Information - Control	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	Before I respond, I would need pre-fire plans, KNOX-BOX, or gate codes, hydrant, and in-response, road closures. Other things would be if anyone's trapped, anything of high priority, anything stored at the facility that's high priority. And just like they do now, an overall what's going on with this place, what do we have? And then once we get there, I don't really need anything else on my computer
Information - Control	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	For instance, those MBCs, they're great. It limits the amount of radio traffic [inaudible], because all the information you're getting for the call, you're seeing real time as the dispatcher's typing it, you're seeing it on your MBC, you're reading it, you've got a map right there, so you don't even have to know your territory anymore because you can hit the map button and woop.
Information - Control	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	A lot of times, I've seen and heard how the 911 call goes and I know the dispatchers are trying to get information from the caller and they're giving you everything they've got but sometimes, it's just I can't get anything more. They don't know where they're at. "I can give you the best address I could, so don't get mad at me because the address doesn't seem to be right." It's like, I got the best out of the information.
Information - Control	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	...So usually when they are leaving the station, they hardly have any information other than the address and the call time. Sometimes they'll have maybe one or two lines of call [inaudible] that the dispatchers [entered?], but as they're driving towards the scene, they're getting more and more information as a call taker is still on the phone with the caller.
Information - Control	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	Yeah, well like I said earlier, if there was a way that more closely tied that person who has having the emergency with the people that are responding. I mean, that's the goal is to move the information from the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								caller to the engine.
Information - Control	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	...For the most part, dispatch should be the only ones communicating en route. Because they're taking direct caller information that they can give to us and we don't know anything. We're just going.
Information - Control	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	They're supposed to. Emergency traffic is one. If command says, "Priority traffic only," everybody is supposed to be quiet and let command and the officers talk. The big one we have is, "Mayday. Firefighter down," something like that. If somebody gets on the radio and says, "Mayday, mayday," everybody is supposed to be quiet. Sometimes that didn't always happen and that goes back to the discipline thing but that does happen. So if we have a Mayday, whoever calls it, gets the channel, gets to talk. Sometimes dispatch can help clear. They'll say, "Dispatch received. Engine 14 calling a Mayday," and then everybody else should be quiet. So there's a few key phrases that we had built in.
Information - Control	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	Command will say, "Mayday, Mayday. It's been burning for two hours. We think it might collapse. We're going to do a tactical withdrawal." That's where everybody just kind of slowly withdraws. They take all their tools with them. They take their hoses. All of our equipment comes out. If there is something catastrophic like a building collapse, command is going to say, "Mayday, Mayday. Emergency evacuation." And everybody is going to drop their stuff and just get out.
Information - Control	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	Yes. This is coming in over the radio. When we do get assigned to an emergency like that, dispatch will also be monitoring, and then all of that gets transcribed for our reports or whatever they do up in the upper management. But yeah. So that's how everybody else is getting their info. Dispatch will hear it. They'll start typing everything in into our call text. So if somebody didn't have their headset on or something, it'll actually populate on the MDC, and then that info can be relayed.
Information - Control	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	Okay. So I'm driving there, and so the dispatch tells us information, we get time of day fire reported. So information we'll need as we're responding: is everybody evacuating, are there any hazards in the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								building, stuff like that. And that's normally through dispatch that we get enroute.
Information - Control	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	There's certain informations that I could tell them to reinforce, and then there's certain informations that I kind of hold back so that it doesn't stop the flow of the incident.
Information - Control	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	It is. It is. It goes the same way for when the police are involved. I have to help the incident by listening to the police channel and telling people that are on the call, whatever the police are saying, "Hey, there's somebody that's in the house with a long rifle, so you should be parked a long ways away because if you're right in front of the house, you're in danger."
Information - Control	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] How do mean? So I can talk to you from my level. I send out an occasional email explaining what's going on in the department. I would love to meet with every crew once in a while, but that's 54 stops. So by the time I get to the 54th, everything is changed from the first one. It's impossible. So we have to depend on the information coming from [Name] to the battalion chiefs that can go out and communicate with the crews. I think it's important for the chief to get out, but it's impossible to get to all the stations.
Information - Control	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] Yeah, to answer the basics is to have leadership meeting once a week, on Tuesdays. He'll bring in his staff; people like me, the EMS, deputy chiefs, fire marshalls, gives us the broad message. We deliver it down to our people. I have monthly operations meetings where I bring in all of the battalion chiefs and, for three to four hours kind of give them briefings for them to take out into the streets. And then, yeah, we try to stop by and see the crews and let them-- they enjoy it actually, to actually see some of us out on the scenes. So we try, but when I first came in here, again I've only been off the streets for two years. So yeah, I was going to come in, and I was going to be that great communicator and I'm going to be out talking with the crews. You just can't do it.
Information - Control	FF	S	Supervising	Not	Not	Male	FF-S-036	[S2] Followed up with a real dispatcher in there that can give them any--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder	specified	specified			relay any information needed outside of what's on their screen.
Information - Control	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] We have the ability to do that. The problem has been finding time to put all that information in. It's very time-consuming.
Information - Control	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: communication with LE] ...The challenge that we had starting shortly after is the people side of it. So just because you can talk, police chief to fire chief, the cultural limits, the busyness, who knows whatever reason, they still may, to this day, not talk to each other. In which case, I can give you all the technology in the world but I can't force you [laughter]. We like to describe it in the national level, with FirstNet and SAFECOM and whatever, that we manage the pipes, we don't manage, necessarily, what's going through the pipes. That's up to every fire chief, police chief out there.
Information - Control	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. Some of them are paid. Some of them are free. Some of them are mandated, like the AskRail is a mandated app. And so the railroad companies actually maintain them. But you do have to send in an application to get access to it. And then they'll send you a username and password.
Information - Control	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	The city actually uses a web-based program that they track all their water and sewer systems. And so we have access to that, that you can actually go into just a GIS map.
Information - Control	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. So if we went-- and the only thing that they would monitor is that somebody else in that northwest quadrant, or southeast quadrant, or whatever, wasn't already doing something. So if they are doing something, then you may switch to a radio channel that's out of that quadrant, but just that dispatch is monitoring and they know that isn't busy. Or we can go to a non-repeated channel. Something like that. So they'll find a work-around to make it happen if we need to make it happen. But it all comes through dispatch.
Information - Control	FF	S	Not	Not	Not	Male	FF-S-022	[RE: NG 911] So it's neat. I think it's giving a lot of-- there's a lot of ways

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			specified	specified	specified			to get information to a dispatcher to be able to get people en route to a call. Some of the texting and some of that, when you're getting away from the phone call, it's difficult to be able to gather the needed information to get the right truck to the right call, which is one of the biggest problems. It's being able to ask the right questions, being able to get the right answers. You're dealing with people that are... really distraught. They're really worked up. And you're trying to have them come up with a good answer, I guess, is the best way-- I don't know. You're trying to get them to think and to say the right things. You're trying not to be leading, because once you start being leading, then you start getting misinformation. So the text thing I think is neat, but it doesn't give you that rapid communication where you can get all the information. But at least it's another means to get people there...
Information - Control	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So we start our day with our daily pass off from the off-going crew. They tell us anything to note, just what they did on the day before for anything, any issues. And then we go to our life-size system which is a video conferencing system through all the stations and headquarters and dispatch. Everybody gives any more pertinent information and what's going on with the day. And the time chief and the support officer run that. After that, we go out and do our truck checks, get everything ready for the day. My lieutenant spells out what we'll be doing for the set the two days that we're on, and we go from there.
Information - Control	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So we do have a dispatch center, our own dispatch center. So they verbally, over the air, and on our NDT's give us information about, obviously, where the call is and pertinent information. A lot of the information doesn't come over the air, but I'll get notes on the NDT telling me specifics. And then we all wear headsets, so we can talk to each other in the truck.
Information - Control	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So really, if we take a fire scene, command is in a separate vehicle. And usually there's at least two people in that command vehicle. So they're giving overall orders for the scene. So it's a back and forth of-- we echo everything, so, "Rescue 54, I want you to do ventilation." "Copy.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Performing ventilation." And then we can talk to other crews, also, which doesn't happen, usually, on our fire scenes. Everything goes through command and then send information back out to the crews.
Information - Control	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: radio in the rescues] The officer usually is talking into it.
Information - Control	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: radio in the rescues] The officer and the engineer both have a button to talk. In the back, we don't have a button, so either one of them can talk, but he's the main.
Information - Control	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	...sometimes there's been information that's been lost in translation from people on the scene to the officer, to their dispatch, to our dispatch, to us, confusion about if somebody's inside or not which really changes what we do tactically. So we're doing something, thinking there's potential rescue when there's not. So you're really putting guys in quite a bit more risk...
Information - Control	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Yeah. So generally station five is our support, or we support each other with technical rescues. So we always respond jointly. And again, with that, we're part of the [Name] Tech Rescue Team. So our last one was a trench collapse with a guy in the bottom, out in a different jurisdiction. And so we responded with them out there. And yeah. So we go on scene, and there's a guy in the bottom of a collapsed trench. And for that, we'd shore up the sides, and then we start digging out. And as far as communication, it could have gone better. There was the incident command structure, and he was delegating all the tasks and all that. But, yeah. I don't know if we had a common radio channel. It was mostly face-to-face on that one. How in-depth, do you want me to go about the call?
Information - Control	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So, I mean, my role, I talk with my lieutenant. I barely get on the radio. Everything's relayed through him and same with him to me. He talks to me. And then he's usually assigned through the radio from instant commander after the command's open, it passed the battalion, to the chief.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information - Control	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Really, for the most part, it's the company officers talking to command. On a larger incident that could change because they could set up divisions. So I might be talking to a specific person who then has four or five companies under them. Then they talk to command.
Information - Control	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Yeah. So that's frequently how we-- we'll just set up and have a communications plan. Police will be operating on whatever channel it is. And then we would have that. And we would spread that information to whoever that unified command incident commander is who's working in that specific incident. And then we would take down and pass-- if we wanted to have subchannels underneath there, we would pass that down to fire commanders or to police commanders who are working underneath, like in a fire branch or in a law enforcement branch, or an EMS branch...
Information - Control	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So every morning, I check with the Joint Terrorism Task Force, the [State] Information Analysis Center, to see if there's anything credible that's going on and see if there's anything that's going on within the city and county to see if there's any correlation. And if there's information that I need to disseminate, then I take that information and I push it on out to the operations folks.
Information - Control	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So Tablet Command is a program that, in a nutshell, we-- a company came in and helped develop for us. And so what it does is it takes live data that comes in from dispatch, and we use it on a tablet, and it puts the incident on a map and then it has an incident command kind of application. So it's kind of a live feed thing. So it's an incident commander saying, "Hey, Truck One and Truck Two, I want you to go to the roof and be my vent group." It will drop them in. Everything is live feed, live recorded, and so it really helps us after to actually see what transpired. And so rather than using a tactical worksheet and say, "Okay. Truck One, Truck Two to the roof. You're my vent group." It has trucks color-coded as red. They are now the vent group. You could just slide them on over and drop them in as the vent group.
Information - Control	FF	U	Field	46-55	11-20	Male	FF-U-020	[RE: Tablet Command program] Yes. So only one person can really

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					make-- so the incident commander is the only one that could really make any changes, but multiple people could see it. So let's say Division Chief [Name] is the operations divisions chief and he's sitting in his office and he wants to take a look at what's going on at this fire over here. He could turn on his radio, listen to the radio, and he can pull out his tablet and see exactly what's going on, where the crews are, how they're being utilized. What we didn't want was a second and third battalion chief on scene being able to manipulate data. So I'm not quite sure how that piece works, but if I'm the second-in chief, I'm not the incident commander. I'm the safety officer, or I'm assigned to be on the back side of the building. I can see things but I don't have the ability to actually drag and drop companies. That only comes from the incident commander and dispatch... So if the chief's super busy, dispatch can actually take that and they can actually assist the chief in doing--
Information - Control	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Situational 360 program] ...From an incident perspective, there is also-- it kind of splits. Most people would have access to that. So if I'm a firefighter or a company officer and I'm working downstairs and I wanted to get on that tool, I can say, "Hey, what's going on today? It's Saturday, July 4th," and I could just start clicking. "Man, this road is closed here. We've got to take this route over here."
Information - Control	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Situational 360 program] ...Or, "Man, I totally forgot that [Name] Festival was going on this weekend, and there's going to be a couple hundred thousand people at [Name] Lake. Man, that's going to mean we're probably going to be heading on over there for a lot of calls." There's also a public safety side to that, which is not accessible by some of those other people within the city. Only by public safety, which actually does something similar. It's tied into 311 and 911.
Information - Control	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...So our fire prevention division, which is the code enforcement part, the people that go out and inspect, as they come across certain features of buildings from a code enforcement standpoint, sometimes it's not possible to get people to come into compliance immediately. Some larger buildings or facilities that don't-- even if I take them to court, it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								doesn't necessarily mean they have the money to fix a problem. But the building is still standing and in existence. Even if I take everybody out of the building, we still have a building.
Information - Control	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: hazardous construction features] And so now, rather than it coming and going through kind of a bureaucratic-y kind of, "Well, maybe we'll get- who's going to get to it? I don't know," there is, I'm a company officer. It's 2:00 in the morning. I went on a call. I found whatever the hazard is. I immediately click safety hazard. I write in what it is. And then that's going to be immediately, that very- immediately, the next day, people will be assigned to flag the building, go out and look to see if it's meeting code, put it in the dispatch notes so all the key players who would be involved in communicating it and mitigating it are immediately involved.
Information - Control	FF	U	Manager	46-55	11-20	Male	FF-U-021	Face-to-face meeting every day. Same thing, I kind of update on city attorney stuff, things we have going on litigation-wise or if any of the concerns he needs to be aware of. He's over at a separate building. That's where arson's staffed out of, so he's kind of my eyes and ears for arson, and we also run the Youth Fire Stop program as well, so that staff's a smoke trailer and does all the education components for the schools, for DPS, and things of that nature. So I kind of get an update from him what's going on. Investigations, any arrests, anything in that aspect I need to know about...
Information - Control	FF	U	Manager	46-55	11-20	Male	FF-U-021	[RE: Firehouse app] But basically what it does, it gives you a timeline of the incident. So it'll tell you the timestamp, the time the call came in, from the time the rig got it, from the response time, when they get on scene, and all the notes that are important as far as safety concerns, or this or that, so that they can mentally prepare what they're going on. So I've got that on my phone where if a fire comes in, I get a text for it. But at the same time, I can also look at the call and see what we have going on. And that way if PIO calls or there's information I need to know, it's kind of like as soon as dispatch is putting it in it's up to in my phone.
Information - Control	FF	U	Manager	46-55	11-20	Male	FF-U-021	...What we've been doing and what the issues are with a particular type

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								of call. PD, again, it's dependent on the type of call but if it's an active shooter or something significant then we'll have some type of a joint command. Same thing with ALS but those are not as frequent but again, you still have, they respond a lot to accidents. So there's that verbal communication and we will listen to them on the radio to find out if the scene is secure and safe for us to approach. So we'll definitely go to the radio channels and monitor the radio channels. Same thing with ALS, we can go to their channels or let them know that they're not needed or vice versa. They'll pick us up on our channels if we're not needed at the scene.
Information - Control	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Yes, Evenza Maps is pretty awesome. You can go in, and basically individuals will create maps. And then they can then make them available, so some of them cost money. Some of them are free. [Organization] has all of their maps on there. So you go in and pick a region. You download the maps you want. The other cool thing about Evenza Maps is for crews that are deployed to, say, a wildfire anywhere in the country, the [Job title] team can send those maps to the people's phones of the area they're working, and so they can interact with those maps. It's pretty awesome.
Information - Control	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: comms with other disciplines] We do. If dispatchers and if everybody sticks to protocol, it's not so difficult for us to get on the same radio channel, but it doesn't always happen. So EMS and fire are pretty much on the same channel. Law is on their own set of channels. Dispatchers will tell them to move over to our channel if it's a big, long, drawn-out call. Otherwise, if not, then we got to tell dispatch to tell law enforcement. Law enforcement has to give-- tell dispatch the answer. Then they have to tell us.
Information - Control	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...The other thing about station alerting is right now someone answers the phone, they start taking information, who, what, where, why, what's going on, and then they hit a button, whatever their procedure is, and then it goes to the other consoles. Then the person who's dispatching sees the call, they read the notes, okay. They start building the calling

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								CAD, and then they have to go to this other screen and they have to choose which radio channels need to be awoken, if you will. Then they use a button, they make the noise, and then they send out the dispatch.
Information - Control	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	No. So that's going to be the chief and the rescue squad. And that is a report of smoke in the building at that address. And everything here is tied in. They use the old telegraph street boxes.
Information - Control	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Yeah, we do that stuff. We go to schools sometimes. Sometimes if the neighborhood's having a block party or something, they'll ask us to show up and we'll go and show the kids a fire engine and stuff like that. When we're out driving around, usually the boss is always pointing stuff out like, "Look at this roof, or that roof." And aside from that, it's the normal banter in the fire engine, which is always fun. So.
Information - Control	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Only what they send us. So every call we get, a screen pops up that shows a lot of the same information. The call, the units due, address, the box number and then below that, we'll have all the data that the dispatchers have typed in. And there's a button that says, "Resend incident." And so if they add or delete a unit from the call or add or delete information, you can hit resend. It'll resend you the most current version of what they have.
Information - Control	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Which can be handy if we're out of ambulances, for example, and they say, "Medic to follow." We'll get an indicator on there that we're a certain number in line for an ambulance. And then if you hit resend when they've assign an ambulance, it'll pop up with a unit number so you can tell that you've got one at that point.
Information - Control	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Okay, that was a question I meant to ask earlier is whether or not you had to notify-- you know, push a button that you were on scene because we've heard that before they have, you know, on scene or when they're departing scenes, so you guys do that here too?
Information - Control	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	The officers relay any information that's citywide, as far as the department, on email. And so our morning brief will get that information or over the radio if it's a-- say it's like a holiday or they'll advise if certain

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								streets are closed.
Information - Control	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Yeah. And then it will come to our chief, our division three, who's our fire commander for that type of fire and then he would relay that to the operator. So if they were going to have that dispatch go out, then that operator would tell the lieutenants or captains to start calling people to say, "Hey, you guys are going out on this fire. Report to Station 7 and you have within an hour to be here to get deployed."
Information - Control	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Everything was face-to-face, yeah. So it turned out since we had three victims, communications to our dispatch, I requested another ambulance to come.
Information - Control	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Green, yellow, red. And by the time you get to red, you're going to get your Viber alert, and then you got to grab your buddy. Two in, two out. So you grab your buddy. You let your officer know, and then you report outside. Change your bottle. Go back in.
Information - Control	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	So it's kind of nice to be able to actually see that. But if you've got good officers, they're reporting it back to you anyway. So I mean, the biggest key is to have-- would be to have communications that never died.
Information - Control	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...now it's getting better with them letting us know that these are dangerous buildings. So that's kind of changed where if it comes in through dispatch that there's a fire in this building and an address, now our main office has addresses that are built into the computer saying that these are dangerous buildings, or abandoned buildings, and those kind of things - Those are good to know - or what may some of the contents in the building be. That's good to know. I think for me, as far as my experiences go, is it's good to know that. But at the same time, what's imperative for us to know are, is it unoccupied or an occupied? Are there occupants in the building? That changes our game plan. It changes our risks versus benefit, which I've talked about before...
Information - Control	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: communicate via radio or computer] Yes, it could be both. The person making the call could say, "Everybody's out of the building. I've got a fire in my house. We're standing outside. Everybody's out of the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								building." The main office could get that information and relay it back to us. It could be printed out on a computer, or it could be relayed via radio. The other way is if a company's on the scene first before say we get there and the homeowner's out front saying everybody's out, that's another way that that communication is transmitted. So the first companies will say, "Okay. We do have a fire, and everybody's out of the building per occupant, owner." So those kind of things.
Information - Control	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	There's always. A lot of ours is just-- the problem is we rely on call-takers who are reliant on the public to pass on information. So especially on our EMS calls, they can vary widely. We'll get gunshot, and you get there and it's nothing, or you get minor accident, and you get there, and there's like three cars. And we get traffic accident. Is it a school bus pinned under a truck, or is it just a fender bender? You have no idea until you get there and see it.
Information - Control	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	As far as, yeah, mobile data terminal which is basically a computer on the rig. It gives you the address of where you're going, across streets for people who are unfamiliar with the area. It gives you the cross grid and also geographical location. But the best thing that I like about that is you can acquire additional information. But they don't say it over the radio because it might be, for example, if you see something over a radio for a HIPAA, you can at least put in the remarks column or the additional column on our screen to give us a heads up of what we're going to be encountering. It's nice to have that information beforehand, before we even walk in...
Information - Control	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Correct. Yeah. On a truck company we'll send two guys to the roof if we had a fire and they will ventilate the building. So I have two guys on the roof that aren't even in the building that work for me. And so, I was always on the radio, "How are you doing up there," just to hear their voice told me they were fine. But I worked with people who wouldn't even do that. And I'm like, "How do they even know what's going on up there?" So that was no good. But we've come a long way with all that. We truly have.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information - Control	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Yeah. I mean, as far as the way that it's being used now, all the way down to the fire fighter rank, they'll put out maybe, a memo on our shared drive saying, "Check your email." And they'll dump something into the email of every department member. And they'll kind of flag that they should be checking it because it tends to be on the lower ranks that they don't check it as often because there isn't anything too important in there for them. Whereas, at the upper ranks, it's the main source of communication I would say right now, maybe even being abused by some. I've had people in the building here email me something insignificant that worked down the hall from me and I'm like, "Listen. Just come down and talk to me." I mean, really? You're going to say this in an email?
Information - Control	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	On your rigs, we have on-board computers. We have the ability to type in narratives to the fire alarm office. They do the same to us if they don't want to transmit something that somebody outside the department may be listening to because people have scanners and listen to us. So we can communicate that way... We're basically, it's all simple, en-route buttons, on the scene, returning. You may send them information about a patient that you don't want to say over the air that's HIPAA-related, maybe. And now the alarm office can read that and send up a typewritten message to the responding ambulance to let them know what you're encountering
Information - Control	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	... Any information I always had, I would always try to just verbally tell everybody because I didn't feel like I should be the only one that knows this. I would leave the firehouse with that printout but if I saw something, I would say, "Hey, the 20th floor, they're saying is loaded with gasoline drums." I would tell everybody [laughter] about it. I don't want to be the only one that knows that.
Information - Control	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	... We'll give them building dimensions, whether we have fire showing, or just smoke showing because sometimes it can be burnt toast coming out of the window. We'll tell them the size of the building. Is it occupied or not? And is it commercial? So we have certain things that we'll say

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								from the very instant that we pull up
Information - Control	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	...So you fly over and get a nice aerial view of the building and it really aids tremendously to whoever the incident commanders are for tactical decisions as far as fire-spread, roof conditions. Even hydrant locations, believe it or not, because in certain times of year our-- there's a variety of things weather-wise that affect fire conditions, like barometric pressure, and humidity levels, and things like that. Sometimes we can see everything outside of a fire building.
Information - Control	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Dispatch has gotten to where they give us cross streets which we didn't get always. They give us a cross street, they give us numbers, you know and all that. Part of our problem here is a third grader numbered our [County]. Actually she wasn't a third grader but the way the system is supposed to be... you can go put it in Google Maps, Google Maps will tell you that you should go to this place for this particular address because Google Maps knows that you're supposed to assign a street number every so many feet. Okay? That's not the way it was done. They would look in the book and say, oh well, so and so lives here and so and so lives there and they live in the middle. They live a little closer to this one maybe but I'll say--I'm just going to give you this number.
Information - Control	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Oh, there's some things that we use. There's a... different things for hazmat that out there that we use. I don't have it on my stuff but like on the sheriff's office stuff they have a digital system or electronic system where you can send the judge a warrant application or, you know, whatever. There's some of those. And I could get to it. I just -- I don't use it enough that I... so but... but, yeah, we have different apps that we use. We have some drawing things we use to draw our pre-plans and then we move those into--we use software that's not really an app but we use software on a computer called Firehouse. It manages our run reports and all that stuff.
Information - Control	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S4: Sure absolutely, we do a shift change in the morning with the previous crew. We get total information about the truck or about equipment, any changes that needed to be taking place and anything

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that needs to be repaired or replaced from the previous shift, any cool calls that came about and we will talk about those and we do talk about those as in a debrief type of atmosphere is routine. You know the crew ran a two-car crash at an intersection, there was a patient trapped, they flew one out, and you know we talk about that kind of a call, not breaking any HIPAA laws.
Information - Control	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	Well, we get one guy that is assigned that particular job of looking for the right price and how many we are going to need and then he brings it back to the table, you know, to the meeting and we will talk about it, how much is it going to cost, what is it going to be benefit for us, is it going to be a good investment and then we will vote on it.
Information - Control	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	Yeah, we all give input and we are passed around the estimates, everybody -- you know, it is kind of an open discussion -- hey, why is this going to cost this much. Why is this radio this much? Why is it -- you know, are we going to get a maintenance fee in case one of these melts, you know, I mean just its thrown out there for everybody to ask the question and you brainstorm kind of so you are like -- oh, you know that? I didn't think about that.
Information - Control	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Yeah it's usually up to the dispatchers what they give us.
Information - Control	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Yeah some like medical calls we get too much information from dispatch constantly updating us while we're going on site. You know so we've talked to them about hey, if it's changing on scene the safety on the scene or anything like that yeah we need to know about it but you know sometimes there's too much details and other times I'll have the CAD status on and with this this is exactly how the CAD system works that they have like if I want to know here's a wildlife call.
Information - Control	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	And they're pretty good about that so we get medical pre-alerts so they get us notified really quick and that comes up on active 911 so we know where we're going and you can look at it on the map on your phone

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								which is very helpful and you can see who else is responding if they remember to push a button.
Information - Control	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	Mostly it's just things that I feel like they need to know either new information like that app, getting it set up. If we had a call we'll talk about it you know what we could've done, should've done, what happened, what could we have done better or worse, some is going through our trucks training you know, we got kind of old business and new business, we'll read our minutes from the last meeting, go over that stuff, if somebody was supposed to check on getting a truck built or getting something like that and then anything new that comes up you know like last month was Halloween so we put on a deal for everybody by donation, talk about that you know how much we got donated or didn't that's about it in the meeting.
Information - Control	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	The directions and what is exactly going on? And that's been an issue too not to put down our dispatch center but they hire they're probably the least paid person there. They need to have as much training if not more than we do because they're getting a call from let's just say a panicked, excited wife that her husband is laying on the floor not breathing so she's hysterical, she's got to take that information put it in the computer, type it out and then get us the right directions and all the right facts. A lot of times that don't happen and I mean that's the key of it all right there is that dispatcher.
Information - Control	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Currently we have just switched to an app on our phones on our smartphones that's called [Application]. With it, it will the app will come across our tone for our department will go out and then it will give us the information for the call, it will be followed by a text through text messaging through that system we can either say we're responding to the scene if we're closer than where we're at to the scene or we can respond to our department or we can stand down and in doing that through the app it goes directly to everybody on the department so everybody knows who is showing up and it also goes to dispatch and they can know okay we have a firefighter or EMR that is in route either to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the station or to the scene.
Information - Control	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	...They brief in the morning or in the afternoon, whichever shift they work. They have what we call pass down or shift briefing. Each officer's a little different, but they'll get in their cars, and they'll go start patrolling.
Information - Control	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	Daily, it's really left up to the officers unless we've had a complaint about a certain area, or speed, or if it's people running stop signs. Then I'll send information out to them, and ask them if they can be in this area, kind of spread it out and stuff.
Information - Control	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	The Sheriff's Department dispatches for us, and so 911 calls and calls go into them, and then they disseminate it to the officers who are working.
Information - Control	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	...I need to know as much as I can about what's happening in a timely manner. There's a little bit of a disconnect-- I'm sorry, not disconnect. There's a little bit of a delay, because currently, when someone calls 911, the information goes from a call taker to dispatcher to us. So there is a few seconds even to a couple of minutes delay in getting the information.
Information - Control	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	...As far as, we're working at a UT football game, while there's a concert going on right across the street, everyone's texting, and then - I don't know - somebody blows up something. Everyone's texting. Everyone's calling. There's an obvious issue there.
Information - Control	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	We'll have a show up thirty minutes prior when the shift first starts, at which point we discuss some of the BOLOs, what we call Be On the Look Outs, for certain events that are happening. See any events that the other troops have worked previously. Sometimes we'll discuss training, sometimes we'll discuss tactics. We've had a call that's been-- that was complicated, dangerous, people make mistakes. We like to debrief those. That's one of my biggest concerns is to make sure we debrief people and learn from our mistakes. So we'll talk about the tactics involved, what we can do better, those types of things.
Information - Control	LE	U	Field	26-35	6-10	Male	LE-U-005	So if I've got somebody who was being cooperative with me, but he's not

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					in handcuffs yet. And dispatch comes back and says, "Oh, he's got a felony warrant for stabbing his wife." Well, he just heard of that. Now he's going to run.
Information - Control	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	But other than responding to those types of things, we also do press conferences. So if there's an affidavit that came out for the media and the detective isn't available or it's just something providing safety tips like a particular media outlet wants to talk about running on the trail at Lady Bird Lake, what you should do, what you shouldn't do. Or we had a sexual assault suspect that was a serial rapist going around, and so we would go and give public safety talks and those types of things. But really, it all starts from our inbox which is our email and daily media, along with public, send requests for interviews, questions. Why do officers do this? I was on a traffic stop and the officers did a great job here. Those kinds of things all filter through our office. So we do use a lot of technology. We use a lot of social media. We use Twitter. We use Facebook. Also for our briefings when we're on scene, we use Periscope, which is a really invaluable tool for us because media will edit our interviews, right? So they will get sound bites and they'll take what they need
Information - Control	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	So they monitor all that stuff. So when we're getting ready to go out on scene or a call like that pops up where they know it's probably a homicide or robbery, they'll call down to our office and they notify us. And they'll say, "Okay, we're working a bank robbery at this location. Robbery detectives are en route." So we give them a few then we call up to robbery and we see what sergeant is out there. And then we're like, "Okay, what's going on?" Get a little bit of brief information.
Information - Control	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	He'll call us and let us know. Make the notification. And they also send the emails overnight. Those significant notification notices to let us know, maybe what we've missed and what we might be getting called on during the day. [talking about the watch commander]
Information - Control	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	Yeah. And they're usually not very long. Because the briefings is-- it's the initial investigation. So officers responded this date and time to this.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Suspect came in, took an undisclosed amount of cash and left the bank on foot. I mean, we give out very minimal on a briefing. Later on, as we get more information, then we provide it to the media or we'll have the detective do a press conference. And we'll show photos or whatever else that we need to do.
Information - Control	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	I mean sometimes it's just the game of telephone, too. So you have the watch commander tells me this. I hear it that way. Then I call the responding officer. He tells me something different. I talk to his supervisor. It's something different.
Information - Control	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	Police dispatcher. A dispatcher is then going to start dispatching that call before they have additional information. As the additional information comes, the call-taker will relay that to the dispatcher and the dispatcher will supplement the information that she's already provided. But when you call, from the time that that actual telephone call is relayed to a call-taker, they input the information to computer. That computer information is then generated to a second body. That body then uses their computer system to decide who is responsible for that call, puts it actually out on the radio, gets the information out.
Information - Control	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	...And if it's a state of the union type thing or inauguration in the state, then the park-- I'm sorry, the Secret Service takes the lead, so they're giving us information in. So as I hear these things coming in, I'm making sure I'm trying to be a little bit proactive and if I'm hearing something, of course, I'll start bringing up cameras in that area.
Information - Control	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah. It's still the dispatcher or it be through our Command Information Center, which is right down the hallway here, which you walk past. The dispatcher lets them know and they call different agencies to let them know, "Hey, something's going on," or whatever.
Information - Control	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	...So I'll get called on the radio through ECC, Emergency Communication Center. They'll call me and let me know that my assistance is being requested. I'll acknowledge it and then they'll let me know where I need to go. Then through that, they'll tell me where I need to go over the radio

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								then also send my computer a message saying, "This is the address that you need to go to."
Information - Control	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	And we also get information. So we have anonymous text tips that come in. So citizens can text tip - it's 5041 - any kind of information or pictures anonymously to us.
Information - Control	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	And then those folks who are inside our command information center, they're pushing out information. So they're using social media. They're using your Twitters and your Facebooks.
Information - Control	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	The BOLOs, one individuals we push out. So every day there may be new warrants issued. We can push those BOLOs out electronically
Information - Control	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] ...As far as operator to operator - 911 operator - they're handling one call at a time. They're not required to pass on information over calls that they handled in that type of world. Dispatchers, though, however, if there's a major event going on such as there's an active 10-13, an officer needs help, we actually want that dispatcher to stay and handle the event if at all possible.
Information - Control	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: MDTs] Yeah, any time that goes down, you get officers, they have to be on the radio and ask two or three times for the address because they didn't write it down.
Information - Control	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Fire has access to our encrypted channels because we share a radio system. But the channels that they use primarily are not encrypted. And we thought that that was going to be a big issue, and so our PRC, our Public Relations Coordinator was all freaking out because the news was going to be able to get our radios. It has not been an issue at all. It has actually improved because we used to stop cars, and they have the app up, and then we could hear ourselves key it up, and it's coming through their phone. And now that doesn't happen. So it's very good. We still let the news know what's going on. Tweet them or whatever [laughter].
Information - Control	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	... part of why dispatch has access to all our report-writing stuff because they don't write reports. They don't need to access it for that, but when they can pull up and say, "Hey, we've been here. We've taken four cases

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								on this," because the CAD system logs pretty much every time someone calls the police or calls for a fire department. The report writing-system only logs anytime we take a case. So if someone calls for something, and it's not really to the point where we need to take a case on it, it's still documented in one system, but not necessarily the other. So they have a lot more short-term information. Everything from the call to the time we get there, pretty much. And then the report-writing software is pretty much everything from the time we get there, whatever follow-up, anything that we've saw, what video we need to get, this, that, and the other. So it's kind of dispatch has the shorter term, immediate information, and then the report-writing system has the longer term.
Information - Control	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: electronic evidence discovery] We certainly from the district attorney's office, probably their efficiencies have gone up huge. And from the defense attorney's side, being able to provide that discovery is big. It does provide electronic tracking. So as soon as we send it, it's stamped and they get it. So there's no questions on, "Ready for trial?" "Well, you never provided this photo to us." "Oh, yes, we did."
Information - Control	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: app for situational awareness] It did work pretty well. In the command center, I could see it. I was able to take pictures. We were able to monitor crowd size. So from the field, I would take pictures within the app and then it would tie it into the app. It would show up in the command center. Then they would relay it to the public relations people. So I'd watch how long it would take when I'd say, "Stands are half full." And then that would go to the command center, they would pass it on to the PIO group who was putting out, on the public side, the notifications. And it's usually about a minute or two and then it would come through, "Stands are half full." And then the people in command could actually see the pictures, so if something did come up they could have gone back to those pictures at the time that I took them...
Information - Control	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: decrease radio time by using computer] "And then when you get on query, you say--" and let them know you already did it on the computer. So it's MDT traffic stop. Then everyone who doesn't have a computer

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								knows you built a traffic stop somewhere. So that was a process of working through. I'll say it was a little letting go of control from the dispatchers. They disagreed with a lot of this. I think, as a field user, we said, "We don't care. This isn't your decision. We love you guys. We appreciate what you do. The person most responsible for my safety is me. And so if I need to build it on the computer, don't try and give me a policy that says you shall not. It's not going to work. Highly discourage. Make it as strong a language as you want. It's going to happen."
Information - Control	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: information sharing software] ... it gives me nicknames, heights, weights, tattoos, these are all tattoos and scars, personal data. And then if you keep scrolling down, it will give you associates, it will give you vehicles, addresses, any of that stuff, so it's extremely helpful. And it's great that I can get it right on my phone...
Information - Control	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: person of interest information lookup] before, what we were having to do is I would have to contact dispatch on my radio and I'd say-- tell the type, DMV, and request from them for a DMV photo. And then they would email DMV and say give me a DMV photo and then you have to wait for a person at DMV to go to a computer, type in that person's photo, download that photo, email it back to our dispatch, then our dispatch emails it to us. Then we have to log in to our computer in our car and then get the photo and then you-- meanwhile, you're sitting on the side of the road with this guy
Information - Control	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... So anyone that has a [information sharing software] login, they can now view our photos from our crime scenes, from our booking photos, anything else, surveillance videos from bank robberies, anything like that. We don't have to now try to find an encrypted way of sending it, they can just log in and view it. We're the only agency that stores it like that so nobody else has that capability. But if you go to the desktop versions, you will now also be able to read any agency's reports from any of their systems. So while you don't get the media, you still get the reports, so it's all great sharing.
Information - Control	LE	S	Other	26-35	6-10	Male	LE-S-021	[RE: bank robbery incident] Well, technology was great because we had

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel					a tracking device that the bank teller had given the suspect. So we're trying to track through that but here's your problem, is you have the Feds that are doing their Safe Street program for the bank robberies, they have the tracking device. We also have a tracking device here or a tracking system here, [county] has one, I don't know if [city] does or not, but all of them are looking at their systems. They're then all calling up to our dispatch, so our dispatchers who are already handling two channels are now handling three different people calling into them to give them information instead of that source coming straight to the officers on patrol. So if they could just air up with us and then give us the information straight, that would be great...
Information - Control	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: bank robbery incident] ...there's the relay to the dispatch and then our dispatch has to relay to us while they're trying to maintain the channels and then also provide the information that we're giving to them to other people. So then they have to run a third channel, [urban city channel], so they're relaying out all of our information to the rest of the metro area. So our channels are encrypted so no one can listen to our channels. But they take it to [urban city channel] and now they're telling all the information, so now everybody else is-- if you're scanning the [urban city channel] ... you're hearing that we're tracking someone. So if the suspect is listening to that, they now know to get rid of the pack, which they did. Okay? So if we can-- I don't know how it can happen because you have to share encryption across everybody. So I don't know if it's a monopoly then if everybody has to have the same system or same-- plus, then, if the encryption code gets out, then now you have to deal with all of those issues. But if there's a way--
Information - Control	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So I'm part of a CIR team, so it's a Critical Incident Response team. So anywhere in [county], if a shooting happens or an officer-involved incident of any sort, we can respond. So we get called out for that. So we won't just work in our agency, we work in other agencies. So now when we go over there, we kind of have to buddy up with another agency member and say, "Okay, you listen to your radio, I'll listen to mine, and I'll

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								tell you what I hear and you tell me what you hear." That's the only way that we can communicate...
Information - Control	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So if we could just-- so one great thing that we've done here is our fire department has the same channels that we do now. So when they go to an incident to help us out, they pull up on scene or they get dispatched to it, they flip to our channel, they answer up on our radio, and we know that they're hearing us and all we have to say is, "You're good to come in," and they can come in. Whereas before, we call our radio, our dispatch, they call their dispatch, they send them, and actually, we're sitting next to each other-- So that's been beneficial, but if we could expand it to include other agencies, which, I know, again, it brings in a can of worms.
Information - Control	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: surveillance video] ... So where it comes to the size too, we're starting to go to a online paperless system through the courts. So [county] has had this for a while, where they can do online submissions and they would upload-- they scan all the documents and then send them electronically, but then they would still send a disc of all the photos or surveillance or whatever else. Well, now they're able to upload that electronically, but it's got a limit of two gigs... it's not helpful at all. So for example, for one of our cases that we had at the beginning of this year, we took 3,800 photos. I'm trying to think. How much was that? Oh, I can't even remember how much surveillance, I mean, but it's-- man, if I could remember the gigs. It's astronomical... a single officer taking an average amount of photographs on a domestic is going to be close to a gig and a half at least, but for this case, I mean, it was-- it took, I think, like seven DVDs in order to get all of the photos onto there...
Information - Control	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: data sharing between LE and DA office] ... So we create what's called a web share which is actually giving them not just the raw data, but the raw data that's been turned into the product so they can view the product up there. When it goes to the public defender's and they get the raw data, they have to create the product themselves. But it comes into constraints of, "How do we get this up there?" [county] is soon going to a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								paperless system. And we've been learning through [county]'s problem that if they don't make the pipe bigger, we're not going to be able to get it up there. And at this point, there's no solution for it. It's just flash drive after flash drive. And so every photo disc request that we send to the DAs office, we have to send three copies through. So three discs of the same photos up to them, so that one goes to the courts, one goes to the prosecution, and one goes to the defense. And that's per defendant. So then if you have multiple defendants, you're having to do it multiple. But if it exceeds the capabilities of the DVD, you either make multiple DVDs or if it's a phone dump, then you have to do flash drives. So at this point, they're willing to accept one thumb drive to accept it, but then they will have to make their own copies, but if they're trying to get away from the paperless system, it's not going to work unless we figure out something else.
Information - Control	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	Yeah, so at the beginning of shift you have to log in to your computer so that it's assigned to you specifically based on the vehicle, your ID, your password, so they can monitor who's using what, where they're at, and then within that you have to log into-- certain officers pull up different programs. It just depends on what you want to do because we can run stuff through dispatch if we want to, but I like to run people if I can just on my own so I don't have to call dispatch, wait for them to do it and then call me back, as opposed to me just typing it in and it coming directly back to me. But you have to log in to those, so they're different programs...
Information - Control	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	... So I think it's cool to just sit there because I'm here in light duty and I'm not able to get involved, but it's cool to hear other people communicate. And then the way that the commanders or sergeants or whoever's on-scene, how they delegate and kind of orchestrate this whole chaos into something that's manageable. So I mean, communication is huge. And if it's not there, then nothing functions properly.
Information - Control	LE	S	Field	26-35	5 or less	Male	LE-S-022	I think, in general if there's ever information that's not provided to us

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					prior to arrival, it falls upon the reporting party or their inability to communicate effectively through dispatch. People are in states of panic or whatever, so it's very hard to communicate. And so dispatch has to do the best that they can and provide us with the most succinct and direct response to what they're being provided. So yeah, a lot of the time we show up, and it could be a suspicious incident or something, and it's actually an active domestic. So you get on scene and it's, "Okay, well, I wasn't provided this information," but it's not necessarily their responsibility to tell us everything that we need to accomplish our end goal...
Information - Control	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	.... It's actually easier just to come back here, write the report. We have an inbox, we have a stack of reports to read, like he's doing right now, and then as we come in we make little corrections and then tell the officer, "Okay, it's good," and then he can go home or he goes back on service. Most of the time they write the report as fast as they can and then they run back out on the street.
Information - Control	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	...But now dispatch just broadcast this guy with the knife call. I'm going to be bumped off that run and go handle it. And it just calls the services when the officer gets in his car, just stacks of them.
Information - Control	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	...? But that A-priority call-- so dispatch would try to say, "Hey," - say I'm calling Car 54 - "Car 54. We have a call at [Location], Nordstrom's, of a shoplifter. Are you in the area?" And you go, "Yeah, 10-4, yes sir." Or the sergeant will look at this, at the waiting calls, and go, "Okay, I have a foot beat unit in that area." And on that call, the homeless person in a doorway, all of the sudden I caught that. Because the cop doesn't know. You know, if he has his phone aren't hooked up to CAD, to where he can see the waiting calls as he's driving down the street.
Information - Control	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Even then we had communication issues, because they're [City], we're [City], we gotta figure out what channel to go to, you know, so. And it takes training. No matter where you go, it takes training. Now [County] is pretty good because they have all the-- they go to a green channel, which is the channel everybody has on their radio. We don't have that for us.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								We have to go to a different channel to talk to them, a C [bank?], but it probably requires a dispatcher to tell an officer--
Information - Control	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Those are probably the main complaints from most of the cops are the cars. The radios, they stay on that one channel. The biggest complaints on the radio is that officers, if they have to go to [City], and they get in the pursuit, that they can't talk to that cop in [City]. And like I said, it's a training issue. We have to make sure that the dispatcher's on board. She has things that she has to do from her end, and go to the mutual aid channel and everybody has to switch to claymore's eight. As me, a radio person, I know that, but even if we go down to BART, we lose communication in BART.
Information - Control	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Q: Right, yeah, and ideally though, I imagine, you'd want to know a little bit about the history of what's going on. Like you said with the firetruck, "I don't know." SME: So we get that in CAD.
Information - Control	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Okay and then dispatch usually broadcasts that information in CAD. So the way-- have you been to our 911 system?
Information - Control	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	So that's the most frustrating with the people that are calling 911. They have a script. "What's it look like?" [inaudible]. "No, what's it look like?" Right? Because they have a scripter going [inaudible] even with the fire side. I need an ambulance here. "Why?" Because they have to figure out what type of-- are they bringing firetruck also? Are they bringing police who might be closer with the [AD?]. What's going on? "He's going nuts, I need a--" well, if he's going nuts, they're not going to bring the fire or the ambulance crew by themselves. They're going to bring in the police car also, right? And then it's because they're going by their script. "He's having a seizure." Once he has the seizure, it's already done. But [inaudible] response, [are they?] bringing the police over there. Once he wakes up, he's going to be disoriented, so these that you have are the little script you go by. The cops get frustrated, I think, every once in a while. "We need an ambulance here now!" "What's the reason?" "Get an ambulance here now, he's not breathing!" "What's going on?" And the cop's doing [crosstalk], so. So that's, you know.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information - Control	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Q: So generally that information is coming through CAD, it's coming through your radio, from dispatch? SME: CAD and the radio, yeah.
Information - Control	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Probably both. I can't always give them-- we can get like a-- remember I shared a channel with two, with another station, and we have a code 33, there's a cleared emergency channel, for something, some cops chasing a [inaudible] suspect, all of a sudden a cop is in front of the station calling for an ambulance at the same time. Sometimes I can't get on the radio. I'd rather get the information from CAD, or I can switch it to another channel.
Information - Control	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	...And this first time the community has talked to the cops in months. And they're still doing this thing. The Captain says, "You got any issues, you email me." I'm looking at him like [laughter], "Why?" If that was the fact, why are we having a community meeting? We just do a mass email. How about that? Let's just video tape it. We'll video tape it in here. Everybody logs on and you video tape so you don't have to talk to anybody in person anymore. But that's what society has turned to now. And that's where technology is hampering, I think law enforcement, is they're not getting out and not talking to you. Every once and a while, you'll get a clip of a cop playing basketball with a kid out in the street or something like that. But they're not doing that. You can't communicate with them unless it's PlayStation 4 or some crazy stuff. There's nothing to relate to. There's no Monday night basketball. I remember you had to be home before the streetlights came on. And if I screwed up, my neighbors had permission to whip my butt. Then I got two of them, from them and then from my parents when I got home.
Information - Control	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	With these cell phones, and people filming you, all right? It's very, very difficult to-- and even with our shootings, when you get an officer go off shootings. And the next thing you know it there's a protest, because it's already been on YouTube on the civilian side. It'll be four or five days before they put out the real video.
Information - Control	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	...So your passenger is going to be your comms guy, communicating with dispatch and reading the CAD. And whether they need assistance

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								or they want backup units, all that is going out over the air. It's not getting typed up. It's going out over the radio.
Information - Control	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	Let's see. When you arrive at the station, you go to lineup. When you're in lineup, the lieutenant or sergeant explains to you what's happening that day. Just in case you have any critical incidents or things that were happening prior to you coming onto shift, because there's different shifts that you work. And then depending on either your seniority, if you have a sector vehicle, or if you're walking a foot beat, you'll get in your car and you'll start doing your patrol, your patrol functions. You have your gun. You have all your equipment that's issued to you. Now they have cell phones. Now they have body cameras. So everything is turned on. So when you leave the station to start your shift, you're ready to go. You tell dispatch you're in service, and if there's a call within the area that you're supposed to patrol, they will let you know.
Information - Control	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	They'll be on a radio with dispatch.
Information - Control	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	MDT in the car. You'll have to CAD all that information, where you need to go. One guy's driving; one guy's looking at the information prior to going to the scene itself. The only times that you would use, I would say, your phone is if you're doing the investigations, usually after the fact. The primary is when you arrive at the scene, depending on what you're responding to, you have to render the situation. Is it safe? So last thing you're going to be doing is taking out a cell phone. Talk to the victim. Talk to the reportee. What's happening. What you have here: the who, what, when, where, why. The standard procedure stuff that you have to go through.
Information - Control	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	So with our department, we have our line up in the morning. It's like roll call, I guess in other departments. They give us information. If we're looking for someone or if there's someone that's wanted, they'll show us a BOLO or a be on the look out for. Information that's passed down through the captain or command staff, if someone is ill or if there's a birthday in our station, we kind of relay information.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information - Control	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Q: Give me the data, right? Okay. And so, when you think about information though going from person A to person B to person C in terms of who needs in, so where does it start? SME: Usually, through dispatch.
Information - Control	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	... So the routine with that is that they would be checking on, get ready for the lineup, get their gear and everything else, respond to the lineup, meet with the platoon commander for the day, get the brief time activities that are going on, things that need to be done, or any bulletins, or any warnings, or anything else that come up. They get those notifications. They get their assignments, their sector assignments, and then any other information for the day, whatever has to be passed down, if there's roll call training or something that would be given at that time.
Information - Control	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	So the communication at the larger events, the issues become when you've got multiple entities involved. So you've got the police department, the fire department, the medical services, the EMS guys that are actually on-site...So they'll hire their own security companies, their own volunteers, so getting communication in a timely fashion, and the information disseminated from all those different components to the point of contact for the PD and do our command post and then coordinating that with the district station at the same time. So a lot of times, we'll get a different channel, another PD channel, separate from the district channel.
Information - Control	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	Yeah. Depending on what's needed, yeah, there is. But a lot of the marching orders and the instructions are already given at any of these events at the lineup and at the briefing. All right? The expectations, the parameter, what the idea is for the event, and then what the chain will be if there is a response for something or a need. We establish that. And then the proper contact for any of the officers that are on post is that squad leader. So that squad leader is pretty diligent as far as staying in communication with the command post or whoever the event commander is.
Information - Control	LE	U	Field	46-55	11-20	Male	LE-U-014	Radio to radio. Yeah. Not so much person-to-person. So the person-to-

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					person, once that venue gets started and people are on post that person-to-person is not really person-to-person. It's unit-to-unit over the radio that you'll deal with radios.
Information - Control	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	So the end routine, the officers would patrol the district all day and handle the calls for service in their district, respond, to assist, whatever other units need assistance in the district. And as their shift is coming towards an end, we'll have an overlap of another shift coming on. That next watch coming on will get the same similar briefings, whatever information needs to get passed forward to them. And they would go out in the street. So the shift that's already on the street would then have that opportunity to come back in, start getting some of the administrative stuff done. Either they've gotten police reports during the day or they've got some other sort of a follow-up, that's their opportunity to kind of come in and get some of that paperwork done. So they'll have that interaction with the guys that are going off. And they'll see that, and they'll be writing the reports, and that's on a daily.
Information - Control	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	... So dispatch will be asking us those questions, and so for us on the PD side, the importance is to establish some sort of a command post if we had those type situations where there is somebody to be designated to respond to those questions, while somebody else is designated to respond to the scene and kind of coordinate the response there, so. And that is a rapidly developing kind of scenario so that's not something we have just sitting in place.
Information - Control	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	So apps. So what exactly do you mean by that? So what we do on any time we're running our thread assessments, we're coordinating with our [Name] for a particular event, our DOC or operation in command. We're coordinating with them as far as if there's any protests pending or coming that they're aware of on social media. On the station level, we don't have a social media unit that actually kind of sniffs out stuff and does all that. That's beyond us, but we coordinate the events
Information - Control	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	Having some way to automatically notify different districts as events are moving into their district, so say [City] has a lot of activity. They've got

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								their own calls for service... And currently, it's when dispatch gets a break because they're multitasking trying to communicate with the supervisors, notify the officer that's in pursuit, notify somebody else, and at the same time, they may have a call taker on the phone that's trying to give them information. So those dispatchers are kind of inundated with information.
Information - Control	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	Two sides of our districts are bordered by expressways. So it-- there's a police shooting on the-- not a police shooting, but there's a shooting on the [street] ramp and trying to coordinate between the dispatcher talking to the state police dispatcher then to us, and getting all the information back, there's a lot of confusion going on. I mean, we had people chasing people. Nobody knew who the offender was. Until you get there and somebody can actually put it out that this is what happened, there's-- it's confusing sometimes.
Information - Control	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...on the radios, we are able to change networks. So for example, if we did have a chase from state coming to my old jurisdiction and we communicate with state dispatchers. We don't communicate with our own. We said, "We're leaving this network to go to this network." And then, we talked to [city] with state, with all of the other agencies that were then chasing, probably all the suburbs. So it puts all of us on states network with their dispatcher. So it's all going through one.
Information - Control	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: comms with other LE jurisdictions] ...I mean, when you're going by the fact of State Troopers calling for assist, that's all that will come through. It won't say, does he need an-- it should be more clear. Sometimes, they'll put out an officer needs assistance, and they'll make it like almost like an emergency, where the guy just needed a transport. There should be a better way of-- we just need this or that, so.
Information - Control	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	You know what, I think sometimes the shortfall is what the caller gives us. So, part one of the puzzle is the 911 call and if that starts very poorly, then it's that bad game of telephone just totally degrades by the time it gets to us in the car... Sometimes we'll get good descriptions right off the bat and that's way more helpful, but that's part of the equation that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we cannot control. I think for the most part, people get updated, you can see who's on the scene, the dispatchers will update the tickets with information as it's given out. So I would say on our end, it gets updated and it's used very well.
Information - Control	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[To the?] aspect like the radio communications that there's something going on. "Shots fired." Like, "We have an officer shot." Everybody tries to get on the radio at the same time. Sometimes the dispatcher just-- they have a hard time controlling the entire situation. The officers have a hard time not cutting each other out. So, like we had one officer that was shot while the other officer didn't know she was shot because they work in a pair. He took off chasing the guys. So, she's trying to come over the air saying she's shot while he's coming over the air saying he's chasing this person. Then people would step in, that, "I'm going. I'm going." Where then that person doesn't need to-- you just go. So some way of better controlling the airways when there is a critical incident.
Information - Control	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I came from a department and we had different technology on the computer. And we were a smaller department so it wasn't we didn't really need to worry about walking on each other, but if he got a call and I wanted to go on his call, I could put it in the computer-- we used 10 codes there. I would just put like 76 to blah-blah-blah's call. So I never had to go over the air to dispatch or [inaudible]. At least it was on the computer, which I think some people may be a little old school or worried about, "What if I get in a crash. I never said I was on the way to the 10-1, then I'm gonna be in trouble."
Information - Control	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I could look up the whole district but I can only say I'm going to or on scene for the call that I'm personally assigned to. If I want to jump onto a call, I have to go on the air and say, "I'm going to the call with this person." It's not something I could do on the computer.
Information - Control	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I do know just talking to firemen-- they might get a firehouse call. But if they get an update from us saying, "Yes, this is a bonafide fire," then they start rolling out more trucks. But initially, their response is slower until they know for sure that it's a fire. But then, it's usually too late, especially

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								with the rate that houses burn these days.
Information - Control	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: FF] they can't navigate traffic as usually as we can. So we beat them there for the most part or we could see the smoke coming up to the call. But I think they do tend to wait for us to say, "Okay, this is what we have for sure."
Information - Control	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: calls stacking up] Well, if they stack you, they will. When you do multiple jobs. That will happen sometimes through afternoons and midnights when there's a higher level of call for service. But the officers in their cars, at least before it was, they can't see what's pending or what's waiting. Only the dispatcher can and the supervisors can. So from the station, I can run and see how many calls for service we have waiting. Around the 4th of July, you get 3,000 calls of disturbances with fireworks. And we'll tell the dispatchers [not to?] call them unless there's a caller that wants to be seen because, literally, you can't handle-- you're going to be in a back log all day if you're--
Information - Control	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I'd kind of like more sharing between all the databases. I know we have [state criminal database]. If you're certified in that, you can pull up pictures of people. But I think that all of those databases should just be rolled. The states should be able to communicate.
Information - Control	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	The vigilance system, I mean, the city has it, but there's limited access to it, and they wanted to give it to certain districts, but they haven't done that yet, and that to me would be fantastic to have, like if a private company has a hit, it should automatically somehow get transferred to dispatch, like say, "Hey, there's a stolen car here," not 10 hours later when somebody at headquarters, runs it and finds out where it's at and then sends it to us, and then by the time we send a car there, it might not be there...
Information - Control	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...I will then go to the VRI office, which is the Violent Reduction Initiative, and will ask them how many cars are detailed to the [district name]. They will tell me how many cars. I will go upstairs myself if the [special information officer], if he is there. We will place the cars strategically

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								where we're expecting violence. And then I will type out all of the HunchLab boxes that they are going to be into. And then I will mail it to everybody that needs to be mailed. And then I will go and bring it-- bring the maps downstairs. They don't have a color printer. We do. So I have to go down there and go give it to him. I will go over it with him, see if there's any questions they have, and then I will go back upstairs...
Information - Control	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	Private, right. So yeah, we'd do that, and then we'd meet up with victims and witnesses and take additional notes. And then, at that point, then based on our initial interview, the case report would either be like, "Man, there's nothing further we could do. We have nowhere to go with this." And then, I would file it in the no further information file. Keep it there. In case something pops up later on, I have it. Or they would be routed into the next act of in furtherance which could be, "All right, we got serial numbers. The victim had serial numbers. We got serial numbers now. They need to be entered into LeadsOnline," which is a software that we use which ties into all the pawn shops. And they're required to report what they take in, and we could switch those transactions then. So if we have serial numbers, and it's our duty to do something with that serial number, I'm just like, "Oh, that's a serial number. Well, let's put it into LeadsOnline and see if we get any hits."
Information - Control	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	When I was out on patrol, I gave my number out, my personal number, out to people. But what I had done is I had created a Google Voice Account, and my number was [Phone_Number] [laughter], and I would give that out. I had it on a business card, and I'd give that out. And it would ring on my phone, but it was a pseudo number. It didn't come back to anything, because I was afraid-- because I have Sprint, and if I run into an offender who has a friend who's at Sprint, the next thing you know, they get all my personal information
Information - Control	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	...The next thing I would do is, I would go to what's called the 24-hour reports. And it's just a listing of all the case reports that were reported in your district for the last 24 hours, take a highlighter and read the ones-- I'd highlight the ones that I wanted to look into further. Robberies,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								burglaries, thefts, anything that had a violent nature to it, violent tendency, domestics and this and that. Randomly, I would look at domestics if it was a person of interest, a suspected burglar got into a domestic. Ooh, I'd love to call his wife and talk to her about what he's been [laughter] up to. Stuff like that, those kinds of things. We would take advantage of those things when they presented themselves. But really, we were reading all the robbery and burglary case supports and knowing what's our crime map.
Information - Control	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	... So I know, okay, these are two good addresses for him. And this would happen on a daily basis. And I'm kind of freak. I remember everything [laughter]. That's just kind of one my qualities, and I would remember everything. And when we would go out there, I almost knew almost everybody I was driving past without even really talking to them, because I was taking advantage of the work that the other officers were doing.
Information - Control	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	... So I didn't tell you, but now, as a sergeant-- I am a sergeant. I am assigned to these SDSC rooms, which [City] just started, which is the cutting edge of technology in the department. And these SDSC rooms stand for Strategic Decision Support Centers. We have gotten all the best technology, and I am lucky enough to be the sergeant for that, so I get to decide how to utilize the technology. So I am actually in a very-- that's why I kind of signed up for this, because I actually use the technology. I push it out, and I'm at the forefront of it. I've got this phone. They brought watches to us, smart watches to us, and we had to send those back because we didn't have any use for them.
Information - Control	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	Instead of you worrying about calling it all out all the time. You've got to run, you've got all this stuff, and you're like, "I'm going left. I'm going right. I'm turning right. Southbound here and northbound here," and sometimes you don't even know what streets you're on. You're running. Could you imagine if you didn't have to do that, and you could have your hands free and just focus on chasing after this guy? And the dispatcher would be like, "All right, northbound, southbound." Because whatever

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								direction the police officer's running, then that's the definite direction that the offender's going. So the police officer's almost like a trail, a marker, a trail marker, a GPS trail marker behind the offender. And if you could see that in an aerial view, you can dispatch and coordinate cars to come from the north, come from the east and west.
Information - Control	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	I think we have a problem with that now. I think we have a problem with too much data going out. We need actionable intelligence. We need actionable data. Someone in the department needs to be responsible for analyzing the global data picture, absolutely. All that data, again, disseminated down, it just creates data confusion, if you want to call it that. It's too much. You need to figure out-- you need to vet that data. You need to then send it to the right people in the right format. That's the other thing. You need to send the right information to the right people in the right format
Information - Control	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	Put that out over the air right away. Right away, we're looking at it. Our captain came in, "Squad, this what we're looking for. This is the car we're looking for." The captain, based on where the shooting happened and the type of car it was, he already knew. It was like he pointed to the map and said, "They'll be heading in that direction." He's like, "I'm going," and he left out on the street. This guy's an amazing-- he's a god. He's a genius.
Information - Control	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	And that visual has to be pushed. The push is important, how it gets to the officer. Flying, bing, and you just see a big picture, "This is the car we're looking for." That's awesome. If it's an email that they got to open up or this and that, it's not going to work. The format's wrong. It's a dynamic situation. They can't get to it. It needs to be boom, "Wanted vehicle for this," boom, and just the picture of it. Simple, bold writing. That's the key. Now, if you give them too much information, if it comes up in a format where, "Year 1997, Ford Taurus, VIN number." I don't need all that. Let me see the car. Let me know what- well, now I know what I'm looking for.
Information - Control	LE	U	Field	26-35	6-10	Male	LE-U-023	You have to kind of figure out, what is this person's position? What is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					their role? What is their functionality, and what are their needs? And what information do they need, and what format does it need to be in to be effectively delivered to them so they can actually utilize it and use it?
Information - Control	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	...We have very good bosses in the town districts, especially on days where they really like sharing information as much as they can with us. A lot of them work from the game units and everything. So they're very, very on about letting everybody know what's going on. I've heard other bosses, "There's the keys. Get out of here. What are you doing in the station? You shouldn't be in the station." And that was years ago where you didn't even have access like you do now. I could go on my phone in here and look up the major incidents that's happened in the last few days in the [district]...
Information - Control	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	[RE: dispatch information source] It'll come from the 911 callers. Okay. And then, usually the dispatchers, whatever they do, they'll type it up and they'll send it to us. Obviously, there's probably changes between the stories as it goes. The dispatchers, I think they do a very good job of getting us the information that we need, and they kind of know what kind of situation we're going into. And I think they pay a little bit more attention to the more important jobs. And I don't want to say important but more high risk jobs. So they're always-- our dispatchers, I think, are very good.
Information - Control	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	[RE: information from dispatch] it'll come through the radio, always through the radio, always through the radio. And if you do have a functional PCAT terminal, obviously, you want to be logged on and then they'll put it through the PCAT...
Information - Control	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	...I mean, there's problem areas that you could drive by, see what's out there if you want to take protective steps to stopping people. That's always a good thing. But if you're doing that you basically got to call your co-worker and say, "I'm going to try to put a stop on these guys." Or at least let the dispatcher know what you're going to do. I mean, they give you a set of keys and say, "What do you want to do today?"...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information - Control	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	[RE: comms with FF and EMS] It has to go through dispatcher... So if you have an irate mental who needs to really go to the hospital, chances are the ambulance is really coming whether or not you tell them, "Yeah. This guy's really acting up. Let the ambulance know." And vice versa, telling the hospital we're coming in with a mental or whatever. I think that's the biggest thing with us and the fire department is people with mental problems because that's when somebody could get hurt. So usually anytime there's a call for service for that, they're usually requesting police presence. And so we already know what's going to happen. So they're all pretty good...
Information - Control	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...They're also using body cams out in the field so officers are issued those as well as their radios. There are other door controller systems like the swipe system that you saw us use to get into this facility. That's another one. We have communication systems between [State] Patrol and other government agencies throughout the county mostly based in [City] and so we've got electronic fingerprint systems where we can transmit fingerprints back to state and federal agencies as well as kiosk systems so that customers can come in and interact with accounts for inmates so that's all tied in and integrated...
Information - Control	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...So the officers are entering information the supervisor is looking at that information and approving it, that information is going to the RMS administrator, she's viewing that information and approving that, that information is going back to the officer for final approval and getting pushed up to the feds. So there's constant electronic communication back and forth as far as checks and balances and making sure the information is accurate and it all flows very well and I'm always impressed at how much information is back and forth and not just via email but via these systems that the officers are using to maintain data.
Information - Control	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I mean I think that on a daily basis. I mean that not only just with technology I mean certainly the state operates the eyelet system which is a law enforcement database for criminal histories and driving records and vehicle registrations you know all types of vehicle registrations

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								boats, planes and so I think that's a constant daily hourly thing. I think I can't think of you know there's probably tons of other things. You mentioned like the fingerprint system and like anytime someone's booked in the jail their fingerprints are transmitted electronically to the state. There's tons more.
Information - Control	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I know the probation department has systems and they work directly with the juvenile offenders, the correctional institutions, the prosecutors are constantly working with different agencies throughout the state. We're tied into hub and spoke network with the [State] Supreme Court and so there's a centralized brand new system in the State of [State] where the Supreme Court has servers both at each county and also centrally located and so there's constant communication, probation prosecutors, public defenders and defense attorneys are all tied into that system as well. And so that information is funneling from law enforcement to the prosecutor's office to the courts to probation and it all ties in seamlessly...
Information - Control	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	... Secretary of State is a direct connection for us as well so the voter systems, registration, voting booths all of that stuff ties in automatically and information transferred nightly between different agencies. I know that the [state] Patrol maintains a crime lab and so a lot of the investigative pieces of our investigations go there and there's a system that we can access 24/7 where we can view the status of different pieces of investigatory evidence and where that's at in the workflow and so we're very tied in to agencies throughout the state...
Information - Control	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...I think we have seven or eight direct connections not including the cities which we also directly connect to. Some of the evidence management we do have an evidence management system and some of that ties directly into the cities where they have the ability to log evidence up there enter information and then it comes down here to a centralized evidence locker where that stuff is maintained piece by piece row by row aisle by aisle and so it's a lot of integration.
Information - Control	LE	R	Not	46-55	Not	Male	LE-R-042	[RE: [Organization]] ...That was our primary way to push out information

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			specified		specified			to local first responders and commanders for fire and law enforcement and EMS along with like the health districts and the state EOC. We had a lot of users in the county that was pretty much their primary source of information during the flood events as far as the daily operations and updates. I think it took a couple of I think [Organization] has been in place for many years but it really took a while to catch on here I guess and now I know during this flood event the state guys were like you guys have so many users now it's becoming such a big thing and it's like well that's good that's what you guys wanted. The management of it has been excellent and the training and it's really been a big tool but it really only gets used when something's bad is going on.
Information - Control	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	...A lot of time you're driving because you're going from Point A to Point B, you don't have time to pull over and jot down like a note or take a recording about everything that's taking place. So me, I'd rather be able to look at it, see it, and then send it off.
Information - Control	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	It can be. But there are some troopers that do monitor our radio so they'll relay that information to their chain of command.
Information - Control	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Social media on both hands whether it's the fire service or the police service, it's a great tool. But it can be a tool that can hurt you. I believe especially, especially an emergency, emergency work, police work and fire department work, that social media as far as us is public service should be a one way direction. We should only be sending information out. We should be informing the public of what they need to know, in other words we shouldn't be commenting on other people's posts. We shouldn't be allowing people to comment on our posts. The public service aspect of it should be a one way direction. We should only be sending out valuable information about road closures or anything to update the public. As first responders, we should be more professional than argue with people on social media and put things about our personal lives on social media. We shouldn't be doing that.
Information - Control	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	I think it's easy to get the information at least at my level I'm learning about it that the part with information on a--specifically on a game day

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								for us is how do we disseminate and who does it get disseminated to when you're looking at certain things.
Information - Control	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	Starts at Dispatch, then I'll call in to Dispatch, they'll look at the rotation of who is up in the call rotation, they'll call that next person, it usually starts off on alert, headquarters will call whichever officer they're trying to get to, the officer will respond, then the next step would be a--just a basic description, like a--copy, disturbance, or medical emergency here, or something like that, and then once that officer responds, because they know what it is and where it is, the communications will give them more information if they have it, over the radio, while there are officers on the way.
Information - Control	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	It's usually pretty short. Occasionally, they can put a lot of information in the notes, on the computers, that would go to the officer's computer, so as soon as he gets that call, it'll come up on a screen, or if--depending on whether or not it's an emergency. If it's not an emergency, they'll sometimes do it by phone, or just ask them to step up if they're nearby.
Information - Control	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	... It's bad enough that off--the complainant is the victim of a violent crime, aren't necessarily capable of giving us exactly information as they can, and since things--there are very few cross streets, it's a very foot traffic heavy area, they were going to--they generally just tell you the last building they remember, or the building that they actually know that they're closest to, rather than a more specific location, and communications officers don't have anything else to go on, because a lot of times, a complainant or the victim can't give any more information, so just the officer has to just drive around in circles, get out and walk around, and never be able to find it.
Information - Control	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	... We'll speak with them on the phone to have them come in. But I always want to meet with the victim, sit down with them, put that human aspect there and let them know who the detective is, who the person investigating it is, let them feel comfortable talking to us. And once they make that connection, I think maybe they feel more comfortable calling us with information.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information - Control	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	We do not a lot. NCIC obviously, if we're entering property that's been stolen or wanted persons. Other than that, we don't interact with them that much. Sometimes we'll have them run packets on a suspect or something to see criminal history. But other than that, it's not a lot, not nearly as much as the average patrolman does
Information - Control	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	Sure thing. I mean, [short laugh], computers obviously, cell phones; gosh, I am trying to think of anything else. You know, for me, honestly, it's more old fashioned, it's more the telephones, the face to face, the, you know, the computers, the emails, those type of things. Social media - I personally don't get involved in social media but the department has a social media page that we put information out there; we're still a little bit with that, but you know me, I guess I am a little more old school and maybe not as much - how do I want to put this; technology, I embrace it, it doesn't scare me, but I am more a pen and paper person because I rely on that, I know it works but other than that it is really the basis of what I deal with.
Information - Control	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	You know, we tend to stay away from the conversations on the MDT and again, unless they are of critical nature or very - not critical nature but sensitive nature I guess is the best way to put that, we generally don't have those chats back and forth on the MDTs, again, unless it is something that is officer safety related, you know, maybe embarrassing to whatever the complainant may be, something along those lines, you know. We don't put that information out via the radio. Because we are such a tight community, people tend to know, okay, if I send an address, you know, in the [city], you know, ten people might recognize that address and who that address is associated with, so if there is something of sensitive nature or a potentially embarrassing nature, we tend not to, or we try not to put that information out there for public consumption.
Information - Control	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	So generally the calls come in to Dispatch and they will route us to wherever we need to go.
Information - Control	LE	R	Field	46-55	21-30	Male	LE-R-060	Both. They will tell us where to go and they will have the address on the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					MDT with some notes, you know, about what we are going to and so forth.
Information - Control	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	For the most part. You know, the dispatchers do a pretty good job at determining what questions need to be asked, you know, so that we have an idea what we are going to; some domestics, for instance, you know, Dispatch will ask if there are any weapons in the house or if someone is intoxicated, and in pretty much all the calls that we get dispatched have an element of questions that would typically go with them. So I mean, generally it's pretty good. And some of the stuff may be a little more colorful stuff that you don't put over the radio is entered into the MDT.
Information - Control	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Yeah, I would. I mean, I think they try their best, but if - you know, there is always what's lost is the nonverbal or you have let's say a dispute maybe that is domestic. While it is a domestic, depending on what the office is asking for, you know, domestic, if I hear that there is another officer at a domestic, that I am going to go help because I know volatile domestic situations can be and so forth and so on, but sometimes, the dispatcher might not know - okay, well, so and so on [town] is on a domestic, should I send another unit automatically or do I wait for them to ask for it? So, a lot of times, if we hear it, we might not even wait to get dispatched; we will just start and that way whatever.
Information - Control	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	You know, for instance, if I get called to do an accident investigation, I might get an initial phone call from Dispatch saying can you come in and do this accident? Then once I get en route, I will, on the radio, I get into a car that has MDT, usually I will use my cell phone on the way to kind of figure out, you know, what's going on and by calling the other accident investigators, figure out how close they are, do I need any equipment, so that stuff. Traditionally, I don't know how they would have passed that on, you know, before cell phones and stuff; I guess you could go through Dispatch but if they have already left their house and you don't have cell phones, so I think it is kind of streamlined, some stuff, but again, if it doesn't work.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information - Control	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Yeah, they know that they gotta go and where to go but as far as okay, hey, this, you know, this person has got a history of violence or whatever might not make it to the opposite frequency.
Information - Control	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Most things are done with our police radios. We can also send messages over the computer if we dont want to call, you know. A lot of the public have police scanners and certain information that may be sensitive for specific crimes you dont want to go out over the airwaves where somebody is going to, you know, immediately post on Facebook or on the internet or call the station in a panic. So we will send that over our private messenger system.
Information - Control	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	A lot of the behind the scenes information, I would say, through the MDT in the car, like their driving record history, their criminal convictions, you know, our previous contacts with them definitely we can access that through the car computer or up front here at the station but the let's say human-to-human transmission of that information through the radio is [unintelligible] so it is a little bit more of a priority because I could scan that information, I can pick up the important points that I need to relay to whoever and say, hey, he is a white male, 5 feet 6 inches, weight 160, brown eyes, brown hair, warrant for whatever, this is what we are looking for, so, instead of sending them, you know, 10 pages worth of documents that they then have to scan it and stuff like that.
Information - Control	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	... they create new parcel ID numbers and then so there's a script that runs over the weekend that says these parcel ID numbers are not in the GIS layer so that tells me that there's new stuff that they did and then I can go in there and update that and do those updates so yeah and as far as you know other things that need to be updated you know people will send me an email saying this address needs to be updated or this thing text messaging thing needs to be updated or who knows what so yeah.
Information - Control	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	I provide them information you know we do follow that kind of NIMS idea where we have a public information officer so and of course I'm not an ultimate decider right so because [Name] is my manager, [Name] is my manager so my position is split between two departments right so

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								I'm in the [County] Communications Department which is a [County] entity and then [Job title] which technically is a [County] entity also but it's managed by the Sheriff's department which is a department on all its own so yeah.
Information - Control	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	Information...the largest amount of data we need almost always comes from dispatch so when we get dispatched to a call we need to know what's going on, where's it at some of that dictates the priority level, how many people are involved, are there injuries, you know what's the life safety factor as far as what kind of additional resources are we going to need to get there that kind of stuff so that would be from the call side.
Information - Control	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] ... They send us street numbers, give us the name of the people, outside of that we got to go from what we can figure out we know. Like he was saying we have to (INAUDIBLE 00:12:36) if we don't buy our own GPS you better have a phone.
Information - Control	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] Dispatch gets the call from the reporting person they say this is what's going on. We have a computer system which is the call log center, they sign in, call tells us what it is and then they reach us over the radio tells us what the address is and then send us... We're going to do a search warrant on a house we do what's called (INAUDIBLE 00:21:50) which means no one else in the department talks but the people that are out there on that call.
Information - Control	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	...We're a very small county here so generally you're just getting information from your radio from dispatch right so dispatch is going to call us if they've got something they need us to do or some place they need us to go. Maybe you know when we're in the station we're just talking to people so that's kind of with dispatch there with you know the sheriff there but or sometimes you know if we get a call we're going and we're talking to people so sometimes we're just we're just talking to people.
Information - Control	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	So it's not that hard but it's also kind of not it's not through the radio like the rest of our communication is with dispatch. Dispatch is sending

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								them usually the calls. They're getting their calls too from dispatch so often times we'll get those calls from dispatch and not from fire right?
Information - Control	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] ... we'll provide her with the names that we're aware of because we're out on the street and the guys that work in our unit both [Name] and I don't know if I'm allowed to say these names.
Information - Control	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] ...Now if we're in a certain area for a certain type of crime burglaries for instance we'll let the dispatcher know that and we'll be on a separate channel from the regular patrol units and then the dispatcher will switch over and say hey I got a burglary in your area so that way that's our priority that's why we're there we head over that way but in the meantime like we said all these other forms of communication if we're working on stolen cars that's when we have most lines of communication come in because the stolen cars travel from jurisdiction to jurisdiction and we're getting this information from so many different officers.
Information - Control	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S2] The app has 185 officers on here and how many jurisdictions? Probably 20 and like this car hit the license plate reader. They put it out instantly 185 officers know about it rather than it taking time to go through dispatch or whatever. We would never get that information. It's real time.
Information - Control	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] The way it would work is the LPR behind the computer would tell [City] Communications then [City] Communications would contact [count] Communications. [County] Communications would then put it out over our radio so there's such a big delay with the app with the guy that's sitting at the LPR computer takes the picture sends it out to 185 people right away.
Information - Control	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S3] Yeah I mean as far as accomplishing our tasks in our job I think it does but along with the hectic thing has become with so many lines of communication in ways of receiving information is has become a lot there's so many different things going on you got to pay attention to 20 things rather than just listening to the police radio.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information - Control	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S3] ... you're getting lists like this daily from other jurisdictions along with our list of stolen cars so you go down the list of 15 different cars you know what I'm saying it's an overwhelming amount of information you know so you're not just looking for that one red truck now you're looking for 15 from [City], 10 from [County].
Information - Control	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S3] I think the only thing that would cause problems is the unnecessary people being on the communication level. You know what I'm saying? There's certain people that you want putting information out because they know what is the pertinent information. Sometimes you got too many people putting out unnecessary details that don't necessarily involve other people. I don't know. What else guys? I think if you necessarily don't have a restriction on who is putting information out that's when it kind of gets all cloudy you know what I mean?
Information - Delivery_mechanism	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	--risk associated, right? But not being able to hear, like, "Okay. What did he say? Did he say he needed more people or did he say he was coming out of the building?" I mean, you would think-- you're like,"Whoa." I mean, it's sometimes that bad where you
Information - Delivery_mechanism	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	And I'm like, "Okay. I got to push that [over to the side?]," and I grab my clipboard, and I just start writing. That's okay, too. I mean, nothing's perfect, and I totally get that.
Information - Delivery_mechanism	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	Yeah. And for what it's worth, there's some human element to that. I have that great fleet map that I showed you, and I'll print one for you.
Information - Delivery_mechanism	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	Yeah. Which is great, right? I mean, we have that. Let's see. What else? Our county protocols are all digital so they don't-- they used to publish a manual. I mean, the thing was this big [laughter], but let's say I want to know like, okay, a pediatric-- for burns, there it is right there.
Information - Delivery_mechanism	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	--26. And so 26-year-olds like to text. And so that's what we do. We text a lot. We don't talk a lot on the phone. Email a bunch. And I like face-to-

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								face with people. So I spend a lot of time-- the Comm center is probably, I don't know, maybe 100 yards fr
Information - Delivery_mechanism	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	...A lot of times they just write stuff on a tablet and then type it into a word processor later and enter the times that they looked at their watch to get the times. They can't buy any of this stuff. But they have crime there, and they have people that get sick there, and heart attacks, and all of that kind of stuff.
Information - Delivery_mechanism	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	We call them cards because the original set is actually physical cards. In case our computers go down--
Information - Delivery_mechanism	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	--We have those as backups to flip through. We have the online medical part that We just click on, but the numbers associate. so the number one is abdominal pain, number two is an allergic reaction, and it goes by alphabetically.
Information - Delivery_mechanism	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	Yeah, we should have the face to face type of phone calls but we don't. So we have-- it's a very large disappointment to us.
Information - Delivery_mechanism	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	--writing addresses down on cards, and keeping track of all our calls on cards.
Information - Delivery_mechanism	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	I remember when we didn't have email [laughter] back in the day. Everything was done by paper memo and you'd have to go to your mailbox--
Information - Delivery_mechanism	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	--in the station and get the envelope out and look at this. Leave requests were done by submitting a leave request on paper to the scheduler. And it would go via pony mail, and then it would come back. So just--
Information - Delivery_mechanism	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Sure. So when I come in I will always have my breakfast and then I come in here and to our roll call room, sit down for a meeting, they'll go over any important information, sometimes we have trainings in the morning, we will go over any like major incidents that maybe occurred the day before, anybody that we're looking for stuff like that. Anything related to ECC if there's some type of technology issue if there's something like that and then upcoming announcements and things like that. Just like

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								housekeeping stuff and then after that I will go into the room depending on we're assigned something different every day you know based off of what your qualifications are then they try to fit in training.
Information - Delivery_mechanism	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Right. So we have to manually enter that information into our CAD system in order for us to be able to search it and then present our CAD system is not as dynamic as say Google right...
Information - Delivery_mechanism	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	Basically, you're just going to make sure that-- anywhere from 8 to 10 minutes-- depending on the call. If it's not a big deal, you're going to keep checking their status. Make sure they're secure and they don't need any backup. Or if they do, you get backup on the way. If they need, like in that instance where [Name] needed a file, so I ran the file and he asked me to save it, so you print it off.
Information - Delivery_mechanism	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	Most of it's word processed. I just like to write things down in case I miss something. Generally, I'll write it down and then put an X through it. I enter a lot of stuff into the computer and then sometimes the officers will call they're just rattling off so fast. As I think you saw, I was taking a phone call and talking on the radio, so I got them in one ear and I'm writing stuff down in the other, just so I don't miss anything. We also have this complaint book which is old school, but if the computer goes down I can still go back-- if somebody comes in and wants an accident report I can still go back and say, "Oh, that was last week at [name] and [name]." And then I can run and get the report, so even if my computer's down I can still pull the report and make a copy so they don't have to come back.
Information - Delivery_mechanism	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] I think the more we can do the better. I mean, we have a lot of processes that are all paper-based. If I have to fill out an overtime card, they're still printing them out on pieces of paper. It just doesn't make any sense, right? I should be able to put in my pay. I should be able to submit my time off request. I should be able-- and all those kinds of things should be accessible from a connected device. Call-offs, call-outs, my on-duty status, my off-duty status; all those kinds of things really should be as simple as pushing a button. And today it's all done phone calls,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								face-to-face, all those kinds of things. So yeah, I've got a whole list of things that we are going to try and tackle.
Information - Delivery_mechanism	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	It helps us because as long as you have a Facebook account or you have a Twitter account or you have this account or that account. But being rural, we still have to go back to the paper press release or making sure that family takes care of family, friends take care of friends.
Information - Delivery_mechanism	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	I mean I typically speak to the same people in the public quite often. So I mean I guess in a way yes, but I mean on a personal level, no.
Information - Delivery_mechanism	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Yeah, absolutely. Actually, see Monday nights. Well the Mondays I'm off, our rotation actually goes out for steaks. We go and we talk, we'll talk about I guess serious situations, stuff that deputies worry about, the dispatchers worry about, 'cause we don't always find out what happens once the deputy goes on scene or how they solved it. So we don't always talk, but sometimes we talk about football, or it's not always the same thing. But we definitely spend time together outside of work, and I think that helps the working relationship for sure.
Information - Delivery_mechanism	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	It definitely starts the same and ends the same. We come in. We relieve the group before us. They're usually tired or ready to go. So yeah, we'll talk, [inaudible] pass on what situations could have, could come back up, what happened, and is not going to come back up.
Information - Delivery_mechanism	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	So they physically see me and my major which is only two steps below the sheriff and sometimes the sheriff will actually come with us to that fire chiefs meetings to ask if there's anything that we need to address, if there's any issues or just sharing information back and forth basically. Besides that they are... very well aware and used to call me [Laughing] if they have a question or a concern. But I also do sometimes bring along a dispatcher randomly, just a random one that hasn't been, hasn't met them, especially the newer ones just so that way they can put a face to that voice that they're going to hear on the other side.
Information - Delivery_mechanism	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Right. Not unless they're bringing paperwork or something but other than that no.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information - Delivery_mechanism	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Oh, your partner, well your relief comes in at about 5:15, 5:20 and you go over shift change, tell them everything that's happened, who all they have working for them, and just kind of make small talk and they make their coffee and you leave and that's it.
Information - Delivery_mechanism	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Yes. Basically the start of my day we relieve, 'cause it's 24/7 so we relieve another shift. We'll do like a pass it on type of thing where they just let us know what happened the night before. We just log into our system. We do check everything like to make sure our radios work. The radios are still working from the night before, the 911 lines are still working and everything like that. And then at the end of the shift we just prepare to give the coming on shift their shift notes or reports.
Information - Delivery_mechanism	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	[Laughing]. It is to a certain extent. I do think we do need to test our systems but sometimes it's like, well, what if they go down, like right after I do it, like how am I going to know it's down? But so we do test our systems. We kind of I think we need to restart them 'cause our computers never take a break. I guess like they--they just run 24/7. And the passing on, I definitely think that helps because you get to know like what happened on the shift before. So if somebody calls us right back and like well I just talked to y'all, I'm like, no, you didn't talk to me. But, yeah, we'll know what happened because we can look at the shift notes and they can tell us. They've already told us what happened.
Information - Delivery_mechanism	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Just to jot down little notes or whatever but not... we don't--the only thing we... we record by paper and pencil is escorts and like details and stuff like that but nothing major.
Information - Delivery_mechanism	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	I mean we're 1984, '85? At our best right now. And they're using notepads and writing down information. They're handing it to someone else and they're keeping notes of that. And I don't mean just a stack, a small pad, I mean stacks of paper. And they're using their mind, their brain to figure out problems. They're not relying on the technology to solve the problems. They're using their human brain power to find the solutions to those problems and it's just a portable radio and a portable on the other end with a deputy or a fireman in a boat going, okay, I've got

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								6 people out of this house, where do I go next. And they look at the next piece of paper and say go here. And so that's kind of what I think that we're looking so often to say technology is going to help us in these big events when you know you'd better prepare for that big event to take that technology.
Information - Delivery_mechanism	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	...So I guess you could say that's the stressful part. I like dealing with just police stuff. I don't really like dealing with, I wouldn't say the public, not face to face. I can deal with them over the phone; I don't really like face-to-face contact with the public. So that's kind of stressful. Having to do office stuff in there, that's kind of stressful, 'cause I'm more call-oriented. I'm more, I like that kind of stress, not office stress.
Information - Delivery_mechanism	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	... And then we go from there, and then at 7:00 we get off, and we give them the rundown of what happened that day. If it's serious, I've got to let them know. During this time, we're also dealing with national crime information files. We have to do a lot with that as far as if somebody stole your phone, and [inaudible] NCIC. If someone gets a hit on it, I have to verify that. That can happen time anytime during our shift. And so if we input someone as like a wanted person, I would really need to relay that to the next shift.
Information - Delivery_mechanism	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: Well, we have briefing beforehand outside this centre. Yeah, so that's every day and then they will come in as a group, relieve the ones that are leaving.
Information - Delivery_mechanism	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	I mean, I guess to elaborate a little bit more, we operate with phones, radios, computer, email, face-to-face. So I tend to, if I can, I try to operate face-to-face... I do better that way. It makes it more personable. If I can help somebody out, I'll try to go to their location and be able to talk to them...
Information - Delivery_mechanism	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Back to the communication, so we have that form. And then we do more of the verbal communication, sitting together. Everybody face-to-face, talking. There's some documentations or policies that are read every morning. We may share a quick YouTube video if need be of an

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								incident before, lessons learned type thing. And then after that, most of it is all just one-to-one or individual verbal communication throughout the day...
Information - Delivery_mechanism	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So at the station level, it would be face to face. On actual incidents, important or urgent messages are delivered via radio so that they can span the whole audience, whether it's just myself or my partner on the scene saying that we're going to the hospital or that we're at the house or what we've come across. If it's just something I need you to go to the second floor and check the battery and smoke detector, that's face-to-face. That would not need to be transmitted over the whole county or the whole population. So I would say most all communication in my profession is done verbally. And probably 50% is face to face. The other 50 would be over a means of radio communication or phone.
Information - Delivery_mechanism	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	We usually interact with them frequently and well, usually if we need to talk to other first responders, police officers, or whatever, usually it's face-to-face on the scene. We don't have radio communications with them. Our radio systems aren't connected to theirs...
Information - Delivery_mechanism	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: new ambulance setup] So I mean, I've spent my whole career literally standing up in the back of a-- well, moving around during the call in the back, and it's not like I'm running around, or there's drama, or whatever. It's just like, I got to grab this, then I got to grab this, then I got to grab this. And there's railings on the top. So you're kind of holding on the railing, grabbing this thing. You're looking at the traffic, and you know where you are. So you're like, "Is it going to be bumpy," or, "There's going to be a stop." And your partner is also trying to tell you like, "I got to stop fast," or, "There's train tracks coming," or, "There's a bunch of traffic ahead," or whatever. So all those things are happening. And you're not trying to be like cavalier and be like, "Oh, I can swing from the bars," or anything. I need to be up...
Information - Delivery_mechanism	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...sometimes, if I've got something I've got going on, or the other firefighter has something that he or she has got going on, when they come in a little bit later, we'll ask, "Hey, did you already check the oxygen

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								bag?" "Yeah, I got that." Or, "I didn't." So it's pretty much face-to-face communication. There's no electronic record-keeping on that.
Information - Delivery_mechanism	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	But from the EMS side, we do so many things where we talk and we experience, based on what we see. Whether your face is drooping or if I'm talking to you and you're not quite making sense. You are making sense, but I'm picking up on something that isn't quite right. So how do we portray that to the hospital sooner? EKG monitors. Our monitors don't have WiFi or Bluetooth capability. They purchased them right before I got hired here, so I think they bought them in 2006 or 2007. And if you think back then, WiFi was still kind of limited. We can't send our 12-leads. We can't send our heart monitor pictures to the hospital. If I thought it was important, which I never do, I could lay out their EKG and take a picture of it and send it. But again, we don't have that capability with the department...
Information - Delivery_mechanism	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Always two of us. We have a paramedic. His title is a fire paramedic who drives the ambulance and me as the paramedic in charge. So my role is to document everything that occurs in the shift even if it's not pertaining to a run. It pertains to inventory of the ambulance, anything that needs to be done to the ambulance, or work to be done, maintenance. Everything that goes on in the 24-hour period, I need to document that in a journal... At the firehouse in a journal... It's all by hand.
Information - Delivery_mechanism	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: preferred mode for getting detailed dispatch info] MDT's good. That's efficient enough for me. There's another way too. If we're at the firehouse, and we're waiting for the call, there's the alarm terminal, another computer, and it alerts us by a bell. And the computer system, a female voice will come on, "[company], we have a call, person down." It tells us the address, and that's pretty much about it. At the terminal, at the area where the computer is at, it's called the-- brain fart. It's a printed ticket. A paper copy comes out. It'll tell us the company, the time, basic information, the address. That's pretty much about it. And I always take that ticket with me.
Information -	EMS	U	Field	36-45	6-10	Male	EMS-	[RE: dispatch printed ticket] I have it. So when we get to the scene of the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Delivery_mechanism			Responder				U-012	address, I have that ticket with me because I don't have nothing else, besides my radio and that ticket. Because we could go to a high-rise, the [high rise] on the sky level, and the security there's like, "Hey, what do you guys have?" I pull out my ticket, "This is what we have." "Oh, okay. I'll take you to that person." A lot of times, they don't know we're coming.
Information - Delivery_mechanism	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	So the way that works out is the first 15 minutes, we do what is called a lineup. So whoever is in charge of the shift in-- on the nights that I'm in charge, I have a little briefing that we go over, whether hospital statuses, pertinent information like that. And then everyone goes and does housework or chores.
Information - Delivery_mechanism	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	...And then once we're with the patient, and the family, and other providers, it's all person to person.
Information - Delivery_mechanism	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] Yeah. Trying to standardize that so when there's a big event. But at the same time, for me, I've done that so often, that was just refresher, but for my trainee, that might be his very first experience, so he's going to pay a lot more attention and might be more overwhelming.
Information - Delivery_mechanism	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] Apparently new stretchers [laughter]. I mean, I would like to go back to the old days of just writing paper trips--
Information - Delivery_mechanism	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	.... We have a MRU, it's a mobile computer that we get-- we download runs, runs get downloaded to. We fill out our paperwork on that.
Information - Delivery_mechanism	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	Visually's nice. Because for the ones-- like for driving, I mean, the city's so big, so it gives you cross streets. So that's always nice to see.
Information - Delivery_mechanism	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	Yeah, it'll give you the grid system, it'll give you the hundreds, so-- and then [City] just a big grid, so you can figure it out from there.
Information - Delivery_mechanism	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	Honestly the only other thing that we use is once we get back we kind of do old school. We have paper patient care reports so we write all the patient's information and then when we get back we log into the computer here and actually type a narrative which is a storyline of what

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we did and what happened on that call. Printer, copier, fax that's about it.
Information - Delivery_mechanism	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	It's paper. It's a checkboard. We don't even check in addition to that. We'll run it, make sure it's operational. Like [Name] said, we go through different compartments, clean it, run it.
Information - Delivery_mechanism	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. Right now, everything's done on paper. We've looked at a couple different ideas of going to a digital system. But without building it ourselves, nothing really exists that does what we need because the physical check are just a database of saying yes, it's there, or it's not there. It's pretty simple to build. And we've actually kind of, here, worked on a real simple process of doing that. But what really needs to be done is to have a log of, it's there, but then a log of how it's working. So is it working? Then, if you did a repair to actually notate or maintain record of the repair. There really isn't a system that's there. And then, the other thing would be is if it's not broken, but there's still something that's... whether it's not quite right or not operating right...
Information - Delivery_mechanism	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So they're trying to create a standard. But to do that all across the United States is almost [tough?] because you got to look at data back in the history of years past. And you might have done yours in Excel, and he did his in DOS, and I just did mine on paper. So there's really no set system, just like [Name] said that we had Fire Zone, we have different software programs, but none of them communicate with each other. So it's just a lot of data entry. Then all of a sudden, we'll start doing it. And then all of a sudden, the computers don't run on certain programs. So then you got to get rid of that program, and then you end up with a new program. So it's constantly changing.
Information - Delivery_mechanism	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: lifeline rope] And so we have an inventory software that we can track when we bought it, and we can track when we throw it away. But the only way to track all the stuff in the middle is a piece of paper.
Information - Delivery_mechanism	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Then it even goes deeper than that, in terms of certifications. So based on what my certifications are, may be different than [Name] certifications. So when do those expire? How many CE hours do you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have to [inaudible] that certification? And then you have injuries. You can throw injuries on top of that. So here's this individual. Here's all the injuries to date. Here's what happened. Here's the surgeries. There's so many different aspects of it that's not tracked. A lot of it's paper-tracked, like [Name] said, but it's never really data input. And you can actually look back at a history...
Information - Delivery_mechanism	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: working in Arson] Radio-wise, by the time we got there, everything was over, everything was done. Most of ours was face-to-face communication or cell phone comms with each other, the other investigators, or the state investigator. Everything was cell phone or text message. It was rare we do a lot of radio comms...
Information - Delivery_mechanism	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: working in Arson] People were touching your stuff and moving your stuff and dropping your stuff, and at some point, you just went, "I'm going to write on a piece of paper with a pen." And that's it. And I went back to pen and paper. And a good pen that could write when it was 20 below and that was it. Because trying to use technology in that-- it made sense, but it just was impossible to do. It was just too hard.
Information - Delivery_mechanism	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Yeah. So generally station five is our support, or we support each other with technical rescues. So we always respond jointly. And again, with that, we're part of the [Name] Tech Rescue Team. So our last one was a trench collapse with a guy in the bottom, out in a different jurisdiction. And so we responded with them out there. And yeah. So we go on scene, and there's a guy in the bottom of a collapsed trench. And for that, we'd shore up the sides, and then we start digging out. And as far as communication, it could have gone better. There was the incident command structure, and he was delegating all the tasks and all that. But, yeah. I don't know if we had a common radio channel. It was mostly face-to-face on that one. How in-depth, do you want me to go about the call?
Information - Delivery_mechanism	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Boy. Typically I have technical rescue response. I'm either going to be operations which is-- because typically what we do, even on a fire, I might initially be command, but then I'm going to pass that on to our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								battalion chief which would probably most likely what would happen unless we assign this gentleman to operations or something like that because sometimes it's based on expertise or something like that. So I would probably initially be [inaudible] in command and get things going and then assign your operations and then assigning specific tasks. But then eventually I would probably work with command or pass command on. And then, that would be-- on calls like that, it's a lot more face to face. But I would do some stuff over the radio. Officially passing command and assuming command, and things like that, that's all face to face stuff.
Information - Delivery_mechanism	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	And on those, they usually do a brief with everybody before. And it's not over the radio. It's just, "This is what's going on. You're doing this. It's doing everybody good," something like that versus a fire where they usually air everything just so everybody knows because everybody's not there, and it's a little more hasty and a little more of a fire and stepping back on the HAZMAT.
Information - Delivery_mechanism	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: information dissemination] It's usually via email. Depending on how sensitive it is, I might just make a phone call because if there's something usually that's sensitive, I don't want to put it out via email.
Information - Delivery_mechanism	FF	U	Manager	46-55	11-20	Male	FF-U-021	Face-to-face meeting every day. Same thing, I kind of update on city attorney stuff, things we have going on litigation-wise or if any of the concerns he needs to be aware of. He's over at a separate building. That's where arson's staffed out of, so he's kind of my eyes and ears for arson, and we also run the Youth Fire Stop program as well, so that staff's a smoke trailer and does all the education components for the schools, for DPS, and things of that nature. So I kind of get an update from him what's going on. Investigations, any arrests, anything in that aspect I need to know about...
Information - Delivery_mechanism	FF	U	Manager	46-55	11-20	Male	FF-U-021	[RE: vehicle schematics] You've got to pay for them, but they initially had books. So it's kind of a sort of hazmat book. It's an emergency response guide book for all the vehicles. And you could flip to Prius and it'll show you where the high voltage is running. So it doesn't change really our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								operations internally. It just gives you a lot more to think about.
Information - Delivery_mechanism	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	[RE: call information] We get it on the print-outs and the mobile data terminal. Like I said, they have to be on something that you can digest quickly. It may be too much information to put on any one thing, or it may not be able to process it as quickly as you'd like. But some of it would be nice to have on the screen. You could scroll down. We do have it on some of those where-- how many floors, because I go to high rises all the time. I don't know how many floors are on there. I mean, so I've got hundreds of buildings in my [inaudible] district of high rises. I don't know each one how many-- what the floor is. Be nice to have that either on the printout or on the screen so you could access it.
Information - Delivery_mechanism	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	[RE: cause of communication issues] It's probably two-fold. First, a lot of it is operator error. Like I said, radio discipline - being able to use your equipment and also being able to make the correct communications at the appropriate times. And I'm sure there's also a technological aspect where you have to make sure it works. If anything, there's a tendency that things may break, need to be replaced. As a whole, our department, we don't embrace change very well. So we have a lot of people that-- I mean, I don't think it's as much now, but I know that whenever I get a radio, in the beginning, some people are like, "I'm never going to use it." Just like the computers, "I'm never using that." 150 years tradition unimpeded by progress. We're just getting to the part where we don't file forms with carbon paper anymore.
Information - Delivery_mechanism	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	It seems like we're definitely moving in the right direction. I know they're going to roll out-- for the medicals, I think we're going to get iPads soon where you can do all the information, capture patient information via the iPad, and then have them fill out their paperwork instead of being on paper like we still are.
Information - Delivery_mechanism	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Whoever said face to face, that's the best method of communication. Receiver and sender and sender and receiver. You got me and I got you, and we understand our messages from face to face. Relying on technology so, "Oh I hope he got that message." Or, "I hope I got this

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								message to achieve that might be three blocks down the road on a large scale inset." The assurance of knowing that you got your messages across and especially critical messages. There should be no doubt or wondering if this is going to fail us, this system. Did he get the message or-- again, nothing beat face-to-face communication. I say, "Well, I'll write him a letter."
Information - Delivery_mechanism	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...Gaining complexity is the real killer of simplicity from my perspective. And how to improve that? A lot of face-to-face communication, maybe having one guy operate the radio. Giving messages instead of everyone having radios, and all this talk and garble. I have to be responsible for listening to all this, because it may apply to me. So funnel. So you take your five people in a room. You tell them all be quiet, one speaks. So that would be just a suggestion for that, just not being in a position where you're going to be overloaded with, where this technology has become rather burdensome in your decision making or thought processes right now.
Information - Delivery_mechanism	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	I can still read the PDF and scan through the pre-fire plan but it would be nice on the scene to always have it printed out and ready.
Information - Delivery_mechanism	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	That's why we have extra whiteboards, that's why we have extra radio setup.
Information - Delivery_mechanism	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Right. And face-to-face communication will always be the best route. If I'm talking to you right here, if we just put a barrier up right now, inference and stuff will be lost, there may be so many things that we would lose.
Information - Delivery_mechanism	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	So we have lots of-- any of these buildings downtown we've input maps. So it's a great example of communication overload. What a wonderful resource to have if I'm going into one of these big high-rise tall buildings. Right? So it's a great resource to have. No one would ever argue that. But then all the sudden, I've got this 30-page map. It's got everything I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								want to know about that building on a computer. That's overload because that doesn't--
Information - Delivery_mechanism	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	I think we can go back to face-to-face and we'd be a lot better off for most of our transactions.
Information - Delivery_mechanism	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	Yeah, we had paper map and plus you just knew your territory and all the traffic and communication from dispatch was over the air. So if you needed more information, you had to ask for it and they'd give you what they had.
Information - Delivery_mechanism	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	Face-to-face if possible but I'm assuming that if I'm there asking about it, they'd probably already gone up in the building. Face-to-face is best. And then if there's something I feel that everybody else needs to know, if they tell me face-to-face, I'll transmit it out. But a lot of that stuff, I'm just making sure that they're completing stuff as they're supposed to without any difficulties.
Information - Delivery_mechanism	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	...So then command can either do it face-to-face but probably, with the large footprint of our high-rises, command will be on one side, the FDCs, the water connections will be on another side. Command will have to do that by radio and say, "Engine three, your water supply, what's going on? Check the hydrant. What's your pressure?"
Information - Delivery_mechanism	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	Sometimes you can go to direct and sometimes that works with a walkie-talkie. But the biggest thing is-- and this has happened on the scene where I had to leave the fire control room, walk outside, go face-to-face with command, walk all the way back in there, just because I can't communicate out. And command really needs to know what's going on from the fire control room but we're just separated by concrete that our radios can't get through.
Information - Delivery_mechanism	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	Oh, so the orders, the battalion chief sets the board up. Battalion chiefs actually come in at 10:30 in the morning. So they set up the board and everything for, "Okay. These people and so and so are on vacation. Well, I need to fill those spots with overtimers." So they're going to come in and say, "Okay. Well, battalion one, which is station one, two, three, four,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								sevens--," yes, and sevens. So they have those, whatever that was, five stations. So they'll look and say, "Okay. Well, this many people are off. We're going to bring in overtimers to fill those spots."
Information - Delivery_mechanism	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	Correct. So me, being kind of the low guy on the totem pole, I'm usually here pretty early. As soon as the orders get up, I'll go up, make the board. So that would include who's riding where on each rig. We have three different rigs here. So, for the most part, it's pretty straightforward but when we start having a lot of vacations, especially over the summer, it's kind of a game of, "All right. I don't think anybody's going to yell at me if it's set up this way," and then right below it we'll add the notes on what's going on throughout the shift, whether training, or what have you.
Information - Delivery_mechanism	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	With my limited amount of experience here I haven't really come across a situation where I could say that, "Okay. Somebody wasn't giving us enough info." Unfortunately, we don't make as many fires as we would all like, but [laughter] I suppose that is a good thing. Like I said, all the officer's training that they go through so our drivers can ride up as lieutenants if the situation calls for it, just like our firefighters can ride up as drivers, when they go through the program in order to do that - they call it getting your hat to ride up - actually, it's a fairly in-depth program from what I understand. So through that training they do a ton of different scenarios where's it's, "Okay. You guys just need to start getting it into your head now that this is the kind of information you need to be telling everybody else coming in." So, like I said, I can't think of a situation yet where I've not had enough information going in.
Information - Delivery_mechanism	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	I think the only time that I would probably be on the radio is to acknowledge a request. So if they say, "Okay. Firefighter one, we need--" something random that we wouldn't really-- "We need an attic ladder or something to get up in there." "Received," scoot down, grab the attic ladder off the rig, and that would be a face-to-face meeting with the officer. The only other things I can think of is maybe if you were coming in not as a first on-scene unit but a later in the scene unit, that you'd be confirming or contacting command, whether that's still the first-in officer

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								or the chief. By that time, that utilities are shut down, evacuations are complete.
Information - Delivery_mechanism	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	For something like that, I would venture to guess that that would be information given to us outside the rig. So the officer won't have access to the MDC anymore. It's going to be strictly radio updates. So it would probably-- it's kind of hard to make this all play out kind of the way that you want it to because of how quick we can get on scene, because each unit has their own objectives they're supposed to handle.
Information - Delivery_mechanism	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	So more than likely, if nobody calls in saying, "Hey, I'm in the apartment next door. I'm disabled," or nobody outside knows that there's a person in there that's disabled, it's going to be one of our rescue or ladder companies saying, "Hey. We got a guy in here. We need to get him out. It's starting to get a little smoky in his apartment." They're going to give us, more than likely, a face-to-face kind of update.
Information - Delivery_mechanism	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	That can be kind of overwhelming. So, at that point, it's sometimes best-- instead of holding on to technology like you do, it's just better just to go back to the old school, and say, "Okay, what do I have?" And just start writing it down, putting it up on the whiteboard.
Information - Delivery_mechanism	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...So we come in, first thing we do is we do our line up, which we did just before you got here. We all met in the kitchen at 7 o'clock in the morning. I've looked to see what the activities are that we've got on our calendar. I look to see what activities the chief has on his calendar for us, sort of figure out what the plan for the day is, communicate that plan, talk about any issues within the station or the apparatus that have come up. Often there's things that are broken, or just got fixed, or stuff like that. Lay out the plan for the day
Information - Delivery_mechanism	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	It's probably 10 o'clock. Yeah. And then at 10 o'clock, most of us start to do our rounds, which most of us start to visit stations, and it's not an expectation, but I try to go ahead and gauge with the station at least for 45 minutes to an hour.
Information -	FF	S	Supervising	46-55	21-30	Male	FF-S-041	No, I have a chart, a paper chart.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Delivery_mechanism			Field Responder					
Information - Delivery_mechanism	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	There's four people who staff that position. We get in at five o'clock in the morning, usually a little bit earlier as a courtesy, and the first thing we do is just kind of, hey, what do you got for me and we'll go through the landings with the person, we'll go through what units are in and out of service, any sort of major incidents, anything funny [laughter], anything bad that happened, anything that. The watch commanders are the supervisors at OUC, even though we all know each other, we're still required to go reintroduce ourselves every day. Kind of talk, shoot the shit with the dispatchers. basically needs to be passed along. We do basically a pass along report...
Information - Delivery_mechanism	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	And in reality, 99% of what we do in that place is documented. I mean, we're literally on camera when we're sitting in there.
Information - Delivery_mechanism	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	Tradition and fail-safe, I guess the journal's never going to crash.
Information - Delivery_mechanism	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	We're almost always face-to-face. We're literally relieving the person.
Information - Delivery_mechanism	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	I don't know. Good question because I'm trying to move-- so when I'm on an incident we keep track of it through a tactical worksheet and it's handwritten.
Information - Delivery_mechanism	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Yeah, the tunnels and they're in different locations. So some guys just have this giant binder full of paper, and I can just use this.
Information - Delivery_mechanism	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	...My aide would do staffing. He would do it with pencil and boxes. He'd fill in buckets and boxes. And you need fireman boxes filled and you need [inaudible] box.... So if he knew this battalion needed this and he had extra ones, okay, you send them there. And I think six guys with pencil could do a lot better job than a million-dollar computer program because before, the deputy, all he had to worry about was numbers.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information - Delivery_mechanism	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	Yes, so we would-- in the morning, we always had a meeting to kind of outline what's going to happen over the course of the day and then there was four incident safety officers, each one had their own administrative responsibility... We did quite a bit of face-to-face or conference call meetings about new products coming out or stuff that we want to see that we think that could maybe work for us.
Information - Delivery_mechanism	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	...On the fire ground, obviously it's face-to-face interaction, radio communications.
Information - Delivery_mechanism	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	You know, this sounds really silly but we had a couple of people from our Homeland Security EMA come meet like a table-talk thing and I was away over July and I was watching the Nationals game--
Information - Delivery_mechanism	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	.... And if I want to get through to one of my company, we split up into three teams. If I want to get through to them or they want to tell me what they found, if I gave them something to do, it's almost impossible. So sometimes we do face-to-face.
Information - Delivery_mechanism	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	A lot of the times it's interviewing people. When you get there, talking face-to-face instead of having a third person tell you. It's asking the person. And sometimes like I said, it's people explaining it the wrong way or being a civilian, not knowing what he's looking at. But as far as radio communicate, I think everybody does a good job except, like I said, some people get on the radio and just start talking.
Information - Delivery_mechanism	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	Yeah, yeah. And if radio gets overwhelmed I do a face-to-face. Or I send somebody else.
Information - Delivery_mechanism	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	No. No, I have to tell them and I more or less do it to say, "Okay. Open up here, we don't have to open up here," and then you can look at a building, you can look through smoke and see a body. But I know there's technology out there, certain cameras, but if-- every officer has a TIC camera, so I don't know-- they'd have to have a huge TV screen to see

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								everybody's camera.
Information - Delivery_mechanism	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	.... But if I had a display that was very legible and easy to read on board, and obviously the way the apparatuses are - and they can be different from different firehouse to different firehouse - because budgets don't allow us to buy the same thing throughout the city. The more people that could see it, the better. Any information I always had, I would always try to just verbally tell everybody because I didn't feel like I should be the only one that knows this. I would leave the firehouse with that printout but if I saw something, I would say, "Hey, the 20th floor, they're saying is loaded with gasoline drums." I would tell everybody [laughter] about it. I don't want to be the only one that knows that.
Information - Delivery_mechanism	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Sure. So as a firefighter, the daily routine is come into the station, chat with the people that were on shift before, the 24-hour shift. We work 24-hour shifts. So in the morning, we would talk with the people that were on the apparatus before us, see how their day went, see if there was anything, any information for them to pass.
Information - Delivery_mechanism	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	So right now, we utilize a paper-based pre-fire planning system.
Information - Delivery_mechanism	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Yeah. Certainly, so communication within our station is almost always face-to-face. And even often with our outlying stations it's-- I guess it wouldn't be face-to-face. It's often over the phone if you want to-- there's nine stations in [City] that are staffed [inaudible]. So face-to-face communication and then a lot of telephone. If you wanted to reach somebody, we can see in our staffing, daily staffing, kind of software where everybody's at. So if you need to get somebody, "Oh, this person is at station such and such. I'm going to call that station." Communication from the administration is very much not face-to-face, it's through email. The department relies a tremendous amount on email for communication, and yeah, to the extent that it's almost, at some degree, starting to become a problem, I would say. Just the fact that everything is just kind of-- if I've pushed out an email, I assume it's read by everybody and just lots of email, lots of communication that way. So,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								anyway, so the inner crew, definitely face-to-face. Your direct supervisor, face-to-face. Communication to and from admin, a lot of it is not face-to-face and done via email.
Information - Delivery_mechanism	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	And currently, we write all of our forms on carbon copy type paper, and so we're changing to a tablet-based reporting system which will send that information to a database and facilitate better communication with the hospital and, basically, the electronic patient care record kind of system
Information - Delivery_mechanism	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Right. Yeah, but ideally, anything that's better than I go on nine calls in a period of throughout the day to different healthcare agencies that have people that need to be transported. I get a jumbled pile of paper from this person. I get a nurse who's, say, very acute and aware of what's going on with this person and can tell me everything. I get a person who has no idea, really, what the medical condition is that this person has. They don't really know, they just happen to have a shift change. I get a person that tells me something about their health that's completely bogus.
Information - Delivery_mechanism	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	So the daily routine for a line officer - so that's when you're working shift work - is there are 24-hour shifts here in [City]. and the mornings always start off with roll call. So we make sure that everybody's there, everybody has what they need, they're in their proper uniform.
Information - Delivery_mechanism	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Most communication, preferably, is done face-to-face. You have a less chance for a misinterpretation of the message. You can maintain eye contact, interpret body language and posture, and things like that. So face-to-face is always the preferred means of communication, even on the fire drill ground. We try to do face-to-face communication as much as we can. Other communication, obviously, you have email for things that they don't need an immediate response. Or phone calls are also forms of communication, obviously. But around the station, yeah, obviously it's face-to-face for the most part...Most communication, preferably, is done face-to-face. You have a less chance for a misinterpretation of the message. You can maintain eye contact,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								interpret body language and posture, and things like that. So face-to-face is always the preferred means of communication, even on the fire drill ground. We try to do face-to-face communication as much as we can. Other communication, obviously, you have email for things that they don't need an immediate response. Or phone calls are also forms of communication, obviously. But around the station, yeah, obviously it's face-to-face for the most part
Information - Delivery_mechanism	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	It's not difficult. We, typically, only interact with police when we have a joint incident. So something that requires law enforcement and an EMS response. And then, same thing kind of applies if we're in close proximity. We'll have face-to-face communication.
Information - Delivery_mechanism	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Depends on the call. Currently, all of our medical reports are hand written on a triplicate type sheet. And so if we see a patient and they're going to stay at home, or they're going to go drive themselves into the hospital, or if they're going to go drive them self to their personal doctor, we don't have to fill the paperwork out on site. We can. But we don't have to stay there and leave a copy with anyone. So we can take that back to the station and we can fill it out on our desk when we get back. If they're going to get transported by a medic unit, or an ambulance, or an aid car to a hospital then we need to stay on scene and fill that paperwork out so that we can give a copy to the ambulance, or the aid car, or the medic unit to stay with the patient as they go to the hospital.
Information - Delivery_mechanism	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	No. The paper form is only for-- well, there's different paper forms, obviously [laughter]. There's the medical paper form. And then, if there's a car accident, there's usually an injury associated with that. And so they would also get that same medical form. If there's a fire, there's not a specific paper form for the fire. But we definitely take notes of that and record that.
Information - Delivery_mechanism	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	--and you forget about it. That would be the only instance that I can initially think of where technology would get in the way. If you get too focused and you only know how to work with technology then what happens when it doesn't work? That's the problem. So we always have a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								paper system too. So if all the technology fails, we have paper maps in our apparatus. And we can always use a paper map.
Information - Delivery_mechanism	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	So we have our pre-fires. They're all on paper in binders. The tablets have most of them loaded on the tablets.
Information - Delivery_mechanism	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	--devices. They're used to a map. They're used to the paper. And so I could see somebody who's used to working on maps and paper-- all of a sudden, now they have three or four devices in their hand.
Information - Delivery_mechanism	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Yeah. I think when I started, anyway, it was all paper. When I was a volunteer, anyway. It was all paper. So we would get a dispatch from the dispatcher, and we would have to write down. If we weren't in the station, you could grab the printout. We [would?] have a printout. But if you didn't have that, you'd have to write down the address, and write down what channel that you're going to be responding on.
Information - Delivery_mechanism	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	And probably the biggest thing - and I'm not trying to give you my big break here - but when I'm on scene before, I had a piece of paper and I was able to jot notes like in a column. Because sometimes, things get fired out at you - BPs, heart rates, different things - and I had a level of awareness that I was able to keep, and to be able to make a note in the column and then finish my form later.
Information - Delivery_mechanism	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] The third person on a crew always helps. but you're right. That thing requires nothing more than the ink that comes out of your pen. [talking about a wooden board with a piece of paper]
Information - Delivery_mechanism	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] I've got a pen in my pocket, I'll write down vitals and try to scribble as much information as I can on my hand. That way my attention is the patient.
Information - Delivery_mechanism	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4]... Not everybody gets to hear the face-to-face communication, so I used to not like to have a whole lot of radio communication, for instance. I would always try to do face-to-face. What I found was is it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								created a lack of situational awareness on the incident as a whole, so it was really incumbent upon me to make sure that as the incident commander, I transmitted out important information. But if I needed-- if he was the guy, I would get the information from him face-to-face, because when I have a face-to-face conversation, then I'm going to have the best of what he says. I may be able to read a lot into what he says based upon how he's saying it and the look on his face while he's saying it.
Information - Delivery_mechanism	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] ... So by the time I get to the 54th, everything is changed from the first one. It's impossible. So we have to depend on the information coming from [Name] to the battalion chiefs that can go out and communicate with the crews.
Information - Delivery_mechanism	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] That's face to face, trying to unify our command when we can when we have these large-- even when we have a large fire, I want a police sergeant there. It's not a fire incident. It's a police sergeant in my command post.
Information - Delivery_mechanism	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	Big incidences. Yeah, it saves times and it cuts out that middle person of the old of saying, you tell this person, by the time it gets to the tenth person, it might be a little different. Well, if I can just tell the police sergeant and have him relay to his people--
Information - Delivery_mechanism	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	.... So I have a good understanding of the benefits of face-to-face versus just the emails and the texting. I understand the benefit that it's easier for me to communicate with you face-to-face than a short little blurb on an email.
Information - Delivery_mechanism	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	Yes. Monitoring the radio, windows up. They may get somebody that comes up to their window that wants to ask them a question. Unless they're ready with everything they're going they won't roll their window down and talk to that person yet. Now if the person-- if it's an emergency, certainly, but we've become disciplined, I guess, in that aspect where we understand the importance of listening and paying attention to the radio.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information - Delivery_mechanism	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Q: Okay. So that is the face-to-face communication where-- SME: Correct.
Information - Delivery_mechanism	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	[RE: communication with other responders on scene] Most of it's verbal. If it's a major incident, like a fire, a huge auto accident or something like that then you'll have a TAC channel, tactical channel, assigned to you. And if you're not within eyesight of the person who you talk to, it's gonna go over the radio.
Information - Delivery_mechanism	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	So we are expected to be here at 8 o'clock in the morning but most guys come in earlier, around 7:00 so they can relieve the people that are here. You can imagine if you've been here 24 hours, you're dying to get out of here. Some of us. So we show up at 8:00 and then our day really doesn't start until 8:30. From 8:00 to 8:30 there's our coffee break. People are just talking day-to-day on things that need to be done, how the rig's responding, if something's missing, or what type of fires or calls that they had and just heads up.
Information - Delivery_mechanism	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	There's a chart and the officers, their job in the morning is to delegate those tasks. So we all take turns, so there's a watch chart and people are assigned.
Information - Delivery_mechanism	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Well, in a fire-- you might have to do a face-to-face with the incident commander, the chief that's planning the call. Because there's so many people talking on the radio that if it's important enough, instead of waiting, I'll just go outside and do a face-to-face.
Information - Delivery_mechanism	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Or I'll give you an example, the other night we went to a vehicle crash here, two blocks away on [Street], and the police were first on-scene. And it was a drunk driver in one pickup and then another SUV, and they were both pretty banged up. And so in that case, communication when I first on-scene with the officer, "Just how many victims do you have?" And he would point out, "I have two." And there actually turned out to be a third victim that was sitting down. It's when a officer pointed that out to me, some other officer, and so I went and checked her out. And I go, "Which vehicle were you in?" And she goes, "The black SUV." So I went

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								back and I communicated with the person that was driving that vehicle and I go, "Do you know this person? She says she was in your vehicle." He goes, "No. I've never seen her in my life." So I tell the cops what's going on. Turns out that she was a prostitute that was in the car with him, and he did not--
Information - Delivery_mechanism	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Everything was face-to-face, yeah. So it turned out since we had three victims, communications to our dispatch, I requested another ambulance to come.
Information - Delivery_mechanism	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	So on the squad, our systems are so dated. So Google Maps doesn't really work and they're not precise, so we rely a lot on our phones. So a lot of firefighters-- if I'm driving the squad I'll have the person behind me go, "Can you map this out and tell me directions over the headsets?"
Information - Delivery_mechanism	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	No. I mean, our tours change all the time so you're working with different people, and you get to know how people work. So say you didn't work-- you haven't worked with this person before, it'd be nice just to have a face-to-face and work things out how-- if we do get something, how things should go.
Information - Delivery_mechanism	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	Right. It's funny. We think about technology these days as electronic technology, and we fail to realize that chalk and maps are all technology--
Information - Delivery_mechanism	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	You have to wait. And I don't think they've experienced that because we haven't had any major events. But on the other hand, if we do have a major event and the system becomes real busy, we can fall back to our conventional backup system and be still the one on one conversations, but we're not competing with anybody else other than the fire resources.
Information - Delivery_mechanism	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	I'm not sure I can answer that question just because in every after action review, communications is in the top three items that need to be reviewed and improved upon. And so, I mean, I don't know if I can answer the question if it's helped or hindered. We're still in the top three of items that always seem to be an issue in any major event. I'm sure it enhances it to some point, but we may rely on the technology to share

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that information where verbal communications could have, should have been directly involved. And I mean, that could have been walking up and talking to somebody, versus trying to send them a message through an MDT, and the system being down or congested, and it never made it there to where-- it's dependent on the situation and what's happened, but--
Information - Delivery_mechanism	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	On the scene just guys being able to you know hear their radios you know if they're in and out because you get on scene things are loud. You're going to have to yell at guys you know face to face. I mean you and I are what five feet apart we'd be hollering at each other most of the time trying to communicate you know depending on the scene. Just being able to hear each other and you know so we can understand each other that would be a main thing I think on a lot of it. So just you know just improvement radio wise I think would be huge. You know we could have every guy have ear pieces on their gear or something included in there where we can be talking and doing stuff and hands free stuff would be great.
Information - Delivery_mechanism	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	Yeah. Communication is invaluable whether it's over radio, whether it's face to face. In light of 9/11, [Organization] as brand as it is it is vital to understand at least the basic incident command system. It's the first step in safety and from that you know it responds whether it's face to face verbal, whether it's over radio communication things of that nature. On a scale of 1 to 10 out here our communication on scene I would rate it at a six.
Information - Delivery_mechanism	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...we live and die on our MDCs. There's been times we've had [CAD allergies?] in dispatch, and the programs go down, and you got to jot stuff on pen and paper again as to where you're going, what the call is, to catch it up later and people just-- [they pull on getting?] more. They don't know anything different.
Information - Delivery_mechanism	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...one of the deputies was in our city, actually ended up firing shots at a suspect. We got the call from another party in the house, and we were already responding had units on scene, before we got relayed that it was

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a [county] deputy involved, and then we've got the scene shut down. We're taking care of it when the Sheriff's Department and all their resources start rolling into the scene, and we're immediately screaming at them, "Stay in your car! Stay here! We've got this." We don't want any blue-on-blue stuff because you don't know where we're at. We don't know where you're going. Because in order to switch everybody to a channel, it takes time. You would think that they could hit a button and do it, but it doesn't work and so... We just shut them down, we handled it, and then it was all face-to-face conversation, and it went through that way. And it got taken care of...
Information - Delivery_mechanism	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: paper, but want electronically] Yeah, things like tow sheets. We're still doing them on paper, even though technically I can build an app into our eticketing where we could do that. We have a lot of forms from the state. Like drivers, if they get a DUI, then those revocations, they won't allow us to do an electronic version. We try to come up with an electronic version and, "Oh no. You can't do that." I don't know why not. I can print out three copies. But they don't like that. Other things, like DUI field notes and stuff like that that I've already generated as a PDF, we're still not using electronically. We have access in our RMS system to do affidavits which then keeps it as part of the permanent record in there. But, again, at the command level, we haven't forced the officers to use that, so some still use Word and type it up. And then we're scanning and attaching, all to six different systems, and I think that's the big challenge...
Information - Delivery_mechanism	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...There's a lot of things that-- there's really almost nothing that we have to do on paper anymore, I don't think, but we do. Even our eticketing, it imports directly into the court. They have it the next morning. They still print out paper copies. Our records department, it could import directly into our RMS system, but because they had to click three times to merge the records, they print them out, and they hand type them in. There's job security there [laughter]. So it's there, but... we still have stacks and stacks. "Paper and printer is expensive." Then stop doing it [laughter].

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								But we keep doing it, even though we have other places to store all that stuff.
Information - Delivery_mechanism	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	... If we're out doing something, and we don't really want to be known that we're in the polices, we usually text each other via the phone, so we're not using radios. If it's people that just have questions, usually we'll just come back to our office and we'll talk about it face-to-face. Other times, if it's someone that's not working or if it's for everybody, we'll do email- excuse me. Or, like I said, we do a lot of follow up on the phone too, so a lot of phone calls.
Information - Delivery_mechanism	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	So the state passed a law where it charged the [Job title] Offices, state-wide, with creating a system so that every law enforcement agency in the state submits records to them electronically. And they engaged a vendor who did that, and that vendor wrote the interfaces with whatever records management systems we have. But it's a separate system you log on to. It's a manual data transfer now, where you go pull the case and it populates the fields. And then they have to go through and do the attachments and you can label what each of the attachments are. The additional step that all the records folks have is they have to print out the narrative. So the report that I wrote, they print it out, create an electronic copy of it, and reattach it...
Information - Delivery_mechanism	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: evidence discovery process] ...if someone's on the stand and they hand them a printed out copy of the report, they want it to look the same as if the officer printed out of their own records management system. Not change the format that the officer's going, "Well, this looks totally different than how I've ever seen this." Which then can lead to some credibility issues on the stand. So it was kind of a good catch that someone realized that could cause issues down the line and in court. It creates an extra step for the records folks to go through and do that.
Information - Delivery_mechanism	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: electronic evidence discovery process] And that's always an interesting one. When I first brought that up, the person in records was literally printing it out, rescanning it, and attaching them as a PDF. A said, "No, no, no, I meant just print it to PDF and attach- it's all

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								electronic. You don't have to physically use paper for anything." Then there's a whole discussion on, do you still keep paper files? ... Do you just keep electronic files? I think it's mixed within the county. At the sheriff's office, we still keep paper files. So everything is replicated into a case file that's stored somewhere. The salt mines. I don't know. Oklahoma, Illinois. I don't know where they are. So, yeah, we have all of the physical copies of everything.
Information - Delivery_mechanism	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: evidence discovery process] Today, if they [district attorney's office] were to call us up, we'd just make a new copy of whatever and take it to them, which we probably already gave them a copy and whether it got lost, got misplaced. So there are a few safeguards built in and a few potentially helpful things as these systems come up. And that's sort of the tracking, the data integrity, all the other stuff that people think that any system should have when you're talking about data and data transfer.
Information - Delivery_mechanism	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: station life] ...usually, at some point, it's going to involve leaving and doing some field work, whether it's coming up to a meeting to discuss radio procedures or going out to someone's site because they're having issues with their in-car computer. Or this time of year is when we get all our new cars that are coming in so there's been a lot of driving to [City] to pick up the new cars as they're getting outfitted at the electronic shop.
Information - Delivery_mechanism	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	... Our vehicles are kind of accurate as to where we're located, but we can't establish jurisdiction based on what our vehicle reports, we have to do it on that phone or with a map or something, a physical map.
Information - Delivery_mechanism	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	so our cheat sheets, if they're on our phones, it's because somebody took the time to scan theirs and then email it around. That's how I got mine, as well. Another officer took the binding off and actually sent it through the scanner... But our municipal code, you can search for stuff, which is pretty convenient. Because otherwise, [statutes], the revised statute, state law, we have to go through this gigantic book to find stuff, and it's not always the most convenient thing to- or time efficient thing

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to just sit there and peruse... I mean, it's fairly user-friendly for the most part.
Information - Delivery_mechanism	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: learning geography] So I have my duty bag, and I keep my-- so we have, they're laminated and they're yea big or so. And so each side is a sector, so you've got Baker one side, Adam on another, then Charlie and Delta. So if in situations like that, if you absolutely needed to pull out your map, then you just-- and that's what they do with a lot of the recruits or people in training is they'll have them pull over, identify where it is, and go.
Information - Delivery_mechanism	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: roll call] It'll be the whole shift and then a supervisor, whether it's a lieutenant or a sergeant, will come and address the watch.
Information - Delivery_mechanism	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: using station computer instead of vehicle CAD] It's easier to navigate. Kind of instead of being able to sit in the computer and use a physical mouse, instead of the pad and it's off to the side. And if it's something like a picture for a warrant, then you could print it out. So the more tangible to look at the photo in front of you.
Information - Delivery_mechanism	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: getting call info] It's radio and they'll throw it-- you'll get it on the computer pretty much simultaneously. If you don't have a computer, usually I ask them to repeat it, and you write it down on a piece of paper.
Information - Delivery_mechanism	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: technology use] I would say it's pretty much computer and phone-based. Other than that, it's all through-- word of mouth is really still going to be powerful with police work. Because people want to talk, but they don't want to talk. We can't exactly always talk to somebody on the phone or say, "Hey, come into the station." People still want that type of business to be handled privately. So even though we have all this wonderful technology, there are still people that are shy to get into-- some people don't even want their names put in reports, let alone phone numbers and all that kind of stuff. But I would say the bulk of what I'm doing is computer-based.
Information - Delivery_mechanism	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...We also have a meeting, and it consists of the commander and all the other bosses. And we go over any violence, any shootings, any robberies

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								from the night before to make sure everybody has the same information. There's a PowerPoint slide. We send it out to all of the officers on the watch on all three watches, the TAG team, any other outside unit who needs it. We do that. I make sure that the probationary police officers feel comfortable with their FTOs. If they have any questions, they can come and talk to me. They can come ask me questions when they're not with their FTO. If they're scared to ask their FTO or if they have any comments, cares, concerns, they can come to me just like anybody else on the watch. So there's probably some other stuff but I can't remember.
Information - Delivery_mechanism	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...I will then go to the VRI office, which is the Violent Reduction Initiative, and will ask them how many cars are detailed to the [district name]. They will tell me how many cars. I will go upstairs myself if the [special information officer], if he is there. We will place the cars strategically where we're expecting violence. And then I will type out all of the HunchLab boxes that they are going to be into. And then I will mail it to everybody that needs to be mailed. And then I will go and bring it- bring the maps downstairs. They don't have a color printer. We do. So I have to go down there and go give it to him. I will go over it with him, see if there's any questions they have, and then I will go back upstairs...
Information - Delivery_mechanism	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...I think we need a lot of information and specifically I have a hard time coming up with things I mean for my job from a command staff level I mean we do a lot of in person communication. We certainly have lots of meetings face to face I know that sometimes as nauseam. But as far as the information I mean I'm trying to think of it from my perspective or from one of our average you know patrol officer/jail deputy's perspectives I think they just constantly need information passed verbally through email, through telephone, radio...
Information - Delivery_mechanism	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	Typically, they arrive to work, and then they get started. They brief in the morning or in the afternoon, whichever shift they work. They have what we call pass down or shift briefing. Each officer's a little different, but they'll get in their cars, and they'll go start patrolling.
Information -	LE	R	Field	18-25	5 or less	Female	LE-R-002	There's not a roll call, we're not really big enough for that but we have a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Delivery_mechanism			Responder					briefing. The two-day shift officers will kind of talk to the two-night shift officers about what happened today, if there's any kind of be on the look out type of stuff or any kind of talk about burglaries that might happen or things like that. Just sharing of information really.
Information - Delivery_mechanism	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	That's more of on a detective level. That's more of we'll-set-a-time-and-date kind of level. But on a patrol level, at least here in [City], it's-- yeah, we don't work together. We don't take calls together, nothing like that. I mean, occasionally, if I see a deputy making a traffic stop, I'll pull in behind him, and walk up, and ask, but there's no communication on the radio, nothing like that. It's just more of in-person communication.
Information - Delivery_mechanism	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	Well, it just kind of varies. There's different forms of communication that patrol would use on a regular basis, anywhere from your normal stuff that you hear, the radio, communicating with dispatch, communicating between officers. Then you have your messaging on our computer-aided dispatch, on our CAD systems. Essentially, it's like text messaging, but on the computer. Or even on a broader state, just emails going back and forth with day-to-day stuff, with our BOLOs, be on the lookouts, just information, briefings, going on our emails a lot of the way that that gets communicated, and obviously cellphone, and face-to-face, and all that.
Information - Delivery_mechanism	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	So before, when I was on patrol, you'd check your email whenever you get around to it. There's usually nothing too important on there that you don't get in our daily briefings or just word of mouth kind of thing. In this job, I check my email, I don't know, hourly?
Information - Delivery_mechanism	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	I mean, it depends on what you're doing. There are paper copies for family violence. If you take a report for family violence, a lot of times you have to fill out a family violence victim statement form, is basically what it's called. And then, that gets put in with your arrest affidavit, and it gets sent to an attorney, the district attorney's. So there is definitely some paperwork still. Crash reports still have paperwork. It's getting less because it's getting more digital--
Information -	LE	U	Field	26-35	6-10	Male	LE-U-005	We'll have a show up thirty minutes prior when the shift first starts, at

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Delivery_mechanism			Responder					<p>which point we discuss some of the BOLOs, what we call Be On the Look Outs, for certain events that are happening. See any events that the other troops have worked previously. Sometimes we'll discuss training, sometimes we'll discuss tactics. We've had a call that's been-- that was complicated, dangerous, people make mistakes. We like to debrief those. That's one of my biggest concerns is to make sure we debrief people and learn from our mistakes. So we'll talk about the tactics involved, what we can do better, those types of things. So that's in a 30-minute window, at which point we'll move to starting to check out equipment, which is a task in itself. So it takes about 30 minutes or so. That includes loading up the vehicles, which is a huge fiasco for us because when we start running into technological issues, we've got a lot toys in the car and a lot of those toys don't play nicely with our wireless. So that's a big window when we're off the street tied up for a while. And then we'll hit the street somewhere about 45 minutes to an hour after the start of the day. They'll cruise around. It depends on what I need to get done for the day. I'll either do paperwork or I'll help them out with some hot calls that'll will clear the calls off the board. We'll try to clear everything up. About 30, 45 minutes, by he end of the shift we'll try to cruise back inside and have show down, which is where we offload if we have evidence. If we have extra reports to get done, if someone's got a big case, everyone will kind of jump on it. Some people take some evidence and turn it in to lessen the burden on that individual, and then we just kind of wind down, and then we're done for the day.</p>
Information - Delivery_mechanism	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	<p>So that's the way to kind of work around just having two of us in the office. So some days it can get busy. Because we can have a homicide and we can have a bank robbery when my sarge and I are out. But in addition to those types of responses-- oh, we do go to the scenes. What we do is we basically get the information from the investigating detectives or the officers on scene and then we provide media with the briefing... So that's what we do in those types of incidences except for officer-involved shootings. The chief will talk on that. So usually, if we have a situation like that, we'll get a timeline for him, get him all the</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								information. He talks to everybody on the scene and then he provides the briefing. We just set everything up.
Information - Delivery_mechanism	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	...But really, it all starts from our inbox which is our email and daily media, along with public, send requests for interviews, questions. Why do officers do this? I was on a traffic stop and the officers did a great job here. Those kinds of things all filter through our office
Information - Delivery_mechanism	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	So they also monitor the stuff like any big incidents that happen overnight. In our email address or in our inbox, we will get what's called a SIN which is a significant notification. Basically, tells us if something's going to garner intense media attention. They'll put at the top like if it's an aggravated robbery or a celebrity was arrested or something like that. We'll get a notification.
Information - Delivery_mechanism	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	Yeah. And they're usually not very long. Because the briefings is-- it's the initial investigation. So officers responded this date and time to this. Suspect came in, took an undisclosed amount of cash and left the bank on foot. I mean, we give out very minimal on a briefing. Later on, as we get more information, then we provide it to the media or we'll have the detective do a press conference. And we'll show photos or whatever else that we need to do.
Information - Delivery_mechanism	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	...So they won't dispatch us calls, but we're still at work, per se. And then, when the time allows, when you are done doing whatever it is you're doing, whether you leave roll call, which is a process where everybody comes to work and goes and the supervisor meets with everybody at the station, gives them anything that they need to know for the day, any information that they need to know, if there's any lookouts, if there's any of the actual departmental logistical stuff that needs to take place.
Information - Delivery_mechanism	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	Sure. Yeah. Yeah. I mean, every once in a while, if it's incredibly busy, a supervisor will tell you to go in-service from the road, but 99% of the time you're going through a station. You're sitting down. You're having a face-to-face and then you would leave from there and everybody would go out their respective areas. We're provided geographical areas which

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you're responsible for.
Information - Delivery_mechanism	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	I mean, it's all professional. I mean, when I'm at the station, we're usually talking about something that happened at work.
Information - Delivery_mechanism	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	...everything of importance that happened that day, you'll see a list of things, and you can click on it, and that'll give you the information about what happened. And that's what the sergeants do during their roll calls. They'll look through that, and they'll read those out loud for people to hear what happened.
Information - Delivery_mechanism	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	...And if you're not near another county building, you'd have to pull into a gas station and use the-- when the dispatcher would call you-- now, the radio was even worse back then. I mean, the reception was bad. But there was no computers, so you had to write down every call. Then once you write down the call, of course, there was no apps to find GPS or anything. So we had the old maps. We had to pull them out and find which way to go and stuff like that. Report writing and everything we did were-- when you arrested somebody and you charged them was all done by paper. I'm trying to think what else we did that-- I mean, it was all-- everything was either hand-written
Information - Delivery_mechanism	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	Yes. In the grand scheme of things, it's better, but like I said before, there was more personal contact with people when it wasn't all computer and all technology. I mean, there was more face-to-face conversations. Now you go to a call, and people will just show you an email of text conversations [laughter] as opposed to an interview. Now you have all these other things.
Information - Delivery_mechanism	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	Verbally. Verbally. In a verbal conversation. So now, you're getting accurate information because you're getting it right from a source within those outside agencies.
Information - Delivery_mechanism	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	Yes, so they're in here as well. They have a station. Whenever we go live from a planned event, they have a station where they send fire and EMS. Both come. Now, on the command bus, they're not on that, but generally where our command-- they have a bus as well. So, generally, where they

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								park, we're close to them. Yeah. We're close to them. So we can convey information whether we go over the radio or we physically walk to them.
Information - Delivery_mechanism	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yes. So we would come in, go to the locker room, get changed, put your vest on, put the belt on, and then we'd go to roll call, which the beginning of every shift, all the members of your shift are in a room. And then your supervisor is at the front of the room, and he gives you assignments such as Officer X is assigned to area Chinatown, and Officer Y is assigned to Union Station area, and this is the vehicle you have, and this is the equipment you're issued. And so basically, the roll call is essentially time where everyone is together, and they give you out assignments and what roles everyone's taking that shift.
Information - Delivery_mechanism	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Oh, it's good. I mean it's helpful that-- so my desk is there, and the Assistant Chief's desk is right in the other room. So if he needs anything, he's like, "Hey, [Name]--"
Information - Delivery_mechanism	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah, face-to-face more, except for a lot of people that are under our bureau.
Information - Delivery_mechanism	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah, admin email boxes. And then some things still need to be hand carried though, depending on what it is. But in the office itself, it's mostly just verbal communication.
Information - Delivery_mechanism	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Or you know the person really well. Yeah, it's hard to interpret an email, so I'd rather go to someone in person. It's easier and usually they can't ignore you if you go to them in person.
Information - Delivery_mechanism	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Our day begins is we log in to our mobile computer, and we go to our area of responsibility, and we get a schedule from the supervisors, so we know where we're going. And then, sometimes, we'll go into the office if there's anything we need to check. Sometimes, we'll go to a district station and attend their structured roll call. For patrol officers, they have to report for structured roll call at every shift, whether it's day shift, evening shift, or midnight shift.
Information - Delivery_mechanism	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	I've communicated with state police. Federal wise, anything I've done with them, it's usually we will brief together and then we'll take care of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								whatever the assignment is. But radio wise, federal level, I haven't used radio for that level. Q: Okay, so it's usually face-to-face when you're dealing with --? SME: Yeah
Information - Delivery_mechanism	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	... And we rely heavily on NIMS in the ICS structure because we use a lot of special events, so we're bringing in folks to make sure we have that. So to communicate, to make sure everyone understands-- when you bring in that many law enforcement and we have a large briefing where we bring them in and basically, we walk them through the plan. The parts of the plan that are important to them, what they're going to do. And we do an overview of the entire plan so they're aware what's happening.
Information - Delivery_mechanism	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	...We actually host the bi-weekly meeting with all the law enforcement partners here, FBI, Uniform Division, everyone. They come, so we kind of all talk about, "Hey, this is coming up. This is on our radar." So everyone's kind of aware what everyone else is doing.
Information - Delivery_mechanism	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	...New daily briefs, any pertinent crime trends or anything that's come in overnight, or something that's pertinent to our bureau. Like we have major crash, so any crash fatality reports, anything like that.
Information - Delivery_mechanism	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] ...And they'll have that exact assignment, zone 15. So they'll look at the board then know they're going to zone 15. If they come back from sick leave or something like that then they'll actually walk into the supervisor and the supervisor will return them back to work and give them an assignment. But if they're coming in when they're scheduled they'll see their assignment.
Information - Delivery_mechanism	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...And so on a day-to-day basis we handle, I mean, really, department communications required just amongst ourselves. And even at the PSAC you'll see upstairs face-to-face or walking from one side of the floor to the other, there's a lot of communication that can happen that way just upstairs in the PSAC. But out in the field as well, as an incident may be growing, we deploy field command posts and other-- there are sort of forward command posts and command posts that are set more

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								back. And there's really a lot of face-to-face interoperability going on in the field.
Information - Delivery_mechanism	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	They are paper. They're on a computer. It's a rather archaic system that we have for storing our case reports. It's called CRIS. So we refer to it as the CRIS system. And it's not linked with other systems, so you have to-- if you want to get a copy of a case report, you have to log into another system to print it out. But we would at this system. No, we're not allowed. I know how to download it as a PDF, and I could easily throw it on my laptop and review it there, but we're not allowed to do that. So we just print out a paper copy, and then we just sit down and go through them, make our notes on them, and then just go meet people, and then just keep building our notes on the back of those reports.
Information - Delivery_mechanism	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	So what I want-- I want to finish on that, actually. The reason why I told you that story was the format, and that's what I want to impress upon you. We put out this car description: silver, black thing. Now, if I sent out-- how do I want to get that out to my officers for situational awareness in a dynamic situation? They don't have time to sit and open up a PowerPoint. I can't send them a PowerPoint slide. I need to send them a text message, bing, where it pops up, "Oh, that's the car." Now, when they have that visual of that car, that makes them a thousand times better at finding the car. I give you a auditory description, and you get-- yeah. But when you see it with your eyes, like, "Oh, this year, make, model, round headlights, square taillights," you're going to be so much better and more effective at finding that car.
Information - Delivery_mechanism	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	...So that's something just to be aware of, but how many black money collars do you see drive by every day, unless you really focus on a license plate or a damage to a vehicle. It's kind of really hard to keep that in the back of mind along with the gray car that's wanted for this, along with the blue car that's wanted for that.
Information - Delivery_mechanism	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	... So when I come on a Monday, I kind of always go on the computer. And I'll go back a couple pages just to see, "Hey, what's going on here?" I think just from my officer's safety point of view. He said, the lieutenant,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								"It's pretty violent. We're doing real bad with the shootings recently." So that's just for me. I just want to see what happens.
Information - Delivery_mechanism	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	Q: And generally through the radio? SME:No, face-to-face.
Information - Delivery_mechanism	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Yeah, some people. But I definitely try to keep those relationships going throughout the day. But it's a great environment, very positive. I love it here. I mean, I get to sit down and talk to the chief often. I talk to my commander, [Name], out there. I talk to him.
Information - Delivery_mechanism	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	I figured it didn't matter. But yes. So it's a nice environment. It's a very open environment. We're not a big city so we do talk to the chief. We do wave at the chief. We do talk to him. In some big departments, you don't ever see the chief.
Information - Delivery_mechanism	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Even though we rely on this stuff, it's really important, I would rather shoot a quick email and then run over across the town and go talk to someone in face, just to-- it's more personable. Because you have all the time in the world to use the phone, so. But that's why I do this position too. I like to be in front of people. I like to present.
Information - Delivery_mechanism	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	...So with that, all you do is you stop somebody or whoever, you get their driver's registration, and that's where you scan their driver's license, scan their registration. It automatically populates into the computer. And then you just hit print, and it prints out an exchange of information or the accident report. Everything is done on the computer, so for me, I've seen-- that was kind of the beginning of my career. That was I think when it really started to go. Here, nobody writes paper, rarely even a paper ticket any more. Almost all tickets are done on the computer.
Information - Delivery_mechanism	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	.... And then we bring up pertinent informant in a briefing, "Hey, be on the lookout for this vehicle," or, "Look, all these [inaudible] happened in this neighborhood," or whatnot, to try and pass that information down to the officers, the line staff, so that they know what was going on while they were gone.
Information -	LE	S	Supervising	36-45	21-30	Male	LE-S-028	... We're a really small agency but we're a small agency so we all know

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Delivery_mechanism			Field Responder					each other and we all get along. I can go and sit in the chief's office for half hour, just chatting about whatever, as well as I can go and sit in our dispatch center or whatnot.
Information - Delivery_mechanism	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	...I mean, as a rule, we'll meet as a command staff. We'll meet every Monday to discuss things. Other than that, I mean, I'll get phone calls from my immediate boss who's Deputy Chief [Name]. So she and I talk fairly frequently, usually by phone. Generally speaking, I don't have a lot of meetings with my bosses. It's more phone conversations about specific topics. And again, I try to get after the precincts.
Information - Delivery_mechanism	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Yeah. I mean, for interpersonal stuff, it's all face-to-face. For work-related stuff because we're all in the same precinct, a lot of times, it's face-to-face, but sometimes, it has to be emails because they all work different days.
Information - Delivery_mechanism	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	.... So if we're at a scene where both police and fire are present, it's very easy to talk to them. I think the police department and the fire department has an excellent working relationship. And from that perspective on a one-to-one basis at a particular call, it's very easy to communicate with them
Information - Delivery_mechanism	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Oh, absolutely. Absolutely. Because it's the same as having a face-to-face conversation or trying to have that same conversation by text or email, right? Because I can look at you and I can read body language. And if one of or both of us get stuck on a point, we can work that out.
Information - Delivery_mechanism	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	... So I will use the computer to look at that. I'll look at bulletins that are on the computer, I'll print those out, and I will ask the other sergeants in the area what was going on that day. So that's how I try to-- and then we have a board that we use and I look through the board to see if there's pertinent items--
Information - Delivery_mechanism	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	... So then we go into roll call, give the information. After roll call, the officers that go to cars, they go to their cars.
Information - Delivery_mechanism	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	--we talk face to face, right. I use the old phone if I need to call a detective or a follow-up unit. A lot of work I do, I have to call our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								operations center and I use the phone, either the work phone or my cell phone to do that. I do find that-- I know we don't like to print a lot of stuff out, but I do print stuff out for a lot of reasons. And if I want to print, I have to walk over to the door to pick it up. And then if I want to print it in color, like a picture of a person's face, I have to walk way down to the other one person--
Information - Delivery_mechanism	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	... I will go and I will put that-- when I'm in charge of the roll call, I won't even read that. I won't read it, because they already know it. We train them a certain way.
Information - Delivery_mechanism	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] Face to face. Yeah, I mean, sometimes I could send an email, I could pick up the phone, but I choose to get up from my desk and walk in and talk to the person. And yeah.
Information - Delivery_mechanism	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] More discussion. I think you can communicate your point better or there's no emails and messaging as you know just from texting can not portray exactly what you're meaning to portray, right? And I think face to face, I just think you can communicate better that way.
Information - Delivery_mechanism	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] It's a lot more contextable that you couldn't see otherwise in communication I think. And from a technological perspective, sometimes I'd rather be face to face rather than chit chatting and reviewing an attachment on an email thread. I like to be there, point things out, explain things, have that discussion face to face.
Information - Delivery_mechanism	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] To actually do the email piece, or you just want to be able to talk to them, and point it out--
Information - Delivery_mechanism	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	... We have an inbox, we have a stack of reports to read, like he's doing right now, and then as we come in we make little corrections and then tell the officer, "Okay, it's good," and then he can go home or he goes back on service.
Information - Delivery_mechanism	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Oh, yeah. Oh, yeah. It's very regimented in that aspect. Say, it's 6:00 AM lineup. You meet with the lieutenant and the sergeants, and they call the roll and go over any issues for the day, hand out the assignments.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information - Delivery_mechanism	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	Yeah. So we've got multiple watches that come in. They check in their day watch, their late days, then your swing watch, and the midnight guys. So the routine with that is that they would be checking on, get ready for the lineup, get their gear and everything else, respond to the lineup, meet with the platoon commander for the day, get the brief time activities that are going on, things that need to be done, or any bulletins, or any warnings, or anything else that come up. They get those notifications. They get their assignments, their sector assignments, and then any other information for the day, whatever has to be passed down, if there's roll call training or something that would be given at that time. So at the lineup, once they've done that, they would have all their equipment.
Information - Delivery_mechanism	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	But these events, depending on what the event is, don't raise to the level where we're going to open up a huge DOC, where we're going to have representatives from all these other agencies and be in there for a huge instant command kind of thing. We're dealing with this command on-site for this event in there. So unless it mushroomed out to something different, we wouldn't stand another command post. We would have our mobile command out there typically or we would set up a command post on-site. But again, it would require us to be in close proximity to all event organizers, all these other entities involved with the event to get that information shared.
Information - Delivery_mechanism	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	And then person-to-person wouldn't be unless you actually walked up to a particular post and identified an issue or you reassigned somebody to someplace else. But most of it will be directly feeding off-- if there's a observed issue out there where there's a crowd is getting too rowdy, or there is an unruly group, or there's a medical crisis, or there's some other call for service that came up for robbery, a battery, or something like that, we coordinate the response to that unit-to-unit, to get a unit to respond over there.
Information - Delivery_mechanism	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	So I would say the station level as far as I'm around, everybody gets along. Some days you're doing more or less, but that's to be expected,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								just because of staffing and the changes in a lot of jobs, or we're trying new stations is allowed to get newer officers coming in that make it not monopolized with the reports. Communications, everybody speaks to each other, talks to each other.
Information - Delivery_mechanism	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	...And as their shift is coming towards an end, we'll have an overlap of another shift coming on. That next watch coming on will get the same similar briefings, whatever information needs to get passed forward to them. And they would go out in the street.
Information - Delivery_mechanism	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	... Somebody else is making notifications, and we'll respond accordingly and then, additionally, locating witnesses and trying to get more information, that kind of thing, so.
Information - Delivery_mechanism	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Not with work people. No I don't find text messaging something that I try to do with a lot of work people. Usually because text messaging is so short and sweet you know there's not a lot of time to really explain I know there is but it's easier to talk than to type out the explanation. So yeah that's probably it unfortunately fortunately? I don't know what other types of communication there are.
Information - Delivery_mechanism	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	I provide them information you know we do follow that kind of NIMS idea where we have a public information officer...
Information - Delivery_mechanism	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	And that again is just the same. I mean it's mostly email, phone calls, in person meetings. You know you schedule a meeting with all the people and you all get in a room and then you all tell each other what you think they want to hear let's face it and then you go home and complain about them. They never listen to me. But yeah and so you get emails, exchange emails back and forth and phone calls yeah that's about it.
Information - Delivery_mechanism	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] They send us street numbers, give us the name of the people, outside of that we got to go from what we can figure out we know. Like he was saying we have to (INAUDIBLE 00:12:36) if we don't buy our own GPS you better have a phone.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information - Delivery_mechanism	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] Dispatch gets the call from the reporting person they say this is what's going on. We have a computer system which is the call log center, they sign in, call tells us what it is and then they reach us over the radio tells us what the address is and then send us.... We're going to do a search warrant on a house we do what's called (INAUDIBLE 00:21:50) which means no one else in the department talks but the people that are out there on that call.
Information - Delivery_mechanism	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	Sure. We start out the shift and we're talking to the folks who are coming off shift. We're seeing what was going on. We'll generally have at least a little bit of time in the department in the station there and go out we check our car, we check our equipment then we're out on the road and most of us we've got our kind of patterns where we go when we're out there but and then we're just patrolling until we get a call and if we get a call then we'll go someplace specific yeah and but otherwise we're just driving around trying to make sure people are feeling safe and feeling okay about what they're doing. So that's generally what we're doing when we're out there.
Information - Delivery_mechanism	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	Yes ma'am yes. We start the morning there we end the afternoon there. It's fine. If dispatch is there we usually come in. We're joking with them usually. We'll run over what happened during the day, we'll talk about maybe what didn't get done, if something didn't get done for some reason so the evening shift can look at that take that on you know but not much. If we've had something going on during the day we might have to be writing a report or finishing something up but that's really pretty rare really.
Information - Delivery_mechanism	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S2] Yeah so we try to have a set thing like me and him talk today we're going to do this, this it always fails.
Information - Delivery_mechanism	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	At the other campuses it's only one or two so but you're going to come in you're going to have a chat with your supervisor kind of figure out what's going on for the day. We do a lot of we call them business checks but it would be a lot of walk through, building checks, location checks so sort of expected but throughout the day when you're not answering

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								calls, you're not doing traffic, your job is to be visible whether that's riding through a parking deck, walking through a building that's a big part of what we do as an institutional police department.
Information - Delivery_mechanism	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	I would say it happens on calls you know if it's any sort of call where there's a perception there needs to be another officer there, there will be another officer there. We have the luxury that we can we're close and we have enough officers we can have backups. You're definitely going to have face to face communication on a lot of your calls. I mean you go to a building unlock you're going to go by yourself or you go to a wreck you're going to go by yourself.
Information - Delivery_mechanism	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	We're very close to getting that but we don't so a lot of officers complain about that having to hand draw their diagrams and hand write their accident reports. Ticket writers I think people would like ticket printers you know having electronic ticketing I think people would like to have but again we don't write a ton of tickets here so when guys complain about that it's like if you were writing 20 a night I'd feel bad for you but you write like 4 a month you know you can make it happen and then having access to NCIC in the vehicles which I think is important.
Information - Delivery_mechanism	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	Give it to this guy that kind of thing and then that's on a Sergeant I think to stop that but that sort of stuff happens playing favorites those sorts of games or sometimes dispatch will be uncomfortable saying something over the radio so they'll ask you to call dispatch or they'll ask you to come and meet them in dispatch and it's like well that's defeating the purpose of all this. We have these radios for a reason. We have means of communications. We don't need to always but there's probably more face to face here than there should be because of the commun-- not in terms of personal interaction but people like during the course of their job either calling or going back there to talk to dispatch instead of just doing it I think either over the radio or on the MDT but again this is me offering my personal opinion as opposed to what but I think I speak for the communication supervisor as to what she would like to happen.
Information -	LE	R	Field	46-55	21-30	Male	LE-R-052	In the morning, the only routines that we have are every morning we will

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Delivery_mechanism			Responder					send out a brief. We get a pass on from the night lieutenant. If I'm on day shift this week, I had a pass on this morning from the night lieutenant to let us know anything that's going on, major that's taking place, that may take place today, like a major incident, and it may carry over to us. We'll do a debrief and then from there we'll send out the bulletins to the deputies using our computer system.
Information - Delivery_mechanism	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	Some, normally in the mornings it's face to face because our morning section because when I'm coming I'll normally come work early, 30 minutes early. We have to be out for a quarter to five, I'm normally out 4:30, 4:15. Our off-guard lieutenant will normally be in the office typing up his paperwork or his pass on information, so we'll do a face to face.
Information - Delivery_mechanism	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	Hurricane, what we experienced in Hurricane Katrina was catastrophic phone failure. There were no phones. We even talked on the radio or we had to meet up face to face because most of the towers here from Hurricane Katrina were destroyed. They looked like pretzels, there was no communications.
Information - Delivery_mechanism	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Q: Okay. And you mentioned that you've got meetings and training, so you've got a lot of face to face communications. SME: Yes, ma'am, Yes
Information - Delivery_mechanism	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Alright. Well our department, our fire department is set up to where every first Wednesday of the month we have a board meeting which everybody's always invited to attend. And then the second Wednesday is a departmental meeting where we actually cook a supper and the whole department meets as an organization and then every Thursday of the month, throughout the year, every Thursday is a training day where some days we'll do classroom activities.
Information - Delivery_mechanism	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	So you almost had to just tell them like me and you are talking face to face, key, look, we have a disturbance at this specific location, or they would just follow us there. So yes, I do believe that especially across American, we need to become more standardized in radio etiquette especially when a major incidence goes down that we can communicate

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								between police and fire and ambulance and all be on the same page. And I think national incident management has done some of that for us but we still have a long way to go.
Information - Delivery_mechanism	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Yeah, I do believe so. I do believe so. I believe that... yeah. Training wise, and technology, I think that the officers are becoming more, more reliable on less lethal means, because of different, the trends on social media, and even more dependent upon the computers and the radios, rather than being able to get out there and just the old police way and talk to somebody. Nowadays when you go to a restaurant, rather than seeing face to face conversation, everybody is on their phone texting. So I do believe that in some technology has hurt us. It has helped us along the way, but it has hurt us a good bit as far as that face to face communication and being more isolated. Rather before a police officer would get out there on the street and talk to somebody and develop information. I can remember walking down the street as a [Job title], canvassing and talking. Now they're on their phones, on their computers in there, searching somebody's bank records, searching their phone records, they're going through all of--it puts them in a bubble. It puts the police office in a bubble where no longer does he have to get out there and interact with the community.
Information - Delivery_mechanism	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	... But I mean I would love to have computers in all of the fire units that we--I mean we still generate handwritten fire reports. When an officer goes to the scene, he generates a handwritten fire report, brings it back and turns it into the station and we put it into the computer system.
Information - Delivery_mechanism	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	Well, between unit to unit, of course you've got the radio traffic, and they use their cell phones quite a bit. There's some face-to-face, where they meet with each other and discuss what's going on or whatever, but typically, they respond to calls, if it's not enforcing traffic, of course, if they're out checking for speeders or whatever, but then you have your dispatch calls to your accidents, your medicals, sometimes if they need assist, Fire Department.
Information -	LE	U	Field	36-45	11-20	Male	LE-U-055	Yeah. I mean I think we get a lot of... interaction when our officers are

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Delivery_mechanism			Responder					out and about and, hey look, I saw this guy the other day and so word of mouth, face to face information that comes in to officers as they're out on the street. You know we're starting to see social media, or not starting to see, we've have been seeing it. With social media and you're pulling information off of that. And so... we don't have a full-time analyst that monitors social media but I think there's probably a... we could certainly fill that spot if needed.
Information - Delivery_mechanism	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	Then it's kind of a face to face interaction, you know? Assuming it's just a normal, everyday, we either had a small fire or medical emergency of some sort. It's just interaction between their personnel and our personnel. Hey look, this needs to happen. We've got to do this and we have to do this. You know? I would... in a major incident that's going to change just because of the mutual aid and everything that's going to be going on and I... I'm not quite knowledgeable enough to speak exactly on what that would look like. I think Lieutenant [Name] who's our communications supervisor can probably shed a little more light on that but.
Information - Delivery_mechanism	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	--going to talk to them? And then you know I think we've already talked about it but they have the MDTs in the car. So they're getting information and communication through that. They're dispatched via radio so they're getting information through that. And then any face to face interactions that they may have where they're getting information and communication.
Information - Delivery_mechanism	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	As a sergeant, not quite. I've only been a sergeant for a little while. Before that, I was a traffic officer on a motorcycle. For me, it's--I try to wake up early enough to make sure I can get to work. I keep all my work stuff in the same place, so I know where it is. I usually have whatever uniform I'm going to wear set up the night before, come in, we have a shift briefing, pass on any information we have from last night or anything new that we need to pass on to our officers, then I usually go get some coffee, come back, and start writing reports.
Information -	LE	U	Field	36-45	11-20	Male	LE-U-057	... And then towards the afternoon I'll meet with my detectives and see

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Delivery_mechanism			Responder					what they have going on, see if they have any questions or anything like that that I can help them with.
Information - Delivery_mechanism	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	I think it's changed [inaudible] the years for sure. I mean it used to be a lot of phone calls and face-to-face talking. Now everything seems to run through email.
Information - Delivery_mechanism	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	Victims, I always prefer to meet face-to-face with them. We will email and try to set up appointments to talk to them and have them come in. We'll speak with them on the phone to have them come in. But I always want to meet with the victim, sit down with them, put that human aspect there and let them know who the detective is, who the person investigating it is, let them feel comfortable talking to us. And once they make that connection, I think maybe they feel more comfortable calling us with information. Or they have a concern, then they know there is a face to that voice and I can, that person is there to be my advocate, they can help me through things. So I think that's very important.
Information - Delivery_mechanism	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	I kind of stay in my office most of the time unless I'm meeting with my guys. I have a lot of paperwork to do, so I don't really get out and talk to the officers too, too much. I kind of worry about my detectives and the people under my command, and I take care of my paperwork and the reports. So I would say I don't interact with everybody in the station as much as some of the ranks do here, other officers.
Information - Delivery_mechanism	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	When I first started, honestly when I first started, we had email, but it was used very rarely. Maybe 5 emails a day you would get, and now it's 56 emails. If you were dealing with your cases, it was never, information was never sent to you in email. Your supervisors didn't tell you what to do in email. I mean it was a lot of face to face, a lot of, maybe we used phones more back then, than what we do today. It's just, that's the main thing.
Information - Delivery_mechanism	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	I think email can sometimes cause communication problems to be honest with you. I know it's a trend, and I don't want to bang on emails. I get all the great things that we get from emails. But you don't always get

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the full picture when you're just emailing, and people maybe don't feel comfortable sending their questions because they're afraid of who else might be on the email trail or who it's getting sent to afterwards. So I think sometimes having those face to face, people are more comfortable to ask a question and not be embarrassed later or something that they didn't know or that they wanted to ask and didn't ask.
Information - Delivery_mechanism	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	But you know, certainly we have processes that we follow and that being, you know, generally the guys will come in and they will brief amongst themselves as far as information that the previous shift dealt with again, you know, what type of incidents they dealt with the night before. They will brief the oncoming shift so they are aware of anything that may carry over into that oncoming shift. Once everything is done, we will go out, we will do our patrol car checks, make sure everything is good, jump in your office for the day, and then you know, go out on patrol. But, you know, as far as anything routine that we really do other than those briefings both at the end - excuse me- beginning and end of shift, that's really the true routine for patrol
Information - Delivery_mechanism	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	Okay. And so it seems like that communication that is face to face amongst themselves.
Information - Delivery_mechanism	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	But again we are much smaller, you know. A lot of larger agencies may do it with a shift briefing via email, you know, where a [Job title] or [Job title] or something along those lines is briefing, where everybody is not brought into the same location, it's done, you know, electronically. There certainly is that option as well. We are very small, so we, you know, our focus is the face to face.
Information - Delivery_mechanism	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	I am pretty much just email and phone, yeah. You know, person-to-person contact when we have meetings and stuff like that but a good chunk of it is just email and phone.
Information -	LE	S	Field	36-45	11-20	Male	LE-S-061	S1: And what about for your officers out on patrol? S2: Mostly face to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Delivery_mechanism			Responder					face contact.
Information - Delivery_mechanism	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Yeah. We do a roll call. I mean, it's pretty informal. There is a special attention list that they are provided, whether it is to pay special attention to a stop sign or we are looking for this person to arrest, they have got special attention books that they are responsible for.
Information - Delivery_mechanism	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	To an extent. We are not - some of the [unintelligible] are fairly micromanaged, we are not here, I mean, you come here; you would be here on time. We have kind of a daily roll call, other shifts will go over, you know if there is BOL for this or you know, stuff like that and then aside from your call that is kind of - they kind of leave it up to you to go out and - you know, if you wanna go do neighborhood checks, gonna stop by the businesses that day, if you feel like working in traffic enforcement, as long as you are doing
Information - Delivery_mechanism	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	It depends. I mean, I would say 90% of it is. We also have more sensitive missions, if you will. You know, if we are going to pick up somebody on a warrant, we will have all the officers meet in the station, go over our game plan, figure out where everyone is going to be, what everyone is going to do. We got a [unintelligible] board at the back, you know, if we have certain things that - really in-depth, things of that nature; we meet with other agencies here who need assistance [unintelligible] come out to look for people before; Department of Corrections, state police, Child Protective Services, so we will meet them here in the station a lot of times, formulate a plan and then go to the location, but then all the communication is done in person, so when we get there, nobody is confused; theoretically, nobody is confused.
Information - Delivery_mechanism	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Well, face to face in terms of the diagram, we put something on the board, there is no way to diagram or make a drawing on the MDT and send it to somebody and as far as us here at [town], you know, you say you take the east side of the house, you take the west side, north, south; we all know what that means. But if you get some agency from out of town that doesn't spend much time in [town], you know, they are like, it's a grey day and there is no sun for reference, and like...what is the west

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								side and which is east, you know?
Information - Delivery_mechanism	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	We will sometimes actually draw it and print it out with a copier machine so everybody gets a copy of -
Information - Delivery_mechanism	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Sometimes, there are communication - I mean, we try and be pretty good but now and again between like the 3 shifts; like midnight is almost like being on an island because you are cut off from all of the normal day stuff and every shift is different days - like you deal with the schools, nuisance stuff, if the businesses are open, things like that. Afternoons gets a lot more of the crime kind and then midnights -it varies, but the communication between days and afternoons is pretty good. Like a lot of times I will hang over and do traffic overtime for a couple of hours after my regular shift so I talk to those guys at noon, make sure that everybody knows what is going on, to let me know stuff that is going on in that afternoon shift. Whereas midnight is a little different, you know. A lot of times in the morning they barely got their eyes open, wants to get the heck outta here, not linger around and talk, but at the same time, I mean, we have, on our computer system, we can go there and read all the recent reports; we can see what happened last night. I generally try and read the reports every morning; if there is a problem, I will answer. If I think we are going to [unintelligible] some more I will know.
Information - Delivery_mechanism	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	Yeah, I would say about in the 80-20; 80% probably face to face and then 20% that is probably going back and check the logs for the computers and scan documents or something like that or check previous calls to that area.
Information - Delivery_mechanism	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	Right. Yeah. We receive a phone call or a walk-in and I would say about 85% of the calls for service that we have are generated based off those phone calls and then about 10% of it is maybe someone walking in or [unintelligible] on the road or something like that and then another 5% is just straight off initiated on the road, so..
OE	FF	S	Other	36-45	11-20	Male	PS-S-001	It is a fully integrated department. Right. So we've got EMS, law, and fire,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel					of which, we rotate back and forth between bureaus. And, I mean, it's a very unique experience.
OE	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	Yeah. So for example, this station, we do annual sign ups. So each year, we'll bid for either fire division, patrol division, or special operations. Special operations is like our training units, our internal affairs, our community service officers [with the schools?], detectives, our motor unit. So anything that isn't kind of the two main bureaus falls under special ops. But fire bureau, within that bureau, you have a whole bunch of specialized assignments. Like this station has, normally, a platform, a ladder truck, and so that's a specialty assignment. This is also your hazmat team, so it's a specialty assignment. So within those assignments, we have rotations for specialties that are anywhere between three and five years. So being the supervisor in charge of this hazmat program on A-shift, I have that window of I could be here in this role anywhere from three years to the maximum of six years. I mean, obviously, there are some [spin-up?] costs, and training costs, and just getting to know your job. Likewise, same with a canine officer, or a detective supervisor, or something like that. So it is a very unique challenging place to work at. There's lots going on.
OE	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	And in our city-- off the record, of course. But it's about a 160, 170 thousand people, peak hours. And so with that, we have six stations and we have a police substation in the middle of it. So with those seven buildings-- our fleet for fire ops is we have, what, 13 apparatus. Three of them are trucks. 9, 10, 11, 12. Is it 11? So, yeah, 10 of them are engines. No. I'm sorry. 9 of them are engines. 1 of them's like a heavy rescue, USAR, hazmat kind of combo which is housed out of here. So then on the patrol side, we have anywhere from 6 to 7, 8 units on at any one time to maybe 14 to 18 units on depending on peak hours. It's a busy place. A busy place to work.
OE	FF	S	Other Public	36-45	11-20	Male	PS-S-001	... And in this department, because we have a whole bunch of unfilled positions right now, we do a lot of mandatory overtime on both bureaus.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					So these guys will be working here today, and then tomorrow, one or two of them will go work on patrol shift for 8 hours to 12 hours.
OE	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	It's interesting because most of the complaining happens outside of the view of people who can answer the question. They don't want to complain to me because then they know I'm going to tell them how it is, and that, "No. Actually, if you press that button it will work." But if they can go over here and say, "Every time I press the button it doesn't work," when I know it does, then we are a headline news society. All they're reading is-- it's kind of this mindset that has just engulfed us. And it happens even in law enforcement and fire. So having the resource. Making people completely aware of how the technology works in a non-technical way. And giving them resource. If there's a problem, if you give them an answer to where they can go, if they know every time that they have a problem that they're going to be able to go somewhere and get the answer for the solution, I've noticed that that takes away about 80% of the angst. I mean, it cuts down a lot. Nothing's perfect. You're never going to make everybody happy. But it's a lot of the little technology things that we do. When we put new laptops in the car, people complain. I shouldn't even say this on tape, but this isn't published, right?
OE	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	Yeah. So, I mean, I think FirstNet has a good group of people. I think they're working hard. I think they've done a lot of great outreach. I think our profession has refused to listen. I mean, that's why we're doing more town halls and more public stuff. I think FirstNet has a great plan for getting that done because they've been going-- I mean, I can't tell you, but I think FirstNet's been here six or seven times the last five years--
OE	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	It is. Overall, I mean, our radio system, we budget-- so [City] is somewhat unique. We do a 20-year plan. So we do a 10-year budget, 20-year plan, and then we do a 2-year budget cycle. So every two years we budget for two years out. We have some flexibility in that. It's more difficult to move money. But then we budget for the 10-year realm and then we put a forecast for 10 years. So that gets us 20 years out. Microsoft actually adopted our budgeting process.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	We've had a history of never laying anybody off in this city. And we do budget appropriately which makes our finance department very strict at times, so sometimes they're difficult to work with. And we're doing different things now. Our new city manager-- well, not new, she's been here a couple of years, but [Name] has been here a couple of years. She was in [City] and [City] prior to that. And she's changing some of the way we do business that makes it a little bit more effective. So money is not necessarily the issue if you can make the business case [laughter]. And we--
OE	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	In our organization? I would say we're middle of the road. We're a leader in some areas and we're way behind in others. I mean, these voice over IP phones, those are four months old. I mean, we haven't had voice over IP. Radio system-wise, we're cutting edge.
OE	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	Yes. Yes. So I think everything's going to go tablet. Fire is really pushing tablet. I mean, Fire has been tablet-based for a long time in some areas, and most of the agencies that I've talked to are going tablet. [City]'s switching to iPads. They're getting rid of their MDCs. I think we'll do the same eventually.
OE	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	Right. But you do become more efficient overall because you have better information when you're going where you want to go. I don't think the adoption of technology is causing a problem. I think what's happened is there's a disparity amongst agencies. Everybody had report writing back in the day. Everybody had portables. So then you have phones and laptops and tablets and APIs from different software companies that can do this and do that. And you've got agency next door doing all of this cool stuff with their electronic citations, but we're still writing paper citations. We want that. And by the time you convince everybody here that we need to get that, we got our paper citations. "Oh man, they're doing electronic report writing for crashes. We need to get that." So there's a disparity. And as you move around the counties then you find somebody else who's doing something else really cool. "Oh, we're tracking all our officers by GPS though iPhones that we issued to them."

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								"Hey, we need iPhones." So you have all these agencies that you look at that you say, "That's really cool and I want to do that," and then you have one agency that looks at that and they say, " Well, geez. If I do that it's \$10,000 a year, if I do that it's \$20,000 a year, and by the time I'm done it's \$50,000 a year and now I got to ask for the money." So I think it's figuring out a way to really know what's reliable, what works, how it works. In most law enforcement agencies that I know or even fire agencies where something like that gets implemented, it's usually the one guy that's the hobbyist that loves it and then he gets it implemented--
OE	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	And so sometimes you don't have adoption by everybody because they don't want to use it. I think, again, that's becoming far and few between because of the age of people that we're hiring. But I mean, we had a guy up until a few years ago who didn't even have a cell phone. And when he finally got a cell phone-- and I'm talking like three years ago didn't have a cellphone, and when he got a cellphone, he has a flip phone that has 10 buttons on it.
OE	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	I think everything going on in society. I think it's just-- whether it's drug behavior, whether it's mental health behavior, criminal behavior, society perception, I think all of that right now has become kind of a sensory overload for officers. And what's sad is I think that the stress that we saw in the '80s and '90s which got the strong retirements for law enforcement, that got taken away recently and weakened those retirements, I think the stressors that officers are going under, I think it's going to increase again. I think we're going to see the shorter lifespan. I think we're going to see-- the only good thing is, is the health of officers is up. The fitness of officers is better than it has been, at least locally. I don't know nationwide, but I mean, at least locally, the awareness of healthier eating habits and fitness is better than it has been.
OE	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] Yeah. We dispatched for 13 different agencies.
OE	COMMS	R	Manager	46-55	11-20	Female	COMMS-	[S2] We're a consolidated dispatch center.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
							R-008	
OE	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] So they're called takers. They handle police, fire and EMS.
OE	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] Summer it goes up. There's two months in the summer it pretty much doubles which is July and August and then winter so our average is about a hundred calls for service a day and so in the summer it's you know 200 calls a day. Some winter we will get it in the winter at certain holidays like president's weekend is a big ski time so everybody you know have a bump up in calls then so certain if there's certain events going on so it's very driven it's driven by tourism. Who is coming and going you know what activities are being promoted.
OE	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] We have a minimum of two on shift at a time. We try to have three. We have we're authorized to fourteen full time employees but typically it's two and that's our minimum for our mandatory minimum.
OE	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] They rotate every 6 months. They don't rotate from they bid on their shifts so it goes first by rank and then seniority and so supervisors get put where I put them and trainers will get put where I put them if needed but I try to give them as much flexibility as I can with their scheduling and they bid they work 4 on 3 off, 3 on 4 off schedule so it's a 12 hour shift and they have the ability to bid on that type of shift as well as opposed to another that is a little different.
OE	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] Well let's start with phones. So they have the 911 lines which come in off of 4 camera trunks so basically it's set up so that so there's four 911 lines, there's ten other lines?
OE	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] And for the radio they handle 700 megahertz radios they answer on fire the HF radios and there's I don't know off the top of my head probably they handle four primary channels, radio channels and then up to six it's probably about right six to eight I guess and that's also through the [brand] IP based radio system and the phone system is IP based as well and okay so there's the phone. They have a CAD system so their computer system they have eight different screens so eight monitors,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								CAD system which is operated off of a desktop and the software programs they run would be the CAD system itself, computer aided dispatch and then the our the eyelet system which is your criminal justice information. They run that program. They have a [application] which is a 911 text program that they use and then emails, general management, records management, they have the jail, they're able to take the control over from the jail so they're able to use touch screens to open doors or whatever they have to do if they have to.
OE	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] No not very much. We have had calls so they've been it has been used in a positive way where it was a true text to 911. They couldn't call so I think we've had maybe four and we've had it in place for 2 years I think now. So you know it's basically doing exactly what most people said it was doing which is very low.
OE	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] ...They don't have the we haven't purchased the software yet for the fire and police but the fire's getting purchased this year for the line of questioning that they'll be asking. So yeah it's really call specifics but in order for them to get help on the way they have to have the address and the call type.
OE	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] Exactly. So that's very important for us to be able to in our CAD system has a automatic ping to the cell within 30 to 50 seconds it will automatically ping and then we can manually ping as well after that to try to better exhume it yeah if we can get off the cell tower you know get more precise information which we do sometimes.
OE	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] And in the town that we live in it's challenging. We're using anything from you're using anything and that's what I wasn't trying like even in that meeting to say we all need to be on the 700. I know it came out that way but I know that it takes every single type of radio or cell phone or phone or smoke signal to I mean out here you could be in the middle of nowhere, you could be in wilderness land and you can't take anything in there so you got to get the authorization and that's timely and you know so it can be difficult so you have to figure out what works and you have to be flexible enough to recognize that and support it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] Obviously not using type printers anymore or index cards so all of our records management. We moved out of our card files and implemented them into the records management system so that it shared across all the agencies so they have that access to them. You know if they'd come across an individual they can see well okay this guy's been doing this, this and this you know or whatever so that's definitely been useful. Can you think of anything else?
OE	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S3] This is is the first time I've worked with a piece out in my career and so it was eye opening to say the least at first but I think that it's more for a lot. It's changed from when we used to have our own selective router here in the [County] because we had multiple ESOPS in the [County] that was consolidated and the way that we received calls, the equipment that takes the calls is new. We're looking at replacing that with nex gen. It's constantly involving the changing.
OE	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] We get a lot of 911 hang ups mostly off the mountain. Now with the smart watches doing 911 hang ups. They move their wrist. That's a real pain. That's worst than the pocket dials.
OE	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S3] Another technology initiative that we saw fail in this [County] was the fire several fire agencies were trying to get mobiles in their vehicles and right now there's very limited capabilities for fire to see the important information in their mobiles that law enforcement sees and again it comes down to just lack of funding and ability for them to tie into these calling systems and so I think that interop just isn't radios there's more to it with these officers, these first responders need to have certain information, they don't need to see arrest records and things like that but there's a lot of information that they crave from dispatch and they just don't have any way to get to it because they can't have the tools that are funded by the law enforcement side.
OE	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] Well they do now. They do now. Because they have apps on their phones now that they can listen to the radio. It's not mission critical you know you can try mission critical piece of a device but they can listen you know just click on it and listen to it which is great but if it's not

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								mission critical then you can't depend on it so it's just another nice thing to have.
OE	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	And so in our county, we're organized under the town of [name]. So all of the agencies in the county we dispatch for.
OE	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Everybody except for state patrol. But we're managed by the town of [City]. So my boss is the Chief of Police at [name]. But I really answer to everybody, all the chiefs. We have 24 dispatchers and supervisors, and I herd them.
OE	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	24. Dispatchers and supervisors.
OE	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Representatives from every public safety agency in the county sit on that. So the the hospital has people there. The ambulance district, the courts, fire departments, the police departments. Our health and human services people are there. Anybody can come to it. It's open meetings but the-[talking about the [Organization]]
OE	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Last year we did a complete remodel. Actually this year in May of our comm center. So we took everything out of it. Moved it into a different room for a couple of weeks and we stripped it down to zero and put new furniture, new computers, new everything pretty much.
OE	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	.... But yeah, and we train law enforcement dispatching first. And a lot of places go with phones first. And I don't know why we do that, but that's the way we've always done it, I guess [laughter]. I don't know. But it seems to work out pretty well.
OE	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	...Particularly, in our community, a lot of our Spanish speakers have Spanish phones, of course, and the product that we have doesn't translate Spanish alphabet. I guess as it were, all of the different accent marks and stuff like that come back as pretty much gibberish.
OE	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	... So we have a cell phone in the center that we sometimes use to text out and try to initiate contact with people. Once we've got contact then we're good

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	But, I mean, frankly, in [Name], we have so many young alcohol induced stupid people, our thought is we're probably going to get a lot of pictures of penises [laughter]. And for no reason whatsoever. Sorry, I said it. But is that something that we can choose not to look at. Like the dispatcher can say, "Well yeah, okay. Thanks for the phone call," and just whatever. Or is it going to be something that's always there, regardless of what is sent and whether it makes any difference to the call or not?
OE	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	So, I don't know how that's all going to look on the data. I think our county is pretty well poised already, and I think addressing has to be 98% pure. We've been cleaning data for months trying to get to that, and we've come up with some solutions that we're going to probably change our processes.
OE	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	... So we have 53,000 people that live here, but in the winter time, the population of our county is closer to 85 because of all our skier visitors. And a lot of those people call 911. They're lost. They're hurt on the ski mountain. They've crashed their car because it's snowy. All that stuff, and so, a lot of that impacts our business. But their surcharge goes to wherever they live. So we don't get that funding from them. That's one thing. Location information sometimes is difficult to get from a cell phone. And again, we have a lot of visitors here. And they never know where they're at. Had no clue.
OE	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	There might be 40 or 50 houses, 40, 50 families, and none of them have a phone. So we had to go get-- we had a different program. We have [name]. And [name] allows people to sign their cell phone up and associate it with an address. So that they can get that Reverse 911. But if they haven't signed up for it, they're not going to get anything.
OE	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Constantly. We split the county into four; it's east and west basically but east law and east fire, and west law and west fire. And the fire dispatchers work with their law partner. The law dispatchers are a lot busier most of the time, and so the fire dispatchers are the call takers as well, and they work to back up their law dispatcher on running plates and parties and stuff like that. And then, when the gas line breaks and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you have this huge input of stuff, then the law dispatchers kind of help back up the fire dispatchers. So they are talking to each other constantly.
OE	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	No, they do. We try to rotate every day. Since we have four disciplines, we try to have each person-- if there's four on shift we try to have them take one a week. Or they work four turns. It just works out. That doesn't always work because we have trainees and they have to have a certain channel, but we do try to rotate. We also rotate their shifts. We rotate every quarter, and you can pick the same shift three-quarters, but the fourth quarter you have to take something opposite. So if you work week days for three-quarters of the year you have to go weekend nights because they're different calls, different stuff comes in at night and on weekends. And then, if we have extra people, usually they just answer the phone or do something, go get ice cream [laughter].
OE	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	Most of the jurisdictions here near [name] have a civilian corps of dispatchers and 911 call takers. Here in [name] we have paid firefighters that have gone through all the fire training. They've spent years out in the field. And then at a minimum of five years, then they're allowed to come up here and be in the communications division.
OE	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	There are other smaller jurisdictions that have one dispatching center for sheriff, police, fire, ambulance, everything because they're smaller. But we have 37 fire stations and over 1,400 career firefighters, it's quite a bit.
OE	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	Yeah. It's funny because time of day, in the morning you have all your car accidents here in the [name] area, between like 5:00 and 9:00, you have a lot of that. And then you get a lot of the medical facilities. People go for their doctor's appointments, and then we get a lot of medical facilities calls between like 10:00 and 1:00, because they go to their doctor for a checkup and then they have either chest pains or trouble breathing or a seizure or a stroke or something like that while they're at the doctor's office. Or their blood pressure's too high or something, and the doctor feels like they need to go to the emergency room. So they call

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								an ambulance for that. And then you get a lot of people that break for lunch that have problems...
OE	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	...And then you have the commute going back home at the end of the day... A lot more accidents. And then also at the end of the workday it seems like kids are out of school, there's a lot more activities, so there's a lot of kids with accidents on the playground, at different sports fields, depending on the time of year, soccer, football, baseball, swimming, all that other stuff. You have accidents after school. So between 5:00 and 9:00 it kind of picks up. And then depending on summer or winter, if it's summertime you get a lot of people in the clubs and in the bars. Summertime, school's off and they drink a lot, and so you get a lot of drunks, drunk driving accidents, people hurting themselves because of alcohol-related injuries, anytime during the week. But then when school starts it's usually only on the weekends. So at nighttime Monday through Thursday, between like 10 o'clock and midnight, it's not as busy. But in the summertime, with good weather, it hikes up a lot...
OE	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	...And then we have a joke up here that we have the Friday Night Knife and Gun Club. So any Friday night, because of our geographical location, because of the local gangs that we have, Friday night we always have stabbings and shootings... Multiple, every single Friday night. And that bleeds over to Saturday sometimes also. It's always our Friday night. Always, always, always we're going for stabbings and shootings every Friday night...
OE	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	...And then you have, with the seasons, you have the summertime injuries. And everybody's out and about hiking, or on the trails. So all of our local parks and the trails, specifically the Potomac River and the Billy Goat Trail, that is a seasonal thing where the experienced people go hiking and running all year round. But only the inexperienced people do it in the summertime and they get hurt. And then you also have the seasonal depression. so around Thanksgiving and Christmas our suicides spike up considerably, between the middle of November and the New Year. We have anywhere between three to five or six people

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								commit suicide every week during those months. and then the cold weather emergencies, you have a lot of people that are exposed to the elements. And then you have a lot more accidents because if the [City] has any little bit of snow, people don't know how to drive in it very well...
OE	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	...And you have a lot of people from other countries. So this is a very mixed geographical area that we have. And then with all the research facilities that we have in here, the population in [County] is very unique with just a lot of foreign people here... their experience in driving the local area varies tremendously. And then there are local customs and their local holidays, and there are safety precautions, because in a lot of other countries they don't have smoke detectors, they don't have 911, they don't have any of that. So when they come here, they still practice a lot of their habits that aren't quite the safest, but hopefully for them, we do have smoke detectors and fire prevention that we try and teach them, "You can't build a fire in your living room," things like that, that you...they build a fire in their living room with wood, yeah, because back in the country they lived in, that's just kind of what they did. You can't do that here, because of other fire hazards. There's a lot of things that are out of the box where you couldn't make this stuff up, because it's just very strange. People coming from other countries, they just don't know about that and it's just their ignorance. It's not bad, it's not their fault, it's just different customs...
OE	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	...here in [County], there's a lot of different countries that come in for various reasons. And then we also have a lot of the diplomatic and political population in [County], and we also have a very expensive cost of living in [County]. So you have a massive economic separation, between people that work here and people that live here. So people that work here usually travel into [County]. People that live here in [County] are kind of split between the higher end district of [City] and [City] and all that, and some of the other areas aren't as rich. So it has a lot of different call volume because we have a lot of areas that people need 911, and then some of the more rural areas where it's very rich, it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								slower, but when they call 911, it's because there is a real emergency.
OE	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	We do have the Potomac River, which is what they say is the largest Class V rapid river in a metropolitan area in the world.
OE	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	Because you have classified rapids within a half a mile of an [University] and it's two miles from [City]. So this massive river that is very fast and very dangerous, around a lot of people who may or may not know the dangers. And there's people that unfortunately drown every year in the Potomac River. And we do all the rescues and all the body recovery and everything else.
OE	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	... So where all the major corridors of traffic are, is where we run a lot of mutual aid. It's just because it's a geographical thing. So that's a lot of people that we deal with, but they're other dispatchers.
OE	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	But [name] is a very open county. They're not very strict when it comes to certain things. So in [name], you have a big mix of international people. Whether they're illegal or not, personally I don't really care, I don't have any one stance or another... But [name] is a very open county. They're not very strict when it comes to certain things. So in [name], you have a big mix of international people. Whether they're illegal or not, personally I don't really care, I don't have any one stance or another... You go to the north in [name] near [name] and some of the more rural areas, and people call 911 only if they've shot themselves or there's a hunting accident or they're missing a [inaudible], like a legit crazy call. Sometimes in these more densely populated areas, and part of has to deal with the economic split in some of the lower economic areas of the county, people don't have a stable income, they don't have Medicare, they don't have health benefits, and so their only help is 911 and the hospital. And since we have such a strong financial foundation in [name], with multiple hospitals, fully staffed, that are very good hospitals, that's their only case. So they call 911 for a splinter.
OE	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	Exactly. And so you have all sorts of numbers of people that are just-- or you get the people with some psychiatric behavioral issues. You can't

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								avoid that. You have to send help. So we get our frequent callers. People say, "There's a plane crashing--" there's a certain gentleman that has a certain phone number that we know. And whenever he calls up, he says, "I'm having a heart attack. I just set myself on fire. And I see a plane crash." And he says these crazy things. And he is out there. But if you're a new call taker, you freak out, because you think this is a major thing. So those are the type of people we deal with, is people anywhere from-- I wouldn't quite call them system-abusers. They just don't have coping skills for life.... And in [name], if you don't have insurance, we don't bill you. It's a complete free system. If you have insurance, we'll bill your insurance because in your insurance plan you're already paying for it. So it's not added cost. So if you can't pay for it, we don't bill you. If you can pay for it, you're already paying the benefit. So we're just taking advantage of the insurance side of it. So that's where a lot of people like to come into [name] because they get great emergency coverage for EMS, with no cost.
OE	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	[RE: resources] It is normal across the country that it's there, but with [County], specifically fire and rescue, we have paid professionals from our fire department budget for our firefighters. It's mixed between our union and the department, and they work together to offer the firefighters financial advice, counseling advice for financial, counseling for family, for marital counseling, divorce counseling, all the spectrum, we have someone that we can turn to that is sponsored, that either refer us to, or that they pay and its a service for us so we just have to ask, "Hey look, I need this help. Who is the contact?" And then they're already contracted with our county or with our union and we can take advantage of that benefit.
OE	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	I think that would be-- that would describe a 24-hour shift.
OE	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Well, it's extremely diverse. I mean, we have all kinds of different cultures. There's a big Latino or Hispanic population, lots of Spanish speakers. I was saying before about, that can be frustrating for the call

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								takers because--
OE	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	24 on and 48 off.
OE	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	I mean, they did have planned outages, usually they occurred in the middle of the night. If they wanted to upgrade the system, they'd take it down for an hour from 2:00 AM to 3:00 AM.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	So demographically speaking the County of [county] is an extremely wealthy county. It's one of the I believe it has one of the highest median income household incomes in the whole country. Very, very privilege people live here. With that they also kind have grown accustomed to a higher standard of living and they also expect that in their public safety so a lot of the things that we deal with are usually maybe other agencies would not respond to but there's kind of something that's referred to as the [county] Way and that's just kind of used within the government here to kind of refer to the kind of extra customer service that we provide that maybe other agencies do not. We respond to a lot of calls that other agencies would not respond to. We are a lot more patient than other agencies would be and so I think that it helps us in a lot of ways but it can also be kind of negative. It helps us in one way because I do feel like there is a higher professional standard so we're very good at our jobs, we're very professional and courteous to the public but then on the other hand sometimes they can tax our resources because we're responding and dealing with these incidents that maybe you shouldn't really be receiving a public safety response.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	And again it's good you know sometimes it's nice if you're an [County] citizen and you request the police you'll get the police but then on the other hand we also don't have as many resources as other agencies that are surrounding us. Like for example [City] has many, many officers from many different agencies that can respond to a variety of incidents however we don't have as many resources as they do and yet we're also expected to respond to more incidents in that sense you know not the volume but necessarily the type.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yeah so this building is a little strange. It incorporates a variety of services. It is the courthouse building so there are several floors that are dedicated to the courts and it also houses the police department. A lot of people are surprised to find out that a county of this size and this location only has one police station. People call us all the time and ask us where the closest station is and there's actually only one.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yeah we have everything out of this station. So the whole police department is in here and like I said we have the courts, we have a couple of most of the sheriffs are over in the jail which is across the courtyard. I don't know which side you came in on but the courtyard but just across the courtyard is there's the jail and that houses most of the sheriff's office but there's also some of the sherriff's office over here and then in addition to that we also have ECC here as well and it's convenient but also in terms of public safety critical infrastructure this is not perhaps the wisest setup because everything is one place and then I don't know if she spoke to you as well but across the street actually literally right across the parking lot is our backup center.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	So if anybody from here ever needs to have a meeting over there with someone from the county or if the police department needs to go have a meeting with the county or whatnot the county offices are right there, the county board offices are there, that's all very convenient, the fire department offices are over there but you kind of have this there is an issue of geodiversity in the sense that all of our critical infrastructure is in one spot.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Which is not good and there's a perfect example I don't remember the year before my time but a couple of years ago there was a suspicious vehicle that they thought may have contained a bomb and that was parked right on the street between the backup center and the main center and if that had gone off [county] would not have a public safety answering point, it would not have a piece up. So that is great and that's something that's been expressed to the county but one of the frustrations I feel like that we have here is we do feel like they don't the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								county does not prioritize public safety as much as you know maybe we should and so when we've expressed that we need a geodiverse separate building for public safety specifically for the piece app they're like you know interested. They don't want to pay for it because it is expensive to set up and they just don't really see the value because they don't think the way that we have to think.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	So we have two different shift schedules for our day and our night shift.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Oh okay so we have four shifts. We have two day shifts and two nights. We work 12.25 hour shifts.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	We have a 15 minute roll call. In my day I arrive at 6:45 a.m. and then I leave at 7 p.m.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Hopefully. Staffing permitting and then basically and that's a traditional that's what your scheduled to work and for day shift we do it's like two on, two off, three on, two off that kind of set up.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	So we work Monday, Tuesday then we have Wednesday, Thursday off then we work Friday, Saturday, Sunday then we have Monday, Tuesday off, Wednesday, Thursday, Friday, Saturday, Sunday off back Monday, Tuesday and we do that rotation.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	And then the other day shift rotates with us and then the night shift they're much simpler. They do four on four off and then they alternate with the other night shift so they'll do four on four off, four on and four off yeah and then so I so to ask what is someone's schedule is kind of difficult because that's our traditional schedule the day shift but then a lot of people work a lot of overtime like a lot of overtime so---
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yeah so we are required as employees here to work eight hours overtime a month which is not a lot especially considering we work you know 12 hour shifts so you can just pick up one day and not even a full day and you thought you'd be satisfying your overtime but a lot of people work overtime because the pay in this job is not as great so that's where a lot of people make their money and then also a lot of people also work

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to help out other shifts because our staffing is so poor. So a lot of time even though it sometimes has a lot to do with money it is also to help out other shifts so that they can get breaks and stuff because if you don't have the appropriate staffing you're not going to get an hour break. You know you're not even going to get a half hour break and also the people that need to get trained are not going to get trained because we do all basically one on one training here.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yes. So to my understanding keep in mind I've only been here since January but to my understanding it is a chronic issue. Independent research would suggest that it is a nationwide issue. It is especially felt here. We just sometimes we barely have enough people to cover our minimum and in fact we've had several studies that have been conducted by various contractors with the county that have suggested that our numbers should be around 15 given our population and our call volume and we most of the time will have eight.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Right. So even just one person is a massive difference. So and a lot of things contribute to the lack of personnel. Partially it's retention, partially it's recruitment and then also it's just you know when you have people that work like overtime all the time sometimes they get really over taxed so got to take a break and stuff so yeah so and again the only reason why we're at our minimum above our minimum today is because half of the people that are on our shift today are working overtime.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	So anyway yeah so basically my interaction is usually all police so I really the only interaction I have with the fire side is I call take obviously for fire and police and then taking medical calls and things like that but I personally don't have a lot of interaction with the fire side however if you speak to a more experienced dispatcher someone who is trained on the fire side I'm sure their answer would be very different. So my main interactions are with the public obviously is the biggest group of people that I speak to mainly taking calls and things like that and with the public I would say most of the calls we receive are non-emergency even if they come in on a 911 line most of them are not emergency. Usually I mean

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we're definitely busy but again a lot of the (00:15:38) stuff that we're responding to is you know is routine stuff.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yeah [County] Way stuff kind of routine. You know suspicious vehicles, suspicious person, minor vehicle accidents, accidents with injury that sort of stuff so that's most of our that's like our bread and butter is that type of stuff and then of course we do I mean a lot of people have this kind of idea that nothing happens in [City]. That it's a very, very safe community and it is quite safe. It's very you know it's definitely a nice place to live. I live here myself but I think that's kind of a misconception because there is actually a lot of crime that happens here that people don't really hear about or see you know and so we definitely do get our fair share of emergencies whether that be you know domestic or whatnot. I mean you know and like I said I've only been here since January but I personally have you know taking stabbings and stuff like that so you know assaults with injuries, robberies, armed robberies that type of stuff. We do get that you know and that's a lot mainly given where we are you know we're right next to [City], [City] has their fair share of crime, [City] does too so we're not immune to crime you know.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Right, right and then of course that's also not counting the actual emergencies and then I would say for emergency calls most of the time we're taking calls for medical and I think any piece app will tell you that that's--
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yeah a lot of their real true emergencies are going to be medical and those can get pretty stressful but you know a lot of it is elderly people with chronic conditions and then they flare up and so they need assistance from medics and then outside of that I exclusively communicate with other agencies and police officers and so those are my main people that I speak to. Police officers I would say public, police officers and other agencies.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Sure. So when I come in I will always have my breakfast and then I come in here and to our roll call room, sit down for a meeting, they'll go over any important information, sometimes we have trainings in the morning,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we will go over any like major incidents that maybe occurred the day before, anybody that we're looking for stuff like that. Anything related to ECC if there's some type of technology issue if there's something like that and then upcoming announcements and things like that. Just like housekeeping stuff and then after that I will go into the room depending on we're assigned something different every day you know based off of what your qualifications are then they try to fit in training.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	So we like I said we do 12 hour shifts so we have 3 rotations so we have basically three positions that you'll be working and they're all four hours. So if someone's fully qualified they could be on five ground radio for four and then they'll move over to maybe teletype for four and then they'll move to police dispatch for four.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Right. [City] will train you in three of the four competencies. They train everyone as a call taker and then you get to pick which two you want to do.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Okay so let's say I'll use a domestic because a domestic I think is a pretty good example of a regular call that we take so the most important question that we ask always is the first question we ask is what is the location. We need to know where it is right? Our technology in terms of locating people is just not there. We don't know where you are you know I've used the map as a reference but based off of the cell tower that you're hitting off of I don't know where you are. You could be anywhere you know and that's why we get a lot of calls for different jurisdictions.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yeah we do do geo-training and we do make an effort to become familiar with the county but it's 26 square miles you know so it's very and especially when you're not out there everyday. We're here right so it can be challenging to know you know and I definitely overtime become familiar with our hotspots where we get most of our calls.
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	But the problem is is that you're overusing resources then because you're sending police and fire because you don't know what the problem is or whatever. You know what I mean? So anyway so location

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								information is very important. I would love to be able to see you know this is a pretty big wish but one day I would love to be able to see you know accurate you know x, y, z coordinates. I'm talking like z coordinates would be cool especially in this environment where we have a lot--
OE	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	The problem with an environment like [city] is we have a lot of development that goes on here especially in the last couple of decades and again I wasn't here but this is to my understanding is that area and you can see it too just being here for I've been here since January you know just being here since January you can see there's even some places that have totally changed just in my time here. It's really great. It's a very vibrant community, there's a lot of change going on here, there's a lot of change going on in the [City] area in general. [State] is a constant state of construction right so you know it's there's a lot of changes that are going on and with that there's a lot of influx and up flux of businesses right? So businesses, apartments all that sort of stuff.
OE	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Yes it's kind of a demographic for dispatch where it is much more lean towards female but it is male. So in our center we have employed I believe it's fifty two employees with the capability for more. We've lost a few and out of that on the actual dispatch floor I believe that we have maybe five male dispatchers and in the back office the administrative side of it we have another five so out of 52 there's 10 males.
OE	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	We had enough staffing it was right around a switch time so the oncoming staff was told to go to our backup center and our staff that was in our main center was escorted out under SWAT protection so shields, everything, the whole shebang escorted out of the building. There were no bombs found. We didn't find any snipers but at that point we were still just across the street from where our building could potentially collapse and our backup center is actually where we answered 911. The calls and dispatch and things like that so it is an even older facility that is much smaller as well so our capability of having as many dispatchers on the floor is very limited.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	So it's a lot different when we do have to go over to our backup center. So with combining the two centers we do have some additional options once the rest of our technology catches up, once we get an integrated CAD, once we figure out our radio system and how we're going to get them to work together then we'll be able to in those instances when we need to leave [name] when it just effects the courthouse area we will have a second backup center that we can go to as long as they're not as well occupying it.
OE	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	It makes it a little more difficult yeah so I mean it's off topic but it's something that brings it down to such a simple thing but something as simple as changing the name of a road. In [name] once the city decides on it they do it. In [name] we can't. The state government has to decide that because it is a state road because we're a county so we can't just change the name of a road because the citizens want us to. The state has to say that we're allowed to change the name of the road. So that same kind of regulation affects us in other aspects as well.
OE	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Yes. So they are a much wealthier demographic and so and a lot of them are very big in technology because they work for federal government, state government, they are military, they work in the tech worlds, they work for [name], they want the best of the best and they don't want another city or county near us to be better than us. So their expectations are very high even if it comes down to something as simple as parking or dogs off a leash they expect a certain level of response no matter what the call or what the situation is.
OE	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	It puts an extra burden on us. So the citizens if they want something they have the ability to get it because of the money and the power and the voices that they have which is a great thing. It's great to have that communication with them but making sure that the correct expectations are set for them so that they fully understand what the expectations are, what are limitations are, what they're asking for. The burden that they're asking on us--
OE	COMMS	U	Manager	26-35	6-10	Female	COMMS-	We also have the military base where we are their medical department.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
							U-007	They have a fire engine and a Battalion chief but if something big happens [name] is the one responding and anything medical [City] medics are the ones going to it.
OE	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	We do yes and [name] which is a very small you know maybe 10, 12 square miles it's a really small little city we are their primary answering point as well and we're their fire department.
OE	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Demographics for [name] are quite different.
OE	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	We almost double our population during Monday through Friday because of different federal or government buildings that are in [City]. So our population level for how small we are we're roughly 22 square miles our population is somewhere around 250,000. During the day that almost doubles.
OE	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	So [county] it can be really hit or miss with call volume. You can have some days in the middle of the day that are slammed. You can have some like a Sunday night or a Monday night when you expect nothing's going to happen and you were busy all night long so it really fluctuates depending on what's happening and can fluctuate day to day, month to month. There's really no we all have our sayings of when we're going to have an influx full moon especially if they're on Friday nights, if there's holidays. We're getting into the time of the year for domestics, Thanksgiving, Christmas, New Year's because family comes to visit everybody and so you get influxes of that.
OE	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	So you kind of know certain times of the year when you're going to start getting influxes of certain types of calls but it really goes up and down. We get more calls during the day that are less severe. We're getting the parking complaints, we're getting the barking dog complaints, the dog is off a leash, we're getting referral calls where someone calls us and asking us you know who they need to call that kind of thing. At night we may have a slower call volume most of the time but they're usually the more severe calls.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	We can't do anything but the expectations are there that we will do something. Some of that is not necessarily ECC's fault but [county] jurisdiction government as a whole where we have also kind of fed into those needs and wants of our citizens versus saying no.
OE	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	[City] can say no to somebody, [county] we don't. If you want an officer you're going to get an officer, if you want an ambulance you're going to get an ambulance. We're not allowed to say no. We've had people call with a tick on the toe. She refused to pull it off herself, she refused to drive herself to the hospital, she wanted a medic, she refused to let the medic to take it off, she wanted to go to the hospital and have a doctor take the tick off of her toe. So we've kind of allowed those expectations to also hold true so we've kind of also perpetuated this [name] kind of view on life. So we kind of make it harder on ourselves but again it's a county as a whole not just one specific entity within the county.
OE	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Then we have other things that integrate in. [county] is really big on IP and fiber. We have laid our own not ECC but our County Department of Technologies Services has laid a massive IP fiber connection throughout [county].
OE	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	So they'll eventually be working towards trying to integrate it into the firefighters current equipment and gear versus having a pager that they need to clip on to their belt yeah it could be lost, it might be damaged because of fire so they're trying to find ways of course that's going to be well off in the future because once it's available then jurisdictions have to buy it so we're pretty excited about things like that. So we have a lot of things coming into this area where they want to do test runs and trials with us and see what we're doing. One thing that we are doing already is we have established and I was part of this as the first year after the first year I moved off into continuing up my chain but we established in 2013 [name].
OE	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	I would say it's unique in the sense that we do handle all the window traffic. Like I said, we handle sex offenders. We do purchase permits. I mean, we have the citizens that come in. We have probationaries that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								come in twice a day or sometimes three times a day, to do breath test for alcohol-related incidents. Plus we have to manage our records. So I mean, you're call taking. You're dispatching. You're handling the window traffic. You're running all the officers' paperwork.
OE	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	Our community is small, so it's not the big city. You get to know a lot of the people. And since I've been here 17 years, I know a lot of the business owners and a lot of citizens. So they'll call or they'll come in and then they all address you by your first name. So in that sense, it's a little more-- you get a better feel for it because you start to get to know people. Even when people call you [laughter], you get to learn their voices. You don't even have to ask their address or their business because as soon as they call you, you're like, "Oh, that's so-and-so," and you just start typing in the address, where on the big city, it's not like that. I mean everything's different. You've got so many different people calling. There's no personal level. Where here, I think, there's more a personal level because it is a smaller department.
OE	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	I would say prominently, middle class. I mean we do have some lower socioeconomic areas or some of them are apartment complexes. There might be a couple neighborhoods that are lower socioeconomic, and then there might be a couple areas that are a little bit more affluent. But I would say the medium is middle-class families that live here in town.
OE	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	Our department is small. It's within the city hall. We have our own dispatch center which is the only department, besides the sheriff's department, that has their own dispatch center. Everyone else goes through central dispatch. We're only open 16 hours a day, 7 days a week. So 8:00 AM to midnight. I'm the only full-timer. And then we have one three-quarter timer. And then we have five part-timers that are only allowed to work 29 hours a week. So generally, they'll fill in on the afternoons, or the weekends. And we have 12 officers. So we're small in a sense that it's a smaller city.
OE	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	But we kind of work together as a team. And, again, that goes with the small department. Where, in some of the big departments, you probably

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								don't have-- I guess it's more like a family here versus just a workplace.
OE	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	When I worked at my other department, I worked every weekend and holiday for 10 years. I think the only time I ever had a weekend off was maybe if I was on vacation. And a lot of other agencies, you might alternate weekends, or if you decide to work a specific shift, or overtime, you might work every weekend. It just depends.
OE	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	Probably because it's smaller, and the officers work 12 hours, and then I work 8. Over the summer, we were really short, so there a lot of days I was staying 12 hours.
OE	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	I mean we have a lot of domestic violence. So someone might call screaming saying, "My boyfriend's beating me up." Or I mean it could be a parent. It could be a child saying, "My mom just hit me." I mean, we have another sad situation in our society is the mentally ill out there. We have a lot of people that are living out on their own that are severely mentally ill.... And again, you get to know all these people. Even if they're here for a short time you know their voice as soon as they call, you already know where they live, you already know their address. And that's the beauty I guess of a small town. But we get a lot of unlocks, a lot a lot of private property crashes, a lot of crashes on the streets. But we get a ton of unlocks and I think we're still the only agency in [county] that does unlocks. We carry the tools in our car and that's a service that we provide for free, so we do get a lot of calls for unlock.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	That's the biggest thing really. You've got to be a really good communicator. You have to be good with people. We do have people sometimes coming into our offices so you know you've got that one on one and you have to be able to deal with people. Sometimes they're not happy, sometimes it's just you know have a chat. We have a lot of older folk in our community and sometimes they just like to stop in have a good old chat and then go on their way and so got to be good with that. You have to be able to follow a protocol right because when people call we have to be able to get the right information to give that information to the deputies so they can go out and do their job and actually help

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								those people so communication skills, communication skills, communication skills you've got to have those.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Well it's remote I would say where I work we're kind of remote when we're there are no big cities real close and so we've got a lot of farmland. There are seven small towns here and we serve them all and everything in between and so there's a lot of area I think that we cover but that's really a lot of farmland. Again none of the towns I don't think are very big maybe a couple hundred folk or so. Post office, a gas station, you know sometimes that's about it in the town. It's not like it's an actual town. We have maybe one diner so small I would say small if I'm describing where we are.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Well I think most of us do live in the county. I can't imagine anybody who doesn't but I don't know that it's required really so no I don't think it's required. Most of us know it because we're here because we live here because we know the area but I don't know that it's not like we take a test or anything about it but it's hard to dispatch a car if you don't know where you're sending it so I think that we do work hard. We've got maps here and different things that can help us too.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Well it's a dispatch center but really it's an office. We're in an office and you know I've got my desk here and you know here's the radios and the Sheriff has an office back in the back, the jail is back there but really we're just in a small office yeah.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	I do. I work afternoons and so that's by choice and I've been here long enough I can you know I kind of get the shift that I want. We do have trouble getting dispatchers and keeping dispatchers so sometimes you know we might have to cover an evening shift or we might have to cover a weekend shift or you know somebody might ask you to take a shift for them but generally yes we're doing the same shifts all the time and that usually means we're communicating with the same deputies out there because they also they rotate maybe a little bit more than we do but not a lot and so we know each other. Again this is small enough to that there aren't that many of us so we do know each other and we come in and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we can talk and I know who I'm talking to over on the radio.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Well we've got the public certainly. Sometimes they come in here so sometimes they're in here and we're just talking but usually they're calling in and so they'll call if they got a problem. This time of year it's a lot of we get a fair amount of accidents this time of year so generally the public. We do dispatch all the 911 calls in the county so usually we're talking to law enforcement, we're talking to the Sheriff's deputies but sometimes we might have to send a call out to fire and so each of these small communities have their own volunteer department but they'll all be notified when something's going on because often times they'll have to send trucks from different towns to help in the case of a fire and here we've got a lot of wild land fires, we've got a lot of brush fires and so often times it's bigger than just one town can handle so fire and we've got also got an EMS. That's a company we send out too so that all comes out of this office.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	So we do, we do we've got again kind of a lot of small towns here. We call them towns but they're not really towns in the way most people think about towns right? It's not like there's oh I don't know restaurants or bars or anything like that but our post office and sometimes a gas station and so most of what we've got here is farmland and so we're dealing with a lot of kind of remote locations and our folks are driving around a lot during the day kind of seeing what's going around until we get a call and then they'll go directly there but we're very small.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Yeah we're not like [City] for example you know which is bigger town. They've got a bigger population and there's definitely more diversity up there. We don't really have much. I think in general folks are pretty basic here mostly farmers or people who are living on farms working someplace else. We've lost people in really the last five to ten years especially populations in these towns have really gone down and that's really been a problem certainly for dispatch for example we have trouble getting people to work, to find dispatchers and so that is just we don't have folks who want to live here anymore and that is a problem.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	We start out by asking who this is and where they're at. Those are the two pieces of information we really have got to get. Who is this and where are you at? Then we need to know what's going on. Is this an accident? Is this a fire? What's the nature of the call because then we have to send out the appropriate people so that's the main information at the minimum that we need to get. Kind of who is this, where are you and what's wrong? Once we get that we really need to dispatch because that's all they need to get going and because we are such a large area it might take one of our deputies a while to get wherever they're going so we want to get that information out to them and then we might go back to the person then and ask we're going to ask things like is anybody hurt?
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Well sometimes but that's very, very rare here. Sometimes maybe but if we do if I'm on a call for example and I get another call you have to see what the nature of that call is. You do make a decision then about where you need to focus your energy first, you take care of that, you dispatch that then you go back to the other call so some of it is about prioritizing and understanding what needs to take priority in those kinds of situations and so it's about figuring out who needs help the most and sending people there.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	No not really. I can't think of really any instances you know maybe one or two maybe again we're organizing something or you might have something going on but not usually for calls no I wouldn't say that that happens.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Not really. Again radios drop out sometimes yes and so maybe that. Again this is a we're kind of remote we've got sections of the county that are relatively remote and those can be a problem for our radios. You know you're out in the middle of a farm and who knows what you're getting there so that can be a problem but other than that I don't think so. No.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Q: And so you are providing your own 911 service here? SME: Yes ma'am. Yes we are. It's all run through this office.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	I don't think so. I think that's about it. It's a good job but we do have trouble getting people. It's not like it's a lot of money or a glamorous job but it's a good job that helps your community and I hope we can get more people here to do this work because we do need help, we do need help.
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] So the answer is no. And the way that it works in our county, and particularly in the fire world, we will start out on our trunk radio system which provides the best coverage and audio quality. But we have to go down to the most common denominator which is an analog VHF radio. And so we move from that digital trunk world to the analog VHF world so that the agencies that are responding - and they came from all over northern [state] to help out - can show up and have
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] No. We're responsible for ourselves. I mean, we could hire them back to do it, but we have the capability to do it.
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah. So the sky's the limit, really. And the way that it works is there are a variety of built-in tools. And it mimics a EOC environment within the application. And so if you walk into an EOC, typically, you'll look around there's hanging boards. Like one behind you. You can't see on there quite [crosstalk]--
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] But the boards will just be easy ways to put summaries of information, right? So one board will be the fire department status for this particular agency. Another one will be an EMS status, and one will be road status and those kinds of things. So we do that exact same thing but we digitize it in the application, right? So we have all those things, shelter statuses, staffing levels, we've got road statuses, those kinds of things so that at a glance everybody can see the same information at the same time. And as I start adding information everyone else gets to benefit from the information that I'm sharing. One of the things we're priding ourselves on is not making it too complex because if it's too complex, you require too much information, then

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								people are going to be hesitant to actually use the tool. But we've been really successful and just about everybody says it's been an amazing implementation.
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] On the back- end it's a dot net application. So your standard Windows desktop, Internet Explorer browser. Any HTML file browser will work. Your mobile devices will work as well. So people bring their own device to use the application which is awesome because when you work in the county, you distribute architecture in terms of our county. So each department is siloed. They've got their own IT resources, they've got their own everything. So when we all come together is really difficult, right? But in this case, this platform is designed to kind of be at the level set of that. You bring your own device, they should all work as long as you can get to the internet.
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] [laughter] So this whole building becomes the EOC for our county. So every room will have a designated purpose in this building for a different function. And they used to have to be physically here before they could even start their job. Now they can access it from anywhere and they can start and or work it from their own offices if that's the only option.
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah, we're actually proponents of using our daily tools to manage the incidents that we actually use and that's because people are already familiar with it. They're ubiquitous, right? And if you can just modify it slightly to handle your incident work load then you're just much better off. So we use the standard types of tools, right? Email communication, phone communication, radio as well, and the application suites that we integrate into the whole process. But from a communication perspective, that really encompasses the majority of it. My group is an all hazards communications unit. There are other siloed groups that just do it for their organizations but ours is cross-cutting because we have so many departments. Within the county itself, we have EMS and hazmat and law, so all those groups are facilitated through our communications unit. But yeah, on a daily basis it's the basic tools.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] We don't really have pre-canned comms plans. Essentially, as a comm [owl?], we essentially look at the situation and we look at what's available and then kinda match that up. In our county, we developed a tool for doing online reservations of talk groups. So we're all sharing a pool of interoperability talk groups, and those can get used for a variety of purposes but they can also become conflicts. So we use a tool that de-conflicts that process by basically reserving them in advance, and then there's a process to-- if I have a higher priority incident, basically bump people. And that's a mobile application that people use from their phones or on their computer and then they get notifications when a new reservation goes in. In essence, that replaces many comm plans, right?
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] So they don't have to write a full comm plan. But if the incident is big enough that it requires a communications plan, we will write it based on what's available at the time and the certain circumstances. Our geography and density in the county, if we want to use analog or conventional channels we really have to pick the right ones.
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] So for example, we have a lot of refineries in our county.
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] We do. We have a high population of refineries in our county and chemical plants as well.
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] We do a lot of net-- we stand up independent networks. So mesh networks, point-to-point networks. We do that a lot in the search and rescue arena. Yeah. We pipe in satellite, we pipe in LTE, we pipe in connections back to our enterprise corporate networks, those kinds of things. Yeah? Hi.
OE	COMMS	S	Other Public	36-45	11-20	Male	COMMS-S-001	[S3] So there's a variety of tools out there that we're using for mapping. Within the [application] has its own mapping component. Primarily, we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					use a tool called [application] or [application]. It's the same tool, just two different names. And it's a free tool and it has a ton of features in it. It was originally developed for the search and rescue world, but it's kind of expanded its features today. And its access is everywhere and for everybody. They even offer a version that you can download and host on your own server so that if you're in a search and rescue environment with no connectivity you still have the mapping component.
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Well, it's changed dramatically. Particularly since we've-- from a law-enforcement perspective, we left the analog radio world and we went to the digital world. That's been a significant change for us. Capacity has increased significantly. We've been able to divide up our communication paths by function and just made it so much more simple. Access to applications and application development, and being able to develop things on our own has made really a significant positive change for the organization. With our outlook on technology as a way to bring people together has definitely strengthened, right? What we see as an example of that. Before that I would venture to say that everybody kind of did their own thing, right? And now it's less of a challenge to get people to come to the table and communicate and just share information. So--
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] There are some people that don't understand that concept, right? That those problems were there all along, you just didn't know about them [laughter]. And now you're getting it out, right? And so I think we're working our way through that phase right now. And I think things are improving and then we'll just get to a much better place where hey, yeah, it's not that difficult for a fire guy to call a law guy and a law guy to call a fire guy. And we're all the better off for it.
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S2] Diverging cultures.
OE	COMMS	S	Other Public	36-45	11-20	Male	COMMS-S-001	[S3] Yeah. So we have a full-fledged drone program here at the sheriff's office.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah. So we have three drones.
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah. We are implementing on the tactical side right now so our tactical teams have access to it. It's also a shared resource so they can be called out by any agency, really. And we have a paid staff and a volunteer staff to back them up, just to cover the 24-hour model--
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] --seven days a week. And yeah. So we have full-size drone, not military grade but commercial grade full-size drone, and then some smaller ones that they can navigate through buildings.
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S2] Cool. And how long have you had that program in place?
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Right. And in our program they actually use pilots. And then they have an operator that goes with them so they can do the TFRs and all that kind of stuff.
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Just making sure that everything is connected and then how to monitor it all once we do get it connected so that it can be seamlessly monitored. We're building a new EOC so that's where my mind is also going. So a lot of video and audio technology is what we're looking on with things. There's a lot of fiber-based stuff out there now so we can push a ton of video. Which is really nice but not everything is connected to fiber. So now we're doing cross--
OE	COMMS	S	Other Public	36-45	11-20	Male	COMMS-S-001	[S3] So [county] is about 735 square miles in size. It has 1.09 million people in it so it's in the top 50 sized counties. So it's big. It's a big

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					county, high population. Industry that's here, we have the oil industries here, lots of refineries. We have a significant technology sector. We also have pretty good size agriculture as well. So because we're along the coast and we have a valley as well, so we have this really interesting mix. Banking is also here. [bank] has a significant foothold here as well as Wells Fargo, so it's kind of across the board. We have a population that is very poor and we have a population that is extremely wealthy in our county, so it's really diverse from that perspective. There's nineteen cities and towns, so that's kind of it in a nutshell.
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah. [company] has their headquarters here.
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[RE: source of funding for new technology projects] [S3]: I would say 90% is through grants.
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] So our department just made the decision recently to give every person that's on patrol a cell phone from the agency. They're doing that for a couple reasons, one: they can't have the excuse of I didn't have the ability to make a phone call. But it's also a lifeline as well in that case, if you really need it. Our county is so big geography-wise that people can be out in places where there-- we have 95% coverage from our radio system, which is significant. I mean, you don't really find radio systems that high. But the fringe areas that our county patrol works in are the 5% that you don't really get it so you need to have an alternative way of communicating.
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Right. No. You probably get another 1%, maybe [laughter]. But at least they're doing their part to give you another tool to train. And so patrol has it. Anybody that's in the sergeant position above will have an issued phone as well, but everybody still brings their own phone, right? That's just the way it is.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah. That's not cool. We just got rid of our MDC's and went to tablets. So part of the reason for that is so you can pull your tablet out of the car and utilize it. We also dropped hard-wired modems in the cars and exchanged for a modem built into the tablet so that if you do pull it out you can actually still get connectivity. So those kinds of things. I mean, they're small but they make a big difference for some, in some cases to have that accessibility.
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	Q: So you've mentioned that there wasn't a lot of support initially. Do you feel like that's been changing over time? Was it sort of one of those things people just had to buy into the idea, or--[S3] SME: Well, I think they had to buy into the idea because, status quo. Like, "We're fine."
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] And we have a significant, diverse population here--
OE	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] But we have phone lists, just like you said. We have [application]. We have radio. So there's a whole bunch of communications technology that we have. We have satellite phones here as well. And satellite radio. So we have a system that allows us to push to talk over satellite to different communications centers as well. So there's a bunch of different technologies that we can use. And that's not just for our operational area, that's for the whole [Location].
OE	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	It's very rural. We don't have a very high crime rate. But lately we've been experiencing more elevated [inaudible] burglaries, and we're not too much on the shootings. We do have them, and we have had issues where we would have those hot calls... You have to deal with, we have a lot of accidents. So being that we have US-[road number], which runs off of a river, it's a very, not as big as the [river], but it's big enough, and we have lost a lot of people that'll lose control and go into that river. Those calls there, me myself, I've worked three that we actually saved, and two that we actually lost.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	<p>Hmm. Some of them are lower class. Well most of them, lower class. We have mid-class, not too many upper class. But mid and lower. So the lower class is sometimes difficult to work with, because they're at a high demand. They want what they want, when they want it, and how they want it. And some people, you can't get them to understand I'm only the dispatcher... Mid-class, they're more understanding. They'll give a day. It'll be well, we called into to your dispatch center and reported this, and nobody never came out. Well sir, I'm sorry about that. I will relay that message again and get them as soon as possible. And they'll understand; they're more understanding. It's very understanding with the lower class being, some of the areas, speaking of like [inaudible] area. It's more of a higher crime rate, more the burglaries, more of the home invasions that happen around that area. So in certain areas, we know which, what to look for.</p>
OE	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	<p>Well our dispatch center isn't real big. It has grown since before I started. I'm ten years into it right now, so the size that it is, this is what I walked into when I walked in ten years ago. It was smaller than that, just from what [Name] [phonetic] was telling me. And sometimes it can be a little cramped up when you get certain calls, and you're, it's a busy time. You get cramped up; you need to take a walk. We're very secured, so we can walk around the building and not worry about anything because you have to key in. You have to key in. And at any time the police, sheriff office is right up front. So it's secure.</p>
OE	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	<p>Q: So do you work the same shift every day? SME: No, it varies. I could work day shift, like today. I could work a night shift. Sometimes I'll split a shift. It varies.</p>
OE	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	<p>... And that in a nutshell is, the councilmen, [inaudible] the communities, the different districts, we have our council members that speak for that area. So if they call in and they need any assistance or they have a resident that's calling them for certain things that's going on, they may call in, and they'll ask what's the latest on this, or did you all send anybody out here? So we give a lot of updates.</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	Mm-hmm. Sheriff, fire. We have the two police departments, which is Lutcher and Gramercy. We dispatch for both. For EMS, we transfer straight to their dispatcher. Now we do assist their dispatcher in getting that information. If they lose the call or if they couldn't hear the caller, and they call back, we already got that information, so we'll in return give it to them and make sure they have the assistance if they need any assistance going in. Then we assist them in doing that also.
OE	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	We try to get a routine in. Sometimes it'll work. Sometimes it's like okay, we can't do it that way, you just have to do it another way. So coming in, setting up our system, and logging into all of the systems that we have to log into, and just being ready, readily available for anything that comes.
OE	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	...Our fire services would be second because we dispatch to them in the event of a residential fire, which is a structure fire, you have a house. We have two on the east bank and two on the west bank. So normally for a structure fire, if your house is on fire on the east bank, we dispatch both departments.
OE	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	Each of the towns, yes. And mostly our [town] department, they are very good about coming out and handling the calls that their municipality gets. Sometimes with [town], we may not have an officer on certain days. He'll come out maybe the weekend and maybe two days out of the week. And our sheriff office has to handle the calls that they don't pick up, so...
OE	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	Our call volume goes up. Our call volume goes up extremely. And it's like the phone is nonstop. That's when we bring in our three laptop positions, which are call-taking stations. So that'll be the biggest difference in the event of a natural disaster, the call volumes.
OE	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Emergency preparedness is a little different in [County], being we are very, yes, we are very rural. As emergency preparedness director, I'm in charge of 911, radio infrastructure, GIS, IT, and prisoner care. [state] is a little unique in which the sheriff operates the jail, we have to pay for all

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the upkeep, whether it be transportation of inmates, keeping of inmates, medical care, dental care, the whole 9 yds., we have to, we have to foot the--
OE	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Not, it does. They bring the invoice to me. In a nutshell, I guess if you were to [inaudible] my job into one, it's public safety more than just emergency preparedness. We also have a direct, all four fire departments are volunteer within the [County]. So I also have one person on my staff that handles just fire department calls as far as clerical work. So she acts as the point of contact between all four departments as no one is at the station 24/7 like in majority places.
OE	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Never a dull moment [laughter]. Not knowing, always something different. No two days alike. Borderline ADD [laughter].
OE	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Dedication. You have to want to do this job. It's not a job that just anyone can just jump into. They have to realize that they're going to get screamed at, hollered at, fussed at, in an individual or individuals' worst time answering a 911 call. So cannot come in with the mindset of, also being the same job, the same day, every day, 'cause it's not. Heavens knows what's going to, what's coming down the pike. There's going to be a flipped-over car versus a burning house versus, you know, someone held up at gunpoint in a residence, just so many different odds and ends and so many perspectives that it could just be anything.
OE	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	[County] is between [City] and [City]. We have a population of right over 22,000 people. We average about 16,000 911 calls a year, and probably close to 12,000 calls for service a year. Our dispatch center is a little unique in that we have a consolidated dispatch. However, we have a law enforcement, sheriff's office dispatcher, and a [County] dispatcher both cross-trained in each other's jobs. The only difference is one gets their, one's on the payroll of the sheriff, one's on the payroll of the [County]. There is a supervisor for each shift or each, I'm sorry, not each shift, each discipline. We are 24 by 7, 365, two position [inaudible].
OE	COMMS	R	Manager	36-45	11-20	Male	COMMS-	Not really because I think the boundary lines if you will, the areas of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
							R-011	jurisdiction are pretty clear-cut. There's no gray areas. So I think that that really plays a key role. The two municipalities, one's a little bit smaller than the other, so naturally would not have the funding sources the bigger one has. So it's a little hectic sometime on the dispatchers insomuch that the smaller municipality does not always have a sheriffs, a law enforcement officer on call, and t may have to be the [County] backing up the municipality. So it can be frustrating at times, but I have to say they hold their own, and they do their best.
OE	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Correct. [County] is real heavy on petrochemical, but there are a lot of people that live here but work out of the [County]. So we are still fortunate that some of the companies or individuals work for, they do let them leave for emergency situations. And we have a lot of shift workers also that work in the petrochemical industry that are available during the day. But it's still not that optimum number of folks that you'd like to see.
OE	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	This is kind of comical. When new folks come in, the building was built in 1985, was in the in theory is an above-ground bomb shelter. When you walked in, there's 18 in. of concrete, 1 ft. vapor space and a cinderblock filled with cement. We have no windows. So the only way I can see outside is pulling the cameras to see if it's raining or if it's sun-shining.
OE	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	So protected. We don't know it's raining outside unless we hear the water dripping in the gutter [inaudible]. So it's kind of comical sometimes. A lot of people, they can't get over it that we work in a building that has no windows. But at the same time it's kind of a safeguard more than anything, so it's pretty neat. It's pretty unique, if you will.
OE	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Sheriff's office is actually in the courthouse. This first floor is all emergency preparedness. We do have one sheriff's office, lieutenant that is a supervisor over his folks here in at the dispatch center. And then above us on the second floor is our community action folks, council on aging and special programs, that type of thing. So we see a lot of traffic coming through them, through here going into them. And the only other folks that I'm not over that's on his first floor is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								purchasing, which is actually in a corner office. But it's because of the warehouse for supplies being at the back. But other than that, I have control of everyone on this first floor.
OE	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	... And when it comes down to the communication end of it versus the emergency management side of it, it kind of ties together because when we do have natural or man-made disasters, all of a sudden we're wearing several different hats at one time and having to change gears to do and make sure that we don't overstep our boundaries, if you will, speaking, what's either law enforcement-sensitive and/or dispatch-sensitive versus what's going on in the real world. So we're almost the speed dial call of a lot of people because when's the roads going to open, when the bridges are going to reopen, that type of thing. So I mean it's, and they come to us for a lot of answers that sometimes may take us a little while to get back to them. It's quite interesting.
OE	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	... What we've done after, we've had as I spoke earlier, two [Event] almost a year apart in 2016 and 2017. And that was some very unique situations for us, because we're not used to [Event] here. And GIS Department also falls under my umbrella, if you will. And there were a couple of applications through a GIS provider that we implemented after that, so we could do damage assessment. We can show, we can take a picture of an address and not have to worry about buying hypothetically a \$3,000 camera that gives you lat and long of the picture.
OE	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	911 inundation, we have three 911 trunks. Like I said, we average about 16,000 911 calls a year. Me being a fire [inaudible] that I am also, we have to, we have the Property Insurance Association of [state] which is ISO in many other states. Property insurance kind of takes some of the ISO and kind of puts a spin on different things. But we do have to file an NFPA 1221, which is the answering, one part of that chapter seven I think it is, is the answering section of it to where all incoming emergency lines have to be answered within 15 seconds 95% of the time, within 40 seconds 99% of the time. I mentioned the 16,000 911 calls. But as a whole, we answer two dispatches 24-by-7, 365, answer on average

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								about 82,000 calls coming in the dispatch center. Now you take the 82,000 and subtract the 16, that's all admin lines coming in for the simple fact they were so small that everybody knows that if they dial 562-2200, somebody is going to pick it up and not have to go through [inaudible]. So it's kind of comical, and a lot of those 911 calls also are maybe in a neighboring jurisdiction to where we transfer those calls to a neighboring [County] .
OE	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	... And they don't realize what actually goes on behind the scenes. Yes, our normal working hours are 7:30 to 4:30, and 7:30 to 11:30 on Fridays. I'm here at 6:30 every morning and usually don't leave 'til 5:30, quarter to 6:00. Yeah, I'm salaried, but so what? There still is a lot of work that has to be done, that needs to be done behind the scenes when the phone's not ringing, the email's not coming through, to where you can have that zone, that trance if you will of trying to get something accomplished.
OE	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Okay. And we talked just a second ago about the fact that you are deputized.
OE	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Depends on what day, I guess it depends on what day, 'cause some days it's aggravating. Some days it's easygoing. It's a roll of the dice. You never know what to expect. So I think that's probably the reason why I'm still here after so many years. It's ever-changing, so I never expect the same thing every day.
OE	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Well you have your cities, which [City], well it's a, I'm from a much larger city, so I think it's a small city. Some people think it's a big city. I think it's a small city 'cause I'm from [city and state]. So it's definitely probably about five times the size of [City], easy. So you got your small city, cities like [three cities]. But then all those surrounding areas, like the areas between the two cities is very rural. It's not surprising, like if you're driving from one city to another, and you see somebody in the bayou alligator hunting, like where I live, it's a rural area.
OE	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	I guess it depends, 'cause you have a lot of oil builders that live in the [County]. So before the oil field [inaudible] out, basically you had a lot of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								higher middle class groups. But I think mainly it's at the very minimum middle class people. You do have some lower class areas, but for the most part it's definitely middle class.
OE	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	It's definitely much bigger than our older office. Our older office is probably the size of this room and the room next to us. So it got a little crowded. And unfortunately when you're on top of each other like that, not everybody gets along, so you'd be surprised what a little room does [laughter], but yeah, this building is a complete shock. Like it's, we went from sitting at a desk with just one computer that worked when it wanted to, to we came to this building, I mean everything's I guess fancy right down to the desks. The desks move up and down. I had never seen that even when I was in college and out here, and I'm like, I played with the desk for about three days. We have multiple screens to deal with, so now we can look at everything all at one time instead of closing one thing down, opening another, closing. And the computers are much up to date, so they move a lot faster, and we don't have to worry about officers being in danger 'cause our computer is frozen, we forgot where they were, or having to go to paper and then back, back and forth from the computer to paper.
OE	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	I work the same shift every two weeks, the same shifts every two weeks. So the best way to describe it is I work Monday, Tuesday, Friday, Saturday, Sunday of one week, and then the next week I work Wednesday, Thursday. So I work a total of seven 12-hour shifts over two weeks. But it's split up so you have days off between your shifts.
OE	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Well they were work the same shifts we do, so they get used to dealing with people, the public, and they have their typical, we call them frequent fliers, which is the people who call at least once a week. So we know them, we know where they live, we know basically, we can guess what they're calling about.
OE	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Well that's when you forgot whether it's going to be a slow day or a busy day is right about 10:00 and 12:00. If the phones start going crazy, it's going to be like that for the rest of the day. And if not, then it probably

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								won't be.
OE	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Okay. So you have one sibling that's calm and mellow, and then you have one sibling that tends be neurotic. Like everything has to be a certain thing down to the T. This agency is your mellow agency, and then some agencies we deal with are neurotic. You kind of wish your mom had adopted them out [laughter].
OE	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	My regular dispatchers have six. I have eight, and then the fire room has eight. So your regular call takers and the headquarters have six monitors. The extra station, which is where the supervisor would sit, you've got three people on your shift. And then there is the fire room, which has extra monitors. We typically have the Zuercher running, and then we have a camera system which covers the whole building, which kind of, it increases security. So if we see somebody in the middle of the night walking around the parking lot that shouldn't be there, we can send somebody to, hey what are you doing? Because we do have a lot of, like we have our body shop here. We have a lot of property here that would not need to be damaged.
OE	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Yes, it's definitely sufficient. It meets our needs. Our boss, the sheriff, he's pretty good at, if it's not over the top or you don't really need that, what are you going to do with that, if it's something technology-wise that we should update, he typically doesn't have a problem allowing it to be updated.
OE	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Well, the call volume definitely increases, which the problem we have [inaudible] we're answering the same question. Even though like we put our press releases, we've put out, there's numerous ways to inform the public, and like they'd rather just call. Which is fine normally, but if we have an active shooter, we have other things that we're focusing on and getting everybody ready 'cause we know we have to deploy a SWAT team, 'cause we, it starts with this building for any situation.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	If you are a full-time employee in the dispatch center you actually attend what is called the 360 post academy, just like a regular police officer. We

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have a night academy and a day academy hosted at our agency. Our communications officers attend the night academy from 5:00 p.m. to 10:00 p.m. Monday through Friday after shift. They get paid and compensated for that. And at the end of it you are a post certified deputy just like a police officer on the road.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Busy. Unpredictable [Laughing]. You don't know what you're going to pick up and what's going to happen at that moment in time. But to me I enjoy it. It's very satisfying to know you can help somebody.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	It is mostly rural. The one large city we have is [City]. Everything else is little populated cities and towns mostly. We kind of have our [County] divided into three different areas: north, central, south. And they all have their own rules of living, I don't know what else to call it [Laughing], unfortunately. But it's very diverse. Very.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	The north end of our [County] is more of the [City] and a little rural around it but it's a lot of subdivisions and such. The central area of our [County] has [Street] running straight through it which is a main interstate going through. And then the south portion of our [County] is... we call it another world once you cross the intracoastal canal [Laughing] but it is... they work in the boating industry, the fishing industry, you know the shrimping and crabbing and they work out of Port [Town] where they go offshore. So it's a lot of that culture, strictly, down there. So they have a different way of life than north that works in a city and offices and businesses and such.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	No. We actually have part of the training as a dispatcher, we actually take you around the [County] and show you the main points of what we call landmarks throughout the [County] or the main streets and subdivisions that we know are going to pop up that are the normal areas we go to unfortunately. And we actually go through that in their training. They also actually ride along with a patrol deputy during their training to see what that patrol deputy does and what he goes through on the other end of that radio.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	It is 4 years old. We actually went active in here in October of 2014... But we made sure that, you know... they could be as comfortable as possible at their station. Their stations go up and down whether they want to stand up, sit down. They each have fans. They each have a heater. They have dimmable lighting.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	And it seems a little excessive but when you're sitting there for 12 hours and you just need to get a little bit of heat but the person 2 desks down from you is cold or is hot and wants the fans on them, it makes a big difference because just in their work you are letting them get comfortable at their station as far as, you know, environmentally-wise they can heat up or warm up or cool off and they can--I find that it helps them perform better because if you're sitting there freezing, I mean you're not exactly going to do anything at that moment in time. So. But we've been here 4 years and it's still a work in progress I think. It's still, you know a year after we were here is when we had the video wall installed up with the--but we're constantly getting technology and adding stuff to it so.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	They work, I want to say it's called a 2-2-3 schedule is how it's described. They work the same shifts as their patrol shift. So they stay together. The same dispatchers stay with the same patrol officers. They work 2 week days, and 2 weeks nights.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Over here, we work 12-hour shifts on the station at terminal one. So you day starts with that station and it ends with that station for the most part unless someone needs to switch during the day for whatever reason. I don't know that it starts and ends the same. If you're on day shift it starts really, really slow. 6:00 o'clock in the morning not a lot of people are up for the most part. But by the time you get off at 6:00 p.m. it's [Laughing] extremely chaotic in here. And then if you're night shift you're coming in at 6:00 p.m. So you're starting it off on your busy time and you're ending at 6:00 in the morning really slow.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	A normal dispatcher, call taker, in our agency, it depends on what station you're at. At station 6 that person is actually a call taker to 7-digit lines, a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								call taker to 911 because we don't operate our 911 in our sheriff's office. We actually have it at a primary PSAP [phonetic] in [City] and then we're considered secondary. So they have to answer 911 lines that have transferred to us and/or compose messages. And that dispatcher also has to tend to 8 fire departments throughout their 12-hour shifts.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Yes [Laughing]. If you're at station 5 which is our primary NCIC channel that person is 7-digit phone lines, 911, and channel 2 which is where all our officers run criminal histories, driver's licenses, and vehicles. And then if you're at station 3, that person is our primary radio. They are strictly dispatching and taking the radio traffic from officers.
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Yes. If there are enough personnel in the office they can step away and step outside and just take a breath of fresh air and come back [Laughing].
OE	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Fortunately we work for a sheriff that is very big on technology. So we normally... normally getting in on the very front of some new technology. Our sheriff's office is CLEA [phonetic] certified and he's a commissioner and all that other stuff. So we get in on the very front of that. He was president of the National Sheriff's Association so he get a lot of people that come to him to try this or try that. So I feel like we have a lot of technology here that some departments may not have or may not have the access to.
OE	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	It's usually quiet here [Laughing]. We only have 2 call takers on at a time, 2 dispatchers on here at a time. And during the day it's more busy because we do have people in and out of the building, dealing with the ELC and other aspects of the sheriff's office but at night it's extremely quiet. It's really not that busy here so like I said it's really quiet. And really quiet. But the building is nice. You know we have our kitchen and our restrooms and facilities that need--it's nice.
OE	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	We rotate: 2 weeks of days, 2 weeks of night, but it's always the same time 5:30 to 5:30
OE	COMMS	R	Comms	26-35	6-10	Female	COMMS-	Q: Okay. And do you work with the same people all the time?

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel				R-014	SME: Oh, yes, we are assigned partners. The only time we'll switch out is if somebody takes off or if you're working overtime and you work on another shift but, yeah, we have the same partners.
OE	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	We have the same shift [referring to the deputies' shift]. We're assigned to shifts. It's the same. If somebody takes off or works--working overtime that's the only time they'll switch up.
OE	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	I don't know the numbers but I think we're kind of fairly small. We have the [subdivision] and it's predominantly white. We have [subdivision] in [town] which is predominantly black. We have a subdivision out on 9--Highway 965, it's kind of mixed. And, yeah, that's pretty much it.
OE	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	We have a mixture-[referring to social class]
OE	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	It's not very high. Like I say we're small. We don't see as much... as many calls as other agencies do. We actually did some training, where they took us to a larger facility [City] and we saw their call volume compared to ours, oh my God [Laughing], oh my God. Yeah, so we maybe get, on a slow day we'll get anywhere from 2 to 3 calls. And on a busy day it could be anywhere from 10 to 15 calls.
OE	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	No, because it's 2, like I said, it's 2 of us on shift at a time so if I can't do it or my partner's doing it, you know, we get it done.
OE	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	It's entertaining because sometimes it's--people are different. Like everybody is so different. And so sometimes it gets to be like... almost like your own TV or something.
OE	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	We work 12-hour shifts. And we work 2 weeks days, 2 weeks nights. And so sometimes that gets... kind of difficult 'cause I--you know you have kids and all that and you have to still get here and just kind of erase everything with them so they're pretty much like on their own.
OE	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Huh. It's a--it's an okay place to live I think. Most of the times that--we don't say the Q word, but most of the time things stay pretty calm. Everybody kind of knows each other 'cause it's a small community. We...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								kind of... I don't know. I guess they're okay people [Laughing].
OE	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Q: And would you say for the most part it's wealthy people, poor people, average-- SME: It's a mixture of people.
OE	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	I think it's mostly Caucasian and then African American, then we have a few... others that are... 'cause we have a couple of restaurants and things like that that are owned by like different people but.
OE	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Yeah. But for the most part it's Caucasian.
OE	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Not really. We do change with the same set of people, like it's 2 of us and then there are 3 people permanently on our shift for the road. And so we hear the same voices but we don't know them like that. We don't know them like personally. We just hear the voices also.
OE	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	We do fit pretty close. We sit like maybe 5 or 6 feet from each other.
OE	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	[Laughing]. It's pretty good. It's closed in 'cause we don't have any windows or anything like that. It's always very--sometimes it feels like a dungeon. We call it the dungeon [Laughing]. But it's okay.
OE	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	I know. But it gets like that when it's like... a pretty day outside or something and we're sitting in the dark 'cause we keep the lights low because the computer screens are really bright. And we keep the light so and then you go outside and you're like, oh, fresh air [Laughing]. Society [Laughing].
OE	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Yeah, kind of sort of but the day can bring about anything. Like you never know what you're going to have--what's going to happen for that day? Like some jobs you can go to and you're like, oh, I know what I'm going to do this day or whatever. Like your job, you never know. Like this job you never know. Like you might get 2 calls that's nothing. And the next day you come to work and get like 25 calls and have 1 thing that's really, really major or something like that that'll keep you occupied for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the whole day so it's really different from day to day.
OE	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Yes. Basically the start of my day we relieve, 'cause it's 24/7 so we relieve another shift. We'll do like a pass it on type of thing where they just let us know what happened the night before. We just log into our system. We do check everything like to make sure our radios work. The radios are still working from the night before, the 911 lines are still working and everything like that. And then at the end of the shift we just prepare to give the coming on shift their shift notes or reports.
OE	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	I think the--I think it's the in--an in house thing. I think it's like first responder type of thing. Like I think it's like either they think like we don't give them enough information or we didn't ask or something like that but it's like how could you not get enough information. Like I understand you're going but there's no way for us to sit there and tell you every little thing. All we can tell you is what we were told. And we have questions that we ask. We know the questions to ask. So sometimes it feel like belittling, like well I'm the one that's doing this and you just sitting there all night. Like they'll say stuff like that. Like you just--I mean you just sit there all night. But I'm not just sitting here like...
OE	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	Busy, something new all the time. Challenging. Challenging just to wrap my head around and even to get my arms around the technologies but the personnel issues also because it... with Next Generation 911, with FirstNet, with any of these technologies, it's... we see it from the line level.
OE	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	We are a very rural community in many instances. The largest part of our area, our [County], is rural. But we have some very growing, we're one of the fastest growing [County] in the state and we have a lot of suburban areas. We don't really have any city urban areas but we do have a lot of suburban type of communities, large subdivisions and developments. But most of our area is a very urban--I mean very rural community.
OE	COMMS	R	Comms	46-55	21-30	Male	COMMS-	We... I don't know. I think we're at about 120,000 people in the [County].

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel				R-016	I'm not sure about the number of square miles but we've got--
OE	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	Mostly white. Probably 80-85% white working families. The African American community would probably make up the next portion of that. Maybe 1% since Hurricane [name], maybe 1% of it is Spanish, Latinos that have moved into this area as working, the working class, doing a lot of construction, farming, labor, labor jobs. But we're more of a middle class and lower middle class... demographics.
OE	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	Well we have--we had a flood, [Event] in August of 2016 that covered about 80% of the [County]. About 75% of all structures in the [County] received some type of flood damage. And including our 911 communications facility which had to move overnight into a backup facility.
OE	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	... We staff 7 positions on a normal basis: 5 radio positions and 2, well, a sergeant to supervise and a call taker for most of the time.
OE	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	No, they work a 2-week schedule it's called the every other weekend off schedule. It's 12-hour shifts is what they work.
OE	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	Maybe a hunter or a fisherman every now and then but somebody riding a motorbike but that's the people that are going to get injured, going to get lost, and we don't have that. That ability. So yeah, I think we have a lot of area like that in this area.
OE	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	... The deaf community... very rarely do we get calls for service from the deaf community. Number one, they're a very small population, a very important population for us to serve and make sure that they have access to the services but we got a call one time. This has been many years ago, probably 20 years ago in [City]. I got a call on a TTY call of a, and I think it was a medical call, but because it was an individual, hearing impaired individual, we needed to make sure that it was just a medical call.
OE	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	Stressful is like today. My computer does not work, so my co-partner, if she's here, which is usually two of us at all time, but if one of us is gone, we have to handle everything from traffic stops, phone calls, we field

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								everything. That can be so stressful. My computer being down, I can't really do anything but answer phones. I handle walkups. So that's also different from other departments. Most, I think we're one of the very few departments that actually have walkups to our window. We're not really supposed to interact with people. We have a bulletproof glass for that purpose.
OE	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	We serve faculty. We serve students. We serve visitors. We serve fans. We serve celebrities sometimes. You have, ESPN will come here. You have, [athlete's name] comes here. You have people from, some police officers from other countries just want to come and see what we do. We've had them all over. So we serve even the locals around here. I even live right off campus [inaudible] in an old neighborhood. Sometimes we deal with some of them because they're concerned about traffic. They're concerned about football issues. Current situation events such as the shootings and stuff, they're worried about that, what we would do during that. So I'd say we deal with everybody.
OE	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	Oh yeah, definitely. Social class stems from, they come over here from a foreign country. They have nothing. Some of them are on scholarships. Some of them are, they literally came here with nothing. We have people who live north of campus from lower socio-economic backgrounds. We some on this side. I [inaudible] here 'cause I'm not technically with [inaudible] over here, but they're pretty ritzy, you could say, posh. We deal with ages from, we have kindergartners over here at the U high school, high school on campus, which is kind of new to me. It's called University High School. So you deal with those. We have a childcare center over here, babies. So babies all the way up to whoever works here. I think we even have like a 95-year-old professor that still works here.
OE	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	We have, it's a difference from any other police station than I've ever seen or worked at. We have a way to where you have parking, who is on the other side, which they're moving them. We have two cells in the back, which are very tiny, two cameras on them. Since it's so close to the stadium, this is kind of a landmark to where people need to get here,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they kind of have an idea. I think it's too close to the stadium, but eventually hopefully they'll move this location. But it is a decent way to describe how to get to us. I think we're, as far as location, I think we're kind of in a decent place. Easy to give directions here. But as the office part, it's kind of weird, I guess you could say. The cell situation, I've never really seen too expect for old-timey rule areas, not for [state].
OE	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	We switch monthly. So I work, basically I tell people I work 14 days a month. I work 12-hour shifts. I guess you could say seven days every two weeks. This is my weekend that I work, so we rotate. I love that. I love night shift because the more serious calls happen at night, and I'm more serious-oriented, not as office-oriented. So I guess you could say that we alternate, and we've put in votes for who could get I guess, if we wanted like straight shifts. But I guess it kind of works rotating. But so night shift, they'll come on. I think we rotate next Friday.
OE	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	Oh yeah, I definitely feel you get to know, for example, say we worked six months all day, six month all nights. We kind of would miss out, I think. You get a month here, say you get rotating in [inaudible] football. You would get the kind of day shift calls with the football games versus the night shift. You get a mix. You learn different times, when different events on campus happen. I know when a professor, if he gets rid of the pianos in the music school, he'll get those at the, or send them back in the first part of May and then get them back in August, and I always deal with him. He's like I remember you.
OE	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	Typical day. So for the most part, I'm dealing with law offices. On a day shift, I'm dealing with law offices. I'm doing [inaudible]. Professors, business-oriented school time people, I guess you could say, students. I'm dealing with people who want to come to the campus for classes sometimes on the weekends. I deal with foreign individuals a lot. And that's day and night. I deal basically with any type of person on campus you can think of. We've got them. We even have officers that are foreign, so we deal with them too.
OE	COMMS	U	Comms	26-35	6-10	Female	COMMS-	Yes. So over here we have our gates. So our campus is like this a giant

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel				U-017	square sometimes. And we'll have 4 [City] and [City]. That's not us. That's city at that point. But right there, [inaudible] that intersection is ours. So sometimes they'll call us and be like is that you? No, it's not us. But sometimes we do have to deal with that.
OE	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	... We had a situation where I had to make, we have new sorority houses, and they change every year because people get kicked off or come back on. I made the whole new map up, like a just a brand new map. Just like [inaudible]. So sometimes I take things upon myself to make things better.
OE	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	It's a very nice community. I am--it's very [inaudible]. There's a lot of different things that go on around campus. I mean, it's a very nice campus, I enjoy working here.
OE	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	Well, I mean, there are very different demographics. You have students that are foreign, you have--you know, most of them live on campus, then you have the students that are--it's just a very different demographic, so you have your students that live on campus, you have some that live off of campus, so it varies, there's definitely a vary there.
OE	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	I mean, it's--I like it. I mean, I don't necessarily like that we're up in the front, but, I mean, that may change. I think [inaudible] is going to be leaving, they're going to have their own, so we're going to have this whole building at some point, I believe, and I do--I enjoyed it, I enjoy the people that work here and everything, so I enjoy it here.
OE	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	Well, we work 12-hour shifts. We work five days a week, but we don't work more than three days, so it's shift work, and we do month to month, so we're actually going to be switching to night shift at the beginning of next month, on the 5th, so we do--it's like, every three and a half weeks or so, we switch from days to nights.
OE	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	Yeah, I usually--and you know, sometimes we'll get one in, like, one of the communications officers can't make it in, if they were working by themselves, we get called in to come in and work their shift, but usually, it's just me and XXXX that work together.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	... Yeah, I mean, we have a lot of tasks in here, and it's definitely never a dull moment. We always have something going on.
OE	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	... It's definitely not as bad as other agencies, so I definitely enjoy it here.
OE	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	And see, the way that they're set up, EMS and Fire are all in the same building, so when they put them on the call, they usually just put them on the call, and then they see it and dispatch it out.
OE	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2] ... So, we got the dispatcher talking to the field units and of course they have a different responsibility to make sure that they are responsible for the safety of the officer that's answering the calls and then to make sure that the information that comes from the person on the phone to what the officer gets in the car is correct.
OE	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S1]: City and County. I am saying still; I am sticking into 700 -- around average 700 dollar calls a year, that's --
OE	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: We are in the same room. We handle -- okay, of course, the call processors are just separate, they handle everything coming in... Those are our employees, and then you have Rural/Metro which is a private ambulance service, county fire service.
OE	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S1]: Interstates -- we've got two major Interstates that run together.
OE	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: Four shifts.
OE	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: With A and B, which each have a day and a night, 12-hour shifts. So --But they are all 14 days a month.
OE	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: There work two days off, two days work, three days and then next week -- it is reversed [Crosstalk]
OE	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: [inaudible] some new recruits that when they are interviewing them. You may work like 12 days a month.
OE	COMMS	R	Not	Not	Not	Not	COMMS-	[S3]: And it's worked great nevertheless -- oh man from 8 to 12 hours?

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			specified	specified	specified	specified	R-019	That's hard. They wouldn't give it up now for any amount --
OE	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: For four more hours you get so many more days off. To take a seven-day vacation you take two vacation days and you are off seven in all, you know, there is great benefits it to it.
OE	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: No. We have 40 call processors and then the agencies are split up. [City]PD has 16, No, that's not right. [County] has 16 -- [City]PD has 20, [City] Fire right now is 8 but we are trying to get that number increased overall.
OE	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: No, there is a routine depending on how many hours you are working. So, if it is a regular day of 12 hours, you get two breaks. Well, let's say a break before lunch, where you get an hour of lunch break and then you get two breaks after lunch.
OE	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: So, it just depends on how many hours you are there. That's routine. Our phone system, you don't sit pick up or choose which lines you are going to answer. It automatically assigns to the longest idle. So, it will make sure that the workload is spread.
OE	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: Of course, the daily routine there is a difference, too, in the shift because if you come in at 6 in the morning you can get a slow period, you start slow and then it builds as you go. Whereas if you come in at 6 at night, it is busy when you get here but then it slows down in the morning hours. So, it's you know, a little bit different there.
OE	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: Stand back out of the way, but it its organized chaos. I mean, if you are standing there or you are going -- oh my gosh, because you've got all these people coming in and all these people getting out, but it is organized.
OE	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: Right. So, as soon as you are free, you are cleared up and you've done what you are supposed to do with that call, then you can tread out.
OE	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: Yeah, we do. We have chaplains, we have -- we have a lot of -- a lot of assistance for it.
OE	COMMS	R	Not	Not	Not	Not	COMMS-	S3: Yeah, they do use 10 codes still.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			specified	specified	specified	specified	R-019	
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	I am responsible for our communication center here in the 911 Center for AMR. So we primarily dispatch [City] 911. We also dispatch [indiscernible] the rescue squad. We dispatch all the first responders in [County]. We also take calls from our outlying [Counties]. We have some smaller EMS and they call in here and get the right numbers. We don't dispatch them, but we maintain the records. We also have another dispatch set up in the 911 Center in [County], and even though I'm not over there, I really helped them get set up because their manager is more of a supervisor, a young man and they're smaller, they only have two. They run 50, 60 transports a day where we do over 200. Including we do fire and everything else, they just do their ambulances. So a lot of mine is set up leadership, because we help set up and get the equipment, get them put in, radios all that stuff. So in a nutshell, I am pretty much over, even though I may not be financially or physically responsible for all of our radios, telephones and communication for operations in East Tennessee, I kind of, I'm involved in all of it to make sure that we're all on the same page, we're all doing the same thing and moving in the right direction, it's good for everybody. So that's more of what my job is.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	It's not that much work for them and they don't do a whole lot. I mean [county] frankly can handle the local 911 dispatches.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	We do what we call IFT transports - which are Inter Facility Transports, or anything that is not 911. So nursing homes, hospitals, things like that, we do the non-emergency transfers, so that's a whole separate business unit.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	But we run it together. So by being efficient and me being able to be involved in all that stuff, we make that more cost effective and more efficient. I don't know, if you got to go inside but when you are done, I will take you into the center and I'll kind of show you what we're talking about. So we have a fire dispatcher, we have an EMS dispatcher, we have a call taker and then I have what I call a [Job title] that sits between

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the Fire and EMS and then we have two IFT dispatchers; one is out sick today and then I have a couple of trainees in there today too. So each one of them have a job, but all of them answer emergency phone calls and take emergency calls.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	They have to code it correctly: emergency / non-emergency. Build it very quickly; as quickly as they can, with as few questions possible to get that right: emergency or non-emergency; get the ambulance dispatched or the fire truck dispatched as quickly as possible; and then keep up and maintain that the crews are safe, and it's that same repetition, that's the basis of what we do. There's a lot more into it, there's a lot more record keeping, all those things; but that's the basis of our job. We are, I mean our business guys so anyone in our meetings I tell these guys that "you guys have got to understand we're a consumer. At Dispatch we're a consumer, EMS is a producer, and Fire is a producer. We make no money. We don't do anything that provides any income for this business."
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So we have to, we do more work with less people than government does. So if you go in and look you will have people sitting around on that side, that's government, not doing anything, now [indiscernible] you can see on our side too, the phones are ringing, go off, but they're usually doing some training or something going on. So we do more with less and we have to because if we don't make a profit, I can't buy new radio systems, I can't do all that stuff, so we have to be frugal with our money.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	We're always looking at technology solutions, and not looking at technology to replace people, looking at technology that will make it easier and more efficient and less stressful.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So I also have the third party compliance software called First Watch. We worked with them and we built a lot of triggers, we also built triggers for the health department. So there's things they watch during the year, such as heat emergencies during the summer, cold emergencies. Right now it's narcotic overdoses we're looking at, anytime those things come up, and they'll trigger in First Watch and they'll be able to go in and get

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that data out of our CAD immediately and by going through that third party there's no HIPAA data exchanging, all that stuff's clean, and I also pull my daily reports, hourly reports, compliance reports, because we have a county contract. We have to be at all emergencies in 10 minutes or less, 90% of the time. If we don't, we pay fines. We have another thing set up to where we have first response for ALS engines in the county. So if an ALS engine gets there in 10 minutes it bumps the ambulance time up to 17 minutes, so we still got Ucare in 10 minutes, and if we don't make that in 17 minutes it's a fine of \$250 and in a minute it's \$500 and then in three minutes, it's \$1000 and it goes up, to be allowed to do that; so there are economic reasons for us to be efficient. Unfortunately, the reasons that was in place is because a lot of places contract ambulances and nobody paid attention to that and at one time the county paid ambulance services, so we get no money from the county, we're held under that contract. I get my overtime, every time we are in with the county; I tell them they gotta pay my Mafia money. I say this is the only business I've ever worked in where I pay you to be here and they're like stop saying that, like its extortion. [Laughter].
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Indigent is huge here in [City]. We have a huge homeless population. We have a huge psych [crosstalk]. It's...so if you're in jail, you're supposedly deemed indigent, which I still argue that, if you're in jail and you have the insurance, why am I taking you for free. We should be able to bill your insurance, you know, but by the law, you are deemed indigent when you are in jail.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So our dispatch is. We have shift work. So they used to be straight 6 am to 6 pm when I took over two years ago and it wasn't efficient, because everybody coming as 6 to 6, all the dispatchers and the call takers.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	It went crazy, the whole things. So I staggered the shifts, so we now have, we're looking at our busy time, so we have three: the supervisor and then two 6 to 6, we have three 6 to 6, we have a 7 to 7 and then we have a 10 to 10 and then at night we have three more 6 to 6 come in and relieve the other 6 to 6's, and then we balance it after 10'o clock at night,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there's just four of them in there, because we're not as busy. Then we have my two IFT guys that one comes at 7, one comes at 8, they work 10 hours, 50 hours a week and then we have a 5 pm to 1:30 am Tuesday through Saturday, that comes in at midnight because that's our little busier time and they work 40 hours a week.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	They work the same, so our EMS has a union and they're part of that union so through that all shifts are bid by seniority. So all the senior older people on days and all my new people on nights when I'm not here, so that's a nice...
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	No. you'll see more the private. Its union driven because of bad management practices in the past I think.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So yeah they're not all union, but most fire departments are.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Yeah. They're usually all part of the AIAFF, American International.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	They would come in and log onto the computer and pull the CAD up, get OPTIMA. Depends on which station they're at. Fire does a few little different things they have to do and I will show you that when we go I there, because they're just taking care of our fire department, [indiscernible]. So they have...Fire's a totally different piece than Ambulance. Fire, you know they run out of one station, they have their area; if they're on a call you send the next station that's closer, whether it's on the right or left hand side of that station; it's strictly straightforward and simple. Ambulance is dynamic, they are moving all. We could have 15 available and then 10 minutes later we will have three ambulances available because we had a bunch of calls come in. So we're constantly moving and if you look at that map, you'll see the shaded areas?
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	This tells us our coverage. So right now, for calls I'm covering 69% of the county. Geographically I'm only covered 40% of the county. Out of 20 vehicles, only 10 of them are available to me. Hi, oh thank you, I'll charge

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								them for these [laughter] thank you. And [Name]'s got your keys so hopefully he will be up here in a little bit.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	No, they post. Now we do have a couple 24-hour trucks, so right now the fire department has one getting ready right now too, so this Medic 241 that's down here in [City], the fire department has put an ambulance on in that fire station for the [City] community and it belongs to the fire department and it runs out of the station. Now we have two critical care trucks, 747 which is right here and they [indiscernible] they run out of station 15 where they post, because they're on 24 hours we post them somewhere they can get out of the truck and go on scene.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So we use the UHF frequency on land mobile radio for EMS, both are 911 and IFT side and then all the Fire is on VHF, only different frequency. So all our ambulances and all or our fire trucks have to go on that radio zone. Now we're going to 800 and everybody is buying tri-band radios. Fire, excuse me, is going to migrate from the VHF to the 800.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	EMS is not. So we're working on some legislation changes. So in the ambulance service requirements for the [state], there are certain frequencies that we have to carry - VHF, 155, 205, 295, and 304 those are the disaster frequencies. So the State does not migrate it, but all the hospitals are on UHF to talk to them. Now we're going 800, so I've been meeting with the State and other people so we got to change the laws, because all you're doing is creating expense. So for EMS to go to 800 right now is an added expense, because we still have to maintain those older channels because we can't get rid of them because the State requires them. And there's no funding for us because we're a private company that is not getting grants, and I'm like we got to work on this, and not only for us being a private company, but in [counties], where there's three ambulances and they're already squeezing every penny out of that county's budget, they can't afford to go buy three \$20,000 radios.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	The workload's high because the flu is running rampant, so we're short on ambulances for short dispatches. The guy that went out today has probably got the flu. He's like I can come in - absolutely not. We're in a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								closed locked in building, once the flu gets in here it'll run to that end of the building and then it'll run back and we'll keep it for an extra month that it shouldn't be in here. So no, don't come to work. So, we're on our second round of flu.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	And there are a lot of older people in our community right now that have, especially in their 70s and 80s that's have spontaneous femur fractures, they'll have a foot turn and snap their femur. Now that we know that's what it is on the phone though, so if we want to ask pertinent questions without talking to you for 30 minutes to figure out what's going on.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	There's a lot of land around here. It creates a problem. We don't have, we've not had the issues of them being on a wrong street. Of course we got rid of all that, we changed our -- the metropolitan planning commission changed where we can't have two street names the same.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So we're all on the same CAD. [talking about Fire and EMS]
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So a 911 call comes in and it goes to the 911 call taker, so what we will do, because they're not EMD and we are, we EFD are all fire calls as well -- so they take the call, they grab any information, the address - and then they code it C-fire which is county fire; or they code it EMS and it shifts the cards, and they transfer the caller to us. So they pick the phone up, and now we're on the phone with the caller; we again verify whether we have the right street, and then we EMD or EFD them and dispatch the calls.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	They're all on 800 trunks, the old system. [talking about the police]
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Now, the [City] fire department, they're on VHF along with our county fire. So we're county because [City] touches three counties. I don't know if you're aware of that. [City] community is in [County].
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	[City] is on 800, they're moving to the same new technology, so [City] like great we're going to go 800 too. [County] just went to a brand new 400 trunk UHF trunk...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Yes. So the great thing is we worked on that with EMA and through the [state] we now have -- so it's kind of we now have this TBRS system, which is the State system. So we have what's called Tac. We have a U-tac, a V-tac and an 8-tac. So if I - I don't know if I will find it here - I don't know which band it's in because I don't use this that much. [state], I don't want [state] - fire department. They have a bunch of fire department mutual aids, but there will be a - and we have EMS mutual aids. But we have a V-tac, a V-tac, and an 8-tac, so if I am on a UHF and I go to U-tac, and you're on an 800 radio and you off to 8-tac, and a VHF radio goes to V-tac, they're tied together in the building and we are on the same channel even though we're all on three different frequencies.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	That was a huge event; we probably could've used 140 radios.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	EMA's got like 25 which will take care of what's going on in [City] because most of us have them. It's those inner -- it's when you go outside your region, outside the people you normally play with.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Right, for us it's uncommon. [state]? They do it all the time. They do it all the time, so they're set up with a lot of grants and funding and all that. We tried to take those lessons, but how do I sell to somebody that we need to buy a half a million dollars' worth of radios that we are going to use twice before they have to be replaced because of upgrades. That's just hard to do.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	No. So on game days, I don't come up here, [names] comes up from Ambulance. Normally I go to the game. So on game days - which I didn't go to any of them this year - normally I go to every one of them, but we caught it this year; [indiscernible] but we take a laptop and our EMS supervisor that sits in the command post at the [University] takes a laptop and this was the whole idea of Citrix and how it'll work and to practice that. So they pull the CAD up, so we have three CADs - we have [cities] and [indiscernible]. So when they go to an event whether it's the UT ball game, a marathon that we're doing, they go and set up and we bring ambulances on for that with different numbers and we put them

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								over on that CAD, and they run that system and it doesn't impact up here. So they have the CAD, they have their own radios on their channel, they have all that, so we set up a complete operating system, and we do that different from what anybody else does.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Right. They don't go to the meetings, they don't go to the monthly stuff, they don't go, they don't -- not doing it, so they don't know because they have three jobs. [County] the [indiscernible] director.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	He's a great guy, but he doesn't do much with the 911 because he has got it running and it runs great. But I guarantee you, he's more up on Ambulance, financing budget, ten care, Medicare, those types of things than he is on next gen 911, because his primary job is EMS and that's another responsibility he's got.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	No, I got it, I'm trying to remember, it is about 80,000 calls a year.
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Total. For the rescue squad, fire departments. [for the 80,00 calls/year]
OE	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Well it is because EMS has been the -- EMS is the stepchild that everything gets kicked to when nobody else wants to do it. So for instance: you are elderly, you fall down at home and you're not hurt, but you can't get back up and you just need help getting back up, but you're not injured. In the county, the fire department, or the metro fire department will go do that, pick them up. In the city, they won't.
OE	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	We are a group of trained medical providers that operate in the pre-hospital environment. So it depends which jurisdiction you're with and how the systems set up. Here, we operate as part of a fire rescue service. So EMS providers can be either assigned to a frontline transport piece, either medicated or an ambulance, or they can be operating off of a fire engine which is-- they're an ALS provider. An additional provider on that piece and they provide ALS service prior to a transport unit arriving.
OE	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	A mix. Firefighters, EMTs, yup, between 12 and 15. Some crews are smaller, closer to 10. Others are towards the 15. [talking about the crew

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								at the station]
OE	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	We are an interesting station. [County] is a combination system. This station, in particular, is all volunteer. And then when we cannot be here, we pay our own people to be here. So they're not [County] employees in that sense. They are not volunteers, in the sense, they come in for free but we pay them. So we're allowed to-- we run calls into the district through a mutual aid agreement and it's specific to our organization and the district. So we like to send units that say our name and our people, which is why we do that.
OE	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	...And we provide EMS and heavy rescue services, and our station is one of the few that provide those services. There are a number of fire stations around us that have engines and truck companies but they don't have rescue squads or ambulances.
OE	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	For EMS, they just need to decide, is this an advanced life support or a basic life support. And once they figure that out, the computer does it. It's also much easier to update us on the way than it is to rejigger an entire fire assignment. In [County], if you send units for house fire you're sending nine, at least, pieces of apparatus versus if you say, "Someone collapsed." You're sending probably two.
OE	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	...Here, we have a system that will set off certain lights and it used to open doors. It doesn't anymore but it'll announce the call. It'll do all this stuff. Up in Rhode Island, we just had to listen to a specific tone that meant it was our town. And then we had to listen to which unit was being sent out. So we had Motorola pagers that would only go off when that specific tone was set off. But that was something that we did to kind of prevent us missing a call. So it depends on what the resource allocation of the jurisdiction is. We're very fortunate here to have this technology we have.
OE	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	So we were dealing with that, where you kind of show up to something you weren't expecting. Here, they do a very good job of asking all these questions. So by the time we get there we know certainly, age or an

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								approximate age, the sex, what they're complaining of, they ask some questions, "Have you taken aspirin? Have you taken anything else?" So we could have an idea about that. So they're very good about doing that stuff.
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	I get to work roughly around 6 o'clock in the morning. I relieve the person that was working before me and more or less do some kind of pass it on to see what issues they encountered yesterday, and at that point I would do my apparatus check. And once that's all taken care of I normally get to my office and start going through my emails. See what kind of issues that I need to address for the day and I check the operations briefing which is put out by the duty operations chief and see what areas I need to help out the duty operations chief with the overall operations of Fire Rescue. And once that's done, typically a breakfast...
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...Our boss allows us two hours of PT time, so I normally do some kind of physical training. After that I normally go around the county. I drive around in a Dodge Ram pickup truck in which I am available to respond on whatever calls I would like. My boss gives me a lot of leeways to what calls I want to run. But there are certain expectations that if there's a pretty significant call like if it's a stabbing or shooting or cardiac arrest, they kind of expect us to be on those kind of calls. And we can run at them at any time.
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...Answering a lot of phone calls that providers may have issues with and more or less I'm just kind of a support role to see what is needed. And if I can fix something, I certainly do. Typically, by the end of the afternoon, start going back to the office again, eat dinner, and at that point I start winding down for the day. I work a 24-hour shift and I'm off for 48 hours.
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	In [County] Fire Rescue, we are all EMTs and firefighters.. Some of us are paramedic trained as well. It's just a little bit additional EMT trained. We can give medicines and stuff like that..
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	For the most part, throughout the day I do operate by myself. My response area is pretty much-- we have two EMS duty officers a day. So

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we pretty much cover half the county a piece.
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	For the EMS supervisor, we have two a day. So we have half a county. So I have anything pretty much north of [City] and so I go way out to [City]. I go all the way out to [City], [City]. I go down to [City]. That's my first due. But we have apparatus that is first due to those calls. I'm more or less-- I go there as a supervisory role.
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Typical communication, for the most part, is by cell phone... This is my county-issued cell phone. This is my personal cell phone... I carry them both with me. This county-issued cell phone-- when I get off in the morning, I hand it off to the next guy... This is a shared phone. And the county also gives us a county-issued personal cell phone so that we can take it home and be available for calls as needed... This is my personal personal cell phone [laughter]-- in which-- I typically don't carry my county-issued personal phone, but I call-forward to my personal phone... So if my boss calls me from his phone to my county-issued phone, it will go to this phone and I'm good. So I'm not managing three, four, five different phones at any given time.
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Yeah. It's typically like your own home. We operate in a firehouse and we live there a third of our life. And we have other providers, firefighters, EMTs, and the typical lifestyle is nothing different than your own home. We have TVs. We have beds. We have a kitchen. We have our offices... Other than that it's typically-- it's like your own day at home. And the only thing that we have to do is be available for calls and for citizens that are in need.
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Countywide [laughter]. It's huge. It's got to be the biggest jurisdiction in [State]. I forget the square miles that [County] is, but it goes anywhere from obviously up to [City] down to the [City] line. Almost into [State], the Potomac River, all the way out to [County]. But it's well over a million people that we serve.
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	SME: ...But it's well over a million people that we serve. Q: And at any point in time, you serve half of that?

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								SME: Yes... And on particular instance like this little meeting we're having today, I know my counterpart, EMS704, he's covering the whole county right now. So if any significant issues occur, he's going to be the one-- he or she will be the one that would be handling all those issues. Typically, that's a small portion.
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Yeah, absolutely. I mean things do happen throughout our day in which we won't be available for calls. It's typically for a short period of time, an hour or two whether we're attending a class or we also operate on calls for long periods of time so that EMS supervisor knows that he's going to have the whole county to cover and also we'll help each other out on big incidents. If we really have a significant incident where we are caring for 20, 30 people at any given time, he or she may need to come up and support what I'm doing or what the battalion chief needs.
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Any given time I am not really-- I'm not directly supervising anybody. Meaning day to day, hour to hour. But typically whenever I respond to a call, I'm supervising them at that point. That's typically anything from-- most times about six to seven people in my role right now where I'm maintaining the supervisor role for about that many people. That's typically what our span of control is. Anywhere from five to ten people is what we were typically supervise. But at any given time I could be supervising 30 people depending on the incident. But that's a very rare occasion. It's typical for a short period of time.
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	For EMS, for the most part, and this is well over 90% of our calls, it's a pretty low scale incident. Probably dealing with about six people operating at a call, somebody on a chest pain. So the incident command structure doesn't really-- like the big incident command structure doesn't really fall into that...
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...when you're talking about a significant event when you're talking about multiple buses that have crashed on [Street]. We also had an incident down in [City] in which we had a building explosion. Not only was the fire going on and they had incident command structure, you also had 30 to 40 people that need to be transported to hospital with burns. So that's a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								whole other incident command structure. So we almost have two incidents going on in that one incident. So it's a very similar incident structure in which we have a number of units in which we need to get X amount of people to the hospital and account for them as well. So very similar incident command structure that the Fire Rescue has.
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...That's my main job, is to make sure that the hospitals can sustain, and we share the wealth of these patients to each individual hospital, and dependent upon their specialty, as well. Some hospitals don't take kids. Some hospitals don't take these types of patients. So I had to make sure that I know that, and [quarantine?] with all that.
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Sure. Normally, the people that are taking care of the first triage are the ones on the fire engines and fire trucks. It could be ambulances and medic units. We have four providers on engine companies, three on trucks. So we typically utilize those crews, so that they can get through a lot more people, and triage them and give us a number as to how many people we're dealing with.
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	So we'll have an actual incident commander. Let's say it's a mass casualty incident. We'll have an incident commander of that, and then he or she will branch stuff out, like triage. You're the triage unit. You're the treatment unit. You're the transport unit. And then they'll have certain units under their command. It's all about breaking down the span of control so that one person isn't taking care of 30 people. You're only dealing with about five or six...
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...then typically we'll have a communications officer, and that's pretty much what my role falls in. I would call our SYSCOM, which is a [State]-based medical communication system, and then I need to declare a mass casualty incident, and then I need to coordinate with the hospitals and find out what the bed counts are. So, yes. It's a very similar command structure as a fire. You're just using different terminologies.
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Fire and rescue, EMS is very easy. We all operate under the same system. We're all the same people. We all just have different roles and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								responsibilities. Very easy to do. Operating and communicating with police can be difficult, because there's only a certain group of people that their radio is capable of talking to the police. So I believe I can talk to the police on their radio. We can all hear what they're saying, but we can't talk to them, back and forth.
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	We need to know the channels, yep, and if you don't really operate in those channels too much, you pretty much don't know them, but we do have charts, and being able to tell us which ones they're on. A lot of the firefighters and EMTs tend to listen to police channels, because we do operate on the same calls, but I say, we very rarely can talk to them by radio.
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	It can be. We have mutual aid agreements. We all have very similar SOPs, whether it's fire and EMS, but once again, talking to some of these jurisdictions can be difficult. It's gotten much better. Years ago we could not talk to each other. Had different radio frequencies. We also used to have separate radios. So if you worked in a border station, like down in [City] or [City], you had separate portables to be able to grab when you want to call into their area, but now we're able to utilize our radios, and go to their channels.
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Yeah, typically when we get dispatched on a call, our dispatchers will say, "Respond on [Name]. Eight, we know, is a [County] unit. Or nine something. Typically, part of the dispatching is something you have to listen for, as to what channel you'll be operating under.
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Well over 90% of our calls probably operate-- we typically dispatch on alpha, [Name]. Then we respond on [Name]... these are just channels. And most calls operate that way...
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...On low-scale calls, not a whole lot of communication that needs to happen. We'll have five or six people on an incident, and they're operating within a house, so we don't need to talk to each other via radio. We can just do face-to-face. On big incidents like house fire assignments, hazardous material events, mass casualty incidents, then

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we go to a whole separate talk channel. There's not a whole lot of talking on that radio, other than what's on that particular incident. So if we have six, seven, eight units dedicated to one incident and you know there's a lot of talking, we'll go to what's called 7 Charlie, or 7 Golf, and we'll have a talk group that we can operate within. And only people talking on that channel are on that call...
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...More than 90% of calls we operate under is 7 Alpha, 7 Bravo, and there's not a whole lot of chatter on the radio, other than I may need an additional resource. I may need just to clarify something through my communications.
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	So our communications they dispatch every single call whether it's a fire call, an EMS call, hazard materials, you name it. It's all done on [Name]. We have well over 100,000 calls a year [County] wide. And every single one is dispatched on [Name]. Well over 90% of the calls get-- respond on [Name]. And that is only an operations channel. We don't dispatch on that channel. They just do request of resources and questions and stuff like that of people that are on an incident.
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	It gets to be a little bit more confusing when you go mutual aid. But we have taken a lot of steps in [County] to be able to communicate with other jurisdictions now. But we typically have to be within range of that particular jurisdiction as well. Like I wouldn't be able to talk to [County] if I'm all the way out in [County]. And I wouldn't be able to talk to [County] if I'm all the way down in [County]...
OE	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...Now, I do recognize that our communications is tied by based on what the 911 caller says to them. So it's not a 911 center issue, it's more or less, "It'd be nice to have this information," ... but sometimes the dispatcher has to get the call out without having all the information because there might be a very significant event.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So my daily routine, when I'm at work, is that I work a 24, 48-hour schedule. So I work 24 hours on, and then two days off. It works out to be 9 days a month is my schedule. Typically, I report to my duty

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								assignment, whatever station that may be by at least 6:00 AM. Our report time is at 7:00. So that gives me an hour ahead of time to just kind of help with a last minute call or whatever needs to be done. Makes smooth transition.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...I normally find where I'm riding and get that position ready with my gear. Makes sure it's all ready to go. And then I sit at our breakfast table and generally do breakfast and coffee. And then at 07:00 in the morning, we have lineup which is a traditional term. What that means, that the nine gentlemen or females that are working on my shift, we sit and we have a face-to-face discussion about previous shifts, the day ahead of us, what needs to be done, accomplished goals for the day. And that generally takes about 15 to 30 minutes uninterrupted...
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...we go out and check our apparatus, whether it be the fire truck, the fire engine, or the medic unit to make sure that it's operational and ready for the 24-hour tour of service. Fix, maintain, repair whatever needs to be done. That generally takes about 45 minutes to an hour as well on a normal day...
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...from there generally move into some form of physical fitness or activity to maintain personal readiness... Uninterrupted again on a normal day that's, I would say, about a half hour or 40 minutes on a good day. And it may be individual-based, it may be as a collection as a shift doing that. And from there, change, put on the uniform of the day, whatever is required. And then start our day.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...from I'd say on an average about 1:30, we start an afternoon drill or an afternoon exercise. They can be anywhere from 15 minutes to 4 o'clock that we participate as a whole station...
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...then we move into, excuse me, personal time, pretty much after 4:00, preparing for dinner, cooking, assisting with station duties, housework, cleaning, vacuuming, those type services. And then throughout this period, as I've stated up until this point, we're responding to 911 emergencies or calls. So we're always ready.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So my station has four individuals in which they ride a fire engine that brings water, three individuals on a ladder truck that brings ladders or an aerial device, and then two individuals on a EMS transport unit. So that gives us our total. And then every once in a while we'll have a ride-along, a shadow, an intern. So the staffing does fluctuate a little bit but we do have dedicated staffing.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So it's one of our lieutenants or a captain assigned to that station for the day. And it's kind of a, I would say, informal forward progression where based on those individuals that are there, everybody more or less knows where they're going, and we rotate. So if I was on the medic unit the shift before, then I would move to a fire suppression piece the following shift if all those individuals were there. If that individual was on sick or took vacation and there was only one medic there, then that would default that I would be the only medic. So we try to rotate...
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So I'll use Google translator. Or I find that people that I serve, and I don't mean this ill in any way or disrespectful in any way, but most people can understand a text message. So even if they don't completely understand the whole paragraph, per se, I can write a text message and show them the message. And then it also allows them to text back if they can, or it's just another form of communication - excuse me - along with body language.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So it is a second family. In many cases, I know more about the guys I work with than my own family in the sense of these guys I see every 3rd day for 24 hours a day. There's no hiding feelings, or stress, or things that are going on. So we're very close-knit. We depend on one another for everything. We see it may be our 10th call of the day, but still, it's the first time that a citizen in the county may have utilized calling 911. So we see people at their worst, most of the time or often. And that is a very stressed impact amongst all of us, but we share that stress amongst one another. And when I say I knew more about them, I mean in the sense of my family lives all over the US or can be all over the US, so I may only see them once or twice every couple of months.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...These guys I work with, they live in multiple states, but we all come to the same goal at the same station every third day. So I see them more frequently than I do some of my own family. And when you come to work for 24 hours, and you're eating and sleeping together, and expressing the same life goals, life interests in a profession, you're more open to communicate those opinions and views. And so we certainly know if everybody's having a good day and we know if everybody's having a bad day.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So the community that I serve is a very large response area. I wish I knew right off the top of my head how big the geographic area was. But we go from garden style apartments to townhouses, condos, [Name], or multi-million dollar mansions. We serve and have the largest portion of the Potomac River in [County]. So we have a very large water-based area. As well as we can get within just a couple of miles of making a turn out of our station a very rural of an area that has livestock and farm animals. So where we go from high-rises, mid-rises, apartment buildings the same distance in one direction, the same distance the other direction we have barns and silos, and ponds are our only means of getting water to put a fire out.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	Very, very diverse in all aspects: the community, the population, the people, the ages. There's not one set demographic that represents my response area.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So there's always a state of readiness. So you do have collateral duties or jobs or responsibilities to do from the simple of going to pick up meals for both lunch or dinner to eat to maintain your own personal nourishment but as I said, you can always get that 911 call at any time. So maintaining to be professional, maintaining to answer questions, representing the department, the county...
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Knowing your area, knowing what's going on in the area. And not just my immediate response area but it could be the whole county because any one of us - excuse me - could get moved or relocated to a different station based on service needs for that day.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	I would say things are good outside the station. Most people want to be out in the public. Most want to go out and train and do things, let people see what we're doing. A lot of interaction with children a lot of the time. They're almost a magnet at times, anytime there's a fire truck at a grocery store there's some kid that's coming up to see it. So I would say it's very positive image most of the time...
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Within the last couple of years, it's the the first that I've ever had to really work hard to maintain that professional image, in a sense of a lot of negativity within community or the changes of social media, civil unrest. And not going into too much depth of that, but everybody loves a fireman per se. Some people may not understand salary or taxes or why we're sitting in front of a grocery store, but I think education's the best part of that.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	My station is a fully career station.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So it's not, it's just frustrating and then we-- I just don't listen to the call, what's going on. And it's just being, I guess, situational awareness. I'll even use the word just nosy. To just hear what firefighters are doing and the types of calls. We all try to see what other agencies are doing during their calls, from a tactical standpoint to evaluating it. Self-critique. If I was in their shoes, what would I do? So you try to listen what's going on to hear the calls, and sometimes you can't. And if they switch to another channel that we don't have in our radio bank, then you're done.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	Yeah. So the AVL is a new where it's not just-- it's a part of CAD or the computer-aided dispatch. It dispatches 911 resources to the closest available rather than that response area... So it's just sending coordinated resources that are the closest available via distance. And then it incorporates speed bumps, and jersey barriers, and medians. And so if the closest unit is right across the street, but has to go 10 miles down the road, and get off on an exit, and do a U-turn to come back, well, that may not be the most appropriate resource to send. It may be more appropriate to send someone from that exit that doesn't have to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								do all those navigational directionals.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	[RE: AVL / call volume] Has increased. So it doesn't upset me one way or the other, of that. The call types are different, in the sense of, I used to question it why they were sending a particular unit because I felt that I was closer and they didn't, and that's not my job to question that. Ultimately, there was a reason why that unit went. Now that we're getting sent on more calls, it makes more sense to that previous thought of, "Oh, I knew we were closer. Now we just justified that we're closer." And ultimately it's the end user, it's the community or the citizen that's benefiting from it. So regardless if we're running more calls or less calls it's--
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	[RE: current state of technology] I would say we're probably at a happy medium. There could be bigger, better, faster out there. Knowing a little bit more than I probably should with some things, it takes a while to be current. For the size of the department that it is, it's not like you can just walk into Best Buy and buy thousands of radios, and there's obviously a price tag and a budget that comes along with it...
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	[RE: current state of technology] ...So I would say we're probably at a happy medium. There could be something better, but we certainly have better than others and the means of using it. We may be able to apply it differently or better understand it, and that just maintains-- or means us not being as busy with busy work or other things to learn how to use it better for us.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	I would say on average it's hit-or-miss. We're a very busy second due station; meaning, if one of our sister stations that's around us is busy, then we pick up a lot more calls because they're busy. I would say we average 10 to 12 calls per 24-hour span.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...So we always have redundancy in everything that we do...
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	There's some who are EMS only. The majority of them are cross-trained.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Generally, at the beginning of the day, we're just going over the unit, going over the piece and making sure that we have all of our equipment and restocking the equipment as needed. There's a couple of different computers or tablets on the unit right now, that we're using, that we have to log it, that we have to make sure we're logged in properly and everything. And again, that's when we first arrive for duty or whatever, we get all that checked. Make sure everything's ready to go. Other than that, throughout the day there's not really anything specific. It's just a matter of responding to calls as they come out. And again, just restocking supplies as needed and whatever.
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...The equipment-type supplies are usually pretty well-stocked in the unit. The stuff you usually have to worry about is just the everyday-use supplies: the oxygen masks, the gauze, and IV catheters. Stuff like that that you can just grab from the firehouse.
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Each person has their own log-in. Although, usually, only one crew member is actually logging in. So usually the officer of the unit or the senior person will log into the tablet up front that we use for the CAD system and to get our dispatchers and get all of our call information. The tablet in the back is for the patient care reporting. And generally, whoever's doing the majority of patient care will sign into that one, which may or may not be the same person [laughter].
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	The one up front for the CAD stays on the unit. The other one can be taken out. And it depends on what type of unit you're on. The fire trucks take it out more frequently than the ambulances because they'll take the tablet in with them when they go in somebody's house or something. So if they need to get- the person decides not to go in, and he can sign a release or something. They can get it. Plus, they can record the information that they're getting when they first arrive, and then when the ambulance gets in, they can transfer it over to their tablet. So they usually keep theirs with them. The ambulances, a lot of times, will keep it on the unit because they'll just fill it out at the hospital or on the way to the hospital. So they don't bother taking theirs in with them when they

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								get on the scene most of the time.
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	For the most part, it's a limited set of hospitals for most [shifts?]. It'll be different depending on what unit you're on, but usually you're going to the hospitals that are geographically close to you for the most part. Of course, trauma patients have to go a hospital designated as a trauma facility. So there's a limited number of those, but they're spread out enough that usually there's one that you're going to all the time anyway. And same thing with heart attacks and strokes. There's certain hospitals that you can and can't take those to. But again, most of those are in your hospitals you're going to on a regular basis anyway, for the most part.
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	[RE: familiarity with local hospitals] Yeah. Well, especially down here in the downtown area. Now, I work over east of the river on the east side. But, I guess, the most limited ones we have access to would be probably trauma and STEMI centers for heart attacks and stuff. Those PGs, one we go to all the time or we're here at the Hospital Center. Those are the two closest ones. Strokes-- just about every hospital in the city has a stroke center. So PG is not, however. So usually, if I have a stroke patient, I'll usually send him to [inaudible] [City] Hospital. For me where I'm at, [City], and PG, and maybe Hospital Center are the probably the three that I go to most often.
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Most of the time, yeah. I mean, obviously, if they have to call in sick, or they're on leave or something, [they'll write me?]. But there's a crew assigned to a unit for each shift, so usually you're with the same person.
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	[Q: And are you being dispatched out of a firehouse or is it a separate facility?] Firehouse.
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Yeah. I mean, the relationships in the firehouse are usually, for the most part, it's sounds almost cliché because it's the same way as [I would?] describe it. It's almost kind of like a family because we're there for 24 hours. So for the most part, people get along with each other. When we're not running calls, if we have downtime, we're all working together to clean up, doing any kind of cleanup or anything that needs to be done

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								or things that have to be done around the firehouse or be in the same room just talking and watching TV or whatever, but.
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Yeah. I'm over kind of along the other side of the city. And again, depending on who you talk to, it's very different especially in this area here. It's a wide difference between the type of people that you're serving if you go way up to northwest versus down southeast. Over in southeast, where I'm at, there's a large number of low-income people and a lot of people who don't necessarily have a private doctor they go to. So a lot of times they'll call the ambulance and go to the hospital for more routine stuff that isn't necessarily what we would consider an emergency, but.
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Well, I would probably say somewhere around at least 50% probably. And then that's citywide. At best, it may be a little bit more so down there a little bit. If you go way up off of [Street] or [Street], up there they have a lot lower call volume and a lot higher percentage that are calls are actual more true emergencies, so.
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	We usually interact with them frequently and well, usually if we need to talk to other first responders, police officers, or whatever, usually it's face-to-face on the scene. We don't have radio communications with them. Our radio systems aren't connected to theirs. So if we need to relay information to them before they get there or something like that, then we have to do it through our communications. Our CAD systems are connected, though...
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	the way the city is run, they send [City]PD to a large range of calls that may or may not end up actually requiring the police. But they go on-- they end up on pretty much any call that is out on the street. So if we get called for a person down the street or something like that, [City]PD is going to end up getting dispatched. Any cardiac arrest, they'll get dispatched on. And part of that-- I think they've always done that, but especially now with them changing our policies...
OE	EMS	U	Field	36-45	11-20	Male	EMS-	I guess, to some extent it would-- well, again, there's a cell phone we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				U-017	have on the unit that we don't normally use on a regular basis. It's used for basically, as a backup or for emergency communications if the radio were to fail or something and we need to call somebody. We do carry it on the unit. So generally, we don't use it. It just sits there, and we just make sure it's there every morning [laughter].
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...the CAD tablet up front does have a application for the old-- basically, a digital or electronic version of the old hazmat response guide that we used to carry in the units. So if we're running a hazmat call or something or whatever, we can look up hazmat information on there, and specific chemicals, and stuff if we need to. Again, it's very rarely if ever used so off the top of my head, I think that's still there [laughter]. [inaudible].
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	There's a number of patients that we run over and over. And the other thing is, the database maintains a fairly significant history. And again, I don't know how it's currently configured, but last time I knew for sure, the database actually maintained at least three years of data in the active database. Then it would archive it off into an archive...
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Generally, no. But again, they're patients-- most of the time we go, it's not really an emergency per se and usually, they could have gone to the hospital by other means or whatever, or gone to their own doctor or whatever. But the thing is they allow these patients or patients that do have multiple medical problems, and it's one of those things where you never can tell for sure until you get there. Yeah, until you get there and it's like, "Oh, yeah. We wonder every day, but she does have all this health history so she might actually have something going on," and you never know when that's going to be.
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Oh, fairly-- well I would say fairly significant since I first became a first responder and that's for sure working here 17 years, in the last 17 years. Well, for one thing, the department as a whole has had a different structure then, too. The EMS side was a lot more-- it wasn't completely separate but it was kind of a separate-- more separate from the firefighting side than it is now. They were still both kind of in the fire department, but the EMS was like a separate bureau or a separate

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								division within the fire department. They've kind of combined it all into one operations division now. When I first came on, the firefighters in the fire apparatus and on the [A buses?] used two separate radios. And we couldn't even talk to the fire engines that were on the scene.
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Well now it's a-- I say the majority of the personnel are cross-trained to do both. There are some like me - there's still a few - who were EMS only. And again, that goes back to when it was separate. The EMS had put their hire just for EMS. The firefighters have been cross-trained to do EMS since '87, I think... at a basic level...
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	At a basic level, yeah. And then, I guess, was around 2000 or 2002, somewhere in-between there, they actually started working on putting paramedics on the engine companies. And the first way with that was actually taking paramedics who were already paramedics in the EMS division or the EMS side of it and having them run on a couple of the engine companies as a pilot program. But since then, they've started actually hiring firefighter paramedics. And when they initially started putting medics on the engines, those medics were still just single-role medics. They weren't trained for firefighting at all. They were just riding on the engine to say they had a medic on the engine, that they could possibly get to the scene faster than a actual ALS transport unit with a medic on it. But as I say, since then, it's become a lot more. [As I said?], almost everybody the fire department hires now is cross-trained...
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...they're hiring both firefighter paramedics and firefighter EMTs. I don't know exactly what the proportions are and how the numbers work out. And as far as I know, I don't think they're hiring more single-role EMS providers at this point. The ones who are here-- a lot of the ones who are here are actually crossing over and becoming firefighters. And the department, every so often, will have a class specifically for EMS people looking to cross over to the fire side and do both.
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	There's private ambulance services in [City]. In the past, they haven't been used for 911 services at all. I guess it was starting about a year and a half ago, I want to say - I think it was last March - they did start

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								using a private ambulance service for some of the basic calls to try to reduce the load on because it was getting to the point where we just didn't have enough ambulances and personnel to transport everybody.
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	The other thing is, too, is there's more of a system-wide problem in this area. And the hospitals in [City] actually get backed up from ambulances coming in. So it's not a matter of taking the patient to the hospital, drop them off, do your report, and go back in service. A lot of times you'd go in-- especially. if it's a more minor call. A lot of times you'd go into the hospital and you're sitting there waiting 15, 20 minutes before the triage nurse even gets to triage you because there's a line of ambulances at the door.
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	So they started using these private ambulances to take the, what we consider priority three calls, the ones that are stable, don't require any ALS care on the way to the hospital. They may or may not get an ALS assessment on the scene, depending on what the complaint is, but the ones who basically, where-- basically, the patients that aren't going to need treatment on the way to the hospital. Basically, they just need to get to the hospital. And [inaudible], they're using private ambulances a lot for those. Actually, they're in service for us from 7:00AM to 1:00AM so they're 18 hours. From 1:00AM to 7:00AM, then our [inaudible] handle it all. We just handle it all internally...
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...There's other private ambulance services in the city, that operate in the city. They don't have any interaction with us as emergency responders or first responders. They do just mainly interfacility transports, taking the patients from nursing homes to the hospitals and back and forth. So, I guess, even though we aren't using them for 911 services, as long as the-- to the extent that the nursing homes utilize them, it takes a little bit of a load off of us because they're using the private ambulances to do some of these patients. Again, a lot of times though, too, even some of the nursing homes a lot of the times will call us, and it's a patient that could have gone by private ambulance or whatever.
OE	EMS	U	Field	36-45	11-20	Male	EMS-	...the way the agreements are done with the private ambulance service,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				U-017	they have units throughout the state. The way that the contracts and agreements are written, the private ambulance when we request a private ambulance for transport, they're supposed to be able to get to the scene within 10 minutes. So we don't usually have to wait too long for them. And because it's structured in a-- because of the way that contract's structured, there's no requirements saying, "Okay. Look. You've got 50 private ambulances available for us to use." It's not about how many are available, it's a matter of how many they need to get there within that time frame or whatever. But at the same time, the private ambulance service does have ambulances. The way they have their stuff set up-- they have ambulances that are pretty much designated for emergency response for us.
OE	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Yeah. Because even the private ambulance service that we're using for our 911 stuff, they also do interfacility stuff in the city, too, that's not related to us. So they have some units that are designated-- from what I've heard talking to their crew members, I think they have some units that are designated for interfacility transport and some units that are designated for emergency response.
OE	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] I report to the station. We have one central location where I work right now. And I usually spend about 15 minutes doing inventory on my ambulance, making sure that we have all the appropriate equipment. Log on, check in with dispatch, and then they send us to our assigned-- what we call a post. And that's where we'll be considered coverage should a 911 call come in within a certain area or proximity to where we're sitting.
OE	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] So in [City], it's a ALS system. Certain agencies, more on the East Coast I know of, they run what's called BLS ambulances, and that's two EMTs driving around. And if the patient needs more care than they can give then they call a paramedic. Frequently, they come on what's called a QRV or quick response vehicle, and the paramedic would drive in on that. It's usually like a Ford Explorer or something like that. And then they would do the ALS interventions, the medication, the cardiac monitor,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								intubating if they need to be-- if they need help breathing, that type of thing. [City] and pretty much across the state is generally considered ALS ambulances for the most part, and there's BLS ambulances with certain agencies like the private transport companies that do non-emergent transfers to and from nursing home, that type of thing. [City] is not exclusively dual paramedic. Most of the ambulances are two paramedics. There's a few ambulances that have an EMT more that's like a paramedic in training type of a rule. The training continues so that it's a little bit easier, ultimately, to become a paramedic, which is the end goal.
OE	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] ... More often, what happens is a call generates for whatever reason. It's assigned an ambulance, a fire truck, or the police. And when they get there, they do kind of the initial assessment. And if it turns out that an ambulance isn't needed, [City] Fire or all EMTs, they can assess the basic need. And then if they need an ambulance, they keep us coming, and if it doesn't, it's part of-- frequently, what happens is people sleeping under a tree, and the fire department gets there, they were just sleeping. There's absolutely nothing medically wrong with them, and then that person may walk away, in which case an ambulance isn't needed. And then they would call their dispatch, who would then transfer it to our dispatch, and then they would cancel us. It's a lot of people talking to a lot of different channels in [City]. It's the police, the fire, and us. It's all in the same room, but it's all different dispatchers.
OE	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] That's okay. So it totally depends on how busy the airport is at the time. I mean, it's the ebb and flow of EMS. Sometimes you can sit out there for 10 hours, and nobody is transported out of the airport... So because at that point, you're on a completely different radio channel, you're no longer on operations for 911 for [City]. There can be a long time that you're sitting. And at that point, we're basically free to do whatever we want or need to do. If we are down on reports, then we can catch up on our paperwork. If we're hungry, that's the only time that we have to get food because we're not given lunch breaks or breaks in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								general. Some people, if they have to, they can run an errand. That's the time. If you're posted near a hospital that you ran another patient on that you want follow up from, you can go try and find follow-up from them.
OE	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	...So it's an active community. I think, generally speaking, the overall health of the community is far better than what I am used to in Louisiana. The calls are different than they were in Louisiana. I don't know. They're active. They're healthy. They're generally responsible for themselves. They think they have good food. They're wrong about that [laughter]. There is a huge homeless population in [City].
OE	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] It's something that I have never seen before on I scale that I've witnessed in [City]. But [City] also seems to have the infrastructure to attempt to try and take care of them and help them [them refers to the homeless population]out also. Much greater than what I've seen in Louisiana. I think mental health care is generally better. The hospital systems, operations for receiving EMS is just more organized. They have more staff dedicated to the EMS and hospital relationships, so everything runs smoother as far as our communication and interaction with hospital staff. That's what I have.
OE	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S4] It definitely is a fairly healthy region. It's not quite as crazy, obsessive. It's what it says in, say, [City]. It's a little more laid back on that, but there's plenty to do outdoors. It is [State]. It's pretty close to the mountains. There's definitely a lot of people who have moved here because it's close to the mountains. I have a heck of a mountain range that runs through the state [laughter]. It's in pretty access. The city has a lot of bike lanes and bike paths for people that want to ride their bike. It has a pretty decent public transportation system for what it is, and we don't have much of a train system anywhere really in the country. We're not really big enough to have a subway, but it does okay. Certainly, if you live downtown, you don't really need a car.
OE	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S4] ... And so with that, throughout the years, you've seen a lot of the original population that was there in the '90s and whatnot actually started moving out. It was gentrification.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S4] Yeah. You've seen a lot of that happen, where a lot of the rundown neighborhoods that were located on the east side, the Crip territory if you would, a lot of that is-- I mean, they're still your pockets of gang territory, but at the same time, you're seeing a lot of different cultural backgrounds move into the area and vice versa as well. And I would say that with the part of the neighborhood as well. And so I think that that is one thing that you're saying. I know talking to-- I've only been working for the division for seven months as an ENT, and throughout those seven months, I have heard the dangerous calls and the precautions that were taken in the past and now how those have been sort of put to the side. I would say, a more general feeling of safety, but not every call, you're going to have police attached to it. There's still those flagged, I guess, addresses if you would. They're still going to have-- police are going to be attached to the call. But I would say that's the biggest change that I've seen, I guess, throughout the years I've been here, which is a lot of moving in and a lot of moving out. And also moving out to those areas that he was mentioning, into the suburban areas that surround the actual city of [City] and a part of the actual metro, I guess, area.
OE	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3]... Basically, all of the technology that we use, our specific monitors, how our ambulances are set up, how our trips are written, how our Toughbooks function, which is similar to other systems, but it's how we do things. Our HR staff and our command staff are hierarchy and all that stuff. It's certainly important. You have to pay attention and take notes, and that kind of thing. Nothing can really prepare you truly for the field. That's why it's field-training. The first couple of shifts in first week or two are generally a little on the rougher side. It's not a perfect transition for most people, usually nothing bad, a little style points. It's a lot of style points. This is our system. We do things the way that we do. And it can take a little while to get your feet under you and figure it out, and you just move along and go through the various stages of the training.
OE	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] Police don't bill victims of crime, so. EMS, the last service that I worked for, they were the only government entity that made money for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the city, and it was about a surplus of \$1 million a year that they brought in beyond what their budget was-- beyond what was covered for their budget. And I think that's similar to [City] Health, too. The paramedic division, it might not be a huge money making service, but it is a money making service for the hospital. And they're trying to increase that right now just by encouraging us to get signatures on our paperwork.
OE	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3]... That said, we're never going to not help people with their ability to pay. We're EMS. It's a service at the end of the day. The money system and money gets worked out in the end somewhere in other-- we're the streakers. We're way at the bottom when it comes to all of the finances and stuff. We just help people and drive them to the hospital.
OE	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] A rural system that gets one or two of those cardiac arrests a year would potentially benefit from a screen. We have enough practice to be current in that skill because we do it multiple times a year. Some of it does it once every three years. It would probably like a little extra help. Also, those rural agencies, as is the case with the CPR machine, the less people you have available, the more equipment you need to take up the slack. [City], we have so many ambulances, so many fire stations [laughter], so many cops. There's generally all these extra bodies to help you lift this, pull that, push on that. So for better or for worse, it works for our system to not have some of that equipment
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	So we have ambulances in the county. There are two supervisors, one at the west end of the county, one at the east end. It's 50 miles long in the county, so it's too big to have one person do it, although usually one end is a lot slower than the other. And we also get a lot of transfers out of one hospital in [City]. So I'm located in [City], and I switch back and forth every other month. And then I'm responsible for day-to-day holes in the schedule, for just kind of touching base with the crews, with going on calls that I perceive the crews would want me to go on, and getting transfers out the door. When the hospital can't manage a patient that gets brought to them, they need a different level of care, then they usually go to [City]. That's it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	Yeah. And so there's a station there. There's five stations, one in [City], one in [City], one in [City], one in [City], and one in [City]. And there's two [Job title], one in [City], one in [City], and we switch every other month. So one month is pretty easy [laughter], but it's different kind of calls, and it can't- it takes two hours to run a call there. And one is busier in [City], but it's a nice mix. And the big busier is the hospital and the transfers, and it's busier in the winter time in [City], so.
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	Yeah. So [City] done a really good job at promoting themselves as a more of a year-round thing than just a summer thing. And I started here in 2010, so I've seen I think seven winters. It'll be my eighth, I think, seventh or eighth winter this year. And I've noticed an uptick just during that time, significant. It used to be dead in pretty much April, May, and June, and dead in half of August, September, and October. And now it's slow in May and slow in September, and then it's pretty busy in the middle of the summer, and busy in the winter. So yeah, they found a way to fill it in pretty well.
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	So if I'm in [City], it's busier and has a more structured routine as far as go to the hospital, see what's going on over there, tell them who's working, check to see if there's any potential transfers going out. There's three stations for me to kind of flip between, and then the day kind of dictates itself after that just based on whatever...
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...In [City], you can rely on it being a lot slower. Not always, but generally slower. Sort of the same type of calls throughout the year. The seasons don't really change it. I mean, you might get hunters in the hunting season. You might get crashes in the winter time. More on the highway. But it's still about the same amount of calls year round. We're in [City], December, January, February, March, it's just skiers, skiers, skiers, and tourists and stuff like that. So it's a difference mix at one end of the valley...
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...And we used to be two separate agencies. One in the west end. One in the east end. So there was a little bit of cultures to mix when we merged... Around 2012, 13. It was kind of a slow process that was

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								happening behind the scenes without the people knowing that it was happening. We all kind of had our suspicions [laughter] that it was happening, and then it was announced that it-- I think they had to do some legal things behind the scenes to make sure that it could happen before they told us it was going to happen, and then said, "Oh, never mind. It's not going to happen." So there was that. And I worked in the east end first, and we had three stations, and they had two and we merged. So now we have five. But it's gone fine. It just took a couple years to transition into and changed things for both ends of the county when it happened.
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	And you're coming from the slow end and this sort of seasonally busy end, and that never end transfers and their end transfers, and had a way higher property value, and that was managing themselves okay financially. But because of financial downturn, and because a lot of our money is based on property taxes, and because it takes two years for the property taxes to actually trend one way or another, even if they're going down, it still takes two years. They were in trouble financially. So it was to their advantage to merge with us. And their person that was in charge of them, saw all of that. And I think it also makes us stronger overall as an agency, to be together with five different fire departments. Fire departments sometimes like to take over EMS agencies, and if you have one through out the county with five different fire departments, it's a lot harder for one fire department to say, "I'm going to take your whole thing over when they only cover a certain part of the district."
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...So the schedule, so we have a schedule of people. They're on a schedule. They work 48 hours and off 96 hours, and there's-- let's just say to make it safe, there's 12 on each schedule, on each shift. So there's three shifts. So basically, you work 48 on and you have four days off. And during your four days off, somebody else is working two days and then somebody else is working two days. And then you come back and do the whole same thing. That's the general schedule for the field employees that work on the ambulances, and they get put in fire station.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								You know where you're going...
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...The schedule gets built a couple of months ahead of time. Then people ask for time off, or get sick, or get pregnant, or get hurt, or want to travel around the world, or whatever they want to do. So then holes come up in the schedule. So then about two months before the schedule, two months before the actual date happens, [Name] builds the schedule. He's the number two person here. He builds the schedule, and he puts out the openings in the schedule. So he says, "Everybody want this stuff?" And we have them make sure a full-time people and part-time people. Almost all the full-time people are paramedics. There are a few full-time EMTs and almost all the part-time people are EMTs with exception of one part-time paramedic.
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	So we hire people seasonally. They get full-time benefits, full-time schedule in the ski season. And then there's a few people that, because we're busy enough and big enough, we have them full-time, part-time. So it's like they get benefits, they get schedule, that type of thing. But they're still not a real full-time employee, but they get it for-- and it gets extended and extended and extended and extended. And those are generally younger people, and they generally have a more flexible schedule. They generally have less home responsibilities. They're generally more eager to work on trying to get a full-time job...
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	... So we home-grow a lot of those people into paramedics here. Not all of them. In fact, probably the majority of them end up going some place else after doing a few years here. And then some of them stick it out, rest at the top, whatever they do to get our attention, and we hire them full-time. But it's really, you never know. There's not two or three positions every year. You don't know. There might be one one year, three the following year, no for six months. So it's just hard because other people have other lives too.
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: full-time, part-time responders] Anyway, we use a lot of them to fill the schedule, either the winter time or when there's just holes in the schedule. You have to have at least one paramedic on the ambulance,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								so you can't just put two EMTs on the ambulance together. So there's that kind of thing to take into consideration too...
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...we also have extra things besides just the daily duties that are actually even bigger in the summer which are special events. So there's rodeos. There's concerts. There's bike events. There's white water stuff with kayaking. There's weddings. There's visiting dignitaries. There's just all stuff that just comes with the summer. And then there's busy weekends like 4th of July weekend or holiday weekends, or there's a big concert in town, so suddenly we have 30,000 extra people in town. [the scheduler] likes to look ahead. He knows these events and probably how big they're going to draw. So he might add an ambulance or two, or 12-hour ambulance, or 1 24-hour ambulance, and it's all kind of up to him...
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...So we only manage-- the field supervisors basically only manage the immediate holes in the system or the holes that are coming up this week. That's it. If we have time to look ahead of the schedule and say, "Hey, there's some openings. We'll send out pages and see if people will pick up." So that's the scheduling thing. And then you can place people in the schedule. We can take people out of the schedule. We can put the reason why they're in the schedule for extra time or less time, or put people off sick, all that stuff. We can do all that stuff. But as far as the overall global schedule, he does that. We manage the little holes in the schedule.
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	Yes. Well yeah, we have five stations. They're just EMS stations. We don't work on a fire station... we have our own stations. We're separate... So different places do it different ways... In [City], they have an ambulance sit on the street corner, work 10-hour shifts. They don't have stations. They come out of a hospital garage, and go get dispersed around the city, and then come back home at night.
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	In a lot of places, they work in a fire station. They're a part of the fire department. They're either cross-trained as firefighter paramedics, and then they work in a fire station and they do that. And then what we have is a county-based, tax-supported system that is separate. It's a separate

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								tax district. So it's a special tax district, a health services district, and it's a-- I don't know if that's only a [State] thing, or if it happens all across the country. But they had to go and create this thing 30 years ago. We used to be part of the hospital. The hospital thought we weren't revenue-generating enough, and they didn't realize [laughter] the potential. And so they dropped us and then they created a special tax district...
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	It's like a little household, kind of. There's five stations and there's generally two at most, and then with the supervisor it-- one leader, and there's three. And then in the winter time, we'll up an ambulance usually for 12 hours. So you could have two to five people in a station at one time. And everybody has their own bedroom, and then there's a kitchen in every station. There's a workout room in every station. Some stations, you have your own shower and your bedroom. Some, there's a couple extra showers. In [City], there's three bedrooms, one shower, two bathrooms. It's an older station. And then the brand new renovation that we did, everybody has their own bathroom in their bedroom which is whatever it is, may not be necessary because not every bedroom's being used. But there's a potential that are better-- could use it for grooves. So that's why they did it that way. So it's like a little household...
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	So we have four or five different apps I would use. And some people use them more than others. So we have a Whiteboard. So basically, it's like a-- it used to literally be a whiteboard, like a grease board that you would write on and wipe off. And I would have everybody on the schedule that day, and where they were, and who-- whatever. All that stuff was on a greasy board. And since I've been here-- so in only six or seven years, it's gone to a-- it's a computer monitor that's like just big Samsung television. It sits on every station on the wall. And it's a computer. So you just update it with a keyboard. And you use the scheduling technology to tell you who's working that day. And then the supervisor, in the morning, updates the board. So who's there? Then you update it throughout the day. So if a crew goes on a transfer, you're going to "x" them out and say, "Now, these people are working," or, "Nobody's working that station while

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they are there," or, "These people are covering for them," whatever it is. So that's how we do it. Then you can see the whiteboard on the phone and that's a newer thing.
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: apps] ...there is one for the fleet. So it actually tracks you where you go. Although it looks like somebody has turned this one off [laughter], tracking off in this one, whatever... I think it even tells you how fast you were going and stuff like that. And it can even say like dangerous things that you've done. I don't know how it knows. But it kind of knows. And then you're supposed to put the gas in there, like when you put gas in the vehicle. You put where you got it and how many gallons. But since not everybody does it, it's not super accurate as to how good our gas mileage is because not everybody's putting everything in there. And it's kind of a newer thing.
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	And then, in the urban systems I've worked in, you could talk to the police on the radio. You can talk to the fire department on the radio, and you have a radio in your ambulance, and each person has a radio. So you're constantly listening to different channels, where here, you're mostly listening to your own channel. You can talk to the police on this. Although, they're not as used to it, so when we come up, they're like, "Whoa." And we're not as used to it. So it takes a little longer to find it...
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...These radios have improved, technology-wise, since I've started here as far as they've gone from I believe it was analog, although, I'm not sure, but they've gone to digital. And during the transitional phase, it was kind of bad. It sounded really digital, like you'd hear a weird thing, or it didn't work as well in [City]. It didn't work as well in places with more canyons, with higher mountains, with more obstacles, physical obstacles. But they've added enough I guess repeaters and antennas, stuff like that. So it works a lot better than it used to work...
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...And same in [City]. It used to be fine, and then they kind of went for this transition, and there were lots of problems. It wouldn't work in elevators, wouldn't work in garages, wouldn't work in concrete buildings that you're in, parking garages. Wouldn't work in certain parts of the city. You could

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								park 10 feet away and it would work, but right here, it was like, it wouldn't work. But that's gotten better also.
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	But I think we've gone way more towards phones. Everybody has a phone, everybody texts. So a lot of that. And then pagers are gone for the most part. I mean, some services use-- the volunteers, use pagers, or very rural places use pagers because they can reach places that phones might not reach, or radios might not reach. But the pagers cost money for services, so [City] got rid of pagers. So now, you can get a pager but I would say 5% of the crews use an actual pager. And they almost all get texts. So they can just get a text instead. And you get all your information on a text and or on the radio...
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...you used to have-- in [City], you used to be able to call the hospital on the radio. It didn't happen that often. But you'd do it 5 to 10 times a year. That hasn't happened in years. They still have the channel, but nobody ever uses it. So that's gone away. So some things have changed like that.
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	Yes. We use laptops for trip reporting. So every patient, we have a trip report that we have to write about them. And then it goes to a server, and it goes to billing, and it goes to the hospitals. So they can have a report of what happened before they ever got there. And different places have different abilities to make it better for the crews. And some places focus on-- I mean the billing is important because you need the money to keep doing the job. But some places it seems like a little higher priority [laughter] in making it better for billing, or QA, or research, versus the people that are running the 10 calls a day, who have to write the 10 trips reports per day...
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: trip reporting] ...So [City] used to be-- I used to like it better than this place. But now [City] getting a new one and it's very similar to this. But it's all about billing. It's because Medicare, specifically, likes to deny. They look for ways to deny billing. So they have all these codes, and all these different patient types, and all these different things that they want everybody to fit into, and it doesn't work that way. People aren't

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								numbers. So there's a lot more drop boxing stuff into stuff in order to make it successfully billable. And less focus on just making it something that I can do that's accurate, legal, but also concise. And I can get it done in 15 minutes instead of 25. It makes a big difference...
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: trip reporting] ...some of them, they can drop-- the dispatch can drop the patient information into their call... They can drop the address into the call. They can drop the times into the call. They can drop the miles into the call. They can drop the hospital address where you take them into the call. And those are good, and we like that... And this place is just slowly moving to that...
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: trip reporting] ...Some agencies have ways to track how fast you're going. If you make dangerous turns at high rates of speed, that kind of stuff. And the ambulance, some of them have cameras in the ambulance. Some of them have-- some paramedics have cameras now. No place that I've ever worked, like the cop cameras...
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: trip reporting] So in both places, they're removable. So you can take it in the station, plug it in, or they have a battery that'll last, if it's fully charged and working right, it should last for six hours. And some of them you can lock it into the ambulance but most people'll just leave it on their lap...
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: trip reporting system] So each ambulance has it. And then the people do different-- in [City], one person runs all the calls all day long, and then in here, they usually switch every other call, so you just share with somebody. Sometimes if you have multiple patients in [City], then you're like, "Here I got [inaudible] and you write it." Like if it's a car crash and there's three people and they refuse or whatever, I'll write that one up, or I'll write those two up and you write this one up, that kind of thing then you switch it back and forth. And you log in each time as yourself so it knows that you're creating this trip so it can come back to you if there's any issues. And here, it's the same way but they usually just switch off person. You just identify yourself as the person that was taking care of that patient on that call.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...so they keep trying to do these things, and I think they're trying to do it with safety in mind, but they're not really keeping what really your day-to-day job is in mind. So the safety hinders you from doing your job. So right now, let's say we have 15 ambulances. We might have a little more or a little less. We might have closer to 20. So we have one ambulance that has this newer technology, and everybody hates it. And so it's set up differently. The chair you sit in is different. The place where equipment is is different. The idea is to be safe, and I appreciate that. But moving equipment around messes with your mind memory. So you're like, "Wait, where is the--"
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: new ambulance setup] Especially when you're trying to work on a sick patient, or trying to direct your partner who might be new or hasn't worked on the ambulance very much. You're trying to tell them where something is, and it's not in there. So that's stupid...
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: new ambulance setup] ...they think that they've tried to set this up so you never have to stand up. And so basically, they've tried to design it with you can be harnessed in like with a sort of four-point restraint seatbelt, sitting on one chair that's like this big, on a patient where you're sitting right about up their waist. And then they've tried to set up equipment around you so you don't have to stand up and reach for it. Even though there's 40 cabinets in the ambulance, they've tried to think, "Well, this is just things that you use 90% of the time, so we're going to try to shove them all right here next to you." ...
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: new ambulance setup] ...So you're grabbing your stuff and doing it, and doing it. And as long as it's a normal patient on a flat road, where you can get an IV on their arm, the arm here, and you don't need to reach for suction, or you don't need to reach for bandages, or you don't need to reach for something for them to throw up in, or you don't need to reach for some advanced airway thing, then the call is okay. But that's not how 90% of the calls go.
OE	EMS	R	Supervising Field	46-55	11-20	Male	EMS-R-007	[RE: new ambulance setup] So I mean, I've spent my whole career literally standing up in the back of a-- well, moving around during the call

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					in the back, and it's not like I'm running around, or there's drama, or whatever. It's just like, I got to grab this, then I got to grab this, then I got to grab this. And there's railings on the top. So you're kind of holding on the railing, grabbing this thing. You're looking at the traffic, and you know where you are. So you're like, "Is it going to be bumpy," or, "There's going to be a stop." And your partner is also trying to tell you like, "I got to stop fast," or, "There's train tracks coming," or, "There's a bunch of traffic ahead," or whatever. So all those things are happening. And you're not trying to be like cavalier and be like, "Oh, I can swing from the bars," or anything. I need to be up...
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: new ambulance setup] ...It's not a challenge to be up as much as possible during the call, but when you're running 120,000 calls as a system a year, you need to kind of-- spending an extra 10 minutes on every call makes it that you're going to need more ambulances, and that costs you millions of dollars a year. And the more ambulances you have, the less calls you're on. That makes your paramedics not as good as the ones that are on more calls. And so it's not like-- they're trying to solve a problem, but I don't think they're doing it in the right way. And some company came, a couple years ago here, they were all excited about this thing that they had with, "Let me show you how we can do this," and it was the beginning of this. I saw it coming, and I was all like, "Oh, no. Here we go."
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...so we used to have a technology here that would, you had fog and you would beep it in when you would drive, and it would keep track of your driving, your speed, around the curve thing. I'm sure it had some kind of driver scope inside the ambulance to tell you if you're taking the turn, all that stuff. Everybody hated it and the day it got uploaded every month. And they didn't really use it punitively. But it made noise. So it clicked when you come around a turn. And if you take the turn too fast at all, it would alarm. It was so annoying. And even if you were hitting this at a normal speed, it was telling you you were taking it too fast. Let alone when you were actually going fast, then it would just alarm the whole

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								time. So everybody hated it. We kind of mutinied. And when we merged, we got rid of it...
OE	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: new ambulance setup] ...But now we're getting a couple of new ambulances with a multi-hundred thousand dollar grant that we got. The grant's awesome, the technology is kind of back with the new ambulances in some form. So there's technology that isn't good, or that we don't understand the use for it. It doesn't make our job easier. The goal is safety, but it doesn't really seem to make it safer.
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	So my job title is [Job title], which means I do everything from call a plumber when the toilet's plugged up, to buy \$200,000 ambulances, to hire and fire people. I do personnel. Again, at a small agency, you wear many, many hats. Yeah.
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	So we are what's called a [County] in [State], which is-- you may be familiar with a water district or a sewer district. An entity formed for a single purpose to provide some kind of public service, so that's how we do EMS in this county. So we're countywide, we cover the whole county except for that little part over in [inaudible].
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	It's fine. And we're the sole provider. So in the mountains, there's not a lot of resources when it comes to EMS. If we need help, we usually are the help to the surrounding counties because they're even more rural than we are. So if somebody has a big crash, or there's a big fire, or there's something else, they're using us for help. We're limited in our mobility to basically [Highway] corridor and a couple two lane roads north and south. Lot of recreational activity in this area. So hunting season's always interesting because people shoot themselves, or fall off their horses, or roll their jeeps, or all kinds of things way back in the woods where there's not a lot of help. No communication. You can't track anybody back there.
OE	EMS	R	Other Public Safety	56-65	31-40	Male	EMS-R-008	Like a lot of things in this county, it's a cooperative effort. There is a mountain rescue group. But they're sort of an arm of us unofficially. I mean, we paid for their building and a lot of our members are cross-

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					trained. We work with the [Organization] out of the [Name] Airport. They have the high elevation training center.
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Yeah, it's pretty interesting. But we have search and rescue people, paramedics, who are cross-trained to do what they do and are checked off to be in the helicopter and do all that kind of stuff. We cross-train with the ski patrol. We have paramedics on the ski mountain during the winter. A lot of river activity in this county. [Name] River runs right through the county in one of the [inaudible] parts of the county, of course. So if somebody dumps their raft and is drowning or something, we have to go an hour drive up to the river and figure out how to fix that situation. So lots of long response. Lot of expenditure of resources for one patient, for [smaller?] patients, for those kinds of things...
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: being in a rural area] ...And no, really, communication, so we built a lot of things that are sort of automatic like our medical protocols. In this situation, you can do this. You don't have to call on the radio because... it doesn't do any good because you can't talk to anybody. A lot of systems are very tightly regulated. You have to call medical control to do this or that or this. We have a much more - what should I say - liberal system, in that, there's a lot of things we can do just based on "you can do this if you can't have communication." That kind of thing.
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	There are. I mean, I can pull out my cellphone-- well, why don't I do that? So [because I'm old?], I got a big one because I can see it better [laughter]. Each of our ambulances have a dedicated cellphone. And they're all connected to iCloud so that, say, we have a phone list, a common phone list, for a lot of [inaudible] in [City] that we transport to. We can push out updates of phone numbers and addresses and [dura codes?], and things like that on iCloud and it'll update all our phones. So we do a lot of stuff through the iPhones just because they have a good technology and many people are familiar with it already because they have one. That's a big deal, familiarity and usability because people aren't going to use stuff they're not comfortable with or if it's hard to learn or something like that.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	When I started here, there were six people, six employees and one station. And now we have 75 employees and five stations.
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	So, in big systems, you have your own dispatch and you have grid control over-- the dispatcher can collect the billing information and all that kind of stuff as they send out the call. Here, nobody is big enough to own their own dispatch. So we [are counting on?] dispatch for everything from the dog catcher, to the town buses, to the fire, EMS, police, all of the police agencies, the division of wildlife, the animal control. I mean, it's everything. And so they do a great job at that, but you don't get the level of detail that you would if you had your own dispatch. I mean, they're not trained medical people. They have a card they read off, like if you need to start CPR, okay, do this, do this, do this, do this. Medical priority dispatch, it's called. Most systems use it. You don't have to be medical to read directions to somebody.
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	But very few agencies have GPS location on their vehicles, so what happens is the dispatch computer, they can draw a geofence around an area. And so we have five stations pretty much spaced evenly down the interstate because that's where the volume of most of our business is.
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	There's pretty much five little municipalities in town. And so when there's a call for [City] they just air the call and they say, "Attention, [City] ambulance. Here's your call. Here's your location. Here's what's going on." We can get that information on a mobile data terminal, as long as we have cell service [laughter]. And so that's all great...
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...I mean, there are so many functions, computer based functions in an ambulance anymore. It's an enormous computer on wheels. The ambulance itself, it tells you when it needs an oil change anymore. It tells you when it needs this, that, or the other thing. The electric load in these ambulances is just nuts. I mean, they are just maxed out right now on power capability because we have a refrigerator in there to keep refrigerated drugs. We have a warmer in there to keep IV fluids warm.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								We have a cardiac monitor which plugs in because it's battery operated. We have a suction unit that is battery operated. We have this, that, and the other thing that's all battery operated. It's all plugged in. When an ambulance is not running, it's on a shoreline plug. And if you forget to plug your ambulance in for an hour, it's dead. I mean, it's just the electric load, which is a technology issue as well.
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: ambulances] I mean, in the last five years, we've gone completely over to LED warning lights because they draw so much less power than the old incandescent ones. That's been a great thing. But we've made up for it by hanging all this other [laughter] stuff, this other new technology.
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	So the basic Tough-- we use Panasonic Toughbooks for our patient care reporting system. So that Toughbook can communicate by Bluetooth or over cell with, for example, the cardiac monitor. So you hit a button and it pulls the data from the cardiac monitor into the patient report so you don't have to print it and put it in the copier and then scan it and send it over... That kind of stuff, it's nice when it works.
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...doctors and paramedics and other people who take care of people used to-- people who had done it a long time had a finely developed sense of when somebody was sick. They could look at him and go, "There's something wrong there." They don't have that anymore. It's like firefighters, there's a whole generation of firefighters who is out there now who have never fought a big fire because there aren't any, other than wildfires. A lot of agencies don't have big structural fires, especially if you're not in a city with all the buildings. I mean, I can't even tell you when the last big fire we had was here. I mean, structure fire. It's dumpster fire or it's hazmat spill or brush fire...
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I'm in the [Organization] database because over the years we've done a lot of high security visits, presidents, vice presidents, things like that, special events. So my name is all over the [Organization] database. Well, it got hacked a few years ago. I started getting phone calls, crank phone calls [inaudible]... So I don't trust anybody [laughter].

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I mean, I can't make any of my employees do anything. Okay. They're here 24 hours a day. I've done their job. It's not easy. If you throw all kinds of harder stuff to make their job harder on top of it, it's not going to work. I mean, I can put all of the sanctions and rules and everything I want on it, but I have to motivate people to want to use this technology and show them the advantage of using it. We get paid faster. We can post statistics that show us what we're really doing, how it's useful. But if it's not to them, what's in it for them [laughter]?
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Yeah. They commute to work here. So I don't like that, but I don't have a lot of choice. My people live as far away as [City]. That's 150 miles. [City], we've got a bunch of people that live in [City]. We do 48-hour shifts, and so they can come up for 48 hours and they're off for four days. So they can make that work. And I can buy a house on the [inaudible] for half of what-- or a third of what you'd pay up here. It's just the cost of living and the amount of-- the portion of your salary that it takes to buy a house or buy a car, any of the sort of the big ticket items, has risen so much.
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Ask anybody in this county or anywhere [inaudible] area, really. I mean, you could go to [City], same thing. It's a nightmare [to?] staff because how do you staff full-time, qualified people when your call volume in May might be 200 calls in a month, and my call volume in January is 700 calls in a month. So I have to be able to expand and contract responsively, because you can't build [the church?] for Easter Sunday [laughter]. Taxpayer's money, it just doesn't work. It's not sustainable. So I have two paramedics in every ambulance, and then in the winter, I hire EMTs who do seasonal work, and have some other job as their main job. You have to get very creative about staffing around here.
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Yeah. It's difficult. That's probably one of the most difficult parts of my job, is adequate staffing so that they're not getting just beaten to a pulp in a busy season, and there's not a bunch of people standing around getting paid for nothing in the off-season. That's what taxpayers demand, but it's-- you got to have a happy medium. I mean, I'm usually a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								little understaffed in the winter and a little overstaffed in the summer, and I try and smooth out those curves a little bit, but it's-- everyone complains when the ambulance doesn't show up for 10 minutes or something. It's like, "Where were you guys [laughter]?"
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Yeah. There's only so many of us. Like I say, the nature of [Job title] is you never know. It's like having a restaurant, you never really know how many people are going to show up for dinner. You know probably Saturday night's going to be busier than Monday night, but you never really know. You don't know when they're going to have a 50 car crash [inaudible] in the winter time or-- we got the third busiest airport in the state here in the winter.
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: 3rd busiest airport in state] In fact, some days we're busier than [City] [laughter]. So you can imagine-- I mean, you know [City]. It's all the bigwigs that own company X, company Y... They don't even have room to park all the gulf streams down here at Christmas break. I mean, I'm serious. They're doing a runway [or an?] [inaudible] expansion right now just to park them all. We get direct service here everywhere from Newark, to LA, to Dallas, to [City], to-- all those people. I mean, the full time year-round population of [City] is 5,000 people. Christmas week, it's probably 50,000 people. So how do you staff for that kind of swing?
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Yeah, yeah, yeah. So I got my base staffing is six ambulances for the entire county. Well, my farthest western ambulance is almost 50 miles from my farthest eastern ambulance. So when they get busy, they're not going to drive 50 miles to go out. It just doesn't work that way.
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	50 miles of interstate to go. So, in the city, you've got a little box. You put your station in the middle, and you can go out like this. Here, we've got a bowling alley, and I got a staff like this.
OE	EMS	R	Other Public Safety	56-65	31-40	Male	EMS-R-008	There are times, like in the winter, when you cannot leave this county. The roads are closed in both directions. The weather's bad. You can't get in or out by air. You're it. This is what you've got. So if we don't

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					cooperate, it just doesn't happen. So that's just the way it is in a small county.
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	We meet every month. And there's one paid radio tech for the county. The county [Job title] is the administrator of the radio system. The county sort of takes the-- they're the bank. They take on sort of the pass-through for the cost and everything, do the accounting and things like that. And again, it's another cooperative effort. So that's what the tech ops committee is.
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	As you know, technology is very expensive. You don't just buy it and you're good. You've got to maintain it... You've got to upgrade it. And we deal with some very challenging and physical conditions. A lot of our computer sites are above 10,000, 11,000, 12,000 feet. You can't get to some of them unless it's summer. If one them breaks down, well, just have to wait until the weather clears [laughter]. I mean, we have ice loading on some of our tower sites such that it shuts them down. I mean, it's just--
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Yeah, I mean, the state who we're sort of partners with in the digital [inaudible] radio system. They have a couple, they're called SOWS, site-on-wheels... So it's a trailer they can pull in and stuff. But you don't just call up and say, "Hey, bring that up tomorrow, will you?" It's something... I mean, we need of those ourselves [laughter], really. But there's a couple in the state...
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...I mean, but there are just areas-- there's one area in particular in this county that is-- we've never had good radio coverage, never had any radio coverage. We never had any phone coverage. It's an absolute mess in the winter time. There's a little section of [inaudible], a couple miles long, there's nothing. It's a total blackout. There's no power up there. There's no radio up there. The [repeaters?] don't hit it because it's in a canyon. I mean, that's a big safety deal for us...
OE	EMS	R	Other Public	56-65	31-40	Male	EMS-R-008	...Because I wasn't kidding about the 50 car pile up that happened. And if we're up there with all kinds of emergency equipment, we can't talk to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					each other, that's a problem. If somebody gets hit by a car and we can't call for help, let somebody know, that's a huge issue for us. The certain frontier areas of the county, I mean, we're kind of used to. You don't have anything out there so we just kind of go out there ready for that...
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...But if you're working on the interstate, most people expect to be [laughter] able to use their cell phone at least. There are just dead areas of this county. And a lot of counties, frankly... There's lot of parts of the country there's no cell service. And it's because there's no people [laughter] to pay for it. I mean, AT&T doesn't put a cell site where there isn't anybody to pay for it. It's the interstate corridors and even then there's places where, like I say, you don't have power, or you don't have fiber, or you don't have a microwave link, or something, you're not going to have anything. And the geography just makes that impossible some places.
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I'm sure it's the same in other rural places in the country. I mean, the upper Northeast is very mountainous and sparsely populated. They're not quite in such a bad shape on the Eastern plains of [State] just because-- I mean, there aren't any people, but it's flat. So you don't have to put your sites [close together?]-
OE	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	But, yeah, we got high volume, big accidents a lot of time, and poor communications. That's a big problem for us.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: EMS/fire call ratio] 70/30, 70% EMS
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	Oh, okay. So we work in a what I suppose politically would be called an underserved area. I like it. I take the bus to work. I take the [Name] to the bus. And in the mornings, I don't have any problem, but definitely in the afternoons, I would be more aware if I did that based on what we see. A lot of homeless population there. There's a clinic for homeless people that's right across the street from our station just down the road, and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they tend to congregate there. And then there's a liquor store on the other side, so they get their liquor and they hang out in that parking lot there. But they're always cool to us for the most part. I would say I like running calls there because people like us, you know?
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: homeless population] And a lot of times, that demographic just doesn't know. And it's kind of fun to help them because there's also a significant amount of Somali, Burmese, Nepali, and Swahili. So many of them don't-- if they do speak English, it's just a small amount. And they don't understand services and stuff like that. They just know what they were told, so. Yeah. It's kind of a nice environment towards the-- as the sun goes down, the calls tend to get a little bit more-- we got to be more aware. But during the day, it's really pretty low-stress environment. It's fun. I like it. It's a good place.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	Oh. So as a firefighter-- I've been a fireman for 15 years. Well, that's not true. I've been licensed to be a firefighter. I was a paramedic right out of school and I did paramedic for a while before I got on full-time as a-- fire department. So I'm pushing 12 years as a full-time firefighter. Well, I was, the first couple of years, trying to find a job. So I'm the senior firefighter, senior paramedic. So because we're on a busier engine, I'm also a field instructor, so I tend to have new paramedics on the rig with me. Either they're new in general or new to the department, one or the other. So we do a lot of talking, just discussing. When it comes to our equipment, like when to use our equipment, what's it really for, what's the reality behind it, like a thermal imaging camera, you got to know its limitations as well. So we discuss a lot of that reality...
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	The headsets are wired into the fire engine. On our portable radios, it's just a lapel mic. So it's just an open thing. Some people have been given an earpiece. So they can hear everything right in their ear. Nothing will come out of this. But those people are easily distracted then. Every time they hear a noise, they're like-- they got to train themselves to--
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	Well, our department has paramedics and firefighters on our engine. The ambulance service is a third-party ambulance service. So we do have to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								communicate with them and then the police, of course. So we do have three separate entities that we'd have to communicate with. To go in order, if it's just the fire department to the fire department, we just would say, "Hey, you from me." So, "Hey, Engine Two from Engine One, this is what we have." For the ambulance, the company, then we call them whatever ambulance-- the call sign they are. Now, we know that when we're dispatched. They'll say. So we would call-- [Name] is the ambulance, say. [Name] from Engine One...
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...For me, in my perspective, like I said, I'm really based on reality, and been a paramedic for a while. I don't care. All I want to know is, what equipment do I have to wear? Do I need a black coat or EMS coat, or do I need my fire coat? That's really the only thing that matters to me. Now, I need to know if the scene is safe. That would be nice. If there's a hostile party, are we going to-- is it so bad that we're going to wait for police to get there first, even though the call is for a baby not breathing? We have that luxury here. Not everybody has that. Now, some people want to know more. They want to know if it's a adult or a child. Breathing, trauma, they want to know. For me, it doesn't matter because, so often, the information that dispatch is receiving from people is very much exaggerated. "Oh my God. There's blood everywhere." "Well, compared to what you're used to, yes, there is blood everywhere. But it's right here and it's right here. It's not that bad." So that stuff really does never-- I don't have a lot of value in that...
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: receiving information] Going back to my district that I serve, no. Because those people can't afford iPhones and stuff like that. They're going to have a lower quality image, if they even have that. And a lot of them only have the administered phone that's really the same thing as this recorder. There's not a really lot of capabilities. So for my particular situation, no. I mean, if they could take a picture and send it, that's cool, but it really doesn't help me on the way...
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: receiving information] [Name], that's a rather wealthy community. Everybody there has iPhones and brand-new phones that can take

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								fantastic video and pictures that you'd see on the nightly news, you know? ...So that would be a whole different story, depending on the district that you serve. If you have the capability, we'll take it. I would take it, because again, where I work, major hospital, a lot of physicians and nurses driving through this area, they could easily take a picture or video and send it in. Doesn't necessarily have to be that demographic that calls all the time. So I would find that helpful.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	Our department has those MDCs, but it's kind of underutilized for a computer. I mean, all we do is get this generalized information that we probably could have sent in the '80s. We just didn't have the ability to make it small. Nowadays, it should be like an iPad. Something simpler that's easier to touch, and you could almost pick it up and take it with you so you could continue relaying information...
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...So many of us on calls, if we have a unique situation, sometimes we will take a picture with our own personal phone and send it to our chief's personal phone so he can look at it, because the department doesn't issue the rigs smart phones. Only a flip phone, and then a separate digital camera. So we can't make it all work. So having an updated tablet or an updated cell phone for the unit would be very helpful.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	So using that flip-- having that flip phone with those sensitive numbers in there, that's really helpful. And I've used our phone plenty of times to call the hospital or whatever. But the ambulance company has smart phones, and a lot of times they do take pictures. And they have all that capability.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: technological advancements] So EMS-wise, I like it quite a bit. For instance, the hospitals that we respond to-- now, the one big hospital up north [Name], that one, they have every doctor on site. So we don't need to do it...
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...when we go to [Name] Hospital, that has-- I call it HAL. Did you ever watch 2001: A Space Odyssey? ... They have a machine that they just wheel in and the neuroscientist or neurosurgeon can look at and talk to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that patient right there to decide if we need to go to surgery for a stroke alert. It's amazing...
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...We have the mobile stroke unit that drives around. It's got a CAT scanner right inside of that thing, which is pretty awesome. So EMS-wise, I think it's great that we can basically eliminate a lot of unnecessary things, but at the same time, we can catch a lot of things quicker, too, by having a mobile stroke unit and being able to just go right to somebody's house. And then they can deliver the medicine quicker. I think that stuff is pretty remarkable and I think the technology should be used. Firefighting side of it is different, you know?
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	But from the EMS side, we do so many things where we talk and we experience, based on what we see. Whether your face is drooping or if I'm talking to you and you're not quite making sense. You are making sense, but I'm picking up on something that isn't quite right. So how do we portray that to the hospital sooner? EKG monitors. Our monitors don't have WiFi or Bluetooth capability. They purchased them right before I got hired here, so I think they bought them in 2006 or 2007. And if you think back then, WiFi was still kind of limited. We can't send our 12-leads. We can't send our heart monitor pictures to the hospital. If I thought it was important, which I never do, I could lay out their EKG and take a picture of it and send it. But again, we don't have that capability with the department...
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: EKG transmission capability] ...The ambulance company does, but they don't utilize that either with telemetry and stuff like that. So there's a lot of underutilization. Yet, because those things are so darn expensive, they want to get 10 years out of them. It's kind of like a car, you know? ... You want to get as much time out of them as you can before it's necessary to progress. So labs, blood draws, stuff like that, we just can't take advantage of that due to that limitation.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: mobile stroke unit] So with our dispatch-- I can't think of what they call it. You'll find out when you do dispatching, I suppose. I forget the name right now. It'll come to me. They ask specific questions and then if

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they were going to dispatch us for a stroke, they will also add on the stroke unit. And then we'll have calls where we'll get called for just a sick case, and we'll get there and turns out this is a stroke. So we can call the stroke unit, too, if we need to. There's only one though, and they only work a 9:00 to 5:00, or an 8:00 to 5:00, or something like that.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: mobile stroke unit] ...So the stroke unit's kind of cool. Anybody can call it if they think they need it, but a lot of times, especially where I work, I'm like seven minutes from my furthest part of my district to the hospital going emergent. In traffic, 12 minutes away, it's easier for me to just load up my patient and go to the hospital because of where that thing is-- where that unit is...
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	It's 140 square miles land mass, I think. It's 20 miles from our northernmost station to our southernmost station. 350,000 people. Our density isn't huge, but it's fairly dense. It's not like Manhattan. Or where you're from, out east, that's really dense. We're not quite that dense. We have urban sprawl. That's what we are. 15 stations spread out. Like I said, 20 miles from north to south from our northernmost to southernmost, so. And then the further south and east you go, there's a larger distance between the stations, for sure.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...Our engineer is the one who does the documenting on our EMS calls because we're fortunate with staffing...
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	So for us, we don't have dead spots, which is generally pretty good.
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...In our agency, and then for our specific department, we have a problem due to staffing issues with dispatch. This is just my opinion on it. I don't have the-- I'm just a firefighter. I don't have that upper-level knowledge. But every EMS call we get goes to our TAC channel called TAC 2. Unless it becomes a complex issue, maybe we have an EMS call because a building collapsed, we will change channels for that. But if we have-- which happens often, if we have eight EMS calls going on, which eight EMS calls is 16 units, we still stay on TAC 2. So we can never get out,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								even to tell-- if all I want to tell is the ambulance to come from the north, not the south, I can't get that. Because other units are doing the same thing. 16 channels is just too many...
OE	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...it's my understanding that the limitation is when we switch it to a dedicated private TAC channel, TAC 4 is for fires, or if something major comes up, hazmat call or something, then a dispatcher, some other dispatcher will go and monitor that channel. But now we've strained dispatch and they just don't have enough dispatchers to say, "All right. We don't want any more than six units on a TAC channel." And then so, six units on TAC 2, six units on-- all it takes is-- and this happens every day. As you know, it's true out east. We get two accidents on the highway on top of our four EMS calls. A highway call is two units because we try to keep a shadow of safety. I mean, we have almost 15 units on one TAC channel. It's just too much. So for me and technology, we can talk. But can we get our message out because the highway, the traffic highway, our verbiage highway is just full. So we're in the traffic jam and we can't talk because of the traffic jam that's going on there. So that's our limitations, by far. TAC channels, having more channels.
OE	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Here at [City] Fire, we are responsible for all the fire suppression, hazardous materials, response, and EMS services within the city and district of [City] Fire Protection.
OE	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: job description] Rotate on the engine one month. Rotate on the medic unit for a month.
OE	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	So on paper, a firefighter paramedic and a firefighter EMT are paired together, where on a month-to-month basis, those two partners stay together and they rotate to an ambulance for a month, which is five 48-hour sets. And at the end of those five sets, they'll go to the engine for a month, and back and forth. So they have a partnership opposite of them, as well. And the reason for that is-- I think most people enjoy it because it divvies up the responsibilities between fire and EMS more equitably, and the EMS units typically are busier with longer utilization hours. So I think it helps paramedics with the fatigue and burnout of the EMS side

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								of the system. And it also keeps all the workforce sharp in both fire and EMS skills, knowledge, and abilities.
OE	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	We work 48-hour shifts. First thing we do, we come on in the morning, and we put our gear on the engine or whatever unit we're on. Go in. We have a pass-off with our crew that is going off that day. And then, we have a meeting on our life-size unit, which is a like a closed-circuit TV. So the battalion chief and all the different stations, including dispatch and here in this building administration. And if there's any training or anything like that, they'll make anybody aware of what's going on. If there's any changes, we talk about it, discuss it...
OE	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	So to give you an idea of this agency, there's eight fire houses. Last year, we ran, I think, just short of 16,000 calls, I think, to the tune of 80% of those calls are EMS-related. If you figure somewhere in the tune of 14,000 calls. And we have five ambulances. So on the EMS side, it's busy. And you figure just a rough number of the calls is anywhere for an hour to an hour and a half. So with the average unit running somewhere between 15 to 20 calls a set, the utilization hours start going up...
OE	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Every once in a while, we'll have children's hospitals. If you run a non-emergent, it's anywhere from half hour to an hour away, depending on traffic. But most of the calls or the hospitals here are pretty close.
OE	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	The hospitals have snacks and stuff, but for the most part, our fire department is pretty healthy. So not a lot of people just mow down the snacks and the vending machine. So I mean, worse case scenario, sometimes we'll just stop real quick and get some food and keep going about it and eat it in the truck, but we're trying at least to sneak in some food because we've got to maintain our health in order to help other people.
OE	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	So we do closest unit dispatching. So obviously, we have our primary response area that every apparatus is in the respective quarters. But again, being that we're so active in the community, we're all over the place all the time, it seems like, so being that they do use the CAD and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the MBTs and the AVL to keep track of where we are and who is going to respond to calls. We go all over the place. But, I mean, it always seems like we end up making it back to the house, more often than not, before we have another call to go to.
OE	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	The [City] fire district is something to tune of 40 square miles. So you figure-- I mean, our fire area is probably five square miles, rough numbers, but as the crow flies, we'll go everywhere [laughter].
OE	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	So [City] is full service city. It is a fire protection district that covers the city of [City] and surrounding areas, which is unincorporated [County] County and parts of [City], as well. The [City] Fire Protection District is to the tune of 40 square miles with anywhere from wildland, urban interface, grasslands to a swift water-- a world class river running right down the center of our district to interstates, to highways, commercial businesses, industrial, lots of residential. We have lots of very well established bedroom community with a lot of development of light commercial and single family dwellings on the northwest side of our district. So it is a mix of everything. Pretty much the only thing we're lacking is true commercial high-rise buildings. That's about the only thing we don't have.
OE	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Currently, [City] fire has their own dispatch center, and that is soon to change in the next year or so where [City] fire will be going to a [County] communication center. So it's a county-based dispatched center with all the fire and police in one house. That's essentially all I know about it. I think countywide it's a good thing. I think there's going to be some challenges in the short term going from in-house to countywide dispatch, but the red light goes off in the fire house, we've got a call [laughter].
OE	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Yeah. So we have the actual mobile unit in the ambulance, as well. And that monitors all the channels, so we can hear all of it all the time in the ambulance... Anytime the truck's on, you set which channels get scanned. But essentially, it's the operations channel, the dispatch channel. And some of them have them set to the PD channel, as well.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Some battalion chiefs want their ambulance crews listening to the radio 24/7 sans sleeping with the idea of, if the police are going into an incident, we can get a jump on it essentially. But it's a difference of opinion for some folks, because then you desensitize yourself to the radio. So on paper, we don't-- there's no real policy there.
OE	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I think everything is so attached to technology that if an internet server is down or the connectivity is not there or whatever, and we can't complete trips and get back in service and get information from the hospital that they need, we just start getting backed up quickly. And our system is, I mean, not overly busy. But it's busy enough that it has an impact crew after crew after crew. So that's my opinion.
OE	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	So thankfully, our fire and EMS system is one entity, which is great in my opinion. Everything's in house. The employees, the communication system, all that. We have very little to no communication with our police agency. We are able to scan their channel, but I don't think they want us on their channel, and they don't come onto our channel. And that's been identified as a huge problem in some of these large-scale incidents around the country of, for instance, the [City] shooting. There was no communication between the police and the fire on one scene. So I think that needs to get bridged. I think that's done through policy and procedure. I think the technology is there. I just don't think we utilize it efficiently.
OE	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I think the end-user organizations make decisions that don't bridge that gap well, so I think that there is plenty of channels able to be used that can be a common channel between police and fire, for instance. I just don't think we utilize it to the way that it should be used on incidents that both agencies are responding to. And again, like we were talking with communication issues being a contributing factor to a lot of poor outcomes on incidents all around the country, police and fire interface has been a large part of that communication problem. And I think that the technology is there, i.e., mutual-aid channels or radio frequencies. I just don't think the organization leadership in the fire and police side use

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								them. I think the fire side tries to. I think the police are the ones that are more apprehensive to have that interface than the fire agencies are. That's a pity, though.
OE	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I think the fire agencies do a much better job with mutual aid and communication with other agencies than the police agencies do, in my experience.
OE	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Our wildland team is a specialty team. It's a volunteer specialty team, so they come out. The wildland team has an email text list that says, "Hey, we're getting an order for this. Who's available?" And so, X amount of people respond, and then the coordinator will say based on hours of deployment, this person, this person, this person is going to go. Because you have to be available for 16 days. So there's a lot of parameters to work within to fill the titles on a fire truck and the availability of the workforce.
OE	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I came from very small single firehouse fire department, mostly volunteer, to start and it was one radio amongst the entire fire truck. We had a county-based notification center that was not a really dispatch center for fire. So it was really self-made. So you live or die by the decisions you make versus when I come here, it's very systemic with policies and procedures and guidelines and very rank-and-file. And the guidelines are all put in place for you to just try and apply those guidelines to your daily routine and incidents you respond to.
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[Re: communications leader roles for MCIs] So there are six of us. There's myself and my five lieutenants.
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...we have a very robust communication system. We're lucky that way. [State]'s got the best radio system in the state... it's very well maintained. It's super reliable. We have a ton of talk paths. We get denial tones on the 800 megahertz trunk system. System-wide, we get denial tones at a rate of one a month, maybe?
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	So on an 800 megahertz trunk system, when you press the button, you don't actually start transmitting. You're basically requesting from the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								computer that it open up a channel on your talk group. And so you wait for what's called a grant tone which is a little-- it goes beep which tells you it's okay to talk. Takes about half a second in normal operations. A denial tone, also colloquially known as a bonk, it sounds like mah. And it's the computer telling you, "I don't have a channel to give you right now. You need to wait." We never get them. If you talk to the guys up in [County] County, they will generate them at a rate of 150 a month because they just have a much less robust backend system...
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...On an 800 megahertz trunk system where you run into trouble, it's not with the amount of talk groups you can have. It's the amount of talk paths that you have, the actual frequencies, and the actual [backhaul?] capability from place to place. And [City]'s is very good and very robust so we don't typically get problems there. So our radio system, if we are in [City], is excellent. It's very reliable. It has very few dead spots. When we do get a dead spot-- for example, we had, oh, down at [Street] and [Street] Streets downtown - this was probably 12 or 15 years ago - Verizon put up a cell site and we just lost the whole intersection to interference from the cell phones. And you couldn't talk within about a half-block radius of that. But it got reported. Our [City]'s radio engineers went and talked to Verizon's engineers. And it took them about six months to get everything sorted out so that both people could use the site. But it got fixed. We had a temporary hole. So a lot of our holes are like that. Either you're really deep inside some building where no system's every going to reach or it's something like that where you're getting interference or something. It's a very robust system in terms of its technical capabilities...
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...So for us, our problems are more in the area of coordination both with our own people and interoperability. We do do more interoperability stuff than, I think, probably any other agency because we sit at the center of the metro area. And so we border on everybody, and everybody borders on us.
OE	EMS	U	Field	46-55	21-30	Male	EMS-	And then we also have all the privates in town, the private email services

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				U-003	that we work with, because they do event coverage as well. And so we have-- typically, if we're going to have a big event, it's not infrequent for it to overlap with multiple outside agencies. And so we need to coordinate using the various interoperability channels, make sure everybody has communication systems that are either compatible with [City]'s or with the state's, interoperability radio system, make sure that if we're going to use the state's-- the green channels is what they're known as, that we're not going to overload that system, and making sure that everybody who's going to show up with an ambulance has some way to talk to everybody else and that they know what channel to do that on.
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: private ambulances] Yes, it's very common because a lot of these events will be sort of co-coverage. A [Name] game, for example, we cover the stadium and all the people that are in it, all the spectators. But the teams prefer to have a private company called [Name] Ambulance that provides coverage for the teams, and the trainers, and their employees. So we have to coordinate with them if they're bringing an ambulance in or out...
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...At [Event], one of the big sponsors is one of the local hospital systems... one of the big medical systems. So they are a sponsor, and so they set up and run their own system, first-aid tents, which we then coordinate with. And the stuff that isn't going to require transport, like they need to sit in the shade and rest for a few minutes, and drink some water, and then they could get back into the walk, we'll let them handle it. And then we only step in for the more serious stuff that's going to come out.
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: interoperability] ...The famous [City] shootings, there were a few more like that where things really just didn't go terribly well from the communication's setup which led to a lot of committees and interoperability committees. Here in [City], they mostly operate under the aegis of the [Name] region of UASI, the Urban Area Security Initiative, which is the federal program for large metropolitan areas. So they have a communications committee that has kind of become the lead

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								organization for planning all of this stuff. They produced a TICFOG which I couldn't tell you what [laughter]. It's Tactical Inoperability Communication Field Operations Guide.
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: interoperability channels] So we have a dedicated set. They're called the colored channels... So green channels are for EMS, red channels are for fire, blue channels are for police. Excuse me. And then there's a few-- a channel called [Name] which is intended for com-center to com-center communications. So we actually monitor that here. And then there are a few spare command channels, gold channel. The feds have their own channel, in case they want the command and start playing on the system. And then, of course-- and so that's what we typically use for an interoperability...
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: interoperability channels] ...There's the whole federal inoperability system behind that, so your national MAC channels, your fire channels, your HEAR channels. And we have those in our radios. And if we ever need to use those, which the last time we needed to use any of those was when the [City] front range was having all those floods about five years ago. We sent ambulances far up north that they couldn't use our [Name] system anymore and they had to jump onto those channels. Probably 80% of our guys couldn't find them; they use them so rarely. So we sent a lieutenant out before we shipped the ambulances out of the city, like, "These channels here on your radio, this is what you're going to be using." So the commanders know where they are. Our medics typically don't know where those stuff for ground-air operations and things like that. We have them, but we have to put some special effort into using those if we ever need them. But that's going to be your bigger-- your straight up disaster is when those are going to come into use, when we're getting out-of-state ambulances or we're sending ambulances out of state or to other parts of the state where this becomes more relevant.
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	Those are major, yeah. So you're talking like Katrina level kind of stuff. Because even with the floods which wiped out several small towns and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								took out big chunks of [City] and a few small pieces of [City], at its worst, we never took anything in from out-of-state. It was handled with-- or even outside the front range. Just [City] unit is going north to help, [City] unit is going north to help. The National Guard jumped in, but that was-- even as big an event that was, we were basically able to handle it with regional resources as opposed to interstate resources...
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...The only time that we routinely send people out of state right now is we participate in wildland fire operations. And so we provide the medical units for wildland fire teams, and we provide some communication support personnel for type one and type two ICS teams. And so when those guys travel, they actually have a special set of federal firefighting channel radios that we issue to them just for that purpose. So they have their own whole separate set of VHF radios that the wildland fire guys use everywhere. That's how they take care of that.
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	Okay. So ICS in general, incident command system, we try and use it everywhere just in practice. Type one and type two teams are the biggest teams. So currently the entire western half of the country is on fire. But out of all those fires, I think five of them are big enough to require a type one team. So in order to get on-- and then there's about 15 or 16 that require a type two team. So basically a type one team is a group of people that have been preselected and trained and certified and are very experienced as being able to handle the largest, most complicated incidents. So the really big fires, the really complicated events get a type one team. The middling teams get a type two team. And then essentially there's such a thing as a type three team, but that's essentially just whatever the local people throw together is going to be your type three. So you can handle it without bringing in specialist disaster managers from elsewhere to run you incident.
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	So fire, EMS, police, the sheriff's department which, in [City], is not a field law enforcement unit. They just run the jails, essentially, and the courts. [City]'s a unified city county, so we just have a police department. All the sheriff's department does is provide jailer and court-martial services for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the court, that sort of things. Public works. Everybody who is or was City of [City] or is ex-City of [City], like the Paramedic division which has been independent for about 20 years, works under one unified radio system with one organization that takes care of it...
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: unified radio system] ...so that's a group of-- there's probably about 12 of them, full-time radio engineers. It's all they do. They're very, very good at it. They run the system. They do all their own maintenance. They take care of the repeaters, the transmitters, the [backhaul?], the programming. We do all that in-house. So we do have-- currently our vendor is [Name]. So there's a contractor who's involved as a supplier and as a consultant, but we're lucky enough to be big enough as [City] that we have the capability to pretty much fix almost anything in-house with those guys, which is very nice.
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: communication with frontline supervisors] Uniquely, in this system, our ambulances don't have MDTs, mobile data terminals. They sort of have a back-door mobile data terminal in that the laptop that they use to type their reports on has a wireless link that also uses the-- we automatically download the dispatch information to them to be plugged into the call. They can look up the call notes on that, but they have to open that computer, call up the right call, and do some things. It's not just like riding around like in most modern units. They don't have an MDT that can see CAD. The lieutenants do. So command cars come equipped with an MDT, so they can get a lot of information off of that. Mainly that's self-driven, so they go and they'll hear something that piques their interest and they'll go, "Oh, I want more details on that call," then they'll ask for the notes and all that they come up.
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: communication with frontline supervisors] ...cell phones, of course, make up a big chunk of that. And then we have-- although they are not used very much, we have some car-to-car channels and a command back channel that we can use if we want to talk to them off of the main dispatch channel. Or we have the ability to do what's known as an ICALL which has become almost obsolete now that cell phones are so

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								widespread. When I first started down here, we had cell phones but they were the kind that were still attached to the car [laughter].
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...So we used ICALL heavily, person to person, as cell phone. Now everybody has a cell phone on them at all times and it's very rare to see ICALL used anymore. But we still have the capability.
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	So every ambulance carries a laptop with a wireless connection, and its primary use is to fill out the PCR, the patient care report, and then wirelessly transmit that. It gets uploaded as soon as they hit Complete. It gets bumped up to our central server, PCR server, which then faxes a copy to the hospital where they left the patient...
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	So every person, and that's a choice. So we actually will issue them an alphanumeric pager. Most of them, at this point, and this transition has occurred over the last probably four or five years, four years, have turned in their alphanumeric pagers. They don't carry them anymore. We can turn the pages into SMS messages and send them to cell phones, or we can turn them into emails and send them to an email account on a cell phone. And the overwhelming majority of people, probably in the order of 75%, prefer to just carry their cell phone and use that as a pager receiver via that system as opposed to actually carrying the dedicated pager.
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: LMR talk group usage] ICALL is very low. I would say it probably verges on zero at this point. A lot of the people, of the new hires, probably don't know it exists. It's so rare. The back channels and the car-to-car channels, that is something that you're going to mostly see officers using on a big event where they want to have a conversation that isn't-- and it's not even that they're trying to keep it secret. It's just that the primary event channels is something that just gets clogged. There's so much stuff that everybody needs to hear that if you have something that's only important to a couple of people, it's good to get it off of that channel, if you can. And so that's when you primarily see those being used, is by officers at large events to have a sidebar discussion about something that's important enough to go on over the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								radio but not so important as to chew up valuable main channel time.
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	we've actually recently-- we've started using all of our ambulances because of the need to get data up and down to the PCR laptops, which meant we didn't have to wait in the hospitals. So now, all of our ambulances are essentially a broadband hotspot via commercial MiFi Wi-Fi. Or no, I think we use Verizon Jetpacks right now...
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: ambulance hotspots] ...So we've been looking at trying to exploit that a little better, maybe doing some medical telemetry stuff with that, uploading EKG tracings and that sort of thing. We haven't really done a lot with that yet. And again, I mean, there's all this cool stuff that people are like, "You could send the doc pictures of the patient, and upload the EKG, and do this, and do this." But we're a purely urban system. We're very high-paced. Our guys run about a call an hour. That's a lot by ambulance service standards. And our transport times are so short that they don't mess around with that...
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...our average transport time is 9 or 10 minutes. It's very short. Because we're purely the urban core. We don't cover most of the suburbs. We cover a few of the smaller suburbs, but we're primarily the urban core of the [City] metro area. So 100% urban and very quick times. If it's trauma call, our scene time is going to be around eight minutes. Our transport time is going to be around nine minutes. There's just not a lot of time. You have to move quick to get the basics done in there. We're not looking to do a lot of extra stuff in terms of communications in that time period.
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	So [City] is a dynamic dispersal system. So our guys are out and moving around. If they get some downtime, they're just assigned to a street corner posting. So we send them to an area of the city, and they just cover it from there. They're never down long enough that that's a problem. The surrounding suburbs use a couple different systems, but primarily they're fire department station based systems. So they're looking at stations. So at any given time, we're going to have-- in [City], we're going to max out at about 24 ambulances or so on the streets, and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we're going to drop down to a minimum, very briefly in early, early morning of 10:00 to 12:00. And there are 12 911-participating hospitals for the [City] metro area. But of those 12, there's probably about 6 or 7 that get the lion's share of the transports.
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: 911-participating hospitals] There are some of that are not like, for example, the VA hospital. That's a local rule. Where I trained in [City], the VA hospitals took ambulances. Here, the VA will not accept any ambulances whether it's a person or not. Other hospitals like [Name], which is a tertiary care hospital - they specialize in pulmonary care and immunology - they have no ED. They call us when someone has an asthma attack, oddly enough, because that's not what they do...
OE	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: 911-participating hospitals] ...There are also a few hospitals that are in the metro area like [Name], [Name], move so far to the west that when they were in the city - we sent them a lot of stuff - we no longer send them anything just because they're too far away. So some of the more suburban hospitals, we won't transport to. Some of them, we won't transport to because they're not an emergency hospital and some of them won't let us in the door. We could bang on the VA all we want and they won't open the doors for us so.
OE	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: Fire & EMS combined] So we work under the operations division. And there's two divisions, the EMS division and the suppression division.
OE	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: district chief of EMS operations] There used to be two people to do my one job that I'm doing now.
OE	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	The job of a paramedic out there, on the [City] Fire Department there are two different-- multi-levels. You can have it be a paramedic in a hospital, a private ambulance, but for the [city] Fire Department you have to be very well prepared. Not only mentally, but physically. Be able to answer calls, physically be able to lift minimum of 25 pounds or more. And you have to take your responses in stride. What I mean by that is you can for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								everyday responses, are you going to be-- and we work very hard every day. We get about, I think, 1,000 calls a day or more. And so you have to be able to respond to medical, trauma, sometimes just talking to people in the system and their everyday issues. So not only do you have to be ready to answer the call, for an emergency call, but also be able to handle people and citizens in their everyday problems.
OE	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...I started out at a good house. By good house, I mean it was a busy house. We were constantly busy. I wanted to see everything both trauma, both medical, both dealing with people. So I started out at a good house, which means that we had good firemen. I had a good partner or partners because I had more than one. And I had a good chief, a good boss who looked out after us. And your question was how was it--?
OE	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...Now communication with the firemen, that was easier because we did have a channel that we could go to communicate with them if there was some distance between us. Otherwise, we would be we knew all the companies that were around us, and we constantly had runs with them. And so they knew what to expect from us and I knew what to expect from them. But otherwise, communications via radio was simple because we would just turn the switch over to that channel and communicate with them. And now that everyone has radios, I would assume that it's much easier.
OE	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	I could tell you that paramedics are better at the radios because they constantly have to use it on every run. We used to be able to communicate with the hospital through our mobiles, and we have to give reports over a clinical radio to the hospitals. So we were in tuned to using the radio then than a regular fireman because back then, not all of the firemen had their own radio. Only the officers did.
OE	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	Well, currently each member has their own radio, their own portable radio. And then they have their MDC. Their mobile data terminal, or MDT. However you want to call it. Which was where they get their runs. They also have an MDC inside the firehouse where if they're in quarters they

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								get their runs that way, and they have to-- basically it's a touchscreen where they have acknowledge their runs when they get them. Sometimes the firemen do it for them. They also have a mobile recording unit which is basically a laptop where they do all the patient care reports.
OE	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: GPS] I can tell you that I use it myself sometimes where I don't know every street [inaudible]. If we get a run somewhere down in the Southeast, looking it up. Oh, okay, what major street is it next to? Okay, now I know how to get to it. So yes, absolutely. GPS units, we use the GPS map on there. I forgot to mention that we also do have GPS units on the ambulances.
OE	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...our paramedics are there for 24 hours and they go home for 3 hours...
OE	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: changes in technology] Absolutely, they have been for the better. It has made our job a lot easier. It's very difficult for us to change but it has improved. It's easier for us to do our reports. Whereas before we used to have to write everything out, check boxes, remember what a 1B means on a report but now we don't have to do that, so yeah, it's much easier. As a matter fact, now I prefer to type versus write. So it has improved our ability to do things easier, I think. At least from my point of view.
OE	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...As far as communications with your partners. Because of our different characters, different backgrounds, sometimes people-- I don't think it's as bad as it used to be. Where I'm saying bad is, there were people who were on for 20, 30 years and when you have that amount of time in a certain company, you're set in your ways and whatnot. Versus today we have a lot of younger officers, a lot of younger people coming onto of the job, candidates out there now. Just in the last 4, 5 years we've had over 300 new candidates. So we have a lot of new people on. And again, they come from different backgrounds, different areas. And sometimes, communication is lacking where there's a three or five-year officer who is still learning the job, trying to communicate with a candidate who has

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a month in the job and trying to teach them what they know to survive the streets of [City]. So yeah, there are some challenges out there.
OE	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: paramedics] They also need to be able to know when to-- when they get an opportunity, they need to put their head down because you don't know what the night's going to bring. And that's the most difficult part of the whole 24 hour shift. Any time after 3 o'clock, if you haven't gotten any rest between the time that you start your day and then 3 o'clock in the morning, you're not going to get any rest for the rest of the night. So you know it's going to be a 24 hour, up all night kind of thing. And that's actually the most difficult time because you're exhausted, you're hungry, or [laughter] cold, or hot, and so.
OE	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: paramedics] And I'll give you just from my experience. Some people can be-- I don't know how to put this so that it doesn't sound offensive, but some people expect-- some people are actually very receptive to you. They'll receive you and say, "Okay, yes. You're here to help me. Do what you have to do." Other people is, "Hey, you're going to do this. You're going to take me to this hospital. You shouldn't be doing that. I saw that on TV and that's not the way you do it." So some people are very receptive as far as you're the expert, you're the professional, do what you have to do. Other people are not that way, "I'm a paying citizen, you're going to do what I tell you [laughter]." So they have to deal with that personality, those different personalities.
OE	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: GPS locator for tracking ambulances] ...I know it exists, it's just that we don't have it ...
OE	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	So our hardware is a Panasonic CF-19 Toughbook that we use to create the report. And then we partner with a software company known as SafetyPAD. And they create the software, and they modify it for the City of [City] in order for us to do the report. And then there's a function that is at the 911 Center, or the OEMC, and that's the main server, or the CAD component, that's maintained by Northrop Grumman. So we get a run. It'll push out to the fire house. It'll actually push out to the tablet itself.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								We accept it, create a new report, and then based on your disposition which would be, "No patient found," "Refusal of care," or, "Transport," then there's a number of fields that are required for the medics to fill out before they can complete a report. There's also a component known as NEMSIS, which is the National EMS Information Systems. And we're required to collect data for them and to also send data to the state under NEMSIS. So there's quite a few components that are involved in data collection.
OE	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	[RE: run reporting] They can do it anywhere. Right. So these all have their own 4G Verizon connection. So whether you're in the ambulance or you're in the patient's house, in the hospital, it has connectivity usually wherever you go.
OE	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	[RE: GPS location tracking] The ambulance itself is. The tablets, this current version is not. The tablet is not. But the ambulances all have a GPS component. So that the 911 center-- actually, that's how the computer dispatch works. If you're not in-quarters, it'll do a GPS track to a run and recommend the closest ambulance to you. So, yes, the tablet itself is not but the ambulance is.
OE	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	...they did put the Garmin that you can use if you need to. But if you use the Garmin, by the time that you boot it up and to use it, I think it's so much easier if you got any one area where you're confused about with maybe railroad tracks or angle streets and stuffs like that. If you throw it in your phone, it's so fast, to help you get there. But our CAD right now does not have that integrated.
OE	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	...I think as far as technology goes, we're at where we need to be right now. So yeah, not much else I can think of until they get more advanced with medicine itself. I think we do everything [that an] emergency room can do right now.
OE	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	...it's a home away from home at the firehouse.
OE	EMS	U	Field	36-45	6-10	Male	EMS-	So my company, [name], it's one of the busiest companies in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				U-012	downtown...
OE	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	... our biggest day is Sundays. But every day there's something to do to that ambulance.
OE	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	We have 24 hours on and a full 72 hours off.
OE	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Always two of us. We have a paramedic. His title is a fire paramedic who drives the ambulance and me as the paramedic in charge. So my role is to document everything that occurs in the shift even if it's not pertaining to a run. It pertains to inventory of the ambulance, anything that needs to be done to the ambulance, or work to be done, maintenance. Everything that goes on in the 24-hour period, I need to document that in a journal... At the firehouse in a journal... It's all by hand.
OE	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	So at a firehouse, it's our home away from home. We've developed kind of a brotherhood, sisterhood at the home. And we are members that are assigned to that house so we're there all the time when we are on shift. So we do have a captain that's in charge of the house. We have a lieutenant. So for an engine company, you have a captain and two lieutenants all different shifts. Same thing with the truck company. You have a captain and the two lieutenants. In an ambulance, you have an ambulance commander and then three paramedic-in-charge because we work four shifts. So we have an ambulance commander who kind of is like the captain of the ambulance. And then we have the paramedic in charge is kind of like the lieutenants of the ambulance. It's kind of like the simplest terms to explain it.
OE	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	We do a lot of education with other companies, with the fire companies, with the BLS, with the basic life support. With me, when I'm coming in, once I do my checkout with the truck, [truck] and [engine], I always want to make sure who my EMT is because if we catch a run with an ALS company us, [company], and the truck, I want to know who my EMT is because if I need his hands-- not all firemen are EMTs. They're just firemen. So if we're on the scene I want to look up, I want to see who my

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								EMT is because I'm going to grab him and he's going to help me. So in the mornings, I'll talk with that EMT and say, "Hey, do you need anything? Supplies? Are you okay with treatments? What do you want to learn-- is there anything you want to learn on something that could help us in the field, could help the community out if there's a critical call? I may need you, you may need me on certain situations." So I always want to make sure that they're ready, too.
OE	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	I think on a busy day, we could go up to, I think, two to three million people. Yeah. And when it's not busy, when everybody leaves [City], I think we have about a million people. High-rise residents. So it's a very busy environment for us. We do get calls a lot even for people that are sleeping on the bench. People are concerned, which is fine. We don't have a problem going out and making sure that they're okay, the homeless people. We get a lot of calls for that downtown. We get a lot of calls for the homeless, especially in the wintertime, which is fine. I want to make sure they're warm, so it's okay with us.
OE	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: service area] it's very congested. Like today, it is very congested. A lot of cars, a lot of traffic, a lot of hustle and bustle, a lot of people walking around, so.
OE	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: congestion] You get used to it. My partner came from the Southside of the fire department where there's not that much traffic to this. And he was like, "Oh my God. I can't believe how much lights and sirens." The biggest thing here is that they still don't pull to the right. They don't. They don't pull to the right. I'd say about seven or eight years ago, we did a campaign here. I think CFD did a campaign, pull it to the right. That was great. We had stickers. We had billboards. And I noticed that worked out great. And we haven't done that in a while. So lately, I've noticed that the community has failed on that because we could be stuck on traffic and everyone's pulling to the left. And we got to zigzag especially in downtown.
OE	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	So if we are unfamiliar with the area and we're not on a call, we will go up in-service, through the alarm office, called area familiarization. So we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								will go around the community and just look around to see what's new, new roads, especially in the [city] area, they're building and subdivisions... [City], they're building a whole new community in that area. New roads are being built. So, the summertime, me and my partner will drive around and see what's new, road closures, there's always road closures, there's always construction. So if it's not a busy day, which every day is busy, but if it's not busy, Sundays, maybe we'll go drive around, see what's new and get to know the area a little bit better.
OE	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: comms with PD] We don't. We don't communicate with [local PD] in our frequency. And our frequency is only just EMS. I am able to communicate on the fire side frequency. That's not a problem. Let me backtrack. We can communicate with PD on the frequency, only a few people know how to do that, and I know how to do that because I learned it. I wanted to learn it. But there is no really set memo, or order, or documentation where they tell us, "If you need to communicate with police, do it." There isn't. I just know how to work my radio really well that if I need to get a hold of the police I could switch to the frequency and do it that way. A lot of people don't know how to do it and a lot of paramedics don't know how to do it. I'm teaching my partner how to do it. He's liking it...
OE	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	...in a 24-hour period, fire and EMS, we could run anywhere between 2,400 runs to 3,000 runs, citywide.
OE	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	we have 75 ambulances. Yeah. 75 ambulances in the whole city of [City], so.
OE	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	We do have, in the ambulances, like a graph or a sheet of all the stations laid out. We have all the stations laid out... So in our own ambulance we do have that laid out, so if I need to communicate to somewhere like [airport], I know how to get there. [airport] has it's own radio too. They have their own [J?] radio. It's called a [J?] radio. They have their own little radio too.
OE	EMS	U	Field	36-45	6-10	Male	EMS-	[RE: communication with other jurisdictions] I don't know about other

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				U-012	suburbs but definitely [airport]. And that's another thing, it's another radio. The ambulances in that area have to have maybe two radios. So that's probably another company you probably should talk to... That's [airport] ambulances.
OE	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: communication issues] Well, one big thing is when you have multiple companies trying to talk at the same time to the dispatcher because there is only two EMS. You got EMS [City], and EMS [City]... So you have two dispatchers for EMS. So you could have a big incidence up north where there's six ambulances and they're all trying to talk at the same time. And dispatch will say, "Okay. Hold on, guys." He'll triage via, he'll "Let me see what's going on first, okay? [Company], go ahead with your message. Okay. Now [Company], go ahead with your message." So he has to triage that over them all.
OE	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	when it's summertime, it's so busy...
OE	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	...So EMS works one on, three off. Fire works one on, two off. So every third day that they were working, I would see them. So each day I came in for my shifts, my first three shifts let's say, I got to see each shift. So then it rotates. It used to be where fire and EMS had the same time off. So then you only were really tight with that one shift, but not for us. We get to see all the fire shifts.
OE	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	No. If they're hungry [laughter]. You want to go back to eat and sleep. I mean, you have that tablet with you. You have everything you need in that ambulance. You take everything you want with you in a bag on the rig, whatever, snacks, or whatever, and you go.
OE	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Okay. Well the communication between people in the station is fine. I mean I've known these people whoever I'm working with here I've known them all for a while so we communicate fine. Communication on the radios is a little sparse. I mean you know really I mean this radio we carry it but it doesn't work once you get out of [City] really so you have to be on the truck radio. You still may not get to anybody. When you get to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the hospital you have to tell them you're at the hospital but our only hospitals our in another county so when you get there they don't reach so you have to know exactly where in the road to call dispatch and tell them you're at the hospital or they won't ever know. You got to call them on the cell phone so I mean you know it's just rural EMS and you just deal with it.
OE	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Right so our 2-way radios are fine right here in [town] but if you get I mean this county is huge and we're sort of right in the middle of it so at any given time like the call I went on earlier it's 15.5 miles to get there so you go 15.5 miles you're not reaching back and forth unless you're on the truck radio which is evidently a bigger radio I don't know much about them but it's more powerful, has a better antenna.
OE	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	A lot of the time you'll have to call but still you'll run into places out here where cell phones if you don't have any service either. For example, the place we just went had no cell phone service so you know being able to know where you're going it was an unmarked dirt road off of another dirt road and if you didn't grow up here you know been here for 30 years or you didn't have GPS you wouldn't have found that so cell phones are important but you run out of reception. I mean as soon as we got down the dirt road reception went off.
OE	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	The county's large.
OE	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	36 This county I didn't grow up here but I did start my emergency services career volunteering out here. It's large and sparsely populated. I mean I think don't quote me on my numbers but maybe 15,000 to 20,000 people in a county that's one of the top 5 largest counties in [state]. So for that you have you know mostly farmers or people that are just trying to live off the grid so you got larger tracks of property, people live farther apart, people are trying to get out of the city. They're trying to avoid the noise, the congestion so they come out here and that's good until you need something like us and you don't realize that oh I do live way out of the city and it's great but now I need an ambulance and they're 30

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								minutes away you know so it's a good ol' boy city or county you know with (00:07:36) everybody knows each other, everybody goes to church with each other. I'm sort of an outsider because I didn't grow up here but everybody in there pretty much grew up together. They know each other you know they know each other's parents, grandparents it's just how it goes out here. I mean it's one of the few places left that I've been to that's like that. A big county not a lot of people all spread apart.
OE	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Probably middle, middle class for the most part. You know there may be some out liars but middle there's some lower class as well but so lower to middle class for the most part. [talking about social class]
OE	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Typically I said I get here and check off the truck, I'll eat breakfast that's an important part of my day, we'll clean up anything in the station. Today, it's catching squirrels. We're working on catching squirrels out of the attic. It's a work in progress.
OE	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Here it's a real different dynamic than other places that I've heard of or been to. We have I think don't quote me again but 13 or 14 different fire stations that are all independently run. That may have changed with a few joining the county service but for the most part you've got a lot of independently run fire stations with their own command structure and they have their own buildings, they get their own budgets, they do their own thing.
OE	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	... If you show an interest in them they'll show an interest in you and just don't act mean to them. I mean a lot of people in this business will say you're a volunteer, get out of here but coming from a volunteer background they're necessary. I mean very necessary so you got to have them.
OE	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	We're using paper here right now. We just went from an iPad back to paper because something happened with the copyright of this company yada, yada above my pay grade so I'm just filling it out on paper. My other both of my other companies I work for use computers. One uses a Toughbook, one uses a GTECH computer which is a cheaper version I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								guess but they're two different softwares.
OE	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Yeah. You'll see us in the back of the truck taking names and demographic information down right then so that we can use that to show the hospital so that we can get them registered and get them cared for quicker. So we got to have it right there with us. The patient signed, the computer you know so we've got our whole record right there on that computer. Don't have to do three different things like we have to do here right now.
OE	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	At my other job the stretchers on our ambulances are not like here. They lift up on their own and all you do is just pull them out and then you press a button and they go down so you never have to lift which is a huge deal on your back. I mean they'll lift 700 pounds or 800 pounds really so that's huge. I mean you don't have the issue of throwing your back out you know trying to lift a big patient, having to call for extra trucks but it's just you know it's money. I mean it's a \$30,000 system.
OE	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	This is public. The company I work for in [city] in private and then my full time job is public. So this is a county service, [County] is a county service and then it's a private service that works the [Organization] for [City], [County], [County], [County] and [County].
OE	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Absolutely yeah. The private's got a have a way to make money. There's going to be you're going to run more calls, there's going to be less trucks for the call volume and they're going to keep you working but for the hours you're there you're going to be working. There's none of this you know if you get a call you go. They'll put you on a non-emergency transport if that's what it takes to keep you running so you may come here and run 4 or 5 calls in a day on average, you'll go there and run fifteen or twenty calls in a day. So totally different call volume they're pushing you to the limit, they know their call volumes up but they can't justify paying for another crew on another truck to run out of that station so you got what you got.
OE	EMS	R	Field	18-25	5 or less	Male	EMS-	...I mean your computer shuts down so you're so used to hitting route

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				R-018	okay now I know how to get there you know well if you hit route in [County] we get in we hit responding we do everything off our Toughbook. You press responding, route, figure out where you're going, figure out what you're going for, read about it, go. Here you don't have any of that so everything is radio best but if that tablet in [town] goes down your radio traffic goes through the roof and you know it's hard then to figure out where you're going, what cross street you're going to, where it's at because you're so used to using it. So that's a detriment I guess.
OE	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Speaking on the radio with full words and enunciating what you're saying because we're not playing games here. You know we need to know where to go when you tell us where to go so don't say don't slur your words to where we're sitting there going what? What road are we going to? I mean we can't see it written out anywhere so we're relying on you to tell us so let's enunciate a little bit, speak up and that's a big thing. Codes, ten codes and all that mess. You know you come out here they still try to use ten codes. In [City], we plain talk. In [town] we have our own ten codes and signals so your 1022 here maybe somebody else's you know it's cancel here so somebody tells you 1022 well if you get in the wrong mindset and go to [town] and get told a 1022 that maybe speed up. So now we're flying to a call that we've been cancelled on so you know it's that is a big deal. Everybody needs to be speaking in plain talk.
OE	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Not until the county builds a plan and lots of money for it. I mean there's nothing you can do other than make it work which is a lot of what emergency services does that nobody understands. You know everybody thinks oh man they got the BRT's, the big red trucks and they got everything they need in that thing. I don't know what they got but they got everything. Normally you know in a lot of these places the stuff is held together by what the guys do in the station. They're not going to pay for a new light bar because a tree fell and hit the light bar and broke it so now you're running with a broken light bar but if you fix it in the station nobody's going to say anything you know so you fix that stuff,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you get it going.
OE	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	They are. I love my job. It's very rewarding. It's great to help people when they're in need. When they're having the worst day of their life but it can be stressful because not every day, not every shift ends well and there are times when you just can't help someone as best you want to you can't.
OE	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	It is. When you can't do when you're limited to what you can do or when you've exhausted everything that you know and given every treatment that there is and it's not enough that can be frustrating. It can be stressful at times. You deal with not only your patient but a lot of times family members especially if it's a bad call.
OE	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	Nothing is really routine but as close as you get is you know we show up, we start our day at eight but I usually come in about 20 or 30 minutes early, clock in, I'll go get on whichever med unit I'm using that day, kind of go over all of my supplies make sure everything is there that I'm going to need, oxygen, medications all of those things, get my bunk room set up because we do 24 hour shifts so I'm going to be here overnight, just kind of check the stations see if there's anything that needs to be done, talk to the crew that I'm relieving to see kind of what kind of night they had because sometimes them talking about their calls is helpful and then we kind of wait it out and see what happens.
OE	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	And then of course we let them know that we've heard them and either clarify information if we couldn't understand them, if the radio was static whatever and then we respond and then once we get on scene we radio back in, give them our mileage, let them know that we're there and they usually check on us every 5 to 10 minutes something like that which in this area we're very rural so there's large parts of the county where we don't get any radio reception so once we get to where we're going our communication with dispatch sometimes is null and void.
OE	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	It's very rural and [County] I think is I want to say the third largest county in the [State] and I don't know exactly the details of the radio system

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								here but you know if we're close by they work pretty good but there are far stretches to the ends of the county where we have absolutely no reception whatsoever and then you know dispatch will try to call us on our cell phones but most of these places you don't have cell phone reception either so sometimes you're just kind of stuck out there and when they can't get in touch with us if they have a deputy that's available they'll send a deputy in route to come out and check on us and make sure we're okay which most of the time we're fine it's just that we can't hear them.
OE	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	...If we get on scene and we have a lot of psych calls so if we get on the scene and there's a psych patient that is planning on hurting themselves, hurting us we're the first people a lot of times that have contact with them and if we can't if they don't know for instance they don't know it's a psych patient, if they do they try to send out the Sheriff's office but if they don't we get on scene and we realize oh, this is pretty bad and we need help if we can't communicate with them they have no way of knowing.
OE	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	... they'll request that we call in because there's information they want to provide over the radio that they don't want the general public to hear especially in a rural area like this everybody listens to the scanner ...
OE	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	Personal cell phones. We don't have department cell phones.
OE	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	No ma'am. We don't have any computers.
OE	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	Here it's pretty laid back. We're all you know a close group and we just try to kind of get through the day and take care of anything that needs to be done here. We watch TV, pass the hours, read up for further training things like that.
OE	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	I would say probably mostly farms. I mean you can go once you get out further from this area that we're in you know we've got the little town of [City], you've got the small town of [town] here but once you go out

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								further you will drive for 10 miles and not see a home. It's very lots of fields, lot of dirt roads which is sometimes trying in itself but we're not I wouldn't say that we're highly populated you know we've got a good amount of people here but it's still a very small community and then when you get outside of these little towns you have very few people.
OE	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	I don't know that that poses a challenge as far as the communication. For us it's a little more difficult finding addresses because it's so rural and a lot of it is older population and they you know they don't have addresses, they don't have them numbered and things like that like I said with all the dirt roads. Some of the roads are unmarked so it's challenging and fun at times.
OE	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	For the most part we're here at the station. There are times where we'll do community events like last week or so we had what they call a [Event] which is community event where the kids can come in and look at the ambulance. We had one here at [Store] or we'll go to the schools and things like that to let the kids get familiar with the truck, see our faces because we don't want an emergency be the only time they see us then they're not scared of us as much.
OE	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	We're pretty far behind compared to other counties in the state and elsewhere I'm sure. We're one of the few I think that even do paper reports. We did have a system they finally got one last year and it was horrible, didn't work out so they've done away with that so we're waiting now to see if the county picks up something different.
OE	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	Yes ma'am. I think that when they're bringing in technology I think they and maybe they look at this but it seems like they don't to me because I'm on the outside. I'm just the person that uses it. I don't know the ends and outs but it seems as though when you're in a rural setting that those things should be considered when they're choosing yes. There may be a cheaper way to go and it maybe budget friendly to our county but when we're one of the more rural counties and we have all of these areas that we can't even get radio reception, we can't get cell phone reception then you need to recognize that some of these things are not going to work

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								for us.
OE	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	Not really. I'm new to the game so not much has changed since I've been here.
OE	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	... In reality you could have your whole report done before you even get back to the station because your partner drives and whoever took care of the patient they're in the passenger seat so it would be nice to be able to have that plus you can keep track of we have a lot of patients that call us pretty frequently.
OE	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...So FEMA partners with local organizations and we were one of the original 26 task forces that were identified by FEMA on a national level. There are now 28 task forces and all the task forces are sponsored either by local jurisdiction or a state depending on the particulars of the situation. Here in [County], [County] is the sponsoring organization... So then the local folks like me, I become essentially a federal employee and I get paid by the federal government for my time. So it really doesn't cost [County], or whoever the sponsoring agency is, anything in that moment to sponsor the team. Now, there's other associated costs that the sponsoring organizations do bear to some extent but they also get other the benefits because they get access to training and equipment and resources that otherwise would probably be beyond the means of most organizations to be able to house organically because they're really expensive assets to own and maintain for the very infrequent time you would ever use them in your own home jurisdiction.
OE	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	This particular station is 100% career. [County] is a combination system. So it's actually one of the largest combination career and volunteer systems in the country. We have about 1,100-ish, I want to say, career firefighters. And then there's about 2,000, 2,500 people who participate to varying degrees in the volunteer side of things. A lot of the volunteers aren't necessarily what we consider the operational volunteers, meaning they get on fire trucks and EMS units and go out and directly deliver services. Sometimes they help with administrative stuff and other stuff. So of that 2,000-ish volunteers, I think about 6 or 800, something like

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that, were actually qualified to ride fire trucks and provide what we consider to be minimum staffing.
OE	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	We work 24/48. So we work what works out to an average of a 48-hour work week over a several week cycle, depending on how exactly it rotates and when your extra day off, your [Name] day, is. Some people end up working 72 hours in the week that we work Sunday, Wednesday, Saturday, but then they get another day off where they don't have to work on a Tuesday, or a Friday, or something. So over a period of several weeks, it averages out so everybody works 48 hours in a week, even though one week you might work 72 hours, then the next week you might only work 24 hours. It all averages out. So we work 0700 to 0700 every third day.
OE	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...There's also needs just to stay familiar with our area. [City] is a very dynamic area. It's growing very rapidly. The area is being developed, moved intensely right now in [County]. [City] a few years ago, 10 years ago, 15 years ago, the population of [City] was probably a few hundred or maybe a thousand people.
OE	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	Yeah. And that's over several decades but we're heading towards that rapidly. They're putting up condos and garden apartments and townhouses and single-family homes all over [City], so it's rapidly developing. So that presents challenges for us because there's constantly new streets and new buildings that we need to be getting ourselves familiar with. So unlike some areas in the lower portion of the county where you have occasionally they put up a new building or maybe they rework some street or something like that, we come into work some days and, oh, there's a whole new neighborhood going up over here. They closed off this street.
OE	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	Right. Now, at this station, this is actually one of the slower stations in the county. We don't run a huge number of calls here in an average shift. A busy shift for this station is maybe six or eight calls in a shift. And we have three units at this station. We have a EMS unit that's a basic life support and ambulance.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	BLS. We have a paramedic engine company that has ALS capability on it. So there's a paramedic on there with all the paramedic gear in addition to having all the stuff that an engine company has, hose and pumps and water and all the tools. And then we also have a tower or a ladder truck, and that's what I'm riding today is the tower. So that's the truck company. So we have three units in this station. Like I say, an average shift is three or four or five calls. A busy shift here, we might run 10 or 12 calls in a shift and that would be real busy here.
OE	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	Yeah. The workload just varies a lot by the area, the county you're in, what the demands of that particular population are.
OE	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	Right. In the upper part of the county, where we are here, in [City], high rises are essentially a non-issue. But we do have a challenge in the lower part of the county, which basically is really from [City] down south in the county down to the [City] line where those older neighborhoods that used to be more suburban are becoming much more urbanized. And where there used to only be a few high rises, we're starting to get into a highly urbanized area where it's predominately high rises. If you look at [City], [City], even parts of [City] are starting to develop into--
OE	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...So basically, routine incidents are handled at the station level like the collision that was just dispatched a few seconds ago. The battalion chief's not going to respond on that incident unless they get there and find out that there's a lot of people injured, or maybe there's hazardous materials involved, or more complexity than the average collision that we have that involves one, two, three vehicles, three or four, five patients, something like that. So whenever we get into a more complex incident, whether it's a complex collision, a structure fire, a complex rescue, a river rescue, any number of incidents where we're sending multiple units, and there's a higher level of risk and more coordination required, we send a battalion chief. In [County], we have five battalion chiefs on duty.
OE	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	Well, football events normally fall within-- the average football event game at FedEx Stadium, that's just handled by [County] with their organic resources. But the Fourth of July on the National Mall.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Whenever there's an inauguration, a huge event with lots of people coming into the region and lots of resources brought in to help manage that. State of the Union. These days, because of the heightened threat level, whenever there's a State of the Union Address, there's resources deployed just in case somebody tries to do something crazy during the State of the Union. So the Marine Corps marathon, that's another one that you've got thousands of people, they're spread out all over, and you just need more communications capability. So throughout the year, there's about a half a dozen of events that sort of happen pretty routinely in the [City] region that the caches get used for
OE	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	And that's for all battalions. So this is the one for Battalion Five. I print out two because I like to always have one available for me. I also print out the neighboring jurisdictions and because Battalion Five is a V-pattern, I have neighbors on this side, neighbors on this side [laughter]. So I have a lot of neighboring jurisdictions, and I also respond to another battalion. So I like to print that out. We also have the federal--
OE	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	Yeah. Yeah, yeah, yeah. So [County] is 500 square miles. Battalion 5 covers a third of it. It is the upper V-shaped pattern of [County]'s borders. So basically, I have everything from rural, where there is hardly any building, where it's all farmland, where there are no hydrants, and we ship the water via tankers to the scene, where the response time can be 20 minutes--
OE	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	--yep, for me and also for the station depending on which station it is. And as we move away from the farmland and urban area, we have the-- excuse me, the rural area, we have the urban area and the mix of suburban area where we have apartments, like in [City]. We have planned communities here as well, in [City] and [City], and then we go into again [City], the other side, the east side of the county, where again you have-- some places have hydrants. Some places don't. So it has tankers on that side. And then we start going towards the northern section of the county, where it is somewhat rural again. And then the farther out you go on the outskirts, there is very little development, okay?

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								There are times when I go mutual aid to [County], and there are times when I go to mutual aid to [City].
OE	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	Oh yeah, yeah. It could be a house fire with no hydrants. It could be obviously a townhouse. It could be apartments in an urban area. It could be a water rescue call because we border the Potomac. It could be technical rescue, because within the county and within this battalion, we have a technical rescue team. It could be stuck on a mountain because on the top of our battalion, we have [Name] Mountain.
OE	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	So I have some stations that have the buildings owned by volunteers, some of the apparatuses owned by volunteers, but there's no volunteers that show up. Yeah, show up for meetings. Maybe on Fridays, they show up. And then I have some other stations that have a larger participation, that have a roster.
OE	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	So there's a separate EMS division in [County], so we have the fire division and EMS division.
OE	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	So there have been times where I found out from a unit officer that something is being done that I'm not aware of because the unit officer was told by somebody else and that person was told by some other shift and that shift was told by their supervisor as opposed to my supervisor. So the fire department's kind of a paramilitary organization, so there's a rank structure. So information should be funneled through the rank structure.
OE	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	--when I say everything is documented, I mean everything. Your phone's recorded. You're on camera when you're sitting in there. Everything you're doing is through the CAD and the dispatch, so literally everything you're doing is documented. So it's kind of redundant to even have the journal.
OE	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	[City] super diverse. You've lots of haves, have-nots, a lot of people--joking having grown up in the area, when someone says they're from [City] you ask, "Okay where are you from?" and they say, "Oh, I'm from

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[State]. I'm from [State]." [City] interesting. And a lot of people are transplants. They're still registered to vote in Michigan, or Minnesota, or wherever they're from. They're here for working for a lobbyist for a few years. And it's very political and very politically driven even on a local politics level. Even just working in there is very political at WC. But it's just a super diverse neighborhood in every way, shape, and form. Our city, even the little neighborhoods are diverse amongst themselves.
OE	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	Whereas you don't really-- I mean, this is actually the largest center of Ethiopian immigrants in the country, but my neighborhood in particular. But then you go to our neighboring fire company in [City] and they have oldest star Latino neighborhood. Or you go up to 22 Engines area and they have a-- which is north of us which is like [Street] up to [City] and farther up. And they've got the historic large Jewish neighborhood. It's just a very diverse city.
OE	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	It's different. So it's not a much of a blue-collar working-class neighborhood and stuff, it's just--
OE	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	Just to give you a difference of how it's broken down. We haven't been a volunteer department since 1872 whereas [County] still combination, so it's still based on the foundations of the volunteer departments. It's much more, I want to say like paramilitary. It really almost is. It's more disciplined, more focused in terms of actual policies, procedures, and there's less of a gray area because you don't have competing interests. Whereas out in [County] you've got competing interests. You've got the volunteer companies and their priorities, which are not the same as the county and career service.
OE	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	But for career, they're paying you to be here. They should pay you to-- plus, we are over almost a \$200 million agency in the city.
OE	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	So most of your battalion chiefs are geographically centered. I'm not. Mine are spread throughout the city. So I'm in special operations. So I've got one upper northwest. I've got one deep southeast. The fire [inaudible] is mine. The HAZMAT is mine. So I've literally got all four

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								corners of the city. So I can't go to all in one day.
OE	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Yeah. Obviously, we see the complete diversity, so whereas the geographic tie-ins, where they are going to be upper northwest or in the projects, southeast, I see it all, and a lot of interaction with law enforcement, with locally and our federal law enforcement, like FBI and Secret Service. We deal with them every day. Yeah, very diverse. We hit all parts of the city, the kayakers on the river [laughter], the protesters, First Amendment people over by the White House, the projects southeast. I [had a car in?] one building the other day. So that was a very poor neighborhood. So yeah, we see it all.
OE	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	...So Amtrak was a little annoyed that FBI had shown up, which is typical law enforcement. And that's one of the reasons I talk to [Name] and Secret Service guys every day. So [City]PD could have an issue. They won't call the FBI. And so one of the weird things is the fire department is the glue that holds all these things together because I'll be the person letting the FBI know what's going on, or Secret Service, and we're that go between, keeping everything working.
OE	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	It depends. Usually you like to have unified command, and then whoever the appropriate agency is. If it's a law enforcement, they'll be in charge and we'll support them. If it's a fire department issue or search and rescue, we're in charge and they support us. Park police tend to be difficult to talk to because they're just all over the place. When you think of the park-- all down Rock Creek Park and all along the river--
OE	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	So anytime there's a significant incident or incident of interest within the city we have a communications liaison officer who's based at our office of unified communications. It's a sergeant, he or she is a fire officer, and they're responsible for this like-- it's almost like a mass page, I guess, for lack of a better term. So they send out an email alerting everyone to what's going on in the city. So it actually really helps with situational awareness. Especially if you're sitting in your office and you don't have a radio handy.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	<p>...It's right on-- it's right near Howard University's campus, so you had this major influx of population, whether or not-- depending on whether or not school was in. It was right near the new street, so that area-- it's crazy on the weekends. The Incident Safety Officer, there's only one for the city, so he or she goes, responds through the entire city, so your day could vary-- you could be in upper northwest on a house fire, and then go to a technical rescue down by the training academy or Blue Plains. So it definitely varies. In my time here, I think I've been assigned just about everywhere in the city. So I started right downtown, I worked right off the mall. I liked that, I liked being downtown. I came here for a while as a company officer, so we were obviously right downtown. And then I worked in southeast [City], which was really interesting because the firehouse is really-- here, you're just kind of in the city. In the residential areas, you're more of a fabric of the community. It was-- where I worked was a really low income neighborhood. There was lots of violence. People relied on us for everything. And you realized how important how you are-- like I always see if a firehouse is to close in one of those neighborhoods, how dependent the population is just on that sort of impromptu--</p>
OE	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	<p>Yeah, social service. It really-- you really get to know the people, I mean, because a lot of the people have chronic health issues which you see them quite a bit [crosstalk]. Yeah. So it's really dynamic here. I mean, there's a little bit of everything. There's an industrial component out in northeast [City], so you could go to a big warehouse fire one day or have hazardous materials call. So there's everything here</p>
OE	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	<p>I think it varies. I think it varies a lot by neighborhood. I feel like when you're downtown and there's more of a transient population, and people aren't from the city or don't live in the city, you're just kind of just an anybody, so to speak. I don't say that to be a bad term, but just-- you're just-- everybody's here to go to work and that's it. But when you-- say if you were to go get coffee at a neighborhood coffeehouse at a place where people live and work, you're more a part of the community. People</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								will engage you, ask, "Hey, what happened yesterday?" or "How's it going today?" something like that. So I used to always try to tell my people as a company officer, you're always on duty, whether you realize it or not. So even if you're not on a call but you go to get pizza or something, you're-- people are going to come up to you. They're going to ask you questions. They're going to expect you to somehow represent the agency, so--
OE	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	opinion. But stuff that happens here on a weekly basis doesn't happen anywhere else in the world. Because of that it's forced us to adapt and develop incident response plans that meet our needs. Most cities aren't used to having a million people come in for the Cherry Blossom's on a Saturday in April. You know we've recognized that that's going to be a huge pressure on the agency and we need to put extra units in, we need to ensure extra communications, that all these people coming in are now going to need a radio, that they're going to need an incident action plan, they're going to need to know who to report to because we're outside of our normal scope of day-to-day operations.
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	If we have an observer, I'll orient them. Make sure that they know where they're riding, what they need to do. Any inexperienced people, try to walk them through any processes that they need to do in the first half hour. Then that's about a half hour of housework and management things.
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	Then we usually do dinner around 7:30, either some night crews cook in the station, some other ones say, "Just take the ambulance or the rescue squad downtown and grab some food at the [inaudible]," so that depends on if it's Monday or Tuesday, right [laughter]? So that's around 7:30 or 8:00 usually...
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	I prefer in quarters. Cook it here, eat it here. More like a family around a dinner table type of thing. That's another half hour. Then once we get back from that-- and this is all if we don't get any calls.
OE	FF	S	Field	18-25	5 or less	Male	FF-S-039	So sometimes, we're not eating dinner until 11:00 PM, or sometimes

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					we'll eat dinner at 7:00 and certain things change, right? But then once we get done with dinner, we'll usually start to do training. So the EMS drills are usually done in the training room or somewhere else in the station. The rescue squad drills are usually done either out back - we have various training props for firefighting technical rescue and auto extrication - or inside with firefighting drags or searches or rapid intervention or stuff like that. So then we usually drill until 11:00.
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	Some people go to bed right at 11:00. Some people stay up at the kitchen table, eating ice cream for an hour and talking with people. Some people go and watch TV...
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...The people who ride the rescue squad usually don't stop training right at 11:00. A lot of times we'll go till midnight or 1:00. Once we get in the zone on a drill, we don't want to stop, so we'll just keep going until we're done.
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	It varies because people ride a different amount, and people are in different stages of their training processes. But right now, we have, let's see, one, two, three, four, four-ish people who are in the midst of their squad qualification process, meaning that they can go into fires. They've taken the classes, and they've done the minimum - we call it the fourth man - qualification, so they're probationary firefighters. They can go in with the supervision of a lieutenant, or a captain, or a chief, but they can't be independent. They won't be able to operate as a two person team with somebody less qualified. So we have four people in that process, so any night, we usually have one or two of them in.
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	And then you have other communicators who are very direct and to the point, which around here, in this environment, that's preferred. If you say, "Hey, let's go clean the property office for two hours. Here's the game plan. Let's do it." There's no question about what needs to get done. Everybody knows where they fit into the picture. So the very clear, concise communications around here is what works most effectively...
OE	FF	S	Field	18-25	5 or less	Male	FF-S-039	...So you have everybody in between, the totally vague to the very

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					specific. So there are aspects of the job where when you realize that you're working with someone who's not as good at communicating, or who you start to realize that someone might learn differently than you, and you have to explain things differently to them, you start to pick up on that pretty quickly around here because of what we do and the intensity of it. And you adapt...
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...So there are crews that-- tomorrow's Sunday. I know that the people I'm riding with tomorrow, if we have to cut a car, we might not have to say a word to each other... I can look at my technician or my officer right in the eyes, and I know what I need to do... But then there are other times where you need to say, "Okay, you need to pick up the spreader, and you need to do this. Put it right here, and do it like that. I'm going to be doing this." And so it depends on the person and the chemistry, but sometimes you don't have to say a word. You could be speaking a language that I don't understand, and we can still get the job done.
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So I'm here a lot. I'm here five or six nights a week. So probably close to 100 hours a week. And there's a small group of people that are here that frequently. We're called the live-ins or the permanent sleepers. We have beds upstairs and a little bit more space, and we live here. And so we spend a lot of time together, and that's a very tight-knit group of people. There are seven live-ins right now. And we're very close. So that's kind of the group where you don't need to communicate as much. You can kind of know what they're saying even if they're not a good communicator or even if they don't say anything at all, it's still like, "Okay, I know what you mean." ...
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...Then the next tier of relationships, I'd say for me, is the people who ride the rescue squad a lot because I ride the rescue squad a lot. So even if they're not live-ins but they're very active, then it's the same type of thing. If they're only here one or two nights a week but every week and I'm always riding with them those one or two nights a week, you develop that ability to communicate better and to develop those strong relationships...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...I'd say the next tier is the people who don't come in as often. So people who ride the rescue squad but maybe once a month, or once every three months, or couple times a year, those relationships aren't as strong because you just don't have the experiences with them and you don't have the calls, and the in-houses, and the training, those three things that add up to make the relationships really powerful around here...
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...And then the next group is newer people, people who ride the ambulances who we don't interact with as often. But there are people who ride the ambulance five nights a week who I'm very close with. So it's not like it's divided in that regard, but for the most part, people who ride the ambulances don't ride them as often as people who ride the rescue squad, so. And I don't ride the ambulance as often so my relationships with them aren't usually as strong.
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	Not every night. Our requirement is 36 hours a week and 24 of those have to be overnight. So that would be three nights a week minimum. And then you have to get your other 12 hours through either weekdays, weekend days, or extra nights. So I'm an exception where I'm here six nights a week and then the whole weekend, right? But there are people who are here three nights a week and then they ride during the day once or twice a week too. But either way, you end up spending a good amount of time with these people.
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So we serve [City], [City], [City], [City], part of [City]. I'm sure there's something else in there that I'm missing. Oh yeah, [City], [City], those areas. A little bit of [City] which is really [City], but this area, for the most part, is kind of wealthier. There's not a lot of crime, so the calls that we run are a little bit different and the way we interact with the community is a little bit different...
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...It's a pretty busy station and a pretty busy community. We have over 60,000 residents in [City] alone. But like I said, we serve all those other areas. It's probably between 100-150,000 people that we serve all in all. So the call volume's up there but also the types of calls, total variety, we might cut someone out of a car this afternoon, this morning we were on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a house fire with people trapped that had to be rescued out of the window. So the call types vary, and the types of people vary, but for the most part, there's not a ton of diversity so it's a lot of upper middle class, upper class, white wealthy older people, so.
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	I mean, when we're on a call with police, they're usually in a more of a supporting role, at least for the rescue squad, because if we're on a fire and police show up, it's because they need to block off the road. We don't need to talk with them all that much for that. We'll say, "Hey, can you block off the road?" Not really that bad, or if it's an accident, we're the ones cutting the car, and they're basically either blocking the road, or they may have to check the ID of the person or do a sobriety test or whatever it might be. But our interactions with them are usually pretty straightforward. So, even though we might have bigger communications differences, I'd say we don't even have that many problems with it, because we don't do as much high-stakes interaction with the police.
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So we don't run with other counties around us just because of where we're located. Once in a while, we might run something with someone from [County], but not even that frequently, especially not anymore...
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...What we do experience that's unique is we run to [City] a lot on the ambulances. So people can special call our dispatch office instead of 911 if they're having an emergency in [City], in Upper Northwest, and we'll send them an ambulance to help them out. And we still have to go onto the [City] communications channels, which are different channels. It's 0-12. And so, when we're on that channel, it's pretty straightforward. They use slightly different terminology. If we're in the county, we'll say, "Ambulance 741 bravo to [County]," if we're trying to reach the dispatch center. In [City], you say, "Ambulance 741 bravo to communications." So slight differences there...
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So the ambulances have an MOU with [City] which says that they can-- it's a special exception to the rule, that they can run mutual aid, but the rescue squad cannot.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	Right. So if they have a big incident, they might send our rescue squad for an accident in [City] if they don't have their own rescue squads available, but that's very rare. I don't know. Maybe that happened once or twice this year.
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So we use the radios of course. We use the computers, the MDC computers. Mobile Data Computer, I think. Then the ambulances, more than the rescue squad, but we have one, an EPCR. It's a patient care report. That's just a toughbook that you enter your patient information in it when you have an EMS call. And then, we have our own internal radio system that we use just to communicate between units and our own dispatch center here.
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: internal radio system] We don't carry those on the call, but we just have it mounted inside of the unit. So if the ambulance is downtown getting dinner in [City] and somebody calls our dispatch center having an emergency in [City], our dispatch center will call that ambulance on our special radios. But we don't use them on any incidents.
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: mounted internal radio] ... in-house, yeah. It's just for communicating, "Hey. Can you pick up ice cream?" That type of thing. Pretty simple communications... We have that on all the units, including the utilities.
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So it's a minimum requirement of three. Our in-house objective is four, and we usually ride with four or five. Sometimes six... We have the capacity on this rescue squad to have six in the back and two up front, and on our bravo rescue squad we have two. On our second line rescue squad, we have the capacity for seven in the back for a total of nine...
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...So if you have eight people on the rescue squad, you can accomplish a lot, but it's a little bit harder to keep track of as the officer just because... So you've got seven people riding behind you. Then the officer is responsible for seven additional people plus the driver, and that's definitely outside of their ability to manage...
OE	FF	S	Field	18-25	5 or less	Male	FF-S-039	So they usually divide it up into two teams. So it might be the officer and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					two people, and then somebody senior from the back, who might be a lieutenant or something who's just in the back with two more people, so kind of divide it up a little bit. So we try to have four. We often have five, and I find that four or five is a really good number. You can accomplish pretty much everything you need to, and you can still manage it.
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: AVL] ...Instead of dispatching us back somewhere two miles that way, they might send a different unit that's actually closer. And they can see if that unit is closer. And it tells them. It will recommend that unit above us. So we might think, "But hey, that's our area. We should be there." But in reality, the computer is doing all these calculations. They know we're on the air so we'll be able to start responding sooner. So it gives us an additional minute. So it gives us, or I guess it takes a minute off of our response time. But they also know that that other unit is physically a mile closer. So even though it takes them an extra minute to get out the door, they can get there faster anyways. So it's doing all those calculations that a human dispatcher can't really do as well.
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: AVL] ...a difference of opinion that a lot of people are debating right now is that do you prioritize the call that's happening right now or the next one? If our rescue squad is on the air, and so it gives us a one minute advantage, they might send us on a BLS, Basic Life Support, very simple sick person call as a first responder, because we'll be there a minute and a half before the ambulance, and we get there and we don't really add any value. But while we're on the scene of this BLS call that we shouldn't have been on in the first place, they might put out a house fire right there. And now we can't respond to that. So we might be able to render aid to a sick person who has a headache. But now, they have to send a rescue squad from [City] that's going to take 15 minutes to get here to that house fire that we would've been one minute away from. So they do prioritize the next call or this call instead of the next call. And that's definitely up for debate. And I think that's a kink that they'd probably work out. But the technology is there.
OE	FF	S	Field	18-25	5 or less	Male	FF-S-039	[RE: AVL] ...you can see that it makes units first due to different places.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					So I think we gained some area and we also lost some area. I believe we're due further east, by it might even be a block or two. But you notice that when you get dispatched to an address that you know other units have been on before...
OE	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	They've been really good about-- the dispatchers update their computer with any pertinent information that comes in from 911 calls, or also from the radio traffic. So they're always monitoring that. So if we're running a fire this morning, as soon as they find out that someone's trapped, they'll enter that into the computer, and all the units will get that message. Even units that aren't responding. So if a Chief sees that he might say, oh, I should probably go on that. And then he'll start responding. So they get the information out there pretty well...
OE	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Yes. Yes. So I'm still an operational responder. In other words, I could work an overtime shift on my off days on a firetruck or an aid unit or a lighter truck. So I'm not just a daytime person. I'm a 24-hour responder... So there is rank structures, sort of para-militaristic organization. And firefighters report to lieutenants, lieutenants to captains, captains to battalion chiefs and on up the food chain.
OE	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Yes. In this general area, [City] area, specifically with our agency, yes. We're all cross-trained firefighter/EMT. Some are cross-trained fire fighter/paramedic which is a higher level of EMS care. We have ALS, best life support providers that work within our fire stations but they're affiliated with another fire department.
OE	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Yes, there are. There's the [Tribe] towards the city of [City]. They're one of our partners in the consolidation, and we provide-- under part of the fire district that we cover, we have an agreement with the tribal community, city are the [Tribe]. It's primarily the [Casino] is the major--
OE	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Because if there is a trail rescue up at [Mountain] our units will get dispatched. And we will contact [County] Sheriffs for search and rescue because it's their jurisdiction. But, we're quicker out the door to assess that problem. They have to rally their search and rescue troops from

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								wherever and then they-- so in that way, it's a cell phone to [County] Sheriffs. If we're going out on a domestic violence call in an unincorporated [County] that's covered by [County] Sheriffs, again we have to go through our dispatch center to get updated information. If there's an active shooter, we're not going to know that unless the Sheriff on scene communicates with [County] Sheriffs dispatch.
OE	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	And I think we're fairly fortunate with some of the personnel we have on staff. Data analysts and IT personnel that are sort of ahead of that curve. Whereas, because we're a fire district technically and legally, we don't work for a city. We're not a city department like the City of [City] or fire where there is multiple layers that you have to go through. If we were in a municipal fire department and we had an IT department somewhere else, atypical, we would have to get that approval through the IT that is communicating for city hall and public works and all the other agencies.
OE	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	And then of those, we take about 20 or 30 days a year that get scheduled for holidays or vacation or just overstaffed, just kind of work relief. Kelly Days is what they're called. So that's kind of the typical-- at least that's how we do it. And there's a lot of variation between the different departments.
OE	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Typically, most work 24-hour shifts but how they break that up-- and we have three different platoons of workers. So when we're not on, another platoon is. And there's three different platoons.
OE	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Yeah. So, [City], [State], is a rather affluent community. There's a decent amount of money in the community. And there's also a significant amount of growth in the community. We're a bedroom community to [City], [State], which is experiencing a significant increase in just growth in general. The technology sector has kind of been booming the last number of years, so we're getting a lot of influx of people and of high-waged, high-salary people. So lots of growth and expensive real estate. So we have lots of money in parts of our community and then we're also a very diverse community, with lots of different cultures and races represented as well. So we do have significant variety of different

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								languages and cultures and people from all over the world here as well. So relatively diverse and also relatively affluent, I suppose, in two different-- and then kind of segregated out in different areas of our coverage area is normal. But yeah, so that's kind of the basics.
OE	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	So, yeah, not surprising from the last conversation there, but we're pretty out of date. And I think that we may even be a department that is more forward leaning than the rest in the industry or the country as a whole, in the fact that we've developed in-house the technology, the application to do our pre-fires to push those out.
OE	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	So the daily routine for a line officer - so that's when you're working shift work - is there are 24-hour shifts here in [City]. and the mornings always start off with roll call. So we make sure that everybody's there, everybody has what they need, they're in their proper uniform. We go right into checking our apparatus to make sure they're ready to respond, the inventories are all up to date and current. And so we go through the daily rig checks. Following that there's typically a different assignment for every day of the week. So on Mondays, we'll check portable equipment. On Tuesdays, we'll check ladders. On Wednesdays, you know. So we have different things. So depending what day it is, then we'll go into that. And then, we try to take care of one training drill every shift. And so that could be either in the morning or the afternoon as time allows. We also have medical EMT classes assigned to us. We have fire training drills assigned to us that we have to get done. So as time allows we do those trainings, and then we also respond on calls. Whenever a call comes in, everything gets dropped. We run out. We go on the call. And then, we try to pick up where we left off if the time allows. And sometimes things have to get rescheduled and shuffled around from day to day, so. Yeah.
OE	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Well, it's like a second family because we spend 24 hours a day together and about a 100 days a year working together. So a lot of it depends on the size of the station and the crew dynamics. So we have some three-person stations. And so this much smaller station. And depending on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the personalities that you have there, you might spend a lot of time together, or you might not spend much time together. Some people prefer to be by themselves and do their own thing, and some people like to be in a group. Kind of worked at a three-person station for six years and I really enjoyed it. My crew and I got very close. We're very good friends. After that, I went and I worked at an eight-person station.
OE	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Sure. Well, we work for the City of [City]. Man, there's about 140,000 to 150,000 residents. And then, during the day, we get another 400 to 500 thousand people that come in to work--
OE	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	--and traveling through the city because we have two major freeways that kind of-- [runway?] [Street] and [Street] that kind of run through. So there's a lot of diversity. There's a lot of technological industry here. So it's more of an affluent area I would say because there's just a lot of technology. It's just a very interesting, unique place to work. Yeah. Culturally diverse, and economically diverse, and there's just kind of a lot going on here. Yeah.
OE	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Yes. In this city, fire and EMS are combined. So all of our firefighters are also EMTs. And we also have paramedics which are also firefighters. So our fire and EMS are together.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	We come on shift at 7:30. So aside from very early, we make sure that as the officers, what the staffing is for the day, who's going to ride in what position. We have multiple units here in the station between engine trucks, two aid cars, and a staffing coordinator, as well as we're also the HAZMAT response team for the city. So first thing in the morning, we figure out where everybody's riding, what position. Especially on the HAZMAT team, whether they'll be entry or [decon?], or whatever duties they'll have. We go through a kind of roster's layout, what the day will probably look like, whether we have training today, whether we're going to do some inspecting in the morning, in the afternoons, as far as training if we have that, or go over review material, any projects that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we're going to do. Then we have lunch noon-ish, we all [clutch?] for dinner at 6:00. And then after that, it's kind of a little bit of a hit and miss usually after dinner. Again, do our own housework cleaning and all that stuff when everything is done. For the most part, me personally, I kind of let the guys and gals do whatever they're going to do. And then I usually try and catch up on paperwork, or work on projects or something like that through the evening. Rarely do we do training after dinner.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	...One of the difficulties that we probably have specific to our district is our clientele that we worked with, the majority, probably 90% of them are all of the homeless, the shelters. And so you end up in this-- society has changed to people-- before, it's like fire department showed up and they were real happy to see you. Now, the majority of our clientele, they're just like-- they're just as happy to tell you to go screw off. They just don't really care. So it's not like you're out going to the 80-year-old grandma that's most likely to bring you a plate of cookies the next shift, right, and really are happy to see you. Most of our people-- and you've got a huge mental health problem. So a lot of times, it's difficult trying to deal with the individuals that don't want help, but they need it. So it's a different dynamic, depending on where you are in the city. And each has their own, right? So there are times where it can be very rewarding, because our job is to help people ultimately. Sometimes it can be very frustrating, because you try and help people and they don't want it. And there are other situations that get very frustrating.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	It's kind of tough because I don't want to get political in a way, but it's just-- I think what I've noticed is the majority-- obviously downtown too, we have a huge influx of a workforce that comes in during a given day, and up to a million people between the high-rises and everything. For the most part, we don't-- that isn't much of our run volume. Especially, and I think maybe more, a medical level. Because that's the majority of what we do, 80% roughly. So we don't often-- we aren't usually going into the high-rises with your average white-collar, blue-collar worker, just because-- and sometimes for a diabetic, or they didn't eat right or things

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								like that, seizures. You kind of have your random stuff, but I would say the majority of it all deal with the homeless and the shelters. Because you have people that either, number one, don't do a very good job of taking care of themselves, which perpetuates their medical problems and/or just aren't capable of taking care of themselves. So with that, that's what most of the time and energy goes. And then two, from the fire side, we do a lot of false alarms. And a handful of them can be from malfunctioning systems in high-rises, but most of them are still maintained by their engineers. Most of the false fire alarms we go on are the low-income housing, where people are drinking and then cooking and fall asleep and burn their food. That's the majority of what it is.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	What we do get a lot down here, partly because we're kind of located at headquarters, which is where we used to be stationed. We moved here about, going on nine years ago. They built this. We get a lot of tours. It's not so much that we, where we are, go out. But because we're such a big station, a lot of people come in. So we're constantly doing tours and/or things like this, where people come in from different businesses and/or being HAZMAT, we have a lot of technology that we use for monitoring. So sometimes, we have a lot of people that want us to beta test their equipment and stuff like that. So there's that kind of interaction on a-- and then sometimes, it's getting out, going to shop because we buy our own food, cook our own meals, as well as just kind of taking care of the guys and going to grab a cup of coffee at the local Starbucks or something.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	...So the primary are the police, and they're up off of [Street] and they have their main center. Fire is one of the few that we have-- and I don't know how many there are in the state, but we're actually uniformed. But they're secondary PSAP. So our dispatch center which is just up in this other side of the building, are all uniformed firefighters and have been in the field at one point. So it's not civilian. It's all uniformed. So being a secondary PSAP, anytime a call comes in, a 911 for emergency, it comes into the police. They determine whether it's police, fire, or EMS. And then

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they'll transfer it to ours, who then will appropriately interrogate and then send the appropriate resource. So with that, it kind of goes back up the chain. So if I need cops, usually I call them. And then they have a ring down that they talk to police, whether it's just a call taker or whether it's one of the central dispatchers, one of their supervisors to either get updates on an ETA for the scene being secure versus needing-- or you recognize it's a non-injury accident, and we need cops. So they may just talk to the dispatcher. Not to say there may be at times that I actually just use my phone to call 911, for example, for detox. So if there's a time that we have an individual, it's not a medical emergency, but they need to go to a sobering center, I just call 911 directly to say, "This is [City] Fire, non-emergency," and I just contact directly through them. For the most part, in situations that if I'm going to need to give a description of the individual [inaudible] staying on scene to kind of provide some information. It's a lot easier and quicker for me to do that directly to them, than trying to relay all that through them for them to relay it.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Not normally. Normally, it's pretty good. They've got quite a few within the 800 megahertz system. There's quite a few towers. And specifically within [City], we've got three or four. I think it was three. I don't think we have a fourth one. But, no, I would say the majority of the time communication is pretty good. Other than too much communication.
OE	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] It's like a clubhouse.
OE	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S5] Dependent upon which department. Of course, here, we like to require that they need to be an EMT prior to coming in, at least with our current hiring standards. Different departments require Firefighter 1. Some people want them to have the college background. So there's a lot of different requirements dependent upon where you're looking.
OE	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] I think part of what goes into it too is that, as we've talked about already, our individual stations of the department as a whole, as cliched as it is to say is a big family. Right? So part of that requirement, I'm sure is finding individuals that are going to fit this family for the next,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								potentially, 25 years, right? You're hiring a roommate as well as a firefighter EMT, so.
OE	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] It's pretty economically vast too. From one side to the other of [City] you've got people that are very, very well off and people that may not be as well off, which is-- it's great for us because we get to respond to those different areas and see either side of what [City] has to offer. I think that as he stated here, the people of [City] really have a lot of support for our department. And we owe it to them to continue to provide excellent service and that's what we aim to do every time we are out there.
OE	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] In some ways. To get [inaudible] they pool together because they're comfortable together, right? So you can kind of know when you go on a call, what you might expect given an address or a certain area. We have some of those same people who speak that language. They make themselves available by phone if you don't speak the language when you go to a particular apartment complex that you know is going to be one complete ethnic group. If somebody there doesn't speak English and we can't get through a language line that's provided to us by the county, we can call one of our off duty firefighters and hope he's always on duty. But it's not fashionable.
OE	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] Kind of what she was talking about, people coming up and gushing, "Hey, thanks for all you do." There is that culture of humility in our department. That's the part that makes it a little-- when people come up and gush, in my head, I'm like, "I'm just coming to work. I'm just doing whatever it is I'm supposed to do." And I can remember thinking everyday, "I'm just a student. I'm still learning. I'm still learning. I'm still trying to get better. I'm still trying to get better." So there isn't any of that, "Oh, we're heroes," type of thing anywhere in our department. There isn't any of that. We're good at what we do. We know that we're good at what we do, but we continuously strive to be better and provide better service, and so I think that keeps any sense of ego-- it doesn't exist.
OE	FF	S	Not	Not	Not	Not	FF-S-035	[S3] No, that's perfect, perfect example. Some departments they like the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			specified	specified	specified	specified		6'3 big guys or very, very strong women. They like the certain thing that they know how to train those people to do a very specific job. We try to educate people to solve problems. And we try to hire people and we look for people with good moral foundations, good public service aptitude, and good problem-solving skills, and we can train them to do anything. We look for people that are teachable in terms of making the decisions. We empower them to make decisions and we empower them to make mistakes. And that's not a culture. That's not common always across the board in fire service departments.
OE	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] I think that has a lot to do or that fact alone has a lot to do with why [City] fire fighters, in general, are quick decision makers and pretty educated in all of our subjects because we're allowed to make those mistakes. There isn't this sense of like, "Well, I made a mistake. It's the end of the world. Everyone's going to get all over me." No, everyone's going to give you an opportunity to get better. Right? We're going to go back to the drawing board like, "Here's what we could have done, right?" You don't feel bad walking away from it, you just feel like, "Okay, cool, I've moved on past that. Hopefully, I don't make the same mistake again." I might, hopefully, I don't. But now I've had an opportunity to learn how to do that better.
OE	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] EMS in this region is incredibly integrated with the healthcare system. We're basically a part of the hospital system, particularly in the areas of myocardial, and partial, and stroke. They basically track our time. We all work on the same timeline of care so that whether it's getting a 12 lead and then getting them into a cath lab, or stroke care, we're all integrated very closely. Technology is one of the big tools that makes that possible.
OE	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] Not leading edge. Probably barely cutting edge. I mean, there's so much that could be done. And because we are trying to manage that, we're probably not quite on the cutting edge. We were for a bit. We certainly are within our region. In terms of the program we kind of are on the cutting edge here. But in terms of what's available out there, I think

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we have all the cutting edge in terms of having the tools that we need to effectively do our job. But we're not out there trying a whole bunch of stuff because there's a fine line between the cutting and the leading edge and the bleeding edge. So, we're trying to stay away from the bleeding part.
OE	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] It means that I'm in charge of all the finances. I'm in charge of all the personnel. We have about 300 employees. And we have legal consultants. We have HR. So we're more like a city than a member of the fire department within a city that just deals with fire. We have all the ancillary services that an organization needs. And so, I report to a fire commission of elected officials. And so really, it's almost like a city manager of a city.
OE	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] I report to the fire chief. In general, I oversee the operations on the street; the men and women that are in the brigade. I do that by supervising 12 battalion chiefs, who again oversee all the rest of the 300 employees the chief was talking about. So yeah, my overall goal is to oversee the basic fire EMS operation on the street.
OE	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] I'd say it's kind of like living with family. I mean, they're there for 24 hours, so the day to day-- it also depends on where you're at. If you're working across the street here, your day is much more on plan because this is our busiest station across the street over here. So they're going to run 15 to 20 calls today. So they're in response constantly. The very little time that they get is spent in training and preparing themselves for the next call. Or we have some stations that only run 400 to 600 calls
OE	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] Yeah, well, we have everything but rural. So everything's hydranted, which means we don't have any tenders or takers or anything like that. So mostly suburban with some urban, and some of the-- like [City] is going urban. They're going to start highrise. They already have mid-rise, and the trains are going to come up to there now by '22. So it's a busy area, but mostly suburban. And a lot of diversity throughout the region, different pockets.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] To where you go to [City], it's a quiet small block style home, but a really quiet community. Small town. So it's very diverse.
OE	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] We try to train our guys that it doesn't matter. The broken leg at [City]. The broken leg across the street here does not matter to us. Shouldn't matter to us. Does it emotionally wear? I mean, when you work-- if you spend three to five years in this area working this station, you see probably the worst of the calls. And I will hear from people when they go to-- end up going to in [City] or [City] for a while, that it is a-- it's a different-- it is different. And you realize sometimes, if you work in just one spot you can start to get jaded. If all you're seeing are drug calls, you can start to let that wear on you. So we tell them they're not supposed to-- everybody's the same. But it can slowly wear on you, but I think in general, most people deal with it well. Like I said, we do move around a little bit so they can get out and work at another station and kind of see that, "Hey, this isn't the just typical spot here we got here."
OE	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] One of the biggest problems we have up here, too, is we're pretty much a medical provider to a lot of people. A lot of homeless and heroin overdoses and fentanyl overdoses. They go multiple calls a day now, homeless here, too. And that kind of wears on them. And 99% of those calls are somebody sleeping drunk. And we wake them up, and we leave. There can be call after call like that, so. That's probably more of an issue than the diversity and minorities, and other stuff is dealing with the homeless and the opiate issues.
OE	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] We've focused heavily in the last two years of CPR ready. This year our goal is to train-- I think it was just-- was it 500 people to be trained just two weekends ago to [City]? Taste of [City] Fair. We give away car seat checks. We give away free bike helmets. So every station has bike helmets inside their stations. Anybody can walk in and request what sizes their kids and put them in bike helmets and send them on their way for free. So we're always trying to get-- as the Chief said, the more you're out there. The crews I think, know that. Perfect example, of what

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								does a crew do when they have time. This weekend I don't know if you saw this Chief, but this weekend it was hot over here and one of our crews in [City] they decided they had some time and the bin on the side of the engine which holds a little bit of hose. The took the hose out, and they filled it with ice. And the crew went and bought Otter Pops. They filled it up with 200 Otter Pops and then they drove down to the park and handed them out to the kids.
OE	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] So that's the little stuff. What do they do on their time? They chose to do. They chose, to go and they drove to three different parks, parked, let the kid gave free each, that was all on the crew.
OE	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] So anywhere that goes in now and known problems, they're required to put BDAs in. And we're pretty strict about that. And if you talk to [Name] or somebody from [County] County, we learned from their mistakes. And [City] and [County] County, when they put their 800 system in, they went 95% coverage with a portable out on the street. We designed ours 95% coverage in a medium density building. So the difference is we did two phases. But phase one here is about the same size as the city of [City]. Our phase one. [City] had one transmitter to start with on the main building. We put in nine. So we wanted in-building coverage, and they had fire after fire. They would have to go to the simplex to talk down there. We didn't have to. So we have very few problems. There's the hospital. We had to go to Simplex once down in the basement. But that's--
OE	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] Yeah, I'd say we have a great communication system. I think this department is pretty proactive on if we see something, we're not afraid to try it. That's for one. We're not afraid to try things. I think as a whole, things are developing. Whether it's the MutualLink, we've got different departments that are doing drones now. And we've got-- we're looking at it. We have a group that's researching it now, but I think it will continue to get better how we get our information. I know that we just test it for a chief and there was a San Jose chief that are testing a dispatch drone right now. And when it dispatches, when the call comes in to go to a call,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								this drone automatically goes ahead of time and starts linking back the picture above it. That's where we're going to be in-- five years from now, I don't know. But there are so much more out there that's coming that's going to help us, that communicates. The guys driving can see what they're driving there. You got something floating over the building. They know what they're coming to while they're still two miles out. So it's going to get better. But I'd say I don't think we're missing too much right now. I think we're pretty good.
OE	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] We're going to be more nimble in a huge city.
OE	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] And I think with that, it's imposed by us a little bit. But because we've got all this electronic stuff when we need that it can have-- some guys get focused too much on making sure the right box is checked. I don't know if that makes sense. They're focused on click, click, click that you sometimes lose side of a bigger picture or something over here that if you weren't so on your tablet. It used to be you just-- you wrote. You just scratched. Now, you are click in any way. Go back and then-- so I've heard that you kind of-- sometimes, it can look like you're losing a little touch of that personal side of you. You're talking to the computer. That's more self-imposed. It's really not the technology doing that. It's just how we use it. So it's getting in our way. Our board, that's what they want. They want the data. That's what's important to them. Their crew just wants to give [Name] the best care. So every time we institute something-- what you're saying? Firemen hate change. Wait. Firemen want change.
OE	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] Snapchat, those can be extremely challenging for us because the data is flowing unchecked. So I'll get things-- my daughter's in high school [my life terrors?], and they'll have thing within, "They said there's a bomb in there." It goes so unchecked. It makes our job 10 times worse. If you're trying to get into a thing, and people are-- you can say anything you want on Facebook, and people believe it as-- so if somebody says,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								"Hey, there's a bomb at Valley [City] High School, you should get out there." That's gospel, and it hurts us in some of the bigger incidents a little bit. We're lucky we have a Press Information Officer, PIO. That one of the first things you do is, please check with us for official, any officials coming from us. But a lot of the departments don't have that, don't have those resources, and so, it can make it challenging for the crews because a lot of citizens coming up saying, "Well, I heard there's--" So.
OE	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	Well, there's three different cities that we serve, so [City], [City], and the town of [City]. Our population is almost 100,000. Not quite, but almost [laughter].
OE	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	What is it like in a station? Well, having spent many years in the station-- I was 25 years on the line. So that was from a firefighter to a company officer to battalion chief, so I got to experience it on all levels. And it is very close-knit groups that work on the shifts. I will say we're very fortunate here. I hear a lot of different stories in other departments, but knock on wood, we're fortunate here that we got groups that really get along and enjoy working with each other, and I think that's just part of the culture that we've created through the years of how we do business. But you've heard this, I'm sure. They're like a family. They come in together, they have breakfast together, they work out together, they eat dinner together, and they talk about each other's personal lives with each other. A lot of them are friends off duty, and they go camping, and vacationing, and-- so yeah. It's a pretty good atmosphere. Obviously, some station are busier than others. So you have that dynamic, but that doesn't really change the personal side of it. It's just they're busier, and they're a little more sleepy in the morning when they're getting off duty. So yeah.
OE	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	Well, we serve three communities, the city of [City], where we are today, the city of [City], which is down south, and then the city of [City], which is a small kind of a community on the [City] here. I will say we have a military base to the south of us, JBLM. So we have a fair amount of population and military personnel down south. There's some transient

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								population with that. There's some coming and going of the military members. But all in all we have-- I mean, I would say we're majority residential. We have our commercial corridors. We have some light industrial areas. A little more on the [City] side, I would say property values are a little more high up here versus the [City] side, just because you have the views of the [City]. And then [City] is its own little community on the [City]. It's actually where I live, down in that town, so.
OE	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	Yes, we do have-- it is very diverse. I would say on the lower income scale, that would be a lesser percentage of our population. And then a lot of right in the middle, and then a little bit upper class that we deal with here and in some areas in [City] on the lakes that there's some big expensive type houses. So a little bit of everything we have in town here.
OE	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	Yeah. Well, just to go through some of the things they do, I mean, you mentioned PR events. We do a lot of public relations events. We have an actual division that handles that. They schedule it, they send it to the troops, put it on that calendar we talked about, "Okay, you got to be here at this time." So we're very involved with the community, and everybody has kind of grasped onto that. I mean, that's kind of part of our culture that we're going to get out, and we're going to go stand by at the football games at Friday nights for the high schools. And most everyone enjoys doing that, because they know that we're getting out in the public, they're seeing that we're there for them. Grocery shopping, they go get their dinner goods if they didn't bring them in, coffee break, Starbucks. So they get around and they do what needs to get done, and they also allow time for those types of things to happen as well. So yeah. I mean, I don't know if [Name] mentioned. That's our model up there, and that is pretty much-- that's what we go by. And that's been in place for quite some time, but the last piece is the one that I like to focus on is to be nice. I mean, that is something that everybody knows that we're going to nice. We're going to be nice to you coming in and doing this interview. We're going to be nice to the citizen that we see on a call. We're going to be nice. I mean, that's just what the expectations are, and coming into this

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								organization, you accept that, and that's the way business is.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So one of the daily routines in the company level is we get on. We have what we call- well, we exchange shifts. So the off-going shift reports with the head any problems, any incidents, or anything that they did. The oncoming shift will typically swap out our equipment. We log on to the computer, check email, any memos, notes, meetings or anything like that. We kind of find our schedule for the day as far as any required training, maintenance, all of that sort of stuff. Then we'll have a roll call where the officers will brief everybody, the crews, as to kind of the game plan for the day. And then we go into the routine...
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...So the routine includes maintenance issues, housecleaning, and whatnot. There'll be training stuff. There will be inspections. So there's stuff that interfaces with the community: inspections, trainings, school visits, site visits, all that sort of stuff. There's stuff that pertains to us here in the station. So training, maintenance, health issues, health tracking, fitness, all of that.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	Right. So our shifts are 24 hours, from 8:00 in the morning to 8:00 in the morning the following day.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So actually in this department we're four different shifts. So we're one on, two off, one on, four off. And then to make the numbers worked out, we owe the city or the department an extra day every month and a half or something like that to keep the number of hours consistent.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	Our department is 100% career. No volunteers for us. So we're a large metropolitan area. We've got a static population about 700,000, but we have about 1.3 million people come in to the city every day for work... So our weekday population is closer to two million.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...the second half of my job is more administration, and so I interface with people all over the country. So there's different time zones to work with so that's conference calls or webinars, or I have work-related travel probably once or twice a month all over the country for that. Different committee meetings and whatnot as well.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So FEMA sponsors 28 urban search-and-rescue teams throughout the United States. And we are part of one of those teams. And so those teams get mobilized and state requests for incidents like Hurricane Sandy, Hurricane Matthew, I went to last fall. September 11th. I went to New York for that. They went to the Pentagon. So Northern Oklahoma I think there was a tornado, stuff like that. So that's also part of-- that's one of my roles, is being active on that team, the regional team.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So our communications is anything and everything, depending on the nature of the disaster. So in emergency service, it's not unheard of, whether it's communications or anything, to kind of have your main plan, your backup plan, your backup to the backup plan, your backup to the backup to that. So depending on where I'm working, the communications will be different. So in operations here in the fire station, we use smartphone-type devices.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	Yes, one is the department one, and one is personal. So being in government, everything is subject to Freedom of Information Act requests. And we have had in our state people that have been very specific. They don't like the idea that they can't get the information, so they have done many blanket requests where they want every single text to every single employee of agency XYZ or whatever have had-- they've made request for every single email for every single state employee for the last year. So some of these, they may know full well that, I mean, the state can't fulfil those because we're dealing with millions of hours and [laughter] dollars. But knowing that those requests are out there, yes, anything on this phone, I understand and acknowledge is work-related and always subject to that. And then anything on this phone is for the wife and kids and [laughter].
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: smart phones] FEMA issues a device for their search-and-rescue environment. Usually I'll have that one forward to this one or something like that.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So yes, it's not unusual for us in public safety to have maybe even a dozen MAC addresses or IP addresses for us and for what we do. So, I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								mean, right here, the desk- or station-assigned computer, I'll have this one. And then the department issues me this one, and then I've got the two smart devices.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: department-issued cell phones] ...not even just officers. Really is based on need. So every apparatus will have one... But depending on what people do for the department. Division heads will have their own device. There's a lot of people that are just whether they do a lot of logistics type of work for the department. So it's not really everybody above this rank gets one. It's more based on need. What are you doing for the department... I mean, for a department this big, the fire chief wouldn't-- I mean, it'd be the decision level, several levels below that, but yes.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: radios] On every on-duty person. So fire is a little different than law enforcement, traditionally. Fire departments at least in the Western United States, and I think most of the United States, usually there's one radio assigned for a position. Because fire departments will have a minimum staffing--
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	For law enforcement traditionally across the United States, every individual will have a radio assigned to them. Law enforcement traditionally does a lot more. I mean when they're off duty they're still on duty, taking home the police car, that sort of stuff. Versus on the fire side, we don't take home the fire engine [laughter] and [crosstalk]--
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...this is one of the busiest stations in the department...
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...so myself and my other officer counterparts and actually a lot of the crew members and stuff, it's go, go, go, working from usually 7:30 in the morning, getting ready to transition on shift till probably 1 or 2 o'clock in the morning as far as just paperwork and maintenance and tracking things and training and learning about our job and stuff. And then from that point on, usually it's personal time. So if there aren't any calls, people will sleep. If there are calls, then you always go on the calls.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								You're always doing the emergency response. But people will do hobbies or read, or sleep or whatever...
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So at this station, we have 13 people assigned 24 hours a day, 7 days a week. So we'll have 13 people on staff here. For special events, we may bring on extra people. If the Major League Baseball team is playing, or the NFL team is playing, or some of the Division I colleges are playing, sporting events, big concerts, marathons, we may up staff or supplement that. But 13 is the minimum staffing for this station.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So in our department, we do the EMS. But we're a little unique from a lot of the rest of the nation in that our paramedics only do ALS, the advanced life support. That's the IVs, and the intubation, and stuff. Most other departments, they will have those paramedics either running on the engine, or if they're on an ambulance, the paramedics will do basic life support and advanced life support. So ours, they don't--
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: paramedics] they don't ride the engines and they only do ALS. And what we found is that that really helps reduce the amount of burnout or frustration, because they're doing the critical life-safety stuff that they've been trained for, not the, oh, I-need-a-Band-Aid-type calls and stuff. And so... everybody is cross-trained to ride either on the truck or the engine or to do the basic EMS-level stuff.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So our department averaged, I think-- I want to say we did about 90,000 calls last year for service. And that was generated from, I think it was 130, 140 thousand 911 calls. So of that 90,000 responses, about 78 to 80 percent of those are EMS-medical related.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So the fire stations are spread pretty evenly throughout the city. Yeah. And there's all kinds of sociopolitical reasons for why fire stations get put wherever they do.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So we respond out of 34 facilities. So we have 33 fire stations and then 1 hospital that we respond out of, so 33 plus 1 [laughter].
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So this particular station is bordered right on two different districts. We have our international district and that whole community, and then we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have what they call the [Name] community. It's kind of the south end of the downtown core or the south end of the downtown business. I've worked downtown here for at least eight, nine years. And really, two really fun communities. Very different, but very fun communities to interface with, and work with, and stuff as far as identifying key members and just different celebrations in schools and all the fun stuff that goes with it.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	No. So, it's our Chinatown, but it's not just Chinese immigrants. I mean it's all of Asian-- and it's fun. I mean it's kind of separated into different sections, but, yeah, there's a placard just down the street for what used to be Japantown and then Chinatown but there's the Korean, the Vietnamese, the whole... That's our international district here.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	It was kind of a-- it used to be, when I first got down here, almost kind of like a retro-type community. But it became so hip that a lot of new people have moved in, so it's not even really retro anymore. Now everybody that's here is all kind of nouveau [laughter]. So there used to be kind of these kind of grunge dive bars and now they're all kind of these hip places, and it's really kind of weird in that regard. But a lot of art. So, it's basically a big mix of business and residential down here, so.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...probably half of the people in the fire service-- because of the hours and the shift work, probably half of them have off-shift jobs, and of those-- and this is the professional, not necessarily the volunteer, which all have other jobs [laughter]. And probably half of them. So a quarter of the fire service is in the trades: painters, plumbers, electricians, roofers, all of that stuff. Just because it's very easy to schedule around your shifts and whatnot...
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: apps] ...we've got information on rail stuff that shows us rail crossings, and what may be coming on trains, and where to go, and emergency contact numbers for that... Well, in our major city we've got lots of-- [Name], and [Name] track, and trains coming and going all day, every day, year round. In fact, this is a very narrow rail corridor. So it's not much as finding an alternate route as opposed to trying to find out

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								what's in this train. This train just derailed or hit a car crossing. And there is this white cloud coming out. What is that? Is it good? Is it bad? Is it who cares or whatever? ...
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: communication with LE] It's gotten a lot better, and I would say that it is incredibly regional as to how good or bad it is. This area of the country, this greater metro area, has been working on it for a long time. 15 years or more. And so, in this area, I would say that it is really good. If we're weak in any one part, maybe, in some of the training. At technology level, every responder in the region has the ability to talk to every responder in the region, but sometimes, people aren't using it a lot. They may not remember or they may not know where do I turn in my radio or whatnot. It's a perishable skill. Use it or lose it. But this area of the country's worked really well. I know from a lot of my national stuff that there are areas of the country where it is not very good at all.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: communication with LE] That they don't. What we have found since September 11th, is that after September 11th, public safety put out the word that, "Hey, we need a lot of help with this." And in short order, we got a lot of technological support. So there are the little black boxes or apps or software. You can pretty much make anybody talk to anybody. So that was part of it...
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: communication with other jurisdictions] So it really depends. Our first choice throughout the whole region, and again, pretty big region, is using the radio systems. The reason we like the radio systems, excuse me, is because we built those and the reliability is incredibly high. And they'll work when a lot of these other systems don't. Day to day, there's the cellular device where I can just call them. Or even the wired, the landline stuff. We have a pretty robust satellite network in this area.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: communication with other jurisdictions] So if all that other stuff fails, we have, like I said, a pretty good satellite-backed call so that we can at least talk from command centers to each other, in that regard. The technology that I see most of the guys and gals using every day is like the text messaging and stuff. So that seems to be the biggest one.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	Right. From the communication side, on the radios, we actually have radios and licensing and whatnot in the 800 megahertz spectrum, the UHF spectrum, the VHF spectrum. So... it's kind of, again that plan A, plan B, plan C, plan B. Keeping all that contingency planning going.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: current technology] Some are better than others. Satellite communications tend to be very expensive. So they don't get used a lot. And when things don't get used a lot, then they can kind of get a little buggy... Just because people don't know. So then that's from the cost of it...
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...The radio system, the current radio system is, I'm not going to say bomb proof, but pretty darn near. Very robust system. They've got a lot of the bugs worked out of that. And so it's very convenient system to use for a lot of our communications, disaster or otherwise. The cellular stuff that we have is good. And again, that's what most people use most of the time because of its convenience. But here in this region, we've experienced where saturation has caused problems even talking to our own devices. So we have the personal cells, but every apparatus has a modem in there. We have mobile computing platforms.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...the expectation in the fire service is that you have to learn your first-in distract. And then you have to learn major arterials and everything throughout the whole city. So the map's kind of a convenience thing. But sometimes it doesn't always work. So, for example, our apparatus or part in the stations, they can't see the GPS. So--
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So in [City], we try to process all of our incoming 911 calls within 60 seconds. It's NFPA Standard 1221, which regulates those. And I think we are at, I want to say like 94% compliance, or something like that. And then NFPA 1710 regulates the actual response. And so with 1710, and I'd have to look those numbers up, we try to be at all emergencies within four minutes. So from the moment you start dialing 911 to when somebody pulls up in front of your house or your car, we try to keep that less than five minutes. And we are--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	I think we're at like the 90% compliance rate with those times. And we've done a lot and lot of advanced study on those times and why those times are so critical. I know that NIST, different divisions, but have done studies on the fire-growth, fire-burn time, and whatnot, as far as, yeah, that four-minute response number is still pretty important as far as the burning. We've done, in conjunction with our universities here-- we have probably one of the premier medic programs in the nation, and they have found that, ironically, almost identical to some of the NIST stuff on the fire growth, that on the medical side, you have about the same four-minute window for a lot of your cardiac events. So if the heart stops beating, you have about that same four-minute window to start getting oxygenated blood back to the brain before they become very, very sick.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...we just switched to a new medical records platform, and so they're still populating a lot of the databases. But being able to have information on that patient from previous calls and previous history is really cool because filling it all out the first time can be very time-consuming. What medications do you take? What medical history do you have? Have you had any surgeries? All of this stuff. If somebody else sees that patient later and you've already mentioned that or put that into the medical records, if they put in the right name, a little flag pops up that says, "Hey, is this [Name]?" If you click yes. It's like, "Oh. Last time we saw [Name] was this date and time. Here's all the medications she was taking. Here's what we saw her for. Here's her concern. Here's all of that type of stuff." So being able to get that information. We're not there yet just because it's a new enough system. But that would be huge in being able to share that with hospitals and stuff.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So our dispatch center is in a minority in the United States that we're a uniform dispatch center. So you have to be a firefighter with the department for at least, I think it's like five years before you can apply to that program. And it's a competitive program to get into... So that helps communications out in a big way because they've been here, they've done this, they know this.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: LE dispatch] They're a civilian dispatch center.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: NG 911] We have not rolled out, yet. So in this area, the 911 services are administered at a county level. And so we have, I want to say 12 to 14 PSAPs in this county. And so trying to coordinate those and getting everybody going at the same time has been kind of a challenge. So I know that they started buying some equipment for some of the 911 stuff, but they have not installed and configured it as of yet.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So the other thing, fire service and law enforcement operate an incredibly high-noise environments. So fire service is chainsaws, and fans, and apparatus at high idle. Police, same. The sirens and stuff. [It's?] the same for them. Gunshots and whatnot...
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	it's really fun, too, as far as we are not at all ashamed to steal somebody else's great idea... So if this department has found a solution, or if they're doing something that works really well, bring it back, and we'll see what we can do.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So we work 48-hour shifts... So two on, four off. It starts off, in the morning, we'll do a pass-off with the off-coming crew. So this morning, we came off with A shift. And they'll tell us, basically, pertinent information in terms of calls. They'll tell us how many calls they ran, how many our ambulance ran, any training they did, any issues with the truck or equipment, or issues with the station. So that's that. And then at 7:15 in the morning, we'll do what we call pass-off with the rest of the stations.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So we have a technology, it's called LifeSize... And what that allows us to do is, you have a TV screen, and every station, basically, is on camera. And we'll go through each of the stations. They can tell us what they're doing for the day, any trainings. If they're going to be in service, out of service. And then we also use that for critiques. Where before, we'd meet at one central location, and we'd talk about an incident, whether it's fire, a large incident, EMS, mass casualty. So now what that has allowed

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								us to do is stay in our primary area. So if we get a call, our response time is a lot less...
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	throughout the day we'll a training. We run, like [Name] said, a heavy rescue and a hazmat. So we do quarterly trainings. So depending on the time and where that training is at that time, we'll go out of service. And then we train for that day. And that's just not-- the hazmat and heavy rescue are SET and TRT. But we'll do in-house training, as well. So it doesn't necessarily mean we do multi-company. But every department requires, at least our department requires, that we train in the 24-hour period some type of training. And then we do physical fitness training. That's mandatory. Two hours a day...
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...So you can get these hot and cold zones. You can get the hours that are more busier than others. And then you can even-- in [State], we can break it out into season because we can see that-- during colder months, we get more CO calls. We get more things of that nature. During the summer is when we get the outside broken arms, broken legs... all that adventure rafting and stuff. So it's interesting when you really start to look at the data. The things that we knew in the past just by experience and rumor, now we can actually see a true example of what's going on.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	The whole fire service is really-- now, there's a huge adoption of technology, which is really cool. But, like I said, there's 50 vendors. And there isn't one vendor that's done everything very well. And even at that, the vendors, the 50, or 100, or whatever, they've really focused on one area. And they try to do the other two or three things, but they never do them well. And so we've created work-around after work-around to try to get everything to work, but it doesn't work well. It creates a ton of work on our side to be able to make all of this work.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	That doesn't only work in our department, but even our physicals and that. So to go between different agencies and different cities to say, "Hey, look. In [State], you can have a VO2 at this number, and in [City], it's this number." These guys [work here?]. They work 48/96s, compared to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								these guys that work 24 hours. So you can start to see trends. So the way we track it, compared to other departments, the way they track it, there's no real way to put all those raw numbers together.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah, that's another item of contention right now, especially in our fire department, is gear. So right now, all of our bunker gear is made by Honeywell. And so Honeywell has a program that tracks model number, serial number, all of those things. And so all of our bunker gear is inventoried in a particular program that our fire department bought. But then, all of the repairs, warranties, and stuff like that are tracked in another piece of software that's accessible online through Honeywell. And we use a third-party vendor to do our repairs. So when they do the repairs, they have to certify the repairs, and they enter them into Honeywell so that they can track them. But when we do in-house cleanings or things like that, we don't have access to that system. So then we track it through our inventory software, Wasp...
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So, I mean, like I said just a minute ago, that when you talk about technology in the fire service and our rapid adaptation to it, we've never found anything to bring everything together. So there's inventory of equipment, and tracking the equipment from birth to death. And then the costs of repair, and when is it time to replace? And then inspection, and service tests to show that you've inspected it, and how it's lived...
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...I mean, we send our gear out for a deep cleaning. Our station, we clean after every fire. And that's come around a long ways. It used to be you have your gear, you do your fire, you go back and wear your same gear. You don't wash it. Now we changed it so we have a backup set of gear. So it's changing, it's evolving, but there's not just one program that communicates with everything. It'd be tough. I mean, I think it can be done, but there's a lot of aspects.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah, we do have an in-house IT department. There's two full-time staff, one part-time staff. They support our LifeSize program, which is that video conferencing system. They support our CAD in a-- they support an arm of our CAD. Our CAD is actually a regional CAD system. So there's a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								multitude of fire departments that are on our CAD. So they don't support the entire CAD, just the arm that is our [vadifier?]. We use a Voice over IP phone system that they support. We also use an alerting system in the firehouse that's IP-based that they support. And then just all the desktops. And all of that, they do quite a bit with...
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	It's a computer. We call her Susie. And the computer will come out and say, "Medic 51, respond," and whatever situation. Gives you the address. Right? And then our dispatch comes on, and it'll tell us what the call is. So it'd be a 17 Alpha 1 or whatever. And then you check in. So that and the screen - it's all touch screen in the front of the fire truck - it basically shows you a map of where you're going, shows you your hydrant locations. It'll show you all of the rest of the department, if they're on any calls so you know if you need to specialize in, maybe our heavy rescue, and they're on a call [if they're not?] available, so.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...we had the dot matrix, which was the Rip-N-Run. It was really cool... That was what the manufacturer called it. Even in the industry, it's still referred to as a Rip-N-Run because it's all your information in just a little piece of paper, and you grab it and run out the door. The CAD is actually what kind of-- or the MDTs is what replaced the Rip-N-Run. And so we went to really generic DOS-based MDT, the black with the green lettering and stuff like that. It worked well, but it was in transition. Now we've gone to a full MDT, so we have the Internet and everything in the trucks...
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	We have our radios, which, like [Name] was talking about, we've gone from a VHF, when we were in the low frequency. We've gone into a UHF, which started some of our communication problems because we used to have a longer range. And it was actually a longer-- it was a lower lower frequency which got out of buildings better. But when they've gone to a completely digital system now, it's clear, but it's also a shorter length that it can transmit. And it's also susceptible to more interference.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yep. And then we also have green channels now, which are EMS channels. And then we have blue channels, which are police. And silver,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								which are the feds. And so all of our radios now have that. And all of our radios can connect to these networks, which is really cool when you're starting to work with other places. But you get one thing, and you're starting to lose something else. And the other thing that we lost was just the distance and how well the other radio used to work. And so they're doing things now to fix it. In the city, there's a new push to do an amplifier into large buildings. And so it's just a based repeater that they actually would have to install in new construction. But that doesn't--
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	The mic in the fire service has become kind of a big issue. We're pretty early adapters at [City]. We tried a Bluetooth system. And the problem with a Bluetooth system is it has to pair every time you turn it on. And it doesn't always pair. And then you're trying to smash the button to make it pair. And so we got rid of it [laughter]. We also tried to do a Bluetooth system in the cab of the truck. So as the engineer, my position, we tried to buy one so the engineer could jump out and still have his headset on. And he could listen to the radio and then be able to operate the truck, not be exposed to the noise of the truck and all of that. And same thing. So you'd have to pair it, and then the battery died. We ended up with a [Name] that's MIL-SPEC that works really, really well for the military. Because they get in in the morning, the HUMvee, or whatever it is, put in a new battery, pair it up, and they can go about their day. But it wasn't built for the fire service. So it's not built for the truck that gets backed in, gets turned off. Then, you get a call, start the truck up, it still needs to be paired or connected.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: radio mic placement training] Absolutely. I mean, we do it all the time. But still, you can get in a unique situation, just like we do in TRT and SET. And you get in that one space, and you can't actually be spread out like that. So now you're communicating like this, where maybe [this?] your choice. And they've tried this. [Name] said they actually have headsets built into the masks. And there's a cost affiliated with them. And I'm not sure how those work. We haven't had them. I think we tried them and messed around with him, but didn't really come out.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So the officer gets a 1974 Nokia flip phone.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. Everybody has a smart phone, for the most part. And then, that's what's funny is when we show up, a lot of guys use their cell phones for particular things. On the hazmat, we use our smartphones to access the Internet. There's a lot of apps that we're building.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. Some of them are paid. Some of them are free. Some of them are mandated, like the AskRail is a mandated app. And so the railroad companies actually maintain them. But you do have to send in an application to get access to it. And then they'll send you a username and password.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	The city actually uses a web-based program that they track all their water and sewer systems. And so we have access to that, that you can actually go into just a GIS map.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Well, we're a special district. So we do have the name [City], but we're not actually [City]. So the city of [City] has a web-based version and they have an iPad app. And so we've got that on our MDTs so that you can access that...
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Another good thing with that PEAC software is you can type in an address, it'll tell you the chemical. Not everybody participates. Again, back to certain jurisdictions...
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	I know we do-- we use the red channels a lot... Because of the hazmat and because of the rescue. So we go to a lot of other jurisdictions because of that. And then [City] decided to split their-- or [State] split the state into four quadrants... So we have red northwest, red northeast, and then so on and so forth. And then they actually used [Street] and [Street] as their kind of boundary because it actually works as a perfect square through the state. And so that's been pretty neat around here. And then the fact that, up until we went to the digital radio, we couldn't talk to our neighbors. And so that's helped a lot... And now you can just switch the channel and get there.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So depending on the type of call, if it's a long extended call, then we'll view off of the primary channel. Or, depending on how busy our dispatch center is, every fire goes to channel three automatically. Very rarely, we get local.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: radio channels during mutual aid] Yeah. When you respond, they'll tell you to check in on red northwest or whatever.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. So if we went-- and the only thing that they would monitor is that somebody else in that northwest quadrant, or southeast quadrant, or whatever, wasn't already doing something. So if they are doing something, then you may switch to a radio channel that's out of that quadrant, but just that dispatch is monitoring and they know that isn't busy. Or we can go to a non-repeated channel. Something like that. So they'll find a work-around to make it happen if we need to make it happen. But it all comes through dispatch.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Well, obviously, we eat there; we sleep there; we cook; we work out. I mean, you never know what you come across. You can have one call that'll mess up a whole crew. You just never know. You may run 20 calls. You may run 1 call. You may run 0 calls. It just depends. Like you said, there's not really a time where you're going to say, "Yep. Three o'clock, we're going to be running down on [tong?]." I mean, we do have what we call frequent-fliers, per se, where we know we help certain individuals out, but it's never a set routine. It's different every day.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	I mean, even our crews are different. So if I'm off on vacation, now somebody else is going to fill in for me. We always run four-man engine, and then we get two on our ambulance. So we know every day that that's going to happen. Unless the fact that I get sick and I got to go home, then they'll have a short duration where nobody's in there. But usually that person will hang out. So it's not set, besides the truck checks, and the clean ups, and the workout. As far as, yes, you try to work out between 9 and 11 o'clock. But if that call drops or [inaudible] something like that, everything changes. You can just try to rechange your schedule and move on with your day. In fact, it's busy work until five

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								o'clock. After five o'clock, then we can turn on the TV, unless it's a newsworthy event. But for the most part, it's busy work.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We used to do inspections, and now we do what we call pre-plan. So any new construction, we walk through the building. We look for hazards. In the event that that building starts on fire, we'd say, "All right. In that corner, that's where an ammonia is. And that's a roof access over here. That's our FBC." ... "These are exits. This is how we're going to lay hoses, and this is where we're going to throw our ladders." So it helps us out.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Well, we need to understand the danger of what they're doing. And so if there's a leak, and-- but the firehouse is neat. It's fun. It's never the same. You're doing something else every day. Some new company's moving in and you're being exposed to a new idea, a new concept, a new hazard. And now we're learning about the trains because commuter rail's moving into [City]. So we have to learn about how to de-energize it, how to lift it, how to work around something as heavy as a commuter rail train.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	I'd say, I was just on a call a couple of days ago. It was an officer-involved shooting. And we basically have a set system of, basically, command structure, right? And there was no command structure in that. So nobody's knowing what is going on because you have multiple jurisdictions. You got [City], where it happened at. You have [County] sheriff that was serving a warrant. So he was serving a warrant and he got shot. So obviously, he's calling us, calling [County]. So everybody's coming in. So is there really-- they should have a command post and the command post will delegate, "Okay, you're going to be my safety officer." And it just goes down chain of command. Well, it was just free for all.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	And that was one thing I was going to talk about with the radio that's gotten better is, in the past, anybody could get on the radio. We're all safety officers. So if I need to get on the radio and I say, "Hey, this wall's coming down. It's going to collapse," I get on the radio and I let that be know. Well, now we have basically an officer where, pretty much, you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								say, "Hey, doc. That wall's going to come down." But he doesn't do it or he doesn't see it, you're welcome to get on the radio. But we just don't have-- it's not free for all. But our command staff is where it needs to be because once that domino goes downhill, it goes downhill fast. So you just don't show up and do whatever you want...
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We all have certain tasks that we do, certain jobs, and they'll change depending on where you are and who else is around you and where they're at. For the most part, we're a truck company, but if we have a fire in our backyard, we may switch over to an engine company. An engine company may be a truck company. You just never know. So that constantly changes. But that's the biggest part, is that command structure.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...I mean, they're calling for one of us - I was on the ambulance - calling for a paramedic. Well, we don't ever just go as one. It's a rule: two in, two out. So we ended up fixing that, but our command staff was not happy, either. They wanted to set up a designated command staff in that post. And then we work and they say, "Okay. We need one medic. We need two medics. We need five medics. We need six beds." And then our command staff calls our dispatch center and they say, "All right. We got six reds, five blacks." And then they start delegating to where you need to be transported to, and who's available and who's not. So it just all happens. And if you don't do that, then nobody knows their right foot from their right hand from the left hand, so. It can be a mess real quick.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Well, I think the thing is, is firemen and policemen and all people that work in these industries, they're really good at just adapting and overcoming. And I think that's what we've always done for years and years. So there's even from the command structure, there's even from communication things. Like I told you about the call that we had that the city showed up with an iPad app that showed all the water. At the end of the day, we always get everything done. So we always cut the car. We get the water shut off. We get the officer that's been shot to the hospital. Things can always be done faster and better...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...we can always have more access to more information. I don't think that there's ever a point that you can say you have too much information. And it's finally getting to a point where we can have all of the needed information in one place. As first responders, to have access to the water maps, sewer maps, gas shutoffs, all those kind of critical infrastructure, would be ideal. We're not quite there yet. But one day we'll get there. Having access to the information that's on the web and out there in books in digital format so you can carry all of it on your phone and not in your pocket. It's getting there. But we've found a tremendous amount of work-arounds to make that happen. At some point, we'll get past all the work-arounds...
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Well, there's too many people talking that are 20 feet apart. And they're talking because they're 20 feet apart because of the noise on the fire ground. Because in a hazmat suit, you're wrapped in a giant Ziploc bag [laughter]. So you're trying to talk to each other, and you're 5, 10 feet apart. Which, the technology also exists to communicate 5, 10 feet apart, but it's not integrated together. The stuff that's coming out, with the thermal imaging cameras, it's neat to have it in your mask. I don't know if it's necessary. It might bring a level of safety. But I don't know at that point, do you become sensory overloaded where you're getting information about where you're at, what's going on, when-- focus on the task.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...we have one thermal imaging camera. We send one in with every group of firemen that go in. So they have that technology there. But the people in the front that are on the nozzles that are doing the job-- to be able to talk to them and to tell them, "Hey, I see this," or, "I see that," because you're focused on your one job. I think that would bring more value than everybody having \$50,000 worth of stuff attached to them... When maybe not everybody needs that. Everybody needs to be in contact and to be able to communicate everything that's happening. Because I think now, everybody wants to have a TIC because they can't see it. But if you were just being told in a regular voice where, "I didn't

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have to push a button. I didn't have to do this. I didn't have to do that," you wouldn't feel the need to have to have everybody have a TIC to be able to see...
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	I mean, there's things that are in place. And our AED's come a long way. And as you know, most places have AEDs. That's a big advantage. Our prams are a big thing now... They're stretchers. They're automated.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...the thing that is here, at least in the metro areas - and this is from the manufacturer of the new RMS - that it just so happens that the [City] metro area has the largest integration into this one particular program. So where we're at, out at the hospitals-- what'd they say? Six of the eight? Six of the eight hospitals that we commonly transport to are going to this new RMS program... And we're in that RMS program. So it just happens that it's working out now... That wasn't planned... That's a happy coincidence...
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	That's a happy coincidence. So that's some of the neat things that are happening with EMS. I know all the monitors now have the ability to send the EKG to a hospital. But it's just the receiving hospital has to have the right technology to receive it... And somebody looking at it. We're getting there. One of the hospitals we go to, they're only a trauma... so they don't have a doctor on staff for strokes at night. But they do have this little robot that drives around. And then it's got the camera, and it has a screen. And the doctor can actually drive it around, move up, move down.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: sending EKG strip] ...So there's still a lot of steps that need to be taken to make the thing work. But I think it's just-- there hasn't been the big push to get EMS, and hospitals, and everybody working together... the thing is, one's government. One's the hospital. The hospitals are a business, I guess... They're out to make money. And so they want people into their system. And so now they're building these outlying EMS places. And I don't know if that's a big thing where you're coming from, but.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[City], they've hired a nurse to ride with a paramedic in a pick-up truck with more equipment than you would have in an ambulance. So they could slide the bed out, and he actually had a small suture set. They had small things that they could do in house. And so they could actually do it there and then not transport him.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: stand-alone ERs] You save that money. You save that ambulance transport... Puts us back in service quicker for the next patient. There's still a lot of kinks that need to be worked out. A lot of it's insurance and what they're paying for, and what they're not paying for. So I don't know how it's going in [City], but we've had it here through a private agency. It's called a CCT unit... Critical Care Transport. So that unit would show up and then, like I said, based on what it is, they [would either?] take care of you right there and send you a bill or transport you. So I really think that's the wave of the future for multiple reasons, and I think it's a great idea. You're going to have those people where you absolutely have to transport them... But from the hospital's perspective, they don't want you to do that. They would rather see you in their building...
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: cause of communication issues] I think lack of training, maybe. Adrenaline... I mean, I can honestly tell you it doesn't happen here. We may get off of track a little bit, in terms of an individual or two, but for the most part, we get toned. Our chief gets on scene, he takes command over instantly, based on if it's a fire. Not every time. It's his discretionary, based on what he's hearing en route. He may say, "Yeah. My officer's got it under control. I'll let him have it." But it's still in-- you still have somebody in command, right? He basically is there to support you, but not like I just come in on [Name] seat and take it over, unless he tells me or I ask him to. So I think that part, here, is really dialed in...
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Well, [it's?] in hazmat. You have an unknown package. Take the drone over there. Fly it over there, and zoom in, and take a photo. Sends it back. Well, the drone's there. We can see what's going on.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We've lost a lot of the older dispatchers that were really good at the run cards. I've done it for a while. So you start losing some of that once

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you get the-- when I started, we had two monitors [laughter]... I think ours has eight. So there's the EMD card, then there's the map page, and then there's 911. Now that we're moving into the new Annie Alley system and the level three 911, it's really cool because we used to just get an address. But that was really neat because everybody had a landline. Now everybody has a cell phone.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: cell phones] ...And that's created another level of communication and problems, because you have your different level PSAPs. And so most cell phones usually go to the PSAP one instead of PSAP two or three. And so, like here, the PSAP one is the county. And then, they will transfer you to the PSAP two, which, in [City], is PD. And then, if you need EMS, you go to the PSAP three, which is EMS and fire. So now you've been transferred three times. If you hit a tower that they know specifically is in the city, you probably will go straight to the PSAP two, which is the City of [City] Police Department. Then they say, "Police or fire?" And then, you get transferred to fire.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...we're going to a regional dispatch center next June or July. So that'll help in halving the transfers. You'll just be transferred in house by primary dispatcher to maybe somebody that specializes in fire EMS, because they can ask the particular questions. Because we do EMD. We also do the EMD for fire. So they have all the cards, and they'll ask the particular questions to be able to get the information that they need. And it's helped. It's helped a lot on the streets...
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	The technology that [Name] was talking about, [Name]. We use a multi-channel dispatch concept, which I'm sure you've heard of a lot. You have your primary dispatch channel, and then you go to another channel to check in. So [Name] is just an automated voice that announces what the call is, the call type, and all of that. And then we dispatch on channel three-- or channel two. I'm sorry. Either one. So we dispatch on channel one. [Name] happens on channel two. And in a typical system, you would change to a TAC channel. We don't do that. We don't do that because our admin is older, and they don't like the switching back and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								forth between channels, which I think is a big thing for us. It's caused a lot of radio communication on one channel. It muddies everything. Personally, if I could do anything, I would like to see us move to a more dedicated TAC channel type of environment. I think if you could have a perfect world, it would be neat if I could dispatch, and push a button, and make all the radios on that truck go to that TAC channel.
OE	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We try to do a silent dispatch here. And, again, it was more admin and technology than just-- admin didn't agree with it and the technology wasn't quite there. That was about five years ago. We haven't brought the idea back up. I think, personally, it's a great idea if you could prove it to happen-- prove it to work 99% effective.
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	So we're a fire protection district. And as a fire protection district, we're our own tax-collecting government agency. It's a special district in [State] , Title XXXII if that's important [laughter].
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	There are way too many pieces of paper I have had to read. So we are a special district under Title XXXII in [State] , which means that we have a five-person board. In that five-person board, we collect all of our monies and they allocated it out to us. From there, we're like a traditional fire department except we do have all of our own maintenance, dispatch, HR, finance. All of that stuff is actually within our purview versus like a city fire department where that's usually outside of the fire department and they focus just on maybe a few support people in the fire department...
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	...We have four divisions. We have administration, which is finance, HR, and the chief. We have my division, which is planning and support services. We have our operations division and our community risk reduction division. Community risk reduction is the fire marshal, and they do all of the public ed, and enforcement stuff...
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	...Our community is about 46 square miles, primarily, urban and suburban. We do have a couple of areas that are-- let's call them rural. They're close to wildland. There's like one house there that's close to it,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								but small areas. And with that, we do-- let's see about 126,000 people who're within our district. We primarily cover the city of [City], that's our biggest customer. But we don't cover all of the city of [City]. We cover everything from [Street] to [Highway] in the city of [City]. So there's a few little areas that got a little pocket that's east of [Street] or a little pocket that's west of [Highway]. We cover about a third of the city of [City]. And we cover an incorporated [County] and that's just a bunch of little pockets that the city hasn't incorporated.
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	Eight stations. Six engines. One truck, and one rescue. And then we have five medics. Five ambulances. We do our own EMS transport. And that started in 2013, so. That seems so long ago [laughter]. It's really not.
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	It's been a lot of work. EMS is a lot of work. So we staff our engines with four staff or medics too. We have a battalion chief and a support officer on, and that's our daily compliment for operations...
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	...Let's see, as far as the community goes, primarily a bedroom community-- well, I guess bedroom community-- primarily residential. Most of the commercial and we have support that. So... restaurants, shopping centers, that kind of stuff. We do have some light industry. Not a lot. There's some light industry. And then we have a couple of pockets of bigger industry out west. Our northwest area used to be all rural and within the last five years this huge development, actually, two huge developments have come out there. The [Name] and [Name] communities have started building our there and it is by the end of it I think we're looking at 3,000 homes plus all of the stuff that goes with that, shopping centers and that kind of stuff.
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	it's growing at about, I want to say, 300 hours a year. And at the beginning, it was vacant land, and now it looks like a big urban center is moving up that area. So they're all stocking mid-rise to high-rise buildings in there, hospital, that kind of stuff... So by the end of it, it's going to be a fairly dense area.
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	Yeah, when we look at our data, when we look at our-- we've got two

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								properties out there that we had our board, many years ago in the 60s decided that when we had that area, they bought this land... They were very smart. We have a bunch of little places of property that's pretty cool.
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	So we have two properties and we use time analytics like a GIS modeling. So I've got a part-time GIS guy, one of my IT guys do [JAZ?] pretty well. And they run response times from those stations and then we look at call volumes in those areas, growth in those areas. And we're trying to dictate which one we're going to build. So we're going to build probably next year or the year after.
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	That's really what support services is all about. Our mission is to keep the fire fighting force fighting-ready. That's what we like to say.
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	...So I have the dispatch center, and we have two full-time dispatchers on at any given time, plus a dispatch supervisor and we use computer-aided dispatch. A Q/A, it's a EMD/EFD system. So it's a question/answer system that they go through. But we also have a station alert system that they activate. Westnet is the brand. And then we have-- what else do they have to do in there as far as a call goes? A lot of recordings go on, a lot of extra radio, like backup radio systems, that kind of thing. So they're pretty technically important. Huge trunks from our phone provider, so there's a lot of telephone coming in and going out from them.
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	Yeah, and then so I think that's everything. Oh no, maintenance. So I also have maintenance as well. Can't forget those goofballs [laughter]. So it's a little maintenance division, I've got a maintenance manager who's also-- does a lot of our building and facilities. He's got a part-time assistant. We have an assistant for that whole group that does a lot of paperwork and data entry and stuff like that. And then we have three vehicle mechanics that do all of the vehicles.
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	And quite honestly, that's a highly overused medium. We find that most of our emails are for trying to educate or inform through email, don't go out to the masses. It's just junk. In their head, it just goes away. So every

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								morning, we have a life-size briefing for every shift change with the crews. There's a life-size briefing which is the Skype. It's just a television meeting with all the crews. So I join in on that. Listen for any things that might be for my division. So I have my maintenance guys join in on that, so they can inform people what maintenance needs are...
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	...because I have dispatch as part of my purview, I try to listen to radio the entire day as well. So I have a radio in my car, I have a portable that I have on the desk. So listen in on that. If I'm out and about, and a call drops that I'm closer to, I'll go to that. If it's a fire or something, I'll go to that. So it's all part of the gig. So radios, email, Skyping, or the video stuff, telephone, that's primarily how we communicate. I mean, face-to-face. But a lot of face-to-face stuff too, but. And then I try to to get out to each one of my locations frequently, and each one of those stations frequently, so that I can talk to people and try to get what's going on. Kind of that management-by-walking-around stuff.
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	So when I first started we had UHF and VHF radio. So the 100 and 400 frequency radios. The 100 stuff we still use for aviation and I think wildland is still 100. So it's the VHF stuff. Those radios were pretty much radios. They were crystals. You'd tune it in and you had only a select number of channels you could get to. They were highly reliable and they had good penetration out of buildings. You didn't have to have as much infrastructure. You didn't have to have as many radios on repeaters and all that stuff in the area because they had a little bit more power, UHF is slower wave. One of the reasons wildland hasn't gone to any of the 800 or anything like that is because you don't have repeaters and you don't have-- and that 100 level radio that we have is actually much longer distance. It's still line of sight but it goes a little bit over the horizon I kind of thing.
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	...So that was the 100, 400 era. Then we started with the 800s, which is all digital. And it's not UHF, whatever 800 is. It's the ultra-high frequency or whatever. So we went from mechanical radios with crystals and tuning and solid-state information-- or solid-state stuff in it to what we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have now in the radios, which is all just pretty much a computer. And these digital radios, they have to be in a system. So they have to have a key in a computer somewhere that the computer recognizes that this radio's talking...
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	Yes. So, over the last several years, we've gone through a couple generations of these radios. We're now on the most recent generation, and we've added some towers. We've added some computer capacity and some communication between computers and stuff. So it's pretty reliable, but we still have a lot of weird dead spaces. Valleys where [City]'s radio can out broadcast our radios, and all of a sudden we can't talk. However, the interoperability of those radios is remarkable. I can put 15, 20 banks and have a bunch of different talk groups in each bank. In the past, we'd have to pick a couple of fire agencies that we wanted to talk to, and then we would tune that in to our 400s. Right now, I have [City] PD, [City] PD; I can talk to the state PD. I can talk to [City], [City]. Anybody in the area, I can talk to on their channels or we can code to a common channel...
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	[RE: radio systems] ...So the interoperability of that information, or getting that stuff, theoretically, is awesome. It requires a lot of programming and a lot of coordination, and that fails, occasionally. So there's pretty much the state system. [City] has a system. [City] has a system. A couple of the counties have a different system, and if those don't coordinate how that technology talks - even though in theory it would work really well - when I change the channel, or change my tuner, or whatever, and I try to talk to them, it's not working, because it can't recognize that computer. It can't recognize that thing. So in our state system, since we're all our own individual communities, it takes a lot of coordination, a lot of people talking at a lot of levels. There's a good part of that. That means we're all talking. There's a bad part of that, a lot of errors.
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	...there's the PSAP and then there's our dispatch, so we have two dispatch centers. The Police Department gets all the 911s and then they

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have their radios. Now we're on their radio system so that's okay. So their dispatchers get information and they send it to their police officers. They usually send calls then to our call center and we will get more information, more in-depth information, send our fire trucks...
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	...That was 2011; we almost lost two. 2017, and it all worked out pretty well. But that had to deal with us coordinating those two centers. And like I said, that's our history. I'm sure this is a lot of people's present [laughter], having to deal with that kind of stuff.
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	So the unit hour utilizations came from the ambulance community. And what they try to do is if they can get there-- what it is is how many hours you are on calls over available hours. It's just a percentage. So in the private ambulance industry, they try to get that as high as they can because that's profit and that's them getting things done. In the public sector, if you look at an engine or anybody else who's located at a specific geographic area, and we're at this 90th percentile, is how we rate everything, anything approaching 10% means that they're giving into that 90th percentile. They're going to be ineffective. Medic units, we try to look at that because there's more than just responding: you've got to recover, we required to work out, we're required to do training. We require all this stuff--
OE	FF	S	Manager	46-55	21-30	Male	FF-S-023	[RE: UHU] So we're looking at like 30% during the day and 20% at night. That's kind of where our cautionaries are. Whereas private ambulances look at it, not as cautionaries, but as profit areas. I'm not trying to be negative. That just... --that's how they use it. Yeah, they use that to see their effective force and how it's making them money. We're looking at it as to how we're burning our people out. If we go too high, tired people make bad decisions; bad decisions kill people. So we look at it from that direction. So it's just really time on-scene over overall time.
OE	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	A neighboring agency's having a line-of-duty death funeral tomorrow, so making sure we have a firetruck, making sure we have a certified engineer, and an officer, and [inaudible] off-duty people and honor guard people and getting their time off coordinated, making sure we have

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								proper staffing tomorrow, working with our neighboring agencies to make sure we're all covering for this fire district who's going to have a tremendous amount of resources at the funeral...
OE	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So we have the state channels now and on my banks of state channels, I have the ability, when we run with [City] Fire, I can go to their channels, their operating channels. When I operate with [City] Metro, I can go to their channels. When I head out east, I can patch together. I can have our channels patched to their channels and we can talk. Our biggest problem right now is we're waiting for one of the departments to absorb the other department. And when they do, then we will go-- right now, we're still using Red [City]. We're not using each other's channels because of these multiple comm centers that are involved. Once [City] Metro takes [City] and absorbs them in, they'll be one comm center. And we will then start going to a policy that states whoever dispatches the call, as a Mutual Aid or a dual jurisdiction call, will have oversight and we'll use that channel and we'll be able to switch over and start using each other's channels and talk on their talk groups. That'll make our lives way easier.
OE	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[City] takes little departments and [County] is a combination of two departments who are now looking at adding two more departments to make that fire district bigger. [City], for the City of [City] Fire, has contracted out to some of the smaller suburbs and taken over their fire protection. But, otherwise, everybody else is kind of a lot of free-standing fire districts under large county comm centers.
OE	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	No, so how we work, all 18 of our fire trucks, as we have 14 engines, 4 ladder trucks, 3 2-person medical rescue squads, all have at least one fire fighter paramedic on them. So we have a mix of medics and EMTs. And then we use a private ambulance service. So the private ambulance comes in as the transportation fees.
OE	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So they have a call taker. They have a group of call takers. They take the call. And then depending on-- we just went to priority dispatch. So depending on how that is set up, it is either sent to PD or to fire. And

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								then they may ship it over to PD or fire depending on which one went first, what additional resources you need. We don't see duplicate calls unless it's something where you're just getting multiple callers and they're all loading the system at the same time, the dispatcher grabs one and adds resources to it. I just go in and get rid of them so they don't show up as incomplete reports.
OE	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So we work on projects like that. Those are kind of more of the significant ones. The operational ones. A little R and D, a little planning for it, so we're building incredibly large hotel out by the airport. And it is very distant from most of our core resources. Not only for us but PD, and streets, and parks, and water, and everybody. And we're trying to work together to figure out, okay, how are we going to provide services? Well, it's so far out, that now it's building relationships with north side fire departments that we've never worked with. But they're actually our closest backup. But it's so distant from the core of the city and we've never had any development out in that area that all of sudden now we've got almost a three million square foot hotel, convention center complex going in. And there's going to be one fire truck, for now, assigned out there when it first opens. We'll add resources as it grows, but figuring out, okay, if we have an incident, how do we cover that, and then building out the relationships with our neighbors to the north, and introduce ourselves, and do some tours, and some joint training, and kind of get that. So those are some of the projects that I have the opportunity to work on.
OE	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	I think really good. We work very closely with a similar size or smaller departments. We have a good working relationship with [City] Fire, but they're big city fire department, with a lot of big city calls, a lot of issues going on. We have some border calls that we work together. We don't do a lot of aid back and forth to each other. But I would say, otherwise, and especially now that we've improved the radio systems, that's made it even better. I think as our technology opportunities change, if we get to a point where our CADs are talking to each other, we could look at

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								some-- we have some areas where dual responses, coordinated responses would work out really well for us. But it takes some time for us to have the comm center, notify a comm center, and then they process it. A call gets shipped out, and there seems to be some delay. Whether it's a training issue or a technology issue, not super sure yet because we haven't pushed that far into saying, "Yes, we're going to run dual responses together." But I think there's some opportunities in the future as money gets tighter, and that you just can't build fire houses wherever you want anymore. You have to figure out how can we work together to cover areas on the fringes of your protection area. So I think there's some opportunities in the future. It's just, okay, how do we work through that?
OE	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	For our city, if you look at a map, our fire department really blew up. And we came into existence, we really started with paid firefighters in the '50s. So we had a fire department starting around 1900, the price is on my stuff somewhere. But we went to a paid fire department in the 1950s. As the city started to grow, so did the department. We saw a huge growth in the '70s and '80s, things kind of slowed down. Back then, you had a neighborhood fire house. It wasn't uncommon to-- the fire house was part of your neighborhood. And a lot of times when a developer came in to build a neighborhood, a fire station was part of it. And, really, that's part of the city's philosophy now as this land is dedicated by a builder for a temporary fire house and for a permanent fire house. But back then, the neighborhoods were kind of smaller. You've got a neighborhood firehouse, and if you look at our fire stations in the older parts of town, their response circles lay over each other so they're 6-minute, 30 or 8-minute circles lay over the top of you. And you have circle over circle over circle over circle. When you get out to the new portions of town, the circles just barely touch each other.
OE	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: AVL] So, we have it. And right now the only rigs that we use the AVL technology in is the battalion chief vehicles. So it picks the closest battalion chief. We have it in the fire trucks. Organizationally, to this

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								point, we haven't chosen to turn it on, because we've tried to control how many responses our rigs get by setting a response area that will control how busy they are. The new fire chief-- we just got a new fire chief, and he's interested in turning the AVL on for everybody. We know that it will cause some of the apparatus to spike. Their call load is going to spike because they will be the closest. So really, I think we didn't turn it on to try to balance our call load by setting response areas versus having the AVL turned on.
OE	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	That beeping you heard is probably one of them texting me. So there is a tremendous amount of texting communication throughout the day. If it justifies more than texting, then we move to phone call. And if it's more than a phone call, then we move to a face to face meeting. A lot of texting back and forth all the time. So we do a lot of communication by cell phone, a lot of emails go out. I try to do when there's a lot via email or I'll just a cluster, push it out just because it's effective and I can show, yes, I did send you an email and here it is and it went out. So those are really my main ways of communicating with them.
OE	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So, here in [City], primary dispatch channel, and then we have TAC channels two through six. TAC two is almost always medical. TAC four is almost always fire. If there's a lot of medical, so six or more are going on simultaneously, they can open TAC three. If there are two simultaneous fires going on, house fires, then they'll open four and five. The biggest issue is the comm center has to have certified or trained people to function on those channels. And a lot of times, we can't get extra channels open. They just don't have the staffing to-- either the people trained or the people period to open extra channels for us, and that's where it becomes difficult. And you can hear-- they'll open it, but you can hear a dispatcher working multiple channels and trying to handle the call volume that's going on...
OE	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	The new radios where we have the ability to have our radio system and the state system-- so most of the, I think-- I'd love to give you an accurate number. There's probably 10 free-standing agencies that have

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								their own radio systems. And everybody else is on the state system. For us to have access to the state system makes it nice because we occasionally will go out as a strike team. So five departments with five-like resources will go to an area as a strike team. And to now have radios where we can communicate or we can go to state interoperability channel and operate is fantastic. We didn't have that ability before. So it's really cool. The new radios are really nice.
OE	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...Hopefully, with our mask, because talking on the digital radios, we've-- when we switched radios, we went all digital. We still had a lot of analog channels. Our organization embraced and loved analog channels because the communication was so clear and we have struggled to make that transition to digital because you get those digitized or scrambled communication. We just weren't used to those and we're finally understanding it.
OE	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So, again, some of that is we have a HAZMAT rig, and our rescue has quite a bit of equipment. So we do our truck checks on those, also, running all the equipment. But then we also have our daily cleanup schedule for the whole station. We have to get that done at some point also.
OE	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	We have an ambulance company with us, as well. So they're in and out. They try to do as much as they can with us, and we try to integrate them into what we're doing training-wise, and working out, and eating, and things like that. They're typically busier than we are, so they're in and out of the station quite a bit more than we are.
OE	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	In the past, we've used them for pre-plans and that kind of stuff. I'm trying to think what else. Ambulance crews have laptops they do reports on. And we don't have those on the engines or trucks or the rescue. I mean, we have MDTs on the apparatus But we don't do reports on those.
OE	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	As far as computers-- I mean, we're HAZMAT, also, so we have one on our HAZMAT rig that we can do several of their-- research stuff with for any chemicals or anything we run on. And with that, our meter

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								maintenance, we try to log all our stuff in digitally like that, also. It's an electronic meter so it can plug in there and you can do all the--
OE	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So we do have a dispatch center, our own dispatch center. So they verbally, over the air, and on our NDT's give us information about, obviously, where the call is and pertinent information. A lot of the information doesn't come over the air, but I'll get notes on the NDT telling me specifics. And then we all wear headsets, so we can talk to each other in the truck.
OE	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Which we also all have portable radios. Every firefighter on scene has one.
OE	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So with that, too, I mean, if we're working a fire, we'll assign to a tac channel and that'll be separate from all the other operations throughout the district. But, for every other call, everybody shares the same channel versus for the operations dispatch. As they dispatch out the calls, that's on its own separate channel.
OE	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So really, if we take a fire scene, command is in a separate vehicle. And usually there's at least two people in that command vehicle. So they're giving overall orders for the scene. So it's a back and forth of-- we echo everything, so, "Rescue 54, I want you to do ventilation." "Copy. Performing ventilation." And then we can talk to other crews, also, which doesn't happen, usually, on our fire scenes. Everything goes through command and then send information back out to the crews.
OE	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Each station has its own cell phone. We have very fancy flip phones [laughter]. I'll pull this bad boy out so you can gaze upon it [laughter].
OE	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Most of the directly surrounding departments, we can get on their tactical channels through our radio, so it's real easy. And then we have kind of an all-encompassing channels that we can use in this area. It's called [City] [City] . So all departments can get on the same channel, be it their portable and apparatus radios. And then we can all talk to each other. So it's pretty straightforward and streamlined anymore.
OE	FF	S	Field	26-35	11-20	Male	FF-S-018	With that, [City] Police Department's also-- we can also get on their two

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					tac channels so we can talk to them and listen to them, also. And vice versa, they can get on ours. And there's been several times they get on there and let us know stuff, so.
OE	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	I'd say more often we see an ambulance mutual aid. Where our's goes there, or we're out of ambulances so they send one. And it's just simple medical pass off, and they transport the patient, so it's pretty basic on that end.
OE	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	...But it seems like email has been the, pretty much, standard for the official announcements and everything because that encompasses everybody versus the daily-- if he's on vacation, he's not going to get some of the info. So seems like email is our main official communication...
OE	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Right. But our ambulance crews have to do two different places for reports. So there's a lot.
OE	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	And we have portables. And we have radios in the rescue itself.
OE	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Hazmat we have in-suit communications. So that's just a thing that clips into your mask and then it has a speaker that goes by your ear. You have a button that you can push through the big level A suit. You can push it through there and then speak. We have a radio system on that hazmat that we use for that, but it just uses regular radios.
OE	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Yeah. We have a newer fire truck, so it has a screen which shows which doors are open and all that. And it has all the interface to show you. I mean, it's new, it's nice. It has a screen and tells you a lot of information. You can click through that, cameras around the truck and stuff like that, which... It's a separate command zone. [City] fire trucks, they put it in there. And it has the cameras so you can see around the truck. You click your left or your right blinker out. Ambulances have that, too. The screen pops up and it shows just like a vehicle backing up. And then the right and left blinker shows the-- I think it's safer. It keeps us from accidents and all that, so yeah.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	SME S2: Our oldest is, what, that's frontline, is 10 years old maybe? Engine seven? SME S3: Engine three and engine seven. They're older than that... We're on a semi-regular apparatus replacement plan, so.
OE	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: apparatus replacement cycle] I think the general is like, what, 10 for an engine and 15 for the more specialized apparatus, the trucks and the rescue.
OE	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	I mean, a majority of our calls are medical calls now, and the majority of those we're going together with an ambulance.
OE	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	...There's been times in the past because our PD, even though we work really closely with them, they have their own dispatch center too...
OE	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: fire incidents] I believe they're about 6 to 7% of our calls each year.
OE	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Total, we maintain about 40 members. That's a combination. We're a combination department. So volunteer, paid, part-time paid, [inaudible]... There are 7 of us paid.
OE	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	We also live in a resort community, and we have a lot of transient population. And so as a volunteer comes in here, and the society expects them to have the same certs as a paid individual, even though they're volunteers. And we live in a high-cost area, so they have two or three jobs in order to maintain a minimum standard of living. On top of that, they're now required by the public to have the same certs as a paid guy, which takes time away from their job. We also live in a... very beautiful place, so having time off is super valuable. That's why you come here. And like you said, the life expectancy of a volunteer to maintain that internal and external standard is really, really difficult.
OE	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	This month alone, we have lost three individuals for various reasons. That doesn't make them bad people by any way-- stretch, I mean. But life has changed for them, and they are no longer able to be a part of our team. And that sucks. And we put a lot of time and effort into them. Again, they're not bad people, and this is isn't an animosity thing, but they need to move on with the next chapter of their life.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Networking, I would say, is probably the biggest thing, and partnering with [School], the local community college. I think that has been, because the demographic that we're pulling from is those college-aged kids looking for-- so if you can get in there, they're going through to get the education to become a firefighter. So if we can kind of partner with them to get them experience, that's so far been, I think, our biggest pull lately.
OE	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	The top couple of people have department-issued cell phones. Volunteers don't. Most of the part-time engineers don't. But anyone that's full-time will generally have a department phone.
OE	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[County] works because we've always gone into everything as a county, and we continue everything we do, technology-wise. I sit in the same-- the reason I know [Name] here, we all have that tech ops group, and I happen to be the chair of the group. So we make sure that we include everybody in the county, and so we're as a whole. And then that ties into the state. So our state has gotten better. The state spent a lot of money in investment into a state digital trunk system, and it helps...
OE	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Yeah. We cover 455 square miles [laughter].
OE	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	That's our radio template. This exists for every single radio in [County] County. All 1,200 radios have the exact same template. It doesn't matter if you're a public works person, trash collection, or the county manager. We all have the same template. That's something, again, as a group in [County] County, we've really embraced. And this has helped us really work well together, that we know how to find each other, and it's open. I mean, you're not going to get your hand slapped because you went over and called someone and talked to somebody.
OE	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	So we're putting our people in the way to have that problem? There's got to be a better way. I don't know. Our trucks just started having piercing nozzles. I mean, just fill the thing with foam or something. So I think as our fires have changed, especially structure fires because of all of the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								plastics and all of the different products, we have to change how we're fighting fires and have different products that do it. Just going in and putting water on it is not working.
OE	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	It's atomizing the water. Anywhere, depending on the handling to 140 PSI. It's significantly different. They're using smaller pumps, less water, but they also have less of a chance of the building falling down. So even country-wise, we're still not doing the same things. As a manufacturer, that probably sucks. You're trying to sell in Europe. You're trying to sell in America. Two different products.
OE	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	We have a single source variety or for Internet. We have [Organization], horrible company. You can't get anything to work through them. I mean, we used to have smaller companies, and competition, and stuff, but now [Organization] has sucked up everything, and they're horrible. And it's actually debilitating us on a lot of times because they're so bad that Internet connection, TV, everything-- they want to control everything. And they're screwing it up so badly that it's actually blocking us from watching the news.
OE	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	We're sitting in the million-dollar addition that we had to build because we were no longer getting volunteers from the town. And we were having guys coming here from [City] and [City] sleep in bathrooms because there was no place for them to stay here. Because prior to that, everybody had a house relatively close to the fire station. They used to respond here and grab a truck. Well, nobody lives in town, and we're still getting calls, so--
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So we have two captains. I came up into this brand new position about four months ago. As the position actually has expanded, they felt like they needed to have somebody else there...
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...In conjunction to that, we also coordinate our wildland program... Even though the City of [City] doesn't have a large wildland interface, the City of [City] Fire Department actually has one of the largest wildland teams in the region. So we have about 150 firefighters that are on our wildland

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								team and they deploy individually and as various groups, or units, or task force, to incidents around the country. And we have apparatus that we can also send tools and equipment as its own resource. So we can send an engine to a fire scene with people on it. And so we coordinate that...
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Yeah, and I think there's only two-- there are two departments in [State] that are currently using drones. They're not using them 100% the way they-- I shouldn't say the way they should. There's just some certain regulations and rules that are needed to be followed but they just started so they're kind of moving down that path, so we didn't want to-- because we wanted to make sure that we were-- we had all of our ducks in line prior to starting the program. We wanted to make sure that everything was vetted through the city attorney's office, through the state. Governor [Name] actually formed a drone commission.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...Recently, the police department and the fire department and the sheriff's department took our radios and we made them all the same so that we can-- where police has their main channels and we have ours, fire can now access police channels and police can access fire. So incident commanders can actually-- we can actually talk significantly easier now because of the way our radio channels and our trunk [inaudible] is set up.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...I don't know if you know that we're a bit different here with the way we run with our EMS system... Unlike most fire departments, there's been a bit of a-- we have evolved in the city as the [City] Paramedics, which is [City] Health and Hospitals, which is not truly a city agency. It is just the [City] Hospital. It's a private hospital. And the paramedic division has-- it works for them. The [City] Fire Department is obviously a city fire department. We work for the city. They provide the advanced life support and transport. We provide basic life support, unlike most fire departments around the country where the fire department houses both advanced life support and basic life support. And the fire department has its own ambulances and there's paramedic firefighters that could work on the ambulance or there's just firefighters who work on the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								ambulance that work on a separate...
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...like New York City has an EMS division. And so I work for the FDNY as an EMT on an ambulance. In [City], we don't have that. Now, we do have quite a few firefighters who are training as paramedics, but they don't get to operate because they might have day-off jobs or they came here from different organizations that allowed them to work in that scope. We don't allow you-- we only work as EMT basics. Our fire trucks have four firefighters on them. And so we, because of the-- we have 15 truck companies and 38 engine companies. And so we could usually get there prior to an ambulance. And so we start that basic life support part, that component...
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So when we set something up that is a large event we will have-- in the coordination piece of it we'll have an EMS branch, which would usually comprise of someone from [City] Health and Hospitals. So that's kind of how that works. And if they needed additional resources, they could bring in their own staff and/or us to assist with that EMS piece. So we could serve two roles of a fire rescue part or the EMS piece, so.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...Every state after 9/11 was tasked with having some form of a communication clearinghouse for law-enforcement-only information in regards to homegrown violent extremism and terrorism. So our clearinghouse here in [State] is called the [Agency] or the [State] Information Analysis Center. And so there's various agencies that are represented there. Most of them are law enforcement and they work with the state police and the FBI, and other intelligence agencies that will bring in information and see if there's anything that's happening in and around the state...
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So anyone that's in a key position-- so every fire truck has its own cell phone. And that phone will be-- is designated to the fire truck, stays on the fire truck, gets charged in the fire truck. So all the chiefs have their own. So all of our-- we call them district chiefs or battalion chiefs, they have a phone. And then anyone that's in a command position, so all of our staff within the department, the chief, the deputy chief. We have

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								shift commanders, the operations captain, we all have our own cell- we have department-issued cell phones.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...I think for a while, that firehouse was one of the busiest firehouses. It was the busiest firehouse in the company when you totaled up. There's an engine company there, a truck company there, a chief there, and the engine and truck also comprise part of the technical rescue team, both the high-angle rescue and the water team. They're a piece of it. They run a lot of calls. So I want to say 10 or 11 thousand calls a year just out of this firehouse.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...So here at this firehouse, you're talking about some really highly motivated people. Obviously, in every fire department across the country, you will find it's all based on call volume. So different departments, where all firefighters go through relatively the same type of training, firefighters that work in downtown busy areas just are significantly busier. They go to more calls... And they have a lot to do...
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...So even just from-- usually the firefighters, whether it's the [City] Fire Department or Los Angeles, have to conduct inspections. Those inspections are usually within your first due area, meaning where you would be first in. So if I am in a high-density area like this firehouse right here, they may have three, four, five hundred inspections to do per shift. Conversely, if I went out to some of our outlying areas, they may only have 100 inspections to do. So they go on less calls and they have less inspections, same amount of training that they have to do...
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So in this particular area, it's a high-- just a lot of business. So a lot of business people, so this area, specifically at this firehouse, it's incredibly diverse. So because we have-- right behind us, we have the [State] Convention Center.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Just over here, we have all the theaters and venues. So you have the [Name], which has hockey and basketball but they also have about 300 concerts a year. So because of the way [City] is situated geographically in the country, we don't have a lot of other cities around us. We've got

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[City], which is significantly smaller down south. And then we have [City] about eight hours off to the west. And then we have [City], which is about eight hours to the east. Not a whole heck of a lot above us, like [City]. So, frequently, we get a lot of tourism and tourists to come in to go to concerts and sporting events. And so this specific area right over here--good, they left me a message. This specific area here serves a lot of the major venues. So we definitely get a lot of tourists.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	With that said, we're right on the outskirts of the high-rise district, so a lot of business. What we've seen recently, honestly, is we've always had a fairly large population of homeless but it's exponentially increased over the last few years because of the marijuana legalization. So every 16-year-old that's angry at Mommy and Daddy because they don't let them smoke marijuana decides to leave home and come out here. So if you look out right where they're going, right over here is a high-density area for homeless people and drug usage. So it becomes, for us, we've seen that increase dramatically and with the homelessness comes-- and the marijuana, it just takes-- it goes from the marijuana and then they come out here, the next thing you know, it's some type of cocaine, heroin, just whatever. So we're trying to-- and there's not a lot of places to put them, so the mayor's priority is really trying to get people into some type of housing so that they're not out there just-- and programs that really help the people that are out there coming in and just getting addicted to stuff, so. But this firehouse really has just a wide-- if you just head just a little bit that way, it's low-income. If you head a little bit that way, upper-end business... So this area kind of hits it off... This area just totally sees it all.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Our call volume has increased tremendously. We're reaching a place where, as we're looking and staffing and we're trying to track and trend the data that shows, okay, this is how our call volume has increased, and here's a direct correlation to population increase and some of the other various factors like marijuana. And so there's a direct correlation between the population increase and our call volume. It just is. So as the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[City] keeps doing better and better and better, which we have, we are growing and growing and growing. I think there's a projected 187% increase in-- yeah, I think we just surpassed Baltimore in size, which is... crazy.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...when I moved here 20 years ago, we were about 500,000. Now, we're pushing 700,000 just in the city. The metropolitan area has increased-- I mean, it's grown also. So we went from this area of 500,000 in the city and in and around the metropolitan area, maybe close to 2 million. Now, we're 700,000 in the city and close to 4 million. So the infrastructure from a first responder standpoint has been taxed, so.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Our dispatch is kind of unique, where we still have [City] firefighters work in our communications and our dispatch. We don't have call takers and dispatchers. Our union has fought very hard to keep firefighters and we have a group of people that-- we still rotate some people through there because not everybody wants to go to work in dispatch. But usually some of the older firefighters, or people who might have been injured, or people who just don't want to work in a firehouse anymore, they'll go up and they'll work up there and they'll stay there for however long. And so they can become quite proficient...
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...sometimes CAD will come in and say, "Engine one, respond to this call." Well, it's not taking into account that this road is closed, and so engine 11 may actually be closer because right now there's a protest going on, and so this road is closed. And so it just automatically assigned engine one... So, us having firefighters up there who actually understand firefighting... They understand, "Hey, you know what? I got this road closed." And usually, they're not quite as-- I don't want to say fearful of making a decision as maybe a civilian who's hired to be a dispatcher. "CAD told me to do this so that's what I'm going to do." I have firefighters who are like, "No, this is the best reason why I would do this." Or, "Hey, Chief. Do you want me to start you a second company on that? It looks like you're running a little low on truck companies. I'll start you another one." So having those firefighters up there is kind of a-- every time we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								come to collective bargaining every three years in the city we always fight to keep our dispatchers up there.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: firefighter dispatchers] ..."Are we really getting any value out of this? Are there technologies that we could use to bridge that gap a little bit?" I suspect that it's only a matter of time before we-- I mean, that's just the trend across the country. Very few departments have-- it's just not the norm. And it's something we have fought for. We give up things so that we can keep it because we see the value in it. With that said, there's been some recent activity that's kind of been like-- where we've had a lot of dispatchers that have done exactly what I just described as being a benefit, they have done the opposite. "Hey, I can't do that. CAD says I can-- CAD only says this." So at the upper levels, we're kind of like, "Hey, your only value is from being-- as a firefighter, is saying that you can take a look at a situation and make a human judgment to say, 'Yeah, I get that the computer is saying this. Makes complete sense, but I understand the total picture and I'm going to say this.'" So we're running into some of those issues.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	And so the mayor said, "Hey, I want some key stakeholders. I want all the department heads to be present." So I was actually asked to-- so it was most of the 22 major departments in the city. And police and fire were me and the police commander. And we formed a group that's still in existence today. And during that time, one of the gaps that we identified was we did not have anything that allowed us to have any situational awareness in the city and what was going on externally to the city...
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...So we have some venues like [Name] Park, which is right across the street from the City and County of [City]. And the fire department that serves it has got like three fire trucks. So, obviously, if something happens there with 50,000 people, they're going to be overwhelmed. But in our policies, procedures, and protocols, that's not in the city. We don't really concern ourselves. But it is a shortfall to say, "Hey, if there's an active shooter, or there's a bombing, or if there's a drone that just crashes into it because a hobbyist is flying it around and it just happens

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to hit the crowd and a bunch of people start running for the door and start trample over each other, we're going to respond." And so we came up-- we were given some money. We presented to the city council, and what's called the [Name] Committee, to invest in technologies that would allow us to create a situational awareness tool. We brought in several companies. One of them was IBM. And I think they said something for like 850 billion-- no, I'm just kidding... So, for some extraordinary amount of money, they could work and create a tool. What happened was that it was just too much money...
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Situational 360 program] So yeah, the ultimate goal is to ensure first that everybody within the city is utilizing it the way it should be utilized. Trying to get more agencies on board. And so some of the stuff we're struggling a little bit with is trying to-- if I'm an incident commander and I'm working at this particular house fire and I have roads here, and I say, "Hey, I'd like the police department to come in and block off this road right here to protect our hose lines and make sure nobody goes down there," how do I show on the map that these roads are closed? ...
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Situational 360 program] ...We have a way to do it from public works, when public works permits that building which is being built over there and they're closing the road down. As they pull their permit and they say, "On July 20th, we will have this road shut down because we're doing crane operations." That data gets inputted in here so you can actually see that road closure. As something happens where I have the SWAT team working barricade suspect we don't have any availability right now to show that road closure. We are working currently with the water department as well as with public works to refine that a little bit more. So the water department can show, "Hey, we're working on this water main over here, so you're going to get less flow out of these fire hydrants." ... So, yeah. So that would be in there. So you know as an incident commander, or even as an engine company officer, I'm not going to get all the water I thought I was going to get out of that fire hydrant... So I might [crosstalk] go to this one over here. Or I might need

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								two engines to do-- so, it gives you an increased situational awareness...
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Situational 360 program] As we start working through that, the ultimate goal is to bring in these other municipalities in and around the area so that all the jurisdictions in and around the metro area are operating on the same sheet of music. So that we can actually all see exactly what's going on. That's the ultimate goal, that we're not operating in our own silo. That we're actually really sharing as much of that information as possible. So that is the ultimate goal.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: hazardous construction features] So they share that information with us. And so there's a lot of-- recently, we had a firefighter fatality two years ago and that firefighter fell through a roof in a warehouse. What we didn't know was that up on top of the roof, a lot of these places were using-- just like a sunroof, they used corrugated Plexiglas that looked like the corrugated tin and they were putting it on top of these roofs to create more sunlight. Well, the firefighter was walking across the roof just like he would on the corrugated metal piece and stepped on the corrugated plastic and went straight through. Yeah. So subsequently after that, we found a tremendous amount of buildings around that had those because we were like, "Holy cow, where are these things coming from?" ...
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...So now with that, in addition to looking for that specific problem, one of the things that we did is on our software in a program that we were using called Firehouse, which now we're using a different program, we created a safety hazard box, which is-- essentially, if I go on a call and there is a safety hazard, I can click that box and write in what that safety hazard is. That safety hazard, when I click that, gets sent to the highest levels of the [City] Fire Department. The chief sees it, the deputy chief sees it. The division heads see it and some key other people. And that safety hazard will be immediately looked into.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So the other stuff from a technology standpoint, for our department, because our chief is so-- I think he just got TVs in every firehouse so that we could use this training program so we could live feed training to a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								firehouse. They could pause it, go on a call and come back, hit play again and the training is up on the TV. He can talk to every firehouse if he wanted to and give a, "Hey, I'm the chief. Here's the mission of the fire department. Here's the direction we're going in." And if they went on a call, they could just pause it and hit play again when they come back, they could finish watching him. I think it's even interactive. I think they can even ask questions back to-- that piece I'm not sure. That stuff, that's not in where I work.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	He's very interested in advancing the department. A lot of times we don't have firefighters that stay in key critical positions for a long time because we love to get back out and do the firefighting thing. And so those key positions that keep the organizations moving forward, in the fire service in general, we get huge amounts of turnover. I'm a brand new captain. A brand new chief. I'll do my 18 months in hell. Go work in an office and then I want to leave. But anything, if you want to advance the organization, if you want something... If you want to increase your budget, get a new piece of technology, those things aren't just like--
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...So Chief [Name] has really bridged that gap well by putting key people in positions that have a strong desire to see the department succeed and put the organization above their personal needs of wanting to go back to the firehouse. So I think that's one of the key reasons why we've advanced as far as we have.
OE	FF	U	Manager	46-55	11-20	Male	FF-U-021	We also do a lot of other different components. We have what's called a CAP, a career apprentice program where they get preference points. We do a lot of recruiting at different types of gyms. We really try to target CrossFit Gyms. It seems to be a great place to get female applicants, because not only they're physically fit, but mentally they're tough. And that's the type of workets we utilize daily at the fire academy...
OE	FF	U	Manager	46-55	11-20	Male	FF-U-021	...We've got good relationships now with athletic directors at all major universities in [State], so we recruit all of the sports teams through those. And obviously, your college isn't so on and so forth, the typical stuff, but we really try to branch out more. We work with [Name] a lot.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								We go to churches. We speak at churches, community events. We really try to be out in the community. We try to turn people into recruiters for us. So when we realize we don't have two recruiters, we try to get by from people not only in our job but also in the community and say, "Help us to help you to represent our city," and we try to brand it that way. So it's definitely been more successful than in the past....
OE	FF	U	Manager	46-55	11-20	Male	FF-U-021	...We've doubled the number of women applicants and applicants of people of color in the past four years, and it's going in a good direction. So we're not perfect, but we keep looking back at what's good and what's bad and trying to better ourselves each and every day. to brand it that way.
OE	FF	U	Manager	46-55	11-20	Male	FF-U-021	...what rigs we have in and out of service. Five-inch hose companies, tower companies, ready reserves, wild end rigs. Everything tells me in one quick snapshot what we have going on for the day and if there's any concerns that I need to pay attention to right away. So that's kind of the very first thing I do, look it up. And then if we have to do any short-hiring, operations will hire them, but we do all the staffing. So we'll look at the staffing and make sure that we're not going to run into any issues where we're going to have too many rigs out of service or not staffed properly where it's going to be a safety concern.
OE	FF	U	Manager	46-55	11-20	Male	FF-U-021	And then as far as these ones, green means these companies are all staffed, so I've got five [inaudible] companies. Tower 22 for some reason is out of service, so we know that we don't have a tower. That affects operations. That's more their division, but I still like to take a look at that to make sure. And if we could do anything administratively to help out, that we do.
OE	FF	U	Manager	46-55	11-20	Male	FF-U-021	You know we have a MDT, we'll have it on a portable MDT, Well we only have so many of those and we-- with the new individual we just added for PIO, my PIO person shares responsibilities with the two recruiters, so it's kind of three of them kind of working together because it's too hard for one person to be PIO 24 hours a day. So they have that MDT for them, for their use, so that's why I don't have it in here.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	U	Manager	46-55	11-20	Male	FF-U-021	[City]'s awesome. [City]'s a very, very, very diverse community so it's a big melting pot. Nowhere near, I'm sure, you said you're in San Francisco or New York, no word to that level but it's definitely a mixture of people that are very friendly, they're appreciative of our services and we really get a lot of good support from the citizens that we service. And then from the mayor and most of the city government, so we're very fortunate in that aspect....
OE	FF	U	Manager	46-55	11-20	Male	FF-U-021	I personally don't. I do, obviously, with police, being in different types of meetings we'll communicate about civil service hiring, promotions, recruitment practices, something, behavioral health, a lot of stuff that falls under administration, I'll speak with the other administrators from [City] Police. A little bit from paramedics but obviously on the job, day-to-day interactions, it's non-stop with firefighters. I mean, you're running calls, you're having verbal communications with paramedics. We're a two-tiered system so we're generally on scene 90% of the time first so we're kind of giving them a hand-off when they arrive on scene anywhere from 5 to 15 minutes later on...
OE	FF	U	Manager	46-55	11-20	Male	FF-U-021	...But you know the fire house there's just a lot of training especially in the special operations because there is a lot of different disciplines. From knowing how things are put together, so when they come down what dangers are there. So when you're talking about collapse how do I assure not only, how do I assure, but what type of way I'm I trying to show and what's the best way to do that. Heavy lifting, trying to compute tonnages versus concrete, versus steel, versus these things you need to think about. Welding, cutting metal to get things out of the way you can find space obviously. Then you need to worry about air monitoring certain gases and what's there and what's not there that's needed and then obviously training on different types of diving over the ice, under the ice with water rescue.
OE	FF	U	Manager	46-55	11-20	Male	FF-U-021	And there's a lot of things that have built through the fire house. There's props that a lot of people built on their own. And then we have a training facility off of [Street] which is kind of northeast part of the city. That's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								where training facility's located, one of those things there. Newer fire houses are building, they're actually building props into the fire houses, so you'll have anchor points where you can go to certain stations and you can repel and do different types of rope rescues. There's ventilation props. There's a different types of props. Just depending where you're at.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	I manage five fire stations. Each one of those stations has their own officer, but those five officers answer to me.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	We try to do it regularly. We don't-- right now, our training chief is in transition. So generally though, in my position, we will train with the individual companies. Or I'll bring two companies together and we'll do some evolutions or whatever.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	The officers, so battalion chiefs and up get issued a phone, and then each fire engine has a phone so that the duty crew can use that. Now, members do have their own cell phones. We really don't have a lot of policy on that. That's up to the individual officer how they manage or allow their fire fighters to manage that during the shifts.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...We don't have all of the equipment. If someone offers it, we have to decide whether or not we're going to take on that liability. That's a pretty rare occurrence, but they handle everything. But we work together. River rescues, any time we go on a river call, we're always going to be first because we're right there and mountain rescue's always notified and they may or may not respond.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	It does. I mean, our call volume will follow that. So our busiest time is basically middle of December through New Year's. That's when we have the most people. 20 years ago when I started, this whole valley was a ghost town after the last lift went up for the year until the middle of summer. Now it's becoming year-round, but we still have tremendous fluctuations in the winter and a lot in the summer.
OE	FF	R	Supervising	36-45	21-30	Male	FF-R-024	[RE: laptops] So the battalion chiefs and upper issued them. It allows us

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					to work remotely. We can bring them to meetings. I can do work at home. I try not to. I don't get overtime. We're exempt. But really, it's a way to kind of free us from the desk so we can work at the table. We can take it to the stations and use it for training if we want or whatever.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Yeah, we are a completely career department. All five stations career.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[City] has a resident program. So [City] is all career, and then they have student residents. They live in the station for free, they get their own room, their own kitchen. They pay for their schooling, and in return-- and now, they get an hourly rate of-- some sort of hourly rate. And then, in return, they work at that lower rate for the fire department. I went through the same program in [City] 20 years ago, and it was-- they paid for my schooling and that was it. They didn't pay us. We had to go get jobs, and then we would work two days a week, but it's gotten a little bit better than that. I thought they were going to get rid of it, but it's just too much potential savings on paper for the town council. They just can't ignore it, even though it's-- anyway, we got rid of it.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[City] is paid and volunteered. [City] has some paid and they're mostly volunteer. [City] up on [Street] is-- if they answer the radio, great. Sometimes they don't even answer the radio.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	And that was one of the selling points for going to 800 megahertz up here was we could talk to road and bridge. I mean, none of us talk to road and bridge. I mean, it was-- I am very anti 800. It is terrible. It's gotten better, but up here, we have to deploy technology hardware. We have to deploy hardware to get through and around the mountains, where in the Front Range or in the Midwest, they can use half the hardware because there's nothing in the way...
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...so the first-- man, I was here-- so I've been here since the implementation of 800, and it was tough in the beginning because you-- it take care of the valley, the [Highway] corridor, we call. Everything on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the ground was-- on the valley floor was covered, but so many neighborhoods are up in the hills and stuff, and it's taken years to figure out how to place everything, microwaves and what not, to make sure it all works. So we still have some dead spots...
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	That was the biggest change. So when I started in [City] in '96, it was still VHF or UHF, one of the two, and at the time I didn't have nearly the responsibility or the knowledge, so to me, it was fine. It worked. It worked great. And then throughout the whole 800, it's just taken years to try to get every coverage where we need to get it. It's gotten better. Depending on the size of the structure, we'll require BDAs, bi-directional amplifiers, so then that just takes the radio communication that's outside and available, and it pulls it in through the concrete into the buildings because we could go into a parking structure and have nothing...
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...And then what we, as [City], and by policy we, our operations-- so by operations, I mean when we are working on a scene, we take all of our traffic to a non-repeated channel by policy. It's not recorded, but we have decided we don't care if it's recorded or not. We just don't want any-- when somebody keys up the mic, we want them to be heard. For example, [City], on the other hand, is the opposite. All of their operations are on the repeated channel because they want everything to be recorded. And you get far more distance out of that because it's on the repeated system. You get almost a mile on the non-repeated. That's plenty. Unless it's a massive hazmat, we are not operating over more than a few hundred square feet. So that is one thing that we have done to improve is we just don't use the technology.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Well, there's towers at 11,000 feet, at 10,000 feet, and they're riding snowmobiles in the middle of a blizzard to go make a repair. They had pictures last year of the tower in East [City] that was completely covered in ice because there had been so much freezing and thawing and precipitation. And then they get up there and the pictures were incredible. Just blue ice, just dripping or solid frozen on this thing, so.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...So if Motorola decides to change their portable radio, it doesn't mean we have to change, but if we have to replace any with the newer model because they don't make this model, that's when we will make the change. So they're pretty good about giving 7 to 10 years before they make changes. This one has been pretty good. I don't know if they'll do that even at 10 years. Bu anyway, so we have an equipment replacement fund where we will take that amount that we paid for all these radios, we add a 10%, and then we divided it up into 10 years. And then every year, we have a budget, a line item for that, and we apply funds to that so that when we get to the 10-year mark we can just pay cash and we don't have to fund it.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Yes. We have an IT. So we had a battalion chief who sent us down this road and then left to go work somewhere else. So now one of our engineers, our drivers, is trying to keep it afloat, which is great. I'm glad he stepped up, but it's too much. In my opinion, it's too much responsibility to put on someone who drives the engine and is paid a certain amount and is already busy doing a whole bunch of other things. So we will see how it pans out.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Anyway, we get thousands of followers. We get good really feedback through Facebook. So anyway, decisions are made, PIOs are notified. They put together a little press release. They send them out. Up here, people are really good about listening to and abiding by the restrictions, even the visitors. The people who live up here understand what happens if you don't, so.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	For us, our number one call is automatic fire alarm, so we have over a billion dollars in real estate value. And every square inch is protected by some sort of automatic fire alarm system. Sprinklers, they're required by code, so they're sensitive. So somebody comes in takes a hot shower, it's going to set off the smoke detector if the steam gets in there. Cooking popcorn, popcorn's the number one smoke maker in a building. The [Name] Medical Center years ago outlawed it with their employees, no more popcorn in the building, can't do it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Medicals are probably the second most frequent call for us. Motor vehicle accidents are up there. We run a lot of winter accidents that are really nothing. Any car that slides off is going to get 50 phone calls. It's pretty outrageous. It's job security, I guess.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: false alarms] Yup, most of them are. I think maybe once a year we actually go to one and we get there and then-- we had one in [City] a couple of years ago at a house, and the engine was turning into the neighborhood and they saw the glow. And they're like, "Oh, this is the one? Man, we're all alone--" because we only send one engine. They're all alone, and, hey, this is a fire. It was pretty awesome. [crosstalk]... they put out first alarm and so then we send-- we send three engines, a ladder, an ambulance, and a battalion chief to every alarm.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	There are three. So stage one is more of just a let's get a handle on the little things that cause fires. So people smoke, so you can only smoke inside your vehicle or inside buildings. Campfire rings, that kind of thing. Stage two is no campfires at all. There's other restrictions. The restrictions get heavier. And then stage three, which I don't remember the last time we've had a stage-- stage three is they close the forest. You can't even go hiking. So there's none of that. I don't think I've ever seen that. I might have and not known, but it's pretty rare.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: wildland fires] So we obviously take care of the urban areas of our corridor. We do respond to anything within our district, which includes the Forest Service, like the wilderness area. We generally won't engage in something that's way off the road. So if you were to take [Highway] and go to [City], there are many, many areas where you can see miles off into the forest. So if we get a call up there for a smoke report and if they get to a location and they can see it way off there, we're just going to pass that info on to the Forest Service. They go and handle that. If we have something significant within the urban corridor, then we definitely handle that. All of the agencies in the county will assist with that...
OE	FF	R	Supervising Field	36-45	21-30	Male	FF-R-024	[RE: wildland fires] ...[City] had a big one a couple of weeks ago, and because of the status of the town of [City], and it's a resort, they had

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					nine planes on it within a few hours, which is unprecedented. They were not going to let that town burn down. But it was 80 acres in the forest right in the ski slope. So if it's situated in an area that's going to go and burn down neighborhoods, we're going to get a lot of help pretty quick. And then we will. And so the way it works is it's our fire for the first, say, 24 hours' operational period, and then if it extends into the Forest Service or if the sheriff declares that it's a certain-- if we can't take care of it on our own, then we can go to the federal level and then they can send in a type three team or a type two team or whatever and we can get resources. Those are rare. I have not ever had anything like that in 20 years. [County] has gotten lucky, very lucky.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: station alerting] So anyway, they send out this high-low sound to alert people. Well, the problem with that is that it's the same sound at three in the morning as it is at three in the afternoon. So you are startled up. I mean heart palpitations, it sucks. And so what station alerting does-- there's probably four or five companies that are actually really good at it. Unfortunately, it's very expensive, as all of it is, but basically, it is a system that is embedded into the CAD at dispatch and then at each station then has equipment that receives the call. So instead of this high-low thing, it will provide kind of ramped tones, so it's soft, louder, louder, louder, louder. And with that is a ramped LED lighting that's red...
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: station alerting] ...So each bedroom, for instance, will, when there's a call, the sound will come over, the light will come out-- will also come up. The red light's important because it preserves your night vision so that you're not turning on the light and then going right back out into the dark. There's a lot of components. They add a lot of bells and whistles to entice people to buy it, but I just want us to get away from this high-low thing. In the '80s and '70s it was a bell, like a bell, a buzzer, so we've come a long way. But we're just stuck here because with station alerting-- because it's an all or nothing thing. Everybody has to have it or nobody gets it. And so then you go out west to [City] and [City], where they don't have a lot of money so they can't really invest in it. [City]

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								doesn't even have people in the station every night, so what use it for them? ...
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...So anyway that's kind of my number-one thing is getting station alerting. Our chief is to the point where we may just foot the bill for, say, the dispatch end of it and then figure out a system to-- because if we put in the dispatch part of it, everybody's going to be enjoying the fruits of it, if you will.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...The other thing about station alerting is right now someone answers the phone, they start taking information, who, what, where, why, what's going on, and then they hit a button, whatever their procedure is, and then it goes to the other consoles. Then the person who's dispatching sees the call, they read the notes, okay. They start building the calling CAD, and then they have to go to this other screen and they have to choose which radio channels need to be awoken, if you will. Then they use a button, they make the noise, and then they send out the dispatch.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	We have a very large Spanish-speaking population.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	I would say we're mostly a bedroom community. Most of it is homes, condominiums. The businesses we got up here are for the most part local. We really have no-- at least in [City], we really don't have any industrial complexes, none of that stuff, but mostly high-rise hotel, single-family homes, apartments.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...A lot of our-- probably half of our firefighters live in [City]. We work 48 hours on, 4 days off. So you only have to drive up five times a month. People carpool. We've got two in Junction-- no, one in Junction, one in [City]. We got one in [City]. And these are three-plus-hour drives.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	We have a system for callback, but we don't require it and it's rare. We might get one or two. But now, with five-staff stations, we have a minimum staffing of four, which is [Organization]. The chief, we spend hundreds of thousands of dollars in overtime to make sure that these

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								engines have four. So we can do a lot more now than we could 10, 12 years ago. 10, 12 years ago, we were doing callbacks for a lot of things, but it's rare now.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Yes. So they do have a big job. So one, two, three, four fire departments, one EMS agency, five law enforcement agencies, and then they have the ability then to also interact with Road and Bridge. All of them, the four of five towns, buses. They don't talk to them routinely, but they're there. So buses can call them if they need something. So they do a lot, going on up there. And then to have four people on at a time, to juggle all that. One big incident in the county will tax two or three dispatchers at once.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: dispatchers] They generally are four on, and I think from 3:00 AM till 5:00 AM, there's a two or three-hour gap there where they're down to three. And that's improved. That's gotten better. There were two people on at night in the past. One fire at 2:00 in the morning and nothing else-- I don't know how they keep up.
OE	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: EMS] They transport, and we don't transport to the hospital. Every agency is trained up to EMT basic... And then the paramedic system-- they're all paramedics, very highly trained. They're CAS certified. Yeah, and we work pretty well together.
OE	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Yeah. This station's usually pretty busy.
OE	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	We have mobile data terminals in all the rigs. But as far as I know, we're the only station that has that.
OE	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	We primarily serve the [County] in [City]. I'm not sure what the population of it is.
OE	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	But we serve from probably [Street] all the way down to about [Street], and we go up from [Street]. So it's a pretty good area that we serve.
OE	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Yeah, very densely populated. It's a pretty busy area. And it's [Name] District. It's mostly a Hispanic population. And then, we have [Street]. It's kind of the big attraction in the area. It's where all the bars and eateries

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								are and things like that.
OE	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	We don't really run into that here. I think maybe on the south end of the city might be a good place to inquire about that because they will run into the [City] fire department stuff like that. Everybody that we work with is pretty much from our own department unless we're sending out a strike team or something. That's kind of a whole different thing.
OE	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	The rescue squad will use it because they cover a really large portion of the city. So if they get something between two alleys then it comes in handy for them. The guys in the back seat, we usually have enough time to get dressed. And the driver will know a general direction and then a few miles down the road they'll get the Google Maps going after everybody's dressed and figure out exactly where to go. But for us in an engine, you're kind of expected to know without using it.
OE	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	I would say it's up to date. It was old for a while [laughter]. And it seems like they're doing a better job now. We've got brand new MDTs in most of the rigs. We have nicer radios than we had before. They have LCD readouts on them and everything. And they have a lot more channel capabilities than they used to, which is nice.
OE	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	I don't personally. I haven't heard of any of the other drivers or EMTs on the engines that do that. I've heard of the medical ones but I'm not a paramedic so I don't use those. I've heard of apps where they calculate friction loss in the hose, but everything we do is kind of already pre-laid out so you kind of know a starting point of what your pressure's going to be for any given situation and then it's usually just a matter of adding or subtracting 5, 20 pounds per floor or something like that. So our stuff is-- we keep it pretty simple.
OE	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	No it's specific to [City]. And hospitals is another thing it'll show you. [in 18:01 S1 says: It does, and there's layers on it. There's a layer that'll show you police stations, I think it'll even show you your first alarm area, like a little border around it, high pressure hydrants because we have two different kinds, cisterns, which is like a tank under the street that we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								can pump out of.]
OE	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Well, we've always had those things. I've been in this department for seven years. The departments that I came from prior didn't have any of that. All we had was radios.
OE	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	The only way it's a hindrance is if the person you're next to, usually it's your officer that's going to be talking on the radio, if they talk on the radio and you're right next to them, you're going to get feedback. So, some officers will address that in the morning by saying either, "Keep your volume down or keep your radio off until you need it." They'll say, "Set your channel that we're going to and just leave your radio off. Unless you're in trouble or something, you can just turn the volume on and you'll already be on the right channel."
OE	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Yeah. And that, again, is going to be at the discretion of the incident commander. So when we-- the first engine is usually the first one there. And when I say the first engine. It's the first out of an assignment of four engines. The first one is usually first to get there. And the first chief will be the incident commander. So they don't-- a lot of departments I know, the first engine will get there and they'll say, "Establishing incident command." We don't usually do that because the next-- the chief is usually not more than a minute behind them. So it's not like they're waiting 15 minutes before they get a chief to get on scene. Everything happens-- we get 40 people there within 3 or 4 minutes. So any changes like that are going to come at the chief level. I think an engine boss could, say, strike a second alarm. But typically, it comes from a chief.
OE	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Yeah, I would say in [City] I'm not sure that that would hold true. And that's probably because even though there's no-- we may not have anybody in that building, but if we don't get a handle on this thing quickly it's going to get into buildings where there are people because everything is touching. So it is still a life versus property issue, but I'd say we're generally going more towards the life risk factor. As far as tactics go, they're trying to get people to look into the Vent Enter Search model a little bit more. What we would consider an untenable space, if you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								close the door maybe somebody is alive in there and you can get them out before the main fire fighting crew comes in and fights the fire and disrupts the thermal barrier, all that stuff. But for the most part, it is just, I always say there's no app for it. You actually have to physically take the hose to the fire and put it out [laughter].
OE	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	They always say kind of 90% EMS versus 10% building alarms, actual fires, or some other small outside fire, something like that.
OE	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Yeah, almost every building alarm we go to is false. There's been a handful that I've gone to that have turned into something real. Whether it's an HVAC motor overheating and smoking or a real fire, something like that, or a light [inaudible]. Rarely is it an actual fire.
OE	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Yeah, our department doesn't do a great job with what we want but they give us what we need [laughter].
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Yes. And there's different types, there's single engine companies. So there's a total of 45 stations in [City]. So the city's 49 square miles so you figure one firehouse per square mile. And there's at least 20 single engine companies and then another-- the difference is double companies. So you have an engine, a truck and then there's only two stations that has an engine, truck and a rescue squad. And our chief, of course, here. So we're the largest as far as personnel. Where was I going with this?
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	So the department just recently-- you can assign your server to get updated on department emails. So you can get it on your tablet, your phone, or you can log in at home, as far as email, but then as far as the fire calendar, we're not there yet. Other departments do it so you can check your shifts and see who's working but we don't have that yet.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	A zoo, it's a zoo.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	So at shift change, it's the busiest time. So you have 15 people going off and 15 people coming on. Guys are noisy. It's your second family. I can't wait to get to work, I don't know. Something's always happening, it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								exciting. In here at 7, I mean, it's a busy station. The demographics as a city directs on how busy you're going to be, so if you're in the Marina it's not going to be as busy as here. I think it's here, it's-- as far as there's BART, there's been a series of homeless people. And so 80% of our calls are medical and because of the homeless population, there's a bunch of drugs, alcohol. And so with people with cell phones they're always-- someone's lying on a street, they think there's something wrong but most cases, they're just sleeping.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	But our calls do go up on that so we're always responding so. It's chaotic here and that's what I love about it.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	So the busiest stations in the city are Station 1, Station 36, and Station 3. They're the top and those are-- they're averaging 30 runs per watch. So like one every hour--
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	And then Station 7, we average probably 20.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Yeah. There's a paramedic on every engine and so they-- we'll send an engine and an ambulance at the same time, but the engine there-- because there's so many of us, there's like 45 stations. So you're going to get an ALS or BLS personnel to help on the call within three minutes, three to four minutes. And then the ambulance is not too far off. But there's only about 14 to 15 ambulances city wide.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Ours are satellite. They used to be part of the fire station, but now there's in surrounding satellite areas. And then so within those 15 if, say we tax those resources, there's other private ambulances that can be brought in. But they're not part of the fire. Just within fire, there's about 15.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Everyone out of the training tower is EMT qualified... So basic life support. And then our paramedics are cross-trained. They're both paramedic and firefighter... Here, one paramedic per.. watch... So each fire engine has a paramedic on so.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	There's been a change. It used to be middle class Spanish, and now there's been a little gentrification going on and there's property values

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								are at their highest, which has gone through some change. So there's a lot of the mom-and-pop stores have been being bought out. So you have more of a restaurants, bars, and a lot more younger people coming in. So it's a very hip place to be and shop in certain streets. So it's slowly changing. Whereas before it was more middle-class families. Yeah.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	So the last consensus, I think it was, what? 850,000 here but now I think we're past a million, easy. There's just so many people here. So many people want to live here. Rents are through the roof, property value's gone, and now traffic. The city streets weren't made for this many people, and so if you throw in Lyft, Uber, it just ties up everything. And the city's been changing streets to put in bus lanes, and no left turns, and bike lanes, and it just traffics. To go from one side of the city to the other, it's a good 45 minutes. And so--
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Yeah. So say, people are commuting to their jobs and so you throw a fire in there, and people are so upset. So we get little name calling here and there. Whereas, I think before, people understood more so what we did, we were more involved with the community. But now everyone doesn't live here, people are--
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	That's what I still do, but I've just been fortunate. But a lot of people can't afford to live here anymore and they have to commute.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	No. Well, if there were a catastrophic event, then you might get a call or wildland, some of us are cross-trained in wildland fire. So if you put your name in, available to work for that, then you might get a call to go out. And in fact, we have a strike team that went out two nights ago.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	We designated to that. We have specifically five engines that are not part of our cache here in the city. They're just designated for wild and fire and so they're always available. And [City] knows that we have them, so we're usually the first they call because we have the personnel and the rigs ready to go.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Other counties. We have five and plus another rig that can go out, or sometimes Engine [Name] on a special need. But other than that, no.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								They would have to go somewhere else. Yeah.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Well, my brother works for [City] Fire, and so they have different computer programs, different tools, and we're always comparing. And so when we're out having a beer or something and we're just talking. They have the capability of knowing who's on shift through their phone and they can manage their work schedule via phone, whereas we still have to call in. Say you need a day off, going off sick, we still have to call in and report in and say that, "I need a day off." Whereas they can just check it off on their phone or computer. That's one difference that they have.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Not everyone had radios, only certain firefighters, so as far as safety, that was huge. We were still fighting fire in just turnout coats and our wool pants, and that changed. The SCBAs that we use are lighter than the ones that first came in.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Definitely. I would still pursue college. Our job is so-- it's like winning the lottery. For [City], there's usually-- they hire every other year only for like 150 to 200 positions, if that. And we get it close to 14,000 people applying... It's tough to get. It took me 6 years. It took my brother 12.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Certain departments do. You go through a board, chiefs interview. We're not there yet, we're still just us.
OE	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	Yep. Yep. And you check the roster and see if you're there that day. Sometimes you get moved based on qualifications. People are hazardous-material specialists, rescue specialists, drivers, officers, and there may be another station that needs them somewhere else. So you might come in and look and go, "Oh, they've got me going to Station 11. They've got me going to Station 6." So you come in and look and see if you're even here. And then you look at what rig you're assigned. Some people are always assigned to the same rig. Some people shift rigs. I've been back at this station since January. I've driven and rode in every single vehicle out there, including driving the chief and being the chief's operator. And that's the normal job of a firefighter here in [City], is you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								could literally be in almost every seat in the city. So you have to be prepared to use all the different equipment, and do all the different jobs that the different rigs do.
OE	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	Then we'll go and do area orientation. We'll just drive around our area. Sometimes if there's a guy who's on overtime, as a treat to the crew, he'll say, "Hey, let me buy you a coffee." We'll get a coffee, and then we'll drive the area and do what's called pre-fire planning. So additionally to area orientation, and looking at the buildings and what you're assigned. Especially, if you're not from this house, which happens a lot. So the types of buildings change based on the neighborhood, which means the types of fires and the types of profiles for your victims change based on the neighborhood. So they'll kind of do an overview of that, and then they'll also do just a pre-fire plan like, "Hey, if we get something today on this rig, what is expected of you is X, Y, and Z." And so we had that this morning. Lieutenant [Name] talked to us and said, "If we get a fire, all five of us are going to the roof. We're not going to split. We're going to stay together. We're going to bring the chainsaw, the hook--" and lists out exactly what he expects to have happened because there's only one regular member on the crew today. He's from a different station. The other person is a probationary member. The person driving the backend is from the rescue squad. And the other girl in the back who is being our EMT is from Station 32. So I'm the only person, who's normally assigned to that apparatus, on duty. So new neighborhood for half the crew, right?
OE	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	Then in the afternoon, a lot of times, that gets split. Whatever didn't get done in the morning, things like hydrant checks, fire prevention inspections of different apartment buildings and houses will get completed. If probationary drills didn't get done or they have extra drills, like they have a book they have to complete, you'll go and drill the probie and do more training to accomplish in the afternoon. You'll also do any station projects. Certain stations have certain responsibilities. So we have, for example, the light rescue vehicle that's assigned to this station. It has additional equipment, so that might be a time where you go, "Hey.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>We haven't taken the light rescue out. Afternoon will be a good time to take it out. Give it a wash. Inspect all those tools." They're kind of infrequently used stuff. Other stations will have wildland fire apparatus in the back of the station. That would be when they would go, "Okay. Let's pull that out. We've got to check that." You may be doing-- we have a triannual station inspection, so you may be doing cleaning and like that. And then usually after 3:30, it'll be like majority of people-- there's someone always down here watching the phones. But that's when people will start to do things like personal fitness, prep for dinner, things like that. Depending on the station. Depending on the culture. But at this station you'll see a lot of people up in the gym from 3:30 to about 5:30. At some point, running the stairs outside, doing something like that to stay in shape for the job. And that gets you to about 5:00. And then after 5:00, everyone does dinner, helps the cook out, does whatever else, calls the wife, checks in, FaceTime's with the kids. All of that stuff.</p>
OE	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	<p>Triannual, that means every four months. The division chief, which is stationed here, right? There's two in the [inaudible] with the city. They go and inspect each station. They split them up over the course of the year. But three times a year, this station will get inspected by it's local battalion chief, the division chief, and the rescue captains in charge of EMS responses. And they'll come and check the cleanliness of the station, the care and maintenance of the tools and the apparatus, all that kind of stuff. Member's uniforms. Their personal protective gear. All that stuff needs to be labeled, marked, clean, serviceable, all that stuff.</p>
OE	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	<p>Yeah. So like I said, [City], I think maybe [City], I'm not sure, they're using these exclusively for everything. It's their dispatch. It's their tracking, it's everything. So yeah, it's a pretty good system. I'm sure it can get a little bit better and hopefully, it'll get tweaked over the years. But it's pretty good.</p>
OE	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	<p>So there's two parts of it. There's the administrative part of what I do, which is to deliver the latest training to the battalions that work for me, which there are five battalion chiefs. And five battalions oversee about</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								25 stations, collect daily paperwork and review it for accuracy, making sure that some of the HR matters are handled. So that's the not glamorous part of the job. But the--
OE	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Yeah. So I'm going to say that as a team, because I have somebody that's an operator or driver for me, and so we use an iPad that has technology on there that is sent directly to it from the communication center that tells me everybody that's going to an incident. And we take those units, and we put them into an accountability column so we know where we've told them where to go. And if something was to go sideways, we would know where they were--
OE	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Well, I mean, there's two facets to that. We take care of 99.9% of our stuff with just our department within the city and county of [City]. There are some areas to the south of us that we might interact with them a little bit. But when I'm talking about the mutual aid component of things, along the sea, the ocean, and out towards the Golden Gate Bridge, we may have to communicate with the coast guard, and the CHP helicopter, and maybe another department for a boat in distress or somebody that's in distress in the water. And so, if we have to communicate with them, we need to have the ability to quickly find that channel and talk to them instead of having to go through zones to try and find them.
OE	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	It's really been slowing down lately, but I would say between 5 and 10 times a day. 5 to 7 times a day, maybe. I don't know what our average is.
OE	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Well, think about it. You're dealing with a huge machine. A whole department. Department of emergency management oversees the department of communications that oversees the police department, the fire department, all the radios. And so you're just not going to make a quick change on the radios. The current radios that we have right now, generally, are probably-- well, some of them are newer radios, but the technology and the channels that they're able to access are still 15 or 20 years old. So the radios have changed a little bit, but the infrastructure--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	No. And there's a lot of departments out there that do that. Phoenix has always been-- well, they've said that they are the greatest department in doing this command post stuff. And the way that they operate is their chiefs actually show up in a vehicle, and they've got their air conditioning on, and they operate from a--
OE	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Well, we have a department phone, but this is my personal phone. But there is a department phone in the vehicle, and it's a, probably, three- or four-generation-old Apple phone. But we don't use the phone for anything other than communicating. Some texting, but we use the iPad technology for the accountability part of things that we do.
OE	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	If you get that blank stare, you go, "Repeat back to me what I just told you." And we're an evolving department. We're younger. I mean, we are hiring a lot of people right now, and so that trust factor has to be gained before I can just let somebody go on their merry way.
OE	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Well, just if you look at that number, you have to put that together with, between 2007 and 2011, 2012 - probably that six- or seven-year period of time when there was a huge downturn in the economy - in [State], in particular, nobody was hiring anybody because shutting down fire houses-- yeah. A lot of fire houses that were shut down during that period of time - not in [City], but across the [City] - have not opened up again because of the economic downturn that happened. Fire departments didn't hire, and so they ran short firefighters and they used overtime to fill the gap. And then all of a sudden, we're hiring a third of our department in the last five years. And so we are probably the norm of what's happening in [State] and probably across this country. So you take those 400 people that have been hired in the last five years, I would venture to say that more than half of them have not been first in at a working fire. So they don't have that experience, right? So the first time they burst in at that working fire, they might do some things that-- and you can try and train them all you can, but--
OE	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	We have a pretty dynamic community. We have both retirement community around us because of our weather and our-- just the location

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that we're in. But we also have a technology community. We're not that far from [City] and [City]. A lot of technology companies are within this area. So we're always developing new technologies, and I think we're seeing it quicker than most just because we live here, and people are trying to get their technologies out and can be seen. So from that perspective, you have the older generation that haven't been exposed to all the technologies, and it's just mind-blowing to them the technology that's available to them. And even over 20 years, I mean, it's changed. So they're going, "Wow, you can do that?" Video conferencing is becoming a norm. GoToMeeting conferencing, that type of stuff. There's no more just conference call where you're talking to a phone. It's all webinar and GoToMeeting type stuff. And that's the type of technology that I think we're starting to get expectations from a public safety perspective when we do our mobile command vehicles to have those conferences. And not only talking to people here within my county, but all the way back up to [City] to the capital. And depending on what region we're in, maybe back to a regional joint information center. So it's just not one technology. But you go back to the demographics. It's ever changing, but you're slowly seeing that the millenniums and the younger generation come in, and they want instant communication. They want that instant access. But I don't think they understand what's going to happen when-- they may have it, but it's not talking to anybody on the other side. What's going to happen? How are we going to make decisions? What's the contingency plans to be able to do that?
OE	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	So we're a little bit of an anomaly in [State]. Most of [State] is pretty interoperable. Everybody knows how to do mutual aid really well. We probably has the best mutual aid system in the country. [City], we're a very large-- we're like New York on the West Coast, a mini New York. We rarely, if ever, call for help from another jurisdiction. We just don't need to. We have 44 engine companies.
OE	FF	U	Supervising Field	46-55	21-30	Male	FF-U-016	I think in the past. I think right now, technology has really boomed in the last five years, and I think technology is worthy and an impedance here

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					too, to technology. I mean, it's not technology anymore. I think the apps are there. We can almost do whatever we put our minds to. Technology is not holding us back, it's our budgets and our thinking is what's holding us back, our culture.
OE	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	[RE: the challenge of being progressive in a big city] Some of it is just pure logistics of training 1,500 people. To do a training module in our fire department, for example, we really can't train outside of three hours. I mean, we have a training module from 9:00 to 12:00 and then again from 1:00 to 4:00. And we get five companies go out of service to the training division. They do that because we can't pull everybody out of service at the same time. So they train in the morning, a different set of people come in the afternoon. Running that model for 35 days gets us to 92% of the people in the department training. So that limits what you can train on in a year, the time you can train on something. Some things are online and some things can't be done online, you need to be in person, so that's a limitation. Some of it is, like I said, is culture, willingness to change. Some of it is generational. The new kids are really good with electronics. I grew up, have 23, 24 years in the emergency services. I grew up as an adult without technology and had to learn it as an adult.
OE	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	So yeah. So a lot of it is culture because those fire agencies that are progressive, and we have a lot in [State], they're smaller departments. They can affect change much quicker and that leader can affect change and impart his vision much easier than you can in a giant department like this.
OE	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	So it's culture. It's culture. It's acceptance that the fire department's vision has gotten more complex as the years have gone on. We do more now in the fire service than we've ever done in the history of it. We haven't increased our staff or capabilities to handle that. So there's another technology that is capable now and it's called Wave Relay technology.
OE	FF	U	Supervising	46-55	21-30	Male	FF-U-016	I think they are. We just need to spend more time and being better at our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					job but we get away with not having to do that here because we are so internal to just us. We don't need to be good at the whole radio system. I just need to know how to turn it from A1 to A15.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	So what I'm doing currently right now is we are looking at-- I'm doing a lot of my research right now on cancer research. So I am trying to have a better understanding of cancer biology in metastatic state in reference to firefighters when it comes to constant environmental exposures when it comes to sleep deprivation, when it comes to stress with the calls, as well as when it pertains to our home life with our relationships with our wives and our families as well as side jobs. So that's kind of what I'm looking at, is the whole picture, the holistic look at cancer in the fire service and not just the byproducts of combustion causing mutations, but everything. So which is I think those are the areas that are missed. We focus a lot on the toxins at the fire scene, but what we don't look are our longevity profiles. We don't look at what sleep deprivation does. We don't look at-- we don't look at the stress that's caused by our job with just lack of-- not even just lack of sleep but lack of nutrition, issues with our home life and social structures, and just different things that just actually are major components to disease development in our line of work. So that's what I'm doing.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...You'll never be able to totally eliminate your exposures. It's just unrealistic. It's nature. It's an occupational hazard...
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	Yeah, a fireman? As far as stepping away from what I'm doing now currently, just going back to being in the field. I think it's a rewarding job for sure, and it's certainly a stressful job. It's rewarding, but at the same time, it starts off as a sport. When you're younger, it's a sport. We have all the players in a sport. We have our coaches. We have our referees, your chiefs. We have the players, and we have all our positions, so it's a sport. Just like baseball or football, you got your quarterbacks, your linebackers. In baseball, you got your offense and defense. It's very much a sport. And so that kind of is the driving force for the excitement of what we do...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...It's very adrenaline-packed, for sure, and it's no different than someone who is a sports fanatic and who is always sitting in the bench, or in the dugout, or whatever. They have that anticipation and that drive to want to get out there and play. It's the same thing. So if you're sitting in a firehouse and you haven't been to a fire in a few days or a few weeks, it starts to build on you because that's what we want to do. We're here to play the sport. And it's very satisfying for us. And, as you age, that sport still kind of follows you but it starts turning into a job. And how it was explained to me years ago was it's a young man's sport and an old man's job.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	Well, communication for us has been a major player when things go wrong. That's normally one of the-- probably the main, I would say, most common denominator of anything that's gone wrong in the fire service is the communication breakdown. So we use radios. The radios that we use are fairly good. Where it comes into issues with communication is when you're actually interior and you're actively doing something, and being able to communicate what's happening or what you're doing may not be as easy as it may seem. So plus talking through a face piece and into a radio mic, the clarity isn't the greatest.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: cell phone use in FF] It's not going to be used as much. The chiefs do it. They'll use cell phones to communicate probably to our main dispatch center when they can, just because they have the capabilities. They have the time to do it. They're set back from the scene. They're not actually in the trenches, so for us to use a cell phone in fire situations are less likely, but other incidences like maybe if it's a situation where we're able to step back and not get so involved, we may be able to use a cell phone. But when cell phones are used, it's mainly an incident-command type of situation, not actual-- the companies are actually mitigating a situation. We don't really get into cell phone use at this point, so.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	Well, a few things have changed with communication is that everyone has a radio now versus when I first came on, there was minimal radios,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								so not everyone had a radio. So a lot of things were based on face-to-face communication or they were based on an officer-directed communication. He would get information from the outside and then relay that to the members inside who didn't have radios. So there was a lot of face-to-face, but now everybody has radios. So that's one change with communication, which has certainly helped tremendously...
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...I think maybe different improvements in radio function or capabilities have changed. Radios we used to have years ago just didn't have the transmittable capabilities, didn't have as many channel selections. And they weren't really high-tech radios. They were very basic, which is okay too. But I think the level of high frequency versus very high frequency and those kind of things, the capabilities of radios have changed. But I think that our biggest change, just in fire ground operations, is that now everybody has a radio, and I think that has really changed a lot.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...I think the tablets may have its benefits as long as they're durable. That's big. That's big. And when you get to talking about us, if I have a radio that's expensive and something happens, I lose the radio or it gets stolen, the officer gets time. So it comes out of his pocket or he gets time with suspension. So that's a big concern, is that, say I'm an officer in engine, we get these new tablets that are easy to break. I'm not going to be happy about it because then now, that's something else I got to worry about. And when you're slinging tools around and your big concern is getting off this rig, putting your stuff on, and getting in there, you're less worried about delicate things. We're not delicate. We're just not delicate people. So when you put something on there that is a level of technology that is where we are today but is not durable, that's a concern for us as firemen.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...And firemen, sometimes you look at firemen as being a blue collar. They're just dragging around a club, and that's what they do. It's different, but we have a lot of people who are very well educated in this line of work. But when you look at something that is very complicated or if you hit the wrong button by accident and it completely changes the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								whole thing and you don't know how to go back and fix it, those are where issues begin. And even with some of the radios, you may grab the radio and pick it up and your thumb may hit a button by mistake. And it completely puts you in a different channel or a different zone and you don't know how to go back to it. Those are some situations where technology can be a problem.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...I would say technology for us, engines, pump panel, and engines, whether it's you got a digital readout versus dials. Sometimes when you first come on this job, you're used to reading just gauges, right? And you're focused on reading gauges and understanding those gauges. But when everything became computerized, touchscreen, and digital, that was a little complicating. So I think what it is is that you've just got to kind of evolve and learn, and there's a lot of resistance to learn or to accept new changes...
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...I think with getting back to the tablet and some more of the more recent and up-to-date technologies, I think there's room for it as long as it's durable and it's user-friendly. That's huge. Because when we need the technology, we need it to be simple. We don't need it to be complex because we don't have the time to work through complexities in anything technology because our decisions are instant, and some things that we need to do need to be made. The decisions need to be made now and not in 10 minutes. We're not sitting in an office and trying to sort through different programs and analysis. We need to make a decision now. And so technology is great, but if it's complex, it kind of is counterproductive, so.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	Subways are huge. A lot of issues with subway radio communications. I would say there have been a lot of issues with high rises just because of all the interference, frequency interference in downtown, for sure. And I would say that's probably the biggest communication issue, especially when you're on fire ground. Sometimes our fire ground frequency only goes so far. It's not a very strong signal. And so if you're 25 floors up or 40 floors up and you're trying to talk to someone on the ground floor, it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								may not go through as well. So there's times where even other departments, they'll put almost repeaters that are on different floors that transmit and repeat their message. Or there's repeaters built in the high rise. So there's all different kind of things to think about with that. But then we set up our command staff, which is one of the reasons why we do that, a few floors below the fire floor so that that radio communication doesn't have to go all the way down. So it would go to him, and then it would go down.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	We currently use radios. I'm not even sure what generation we're on. We have Motorola [laughter] 600, maybe 6,000 Xs. I'm not even sure. That's our main communication, radios between-- every member in my company has a radio. And there's a rig radio, so we can always be in constant contact.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	we also have a computer in our rig which runs our dispatch over, gives us our information on where we're going - tips on street locations, cross streets. It also gives us, sometimes, information on what we're heading into like some-- I don't know why it never was completed, but there was like a high rise survey. So some buildings we'd get how many stories, standpipes, what stairwells, have smoke towers, stuff like that. It could definitely be used more efficiently.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	Yes, and mobile data terminal. And then at the firehouse, we have a terminal where we get the dispatch from, which is very similar to that one, and then also a computer where we do our daily reports, and everything should be done on that.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	Drastically. I think we're just entering the 2000s right now as a fire department. When I go here, they were at telegraph. We were still on a telegraph, right before I got here. So I mean, it's drastically better. Not everybody had radios. The radios worked sporadically at best. So yeah, it's definitely gotten much better.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	I use my cell phone for a lot. I use it to call the office, like our dispatch center. Especially for stuff I don't want on the radio. Or we use it a lot for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								EMS runs. Each company also has a cell phone for the EMS with-- so when you're calling medical control to talk to a doctor, rather than just use the radio, you can use a cell phone. So I use it to communicate to the chief. Maybe the chief's out, and you have a question about a drill we're doing, or where you want us to be, I can call him on his cell phone too.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	[RE: cause of communication issues] It's probably two-fold. First, a lot of it is operator error. Like I said, radio discipline - being able to use your equipment and also being able to make the correct communications at the appropriate times. And I'm sure there's also a technological aspect where you have to make sure it works. If anything, there's a tendency that things may break, need to be replaced. As a whole, our department, we don't embrace change very well. So we have a lot of people that-- I mean, I don't think it's as much now, but I know that whenever I get a radio, in the beginning, some people are like, "I'm never going to use it." Just like the computers, "I'm never using that." 150 years tradition unimpeded by progress. We're just getting to the part where we don't file forms with carbon paper anymore.
OE	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	[RE: equipment en route vs. on scene] I don't know if it'd be different-- well, once I get there, I'm going to rely on my radio because I won't have anything else. I'm sure for the chiefs and stuff above me, they like to have more equipment. I know if I was the commander, you feel like-- I know they're piloting a drone program here where the drone can kind of leave and show the command van. If you're at the command post, you only see one side. You're relying on your other members. Maybe they don't see what you see, or maybe they don't see it at all, whereas something like that, where you could actually focus on areas that you want to look at would be good. But as I said, that's way above my pay scale [laughter].
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...a great majority of our runs are EMS related. And now some of us are paramedics, some of us are EMTs. Now we have to know about life-saving skills, what to do with a [neuro?] addict, get people to breathe,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								CPR, identify a medical component that's giving someone a big problem or an issue, and address it, and fix it for them. It's at the snap of the finger. How much time to go and get your medical book and say, "Ah, this might be happening to you." See the flow chart and how to treat it. And then, again, it can go off into another hauler of hazardous materials, water rescue. I mean, it's endless. Trench rescues. These guys are doing outside your confined space rescue, which is a discipline of rescue. So it's all-encompassing to have knowledge in every little aspect, to make you very proficient but very efficient on it and get the job done. That's the whole main goal, is to get the job done. And that's why they call us. You are the jack of all trades.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	I haven't had any issues. I think our equipment is pretty much up to date. When we compare ourselves, you have to have a comparison to other people. Other big departments are pretty much on the same wavelength as us and we're vice versa with them. So I think our technology has finally caught up. I can't really think of any issues that could pose a problem, but we could be operating portable radios, for instance, in dead zones, high rise, metal, concrete buildings where you might not be able to get that transmission out. That's what's important because their transmission may be very important. It's important that everyone hears it.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Well, things have changed. When I first came on we had the - what was that - dual band radio or [megahertz?] working at 154 whatever X amount of megahertz, now we're at 800 or digital trunked systems in there. I think that's a very big step, again, in keeping up with other huge metropolitan departments. And I think it suits us. It suits as well with the communication system that we have now. Again, it's not something that is not problematic. If things were problematic, you can sit here for quite some time and explain it at length. But if you're not having the problems, you only have subject of discussion.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Technology does not remain static. It's always dynamic. All right? It's always changing and evolving. So one day you may be at state of the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								art. A year or two later, that stuff that you had was state of the art is not state of the art anymore. So trying to just even keep up with pace and that's pretty prevalent in everything, even with computers and these phones that we use. They're always continuing to get better in each model. So the one that you have would be obsolete back then. People make fun that I still have the iPhone 3 or whatever. They say, "That's outdated." But it served its purpose in that time period or that time frame. But technology will continue to advance with that. As far as I think with technology advances, I think there's a form of complicity that comes with it. I'm speaking for myself, too.
OE	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Cell phones, I think they're-- yeah, again, very useful. We all have one. We all carry one...
OE	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	...But that, like any other kind of training, that's only half the battle, I feel, until you can actually have the environment of a little bit of chaos and a little bit of the normal civilian verbiage that's in our ears as we're working and people trying to get our attention to something else when we're trying to focus on an individual task. So training fills that gap somewhat, but not in every capacity. So it's hard to get good at our job without the years passing you by, in a nutshell, is how I would say it.
OE	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	I mean, maps aren't anything that we normally get. Our command vans that respond to either incidents that are upgraded or large-scale incidents, our command vans all have that accessibility. They have computers. They have hard copies of maps of everything in the city from our infrastructure. Well, a lot of it's outdated [laughter]...
OE	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	...For instance, our normal protocol is to change quarters, so I may be in a firehouse here downtown, but they've had two or three multiple alarms going on out south. So they'll start sending north side companies to sit in the firehouses way south. So now they're in unfamiliar neighborhoods. They don't know the construction. They don't even know the proper routes to take to get quickly so it changes everything. So technology can definitely help there big time. And I'm sure that's the case for any, at least urban areas. You start getting out of the cities and you're limited to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								how you're going to get anywhere on the rural routes. I get that, I have a lot of respect for firefighters that work in those areas. I mean, they have a lot of challenges. They don't have the water supply. They have a lot of challenges, a lot. So my hat's off to them for doing that. And there are limited budgets and a lot of volunteers, so, yeah.
OE	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	We're a combination department. We have some career staff. We have some part-time staff. And we have volunteers.
OE	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Somewhat. I mean I travel for my regular job which is investigating fires in the private sector. So my schedule is different. Right now I'm trying to make it a little more regular but you know I always try to do that but it doesn't always happen I'm at the mercy of whoever's paying me. But there are things that you regularly deal with. You deal with personnel issues. You deal with making sure that the training is done. You make sure that the training is focused on where you see areas that need improvement. And then you work on making sure that the equipment is where it's supposed to be and when it's supposed to be there and that it's been maintained properly which we have a mechanic that's full time.
OE	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Partly. We have the river out there so we've had to do things related to the river over the years. We've, you know, we did the bread and butter house and grass and vehicle fires and all of that but over the years we've gone and taken people off of radio antennas or towers that have had issues. We've dealt with trench rescue. You know we do a lot of vehicle extrication. But we train for high angle, we train for collapse, we train for all kind of other things. We have members on [Organization] [phonetic] teams.
OE	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	We switched to the 700 system pretty much last year because we have a 150 megahertz system. And in the terrain we're in it works pretty good. Portable to portable. We've got multiple tower sites and repeaters and Vodor systems and it's kind of complicated but it works until lightening hits it and just fries a bunch of it. And the last time it took out most of it. And we're still trying to put it back together. That's our main dispatch

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								where we get our tones from. But we switched to the 700 system that the state takes care of. And other than some dead spots particularly in certain buildings it does okay other than its alerting feature, we have... we have 11 stations. Each of those stations are supposed to have a different dispatch tone so that you don't wake up the whole [County] because one of them has to go to a first aid call.
OE	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Now the people I'm going to hear next door, right through the window. So we have a nuclear plant that neither system really works inside, the 700 system will work radio to radio, so will the other one, but we have portable repeaters on our other one that we can park right outside and get--we can talk through the concrete to the truck then hit our regular radio and hear back. You can't do that with 700 unless the people install equipment at the facility 'cause we don't own a system that can do that. Other than that I mean... that's pretty much... what goes on with how our radios work and don't work.
OE	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	There's not. And the... hmm, the only way that's going to happen here is you have to come in--us affording to put the terminals in the truck is no big deal. Us affording to put the data linkup is where the money comes in. We're looking now at when we replace the equipment on the 155 system or 154 system that with the new digital repeaters it's a little easier to do but then you've got to get into all the computer part that backs that up. And that has to be a [County]-wide function not just a fire department function to make it feasible because our call volume is about 1,000 a year, a little--it's under 1,000 call a year and that's for everything. We do use a couple of iPads and stuff that we can link back to get some of our data but in terms of truck pulling up and having the pre-plan of that sitting right there in front of them or GPS just base dispatching or...
OE	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[State] for the most part in the southern part is very flat. We're not. We have hills, hollows, and because of that we have coverage issues in a few places. This thing does decent, the 700 does decent, our other one did better. Penetration into buildings is the biggest issue. We have more

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								trouble.... The school. When we, being a deputy we go to the school for active shooter training. So the 3 arson investigators we go, too. And... we have to switch to a direct channel in the school because we cannot talk out. And I have that same problem in that fire in there. I've got to switch to--we've programmed the radios so it's just a click, you know? It's just a turn of the button. But we're still dealing with, you know, if you're--if they don't remember to do it, you know, going in, they're deaf.
OE	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	The [County] next to us, I don't even think they use it. They don't use the 700 system. They don't have the money to buy them.
OE	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	And we've seen that. Before you would get hired--before our dispatchers were just jailers. You know? Whoever was working in the jail was who dispatched us and what information you got, our biggest problem right now is we probably need a third one in there all the time because if you get a good call going, you have somebody on the phone and somebody trying to talk to three agencies at a time. And to you get to where one takes priority where maybe it shouldn't be at that time. But it's just the nature of it. So if you had one person on the phone, one person can do fire and EMS, one person is going to do law enforcement 'cause when law enforcement gets there they're wanting to start their, you know, if it's a wreck they want to start getting their information run so they can get their report done and getting the wreckers coming.
OE	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	But we... you know, our biggest problem is limited number of people. But we have a large area, spread out, without a water system that covers the entire thing. So we have to bring a lot of our water to fires. So that's what we deal with here
OE	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	No. It's not dense--it's in some areas you may go a mile before you see another house. In some areas you can see your neighbor, it just kind of depends.
OE	FF	R	Supervising Field	46-55	21-30	Male	FF-R-051	We are 55/45 white to black. And with some there's in there. We have some Hispanic population here. You have both ends of the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					socioeconomic spectrum. You've got houses worth millions of dollars in this [County] and you've got people that, you know, living things that probably shouldn't be inhabited. You--the areas are kind of clustered in terms of you have areas that are predominantly black and you have areas that are predominantly white. You have some mixed. And it's not that they necessarily segregated themselves but you normally build bigger houses in new subdivisions, there are more affluent people and you'll get a few mixed in there because, you know, based on the economic capabilities of those people.
OE	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	But then you have--one of the things you have here, a lot of, is family property. Undivided family property. So you will have 5, 6 generations of a family that are living on this property and don't own the property. And because of different zoning regulations some of them are living in mobile homes 'cause you can only have so many permanent structures. So it's, you know, it's a rural community. It's an old community with some newer subdivisions and there's 2 or 3 being built right now.
OE	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Around here they know the police because they either grew up with them or went to school with them, they know--or their mom and dad did. Same thing with the fire department. Most of our--a lot of our EMS people live other places and come here to work. But you know with a volunteer department your neighbor is usually the person that's--we don't--volunteerism has dropped. One of the things about our demographics is it's not the money, it's the age. The property values here are high so we don't have as many younger people living here. So that 18 to 30 demographic that you want to, you know, fight fire, we have few of those. You know I mean I had a birthday Monday, turned 49, so it's, you know, I still do it but, you know, I'd rather--[Laughing] I'd want those 20-something's to do it, you know?
OE	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	We only have... we had 4, we're down to--well we're fixing to be down to 2 career people because the fire chief is retiring to take a private sector job. We lost our deputy chief. We will figure out end of the year what we do about replacing the chief, replacing the deputy chief or what position

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								gets filled after that. We staff 3 people 24/7 right now as part-time people. We're discussing going out--we've made the steps to go out for a tax, to see if the voters will give us some money to put some more career staff on. And after that we have 60-something-ish volunteers.
OE	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	It's--they're--everybody--people will come through the door and volunteer. But when they start figuring out what's involved, there are more... there are more volunteers at the animal shelter than there are at the fire department. And, you know, there's also a bunch of volunteers at the school. Some of them are different groups of people. But, you know, like we tell them, there's nobody that can't go do the first aid stuff. And that's the bulk of our runs. We only burn... we burn less than 20 hours a year in this [County]. So I mean. But when you need firefighters, you need firefighters. So.
OE	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Well there's more than a couple around but we have 2 or 3 that the department owns.
OE	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	We have several laptops and stuff like that. But they're not... they're not deployed on the trucks. They're--you know the officers, some of the officers have them. Stuff like that
OE	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	This one up here is a combination of the two. It's mainly volunteers but they do have some full-time staff members.
OE	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	Yes, Ma'am, we definitely have a daily routine.
OE	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	Oh, well when we're at the station, some days there can be downtime. Some days you know we may leave the station at... 7:00, 7:30 in the morning as soon as we get there and we may not get back to until 4:00, 5:00 o'clock in the evening, just depends on what else is going on throughout the day that we need to tend to and/or what kind of calls we get. I mean we can go on some calls if it's like a hazardous material call, you know, with hazardous materials leaking or something, we could be out there for 12-plus hours. You never know.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	.... I've had family that's lived in the [County] I guess most of their life. So it's not like I was a stranger coming into a brand new place. It's very rural. There's lots of area for us to cover with the fire department. We have to be familiar with the area. We have to be familiar with whether that area has good water system or whether it has a water system at all because there's some parts of the [County] we have to bring our own water because there's no hydrants or there's no, you know, like [County] water doesn't got out that far or whatever. A lot of people are on wells I guess basically is what I'm saying.
OE	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	Or after a significant tragedy, like just like [Event] for instance. I mean after [Event] the fire service was just so praised for so long, publicly, you know, and it's just... I don't know, I guess it's sad that it takes an event like that for people to recognize. But a lot of people don't know what we do. Because they've never had to call 911 before in their life. They've never, you know? If they've ever been sick or anything it's been to a point where they could have a family member take them to the hospital, they didn't need an ambulance. Or maybe they just never had emergencies to where they need our service.
OE	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	So if I try to get on the radio to call them because I need something from them, typically if I'm on scene and I need something I do it, we would usually do it through like the 911 Centers. You know? Whatever my unit is, hey, can you contact them? Well then they can get on the telephone or whatever, however they contact them, and say, you know we've got a crew that's at this location and they're requesting, you know, X, Y, and Z for you all. Can you--but now if they're on the way I don't know if I can talk to them.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S1: Right, now because it is rural metro you are career? S4: That's correct. S1: Are there volunteers in the metro? S4: No ma'am.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S1: Everybody is career.
OE	FF	R	Field	Not	Not	Male	FF-R-053	S4: And that's how we operate because we are a rural fire department,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder	specified	specified			we are not a metropolitan fire department where we have large structures. Normally respond to homes and small commercial businesses so they don't require a whole lot of manpower.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S4: At this station, we can average 6 calls a day.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	On average. Sometimes we are lucky we don't even get a call, some days we can run 10, you know or 12, so at an average of about 5 or 6 a day. Some stations can get hammered; they'll run 15 or 20 a day.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S4: A small percentage of fire. I would say 90% of our calls are going to be EMS related and then the other 10% will be some sort of fire related call.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S4: Well there are three shifts and there are two people in a shift.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S4: The community is, I wouldn't call it middle class, it is a little bit lower than middle class in this area.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S1: Oh yeah, okay, okay. Now because it is more metro, I guess; we used to live in [indiscernible]
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S4: It means that we are a private fire department. We are in business in fire suppression I mean, and we can bill for it okay.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S4: You have a trash business that collects trash for money, while we put out fires or we are in service to community for a certain amount of fee. That doesn't mean we wouldn't respond, we are required by law to respond no matter what the incident is, based on the jurisdictional acts of the state laws and federal laws that we have to act. We don't get paid by taxes. We are supported by each community; each community who is a member of our department pays a certain fee based on the square footage on their home or any other structures on the property. How they come up with that I don't know. They do research studies all across the country with fire protection, fire departments to come up with a fee for that.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S4: So that as a service that we provide as a fire department to assist the ambulance.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S4: Oh gosh yes. Lord have mercy. We ran one this morning, we run daily, four or five a day.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S1: They got bulldozers that can climb mountains you know.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: So but we are not, we are strictly volunteer and there is yeah this is all over the world.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S3: I would say it is a lot of hard work and it takes a lot to run a fire department. Like more than just you know running out on calls and fighting fire; you got to - like in the volunteer department we have to have a lot of fund raisers and everything to make our ends meet.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: See what people don't get nowadays is we just don't go out here and fight these fires; 90% of your calls - 80% to 90% of your calls are just wrecks and EMS calls.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: I mean we are not first responders, you know the first responders you got with the ambulances, we are like lift assists, cardiac arrests and stuff like that and involves like CPR and all that, which we are all here pretty much all are certified in CPR so.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S1: Interesting. So how many guys are here? Guys, girls?
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S3: We are having it right now twice a week at least, sometimes three times a week.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: Yeah it is an all-county dispatch.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: Most of us live quite close. We got sleeping quarters upstairs, three bed, three room; not three room but three bed in one room sorry.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: Well we got two stations.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: So if you want to count our station and [indiscernible] substation you have; there is roughly about 13 or 14 I am not really sure.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: I mean I am not saying that we are the like we are the best county in the state but we have what we need; I mean they really could be more stations but.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S3: Like we cover 85 square miles.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: Oh yeah, mostly farmers.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: It just varies; we have some you know wealthy part in the [City].
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: We are not the wealthiest city.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: We are not the most populated but we are you know we are up there sort of.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: Well no, we have so many radios on each truck.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S3: We take the pagers home too. We have all got pagers.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: I paid for mine. We pay for it, don't we?
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: Some people work one day a week so it is hard for them to make it yeah.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: See that's the thing; we could go from not running a call in a week to running about three or four calls a day you know.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S3: Since 5th of February, we have had 18.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S3: Well if there is somebody there it is; most of the time we know before we get there most of the time.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S3: We got two zones, we got a zone here and we got a zone down there. I live in this zone up here, so if we got something that happens down that zone down there then I am supposed to just come here. Same thing with people down in zone 2, if we got in the zone 1, they are supposed to come here.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: We have 9 including 2 down there at the station.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: It's just the smaller residences that we have yet to preplan. I mean we have all seen what kind of house it is going to be you know on fire.
OE	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S1: I don't know what a truck costs but. S2: I am thinking \$90,000 is what they paid for our radios we got on our trucks right now.
OE	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	S2: But, I mean -- it's just every once in a while. But a lot of times we (I hate to say it) we get lot of druggies and --
OE	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	S2: Yeah, we've got a big drug problem in [City] that nobody seems to understand. We've got meth, we've got hydrocortisone, OxyContin, I mean, we've got all the stuff that nobody knows about. You know you hear it at the big cities.
OE	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	But, it's down here and worse. I mean, it's spreading further north. It started off more in Georgia, now it is going like this across the states -- I don't know why but that's what research has shown.
OE	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	But other counties, we've four or five fire fighters who are in [County], [Cities] fire department, of course we have got some that work from [City] fire department. [City], I mean, there is just different ones but they don't want us to be part of another department in our county because they don't want the conflict and all that and a lot of people will -- Oh, we've got a wreck or a fire and now run to that and then this other -- my department or somebody else's department will get to something else and they will just over there and won't come to theirs. SO, you know, it is kind of a touchy thing.
OE	FF	R	Field	46-55	5 or less	Male	FF-R-055	Yeah, we do monthly meetings and plus we have a President. He is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					down here too in [Town] [City] and I am [Job title] and of course the Chiefs sits in, the secretary, and Commissioner and all that stuff. So --
OE	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	I am looking into it. It is slowly coming. One of our guys at our department writes grants and that is all he does, so I am talking to him about it.
OE	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	S1: Yeah, I hope that he can pull that up. So, how many volunteers are there in your station or department or? S2: In my department -- there is about 35 to 40.
OE	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	S1: So, about how many calls do you get a week or a day or whatever the matrix is -- how do you measure it? S2: Well, sometimes you won't get any a week. Yeah.
OE	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	Some days you will get -- excuse me, you get two and then sometimes when the moon is full, you will get -- I mean, I will be going down the road five times a night, siren, lights and everything, just because either cardiac arrest or somebody's had a stroke or there is a fire on [Street] or I mean, we have had people just go crazy and set their mattress on fire in the driveway and we are called to go put the mattress out and the cops are called and then -- I mean.
OE	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	Well they dispatch us all. And all our pagers go off at the same time and usually a lot of people are at work during the day. So, when we are at the meetings, we try to figure out like me -- I am off during the days, during the weeks, I work at night. So, during the days, most of the time I will respond, with two other guys or three other guys and if somebody is off, they will respond. And like today, I am off all day and off tomorrow and half of Sunday, so I can respond to whatever.
OE	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	Right. Unless we get our Captain on the scene or one of the lieutenants and then they are on command until, if he comes, sometimes he doesn't -- he will call and say, I'm at the station. If you need something, let me know. And then we are like okay, we got this handled, like if it is a wreck and if it is not real bad. He'll say -- alright, I am standing by the station, let me know. But most of the time we got one or two lieutenants on the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								scene that are -- you know they have been doing it a while so they know how to take care of it. We got a couple of real active firemen and their lieutenants and they know pretty much what the chief knows.
OE	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	Not all to the same. You know, everybody is on a different frequency, but they would, I don't know how they handled that really. I think that communications building was -- but however they were doing it.
OE	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Can't remember [Name] rule fire district which is all the private land outside of the [City] and the [City] from the [Name] North to [Name] that's the [Name] Fire Districts taxable. They have their own board of commissioners three rule district commissioners and they have contracted since then with the city for personnel services. So the rule district has equipment buildings live in quarters for firefighters but they have no employees. They pay a contracted amount to the city each year for all the employee services.
OE	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Yeah and then with [Name] we as long as I've been here we've been trying to work together we have auto eight agreements so we cover each other on fires. We have a joint back country medical rescue team for hunt angle rescue and any kind of technical rescue services so we have some motorized equipment that they house at their [Name] station and we have all the high angle road stuff here at this station and yeah we do avalanche rescue and because we have red avalanche zones actually in the city with houses in them.
OE	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Well for [name] we have the fire code official he has a department issued one and then we have a duty phone that basically if someone calls the station then it will link through their cell phone if they're out in the field they're doing something so yeah.
OE	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	...So a combination eleven full time firefighters, two chief officers and 37 paid on call and so most of the senior paid on call are issued radios and yeah so we have a lot of radios, a whole bunch. Every radio has a mobile radio in it and my command radio has 2 mobiles in it.
OE	FF	R	Supervising	Not	Not	Male	FF-R-046	And then we also have ski patrols radio which are 800 trunked so we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder	specified	specified			can interact with the mountain and then we have I think I have a total of five 700 megahertz radios to talk to law enforcement.
OE	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	So yeah the [City] well is a contractor I don't know basically [Name] provides the ambulance and we provide first responders so we'll go and assist the scene and we actually we work really closely with [Name] with our EMS support and we do all of our joint training together for EMS and basically respond with our auto aide and mutual aid agreement and MOU's we kind of definitely proud of how well the both organizations work with the EMS side of things.
OE	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	We house the ambulances and have the paramedics but we're pretty much joint. If any of their staff are like in [name] and there's a call in [name] they'll go right to the scene and join.
OE	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	So our minimum staffing is two so there would be two full time people on duty and like a CPR call that's not enough and then a structure fire you know you need a minimum of 21 to really fight a real structure fire safely and so we rely on the volunteers to back us up. We also offer a shift assist program where they come in work 24 hour shifts when we're short because we have two shifts that have four on them four people assigned but they get so much lead time here that very seldom like today we're going to only have three here and so a volunteer will come in and work a shift to bring it back up to four and our third shift only has three so they get a lot of people working on their shift and yeah it's great having volunteers. I mean yesterday a car wreck out [City] and they were on another call the duty crew was and so I ended up going and an ambulance full of volunteers came.
OE	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	So being a [name] community we have a lot of second homeowners. So we have kind of a small full time population but with that we have massive influxes of tourists coming so we can go from being very quiet to then getting into the holiday period where we have large influxes of people which actually kind of then strains emergency services because you've got to be prepared for that year round but it's kind of it changes so much. Another unique aspect that we have in this community is the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								size of our homes. The majority of our homes are would be considered kind of commercial structures just because they're so big.
OE	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	It's not uncommon for having a 10,000 square foot home that we go to and yeah it's definitely has its challenges and I mean it's a great community and they're very supportive of emergency services but it is a battle trying to keep up with staffing and equipment and all of that just due to the type of community that we have.
OE	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Monster homes. Lots of service workers driving up from [name] every morning and going home every night so we have challenging traffic mess. I happen to live south of [Name] and sometimes getting on the highway in the morning is a nightmare.
OE	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Right now it's slack. I mean there's virtual nothing happening right now the town is just dead but you know I was looking I don't remember if it was you I talked to the other day about the our population around here. The whole county is 21,000 permanent residents that can vote here. [name] is under 3,000 residents but the reality is I think it's 19,000 is our tourist influx.
OE	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Yeah it's non-infrequent so there's no aid areas at the bottom of the mountains so if the people don't have a ride which a lot of people you know they fly in get a ride in at the airport, they don't have cars, they're using buses and so they rely on the ambulances to take the people to the hospital so it's not uncommon for us to have
OE	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Mmhmm yeah so it is the two wrist and we become an aging population so most of our patients now are really complicated, lots of medications, they don't drink enough water, six thousand feet and dry air, we get a lot of medical calls now. It used to be all trauma. We get mostly trauma on the mountain but now it's turning into the elderly population with medical problems.
OE	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Yeah and I know [County] is at 91%. It's mostly what they do but they have all the assisted living centers down there.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Being a very active community we do a lot of back country rescue and communications again is one of our biggest issues so we kind of look at different ways that we can improve communications and have backup communications for those responders that are going out into the field because especially during winter with avalanches there's so many additional hazards that the responders face out there added on top of it so what we've been using between the radios, hand radio we've also started using [name] units which are similar to the spot units for tracking of our members and our teams.
OE	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Oh yeah the soda bottle ones, soda bottles or whatever and I think that kind of goes back to what's unique about our departments is that we have these events that are the face big city departments you know with those type of people so we interact with so many different agencies and so it's great. I mean that's what's part of the reason I love working in our department.
OE	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	...but I think see there's seven departments in [county] and we all have a chief's meeting once a month at a location and it started out just for task force reasons but it ended up being more of a chief's meeting but I think they pay out of our tax money that we just recently got for this system.
OE	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	I think right now I have I'm going to lie to you I should know off the top of my head but being I've lost some and gained some I think I have seventeen all in the department at the time. I can have up to 25 that the town will pay for but anything over that as far as their dues because we have to pay yearly dues on each fireman then I mean that's the max that they will pay for is twenty-five.
OE	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	Yes. We do have two we now have we got one paramedic I just put on and we have 2 EMT's that are on the department and then there's five or six of us that are used to be called first responders but they changed it to EMR's, a little more technical there but and then everybody well not everybody but if they want to be as a fireman most of them are I think there's a couple that I don't have they just wanted to stay strictly EMR

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>medical side but I would say you know in an average we have here probably 30 to 40 calls a year and 8 out of 10 you know would be or 75% of those are probably medical calls. Wrecks are very slim which I think the Lord for that. We have had I mean a few but not as much as like [Name] would where you got a major highway running through there. Most of our fires are grass fires or controlled burns that got out of control luckily. We have had a few structure fires but knock on wood not very many of them and we also have storm spotting calls you know. If the weather gets bad they'll call us to go spot for tornadoes or whatever.</p>
OE	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	<p>...I don't know it's almost like kids in grade school they get in here and they just want to chit chat and show pictures and this and that some of them not all of them but for the most part once everybody I may have to get on my phone and call that person and say hey get your radio on this channel you know and because I mean your adrenaline gets to going and around here we don't have a lot going on and you don't know who it's going to be that shows up to the call who is available so you may run if we have a call everyday there may be five different people every one of those days so it varies.</p>
OE	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	<p>Yeah I was trying to think. I did that ISO here not too long ago and I couldn't remember if it was three or four. I thought it was maybe three or four hundred. It maybe a little less than that.</p>
OE	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	<p>Yeah. I mean we've got co-ops and they put in a seed cleaner but it's outside the city limits. Another town built a fertilizer storage kind of plant but it's outside the city limits also. But yeah most of the stuff around here is farm ground.</p>
OE	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	<p>Well most of the multi well I mean we may have a few multi-day when here you know but the last one I can think of was just out here east of town. It got in the trees I mean you know a tree is going to burn forever unless you bring in a dozer and knock it down and be able to foam it or something and it just got into a place where we couldn't get our trucks and our hoses weren't long enough to get in there. The next day I went back you know or a couple of us did and you know tried to hit some</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								more hot spots. It probably wasn't going to go anywhere but it just made me feel safer.
OE	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	Well it used to be out of [Name] is where we would get our ambulances from in the past. But [Name] became I guess you could say an agency and they have an ambulance so if they're not busy they're the ones that we get and they're here within 5 minutes to where Fairview it may have been 20 or 30 minutes before they'd get here so I mean that's really helped us out a lot you know especially emergency, emergency deals of them getting here so quickly.
OE	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	I really don't know how their system works for sure at dispatch because each department has a tone, beep or something or two beeps and then a long tone and that tells you well that's [name]or that's [name] or that's [name] and then from there it'll come up and say we need Aim's first responders at such and such place or something like that well then after that comes across the radio then it comes across the phone.
OE	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	We've had people spend the night out there before you know so they got a place to lay down in the backseat if they wanted to and then across the front you know and it has an air conditioner because you cannot with the sirens going and the windows down and the wind blowing in [name] you can't hear yourself think let alone the radio you know when you're trying to talk to people especially on the way out or home you know so I said my fireman are going to have an air conditioner I mean I've seen a lot of people get overheated you know and need to cool down so you need to have at least an air conditioner and a place to put an ice chest or water.
OE	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	No I mean granite I say [name] that's the biggest one that we're close to that's out of our county you know I don't know how many departments they have in [name] but I'm going to say you know 90% of their calls are medical or structure. [name] they have task force [name] County does and they do do grass fires and all that also but you know and some of that training needs to be the same for all but as far as the legal documentations as far as some of the training and hours of training.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								And I ain't saying training is bad but there's a difference between volunteer and paid people you know. I mean they may have old age set over there and track we don't. We're at work all day and then we have to go and take our training at night 2 to 3 times a week you know from 6 to 10 at night and then come back to your families or whatever I mean it don't go over very well for some you know.
OE	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Volunteer. One hundred percent
OE	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Yes. We all have our own jobs that pay you know and everything we do all the fire department either it takes away our personal time, it takes away our family time and quite often it takes away our job time you know and most employers are pretty lenient. Thankfully I'm self-employed but as with me being self-employed in the middle of harvest time or planting time when time is critical and mother nature is your boss I mean my job quits you know so I have nobody to fill in you know. Or take over while I'm gone so yes it's difficult because I mean you know we're glad when we have guys that are available to show up not necessarily to a call but then you know we have to do training and it's like okay I have something planned you know and it's tough I mean because we are all volunteer you know I mean it's not because of our job and we're not getting paid but we do it because we volunteer.
OE	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	No it is all through our personal and personal data usage and everything.
OE	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	This is a community that they stand behind us. They support us very, very well here in [City]. They're very thankful of what we have and I mean everybody seems to get along you know most everybody is either farms or is in oil field around here.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Small yes. I don't know what the population is currently right now but--
OE	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Most of our incidents are wild lands/grass fires stuff like that. You know field fires, brush stuff like that hay bales. Then the next one would probably be car accidents. We do respond with those and then on down to structure.
OE	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Yes. Here at the department we are an [Job title], [Job title]. What we are is basically a step below and [Job title]. We do do medical calls and assist with the we assist the patient until the ambulance shows up and then we assist the [Job title] and the [Job title] so yes we are not everybody on the department is medical. It's just kind of if you want to be I personally am an [Job title]. I've been an [Job title] for 9 years. Most of the guys and girls on our department are both fire and medical.
OE	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	We have radios on the trucks, yes and then it's all the same frequencies as our handheld radios and so therefore we can communicate on the trucks you know to the dispatch through radios. That's communication wise I think that's about as far as we got.
OE	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Yeah I mean obviously you know our trucks are getting outdated. I mean but you know we're working on a tanker right now to replace the one we've got and it's going to cost over a hundred thousand dollars just for the tank part and the bed and that's not including the cab and chassis on the truck which was donated thankfully and like our jaws you know ours are hand me down, hand me downs and I mean you're looking at ten to twenty thousand dollars for a set of those you know stuff like that you know there's always things like gear. Gear is more important. I was at a training deal extrication class and one of the instructors was the [City] Fire Department and he's like yeah he goes it's funny listening to you guys talk you know you're going gosh I wish we could get a truck you know, I wish we could get you know jaws, get this he goes we got guys complaining because their gloves are a month old and I looked at

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								him and I said we got gear that's been out of date for ten years. [Town] Fire Department over there that I'm on we got a couple of guys don't even have gear and well until they just got some wild land gear but at a structure fire they can't go to a structure fire. They can show up on a car wreck you know we've got guys here that are you know it's getting to the point where we've got to get some more gear but you're talking just the coat and pants alone are about \$3500 that's not including boots, that's not including helmet, that's not including gloves you know, that's not including you know radios, you need hand tools, flashlights you know I mean there's a lot of hand tools that would be nice to equip every guy to have you know just for breaking glass you know but we have to have everything up to code. We can't just go down the hardware store per se and get a hammer you know to do this and that. Would it probably work? Yeah but inspection wise we got to have everything you know the fire tools that work better you know for our stuff.
OE	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	It is a huge issue. I mean funding is a huge issue. Up until I think we're coming up on the first year of having the sales tax for our county and other than that we were funded by a yearly fundraiser. It was basically the town donating their personal money to protect them basically you know and that was I think the state did allow some funding but I mean it wasn't enough to make a difference. If a truck went down that truck's gone until we can save up the money or get a grant or figure out something to fix that truck. I mean we were living year to year as a department you know and that depended on the size of the department and the size of the town.
OE	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	On the scene just guys being able to you know hear their radios you know if they're in and out because you get on scene things are loud. You're going to have to yell at guys you know face to face. I mean you and I are what five feet apart we'd be hollering at each other most of the time trying to communicate you know depending on the scene. Just being able to hear each other and you know so we can understand each other that would be a main thing I think on a lot of it. So just you know

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								just improvement radio wise I think would be huge. You know we could have every guy have ear pieces on their gear or something included in there where we can be talking and doing stuff and hands free stuff would be great.
OE	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Okay from the government standpoint that makes our regulations understand we're doing this on our spare time. This is not you know we're not paid, we're not sitting here at our fire department going okay we got to have a call any time you know we're at home, we're at our jobs, we're at our kid's basketball game, t-ball games, we're at our kid's birthday parties, we're at our family Thanksgiving's and when our phone goes off we leave those you know and so and then when we have training you know it's like I've been on three calls already this month you know I've taken enough time off. It's hard to get guys yes, we need the training but you know whenever the state's going you guys don't have enough training.
OE	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	There's a lot of them. Which it's good that we have them. It's good that we have them because that way you know we can't say we've got to have this done and it keeps us in check. It keeps us up to date knowledge wise, training wise because I mean if we don't know what we're doing on the scene we just will not show up but it comes to a point that what's realistic. What's realistic for us. You know we're not going to be put in situations like a big city would you know we don't have anything high rise here you know we're dealing with elevators and multiple, multiple stories you know.
OE	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	I'm a volunteer out here and it is a totally different beast as opposed to where I work as a professional firefighter. Out here our resources are limited. When a fire is paged out here they may page out the appropriate response it may or may not go out over the radio. We have somewhat of an outdated underfunded antiquated communications here in our county. On top of that it's a volunteer department. Some people may be having to go to work in the morning I just can't go to that call and you really never know it's like a box of chocolates you don't know what

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you're going to get out here when an emergency goes out as far as fire goes and [name] where I work I know exactly what's coming because we have people on that shift specifically for whatever response needs to be sent out so here it's I would say it's inherently more dangerous being a volunteer fire.
OE	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	We do get a little bit of funding from our county but considering the funding that we know could be available to us we're very underfunded. That's also a very sore subject out here. We have to take a lot more time cooking barbeques, selling raffle tickets and things like that and you know that takes time away from our daily lives with our family as well so there's more to being a volunteer than just going to the call in the middle of the night. Our communications out here have it's been updated but it's very limited and antiquated. We have volunteer fire service in the county. We have EMS which is a paid entity, we have the Sheriff's department which is a paid entity, we have emergency medical responders which is the volunteer side of EMS. We all share a radio system.
OE	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	I can't tell you numerically our acreage but we are within the top ten largest counties in the State of[name]. One of the largest in the north part of the state. Our cities are small, water systems are limited. We have four incorporated cities here. Three have water systems that actually do go outline which means past the city limits to a certain degree and I would say there are many people without water in this county as there are people with water.
OE	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	It can be difficult at times. Our EMS is paid, our SO is paid, our volunteers are not obviously. There can be same type of confrontation between those entities and a volunteer setting as there is a professional setting. I'd say 80% of the time things go great. We all get along, we get it right and it does great but that other percentage left over when we get it wrong we get it wrong big and you know we have to mend some fences and the thing about out here is the mending fences happens and it has to happen because we all know each other. It's a rural community we all know each other. As big as it is it's pretty small as far as who

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								knows who so you know you have to you hurt feelings you got to get over it and that's on a personal level and a professional level out here.
OE	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	That's probably as high tech [Organization] as most of us have around here. I do know that the sheriff's department out here does have laptops I believe in their vehicles. I think EMS does but I do not know on the sub on the MDT CAD system.
OE	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] I'd say the same more so flexible with EMS stuff is the major part of what we do right now so EMS is taking over everything.
OE	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	Q: And so is EMS combined with fire and rescue then? [speaker 3] SME: Yes, yes
OE	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] I would have to say 90% of our calls are EMS related and 10% being fire or other with 5% of that possibly being actual fires.
OE	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Depend on the day of the week. Each day has its own special day like it's a truck day, major cleanup day but anything outside of the station is not routine so all routine could be not routine in the morning.
OE	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Depends on the station. Some in [City] some are fast some are a lot slower more chilling stations.
OE	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Yes it is. It's all in one command center but there is certain groups, certain parts in one room that's dedicated to one. Like the police is broke down in zones and fire is main subject broke down in one section that's fire and there's three to four to help with fire.
OE	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] It goes into a main line so the main dispatcher will break it off into what's fire is and police is.
OE	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] No. Everybody has their personal cell phone but that's not really a go to for emergency calls like that. The only people that have cell phones are chiefs and people that work more than 40 hours. Anybody else on the regular 24 or 48 have cell phones.
OE	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Yes. We have call takers taking in a call.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	Q: Twenty four hour shift though? [speaker 2] SME: Yes.
OE	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Kind of everybody kind of welcomes us over there. Very diverse all races, types of life, you kind of get welcomed with open arms around here being a firefighter.
OE	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] You stay in your territory for the most part but station territory can be big, could be small all depends on where you're at but usually everybody kind of like stays in the territory just in case we may get a fire call, may get a call you don't want to be too far from the territory.
OE	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] And territories are diverse. It can be residential to business district to industrial district and then it can be very suburban so your residential areas those particular stations there's a lot of outreach within the community. You may be going to a homeowner association meeting or community meetings associated with the city, you may be going to schools to talk to the children, the downtown areas or more or less dealing with the businesses you know getting out stay at a hotel district here in this area where we are now. Guys and girls may go out and do some type of proof fire planning or they may even attend some type of meeting at the hotels association may have to share information and get information. The trends what may be the special events coming up things of that. This weekend is the [conference] championship so busy weekend and then the Falcons play on Sunday so in [city] you have a lot of special events so it's always a lot of things happening. Now we have a Christmas parade too this weekend so a lot of things going on. It's convention time.
OE	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Just being closer to the airport. We deal with a lot I know a lot of spots when I worked at an airport there were a lot of dead spots out at the airport. There weren't a lot of reception because you know their antennas are a lot stronger than ours so but for the most part not too bad just a lot of dead spots around there.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] Yes, yes. So if you go to most cities the fire department is either contract [city] is different the fire department runs it but they'll have their own police service where [city] Police Department is the main security element at [airport]. We are the primary fire and EMS provider at the airport so in terms of EMS the downtown operations we do not transport patients. Out of the airport we have our own ambulances so [City] Fire will transport patients to area hospitals.
OE	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] It's the largest fire department at an airport in the world.
OE	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Not really. Just because of the dead zone you don't realize too many on the terminal it's pretty strong so your dead zones would be out on the runway somewhere but more so in the terminal it's pretty cool in the terminal.
OE	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	Q: I find this interesting as well because you've also got a couple of different universities within the downtown area or within the city limits which have their own jurisdictions in some ways at least for law enforcement but fire covers that all as well? [speaker 3] SME: Yes
OE	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] I'd have to say on an incident in a response phase of it we're not talking I mean because police is on their frequency we're on our frequency however once we get on scene or even for a planned event we'll reach out to Sergeant [name] and they'll designate channels so we are not an entity that can provide all of the services needed to manage an event. As of this weekend [conference] championship you'll have multiply jurisdictions come in to assist so you'll have state, federal and local agencies mainly law enforcement with the [city] Fire coming in to make sure that you as a visitor of this city get the right service that you need so they'll designate channels so instead of all these agencies being on one channel being on their different channels we have mutual aid channels and they'll designate what channel will operate off of for that particular event and the rest of the city goes on as normal daily operations so we don't compete on any daily services.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	Q: Okay so it sounds like communication operates relatively well when you're kind of crossing jurisdictions or dealing with other agencies? [speaker 3] SME: Yes
OE	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] In terms of I mean when I first thought about NIST I started looking at everything from hazardous materials and WMD and I know that NIST has some play in that when it comes to the technology so we try to across the board have the same equipment as far as identifying different products that maybe released into the environment and that is so let's just say we get a white powder call in the mail we should have the same as what the feds have but when you start getting down to the local level the equipment starts to change just a bit.
OE	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	We have 60 total, and of those 60 I think there's 50 sworn and then 30-some that are actually working the road, because we have admin staff. We've got officers that never leave the station. So I think there's 35, 40 that actually work the road, and 50 or so total. [talking about the number of officers in the station]
OE	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	wealthy. You have certain people that live in [City] and [City] that are pretty poor. You have very highly educated people who live in the county. You have people who can't even speak English in the county. You have people who live in farms. You have people who live in-- so I mean, we've got a mixture. You name it, we have it. And that's--
OE	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	Well, no. Well, kind of. So our department is broken up into six districts, so it's six geographical areas. So for example, this area's patrolled by what's called our sixth district. So the K9 officer that is assigned to this area would be on their channel, which we call channel six. So typically, you try to stay in that geographical boundary.
OE	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	...And inside these districts, the geographical area is then split up into what's called beats, and those are smaller geographical areas. And they split them up due to call volume. So you may have a big geographical area, but that's because there's not a lot of calls, or you may have a very small area because there's so many calls that they got to shrink it down

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								so that you're not running all the calls and nobody else is. So with your car number, it coincides with what beat you're working
OE	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	Yeah. Yeah, so I have another person that comes back and relieves me, and so I run my-- generally, I run the standard eight-hour shift, but sometimes it goes over. If it goes over, they give us overtime for it, then we'll stay. But for the planned ones, we are-- the unplanned ones is the ones that you'll just be doing overtime for. But the planned ones, we have a schedule. So I'll do my shift, another person will come in, another person will come and relieve. That's three, broken down in three shifts.
OE	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	I'm a believer at this point now that we're kind of unique here at [City]. We have multiple federal agencies all around us and we have to work in unison with them. But whatever the event, there's only agency takes the lead. So finding that balance is kind of hard because the [City] Police is the primary agency in the city regardless of who else is in here.
OE	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	So under us in special operations division, so all of the specialized equipment, so squat team, helicopter, canine are part of our bureau.
OE	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	It varied. Some people didn't want to talk to you. Others were very friendly. And it could vary by block. It's not even neighborhood by neighborhood. It's literally one side of the street's friendly. The other side isn't. And even within one building or even within one family, one person's cooperative, one person isn't. So it's very varying, but also, I think it depends on their past experience with law enforcement.
OE	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	So in the Third District where I used to patrol, there's a lot of people on foot because there's a heavy nightlife area, and bars, and restaurants, a nightlife zone. But in other districts such as the Seventh District, there's less foot beat officer because it's more open. So it really depends on the patrol district.
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	It's always the same county because that's our jurisdiction. That's for the agency I work with. There are six districts in our county currently, so we work one or two of each of those districts.
OE	LE	S	Field	36-45	21-30	Male	LE-S-037	Well, typically, the busier districts like 3rd Districts, [City], usually there's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					a dog down there. And [City], there's typically a dog down there, because they are the busier districts for dog calls. So if you're up north in the [City], [City] area, sometimes there's a [City] city dog working, so that helps alleviate some of the pressure. And so you will work both [City] and [City], or sometimes you work [City] and [City]. Those are typically your overlapping districts, so.
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	...I would say on an average midnight shift - and again it depends on whether you're working weekends or weekdays - I would say an average week K9 calls, we probably run 8 to 10 K9 calls. Now, when we're not running K9 calls, we'll back up patrol officers on domestics or any other just general police calls that we're close to or we're able to help them with.
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	We do each have either one dog or two. Half of the unit has two dogs and half the unit only has one. And currently, each of our people that has one dog has two disciplines, meaning all of our dogs are patrol certified. So that does people, tracking, evidence, that kind of stuff. And then, they would have a detection side, so they either are a narcotics detection dog or an explosive ordnance detection dog.
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Yes. We have a central office. We're considered what is considered a central unit, meaning we have a central location, and we run the entire county from there. So we're not at a district station, and it's-- so that's where our office is. That's where our sergeants' offices and all the K9 handlers' office are there. So that's where we-- all our equipment is for training and that kind of stuff.
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	I mean are you looking for demographics or-- like [County] is a little over a million people.
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	And just a county. I think it's geographically a little over 300 square miles, give or take. There's 1,100 sworn police officers. So I guess by agency size, that's about midsize. I mean it's not like a Chicago or a New York, but that's still a lot of police officers, but realistically, it's less than what we should to serve a million people. We should have almost twice

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that to adequately serve the community. But we're fortunate that it's still a fairly quiet community.
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	We are what's considered a single-officer car, meaning there's only one police officer, and with us, a dog.
OE	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	No, it varies. There's different districts within the county. And there's six different districts. So if I'm working the road, I'll get assigned a district or two, maybe three. It just depends on how many dogs are working. One of the things the sheriff's office does is we provide security for the courthouse, and we transport inmates from the jail to the courthouse. So we rotate through-- our canine unit rotates through-- we work in the courthouse and then we work on the road. So if I'm working the courthouse, I'll do the same thing. I'll prepare my dog for the day, and drive him to the courthouse where we'll help and assist with different aspects of the job. Whether it's trailing a transport vehicle full of inmates or just working within the courthouse, helping out the guys there. Guys and girls there.
OE	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	Well, the sheriff's office is located-- the main sheriff's office is located in the circuit court building, and the K9 office is also in the circuit court building. So anytime I'm working at the courthouse, I respond to the station.
OE	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	Right. Because we have different shifts, we're generally not there the same time. There are times where we overlap, but if we're overlapping, unless we all need to be there for a roll call, it's very rare to have us all in the same place at one time, because of the shifts.
OE	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	It's a diverse community. There's different rural parts. There's urban, there's suburban parts. It's actually a very-- it's a great community to work in throughout the whole county. It's a, like I said, a diverse community full of good people that we're here to help.
OE	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	So, I mean, it works very well. We have a large group of individuals, so our command information center is kind of like the hub, 24-hour operations center, like a watch center that you might call, where

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								information from all the patrol districts as well as we're also watching what's going in the regular media. We're also monitoring multiple phone lines and things like that coming in the FAA, the Secret Service, capitol police, things like that.
OE	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	And then those folks who are inside our command information center, they're pushing out information. So they're using social media. They're using your Twitters and your Facebooks. They're pushing out traffic information.
OE	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	So believe it or not, we actually work very well with the federal law enforcement agencies here in the city, and it's because we have everything that we do - I don't want to say everything - but a lot of things we do, we do together.
OE	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	We do a lot of interagency collaboration and coordination, and then all the NSSCs, so the State of the Union, the Inaugurations, a lot of these Summits, Nuclear Summit, African Leader Summit. Those are all NSSCs, so Secret Service takes the lead planning role, which means they're responsible for making sure it's planned out. But that's not to be confused with who's in control. We work as a unified community structure here. So it's a federal city. There's lots of people. Everyone wants to know what's going on. Everyone's kind of got an vested interest so there's kind of two ways you can go with that.
OE	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	all the museums are here, so you get charter buses. Because, I mean-- and the demonstrations, I mean, you've got the Million Woman March that was here after the inauguration. So it's things like that that brings in thousands of people to the area that wouldn't normally be here. So you have to have all that increase-- and a lot of those folks, they don't come to [City] all the time so they're not familiar with the area. They maybe traveling from very far away or internationally. So when they do get here, we want to make sure we're putting our best foot forward and then helping them, communicate with them, and keeping them safe. So.
OE	LE	U	Supervising	36-45	11-20	Male	LE-U-039	Sure. So, yeah, fire and EMS. So whenever we get special events and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					things like that, they're all involved in the planning. So one of the key things is making sure there's adequate EMS and fire resources.
OE	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	...Well, we know if it historically happens here, then we can do some target enforcement there, we can reduce the crime. And we know that the majority of crime happens at very few locations. So if you can target those locations where you have a high propensity of crime, you'll lower the overall crime within the area, within the city, or the district. So making sure that we're focusing our resources that we have, they're limited, obviously.
OE	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	Oh, sure. The structure of most law enforcement agencies is a paramilitary structure with a chain of command. It starts with an officer, sergeant, lieutenant, you go up in rank. Our office is an assistant chief's office. We're one step away from the chief of police.... We receive a lot of correspondence from the Special Operations Division regarding requests for our event details like funerals, retired law enforcement officers. So we make sure they fit certain criteria before we give them to the assistant chief for approval.
OE	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	And so it's a totally different function. And yeah, if we ever become a state, we'd be the state police. But then there's all the what would be city police, like we have FBI police, we have Capitol police, we have United States Secret Service Uniformed Division. So there's a lot more law enforcement in the area too.
OE	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	It's cross-jurisdictional. Secret Service has their little piece of the pie. The FBI police has around their building. You could walk out the front door of a building and from the building to the sidewalk to the street, you're in three different jurisdictions. You walk out the back of the FBI building and you go on the sidewalk, that's Park Police, and you hit the street, which is us.
OE	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	Sometimes if, this happens with Special Operations a lot, is you don't have a home base. One week I'm here, then if I go to seventh district to handle something or somebody's going to the first district, then you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have to go in and log in on of their computers to do a certain report. Or some cars don't have computers in the car, so you have to go back to the station. If you're not at your home base, it can be a little disruptive because you can set up your computer safely to be able to have access
OE	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Yeah. It's a really nice community. We have, I think, 40 or so-thousand people here. So I think we're considered a smaller, middle-sized city, probably and definitely on this lower side of that middle size, but we're not very big. Not a lot of big city. I mean, the buildings are starting to grow a little bit. A lot of residents. A lot of people. It's a very large community. A lot of residential homes here, apartments. It's fairly diverse. It's becoming more and more diverse which is great. I would say it's probably a middle-class area, I would say, give or take. But overall, it's a great community. The woods, we have all the trees, hiking trails--
OE	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Yup. Close to the paths and the mountains to go hiking. Close to [City]. So we're 15 minutes from [City]. So it's pretty good. And then you ride through. [Street] goes through us, so.
OE	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Yup. Yup. Check calls and then, depending on my schedule, like today, I don't have a lot on my schedule. So another part of my job is Salmon Days. It's a big festival that we do in October. Every city has a big parade and stuff. We do ours in October, first weekend of October. I'm in charge of that. So--
OE	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Yeah, some people. But I definitely try to keep those relationships going throughout the day. But it's a great environment, very positive. I love it here. I mean, I get to sit down and talk to the chief often. I talk to my commander, [Name], out there. I talk to him.
OE	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	I figured it didn't matter. But yes. So it's a nice environment. It's a very open environment. We're not a big city so we do talk to the chief. We do wave at the chief. We do talk to him. In some big departments, you don't ever see the chief.
OE	LE	S	Other	36-45	6-10	Male	LE-S-027	Yeah, so many woods. So dense. It's hard. I mean, for us to go into the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel					woods at night-- we have night vision and infrared here. We have goggles, which we use sometimes. I mean, I'd rather have the helicopters roaming around safer up there and giving us a more specific location, so we're not-- they can still hide from us, still hurt us, so.
OE	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	This is a town that's growing very fast. I've been here for almost 14 years, and we've more than doubled in population.
OE	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	So we've gone from a kind of pretty small, although not tiny community, to being a more metropolitan group. So this community is very concerned about-- there's a lot of-- what's the right word here? Very concerned about the environment. We have a lot of hiking trails out of town. We're seen as being kind of a gateway to the Cascades, so our community is very much about both protecting and using the environment recreationally. Again, we have a state park in town. We have another county park in town which both have hiking trails that go out of them that are widely used and very popular. Just south of town we have an area where people do paragliding, where they come off with a-- so it's kind of cool. You'll see them all up in the sky, yeah.
OE	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	So we have a pretty-- our community's pretty diverse. We have a lot of population that works for a lot of the technology agencies in the [City] area because we're situated at Interstate 90. It's a really quick run into downtown [City], or into [City], or whatnot. Whether it be Microsoft, or Amazon, or whatnot, we have a lot of individuals that work for those agencies. So we have a pretty diverse community. Wasn't prepared necessarily to talk about the city in and of itself.
OE	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	So it has a real-- it has a very little-- the downtown area where we are now has a very small town feel, but this has become a very large city where we have a lot of big box stores and stuff like that. But it stretches outside the downtown area, so this downtown area feels like a-- this little tiny town, which it used to be back in--
OE	LE	S	Supervising	36-45	21-30	Male	LE-S-028	That is the one thing that we do when you look at issues that we face.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					Traffic is one of them. We are a hub for southbound traffic into [County] where a lot of people live. So a lot of people come through [City] on kind of more country roads to get to [City], or to [City], or to [City], so.
OE	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	I would say it's a middle class community. Middle class and between middle and upper class, for the most part.
OE	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	I started in a very small city in [State] and there were only four officers in the department I started with. So I mean, we're talking-- was it '93? We didn't have computers in the cars. Up and where I started my career, they still have to change in between the different repeaters depending on where you are and on-- I worked on [City] and depending on where you are on the island, you have to switch between talking off that repeater or talking of that one. And you have to change it manually on your radio.
OE	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Well, it's our Detective Division. So we don't carry it in our cars. It's a shared camera. So makes it a little bit more-- you have to remember I might need the camera or you're coming back for it, so. And then we don't have a real quality video system. I mean, we have an older video camera that can be used, but it's not real high quality because that technology changes so fast. If you invest in it, a year later it's worthless. And so having the ability to do that in a better realm. And then for us, we've looked at systems to record our interview rooms because a lot of times just like you've thrown the recorder down here, we'll have to do that in an interview. But you go to other agencies, and you go in the room, and as soon as you close the door, the whole thing, it starts video taping you and recording you, and so--
OE	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Very diverse community of about 706,000 people now, so medium-sized city. A little bit of gentrification going on in the east, central area. I honestly don't know the racial breakdown, but very, very tight communities. We have what are called the micro community policing plans that are actually broken down by neighborhoods, so we have policing plans-- it's kind of a national trendsetter the department was. In that, you actually have identified neighborhoods, there's about 56 of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								them I think, something like that. And we have community councils in each of those neighborhood groups and they go, "Listen, these are the priorities for me." Maybe it's car prowls, maybe it's burglaries, maybe it's night clubs, may be it's whatever. And so we have--
OE	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Yeah, every neighborhood can be a little bit different. Now, there's a lot of commonalities but we've actually tried to get to the point where the [City] neighborhood may want us to work more on car prowls while the [City] neighborhood wants us to more be focused on night life issues because they have a really vibrant night life there. So I guess that's some very, very organized communities--
OE	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	It goes up and down. What unfortunately happens sometimes, and the reason we have the liaisons that communicates with these folks is there will be a new story about something, about a contact between an officer and someone in the African-American community and it'll turn into a news story and emotions will flare, but then the goal is to have this liaison that they can reach out to and go, "What happened?" And we can try to provide information to the degree that we can. So I think it's pretty successful. It's important that we continue to do that. But again, it turns on what happens if there's a bad news story then we usually have some damage that we might have to repair.
OE	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	I think they have limited applications. [City] is a very surveillance sensitive location. We actually had drones at one time, and then people went crazy about it. I don't know from a political standpoint that we'll ever get them back. I think they have limited applications. We have a couple of huge-- like Discovery Park is almost 700 acres. Well, searching that for a lost person is pretty difficult, but you can put a drone up. Especially with a forward-looking infrared, you might be able to find them. I wouldn't be a big fan of them for routine patrolling and that kind of stuff. It is a little too big brotherish for me. But for a barricade, being able to put a drone up to get a view of the house to purchase barricade in, or looking for lost people in like Discovery Park or something, I think they'd be phenomenal.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Yeah, they should. But for specific reasons, for specific incidents or reasons I think they'd be great. But again, very sensitive over here. Any kind of surveillance technology is something that get's people's attention right away.
OE	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Probably administrative. The precinct is a patrol function. I provide patrol services to the geographical area that is the East Precinct. The working day is divided into three shifts. We call them watches. And so each watch has a number of patrol squads that are supervised by sergeants. And then there's a lieutenant, who is a watch commander over that particular part of the workday. So the operations lieutenant has everything that goes on in the precinct other than patrol functions. And so my job is largely administrative as opposed to operational. But because the captain has overall responsibility for the precinct, then whatever task he assigns me, I accept. But it usually is outside of the pure patrol function of the precinct.
OE	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	I think we have-- it fluctuates a little bit. But roughly, 125 officers and sergeants assigned to the precinct, officers, sergeants, and lieutenants, so--
OE	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	They're all patrol. Yeah. Well, except for the four officers that are assigned to the Community Police Team. And there's a sergeant and six officers assigned to the Anti-Crime Team, which is it's a uniformed assignment, but they're usually tasked with specific crime-related projects. They're often engaged in doing anti-narcotics type of work. They will do search warrants. They'll do narcotics operations. So they're kind of halfway between a regular patrol squad and a SWAT Team. It's their function.
OE	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	The East Precinct is a very diverse group of neighborhoods, and so geographically, it extends from the ship canal on the north end, which is the dividing line down to the [Street] on the south, then it goes from [Street] the freeway all the way east to [Lake]. So it's a pretty sizable chunk of geography, but within those boundaries, we have some of the richest neighborhoods in the city and some of the poorest.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	It's quite a bit of extremes, and so socioeconomically, it's very diverse. Racially, ethnically, it's very diverse. [City] is not particularly diverse when it comes to political views, so in the East Precinct, there's not so much of a recognizable right and a recognizable left. But we have a lot of residential areas. We have some very dense population areas in the sense of multistory, condos, or apartment buildings. There are quite a few businesses. The [Street] Corridor is a mix of business and residential. There's not a lot of industry in the precinct, but there are some little pockets of more or less industrial-type neighborhood, not heavy industry, but-- so it's a very, very diverse community. It's both fascinating and challenging to provide police services because not only do individuals expect different things from the department but specific neighborhoods expect different things. And so it's a bit of a challenge to deliver the services that those neighborhoods asked for in a consistent manner.
OE	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Don't use it that often, and radio could just tell me and we'd both switch to that. I think it's Mars or something. Sometimes, the helicopter goes up. It's run by the [County], but they are on our frequency and are aware of our policy or radio procedures and so we can listen in that regard. It would be nice if we worked better with [State] State Patrol because sometimes we interface because the freeways go through our precinct, and usually that gets transmitted through 911 and there's a delay and--
OE	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	And I think they came up with one other thing that may have been an issue for that precinct. Somehow that precinct kind of got off course and did things in their precinct, radio procedures-wise, a certain way, and that should be a conversation with that precinct, and not at the officer level but a supervisory level, not sending out an email to the entire department.
OE	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	My captain, he runs that precinct and he goes to a lot of meetings and he gets-- there's a lot of databases that he uses regularly to look at to assess his precinct and his job in his precinct. Well, he pushes that down to us. I have been here long enough to-- I know the information

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								he's showing to me, but it means nothing to me. For years and years and years, police across the country were supposed to report to the FBI certain crimes. I don't know if you know what I'm talking about.
OE	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[RE: the difficulties of work being a both exciting and challenging] I'd say absolutely and probably on a day-to-day basis. I used the adjective earlier, dynamic, and I think that plays into that. It could be a pretty routine day until something happens. And then the day completely changes. It does a 180 and you're off doing something else completely.
OE	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Yes. I think it's important to note to on that note that our particular 911 center is the primary public safety answering point for the city. We'll receive all inbound 911 calls, but we're a police-disciplined dispatch center only. If it's fire or EMS related then it will be transferred to the fire alarm center's 911 center which is our back up down the street, and they field and then process all of the fire and medical calls.
OE	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Yeah, I think so. I think it's sufficient. I'll give it that. It's sufficient. I think, and [Name] could speak more to this, but I think more on the data gathering side you're ahead of the curve, especially compared to a lot of other departments out there. There's a whole lot of data being ingested, analyzed, spit back out in various different reports and things, but the technology from an operational point of view is sometimes kludgy still. It's got the old kind of Windows 98, 2000, XP feel still. In the world of public industry providing all of this stuff to everybody, the expectation's way high for the public when they interface with people like us at public safety and we don't necessarily reciprocate that with the technology we use. I say 10 years ago, like [Name] and I were wizards; we could make anything happen because it was still sort of new and developing. I feel like things have gotten a bit stagnant in the technology realm.
OE	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] We have a public information office too and so they utilize things like Twitter. They have a very heavy presence on Twitter, social media, things of that nature.
OE	LE	U	IT	Not	Not	Not	LE-U-032	[S3] And that could be a scaling thing, too. I think if you're in a smaller

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Specialist	specified	specified	specified		department, that'd be much easier to keep consistent. I think at this size, it's way more difficult.
OE	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] Yeah. And we're way ahead here in [City]. So I know that I could probably go to 50 different cities, and we're still back the way that I remembered it, growing up, right? So we've got a long way to go.
OE	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Right. Well, I'll just put it this way. We have a unit [stood up?] now, and I'm sure several [other?] departments across the country for just that thing. Privacy, transparency, public disclosure. Those are two separate units. And there's people needed to staff those and then try to make those decisions and sort of navigate that course.
OE	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] I'd say overall it's professional above everything else because officers or first responders aren't mingling in dispatch center. I don't even think our call takers or dispatchers know half of the people, at least personally, face to face that they're talking to and because the department is so large. I think that could be a cause for no relationship in general except a working relationship. Then you have others who do have relationships at work, outside of work.
OE	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] So, yeah. I've seen, yeah, a lot of retirement. Has been some attrition naturally because people leave or whatever else. But again, overall, tough and resilient. No matter what, they get the job done. But you're going to-- in a high-stress environment like that you're always going to have some fireworks potentially in relationships. Not the good kind.
OE	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] We're having those discussions on the national level at conferences and with standards providers like [NINA and Apco?] and all of that. So we've been talking about this for years. But data can travel at the speed of light from all sorts of different directions, but it ends up at a human still. And then the human has to be the one making decisions on what to do with the data. Every day it seems like we're adding more stuff into the dispatch center. More responsibility, more technology. And you do. You see that kind of fatigue or burn-out already happening. To answer your question, if we're going to be bringing in live-streaming video from

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								somebody's phone who just got robbed at gunpoint, somebody who was suicidal, things that maybe a dispatcher didn't necessarily sign up to do when they picked the job either. And so when we get in that realm of multimedia, I think it will change things drastically. We have a real-time crime center here. It doesn't necessarily marry with the comm center as well as it maybe should. Maybe in time it will, but those are discussions we're having in the sense of if the real-time next-gen 911 stuff can be handled by something like a real-time crime center because it's a direct interface with the crime going on, or we're sending that data to patrol officers who are en route to that particular crime but strictly keep voice call and dispatch at the dispatch center. We've had those discussions, and I don't know where we're going to go with any of it yet, but it can be talked about nationally, and--
OE	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] Essentially, operations is our client in a lot of work. So, essentially, all of operations' needs from a technology and mission-critical systems perspective are facilitated through our organization, and that includes everything from computer-aided dispatch, radio communications, all other administrative types of computer needs. Also, interfaces with other outside jurisdictions that we work with and partner with, and including some of the technologies that other agencies provide, like the Information Technology Bureau that provides the call handling system, which is our telephony portion of the 911 system, the logging and recording systems that are implemented. And I didn't bring it with me, but all of the technologies are integrated in the PSAC and PSACs in a manner where it provides the greatest uptime and availability to the 911 call takers and dispatchers that operate in the center. So there's a lot of incident management, change management that we have to facilitate on a day-to-day basis, plus the implementation of new technologies that replace the old technologies. So there's a lot of coordination within the center as it pertains to the systems and the infrastructure, and that's what we facilitate.
OE	LE	U	Not	46-55	Not	Male	LE-U-041	[S3] ...2e have very generous breaks. There's OSHA guidelines. Two

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			specified		specified			hours they have to be up and away from the screen. So no individuals up on the work floor are working at their positions more than two hours at a time, and they get their meal and scheduled breaks in as well. There's overtime that's voluntary and there's overtime that's mandated if we do not get enough volunteers. There's sign-up sheets. So I hope I answered that question.
OE	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] ...The operators have assignments as per avenues. When you go upstairs you'll see avenue A, B, C, D, E. Then the dispatchers, it's geographical. They'll have [City], [City], [City], [City], [City] dispatching. So they will be assigned-- it's broken down by zone as well. So the boroughs are broken down but then even further you'll have two precincts, for the most part, per zone and there's several where you have three precincts. And they'll have that exact assignment, zone 15. So they'll look at the board then know they're going to zone 15. If they come back from sick leave or something like that then they'll actually walk into the supervisor and the supervisor will return them back to work and give them an assignment.
OE	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...And they're specialized and so they only primarily deal with those people in the field. And then there's transit. All our below-ground communication with our transit dispatchers. And that's a unique environment in itself, just handling the underground communication aspects of the police because it's really Transit Authority but it is an outside jurisdiction but we police it. So the Transit Authority runs the trains, operates the trains but [City]PD is in control of policing the below-ground subway stations. And so those are pretty interesting and challenging aspects, right?
OE	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	Then there's also three zones that have five people working. They do even better with the breaks, such as citywide. So now there's five people working covering three zones. So even though you're assigned to a zone you're not going to work that one zone all day because it's going to be two zones between three people. So you may work just, say, zone 15 for two hours then you move to zone 16 after your break. So you'd go on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								break and then you'd come back and it's like a rotation.
OE	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] It's pretty good. We're always trying to make the relationship better. There is a slight separation. The officers in the field are uniformed members, police officers. And the civilians are dispatchers. We're always encouraging the uniformed officers to come here. Well, we even mandate it when the new academies come through. So we do it for several months. They all come in while they're still in grey shirts, which means they're still not police officers yet. And they sit down with the dispatchers and they sit down with the call takers. And I think every single one of them is amazed, especially by the dispatching, how much multi-tasking. Every class that comes through, they're just-- so we're always trying to encourage it, to make it-- we're all one team. It's the [State]PD. And we're always trying to make the relationship better because police officers can be-- in any jurisdiction, I think they can be a little rough sometimes.
OE	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] We have them, meaning our citywide dispatchers, go to ESU, as well, at Floyd Bennett field to see all the helicopters, the trucks. So we want the dispatchers to know why certain things are done the way they are, to give them a better understanding so they buy in and they accept it. We're trying to make the relationship better and better, but I believe it's a very good relationship.
OE	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	Everybody. And we do that for-- it goes on for a couple of months to get the whole police academy, depending on-- say there's 1,000 police officers. We bring every new police officer while they're still in the academy. They actually come in this room, and they sit at this-- all these chairs. And we bring in-- I'll speak with them, the captains will speak with them. Then we give them a tour, and we have them sit down. And sometimes, we bring them down after so we can answer their questions, but we feel that that's made a big difference because I don't think it-- and I'm not saying it because I'm the commanding officer of the 911 center, but I don't think any police officer doesn't have a newfound appreciation of what the dispatchers do, because you'll see-- especially a busy day.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								We do it on day tours and the 4-to-12s. The 4-to-12s, it's 1,500 by 23. We call it 4-to-12s. It's just our language in the day tour. But the 4-to-12s is very busy. And the dispatching is just-- you'll see when you go upstairs if you have time for that, if that's part of it. But you'll just see how busy it is.
OE	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] ...So, absolutely. In the [City] we have what we call the quiet room. We have some areas here in the EAU room, but not a dedicated quiet room the way we do in the [City]. We also have a gym in the [City] that people can go and work out if they're feeling stressed, or just to stay healthy. It's part of any call taker. It's a stressful job, and we do our best to help them. And they have a very active union here that they can also speak with the union or get tips or pointers.
OE	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...So, for example, World Trade Center campus, we have special communications systems that are deployed within the facility and within the campus that allow us to get our communications within the facility. But then also the Port Authority has other systems that they can turn up, and we can patch to those systems. So there's a lot of unique geographic and jurisdictional areas and challenges that we have to face, but for the most part we have them covered through existing interoperability that is documented through sort of tactical interoperability plans, and there's SOPs that are put in place.
OE	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...So we've worked some of those challenges. We fixed [County]. We're working with [County]. Then we have to work with [State]. So it's different because we have to deal with three different jurisdictions. We're done within [State], different county of [State], and then [State]. So we have to deal with the state up in [County] because the state handles theirs, [County]. So 911 in itself has its challenges from a call-handling perspective.
OE	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] Well, we have other data scientists that probably will be able to better answer that. I don't know. But, again, there's the counter-terrorism aspect of that and then there the day to day, kind of--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] Well, we have the mayor's office of operations that looks at all that kind of stuff and they post the 911 stats online. And they have a lot of statisticians that that's their job and they look at a lot of those types of things. So that's where you start to see the other entities, like mayor's office of operations with police and fire. Those are special groups. They're special groups that we have, for example, and steering committees that look at all of those types of matters. And then we have a steering committee that deals with technology and those aspects. So--
OE	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	And so we do have pretty good analytics just on that. And, as he said, they have the mayor's office of data analytics as well. But my stats unit-- and also precinct COs, that's the commanding officer of his precinct, he also has access to all these types of stats--
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	So my primary focus is narcotics and drug investigation. So that includes running a confidential informants, buying controlled substances, looking at groups of people who are-- there's a group of people, six people, selling meth. You look to see if there's connections and then if you can build a case out of that. Then whatever else they need me to do. Last week I was teaching a class to eight-year-olds about drugs. I'm also a [Job title]. So I go round the state and actually all over the West teaching about the drug impairment and drunk driving, teach all over the State about marijuana and the impacts, teach at the academy and so on... at [College] in the hood.
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...At some point, I will eat at my desk and just try and weigh through my to-do list as much as possible. As some stuff comes in, we're somewhat reactive, in that, if needed, we will react to it. And there's a triage that you just go through your mind of what needs to be done now. And if there's nothing that needs to be done now, what task can I do to get done the quickest, just to help clear stuff off my plate?
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	This is ski town in [State]... it's a unique area, it's 1,800 square miles of the county. There's places of high-density people, people density. But it's mainly along the valley floor. Then there are outline areas where-- along the valley floor where all the people, you've got all the technology, cell

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								phones, radios, everything else. There's some places out ... in the county, where it's you and God. And if you're atheist, well, it's just you because there's nothing. There's no technology out there. So there's that aspect...
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...There's approximately 50 to 50 thousand residents of the county year long. But on weekends, that can bloom up to 150 to 200 thousand depending on what's going on in town. I don't know how many hotel rooms there are currently, but they seem to be doubling all the time. We have a county turnover. I shouldn't say county, a population turnover of your people that live here. Probably a majority of people live here for five years or less, and then they'll move away. And all this is not scientific, just that I lived here for 16 years now. But they come. People come for those skiing. And then they stay for the summers, and then eventually, cost of living is exorbitant. We're ranked up through with San Francisco, New York as far as cost of living and everything. MSN put this last year as the number one most expensive place to vacation in America. So it's expensive to live here. It's comparable to living in Hawaii. I went to Hawaii last year, and everybody's like, "Watch out for the prices." I'm like, "It's the same. The same shit that I pay at home. Not a big deal." ...
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...Our population of tourists turns over every weekend. Summers are just as busy as winters, not just the skiing. But they fly in on Thursdays, party like rock stars all weekend long. Eat too much. Drink too much. And they're probably good folk. But they left their brain at home, and they just do some stuff here they probably wouldn't do, whether alcohol, drugs, all the above, with marijuana being legal...
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...I used to go to a CrossFit gym close to here and across the parking lot. Literally, we shared a parking lot with a marijuana dispensary. And you could watch lines of cars just all day long in and out, in and out. And they're all out of state plates, or they're rental cars. Rental cars easy to identify. They've got little tags in the back window. So being a cop, you spot this enough. So there's that. And then what that doesn't- so you have that mentality of people come here to party. But there's also a local mentality of the service industry. And they're the ones serving all these

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								people. So then Monday, Tuesday, Wednesday when-- the service industry's days off. So they partied like the folks that were here all weekend... Same thing, drugs, alcohol, all of those...
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: ski town narcotics office caseload] ...actually, our busiest times of the year as far as the Sheriff's Office goes, are the shoulder seasons, mid-April to about Memorial Day and then from basically, October 1st to Thanksgiving. When the mountains are closed, there's no tourist here. In spring they call it mud season because it's just muddy and ugly. You can't really do anything outside. But there's no tourist to occupy the local population. So then they party like rock stars even harder.
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	And the dynamics are super weird here because we have-- there's a restaurant. There's a sushi joint in [inaudible]... There's that type of top end. [Name] got a place here. As time goes, we get more and more celebrity chefs. They have events all year long at the various ski resorts where they bring in celebrities from around the world. There's a minor middle class of cops, firefighters, and teachers. Our teachers are paid shit. They wonder why they can't keep anybody, but they're paid 30 to 40 thousand a year. And they can triple their money by going to [City]...
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...So there's that, but then there's a high illegal population, high population of folks from south of Texas wherever they were. And then you have the top 1% of the top 1%. I've literally gone from calls that one of the top ten richest people in the world's house to one of our local trailer parks, where they're renting out space underneath their trailer for people to sleep. And this is January, it's 30 below. But the people that are sleeping under the trailer are just here. But even though they're sleeping underneath the trailer, it's cold, it's still better where they came from, and they're still making more money. So there's a weird, weird dichotomy... It's extremes.
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: department issued iphones] ...We just got our patrol but everybody at the Sheriff's office has an iPhone. Text messages between co-workers and bosses about things you can need. And sometimes it's as simple as, during the workday, "Hey." I'm interviewing somebody in the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								jail, "Can you bring me a form?" Cool. Or it can be 10 o'clock at night, "Come find me in the morning," or, "I need to do this in the morning." And some of that bothers me, some of it doesn't. That's why I try not to go through the emails. But some of them are-- there's a lot of junk mail. And being me, I get my Cabela's emails sent to my phone. So that way I just-- but on weekends, I'll spend 10 minutes at a time just waiting through it. I haven't gone on. And I've just waited through...
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...So it's 10 o'clock right now on Tuesday. This is my first day of the week. And I've got 68 emails to go through. Of those, will they result in more work or--? I don't know. I mean, I'm just scanning through them. And some of them, I can just delete right away. But of those, I think [inaudible] refresh 76. But there's probably 30 that I need to look at, I need to do something with. So there's a lot of emailing. Phone calls, all day long. There's phone calls.
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Both. But I try to use my desk phone more because I'm inside. And maybe it's because I'm in my 40s. So it's just as easy for me to pick up a desk phone. Plus I got the big foamy things so I can rest [inaudible].. Also hands-free. So I'm like this, and I can still type. But yeah, both desk and cell. And I've got a car that's got Bluetooth. So I've got my phones wired through that so I can talk as I'm driving down the road. And that happens quite often. I got police radios. I got one in my office. I got one in the car. And everybody, if I don't answer my work cell phone, they have my personal cell phone. So they'll call me in there. Thankfully, that tends to be more trash-talking. And that I thoroughly enjoy. I should cut down on my trash-talking. But at this point, I'm enjoying that.
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: department-issued iphones] So the detectives got them and command staff got them before everybody else. Patrol just got them the last year and a half or two years. And I want to say I've had one for-- well, since the five came out, so probably three to five years. They don't buy some nice ones. I mean, the one I got now is a 5C. C stands for crap [laughter]. But we get the ones that-- they're not upgraded if I break it. I might break some stuff. I'm kind of clumsy like that. Because they'll give

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you the new Penny phone, the new Penny iPhone. I'm like, "I cracked the screen on one of them. I'll just go get it fixed. I'll pay you the 20 bucks." ... No, just give you a new. And everything is backed up through our cloud. So it takes half an hour to swap everything over, so is what it is.
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: apps] Google Translate, which a majority of the two languages most spoken here are English and Spanish. The third would be German... In [State]. But there's a lot-- I shouldn't say a lot. There's a contingency of former Eastern Bloc countries here: Bulgaria, Yugoslavia, Czechoslovakia. So they all hang out. And Russians and other-- Russian's coming up. Like [City] PD, there are so many Russians there that they send their guys to Russia. And so they learn how to speak some Russian.
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	So there's that. But yeah. English, Spanish, and German are the three most spoken in [State]. I know people that, if I need to, I can call, and they can handle all of those. We have deputies that speak Spanish. We have deputies who speak German, deputies who speak Portuguese because we get a lot of the ski resorts. They bring up people, and I think they're J-1 visas. So they bring a lot of South America. And then you'll get Portuguese up here, and they commit crimes and-- I'm sorry not Portuguese but Brazilians who speak Portuguese. And then so we've got somebody that speaks Portuguese that can speak to them. And their eyes about fall out of their head when they run into somebody because-- but if you run into somebody that speaks Mandarin, you're not going to know it's Mandarin. You're just going to know, "I don't know what the hell you're saying." We have phone call language lines that we can call up, and they'll provide translators for us.
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE; report writing] Yeah. Yeah. I have to. And I'm old schooled, and I've OCD and everything. So I need my desk. I need my computer. And I kind of have like a flow of how I need to lay out my papers and-- I take notes, and as I put it in the report, I cross it out but in a different color pen because that way I know I did it. But yeah. Our reporting is desktop-based. You can access certain parts of it in the cars, on the MDT. But

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you're twisting yourself up into a nod. And then, the word processor in our report system stinks always. Just garbage. And we've taught everybody. And I was one of the original instructors. And I almost think that I was told this by the company. "Just type at Word, copy and paste."
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	I am very blessed that my office is here. We're off site. I'm not at the main office... So most of our guys are based out of our sheriff's office. But then we have a couple that just lived in different spots. We have a couple substations. That serves the community better. But I get fuck all done when I'm in Eagle at the sheriff's office. There's too many distractions. Like I said, I can handle homicides to hanging Christmas lights.
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	So the front desk folks, if they need help, they have a question, they kick it back to us. And we get a lot of, "Hey, can you come here? I need you for five minutes." Well, five minutes, and five minutes, and five minutes, and five minutes. Then where our office is, it's kind of a-- so for you, it's an L-shaped corner. Our office, the detective office, is between the [Job title], [Job title], and the [Job title]. So everything filters into our-- and it's a corner office. So everything would filter into there, whether it's some command staff just coming in to BS, which is-- it's cool. "We're letting you know we're one of the boys." But they come in there. Or if they have a special project that needs done right away, they come in to us. "We need this done right away." And all you do is say, "Okay." Whatever I was working on, it wasn't the priority. Now, this is my priority. But what happens is they come back to you, "Why didn't you have that done for me?" "Well, it's because you told me to do these three other things." "That doesn't matter. Why isn't this done? I don't want to hear any excuses." So we're kind of a dumping ground of-- we get everything...
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...the other detectives that are down there hate me because I'm off-site... It seems to be out of jealousy. Because they'll go in. And they've got a bunch of paperwork to do. And then they don't type it. And then we shut our door, and then we're told we're anti-social. I'm like... But I got to get this done... So station life is-- life at the office is you avoid it as much as

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you can... Just because you know you are going to get more work done some place else...
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...And being detectives, it's a spot we all have to attest for, and everybody gets picked because of that drive to do the right thing and get stuff done. But it gets very frustrating that the boss is always coming in and derailing your train of thought.
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Yeah. That gets to a point where you get bothered so much. You just lean back. All right. Let's just talk. You don't even try because if you're going to pay me, and you're okay with doing this, then I'm just fine with it too. But that's why a lot of us will work before and after, before 9:00 when the bosses get there and after 5:00 when they leave... Because between 5:30 and 6:30, you can get more done than you did in the previous nine hours.
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	You're called anti-social. I've been called way worse. But all the [Job title], we all have desk or laptops. So we have that ability, but it never feels-- you need to be by a printer, or there's always-- if you go somewhere else to work there's always the price to pay, wherever it is. So I mean, I hate to admit that I do this - and my wife gets pissed at me - but I just sit at home in the kitchen table sometimes because I'm one of these people that's blessed with not needing sleep. So I just will sit and type because it's quiet. And the worst thing I got is a cat bothering me. So it's not that big a deal.
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Oh, no. I talk. I'm not bashful. My mouth gets me in trouble more than anything. I love teasing firefighters. I mean, I call them American heroes and Band-Aid throwers [laughter]. I don't care. I love having fun with them. And there's a former [Job title] now - he's retired - he and I would just start going at it. And it was all out of fun. But if you didn't know that, and the way we were going at each other, you'd think we hated each other. But it's breaking balls. We're out here doing-- they're different jobs, but they're extremely dangerous, and they're extremely important to society. I've been through training, the narc stuff, where you have to wear the respirators and the air packs and go crawling through smoke-filled

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								buildings and-- no. Shoot at me. I'll take that. I ain't going in no fire...
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...the new [State] driver's license, they've got so much information on them. It's - I don't know - like a six font. These guys have literally gone out and bought the Home Depot or Walmart and got magnifying glasses so they can read the-- so you're doing this. There are workarounds, [State], and there's other states that are now going to like a QFR code on the back so you can scan it... But of course, it doesn't work all the time.
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	It's a lot different. Radios have gone from VHF to digital. And in [State], one of the-- I recall, but it was a horrible event. But one of the benefits are there is state-based radio system. So I can talk to-- we'd have to go to a certain channel, but I can talk to somebody anywhere in the state on the radio shy of, I think, two counties who are part of it. So there's that. That's different. And that's awesome compared to when I started...
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Yeah. We get a lot of-- because [Street] runs through the center of the county, and it runs from [City], I think, all the way to just outside of [City] when it hits the [Street] but-- so we get a lot of people that travel through here. The nomadic nature, I guess, of the people who live here, they come here, they go. So you get people that come here. Like I said, every weekend the tourist population recycles itself. So we get people from all over, all over the world.
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...Technology does the lack of communication and the lack of governmental agencies like our [Agency]. it's the [State] version of NCIC, is still primarily a DOS-based. They've added a little bit of color. But it's a very basic code-driven system. They just in the last-- I want to say six months to a year, we got it so we could get driver's license photos. We could always get them before, but you'd have to go through a long-about route. But now, you can just check a box, and it pops up. And we've been getting stuff from Florida, Georgia, other places, where it's built into the format. And some of that is state government. Some of that's federal government. But just the inability or the lack of wanting to change is frustrating. So some of that stuff-- and I mean, a lot of it you think would be just, "Oh, you have a picture of this person? Just put it in there." ... I'm

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								not saying we need a picture of they drive a red F-150. We don't need the exact red F-150. But when it comes up to the plate, it comes back to a red F-150. Show a generic photo of the-- just simple things like that. But they don't have them.
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Well, I am. I mean, I got a car. I got a 4Runner, but I hate it. I had [inaudible] Ford I liked too much better. But patrol cars, there's just so much crap in there that it's tough for me to fit. And there were the different styles of cages. And if I went back to patrol, I'd-- I'm at a point where I could spec out my car within in the sense of, "Don't put this here. Put it on the other side. Or put this piece of equipment somewhere else." So I got that little bit of stroke. But I'm very blessed by that.
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	For our agency, we're not supposed to, but we're down enough people that we have a one to one-- or just about one to one so everybody has their car, which I think is great because you know how that car operates. And naturally, guys that have their own cars treat them better because if it's a pool car, everybody drives it like they stole it. It's kind of like a rental car.
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: radios] No. If we go out, I have one. Yes. But just walking around, if I was going to run get lunch, go to the deli, I don't carry a radio. I don't call out. But I go in plain clothes. And I'm not under the [inaudible]. I mean, I love for vest to get lighter, and stronger, and more powerful, and all that kind of stuff. I mean, my first vest compared to the one I got now, it's night and day.
OE	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Stuff like that would be awesome. They could monitor heat or heart rate or any of those kind of things. We all have wearable technology. And I've got it. It watches my steps, and sleep habits or lack thereof, and all those. And I think those are fantastic. And it's the more miniaturization that we can do. And there are certain things that just could be better...
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	Well, I'm in charge. We have 5 dispatch centers statewide, 6 including-- we have 1 at our capital ESU, but 5 regional and then 1 specific for the capital area. Have 140 employees in charge of all dispatch-related

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								functions-- CAD, computers, in addition to purchasing mobile pac-set radios. And then working in conjunction with OIT with-- they do the actual installs in towers, and those type of things. So a little bit of everything.
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	Yeah. Well, it depends. Currently, we're building a new dispatch center in [City]. Projects today that I was working on, we're actually moving another one of our dispatch centers. We're actually combining State Patrol dispatch centers into the traffic operation centers with the Department of Transportation. So those are two that we're actually actively working, and that's taking up a lot of the time that I have now. In addition, I'm on the [State] FirstNet Authority Board, so working a lot with that specifically, the [State] Plan came out in June. We're doing evaluation in that. So that's a meeting I go to this afternoon.
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	Sure. We have Motorola as our CAD vendor. And we were moving from version 3.1 to 3.3. It's a large step. There were steps in between that we didn't take. So we're moving up to that. And in addition to, not only our communication centers that I'm directly responsible for, but our MDCs, our mobile computers with the troopers. And that's been more of a challenge, test-related. We do have a section that's just in charge of the MDCs and mobile. So I'm less hands-on with that, but still overall seeing on the project, so.
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	Not really. Apps are very limited. We don't issue our officers phones... We do for supervision, but not the individual officers. Obviously, everybody has one. And nowadays minutes are unlimited. You know it's not like the old day. Texts are unlimited. Data is the only thing they charge for basically now so.
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	...when our CAD went down, we went back to manual. And we used to be on a card system, and writing things down on cards and the frustration level of our dispatchers was through the roof because they're not used to it, writing things down. There's very few people left in this business, you don't stay in this for 30 years. So they had no concept of what writing things down were and then the ability, when it came back up,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they had to go back in. The frustration of back-filling information. And so it's gone from a-- when I started, we-- the radio system, we shared channels. It was VHF. So we still had multiple-- we actually had more dispatch centers. We had 17, now we have 6. So, we did consolidate
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	[City] is kind of central in [State], so if they had a BOLO, they could do it. And everybody was on the same channel. So everybody could hear it, type of thing, because of where the towers were located. But the ability then, we were bound by the geographic of a VHF system where when we went to DTR you can talk from one end of state to the other, and it's seamless, and those types of things. So it's been very much a transition but mostly everything for the better. Even the consolidation piece.
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	In a consolidated center, you've got multiple people there to help you all the time. And typically each area doesn't have an emergency going on at the same time. So a lot of pluses on that, the ability to talk and have different channels and those types of things. I've seen it evolve...
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	It's one of those things where it's two-fold. It's one, that when I hire somebody I offer him nights, weekends, holidays 24/7, okay, so right off the bat, they're-- it's not a great scenario, to be at it for a long time. You miss family things, you miss family events, and those type of things. And the addition too, with the younger generation that we're hiring, they don't like that. So they're always looking to better themselves. And then we do an exit interview on anyone and I have always told these people, I've never been mad at anybody, they got something to better themselves. You're a good employee for us, we wish you were staying, but I congratulate you for moving on. But, yeah, it ebbs and flows, but we're at about a 10% vacancy rate statewide.
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	But a while back we had one of our smaller that only has 13 people, but they were down to 8 and so even though they were only down 5 people, the effect on their center was much more than it is for [City]. When you see that even the 10 out of 45 you're talking, you're down 20% maybe, but the other you're down 50%. So then your scheduling becomes a problem... Yeah, and initially people like over time because you're getting

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the money and then you get to the point where, I need a day off. I don't care how much you pay me.
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	I'd say average, we're averaging 30s early... We get a lot of young people. And then we've got some people that are in their 40s and 50s that have been here. They're old-school people that are still bringing the average, but it's more of a younger generation that we're hiring right now. And typically, it's a younger person's job. It's all computerized. It's all typing. It's all those type of things. And the younger generation does better with that. I mean, I'm saying we do get people in their fifties that apply for us, and they have education, and they have the skill. They have a lot of things, but when it comes to actual multitasking and those type of things, it's not as good. And I said, "I wouldn't want to sit down at an advanced age either because it's not an easy job."
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	Yeah, and every day is going to be different, and that's what I liked about the job. When I initially came on, I liked it when it went bad. I was a shit magnet, so [laughter]-- but that's okay. I liked those type of things, but you have to have the temperament and the abilities on that. So it is a younger, I would say, workforce. But a couple years back, when the economy went to crap, we had a lot of middle-aged, 30s, where people were applying because their line of work was not available anymore. So we got a lot of good people out of that...
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	Yeah. So we transition a lot. So we have a lot of differing statewide because we're different. We're not just one agency, and we're not just one in particular agency, so it is unique.
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: text-to-911] Some places. It isn't statewide yet and of our centers, only three of them are 911 centers. Our two biggest ones are not 911 because there are other entities that handle that. Like in [City], [City] has their 911, [County] County has 911, [County] County, all of the large counties, they handle their own 911 then they transfer calls at us. So we're not answering point for 911 here in our big centers. Within the smaller centers, we are the communications center for the counties, multiple counties, those type of things, so we do it all so--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: text-to-911] It has in the-- typically, where we have it, it's in the smaller areas anyway, so it's limited use. I know in the larger metropolitan areas that have it here, they do get more use out of it so--
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	One of the things we have, it's called the Safe2Tell program, which is it's for kids to call anonymously to report incidents involving in schools, whether it's bullying, suicide attempts, all those type of things. It gives them a unique perspective to be able to call into-- when it started to-- it was a toll-free number, totally anonymous. And when we started this back, maybe 10 plus years-- and it was good, it was busy, it was those type of things, but a year and a half ago, they implemented the app and it went through the roof.
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: text-to-911 Safe2Tell program] Yeah, and when we first started is-- when we had just the phones, it came into our [City] dispatch center and that was the only one statewide that it came in to. When we saw the-- we were looking at texting and then the app, we needed to open it up. Oh, and there's also the web bit. They can do it over the web as well.
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: text-to-911 Safe2Tell program] So I said, "I can't have one center doing this," so we gave first the web tips and text tips to our Pueblo, which is our second largest center. And when we did the apps, we gave it to Pueblo as well. But we went from-- when we first started the web was like 75% voice and 25% web or text, and now we've flip flopped it... Yeah. So now we get 20% phone calls and 80% apps or web tips, so.
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	...When DTR came in, when Digital Truck Radio system came in, the ability for responders to be on the same talk group, same thing, share information, is there. We still have agencies who, for one reason or another, did not adopt DTR. They're on a different system, or they're on a DTR system, let's say silo, because they want to control off of states. We do have silos of communication, so we do have interoperability channels with all the different agencies. So there are some that we can still talk direct to even interoperability to multiple systems. But there are some that have to go through dispatch to dispatch. So we have a little bit of everything. A lot of our centers that we dispatch police, fire, EMS, we're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								dispatching it all, so that's a one-stop shop. So we have the ability to go from-- we do everything to-- we have the interoperability and then some we don't have much of anything other than dispatch to dispatch.
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	They all know how to dispatch all of them, but they do rotate through different areas. I mean, so some will do law, and then tomorrow you come in and you're going to be responsible for the EMS, or fire, or those type of things. And they do rotate through each and every one of them because you can never predict on who's going to call in sick.
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	So that's the ability for us to-- and that's required of all of our centers. We have our busy radios with the multiple troopers, and everybody has to have their ability to work that radio. And we get kick-backed sometimes and says, "No, we want our dispatch. We want this dispatcher." And I'm saying, "Yeah, but I've got to make sure this other dispatcher that may not be as fast, and may not be as fast, has functionality in you because your favorite dispatcher may not be here someday. And if the other one has never been there, it's going to be a lot worse."
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	Typically, the way in [State] is that we're responsible for all unincorporated areas... so outside of the city. So when you get to large metropolitan areas, unincorporated could still be very metro, very urban. They have a lot of cops around so it varies as well. So we're responsible for all of those, for anything that goes on in that. So even if it's a domestic going or anything from traffic accidents to motorist assist, breakdowns, those types of things. So we handle most of it...
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	...There are some counties in the state that will cover traffic accidents. They actually have a traffic division. And they do accidents on the county roads. And we still monitor main state highways and major thoroughfares. But they handle their county roads unless it's something big and type of thing. But that's fewer and far between because, on the other side, they're taxed on resources as well. So the first thing that they want to give up is traffic because, well, traffic's the state patrol's problem [laughter]. Yeah. So we're getting some of those back. But we do very

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								well in working with other agencies. We have a very good working relationship with the sheriffs and the local PDs.
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: MDC text-to-speech] There are some that can. We're looking at that as well.
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: patrol cars] Four years. Four years, 100,000 miles, is what we lease them for.
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	...One of the things now, typically, and I'm going to update myself a little bit, that calls that came in were sporadic. For an accident, you might get one or two calls because they either had to go to the next exit, find a pay phone to actually call it in, those types of things. Now with cell phones and everybody, we get dozens of calls for one accident. So the volume, which is good that we're getting more calls, so we can piecemeal better information. But just the sheer number is so much before, so. You talked about, we don't get the information. We got less information before, but now we just have to-- where we run into trouble is when we, our centers, don't get the person to ask the questions that we want answered. We can go from it's a three car accident, or a two car accident, and then everybody's walking around to turn it into a fatality involving seven cars, in reality [laughter]. So that, the information-- we only give what we have, so. I don't know.
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	And one of the things we have in [State], we set up a-- it's Star CSP line which we use for road rage, and impaired drivers. And those calls are directed to State Patrol dispatch centers whether they're in a metro area or not, because we're not taking away from true 911, it's not a 911 call. But they did direct it to us and we typically are responsible for the highways. Those calls obviously go through the roof as well. One of the huge numbers that we have. So, again, it's a technology that we saw an issue and said, "If there's a way we can get some of these calls direct to us, we'd get better information." So we worked with the carriers, all the major carriers, we met with them and set it up. And initially, when we did that, time on phones was an issue, people didn't want-- so we got it to be a toll-free call.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	Florida does have it, and actually, it was one of the initiatives that when I was-- I had went to Florida with my family to Disneyland type thing. And I saw it on that they have Star FHP, so we did some research on that and then got in talking with them and says "Yeah, this is what we do." So then we brought it into [State] and set up the program and got it going.
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	...With our own people, outside different areas, everybody has a different perspective of what's important. For us, our main focus is traffic, but for some PDs, traffic is not important. They're worried about burglaries, homicides, those type things. And that's important to them, it's in their jurisdiction, and this is somebody else's and we'll give it to them, so...
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	Well, I think for me, for [State], I think if there were more reasonable satellite-type of communications because we get into terrain issues with the mountains and no matter how much we use to try to fill in our gaps, we're not going to put a 750,000-dollar tower to fill in one canyon. But it's important for us to talk in that canyon...
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	We have an interoperability with [State] and then it's generated through a radio system. In [State], when we go into [State], we have some of their talk groups into our radios. They have some of our talk groups into their radios. The only problem is if they go to somebody else, our dispatchers lose track of them, so now they're on their system. It's not the best, but at least they're able to talk to the officers in the particular area because we have time gone quite far into other states. But we try to set that up that way. [State] is very difficult. We're having very difficult time. They run their radio system differently, and their legal department has indemnity issues type of things about sharing their resources with others. And so when you start getting into legal problems, I mean, it's, why are you involved?
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	I mean, we do that in eastern [State], which, a lot of times, our guys are their backup, I mean, because there's not a lot in eastern [State], [laughter] okay? So his backup may be coming from [City] or something because that's where the population-- The guys out of [City], so we know these type of places and we have very good relationships with those

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								type of people. But sometimes, when we get politics involved, it kills processes.
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	Well, it's pockets of local influence. And what I mean there is that in the rural areas, rural [State]-type areas, and [City] extends into [inaudible] then [City], but they extend into Southeastern [State], which is extremely rural. All of those entities work very well together. They know that they have to count on the State Patrols for backup. They know that we handle all the Hazmat responses for their areas. So we work very good and very cooperative type of thing because, one, they don't have the resources, they have their own, and they need the state. And the state is very well-liked, very well-received in our smaller areas. Our [City], is in one of our communications centers, we only have one troop there, but we dispatch for 20-plus agencies and they're all local.
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	that's one of the ones where, as I stated, as a State Patrol, we really don't need a dispatch center there, but for the local people, they don't have anything else. So we are there for them. So it's a different viewpoint of how the state is viewed and what our role is in the rural communities. When you get up to end of the metro areas and along the [City], [City] to [City] and up west into the ski areas, these agencies are bigger than us. Statewide, they have more officers, they have more toys, and they do their thing...
OE	LE	U	Manager	46-55	31-40	Male	LE-U-020	What they did is they've put up a silo because now the officers, boots on the ground, where they had the ability to talk to each other. They back each other up. They knew when each other was in-- that because they went on a different system, even though it's the same system, but it's theirs. And now the two cars can't hear each other. And it's been very difficult on the boots on the ground to say, "We lost this, and we can be right here and this other officer can be getting his butt kicked. And we don't know about it." It's going to take multiple phone calls to-- and then dispatches, and time. And it wasn't a good decision, but it was a political decision that they created our own silo. And that's tough, but that's what I'm hoping that FirstNet won't become as well.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...our typical day starts with checking emails for overnight body camera problems. We manage 450 body cameras. So today is a good example of dealing with camera problems that we have to resolve immediately and then doing audits of the body cam system. If there are-- sometimes there are problems with our in-car video camera systems. We're also responsible for that. And then the interview rooms that are in the three district stations, if any problems arose with that-- so we're basically-- start our day with managing different technology issues or different technology-related issues that we have to fix and then figure out why whatever broke broke so that it doesn't continue to break. And then on some days, we're also responsible for all the training for officers that's related to technology. So there are some days where we're scheduling training...
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	So overall, officers go through training, and then they're issued a body camera. And they wear them on a daily basis throughout their patrol shift. At the ends of their shift, they're required to have it on when they're dealing with a citizen. And then at the end of their shift, they dock the camera, the video, automatically offloads. We're one of the few departments in the country who have integrated with our computer-aided dispatch systems. So it'll automatically tag the video as belonging to Officer [Name] and Officer [Name] who's on a burglary call, so that's what this video corresponds to. That eliminates the officers having to manually enter metadata into the video. So that's kind of just overall how the system works...
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...we're just now getting into drone deployment, and I'm sure that's going to escalate and be a big deal in the future. We haven't done too much of that yet... Right now we only have three pilots who are-- can do this, and we've been doing a little bit of training. We have one drone for the department. Hopefully we'll get a budget for a little bit of more stuff, but we are able to do some crime-scene mapping. We haven't done that yet. On certain types of SWAT calls, we're allowed to go out and assist on that part around the outside of whatever the target area is, and we have

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								on one instance deployed a small drone inside of a residence to try and get an idea where the target person was.
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	We have a kind of a homegrown wireless mesh network in primarily just in two or our higher-crime areas that we use to transmit surveillance camera and license plate reader data back to our centralized servers. The body cams, that video is transmitted just simply by-- it's not a live feed, so the officer gets done with their shift, they dock it, and then it uploads to the cloud. We use cloud storage for that. Everything else we store in-house. So I think that's probably about the only way that we transmit video, other than the in-car video system, and it's pretty limited. We only have, I think, 12 cars that have in-car video, 11 or 12... then that video can actually be uploaded wirelessly when the officer pulls into the district station. It can connect with the-- it has the capability to connect with the wireless system and upload the video that way... they don't have to manually transmit anything.
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	we do have MDCs in the cars, and those are connected through Verizon, so it's just a data-cell connection...
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	SME S2: I guess I can speak to it a bit. So different units within the police department have different technology needs. So, for example, we have a fugitive apprehension team that they just go after real bad guys - fugitives that are on the loose, and their needs are much different than our community resource people's needs. So for example the fugitive apprehension team will contact us for surveillance cameras, GPS trackers, license plate readers, that kind of thing, because they're trying to track somebody down. The community resource people, we call them PAR people, they may just contact us because they have a question about security cameras, and they want to talk to a neighborhood group about how to look for a security camera for your house, that kind of thing. So there are really, really disparate needs among the agency, as far as what-- SME S3: The detective might want to know whether one of our [miss?] cameras can view this particular location, and we might have footage of it or had a research a license plate to see where it's been, or

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								something like that.
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	Well, everybody's got a cell phone now, obviously [laughter]. And they're used heavily. They're used a lot. We've got the radios, the portable radios and the radios in the car.
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	And our radio system is capable of not just voice but also data transmission. So it's a P25 Phase 2, so it has data and GPS capabilities. It's really like Motorola's state of the art.
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: radio system] And it is digitally encrypted, and we can communicate with pretty much anybody in the state. And the MDC is the mobile digital computers inside the car...
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	We pretty much have the worst computer-aided dispatch system [laughter] [of all?].
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: CAD system purchase] ...So, yeah. It's been a really, really disappointing process. And that's one of the things just for in technology in general with, I think, most law enforcement agencies is there are many disparate systems that need to communicate, and that's one of the real challenges is getting our CAD system who's made by one vendor to talk to our RMS, records management system, who's made by another vendor and get all that information to feed to our analytics system, which is a completely another vendor, so those kinds of things are really a challenge. I'm sure you've heard that from other agencies, but that's a challenge for us.
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	It depends on your assignment, but for the most part, the officer on the road working a patrol assignment doesn't get a cell phone. There are officers who are on call or something like that, then they get a stipend for their cell phone.
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	Some officers are given a choice of a stipend for their cell phone or a department-issued cell phone. There are other officers working in covert units that are going to need to use their cell phone for that type of operation. So those are city cell phones that they're given to the officer.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...Our department's pretty good about being responsive to technology needs, and hopefully, I'm not just being biased because I work in the unit, but there were some officers right before we got body cameras that were going out with personally purchased cameras and wearing them. But the department did a good job of responding to that, got the body cameras...
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	the three of us have all been in the department for a long time, and have seen even before we had an electronic support section, just the department tries to stand-- I think we were one of the first agencies in the nation to get computers in the cars. And that was back in the late 70s, I think.
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...this department has always been kind of on the forefront in our wireless mesh system and surveillance camera system, everything is really state-of-the-art.
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...we talk about the MDTs that we used to have. I came from another smaller department here in the [city] area, and we would have to go under the station and do it all, but we typed all of our reports, added all of our comments and notes to our calls at the station at the end of our shift or throughout the day, and then I came here, and we hadn't gone to computerized report writing yet, and so I got here first, and this is 2000, or-- okay, which forms do I need. I need six of these, three of these, four of that, and now we're into your ten-page report, and you got your writer's cramp...
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	from my perspective what's happened over the last probably five years is that there've been so many advances in technology that's related to law enforcement that it's, I guess, I don't know if overwhelmed is the proper term, but it's overwhelmed some officers that worked for years with really the only real technology they had was the laptop in the car, the MDC, but really nothing else, and now with the advent of the body cams, the surveillance cameras, the license plate readers, we have our motorcycle enforcement team has hand-held e-citation devices. Or exploring now, putting printers in all of the patrol cars, so we can do

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								more electronically and print in the cars...
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	I was the first one to start writing reports in the car on our computers as the guinea pig, and I started teaching at the academy when everybody started doing it, teaching how to do that, and I have ever since taught out there as to how to do that, and the difference in officers from when we first started doing that as far as how adapted to technology they are and now, it's just night and day. It's completely different. So everybody is much more computer savvy now.
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: technology] Yeah, change. I think this biggest thing we fight, and cops are the worst, I think about that, about changing and--
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...we have over the last few years any of those things about as fast as we possibly could because of all the new advances and stuff...
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	Yeah. I mean, I communicate with my counterparts around the country and see them at different conferences, and I think we're much more advanced than a lot of agencies. A lot of agencies move a lot slower than we do, and some of that has started to detriment. I mean, I think kind of like these guys said, we've introduced so much so fast that I think sometimes that gives officers on the street kind of overwhelming feeling using it. They just hit me with this, and now they hit me with this, and so. I mean there's some stuff that I'm actually kind of putting the breaks on. Okay, let's make sure that this stuff is working before we now take a leap on the other things anywhere...
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...One of things we're exploring is making the transition from a typical laptop configuration in the patrol cars to more of the tablet configuration, so the officer can take the tablet out on a scene, and that's probably going to happen this year. That's going to be just another change. Functionality, they'll work about the same with the exception of the Windows 10 operating system as opposed to what we are using now.
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	It's another new thing they just did was a got to [inaudible] dispatching. I hope you are familiar, but that scripted thing that the call-taker do when

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they get a call. It affects how the call prints out, or how it displays in the car, and it affects how it's aired, and when it's aired. And so there's been some growing pains with that. But everybody is getting more, and more used to that too. I think they, for the most part, they do pretty well. There's been some problems, some complaints, and one of the solutions that they just went to is to bring dispatch back under the police department umbrella rather than having it as a separate entity that it was before, so that means they can do rest here.
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	So internal communication, there isn't a lot except at the chief's level, I'm sure there is. But there isn't a lot of, I guess, communication interaction between the agencies. Now from a radio standpoint, or a radio system, we have the capability to talk across police, fire, that kind of thing. So that's pretty seamless. I mean, we all have the same radio system. Everybody in the city has the same radio system. We have it set up so that if a street worker is in trouble and needs help, they can get on the radio and call dispatch and get a police response.
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	Well, one of the things we haven't mentioned so far that's been a big change just in the last year probably is our public information outreach, using social media has changed considerably in the last year, so.
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: mobile fingerprint readers] So we have 10 of them out deployed-- 2, 4, 6. Yeah, we've got about ten of them deployed out, and we have two in each district. The way we do it is the sergeants-- I mean, anybody can access it, but the program to interface with a mobile printer reader, with the reader, and get the fingerprint read, is loaded up on the sergeants' cars just because we don't have a ton of them out there, and so the sergeants have more mobility, they spam what's going on to bounce around if somebody needs the use of one. Our fugitive team has one, our gang [inaudible] also has one...
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: mobile fingerprint readers] Just from what I've heard from the radio and from talking to people, I feel comfortable saying they probably get used two to four times a day... As people get more used to them, they get more use. And now we have two of them out there that it's going to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								help to increase that use, I think.
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	Your typical patrol officer, they don't have a cubical. They don't have a desk. There are a limited number of PCs available for them to do report writing, that kind of thing, and interact with technology, but short of that, it's in the car. They have a connected laptop in the car, and that's their primary use of our technology is when they're in the patrol car.
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	That's part of our mission, and typically, what happens is someone from either the chief's office or another lieutenant or captain that's in charge of a section will contact me and say, "Hey." And usually, it's because some salesperson contacted them. "Hey, we want to look at this particular technology." ...
OE	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	I'm pretty familiar with the technology that's out there for law enforcement. I've been in this assignment for seven years, and I think we're pretty much up to speed on everything that we want to be up to speed on. I mean, there's some technology that's evolving out there...
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Currently, we just have a land mobile radio. Whether that's the portable that I wear or the trunk mount in the cars.
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...When I started, I started in the age where cell phones were just beginning. When I got here, I started in '95, we had a cell phone in the car, and it was mounted into the car, and had the cord and everything. You really weren't supposed to use it. And then as we've progressed, we've gone through-- I think we're on our fourth or fifth generation of issued phones. We're all issued Samsung smartphones now.
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	All of our patrol cars have MBCs. We do have a few unmarked, I guess, pool cars or command vehicles that we use, that do not have computers. Our detective vehicles don't have computers. And our motorcycles at the moment do not, but probably by first of the year, they'll all have tablets on them as well. And then, all of our newer cars are actually WiFi hotspots with the tablets that they can be removed, and we have about a 400 foot range around each car.
OE	LE	S	Field	36-45	21-30	Male	LE-S-016	When I get here, I get in my assigned car, just log myself onto the CAD

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					system using our computer. And then get a go-out, or usually, it's catch up on the other stuff I do. And then once I go out on the street, I start doing traffic enforcement. Even though I have access to-- I can directly input into CAD from my car, put myself on calls and stuff like that, our agency does not do that. So everything we do is over the radio. So every traffic stop I call out is done over the radio. Every call we get dispatched to is done over the radio. It also comes through the computer as well, but in some ways, we're still antiquated and require that somebody has to hear it...
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	We're in the process of-- just kind of rambling on here, but we're going to a regional comm center... It's been a two or three-year process, and they've had to fire the director a couple of times. But when that comes about, it will be the entire team of [county], ongoing CAD system, which is between police and fire, there's like 26 agencies. Which in my mind, is a very big step backwards as to where we are now because our dispatchers now know us. They can hear differences in our voices. They can tell when something isn't right. They have an idea as to how our city is laid out, how it works. And I think we're going to lose that when you go to a comm center...
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: transition to a regional comm center] ...They say they're going to try and keep people the same from this agency because our comm center--they essentially lose their jobs here, and they're offered a job at [regional comm center]. And so, very few are actually going to go. We've been losing dispatchers over time since they made that announcement. But I think, in reality, we're going to have a dispatcher on the radio today, that may have never worked with [city] at all. And tomorrow they're working for [county] or [city] ...
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: transition to a regional comm center] ...while it's one regional comm center, each agency is still going to maintain their own radio systems. So we're on Harris. [city]'s on Harris. I think [county]'s on Motorola. [city] on Motorola. And so, we're not going to combine radio systems, just dispatchers... So that patching is going to be an issue. Even though

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								everybody's working out of the place, and could just scream across the room at each other, we're not going to hear that...
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...so back on car traffic stops, do all that. I can do the computer dispatching a little bit if I'm not-- I can assign a case number or if I'm going on something where there's not going to be any public contact. So if I'm vehicle maintenance or if I'm going on a follow up or a meeting, meetings contact, then I can do it on the computer that way. Now, our animal control people, they can put themselves on dispatch calls. They're going to the same houses and their not armed, so a little confusing as to why they don't have to do it on the radio either, but it's how that works.
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Well, the computer has the ability that I can see every call that's on the screen. I can click on it, and I can technically hit the button to assign me that call, and I would pop up, and it would be assigned to me. But patrol's not allowed to use that. Our animal control officers, they can look at it, and they can hit the button and self-dispatch. So again, I think it's just stuck in the-- the biggest fighters we had about going to self-dispatching, which we tried a dozen years ago, was we had a few old time sergeants who wanted to hear absolutely everything that happened. And they told their people not to engage in the testing, so then it went downhill. And without support from the supervisors, it didn't progress. So then we're back to the radio, and most of those supervisors are gone now. And most of the supervisors we have now, frankly, started way after I did [laughter]. And I think technology is moving that we can move more in that direction now. Just a slow process.
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Yeah, technically there are channels that we can go to to do the interoperability. I can go to-- there's some state channels that I can go to. It's like [channel], and I can go there, and everybody in the state has access to that channel. So technically we can talk back and forth. There can be some delay, because everything goes into one place and then gets reformatted in digital or analog and then gets pumped back out, and so it's not always the perfect thing. I can be standing right next to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the guy, and I can key up, and it takes a second for him to hear. And it does work when we absolutely have to. But when it comes down to emergency type situations, it's very difficult.
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...there are times where we work with other agencies. I've gone to [city] and [city] to help them with crime scenes. And [city], even though we have the same radio system and we bounce off of each other towers, I cannot talk directly to them, because we don't actually share the channels [laughter], so. And then up in [city], they're on something completely different, and so we don't have access to that at all...
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...In my house, our radio works just fine. I can call back and forth, no problem at all. I get down here to [street] and [street], half a mile from here, and the radio's drop because we have dead spots. We have interference from-- we have interference from the high-rises in [city] that it's ricocheting back off and it's blocking the signal so it's dropping. So we're building extra towers and stuff like that, but we have areas of our city out west that we don't have coverage. They're building now towers, but that takes time, so.
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...Our traffic unit, we have ecitations, so I have a handheld Android device to write tickets. I can actually do an accident report on there and exchange the information. But, again, with our systems, I still have to come back here and then cut and paste from that application into our native RMS system. So even though technically, I've got the accident report done in 15 minutes, I still got to come back here and spend another 15 or 20 minutes to transfer it into the system that they want.
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: MDTs] it's a Panasonic tablet. Well, the newer cars have Panasonic tablets that then they dock. And then we have a-- the screen is mounted into the dash of the Explorers. They're now changing that, and we will keep those Panasonic tablets, but then we're changing the screen configuration because some people didn't like it built into the dash. And then some of our older cars still have a Panasonic Toughbook laptop. They're then mounted in there. And those are actually mounted in the back with the PRC screen up front. So we're kind of in a blend at the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								moment, but those old Toughbooks are going away. One, we can't get the screens anymore, so that's why we're going to the tablets. And the idea's that now the car's a hotspot, you can take your tablet out, and you can go in and do a report. Easier said than done [laughter]... Nobody does it.
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Everybody is getting to body-worn cameras and stuff. We don't. We don't have cameras on our cars. We don't have body-worn cameras as a department. We are allowed to wear them on our own under certain guide lines, and I do that, but it'd be nice to have one device where, if I wanted to, I could hit the button and hit record, and record all that stuff...
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	And there's only one thing cops hate more than change, staying the same [laughter]. So it's a constant battle, "Why are we changing this?" and "Why aren't we changing this?" You're stuck.
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...True, primarily we're secretaries. We take reports. The emergency responses are limited here, but everything has to be documented, so you do that. So our officers were in here all the time, so now we're going back, and we're now going back to another dictation system. And that's an app, it'll be on our phone that I can record, and it'll send it to them, and they'll type it up for us. So hopefully our reports will get better and faster, as far as that type of stuff goes...
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: officer to officer comms] We have a channel that we can talk back and forth on. And it happens quite a bit. But, again, when you get into the real nitty gritty of a case or something like that, we go to cell phones as compared to that. Also our primary channels are all encrypted. But our traffic channel is not, so.
OE	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Fire has access to our encrypted channels because we share a radio system. But the channels that they use primarily are not encrypted. And we thought that that was going to be a big issue, and so our PRC, our Public Relations Coordinator was all freaking out because the news was going to be able to get our radios. It has not been an issue at all. It has actually improved because we used to stop cars, and they have the app

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								up, and then we could hear ourselves key it up, and it's coming through their phone. And now that doesn't happen. So it's very good. We still let the news know what's going on. Tweet them or whatever [laughter].
OE	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	... I know at our dispatch center here, they've got cameras in town that the dispatch monitors. They monitor the holding cells. They've got alarm systems that they monitor. All sorts of stuff like that. So dispatch has a very, very wide breadth of responsibilities.
OE	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	And our agency's a little-- since it's a smaller-- there's only the two of us, so we kind of catch everything. A lot of agencies have specific people to do property and evidence. So they have specific people to do specific crimes. And since we're smaller, we don't. We just catch all of it.
OE	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	I keep a work-issued phone, a personal phone, separate. So we've got an evidence-tracking system that we use. We've got a report writing system that we use. We've got in-car and body-worn camera video systems that we use. We've got an inordinate amount of [laughter] computer systems...
OE	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	...The evidence one is actually new as of last year, so we're still kind of working the kinks out on that one. But for the evidence system, it's got a bar code printer and a bar code so you can just scan where it's going and this that and the other. We've got a tablet that we have just for the detectives that we can take out to a crime scene if we need to and do evidence remotely or connect to any of the computer systems in our office remotely if we need to, which would work a lot better had I not dropped it two weeks after we got it.
OE	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	Generally, we're at the police station. Again, since we're small, sometimes we get tasked to cover the road, so we'll put on our uniform and pretend to be real cops for a day, but most of what we do is at the office.
OE	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	It's fun because we've got a small group, so we kind of all know each other. It's not like a huge agency where if I get a case, I don't have any idea who is writing it and what the circumstances are. So that helps to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								know everybody a little bit better and know what their strengths and weaknesses are to some extent. Especially with the newer people, when they're still learning and being able to guide them and stuff like that. And then, being able to work with the sergeants if there's issues or if there's disconnect somewhere like that because we've only got four patrol sergeants, I think, and four patrol teams. So it's pretty small.
OE	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	So the [city] Public Safety Communication Center is for all of [county]. It's housed at the [city] Police Department, but it does for all of [county]. So except for State Patrol. They've got their own.
OE	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: jurisdictional agencies] we've got a pretty good relationship with all of them. I think the biggest issue is that State Patrol's on VHF or UHF, I can't remember... And we're on 800, and our dispatch center has the ability to patch our radio channels so that we can talk to each other. And then we've got certain mutual aid channels that we can all get on from our individual radios and talk to each other, which is very helpful...
OE	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	...But on a kind of day-to-day basis when there's nothing important really going on, it's not a huge issue. We can either call their dispatch center and get patched through or whatever we need. We've got their channel on ours, that's patched, and they can get-- a lot of the State Patrol guys carry an 800 radio so that they can get a hold of us. So it's not uncommon for us to be talking back and forth. And then obviously the fire departments, they're all on the same radio system, so you've just got to change channels.
OE	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	... being a detective, we're on call usually every other week...
OE	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	The body-worn cameras we just got last year, I think, so those are relatively new. The in-car cameras we've had for 8 or 10 years-- well, probably 8 years. We've had those for a long time.
OE	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: MDTs] So that's only in the patrol cars, so I don't have one in my car. But like I said, we've got the now busted tablet [laughter] that we can take with us wherever. Yeah. But all the patrol cars have one, and it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								very handy.
OE	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	... obviously, we're in a very ideal place because we have the budget to have computers in every car, and have cameras for every cop, and have cameras in every car, and all that...
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...So as I tell people, everyone starts off getting into law enforcement and you're the street cop out there answering calls, but then there are other career opportunities. And that kind of moved into the tech world. I started going down that path and decided I didn't want to support computers my whole life so I pulled back and stayed more on the training and application side, dealing with the new stuff that came through for law enforcement. And then the mobile data computers started coming in so I got put into that...
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	When I first started, there was a bag phone in the car, but don't you dare use it because it was so darn expensive...So that was only for a true emergency that you can take it, and you had to unplug it from the wall and then plug it back into your car. So you didn't really have the cellphones. And then as it progressed, then I started supporting more of the in-car computers as those systems started getting more robust and they could do more things...
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	We don't have body-worn cameras yet... most of the agencies in a county do. So I usually talk with them about it, just kind of the pitfalls that they've gone through. And then read their policies and there's bigger discussions on the privacy issues. When to record, not record. So we sort of stood back and watched that from the edge. The current under sheriff and I used to joke about, "The day my word's not good enough in court and they will demand to see a video, it's time to get out of this line of work."
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...We've gotten state-wide a new electronic discovery process. Just adds that much more time to our records folks to do what they used to do. And, okay, now stop and now go into another system and make sure everything gets transferred over from our system and uploaded. More

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								stuff keeps getting added in. I'd like to look at it holistically and say, as a system, we're saving time and there's efficiencies. You, as an individual person in this position, it may not help you.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	So the state passed a law where it charged the [Job title] Offices, state-wide, with creating a system so that every law enforcement agency in the state submits records to them electronically. And they engaged a vendor who did that, and that vendor wrote the interfaces with whatever records management systems we have. But it's a separate system you log on to. It's a manual data transfer now, where you go pull the case and it populates the fields. And then they have to go through and do the attachments and you can label what each of the attachments are. The additional step that all the records folks have is they have to print out the narrative. So the report that I wrote, they print it out, create an electronic copy of it, and reattach it...
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: electronic evidence discovery process] And that's always an interesting one. When I first brought that up, the person in records was literally printing it out, rescanning it, and attaching them as a PDF. A said, "No, no, no, I meant just print it to PDF and attach-- it's all electronic. You don't have to physically use paper for anything." Then there's a whole discussion on, do you still keep paper files? ... Do you just keep electronic files? I think it's mixed within the county. At the sheriff's office, we still keep paper files. So everything is replicated into a case file that's stored somewhere. The salt mines. I don't know. Oklahoma, Illinois. I don't know where they are. So, yeah, we have all of the physical copies of everything.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: ability to revert from desk to patrol] I think, in a lot of places where I talk to, yeah. I think, here in our community, it's out of necessity. I can't just say, "Okay. I'm now assigned to this tech unit and I'll never need to be called in to do anything else." ... I certainly see it as a strength and that flow of information. I feel quite fortunate. As I've told you, feel fortunate I'm able to do this. And at the same time, I think I've worked to get to that level. It wasn't just by luck. So just still try and balance some

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								of those things.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	I think it comes to the question on, as they're going through this process... even on the National Broadband for Public Safety when they're defining who's a primary user or secondary user and dispatch wasn't included. I think when you look at the people who actually physically respond, and not to say when a dispatcher answers the phone that's not a response, but to me that's a very controlled environment, and if they had to step away for some reason, someone else could fill in, there's not that immediate sense of peril and they're talking on the phone, and that they're doing a lot more stuff on the computer screens and looking at stuff, but they're not out there where the sights, the sound, the smells. To say taste comes in, but on a heavy wet foggy day, you get those tastes sometimes in your mouth...
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I guess that's where I see the differentiation on who's a first responder, someone responding to a scene or in the field versus all the other people who are certainly part of the public safety system and may be on the front lines but don't get that full sense of engagement. To really have those impacts you've-- I've never heard about dispatchers getting tunnel vision or auditory exclusion or all the other things that we're regularly trained on and discussed to recognize in ourselves and in others because it creates a safety situation that can affect others. I think there is a line there and I think it's continuing to be defined... By FirstNet saying we've got to draw a line somewhere, and where is that line, and what could you objectively and scientifically measure and say, "Here's why there's a line." When I thought about it last night, I think that engagement of all five senses and the potential impact it can have to you, in the sense of immediacy and threat and security to you is what kind of creates that.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...So I think, currently, that cellphone is probably the most immediate way to get ahold of people.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	I do have a department-- this is my personal one from doing the contract work so a lot of people just know I carry that one. I have my department

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								issued cellphone for when I'm doing patrol shifts because if I call people back I'm not going to use my own cellphone. So it's kind of a mix of which one I use. And I usually carry them both now but my department issued one's not on as much unless I'm doing more patrol work where dispatch is transferring calls to me. Yeah. Then it's to get in and check the emails and respond to a few of those. It's for the more formal, written stuff. And then, occasionally, I actually get to have meetings with people.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	I think most everyone carries two cellphones because everyone has their work phone to keep that stuff separate and then they got to stay communicated with their personal phones. Because that's how everyone talks to the family and friends and everything else these days.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: department-issued cellphones] Even for a while, it was kind of the-- I don't want to say it was a running joke, but as technology improved, the cellphones we had didn't have texting. They were more of a basic cellphone.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...there's lots of apps that I use regularly in my day mainly for communication, and organization, making sure life keeps moving and doesn't get too hectic. Our department hasn't gone into work-specific apps. Certainly, they are out there. The response apps. I know some of the other agencies in the county have the information apps that are tied into dispatch because they carry their phone. So as soon as the event is created they get a notification on whatever device that your agency has a call coming through. And that's going to be dictated by their workflow and the type of device they have. The mix in law enforcement versus fire...
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...the running joke we have from law enforcement is that we tell the fire guys, "Well, if you just stayed awake, you wouldn't need all these apps." And the fire guys joke back to us about, "Well, if you worked 240 hours every month, you'd probably take a nap too [laughter]." So it's kind of the running joke. They're different work environments. But I think we both recognize that because of that there's different apps, if you will, or

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								technologies that come into play because of that type of environment.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	For my agency, no, we haven't gone to a specific app that we're all using within law enforcement. For payroll processing, ADP, I know there's an app. A lot of guys have that for clocking in and out. On the computer, you have to go do it. So you either do it online or you do it on an app.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: app for situational awareness] ...But it was kind of a new concept at the time since, as I mentioned, the department wasn't using cellphones yet, or the smartphone, so the concept of having apps that did all this stuff wasn't there. The chat was more encrypted than I think if we just think of the standard messaging apps that are within the phone. Sometimes that comes into play, sometimes it doesn't. Sometimes the tracking of those messages can come in if we're all using one app. And so we go through a server and we tell everyone, "Hey, guys, all this stuff is cataloged. Just be aware it's discoverable." That's always the issue guys want to know. A lot of time guys will use apps that aren't official apps because no one knows they are using them, so it could never be discovered, just like a phone conversation... Everyone knows everything on the radio is recorded, but if you call me on the phone we can talk about whatever we want.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	I've got my main office down in [County], which is part office, part storeroom. For a couple of the other people who have stuff as more and more stuff comes in. We need to keep paper for the e-ticketers and the backup printers. So I've just got a wall of shelves and all the extra radio parts.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...Typical, there's probably nothing typical. It's going to change day to day. It's coming in and planning out your day and knowing what's coming up... And I think most people get into this line of work, that's part of what they like and expect.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Most cars are about 100,000 miles. That gets us three to four years depending if it's a single person or two person car. I can't remember how many years ago we decided the cost of the equipment in the car far

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								exceeds the car when you start talking about your radios, your radars, your in-car video, the in-car computer system that's now the electronics that even though it's controlling the light bar since it's all relays and digital now, programming how many siren codes you want. So all that going in exceeds the cost of the car. We've got one person in the office who's sort of the car guy who keeps up on some of that stuff. I still do the computer part...
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...Cellphone technology's coming up. We talk in our county because the cellphone coverage is pretty much along the interstate. We've got a bunch of communities that are just far enough off the interstate, cellphone coverage was fringe so we started putting boosters in all of our cars probably seven years ago. And it was just enough to hit a couple of the communities that we're regularly in and maintain cellphone coverage.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Now, the cars we picked up this year, so now the cars themselves are having more technologies with the backup cameras with some of the other display. You can set up the dashboard on your car to display whatever you want... And going through all the menus looking at those. The other day when I picked up a car, I knew I wanted to display my clock and my miles per gallon and where's my temperature thing going to go, and then the display for the audio and the climate stuff, and how can I configure that myself when I back up. Do I want the little lines to turn when I turn the wheel?
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...the old days of the police car had an AM/FM radio and nothing more... Now they've got the auxiliary audio input. There's USB ports for charging your phones. When you first get into your car, you have to log in to the video system. Everyone has an assigned USB stick with their identifier that they have to plug into a port to log on to the video system so the display shows their name. So all those things just keep building and more power and more plug-in stuff. Again, it goes back to customizing the cars and all the technology that's in there now far exceeds just the cost of the car.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...We're fortunate that we've got the [military training site]. So they bring in helicopters, crews from all over the country, the world. I know we've had Israeli troops in here and they do the training. We benefit from that in our mountainous area with some of our search and rescue stuff. Back in the day, if you will, things were much looser and we could just call up the station and the commander would drive up there and say, "We've got a lost party in this area. Can you guys launch a bird and go look for them?" or "We need some support." ...
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...It was a challenge when the MHz stuff first came out because, on the VHF world, that air-to-ground communication was pretty clear and they could just dial in whatever frequency they wanted. With the 800 stuff coming out, for a while the standards didn't allow a direct air-to-ground channel. They're worried about, on a repeated system, the helicopters getting up too high, lighting up too many repeaters, and tying up resources...
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...So for a while, we sort of lost communication if the helicopter was up in the air and that created some frustrations as a new technology came out and people realized, you get up in the air, kind of like, "Why are you not supposed to use your cellphone on airplanes," because you'll see so many towers. Not that that's going to bring down the airplane. We would hope that airplanes are made better than that. But there's other reasons and they don't always get explained properly as to why they make these rules that say "No." The helicopters there and flying around regularly. As you saw yesterday, it's probably not a common sight to look up and see three or four military helicopters just flying around, doing different things.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...The other thing we have here is because we have federal wilderness area. So if we have a lost hiker and we need to put a helicopter up in the air, we have to notify the forest service because we're using motorized equipment within the wilderness area. We have those protocols sort of pre-established on the sense of urgency that's needed and is it just a notification because we're going to be going in there, especially if you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								found somebody, we're going to go get them out. If some of the forest services can't answer the phone right now, we're not waiting for permission to go on and do it. Other times, we are. We're just doing a search. It's a very broad area. We don't have an actual victim. We need wait for permission before we can use a motorized whatever within the wilderness areas.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Probably a unique thing more on the west coast. I don't know how many east coast areas have wilderness areas. And obviously, we know a lot of counties in [state] don't have them. We're fortunate to have a couple of them within our county that we work within.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	And everyone knows that in a lot of wilderness areas, you're not going to have radio communications because you can't put a radio tower in there. And generally, wilderness areas are high and mountainous, which means there's valleys and radio signals don't get into valleys. So you know what valleys you're not going to have system coverage, you'll have direct coverage. But that just involves the pre-planning and training guys on the radio on the concept of a radio system and a repeated talk group versus a line of sight and direct talk group. And when do you change and what are the limitations. So their expectations aren't unrealistic versus what your technology can do. So you don't hear after actions the whole time that the radio system just stinks [laughter]. Well, it doesn't stink. Let's work to resolve it so the next time you know what to expect.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	When I started, we were on VHF single system, the dispatcher would change which tower they were broadcasting from. So you regularly get half the conversation because you can hear the tower but not the person talking who may be on the other side of the county. Within our county, we were split. East end of the county was on one radio system, west end was on another radio system. At the sheriff's office, we carried a pack set that had the east end system because, obviously, we drive through their town, and if we needed help, they had to come out of their town to help. Just staffing level being what they were. We still have that today. It's going to be mitigated in one part of our county where they're still on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								different radio technology than we were. So the cars assigned over there get those radios in the cars. So they have our 800 MHz system and they still have a VHF system in the cars. That part of the county is now switching over to 800 so it will be easier to communicate. In the late '90s, when one dispatch center left the county, we consolidated...
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... we stood up an 800 MHz system within our county. So we all had each other's talk groups but everyone was still afraid to change the channel on the radio or talk in somebody else's talk group because they just didn't do that before. So that took a while to convince people that we have new response protocols. And if multiple agencies are responding to a scene, we're going to move off the various dispatch talk groups and go to one response talk group. It took law enforcement a long time, and they're still not really there, that they're going to go off their channel to go to that response channel because their thought is they're always waiting for the bigger and better deal to come along and go do something that is more fun than directing traffic on an accident scene. So they always listen to their talk group. So we try and do that from a resource utilization standpoint, from an information sharing standpoint. If we're all driving up and down the interstate and no one's found the accident, it's nice to know that...
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... So early on, a couple of radio sites, much higher power, so you could get a little further away. Now, on the 800 stuff, a little less power. We need more radio sites as they start to fill in coverage areas...
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Now that we're on this shared state system, we don't know how many units the Department of Transportation has that may be using the same tower I have. We're no longer an island, where it's just the people in our little county and our responders. Anybody could be driving through here and tying up those resources. And I go to hit my radio and I get a busy signal. I'm like, "Why am I getting a busy signal? It's a clear day. There's no accidents." Well, there's more people out there now. Or it could've been somebody didn't turn off their radio and they drove through and they're dragging a talk group and tying up my resources. So trying to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								explain some of those to people, again, we try and mitigate it by putting more repeaters in a site if we have to so we don't get busies...
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... As we tell people, if there's a big event going on, and the example we use was years ago, the [incident] on the front range of [state] and the guy was saying [incident], while we had just set up recently, this state-wide radio system. Well, people up here realized they could tune in and listen to what was going on on the front range. Well, the state deactivated those radios. They realized that the entire system was getting tied up by people who were not in the area of operations, listening to what was going on. And they were able to go through and deactivate those radios. So that was a big eye-opening experience to people of-- there are repercussions when you do things we tell you that you're not supposed to be doing. Which is a good thing because then it freed up the radio systems, they could do what they needed to do at the time. But yeah, most people remember that situation. They've been around for awhile.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I may not want to call out every time where I'm doing foot patrol at night. I know people have scanner apps. They start talking about apps.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	So then, in response, a lot of agencies have gotten to encrypting their radio talk groups. And then the press is like, "Well, wait a minute. What are you hiding? Why can't we hear what's going on?" Kind of a whole nother discussion on privacy and just the way our system works. So we have been able to change our protocols on how vague can you be. You're on foot patrol and give the town. And if I want to know, I can go look on the computer and see exactly what business complex you're at. But we expect people are listening. A lot of our guys have the scanner app on their phone because they like when they go on vacation to listen sometimes. I don't know why.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	And so we know how ubiquitous that is, and everyone's out there doing it. So rather than trying to hide all our radio traffic, let's take the steps to safeguard ourselves or our procedures to still get our job done but not let anyone think we're trying to trick them, or hide anything, or be the big,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								bad government that a lot of people suspect we are.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	The big river, when the snow melts, we got a lot of rafting accidents.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Unique to this area we're starting to deploy as many places are more AEDs in the vehicles. As a first responder, if you're the closest, and it's pretty easy to run with an AED and pop it on somebody, and we know that saves lives. So if we're the first one there, or the ambulance is the first one there, the fire department is the first one there, it's not who gets the picture in the paper and the hero award, it's that you saved a life...
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: AEDs] ...So we kind of recognize, and as those costs have come down, and we start to deploy those countywide and nationwide as we're trying to put in our can in the cars. So in our county, we've got that deployed now through a program with the state. We've already had a few times those reused. So more and more stuff are going into the cars as it's recognized as people are out there in the public calls in, well, who can sort of solve their issue.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: hiring issues] Whether it's rural- we don't have a big population base. Whether it's law enforcement right now, I think is not looked at as a great career choice. If people asked me, I'd say, "Go be a fireman." Just the climate in the country right now. The expectations that are being put on law enforcement...
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...So as to why people aren't applying, whether that's part of it. In our local community, it is a high cost of living area. We do get a lot of people that come here, realize they're not going to be able to afford to buy a home or get out of the apartment. Put in a couple of years and leave to go to a lower cost of living or bigger city. We don't have all the areas of operations or responsibilities that a true city would have. We don't have a vice unit, and a motor unit, and a traffic unit. So you may come here, and you may be a patrol guy for 20 years, and there's nothing wrong with that, but if that's not what you think you're going to do with your career, or that's not okay with you, it's not going to work out. So whether you're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								going to leave or not apply here to begin with, I don't know...
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: problem with turnover] Yeah, and that's always been that way. The guys get here, they put in four or five, they get some training and experience, and then they decide it's time to start looking somewhere else. Some of them recognizing, as they mature, they gain knowledge and wisdom. As an adult, and actually start thinking about retirement, and where they're wanting to be, and whether it's a pension, or a 401(k), and then the work situation and overtime, and how much they can make. That they're young enough, that the time is now to make that decision to go somewhere else. So that happens. Yeah, sort of outside the basic life events that cause people to move, divorces and whatnot, or they get in our area, it then does lend itself to be able to come when they're here a few years to get the experience, and then recognize it's time to go somewhere else.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: difficult to read driver's license format] ...they're trying to use more security in their driver licenses. The REAL ID Act necessitated that, so responding to the federal stuff. I know some states have now the actual enhanced driver's license. I think there's two or three of them. We're not one of those yet but that may come along, so there's going to be more and more stuff going into the driver's license to get a chip. Yeah, so things to think about if somebody actually has to read this still while talking on the radio and watching ahead of them and that eye focusing thing. I mean, I want to look down at my license to read it but I'm still keeping an eye on the car I got pulled over, so now as I know my eyes are taking a little longer to focus from close to far away, how do I change my work practices?
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...every three months we have a shooting in our county...
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: typical calls] As I mentioned, there are a lot of those, "I have a problem and I don't know who's going to solve it."
OE	LE	R	Field	46-55	21-30	Male	LE-R-019	...We do get a few shootings. I guess I would say not what we would

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					expect in a big city in terms of numbers because maybe it's a sad comment that we just expect shootings are part of big cities. But it seems to be the number seems to hold true for that. But we do. And when it snows you're going to get car accidents. They kind of go hand in hand...
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	I think some of the towns and ski resorts have banned drones... They're on federal land, so it's pretty easy to say, on federal land, you can't use a drone. In the town of [City], they may have banned them. Surely in the wilderness area, that's a motorized-- [inaudible]. You can't use a drone.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	So I'm sure they're out there. Drones everywhere. Every beach, people are out there with drones... And they're watching their people surf. I don't know if they're-- I was amazed. I was like, "Oh, my gosh." Every beach I went to, someone's got a drone. Some of them are way cool, they're pretty advanced things. But not seeing it where I live here, I was just surprised to see so many of them.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	A few drones may have gotten shot out of the air. Well, they were a threat at that point. So I understand within the FAA stuff, that's allowed. Just like anything else that-- if they're hurtling a bottle at me, I don't have to just stand there and let it hit me... That was not something I had thought about until the guy showed me the video. And we haven't had protests here for a long time, but we've had them... there was no drones in existence at that time.
OE	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...We looked into body cams, we don't have those here. But it's a possibility, so at some point.
OE	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So the best thing that we can have is technology sharing, information sharing. So we had this service called [information sharing database] that a company ran and it's a online database that agencies can belong to and you can get your own personal log-in. You log in and there's data from every arrest that happens within every jurisdiction. It's not even an

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								arrest. It's every contact.
OE	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So [information sharing software] does do it by account. So they charge by the account. [city] has a beta testing agreement with [information sharing software] so everyone at the agency that wants one has a [information sharing software] login. Other agencies have to pay per login so some other agencies have one login for the whole department. I think it's unbelievably invaluable.
OE	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: information sharing software] ...So brings you up mugshots. So that's one of the problems is it depends upon the agencies that are connected with this whether we get their booking photos. So our own local jail is actually not connected to this yet... But our photos, if we booked them here in this building, they go in there. So, yeah, so that's good, but we are waiting for a huge dump because it's going to be [county], [city] PD, [city], [city], they're all coming into [information sharing software]...
OE	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: information sharing software] ...they've created CJIS. And what this is is an online archiving service and it archives all of our digital media and it does it in a cloud and it also does it in a server. I think the server's down in Texas, somewhere like that. So it's backed up three different times. We went through the creation with them and they came in and they have had people available by the phone so that we could work out all our kinks, so it's CJIS-compliant, so that it's, yeah, so we don't have any issues with that whatsoever.
OE	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... When it comes to the radio systems themselves, we got these new ones which I think are better. They still, of course, have issues. We have issues. We need more towers all over the place because you go into a low spot then... you lose it. If we go south and we go east, we've got a straight shot, no hills, no bumps, or anything, you could go miles and miles and miles and still listen to the radio. You go two blocks in our city north, and you hit on the other side of the hill, and you lose transmissions. So the more towers we can get, the better. The more signal that we can get out, the better...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... So the motorcycle cops, they have helmets with microphones, and when they got new headsets, they went through a trial period where they can't hear very well. So they're talking extremely loud.
OE	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So we've had some upgrades in our cars where... they have tablets installed into the dash so that you can now manipulate it. They have the secondary tablet that's on a docking station right in front so you can take that out and do your reports. But it's literally like this big so if you have giant hands, it doesn't work so well. But they tried to do that to make it easier for officers to come and go, and do their reports in their cars. But with the advances of technology, you put the tablet in the dash, now you're staring down like this instead of looking up like this at your computer. So some of our cars still have the old-fashioned, big MDC toughbooks. And we actually prefer that for the most part, I think.
OE	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: input sought when purchasing new equipment] So sometimes, they generate a committee of select members from the agency. So they just pick a few people. And sometimes those are the best people, and sometimes, they're not. But they could do a little better job with that.
OE	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So in the cars, too, I'd say, is one of the biggest problems. They did it, a revamp of the way that they put all of the computer systems in the car. So in the back, it's now on a folding tray. So it used to be, before, in the Crown Victorias, they used to take up basically the whole trunk. And then we had a storage box that had blankets and flares and stuff like that. But it still took up a whole lot of space back there. You had an extra computer in the back, a extra computer in the front, and then all of your boards and everything else are in the back supplementing it. So it takes up a lot of space. So they were actually, somehow, able to reduce a lot of that and then put it on a folding tray, so now we have the SUV crossover Ford Explorers. And so you open up the back hatch and we've utilized the space that's beneath where the spare tire was. And you open that up and you have some storage down there too. But then they also have a folding tray that folds up against the back seat. So they just pull a pin,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								fold it back down, slide it out, and they can work on the system, and it doesn't take up a whole lot of space. Now I still have room for full-size cones and flares and all that sort of stuff.
OE	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...right now, we're getting a new CSI vehicle and we're having to figure out how to structure that, what type of monitor we want, where to put all the data because it's going to be a pick-up truck where we need the whole back for storage. So now do you put it under seats, do you put it where...
OE	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So if we could just-- so one great thing that we've done here is our fire department has the same channels that we do now. So when they go to an incident to help us out, they pull up on scene or they get dispatched to it, they flip to our channel, they answer up on our radio, and we know that they're hearing us and all we have to say is, "You're good to come in," and they can come in. Whereas before, we call our radio, our dispatch, they call their dispatch, they send them, and actually, we're sitting next to each other-- So that's been beneficial, but if we could expand it to include other agencies, which, I know, again, it brings in a can of worms.
OE	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	No. So it's if you are on patrol, you have a shared pool of cars. So each substation, so we have three substations right now, we have the main station here, and then two other substations that they just recently built. They're building a third substation way out west. So each of those stations has a pool of cars that they keep there for the patrol. So sometimes, we have enough, depending on manpower. We're trying to get full staffing, and when we have full staffing, generally, the grave shift, when they come on, the day shift will come on and say, "Hey, meet me in the lower lot with your car. It's already warmed up, it's good to go," and then they just swap off cars and then we take it. So then the car gets run over and over again without a break. If we have enough people, sometimes we load up our cars and then we have a full team of cars. That's for patrol.
OE	LE	S	Other	26-35	6-10	Male	LE-S-021	For investigations, they have-- so unmarked cars, but generally, there is, I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel					want to say, 10, maybe 10 total for all of investigations. And they're just basically keys hung on a board and, hey, there are known cars of these are these people's cars... It's known like that. But at the same time, we don't have enough for everyone. We used to have enough, and then if a person is on call, they can take one home with them every night. So we're on call, generally, from week to week, so 7 days at a time, 24 hours. So they can take that car home with them and then they can switch off.
OE	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: take-home vehicles] ...So as far as CSIs, we don't have one, but we're on call 24/7. So that's why we're trying to get a new one. So we just got a grant that allows us to do that.
OE	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So we use Cellebrite to download cell phones, to download computer data, to-- I mean, cell phones are just so massive with their storage capacity now, so we do not attempt to upload those up to [information sharing software] at this point. So most of the time, we buy a 64 gig thumb drive, save it on that, and then that goes into evidence. So we are now currently going through about 30 thumb drives every month of cell phones, computers, whatever else because they do a lot with child porn, online child porn...
OE	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: drones] ... There's a time and a place for it and only so much of it. But there's a lot of regulations that you don't realize go into it. Because we're having to take the piloting test for it and we found out that there's all these air spaces that we didn't know about. But the technology from that is going to be amazing...
OE	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... everybody has a watch. Everybody carries one in order to know the times on their calls. I mean, we carry cell phones now, too...
OE	LE	S	Other Public	26-35	6-10	Male	LE-S-021	[RE: percentage of people that wear an earpiece] Full-time? I would say probably 5%. Yeah. But I would say before the radio changeover, our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					radios used to be bad and you couldn't understand them, but the volume was consistent across the board. And since the volume's been so inconsistent everybody's just been unplugging these things.
OE	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: using 10-codes] Just 10-4 [laughter]. No, we really don't. We use a specific one for when an officer is in danger, or captive, but otherwise, no, it's plain speak. We use phonetic alphabets but it's a police alphabet versus military alphabet. So that's a little confusing.
OE	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: police departments in general] Yeah, half of them use military, half use police. Half use 10 codes, half don't use 10 codes... and they all don't use the same 10 codes... and military has their own set of 10 codes. So it varies from branch to branch, it varies from agency to agency. So, yeah, if we went to a place like [city], I believe they use 10 codes, we would have no idea what they were saying. Even if we did just toggle over to their channel, we wouldn't have any idea what's going on. Whereas ours is plain speak, but maybe it does take a little bit longer to get things out...
OE	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... So right now, we have, I want to say four main channels that we use. So our first one is the main, "Tell us what we're doing". The second one is we do clearances, so it's like administrative work, so like, "I need you to clear this person," or, "I need you to do this for me, I need you to do that." Third channel, it's for animal control so that they can operate on a channel, not ours... And then the fourth one is car to car, so we can go through and just talk plain speak to each other...
OE	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: job description] I guess we provide a service for the community that stabilizes our society, kind of just enforces laws and social norms, essentially.
OE	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	So within in [city], we have three different-- well, four different sectors with three different areas that have a specific building, I guess. So here in Baker, one in Charlie, and one in Adam. And we all kind of teleconference, similar to this. And so here in Baker, we'll have whichever officer's listening to Charlie's commander or sergeants or

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Adam's commanders and sergeants on whatever issues they have to present, so.
OE	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	And I'm in investigations right now, but when I switch this next week, I'll go up to [County], which is way out west. But when I was assigned to [County], typically that's the area that I will generally stay within unless we're short or if it's a high profile situation or something like that.
OE	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	So [Name] kind of like our smaller... so approximately 6600 blocks, not actual... Yeah. It's a pretty big area.
OE	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: comms with FF, EMS] I don't directly, but when EMS or fire's dispatched to a call that we're on, they occasionally will be on our channel so that we know that they're either staging or in route. I have never personally contacted them. So that's the extent that I've been contacted via the radio.
OE	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	So I mean, the radio's-- that's the heart of what we utilize. That's our communication. So that's a huge aspect...
OE	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	So all the cars have a computer system. The older cars have-- I mean, it's a screen that you can manipulate. You can slide it to one-- you pull in and it slides from one side to the other, which I find more convenient and beneficial. The newer vehicles have a tablet that's-- I don't know, it [inaudible]. I don't know, it's connected to the vehicle itself so you can't move it. It's kind of a little bit further out of reach, and it's touch screen. Well, everything's touch screen, but it's just kind of newer versus older technology. And we have our keyboard that's on a swivel, so if we need to move it out or anything, and then it's just kind of-- so it's basically just a computer system that's connected to the vehicle. Technology-wise, StarChase and stuff like that...
OE	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: e-ticketers] Yeah, we do have those. They're typically used by our motor units, our traffic officers, so those are pretty convenient. I am technically trained on them, but I'm kind of lazy in regards to technology, so I'd rather just fill out paper tickets than enter it into a little [crosstalk] computer--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	Yeah, so as a [Name] unit-- so we're all assigned our own identification, so I was [ID]. And that's what we refer to ourselves as. So if I call out on a traffic stop or something, it's [ID], and then they respond to me as [ID]... Yeah, so my sector partners would be a [ID] or [ID], and those are the people that I'm with in my sector that I'm trying to back up or just know where they are at all times and make sure that I'm just aware of any situation that they might need help in or something.
OE	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	It kind of depends based on the-- certain days are a lot busier than other days. Obviously, the weekends are higher volume of drunk people and stuff like that, so it tends to-- it varies from day to day and from shift to shift. So this previous day's shift had six total officers, which is pretty low for a day. So we had two in each. So we had two bigger units, two Adam units and two Charlie units. And that's kind of typical of days, Fridays because it's a little bit slimy...
OE	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	... Today was ridiculous. They had all kinds of high profile calls, so I was kind of [crosstalk]. Yeah, so and that kind of drains our resources, patrol-wise because you have people coming from all different sectors and responding to that. And we had two tone calls-- so we had a robbery and a domestic at the same time, so we had two Baker-- our two Baker units at one location, and then within the Baker sector, that robbery came out, so two Adam units had to come from up north to respond to the unit, or to this call, and then the Charlie units came down. And we had our traffic units respond and sergeants and investigations and stuff. So.
OE	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	So here in [City], we're supposed to be assigned cars. So we have a list downstairs that has your name on it with the car that was supposed to be assigned to you. But it doesn't always work out that way. In the substations, in [Name] and [Name], it's kind of more specific because they have fewer vehicles out there. This is the main department building or whatever. And so it's easier to kind of monitor who's using what vehicles in those areas. So kind of it's supposed to be, but not necessarily.
OE	LE	S	Field	26-35	5 or less	Male	LE-S-022	[RE: apps] Some of the translator stuff is very beneficial. We have a lot

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					of Russian-speaking individuals in our city. I mean, it's kind of a subpopulation, but we handle a lot of calls where it's hard to communicate. We have certain officers that can speak Spanish and stuff, but nobody that can speak Russian, to my knowledge, anyways. So having Translation, which is just basic communication with different languages, is very helpful.
OE	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	... So there's Code 0, Code 3, Code 7's our lunch break. Code 9's if you can't hear somebody. Code 6 is if we have-- if somebody has a warrant or something like that. So a lot of departments have different ways of communicating. We use plain speak, I think is what it's called, so we talk very directly. We don't have a lot of Code 10-4, 10-20, 10-82, stuff like that. So it just kind of depends.
OE	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	I think what they're doing with [information sharing software] is going to be very beneficial because right now, it's kind of located within our city and the surrounding areas. So if somebody's been arrested here, then I can pull up their information and stuff, but if it's in [City] or [City], it's not necessarily going to come up. But they're trying to combine us with [City], [inaudible], [City], [City]. And so just having that general database of individuals and their associates, their vehicles, their locations, their phone numbers, that's invaluable to investigating and figuring out how you can pursue people and charge people with stuff...
OE	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Right, so the Tenderloin district has a little bit of everything. So we have our drugs, our prostitution, our robberies. We also have families that live here. So we have actually kids that are actually growing up a lot faster than they should. We have only one park in the district. Kids can't go out and play and throw footballs around and stuff like that. No way you can do that. They're also stepping over needles. They're learning at four years old, that is needle, don't touch it. So they are seeing a lot of mental health. They've seen a lot of that around here. "Why is that guy with his pants down around his ankles? Why aren't the cops doing anything about it? Oh, the cops just grabbed him, but now I just saw him an hour later. Why is he out?" "Because he's already been to a psych ward, they

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have already given him his blessing, and he's right back out." He needs to be conserved and everybody falls back to Reagan. Well, it's not a Reagan issue. Even though he closed down those places, they've had many governors since then. They could have fixed this. There's no where for them to go. Unfortunately because of our SROs down the Tenderloin, everything gets filtered down here. So for instance, the clinic that's in Pacific Heights, the clinic that's in the enrichment district, a clinic that's where the wealthy-- there is no clinic there. So where do they move them? They move them down here to the Tenderloin. Now that area is cleaned up. That city's supervisor gets all this praise for getting rid of that clinic. Well now that clinic is down here.
OE	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	I have clinics that are across the street from parks. It doesn't make any sense to me. You have a park, and you have a clinic right across the street so kids are in swings watching people shooting up right across the street...
OE	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[The community means a lot?]. And this first time the community has talked to the cops in months. And they're still doing this thing. The Captain says, "You got any issues, you email me." I'm looking at him like [laughter], "Why?" If that was the fact, why are we having a community meeting? We just do a mass email. How about that? Let's just video tape it. We'll video tape it in here. Everybody logs on and you video tape so you don't have to talk to anybody in person anymore. But that's what society has turned to now. And that's where technology is hampering, I think law enforcement, is they're not getting out and not talking to you. Every once and a while, you'll get a clip of a cop playing basketball with a kid out in the street or something like that. But they're not doing that. You can't communicate with them unless it's PlayStation 4 or some crazy stuff. There's nothing to relate to. There's no Monday night basketball. I remember you had to be home before the streetlights came on. And if I screwed up, my neighbors had permission to whip my butt. Then I got two of them, from them and then from my parents when I got home. Right?

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Yeah. It's just that this wave keeps on going down, because we're losing so many cops and when you only have a class of 40 that you normally--
OE	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	So, in a class of 40, they lose maybe 6 or 7 in the Academy. They're just not up to it. And then they come to the street and I end up losing another, say 6. So now I've got 10 to [switch?] stations and I'm separating 30 cops through 10 district stations. So, starting Saturday, I get 6 recruits are coming here, on Saturday. We retire 15, 20 a month especially during contract-- when the contracts about to end, everybody is bailing out. We lost, July 1st, we lost 42 cops. So we're not catching up. And not just catching up.
OE	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Yeah, it is the lower intestine of the [City] [laughter].
OE	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Yeah. And when I worked down there, when I got promoted to sergeant, that's where I ended up on swing shifts, and this may sound jaded, but you could almost use certain individuals who were moving up the block on their hands and knees as a clock. When they got to the end of the block, it was almost time to go home.
OE	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Yeah, It's like the land God forgot. I mean, it is the definite-- and then it has a big immigrant population of Vietnamese, Laotian, and they're not necessarily very demanding of services or whatnot. They try to keep it low profile, and they shelter in place. They leave early and come home late, and they don't-- and then the rest of us-- I mean, so many people are so poor that you can't even go call them impoverished, and it's--
OE	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	There's a lot of carpet baggage here in general, so I don't know it's a problem. I mean, there are a lot of people moving in, moving out. It's a very expensive place to live. So those that have been here for any length of time tend to been here forever, their lives. Lots of families. There were lots of couples as they're getting once they start having kids, they start looking across the bridge. The grass is always greener on the other side.
OE	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	We are way ahead of the curve. We disbanded our Intelligence Unit 19 years ago. I think actually it was after the Democratic National

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Convention in '84.
OE	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	My older brother is retired. My younger brother retired. I think post 9/11, we caught a big wave, public safety police and fire. I think 9/11 doubled their wages. 9/11 made us all heroes, whether we deserved it or not. And then reality started to impinge on the image, and the way the city manager of [City] ran [City], and that kind of thing where the city is funded on citations on the backs of their poorest folks. And the cops want to get paid, so they don't write tickets. They don't get paid. So they have to write tickets so that they'll write you three tickets in a day. "Because I got to get paid. I really don't care. I've got to get paid." They've told me. There's no overtime. There's no funds or no nothing. There's no gas for the cars unless I write you tickets, unless we do DUI checkpoints and other enforcement programs to catch the poor tourist driving up from Florida to New York. "40 a day, I want from you."
OE	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	If you have a designated police sector car, yes you do. But you can go outside of your sector within the boundaries of your station, because every station is basically given a boundary to patrol. Yeah. [City], we have like 10 or 11 districts. They call them district stations. So within each district, you have up to five or six cars that patrol a different designated area.
OE	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	No, I think we're one of the first. We're one of the first that has that.
OE	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Our station is more of a busier station. We call it a money station. It's an overtime station.
OE	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	That's just me. But each station is different. When I was at a different station, they celebrated birthdays. When someone retired, they had a huge party. If you're having a baby, they had a little gathering in the lineup and say, "Hey, this person had a baby, and they're doing okay." But each station is different.
OE	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Yes and no. I do miss the birthdays. I do miss holidays. There'd be huge barbecues. But our station is so busy, it's hard to actually sit down with

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the group and have a meal because your area's blowing up. You'll literally sit there with your food, and you have to go. So it's hard. It's hard at our station to do that.
OE	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	We got new radios, but they're almost as worse as our old radios. We're in the middle of our station, and we can't transmit and receive information static. In the middle of our station. Specific areas where you can't transmit, buildings, you still can't transmit in the basement of buildings. But the main thing is our station. You're in the middle of the police headquarters on the first floor, and you can't transmit or hear. You literally have to walk to a hallway or walk outside the transmitter, because dispatch can copy you.
OE	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	I did a test run for six months on my own-- I was the only who had it, me and my buddies, the programmers. It worked. And then, people were like, "Oh, my God. I've never seen this before." And I told them, "I'm beta-testing this." Even our old chief said, "You're not supposed to do that," and I go, "Well, where does it say in our department general orders that I can't get forms digitally." It doesn't say you can't give someone a form digitally. It just says, "You shall give them a form." I had a business meeting with the department. I sold it to the old chief, but with any government agency, there's a lot of red tape. So they got aced. They got canceled. My programmers and me don't talk anymore because there was a guaranteed amount of money from the department. I never got it, and basically got a "No, thank you. We're not interested," from our technology department. So it's kind of a touchy subject for me.
OE	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	And now, our department is-- they want us to be more like this with the community, interactive with the community. And I was using technology to kind of build that bridge of helping us become more friendly with the community.
OE	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	So I would say the station level as far as I'm around, everybody gets along. Some days you're doing more or less, but that's to be expected, just because of staffing and the changes in a lot of jobs, or we're trying new stations is allowed to get newer officers coming in that make it not

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								monopolized with the reports. Communications, everybody speaks to each other, talks to each other. It's the calm before the storm, usually for calls for service because we have a large district. I mean, it's a pretty good size district. And the calls for service could be minimal at a moment and then spike. So depending on the day, you'll get these thermal meters of crank density towards the afternoons or towards the late nights or whatever, but then you've got all these different calls for service in the middle. And whether officers are on viewing in a process, either with driving violations or street times, or even just some other need for the community that they're getting wagged down for, flagged down for. So it's busy every day. It's consistent every day of being busy.
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	Being on days, come in in the morning, go through roll call. We're usually given information about what's happened since the last time our shift has gotten off. Go through. It tends to be a little slower in the morning, so we have time to maybe drive the beat, see if anyone's out. It's typically pretty quiet. And then kind of wait for calls to roll in and if you're feeling proactive, pull cars over and stuff like that.
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: roll call] It'll be the whole shift and then a supervisor, whether it's a lieutenant or a sergeant, will come and address the watch.
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	The work cell phone, since we have them. In other districts, they don't have them. I came from a different district before they implemented that, and it was mostly your personal phone.
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: after roll call] We split off and I would say it's a pre-natural flow in and out whether it's to eat, use the washroom, maybe you need something on the computer, your computer's not working, or you can just-- you waited for the boss to come in, you need to talk to him. It's a pretty good flow, depending on how far that person's beat is from the station. So if somebody's beat is next to the station or in the-- it's easier for those particular individuals to go in, whereas if you're working the total opposite corner, it's not totally worth your time to make that drive.
OE	LE	U	Field	Not	Not	Not	LE-U-024	It's I think the third largest [district] in the city in terms of real estate.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder	specified	specified	specified		
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	SME S3: Probably from the station to [intersection] and you're talking five to six miles from the station, which doesn't seem like much, but especially in traffic, if you're trying to go use the restroom at the station, it'll take you 15 minutes before you can actually-- SME S2: You'll probably get a call before you can get there [laughter].
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: vehicles with CAD] They've replace a lot of them with the newest generation, but they're still-- they go down for maintenance if the car goes down and we get a pull car that PDT doesn't necessarily work in that car because it's different mounts and since it's just a pull vehicle, they're not going to put all the newest latest and greatest things that are going to work in it. It's just a car to use while yours is being repaired.
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: car assignments] It could change every day. For the most part, it does. Some people are pretty good about taking the same ones. For the most part, I'd say I'm lucky to get the same car two days in a row.
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	our district is one of the bigger ones in the city. I would probably argue that it's the most diverse, as we have Chinatown and then we go into very old communities from [City], which is pretty much the nuisance of history that [City] started. But then we go into Hispanic areas and we go into black areas and we border [City], we border busy districts as well. So I think we have everything. We have everything from the crimes that you see on TV, to the burglaries where someone's doors getting kicked in the back when they come home from work. So not only the people we serve diverse, but I think the crime that we have is also diverse compared to other districts.
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	In the district, yeah, we're assigned one mostly due to the fact that we have one of the SDSC rooms and the apps that come with that are on the department phone... HunchLab app and ShotSpotter.
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	Two sides of our districts are bordered by expressways. So it-- there's a police shooting on the-- not a police shooting, but there's a shooting on the [street] ramp and trying to coordinate between the dispatcher talking

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to the state police dispatcher then to us, and getting all the information back, there's a lot of confusion going on. I mean, we had people chasing people. Nobody knew who the offender was. Until you get there and somebody can actually put it out that this is what happened, there's-- it's confusing sometimes.
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: department radios] They're also not encrypted like they should be... Especially by us, we have a lot of Hispanic [inaudible] listening to see-- hear what's going on because then you-- you know, if there's somebody doing a shooting over there, the police are all going to be on that side. And if I want to settle that with somebody else, I can go over [spot?] out the less likelihood of something happening.
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: technology use] I would say it's pretty much computer and phone-based. Other than that, it's all through-- word of mouth is really still going to be powerful with police work. Because people want to talk, but they don't want to talk. We can't exactly always talk to somebody on the phone or say, "Hey, come into the station." People still want that type of business to be handled privately. So even though we have all this wonderful technology, there are still people that are shy to get into-- some people don't even want their names put in reports, let alone phone numbers and all that kind of stuff. But I would say the bulk of what I'm doing is computer-based.
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: body and in-car cameras] You have two major companies that do completely different things, Motorola and Axon.
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	Before we didn't have tasers, we didn't have-- probably, they had no cell phones. I mean, the PDTs were just coming into the cars. And they've really, from the time I started to now, it's kind of like going from an Apple IIc to this brand new gaming system that you almost have in the car. You could say the same thing about cell phones. I mean, before your cell phone was to make phone calls, and now it's [laughter]--
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	In the smaller departments, it's also easier to manage the amount of folks you have whereas a police department this size, we have people

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that have trouble remembering simple ways to code out jobs. There's only 20 of them and they still can't figure it out so--.
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	the computer where it's at, it's not really comfortable. I mean, I would hate to have to write a report in the car. My back would be killing me because you have to turn, and lean, and type, and it's not-- it'd be nice-- it's supposed to be a portable data terminal but it's not. It's fixed in the car... You could take it out but if you're in the driver's seat [laughter], your steering wheel is in the way. So if you're in the passenger seat, you can put it on your lap and work. But if you're-- we're days so if you're by yourself, it's-- you're working like this.
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: subways] They have a special frequency for that but we don't have any in our district.
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: radio communication] Hospitals are tough. [Hospital], [Campus hospital], I can hear you, but I can't broadcast out. So if there is an issue, we have a problem.
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: FF] they can't navigate traffic as usually as we can. So we beat them there for the most part or we could see the smoke coming up to the call. But I think they do tend to wait for us to say, "Okay, this is what we have for sure."
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: call response frequency] I would say I can get something from something pretty menial to something serious, but a minimum five calls a day.
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: calls stacking up] Well, if they stack you, they will. When you do multiple jobs. That will happen sometimes through afternoons and midnights when there's a higher level of call for service. But the officers in their cars, at least before it was, they can't see what's pending or what's waiting. Only the dispatcher can and the supervisors can. So from the station, I can run and see how many calls for service we have waiting. Around the 4th of July, you get 3,000 calls of disturbances with fireworks. And we'll tell the dispatchers [not to?] call them unless there's a caller that wants to be seen because, literally, you can't handle-- you're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								going to be in a back log all day if you're--
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	Even, like you said, [state criminal database] which not every officer has access to for [city] but you could get driver's license photos. So, if someone's playing the name game and says that their brother-- well, of course, you know your brother's birthday and his address, so you can easily say, "Yeah, I'm him," and we would never know the difference.
OE	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: cars with license plate readers] A handful... I think some officers do not like it at all. I don't know how to describe it. It's just more noise in the car... Between the computer making noise to you hearing, like you said, you listen to the radio, but not always, it's just kind of it almost becomes chatter some days, and then if you turn the talk show radio on and then you hear this thing go, "Boop, boop," and then you run the plate, and I think it would be nice if the plate reader knew if you were in motion or not...
OE	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	when the ShotSpotter goes off, we go over the areas that spotter detects the shots. And we call it out. And then we see if there's somebody shot, and we dispatch officers there immediately. I have HunchLab. So with that, I help deploy. I assign our overtime cars from the Violence Reduction Initiative. So we determine where we need the extra resources, where our regular beat cars in the district don't-- aren't able to always cover. So where there's a high propensity for violence. So we will put the extra overtime cars there. So I do that when I get to work also...
OE	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...We will do [surveillance camera] missions. So we will watch the [surveillance camera] Devices. And if we have any arrests I have to create missions for all of this. We do at least two a day. And I'll assist the officers with the arrest if they've never done a [surveillance camera] arrest before. And pretty much if anybody has any information then they will come in...
OE	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: patrol same areas daily] Sometimes. I've been in several different districts. So depending what district I'm in, depending what I was doing.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								And I don't like to stay in the same place for too long. I like to go to different places. But when I was on the watch, when I was in the [district] on 3rd watch I was the same beat every day. I knew everybody that was there. When I was in [district], sometimes I had the same beat. When I was in the [district], I was the same car every day. I worked the same beat unless they didn't have enough people on the watch. And then I would work on the watch to cover all the beat cars.
OE	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: working with partner] I've switched to every watch. So I've never worked the same watch for more than a year. Afternoons and midnights I would be a 10-4 car, which is two people. If I was on days, I would be by myself.
OE	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: calls] Well, it gets dispatched through the radio. And then it gets dispatched on their PDT if they have one in the car.
OE	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: station life] There's the desk officers. So there's the desk, people come in, people need reports, people need help, people complain. At the same time the desk sergeant is there, he's approving case reports, he's approving arrest reports, he's approving inventories, he's going to lockup to check on the prisoners, he's sending out emails if there's a person shot, and anything else the lieutenant might need him to do. I'm off to the side. I'm in this information center and I'm in there with two other officers.
OE	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	We're all very busy. We're all very busy. I'm close to the people that are in my office, that I'm with. One of them used to be my-- well, he was, on occasion, my PPO when I was in FTO, so I knew him when he was brand new. Yeah. So there's that relationship... So at the desk, a lot of the officers know that I used to be a FTO or I was their FTO, so they come in there and ask me questions. So they come in my office quite frequently. I have a very good relationship with my lieutenants, so we talk very openly. Any questions they don't know the answer, they'll look it up.
OE	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: district] The [District]? It's diverse, sort of. Well, it's African American, it's white, it's Hispanic up north... there is a lot of violence on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								those, on the edges, on our borders. And then there's some that-- and the gang conflicts from other districts tend to finish up in our district. So it's very violent in some areas and some blocks are just very calm and nice and then there's other-- you could go one block is everything is well-manicured, everybody owns their home, and it's very well taken care of, and then you go three blocks away and they sell major amounts of drugs. There's a lot of violence, a lot of child abuse. There's a lot of beautiful things there. We have the conservatory. So there's a lot of good people in there. They just can't come out all the time because they're just stuck in their house.
OE	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	Well, I can go in a squad car and leave and go outside if I needed to. Like yesterday, I was outside for a little bit. I work overtime a few times a month. So I just go outside, and they'll see me. The bad guys will see me. Some of the bad guys I have known for a while. So they'll address me as [alias]. The bad guys will even say things like, "Oh, you're outside today." They're like, "Nobody cares about us anymore. Nobody tells us to get off the corner." And they'll snitch on their rival gang members, and I appreciate it.
OE	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	We see state police frequently. Because our station is right off of the expressway, so they come in for all of their traffic crashes. When they do traffic stops and they have arrests, they come into our district. So we see the state police quite frequently. We see [neighborhood] frequently because they border us, and sometimes [neighborhood] because they border us.
OE	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: license plate readers] We only have two of those.
OE	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	FTOs have tablets... So if they don't have a PDT in the car, they have their tablet and they can write reports on their tablet.
OE	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: tablets for patrol officers] They'd just fly around in the car. PDT is better.
OE	LE	U	Field	36-45	11-20	Female	LE-U-026	In our station, our computers are not good. Our computers are very old.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					They don't work. They don't work well; they're slow. So the computers in the station, even our processing rooms, are outdated. It's very hard to do things by yourself because of the way it's set up. So if you're sitting in a room, processing a prisoner, it's just you and him. You're sitting in a room with half of a door and a computer that may or may not work. And if there's two of you, somebody may have to sit with the prisoner while your partner goes into another room to do an arrest. So inside the station, it's different. Things don't always work. Fax machines don't always work. Copy machines don't always work.
OE	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: patrol officers in the field] If they have a working computer, then it's great. If they don't have a working computer, not so great.
OE	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: calls] Oh, they can queue up. We even have a-- it's called a RAP, Radio Assignments Pending. So the entire district will be in a RAP on occasion because there will be so many calls for service... Supervisors can see all of the calls waiting. There is a way to look on the computer. Regular patrolmen cannot see this the way that sergeants see this. However, there is a way to look on the computer to see it. Not all of them know how. It's not easy. It's almost like an Easter egg on the iPhone, sort of like you might sort of kind of know how to do it.
OE	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: patrol officers] They'll see that call and any other calls that they were assigned. They will not see any calls that are waiting to be dispatched... So they can have a dead body waiting at the hospital. They can have a domestic. They could have a noise disturbance and a kid bit by a dog. They can have all of that waiting because it's assigned to them, but they may not see that there was, let's say, a call on the next block or that just hasn't been assigned yet.
OE	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	we have two people in a car so the way we're trained is pretty much the passenger is using the PDT while the driver is driving. So that works out... in [city] most of the time we are 10-4.
OE	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: work cell phones] I don't think they've made a whole lot of difference. I mean, they have HunchLab on them so that makes it easier

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								for the officers. If we could get that on the PDT, they wouldn't need one more thing to take out. ShotSpotter is on the PDT. So I think it would depend if you had a PDT in your car or not. Because if you have the cell phone, event numbers, stuff shows up on there. It would work very well for, let's say-- some things work well for bike officers. Like if you could get the phone to run a name on there, if you had access to leads on the phone, that would be great for people who are on the bicycle. Because they don't have a PDT, they have to run everything over the air. So some things could be used for-- they're a great technology, but if you have a PDT some of it is the same technology.
OE	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	Well, we don't use a lot of 10 codes. We only use 10-4 and 10-99, but most-- yeah, most of the time if you're by yourself you'll just say 99 or 10-4 and that is it. Those are the only 10 codes we use.
OE	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	In my office, we would like to get one more computer. That would be nice. We have four people in the office, we have three computers.
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	All day. We would literally go to a coffee shop in the morning, get our coffee and review all case reports in the morning, decide-- what we did is regardless of how unimportant or how trivial a case report looked, we had a habit of always going to the scene. It didn't matter if it was a little kid's bike that was taken, we were going to go meet with those people at that house. There was a couple reasons for that. One, it would randomize our patrol because sometimes as human beings, we get used to just going the same circles. Well, this would randomize our patrol, "All right, we're going to go here." And then, "Okay, what's the next case report? Are we going there?" It kind of randomized things for us. And that was one thing. The second thing was we always wanted to know the people, and it was an opportunity to meet people. It was an opportunity to meet the neighbor. Or while we're standing in the backyard looking at where the bike was taken from, the next door neighbor decides to look over the fence and say, "Hey, I noticed that--" and that was so powerful, and you can't get that sitting in an office.
OE	LE	U	Field	26-35	6-10	Male	LE-U-023	The community I serve is just that. It's a community. It's a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					conglomeration of people from various demographics, various traditions, various backgrounds. I work in [City]. [City], I don't know if you know--
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	--is the most diverse neighborhood in the United States of America. So we have a heavy Mexican population going up and down [Street]. We have a heavy Indian and Pakistani population going on [City]. And then, you go to [City], and then you have Jewish population. Then you have Muslims by a mosque. You have these Jewish synagogues, and you have all these refugees that kind of come to [City], because there's a lot of social services available in [City]. So you have all these Afghanis, and now you have all these Syrian refugees. You have all these people from Bhopal, Burma. So you have all these refugees coming in. You have Iraqi refugees coming in, and there's a million [laughter] people. There's tons of languages. It's crazy over there [laughter], yeah.
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	I'm one of them. I'm Indian. I'm from India, and when I got on 10 years ago, I was one of the only Indian officers, one of the first few that got onto the department. So I was always a conduit between the police department and the Indian community just by default, even without trying. Many times because I was translating, many times because they felt more comfortable speaking with me, especially coming from where they come from and their background being-- sometimes the police can't be trusted where they come from. So to overcome that stigma-- how did I deal with all this? My partner is Puerto Rican. He spoke Spanish. I spoke Hindi, and Urdu, and Spanish [inaudible] now [laughter], after all these years being with him. So we had it covered. Wherever we went, we pretty much had it covered [laughter].
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	It's interesting that you ask that. These SDSC rooms are--[Mayor] and upper-level management in the police department, that's their number one focus, is to utilize this technology, convert on what we get out of this technology, and produce real results out of it. I work in the [District]. Last month, shootings were down 63%. The [District] and the [District], down on [Intersection], are the two most violent districts. I believe that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there were four districts last year that accounted for 50% of the violence city wide. And the [District] and [District] were two of those districts. You see a 63% reduction in shootings in one month. Last July over this July, 63%. That's huge, astronomical.
OE	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	[district] is from-- I don't know if you're familiar with the city. It's from [street] to basically to [river], which is right next to [highway] from the village of [city], basically to [street], between corporate--[intersection], the jail there and everything. So it's predominantly African-American on north side, and the south then, Hispanic.
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I would describe it as an administrative police function. Basically I'm in charge of operations of a Sheriff's department. So my job is primarily administrative and the operation on a day to day basis of a small law enforcement agency.
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	We have 65 employees so I think probably anywhere under a hundred employees.
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	As the [Job title] I oversee a team of three and so we're also a small department...
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Well I think it's unique to the rest of the state. It's a fairly small community. I think our county's population is like 21,000 or 25,000 I can't quite remember. We have you know several incorporated cities in the county and it's a fairly diverse population from a standpoint of we do have an element of people with great wealth and then we have a big population of service industry type folks who provide the basic services. We do have a ski resort in our county and so I think a lot of the jobs here are service oriented, restaurants and stores. The resort is one of the bigger employers. [County] also employees I think about a hundred sixty employees? A hundred and eighty employees maybe but it's diverse geographically of course...
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...On the southern end of our county we have kind of high desert and on the very northern end north of [town] it's a mountainous national forest recreation area. I think we have a fairly large Hispanic population in the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								community. I've heard upwards of 30% which is different than probably the rest of the state but all in all I think from a law enforcement standpoint I think we have a lot of support in our community for law enforcement and first responders. I think we have a very good relationships with our citizen reign. I think people I think we've established ourselves as a competent law enforcement agency that provides very good service to our citizens.
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I think it's hard to tell. I mean [State] is a fairly different state than others you know. I think generally in [State] I think the citizens support law enforcement. I think compared to you know I think you see across on the national news in certain states or certain parts of the country there's a lot of maybe where agencies they feel less of a support from their community so I think this area is not only unique you know it's probably not unique to [State] but it's unique to other parts of the country.
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I think you know we have a pretty tight knit group. We have a lot of employees that have worked here for a long time and then we have a lot of employees that are fairly new. We do see some turnover just because this area is very expensive to live so I think often times we have people that move here and they think oh it's great. What a beautiful area. The ski resort and once they move here they go oh it's hard to buy a house here because I think meeting the home prices are far above any other place in the state so that's a challenge...
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...I think generally we have a good culture of you know we have I think most if not all of our employees you know work very hard day in and day out. Some of them have really tough jobs and it's all in all I think it's a very positive environment. I think people can come to work and feel free to express new ideas and embrace changes and so that part is definitely one of our strong suits.
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: IT staff time at station] We're over here probably 25% of our time maybe 30% of our time spent between three staff but I would echo everything that [name] said I think that when we come into this building it's a family environment and we're also included in that fold and we're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								treated as team members and collaborators and so it's a great environment and staff are capable, experienced and always striving to do better.
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	We can on a limited basis. I think as part of the grant the fire departments were provided with a couple of 700 radios for their command vehicles and maybe some portables. I don't quite remember. We do have a dedicated fire launch channel. I don't see it get used that often because I think it's primarily like the command vehicles will have the channel that the actual like EMS and fire don't have it so technically yes we can talk to them but I don't see it getting used very often. I hear a lot of gripes about interoperability but I don't always see the users use the interoperability that we do have.
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: cross-discipline interoperability] I think it's kind of a hot topic right now just because there's been some issues with or I guess some people have had some issues with our dispatch center which is operated by the county not by the Sheriff's department but it's something that I guess wherever there's users there will always be users that are unhappy.
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Well to circle coming back to the Sheriff I mean if we're looking at technology in this facility and what users are using you have everything from door swipe systems, door control systems that includes both pneumatic manually controlled systems at the control center and this building which is part of the detention center manages that and so you've got intercoms and intertied camera systems and door controllers and pneumatic Sally doors and so that's all integrated in. We've got camera systems in here so there's DVR 24 hour recording and playback and evidence capabilities there...
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...They're also using body cams out in the field so officers are issued those as well as their radios. There are other door controller systems like the swipe system that you saw us use to get into this facility. That's another one. We have communication systems between [state] Patrol and other government agencies throughout the county mostly based in [city] and so we've got electronic fingerprint systems where we can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								transmit fingerprints back to state and federal agencies as well as kiosk systems so that customers can come in and interact with accounts for inmates so that's all tied in and integrated...
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...We mentioned the PMDC which is the mobile data unit. We also have a separate encryption layer and communication layer that rides underneath that to allow those vehicles to have the correct encryption and security between the facilities. You've got various packages, records and management system which is obviously something very important at the Sheriff's department that ties into the computer and the dispatch system that's in the facility and we use crystal reports, we use obviously lots of office type protocols and programs, productivity. I'm just kind of looking at a list here. We use various data bases, we use different various we'll just stick with various data bases all that kind of stuff with QuickBooks so there's a lot of different technology platforms that are layered underneath the Sheriff's tasks.
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Sure, sure. So we have a software suite that is provided by a company out of [city] that includes both a civil module that the Sheriff's department uses. There's also a module for our treasurer's. There is a recording module, there's a real module that manages all of our parcel and land data, there is also a recording module that manages all of our recorded documents whether it's a liquor license, a manage license some sort of a partial split or something that has to do with deeds or land records and so that's used throughout the county, various data bases with different flavors and lots of productivity suite software obviously...
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...There's close to 40 software packages within the county and so to go through all of those would be a little much. Social media is something that the county is utilizing more and more. We have several dedicated staff both in the Sheriff's and countywide that are using Twitter, Facebook and several other platforms to a degree to try to communicate with citizens and get the message out. As far as technology for the IT department we use virtualization and that is VM wear specifically so

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								almost all of our servers are virtualized and we use storage area networks and those replicate multiple times a day between different facilities and so we're replicating data for both disaster recovery and resiliency...
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...We use fairly robust software package to also backup data and not only move it to another facility but it also gets copied to tape and starting to evolve and that's a 5 year retention policy. We have multiple security protocols and software suites realizing including umbrellas DNS which is a Cisco product. Of course Edge firewalls, interior access control lists and policies and the core of our network as well as out of the access layer and then we're using a product called (INAUDIBLE 00:21:11) for our in point protection both at the serving and in point level and so there's lots more but I'm drawing a blank.
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...Certainly for our body cam systems I think so far we've not run into a storage issue but we will at some point. It will get full but we've only had body cameras for about a year and a half or almost 2 years perhaps but you know as far as the video systems we have the surveillance systems in the building, we have the in car video and the body cam video and I think at some point you know it'll be maybe more difficult to manage...
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I know some agencies pay a lot of money for Cloud based storage. Whereas we do not as far as I know and I think so far we're finding that's really the best way to spend our money up front on the storage rather than over time. I know a lot of big agencies some of the companies that sell the body cameras you know they're all Cloud based and those agencies pay a lot of money for storage whereas we pay more on the front end for the camera itself and the storage but it's something I think it's pretty timely topic just because I think storage at some point will become more of an issue. I don't believe it's a huge issue right now for us but at some point it's got to be.
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Probably daily. I'm trying to think I mean aside from the radio not working, limited self-service in certain areas of our county we do have a lot of we have fairly good cell service up here but because of the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								geography of the county there's places where you don't have cell service. I think one of the big problems of our radio system in this building particularly and the need for technology which I think we did explore a little bit but the cost kind of prohibited was in this building our deputies cannot receive or get out on their radios in certain areas.
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I think it's because of the construction of the building. If you walk down the hall here with our command stuff you'll see everybody's radio sitting on the window sill because that's the only place it'll be able to link up with the system so we have explored I can't remember the name of the what it is but some type of repeater for in the building so if typically if our one of our deputies is in their office or back in the room where they write reports you'll hear dispatch calling them and they can't hear it because they're kind of towards the innards of the building and so I don't remember the name of what it was but I think we did get a bid or a quote to have it installed and it was like a hundred thousand dollars or \$90,000 and we're like oh I guess we're not getting it.
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...so for us it's always a balance of security, functionality and usability and those three have to balance and so the usability portion of it is something that we often don't see. We're not in these applications on a day to day basis and so we cause a lot of havoc along the way and I think it is a daily occurrence. Technology is constantly changing as you well know and you guys are in a laboratory looking at technology on a daily basis and trying to figure out how to secure it, how to use it, how to make it better and so yes, I think it's a common occurrence and I don't think that that will get any better along the way. I just think it takes teamwork to make stuff work effectively.
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I was going to say after listening to [name] talk about all the systems earlier it made me think like you know our computers and our technology work 99.99% of the time and that's a testament to [name] and his team because there's from my perspective and probably most of our employees here when they turn on their computer they expect it to work and like I said it normally the vast majority of the time does and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								our systems work and it's probably something I mean I'm sure our employees have no idea what you guys do to make things keep working and so that's a testament to [name] and his team.
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Certainly and in this valley originally there was a 19-2 modem system with a repeater just right up here on this mountaintop for county because we have such a wide or big geographic area. The cities we use 4.9 broadband modems and so we have several different technologies that we utilize in the vehicles to communicate back to the Sheriff's department and so now that they're all on 700's and cell based communications for the in mobiles I think it's a lot more reliable, the coverage is vastly better, the ability to interact not just with local agencies but across the state and federally has come a long ways to BHS, DHS the different organizations that have come in and helped make these more robust and so just the radio systems alone have vastly improved.
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I know the probation department has systems and they work directly with the juvenile offenders, the correctional institutions, the prosecutors are constantly working with different agencies throughout the state. We're tied into hub and spoke network with the [State] Supreme Court and so there's a centralized brand new system in the State of [State] where the Supreme Court has servers both at each county and also centrally located and so there's constant communication, probation prosecutors, public defenders and defense attorneys are all tied into that system as well. And so that information is funneling from law enforcement to the prosecutor's office to the courts to probation and it all ties in seamlessly...
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	... Secretary of State is a direct connection for us as well so the voter systems, registration, voting booths all of that stuff ties in automatically and information transferred nightly between different agencies. I know that the [state] State Patrol maintains a crime lab and so a lot of the investigative pieces of our investigations go there and there's a system that we can access 24/7 where we can view the status of different

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								pieces of investigatory evidence and where that's at in the workflow and so we're very tied in to agencies throughout the state...
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...I think we have seven or eight direct connections not including the cities which we also directly connect to. Some of the evidence management we do have an evidence management system and some of that ties directly into the cities where they have the ability to log evidence up there enter information and then it comes down here to a centralized evidence locker where that stuff is maintained piece by piece row by row aisle by aisle and so it's a lot of integration.
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I think too one thing that popped in was like our communications with the state emergency operations center in times of disasters or like specifically the flooding events that we went through in the spring there was a constant I think we have some type of integrated line that's a direct communication with the state EOC. We do use a state I guess internet based communication called web EOC. That's something that we really used a lot. I think it took us a while to get on board with it but we really saw the value during the flooding event...
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: [Organization]] ...That was our primary way to push out information to local first responders and commanders for fire and law enforcement and EMS along with like the health districts and the state EOC. We had a lot of users in the county that was pretty much their primary source of information during the flood events as far as the daily operations and updates. I think it took a couple of I think [Organization] has been in place for many years but it really took a while to catch on here I guess and now I know during this flood event the state guys were like you guys have so many users now it's becoming such a big thing and it's like well that's good that's what you guys wanted. The management of it has been excellent and the training and it's really been a big tool but it really only gets used when something's bad is going on.
OE	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	... Our further facility is down in [town] which is about 40 miles down the road here. We've got a road and bridge shop there. We've got a road bridge shop in [town] which you drove up through and so all of these

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								different business units need to be interconnected and secured and how do we do that and how do they seamlessly connect? The applications that ride those pipes they're going to change over time...
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	For our agency, I supervise approximately [Job title] assigned to the Bravo shift. We're broke up into four shifts, lieutenant, supervisor in each shift. We control and maintain daily calls. Any call that's received to communications, our deputies or my shift will handle. We basically supervise manage. We read over the complaints it it's being put in, we prioritize which complaints we put towards priority, and the way that we're going to respond to the calls. And we also, some time we'll send what deputy we choose because we know there's some--some are strong in some aspects of the job so we'll make sure we've got those aligned to that job.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	I would say challenging only due to the fact that we can go from a mundane day where we're doing absolutely nothing, quiet, no complaints on the board, to the next thing you know, we have a homicide, a high speed pursuit, and your adrenalin dumped for the rest of the day. You just, the job is never the same. That's why in our job or our profession we get people say oh we're just like normal--it's a routine traffic stop because there's no routine day for us. I can start off on one end of the [County] and end up on the other, and then back. It's never a day, so it's hard, it's hard to say how the... the day is going to be.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	In the morning, the only routines that we have are every morning we will send out a brief. We get a pass on from the night lieutenant. If I'm on day shift this week, I had a pass on this morning from the night lieutenant to let us know anything that's going on, major that's taking place, that may take place today, like a major incident, and it may carry over to us. We'll do a debrief and then from there we'll send out the bulletins to the deputies using our computer system. It updates them; they get the same pass on it that I get. And then at the end of the day we do the debrief to the oncoming shift. That's the only two things that are really set in stone for the day because again, I know I come to work at

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								5:00 in the morning, but that doesn't mean I'm getting off at 5:00 in the afternoon. I could be out at 8:00, 9:00, 10:00, based upon the uniqueness of the day.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	Right. We're a very rural community. They may be in the same grid location. We have, where our [County] is divided into three locations, north, central, and south. In the north area you have like five grids, central have six grids and I think south has seven, eight grids. You may work in the north area but depending on where the complaint loads are coming from, you may be in different grids that are in that area. So do they work in the same area per se? Yes. They'll work in the north area, central. But if I have a deputy who's on vacation calls in sick, I may shift someone to cover that slag.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	But I'll normally keep my main manpower in the central area and have staff up in north and south, but if something starts kicking north, I can rotate somebody north or I can rotate somebody south, and that's basically based upon a complaint load at the moment.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	... But normally I'm so busy, I have 14 deputies but that doesn't mean there's a lot less than that or more because we have--we have motor officers come out during the day, you're watching over them, you have the canine officers, walk patrol, so you have a bunch of people moving about. So you're actually responsible for everything that's going on during the daily function of the sheriff's office.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	Geographically, I think we're almost 100 miles long, 50 miles wide, and this is basically due to the [City], which was our main hub through the finances of the generations back in the day when the Cajun settled in this location, the bayou was their home. That's how they traded, that's how they brought goods in through the bayou. And it still exists today because we have a lot of shipbuilding in the southern part of the [County] where [inaudible] build ships for the Coast Guard and US Navy. So it's a major contributing factor the way that [County] is designed. So that's kind of unique to us like I said again, you have one major incident on one of the high--two highways running north to south, it can be very

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								tedious. It blocks up everything, especially at five o'clock in the afternoon traffic. The people, the people are unique to each area of the [County]. North central and south what we always say is three different planets. It literally is, there are three different cultures. You have the Cajun culture where some people still speak Cajun French. For those who don't speak it, it can be an issue. But the culture is different, it's changes every year, we have an influx of different groups coming in so you just, you have to adapt with it. But it's a very unique culture.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	I tend to believe there's a lot of diversity. Because you--all industry is down in the bayou, so there you have a growth of financial economic growth, whereas your center, central part of the [County] is more agriculture, as well as the north end of the [County], it goes more agriculture, more sugar cane farmers. More farmer, cow farmers raising cattle. Where south again, it's basically all industry and seafood. We have a lot of shrimp boats, that's where all the shrimp boats are where other parts of the [County] don't have that because they don't have that outlet to the Gulf. Once you get to a certain port, [City], it's past us accessible to the Gulf of Mexico where they are able to run the shrimp and stuff. So you have--it is literally three different locations. When you're dealing with someone from [Town], you don't... their beliefs and the ways they feel about things aren't naturally the same as those from the south. So it--but as far as ethical and ethnicity and everything else, it's--I think it's rather mixed. I don't think there's one location that's one up or the other.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	All you do, the only way it affects, really affects us is security wise because when you have such a major industry like that, for instance during the attack on the United States on 9/11, we have a business called LOOP, that stands for [state] Offshore Oil Platform, where most of your crude oil, your super--they call them super tankers, they can't get within the [river name], so they come to a port out in the gulf. They connect there then they pump the oil here into [port], where the oil is saved or shipped out to different aspects of the country. So as you can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>imagine, during 9/11, this was a major responsibility for us. We were actually, our SWAT team was actually called out and we were sent there to guard it, to safeguard it during the 9/11 incident until the military and national guard could come down to provide their security. So for us, it does take unique because the [port] is a vital aspect. During [Event] when it shut down, [port] shut down, oil prices jumped. And just, you couldn't imagine that until that happened. You would never think this little port, this little small speck on the map in the State of [State] could affect oil prices across the country. But it did.</p>
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	<p>Right, I was kind of born into the fire service, like I said my father was [Job title] here for 13 years, and I mean now I've currently worked my way up through the ranks and I'm currently the volunteer [Job title] of [City] Fire Department which covers everything on the outskirts of the [City]. It's a 77 square mile district. We run about 200 calls a year. We have three stations and nine fire trucks.</p>
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	<p>Pretty much, yeah. I mean I get up early every day; I'm at work for 7:00. I mean in the afternoons, usually every afternoon I usually stop off at the fire station, make sure I didn't get no mail or if we had any calls during that daytime, see what, see exactly what went on. If I need to sign any paperwork, any phone calls I need to return there. I mean at the police department I kind of have two secretaries and a staff that work under me, so throughout the day they're constantly taking messages and calling me so that's pretty much taken care of on that end. But the fire service side is all volunteers, so you just you've got to pick up the information when it comes in or we all come together and when there's a call or when there's a meeting or training, other than that you don't keep in contact throughout the day on the fire service side.</p>
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	<p>No, it would depend, depending on when you came in that day, you had a geographical beat. Each officer has a geographical beat normally that they patrol in, depending on what's going on that day. If we have extra requests, we may send two officers to that specific beat or if there's something going on in that area like let's say it's a big shopping holiday,</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Black Friday or something, we would send multiple officers to the areas where we have multiple stores. So it all depends on what's going on that day, but yes, each and every day when you come in, and especially in our department, you serve a particular geographical area or beat.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	... If the weather's nice we'll go out. We do have a real fine training facility here. We have a three story burn building, a seven story tower. We have a lot of things that we can do there, a big vehicle extrication pad, so depending on what's going on weather wise we'll determine what we do for training.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Right. Well, the city, the city limits of [City] as a police officer, the population is about 21,000, we have the university here. When that university is in session we have about 27,000 people here. The university is a big part of our economic boom here. Our large portion of work. Work related here is sugar cane, so our busy season of the year is their grinding season when they grind sugar. We do have a John Deere facility, one of a major John Deere factory here in the [City] where they have three plants where they make chopper harvesters, pineapple harvesters, that's a real big facility. They probably employ about 600 people here in this [City]. So I mean we are a community and we do have a big hospital here with a big focus on like rehabilitation, they do a lot of sports medicine here with the university. So we are kind of a midsized community within the state and across the country.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Well I mean I guess the demographics would be like properly the majority is white people. I mean we do have a good population, probably about 25%, 30% of African-Americans. One of the main issues that we deal with here a lot is illegal immigrants. We deal with a lot of illegal immigrants; they're coming in to work on these farms and stuff like that, so we deal with that a good bit. A good bit of our illegal population is illegal immigrants.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	And one of the main reasons why we was able to get that grant, and I'm not sure if you know this, but [County] produces 23% of the nation's oil. LOOP is down the bayou, [State] Offshore Production, that comes

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								through [County]. I mean we have big offshore tankers that pump in large amounts, 23% of the nation's oil passes through [County], so that was really able to help us get that grant in Washington, and that really helped out our [County]. I mean I could be sitting right here and there's a big fire or big incident down the bayou, by turning the switch, I can hear what's going on. And our [County] is 92 miles long.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Absolutely it does. Absolutely it does, and I think one of the things that really, that--and you're talking about pre-Karina and post-[Event] one thing that we haven't experienced yet on this LWIN system that I've been saying for years is, is what's going to happen when we do have another [Event], and we have all these subscribers trying to get on that radio, we really have it. We've had the flood, we've had the flood, but we haven't had a major incident like [Event] to be able to really test this networking to see if it's really going to work. So that's one of the things I am concerned about. Now we still have our old high band system because remember that the new system that we're going with is kind of on that cell phone type of service. It's not the old analog radio where you could talk radio to radio. It's depending on repeaters throughout the [state] to be able to talk. Well, during [Event] high water, the towers weren't going to go down. So that hasn't been tested yet. That hasn't been tested yet, but the amount of people that's going to be on this radio when something big like that because I listened to the traffic that they had when they had the flooding in [City] and it was tremendous. I mean it was tremendous.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Yeah, that's kind of guys that just got together like different social organizations that got together and went, help them in their rescue. And they come and developed this group called the [Organization] and they were rescuing people. They probably rescued more people than the first responders, just like guys in groups in a community that kind of got together and just went out there in their own personal boats and was rescuing people.
OE	LE	R	Field	Over 65	11-20	Male	LE-R-054	It's--how would you describe it? It's probably 90 percent boredom and 10

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					percent of--just panic sometimes, so it's interesting, it's--you never get the same thing twice, it's pretty interesting.
OE	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	They each have zones. Pretty much, we try to keep them in the zones. That way, they can learn about the habits of the people that they're responding with and to and for, but we do swap it up to where they do see the other parts of the [County].
OE	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	It's a rural community, not a lot of industry. One of the bigger employees in the [County] is [State] Prison. A lot of people work in corrections, which is a [inaudible] law enforcement type employment. The socioeconomic division in the [County] is probably--you've got some very wealthy people, large land owners, and you've got some people that live kind of on the edge of poverty. They all seem to get along good. The [County] wants to maintain this historical persona of [Name], and the glory days of the south, but for the most part, everybody gets along pretty good. I think if you don't include [Town], that they have about 5,000 some odd people incarcerated out there, and our total [County] population for the last census was something like 16,000 total, so free people, we call them, which are not incarcerated, that's only probably about 10,000 to 12,000 people.
OE	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	Again, it's a rural area. You're kind of out by yourself. We only run three deputies per shift, and they have a pretty good geographic area to cover. It's boredom, you've got to watch the animals, we have a lot of deer wrecks, and just being a rural area, and a lot of times, our deputies are stuck out on maybe a serious call, sometimes 15-20 minutes by themselves, because their nearest backup may be 15 miles across the [County], so it gets a little boring, but it's pretty interesting, you get paid to sightsee around the [County], so--
OE	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	On smaller events, you may have two support groups and one incident commander reporting to them, so--but something like [Event], you had many different agencies and responders.
OE	LE	R	Field	Over 65	11-20	Male	LE-R-054	No, there is no test. Again, with the Sherriff's Office, it's an at will employ,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					there's no civil service, there's no--at this point, a small agency. Like we are, there's no testing. There's some implementation on the HR side that they're trying to get--we've done job descriptions and we do annual evaluations, and the next step on that, I would assume would be some type of testing or minimal qualifications.
OE	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	We rotated through shifts and so each shift kind of had its own routine. There are certain things that our day shift officers have to do, there are certain things that our night shift officers have to do. And so you kind of--you had somewhat of a routine but as most law enforcement jobs it was never the same schedule or never the same... calls every day. Everything was just a little bit different but you kind of had--you know you come in and check in, you get your paperwork straight, you got your unit, you did your roll calls, so those things were routine until you got out of the office and were actually responding to calls for service.
OE	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	You know being on the campus setting, you're covering about 2 square miles and 250-some-odd buildings so we're not--we're big but we're not big enough that we have zones or districts of everybody kind of has the same--everybody patrols campus and we have a few areas that people like to target. We have a Kindergarten through 12th grade school here so we have officers who like to go walk through and do those sorts of things. We have guys that really--and we have officers that really love to get out and interact with the public so you'll see them in the quads so yeah. You're not always assigned to the same area but you did tend to have tendencies in what people liked to do.
OE	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	Yeah. You know [University] football is a monster. In itself you're talking 140,000 people on campus during a game day as opposed to a normal population of 40,000. You're bringing in somewhere in the neighborhood of 250 outside law enforcement officer in.
OE	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	... And we've had some events, nothing... nothing major to the level of like an active shooter or an explosion but we've had bomb threats, we've had protests, we've had demonstrations, we've had armed subjects that have garnered attention from multiple agencies. And you know I think

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								probably as we sit today we're in a much better place than we were 5 years ago on that interoperability piece as agencies are coming in.
OE	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	Yeah, we're--you know we're probably in the neighborhood of a 70-officer department. So we're big but small. Everybody knows everybody. I think you have, I don't want to use the word cliques, but you have groups that like to hang out together outside of work and you kind of see that during work. They pal around and they're working with each other. I think each shift, each patrol shift kind of has their own...familyhood about it.
OE	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	So obviously we're university police so we're serving [university] which is I think our student population is just over 30,000 right now. And then you figure, I don't know, 5,000 to 10,000 in faculty and staff every day, you're looking at a small city here on campus. Staff... is not that big of a turnover I guess but when you look at the student piece, every 4 years, you know you've rotate a completely new set of people in theoretically. And so you know we see it in some of the safety campaigns that we've done. You'll see an improvement and then a rotation comes through and you've got to start back over because the group that you educated that understood it has now moved on.
OE	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	And so it's--it's unique. You know I think we're blessed in the fact that, you know, we don't deal with a lot of domestic situations. There are some and now that dating violence laws are classified under the domestic violence laws that number is going up but you don't deal a lot with custody disputes and so it's... it's challenging in that you may be talking to the president of the university at one point and then 5 minutes later you're talking to a homeless person who's begging for change in the next 5 minutes.
OE	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	[Sighs]. So the university is in the middle of the city so it's surrounded on every side but the west because you have the [river] on the west side so there's nobody there. And you have, you know, on one corner you have a fairly affluent neighborhood and then on one corner you have a not-affluent neighborhood, low socioeconomic status. And you know the university makeup demographic is super diverse. I mean you know

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you've got international students, you've got local people, you've got people that are coming in from other states so the makeup here is it's very diverse. Culturally, you know, racially, it's all here. You know? It's a melting pot, probably greater than you would see in a normal city population.
OE	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	...I think the faculty and staff and maybe some of your senior, upper classmen, there's more of a small community feel to it. You start recognizing people and it's, you know, it's good causal conversation. They understand the job you're here to do and they respect it. I think you've got a group that obviously younger who have not experienced or had any experiences with our police department who don't quite understand who we are or what we do and so you don't get that kind of community feel with them.
OE	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	... Whereas you know I think maybe a lot of agencies just dispatch the call, the officer gets there and figures it out when they get there. Not necessarily a bad thing it's just kind of the way we operate here and our communications officers are really good at trying to go that extra mile and get that extra information so that they have as much as they can before they get on the scene.
OE	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	Yeah. You know I think in those incidents here it's... it doesn't really become a multi-agency approach. Meaning that it's not--although local law enforcement coming in because they have their own responsibilities but we have 2 shelter sites, state shelter sites on campus. And so you're bringing in state resources, you're bringing in federal resources and [University] has its own EOC so that's going up. So you have bigger... bigger responsibilities than just police at that point. You know our police officers, our patrol officers are still just doing their job.
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	The end of the day is shift change, I'm expected to be--I get back here to the office a little earlier than most--than we expect our officers to be, start compiling anything I need to pass on to the next shift. I checked to see who is coming in, how many people are coming in, make sure they're covered numbers-wise, no one has called in sick, they have

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								enough, the minimum amount of offers that we allow to be patrolling at the time, and I just wait for the next supervisor and try to give them as much information as possible, anything that needs to be passed gets passed, and eventually, once they've met the medical [phonetic] officers, they need to relieve us, [inaudible].
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	They patrol the same campus, certainly. We're too small of an area to assign specific zones, but they all work the same area. There's just one call rotation that they go through, so if I call [inaudible] anyone specific, unless it's to track a crash, then it goes specifically to Motors. That's the routine there, that have very little face-to-face value. We all came in at a different hour, so we're just expected to go to [inaudible] on the radio and get to work.
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	It is a college campus, it's mostly students. We--our community changes year by year as students leave and students come in. We've got staff and whatnot, we have a pretty good relationship with athletics persons, we do a lot of work with athletics. Some of the staff, maybe labs, whatnot, we've made RC [phonetic], just because they don't come out, and they don't--they've never had a reason to call us, so we don't--that interaction between us is less. We also have a pretty good relationship with the different halls, the residential community, the residential life and the people who manage the dorms, and manage the people who live in the dorms, work in the dorms.
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	Certainly, some officers, we're small enough that everybody kind of knows each other, we certainly have events and whatnot. The schedule we work now, I find doesn't lend itself to hanging out with us, or may have spent time away from work, or even at work with the same group of people, because it'll be three different teams on one shift, and they'll all rotate their days off, while ours, the dispatchers work a different schedule, but each team, each shift tends to have a pretty good relationship with each other. There was a time when we all rotated all at the same time, so you knew your same dispatcher every time you came to work, you had the same dispatcher.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	We have a very large EOC, Emergency Operation Center, that they activate for those events. They will--communications, they will link multiple channels to one channels, so the officers here won't change their radio from Dispatch 1, but various inter-op channels that the state has will get patched into that, so that way, everyone can hear what's going on for Dispatch. There is the change--generally, an officer may go to a call while a game is going on, and we are going to be a bit busier, they will roll into a different channel, and just let communications know what channel they're going to, to pass things like license numbers and names, if they need to call in a name or something like that. We've also had--we've got a command post, that we'll put communications officers in there, and they can dispatch from there as well, and we can put them in an area where we need them, that way we have multiple--our dispatch, versus, we'll keep mostly just the calls that we would respond to anyway, whereas our command post will be set up somewhere else, and the dispatchers in there are more focused on calls from Athletics, or escorts and whatnot.
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	Here, it can be pretty quiet. We have a lot of foot traffic, so you've got to drive a little slow. The--a lot of the buildings can't be accessed by vehicle, and you have to get out on foot and go to them. We encourage--or at least I encourage my guys to do it, and I enjoy it, as just get out and do foot patrols, and go out and communicate with people that way, that way you have a physical--someone is actually out there, a physical presence out there, as opposed to a car just driving by, because once you're in the car and you're going somewhere, you have almost--except for having to stop for people at crosswalks or the other traffic, you really don't have any real interaction with anybody. They're--all the buildings are set off, people inside those buildings, they're not out, walking around. You can--every hour, a troop of people appear on the streets, and they'll get to their next class, and they'll disappear again, so it can be very dead, seeming--even though everyone is here, because everyone is in a class at the time.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	... There's sergeants, there's lieutenants, they have senior officers who are there to guide them. Somebody's checking those reports at the end of shift, making sure they're getting in. Detectives, you're kind of on your own a little bit more. You work at your own flow. Obviously we have deadlines that you have to have reports in by. But there's nobody there holding your hand through everything.
OE	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	Yeah, we work on a university, so it's a pretty wide demographic. I mean we have professors, we have lots of individuals from different races, cultural backgrounds, so it's pretty diverse. I've worked in I guess more traditional police departments in my life too before I came here, and this is obviously a more diverse group just because of we have people from all over the world that come to school here.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	But again we are much smaller, you know. A lot of larger agencies may do it with a shift briefing via email, you know, where a [Job title] or [Job title] or something along those lines is briefing, where everybody is not brought into the same location, it's done, you know, electronically. There certainly is that option as well. We are very small, so we, you know, our focus is the face to face.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	S1: Okay. And you folks patrol the same area every day? S2: We do. S1: Okay, so they have a set area that they would patrol. S2: Yeah, we don't have districts within the city.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	We are not large enough to have that, so, you know, we patrol the entire city, so there is no specific assignment for our officers; they have the entire city to patrol.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	Sure. Population-wise, we are about 8700. It is more of a - what I would consider, a bedroom community where we don't have a lot of, you know, industry or manufacturing; you know, we tend to send people outside of our local jurisdiction to work, so, you know, they are commuting to larger venues, larger jurisdictions to do the work and then they return, you know, home, you know, obviously to, you know, family and lifestyle such as that, but as far as - you know, they may have to travel out of the area

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								for some of the what I would call, common conveniences, if you will; the big box stores or something along those lines, if they need something, you know, there are no shopping malls, if you will, in this community, so they have to travel outside of the community to get to some of those common conveniences.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	Yeah, not a lot of racial diversity. We are probably an about 87% white community. Socioeconomic; you know, it's a what I would consider a middle class to higher end community, not a ton of lower socioeconomic families that we deal with.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	We have a - for a community our size, we have a very strong police presence, and what I mean by that is we require that, at a minimum, at any given time, you will have two police officers on our streets. For a community this size, sometimes it looks like there are five patrol cars out there, quite honestly. So that really deters a lot of issues or potential issues that we deal with. The mere idea of police presence deters crime, so, you know, when we are talking about the report writing and you have to balance whether you want them out in the cars or in the office to write those reports, that why I say, you know, it's almost like a time thing; ten or fifteen minutes I am okay with because I think it is more important for you to be out there visibly being seen and deterring that crime versus being in the office where people know, you know, you are not out there. So with that being said, we generally - we don't deal with a lot of major crime; the crime that we deal with is crime that every community deals with - the drugs, the alcohol, the domestic issues, you know, and with the drugs certainly comes your larcenies, your break-ins, so you know those things kind of go hand in hand and you know, it kind of goes in peaks and valleys as we see the increase in the newest drug trend, we generally see an increase in those larcenies, in those break ins, those type of things, so, you know, I don't think we are in any way, shape or form, you know, out of the normal of what we are seeing nationwide, quite honestly. Again, we don't have the major crime that some other jurisdictions do simply because we have a very strong police presence

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and I do believe that deters it.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	S1: Okay. So, potentially used to be fulfilling, may or may not be any more? S2: Correct. S1: Especially on the law enforcement side, it sounds. S2: Right. S1: So what actually S1: Okay. S2: Unappreciated.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	And they have. And much more than, you know, it's always been politics that drives policy to a degree, but you know, we always used to be able to tune it - it doesn't matter if its law enforcement or fire, we always used to be able to defend kind of what we did because of, you know, rational, legal, objectifiable, you know, data. And now it doesn't matter.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Emotion. With people making decisions based on emotion outside of whether it is factually based or not.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	I mean, I think technology does have a component into just basically how everybody is so connected where it used to be divided, but now with social media and the different apps that you know, while connectivity I think we use the present tweets. Okay, that is always positive, right? So, normally - I shouldn't say normally; historically, you didn't really have that kind of medium to be opinionated; there were some filters before it actually got out the mainstream public. We don't have that, and as far as police work or firefighting and public safety in general, you have people YouTube, you know, traffic stops and so forth and you know, the problem with that is - I mean, I don't mind if somebody wants to videotape me. The problem is they might only get half the story, and nobody wants to listen to the other half.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	S1: Okay. And how much time do you spend at the station versus in your car? S2: Probably in the car, ten out of twelve hours.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Pretty much. Now, you know, that might change depending on how many reports I have to write or what have you. We have some capabilities to write in the car but, you know, it becomes an officer safety issue and a convenience issue you know; it is kind of hard to type while we are here, plus if I am paying attention to that, I can't watch what is in front of me, so...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Oh, I think everybody has a culture. I don't know that I - how I would explain that. I mean, I don't know that we are - I mean, I guess when you look at normal police calls, there are a lot of times police officers are a little bit more tight knit and their work relationships will transcend the social area, it doesn't really - not so much here. Everybody kind of goes their own way.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	[City] is a probably good community to work in. They are typically very friendly with the law enforcement. It almost seems like the public thinks that, you know, maybe we are back in the 90s and stuff where you know, I don't have to lock my car; we live in a safe community. Generally, that only goes for a little while until their car is broken into or whatever but you know, no matter how much you try to educate them, they still think, you know, we are living in a small community, nothing happens here. The reality is they don't know the half of it. It doesn't - not a lot of it makes the papers, so you know, there are a lot of problems or issues that we deal with that you know, [Town] and some of the bigger surrounding areas do the heroin. You know, it is popping up here as well, so.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Not very diverse racially, I don't think. We are starting to develop a little bit more of that. Probably middle to middle upper class white would be the predominance.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Uh huh. Our reporting software, we use CLEMIS. We also have a dispatch component that is new world, [unintelligible]. We use various Office, you know, PowerPoint Publisher, the Office Suite stuff.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Adobe and, I use some of that stuff, these guys dont.
OE	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	You know, because the big push is to stay off - we really only have the main frequencies in all - I shouldn't say all, like we have our own frequency, [City] police have their own and the sheriff's department those are pretty much the three. But every fire department has the main, so everybody tries to stay off the main because you dont want to tie it up, so they go to their second channel, and not everybody has those.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Fire does, to a degree. At least the frequencies are variable, available for them if they want to put them in their radios, but nobody else has them.
OE	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Basically, we are not competitive with surrounding departments. We are about \$10,000 to \$ 15,000 under everybody else. We got our pay rate up a little more, we were able to keep some more people but I can't even get anybody to apply for the department - and everybody is having people having problems getting people to apply but on average I will send out 100 emails from the testing agency and I will get 10 people to come in and actually interview and out of those 10 people that I interviewed last time, I only hired two.
OE	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	They do. Being such a small city, we try to keep them in zones, A and B zone, to kind of let them get used to the problems that are in that area, but they seem to venture out into the entire city because we are three square miles, so yeah, they kind of roam where they want.
OE	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Overall, it's a really good community. It's very diverse. You have a very large Arab population in [town] back here. We have a large group of Yemeni. We have a mosque in town now that deals with the large Arab community. I would venture to say 30% if not more of the population is Arab, and then you have every other culture between a white Mexican and African-Americans, so it's a pretty big melting pot here; it really is.
OE	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	I would say it's shifted. I would consider it maybe lower middle class as far as income; like, we were discussing the dynamics of the economy and when everything collapsed several years ago, and we got to renting - I think at one point like 50% of the city was rentals.
OE	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	We had a very, I guess I would call it, transient population where they would come stay a short time and they weren't investing in their houses or in the community, so it would be, I guess, a little bit lower than the middle class as far as economy-wise. They are mostly working retail and then in stores where the wages are lower, yeah.
OE	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Well, it is fun and exciting. It could also be long, paperwork intensive, nowadays technology dependent. There are times it is extremely slow

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and there are times it is so fast paced and what I will do is a 12-hour shift and dont eat any lunch because there is no time to even think about lunch. It's a lot of variety.
OE	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Especially being here close to - we are a suburb but we have already tried, so we stay pretty busy. We have you know, a section of freeway that runs through here. A lot of main roads run through [unintelligible]. There is a lot of variety.
OE	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	To an extent. We are not - some of the [unintelligible] are fairly micromanaged, we are not here, I mean, you come here; you would be here on time. We have kind of a daily roll call, other shifts will go over, you know if there is BOL for this or you know, stuff like that and then aside from your call that is kind of - they kind of leave it up to you to go out and - you know, if you wanna go do neighborhood checks, gonna stop by the businesses that day, if you feel like working in traffic enforcement, as long as you are doing something productive, they are kind of hands off unless there are certain things that need attention on, you will get a memo, you know, keep an eye on this intersection between this time of day or complaints over here, stuff like that.
OE	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Yes. [town] is less than 3 square miles as you know, so it is - yeah, you [unintelligible]
OE	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Typically we work 8 hours here, but as there is overtime, we do 4-hour blocks, so either they have to come in 4 hours early, stay 4 hours late, of if it is your day, you can pick up an entire 8-hour shift if there is no one to fill it.
OE	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	[town] is less than 3 square miles. We are roughly 10,700 people at this time. I would say about 60% of the town is home owners, owning their own homes. Those are your generally more supportive, more involved residents, people who take care of their stuff really well. We have had issues with renters. We have a large rental population here because a lot of people became more affluent, or retired or whatever, moved out to a bigger house or more land, and here things are close together and I think

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[inaudible] sounds very nice but, you know, if you go around the east side of town, the houses are very tiny, they are [unintelligible] because we needed houses for factory workers and you know, they don't age all that well necessarily and people don't take care of them, you know, if you are renting a house, you are not going to landscape it or put a lot of money into it because it's not yours. I would guess [town] has probably about 65 to 70% whites, a large Arabic population mostly from Yemen, a large Hispanic population or fairly large, and then a lot of our apartments are mostly black. And then the Asians and everything the whole spectrum is covered here.
OE	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	For the most part, pretty good. And we have got a lot of business owners here in town that are very supportive and when we got our last canine, we had to do fundraising - we didn't have money to get a canine and we went out to businesses. Businesses don't have a lot of money, I mean; they really come out for us. They are very supportive, you know. If we have a fire or a big emergency, a lot of businesses donate waters and juices and stuff to us, stuff like that. [Unintelligible] festival every year, somebody usually donates [unintelligible] donates stuff like pizza and bread and stuff like that, so I mean the businesses are very supportive. Most of our residents are - I would say 90% of the residents across the demographics are supportive but there are a lot of people who don't like us, either, you know. We get the 10% who just don't like cops, that is just how it is, and certain groups keep to themselves more than others. I know it is like white people and black people call for just about everything. Arabs don't open call us, they don't want to be involved unless somebody outside the Arab community needs, you know, if they are involved in an altercation with a white person or black person or Hispanic person, they call right away. If it's just Arab people entangled in some mess, we get there, they don't want to make a report, they want no part of it, they settle themselves, they handle everything internally, they don't want reports, they don't want names, they don't want embarrassment. Hispanic people don't speak English, are not here legally, so a lot of times they don't call us. A lot of people call for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								absolutely nothing.
OE	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Sometimes, there are communication - I mean, we try and be pretty good but now and again between like the 3 shifts; like midnight is almost like being on an island because you are cut off from all of the normal day stuff and every shift is different days - like you deal with the schools, nuisance stuff, if the businesses are open, things like that. Afternoons gets a lot more of the crime kind and then midnights -it varies, but the communication between days and afternoons is pretty good. Like a lot of times I will hang over and do traffic overtime for a couple of hours after my regular shift so I talk to those guys at noon, make sure that everybody knows what is going on, to let me know stuff that is going on in that afternoon shift. Whereas midnight is a little different, you know. A lot of times in the morning they barely got their eyes open, wants to get the heck outta here, not linger around and talk, but at the same time, I mean, we have, on our computer system, we can go there and read all the recent reports; we can see what happened last night. I generally try and read the reports every morning; if there is a problem, I will answer. If I think we are going to [unintelligible] some more I will know.
OE	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	So, part of my function is field training officer so right now I am currently in a double car legitimately, else we run single cars.
OE	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	Recently, we came out with a kind of citywide split for zones; A and B zone; that is basically split down the middle but as the double car, we are more of a city-wide function, so we can [unintelligible] whatever we need to.
OE	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	But we are a small city, so it's pretty small.
OE	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	Yeah, it does not take long to get to wherever that you need to, so
OE	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	I guess, as you know, it's a small community. It is mostly I would light blue collar-ish kind of a low to maybe a mid-socioeconomic class, older

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								houses; most were built at the turn of the century to the 50s and then we have, you know, a couple of newer developments, but generally older residents, predominantly white. A fair mix of industrial versus residential, so we have some railway depots and Marathon, the refinery, got a couple of larger trucking facilities that we have.
OE	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	It's - generally the people are accommodating. They are nice, and most are [unintelligible]; some are a little jaded but...
OE	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	I perform a lot of IT function here at the station so - I am in charge of the LEAN network and the contact person for our validations for LEAN for the state and the WireScan administrator and deal with troubleshooting the body cameras and things like that and processing videos to be put onto disks or flash drives for evidentiary purposes and stuff like that, so I would say I am generally here a little bit more than some of the other officers but I - we eat here and we, have our bathrooms and our locker rooms and stuff like that, so - spare equipment that we have in the armory or in a locker that we don't generally use a lot, we can come back and get that or if we have a specific question like for a supervisor or something with either on-shift work or scheduling or you know, the peer-to-peer conflict or something we need resolved, then we get to come back here and take care of that, but generally they like us to be out in the side streets and make our presence known and
OE	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	Generally it's kind of - generally our equipment is fine but we are not a big department. We don't have a huge budget for maintenance or replacing equipment or kind of maybe venturing out with emerging technology or something like that, so a lot of the higher end equipment that we have we got on a grant from either the government or the state or the DDA or something like that, so, I would say it is generally dated equipment but it still works for the purpose of what we need it for currently, so - like both of our [unintelligible] unit's are - they are functional but they are kind in rough cosmetic shape and some of our modems in our cars go down frequently so it's always kind of balance of in the car that you want that is still working fine, so.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	About 75% boredom and about 25% actual excitement. So -.
OE	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	When I say exciting, I am not saying like exciting like - fun; I am just saying it is action oriented, I guess, if you will.
OE	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	Never had a coverage issue here.
OE	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	No, it wouldn't be that type of merger because we would keep the police department here; it wouldn't be like a merger with - like our fire department became [city] fire department. We would still be [town] police, but we would just be using their computer system that they will be dispatching for us, so everybody is going to have to learn a new - learn how to use the new software.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	I don't. It really depends on what is happening during a certain time of the week or the month, you know? We have a lot of different moving parts because we have a full-service law enforcement agency, we go from A to Z. So, there is lot of moving parts.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	I think this sounds disparaging but being a Sheriff or working in a Sheriff's office and being a police chief -- I think there is a marked difference. You know the police chief is responsible for one person for his job, the mayor. The Sheriff is responsible in our community to 441,000 people. But, I think it lends to being more proactive if you are Sheriff. Being proactive if you are a police chief and you step on some toes, you get fired. You know, you can't fire the Sheriff and if he wants to implement something that may be controversial, he has the power of the people behind him to be able to do that. So, there is a little bit difference. There is a difference in the people we police, you know, culturally there is differences, you know, there is not in our city, in the county. We have trailer parks, we have rural areas, we have subdivisions. What you see in a urban/suburban setting, you know, and they have that urban area.
OE	LE	R	Supervising Field	46-55	21-30	Male	LE-R-058	That's all it is. Yeah. And, you know, [County] County is 500 square miles, so we have the rest of that -- and in our community, there are more

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					people that live in the county than in the city so there is -- and then those demographics haven't changed a great deal. I remember in 1990, I think it was the first time, 88 may have been the first time that there were more citizens living in the county than in the city. And so, there was that big push, you know, that flight from the city. And we've got 260,000 people I think that live in outside the city limits right now and about a 190,000 inside the city limits. So, the demographics of the city and the population of the city have not changed a great deal since 1988 but county sure has.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	And don't -- let me -- don't get me wrong, we have some knuckleheads. You know, we have human beings, right. I am not somewhat immune to it but we have not -- never had that rash of it being cultural in our agency you know or failure to train on a certain area or training bad in areas, use of force and stuff. We've not had that issue, but it still brings a level of accountability to the officers when they put that body camera on and they instinctively know then. You know, so it has dropped assaults on the officers, it has dropped our complaints. The most complaint you get is he's ride too, right.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	But yeah, the storage is where it is at. And that's -- and for us, storing that evidence, I mean we had a room back here with a server in it and had the fans blowing on it and had a water that's in these sprinklers right across top of that. I don't know much about technology, but I know water does not make [crosstalk].
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yeah. We still have a server. We still have to maintain some things you know here. But, on our chain-based evidence from patrol, you know we will be looking soon to outfit and interrogation room, our interrogation room is downstairs so we can upload that to the cloud on our evidence.com platform so when a DA goes to look at a case, they can sit at their computer and pull every video, every officer that was there, any interrogations that were done of suspects, they can look at all that right there from that, they don't have to get CD here and a CD here and a type of copy of this tape and it's all at their fingertips.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yeah we have. We are very progressive that way. We try to be. In our agency, you know, you can get too close to the forest to see the trees. You really, you know, you think you got it so bad here right. I went FBI School last year, their [School] and there were 40 other sheriffs and chief and it had to be like-sized agencies and 6 international students in this class and really enjoyed it, but talking to those folks that are from agencies our size or -- you had to have 250,000 people in your community and you had to have at least 250 sworn officers. So, we've got 500 sworn and we've got almost half a million. So, it was all pretty close like-sized agencies and it was just incredible when you talk and you see what they deal with and how they have to fight with their community. And we don't, you know, we don't have that. It was how it really made you appreciate where you was at. It really did.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	But now, we are very, very stretched, very stretched. Closing [town], we take all of the mentally ill that are up for evaluation to [inaudible] in [City] now, did that on our own.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yeah, incredible. And we do it all with, you know, we used our reserve unit, that are people that volunteer for our agency to work for free and to do the mental transports. We lost 21 reserves this year. I think a lot of it was -- some of it was attrition, some of it was, you know, I've done this long enough, I want to do something else and but I think some of it, you know, this isn't what I signed up for. You know, I am not Uber for, you know, the mentally ill, you know, and they are spending their volunteer time doing that instead of doing other things they could be doing. So, I think that was a big part of losing some of our reserves, but just can't continue to -- we were just talking in here already. We have not had any -- although our budget has increased but it is we picked up juvenile or because we picked up, you know, animal control or other things have been handed to us to do and it comes with that budget increase but as far as us getting law enforcement positions because we have more people, we need more policeman on the street, we haven't. We just went from five shifts to four shifts so we could put more officers on the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								street. These guys are working 12 hours a day now and we got to stop that.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	There are some two in a car if they are being trained. We have a field training officer program. After you graduate the Police Academy, you go into a field training officer program where you are paired with somebody and you get that basic education of the Police Academy, then you get the real op experience with a trained officer for three to four months Performa, so --
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	We've got 14 patrol zones now, we had 12. We've added to [City] its own zone, you know.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	We've got a precinct in [Town] that has been really a direct force and it touches -- it touches. Here is the [Town] zone right here. So, that precinct is right here in [Town], right. So, if you are running a 402 or 404 or 400 and you make an arrest. The technology, you can go to a 403, go to [Town] and you can do -- you can scout downtown to a Magistrate, swear to your warrant, sign it, paddy wagon can meet you here. A paddy wagon takes your prisoner down here instead of here.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	And we've dropped our crime rate -- our crime rate has been cut 26% two years down there. In two years, our precinct with an Office of County Sheriff's Office on it, it's in [County] -- being able to have that presence, shrinking our zones and those officers moving around not there more and I'll tell you too -- we've got young guys.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	We've got young guys. We've had a big turnover with retirements that we have had. We have a pension that's in place that's allowed people to retire with a defined benefit, you know, a percentage of their income. So, a lot of guys have taken advantage of that and that gave us an opportunity to be younger and younger agents. And when you get out of here and you are doing that work, I'm 53 okay. Some of my years were dog years, so I have lived 7 and 1 a few, but I am telling you, that's a young man's forte there. When you are out there in that patrol car and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you are chasing bad guys, you ain't chasing a 53-year-old man.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	But today -- today, what we are talking about today, I don't believe not for one minute that it happens like it did in 1960s. Not for one minute. I have never in my 30 years of law enforcement ever, ever heard of anybody say -- oh, let's get us one today. Never, never. It didn't happen. They will lock up bad guys and it don't matter what color you are. It doesn't matter. They answer calls for service and they handle the calls when they get there and it doesn't matter if you are republican, democrat, black, white, yellow, green -- it doesn't matter. It doesn't matter
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Oh mercy, yes. You know when I found this body worn camera, new age technology, right. So, it's new -- we had in-car cameras but I had my [Job title], who he is retired now, you -- And Sheriff, oh that will never work. That will never work, that's crazy. And [Name], he wanted to take the cameras and dump them off the [Street] Bridge and [inaudible] because he said a policeman's word doesn't mean nothing anymore. And it is sad you know you can't go up there unless you have got it on video, it doesn't matter. The policeman's word doesn't mean anything. That's crazy. But it is true but you are not going to regress, you know, so we got to embrace this. And my [Job title] [Inaudible] was -- no, they have got enough on their belt. You can't put no more on them. You can't do that to them. You cant -- They have already got in car cameras, you know, we are just going from the car to wherever else we are going, you know.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	About too common, may be used on the floor on a trial basis and we have worked with agencies that have used license plate readers but yea we have a couple that were bought or will buy.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	A few -- common as our population grows but we have English or we have Spanish-speaking people and we have one on every shift and then, you know, there is interpreter in court.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	I have got the mobile radio and, you know, I've got weapons in there and things that I might need, but yeah it is more like and office to me. Then you know, I don't use the mobile battle units or anything like or the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								terminals like that. I don't have -- if I need to use at all, I will call somebody, you know.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	We've got drones, yes. We've got drones and have cameras on them and we have an aviation unit with, you know, flyable helicopters, we've got a Huawei and some OH-58 Jet Rangers, but these drones I think are the future for aviation. I mean, for us, you know, it's a very expensive proposition to own, maintain a fleet of helicopters. Our helicopters were free. We got them on a government program. It was, you know, surplus military equipment but the way the drones are growing in technology, it is just -- man. If I call for the aviation unit, if they weren't flying, you know it would take them an hour, you know, I mean, once they got somebody to hangar, pulled the bird out, warmed it up, and got up and got to you -- I mean, really. But a drone, you can off from your car. So, if you needed to do some surveillance, if you wanted to know what was behind the house, that you are fixing to hit, you know if it drone, and you can get it on your phone, you know. They've got iPads that you can operate a drone from. [Name], my techie guy, he first in the [Organization] -- they first got one a couple of years ago I guess. And it was -- and then they got another one last year that was \$ 2400. It was so much far advanced than the first one they had bought. That had the camera that had the ability to lock on to something but the battery lap on those things are the biggest drawback right now. I think it can fly for 20 or 30 minutes but -- but look, if you've got a couple of them, you know, you got three or four batteries, then you can be up for a while.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	That they can order commissary, sick call, they can email, they can do visitation on them, and there is a cost associated with that, it is paid through their commissary accounts. But, that technology is bringing efficiencies to us so we don't have to lay hands on an inmate to bring them to a visitation booth, let their people visit, then take them back, you know. It cuts contrabands -- contraband from being brought into our facility and it cuts that office-inmate contact that drives confrontation. So, our inmates love it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Some people, there was 40 or 50 people that protested it because they were not getting face to face visits anymore and cost associated with it but you can go down to the jail and visit for free. It does not cost you anything. But if you want to set it at your house and visit, like a Skype -- you can do that.
OE	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	No, we are pretty cutting edge here. We really are pretty progressive and proactive.
OE	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	So the environment within this building is pretty good. Yeah it's pretty fun, jovial. I mean it's got its issues I guess you know like any other place but overall I think people are respectful and understanding of different personalities, different beliefs, different philosophies of life so we all get along and joke around. I have heard of any having any issues. Obviously there's you know I'm probably one of the people that people talk about behind my back yeah I don't know right? Like there's always that one person that everybody digs on and if you're not digging on anybody then you're like oh they're digging on me so right? So yeah no it's cool. I don't know it's pretty laid back, relaxed. You know people have their concerns and they talk about for the most part. Obviously as with anything else in life everybody has certain things they're not comfortable talking about, things fester and come to a head at some point or otherwise you go past them and off you move on so yeah.
OE	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	I provide them information you know we do follow that kind of NIMS idea where we have a public information officer so and of course I'm not an ultimate decider right so because [Name] is my manager, [Name] is my manager so my position is split between two departments right so I'm in the [County] Communications Department which is a [County] entity and then [Job title] which technically is a [County] entity also but it's managed by the Sheriff's department which is a department on all its own so yeah.
OE	LE	R	Other Public	36-45	6-10	Male	LE-R-043	So it's all an amount of relatively right and so yeah so I don't you know we have our issues with trying to coordinate a few things. I mean

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					obviously our problems are unique to rural areas but it's not anything different than a different rural area you know what I'm saying? Just because the fact that rural America unfortunately kind of gets left behind because they don't have enough money and they don't have the numbers right. It's funny how grant stuff is based on numbers... At the same time you're rural and who says that you need all this great stuff? It would be nice to have it, it would be beneficial but you got along great without it but so did [City] right? We all got along great without it for a long time so yeah I don't know. That's yeah ultimately that's all I can really say so yeah our problems are the same as everybody else's problems because we're all humans and that's the core of what does what this does. You can have all the technology you want but it's garbage in garbage out 1980's you know the technology can only do what you tell it to do.
OE	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	You know it varies. We do a lot of grant work so it's generally around 40 to 60 hours a month depending on the needs.
OE	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	So we handle day to day calls for service or issues that may arise. Everything from in our county because we're a rural county anything from animals out on the highway to crashes to domestics to shootings to VIN inspections for vehicles to serving civil papers. It's very broad. It's not like a lot of agencies where our they'll have like specialty they'll have like a traffic unit right? We do it all you know we are the initial investigators for a homicide all the way down to you know a guy needs help pushing his car through the intersection and everything in between so there's no specialty. We have investigators of course but we kind of do it all.
OE	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	For sure. It's very broad. Very diverse.
OE	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	It can be slow we've have not very often we have shifts where literally for and our shifts are ten hours where we have not a single call for service at all and then we have shifts that it's just back to back to back and we're overrun so it really just depends so we carry a wide array of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								products and technology and tools in our vehicles because we don't really know what we're going to get into.
OE	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	The primary function of the office we call it the office so the way that our office is set up is we don't have a separate office for just patrol or anything like that so the entire Sheriff's office is housed out of one location. It's also the courthouse and the jail and the DMV and you know our commissioner's office and all that. We have our own areas but all of the county services are in one location, a centralized location now that happens to be within the city.
OE	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	So we're kind of a because we have I mean our agency is fairly small. I think we have 12 full time patrol guys and so it's kind of like one ranger kind of mentality. You know we have to rely on each other and we become very close because we work with the same people day in and day out so the crazy call you went to you know with this guy you're going to go another call with him so you build that rapport so we generally get very close with each other in our agency and there historically has not always been a great relationship between the city and the county and there's always the city cop versus county cop and that's nationwide.
OE	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	...we don't have a SWAT team, we don't have a MREP, we don't have a lot of the technology so we rely on [name] or [name] their SWAT team to come out and they'll fly their drone into the house for us and you know do whatever we need to do. They'll make entry and breach so we have to rely on you know [name] SWAT and [name] SWAT because we don't number one we don't have enough incidents to justify the training for a SWAT team.
OE	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	We have six or seven somewhere in there and that's patrol only. We don't have any part time in the jail or anything like that and really it's kind of a funding strategy because if you have a part time you don't have to pay all the benefits, you don't have to pay all that kind of stuff so if you can kind of have your base and then have you know part time guys then supplement so when you have guys on vacation as you probably know when a guy needs to take vacation you can't just leave the shift open.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	And literally we have two times in the day that there's only one person on in the entire county so if we have vacationing, comp time needs all that kind of stuff we have to have coverage and so that's where they kind of utilize us to come in and of course we do actually set up the grant funding program through the state so we have lot of opportunity from the Department of Highway Safety like on holidays DUI patrols and stuff like that so we'll put extra bodies on the road then and that's we do more of that than we do actually covering vacations at this point.
OE	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	For sure. So call history is really important to us as well. We don't have the ability to lookup call history as far as repeat events so sometimes and this goes for even the full times guys so we're four on three off and then three on four off and then vacations and everything else so there's times where schedules literally you won't work for two weeks which is great. A lot happens in 2 weeks so you may have a neighbor dispute it's an ongoing issue and you know you're getting sent to a call that you think is a brand new issue, you get there this thing blows up in your face and you're like I wish I would've known what was going on.
OE	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	So I think [county] has a similar database that they use for their local but we don't there's no sharing updated I know the state has a fusion center and they'll put out officer safety information around that but we operate independently even the city has their own database and we don't share data back and forth and we work in the same area.
OE	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	... we don't have we don't ever get to show the cool gizmos and gadgets to try to sell anything but I think part of it is personal style. Our small agency we're a rural county so you know we don't have condos and lofts and high rises and that kind of thing. I think in the actual city we have like 6,000 people or something like that. It's very, very small so the type of people that are attracted to areas like that are not going to be the real you know cutting edge. They don't want to be in that you know where some of you know [Name] they've got nice million dollar high rise that's not the demographic of our clientele if you will and so my perception is it's more personal than it is really resource based on that.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	As you get further north our calls for service drastically decrease. Number one it's a response time issue and number two my experience has been the people up there they handle their own problems. So if their neighbor is irritating them they go talk to their neighbor, not that it's a violence thing but they go talk to their neighbor. If their dog gets out and is harassing their lifestyle the dog gets shot. That's just and I don't allow that and so there's a different type of person out there and they're very independent.
OE	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	They don't live in a city or near a city so they have to be. If they slide off the road they don't call the cops to come help push them out, they call their neighbor or the guy with the tractor that they know to come pull them out you know. So the further north you get in our county the less calls for service we have. When we start getting down closer to the city limits in those areas we get more calls for service. We're not a wealthy county. If you Google there's an article actually just put out that [county] is the poorest county in the state. I don't know that I entirely agree with that. It's kind of a bedroom community to [city] because the drive for a lot of people that move from larger cities is about 30 minutes to downtown [city].
OE	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	Yeah so you can get a lot of land for inexpensive and so people who move here from out of state particularly [name] you know a lot of people who move here from [name] they go you know buy 20 acres and build a gorgeous you know half a million dollar house which is a lot of house here so they go do that and then they commute into [name] their 30 minute commute and people I was born and raised here and you know 15 minutes drives me nuts trying to get somewhere you know like hit roads like it takes me 15 minutes to get 10 miles you know that just drives me bonkers but that's not how it is everywhere else. So there's a lot of people that move from [name] and are starting to move into our county which brings some different political views and stuff like that with it but overall the people that have been there a long time even in [name] County the locals really seem to handle their own problems and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they're not afraid to talk to their neighbors or if there's a party going on they go over and they talk to the neighbors. What we find is that if their neighbors are not from the area then it becomes a confrontation and a fight. You know so there's just different level of respect there that we see a lot of times and I'm not just saying from [name]. That's from everywhere [name], [name] you know people are coming here from a lot of places.
OE	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	In [County] it's probably 95% support so it's very high. We get which is why I went to work for a small agency so for me law enforcement is a passion not a career. Growing up around here you know I want to help, I want to make things better so in [Name] [County] there's a very high which is why I went to work there. When you get into some of the other areas and I'll just speak to it from where I live because I don't live in [County]. I live in [County] and just kind of knowing my community that I live in and my neighbors and all that I'd say that it's still fairly high not like other areas in the country but there's definitely more resistance to people off the cuff sharing their opinions about what should and shouldn't be done when they don't know anything about the industry. You know how bad they inconvenience me for doing twenty over, ten over, five over whatever that is you know what's wrong with speeding. I use that because everybody can relate to that and so it's fairly high but those ones that don't really, really paint the water and can do a lot of damage within an agency and because I don't think people can relate I don't think they understand. I mean literally until you've pointed your gun at somebody and pulled the slock out of your trigger and you're about ready to take a person's life until you've experienced that you can't explain it you know what I mean? And that's part of why we become close with each other in our agency. We've had shootings together, we've had critical incidents and I think people just think that that's just a fairytale. That's looking into somebody else's eyes when they've got a gun to somebody else or a gun to their head and trying to explain to them why they shouldn't kill themselves. I mean that's not a Monday through Friday 8-5 check in and check out type of job and to do that for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								in a lot of cases you know you can make a lot more money doing a lot of other things of this proportion and I think that's undervalued and underestimated and not realized from the public's perception. So law enforcement overall is very supported here. We've actually had people donate guns to the agency, ammo, we get Christmas cookies, I mean all sorts of stuff at our agency which is great and but I think a few that don't support it really and there's going to be a few there's always people like that but when the nation kind of starts doing that it is like it's interesting. It makes a lot of us wonder what would happen if it wasn't law enforcement.
OE	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Well the street crimes unit is a newly developed unit. There's only four of us in the department. What we do we're more directly involved with the community. We go off tips I'm sorry tips off tips basically anonymous tips, we work closely with [abbreviation] and other groups inside of [City] and if there's a specific problem they need dealt with they call us so we'll go out we'll do surveillance, we'll try and hit a certain neighborhood really in order to detour the crime from happening there.
OE	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] You know well I don't know on his part but we start our they call our they call it our mushroom which is the beginning of our shift at 9 p.m. It usually takes anywhere from 5 to 10 minutes and we'll be there starting taking calls. Depending on the call volume in the night we usually come in around 4 or 5 o'clock in the morning and do our reports and you know if we got hit pretty hard that night there's times where you know me specifically I'll stay up until one or two o'clock in the afternoon that next day doing reports. There's also times where you know its cold outside, it's snowing, it's icy we take one (INAUDIBLE) and that's it but on a normal day we usually work 9 to 7 but that's not always how it works. There's usually an overlap. When I was in uniformed services there was an overlap it's not exactly an equal overlap with between the morning shift and the afternoon shift there's a 2 hour overlap which morning shift would come in and do their paperwork while the afternoon shift takes over the calls. Afternoon shift

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>and night shift there's a three hour overlap which they're able to do the same thing but between and I was on his shift when I was in uniformed services. Between the morning shift and the night shift there's a one hour overlap and they have a thirty minute mushroom so essentially we only have 30 minutes to actually be undisturbed and not subject to call. So depending on the call volume they're put in a really rough spot on nights and just shifting that one hour forward would make it 222 it's just that would probably get a couple people mad by doing that.</p> <p>But as far as the street crime goes we're one hundred (INAUDIBLE). Our shift is from 4 o'clock in the afternoon until two in the morning that's usually the highest crime area timeframe where people are most active. They really usually start settling down around 2 o'clock. Four o'clock they're getting off of work it's time to go out and have some fun I guess. What we do in the mornings we go through we have an activity schedule that's just something to go off of in case we aren't tasked to do something else.</p>
OE	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	<p>[S2] We do have MDT's. They're only in our vehicles. Usually every year they try and pick up five or six new SUV's that we drive but I drive a crap vehicle, he drives a crap vehicle we don't have MDT's in our cars we go by radios. We have our GPS and we can pull up our call logs but outside of that it's basic radio traffic. They send us street numbers, give us the name of the people, outside of that we got to go from what we can figure out we know. Like he was saying we have to (INAUDIBLE) if we don't buy our own GPS you better have a phone.</p> <p>If you're really tight with your data on your phone sorry you better get to reading that map book and understanding your streets which we do for the most part. I mean that's one of things that we really clench on very hard with our newer officers is getting the geography down because [town] looks small but some of those streets they get really, really in depth.</p> <p>We have a lot of additions, we have a lot of suburban areas, we have a lot of housing developments and there's a new one popping up and so it's really you really have to get to know these streets and that's another</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								reason why these officers want to stay in their certain zone zone 3 which is going to be our northeast side they work zone three for 2 months and then all of a sudden they get moved over to zone one which is northwest just country clubs, new streets. If they get a hot call, an emergency call it's going to take them a little longer to get there which is not only unsafe but I mean it's uncomfortable this is our main communication and it's got its problems.
OE	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] I personally think it's more or less than our tower isn't tall enough and it's nothing that they're going to be able to change necessarily because we're also a military town and they have their flight pattern that they have to get to and our radio tower is right on their approach so they can't make that even taller. It's nothing that they can do so we basically it's pretty much going off of one site and [state] s really flat but it does have its little hills so once you're out of line of sight we're going like this trying to get our radio.
OE	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] What I think it really is you know we do live in [town] and I can't say my wife thinks we're here you know. I tell her about some of the things that could possibly happen. She says well it's just [town]. Like it may just be [town] we may have grown up here but you know it's still a town of 60,000 people. There's still people that hate us, there's some people who don't want us to be around and you know when we have our radios that don't work properly it's almost to like we adapted to adjusting to the fact that well our radios aren't going to work so we're going to have to do this on our own so and there's times where that does happen and that's pretty sad that as a law enforcement agency where we're supposed to have people that can help us that we have to use the fact that we adjust to well I guess I'm on my own here.
OE	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] [Street] runs all the way north and south through [state] and [state] and [state] so it's a very big intersection. The possibility of that danger happening whether it's going to be local the probability of it being local is relatively low I would say because I mean that being a smaller town but we've got our neighborhood bad guys pretty much under good

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								observation but we're a hub for all these interstate criminals and you never know.
OE	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] They have anywhere from 3 to 6 people in our communication's division. Usually on our heavier nights they're going to have a lot more people. They have ones for certain areas. You have one that does fire dispatch, one that does PD dispatch and mainly talks to us, you have 2 call takers and you have one that inputs the information into the computer that way they're as freed up as they can be in order to either talk, type or dispatch and then of course we have our multiple channels that we use in order to get out. Fridays and Saturdays we do a lot of DY grants and stuff like that so the radio is constantly tied up so we have additional channels that we have at our disposal that we can go to in order to be able to talk to each other out on the street.
OE	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] Yeah two people cars. Well street crimes we ride usually two bank cars and a lot times we're not in marked units. We use undercover vehicles and stuff like that if we're doing surveillance or setting up on a house and we'll have the patrol unit close by that can do traffic stops if we see like a hand to hand buy or something.
OE	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] It's very diverse in all means of the word. There's multiple cultures here. There's some tribal culture here. It's not tribal territory at all. You have every spectrum from [Name] (INAUDIBLE 00:35:00) is pretty much half the town and he's on one of the top twenty richest people in the country. We have people from that end of the financial spectrum all the way down to homeless making bare minimum. The city for the most part is split east and west. Your high crime area is going to be more on the east side but the west side has its areas too. It's going to be in the lower income origins of the west side for the most part when dealing with our drug offenses and stuff like that but the suburbs aren't without their own discretions at all by any means.
OE	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] Like you were saying we are divided by a line. We as a department see the line of east side west side that's just how we work it but there's also some things like he was saying there's the rich and there's the poor

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and the sad thing is you know I have more of a relationship with the homeless population then I do with people that can help us because I don't ever see them. They're not out at night but you know when I do see the homeless I usually get out and talk to them and see how they're doing, where they're going.
OE	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] There's a lot of them in town that we know by first name and we'll just hop out and chat with them for 10 or 15 minutes about how their day was and there's some really good people on the east side too that are from the low income sources. It's bad that that has existed is there but the higher crime areas are going to be in your low income areas and I'm sure that stretches all the way across the country. They're fighting for their means for the most part.
OE	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] And the unfortunate side to that because I mean [town] is a heavy drug area. I mean we have quite a bit of drug usage usually it's going to be more or less [state] going to be a prescription pill problem for the most part but we have a lot of meth here, we have a lot of marijuana here, more meth than anything but my main zero tolerance especially is when it comes to you have yeah you might have an addiction but you also have two kids. You don't want to think about them in that way I'm sorry I don't know how to help you. I'm going to help them. I'll get [Organization] involved and I'll do whatever I have to do to make sure they don't have to grow up in this and actually have three meals a day because you don't want to spend that \$20 on them. You'd rather put it in your arm. I have no tolerance.
OE	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Yeah because we have a specific fire dispatch. Now we have a fire dispatcher and a life dispatcher because we actually just changed over the EMS channel to digital so they hear just what we hear well not what we hear but what fire hears. We're on the same frequency so when an emergency call comes out they get sent to it as well.
OE	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] I couldn't answer that. I mean I've worked dispatch for four days when I was in training but I mean there's a little bit but it's nothing major. If we say we need life and fire they all have headsets on they can all hear

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								what we're saying so when we say hey life and fire here now. Fire dispatch gets on and helps the fire when we said it. Life on the other hand there's been times on injury accidents where because usually in town we usually only have one or two ambulances running at times and there's times where they work three counties. They don't show up for half an hour and we need them there within 5 minutes.
OE	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] And it's mainly don't catch me lying but we don't have the filler space available for those videos because we record everything. There's 12 body cams and then there's 3 or 4 (INAUDIBLE 00:49:59) so that's 15 cameras that you have to upload daily you know and every officer is probably going to have anywhere from five to ten videos a day and that's just with about 17 body cameras. We have 100 officers so you can imagine what it would be if we all had one.
OE	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] ... This is how I talk to county. I don't worry about the ring. I keep mine on the TV because our canines they have two radios. They have one that's on [county] and they have one that's on [town]. I don't want to have to take the extra time to move this up and try and find their channel in order to get to them now I don't have my TV dispatch to where they can't get to me now so I'll keep mine on the TV and I'll use [application] and I'll try and get out to whatever (INAUDIBLE 00:57:40) is that I know is working.
OE	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] Well I when I got hired on there was 12 people in my group that got through the PT test and out of the 12 four of us got hired.
OE	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Aside from NIMS we will always use ten codes. The only time is I mean we're in tornado alley so we've had specific NIMS training and stuff like that for catastrophic events and everything like that and five years through more for the sixth time and you have people from not just counties states people coming up from [state] over through [state] everybody wants to help you. You have National Guard you have everything so we have our NIMS training to set up who is in charge and they branch out from there and that's when the ten codes go out the window and you just use common terminology because our ten codes

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								are different from (INAUDIBLE 01:07:53).
OE	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Not really it's just if you do get funding and stuff like that don't forget about the smaller departments and I'm not specifically just talking about [City]. I'm talking about these smaller departments like [towns] where they only have one, two officers on and I mean a lot of the counties over would say I know my badge number is [Number] and his is [Number]. If you go over to [town] 3. It's a manning thing so with that manning with that little budget they can't afford any of this new stuff so it's I understand that big departments have big needs but smaller departments have those same needs so if there's any kind of federal grant money or anything like that that you guys are able to do with the communications don't forget about the little guys because you could probably knock all of us out and we'll only put a little dent in it before you go to the [Organization] and stuff like that.
OE	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	Well you know we serve the community. There are a lot of tiny towns all around here and we usually patrol in our cars. We're here to keep people safe. We're here to answer calls when something comes in. It's you know it's general law enforcement yeah I guess that's what I'd say. It's general law enforcement.
OE	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	No not really. We're we've got a lot of different communities but generally there are two of us out there at a time and you generally are just going around the whole kind of county all the communities in it. Most of us I would say when we're out there on patrol most of us are doing our best to cover as much of that territory as we can because that does make a difference you know when people see you, when people know you're out there they just feel better about stuff.
OE	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	...We don't have computers in our cars here. I think maybe some of the sheriff's do, some of the counties do. We don't. We're a very small county here so generally you're just getting information from your radio from dispatch right so dispatch is going to call us if they've got something they need us to do or some place they need us to go. Maybe you know when we're in the station we're just talking to people so that's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								kind of with dispatch there with you know the sheriff there but or sometimes you know if we get a call we're going and we're talking to people so sometimes we're just we're just talking to people
OE	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	Yeah generally I'd say you know like anything there are lots of places especially in our county where stuff drops out that's a problem but we all know that, we all know that we can adjust to that. Sometimes we use a cell phone that's not real common. We don't find we need it a whole lot but sometimes if I'm in an area and my radio is not working then I know that sometimes I'll have a cell signal and I can make a call with my cell phone but that is an issue. There are a lot of places especially in our county that are remote where we just don't get a signal so that's a problem. This is a lot of farmland. This is a lot of places that are kind of remote. There's really not a town here that's got more than a couple of hundred people in it. Maybe a gas station, maybe a post office but that's about it so yeah I would say that's an issue yeah.
OE	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	Well like I said it's a lot of farmland. We do have some small towns but they're not real towns really. Some of them have a couple hundred people in them and it's mostly the folks outside of there that we're also serving so the sheriff's department we serve kind of all of these rural areas here out here and those areas that don't have their own police departments especially. None of the small towns in this county have their own law enforcement so we are really all that they've got as you know as folks who are going to respond in the case of you know when there's an accident, when there's a vehicle accident, when something's been stolen, when something's gone wrong that's what we're doing here. Sometimes they call fire, some of these small places they do have volunteer fire departments. I think it's a ballad that got to folks you know it's not much so we're often responding too to those calls to help them see if they need help as well but the community it's pretty simple I would say. A lot of farmland.
OE	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	Well we got a lot of like I said a lot of down time, a lot of time when we're alone out in our car so you got to like driving, you got to like driving for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								this job or it can be a little boring that's true, that's true but you know we're also stopping and in the different places that we are. We'll stop at the gas station, we'll have a little chat with folks. I usually check in at the post offices. When I see people out I'll just stop make sure everything's okay double check you know just have a little conversation with folks and they know then that we're out there for them and they appreciate that so that's a lot of it. Driving, talking again if we get a call and this season you got to know this season it's deer rutting season and we get a lot of accidents this time of year so this time of year it can be a little busy for us given the accidents that we see and lots of those are deer related absolutely so that's one of things we're doing a lot of right now but otherwise we're driving and being out there in the community.
OE	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	Well I'd say for the most part this is not a rich area here. I mean maybe you get up to [name] or [name] and you've got more of that there but here you've got a lot of simple folk like I said mostly farming or you got people who are living here who are working in other places. Like I said in [name] or [name] we're not that far so sometimes you got a lot of folks who are going out some place to work but they like living here. They like having the land or this is their family's property whatever it is but for the most part I would say there's not a lot of diversity in general here and a lot of farmers more than anything farmers. You get closer you get a little bit further north you get a little bit over there like to [name] they got the oil, they got the oil there. There's a little bit more money there. Well a lot of more diversity there than we've got here yeah.
OE	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	... We have a little difficulty I think getting dispatchers. I mean dispatchers are in this area I don't know about any place else but in this area it's tough to get them, it's tough to keep them. It's not a job that pays well so we got a lot of turnover there but yeah for the most part yeah it's we all get along real well yeah.
OE	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	No ma'am. We really got to know this area here and that is a hard part of our job really because it's not that big but it is a lot of different communities and it is a big space to cover but you just got to know it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								because here you know people are sometimes talking it's too west or north. We don't really have addresses. It's not like it says 1234 you know [Street] or whatever. No it's most people here most folk maybe they'll list the road they're on but we don't have a lot of actual addresses so mapping programs like that maybe in the city that works better. For us that really isn't something that works real well so I don't think we use that very much no.
OE	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	I think we've got about everything we need out here. It's so like again it's so remote that I don't know what we could have that would really help. It's not like it's not like cameras are really good help. It's not like you know I don't know when you think about technology maybe you think about drones that's not going to help us out here. What's that going to do for us? I just don't think there's a whole lot of other kind of technology that we need that's going to help us do our job better really.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	We had five fatality accidents for 15,000 people. In comparison if that had been [City] next door them having fifty fatality accidents for 140,000 so you're talking about you know that's a lot of fatality accidents for the number of people we have and you start looking at the reasons and the causes and effects for that and a large portion of that was lack of enforcement, lack of education and people. Certain people in the community will always do the right thing but there's a larger portion of the community that needs some reminders and needs you know visual cues on keeping in check as far as speeds and stuff like that and what we try to do is we don't have a lot of deputies. We have 12 well right now, we only have eight because we're 4 short and we're trying to hire some up because that's where our pay is but we try to do things before multipliers. I'll go out and write tickets. This last weekend I wrote 29 tickets this weekend myself personally as sheriff and all my guys work you know if you have a badge and a gun you ain't no better than anybody else everybody can work but the other thing is how you do it and we'll use patrols to really raise awareness and put something on Facebook saying hey you know we had one place it was next to an elderly

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								community and people were having trouble getting out in the road because people were speeding.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	If you have people doing 80 miles an hour and there's a lot of agricultural people down that road you have a cattle trailer that's 40 feet pull out into a road that's a 4 lane and somebody comes down a hill at 80 miles an hour that's going to be a bad day so people need to slow down through there because there is this issue that you see here. It's not the fact that you can drive straight down the road it's the other stuff that interferes with your path and people don't think about that. They go I never thought about that. You explain it to people they get it so I forgot what the question was now.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	We have 441 square miles. We're the top 20 as far as size. There's a 159 counties in [state]. We're the top 20 in the state for size. We have about 14,889 people in the last census so it's not heavily populated. It's fairly sparsely populated. Have a very large agricultural base here. We have 3 state routes that run through our county, [Street] to [Street] to [Street]. [Street] being the most heavily traveled. It's the direct connection between [City] and [City] via [Street] so you have a lot of truck traffic through and stuff in that place. People here our demographics I think is about 16.9% black, 2% Asian, I think 3/4% other and the rest is Caucasian. Predominantly we're Republican here. We have a few Democrats. The democrats live in the more urban areas and the cities and stuff and you know we have a lot of beautiful houses here... Criminals and stuff travel by car you know if you're out here selling drugs or buying drugs you're in a car, if you're stealing stuff you're in a car you know it's pretty well spread out so you don't have a lot of innercommunity crime for the most part so our strategy here is we do traffic based crime number one. When we start looking at the areas where we have a lot of thefts we'll start pulling people on that area and just keep our eyes open and see who is moving around and a lot of times people won't bother to call and telling you but when they get stopped for a traffic infraction they want to help you out and tell you who

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								is doing what so we got a lot of great information off that but overall we have some really good people here, really good school systems. We have a lot of households where both parents are still in the household. We don't have a lot of single family households here. We have some but a lot of our community that are in that situation actually move to [City] because it's a hub community. They have a lot more resources up there. We don't have a lot of mental health consumers here. We have a few most of them move to [City] because they get a free apartment and stuff like that so overall I mean we have a lot of great people here. We're the smallest population in the continuous counties around [City] [County] in that community.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	Every other community I think the next one is probably [county]. They have 30,000 people and everybody else is over 45,000 people for any county that touches [county] so we're well below the population curve. What you'll start seeing is people starting to move out here, probably taxes are really low so there's a lot of incentives to move out here and build houses and stuff like that. Schools are really great so I'm anticipating the community grow in the next few years but right now we're still a small rural community.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	We have kids that come in after school. If the deputy doesn't have anybody at home we have some single parents and stuff their kids can come here and we'll put them on the computer and let them do homework and let them hang out here after school so we try to be really, really inclusive a family environment here. On any given day looking at the numbers for our call volume if you look at call volume with the proper relief schedule we should have eighteen deputies. We're only slated for 12. We actually right now only have eight so we're kind of running. These deputies come and run, run, run.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	A lot of that has to do with pay. And I'm picky about people. If you put somebody in a badge and put them near a community as to the wrong person it really hurts your department so I really work short then work wrong and one thing we had is when I came into office here we were

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>paying \$12 an hour for deputies. I raised it to \$13.23 and I went over budget this year and I knew I would but I wanted to do it the first year to get it right. You know a lot of stuff had not been done here for a long time so I'm trying to fix everything the first year and then after that stay on budget and next year with the raises and stuff we're going to be paying \$14.46 which is commiserate with the other agencies around here you know. We were 20 to 30% below everybody else just rural. We're almost 50% below the metropolitan departments around here like [city] and places like that, [name] and stuff so we're getting competitive, we're getting close. Next year I'm going to ask for another 5% which will put us up to \$15.08 starting out. And \$15.08 is actually above some of the other ones but because we only have twelve deputies we don't have 30 deputies that little increase is not a significant amount. We have about a 2.7 million dollar budget, a 5% increase for every employee here is about \$47,000. You toss \$47,000 in the context of 2.7 million it's not significant you know but it is significant because it goes a long ways to keeping people here but any given day I mean you could jump off, you could be running the whole day. We don't have any special units here.</p>
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	<p>If you can save a life, save a life that's the number one priority so we're getting every single one of our deputies and first responders certified. We're also going to medical aided dispatch. So if somebody calls in the dispatcher is going to be able to talk them through how to maintain that person until help arrives and what we'll start doing is when we have a medical call, emergency call, we'll send deputies and they're actually going to have their own jump bags to take with them for medical purposes and that's just a fourth multiplier again because that's part of shepherding your community you know. You don't always put handcuffs on, sometimes you put a bandage on you know that might be something to save a life because one life saving event is worth a hundred arrests because you made a difference in somebody's life.</p>
OE	LE	R	Supervising Field	36-45	21-30	Male	LE-R-048	<p>There is no perfect officer. My philosophy is you take the person, you look at their strengths, maximize the strength, minimize the weaknesses</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					figure out how you can use them. You got a guy back in investigations not getting investigated. Sits in the courts all day writing everything down does great with this. Low growth needs a guy. He sits in court and does it but you know there's evidence now does a great job. If you were to take somebody who is a high growth needs person and put it in that job you actually made them miserable. So you try to figure out what people are and put them in the position to do what they can do and enjoy. I think you should enjoy coming to work. You know if you don't enjoy coming to work I'll tell them tell me, tell me why.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	Our actual compensation rate for everything for regular deputies is \$18.89 an hour is what they cost us so I'm paying them \$17 an hour. We're still saving a \$1.89 an hour paying them to make sure they show up you know because people will come to work for that kind of money and you can really get good people and they come in here and all they do is just traffic and drugs that's it so they're on top of everybody else 6 days a week and just do traffic and drugs that's all they do.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	And we have a lot of places in the county especially the eastern end of the county or the northeastern side of the county where phones don't work you know of course it depends on who your carrier is
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	...We're probably looking at \$150,000 or \$200,000 for the repeaters and the electronics that we need just to optimize the system we already have which is I don't have an issue with analog system I'll be honest. As long as you have what you need you know the analog is not bad. We had analog in [city], we had a truck and repeater then we went to digital and the 800 megahertz and then we went to digital and our radio quality is pretty good here if we could just get the antennas in a good place and get the coverage that we need you know and then the second issue of course is being able to talk back on portables and stuff.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	There's a lot of areas where I don't have coverage. Specific areas in the county especially where the topography is, is bad. The main corridor around [Street] we have pretty good coverage because it kind of runs up and down from where we're at. You get further south or further north it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								kind of bad coverage.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	Not current. However well kind of and I'll explain that. That's what I'm saying we're in transition and basically what's going on with that is we asked [City] and [County] they had went through and changed out their computers to a from a CF31 Panasonic to CF54's and so they had about 200 something access computers. We asked them to donate some of them five of them to us and they said well we had those five and so we had those five and those five we put them in the cars and they actually use those to write reports on. We bought some licensing for Go Global that allowed them to patch back in.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	.. I got places down here I've been 120, 130 I'm just going to tell you and it still took me 15 minutes to get there. that's how far it is you know. At certain times you got stuff going on and my philosophy down here is very simple to these guys. If you're speeding (00:39:57) have your blue lights on, if you don't have a reason to run your blue lights don't be speeding. It's that simple. Outside of that be respectful to others give due regard and use your heard.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	My house is on the [County] line in [Town] and if I drove the map to the county line the speed limit takes me almost 40 minutes. It's a big county.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	A lot better than it was. You know we have some people come and go. We're losing people not all losses are bad. I'm okay with that. I have people that come in for a time and I knew they probably wouldn't last but they gave us something for a period of time that helped us improve dramatically in the period of time we had and either you know if they left the only constant is change. Laws in [county] I was [Job title]. I probably had 30 or 40 people under me and this year ain't going to be the same 30 or 40 folks it's going to be next year and I actually had a 2 year period where I had zero percentage right off my shift. I didn't have anybody to leave because everybody was happy because I care about them and I talk to them and it makes a huge difference just checking on folks you know find out what's going on.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	He's not going to tell me how to do my job and he needs to understand this and they ended up voting him out. He left the whole county and since he's gone it's been really good but it's also this is my ball mentality with the fire department guys because even we're cross training like with the first responders. We had a deputy one day a guy got there, the fire department got there, didn't have anybody that was CBA certified, the deputy was put on the thing to check the house and his uniform to see if anybody was in there because the possibility that someone's in there came out, it was so hot it actually melted his holster and he had to get another holster you know but I have very good relationships with the EMS director here and we are taking steps to proactively improve those relations.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	Or hey let [town] know we're about to open the road up and [town] advises because we all have different radio systems. None of us around here have the same radio system.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	Previously the previous administration they wouldn't tell you what somebody was charged with. If you called here and asked they wouldn't tell you and I'm like it's probably the record. Just tell them. Who cares what they want to know for? So want to get the webpage up. We'll have that widget on there so a lot of the phone calls we get hey, how much is so and so's bond? What's he in jail for? Well if you have something on the webpage you can just look it up yourself. Who cares you know go look it up. That save us for having to do the work.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	We try to get them right around the belly button that way if you go out you have your arms out like with a gun it actually will shoot under your hands so you're not looking down the inside of it. You actually see what you're seeing. We haven't had a whole lot of incidents here though. We haven't really used them in court. You know people know you have them. We usually go through on a typical probate court date we might have five hundred cases we usually have five or six maybe that won't bench trials and of those maybe only one of them would be a trial one or two and even I don't use a camera. We only have a certain number of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								cameras. We have 14 cameras at \$7,000 a year. We don't buy them. If you were to buy them it would've been more than that just to buy them the first year.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	It can when it fails. You have to be good at going back and [County] would be a good one to talk to. As I understand they took computers out of the cars over there.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	Now if I get to the point where behavior changes to a point where we're not out here running and writing speeding tickets all the time and now I have time for that now but I don't see that being a possibility. We have over 10,000 cars a day that go through 78 by itself so and you're not going to change everybody. Locally when we started out we probably wrote 75 or 80% of the people tickets to people in [county]. This weekend I think we had over 200 something tickets this weekend you know we're talking about five people working and 200 something tickets. I think we had four from [county].
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	The local behavior has changed.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	All the radar I've bought have all been used. A new radar is about \$2100. I haven't paid more than \$400 for a radar unit. It costs me \$70 to get it serviced so less than \$500 I got a perfectly good radar unit and it's not shiny and brand new in the box but you know what it comes down to function and I think that's what you look at here is you have the guy who wants a new car every year and he wants the big shiny, shiny or you got the person who wants something to be functional and get the job done. You got the guy that's got the 1975 Dodge Ram Power Wagon or you've got the guy that's got the brand new 450 jacked up and never been off road.
OE	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	...You got four hours extra at home every day with your family that's important so it makes a big difference and just the way they interact and just to your philosophy. Listen you're here, you serve them they're not

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								here to serve you. You are supporting their efforts. You support the fire department, you support EMS, you support the police, you know you need to understand where you stand in this relationship and once you get that and they stop being smart butts about stuff and humble themselves and embrace their role (01:16:00) it goes a long ways.
OE	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	...We were trying to create that buffer in between some of the less desirable parts of town and our campus proper. Our students tend to reside in sort of that no man's land... Now there's been new student housing built to the east of campus over in midtown so we still have that crime suppression unit that traffic enforcement unit whose job is to continue to circle campus the exterior portion of campus keeping those blue lights flashing and keeping that criminal element at bay.
OE	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	The campus itself is comprised of just over 400 square acres. The [name] jurisdiction extends 500 yards beyond our furthest property...So it gives us quite a good chunk of the [city] actually all of the time.
OE	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	On campus of course we have academic, administrative and residence buildings, residence hall buildings. So a large mix there mixed use facilities. Immediately surrounding campus to the north is the home park housing subdivision typically comprised of mixed residential properties from low rent non-resident landlord type properties to some very bungalow style residents which is sort of that upper and real estate so mixed housing there but a lot of rental properties that is priced to appeal to students however that low pricing also tends to bring in a criminal element.
OE	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	Immediately to the west of campus while there is some Judaification that's occurring on the west side with some new apartment housing that's going on there's an area called [City] which tends to be more of a I guess more poverty stricken and higher crime rate. Immediately to the south of campus [Name] Apartments which tends to be mixed bag of student housing and I think sort of like Hud low income population throughout that area also seeing some high crime rate, some gang

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								activity down in that area.
OE	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	Gang activity and drug activity to the west of campus and throughout the bluff area. To the east of campus we've got [name] to [name] of course that sort of splits our campus proper from our tech square properties and now there is emphasis on new student housing. Non-[name] affiliated private student housing priced again to appeal to students. There there's a bit more control and required proof of being a student in order to reside in those apartment complexes but it's taking our student body farther off of campus with regard to residency...
OE	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	...Not that big of a deal during daylight hours when there's a lot of hubbub and a lot of activity a lot of other students, business people things along those lines however our students tend to stay on campus late into the evening especially during finals which can be several weeks' worth of studying and testing and then walking back unfortunately in many instances despite our urging not to alone in the middle of the night which in any downtown urban environment is going to make someone a target for potential theft or robbery.
OE	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	...We have a very, very densely populated campus of about 27,000 students, 10,000 faculty staff and contractors. We have our own electrical generation from a power plant that is off of [name] to the west of campus. We have our own steam plant and chore plants on campus to provide heating and cooling for our buildings so we have all the infrastructure that any small city would have to include that densely populated---
OE	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	The department again is a [name] consisting of state post certified peace officers standard of training certified law enforcement officers. We have I want to say it's right around 86 sworn. We have another twenty to twenty-five I believe full time civilian support personnel and then we have probably 12 student part time employees that we have incorporated in our social media division as well as in the physical security division.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	...The shifts are broken out or patrol we have our patrol division, we have a criminal investigations division, we have a crime suppression division, [name] which is comprised of under-cover officers or plain clothes officers as well as the traffic enforcement unit, we have four explosive detection canines that fall under our special events division. I know I'm forgetting somebody. We have a fleet division, we have a professional standards division, physical security division, social media division, training division so pretty much all of the same capabilities as any medium sized urban law enforcement agency would have.
OE	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	In fact we find that when we compare ourselves to even municipalities such as [Name]Police in many instances we're a larger agency with more capabilities than them. We have cars SUV's, off road what would you call them? ATV type vehicles, Segway's, motorcycles, and bicycles so any number of different patrol mechanisms that can be incorporated for vehicles for officers to use to meet any of our different patrol type needs.
OE	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	Unlike a lot of agencies which only deal with patrol the [name]or a [name] Police Department where it's mixed residential business here we have to contend with very large special events such as football games, basketball games, rock concerts like the [name] that we hosted a year ago so these special events can pull in crowds of in excess of 55,000 people in addition to our resident population of you know almost 35,000 to 37,000.
OE	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	We do. We have a communications and operations center which has a very large video wall. They have operational live operational use of a network of almost 1700 cameras.
OE	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	We almost always have 2 dispatchers. They're not divided unless they between themselves informally agree upon some way of dividing any of our four zones between themselves. Typically it's a first come first serve. If a call comes in first operator to take the call while the other is continuing to respond to officer's radio traffic they'll hand off calls. It's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								really somewhat informal as far as that functionality. We don't have designated call takers, designated dispatchers.
OE	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	If anyone were to experience anything like that of course we have resources that the department and the campus community makes available for counseling, guidance and mental health. I'm not privy to anyone who has exercised any of those services but then again that would very likely be covered under HIPAA privacy and I wouldn't ask much less attempt to find out anyone who has pursued that but it has not been brought to my attention I can tell you that.
OE	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	We have a human resources division, we have an IT division two dedicated IT professionals, we also have evidence and records divisions so they fall under professional standards but there's still those capabilities of evidence custodian, records custodians in order to obviously contend with any evidence that's taken in, having to be released and records management to include open records act, fulfillment for Freedom of Information Act Release.
OE	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	What was amazing was that our students came out verbally detesting the actions of that Antifa group supporting the police department bringing us incredible amounts of food to help sustain us as a show of support and solidarity. The cards and the calls and just the outpouring of support was absolutely amazing. It truly was. Never experienced anything like it before. Where we had a subsequent protest on campus and we had mobilized our officers to deal with the protest that was what we were expecting. What we did not expect was a turnout of students who began a counter protest on behalf of the police department. Now all of a sudden we had to mobilize to act as intermediaries between these two protest groups when we had only anticipated the anti-law enforcement protest group. Our students here are a very different mix. They're not the [name] type you know social movement or liberal mindset.
OE	LE	U	Other Public	46-55	11-20	Male	LE-U-049	We train the most explosive detection canines of any other agency in the state so that speaks to the knowledge and the capabilities of our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					officers as trainers that we are looked to as that first in class agency when it comes to explosive detection canines. We have a number of firearms trainers that are just top notch and as part of the citizen's academy they go to the ranch, they experience what it's like to go through firearms training. We have a simulator that they experience, a no shoot situation in a very safe controlled environment. They're able to see hands on what our criminal investigations division is capable of with their vehicles, the mobile crime scene vehicles that they have as well as some of the other tools that are available to them.
OE	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	... but I know of course that range and program ability were two of the factors that were taken into account just because we're continuing to expand our footprint as a campus. We continue to go acquire properties that are farther and farther out so our jurisdiction is continuing to grow and as such we need to improve the range of our communications.
OE	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	The weather patterns are the same for us and we can begin to see trends with homelessness and when the transient population begins to seek shelter on campus or when the bicycle thieves begin to receive that resurgence the weather is getting nicer, the bicycles are more plentiful, people aren't locking them up properly but through our analysis of this sick look behavior of campus or nature of campus through our analysis and trending of these crimes.
OE	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	...For example, facial recognition and I know it's a very, very controversial topic however in a setting like a campus setting where you do not have hard walls to establish a perimeter and to keep the bad guys out and we don't want hard walls here. We want this to be an open and an inviting environment to promote learning and to promote interaction but with that open and poorest nature of our campus it becomes at a cost. We have the same bad guys that plaque our campus year after year after year breakdown in the court system that allows them to come back in such a short timeframe job security I guess for our officers for myself but where we could begin to automate and increase the speed with which we identify these individuals.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	... If we could develop facial recognition to a point where it was reliable and able to utilize the existing infrastructure of cameras so that we could leverage our current capabilities with that new software to more readily identify these individuals and to capture them before and catch them as their coming out of campus as opposed to after they've already committed their crime and left. Robotic technology. Not to replace our officers but again to act as a force multiplier.
OE	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	... We are too densely populated. We are so heavily treed we have such a thick tree canopy that the potential for a drone to strike an off school and fall on someone is just too great right now. I don't trust that the technology the off-school avoidance and the redundancy and the lift and mechanisms are to a point where it's safe to operate above people. It's not legal to operate above people right now. The FAA hasn't authorized it so we're not there yet. Will we ever be? Maybe I don't see it in our foreseeable future. Robotic technology I do see ground based robotic technology.
OE	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S2] We have a crime analyst who works in our office and that's her job is to find trends using social media finding offenders based on social media accounts and then we do that too. I mean she does that but we that's kind we're kind of all in work intelligence nowadays you know.
OE	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] You try to have a routine but it can change like that.
OE	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S2] See with the amount of people we have we have 13 people in our unit here full time. The amount of people we have we're most effective if we could get everybody together to address that one priority problem. The problem is or this is the trend that usually happens is wind up taking four of those people and putting them on drugs handling the drug complaint and then I got three or four SWAT guys that are going over to help execute a warrant and then we've got three traffic guys going to address cars being stolen so it's very rare we could have our entire unit at one place at one time because like I said like detective [Number] said there's so many different things that come up and pop up with different

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								parties.
OE	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S2] In our unit no. It just depends on where the problem is. Now there are certain officers within our unit that are better in certain parts of town okay they're very familiar like the other detective I was speaking about there's a neighborhood and a section that he's familiar with the gang activity over there and he's very familiar with that as compared to like this side of town where he doesn't hardly know anybody that's out here and the same goes for other people in the unit. They're better on this side and stuff like that.
OE	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S3] Not to mention, typing. We use an app to communicate between our agency and with other agencies so we're also on they're typing to The [City] or whoever trying to deal with each other. We always got a number of things going at once.
OE	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S2] It depends on what it depends on like we're here in the office more than some of the other guys. Our other guys are on the street but like we have admin responsibilities and you know all kinds of paperwork all day.
OE	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] We're rarely here. [when asked if they are at the station]
OE	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] All over the place. The south end is nothing but country and farmland with farms and up here is an industrial area with business people and the national side is residential where it's all over the place. We have everything.
OE	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S2] It's kind of confusing. Okay so [county] there's cities within [county] that have their own jurisdiction and their inside the city limits. The [city] is within [county]. The [city] is with [county]. They have their own police departments okay so generally we only patrol the unincorporated parts of [county] which does not have its own city and not have its own police department so that's everything on the south end of [county] was unincorporated up until November of last year they voted to be cumbetent city okay so we're a county police department and the new city is paying the county for the police services. Now by March there's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								supposed to be the city police department incorporated so what's going to happen with [county] Police is still unknown. Now us as the SWAT team and the county police we are able to help other jurisdictions go into other jurisdictions if it directly effects anything we're investigating. We have other agencies asking us for assistance all the time. City of [city names] because they don't' necessarily have a SWAT team so if they need warrants served they usually contact us, what else can you think of? The difference between countywide not countywide.
OE	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] I forget what the last thing was. Racially it's mostly black and then white up under that. We don't have a large Hispanic or Asian at all.
OE	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] Wait because of the everything we have you know we have houses that are we have ghetto areas and then we have you know million dollar homes.
OE	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] It's all over the place. Okay. So you've already listed a lot of different pieces of technology right? We've got the cell phones, we've got the radios, we've got MDT's. What other kinds of technology are ya'll using? Are there body cams? You mentioned license plate readers. What other kinds of technology are you using?
OE	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S2] I mean our division I would say do it more in the office just because we have the luxury we can do that but the patrol officers are in their car always.
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	Yeah. I mean certainly like we work 12 hour shifts in patrol and there are and we don't do formal roll calls because we're only putting a Sergeant and three or four officers out on the street here. At the other campuses it's only one or two so but you're going to come in you're going to have a chat with your supervisor kind of figure out what's going on for the day. We do a lot of we call them business checks but it would be a lot of walk through, building checks, location checks so sort of expected but throughout the day when you're not answering calls, you're not doing traffic, your job is to be visible whether that's riding through a parking deck, walking through a building that's a big part of what we do as an

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								institutional police department.
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	Yeah that would be something that would be routine but yeah it's kind of in patrol there's a lot of freedom here because you know our call volume isn't immense. During the day it's obviously busier than at night because during the day they tell us there's about 40,000 to 50,000 on this campus during the day between the hospitals. You know we don't police the [name]but it's right next door so we have interaction if we need to go there if we need to help out but there's also all that traffic flow and then there's also just the connection between [name]. There's a lot of people here so there's a call volume during the day at night it's not as much.
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	Fifteen thousand kind of split evenly between undergrads and graduates about 7500 each and then our healthcare network is massive. We about thirty thousand employees total between healthcare and the university at a satellite locations but when you factor in students that are here, the faculty that are here, the staff that are here and then through the hospital and clinic population there's a lot of people here during the day.
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	We don't have assigned beats or territories here I don't think it's large enough and we have a pretty big I think we've kind of sat down and kind of calculated from we own some property about a mile it's almost 4 square miles kind of it not all of it is ours. There's stuff in between where you're going in and the main campus is about 600 acres. We probably have I think it's over a hundred buildings you know that sort of thing so there's been talk at times of breaking it down geographically but that gets troublesome because it doesn't necessarily break down in terms of calls very well. If you break it down geographically one area is getting a higher volume of calls so officers again it's a freedom where you know if there's an area you know we have an issue they would be told you need to go patrol that area you know [name], patrol as often as possible but and then but as far as jurisdictional kind of limits or you know territory beats we don't have that.
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	Yeah it's really diverse because it's everything. I tell people it's we have two daycares and a preschool and we have a geriatric hospital and a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								geriatric living community that are all [name] so you're dealing with infants to the elderly. We're in an urban setting I mean I would say urban kind of urban suburban it's on the line but we're dealing with just everyday population coming through here. We're dealing with the hospital where all walks of life come and then you're dealing with students who are from all walks of life. It's easy to kind of pigeon hole what an [Name] student is but it isn't really fair. There's students from all over the world, there's students from all over socioeconomic backgrounds and then what gets lost in the shuffle is we're dealing with like staff for example is you don't outsource building services. Our building service employees are all [name] you know making \$30,000 to \$35,000 a year doing building services, facilities management so you're dealing with everybody, you're dealing with blue collar people, you're dealing with doctors, professors, international students, local students, the elderly, children so I would say it's a very as diverse as you can get in some senses in many ways.
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	And again the healthcare element for us adds such a this is a very large hospital and they just added another 200 kid tower so and then we have a bunch of clinics and there's a children's hospital that's affiliated with [name] but is [name] is right down here and then there's the [name] right next to that and [name] primary research center so you just have tons of people coming here from all sorts of different things.
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	The community around us is white collar wealthy particularly as you go towards [name]. It's a very old established community the low water neighborhood. They filmed [name] over there. We're talking mansions, houses built in the early twentieth century. If you go up north of us and east of us you get more into upper middle class. What used to be more middle-class communities but sort of is the last 15 years of urbanization has changed you're seeing neighborhoods where houses went for \$200,000 going for a half million dollars but you know you've got mansions on one side and then kind of brick three bedroom ranches on the other. It's a fairly safe community, it's a fairly affluent community.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								We're not too far from different things from that. You can go south a few miles and be in a rougher part of town, you can go west and be in [name] in 10 minutes but where we are is sort of the angry bubble in some senses.
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	...We understand the constraints of working in a you know it's a fairly restricted geographical area. During the day as you were talking about earlier traffic is insane, parking is insane. We have as far as technology is concerned we're sort of on the bubble where we've had laptops in the cars since our officers are able to do their reports but some cars don't have laptops, some cars do have laptops.
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	.... Here you know your dispatchers. Everyone knows them they know us first name basis that kind of thing because we have about 50 or 55 sworn positions I think we're budgeted for somewhere close to sixty but fifty to fifty-five would be our number and then we have about 10 dispatch positions.
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	Yeah I think particularly on the day shift it's probably no different than working any sort of kind of [name] is just down the street which is a small city of about 20,000 they staff very similarly to us and they police a similar community. It's become a very wealthy community so it's fairly safe and there's a lot of community service expectations. [name] is a small city a couple miles from here if you were to listen to their radio and our radio during the day you'd hear a lot of the same things. Vehicle accidents, thefts we do vehicle unlocks here so there's a lot of those.
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	We do building unlocks for people so for day watch it stays steady. At night it transitions into like I tell people we go from being 40 or 50,000 people to maybe 5,000 18 to 22 year olds at night so that becomes you're still dealing with the occasional wreck, you're dealing with the theft call or a fraud call or something but it's a lot of student person down drunk calls, loud music calls you know the occasional fight or something like that. It's a pretty safe campus and the students are we're fortunate that in recent years the students have been generally well behaved.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	...At one time it was just if there would be two on there someone would pick up someone would dispatch they've tried to go to sort of a defined you're taking calls right now and I'm dispatch so the call would come in, they'll enter it in the CAD system, the dispatcher then will dispatch it, we have a lineup it's basically the watch list they just go through the lineup in order try to keep it even so the first officer always goes first, second officer goes second, the next day that second officer, third officer goes to the top of the list it's a whole system but that's how you know we're not doing beats or territories but the calls are given in order.
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	We have the luxury that we can we're close and we have enough officers we can have backups. You're definitely going to have face to face communication on a lot of your calls. I mean you go to a building unlock you're going to go by yourself or you go to a wreck you're going to go by yourself. But any sort of call that you think might dictate most coming from a big agency we send more people doubled up to calls then we did at the agency that I came from but I don't have any objection to that because it's a safety thing so yeah you're definitely going to be interfacing with officers there and telling them what's going on and find out what's going on, asking them to go do something for you, asking them to you're dealing with one person you turn to the officer and say can you go tell this person that you know so it's nice having that kind of built in network.
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	We also don't have we have an NCIC terminal but we don't have them on the MDT's so we can't run tags, we can't run individuals you have to do that over the radio and dispatch does that. So that I think a lot of officers who come here get kind of dismayed by that because it's not new technology. I mean they've been doing it for 40 years but it has to do with licensing and kind of old attitudes, campus policing attitudes, we're not going to ride around running tags, we're not going to be running people ... [name] is an amazing institution, it's a great place to work, we have access to anything we want but it's not municipal and it's not we are not you think about what municipalities put first and foremost?

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Public safety so the police department gets the raises, the fire department gets the raises, the fire department and the police get what they need whereas here we're part of campus services that's who we answer to in the structure. The name alone implies services. We're not the core function to this university. They need us but we're not front and center and so we use the university's information technology services and they are not on the same wave length when it comes to things like how are we going to store our body camera storage? How are we going to deal with having remote desktops on these laptops? So we're a little behind sometimes because I think we're kind of hamstrung by you know we're not the library, we're not a student with a laptop issue, we're not the granted they have some very complicated things they deal with with healthcare but it's different than what we do and so I think we're kind of off the radar in that regard and it hamstrings us a little bit.
OE	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	It's higher ed which is different than municipal. It's private which is different than a lot of things. We deal with multiple jurisdictions in a way that a lot of agencies don't so it's unique and it's interesting. It's campus policing it's not going to necessarily be the most exciting thing ever but I think we have a diversity we basically the way we sell it is if you can work on [Name] you can police in [Name] at the hospital, you can police in a large university environment or you can police in a small town all for the same agency. Out at [City] it's a very small town in the school only has about 1,000 students and so and it's a fairly rural setting so that's unique I think. Most police departments don't have that kind of option and range.
Problems	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	So I use my personal phone. So as a manager-- well, the way I understand it and the legal advice I got was that the phone is owned by me. It is my property. The only way that somebody outside, or at least in [State], the only way somebody outside of me can get into that phone is with a search warrant.
Problems	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	So if there's a public records request act or something where there's something there, let's say you send us a public records request act

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								saying, "I want all emails and text messages between [Name] and [Name]." And you provide your number and they come to me. The obligation on me is to look in my phone and, "Do I have any text messages or emails from [Name]?" Now, email is funny because it doesn't store on the phone. It stores on the server. They can get that. That's city. You're sending it to my city email. You're going to get those emails. The text messages are sent to me and not stored by the network. So if I look at my phone and I reply back that there are no text messages there and then let's say you produce a screenshot showing [Name] and [Name] had a text string going. "You lied. You said you didn't have any text messages." "Well, no. I delete my texts. I don't store them. They're not stored on the network. So I didn't have those because they're gone." If for some reason there was a belief that there was some sort of wrongdoing and there was probable cause for them to believe that I was involved in something and the agency got a search warrant, then they can seize my phone. But prior to that, I don't see how they could take this phone out of my hands.
Problems	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	Whether related to a case or belonging to the law enforcement agency. They want serial number, make, model, and they want the case number and the crime involved with any case number on any case that we have. Well, one, we believe we're standing on good ground, that we don't have to release any information about the firearms that we own, which the public records would show accounts of what we've bought. As far as the cases, that's a huge effort.
Problems	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] It's our single biggest challenge is communications. [talking about the challenges from 23:11: the different radios and the technology of the fire versus the BOM and the forest service and aviation and law and those new changes with 700 megahertz versus VHF versus everybody's different pieces and the challenges there and it's because we've progressed to a new system that everybody can afford or wants to move to that so it creates challenges that hamper communication.]
Problems	COMMS	U	Comms	18-25	5 or less	Male	COMMS-	... there's also some of the sheriff's office over here and then in addition

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel				U-006	to that we also have ECC here as well and it's convenient but also in terms of public safety critical infrastructure this is not perhaps the wisest setup because everything is one place and then I don't know if she spoke to you as well but across the street actually literally right across the parking lot is our backup center.
Problems	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	[RE: backup center across from the ECC] So that is not a great idea. Yeah it's really nice because like I said we have all these offices that are right here and also the main county offices which are at [address] are just across the street as well.
Problems	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	So if anybody from here ever needs to have a meeting over there with someone from the county or if the police department needs to go have a meeting with the county or whatnot the county offices are right there, the county board offices are there, that's all very convenient, the fire department offices are over there but you kind of have this there is an issue of geodiversity in the sense that all of our critical infrastructure is in one spot.
Problems	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	[RE: public safety offices in neighboring buildings] Which is not good and there's a perfect example I don't remember the year before my time but a couple of years ago there was a suspicious vehicle that they thought may have contained a bomb and that was parked right on the street between the backup center and the main center and if that had gone off [City] would not have a public safety answering point, it would not have a PSAP. So that is great and that's something that's been expressed to the county but one of the frustrations I feel like that we have here is we do feel like they don't the county does not prioritize public safety as much as you know maybe we should and so when we've expressed that we need a geodiverse separate building for public safety specifically for the PSAP they're like you know interested. They don't want to pay for it because it is expensive to set up and they just don't really see the value because they don't think the way that we have to think.
Problems	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Right. So we say we need two [separate public safety buildings] that makes sense to them but then we say we need something geodiverse

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and they're like why? Because they don't think that way so that can be frustrating sometimes.
Problems	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yeah we do do geo-training and we do make an effort to become familiar with the county but it's 26 square miles you know so it's very and especially when you're not out there everyday. We're here right so it can be challenging to know you know and I definitely overtime become familiar with our hotspots where we get most of our calls.
Problems	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	... One of the things that I know that a lot of centers struggle with and some invest more effort than others is common place names. The problem with an environment like [City] is we have a lot of development that goes on here especially in the last couple of decades and again I wasn't here but this is to my understanding is that area and you can see it too just being here for I've been here since January you know just being here since January you can see there's even some places that have totally changed just in my time here. It's really great. It's a very vibrant community, there's a lot of change going on here, there's a lot of change going on in the [City] area in general. [State] is a constant state of construction right so you know it's there's a lot of changes that are going on and with that there's a lot of influx and up flux of businesses right? So businesses, apartments all that sort of stuff.
Problems	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Exactly. We have to have those built in [talking about WiFi]. It has to be it's something that we're looking into adding into our building code where when new builders build things in they need to have the radio redundancy built in. Our issue right now is we don't have anybody to go and check to make sure that they're maintaining that.
Problems	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	I do. I work afternoons and so that's by choice and I've been here long enough I can you know I kind of get the shift that I want. We do have trouble getting dispatchers and keeping dispatchers so sometimes you know we might have to cover an evening shift or we might have to cover a weekend shift or you know somebody might ask you to take a shift for them but generally yes we're doing the same shifts all the time and that usually means we're communicating with the same deputies out there

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								because they also they rotate maybe a little bit more than we do but not a lot and so we know each other. Again this is small enough to that there aren't that many of us so we do know each other and we come in and we can talk and I know who I'm talking to over on the radio.
Problems	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Yeah we're not like [City] for example you know which is bigger town. They've got a bigger population and there's definitely more diversity up there. We don't really have much. I think in general folks are pretty basic here mostly farmers or people who are living on farms working someplace else. We've lost people in really the last five to ten years especially populations in these towns have really gone down and that's really been a problem certainly for dispatch for example we have trouble getting people to work, to find dispatchers and so that is just we don't have folks who want to live here anymore and that is a problem.
Problems	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[RE: county-based communication effort] [S3] Well, I think they had to buy into the idea because, status quo. Like, "We're fine." ... Well, I think they thought they were fine [laughter]. And what they didn't realize is, there's just a lot you didn't know.
Problems	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	I would say some manning right now. Being short-shifted right now is causing, it causes a little problem with us, because sometimes you can't find, as I said, we can't find anybody to work that shift, and it's short, and we're already short
Problems	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	That's an animal of a different color. It's real hard because volunteerism across the country is going down, not just in rural areas, in majority of rural areas or volunteer fire departments...But long story short, there is the inevitability we're going to end up having to go to a paid or four different departments. It's not how, but when. It's just so, daytime hours is just so bad for us as far as fire coverage, so it's coming.
Problems	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Correct. [City] is real heavy on petrochemical, but there are a lot of people that live here but work out of the [County]. So we are still fortunate that some of the companies or individuals work for, they do let them leave for emergency situations

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Q: So what if anything do you think causes communication problems in your work? SME: [Laughing] Lack of communication [Laughing]. That's absolutely funny to say but that's it.
Problems	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Yeah. I find the lack of communication is the worst problem. Our section of communications is its own section, patrol is its own section. So I find a lack of communication between them.
Problems	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Which I just spoke to someone about that this morning. Sometimes it becomes a hindrance because we don't know where each other's... supposed to be pointed to but we're supposed be together sometimes.
Problems	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: And moving on a little bit to what I think we are going to get into -- the storage and connecting NextGen and connecting FirstNet, that data -- I see a lot of diagrams and always first to raise my hand and point out because which we see a diagram with two arrows like this, then it is NextGen and FirstNet but there is a little box here in the middle called 911 that gets left out of those diagrams a lot of the times. So, you know, the person in the field is calling 911 and talking directly to the police officer, then that diagram is wrong because all this data that comes in NextGen, pictures, text, everything it's got to go through us to get back out. So, that's a little thing that -- about [Crosstalk]
Problems	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: The problem is when you have a cold and your pre-recorded announcement answers.
Problems	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: I think as far as location-wise, we are not as far along location-wise as many apps are.
Problems	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: Like what [Name] said, I can go to the app store now and get stuff that's better than what public safety has got and I think that's the biggest thing, how to speed that up but we move it to speed [inaudible] and everybody knows what that means.
Problems	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]...Okay, first of all we bought a phone switch that is next get ready. So, okay -- we are ready for NextGen. Oh, well -- you're going to have to upgrade your phone switch to really be ready to go in there because

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								things have changed in the past year or so, things have changed. So, you have to do an upgrade your phone system to make it compatible to go on NextGen. Oh, okay. Okay, so, you know, the funding and all the stuff. And so okay, we are going to upgrade the phone switch, which we did. But then, our wall boards that tells us how many calls are waiting, that's what wall boards are, like foot work, way back, they quit working. Well, we found out that the computers that are driving the wall boards are not powerful enough to drive the wall boards with the upgrade.
Problems	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: It really doesn't matter who they are. They couldn't make it work. So, now I've got to go and tell my board that I've been telling them for a year and a half now, we are going on NextGen. Okay. So, it didn't work. So, let's regroup and everybody go back and look and see what the deal was and let's schedule the next time. Okay. It's scheduled now. Everything is ready to do. Everybody has got their stuff together. Me and [Name] are back on the phone. Guess how long we were on phone this time.
Problems	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: So, now what's the deal? Well, we need to do this. We need to do this. We need to make sure everybody is here. And we scheduled it the third time, almost, but we had to cancel it and schedule it later because AT&T was having to upgrade their stuff...
Problems	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: Which now means that [Everyone laughs] -- that we couldn't make it work, and then we couldn't make it work and now we've changed it so it may not work this time because it is different. So, now we have it scheduled --
Problems	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: So, it sounds like let me pat you on the back while I am stabbing you in the leg.
Problems	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S1]: Yeah, yeah. Well, and I do know that, I think it's Verizon that has also said they have come up and are going to offer super rates and better options for the public safety community too so the battle hadn't ended here.
Problems	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: Oh you see all the commercials -- it's really small if you know to [inaudible]they said, who would've have thought that you could do this

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								which is FirstNet up to one side and down the other and it says Verizon did. So, I love AT&T to death. As soon as they settle the lawsuit, I will be right onboard with them and we will be the best buddies in world but it is just really hard to have a close relationship with we can't get on the [inaudible][0:47:27] or paying out big bucks for attorneys that are involved in the law unit. Okay, that's it.
Problems	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: I put it here. If the -- if the lawsuit is over the fact that I don't think you did what you were supposed to do years and years ago, would you have paid me what you were supposed to me. That's what the lawsuit is all about, but now you've got to contract with FirstNet and you've promised me what, the world.
Problems	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: Yeah. And so, that really does tie us for emergencies. My fear, and I don't know whether it can be fixed. I've got 62-year-old women and men both in their -- how are they going to handle a text call from a 14-year-old girl with TBT and just all the abbreviations and all that. Yeah, I think it is going to create a lot of in a bad way -- actually I think it is going to put a toll and take a toll and run off a lot of people because they can't.
Problems	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: This might be a good place to throw in, and you can ask may be other agencies because we are in a really -- I don't want to say bad -- but we are trying to get the officers and the fire fighters to understand that a dispatcher can only do so many channels.
Problems	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: So, you've got 10 new radio channels but you've got one dispatcher. Are you expecting that one person to handle 10 channels? So, what is the limit? I mean, what is the cut-off in that -- right? Because there is no specific -- I can handle seven conversations at once but if you give me above seven, it gets iffy. But, some people can. And a lot cant. What is the -- and there is no defined number, you should be responsible for your primary channel and two side channels or three side channels.
Problems	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S1] ...That part has been done for months like August; we finished our part. Now the users on the other hand, they've had to deal with encryption, they've had to deal with this, they had to deal with multikey

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and they have been going through all this and we are sitting here, my grouse is I am sitting here paying maintenance on the new system and the old system and they've got the channels split because they can only have 10 on each until they transition. So, that's where we are trying to get to is to get them dialled in. Now, as far as it's going to be [inaudible], you know, I mean, they are going to have plenty of capacity because, you know, there are going to be [inaudible] that's not going to be a problem but they have never been encrypted before and, you know; it's going to be all new them, new sound and everything, that's what we are waiting on right now.
Problems	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Not completely, no [talking about 911 going down]. We had a gas leak so we had to leave the building one time. [Indiscernible] really quick. No, and those are things [Name] and I talk about weekly.
Problems	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	We just bought those Broselow tape for years for babies. We still have one, but you have to replace them every so often and they're expensive. So Broselow tapes, you lay a kid out, and it not however long they are, and then it'll say they weight this and this is the color of the kid and here are the drug dosages for that weight, so it's a really quick thing for the [indiscernible]. So there's a new program called the PD-SLEEVE, because in a Broselow tape if something changes, and I just bought 10 of them, I got to buy 10 more because it's a prank call.
Problems	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So when you get multiple agencies together and they've got their way of doing it and you've got your way of doing it and nobody -- you just...I'm doing my thing and not realizing that the ever changing make affects everybody on that system. We had some of that in the beginning with this CAD, but we worked through, we figured it out. We will occasionally we'll have a cowboy that says 'well I talked to [unintelligible] they said it wouldn't affect anybody else, I don't know why they lied, I just changed all my stuff.'
Problems	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	That part of technology, we've had some issues. There may be a little bit even going on with this new radio system, we have egos. Depending on who is in that position, there's egos, there's politics, so we're able to get

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>through all of that because of the relationships. I'm a big relationships guy. I mean if you have a relationship with somebody that they like you and they somewhat trust you, or do trust you, it's much easier to conduct business than 'oh crap, here comes that guy again.' So I'm really big on that, so I take time to meet with [City]PD leadership outside of here, same with the communications liaison for [City]PD, he and I talk all the time. If an issue come up, I shoot him an email, 'go ahead and check into this', because I'm not first blush and there's personalities in there. It could be a personality conflict. But I look at everything as so we do adjust culture within EMR which is how I've always done business. I don't headshot people or go yell at everybody when we have an issue. So I look at it as a system issue, is it a training issue? Is it a personnel issue? And I look through that. I end up at personnel last so by the time I get to the person I pretty much know the answers before I ask the questions and if it's a personnel issue I'll deal with the person. But a lot of the times you find out that 80% of things gone wrong, you find out it's a communication training issue. We taught it and it didn't stick, we taught it and it didn't hear right, we didn't teach it at all, or we taught it wrong, or we changed some things and missed that one, we didn't update them on the training. So you have to look at all that. You know they get upset sometimes, so if we don't get to that call in 10 minutes, we review that call; and it's either distance because they just couldn't make it in 10 minutes. Crewe Air, they didn't move right away when they got the call; they went the wrong route, or it's a dispatch error. Dispatch error even being that the CAD did or did not pull the correct truck because we have a recommend and it pulls by road miles the closest truck. So they might've pushed the button and the CAD told them the wrong truck, so it's still a dispatch error, but it's not the dispatcher.</p>
Problems	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Right. They don't go to the meetings, they don't go to the monthly stuff, they don't go, they don't -- not doing it, so they don't know because they have three jobs. [County] the [indiscernible] director.
Problems	EMS	S	Field	26-35	11-20	Male	EMS-	...Within the last couple of years, it's the the first that I've ever had to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				S-015	really work hard to maintain that professional image, in a sense of a lot of negativity within community or the changes of social media, civil unrest. And not going into too much depth of that, but everybody loves a fireman per se. Some people may not understand salary or taxes or why we're sitting in front of a grocery store, but I think education's the best part of that.
Problems	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	What I mean to say may be different from what you mean to say. So it can stem all the way down to basic cultural differences and diversity to department policies and procedures of if I work tomorrow, the captain may have a completely different way of operating and may call me on the phone rather than delivering a message on the radio, something I'm not used to. I may not have my phone with me and he's been trying to get a hold of me, well I'm not used to that. I'm used to my officers talking on the radio or so.
Problems	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...The other thing is, too, is there's more of a system-wide problem in this area. And the hospitals in [City] actually get backed up from ambulances coming in. So it's not a matter of taking the patient to the hospital, drop them off, do your report, and go back in service. A lot of times you'd go in-- especially. if it's a more minor call. A lot of times you'd go into the hospital and you're sitting there waiting 15, 20 minutes before the triage nurse even gets to triage you because there's a line of ambulances at the door.
Problems	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	... So I can page from the phone. So we have Everbridge for that. And I don't usually use this. I usually just do it from the desktop. But I can sign in from this and send a page from this and pick who I want to send it to. And it comes through as a text message no matter where I send it from and it comes through also in an email for them when you send it. And it's actually fine. It works pretty fast. It's pretty easy. All you have to do is remember password. ...
Problems	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	Yeah, the phone, I think it even tells you how fast you were going and stuff like that. And it can even say like dangerous things that you've done. I don't know how it knows. But it kind of knows. And then you're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								supposed to put the gas in there, like when you put gas in the vehicle. You put where you got it and how many gallons. But since not everybody does it, it's not super accurate as to how good our gas mileage is because not everybody's putting everything in there. And it's kind of a newer thing...
Problems	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	And we have map books for old technology. When the dispatch tells us where we're going, it gives us a cross street and a map page. So technically, we should be able to find it. It's just that sort of new, younger generation of people just saying, "I'm not going with a paper thing when I can just ask Siri where I'm going, or ask Google," You can start it finding where you're going while you're walking down the stairs rather than walking down the stairs, stopping, not even turning on the vehicle, opening the book to the page, trying to find the cross streets. You could have already been driving. So it's just faster. So we don't use the map books nearly as often as even six years ago.
Problems	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	Safety in the ambulances. So ambulances aren't really safe. They're basically like plywood on a pickup truck chassis. I mean it's really not the-- and they crash, and people die all the time. And they crash on the most routine things. And they crash for the same reason that anybody else crashes. They fall asleep, or somebody runs a red light, or somebody doesn't run a red light, or a tire blows, or patient jumps out of your ambulance in the middle...
Problems	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	Especially when you're trying to work on a sick patient, or trying to direct your partner who might be new or hasn't worked on the ambulance very much. You're trying to tell them where something is, and it's not in there. So that's stupid...
Problems	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...they think that they've tried to set this up so you never have to stand up. And so basically, they've tried to design it with you can be harnessed in like with a sort of four-point restraint seatbelt, sitting on one chair that's like this big, on a patient where you're sitting right about up their waist. And then they've tried to set up equipment around you so you don't have to stand up and reach for it. Even though there's 40 cabinets

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								in the ambulance, they've tried to think, "Well, this is just things that you use 90% of the time, so we're going to try to shove them all right here next to you."...
Problems	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...And as long as it's a normal patient on a flat road, where you can get an IV on their arm, the arm here, and you don't need to reach for suction, or you don't need to reach for bandages, or you don't need to reach for something for them to throw up in, or you don't need to reach for some advanced airway thing, then the call is okay. But that's not how 90% of the calls go.
Problems	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	... when you're running 120,000 calls as a system a year, you need to kind of-- spending an extra 10 minutes on every call makes it that you're going to need more ambulances, and that costs you millions of dollars a year. And the more ambulances you have, the less calls you're on. That makes your paramedics not as good as the ones that are on more calls. And so it's not like-- they're trying to solve a problem, but I don't think they're doing it in the right way. And some company came, a couple years ago here, they were all excited about this thing that they had with, "Let me show you how we can do this," and it was the beginning of this. I saw it coming, and I was all like, "Oh, no. Here we go."
Problems	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	You need stronger ambulances. You need ambulances that don't explode. Not explode, but break apart when you crash. I mean, it's like driving around in a camper. So that would be more helpful than affixing me to my seat better and making me do my-- not be able to do my job as well...
Problems	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...I think also there's a whole side of technology, but I'm sure they can do a study that said if you get to the scene and you realize a patient is sick, and you need to go emergent back to the hospital, then you spend less time at the scene. You package up the patient. You put the patient down in the ambulance. And you start driving, and you never turn on your sirens. You would get to the hospital just as fast as if you get to the scene and go, "Oh, my God," and get in the back, spend 10 minutes or 12 minutes trying to do something with the patient before driving 60 miles

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								an hour through lights. That, I bet, they would show that the time was the same, and the outcome was the same, and there's less crashes when you're not driving emergent...
Problems	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...I just think there's ways to-- some people think that the lights and sirens are there to save people's lives, and it really-- there's 1% of the calls, 2% of the calls, where it can make a difference. So that's where maybe people could chill a little bit and use research to prove something.
Problems	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...If you get grant money for an ambulance, you have to have some kind of driver monitoring system in it. Well, all those things are connected technologies. They all have to be downloaded. They all have to be analyzed. They all have to-- and that's just one technology. That's not the radio system. That's not our patient care reporting system. That's not our scheduling system. It's a whole nother system that somebody has to deal with.
Problems	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...A lot of river activity in this county. [River] runs right through the county in one of the [inaudible] parts of the county, of course. So if somebody dumps their raft and is drowning or something, we have to go an hour drive up to the river and figure out how to fix that situation. So lots of long response. Lot of expenditure of resources for one patient, for [smaller?] patients, for those kinds of things...
Problems	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	... And it's fine for me to play around on, but if I'm-- my service is going to depend on a technology. I want to be damn sure that, number one, they're going to stay in business; number two, it works the way they say it's going to; number three, I can afford it; number four, I can support it. All those things, they don't say those things in the ads. The salesman just doesn't bring that stuff up for some reason.
Problems	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Yeah. I mean, we come up with great ideas, but then the implementation has a lot of unintended consequences. [It has?] bitten us repeatedly, over and over and over.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...But it's getting harder all the time. I mean, the cost of living here is-- I mean, I know it's expensive in Washington, and California, and all these other places, but there's-- right now, a third of my staff lives out of the county because they can't afford to live here.
Problems	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	So the cost of doing business keeps going up, and reimbursement keeps going down, and cost of living keeps going up, so.
Problems	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	... It's a nightmare [to?] staff because how do you staff full-time, qualified people when your call volume in May might be 200 calls in a month, and my call volume in January is 700 calls in a month. So I have to be able to expand and contract responsively, because you can't build [the church?] for Easter Sunday [laughter]. Taxpayer's money, it just doesn't work. It's not sustainable...
Problems	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Well, my farthest western ambulance is almost 50 miles from my farthest eastern ambulance. So when they get busy, they're not going to drive 50 miles to go out. It just doesn't work that way... 50 miles of interstate to go. So, in the city, you've got a little box. You put your station in the middle, and you can go out like this. Here, we've got a bowling alley, and I got a staff like this.
Problems	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	We move assets up and down, depending on time of day, and how the roads are, and things like that. We use as much predictive technology as possible, but it's still a guessing game a lot of times... So if I guess wrong and understaff, and the economy is booming, and everybody wants to go to [City], skiing, I'm in trouble [laughter]. And I'm in just as much trouble if I guess wrong, and the economy tanks, and nobody shows up... But I've got all these people working. So it's a challenge.
Problems	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...we deal with some very challenging and physical conditions. A lot of our computer sites are above 10,000, 11,000, 12,000 feet. You can't get to some of them unless it's summer. If one them breaks down, well, just have to wait until the weather clears [laughter]. I mean, we have ice

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								loading on some of our tower sites such that it shuts them down... we wait until it warms up and it falls off. But in an emergency, sometimes we have to hire a helicopter. Sometimes we go up in a snow cab or the technician does. I mean, that's dangerous, expensive work. And the radio system is kind of like your iPhone. You shut it down and people are like, "Whoa. What happened [laughter]?"
Problems	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	we got high volume, big accidents a lot of time, and poor communications. That's a big problem for us.
Problems	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	The problem is the technology versus the actual performance. I mean, that's my big pick... I understand advertising people have a job too. But you better get out there and use it before you try and sell it to some people. Because you can kill people if it doesn't work right.
Problems	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	...it's a county-based dispatched center with all the fire and police in one house. That's essentially all I know about it. I think countywide it's a good thing. I think there's going to be some challenges in the short term going from in-house to countywide dispatch, but the red light goes off in the fire house, we've got a call [laughter].
Problems	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	It's always the weak link and it doesn't matter if it's a hazmat call, a tech rescue call, a swift water call. Communications is always the weak link. And in all the studies, and even like line-of-duty death, a lot of times, it was a communication issue.
Problems	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I've been on structure fires where either it's stabilized or you're asking for specific resources, and you can't transmit out the radio. So either it's a connection issue or somebody's walking all over you. And so, any needs that you need in the short term are not being met because you can't talk to your supervisor. Which 90% of the time, it'll be consequence-free. But we don't live in best-case scenario worlds. So I think we want 100% and I think we won't accept anything less than 100%. So it makes a lot of people's jobs difficult to try and improve the system...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I've been standing at the door just ready to go in with a nozzle and my officer was waiting for open air before he could communicate...
Problems	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	...one of our paramedics was involved in an altercation in the back where the patient was fighting and biting him, and he was trying to get out on his radio. And I don't know if it was lost in the system somewhere or whatever the case was, but it wasn't until another crew in their firehouse was listening to the radio and pretty much stopped the systemic response...
Problems	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: lack of communication between FF/EMS and LE] We also do mutual aid with neighboring departments, too. And the same sort of issue. I mean, we can actually use a common channel, so we have made advances there, so it is getting easier to communicate with them.
Problems	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	Q: And do they use those? Personal phones? SME: I can tell you that they do. Sometimes it's easier because we do supply cell phones to the paramedics. Sometimes it's more of a burden and it's easier for them to just take out their phone. They already had their hospital listed on there. You just hit a button and you can communicate them and give them report over there, right, so.
Problems	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	Q: Are there issues that you've seen or know of in using personal stuff once on the job? SME: Yes. Specifically taking pictures of patients, taking pictures of accidents, and then posting them on some type of social media. That is a huge issue. Sometimes they don't grasp-- because it's normal. You post what you're eating right now. Or you post where you're at right now. Or you put it on Instagram, I think Snapchat is the latest, you put it in. People think that it's here and gone, but it's not. So the issue is that when you post something regarding a patient, what your location is at this time, at that time, or what you're doing with who, or whatever, it's out on the internet forever, I tell people. "I don't care what Snapchat says, it's recorded." And so sometimes we have people who forget that, and they may be violating patient confidentiality. They may be violating their partner's confidentiality. They may be violating their department's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								orders. So yeah, when it comes down to communications in that form, a lot of people forget or they don't take that into consideration when they're posting things. Even in our personal-- I'm sorry, in our city emails, I can tell you that there are other people who are reading our emails, whether we like it or not because it's a city email, they're allowed to do that, And so I tell people, "Be careful what you write, how you write it on here because obviously an email can be taken out of context. There's no personality in an email." And so yeah, we've encountered a couple of issues with that sort of communication.
Problems	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...they're using their personal phones for business, which is sometimes some people have an issue with that because they're not getting paid to use their personal phones. And they believe that we should be providing a phone or some sort of communication to them so that they can communicate easily with their chiefs, and sometimes that's difficult on our side because now we would have to supply phones for everyone and it's just not; money-wise, it's not going to happen.
Problems	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	I would love to go out when it's not really busy and drive around and talk to the community and see what they think of us or what do they want from us. I do notice our sirens are really, really loud, and it's for a reason. And they tend to put their hands over their ears, and we do get a lot of bad civilians that are very unhappy about that, but we need it because the cars don't pull over.
Problems	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Probably pretty primitive in comparison to other places. For 2017 we shouldn't be having problems with the radios like we are. You know we shouldn't I understand that cell phone signal runs out but when I look at the [name] on the TV it's completely covering [State] so I'm having a hard time understanding why I don't get service out here...
Problems	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	No. Nobody's worried too much about communication which is interesting because I mean all of them have problems.
Problems	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	I would say probably mostly farms. I mean you can go once you get out further from this area that we're in you know we've got the little town of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[City], you've got the small town of [City] here but once you go out further you will drive for 10 miles and not see a home. It's very lots of fields, lot of dirt roads which is sometimes trying in itself but we're not I wouldn't say that we're highly populated you know we've got a good amount of people here but it's still a very small community and then when you get outside of these little towns you have very few people.
Problems	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	I definitely would prefer to have a system where we do our patient PCR's. Here especially there's times where we have a 40 minute transport and then you've got to drive from [City] back where which is at least 20 to 25 minutes. In reality you could have your whole report done before you even get back to the station because your partner drives and whoever took care of the patient they're in the passenger seat so it would be nice to be able to have that plus you can keep track of we have a lot of patients that call us pretty frequently. They have you know diabetic and congestive heart failure so we see them pretty frequently. It would be nice to when you go out to see [Name] down the street that you can access you've already run her 10 times that instead of you just putting all of her information in there that you can enter in her last name.
Problems	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...I'd say email is one because we have to do a lot of staffing and administrative things too, and we kind of run into the same problems where you don't necessarily get the message across the way you want to. And the other thing is that the tone is really hard to understand in these emails. So sometimes it causes a little bit of conflict when somebody-- especially if someone questions your idea, or offers up a suggestion that you don't agree with. And the tone of the email, it might be somebody older or younger, and they don't interact with email the same way. So when I read an email from an older person telling me something, even if somebody younger wanted to say that exact same message, they might say it differently. And I might get a different end result from that...
Problems	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...the radio communications are a big part of the job too. And every single day we hear something on the radio that we're like, "Come on.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Why did he say it like that?" or, "That's not what you're supposed to do," or, "Don't say anything at all," or stuff like that. But around here, for the most part, especially the more senior people are fairly good with the radio communications. You keep it concise. You use the right terminology, that type of thing.
Problems	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	Yes, definitely. But the only problem with that is that I don't know anybody that's on engine 720 right now. But if we were on a fire right now, I need to know what they're trying to get across based on their radio communications alone. So if I don't know what they're trying to say by knowing them as a person, I need to get the message from what they say and how they say it. And it's possible that I might not get that, and then it causes problems.
Problems	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: comms with other disciplines] It can be challenging, especially since we don't train together all that much, especially people outside of this station. And we don't train together. We don't run as many calls with people outside of the station, and we don't cook together, hang out together either, so... Anybody that's EMS, fire, or police that's not in this station...
Problems	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...So, if we run a call with one of the companies up the street or an ambulance from a different department or the police, it's going to be a little bit more challenging, but we do have common ground in some aspects. We have common terminology, for the most part, especially in the EMS and fire realm. With police, I know that they have certain different-- I think they still use codes like--10 codes, yeah, in the police departments around here, which I don't know anything about those, really. I think 10-4 means okay, but [laughter] that's about all I know...
Problems	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	Has got in the way? I'd say, one time when it does get in the way is when people are communicating on the radio too much. When you're running a fire, and I can't think of a specific example, but I definitely know this happens all the time. If you're responding on a fire, instead of clicking the button on the computer, which you're supposed to do, sometimes the computers will go down. And people will say, "Engine Seven

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								whatever, responding." And then they'll just say that the radio. And so then you've got five engines, two trucks, a rescue squad, and an ambulance, and potentially four chiefs, all saying that on the radio. Meanwhile, one of the engines is on scene and they're looking at a house on fire with somebody hanging out the window.
Problems	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...So you can't blame them for that. For saying, "Hey, if I don't tell them to do this it might not get done." Versus, "If I tell them to do it there's a little more radio traffic but I know it's getting done." So they have to weigh that in their heads. And that's a benefit that we have here because right now if we were in a fire, our chief of this department can run that with us. And if he's command, he knows that he doesn't need to tell us what to do. But the [County] Battalion Chief might not know us and might not know that he can trust us. We've never proven otherwise but maybe if a different rescue squad has, or a different engine company has. And then because he might not-- he might have experienced that lack of trust, he might just rely on that.
Problems	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: what causes communication problems] Either too much of it or too little of it.
Problems	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: Digital inspection system] ...we're focused on what we do, and we don't have the time to build something that's that complex.
Problems	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...they're trying to create a standard. But to do that all across the United States is almost [tough?] because you got to look at data back in the history of years past. And you might have done yours in Excel, and he did his in DOS, and I just did mine on paper. So there's really no set system, just like [Name] said that we had Fire Zone, we have different software programs, but none of them communicate with each other. So it's just a lot of data entry. Then all of a sudden, we'll start doing it. And then all of a sudden, the computers don't run on certain programs. So then you got to get rid of that program, and then you end up with a new program. So it's constantly changing.
Problems	FF	S	Not	Not	Not	Male	FF-S-022	... we do active shooter with [City] PD. And I'll tell you, if it went like it did

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			specified	specified	specified			the other day, we're in trouble. We really are, because you sit there, and you train that way, and you think that's how it's going to be. Well, then all of a sudden, you have a situation. It's chaotic. I mean, they're calling for one of us - I was on the ambulance - calling for a paramedic. Well, we don't ever just go as one. It's a rule: two in, two out. So we ended up fixing that, but our command staff was not happy, either. They wanted to set up a designated command staff in that post. And then we work and they say, "Okay. We need one medic. We need two medics. We need five medics. We need six beds." And then our command staff calls our dispatch center and they say, "All right. We got six reds, five blacks." And then they start delegating to where you need to be transported to, and who's available and who's not. So it just all happens. And if you don't do that, then nobody knows their right foot from their right hand from the left hand, so. It can be a mess real quick.
Problems	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: radio communication] Well, there's too many people talking that are 20 feet apart. And they're talking because they're 20 feet apart because of the noise on the fire ground. Because in a hazmat suit, you're wrapped in a giant Ziploc bag [laughter]. So you're trying to talk to each other, and you're 5, 10 feet apart. Which, the technology also exists to communicate 5, 10 feet apart, but it's not integrated together...
Problems	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...we have one thermal imaging camera. We send one in with every group of firemen that go in. So they have that technology there. But the people in the front that are on the nozzles that are doing the job-- to be able to talk to them and to tell them, "Hey, I see this," or, "I see that," because you're focused on your one job. I think that would bring more value than everybody having \$50,000 worth of stuff attached to them... When maybe not everybody needs that. Everybody needs to be in contact and to be able to communicate everything that's happening. Because I think now, everybody wants to have a TIC because they can't see it. But if you were just being told in a regular voice where, "I didn't have to push a button. I didn't have to do this. I didn't have to do that," you wouldn't feel the need to have to have everybody have a TIC to be

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								able to see...
Problems	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	I think it's evolving. It's going to be to where you'll have ambulance show up on-scene and they'll help you transfer to the hospital. Hospitals are inundated, big time. So you cut your finger and you need a couple stitches. We'll send a unit. We'll stitch you up. We'll give you some [of your?] medications. And then after that, you get with your pharmacy. I think that's kind of the wave of the future, I really think, now.
Problems	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: cause of communication issues] I think lack of training, maybe. Adrenaline.
Problems	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	It all works out. Well, like I said, we get the job done. It's just doesn't work as [smoothly?] as it should sometimes. And it could be maybe that's our disadvantage. I mean, we tried to do a training with a palm nailer a couple of weeks ago. The guy's like, "We never do that this way." Well, it's in the book. That's how you can do it. So not right or wrong, just different opinion.
Problems	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We've lost a lot of the older dispatchers that were really good at the run cards...
Problems	FF	S	Manager	46-55	21-30	Male	FF-S-023	...We're now moving to a web-based PCR in [inaudible] reporting. So now I've got all of this historical data that is out in SQL and other places, and we're going to this other thing that- when we were buying this system, they swore up and down that they had two systems, that PCR and Fire weren't just going to be the same, and that is not the case.
Problems	FF	S	Manager	46-55	21-30	Male	FF-S-023	Those different interests don't always coincide, even though realistically we are trying to make operations work. Sometimes their pie-in-the-sky ideals won't match the technology or the agreements...
Problems	FF	S	Manager	46-55	21-30	Male	FF-S-023	I think the hardest thing that I'm seeing throughout this industry is, industry adopting stuff without ego. Bigger departments feel like the littler departments don't have the right to have a say. Littler departments think bigger departments are clunky and old and don't know what they're doing. Volunteer departments feel one way. Career departments feel another way. All of it's bad. So I started off with bigger departments

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								picking on littler departments and we're a littler department. I'm not saying that I don't have my faults [laughter]. Ego has to get out of this system...
Problems	FF	S	Manager	46-55	21-30	Male	FF-S-023	So somehow I think your job, talking to different industries and different folks is going to be the hardest part. How do you get them to relate the real needs versus what they want egotistically, if that makes any sense? So how do you bridge that gap? I think that's something you guys are going to have to figure out because we haven't [laughter]...
Problems	FF	S	Manager	46-55	21-30	Male	FF-S-023	...As an industry, we struggle with that: east versus west, north versus south, big versus little, career versus volunteer. All of those things are so ingrained in our traditions that it's going to be difficult to make vendors in the industry come together... I'll be long retired before you guys get all this straightened out.
Problems	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...this morning, I had a half dozen emails that related to emergency medical services issues, CPR cards that didn't get issued, people who didn't get to go to advanced cardiac life support class, people who were having issues with medical equipment. So I would then have a conversation with the emergency medical services commander to try to work through those issues, and try to get those issues resolved. I had a staffing issue about somebody being moved on to a fire apparatus on short notice...
Problems	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...Our biggest problem right now is we're waiting for one of the departments to absorb the other department. And when they do, then we will go-- right now, we're still using Red Southeast. We're not using each other's channels because of these multiple comm centers that are involved. Once [County] takes [County] and absorbs them in, they'll be one comm center...
Problems	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...So you had multiple call-takers taking the same calls and when they generate, they load it into the system and it would show up in our record management system as four calls but only one got resources. The dispatcher filled one out, added resources to it. The other three show up

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								in our fire manager as unfulfilled calls. But I don't remove them, it shows up in the incomplete report list that I send out to the battalion chiefs, and then they're trying to weed through these calls that have no resources assigned to them... We don't see duplicate calls unless it's something where you're just getting multiple callers and they're all loading the system at the same time, the dispatcher grabs one and adds resources to it. I just go in and get rid of them so they don't show up as incomplete reports.
Problems	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...back then, the neighborhoods were kind of smaller. You've got a neighborhood firehouse, and if you look at our fire stations in the older parts of town, their response circles lay over each other so they're 6-minute, 30 or 8-minute circles lay over the top of you. And you have circle over circle over circle over circle. When you get out to the new portions of town, the circles just barely touch each other... You've only got a certain amount of money and you've got to have fire protection police, and water, and IT, and parks, and streets, and all that. But it's been a challenge because you're trying to push infrastructure so far away from the core of the city. How do we deal with all that?
Problems	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	Me, personally. I would love, at some point, whether the technology exists or not, the bigger issue will be funding and working with IT. I would love to have a tablet that I could get my calls on, that I could do my maps on, that I could do my pre-plans on, that I could have my inspection ship too. Because we still get stacks of dot-matrix-printed paper inspections. That I could do my EMS reports on...
Problems	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	we've have changed payroll because we have high plans for our scheduling and payroll and all that. From what I hear is that they were going out of business so they can't sell their payroll stuff. So weve had to search for a new one of those which, obviously, with any program change, there's growing pains and it doesn't do everything you want it to do...
Problems	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...That's my job, is to help those guys be successful. Sometimes I succeed, sometimes I don't. But I know at the end of the day, it's your

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								driver's license, and you have to drive to the DMV to renew it... So I fail sometimes. And they're volunteers, too. I mean, we can't impose mandatory sanctions. I mean, we just can't do it.
Problems	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...if you lose-- we lost one very big team player, one big driver who always comes through in the clutch of-- the world's coming apart, he's always there. And we won't have that anymore, so that sucks. And it's like water. Somebody always fills the hole, but at what time and what cost that'll happen is unknown, and we can't control it.
Problems	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...with our transient volunteers, again, through no fault of their own, what are their needs going to be. How do we need to make them successful in our organization? What classes are going to be available and at what cost? Classes are getting more and more expensive. We were just talking this morning. There is a class-- we're getting our last guy through it, which as we've gotten everybody else through, was 100 bucks just to-- the tuition to get into class. That doesn't include the supplies, and hotel, and everything to get through it. But that class is now 500 bucks... So, I mean, everything is getting more and more expensive. There are classes out there that are 1,000 bucks for a week. There are classes out there that are 3,000 bucks for the week. And so the more active the volunteer, the more we're going to be able to throw at them for training, but anticipating those needs is really long-range.
Problems	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	So I wear a lot of hats and it doesn't all get done. And one of my frustrations that I've always said is, as a [Job title], we're the jack of all trades but mastery of none. And so back in the day, I like to have projects and see them all the way through. And it seems like I'm getting on the project and I always hit the good-enough phase, then I'm on my next project. We're never actually completing or mastering anything, or finding efficiencies because we're just-- all we're doing is just putting out emergencies and going on to the next thing, so.
Problems	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	... everything comes with a cost, like he says. There's challenges there.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...Or just even new technology. We hate when the fire service is so stuck in tradition. We try to be a little bit more aggressive. I mean, you could go to different conferences around, and they're like, "Oh no. You just got to do a solid stream," and they don't embrace technology. We use CAFS. We use straight stream. We use [solid force?]. We use everything as a tool for the toolbox. And then, through education, you learn when to use that tool versus one thing fits all. But it'd be better if- there's got to be a different way of fighting fires. I mean, yeah, there's home sprinklers and they do stuff, but I don't know...
Problems	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	So we're putting our people in the way to have that problem? There's got to be a better way. I don't know. Our trucks just started having piercing nozzles. I mean, just fill the thing with foam or something. So I think as our fires have changed, especially structure fires because of all of the plastics and all of the different products, we have to change how we're fighting fires and have different products that do it. Just going in and putting water on it is not working.
Problems	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	And I understand our construction is different, but globally, firefighting tactics around the world are so much different than what we do in America. I mean, they're putting out full on stone, essentially room and contents, where the structure has no fear of falling, but they're putting it out with 100 gallons, because it's going in at 900 PSI.
Problems	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	It's atomizing the water. Anywhere, depending on the handling to 140 PSI. It's significantly different. They're using smaller pumps, less water, but they also have less of a chance of the building falling down. So even country-wise, we're still not doing the same things. As a manufacturer, that probably sucks. You're trying to sell in Europe. You're trying to sell in America. Two different products.
Problems	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Well, my wife has Verizon, and when she lived over the [City], you don't get signal. And, yeah. You're sending me a bill. Well, I'm showing on my computer that I don't service you, or that I do have service, or whatever the problem is. And [Organization], I live in [City] town, and they're still sending me a bill. But on their computer system, they show that they

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								don't service us, and therefore they're not going to issue out a work ticket to come fix my house... So they don't even know. Because they're so big, and they're such a problem, and the system is so broken, they don't even know who their customers are or not, but I sure as heck get a bill.
Problems	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	We're sitting in the million-dollar addition that we had to build because we were no longer getting volunteers from the town. And we were having guys coming here from [City] and [City] sleep in bathrooms because there was no place for them to stay here. Because prior to that, everybody had a house relatively close to the fire station. They used to respond here and grab a truck. Well, nobody lives in town, and we're still getting calls... We have a million-dollar building that we had to build in order to continue to provide service or people didn't have a place to stay, or we didn't go to calls. One or the other.
Problems	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	It's crazy. Because when I moved here 20 years ago, we were about 500,000. Now, we're pushing 700,000 just in the city. The metropolitan area has increased-- I mean, it's grown also. So we went from this area of 500,000 in the city and in and around the metropolitan area, maybe close to 2 million. Now, we're 700,000 in the city and close to 4 million. So the infrastructure from a first responder standpoint has been taxed, so.
Problems	FF	U	Manager	46-55	11-20	Male	FF-U-021	Recruitment, there's never a problem with recruitment. It's more really just trying to mirror the city and the citizens that we served. So obviously, just like most other major metropolitan departments, we have difficulty recruiting people of color and women...
Problems	FF	U	Manager	46-55	11-20	Male	FF-U-021	...So generally, only 1,500 people are allowed to test every other year and those spots use to fill up in about 2 to 3 months. So it was difficult because no matter how much recruiting effort you put out there, shaking hands, and trying to get out in the community letting people know what we do, and the benefits, and what a wonderful job it is. If they didn't have the technology to login in a timely fashion, most people work when the openings occurred, so the recruitment efforts were futile...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems	FF	U	Manager	46-55	11-20	Male	FF-U-021	Yeah, definitely. There was a lot of times with probably the access points, so sometimes the access is very limited. And if you knew what you're facing, you would come in either in a different direction or maybe park your rig from [City]. On a truck for an instance, once you get the outriggers out and the aerial up and if you're not close enough, you're not in a good position where you have good scrub area, we can hit sides of the building you need to get to. It's very time-consuming and difficult to reposition that rig...
Problems	FF	U	Manager	46-55	11-20	Male	FF-U-021	...Construction types, so knowing certain types of construction, obviously there's a lot of lightweight stuff now that's very dangerous, buildings go up quick and they come down quick. So it would be helpful to have stuff like that. A little bit more fingertip knowledge right there.
Problems	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...And then what we, as [City], and by policy we, our operations-- so by operations, I mean when we are working on a scene, we take all of our traffic to a non-repeated channel by policy. It's not recorded, but we have decided we don't care if it's recorded or not. We just don't want any-- when somebody keys up the mic, we want them to be heard. For example, [City], on the other hand, is the opposite. All of their operations are on the repeated channel because they want everything to be recorded. And you get far more distance out of that because it's on the repeated system. You get almost a mile on the non-repeated. That's plenty. Unless it's a massive hazmat, we are not operating over more than a few hundred square feet. So that is one thing that we have done to improve is we just don't use the technology.
Problems	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: snowmobiles and winter repairs] It's a big challenge.
Problems	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Well, I mean, I can't keep up. One of the complaints I get is that we're trying to use technology to fix all of our problems. And there's some truth to that and I don't like it. I can't remember the name of it. Oh, [Organization]. We're trying to bring something called [Organization] on, and it's been a nightmare. It's been 30-some thousand dollars and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they've been trying to help develop it to our needs and I'm still not sure exactly what it's going to do. And we haven't even implemented it yet. So it might be something that we need. But purposely, I just don't get on those committees. I don't. I just don't.
Problems	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	And we still take care of the problems that we're called to the same fashion that they did 100 years ago, so all of this technology is not even-- some of it doesn't even have to do with our daily duties, our most important duties... We don't use tablets to put fires out.
Problems	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So, one of the biggest challenges that I think that we've had in the fire service - actually just public safety in general - is we have had to adapt other preexisting technologies to meet our needs because our user base just isn't that big. When Sprint/Nextel for example were looking at adopting the iPhone platform, they had to figure out are we able to move a million of these devices a quarter? Or I think the numbers might have been even more inflated, like a million and a half a quarter or something, a month. If you total up all of public safety in the United States, every cop, firefighter, volunteer, numbers estimate, you may have three and a half million of us total here in the entire United States and we're certainly not replacing our radios every two years like average customer is with their cellphone.
Problems	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...Public safety definitely has technology needs, but it's always been kind of this push pull as far as, "Well, here's what's available," or, "Here, how can we make this work for us?" versus just saying, "Industry thou shalt do it for us because--" I mean, we just won't buy enough of them, they think, so.
Problems	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...One of the biggest challenges that we have, I think, is data collection and data management.
Problems	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	We could do a lot better on training. Training is probably one of the single biggest costs that public safety has, just because the citizens pay us to be able to respond. And so they'll put companies out of service for mandatory training and whatnot, to all drive to central points to get a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								message, or whatever, or to drive to a central point to do some kind of manipulative stuff. If there's a lot more of that that could be done, either in an online environment, or some kind of interactive environment through technology, that would save lots of time and money on that regard...
Problems	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	From a technology aspect, one of the challenges that I've seen is that a lot of efforts, DARPA, and some of the other federal efforts and stuff, are really focused on kind of the short-term stuff, as far as how can I get some OTS, off-the-shelf-type stuff, maybe slightly modified and into public safety. There don't seem to be a whole lot of people, if anybody, that are doing the long-term stuff, certainly for public safety. Maybe more for Internet of Things, for the bigger general population... There doesn't seem to be any public-safety longer-term stuff that, yeah, this is going to take probably five, seven years to get it, but there's a big-need-type stuff. So that might be a big gap, or a shortfall that I've seen.
Problems	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	...I got to go buy some servers that just handle all that video and be separate because The Sun signed ordinance, people are going to want to ask for it. And we have to we pixelate out the faces of the identifiable people. How long did you keep this video? So we need a separate unit just to do that data retention legalities of it.
Problems	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	... I think those are the areas that are missed. We focus a lot on the toxins at the fire scene, but what we don't look are our longevity profiles. We don't look at what sleep deprivation does. We don't look at-- we don't look at the stress that's caused by our job with just lack of-- not even just lack of sleep but lack of nutrition, issues with our home life and social structures, and just different things that just actually are major components to disease development in our line of work...
Problems	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...We don't want to have in our front set of thoughts, dangers of the job, in particular, to cancer causing ailments and all that kind of stuff or particulates because it would be immobilizing. If we focused on things that can happen once we leave this fire house, then we really kind of run into issues of slowing us down in getting our job done...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...But I think when you have a chaotic scene where there's a lot of things that need to happen, there's a lot of-- maybe you pull up and there's a big fire, and it's communicating to three or four buildings, and you may have some occupant issues, when you have a large incident like that, at first, the first five minutes are very-- they're very, I would say, chaotic with communication because you don't really know what's happening. You can't really set up a game plan because there's just-- you can't make a decision. So.
Problems	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...The only thing I can think of would be I did a lot of dive jobs when I was in the squad. So we would go and we would take care of boats in distress, or drowning potentials, and stuff like that. And a lot of that does take place during the boat shows, and the air shows in the summer, and stuff like that. So where we would run into issues with that is crowd and being able to get to where we're going but being able to figure out where the actual location is because there's people all over the place, and if you're down here and you're just a visiting-- or a citizen, you don't really know the city for sure, and you may see somebody go into the water and not really know how to say where you're at. You know? So those kind of things become a problem. So then you've got the police who are responding to the same thing, so there's cross communication there. We have helicopters in the air. So I think triangulating and narrowing down the actual location is a problem.
Problems	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	I've never noticed an issue with that as far as you're looking at weight or user-friendliness. You never give it a thought. There was no problems. There's nothing to draw from is that I have a problem. I haven't had no problems with these. There could be a problem with the portable radio if left outside of your protective equipment due to thermal insult or a thermal exposure to it. Yeah. You'll melt the thing and it becomes useless, then you've got to rely on yelling, or if you're lucky enough, escape a pre-flashover. So if worn right, worn correctly, and following the procedures or guidelines of the fire department, it won't fail you. Most of those things that occur in the fire service, a lot of it is then human error

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and miscommunication. Communication is a big factor.
Problems	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	[RE: GPS mapping] I mean, if I could-- the problem is I'd have to pull out my glasses, and pull out my phone, and pull up Google, and type in the address. And while we're running, I'm also watching for traffic and stuff, so I'm kind of-- I mean, if I could just press a button on my computer and it went-- I know there's a - I forgot what it's called - Waze or something like that. If I could press a button, and my computer went to Waze and show me the quickest way to get somewhere, that would help because-- I mean, street shutdowns, sometimes we don't get notified of that. And then gridlock. I mean, I leave my firehouse, we go out on a run at 5:00 on a Friday afternoon and we can't pull out the door. I'm in the [neighborhood]. So it's impossible anyway. There's only a couple streets you can take. It goes [Street] and [Street]. You don't go anywhere. So once you make a bad decision on which way you're going to go, it affects everything you're doing. So I mean, I don't know if that's possible, but.
Problems	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	we have a big problem when we're responding seeing the actual address of places, believe it or not. We're pretty good at getting close because our blocks generally, at least in the residential areas, they generally run from 0 to 60. In other words, if this was the [address] block of south whatever, doesn't matter what the name of the street is. Generally, we know that there's a hydrant on this corner, there's a hydrant on this corner, and right around [address] there would be another hydrant, so that's how we think. Everything is about where the hydrants are. But we know that our addresses on most of our residential blocks would run from [address] to [address], and then there would be cross street, and then it starts again. So we always have a problem a lot especially in the evening of seeing addresses. Some buildings just don't have them on there. And others have them, but they're not even reflective, whereas if we even shined a light on a house or a multiple story building, that the address-- and that could be a problem in response time. Again, it's always about time. So if there's a smoldering fire or a fire that's growing

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that we can't see from the outside and we're wandering and wandering spending a couple, just a couple extra minutes finding the right building, it becomes an issue.
Problems	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: address placement on buildings] --it's a real common problem... You see them in every different way. They're actually, sometimes they're scripted... And not numerical, is what I'm saying. It's just written word... And then sometimes they don't even exist. In [City], we have a lot of vanity addresses that aren't even real. Yeah, and it became a big issue. I'm surprised it still exists because it became an issue with a very famous high-rise fire in the downtown area where there was a female there that was after hours working, and she was afraid to leave because the fire was in a floor below her. And she kept calling, and calling, and calling. And they had all these audio tapes that they kept playing on the news. And she kept giving them. And they were like, "We can't find you. We're on that floor." And she kept saying the address over, and over, and over again. Well, it was a vanity address for the building. It wasn't a real address. And she wound up dying in the fire. She wound up dying, and it was horrible. So I'm surprised that they still exist because there are some addresses. But even in the neighborhoods, which is 80% of our city is all residential. And man, I can't tell you how many times I have just wandered looking for an address.
Problems	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: address placement on buildings] I'm just saying. I'm just saying it's pretty crucial. It's pretty crucial. And so, I don't know what the answer is in a large city because to mandate in the poorest of areas that's-- but it's definitely, we respond to addresses. That's all we get.
Problems	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	[RE: radios] Better clarity, hands free you know because if we have big gloves on you know trying to it's hard to do so stuff like that would be good. Just durability of things being heat proof, waterproof you know most phones can handle a lot but you know I mean we're in situations where you know we've got a lot of heat, a lot of moisture stuff like that would be good...
Problems	FF	R	Field	36-45	21-30	Male	FF-R-049	We have so many limitations here. Again communications, funding for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					equipment, for apparatus and I mean equipment as in safety gear. There's a lot of people out here who take the risk using nearly expired gear. We have some apparatus out here that probably shouldn't go down the road and right now we've taken some unfortunate steps to make sure those apparatuses are not being put in service anymore and that's a good thing but at the same time it's a bad thing. We're limiting are suppression capabilities to fulfill the fire service admission which is to preserve life and property.
Problems	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] Or if you go to another jurisdiction oh we didn't know we had x I'll make up [County] County's system yeah they plugged that in a while ago. We've had that for years and they don't know what's in that radio other than they know what's in that liners world but take them outside of that they may not know until they're told.
Problems	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	It is all radio dispatch and it's all--I mean if I have somebody somewhere I can get them to like email it to me or something using either getting it on my iPhone or whatever 'cause we all have our own technology but in terms of having the technology to bring in the information available. I mean I can call--if I'm outside this building, if I'm dealing with a suspect on an arson or a car that we're investigating or whatever I can get any information I want sent to me over the radio and then they'll copy it to the CAD and we get that later on. But in terms of having something printed in front of you that you can sit there and walk up and say, okay, when she reads me--if she gives me a VIN which is sometimes the only way I can identify a car I've got to go sit and write it down then go take it back or I can read it to her and she can say, yeah, that's what it is.
Problems	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Well I own my own and I have the latest version of the iPad Pro. I think the others probably have Airs or Air 2's. So I mean they're functional. We're not having any issues with those. Over there you can find everything from the latest Samsung and you know they all have something. They all know how to make it work for what we do. But it's not the primary communication, you know, on a scene. If we got out on something that's long term, we have Wi-Fi hotspots, we have computers

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that we could bring out. But in terms of it showing up on the truck or you driving down the road, getting the information you need, it's not happening for most of the people.
Problems	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[RE: comms issues] Some equipment, some training, and some lack of personnel and then I get a shit type attitudes. In other words I know I'm supposed to do it but, you know, I'm busy right now so I'm not going to do that. You know they pick their functions.
Problems	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	And you can do training on those things where, you know all that stuff's available. I mean half the houses in this [County] have been up for sale at some point in time. So the floor plan of those houses are available. And, you know, it's all public out there. You just got to go out and get it and put it in there and the tie it in to be able to use it. That's a problem. We don't take that data and mine it and then regurgitate it when we need it. And 'cause we don't have the systems to do it.
Problems	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] ...We look at it the same, way but how it is worded as subscription based, people look at it oh my god it's a magazine subscription, it is terrible.
Problems	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S1] It is hard to bring that chaos to order so to speak, you know when everybody wants to help you know. New York had fire departments come in from Texas, well what for? You know now if they were a specialty team like the USAR team, sure they might have needed more specialty type of teams, but fire departments they didn't need to send fire trucks and firemen up there.
Problems	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	But you do have the usual problems, it a 12 hour and fixed anterior.
Problems	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	We want to sort of know where we are going, like study the map and then work it...Yeah, but some people in this department gets confused you know like they have never been on them roads so we got to pull it up. We obviously pull it up to make sure we get there first but -
Problems	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	Yeah, we've got a big drug problem in [City] that nobody seems to understand. We've got meth, we've got hydrocortisone, OxyContin, I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								mean, we've got all the stuff that nobody knows about. You know you hear it at the big cities.
Problems	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	But, it's down here and worse. I mean, it's spreading further north. It started off more in Georgia, now it is going like this across the states -- I don't know why but that's what research has shown.
Problems	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	This area, yes -- in the county; they want us to live within the county. Now, each department is different. Our department, our chief doesn't want us to be part of another department because of well the area and there is a lot of button-heads. You know, if you are around a scene and your department is there and you are with another department, then you can have a conflict.
Problems	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	But other counties, we've four or five fire fighters who are in [County], [City] [City] and [City] and [City] fire department, of course we have got some that work from [City] fire department. [City], I mean, there is just different ones but they don't want us to be part of another department in our county because they don't want the conflict and all that and a lot of people will -- Oh, we've got a wreck or a fire and now run to that and then this other -- my department or somebody else's department will get to something else and they will just over there and won't come to theirs. SO, you know, it is kind of a touchy thing.
Problems	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	Or we will fill them up. We will pull all the equipment out, make sure it all work because when you get on scene, sometimes stuff don't work like it is supposed to because we are not a paid department so try to keep track of as much as we can because it is all grants, that is all that pays for us is grants and money out of our pockets and we say, one of us wants to buy a bunch of tools, you know, a couple of hundred hours we will put it in and buy the tools that we need; some people will.
Problems	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	I mean, you try to get 35 guys together and it is like -- ah, but he can't be here, he is at work. Okay, well he -- and that's my problem. A lot of times I do the training during the week at night and I will text my [Job title] and I'll say -- ah, I ain't going to make that, you know that. He goes -- I know,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we will get you a Saturday and I would be like, okay. That's fine.
Problems	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	Well, sometimes they don't, because of the mail boxes. Because sometimes the mailboxes are on the opposite sites of the road and we will come up through there and nobody -- I said there is [Street] here and there is [Street] or [Street] on this side and then there is sometimes a split block and you're like -- what crap? And then you see somebody down the driveway waving at you and you are like oh gosh, here it is, and you get on Dispatch and you have to tell them that's the wrong address. That's what I was talking about getting those green signs. Because you come down through there and if it is snow 5 feet deep, you can at least clear it up and go -- hey, that's so and so's house, but --
Problems	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	Well, there is a -- I'm trying to think -- there is some -- we use some training ones. Crap. There is a bunch of training ones, I know they are used but I can't remember the name of and we've got like two or three of them that we use on the computer that you can send it to my home computer because a lot of times the courses you have to take are on computer, so we can't get everybody together and we don't have enough resources for everybody for do the actual test or reading lesson because everybody is off working and all this stuff.
Problems	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	But you had the radio in the truck, which you can get hold of other departments but still if you are up there with two other guys and by yourself and you ain't got a radio --
Problems	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	Down in the rural area and you are like -- who is on this one? I don't know. So, we'll have to go back the station, get the number off the hydrant and the street and call KUB and in KUB they have done this one time, they were like -- oh, it's not a hydrant. [laughs] So we go back out two weeks later and come back out, it's on. And we are like -- wait a minute -- We were filling this truck with water this week and last week we couldn't fill it with water and we were like -- and it was painted and pretty and we were like -- oh, come on. Somebody had a water valve shut off or something. So, it's like --

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Our reporting is desktop-based. You can access certain parts of it in the cars, on the MDT. But you're twisting yourself up into a nod.
Problems	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...The detectives there are seen as the Swiss Army knife because we can do everything... So the front desk folks, if they need help, they have a question, they kick it back to us. And we get a lot of, "Hey, can you come here? I need you for five minutes." Well, five minutes, and five minutes, and five minutes, and five minutes... So everything filters into our-- and it's a corner office. So everything would filter into there...
Problems	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...So everything filters into our-- and it's a corner office. So everything would filter into there, whether it's some command staff just coming in to BS, which is-- it's cool. "We're letting you know we're one of the boys." But they come in there. Or if they have a special project that needs done right away, they come in to us. "We need this done right away." And all you do is say, "Okay." Whatever I was working on, it wasn't the priority. Now, this is my priority. But what happens is they come back to you, "Why didn't you have that done for me?" "Well, it's because you told me to do these three other things." "That doesn't matter. Why isn't this done? I don't want to hear any excuses." So we're kind of a dumping ground of-- we get everything. And the other detectives that are down there hate me because I'm off-site.
Problems	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: report writing] It varies but probably... So last week I interviewed two people for some drug stuff. And it was maybe two hours, two and a half hours interviews. It took me probably close to eight hours to type it all out. Six to eight hours because you type, type, type, and then just whatever happens, and proofreading. It took me almost a day and a half to get from point A to finished. A DUI will take me two hours to type.
Problems	LE	U	Manager	46-55	31-40	Male	LE-U-020	But a while back we had one of our smaller that only has 13 people, but they were down to 8 and so even though they were only down 5 people, the effect on their center was much more than it is for [City]. When you see that even the 10 out of 45 you're talking, you're down 20% maybe, but the other you're down 50%. So then your scheduling becomes a problem...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems	LE	U	Manager	46-55	31-40	Male	LE-U-020	Everything they do now is MDC, it's computer based as well. So the ability for putting docks into cars, space inside the cars, the ability to put modems in the cars, in addition to their radios. As state patrol, we carry both DTR and VHF radios, so they have two radios in every car. The lack of space-- even as patrol vehicles get smaller with cages and those type of things. The ability to put shotguns, rifles, those type of things. Space is very limited.
Problems	LE	U	Manager	46-55	31-40	Male	LE-U-020	... when a national organization like FirstNet comes into these individual agencies, and I'm speaking a little bit on FirstNet now, that they gave a really bad big brother type of-- I'm here for the government. I'm here to help you, type of thing. And that doesn't go very well with local home-rule type communities. And I think that's one of the things that FirstNet failed on for [State] because they set a sour tone in a lot of people's-- and they could be giving them gold, but you've already ruined it. And they're going to find fault with that piece of gold that you're giving them. Then why aren't you giving me two? So any time that there's anything that comes down from-- it should be more of a cooperative type of event. And I understand that there are certain things, but it's how you go about it.
Problems	LE	U	Manager	46-55	31-40	Male	LE-U-020	...if you come in and say, "Well, I'm the state, and you've got to start doing it my way." And "I'm going to get you. Ours is better than what you could do," and you get the "I don't think so, bud." So that's kind of an over-viewing that something you have to fight because there is a stigma before anybody even opens their mouth, that they don't trust government, as you can see in our nationwide government, there is no trust. And unless you make relationships. I think relationships are huge.
Problems	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...From a technology standpoint, I don't know the-- quite honestly, we were lied to by the company when they said they could do a lot of what they can't do. So that's what the primary issue is. It won't do a lot of what they told us it would do...
Problems	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...and then the ability for that particular product to integrate with other systems, we're finding, even though we were told, "Oh yeah, it's easy." It's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								not. And they're using it as a way to increase revenue by saying, "Okay. Well, if you wanted to integrate this way, it's going to cost." So, yeah. It's been a really, really disappointing process. And that's one of the things just for in technology in general with, I think, most law enforcement agencies is there are many disparate systems that need to communicate, and that's one of the real challenges is getting our CAD system who's made by one vendor to talk to our RMS, records management system, who's made by another vendor and get all that information to feed to our analytics system, which is a completely another vendor, so those kinds of things are really a challenge. I'm sure you've heard that from other agencies, but that's a challenge for us.
Problems	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...I think this biggest thing we fight, and cops are the worst, I think about that, about changing...
Problems	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	And there's also some technology emerging for triggers to turn the body cameras on because that's a big issue every day in the news, so with stuff like a gun shot, or taking your gun out of a holster, or turning on the sirens, something like that, there are some news out there causing those sorts of things causing camera to turn on, so probably further on down the line that will be probably a good deal.
Problems	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...I make traffic stops. I make, I don't know, 20, 30 stops a day, and handle wrecks, and do all the reports associated with that. And whether that be-- because of the way our systems are set up, most of those reports have to be done-- are done back here. We have access to various things that we could do in the field, but we don't, honestly. I could do my crash report in the car, but it's not very comfortable. I could technically take my tablet out of the car and do a report there, but again, it's not as feasible as they had thought it was going to be...
Problems	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...Our traffic unit, we have citations, so I have a handheld Android device to write tickets. I can actually do an accident report on there and exchange the information. But, again, with our systems, I still have to come back here and then cut and paste from that application into our native RMS system. So even though technically, I've got the accident

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								report done in 15 minutes, I still got to come back here and spend another 15 or 20 minutes to transfer it into the system that they want.
Problems	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...Some people are really old-school. "I can't do anything else. I write on a piece of paper." ... there's a mentality there that I think is going to prevent a shift in that direction for actually using the tablets like they are designed
Problems	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...Technically, our printers are not mounted in the car. So I got a little belt clip. If I wanted, I could carry it on my belt... it's not very comfortable. It's cumbersome...
Problems	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...sometimes we do, sometimes we don't. Traffic, very seldom do we actually run people because I don't care. I don't want the warrant because if I get the warrant, then I have to have somebody from patrol come over and take them because I don't have a cage in my car. Motorcycles don't have cages. Our job is to go out and impact traffic and run with that. So it's very seldom that we run people unless they don't have an ID...
Problems	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	...our agency gives people the option of if you want to pay, I think it's 10 bucks a month, you can use your work-issued phone as your personal phone. So there's a lot of people that do that and don't have the separation of, all my personal stuff's on this phone, and all my work stuff's on that phone. So then you have the issue of if I take pictures of a crime scene, and I have pictures of my kids on here, not getting those all mixed up and in the wrong place.
Problems	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...if someone's on the stand and they hand them a printed out copy of the report, they want it to look the same as if the officer printed out of their own records management system. Not change the format that the officer's going, "Well, this looks totally different than how I've ever seen this." Which then can lead to some credibility issues on the stand. So it was kind of a good catch that someone realized that could cause issues down the line and in court. It creates an extra step for the records folks to go through and do that.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...The chat was more encrypted than I think if we just think of the standard messaging apps that are within the phone. Sometimes that comes into play, sometimes it doesn't. Sometimes the tracking of those messages can come in if we're all using one app. And so we go through a server and we tell everyone, "Hey, guys, all this stuff is cataloged. Just be aware it's discoverable." That's always the issue guys want to know. A lot of time guys will use apps that aren't official apps because no one knows they are using them, so it could never be discovered, just like a phone conversation.
Problems	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	For some reason, having to dial 911 because we've trained everyone to dial 911. It was supposed to be for emergencies only, but we've done a good job of training them. So everyone dials 911 for everything. And I hear stories in big cities of people getting yelled at, "This is not an emergency. You need to dial the administrative line." "Well, can you tell me that number?" Because we've trained everyone, dial 911. Anyway, so people dial that for whatever their problem is and then they expect it to come out...
Problems	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: Lumen information sharing app] ...we've tried out things like ProACT and we gave it a shot, but it just didn't work. But things like this really, really work because information sharing is our number one problem. I think when it comes down to any technology or anything, it's about sharing...
Problems	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: cheat sheets] ...So when you write a ticket for-- whatever speed over the speed limit, it's a different fine, or CC, or-- so things like that that which I don't want to ever memorize because it's just ridiculous... I don't ever want to take the time to learn that stuff. So it's nice to just be able to reference something and have it at your-- available to you, but not something that you have to dedicate a lot of time to memorize... so our cheat sheets, if they're on our phones, it's because somebody took the time to scan theirs and then email it around. That's how I got mine, as well. Another officer took the binding off and actually sent it through the scanner.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Pictures of your kids-- they have everything. So department phone, you shouldn't be doing anything that you don't want the public to know about. You shouldn't be doing it. And the officers, they did-- they pretty much understand that. Especially when you tell them that, "Oh yeah, they're going to take your phone."
Problems	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	There was issues of confidentiality, having restricted information on their personal phones. There were lots of stuff probably-- you're mixing private and business, and then if the phones were ever subpoenaed, you lose your personal phone. There was lots of grumbling about that.
Problems	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	For their personal privacy and it's hard they don't-- most cities now, dispatchers know right where their cops are. The fire dispatch upstairs know where all their ambulances are, every one of them because they have a GPS device transmitter. It's very hard now. Most people are becoming or adjusting to things changing, but some believe me when I tell them there's no location function on this radio yet. And when I do get it all up and running, we have designed it, so it will only give me your location when you hit your emergency button. And then I will get your location but not until then. Yeah, right.
Problems	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Yeah. Just how quick is that? I can do Google pics. I mean, it labels everything in my-- I mean, I don't do it, but every so often somehow, it figures out who everyone is in the photo, and boom, okay. Why we are not-- and I know everything costs money, but these are free features. It seems to be coming across the board in that we don't-- I mean, people are worried about me looking at their stuff or taking their picture, and then they turn around and post everything they're eating on Facebook. And there's policies now that I shouldn't be looking at what people are eating on their Facebook because it might be an invasion of privacy.
Problems	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	And then I know there's a bunch of resistance for officers as far as, "Hey. Oh, they're tracking me." Yeah, they are. So I mean why not? Everyone else is. So I mean, your Facebook is. Your Instagram is. I mean, we might as well get on board [laughter]. But the thing is if that was available, that would be, I think, a huge resource.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	In the smaller departments, it's also easier to manage the amount of folks you have whereas a police department this size, we have people that have trouble remembering simple ways to code out jobs. There's only 20 of them and they still can't figure it out so--.
Problems	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...There's a program called Vigilant. We'd just like to have access to that. Vigilant is like the plate reader but it is in a car. Have access to it in the station, that it would be nice being able to see all the plates and look at the plates. Because right now only CPIC has it and by the time they send us the information, the information is old. A car is mobile, so it's not going to be there for that long, so having access to that would be nice.
Problems	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	No. Usually, you get a-- yeah, but it's like there's the one officer that's always having a body camera problem. So I always say it's something wrong with his camera. He needs to get a new one. But who do you call to get this? Usually, you tell the sergeant, and the sergeant's got to figure out, "Well who am I calling to get this?" You got to tell somebody because if you're operating without it then you get caught by an inspector, "Well why don't you have your equipment on?" I think that's the biggest thing. I always bring it to the in-car camera guys, "My camera is broken today." They actually came and fixed it. And that's when I'll talk to them about it and say, "You know, what's up with this system?" And they say, "Well they're junky systems. They're not meant for the harsh punishment." And I say, "Well what about the body cameras?" And he's like, "Well, they're trying to get a vendor--" I don't know what he said, but he's trying to get them both incorporated as far as the-- and that would be beautiful. if I could walk around with one body camera to activate my COBAN System and this, I think that's pretty good. I think the less equipment, for me, the less stuff to lose and the less stuff to fall on, more or less. With the phone, I'll just leave this in the car and I'll never carry it with me.
Problems	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	[RE: investigating crimes] ...Talking to people is so powerful. That's the number one tool. That is the number one tool. We cannot forget that. That's kind of what the most difficult part about this whole thing is.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								We're all human beings. I'm a human being. My victim's a human being. The offender's a human being. We're all human beings. That kind of gets lost in the day-to-day grind. When you start just going by the numbers, and start looking at stats, and this and that, it gets lost.
Problems	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: cross-discipline interoperability] I think it's kind of a hot topic right now just because there's been some issues with or I guess some people have had some issues with our dispatch center which is operated by the county not by the Sheriff's department but it's something that I guess wherever there's users there will always be users that are unhappy.
Problems	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	... Another thing that we see within our department as a challenge is the constant change. My daughter is kind of a social media junkie so it's hard to keep up with the platform that she's currently using. Am I looking at her blog? No dad we don't use that anymore. That's a fake account. I don't even use that...
Problems	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	Maybe I would say another problem is we have trouble getting dispatchers and so that's kind of a communication problem for us because then we don't have anybody there or we're always having to train people and you know there's always a learning curve there. There's a learning curve to any job and that makes that difficult I think for those people yeah.
Problems	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	Part of the issue is here we have a DSL connection which is 14, 15 megabytes a second. I have contracted out to get a 100 megabyte connection. That was supposed to be in August however that did not happen so now it should be in first of December so once that 100 megabyte connection goes in it's going to help speed things up. I actually have a very good signal here from [name]. We have a 65 to 70 megabyte a second [name] connection here and what I was trying to do is I was trying to hook our network up to the [name] connection at 65 to 70 megabytes a second and with the unlimited connector I've got with the I forgot what it's called I can show it to you.
Problems	LE	R	Supervising	36-45	21-30	Male	LE-R-048	We're going to pay for the 12 computers with that, the computer mouse

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					with that, we're getting 6 license from [name], our reporting system for the E-tickets. The reason for that is with the E-tickets we have to mainly enter them. Now before we would enter them and then the probate court would enter them. It became problematic this year. Last year the first 10 months I think the county wrote 688 tickets. This year we wrote 4,510 so probate court was like they're having court once every 2 weeks and once every 2 months. Now they're having it every month and we're having about 500 cases a month in that one court date but it's definitely a change. With the E-tickets it removes human error entering tickets and our secretaries and stuff don't have to do that so it automatically downloads it.
Problems	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	Well I don't want it to beyond. In my experience working in [name] we had MDT's that had all of that on it and when you're driving down the road you don't need to be looking at your computer. I had a guy he had three wrecks and I was a [Job title] I put a sergeant in the car with him. I said figure out what this guy's issue is. He's had three wrecks in four months. There's a problem here figure out what it is. Within 20 minutes he calls me up and says I got it. I said what is it? He said man, the computer came up he's driving down the road and he starts reading the computer and he's just looking and we're coming up on the back of a car and I'm going [name]! And he almost ran into this guy because he's reading and not thinking about our know and so we put the close lid policy on him where if you're going down the road close the lid you know if it's not important the dispatch needs to really put it out over the radio for you. When you're driving especially at speed you need to be focused on the road and not diverting your attention somewhere else so I don't really want that system because it causes other issues and you don't really get a benefit out of it to be honest with you. They can print out a CAD printout and give a summary of everything that happened.
Problems	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	The reason why we're not going to get recertified is just for our small agency it's about \$2,000 per recertification because each one of those little cartridges are about \$25 a piece and you have to have two

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								cartridges per recertification and you multiply that by 20 something or 30 something people it's a ton of money. Yeah I understand why taser wants you to recertify every two years now. Make a little money off of it you know.
Problems	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	Q: Yeah so it's not just the training itself it's the physical stuff you have to get to go through the training? Okay. SME: It's the resources.
Problems	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	don't feel like they should have to answer somebody else and they don't want to humble themselves and work as a team. You got certain people who are the top of their tower and don't want to talk to anybody else because they're at the top of their tower. Electronically and stuff I mean I think the biggest limitation is just money. How good can communication be is what you can afford it to be.
Problems	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	...We are actually in danger of losing our GCIC certification. We're out of compliance the last time very badly. I had a guy to look at it and said it's one of the worst reports he's ever seen. They went through and did a self-evaluation that they didn't actually do they just signed off on over the last year they didn't actually do anything. When I got here they had a stack of TPO's about six inches high that had never been put on the computer ever. Twelve of them were still valid not on computer so somebody ran a name and it didn't come back. They didn't know what to do with it stuck it back there. We had warrants that were still back there from '96 and '97 that were way out of date and never went through and did anything. They didn't go through when you're not dispatch and there's paperwork to do here. You have to go through and keep your home tidy. You have to go through and check, check, check, check you know what I'm saying and they just never did it.
Problems	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	...That's a definite. I do believe that there is a kind of a communication breakdown when it comes to different governmental entities. Some government entities want to go off in this direction and some government entities and state entities want to go off in this direction and somewhere along the lines we need to find some common ground. I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>mean a lot of times you see money spent wastefully when you need it in certain areas. Take for instance I mean like just recently at a [County] meeting we talked about cutting funding. Cutting funding here and cutting funding there, cutting funding for our children in the schools, but yet they want to build a \$5 million library. What's, I mean, yeah, we need to focus on what's important for us. Educating our kids, getting extra school resources officers in there, building roads for commerce, or do we want to put up a bigger library than what they already have there that's sufficient for our need. So sometimes you start to see that bureaucracy, or building a big recreational facility, when we're cutting-- we're cutting out. We're building a \$5-\$6 million multi municipal park when the fire department only gets \$500,000 a year, so I think someone at bureaucracy could come to it and we can put out priorities first. Building a splash park, they just did that \$2.5 million in a neighborhood that's riddle with crime. Listen, this, I've been a police officer for 23 years, we haven't changed what's going on in this community in years, and we're going to spend \$2.5 million to build a water park, a splash park in this community because one of the representatives that the council lady from that district is pushing for this. I mean we could have spent that \$2.5 million somewhere else and been much more beneficial as a community in general. So I do see that, I do see that.</p>
Problems	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	<p>Well one thing is is that across America, about 75% of fire departments across America is volunteer. I can tell you that since I've been in the fire service, the volunteer fire services are a dying breed. We've seen a steady decline in the amount of volunteer fire service. I remember when my dad was a chief we probably was 400 or 500 members strong. People were able to be able to leave their jobs and now, it's just, it's dwindled away the way we-- we get a working structure fire today, we may see 25 or 30 people there. So during the daytime. At nighttime, we might see 125 or 150 people at a nighttime fire. But during the daytime, it just seems like owners of businesses and they just don't allow their employees to be able to go anymore. It's just harder and harder to be able to-and I guess maybe, I don't know, I guess maybe the social part of</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it, they're just taking care of your business is more important than your neighbor's house burning down. So I mean I do believe that that has hindered the fire service and it's dying across America. And then another thing that I feel is, is that they're putting more, more and more on you. They're putting more and more on the fire department. They're putting more and more on the first responders. We're having to do cross training things, like years ago when I was growing up when my daddy was the fire chief, the fire department had no responsibility on medical emergencies. The ambulance service takes care of that. Like the other day, they called the Sheriff's office, called our fire department out there for a big scene that they had. We spent five and six hours out there lighting up the scene and helping them out, and then at 7:00 in the morning, we've got to get up and go to work. We've been out all night. So it's things like that I think... it hurts the volunteer fire service.
Problems	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	...But there again, in today's time, whether it's [County] or it's Detroit, Michigan, people aren't approving funding. They're not approving new taxes. We just had a local fire department here that asked for mileage [phonetic] increase and it failed. It failed tremendously. So that fire department is going to have to start closing down stations and now they're having to go back to the public and just ask for a renewal to keep what they have going.
Problems	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	Just the newness of it being issued, because the only issues we have is everybody has to learn how to use them.
Problems	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	I don't know if I'm going to have the same problem, I don't know if the radio is still going to be in the wrong place for it, because I want everything where I feel comfortable to get into it, but I don't necessarily have room to where it needs to be to press the buttons, as the old PRs, we used the sliding batons where, the holder got worn out, it would spin a little more freely, and it liked to push buttons, so I had to get--like, when we had some old carriers for the radio that swiveled, too, and they sat in just kind of a different location, so I would switch to that. My leather belt that I wear when I'm riding the motorcycle out in a different uniform is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								still set up that way, where it's just in a carrier, so nothing else is interfering with it.
Problems	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	... Really, I think it boils more down to training everybody. I've--we have a lot of dispatchers who are very good, but unless--whereas someone can pull up a map for the city and give you a cross street or a physical address, ours can't do that, because none of our buildings have physical addresses, so someone new who is--does not drive around every day and did not have the ticket [inaudible] give you the information on where to find something.
Problems	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	You know the last 8 or 9 years has been really tough on law enforcement now, but, you know, I have mentioned community never bought into that false narrative of, you know, "Hands up, don't shoot." you know, and I'm not diminishing the fact that there are problems in law enforcement in inner cities and with, you know, African-American populations. Those things that have happened that you can't get by, you got to own it, right.
Problems	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	...But it is true but you are not going to regress, you know, so we got to embrace this. And my [Job title] [Inaudible] was -- no, they have got enough on their belt. You can't put no more on them. You can't do that to them. You can't -- They have already got in car cameras, you know, we are just going from the car to wherever else we are going, you know
Problems	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	No, I mean it's hands on, it is weapons, it's you know as batons, chemical spray, it's the taser, you know, it's the cellphone, the body camera is either it is on glasses or it can be on your lapel, your collar, or we have some that have a magnet in there, about that size right there, you know.
Problems	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	We've got drones, yes. We've got drones and have cameras on them and we have an aviation unit with, you know, flyable helicopters, we've got a Huawei and some OH-58 Jet Rangers, but these drones I think are the future for aviation. I mean, for us, you know, it's a very expensive proposition to own, maintain a fleet of helicopters. Our helicopters were free. We got them on a government program. It was, you know, surplus

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								military equipment but the way the drones are growing in technology, it is just – man. If I call for the aviation unit, if they weren't flying, you know it would take them an hour, you know, I mean, once they got somebody to hangar, pulled the bird out, warmed it up, and got up and got to you – I mean, really. But a drone, you can off from your car. So, if you needed to do some surveillance, if you wanted to know what was behind the house, that you are fixing to hit, you know if it drone, and you can get it on your phone, you know. They've got iPads that you can operate a drone from...
Problems	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	Unfortunately that is one thing that, because we don't have just a single vendor for all these different applications, that is one of the things that we really, really struggle with in law enforcement, is having some sort of single sign-on, or you know, we are constantly - there is not a day that, I shouldn't say a day, but there is not a week that goes by that I don't have to change some sort of password to something, and you know, that is truly - that can be a real potential issue.
Problems	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	You know, and this is what I am talking about; there are only two frequencies for radio frequencies within the county that all law enforcement can talk on. Okay. When I talk about all law enforcement talk, small - exactly - sheriff, state police, local jurisdictions throughout the county, there are only two frequencies that we have access to at any given time where we can all come together and have conversation if we need to, in a major event. Fire and EMS has only one frequency that I am aware of. Now, the problem with that being is, I am not sure that all law enforcement can talk to Fire on that one frequency.
Problems	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	Yes. Yeah. But are they prepared for major incidents, mass casualty incidents? Absolutely not. They are not.
Problems	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	You know, it really depends. It could be weather affected, you know. You just never know what you are going to get with our current radio system, quite honestly. [short laugh]. We don't - historically, we never learn from our lessons, we just don't, you know, and I know that you mentioned, you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								know, 9/11, and this being part of what has following from 9/11. I don't think that we have yet learned our lesson from those talking points that were brought out of 9/11. We are talking about the same exact thing, you know, how many years later, fifteen years later; sixteen years later now. That is not acceptable, but again, it is not because we haven't identified the problems, it really truly comes down to is the technology there to connect? You know, if I were to jump on the state 800 system right now, we have the ability to talk from [City] to Guam, okay, but you know, I just - it's the dollars and cents in order to make that happen, and until - and I am not sure what it is going to take; if 9/11 didn't spawn enough, you know, upheaval to get us some funding to accomplish that, I don't know what is, honestly. This is just like I said, we just don't learn from our history, and here we are still in the same place, you know, sixteen years later, so..
Problems	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	[short laugh] You know, I don't think they are any better. I will be pretty honest with you, and the reason I say that is because we haven't - again, we haven't learned anything from our previous experiences you know; what we were experiencing 25 years ago in our communication systems and the breakdowns that occur in our communication systems still occur today. They still do. You know, I think we are getting better, but they are still there, still there.
Problems	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Probably the burdens placed on, whether it be, you know, just the saddle burdens. You know there is a lot more scrutiny, which can be a good thing, but now it's almost to the point where in law enforcement, you know, traditionally we have been kind of separated from the politics, but not so much anymore. So any time politics drives a service, you know, there is room for abuse.
Problems	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	So one of our biggest obstacles as far as challenging is making sure that guys are trained properly because you lose the experience and training as the younger guys are teaching the newer guys - I don't have 20-year veterans like I used to, so my experience is gone, so that is very challenging. Very challenging because -and relates to I don't have much

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								assistance because the younger guys, they dont understand what it takes of all the behind-the-scenes stuff. So they don't know that I gotta do, you know, all the inventories and the grant work and everything and ordering stuff to keep the department running; they just are - so, police work, you get in a car and drive around. So that is challenging. I mean, overall, it's rewarding; the detective bureau part is the rewarding part because you get to follow through on cases and stuff like that. But I don't believe it is as rewarding as it used to be because such a negative impact from the cops [unintelligible] now; I see the guys, they get burnt out quick, they get jaded and you know, whether it is political or if it is from the public, they feel like they are getting it from both ends.
Problems	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Yes. Back in 2005, we had a pretty mass retirement. It was the guys that all came on together back in 1975 and they all left. At that time, the city felt that it was more profitable for the city to save money by lowering the pension; they eliminated the pension for new guys and bringing in 401K. Then they decided to pay a substantial amount and the new officers pay a substantial amount into the healthcare benefits. So at one point when we started hiring officers, for about a good solid 7 to 8 years we were probably at almost a 60% turnover rate.
Problems	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	So with everybody leaving, it caused - it did the opposite of what the city wanted to do. Instead of saving money, we just spent \$ 400,000 in overtime, because now we had to cover the road. Guys got burnt out because you didn't know when you were going to go home and that contributed to guys leaving. They didn't want to work 70 hours a week.
Problems	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	No. We are the same standards, hiring standards as everybody else you know. You know, you have to pass the background, then psychological, then the physical but with the 401K, they come in, they don't work and then they say, okay well, you know what [inaudible] is getting 50 more an hour. They have got no investment here because they [unintelligible], where me, I was the last one with a pension, so I do have a good pension and never - I don't care down in [unintelligible] offered me ten more thousand dollars a year, I am gonna leave it. And so that is why it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								is directly related to why we have such young car men. It's our turnover rate because of a poor benefits package.
Problems	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	I think yeah, it plays a lot into the hiring process itself. I think there is such a negative image on police now that you know, back when I started keeping 200 people for an open position in the police department. Nobody wants to be the police any more. It's a negative career and it's a negative full-time career and you don't have the applicants out there like you used to. Nobody wants to do the job.
Problems	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	You know, we put our applications through [unintelligible], the Free Press and the News Herald trying to cover all bases, and we don't get the applicants.
Problems	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	... Well, if I was on midnight right now, I would [unintelligible] with Fire and ask them both; I would call the station like, hey [unintelligible] is chasing one through the city. So we have isolated ourselves in that aspect. Now we are in a huge - potential - actually I will know more today - potential transition over into combining with our dispatch with [City]... The negative aspect - we are going to be even more isolated from downriver because we are going to be on [City]'s channel and it's going to be [City] dispatcher's responsibility to monitor downriver and also get these guys backup if they are on the south of the city.
Problems	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	... The computer system, personally I think it is a lot - I don't like it, I think the CLEMIS system in comparison to what we got now is not user friendly, the computer system that we got now is phenomenal but CLEMIS is not user friendly, it's going to take a lot of work to get these guys used to it because these guys have been using it for 15 years, and then overall, it's a complete different structure for the department because now these guys are gonna be all on the road. They will be transporting prisoners to [City], they are going to be coming here to do the paperwork but there is not going to be anybody here. So again, yeah, it's a huge transition and it's going to be - we are gonna fight them a little bit but it's - if we don't do it, we will go under.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Well, it's a total different scenario now. [City] took over our fire department, so they are [City] employees and it used to be - I would go over there for dinner and I knew all those guys like first name. I could walk over there right now and I couldn't tell you one single person that is in there. They have isolated themselves from us. There is kind of a - I get the impression that they dont want to be here and they really dont want to deal with us and that is the officers' impressions that they get. They are not the same buddy-buddy guys that we used to know all the time.
Problems	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Yeah. And our stuff is getting outdated. We spend a lot of money fixing programs and stuff like that because our computers are old. The problem is, you can go to Best Buy and buy a \$600 laptop but you go and buy it for the car and it will cost you \$5000 to put in a computer with a mouse and just because it is a MDT -
Problems	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Yeah, absolutely. If you have got an officer that is signaled or you know, in a parking lot updating his Facebook status, not patrolling the neighborhood... Also, that part absolutely has a negative impact on workplace, community, everything. It's -.
Problems	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Nothing real crazy in particular. I would like to see the overall image of police be run up so that I can - you know, these guys are so strongly affected, they are being baited on traffic stops and trying to get them to smart off or something like that and the morale is so low that it is affecting not only the officers but it is affecting the community because they dont want to work. So I think if anything, we get the impression of us back up.
Problems	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	They may have to eventually carry 2 phones. We carry so much stuff already, to carry a city phone and a personal phone is just something else to lose, to break, to misplace, to lug around in your pockets and a lot of guys just don't want it. Like me doing so much traffic, I probably could have pushed for a city phone but I don't need the extra headache; it's enough just having mine.
Problems -	LE	S	Not	Not	Not	Male	PS-S-002	You used to fill out a face sheet for a police report and write a narrative.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information			specified	specified	specified			And where that went, that went and got photocopied, distributed. A copy went into a folder somewhere. And then what happened when you went back to that house, and you wanted to know what happened at that house? Dispatch would call down to records, somebody from records would go find that folder, open up that folder, tell what happened to dispatch, dispatch would then relay that to you over there.
Problems - Information	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	Right. So now the demand is we need to know, and even officers, we need to know what happened there before, who we contacted, what happened when we were there, and dispatchers have access to our records management systems. So when guys complain about that, I say, "Well, do you not want that information?" "Well, yeah, but it's just-- I just hate it when they say it's going to make me more efficient, because it doesn't." And I said, "Well, it does make you more efficient." I said, "Maybe not this specific task--"
Problems - Information	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S3] Another technology initiative that we saw fail in this valley was the fire several fire agencies were trying to get mobiles in their vehicles and right now there's very limited capabilities for fire to see the important information in their mobiles that law enforcement sees and again it comes down to just lack of funding and ability for them to tie into these calling systems and so I think that interop just isn't radios there's more to it with these officers, these first responders need to have certain information, they don't need to see arrest records and things like that but there's a lot of information that they crave from dispatch and they just don't have any way to get to it because they can't have the tools that are funded by the law enforcement side.
Problems - Information	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[RE: outdated CAD system] [S2] ...It's not the worst out there but it's not the best out there and you know so as we look to the next generation CAD system you know we have a lot of things in mind on what we want to see and the location the easy location and not only the easy location but like this one system that we're looking at actually will allow us to when somebody calls in from their cell phone doesn't know where they are they're in the back country we can send them a text that says push

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								this that says it's okay for me to look at your phone or find your phone basically so it's a find your phone and then you can zoom in on that phone's location and even track them if they're moving so and that's the kinds of things that you know we need in today's society of mobile phones.
Problems - Information	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Exactly, yep. And any time now what we're going to do is instead of all the GIS people they all talk to each other, "So we've got this new subdivision going in so here is the new road." But not everybody gets told that, and that's where we get these discrepancies. So now, we're going to do this through a website so if you change a road name, or you change a street number, or a center line, or anything like that this is the form. You go online.
Problems - Information	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	My philosophy on that is I don't care. It's not my emergency. If you're not willing to give me the information that I need, address and phone number, and tell me what's going on, then you're going to wait.
Problems - Information	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	So you have to-- there's a fine line being empathetic and being stern, I guess. You can't take it personal. "My mom's not breathing," "okay, what's the address?" The caller thinks that they've given you the address, they're good. They can hang up now. And that's not the case.
Problems - Information	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Okay so let's say I'll use a domestic because a domestic I think is a pretty good example of a regular call that we take so the most important question that we ask always is the first question we ask is what is the location. We need to know where it is right? Our technology in terms of locating people is just not there. We don't know where you are you know I've used the map as a reference but based off of the cell tower that you're hitting off of I don't know where you are. You could be anywhere you know and that's why we get a lot of calls for different jurisdictions.
Problems - Information	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	[RE: getting 911 calls from people in nearby jurisdictions] Mmhmm and then we'll have to transfer and it's not as time consuming or as bad as people think it is but if you're calling in not giving us information or you're being you know or you're not able to give us the information.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Information	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	[RE: caller location] Right. It can be a challenge because we don't know you know and if I'm asking you questions about where you are and you're giving me landmarks and stuff to an area that I'm not familiar with because it's not my jurisdiction I have to think about that could possibly be and then transfer. So sometimes it can be a challenge in that sense but so anyway so most important question is always where are you? Where is the location? Always ask try to get the street address.
Problems - Information	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	But sometimes it can be challenging especially if someone uses a phrase or something that you're just not familiar with. You know I had somebody what was it someone used a phrase the other day or like last week where they referred to it as like [Street] or something like that and I said it wasn't me it was actually a different dispatcher somebody else said like [Street] and I had and no one had any idea what they were talking about and we called park police where [Street] was. They had no idea. We called state police they had no idea what it was. We called [City] they didn't know. Nobody knew what [Street] was...
Problems - Information	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yes we should get the call back number as soon as we can. The our [INAUDIBLE] will display the number they're calling from if we get it on a 911 line. If we get it on a trunk if we get it through a transfer that's usually one of my first questions. Is what call back number are you from? Especially if you get a transfer I always try to verify that you know because I have had that before where I've made a mistake where I didn't get that information straightaway and then I wasn't able to call them back but at least I had the location... But the problem is is that you're overusing resources then because you're sending police and fire because you don't know what the problem is or whatever. You know what I mean? So anyway so location information is very important...
Problems - Information	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	[RE: accurate XY coordinates] Exactly, exactly so if we get this is a problem you know we have if we get a 911 hang up from a cell phone or you know or even a yeah a cell phone if we get a hang up from a cell phone and it comes back to you know we don't know where you are but you're calling and you're just screaming and then I have to go trace your

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>phone and I trace your phone and they're going to give me even if they can give me an address it's an apartment complex? I don't know where you are. We can't have the officers go check every apartment. We just can't do it right? So knowing kind of an approximate would be really cool. That would be awesome. Anything where we can better direct people to where you are. One of the things that I know that a lot of centers struggle with and some invest more effort than others is common place names. The problem with an environment like [City] is we have a lot of development that goes on here especially in the last couple of decades and again I wasn't here but this is to my understanding is that area and you can see it too just being here for I've been here since January you know just being here since January you can see there's even some places that have totally changed just in my time here. It's really great. It's a very vibrant community, there's a lot of change going on here, there's a lot of change going on in the [City] area in general. [State] is a constant state of construction right so you know it's there's a lot of changes that are going on and with that there's a lot of influx and up flux of businesses right? So businesses, apartments all that sort of stuff. Most people when they're out and about when they're not at home they don't know where they are so they'll call out and they'll say I'm at this place, I'm at you know they'll be outside and they'll be like I'm at Ragtime which is the restaurant downstairs. Right you know or I'm at Starbucks or something they'll just and in an emergency right, right so in an emergency they'll just say oh I'm at this place you know and for us it can be challenging because the only way that we're going to know where you are in our own system if you call out that common place. If you can't give me anything else, can't give me a block or a cross street or anything. The only way I'm going to know where you are as if your name is in our common place. If we've put it in there.</p>
Problems - Information	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	<p>[RE: searching common places in CAD] Right or if you get the first chunk of it wrong then it's just not you're not going to be able to find it so the other part of it is too we have a so there's a in the cemetery in the national cemetery there's a visitor's center we get a lot of calls from the</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								visitor center especially in the summertime medical usually, elderly people who are out there at the cemetery visiting family members, gravesites or if they're just there to see the cemetery or whatnot heat stroke, a lot of people fall down because they don't realize that there's a lot of walking involved you know we get a lot of people with basic injuries and then we do have a few very rarely but sometimes we do have some police calls out there as well...
Problems - Information	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Right and also it would be extremely helpful to have that I don't know if crowd source is the best way to put it in but some type of system where we can easily search for a business even if that business has only been there for like a day or two or if it was an old business right and someone says I'm at the old Mister [Name] right and I'm like I don't know what that is right but if they say oh it existed there in you know 1960 I guarantee if you Google Mister [Name] and it was like a big place then they're going to be oh did you mean [Address] which is now blah, blah, blah? It's going to pop up you know so we don't have that ability so that can be quite frustrating.
Problems - Information	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Exactly. You know I had a call one time from a woman this was like the worst scenario. A woman had received a call from her father who is having a diabetic emergency in [City]. She was located in [City]. She had no idea where he was in [City]. All she could tell him was oh gosh what's the name of the it's a sausage place in [City] it's like [Restaurant] or something like that so anyway so she mentions she's like I have no idea where he is right and I'm like okay what's his... the only thing I have is can he call 911? She said no he went unconscious when I was talking to him on the phone
Problems - Information	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	He's having a diabetic emergency. I don't know what's going on. He's in a white truck on the side of the road. Okay in [City]? I don't even know if he's in [City]?. Okay we think he's in [City] we don't know right so you have this man who is unconscious in his truck having a diabetic emergency, the daughter is in [City]?, she doesn't know where he is, she has his phone number so you have to be a detective and use his phone

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								number and figure out based off of where he was as your own local knowledge where could he be now. And then eventually we get I don't even remember how we got there but eventually we got to this thing where she said he was at Pee Wee Sausage or whatever and basically I had to Google Pee Wee Sausage and it came up with a location and I entered it and got them started out there. Gave them the description of the white truck and thankfully they got him.
Problems - Information	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	So it can be quite can be quite difficult and the process for tracing a phone people think it's really easy it is absolutely not. It can take 20 minutes.
Problems - Information	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Well with our sheriffs we don't really have an issue except where maybe you know the radios don't work and we do have those kinds of coverage issues but generally not a problem when you know I'm communicating something dispatch and something out to my sheriff officers but fire is a different channel and that's not usually a problem. Only sometimes they're not always listening to their radios and we can't control that. Sometimes we don't know that so but we communicate that out, we dispatch that out and then sometimes that's out of our hands and same thing for EMS. We make that call, we dispatch them but we don't always know until somebody communicates back to us that they've gone or not so it's easy enough to communicate. I don't always know that that communication has been successful.
Problems - Information	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Oh no I think it's mostly people really. You know people don't always give you the information that you need even when you ask for it so we think we're being really specific and asking about a very particular thing and then people give us all kinds of crazy answers so sometimes a call that you think should take you know thirty seconds takes 2 minutes and then you've got to dispatch out that information...
Problems - Information	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	...I guess now I think about it you asked earlier about you know decisions we're making about information and sometimes that does happen. Sometimes that is true that we get too much information from people and we don't need to pass all of that along to the folks and so we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								sometimes do leave things out at least in that initial dispatch and then we might call back and give them additional information later but they need that first information to really go in and deal with the call so that's I think sometimes what I would say that it's really it's a people problem more than anything and people giving you the right information when you ask it in ways that are useful.
Problems - Information	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] ... And then you know for us in the county, one thing that we could do better on is our governance and risk management compliance while adopting new technology. I know most of the organizations in the county kind of have a little technology committee or whatever but I don't think those committees share information. And I would like to have standardized-- a standards committee for technology across the board. So that, for example, we're trying to make this work right now with the FirstNet equipment manufacturers. It's like, "Yes, I am law and emergency management and my counterpart is fire." But 90% requirements overlap, you know?
Problems - Information	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] ...what I'm specifically speaking about is, there might be a large fire and we never know about it, right? Emergency management wouldn't be notified. That's a breakdown in communication. Why aren't you being notified? "Well, we've never done it before." I mean, it's those kinds of things that I'm talking about from a communications perspective is, everybody understanding everybody's job. Also, the escalation when things go bigger, right? I think that's where there was significant lack of communication. We have a large earthquake, it's not as simple as, "Okay, well I'm just going to add 500 more firefighters and 200 more police officers." No. It needs to be a lot more coordinated, a lot more organized. And done by function and geography and all these kinds of things. And I think here in this office they knew that, but nobody ever knew how it would actually play out, right? And nobody really had the ability to have the conversation about it.
Problems - Information	COMMS	S	Other Public	36-45	11-20	Male	COMMS-S-001	[S3] ...But Internet of Things, I think it's a good option. Pushing video over LTE, I think it's going to be a good option just because the back hall

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					bandwidth will be so much bigger. I am concerned about the plans that people have to use the FirstNet system for things like-- we have [telecommunication system] here, the [telecommunication system name]. I'm thinking about pushing CLETS data over that system and just all those kinds of things, make you think twice. Just based on the way the project is being run. So that's it. My two cents.
Problems - Information	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	... They want what they want, when they want it, and how they want it. And some people, you can't get them to understand I'm only the dispatcher. I take the message; I relay the message. Now when that officer or when that person that you need that help, that assistance from gets back to you, it's not my fault.
Problems - Information	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	EMS is a bit, it's a bit difficult. It's not all bad, but their system, their mapping system isn't the same as our mapping system. So they have a, older version. So sometimes we have to, we can't disconnect that call. We have to stay on that call to make sure that they have the correct addresses, to make sure that they're going on the current highway. 'Cause in some calls, some instances, they'll pass it up. Because in their mapping system, it's showing a little ways down the street. It's on the same street, but it's showing somewhere further down. So EMS is I would say the most difficult rather than our sheriff or our fire services.
Problems - Information	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	You can. Yes, you could definitely imply that the person, sometimes you have individuals that are exaggerating, or they'll tell the same story, but they'll add more to it. And then you clarify. They say oh no, that's not what happened, or they'll, oh well I didn't say that, even though they just said it, and they'll add even more.
Problems - Information	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	The problem is, where the public wants to know every detail, there's some things it should be a need-to-know basis. Like we had a kid that was investigated at [City] High for possibly having mental, thoughts about shooting up school. And everybody wanted his name released, and they're failing to understand this is a child. And look, I understand he's just as capable as an adult, but he's still a child. There's no need for everyone to know his name, to go pounding on his door, and make the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								situation worse.
Problems - Information	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	It's easy but our fire department, their radios are kind of sketchy [chuckling] so it's kind of hard sometimes with them because they don't get all the information that EMS and patrol would get over the radio. Or we have to keep repeating it over and over and yeah, and it's not great.
Problems - Information	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Well whenever they go into certain areas in the [County], 'cause we are in the country and it's real county here, a lot of trees and it's a lot of back roads and stuff, they won't be able to hear the information we're giving them and we can't hear the information they're giving us. So we'll have to call them on their phone even just to check on them to make sure they're okay. We have to do it over the phone sometimes.
Problems - Information	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	There are times when we've gotten the wrong addresses for people and that's a problem. That's a major problem. But other than that, no.
Problems - Information	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Hmm. It's... [Laughing]. It's a task to really communicate with them 'cause I mean like I said I'm thinking that it may be more because we don't know each other and it's almost like talking to strangers every day.
Problems - Information	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	But it's almost like I can tell you something and then I bet you before you get there you're going to ask me the same thing again like I just told you that. But if I say I just told you that then I would be wrong 'cause that's not my job to be, you know, rude and just have attitude.
Problems - Information	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	But baby, I don't want to talk to you on the phone, I'm not going to have a 30-minute conversation over text whenever I could hear your voice and... and I can really hear are you okay. I can't tell that over here. I can't tell if you're crying or--that's my fear with the Next Generation 911 is are we going to lose that important piece of our communications with technology.
Problems - Information	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	So I think it's going to change things for the better in most cases but I'm really leery that it's going to change how we communicate. I mean we already see it in our society now with our social media. I mean anybody can say anything they want to about anybody on the phone that you would never have said to someone to their face. And... just not... not

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								real... real sure.
Problems - Information	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	...They're using technology so much more. And technology is to a bad thing. It's how it's used. And but we've got to look at the bad because of human nature basically.
Problems - Information	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S1]: So we teach all that with 5 weeks of classroom training and then by but we do have a call handling guy. If it's -- you determine when you answer if it is a police call, then you refer to their call-handling guy. They have a set amount of questions they want -- if we can get them to the best of our ability, we will get all these questions answered. Very rare that we get everything answered.
Problems - Information	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So you have one in your headset which is your primary channel, but then there's 12 more channels that come over your speaker at the same time. Well our fire dispatcher dispatches four different fire departments. So if each one of them has a major event going on, they can't do it. So our supervisor steps in, takes -- so when they have a fire they're supposed to stay on that fire and let everything, all the rest of the work load is supposed to go to the other people and that 99% of the time works, but we can have other major events like a hurricane or a tornado that's come through. It's just chaos.
Problems - Information	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Similar answers to similar questions. Those are the cards we...so, I mean, for instance when I took over up here, I started to pull data and look at things and we were having - I say a lot- it might be two or three a month before we send an ambulance to non-emergency, and the ambulance transported emergency to the hospital because it ended up being an MRI or a stroke. Now that still happens occasionally when we review it, it's because the call taker is a third party, they got to call there or somewhere else, they're not with the patient.
Problems - Information	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	The family's [indiscernible] so he's taking care of you, he's frantic, he calls one of your kids, your kid calls us, I don't know, they don't know the answer to the question. So anytime we have anything that's a flag like that, an emergency to the hospital, we look at every one of those calls;

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								two reasons, one is the medic new and should've been an emergency to the hospital, did we code it correctly, so anything that we could learn from any of those calls we do. So we don't have those much anymore, rarely have those types of calls and then we really, we went from the cards to the software on the screen, so it pops up because the cards are hard, you got to know where the card is... But on the computer screen, its set up to when you answer that question, depending on the answer it gets rid of all the others, goes directly to that third card down. Makes it quicker, makes it more efficient. We found out there were some issues when it first got set up, anything that is an extremity fracture is automatically a non-emergency, that's a national standard. I don't agree with that.
Problems - Information	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	With the new CAD because its math based, if it's pinging correctly, we're pretty close. We have had some issues where they have been on trails and that's not been able to - that's been our biggest thing. [Park]? We got three or four calls in the last year where they don't know which part they're on and we've had delayed responses getting to them and we're kind of shocked and the fire department goes that way, the ambulance goes that way, the police goes this way to try and figure out where they're at. So that part has created some issues, if you don't know where you're at when you call 911 right now, we can't rely on cellular technology to tell us where you're at.
Problems - Information	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	You might be close, might be within half a mile. If it gets within half a mile of the house or the street, we can figure that out because you gave me an address, but when you're in the middle of Nature?
Problems - Information	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	There's a lot of land around here. It creates a problem. We don't have, we've not had the issues of them being on a wrong street. Of course we got rid of all that, we changed our -- the metropolitan planning commission changed where we can't have two street names the same... So you might have a [Street], a [Street], a [Street]; but no two [Street], in [City], or in [City], or in [City], so anywhere around that was a huge change for us.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Information	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	But if you don't know when you call a cell phone, you say road, but you're on trail, it may not trigger, and we may go to the wrong address, may go to the wrong street.
Problems - Information	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	That part of technology, we've had some issues. There may be a little bit even going on with this new radio system, we have egos. Depending on who is in that position, there's egos, there's politics, so we're able to get through all of that because of the relationships. I'm a big relationships guy. I mean if you have a relationship with somebody that they like you and they somewhat trust you, or do trust you, it's much easier to conduct business than 'oh crap, here comes that guy again.' So I'm really big on that, so I take time to meet with [City]PD leadership outside of here, same with the communications liaison for [City]PD, he and I talk all the time. If an issue come up, I shoot him an email, 'go ahead and check into this', because I'm not first blush and there's personalities in there. It could be a personality conflict. But I look at everything as so we do adjust culture within EMR which is how I've always done business. I don't headshot people or go yell at everybody when we have an issue. So I look at it as a system issue, is it a training issue? Is it a personnel issue? And I look through that. I end up at personnel last so by the time I get to the person I pretty much know the answers before I ask the questions and if it's a personnel issue I'll deal with the person. But a lot of the times you find out that 80% of things gone wrong, you find out it's a communication training issue. We taught it and it didn't stick, we taught it and it didn't hear right, we didn't teach it at all, or we taught it wrong, or we changed some things and missed that one, we didn't update them on the training. So you have to look at all that. You know they get upset sometimes, so if we don't get to that call in 10 minutes, we review that call; and it's either distance because they just couldn't make it in 10 minutes. Crewe Air, they didn't move right away when they got the call; they went the wrong route, or it's a dispatch error. Dispatch error even being that the CAD did or did not pull the correct truck because we have a recommend and it pulls by road miles the closest truck. So they might've pushed the button and the CAD told them the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								wrong truck, so it's still a dispatch error, but it's not the dispatcher.
Problems - Information	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	I think where we've encountered some struggles is the jurisdictional terminology and kind of the etiquette they use on the radio. We overcome it. It's really not that hard. But the first couple times you communicate with another jurisdiction, you learn how they communicate with their dispatch
Problems - Information	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	The time from the 911 call to the time the call is dispatched, in a house fire, seconds count. So if it takes 90 seconds to query the number of questions about, "Oh, how many stories is the house?" It could mean we get delayed. The county is always working to shorten that time. And they do something called a pre-alert.
Problems - Information	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	People are chatty, which ties the channels up if you've got a very long-winded person on the other end. But, by and large, that's not really the problem. I think a lot of the issue is just shortening the time it takes from the time a resident calls 911 to the time the call's dispatched. Both fire and the ambulance.
Problems - Information	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	I would say, location can never be specific enough. A lot of times, in this area, we have large buildings and so someone will say, "[Address]," but that building has three sides... Which means we now have to drive around. It would be much better to have that information. And they do a good job and sometimes callers are not great. So the Beltway is a good example of people don't know if they're on the inner or the outer loop.
Problems - Information	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	I mean, definitely a number of incidents. Yes, I wish I had more information.
Problems - Information	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Nothing that I can really think of right now. But I mean, sometimes it can become too much information, and a lot of our responses are pretty quick.
Problems - Information	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Sure. In our old system, which has kind of gone away now, let's say we're on a house fire assignment, by the time we even jump up into the rig we may have like 12 updates on a call. And we don't even know who the dispatch is anymore. So there can be information overload. And we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								understand why our communications center has to push it out, but certainly some things can be too much information, just because there's no way I'm going to comprehend it by the time I get to the scene of the-- excuse me, by the time I get to the scene of a call.
Problems - Information	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Communication-wise, may not be the greatest in the sense of we may not know everything that's going on. So if I respond as a medic to a call, and the police may already be there for whatever reason, I may not know that, that the police are there. I may not know that the police are the ones that called us. If I go to an assault call, and the police are on their way there, I don't go until it's safe for me to enter.
Problems - Information	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	But the police could be there for 15, 20 minutes, and the assault person be another state away. But while they're doing their reporting and talking to one another, they don't realize that we're sitting two to three blocks away, so it may take me to call and ask, "Hey, are the police there? Did it?" "Oh, yeah, yeah. You can come in." To find out that it was safe the whole time. So there is a delay in that. I think we've gotten better with some time, but I also don't know every officer that's in my area. I don't know their first names. I don't have their cell phone numbers. I don't know their radio identifiers. We don't have that relationship to communicate that personally, I guess.
Problems - Information	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...So there's not really a good transfer of care, in a sense. So if you call 911 because you're having chest pain, and the 911 dispatcher's asking you all kinds of questions about where do you live, and what's your address? Where are you at in the house? What time did your chest pain start? Just being that dispatcher asking questions, those are all same questions that I'm going to have to ask when I get there. And I don't know them-- and I don't know them ahead of time...
Problems - Information	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So I get the basics of it's a sick person, it's a troubled breathing person, but it's all very vague. So it could be trouble breathing, but the person also has been outside doing gardening work all day or playing basketball. Well, of course they're going to have trouble breathing. It's not a trouble breathing asthma attack. It's not a trouble breathing call.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								It's a heat-related injury. So I guess more specific type questions, or I feel like we guilt people into-- when the dispatch, guilt people into, "Are you sure you're not having chest pain?" "Well, I might be," and then they code it as a chest pain call and it's really not. It's more of a indigestion at a restaurant.
Problems - Information	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	SME: So that being said, it's not a ALS or a paramedic call. It's a BLS basic call to just go to the hospital. It didn't need to take an ALS unit out of service for-- and the way we call it is if anybody has any pain from their belly button up, it's classified as chest pain. Couple more questions should be-- Q: Can clarify. SME: Yes.
Problems - Information	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	What causes communications? People not doing it. So people not communicating or vague in the delivery of their message. So I will say firegram because that's common terminology for us, but as a medic, ALS provider, on the firegram in the sense of going to someone's house - the incident location, firegram, however you wish to - is somebody may say, "Come around back," but not say, "Utilize the left side because that's where the sidewalk is." So they're very vague in their means of communicating. Again, we don't want to talk a lot on the radio because what we say on the radio, somewhat the whole county is listening and doesn't need to know that the gate's locked on the right, use the one on the left. So we just don't do a very good job of delivering basic messages.
Problems - Information	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Better indication that the police are on the scene. With the AVL, we do have cross networked where the police messages come through our messages as well. So if we're not in the unit and we're outside walking up the street and they're saying that the bad guy with the gun is running down the street, we don't know about it. We know about it if we're sitting in the unit and the computer works, so.
Problems - Information	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...But if you could take a smartphone and put it on a radio, it would be ideal. So I could have five to six dependable apps that I use on my radio,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								I can utilize it as a phone if I needed to or wanted to, as well as to a radio communication and delivering messages. So the radio does not make noise if there's a tornado coming. My own phone does [laughter]. I'm not required to have a cell phone. I'm not required to have it activated, but I do so because the two together-- make me successful.
Problems - Information	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE the paramedic dispatcher] ... But a lot of times, there's other information that they can see if they look for it, that they don't read out to you. They just don't. I don't know if they're busy. I don't know if they're just reading the first four sentences. I don't know if it's buried after like another bunch of notes and they don't have time. I don't know why. So if you're listening to the police channel, a lot of times you'll hear the police get sent on the same call, the same information. And then all of sudden, they add two extra sentences and you're like, "Oh, that's helpful information that I got indirectly by eavesdropping on another--" we're totally allowed to do it. But that gives me information about that.
Problems - Information	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	Well, as much as we like to dispatch, the bottom line is they're getting the information that they're getting, and they can't see the call. And they can't tell us what they can't see, and they can't tell us what somebody doesn't tell them. And people are scared, and people are lying, and people are-- they're passing the buck also, like "Oh, I see a problem. I'll report it. I feel better. I'm going to keep going throughout my day. I don't know. I didn't see what color of pants he was wearing. I didn't see exactly what corner he was laying."
Problems - Information	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	And I learned that idea or whatever from somebody that was a dispatcher and a paramedic where I would dispatch, and he'd be like, "Listen, dude. Until the day that we can see everything that's happening there, we can't tell you what we can't know. We can't tell you."
Problems - Information	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	And it's tough for them from what I know is because they're in a cubicle. So you might be the police dispatcher and I'm the fire dispatcher. You can just stand up and tell them, "Hey, we got an emergency. Send everybody to Engine One's call." But then they got to remember to push the button and talk it through, too, so it gets recorded and stuff like

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that...I can see the complications behind it and I see why - what is it? - the telephone game doesn't work out so well. Yeah. Sometimes, that stuff gets lost.
Problems - Information	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...Now, we don't traditionally talk directly to the police. There's a switch we have to switch to talk to police. We can get onto their channel and turn, but we have to ask dispatch. We do that when we have standbys for SWAT or whatever. We'll switch to their channel and then we'll listen. And we can hear the police request entry, and then, "Okay. We'll go in." And a lot of times, there's a minute or two delay before the fire dispatch will tell us that we can go in, whereas if we're just listening to that police channel...
Problems - Information	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...Now, when we communicate with the ambulance, as far as I know-- because they don't use the same communication program, computer program, that we use. So they don't get dispatch notes. They only get what they hear on the air. Right. And so there can be information lost based on that. But dispatch airs all our notes. They talk it out loud and we can read with them. We see exactly what they're going to do. But the ambulance providers don't know that. They only hear the notes.
Problems - Information	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...so often, the information that dispatch is receiving from people is very much exaggerated. "Oh my God. There's blood everywhere." "Well, compared to what you're used to, yes, there is blood everywhere. But it's right here and it's right here. It's not that bad." So that stuff really does never-- I don't have a lot of value in that...
Problems - Information	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...It's changed a lot. I mean, it went from that to then having computers get dispatch information and with the GPS technologies, able to automatically be on scene within 500 feet of something, which has its own problems of its own. To now, I feel like our department kind of underutilizes technology for that. Yeah. It could be so much sharper. I mean, I get text messages from my ex-wife more than I would like [laughter]. I can't get information from dispatch straight to me that says, "Hey, this is a dangerous--" without having to make it out loud and everybody hears it [laughter].

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Information	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...So for me and technology, we can talk. But can we get our message out because the highway, the traffic highway, our verbiage highway is just full. So we're in the traffic jam and we can't talk because of the traffic jam that's going on there. So that's our limitations, by far. TAC channels, having more channels.
Problems - Information	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	...We have very little to no communication with our police agency. We are able to scan their channel, but I don't think they want us on their channel, and they don't come onto our channel. And that's been identified as a huge problem in some of these large-scale incidents around the country of, for instance, the [City] shooting. There was no communication between the police and the fire on one scene. So I think that needs to get bridged. I think that's done through policy and procedure. I think the technology is there. I just don't think we utilize it efficiently.
Problems - Information	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	...And again, like we were talking with communication issues being a contributing factor to a lot of poor outcomes on incidents all around the country, police and fire interface has been a large part of that communication problem. And I think that the technology is there, i.e., mutual-aid channels or radio frequencies. I just don't think the organization leadership in the fire and police side use them. I think the fire side tries to. I think the police are the ones that are more apprehensive to have that interface than the fire agencies are. That's a pity, though.
Problems - Information	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...So although our voice radio is excellent, our data stuff definitely lags a little bit behind. And because of that, I think we're missing an opportunity both to get a lot more information out to the crews more easily because we're busy enough. Our main dispatch channel before-- we just split it into two main dispatch channels. Prior to that split, which occurred about six months ago, was three million transmissions a year on one channel. And so you physically couldn't give them some of the information you wanted to give them. You just didn't have time on that channel. And now we've taken care of that problem but at the expense of splitting everything into two. We have to have a second dispatcher.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								You can't monitor both channels, so you're only listening to half of the system at any one time...
Problems - Information	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...The stuff where you're getting the caution notes. Right now, if you're not a commander, the maps, we have no really good way of getting the maps to non-officer crews. And so you'll hear a dispatcher trying to describe how to get to the back corner of some elaborate-- we have this gigantic apartment complexes with several thousand units within them, and they all have one address [laughter].
Problems - Information	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: paramedics] I guess that they have to be of strong character. Otherwise, you believe everything you're told and it's not always the way you're told
Problems - Information	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	We have very few issues that sometimes are widespread. In other words, communications between somebody who's getting relieved. That piece of communication doesn't get transmitted to the oncoming paramedic. So in other words, if I'm leaving the ambulance and I forget to tell you, "Hey yeah, by the way, you're going to need fuel." And your first run, you're in need of fuel. That's something that didn't get communicated to you. And if it consistently happens, we have an issue.
Problems - Information	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	... nowadays I think it's even a little bit more difficult for them because they need to know their cardiac centers, their stroke centers, their pediatric centers, their OB centers, their specialized OB centers. So there's a whole host of new things that they have to know. So that can be challenging for them. And then they have to know the people that they're delivering the patient to.
Problems - Information	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	..."Is the offender still on the scene?" We get a lot of. Sometimes the police site knows, but that information doesn't get relayed over to us... It is a problem, it is a huge problem.
Problems - Information	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	Q: And is that related to what you mentioned earlier about, you're on different channels so they would have to call their dispatch to call your dispatch to call you? SME: Yep. I think it does have to do with that and the amount of calls

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that they have. So sometimes even though the police have it, they don't relay it over to us because they're busy getting ready to go on to the next call. So that information doesn't get relayed to us. To be honest with you, I don't know the exact reason why it doesn't get relayed over to us because we know that they have it, it just doesn't get shared with us, which is a problem.
Problems - Information	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...for violent incidents that we respond to, I want to know who's also responding. Are the police responding? Why do I have to call the office to find out if the police are coming in? That should be an automatic, "Oh, yeah, by the way, the police are going there." But that has a lot of political implications. For example, some priorities differ from what my priorities would be where we need the police. "Is this a domestic?" So.
Problems - Information	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	If people are not clear, especially if you're on the scene and you need additional help or other things you have to do manually, things can kind of get confused or messages can get missed, I think, sometimes. For the most part, I think it works well. But when you have the human element in there, there's always the possibility, at least, that there could be some things that don't always work with the radio's communication.
Problems - Information	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	... I'm defaulted to EMS and then I have a channel for the fire side and then I have a channel for my zone, my zone for the PD. So I'm able to listen to EMS, fire, and PD in my zone. I will listen to that ... I like to keep a heads-up. When a call comes in under 911, it always comes into the PD side ... And then by the time it transfers up to the fire side, to EMS side, it takes about two to three minutes. I didn't time it but time, I just know it takes about two to three minutes to get to us because then they'll be calling us, "Okay 42, go to the person who fell." And I mean, okay, about two, three minutes. Now they're calling for us. So there's a delay there.
Problems - Information	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	I know a lot that goes on at the OEMC and they're very busy and they get a lot of calls. I can just imagine them sitting there and get all these calls, and I understand the call taker, they're trying to get all this information. But I think the information they give us is limited because I think it's just

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a lot of work. They tell us what we need to know. We have an injured victim, he's conscious. We'll send you another company, the basic information. I know if it's a critical call, if it's a battery and the offender's still there, they'll let us know. They'll let us know what we need to know. Because it's so busy in there. I just know it's just so busy in there.
Problems - Information	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Every information is helpful for me... Any piece of information for me. Even if it's a stubbed toe, they'll give us the basic information, but I'll look it up. And sometimes it will be in there. How did the person stub his toe? He fell down the stairs and stubbed his toe. All we got was stubbed toe. They didn't tell us he fell down 10 flights of stairs and stubbed his toe.
Problems - Information	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Yeah. I have it. So when we get to the scene of the address, I have that ticket with me because I don't have nothing else, besides my radio and that ticket. Because we could go to a high-rise, the [Name] on the sky level, and the security there's like, "Hey, what do you guys have?" I pull out my ticket, "This is what we have." "Oh, okay. I'll take you to that person." A lot of times, they don't know we're coming.
Problems - Information	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	[RE: too much information] I don't think so. If anything, not enough... Well, for one, if we're going to, let's say, a gunshot victim or something like that. Would like to know, is the offender on scene? If we're going to a psychiatric emergency, would be nice-- is there weapons? What's the psychiatric emergency? Are police dispatched? Are police on scene? Something like that.
Problems - Information	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	[RE: CAD] It'll give us the address. That's a big problem with downtown, is sometimes a building is the entire block, so we don't know which-- it'd be nice to know-- tell us what department store we're going, what-- something like that. What entrance are we using? Like the buildings around [building], there's a lower level, upper level. I mean, there's three levels before you get to street level, so it'd be nice to know sometimes. And then we have to talk back and forth and find out. And then they have to call them back to find out, "Hey, what-- you going to loading bay? Are you going--?" And so, that would be nice.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Information	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	[RE: CAD] ...It'll tell us if-- what other fire companies or anything like that is being dispatched with us or-- it will show that. But we don't know anything about-- we have to talk on the radio to find out if police are invited, or are going to the scene, are they on scene, something like that
Problems - Information	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	[RE: too much technology or information] I think that people might say that as far as like the heart monitor, [LifePad?] 15, it's a lot. That device does an awful lot. Just the recording alone and what you do and send those runs over Bluetooth and do all kinds of stuff with that. I think that the addition of having such intense technology is intimidating to those who were maybe skating by or the thought that now they might be of the mind-set where like, "Oh my God, well I could get caught for what if I didn't do that or--?" And it makes them fearful. So now that technology is causing anxiety because they're wondering, "Oh, am I going to get in trouble? I didn't send that run. They're going to know." We download the runs from a distance. We can do that like anytime we want.
Problems - Information	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	I think that your communication style is just part of you. Some people are very good at it and some are not at all. And if you are not good at communicating, you are not going to be good at communicating on the radio either. And you know people when you hear them on the radio trying to call a run or something happened and they're trying to convey it over the radio. You know that they-- those are the people-- if I know them I can tell their voice-- you know that they have terrible communication skills. They can't even convey on the radio what it is that they need. And then sometimes, yes, I believe that there are sometimes a little bit lost in translation...
Problems - Information	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	... We have the dispatch center, the [dispatch center name]. They take the runs, they dispatch our runs. We sometimes will have to ask, we would like more information. Sometimes they'll say, "Well, what do you need that for?" And then you try not to get smart and say, "Because I'm the one out in front of this house where there's a shooting victim and you're tucked away safe up at the Office of Emergency Management. I need more info." Or "[Ambulance?] time, we need the police." "What do

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you need them for?" And if you hear somebody screaming, "Send me the police!" I think you should send the police and then maybe ask them why. Yeah, so.
Problems - Information	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	...you can go on YouTube and listen to fires in [City]. I don't know if you ever have, but the [Address] fire, that was a good one. That was very good communication. There's some out there where you're like, "Oh my God. They're not even listening. Dispatch isn't even listening to what they're saying." And that's because they're being walked on by everybody else. Too many people are talking at the same time... That can absolutely be an issue. That and your buildings, your cell signal-- your radio signals I should say... I would say maybe not real common, but it happens. Yeah.
Problems - Information	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Speaking on the radio with full words and enunciating what you're saying because we're not playing games here. You know we need to know where to go when you tell us where to go so don't say don't slur your words to where we're sitting there going what? What road are we going to? I mean we can't see it written out anywhere so we're relying on you to tell us so let's enunciate a little bit, speak up and that's a big thing. Codes, ten codes and all that mess. You know you come out here they still try to use ten codes. In [City], we plain talk. In [County] we have our own ten codes and signals so your 1022 here maybe somebody else's you know it's cancel here so somebody tells you 1022 well if you get in the wrong mindset and go to [County] and get told a 1022 that maybe speed up. So now we're flying to a call that we've been cancelled on so you know it's that is a big deal. Everybody needs to be speaking in plain talk.
Problems - Information	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	So there are so many times where I'm like a code 12 you know and they're trying to tell you that somebody has a weapon but you're going a code 12 what is that? Does anybody have a sheet with the codes on it so you're like when you should be saying oh stop let's get our vests on let's figure out what we're doing you know.
Problems -	EMS	R	Field	36-45	5 or less	Female	EMS-	We do. There are times when the radio is just really static so dispatch

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information			Responder				R-019	tries to keep a list of who is on the truck each particular day and has our cell phone numbers and sometimes they'll request that we call in because there's information they want to provide over the radio that they don't want the general public to hear especially in a rural area like this everybody listens to the scanner so they know what's going on before we do sometimes and there may be especially a lot of our elderly patients they may keep a key hidden somewhere for us to get access to the house. Those aren't things that they can say over the radio so we'll try to call them on our cell phone if we have service to do that.
Problems - Information	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	[RE: operating in a rural area] I don't know that that poses a challenge as far as the communication. For us it's a little more difficult finding addresses because it's so rural and a lot of it is older population and they you know they don't have addresses, they don't have them numbered and things like that like I said with all the dirt roads. Some of the roads are unmarked so it's challenging and fun at times.
Problems - Information	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	[RE: communication with FF and LE] If we have a fire for instance and we get dispatched to that fire unless I switch over to either their channel or I put it in scan mode I don't hear their traffic, they don't hear my traffic but you can't keep it on scan all the time because then you also hear SO's so every time they pull over a car we hear that information and if you have a patient you definitely don't want that going on. We can speak to if I need to speak to SO directly I can either go through dispatch or my MS channel or I can switch over to SO's channel and try to get in touch with them that way. I can do the same thing with fire.
Problems - Information	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	[RE: using MapQuest a lot] Because it's so rural even though I've been here full time for about a year but it's such a large county that people have been here a lot longer than I have and still don't know the whole county. We have old map books in our truck which aren't the best to be honest and we don't have a GPS system in our truck so I rely on my cell phone if I have reception at least to get me in the general area of where the call is.
Problems -	EMS	R	Field	36-45	5 or less	Female	EMS-	[RE: cause of communication issues] There are. You know us being

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information			Responder				R-019	human. Dispatch will misinterpret what a patient said and relay incorrect information to us. We may they may relay the right information but we don't hear it right whether it's because we've got the sirens going or we may not be paying attention whatever it may be so human error of course plays a big role picking up and then I think sometimes again that human error just not asking for enough information as well. So part of it is our own fault and what we do and don't do but the better radio system and I think that I think that in general dispatch people that work in EMS all of us as a group could be trained better as far as how to use the things that we do have like the radios.
Problems - Information	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	because you have to guess in a way-- "911, what's your emergency?" "My house is on fire," and you get there and it's a trash can, well we don't need seven units. Everybody else go home except for one. "Hey what's your problem?" "Hey, I see a little bit of smoke," we send a smoke investigation unit for smoke investigation, and suddenly it's a big fire. "Hey, we need a bunch of more folks."
Problems - Information	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	I know-- like, "Tell me what conditions are inside." And if they said, "Well, it's smokey and there's fire." Well, that's okay. What's better is if it's brown, heat-driven smoke, under pressure. The fire is 25% of the structure. I'll say, "Hey, I want a more thorough update, Engine One, fire attack. I want you to tell me." And again, if something went wrong, then I would know in that group, "Hey, Engine Two and this other Rescue 14, Engine One personnel are in trouble. "Are you'll in their location?"
Problems - Information	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	So seeing where they are at, I know that our new air packs have the ability but the software isn't there yet. So to send out how much air they have, that's a really big deal because as people get close to low on air, it doesn't tell me where they are in the building, but it tells me how much work time they have left. And actually older software allowed us to have that, but something glitched about with [Name].
Problems - Information	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	I want to know how hot the conditions are inside. And so please give me a CAN report about, not just the smoke and what you see; the color, the velocity, the density, but the heat issue and how much of the house is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								involved.
Problems - Information	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	And so now suddenly you have lots of different viewpoints and what I'm responding to and what I'm-- if I'm not there, if I'm not looking at it as opposed to a training component where I'm saying, "These are the high points I want you to hit when you talk on the radio."
Problems - Information	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	Everybody has a radio. And that's for safety, and I think it's a good thing. I think that we could definitely cut down the information that we're giving out. We don't need to talk about everything we're doing. It should be, "Are you being successful?" "Yes, I'm being successful. "Okay. Keep doing what you're doing then. If you need anything holler at me."
Problems - Information	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	A lot of times, I've seen and heard how the 911 call goes and I know the dispatchers are trying to get information from the caller and they're giving you everything they've got but sometimes, it's just I can't get anything more. They don't know where they're at. "I can give you the best address I could, so don't get mad at me because the address doesn't seem to be right." It's like, I got the best out of the information.
Problems - Information	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	So it can be overwhelming at first, especially, because you do know you have a lot of information in front of you. I've never been a call taker. I did some dispatch training where-- I've done the dispatch job for part time and just to learn it, and to be able to step in and help out when it gets really busy. But you definitely get overwhelmed as a dispatcher when you've got five people calling on the air, "I need this, I need that." "Okay, hold on. Let me get this guy first." That could be overwhelming.
Problems - Information	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	" So people just get overwhelmed with the amount of information and technology available. They kind of just, "Well, what do I use all the time? That's all I care to know."
Problems - Information	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	" Sometimes we get that. That really doesn't do much. You have to say more to get more, to paint that picture. There's a fine balance you have to strike. You want to get the information out that you need to and you don't want to just say we're out and it's on fire. But you don't want to spend 45 seconds saying everything, describing the paint colors of the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								house.
Problems - Information	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	So dispatch does the best they can but it's still up to us when we get there to determine that no one's in there. And I don't know radio-wise-- caller information is always limited. The caller tells what they think they know and we can't get anything more than that from them, not until we show up
Problems - Information	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	So more than likely, if nobody calls in saying, "Hey, I'm in the apartment next door. I'm disabled," or nobody outside knows that there's a person in there that's disabled, it's going to be one of our rescue or ladder companies saying, "Hey. We got a guy in here. We need to get him out. It's starting to get a little smoky in his apartment." They're going to give us, more than likely, a face-to-face kind of update. And then, more than likely, again, depending on the disability, they might just pick that person up right there themselves and take them right out, at least out of the way of any kind of danger.
Problems - Information	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	So we have a certain-- if we get there with that amount of resources then we call for a high-rise alarm in [City] which is just a ton more folks come in. And so if dispatch didn't have it, and sometimes they don't, most of the times they do. They don't have the building listed as a high-rise, then they'll have just a regular fire alarm compliment, and then so if it is a high rise we'll just make it a high-rise alarm and send a whole bunch more people at it.
Problems - Information	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	And obviously, you can tell if it's typically on the first or second floor. That would be ideal. The other piece of that is, if I'm going to an assault, or a shooting, how many other of those types of events have occurred there would be nice. The other piece of that would be, if I'm going to a fire-- that it delineates between the type of call and says, "Okay. Well, these are some of the things in priority that you might want to know. There is a known hazardous material there. There are known water-supply issues there. There are forcible-entry issues
Problems -	FF	R	Supervising	46-55	21-30	Male	FF-R-008	Because we do things the way we normally do on a daily basis, again,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information			Field Responder					the same concept, the 99%. You have a flooding incident and you're treating these calls as individual calls, and you're keeping a record of them. It bogs down the system. So now your MDC doesn't work as well, and you've got this just laundry list of incidents
Problems - Information	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	Sometimes the callers aren't giving enough information or they'll hang up, stuff like that. And I guess that's the same with directions because sometimes we'll get not wrong directions, but not completely accurate. They'll just say it's South [Street]. So we'll go South [Street] and then you realize, "Oh, it's northbound."
Problems - Information	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	Probably happens to everybody, whether it's your first CPR cardiac arrest call, CPR like on a baby or something, people are just going to-- they're not going to be 100% in it because they'll be emotionally invested.... There's been some calls at, [inaudible] calls, where you get kind of just nervous because they tell you the scene is safe because the cops cleared it, and you get there and you realize this scene is not safe at all.
Problems - Information	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	Occasionally, we have just confusion that gets introduced. I mean, that's just a miscommunication or misunderstanding. And people end up off on the wrong resource. Or they do something like I was talking about where you bump something on your radio and your radio goes someplace that you don't expect it to be.
Problems - Information	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	If you ask them specific things, they're going to tell you yes to a lot of it. Instead of saying, "What's wrong?" And then making them actually describe it. And then off of that you can go with--
Problems - Information	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	But following a script like-- I look at it-- there are so many times that we'll get this misinformation in and it's too generic, where they'll ask, "Is there smoke visible?" And you'll say, "Yes." Well, what's your definition of smoke versus my definition of smoke? So you get misinformation on that. So now ProQA, they've got one chance to put a comment in. They've gone through ProQA. After a certain question, it triggers it where it sends it to the dispatchers even though they're not done with ProQA and they've put no follow-up comments.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Information	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	...But more importantly, it's been dispatched. And a lot of times it's been dispatched incorrectly because they don't have the information.
Problems - Information	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	They don't actually know what they're sending. So to further answer your question, yeah. Almost every incident we get, I feel like we're not getting enough information.
Problems - Information	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	That's [County], that's here, that's everywhere that it just-- the way the CAD vendors do it, it just dumps whatever information is in the CAD remarks all into one rather than actually having it more of a filtered stuff. I don't care what the contact log information is. It should be in the background. I just want the actual remarks.
Problems - Information	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	read through it within the first two minutes before everything else goes in there, it's worthless to me. (comments section on an incident)
Problems - Information	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	A lot of officers don't even look at it because of that. Or because our response times are so quick, but you're trying to get dressed. And by the time you get dressed, you're there and you just don't have time to scroll through it.
Problems - Information	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Other fire departments it's very easy because we can all get on the same channel, and we have interoperability. Same with EMS. Law enforcement can be a challenge. Typically the law enforcement people don't want to come to the command post. Funny how who's in charge at the scene is usually-- sometimes difficult.
Problems - Information	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	Not so much with the federal partners. That's definitely a struggle. EMS is fairly easy only because we're all in the same organization. So our radios are the same radios so they can talk to anybody else. We have AMR which is a third-party transport service for non-emergency EMS transports. That's a little bit challenging because they don't have the same radio system we have so the communication-- you would have to go through-- I would have to call the office for you to find-- or dispatch center, OUC, and have them relay the message to AMR. So you're adding a third person--
Problems -	FF	U	Other	26-35	11-20	Male	FF-U-045	Yes. And it's the telephone game, at that point. Not all the information is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information			Public Safety Personnel					always going to get relayed, so. Yeah, so that was now there's been drastic improvements since then
Problems - Information	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	I think the elimination of 10 codes or I don't know what they did here before but the fact that everybody just speaks plain straight language, I think eliminates a lot of issues.
Problems - Information	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	We have very minimal data. You can get a street layout, a mapped street layout, you can see where an alley is or something like that. But as far as-- unless it is a really high hazard building that's been identified previously, you're not going to get any sort of actual physical information about the building or whatever you're responding to.
Problems - Information	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	I mean there's a lot of office buildings in the city that just have something as simple as you go there on a medical response and the security guards identified that the back entrance is the best one to go in. But that information doesn't get relayed to companies that are coming from outside the area
Problems - Information	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	Yeah. And then doing your other operation or responsibilities. Yeah, you probably won't be able to keep up.
Problems - Information	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...I'd say email is one because we have to do a lot of staffing and administrative things too, and we kind of run into the same problems where you don't necessarily get the message across the way you want to. And the other thing is that the tone is really hard to understand in these emails. So sometimes it causes a little bit of conflict when somebody-- especially if someone questions your idea, or offers up a suggestion that you don't agree with. And the tone of the email, it might be somebody older or younger, and they don't interact with email the same way. So when I read an email from an older person telling me something, even if somebody younger wanted to say that exact same

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								message, they might say it differently. And I might get a different end result from that...
Problems - Information	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	They can't say, "Engine 720 to [City]. We have people trapped and the house is on fire." They can't get that message across. So a lot of times you'll hear people like the Command Officer on scene try to order radio silence. Which is like, "Just shut up. I don't care if you're responding or if you're on scene. I have an important message to get across. Let it happen."
Problems - Information	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...now, basically, they show up on scene, and he's waiting to hear what your size-up is. So you go to the back of the house, you say, "Yeah. Half of the house is burned." Well, really the whole house is burned. So your envision and his envision are two [different?] things. You may say, "It's two story at the back and it's three in the front." He's like, "How's it two? It's three in the front." Well, it's a walkout or whatever, you know what I mean? We've had that happen. So again, that's back to that communication thing, where it's your vision and my vision are two different things. I could tell you it's red, and you're like, "That's pink." You know what I mean? Kind of like that. That degree.
Problems - Information	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...there's a lot of ways to get information to a dispatcher to be able to get people en route to a call. Some of the texting and some of that, when you're getting away from the phone call, it's difficult to be able to gather the needed information to get the right truck to the right call, which is one of the biggest problems. It's being able to ask the right questions, being able to get the right answers...
Problems - Information	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...So the text thing I think is neat, but it doesn't give you that rapid communication where you can get all the information...
Problems - Information	FF	S	Manager	46-55	21-30	Male	FF-S-023	...And then, of course, the data we're getting, like in-first data, is not very complete. It's very open to error, it's all subjective by the officer. We actually collect a lot of data that we don't touch. For instance, when they say things on the radio that stuff should be able to come to us somehow because they're right there at the moment, and they're saying

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								something. So they're probably saying the right thing. Then they come back and do their report, they remember it the way they remember it, human nature.
Problems - Information	FF	S	Manager	46-55	21-30	Male	FF-S-023	It's not a big deal. It is what it is. So we know, for instance, they say that they went emergent, then they got slowed down, they kind of sped up, and they got slowed down. It's not really an emergent run because they didn't go as fast as they could the entire time. So we'd have to calculate that a different way but they may classify it one way. We have all that data. It's there, it's somewhere. So if I can reach that it would be awesome.
Problems - Information	FF	S	Manager	46-55	21-30	Male	FF-S-023	...there was one when we actually got on scene and there was a gun in play and we didn't know that...
Problems - Information	FF	S	Manager	46-55	21-30	Male	FF-S-023	...We had a structure fire where there was two buildings involved... In this particular case, one of the dispatchers on PD got bad information and thought that one of the buildings might have been occupied. We change our operations if we think there's people at risk. We'll very, very, very, very aggressive if we think people are at risk. As it turns out that wasn't the case, nobody was in either building. The PD didn't give that information to fire, but they aired it to a couple of their officers. One of our dispatchers happened to hear that and gave that information out. What they didn't hear was the officer said, "No, I have these occupants here."
Problems - Information	FF	S	Manager	46-55	21-30	Male	FF-S-023	...it was just a few weeks ago we had a fire fighter hit the emergency activation button and now I need PD at this location and ran back because his partner in the ambulance was getting beat up. Sort of. I mean there was a fight going on. Well, now those emergency terms come to our center and it went up and they didn't hear what they needed because it beeps it goes, "Beep," and then it shuts and during that beep is when he said I need PD at that location... one of our other medics was getting a call at the same time and this was 2 o'clock in the morning, just happened to be scanning, heard that and let the police know what was going on...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Information	FF	S	Manager	46-55	21-30	Male	FF-S-023	...I think one of the problems-- well, one on the problems with getting information from dispatch, is the people who are giving you the information. They're not experts, and they're trying to understand the situation they're in. So they're very confused. And usually, we'll get a lot of information from dispatch that turns out to be not even close. But it's because that's what they got. Garbage in, garbage out...
Problems - Information	FF	S	Manager	46-55	21-30	Male	FF-S-023	...So if you could get into the truck and have information there readily available, like a picture of the building, and a residential buildings. Now, a lot of our commercial buildings we'll get pictures, but they're historical pictures or pre-[crosstalk] pictures. If I could get accurate on-scene information in front of me before I leave, can change my entire way of thinking. And if I can shift that thinking process earlier to, "Oh. Well, this is a fire, so I'm going to think of X, Y, and Z," versus, "I don't see anything, but I need to look at X, Y, and Z. But I'm going to focus on A." So I think that would help those responders a lot.
Problems - Information	FF	S	Manager	46-55	21-30	Male	FF-S-023	Okay. So here's another set of data that would be awesome. I've taken Uber and Lyft recently, and there's an application out there that will tell them where accidents are, and which roads to avoid. If that's out there, shouldn't we get that? Shouldn't we get that information back to the fire trucks and say, "Hey, look, this road's closed, we know this," instead of us having to it get into the system and type it in, because if we don't know, we don't know. But there's so many cars out there reporting so much information to so many people, road conditions are, I think, known now. It's just we can't get that to the responders. If we can get that road information up there I think that would make their responses more-- I don't think it would make it much faster, but it would probably make it safer.
Problems - Information	FF	S	Manager	46-55	21-30	Male	FF-S-023	...there's a lot of data we're not collecting. There's a lot of data points that are inaccurate. I think the interface we have with technology for the people that need to be giving me this information is very clunky.
Problems - Information	FF	S	Supervising Field	46-55	21-30	Male	FF-S-017	...So you had multiple call-takers taking the same calls and when they generate, they load it into the system and it would show up in our record

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					management system as four calls but only one got resources. The dispatcher filled one out, added resources to it. The other three show up in our fire manager as unfulfilled calls. But I don't remove them, it shows up in the incomplete report list that I send out to the battalion chiefs, and then they're trying to weed through these calls that have no resources assigned to them... We don't see duplicate calls unless it's something where you're just getting multiple callers and they're all loading the system at the same time, the dispatcher grabs one and adds resources to it. I just go in and get rid of them so they don't show up as incomplete reports.
Problems - Information	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: dispatch] ...The computer says this and they do it. If the computer says this is the run card, they send it and we have dispatchers who go from telecommunicators, to learning how to be PD dispatchers, to them learning how to be fire dispatchers. But they really do what the computer says to do. And I think the biggest glaring example of that was the day that everything crashed. And our comm center vapor locked and I completely understand why. All of a sudden you're going, "I have no CAD recommendations. I don't know what the run cards are. I don't know who should be going to those areas. I don't necessarily know what resources should go." ...
Problems - Information	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	I mean, I've, personally, been on mutual aid, where we went to a house fire in a neighboring district, and it was pretty easy. Our dispatch just said, "This is where you're responding." And the map came up on our MDT, and they said, "This is the tactical channel you need to be on." So we could listen, obviously, at a delayed response for us. It took us a while to get there. But we could listen to the incident as we got there...
Problems - Information	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	...sometimes there's been information that's been lost in translation from people on the scene to the officer, to their dispatch, to our dispatch, to us, confusion about if somebody's inside or not which really changes what we do tactically. So we're doing something, thinking there's potential rescue when there's not. So you're really putting guys in quite a bit more risk...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Information	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	There's always the misunderstanding of something. We're big on echoing verbiage back to whoever sent the message, "Message sent. Message received," something like that. We don't just say copy. But, yeah, again, people not saying stuff or--
Problems - Information	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	I think terminology has come into play in the past where if somebody says something, calls this a radio, and everybody else calls it a portable. I mean, that's just an arbitrary example, but that's caused some problems in the past. Or if somebody tactically does something that is kind of out of the ordinary, sometimes, kind of, screws communication up because everybody else is expecting them to do one thing based on the conditions. And they do something else, and it just, kind of, screws everybody up.
Problems - Information	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	...a few years ago we went to a new incident command system kind of thing. And then how we do size-ups on an incident and it's common verbiage and doing certain steps. So that transition was interesting because you would have somebody get on scene and, kind of, use a different set of verbiage for size-up. And everybody's, kind of, "Wait. I thought we were doing it this way." But that's just growing pains of getting used to a new system and things like that.
Problems - Information	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	the issue is you have a dispatcher that's taking the information and typing it, and you have another dispatcher who's reading that partial information and sending out the apparatus. So you get a disconnect there...
Problems - Information	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...And then you get a law enforcement who interprets that differently. So law's getting different message and fire's getting different message. And through no fault of anybody, we don't always get all the info. And on top of that, you have the RP who is stressed, distracted, driving, something who really isn't giving a good picture...
Problems - Information	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...So you have dispatchers trying to interpret poor data. Not that it's malicious or anything. It's just not accurate, so
Problems -	FF	R	Not	36-45	Not	Male	FF-R-019	...We have our other officer, listens to types of medical calls, Alpha, as in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information			specified		specified			almost medical, all the way down to E, which is an absolute emergency. So A, B, C, D, and E, and he filters that information on whether or not he's going to go help the crew. And the computer itself transposed an E call into an A call, and therefore he didn't go, and the crew was obviously overwhelmed with the E call...
Problems - Information	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...I mean, had we have known a couple of separate things and different access points with our gas alarm yesterday, we could've completely changed our approach to this call. I personally had about 40 displaced employees from different businesses that were angry, almost mobbish because of how we handled the misinformation. And we could've calmed those tempers down if we'd had more of the information available. We were on the verge of even arresting a guy from being so angry...
Problems - Information	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...We're basing life-safety decisions based on the telephone game, because you have an RP talking to a dispatcher, talking to [inaudible], and it goes down, and it never works. So I don't know if we'll ever be able to solve that...
Problems - Information	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...It takes us several hours sometimes to get to certain parts of the district. Now, granted there's not necessarily the infrastructure out there to handle it. But we have to, with limited resources, based on the limited information we have, we have to make the best guess of what apparatus to take. Are we taking the three-quarters of a million pavement queen, or are we taking the \$100,000 brush truck? Do we have one patient? Do we have five patients? Do we need a ladder truck? Do we need ladders? ...
Problems - Information	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: NG 9-1-1] ...There's all this stuff that changes based on the information we have, that if we can get better information right off or even look at it-- someone said, "Oh, yeah. There's a smoke report that we're calling in." We can capture that however, video or photo. And we can look at it and say, "Well, one, we recognize where it is, and I'm going to take a brush truck to get there because the pavement queen's not going to even get close."

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Information	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Car wrecks. We'll get sometimes a call to the-- it's a car wreck. There's no information. We get there, and we find out, and we're extricating three patients, and the car's upside down. It's near the river. And it took us 40 minutes to get there. And by the time we get there, now, I got a call for help. Well, that's another 40 minutes. So some of that stuff ahead of time would be helpful. I know there's a challenge ...
Problems - Information	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...My wife works at the 911 center, and her concern for the dispatchers is there's a lot of stuff they don't want to see. So they want to see where you can get end-to-end information, but they don't necessarily have to be in the middle of it because they're worried about what happens when people start going, "I'm suicidal, or I'm going to videotape it so that everyone can watch me off myself." So it's those things that are unintended consequences there. So, just like anything else, information's good, but too much in the wrong way can be bad. So how do we control that?
Problems - Information	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	50-50 thing. Is it a tool or a weapon? But at the same time, that cop receiving a picture-- here is the suspect of the active shooter that just went to your school. How valuable would that be to every cop that was on duty that day?
Problems - Information	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: in-mask mic] Nobody wants to hear how good in shape I am. They want to hear what I have to say, right? So if you're working hard in the hot sun, "It was 91 degrees. Everybody was bunkered up. We have water." I mean, I don't know what he said, other than he's got water. That's a struggle, so.
Problems - Information	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...But it would be nice to find a better mechanism of not so many different things. I mean, right now, on an incident, I'm carrying usually two 800 radios, a VHF, and two cellphones when I'm running an incident. And that's ridiculous... It's also too much information...
Problems - Information	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Well, we know right now in the fire world, cancer is becoming a real deal... And so whatever we can do to keeping people safe or detection of stuff, things that are bad for us, because we don't know until after the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								fact. Like asbestos, it's not till a week after or a month after when we've done what we can, and we've found out, oh yeah, the place was full of asbestos. Well, great. Well, we hope we followed best practices. But there's something real when you know, well, the danger's here right now. We can deal with that... So I think just some of that awareness or something to help us be safer.
Problems - Information	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...sometimes CAD will come in and say, "Engine one, respond to this call." Well, it's not taking into account that this road is closed, and so engine 11 may actually be closer because right now there's a protest going on, and so this road is closed. And so it just automatically assigned engine one... So, us having firefighters up there who actually understand firefighting... They understand, "Hey, you know what? I got this road closed." And usually, they're not quite as-- I don't want to say fearful of making a decision as maybe a civilian who's hired to be a dispatcher. "CAD told me to do this so that's what I'm going to do." I have firefighters who are like, "No, this is the best reason why I would do this." Or, "Hey, Chief. Do you want me to start you a second company on that? It looks like you're running a little low on truck companies. I'll start you another one." So having those firefighters up there is kind of a-- every time we come to collective bargaining every three years in the city we always fight to keep our dispatchers up there.
Problems - Information	FF	U	Manager	46-55	11-20	Male	FF-U-021	Oh verbally [laughter], the lack of people listening... They get bits and pieces of information and they pass that along and kind of add a little bit, maybe add their own spin to it, and by the time it gets to the 50th person, it is not even remotely close to what the initial message was.
Problems - Information	FF	U	Manager	46-55	11-20	Male	FF-U-021	Yeah, definitely. There was a lot of times with probably the access points, so sometimes the access is very limited. And if you knew what you're facing, you would come in either in a different direction or maybe park your rig from [City]. On a truck for an instance, once you get the outriggers out and the aerial up and if you're not close enough, you're not in a good position where you have good scrub area, we can hit sides of the building you need to get to. It's very time-consuming and difficult

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to reposition that rig...
Problems - Information	FF	U	Manager	46-55	11-20	Male	FF-U-021	...Same thing with engines. Once you connect to a water source and you've got hose all over the place that weighs thousands of pounds when it's charged, it's not so easy to just stop what you're doing and move it over here. So there's been many incidents I could think of where you have just access problems. You can't get the cops that's blocking the road and you can't get through to get the truck or the engine now...
Problems - Information	FF	U	Manager	46-55	11-20	Male	FF-U-021	...Once an apparatus is committed, it's committed and it really kind of sets the tone, either positively or negatively so how things can go down. And if you need to get certain tools off the rig. If you have one rig parked too close to another, you can't get a ladder out. So access to hydrants because of cars that are blocking them. You name it. So a lot of stuff like that...
Problems - Information	FF	U	Manager	46-55	11-20	Male	FF-U-021	...The better picture that the first rig on scene can paint, I think is paramount to the success of the overall operation because you have a better idea of what you're getting into. And that's incumbent upon the officers as well to know their districts because the address comes in, if you drive around, you know your districts and you know your totally hazards, and you know what to look for at certain things. You've been in those businesses when you're expecting, you then know what you're going to face at 3:00 in the morning when you're getting a call there.
Problems - Information	FF	U	Manager	46-55	11-20	Male	FF-U-021	...So we have to learn probably 3 or 400 streets, sequentially, in the city. But as far as the district, I mean, you can put the streets there but you can't put the businesses there. There's certain just target houses where you just don't know. So until you go in there and you just need to pay attention...
Problems - Information	FF	U	Manager	46-55	11-20	Male	FF-U-021	...Same thing with high rises. I mean, I know they have it out there, here's the skeleton and here's where the elevator shafts are. Here's where the shutoffs are. Here's where your fire department connections are because a lot of times they're not where you think they are. An address could be-- should be on the front side of the street and sometimes it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								not. I mean, the same thing, you have one-way streets downtown. You're trying to find the fire department connections, sometimes you're driving in circles. So things of that nature.
Problems - Information	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	We do. If dispatchers and if everybody sticks to protocol, it's not so difficult for us to get on the same radio channel, but it doesn't always happen. So EMS and fire are pretty much on the same channel. Law is on their own set of channels. Dispatchers will tell them to move over to our channel if it's a big, long, drawn-out call. Otherwise, if not, then we got to tell dispatch to tell law enforcement. Law enforcement has to give-- tell dispatch the answer. Then they have to tell us.
Problems - Information	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Medicals are probably the second most frequent call for us. Motor vehicle accidents are up there. We run a lot of winter accidents that are really nothing. Any car that slides off is going to get 50 phone calls. It's pretty outrageous. It's job security, I guess.
Problems - Information	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Another challenge that we have right now is we have two dispatchers that English is their second language. So they're speaking English but it's terrible. It's terrible. One is, I think, it's Hispanic. It's Spanish speaking. The other one, we're not even sure. She's new. Maybe German, but it's really thick in accent. I want to ask him his opinion. And so to go the automated route, everybody is getting the same exact tone, the same voice. There's no excitement. We have dispatchers that get excited. When the shit's happening, they're getting amped up. So that keeps our guys amped up. The language thing gets them pissed off...
Problems - Information	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	I think it was just some information delay, and again, that's that adult development and that human interaction of receiving information and then disseminating that information out to the field. So 911 call-takers take information, and they have to triage that and basically push the right buttons to get the right resources out. And it's tough to sometimes coordinate that because they're getting an influx of information, and we're trying to come up with the decision-making process. "Okay, we've got five bits of information.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Information	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Yes, yeah. And it's a collective consolidation of various agencies. And so they're very good at what they do, but again, they'll come back and apologize. "Hey, you know what? We're sorry we haven't acknowledged you on the radio for three attempts because we're busy managing another call right now, or something else is going on."
Problems - Information	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	I think the problem with it would be too much information. And what someone perceives, what the general public perceives as a dire emergency threat, we would perceive as well, it's not really a priority incident. It's steam coming out of a vent, versus smoke coming out of a building. And if we got every cold winter day, all the dryer vents going off, if someone keeps texting hey, there's smoke coming out of the building, there's smoke coming out of the building. That's going to impact the agencies, or the fire service because we're going to have to investigate every one of them, and then subsequently the next, true real emergency, then we're not able to respond.
Problems - Information	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Yeah. So there's tons of information out there that we just aren't capturing, or that's already captured and is just not accessible. So on the medical side of the calls, so we don't really have any access to any of the patients' history, or any medical information that is maybe there, but not readily accessible. Sometimes we'll get a printed out, jumbled sheet of information that a healthcare provider-- like, if it's in a nursing home, they'll hand us this jumbled package of information about the medication this person's taking, and some basic history, but that's about the extent of it, and it's not presented in a way that's standardized or useful to us.
Problems - Information	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	And then, again, those are kind of things that are currently somewhat managed by our pre-fire system, but it's a very outdated method compared to the capacity that currently exists and is coming to capture and collect and utilize that information.
Problems - Information	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	[RE: incident information during response] That's a big question is how to get that information in a usable fashion in front of you. And I think the part of the problem we had is those attempts either from individual

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								departments or from third-party developers that have said, "Hey. What is it that you want to see?" Well, the challenge there is that everybody kind of has their own different idea of how it's displayed. And it's kind of sent out in whoever kind of had the last decision on what this [crosstalk]. But how that would be done in a way that-- how you can pull up your smartphone and see something, the UI on that smartphone is so intuitive and it's just there for you. So that level of design that is achieved there comes from a level of funding and expertise and necessity that we don't see. So I would have an idea of how I think I would like that information laid out in a way that makes sense. The most prevalent information is displayed at the top, and in a big instant in a certain way. But there's a level of art and science to how information is displayed. And I don't think that those who are creating the applications for us now either understand that or have the capacity to invest in the infrastructure necessary to display it cleanly in a way that works.
Problems - Information	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Well, communication problems, obviously-- it's just a misinterpretation of information. So I know that dispatch has a hard time with this because they'll have people that are in a heightened sense of emergency, right? Because something bad is happening. And so they' have a hard time conveying a clear message to the dispatcher sometimes.
Problems - Information	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	...So you have multiple channels of communication where some of those information [get lost?]. Other communication barriers I think are just-- or mistransmission, I suppose, could be one of them. So yeah.
Problems - Information	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Misinterpreted or you just missed the message altogether. Sometimes---
Problems - Information	FF	S	Other Public Safety	36-45	11-20	Male	FF-S-033	-- and this has happened to me, where you've been on scene and you're making communications but you're on the wrong channel. And so you're telling people information that they're not receiving. And then, by the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					time you've figured it out and you realized it--
Problems - Information	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4]... And it's quite a test. I mean, you get emails weekly that says, "We've got a better system now that would manage that information." But still, there's never going to be a perfect thing. Never a perfect system in terms of always having good, real-time intel. It's going to be the best we can, and so we have to make sure that we set realistic expectations into how reliable that information is that you're getting. A key that's under the mat may not be there. That may be five years old. Routinely we get dispatched to a building where the information on the building says this but that building is no longer there. It's been something else now. We're working on that. It's a battle. But information is great except when it's not.
Problems - Information	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] But because we've got all this electronic stuff when we need that it can have-- some guys get focused too much on making sure the right box is checked. I don't know if that makes sense. They're focused on click, click, click that you sometimes lose side of a bigger picture or something over here that if you weren't so on your tablet.
Problems - Information	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] And it's hard to protect-- we have a lot of protected information, HIPAA protected information. And crews are on the scene, "Oh look what I'm doing today," and sent it out on Snapchat. It's illegal but how do you catch them. So some of that's challenging.
Problems - Information	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] But sometimes we have dispatchers that say too much when we used to do it. Now it's all MDC, but there was an injury accident. It was a Ford probe that turned in front of a green SOB. The people are talking. Now they're on the sidewalk. Just tell us it's an injury auto at the center section and people are up.
Problems - Information	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] We have the ability to do that. The problem has been finding time to put all that information in. It's very time-consuming.
Problems - Information	FF	S	Supervising Field	36-45	21-30	Female	FF-S-037	...And so I feel like sometimes we are trying to do damage control on something that's gotten out. Maybe it didn't even come from us, it came

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					from somebody else but it's not true, so now we have to go back and we have to fix it. "Okay, that is not what's happening. This is what's happening." So I feel technology gets in the way in the fact that anybody can post something to social media, it doesn't have to be true [laughter].
Problems - Information	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	But every once in a while there'll be a miscommunication or something that may have been missed, like I was talking about, that maybe a crew is somewhere where the incident commander doesn't know they are or the incident commander doesn't think they should be. So that would allow the incident commander to actually track his personnel on the scene.
Problems - Information	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	Once we deliver the patient to the hospital the-- field guys typically don't have the ability to contact the hospital, and it depends on the hospital sometimes too.
Problems - Information	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	The MDTs. That was mostly on the old ones, but they do have a map feature so if there is some streets that you're not too familiar with, like alleys or something that come in, you'll get a call on a side street between two alleys and you're thinking "Where is that?" and you hit the map button. Sometimes the map button doesn't work right or they have a route button that will show you a little bread crumb trail of where you are and where you need to go, and sometimes that doesn't-- you hit the route button and the screen just goes blank.
Problems - Information	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Yeah, like I was talking about, you know some of those incidents where you get there and you find out that this is a police matter or we got dispatched for a small fire and find out it's a big fire when you get there [laughter]. Things like that.
Problems - Information	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Yeah in that they're limited a lot by the information that they're getting from the caller also.
Problems - Information	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Yeah if it's not clear what we're getting, we'll ask them to do a callback, if they haven't initiated that on their own. But a lot of times it's from a pre-paid phone or whoever made the call doesn't pick up, so a lot of times there's just no more information to be had... Sometimes we will get

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								more and then most of the time you don't.
Problems - Information	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	My pet peeve is that there's no specific class on radio ethic, and so you want to be short concise and some people just love to hear their voice and if they're always talking. And in an emergency situation, it should be just what's needed to be said... Because you imagine, if it's a fifth alarm, there are so many people. And people are just stepping on each other when they're talking... And not everyone needs to be talking at the same time.
Problems - Information	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	...Because as you can hear, in a big, loud, old concrete building, it's super echoey, hard to always hear. And we're often at this table or we're training there or doing something. So we have that up like that. It is an extension of our computer-aided dispatch, our CAD system. Every fire station and area, like training space, has a CAD terminal. Computer-aided dispatch terminal.
Problems - Information	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	[RE: distance estimation] If that kind of technology-- distance estimation is something we do a lot. With our ladder, same thing. And we have ways of doing it. There's ways of looking at the power poles and what's on the power pole, and going let's-- "14 feet. 17. 20. That window looks like it's about 20 feet. Okay, get the 24-foot ladder." But if there was a way you could go, "[inaudible]. It's 21 feet to that window sill, we need the 24."
Problems - Information	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	[RE: distance estimation] The other thing that happens is, for fear of reprisal, people will overestimate because at least if they didn't get it wrong, right?
Problems - Information	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	[RE: distance estimation] So we have a 50-foot ladder that weighs almost 400 pounds. Takes six people to raise plus one person. We ask seven people to raise it. 35 takes three people. But if you think it's going to be 36 feet or 34 and a half, you go like... Let's use all seven people, and use them on this one thing. Whereas... Either you're doing something twice or you wasted half effort.
Problems -	FF	U	Supervising	46-55	21-30	Male	FF-U-016	So we have three channels that are interoperable with our radio. We're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information			Field Responder					all on the same radio system. The cops' radios are loaded differently than the fire radios, but we have three channels on our B bank, B four, five, and six that we could interface with the cops if we want to. Does it always work? No. Is it problematic? Is it user error? Yes, all of that. But there's a little bit of a misnomer, I think, in interoperable communications. We don't want firefighter number 27 talking to officer number 36. We can't have an officer giving a firefighter direction at a scene or vice versa. The interoperable part has to happen when the two Incident Commanders stand together. Because we're two different disciplines, having a low on the totem pole firefighter talking to the low on the totem pole cop is not what need to happen, per se. If you don't know how to talk to each other, you don't who is who, you don't know when the cops go and say, "This is floorboard [Name]," we don't know what that means, and his responsibility as a role. We don't understand any of that.
Problems - Information	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...there is a few incidences where we were caught into some pretty scary situations inside looking for potential victims, especially in occupied buildings. So situations where either it's unoccupied or the people calling in saying, "Hey. There's a fire at this address. No one's in the building," there's been a few times where we've been inside and we've been caught up in some scary situations where the people outside knew that there was no one in there, and we never got that information. Those kind of situations are critical because then, we wouldn't have been in those situations, and we wouldn't have been in there to where fires break through the door and starting to fly down the hallway because we're in there looking for somebody. We wouldn't have put ourselves in that situation if we had known that there's no one in the buildings, so I think those are critical pieces of information.
Problems - Information	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	I would say, initially-- I would say the first maybe five minutes of the scene because there's a lot of overtalk. There's a lot of companies talking over this person and talking over that person. So that's when we run into those issues, is when they first arrive and there is a lot of things

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								going on. And so there's a lot of times where people want to say something and they're not listening to the radio. They just want to say what they think and what they want to say. So there's a lot of communication crosstalk that cut out...
Problems - Information	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...So now, the radios that we have, they're digital. So if I click and talk and half of my message doesn't go through, you don't get any of the message. You don't get, "Hey, this is Engine 93. We've got this," or, "We're looking at this." And then somebody say, "You know what, 93, we didn't hear that." What would happen is they wouldn't even hear me say, "Engine 93, we've got this." The whole message would be deleted. So there would be no reason or any kind of a reflex to say, "Hey, 93, what was that?"...
Problems - Information	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	It's the type of frequency. I guess it's called digital. It's a digital. So when something goes out in a digital format or message that-- the only way that the whole message can be read is by getting the whole digital. It's almost like a-- I guess, almost like a DNA sequence. You know what I mean? So it's got to get the whole thing, otherwise, if it gets half of it, it breaks up, so.
Problems - Information	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...That's really, I think, where our communication suffers sometimes, is poor size-up and poor size-up communication.
Problems - Information	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...The only thing I can think of would be I did a lot of dive jobs when I was in the squad. So we would go and we would take care of boats in distress, or drowning potentials, and stuff like that. And a lot of that does take place during the boat shows, and the air shows in the summer, and stuff like that. So where we would run into issues with that is crowd and being able to get to where we're going but being able to figure out where the actual location is because there's people all over the place, and if you're down here and you're just a visiting-- or a citizen, you don't really know the city for sure, and you may see somebody go into the water and not really know how to say where you're at. You know? So those kind of things become a problem. So then you've got the police who are responding to the same thing, so there's cross

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								communication there. We have helicopters in the air. So I think triangulating and narrowing down the actual location is a problem.
Problems - Information	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	...The only thing with having more radios, we have to have better radio discipline. There's a lot of things that don't need to be on the channels. A lot of people like just hearing themselves on the radios rather than-- clogging up the airways when pertinent information needs to get through. I mean, you'll see. If you listen to our radio channels, there'll be a big fire, one with a lot of messages. Then some other company - it's not even close - and all will be like, "Yeah, we're on the scene for an ambulance assist," instead of just hitting the button to let them know they're on the scene, right in the middle of an incident going down.
Problems - Information	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	Oh, I think there's always could be more information passed along. Like I said, the buildings that we're going to, or-- and I think it's be a lot better. Not as much as-- I just came from a spot where I was assigned, so I knew the area. But when you're relieving, you're going to different areas every day, definitely, definitely, more information would be better. You may not know the buildings, or the areas, or the streets. So more information would be better. Like I said, I don't think we use that mobile data terminal to nearly its best effectiveness.
Problems - Information	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	Or even you're a reliever, it'd be nice to have the shortest route pop up. If you've lived your whole life on the south side, and now you're promoted. You're lieutenant, and they assign you. First day you're up on the north side. You've never seen this place. The streets are totally different. There's angled streets. You look over and the guy, the engineer, is a reliever too. You're like, "I guess we'll get there."
Problems - Information	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	...the problem is we rely on call-takers who are reliant on the public to pass on information. So especially on our EMS calls, they can vary widely. We'll get gunshot, and you get there and it's nothing, or you get minor accident, and you get there, and there's like three cars. And we get traffic accident. Is it a school bus pinned under a truck, or is it just a fender bender? You have no idea until you get there and see it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Information	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	[RE: getting information via MDTs] Excellent means of communication and then I think that one is still in its infancy, still developing. Because you can also relay a very critical building components from preplans. For example, fire department connections, where are they at and where is the gas shut off. Where's the water shut off? How was this building made? Is it a light-weight construction? Is it a truss roof? It's giving you the information that would help use any sort of commander or the first officer arriving, help base your decisions, what your actions you're going to take. They send a lot of this information, has come about. Without that, it was all either guess work or you had to go and investigate how buildings was made, where the sprinkler connection was, which side of the building we shot the gas off...
Problems - Information	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Whoever said face to face, that's the best method of communication. Receiver and sender and sender and receiver. You got me and I got you, and we understand our messages from face to face. Relying on technology so, "Oh I hope he got that message." Or, "I hope I got this message to achieve that might be three blocks down the road on a large scale inset." The assurance of knowing that you got your messages across and especially critical messages. There should be no doubt or wondering if this is going to fail us, this system. Did he get the message or-- again, nothing beat face-to-face communication. I say, "Well, I'll write him a letter."
Problems - Information	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...Gaining complexity is the real killer of simplicity from my perspective. And how to improve that? A lot of face-to-face communication, maybe having one guy operate the radio. Giving messages instead of everyone having radios, and all this talk and garble. I have to be responsible for listening to all this, because it may apply to me. So funnel. So you take your five people in a room. You tell them all be quiet, one speaks. So that would be just a suggestion for that, just not being in a position where you're going to be overloaded with, where this technology has become rather burdensome in your decision making or thought processes right now.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Information	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	[RE: cause of communication issues] Failure to communicate is one of them, yeah. But as far as communication from a technical aspect - buildings, dead zones, again, metal buildings, being encased in concrete - you're just not getting that signal out. What is causing communication is possibly the-- in fact is that we have possibly too many radios operating on one fire realm. It can be cumbersome, and lost messages will occur. Some of those are crucial, or non-crucial.
Problems - Information	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	I mean, when you respond on a run, you get some stuff from the alarm office, and they don't give you the full picture. I mean, you have to kind of ask them-- you have to prompt them with 20 questions to get them to give you right information. We get a call for a person in the water, and we're looking for a boat that's overturned, and a guy's in the high-rise and these people in high-rise look out with binoculars and are calling 911 all the time. So we get there and it's like, "Well, where is it?" It's like, well, I mean, they're mistaken, but it takes us 10 minutes to talk to the office to figure that out. And then sometimes you have to send somebody up to that apartment and look at what he's looking at.
Problems - Information	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	[RE: 911 callers] I mean, you get bad streets, bad addresses. I guess it's asking the right questions no matter what you're doing.
Problems - Information	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	As far as technology, I mean-- well, a huge one would be-- and I know it's probably out there, but not in the city. When we get a run, having the map on the computer, I mean, that's huge, because I cover a third of the city, and I cover from [street] to [street]. I cover the whole lakefront. And I mean, you go into [neighborhood] and you get the angle streets, and off [street], and it can get confusing. I've been around for a long time, and I've lived up north, and I've driven trucks around, so I know the north side. And I got guys who are south side, so they know the south side, so we're pretty good. But sometimes you hear a street, and you don't know where it is. Or like you get a street along an angle street and you're, "What side of the angle street it is?" Because it doesn't hit anything at all. So if we could get mapping GPS built in.
Problems -	FF	U	Field	56-65	31-40	Male	FF-U-026	[RE: GPS mapping] I mean, if I could-- the problem is I'd have to pull out

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information			Responder					my glasses, and pull out my phone, and pull up Google, and type in the address. And while we're running, I'm also watching for traffic and stuff, so I'm kind of-- I mean, if I could just press a button on my computer and it went-- I know there's a - I forgot what it's called - Waze or something like that. If I could press a button, and my computer went to Waze and show me the quickest way to get somewhere, that would help because-- I mean, street shutdowns, sometimes we don't get notified of that. And then gridlock. I mean, I leave my firehouse, we go out on a run at 5:00 on a Friday afternoon and we can't pull out the door. I'm in the [neighborhood]. So it's impossible anyway. There's only a couple streets you can take. It goes [street] and [street]. You don't go anywhere. So once you make a bad decision on which way you're going to go, it affects everything you're doing. So I mean, I don't know if that's possible, but.
Problems - Information	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	[RE: navigation with road closures and traffic alerts] Well, there's technology out there already to do that but to incorporate it into-- But if you could put Waze or something like that on my computer screen-- I mean, right now, it's just-- it gives the address, the cross streets. If you're on a cul de sac, it doesn't give the cross streets. Or if they give a corner address. If they give you the corner of [street] and [street], it will not tell you what hundred it is. But if the address is [address] it'll say, the 600 block of [street] or the-- it'll go to the next cross street. But it gives you a corner. We don't have a reference. So that's a--
Problems - Information	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	...in the near future I'll have a lot more information available to me en route, which is nice. We do have an enormous amount of information in a high-rise building given to us on a run sheet when we're en route from the firehouse... But the problem is, how about when we respond from another call? Now we don't have access to that. Now it will come up on our display, the same information. But it's much more difficult to get through and sometimes doesn't scroll right. And you're manipulating traffic and weaving it, you know what I mean? So you're moving and the lighting conditions may make-- you've got sunlight. There's a lot of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								obstacles to read it en route like that. Unless our displays change and it makes it a lot more easy to read or look at, or is legible from everybody instead of just the company officer. Because he has a lot going on in his head, he or she, and to have to en route, try to concentrate on everything that's [laughter]-- it's a lot of information...
Problems - Information	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	I mean, maps aren't anything that we normally get. Our command vans that respond to either incidents that are upgraded or large-scale incidents, our command vans all have that accessibility. They have computers. They have hard copies of maps of everything in the city from our infrastructure. Well, a lot of it's outdated [laughter]...
Problems - Information	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	... I'm all for risk a lot to save a lot, but don't risk a lot to save nothing. In the fire service, we have a long history of people getting killed when there wasn't any lives to be saved. And sometimes, just to defend those people who lost their lives, sometimes the information wasn't there. So I have to tell you, 9 times out of 10, especially in residential areas, when we pull up there's somebody on the street that always tells us somebody's in there. And 9 times out of 10 there's nobody in there, so we have that going on in our heads. You try not to calloused to that, but we hear it all the time. So I always tell the younger guys, just assume that somebody's in there until somebody tells you to hit the brakes and not charge ahead. But we have to assume somebody's in there.
Problems - Information	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Too much communication. I would say, yes, you can have too-- I'm not trying to dwell on anything specific, but you definitely can have too much at once, depending on how many players there are in the process. As a chief running a fire event, I've many times had to tell people, "Standby, because somebody's breaking in," maybe. And so, there's a problem there, too. I would have to wonder, "Why are they breaking in?" They should be able to hear me having a transmission already, so possibly on their radio, they weren't hearing. So, you have to wonder. But then I would have to stop, contact that person, transmit a message to them, standby so that I could finish what I have going on here. But it becomes a juggling act because I have to decipher in an instant, is what he's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								trying to tell me more important than me finishing my communication with the person who I-- you know what I mean? So yeah, it could be a little hairy sometimes. So can there be too much? Yeah. I've had incidents where there was too much at once. But I don't know if too much is a word you should use with communication, because the more, the better, right? I mean, the more, the better.
Problems - Information	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	... we'll have communication problems, and this one sticks in my craw. There may be somebody reporting the first fire companies for a reported fire that hasn't been confirmed yet. They'll pull up and say, "Hey, we have a fire", and they'll start giving-- because we have protocol for how we report a fire to the firearm office. We'll give them building dimensions, whether we have fire showing, or just smoke showing because sometimes it can be burnt toast coming out of the window. We'll tell them the size of the building. Is it occupied or not? And is it commercial? So we have certain things that we'll say from the very instant that we pull up. You'll have that going on, and then you'll have somebody cut into that to say something really insignificant over the radio, like we're returning-- they'll just tell the alarm office we're returning to quarters, and now that very pertinent information was cut off by a guy who did something cut him off, and all he had to do was push a little RTQ button on his on-board computer, and they receive that message, as well. So we have a lot of that going on, too. Every time I hear it, I wince a little bit because if at that fire scene, somebody's calling for a mayday, that's supposed to initiate a whole new response to that fire for the purpose of that mayday. And if it's going to be cut out by some guy that just wants to get his voice heard by the whole city that he's returning to his firehouse. That's a problem.
Problems - Information	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: drones] ... at the scene of fires, which is probably going to be our step-off point, for using the one we have, anyway. So you fly over and get a nice aerial view of the building and it really aids tremendously to whoever the incident commanders are for tactical decisions as far as fire-spread, roof conditions. Even hydrant locations, believe it or not,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								because in certain times of year our-- there's a variety of things weather-wise that affect fire conditions, like barometric pressure, and humidity levels, and things like that. Sometimes we can see everything outside of a fire building. If this were an industrial building let's say, burning, sometimes we have no problem knowing everything that's around it. But sometimes that smoke lays so heavy that for blocks surrounding that building we almost can't see each other walking down the street, so it becomes another obstacle to try to attack that incident tactically. So drones can be used then.
Problems - Information	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: drones] We had an 80-car pile up here on the [highway] here last summer. And it was cold and somewhat windy, and it started to rain, and it took them over an hour to really get a handle on the number of victims they even had. And it was because of the way that they were piled up. And it was on an elevated part of the expressway, so you really couldn't get a lot of foot traffic up there to just run up and down. And that was a perfect opportunity for a drone to be used in that situation. It could have just flew up and down, up and down, and it could have got a really good handle on what they needed as far as resources go. And resources for an incident like that are critical for life-saving. Do we need five ambulances or 50? And if they don't know, now the people that need them the most are going to have to wait the longest. So that's not good...
Problems - Information	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	I mean, in a perfect world, to me, in the future, I would pull up to a building that was on fire, and the building would tell me what I had going on. So I may be able to, at some place in the building that I knew it existed, I may be able to get all my information before entering the building. For instance, how many people are in this building right now? The building would know. And the building could tell me, "There's four occupants that are currently in the bedrooms on the third floor. I mean, that would be-- I mean, talk about affecting our job tremendously. That would be unbelievable. First of all, we would not search in an area-- I shouldn't say it that way. We would always search in areas that we weren't being told there were victims, but those would be secondary to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								what we were being told. Whereas right now, we pull up and we have no idea, so there's a lot of wasted time. Wasted not being the correct word, but it's truly is wasted if we search-- if it's a three-story building and everybody's unconscious on the third floor, and we spend the first ten minutes on one and two looking for them, those minutes were critical to their survival rate. So if we could go right to three, that would change things. So if we had smart buildings in the future, that would be awesome.
Problems - Information	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	we have a big problem when we're responding seeing the actual address of places, believe it or not. We're pretty good at getting close because our blocks generally, at least in the residential areas, they generally run from 0 to 60. In other words, if this was the [address] block of south whatever, doesn't matter what the name of the street is. Generally, we know that there's a hydrant on this corner, there's a hydrant on this corner, and right around [address] there would be another hydrant, so that's how we think. Everything is about where the hydrants are. But we know that our addresses on most of our residential blocks would run from [address] to [address], and then there would be cross street, and then it starts again. So we always have a problem a lot especially in the evening of seeing addresses. Some buildings just don't have them on there. And others have them, but they're not even reflective, whereas if we even shined a light on a house or a multiple story building, that the address-- and that could be a problem in response time. Again, it's always about time. So if there's a smoldering fire or a fire that's growing that we can't see from the outside and we're wandering and wandering spending a couple, just a couple extra minutes finding the right building, it becomes an issue.
Problems - Information	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: address placement on buildings] --it's a real common problem... You see them in every different way. They're actually, sometimes they're scripted... And not numerical, is what I'm saying. It's just written word... And then sometimes they don't even exist. In [City], we have a lot of vanity addresses that aren't even real. Yeah, and it became a big issue.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								I'm surprised it still exists because it became an issue with a very famous high-rise fire in the downtown area where there was a female there that was after hours working, and she was afraid to leave because the fire was in a floor below her. And she kept calling, and calling, and calling. And they had all these audio tapes that they kept playing on the news. And she kept giving them. And they were like, "We can't find you. We're on that floor." And she kept saying the address over, and over, and over again. Well, it was a vanity address for the building. It wasn't a real address. And she wound up dying in the fire. She wound up dying, and it was horrible. So I'm surprised that they still exist because there are some addresses. But even in the neighborhoods, which is 80% of our city is all residential. And man, I can't tell you how many times I have just wandered looking for an address.
Problems - Information	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: address placement on buildings] I'm just saying. I'm just saying it's pretty crucial. It's pretty crucial. And so, I don't know what the answer is in a large city because to mandate in the poorest of areas that's-- but it's definitely, we respond to addresses. That's all we get.
Problems - Information	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Yeah I mean unfortunately being on the law enforcement being on 700 and us being on VHF sometimes information gets relayed to an officer that doesn't then get relayed to EMS so that has been a problem and I think we work with dispatch as well to try and improve that making sure that information is being relayed across but yeah when you have that human factor in there there's going to be that failure at some point.
Problems - Information	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Yeah some like medical calls we get too much information from dispatch constantly updating us while we're going on site. You know so we've talked to them about hey, if it's changing on scene the safety on the scene or anything like that yeah we need to know about it but you know sometimes there's too much details and other times I'll have the CAD status on and with this this is exactly how the CAD system works that they have like if I want to know here's a wildlife call.
Problems - Information	FF	R	Supervising Field	Not specified	Not specified	Male	FF-R-046	Yeah especially if it could be possibly a violent scene or something like that. If that information doesn't get relayed I mean I've had first

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					responders show up to the wrong house where law enforcement was the patient was actually at another house and it was one of those kind of domestic issues so it is concerning but they're pretty reactive to what if we have a problem like that to fixing it.
Problems - Information	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Yeah I think there's the different levels of communication whether it's just within like internal with an organization for getting stuff done can be a problem where certain stuff that needs to be relayed doesn't and stuff that doesn't need to be relayed does and then from a paper call perspective it's just having that because it's not their full time job. It's one of those things that they listen to the radio and they don't get on the radio very often so that's part of the problem with calls and that kind of thing is not having the experience on the radio.
Problems - Information	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Another kind of aspect I guess would be when if somebody starts saying something on the radio that's different then the volunteers hear it and think that's what's supposed to happen so then they start using it so then it becomes a bigger problem again and yeah I guess communication in general is one of those things that if you can just most problems can be solved if they're brought to people's attention and talked about it but that doesn't always get through to people and so it kind of builds up and becomes a bigger issue.
Problems - Information	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	I have maps and stuff on my phone. It's not through the department but if I ever needed to I could pull it up. [application name] app does have a mapping part on it to where they can with the E911 systems that we have in place now that dispatch can pinpoint that call for us and then if we need to we can map it out. I personally have not got to use that on the app yet but I think that is a very helpful thing because a lot of times even though we are on a a 911 you know addresses out here you know and all of our roads are marked our calls don't necessarily come in that way because [name] down here on he's on [street] down here by such and such well he'll call in to the dispatch over there and say well I'm 2 miles east, three miles south, a half back east and follow that least road in. We have gotten calls that way and then so then you get a mix match

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								now dispatch can look that and you know trace the call and pinpoint that. I have not got to use that yet but that is something that's going to be you know very helpful. Now if we get everybody to call in and say I'm on county road such and such and you know right south of intersection such and such that would be great you know we could get there quicker you know or save the confusion.
Problems - Information	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	[RE: human error interfering with communications] Yes, yes. People not having the radios on you know and say you know say they don't have well I guess there's like say we have a guy on the truck, inside the truck driving, we have a firefighter on the back sometimes communication between them you know say our headsets don't work because here at the department at [city name] we don't have a headset for the guy on the back that communicates with the guy in the front and so the guy on the back can't I mean he's not going to hear the radio, he's not going to be able to talk because you know he's in full gear, he's got engine running, he's got a pump running back here, he's not going to hear that so we don't have those headsets...
Problems - Information	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	...On another department that I am on [city] they have one rig that does have a headset that is very beneficial because the guy on the back can say hey you know we need to go over here where if the guy driving can't see it but then the guy driving is the one communicating and can listen inside. So that can be a problem you know if we're out and just not being able to hear our devices.
Problems - Information	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	..Out here our resources are limited. When a fire is paged out here they may page out the appropriate response it may or may not go out over the radio. We have somewhat of an outdated, underfunded, antiquated communications here in our county. On top of that it's a volunteer department. Some people may be having to go to work in the morning I just can't go to that call and you really never know it's like a box of chocolates you don't know what you're going to get out here when an emergency goes out as far as fire goes and Metro [City] where I work I know exactly what's coming because we have people on that shift

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								specifically for whatever response needs to be sent out so here it's I would say it's inherently more dangerous being a volunteer fire.
Problems - Information	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	We're focused on task oriented things at that--that have to be done right now. We don't always get the same information that they sheriff's office gets sometimes. And it's simply because one person is taking it and another person is doling it out. Well the person doling it out... and part of that's our own fault. This radio has a response coord--coordination channel so instead of us moving to it which we've discussed and we try to do, we failed at it and it's an administrative issue on our side, on the sheriff's office side, on the EMS side. We should be switching to a response frequency where everybody hears the same thing and then when we get to a scene if we need to do something outside of that we need to just move that part of--we'll still hear it, it scans... But that's a training issue that we will work with the sheriff's office to address but that's our biggest problem.
Problems - Information	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Dispatch has gotten to where they give us cross streets which we didn't get always. They give us a cross street, they give us numbers, you know and all that. Part of our problem here is a third grader numbered our [County]. Actually she wasn't a third grader but the way the system is supposed to be... you can go put it in Google Maps, Google Maps will tell you that you should go to this place for this particular address because Google Maps knows that you're supposed to assign a street number every so many feet. Okay? That's not the way it was done. They would look in the book and say, oh well, so and so lives here and so and so lives there and they live in the middle. They live a little closer to this one maybe but I'll say--I'm just going to give you this number.
Problems - Information	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	And it's not the way it's supposed to work. It's supposed to be numbers south to north and west to east and it is. But you've got roads here that they run north for a little ways and then they turn east-west. So... not real clear on how they numbered that road to be honest with you. And you know so what they would do is they would go west to east and then all of a sudden you're--so your numbers are here and then when it turns

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								south, there'd still be a number on the west-east numbers. So it's not a--it doesn't fall in your grid the way it's supposed to.
Problems - Information	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] We want to know what - you know, it is terrible when we get on a scene sometimes with the sheriff's department if the call warranted the law enforcement to be there, they are telling us that the information they got is totally different from what we got.
Problems - Information	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] Horrible, so you know the problem of the information sharing through the 911 system, it is very difficult to get accurate information. It is not necessarily wrong information it is just that some agencies are getting one bit of information and we are getting another then they don't match when we get on the scene so what are you here for, well we got the call as - we just got a call somebody is sick you know it could be anything and it is all and I think it starts with 911 call takers.
Problems - Information	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] That's different situation. We shouldn't ever go in there without back up from law enforcement and that happens a lot. If we can't get through 911 call takers to get the accurate information that we need to be able to respond appropriately. We get a call for a car crash, sometimes we have got a tractor trailer carrying hazardous materials; we walked into the scene that can potentially be life threatening for us. You know we need that information, so you are asking what kind of information we need, we need everything supposedly we could put together before we get there because when we are driving to a scene our hamster wheels are spinning rapidly.
Problems - Information	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] I don't know how to think about that what causes problems, I guess from the very get go, I mean from 911 dispatcher where they are talking to us or to the county or to the City police or [City] fire department, it starts with them and making sure that they get that most accurate information from the caller as much as possible. That seems to be the breakdown when it trickles down to us, we lose things you know even the ambulance will get on the scene and say they got the call as a seizure, we got the call as trouble breathing.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Information	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S2] So we had a house fire [indiscernible] from here and the actives they sent us the wrong location. We was going towards [City] and the fire was on the other side of the city towards them so. [S3] But it was the same address.
Problems - Information	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S2] Oh yeah, well, like I said you go to a wreck and you don't know how many is in there or in the car you know if they are trapped or not, I mean like you said we are going to a blind call is what they call I guess I don't know it is, that's every call we get, we don't know unless we -
Problems - Information	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	Yeah, but -- a lot of it is -- sometimes I'll have to repeat the address you know and it is like -- what was that numerical? I don't know. Well, what was it? Well, on my phone it says, use [Name], [Street] right here or [Street]. No, that is not what Dispatch said. Well, what do you mean?
Problems - Information	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	And if it's a priority call-- here in the city, if they send me to a man with a gun call or something, the city's so small that I will be there within a minute or two, and if they're busy on the phone, they can't give me pertinent information that I could potentially look at.
Problems - Information	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	As far as, we're working at a UT football game, while there's a concert going on right across the street, everyone's texting, and then - I don't know - somebody blows up something. Everyone's texting. Everyone's calling. There's an obvious issue there.
Problems - Information	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	So if I've got somebody who was being cooperative with me, but he's not in handcuffs yet. And dispatch comes back and says, "Oh, he's got a felony warrant for stabbing his wife." Well, he just heard of that. Now he's going to run.
Problems - Information	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	I'll give you an example. One of my troops had a guy run from him. And he's in the middle of chasing this guy across, I don't know, the highway or roadway and everything. And he's either A, not hearing me, or B, not giving me valid updates. So for me, panic mode is "Is he shot? Is he chasing the guy?" So that's a communication problem, clearly. I'm not getting information from him. I need information to know where he's at, what's going on.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Information	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	For my job, I mean the more information the better. Just details of whatever happened on the incident.
Problems - Information	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	I mean sometimes it's just the game of telephone, too. So you have the watch commander tells me this. I hear it that way. Then I call the responding officer. He tells me something different. I talk to his supervisor. It's something different.
Problems - Information	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	The state police communicate on a radio and they have [Street]. I personally scan multiple radio channels as a K9 officer so I can hear what the state police are doing, even though I'm not on their channel. The rest of the patrol officers do not. So if they had a problem, or a shooting, or a bailout, or something that's taking place right on [Street] in our district, they wouldn't know it until their dispatcher contacted our dispatcher and communicated it to us and hopefully somebody's close.
Problems - Information	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	No. We use plain speech, and it's a double-edged sword. I see the necessity for it, but it takes longer to get through transmissions. If you have a code system and your agency knows the code system, you can cut down transmissions significantly.
Problems - Information	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	With firefighters and EMS is virtually impossible. And it's vice versa. It's virtually impossible for them to talk to us. It's very, very slow and very, very convoluted, because what we do is we get on the radio and we call our dispatcher. That dispatcher is one dispatcher for each district channel. And then, that dispatcher sends a message from their computer to the fire rescue dispatcher for that geographical area. And then, that person either contacts their-- either answers the question or has to ask their firefighter or EMS person whatever we're asking.
Problems - Information	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	But if they're bleeding heavily, there's only so much we can treat, and so they're staging where they should be. But then, we go, "Okay, fire rescue can come in and help us take care of this person." But that goes from police officer, police dispatcher, police dispatcher, fire dispatcher, fire dispatcher, to fire engine. So that's a long chain to get an ambulance and a fire truck to come in and help us take care of a bleeding person

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[laughter].
Problems - Information	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Well, yes. But I say that because, most of the times, the deficiency in communication is on the complainant end, not on the police side. It's not the dispatcher that's not providing you the information. It's the dispatcher doesn't know that information. And either they ask the question and the person calling wouldn't or didn't answer it, so we don't have that.
Problems - Information	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	So I know they have protocol to try and get all that information, but sometimes they either can't or the person just refuses to give it. So you're limited on the amount of information you get sometimes.
Problems - Information	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Well, sometimes you can catch-- you'll catch the end of a nine or something, and there's not a lot of nines out there other than K9. So I would answer them, "Hey, were you calling K9?" Or sometimes you wait. And typically, they will ask twice before they start shopping around looking for another dog. So sometimes, you're like, "All right, was that for me?" And then, you wait, and then sure enough the next transmission is, "Hey, K9 so-and-so, are you on the air?" "Yes."
Problems - Information	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	But there are times where they don't put information over the radio. So it'll go straight through the MDT and the dispatcher will let you know, check your MDT for a message. And we can read the message. For whatever reason, that message can't be communicated through the radio system. So that goes straight to the computer.
Problems - Information	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	Now with social media, people can start gathering online, and in 2 hours you can have 10,000 people at the White House. So it doesn't give you much time to rally enough officers. As long as the thing is peaceful, that's fine, but you need to make sure you have enough resources there to A, keep the people safe. You're out there, and a lot of times they want to march from one location to the other.
Problems - Information	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	But we didn't have enough information from the dispatcher. They didn't ask enough questions, and that's something that you'll hear us ask all the time. Respond for a suicide attempt, well, how are they trying to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								commit suicide? We need to know that because if it's a gun, it's different than if it's pills, things like that. So there's been a couple of times where you wish you had-- and there's always hindsight, that you wished somebody asked the questions that you needed to know, or they didn't give it to you fast enough. Because there can be a delay and that has gotten so much better over the years. And sometimes you just have to wing it just because you don't and you never will have the information you need until months afterwards, so.
Problems - Information	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	in our dispatch, rather than having to wait for you to file it, so. And they trust us with a radio and a gun, so they might as well trust us with [laughter] it. In some ways, my personal thought is that we need to stop making everything social media-based and relying on social media to drive policies and procedures. And that is a technology-based issue, but I don't know if there's a better way to not necessarily control the release of information, but have a better way to get ahead of the negative. And I think that might be a quicker turnaround on public information that could be with a faster method of culling information. Because if there's a shooting in the seventh district, it takes a while for it to settle down, enough to be able to get the correct information. By that time, you had 18 reports that are wrong, from [Name], who saw one side on the street and judge it. And it's a matter of being able to release the necessary information quickly enough so that we get the correct-- whether you like it or not, it's the true and accurate facts of the representation, rather than social media, because that's the biggest damage to us.
Problems - Information	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: checking email] ...I have so much-- I can't wait to do emails during the day. I'm doing them constantly... I have to keep up or else there's no way I can come in at 8 o'clock and just start from scratch.
Problems - Information	LE	U	Manager	46-55	31-40	Male	LE-U-020	...one of the complaints on dispatch use is they're in a tunnel. They never get to see. They can only think, yeah, what's going on. When you have a critical incident, and we've had our share, and always the viewpoint of the dispatcher is always worse than the actual event itself.
Problems -	LE	U	Manager	46-55	31-40	Male	LE-U-020	One of the debriefs we had... they had some video of things, and even

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information								though it was bad, in the dispatcher's mind, it wasn't as bad as what their mind's eye was picturing. So, when they're starting to see some of these things arrive, they're going to be subject to more immediate trauma because you could see, you've got another sensory that's going to be involved, but you're also going to have more of a realistic view of what's going on at the time. So I think as we move forward into this, it's a growing. There's going to be good and bad, but it's different things that we are going to have to deal with.
Problems - Information	LE	U	Manager	46-55	31-40	Male	LE-U-020	...a lot of stuff on the front range, we're dependent-- the initial call does not come in to us. So if you dial 911 on the front range, you're not going to get to state patrol unless they either transfer it, but a lot of the times, some agencies will take down the information, and then they'll call us. So we're basing the questions that they asked, where it may not be the same questions that we would ask if we were actually talking to the person...
Problems - Information	LE	U	Manager	46-55	31-40	Male	LE-U-020	... For an accident, you might get one or two calls because they either had to go to the next exit, find a pay phone to actually call it in, those types of things. Now with cell phones and everybody, we get dozens of calls for one accident...
Problems - Information	LE	U	Manager	46-55	31-40	Male	LE-U-020	...we don't get the information. We got less information before, but now we just have to-- where we run into trouble is when we, our centers, don't get the person to ask the questions that we want answered. We can go from it's a three car accident, or a two car accident, and then everybody's walking around to turn it into a fatality involving seven cars, in reality [laughter].
Problems - Information	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	It's another new thing they just did was a got to [Pro QA?] dispatching. I hope you are familiar, but that scripted thing that the call-taker do when they get a call. It affects how the call prints out, or how it displays in the car, and it affects how it's aired, and when it's aired. And so there's been some growing pains with that. But everybody is getting more, and more used to that too. I think they, for the most part, they do pretty well. There's been some problems, some complaints, and one of the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								solutions that they just went to is to bring dispatch back under the police department umbrella rather than having it as a separate entity that it was before, so that means they can do rest here.
Problems - Information	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...there's some state channels that I can go to. It's like Blue Northwest, and I can go there, and everybody in the state has access to that channel. So technically we can talk back and forth. There can be some delay, because everything goes into one place and then gets reformatted in digital or analog and then gets pumped back out, and so it's not always the perfect thing. I can be standing right next to the guy, and I can key up, and it takes a second for him to hear. And it does work when we absolutely have to. But when it comes down to emergency type situations, it's very difficult.
Problems - Information	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...one of the deputies was in our city, actually ended up firing shots at a suspect. We got the call from another party in the house, and we were already responding had units on scene, before we got relayed that it was a Jeffco deputy involved, and then we've got the scene shut down. We're taking care of it when the Sheriff's Department and all their resources start rolling into the scene, and we're immediately screaming at them, "Stay in your car! Stay here! We've got this." We don't want any blue-on-blue stuff because you don't know where we're at. We don't know where you're going. Because in order to switch everybody to a channel, it takes time. You would think that they could hit a button and do it, but it doesn't work and so--
Problems - Information	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	So a lot of times, [Job title] will get kind of upset when dispatches doesn't tell them exactly what a suspect's wearing, or doesn't know if there was a weapon involved, or anything like that. Sometimes that has to do with the radio channel being busy, Sometimes it has to do with the [Job title] just not knowing because the call taker hasn't been able to get a word in edgewise to ask. Sometimes it's just missing information. So I can't think specifically a time that it was necessarily a technology issue other than just being somewhere where you are out of range, or you are three floors down in the garage and there is no coverage there for the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								radio or cell phones.
Problems - Information	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	...the CAD system logs pretty much every time someone calls the police or calls for a fire department. The report writing-system only logs anytime we take a case. So if someone calls for something, and it's not really to the point where we need to take a case on it, it's still documented in one system, but not necessarily the other. So they have a lot more short-term information. Everything from the call to the time we get there, pretty much...
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: electronic discovery] ...if they were to call us up, we'd just make a new copy of whatever and take it to them, which we probably already gave them a copy and whether it got lost, got misplaced. So there are a few safeguards built in and a few potentially helpful things as these systems come up. And that's sort of the tracking, the data integrity, all the other stuff that people think that any system should have when you're talking about data and data transfer.
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...this time of year is when we get all our new cars that are coming in so there's been a lot of driving to [City] to pick up the new cars as they're getting outfitted at the electronic shop... So that's sort of the part I think most people get into being a first responder is that you're never really sure. I think I'm just going to [City] to swap out a car and I'm going to come back with two inmates, but I didn't know that at the time.
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...we'd recognize, from a workflow standpoint, if a dispatcher does something, how's it going to affect the unit out in the field on the computer? And vice versa. It was starting to create a lot of frustration because somebody would do something on the computer and all of a sudden they would disappear from the dispatcher screen. And they didn't know why.
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...in our training, we told people, yes, we recognize as we introduce more technology, information comes out faster. Don't forget the human factor. As a call taker receives a call and is typing notes and it pops up on your computer, the dispatcher is probably reading as fast as you are. Don't

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								start asking them questions about what you're reading when they may not have done all their reading because maybe they sneezed and they're two seconds behind you. So sometimes everything just comes so fast but you need to slow down and wait just a minute and let the dispatcher do their job and actually come over the radio because not everything may have been in the notes...
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...So if you see something and it's questionable, we had to come up with a time or say how long do you see an event and you think it looks good and juicy, and the dispatcher knows the location's wrong because the caller had wrong information and it's really not in your county. So don't start turning on your lights and siren and running somewhere because that's just where they live but they're calling about their friend who lives somewhere else. So we've cautioned about self-launching...
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...What came in as the structure fire is the reflection of the sun at night. But it gets billed as a structure fire because that's what the caller said. And you see it on your computer, and if the tones go off at the station the guys are ready to run out, so we've got a structure fire and then they never hear the radio come on and do the formal process of dispatching...
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...So from a liability standpoint, I'd say, look, that is your formal dispatch. If you choose to go out on your own, we're not saying you can't. You're all adults here, make decisions, but just be cautious because that event may never turn into what you thought it was and what the dispatcher thought it was. So we are talking about the technology dependencies on how one part can really affect the other part and just understand they're related...
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...The speed of the information flowing is not always great... So it usually manifests itself as an issue, somebody complains about something, we try and go through the problem, realize why, what can we do to mitigate it, what can we do to not mitigate it, whether we just have to say that's just the way it is and there's really nothing we can do to make that easier on either side right now. But at least you understand why it's happening.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	When I started, we were on VHF single system, the dispatcher would change which tower they were broadcasting from. So you regularly get half the conversation because you can hear the tower but not the person talking who may be on the other side of the county...
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...So we try and do that from a resource utilization standpoint, from an information sharing standpoint. If we're all driving up and down the interstate and no one's found the accident, it's nice to know that. The biggest thing we used to joke about is the law enforcement officer does not need to tell the dispatcher that the fire truck is on the scene. The fire trucks knows they're on scene [crosstalk]. This goes both ways. We have lots of tapes of the fire truck telling the dispatcher that the law enforcement is on scene. So that was the training years ago. They know they're on scene. You don't have to tell anybody that. Resource utilization, talk time...
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I know a lot of other areas, they have got enough repeaters within their sites, the certain talk groups they designated are always turned on. So if it was on your scan list, you'd always hear it. But that was a big change early on when people were complaining they didn't hear traffic, they'd call each other. So the result of that it goes to a little more talking on your main talk group that everyone is listening to, to tell them to go to their secondary talk group, and that's just the only way to get around it.
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...the in-car computers are great, and yes, you get a confirmation of what you did. But your supervisor sitting in the office doesn't have the computer in front of him to know that that's what you're doing. And they've all said they'd like to hear that you've cleared your traffic stop. That you went out on a traffic stop. They want to keep a little situation awareness and they're currently using the radio...
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... So how do we take advantage of decreasing the radio time by using the computer and what's an acceptable amount of use of just the computer versus here's a hard stop and here's the minimum traffic you have to do. So if we said, "You could build--" we don't want you building traffic stops. That's usually a high risk situation. But if the radio's so busy

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that you can't get out, we'd rather you build on the MDT, and then everyone can at least know you're a traffic stop, and the location's there.
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Yeah, you can't [read] them. Yeah, we've all talked about that. It's the coloring. It's the size of the font at nighttime. You've got to get a flashlight out to get it bright enough... I don't know who thought of that design but we're all looking at it and go, "That is terrible."
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Going to the airport and the guy at TSA's holding it up now. They see licenses from everywhere that they have to understand and even they're like, "Wow. These are kind of tough to read." So yeah, I don't know who came up with that idea. So that's, yeah, I guess, another frustrating part that sort of technology related on the printing and the style format. Again, they're trying to use more security in their driver licenses. The REAL ID Act necessitated that, so responding to the federal stuff...
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... if the dispatch tells you it's windy, that was a big discussion. If when the new system came in, if you're digital, do you want dispatch to tell you you're digital? Do you want them to tell you why your transmission didn't go through based on their point because it was too windy and they couldn't hear it, because your microphone was too far away and they couldn't hear it, because it was digital? Or do you just want to be asked to repeat? Big topic at discussions, guys like, "I can't do anything about being digital. What good does it tell me you're digital? Just tell me to repeat." But if it was windy, you should be told, "A lot of wind noise. Please move." Little annoyance things. I try and count. Some guys are, "I'm glad this is the biggest annoyance you have today, and we can resolve this."
Problems - Information	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...So anytime somebody puts information about a person, a vehicle, a house, anything, it goes into this database. Then that gets shared amongst any of the agencies that sign up to go with this organization. Well, COPLINK used to do that but it didn't do it very well. Because it was just not a very good template, I would say. So it was very difficult to search. It's not a very good search engine. It would take forever to get any results and then it didn't upload things like reports from individual

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								agencies. So you could find out this person had a contact at this address and you can get a date and a time, but you can't find out why, like what was the situation behind this?
Problems - Information	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: Lumen information sharing app] ...we've tried out things like ProACT and we gave it a shot, but it just didn't work. But things like this really, really work because information sharing is our number one problem. I think when it comes down to any technology or anything, it's about sharing...
Problems - Information	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...So on channel one, we have a incident of somebody trying to kill themselves. So they hold the air, so they give us-- all the traffic that's on that channel is specifically for this call, so everybody else needs to move from channel one to channel two. So now on channel two, we get the bank robbery. So now all the traffic is isolated to that channel. But the problem is you're having scanning covering, so we're getting channel one covering channel two even if you take off your scanning functions. Sometimes it happens, sometimes it still covers it. So right when the bank robbery was giving out the information, the dispatcher was giving out the information, channel one relayed up something and it covered over channel two, so I missed the description of the person going out as we're rolling up to the bank...
Problems - Information	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: tracking device / suspect] ...And then there's the relay to the dispatch and then our dispatch has to relay to us while they're trying to maintain the channels and then also provide the information that we're giving to them to other people. So then they have to run a third channel, MetroNet, so they're relaying out all of our information to the rest of the metro area...
Problems - Information	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: tracking device / suspect] ...So our channels are encrypted so no one can listen to our channels. But they take it to Metro and now they're telling all the information, so now everybody else is-- if you're scanning the Metro channels you're hearing that we're tracking someone. So if the suspect is listening to that, they now know to get rid of the pack, which they did. Okay? So if we can-- I don't know how it can happen because

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you have to share encryption across everybody. So I don't know if it's a monopoly then if everybody has to have the same system or same--plus, then, if the encryption code gets out, then now you have to deal with all of those issues. But if there's a way...
Problems - Information	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...So if we could get on and just air out our information that we're doing this but have it be encrypted for everyone, then it would be good. And then those people that have the trackers can just air up for us and give us direct information because at this point, throughout today, I'm following, trying to catch up to this car, and I'm already two steps behind because the tracker's so slow. And now I'm another step behind because of the information getting relayed.
Problems - Information	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: tracking device / suspect] And then I have to wait to get on the air, and by the time we find out that the tracker has stopped, we now block off the roadway, but by then, the person is already long gone. We don't realize that because we think it's immediate information, which it's not. So speeding up technology. I mean, as fast as we can...
Problems - Information	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	Yeah. Technically, yeah, I guess it would be considered GPS tracking. It's not entirely accurate all the time, and there's a delay, so if you're trying to see where one of your sector partners is or something, you can see kind of a general area. But it's like I said on the delay, so everything might be over here and kind of know where they are, but it's not exact or anything like that.
Problems - Information	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	I think, in general if there's ever information that's not provided to us prior to arrival, it falls upon the reporting party or their inability to communicate effectively through dispatch. People are in states of panic or whatever, so it's very hard to communicate. And so dispatch has to do the best that they can and provide us with the most succinct and direct response to what they're being provided. So yeah, a lot of the time we show up, and it could be a suspicious incident or something, and it's actually an active domestic. So you get on scene and it's, "Okay, well, I wasn't provided this information," but it's not necessarily their responsibility to tell us everything that we need to accomplish our end

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								goal...
Problems - Information	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	...The suspect is heard to be down in the kitchen." Now we have at least an idea. We have two people in two different locations. It helps us with the plan, how we're going to approach that. So the more information, the better. But we don't always get that because the victim might not be able to provide that to us--
Problems - Information	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	...and that's the hard part is that they're scared. They maybe don't know that much. They don't know where the suspect is. If someone's frantic in that kind of situation, they can't always communicate very well, so.
Problems - Information	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Yeah. A snapshot will be-- it's easy. And it's now. Because like I said, DOL photos or driver's license photos are how many years ago. They still are that person, we can get basic identity or physicals on them, but then it's-- I mean, how many times are they going to look like that? They're going to be--
Problems - Information	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Well, I think it limits the amount of information that we end up getting. I'll kind of tie it into what we get as an anonymous complaint. If I get an anonymous complaint from somebody, and I go out there, and I can't find what they were talking about, I can't recontact them and get that information, right, because it's anonymous. They didn't want to give their name or their phone number, so now I've come to what they were really concerned about, and I can't either figure it out, or it no longer exists, or I may be in the wrong spot. But I can't call back and go, "Hey, what about--" and when you think about Text-to-911, there has to be the ability to reconnect with that individual because people don't like to text a lot of information. My fear with Text-to-911 is that you won't have a true idea of what the emergency is because they're not going to pass all that information along, and we like more information than less. So Text-to-911 has to be able to come with the ability for us to recontact the individual, to ensure that one, we know what it is you're trying to communicate, and two, we can recontact you if necessary. So I don't want to say it's a bad thing. I'm just saying I worry what the amount of--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Information	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	wants to make a phone call anymore, and I'm one of those people. I don't like talking on the phone. So it's easy to pass on the information that you want to pass on through a text message, without having to talk. But in a 911 environment, if the people aren't talking, you don't know if you're getting all the data or not. It limits your ability to ask questions, so.
Problems - Information	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Yeah. I mean, if people that aren't efficient with their [crosstalk]-- yeah. And so there's somebody talking about something that may not be super important, which I can't override that person and say, "No, get off the radio. I've got to put something out that is." Yeah, only person can use the radio at a time.
Problems - Information	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	...So sometimes, it gets a little complicated to get information back and forth, but that is very, very rare. I think in my opinion, we've always had an excellent working relationship with the fire department, and we just work out the communications issues on a as-needed basis.
Problems - Information	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	[RE: communication with other jurisdictions] It becomes even more cumbersome but much the same way because if I need some information from [County] sheriffs, again it's a matter of going through our dispatch to their dispatch to whoever they're trying to reach out to. Now, there have been occasions where I've given my cell phone number to whoever it is from the other agency that's trying to contact me or I've gotten their cell phone number, and we've had those telephone conversations, but those events, those situations are very rare. There's been far more numerous times where I've communicated with someone from another jurisdiction on an issue, not an ongoing, in-progress incident but some other mutually inclusive situation. And that's predominantly emails or sometimes a phone call. But operationally, it's not easy to talk directly to someone on the radio from another jurisdiction.
Problems - Information	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	And now, if you're in a noisy chaotic environment and now you're shouting, it just complicates it even more. But I honestly can't think of a single thing you could do to resolve that because you still have to talk on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the radio. You still have to listen to the radio. Sometimes the technology fails and the radio doesn't broadcast clearly. There's static.
Problems - Information	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	More details. But I don't get that on a bike. So police work's kind of changed. A lot of times, bike officers will see things that don't fit and we will get on radio and we'll ask, "Hey, can you run that license plate for me?" And then when they run the license plate, we ask them, "Is there any RMS on it?" which is Report Management System. So is there any prior thing associated with that plate? But our 911 center won't give us that information over the air anymore.
Problems - Information	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Right. The really important stuff is going to get forgotten, and the minor things get remembered.
Problems - Information	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	It's redundant information, and these are officers that-- what should have happened was at the time was the dispatcher should have called their sergeant or called them and say, "Hey, listen, I know you see the guy, but you didn't share that with me. Don't--" send it to each other, send it to me.
Problems - Information	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] think there's a saturation of information, and then what we like to call analysis paralysis sometimes. So many things are going on, you don't know quite which decision to make, and I think technology really is the cause of that many times because there's just a lot of stuff going on.
Problems - Information	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] --resource data, okay? So when I say, "Resource," I'm talking about people and things. So my car and my person. Or utilities has this equipment and this person out at a certain location. And sharing all that data together in one view, but yet making sure that we're not allowing any identifiable-- just certain information that can't be shared.
Problems - Information	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] So that's difficult to communicate with callers. We have language barriers, but we do utilize a pretty great language service so we can get translators online fairly quickly. Other issues would just be, I think, callers maybe not understanding that. "Hey, I'm going to get interrogated." And either they don't understand sometimes how the call taker is getting information and maybe are upset because they're not hearing the right things or that help's on the way, which we'll tell them

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								eventually. But it's hard sometimes to corral and control the caller, depending on what's going on. Among the communication employees, communication-wise, difficulties--
Problems - Information	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...So someone's actually in [City]. They hit a cell tower in [City]. It goes to [City] 911. [City] 911 transferred it to us but we'd get nothing. No location. No phone number. No any information
Problems - Information	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	...So we have to relay on dispatch to say, "Turn on the low-band radio, not the other radio that's in the car. Turn on the low-band radio and revert to this channel on low-band radio one, two, three, or four." And then the officers will be able to communicate with that. And then phone lines are going to be down. Cell phones, you're not going to be able to communicate. What do I have? Call box key. And every cop has a call box key.
Problems - Information	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	That's my worst fear, it's my worst disaster happening because I'm not going to be able to manage that scene because I'm not going to be able to communicate to the officers that are in there. There's no way I can do that, and you always have these scenarios as a cop. I get all these scenarios that go through your head and you start thinking, "Okay. This is going to be a disaster." And you hear the other cities that have the same stuff. You get all of these 30, 40, 50 cops running into a mall. At least they can communicate, but just to manage something like that.
Problems - Information	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	So the dispatcher knew where. So she relayed the information to me over the radio and everybody-- now I have to monitor, I've got cops going, lights and sirens, from five different directions. I got to go. "Uh oh." I'm thinking, "Oh, they'll go crash. Don't crash, don't crash, don't crash, don't crash [laughter]."
Problems - Information	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	So that's the most frustrating with the people that are calling 911. They have a script. "What's it look like?" [inaudible]. "No, what's it look like?" Right? Because they have a scripter going [inaudible] even with the fire side. I need an ambulance here. "Why?" Because they have to figure out what type of-- are they bringing firetruck also? Are they bringing police

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								who might be closer with the [AD?]. What's going on? "He's going nuts, I need a--" well, if he's going nuts, they're not going to bring the fire or the ambulance crew by themselves. They're going to bring in the police car also, right? And then it's because they're going by their script. "He's having a seizure." Once he has the seizure, it's already done. But [inaudible] response, [are they?] bringing the police over there. Once he wakes up, he's going to be disoriented, so these that you have are the little script you go by. The cops get frustrated, I think, every once in a while. "We need an ambulance here now!" "What's the reason?" "Get an ambulance here now, he's not breathing!" "What's going on?" And the cop's doing [crosstalk], so. So that's, you know.
Problems - Information	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	... there's a cleared emergency channel, for something, some cops chasing a [inaudible] suspect, all of a sudden a cop is in front of the station calling for an ambulance at the same time. Sometimes I can't get on the radio. I'd rather get the information from CAD, or I can switch it to another channel.
Problems - Information	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Pull him out at gun point. Put him on the ground. Now I have to come back to the station, write a report that [inaudible] gun and the person who called 911 is now anonymous, and there is no call back number.
Problems - Information	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	With these cell phones, and people filming you, all right? It's very, very difficult to-- and even with our shootings, when you get an officer go off shootings. And the next thing you know it there's a protest, because it's already been on YouTube on the civilian side. It'll be four or five days before they put out the real video.
Problems - Information	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	No. As far as technology goes, I mean, we focused on the commutations aspect of technology. Information sharing across platforms, I shouldn't have to run you three or four different ways to get an FBI return, to get this return, to get that return. I should be able to run your driver's license number and get everything I need.
Problems - Information	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	I want to know what the guy looks like, because a lot of times we just get, "It's a male with a gun." And I'm standing on that intersection. I'm

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								like, "Can you tell me what he's wearing? Does he have a backpack, a purple hat, green-- what does he look like?" And they'll just go, "It's a guy." No description of race, nothing, "It's a guy with a gun."
Problems - Information	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	And that's happened to me, where I'm at the corner, and there's a guy with a gun. And I could be standing next to him; I don't know. So more is better with that type of call.
Problems - Information	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	And, I'm like, "Ma'am, what else? What else?" And they can hear that we need information, but they don't have it.
Problems - Information	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	...I don't want to know about the noise complaint three days ago. I don't want to know about the neighbor and the other neighbor fighting. I want to know if this guy or this specific address has had gun calls, domestic violence, or any kind of police resister. Just those three categories alone would save the four pages of noise complaints, of garbage complaints, homeless complaints. We had that-- because when the call pops on the screen, there's an additional screen. And it shows you the address and all the prior calls for service. But it's like three pages of homeless guys sleeping or someone's peeing in the alley on that address. So it's not pertinent information.
Problems - Information	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	.... So we try to have either a liaison from us with their staff, into a command post type situation, and then have that information pushed out. But again, if the event is super loud, super crowded, the delays, and then getting that message from these different entities. So it's a security guard that sees a medical call for service and the only person he's talking to is PD. And then PD either has to get him on the security radio that's there or go through our dispatch, who will then, in turn, go to a different channel or even try to raise that medical staff that's on site. There is that time lapse that occurs there. A lot of times, we try to keep them in our line of sight and have pretty good cell phone number for these people so we can do that. Get a text message to them or something, some way to do that, but that's always one of the bigger challenges that we work on in this. And each year, we try to dial in a little tighter

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Information	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	...And that really kind of came up in the DOJ reviews of the limited information, as far as the info related to stops, the demographics, the reasons for the stops, and all of that didn't give a big enough snapshot for stuff. The eStop program really is super beneficial to that. You can actually see it. You can drill it out more and figure out what the reasons were. But the information from there is not pushed anywhere else. So we're kind of-- it's in the eStop system. It's not in the report writing system.
Problems - Information	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	... So sharing the channel is beneficial, but sometimes, depending on the incident, it can be monopolized. And then so the district channel will have to get pushed to a different district channel. So either they'll switch it to one from two, which is our normal channel or they'll move whoever's engaged in whatever incident to channel nine or something. So that disconnect isn't having dispatch trying to keep up with that overlay. Sharing the information that's relevant to the district channels as something evolves. Say I've got an outstanding suspect that's now running, but everybody involved is on channel nine, but channel two is where he's running. So trying to get that information shared out. I think that's just a wrinkle. I mean, obviously, we've dealt for a number of years, and as we identify the problem, we adjust for it and we work on it.
Problems - Information	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	...But when they have a robbery or a suspect or something that is now in pursuit at our direction, that once it starts to get to an automatic area, it should automatically notify the next district that this is coming. And currently, it's when dispatch gets a break because they're multitasking trying to communicate with the supervisors, notify the officer that's in pursuit, notify somebody else, and at the same time, they may have a call taker on the phone that's trying to give them information. So those dispatchers are kind of inundated with information. And then for them to get the switch over to tell the next district that this is coming, there could be a delay.
Problems - Information	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...the radio would be the initial call getting put out. Maybe you need an update or you need dispatch to call that person back because we don't

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have access to their phone number after they call.
Problems - Information	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...Some calls tend to have a little more information and it's as much as good as it is to have, sometimes going to a call and trying to read and drive at the same time. If It's a big block of text and you're trying to fish out the information you need, it can be a little difficult, especially if, for example, if they run a plate and they put all the plate information in, really all I'm concerned about is the plate number, the year and the make and that's about it. But then I have all this other stuff that I don't necessarily need at that moment.
Problems - Information	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...trying to coordinate between the dispatcher talking to the state police dispatcher then to us, and getting all the information back, there's a lot of confusion going on. I mean, we had people chasing people. Nobody knew who the offender was. Until you get there and somebody can actually put it out that this is what happened, there's-- it's confusing sometimes.
Problems - Information	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...when you're going by the fact of State Troopers calling for assist, that's all that will come through. It won't say, does he need an-- it should be more clear. Sometimes, they'll put out an officer needs assistance, and they'll make it like almost like an emergency, where the guy just needed a transport.
Problems - Information	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	You know what, I think sometimes the shortfall is what the caller gives us. So, part one of the puzzle is the 911 call and if that starts very poorly, then it's that bad game of telephone just totally degrades by the time it gets to us in the car.
Problems - Information	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: drones] ...If you can see the video from what's going on and that you actually have-- you know what's going on that second. But from somebody making a phone call to the five minutes it takes you to get there, the entire situation might have changed or it might have gotten worse. The person wasn't able to call 911 or they weren't able to get the information out.
Problems -	LE	U	Field	Not	Not	Not	LE-U-024	Because I do know just talking to firemen-- they might get a firehouse

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Information			Responder	specified	specified	specified		call. But if they get an update from us saying, "Yes, this is a bonafide fire," then they start rolling out more trucks. But initially, their response is slower until they know for sure that it's a fire. But then, it's usually too late, especially with the rate that houses burn these days.
Problems - Information	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	LEADS 2000 which not every officer has access to for [City] but you could get driver's license photos. So, if someone's playing the name game and says that their brother-- well, of course, you know your brother's birthday and his address, so you can easily say, "Yeah, I'm him," and we would never know the difference.
Problems - Information	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	Q: So for a patrol officer who's out there and gets sent on a call, does he or she have the information by the time they get to the call that they need? SME: Sometimes. The person who is calling the police may not tell them everything that's going on or they may not know everything that's going on.
Problems - Information	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...There's a program called Vigilant. We'd just like to have access to that. Vigilant is like the plate reader but it is in a car. Have access to it in the station, that it would be nice being able to see all the plates and look at the plates. Because right now only CPIC has it and by the time they send us the information, the information is old. A car is mobile, so it's not going to be there for that long, so having access to that would be nice.
Problems - Information	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	[RE: senior officers] So I mean, I understand their point of view too, because sometimes I get frustrated. It's like, "This is basic information," but we'll discuss it more later, I guess. But it's like you got the people that are old school, "Here's the keys. You know where the problem is. Go out there and do it." And you got the new technology coming in. Well, what's going to be able to help us figure out what to do there, what to be on the lookout for? So it's that lap between what the lieutenant is telling you at roll call, and what you retain, like, "Well, be on the lookout. This corner is that-- we're looking for this person, that person." It's like every day you're always looking for somebody wanted. Every day something violent happens that they're trying to find the offenders...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Information	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	<p>...So there is that gap where I think a lot of officers really-- I don't know if I want to say really care or really don't want to be bothered looking on the computer all day. They'd rather just hit the street and focus on what's in front of them. Because it seems what's in front of you is more important than what you could get from a computer. The here-and-now versus what happened in the past maybe. I don't know, I mean, it's a hard one. Like I said, every day, I give you a set of keys and I say, "Go do what you want to do?" So for me, me finding it, no, it's not a problem for me. But like I said, I'm pretty good with the computer aspect. Every once in a while, I'll fill in the commander stuff or the comps desk stuff. So I know how to pull [police database], and upload the gun reports, pull any major incident that's happened in the town districts or the area. So I don't really have-- for me myself, I don't have a problem reaching that information if I want to dig into it. But the issue is you're a beat car. Why are you in the station looking up all this stuff when you should be out there patrolling.</p>
Problems - Information	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	<p>I think that's the issue that I have with the HunchLab. If it could be a little bit more in-depth or a couple more boxes just to click on. Just to click on and see there was shooting [inaudible] blah, blah, blah. They don't want to give-- and just a quick briefing of what was it about. What is it drug related? That's something that when I log in on the computer, I want to find out that shooting, that's what I read. And there would be some from the detective's division saying, "Okay, victim, possible offender information, possible gang problem." And the detective's good with it because they will always label preliminary what they think the justification that shooting was. Was it gang related? Was it calculated? Was it road rage? And they'll say, "Male standing in the corner was approached by blah, blah, blah." And it's a pretty short paragraph like, "Okay. That's what that's about." But that's something that you really can't access on here. I'll have to go back, and here I am, head down in the middle of the worst area in the town district, and now I'm logging in here trying to find it. So I mean, that's the biggest thing. The information is there. It's the problem of accessing it and get the information. Cops are very impatient. We want everything here-and-now, okay? And if it's</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								going to take me too long to try to find it, then why bother?
Problems - Information	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	...I think we're at a phase in the police department where you got the technology come in but you still got the old school people. It's nice to have more information at your fingerprints but you have to really kind of dig at it right now to try to get that information. Do you want to be patient to do it...
Problems - Information	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	I think the biggest calls for service are the ones that are violent. And certain houses that you know are really bad, when you go there, you know they're bad. Okay. But I don't know if it would be good to know, well, this person who called is a battery victim, or-- you could always do a history on the location. But like I said, ease of access. Now I got to hit the menu, then I got to hit the address, then I got to do this.
Problems - Information	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	...we came up with something called SDSC Live [laughter]. We want to call it SDSC Live, and it would be a PCAD-based software which we could push real time-dynamic data to people. Data is dangerous. Big data is dangerous. Too much data's dangerous. Data's powerful, but data dosage and delivery is the key to data being used. Otherwise, if it becomes too much, it's as good as not having it.
Problems - Information	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	I think we have a problem with that now. I think we have a problem with too much data going out. We need actionable intelligence. We need actionable data. Someone in the department needs to be responsible for analyzing the global data picture, absolutely. All that data, again, disseminated down, it just creates data confusion, if you want to call it that. It's too much. You need to figure out-- you need to vet that data. You need to then send it to the right people in the right format. That's the other thing. You need to send the right information to the right people in the right format...
Problems - Information	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	[RE: visual information from dispatch] And that visual has to be pushed. The push is important, how it gets to the officer. Flying, bing, and you just see a big picture, "This is the car we're looking for." That's awesome. If it's an email that they got to open up or this and that, it's not going to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								work. The format's wrong. It's a dynamic situation. They can't get to it. It needs to be boom, "Wanted vehicle for this," boom, and just the picture of it. Simple, bold writing. That's the key. Now, if you give them too much information, if it comes up in a format where, "Year 1997, Ford Taurus, VIN number." I don't need all that. Let me see the car. Let me know what-well, now I know what I'm looking for... Give it to me so I can digest it. If you eat too much, you can't digest it [laughter]. If you can't swallow it, it does you no good. That's kind of what happens with that information, the way it gets sent out.
Problems - Information	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	[RE: over-communication] No, I don't find that problem on the radio. The radio, through the limitations of technology, it actually serves as-- it has its own discipline mechanism built into it [laughter], into its limitations, yeah. So it's good. One person speaking and everyone's listening, and that's the nice thing about it. On the mobile phone, which we've done this when we're doing surveillance and stuff, and we're in multiple cars, and we're following people, it gets crazy. So-and-so's talking, and they feel like the most important thing that needs to be said is what they're saying right now. They're saying it, and now you're saying it, and it's getting confusing.
Problems - Information	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	It can. That's the most important thing I would like to leave you with, is if you have too much data going at people, it's almost as good as no data going at people because they're just tuning it out.
Problems - Information	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I think it's because of the construction of the building. If you walk down the hall here with our command stuff you'll see everybody's radio sitting on the window sill because that's the only place it'll be able to link up with the system so we have explored I can't remember the name of the what it is but some type of repeater for in the building so if typically if our one of our deputies is in their office or back in the room where they write reports you'll hear dispatch calling them and they can't hear it because they're kind of towards the innards of the building and so I don't remember the name of what it was but I think we did get a bid or a quote to have it installed and it was like a hundred thousand dollars or \$90,000

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and we're like oh I guess we're not getting it.
Problems - Information	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Yeah but that would certainly be just from a safety standpoint and a communication standpoint of the deputies can't get out or hear things going on on the radios because we often times have a dispatcher come walking down the hall saying where is so and so and they're like oh they're in the back writing a report and they can't get a hold of them so that's a challenge.
Problems - Information	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	From my perspective... One of the challenges that we see not just in this environment we have approximately not quite 30 different organization units within the county from the coroner to the road and bridge to the weeds department. Obviously the Sheriff and some of the more well-known ones but you have so many different silos of information and communications that it is often difficult to consolidate that. A lot of these systems don't talk to each other, they weren't designed to and they have no way to interface and so a move towards a more integrated or consolidated technology in my mind for me you know my email is kind of my lifeline...
Problems - Information	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Communication problems. I don't know everything causes problems right and that's such a cop out answer but it's true. Over communicating, under communicating you know sometimes you tell people too much information than they need, sometimes you don't tell them enough, sometimes you don't tell the right people the right things, sometimes you tell the wrong people the right things, sometimes you have communication technology that doesn't work. I mean it's computer, it's technology, it's electronics right? They don't always do what we want them to do.
Problems - Information	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	For sure. So call history is really important to us as well. We don't have the ability to lookup call history as far as repeat events so sometimes and this goes for even the full times guys so we're four on three off and then three on four off and then vacations and everything else so there's times where schedules literally you won't work for two weeks which is great. A lot happens in 2 weeks so you may have a neighbor dispute it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								an ongoing issue and you know you're getting sent to a call that you think is a brand new issue, you get there this thing blows up in your face and you're like I wish I would've known what was going on. I wish I would've known what [Name] had told them. I wish I would've known what [name] told them. I wish I would've known that they were given information to contact an attorney. It's a civil matter so that kind of information on past events will help us solve the issue quicker and especially where they're trying to manipulate law enforcement on civil issues to see who they can get. Maybe they can get the new guy who doesn't necessarily know and they'll get him to actually write it and give it to the prosecutor. That kind of stuff is helpful.
Problems - Information	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	The other thing that plays against us that I wish I knew more is and it's hard to do some of it but criminal history before we're dealing with people so knowing a little bit more I mentioned the vehicle walk up to the vehicle and know if the vehicle is stolen. Knowing just a little bit about the vehicle before I get there and then the same thing with the people. A lot of times you got to do a lot of digging to get to incidents even in our system, our local database you know you kind of know who the players are in the [County] but there's always new guys coming and going and that information across state lines that we have locally in our database does not go anywhere except for local.
Problems - Information	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	We can see call history like we can see what calls they go to and who is involved but kind of like with the dispatch, the patrol and the jail they have their own little databases and information that they have yeah so the data doesn't necessarily transfer back and forth.
Problems - Information	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	I think regardless of who we're talking about I think that inaccurate information is going to lead to any communication problem either a report an inaccurate report coming in from a victim or witness to dispatch where yeah I saw the guy he was wearing a green hoodie and blue jeans. Well no he wasn't he had on a bright red t-shirt and shorts. Witnesses can be incredibly unreliable, victims even more so because of the fact that there may be a level of trauma involved in their interaction

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								with a whatever the case may be so inaccurate information is going to lead to miscommunication.
Problems - Information	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	That miscommunication depending upon the nature of it is it (01:04:24) oh I misunderstood the chief when he said get it done today and you know I thought he said next week or was it a victim saying I was robbed when actually it was a panhandler who was just looking for handout. Two very different levels of miscommunication or misinterpretation that can lead to very different responses in very different consequences.
Problems - Information	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S3] Like just like he said unless it came out of roll call look out for a certain vehicle and we've like he said when we determine that these cars are committing multiple crimes in multiple jurisdictions so all these jurisdictions have been putting out a list of stolen cars okay.
Problems - Information	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S3] ...Sometimes you got too many people putting out unnecessary details that don't necessarily involve other people. I don't know. What else guys? I think if you necessarily don't have a restriction on who is putting information out that's when it kind of gets all cloudy you know what I mean?
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	I think misunderstandings. Because a dispatcher knows, how can I say it? It's kind of like having been married. My wife may know what she wants to say, may say it not in the way she intended it, and I may interpret it the way I am understanding it. The same thing, a dispatcher may get the information from the complainant who's either not relaying it correctly or relays it overly enthusiastic. The dispatcher gets it, puts it in, so you're reading just words. So unless they... sometimes they'll we have what we call silent dispatch whereas they would just type it in, tell you you're assigned to this case. They send in an assignment to you and you open up the case and you see what you have. They may never even-- dispatch over the radio. So, but on hot calls then we're talking to them because their dispatcher knows over the radio. And you're looking at it. So as far as problems because again you're going back to silent dispatcher, if you're not even understanding the exact verbiage, you may read it without understanding it. So I think miscommunication is our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								worse communication if that makes sense, because the way they may have intended it may not be the way we're reading it. Simple things reading one sentence could throw an entire case off because that's not the way we read it.
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	Human technology and interpretation. A simple thing, because a suspect saying, yeah, I'm standing in the front of a brown house, and the dispatcher--we had a case where a guy was shot and he told the dispatcher he was standing in front of the brown house. The subject's laying down in the street. So we get to the brown house, we're expecting to see a guy laying in the street. Well he wasn't there. The person was standing in front of the brown house because they took off running and was three streets over now. But the body was actually on the opposite street but the dispatcher because she assumes that he said I'm standing in front of the brown house that he's laying in the street, this is in the general area. But it wasn't. He's laying in the street further down. So it may--simple thing miscommunication. And some people get upset, some won't, but look, they're just writing down what they're being told.
Problems - Information	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	Yeah, I think we see that and my--I may be talking about a different information sharing than you are but you know sometimes you... you don't push enough information down or you push the information down the lines and it gets stuck somewhere and somebody doesn't see the need to pass that one or forgot to pass that on or missed it and didn't pass it on. You know issues from email working or radio working or you know we haven't had any of that. I was here for Katrina and we had some issues then with cellphones and radios and you know I think they did a lot of things to improve the state system since then. And you know we haven't had any issues through ice storms, a couple of hurricane reactions since then. You know I think the state operation system has really beefed up since then.
Problems - Information	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	The biggest problem is that the officer may be the last person for that information to get to, so at any point in the chain, if something is--if a question isn't asked at the very beginning, then it gets back to that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>officer, who now doesn't know a piece of information, because you always have at least three individuals dealing with it, you have the complainant who's actually calling communications, sometimes it's more, if they dial 911 and they're close, it sometimes goes to EMS or the Sheriff's Office before it comes back to us. Most phone calls that occur in the area will come straight to Communications, but not all the time, so we may be getting information third party from another group, and I guess that officer, that does cause issues. If Comms doesn't ask the right questions, or [inaudible] follow through with a good [inaudible], that's not going to get to the officer. The streets out here, a lot of the parking lots have changed names at least twice since I've worked here. The Communications Officers, whereas they used to be--whereas they used to be uniformed officers. They can see the stadium, because it's huge, it's a very large landmark, but they're not looking at the streets, and the communications [inaudible], oh, they're sitting there by the saw [phonetic], or they'll hear--they'll try to get that information from the complainant, and the complainant is not sure where they are, so they'll just send us somewhere, like, there's no one here... They can see the stadium, because it's huge, it's a very large landmark, but they're not looking at the streets, and the communications [inaudible], oh, they're sitting there by the saw [phonetic], or they'll hear--they'll try to get that information from the complainant, and the complainant is not sure where they are, so they'll just send us somewhere, like, there's no one here.</p>
Problems - Information	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	<p>...Riding for a reason, it would be just like [inaudible] just went out, a worker will complain about something to their immediate supervisor, who will tell their immediate supervisor, who will then say, call the police, when that first person--when they just reported a theft, so that would be extra people involved in this complaint, and it'll finally get to an officer, but there's no information, because all comms may be asking the person who called those questions. The person who called isn't the one making the complaint, or will have [inaudible] work around here who have a captain's number, or chief's number, or the major's number, or just</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								an officer's number, who think, here's a crime, and sometimes, that's an active crime, or it was an active crime when they should have called us, and they'll just tell somebody about it that they know, like, send an email to somebody who works in administration here, or call their friend of theirs so they know, who's a patrol officer, who then gets around, and I think that's just the nature of where our work is sometimes, where it can be difficult enough moving that information through two different people or one different person to get back to the officer, ask him if there are extra people, that's happening after the fact. No one knows, no one remembers.
Problems - Information	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	... So now it is, just looking at it, the technology is there, but because we have such low call volume, you could get away with things like just asking for the description again, or giving more information than you need to give over the net, so stricter on the reins, because the more you put out, the more you're using your radio, and you don't want to use your radio that much at all.
Problems - Information	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Sure, yeah every day. I mean, social media, people putting out wrong information on social media that may be close to a situation. It hampers your investigation sometimes but yeah every day -- it is as much hindrance as it is a help, you know, it's a double-edged sword. But you know, I said that it is probably better than it is bad. You know for all the bad that is in it, you know it is probably better than it is bad. Communication -- when you can communicate with people effectively no matter how they get it you know. I think we are all better off.
Problems - Information	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	Well, you would be surprised. We are a little archaic in our communication system, and again that is because, you know, we are not a high density population county. So when I talk about this, I am not talking just specifically for our city, I am talking more generally with our county - a bigger picture, if you will.
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	I mean, I think technology does have a component into just basically how everybody is so connected where it used to be divided, but now with social media and the different apps that you know, while

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								connectivity I think we use the present tweets. Okay, that is always positive, right? So, normally - I shouldn't say normally; historically, you didn't really have that kind of medium to be opinionated; there were some filters before it actually got out the mainstream public. We dont have that, and as far as police work or firefighting and public safety in general, you have people YouTube, you know, traffic stops and so forth and you know, the problem with that is - I mean, I dont mind if somebody wants to videotape me. The problem is they might only get half the story, and nobody wants to listen to the other half.
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Oh, for sure. You know, like if I have to pass on something to the fire department, I generally call back to Dispatch. Dispatch then will call the county dispatch. County dispatch will then relay it on the Fire frequency over to the Fire department, so there is a huge delay.
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	S2: I mean, I can't call [County], call on the cell phone. I can't call [County]; we don't have their frequencies available, so it would all have to be relayed from us to here to County, to their dispatch to their officer and then back to the state again. S1: Which creates the delay you talked about earlier. S2: Right. And what is lost in translation.
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	You are passing through a number of people which will tend to distort what comes out the other end but also you are touching base and using terminology that is so different, probably, and you are hitting different points along that snake that they might not know exactly what you are talking about. So they dont know what they are hearing, they can't really pass it on accurately, I dont think.
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Yeah, I would. I mean, I think they try their best, but if - you know, there is always what's lost is the nonverbal or you have let's say a dispute maybe that is domestic. While it is a domestic, depending on what the office is asking for, you know, domestic, if I hear that there is another officer at a domestic, that I am going to go help because I know volatile domestic situations can be and so forth and so on, but sometimes, the dispatcher might not know - okay, well, so and so on [City] is on a domestic, should I send another unit automatically or do I wait for them to ask for it? So, a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								lot of times, if we hear it, we might not even wait to get dispatched; we will just start and that way whatever.
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Oh, for sure. When it doesn't work, it always becomes a problem because we are so reliant upon it that - you know, if [unintelligible] goes down because they are doing an update or whatever, can't run bad guys... So we may let somebody go. I mean, you are stuck in the dark because you dont know who they are.
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	You got different people in different frequencies and that becomes an issue, especially - I shouldn't say especially but the way the county works is they have got one dispatcher on Fire frequency and one dispatcher on Police or, you know, two and two, whatever, but it's separated, so we find a lot of times doing both; [unintelligible] Fire gets information that isn't sent to the police and vice versa.
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Yeah, they know that they gotta go and where to go but as far as okay, hey, this, you know, this person has got a history of violence or whatever might not make it to the opposite frequency.
Problems - Information	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Which was identified as a big problem then and it still is. You know, our inability to have dedicated channels to talk to different folks where the Fire has the capability to go to different channels, so for instance, there is the main Fire frequency that everybody gets dispatched on and then if there is - if it is a big enough incident, they might go to a secondary channel, but once they go to a secondary channel, people that dont have that, whether they are, you know, coming in or not, you know a lot of time, agencies that respond in won't have that secondary frequency so they won't know what's going on. And there are certain things you have to do once you arrive on scene, so how do you get that?
Problems - Information	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	Most of the agencies out there all have different systems and I think it would be nice to have something across the board that had all the functions that are user friendly. There are different computer systems out there; like the one that we have currently is pretty user friendly; it's real easy to use, it has kind of a lot of new features, one that they might

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								go to if there is a merge with [City], that it is still going to go to a different system that is not as user friendly and doesn't have the features that the current one has and we will have to learn a brand new one over again that is not going to have the same features, not gonna be as good, in my opinion, because it is not going to - we are gonna lose the functionality that we had before that we took for granted, like the large database of names and stuff that we already have for the downriver area; not in that system anymore, we are not gonna have that anymore.
Problems - People	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	"--this doesn't add up. I mean, I do not have this channel." So long and short of the story, 20 minutes later, we finally figured out that that request was SCU Lincoln 5, which--
Problems - People	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	it could be a button that you press on your CAD, changes your channel for you or it could be a robot that does it for you. You will have some elements in there that you just can't work out or work around because there's [laughter] somebody at the end that either was trained 20 years ago or trained 20 minutes ago, and they're not doing it correctly, in some shape, or form, or fashion.
Problems - People	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	We've lost one in two years out of training. Our normal training isn't that long. So it's kind of scheduled for five months. It just didn't work out this time. The other lady that's in training is from Peru. And she's had some difficulty with accent, people being able to understand her on the radio. So we've given her some extra time. And we're doing some different things with her as well. And the other guy, [Name], who does all the education with the community is-- he had some of those same kind of issues with accent and particularly the radio because when you learn English, that's all great.
Problems - People	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	It's not. We would like to have them do Spanish, but-- And it works in different situations. We're actually looking into now that a lot of people will answer a text and they won't answer their phone. So we get a lot of butt dials here - a lot of 911 butt dials - and about 30% of our 911 calls are butt dialed, so we call them all back. Every single one of them.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - People	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	We have to. And nobody ever answers. But we've heard from other centers that they will answer a text.
Problems - People	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Yeah. And right now, if you want to change your address you have to go to-- if you're in a town, you go to the town, and if you're in a county, then maybe somebody doesn't care about it, and it's just a mess.
Problems - People	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	... So we have 53,000 people that live here, but in the winter time, the population of our county is closer to 85 because of all our skier visitors. And a lot of those people call 911. They're lost. They're hurt on the ski mountain. They've crashed their car because it's snowy. All that stuff, and so, a lot of that impacts our business. But their surcharge goes to wherever they live. So we don't get that funding from them. That's one thing. Location information sometimes is difficult to get from a cell phone. And again, we have a lot of visitors here. And they never know where they're at. Had no clue.
Problems - People	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Don't have a clue. We do get phase two data from most of them, eventually. And we can usually track people down just by talking to them and asking them questions. But not always. And so that's difficult for all of us and for our customer, too.
Problems - People	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	... However, other people think of it as an enabling factor. Anytime you have a large pot of money, people are going to take advantage of it. So there are people that call 911 that are abusing the system. That's just part of having a large metropolitan fire department.... Sometimes in these more densely populated areas, and part of has to deal with the economic split in some of the lower economic areas of the county, people don't have a stable income, they don't have Medicare, they don't have health benefits, and so their only help is 911 and the hospital. And since we have such a strong financial foundation in [County], with multiple hospitals, fully staffed, that are very good hospitals, that's their only case. So they call 911 for a splinter.
Problems - People	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	Very minor things like, "I have a headache." "Okay. What were you doing?" "I was drinking." "Okay, how old are you?" "18." "Okay, first of all,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you're underage." And they call 911 for these--
Problems - People	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	So, for me, a common sense thing of, "Oh, I have a splinter. I'm going to go take a needle and pick it out and put a Band-Aid on it," people call 911 and want to go to the hospital for that.
Problems - People	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	Exactly. And so you have all sorts of numbers of people that are just-- or you get the people with some psychiatric behavioral issues. You can't avoid that. You have to send help. So we get our frequent callers. People say, "There's a plane crashing--" there's a certain gentleman that has a certain phone number that we know. And whenever he calls up, he says, "I'm having a heart attack. I just set myself on fire. And I see a plane crash." And he says these crazy things. And he is out there. But if you're a new call taker, you freak out, because you think this is a major thing. So those are the type of people we deal with, is people anywhere from-- I wouldn't quite call them system-abusers. They just don't have coping skills for life. And so their only out is 911. Then you have other people that come from other countries that don't even have a 911 system where they came from, and the thought of calling 911, and from their perspective, getting a paramedic with a lot of equipment, is better than most hospital facilities they came from. So they love utilizing this resource. And in [County], if you don't have insurance, we don't bill you. It's a complete free system. If you have insurance, we'll bill your insurance because in your insurance plan you're already paying for it. So it's not added cost. So if you can't pay for it, we don't bill you. If you can pay for it, you're already paying the benefit. So we're just taking advantage of the insurance side of it. So that's where a lot of people like to come into [County] because they get great emergency coverage for EMS, with no cost.
Problems - People	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	... Stressors, for a lot of people, are the language barriers. ... So we have a language line that we can call immediately and it has close to 100 different languages that are available to us...and all these crazy countries that the dialect is so specific that the language barrier is horrible. So when you're receiving a call it's a huge stress trying to figure

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								out what language they're speaking.
Problems - People	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	I've actually had this discussion and I've actually argued in favor of both because there are certain firefighters up here that will turn around when a call-taker is crying and they're upset and they need a moment off the floor because they took a call that was hard, and then the firefighter, insensitive bastards that we are at times, with our unique humor.... So that's been a problem up here because of that, but there's been a lot of training and the good thing is the longer that some of these firefighters have been up here from the field, that's one of their transitional things they have to learn about, is understanding these people that work up here that are now on call takers aren't EMTs. They don't respond out in the field. They don't know what it's like to be in your shoes, as much as you don't know what it's like to be in their shoes. And once they kind of grasp that, they may not agree with the responses but at least they shut their mouths
Problems - People	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	So certain people's personal work ethic and what they want to know and don't want to know, and if they want to be more prepared or not, all those variables come into play so that we do have a very good back up radio system that if the people are comfortable with it and comfortable with the transition, it really helps when we have a failure of system and we can immediately switch to something else.
Problems - People	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	... Every once in a while we'll come across a crew that is trying to hide under the radar. Sometimes they've just been beat up. Six or seven calls before lunch, it's now 3 o'clock. They're hangry, they just want to get something to eat. They just want to stay at the hospital, go to a store, grab a quick bite to eat and then go back in service because they know they're going to get hammered.
Problems - People	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	...Now with cell phones, you have 400 people calling for the homeless man on the corner who appears in distress. That's a waste of 911, it's a waste of resources because the guy is fine but all these people with cell phones don't know. None of them wants to stop and help, they just use their phones--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - People	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	--they don't speak any English at all or what they do speak is not clear. And that can be very, very stressful and frustrating sometimes on them. Yeah, just all kinds of different socioeconomic backgrounds in this county.
Problems - People	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Yeah. Had to talk to our technology battalion chief this morning about a radio outage for a short period of time. Had to talk to one of my employees because he was being a bad boy [laughter].
Problems - People	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	To me, it's less than a minute. But sometimes it's just unavoidable. It's going to go over a minute because of the technology. So just some personnel, just working with them gets my stress level up just because of who they are.
Problems - People	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	--the selfish ones, the ones that push the envelope.
Problems - People	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	They get frustrated because they want an ambulance. They don't know the difference between advanced life support and basic life-- they don't care about any of that. They don't care about our response packages. They just want someone to show up at their door. So that can be frustrating, because I know I've dealt with it before in taking 911 calls. My philosophy on that is I don't care. It's not my emergency. If you're not willing to give me the information that I need, address and phone number, and tell me what's going on, then you're going to wait.
Problems - People	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	So you have to-- there's a fine line being empathetic and being stern, I guess. You can't take it personal. "My mom's not breathing," "okay, what's the address?" The caller thinks that they've given you the address, they're good. They can hang up now. And that's not the case. We have to --
Problems - People	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	...We are a lot more patient than other agencies would be and so I think that it helps us in a lot of ways but it can also be kind of negative. It helps us in one way because I do feel like there is a higher professional standard so we're very good at our jobs, we're very professional and courteous to the public but then on the other hand sometimes they can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								tax our resources because we're responding and dealing with these incidents that maybe you shouldn't really be receiving a public safety response.
Problems - People	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Usually so for a perfect example would be one that I took a couple days ago in which a person kind of expressed that they didn't like the look of a vehicle and there was nothing that they could express about why they found the vehicle to be concerning... There was no suspicious activity, they didn't find anybody that they found suspicious around the vehicle that sort of stuff. We respond to a lot of civil matters that because they want the police to respond we will respond even if it is a civil dispute and there's nothing for the police to do. If they say they want the police to respond we respond. So that's more of a and that's a policy that a lot of us kind of share the opinion that that's a policy that kind of is bread of this [City] Way.
Problems - People	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Right. So we say we need two [separate public safety buildings] that makes sense to them but then we say we need something geodiverse and they're like why? Because they don't think that way so that can be frustrating sometimes.
Problems - People	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	And then with that we have received somewhere in the range of two hundred and thirty texts. A good probably 80% or more of that are accidental texts to 911.
Problems - People	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Or believe it or not we get butt texts not sure how you do that. I haven't quite figured that out but we do get butt texts and we also get people saying hey does this work?
Problems - People	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	There's no money in it for them. It's very expensive for them to upgrade their systems and that's why we currently don't know where you are when you call 911 from a cell phone.
Problems - People	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	So it's kind of hard because we have to really start getting down on our builders to make sure that they're doing the right thing.
Problems - People	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Even if it's a very non-emergency they expect a certain level of response. So it's hard for us to keep up with some of those expectations. Some of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								them are very disappointed that we don't have certain applications that are out at the moment. One of those being smart 911 and the reason that we chose not to purchase smart 911 it is free to the citizens but it costs the county an annual amount.
Problems - People	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Now they say every 6 months they're those who buy the who download the application every 6 months they're sent a notification to update. They have to at least sign in and acknowledge that all the information is still accurate and correct but when you look at the elderly populations or you look at the younger populations who you know they get an email and they're like oh whatever and they just blow it off or they don't know what to do with it or they get a phone call and they don't recognize the number so they don't answer it how do we know the information is up to date?
Problems - People	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	We have lots of non-emergency calls stuff that during the day other county departments instead of knowing where to transfer them they're like we'll just transfer you to the non-emergency number and then we are then tasked with trying to figure out where this person who this person really needs to talk to. We have citizens who call upset because there was Canadian bacon on their pizza and not American bacon on their pizza.
Problems - People	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	You're one of three hundred cars right now. We can't send you an officer. Exchange information move your cars. Well we need to be towed. We don't have enough I'm sorry like we're in a snow emergency. If we send an officer to go and assist you our officer is going to be in the same situation and we need our officers to be free to go to emergencies and not in a ten-car pileup because you guys decided to drive down a hill that you drive everyday but yet still decided to drive down when you knew it was going to be covered in ice.
Problems - People	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	You've been driving this route for 10 years. You know it always gets covered in ice. You know this is a regular issue. Let's think of a different route to go next year. So we know when there are going to be influxes especially if there's a snowstorm that hits right before rush hour.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - People	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	[City] can say no to somebody, [County] we don't. If you want an officer you're going to get an officer, if you want an ambulance you're going to get an ambulance. We're not allowed to say no. We've had people call with a tick on the toe. She refused to pull it off herself, she refused to drive herself to the hospital, she wanted a medic, she refused to let the medic to take it off, she wanted to go to the hospital and have a doctor take the tick off of her toe. So we've kind of allowed those expectations to also hold true so we've kind of also perpetuated this [City]-ian kind of view on life.
Problems - People	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	We had people that were not knowing that we would be watching and not that we were necessarily watching for it it was before we started this program our communications department happened to have people were tweeting them saying there's a tree down at this location, there's a tree down at that location, there's someone injured here, there's someone injured there and they didn't know what to do with that.
Problems - People	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	It's a lot and so having something that integrates all of those and you can work seamlessly through all of them I think is really where we're lacking in this world. The technology is there, the technology is great, it's going places but there's a divide where the operations folks know operations and the technology folks know technology. There's not many people that know both of them and that's where my interest in this world comes into because I want to take both of those aspects and worlds into it to make the best for both sides.
Problems - People	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Well with our sheriffs we don't really have an issue except where maybe you know the radios don't work and we do have those kinds of coverage issues but generally not a problem when you know I'm communicating something dispatch and something out to my sheriff officers but fire is a different channel and that's not usually a problem. Only sometimes they're not always listening to their radios and we can't control that. Sometimes we don't know that so but we communicate that out, we dispatch that out and then sometimes that's out of our hands and same thing for EMS. We make that call, we dispatch them but we don't always

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								know until somebody communicates back to us that they've gone or not so it's easy enough to communicate. I don't always know that that communication has been successful.
Problems - People	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Oh no I think it's mostly people really. You know people don't always give you the information that you need even when you ask for it so we think we're being really specific and asking about a very particular thing and then people give us all kinds of crazy answers so sometimes a call that you think should take you know thirty seconds takes 2 minutes and then you've got to dispatch out that information...
Problems - People	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	...I guess now I think about it you asked earlier about you know decisions we're making about information and sometimes that does happen. Sometimes that is true that we get too much information from people and we don't need to pass all of that along to the folks and so we sometimes do leave things out at least in that initial dispatch and then we might call back and give them additional information later but they need that first information to really go in and deal with the call so that's I think sometimes what I would say that it's really it's a people problem more than anything and people giving you the right information when you ask it in ways that are useful.
Problems - People	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah, you've got to follow chain-of-command. Some things have to be formal, some things can be informal, but you just need to inherently know that. And so I think culture really is our biggest inhibitor to having better communications. One of the things that on the incident side right, out there, cost of technology is a significant inhibitor to-- not everybody can have a radio. Right? Even though they really need it for their job. To spend \$7,000, 8,000 on a portable radio is just, it's wrong.
Problems - People	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] It's wrong, [laughter] just to be honest. To spend \$70 million dollars on the infrastructure is just mind-boggling to think about it. But there are other technologies emerging. Software applications that you put on your phone, integrate with those. What's inhibiting from that happening is, we really wanted to have a completely independent radio communications infrastructure from the internet. We don't want to open that Pandora's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								box from a security perspective. And so in order to facilitate that you stuff you actually have to have networks converge. That would make it more cost advantageous. And then people don't like to carry big bulky radios anymore. They'd rather have it on their phone. Now you spend a bunch of money to give all these people radios and now they're just going to use their phone. So it's cultural but it's also cost. And grant funding has been the primary stream for all that. Most if it didn't come out of budget. Once this starts to need to come out of budget because grant funding isn't available or needs to be for other things, then that becomes kind of a challenge. A tug-of-war over what gets priority.
Problems - People	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	...So the lower class is sometimes difficult to work with, because they're at a high demand. They want what they want, when they want it, and how they want it. And some people, you can't get them to understand I'm only the dispatcher. I take the message; I relay the message. Now when that officer or when that person that you need that help, that assistance from gets back to you, it's not my fault. So we take a lot of heat from the lower class... And when they call in, you're going to get that group, that one person that might catch an attitude. They might want to curse. They might want to say different things. But you've just got to know how to handle them. You handle them, and you forget about it. Don't take anything to heart, because that isn't making you a better dispatcher. It's not making you a better person.
Problems - People	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	Sometimes with the sheriff's office, we have to get them to understand the way it is out in the field and on the streets. It's not the same as in dispatch...But if we're if we're busy with the phones, and we're slow to giving you that information back, have some kind of understanding that okay, maybe they're busy on the phone, and they got tied up doing something else. If we say stand by on that, understand that it's just two of us, and we're both trying to fit all between other radio traffic and phones.
Problems - People	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	... Now monitoring both departments is kind of hard, so we set up a channel for them to all switch over to, and they don't always switch to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that channel so we can monitor all of them at once. They'll talk on each other's channel, and you have to flip back and forth and also flip to the sheriff office to the main dispatch channel. So it's three channels that you're trying to monitor. And so that's another task on that one.
Problems - People	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Dedication. You have to want to do this job. It's not a job that just anyone can just jump into. They have to realize that they're going to get screamed at, hollered at, fussed at, in an individual or individuals' worst time answering a 911 call.
Problems - People	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	...Well when they got to the school and an undisclosed location in [County] and they found out that they were not getting food stamps, they were not getting Red Cross vouchers, and they were not getting, for lack of better terms, a Ritz-Carlton to sleep at, they took any means they could back home. And we brought 132 people back.
Problems - People	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	And you talk about the technology. Think about a flip phone or bag phone that we had first, and now all of a sudden why you never answer my email? Well I was in a two-hour meeting. I couldn't answer your email. It's like everybody expects something at the snap of a finger, which doesn't always happen.
Problems - People	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	... But there needs to be limits that I don't think we're ever going to see. Press release, people find out about it before we even find out about it, before the company can even put a press release, before we can put out a press release. The media is beating on the door, wanting to know hey, what's going on at ABC facility? What you talking about? And then oh [inaudible] phone's beeping, it must be them calling. It's its own worst enemy. I think that's the only way I can put it.
Problems - People	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Yes, because it shows the proactivity of a lot of departments and facets of the [County] that people, according to some people, all I do is walk around the office with a two-way radio and a cellphone. I had a family member the other day, I was at a family gathering, and it was right around, right before Thanksgiving. Man, you don't have too much going on right now, huh? What you mean? What, no hurricanes this year,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								nothing else going on, huh?
Problems - People	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Basically when you're able to obtain all the information that you need, you don't have the person want to stay on the line, which I have a problem with people saying on the line. But we have people that they just, they're repeating the same thing over and over again, and you, I'm going to get somebody out there. Then they start over on the story again, and it's like I've already listened to you, I heard you. I understand where you're coming from. I have to get an officer out there. And then as soon as you said it, they start over again.
Problems - People	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	The responsibilities are definitely to ensure that the call taker's safe or any victims are safe. And that tends to be frustrating too because you'll tell them if you're near this person, try to get away from them. And you have individuals that are like I'm not going anywhere, this is my house. And you tell them this is for your safety. You can always return to your house. You can't come back to life if this person is a danger to you.
Problems - People	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	You can. Yes, you could definitely imply that the person, sometimes you have individuals that are exaggerating, or they'll tell the same story, but they'll add more to it. And then you clarify. They say oh no, that's not what happened, or they'll, oh well I didn't say that, even though they just said it, and they'll add even more. So you can definitely deduce whether someone's making a bigger situation than what's really going on. And then sometimes you can infer that if they're not in the right mind state, you can sometimes tell depending on what they're stating to you.
Problems - People	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Lack of communication causes communications problems [laughter].
Problems - People	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	The problem is, where the public wants to know every detail, there's some things it should be a need-to-know basis. Like we had a kid that was investigated at [City] High for possibly having mental, thoughts about shooting up school. And everybody wanted his name released, and they're failing to understand this is a child. And look, I understand he's just as capable as an adult, but he's still a child. There's no need for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								everyone to know his name, to go pounding on his door, and make the situation worse.
Problems - People	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	... But even in here I mean they work in a--it's not a huge area, it's not small, but it's not huge but I will, you know, tell someone to pass it onto the next person or put it out even in an email and they still don't. Oh, I didn't see that. [Snorts]. Yeah, you did. But, yeah, I think the biggest--lack of communication. They get through their 12-hour shift and the new shift's coming on and they're ready to get out of the door. And they forget to pass on or give them whatever and they're running out the door.
Problems - People	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Well we just had an incident the other day. Our PIO released a press release of a juvenile being charged in something for school regarding the unfortunate school shootings that have been happening, about a kid being arrested and charged the day before. And some parent evidently read the headline and not the whole article and got to Facebook and the student saw something and they started texting parents and it turned into there was supposedly an active shooter at a school. There was nothing at that school. There were 600 kids checked out that day out of that school because--and I get it, it's a touchy situation. But they would not believe anything law enforcement said to tell them that there was nothing going on at that school.
Problems - People	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	There have been a few incidences of... a grass man cutting the T-1 line. He wasn't supposed to do that.
Problems - People	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	It--I truly believe that technology can hinder, it's the people using the technology most of the time.
Problems - People	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	.... People who are scared and, you know, are looking for help. Who some people can be agitated and, you know, pretty nasty.
Problems - People	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Yeah, because there are people who have access to our radio channels that shouldn't so yeah.
Problems - People	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	... we have a lot of people over the radio and they're all talking on top of each other. And we have to tell them to go to another channel so they

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								don't block up the main channel that we use to dispatch out, you know, in case of emergency situations. So the radio traffic would be... a mess.
Problems - People	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	A lack of listening, a lack of understanding... a need to want to be right about situations. Pigheadedness. Stubbornness [Laughing]. Yeah
Problems - People	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	I say with our older callers sometimes they're hard of hearing and it's hard to communicate with them. They can communicate with you and you know it's hard for them to kind of understand what you're saying sometimes and we also have some people who live here who have heavy accents that's kind of hard. And sometimes you just have irate callers who just don't want to communication they just, you know
Problems - People	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	There are times when we've gotten the wrong addresses for people and that's a problem. That's a major problem. But other than that, no.
Problems - People	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Cause some of our officers are not from here and they don't know the area as well as they should so they have trouble getting to where they need to go...
Problems - People	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Just because--it's difficult in a lot of different ways. Sometimes you can't please everybody so that part is difficult. It can be difficult because sometimes you might get a call from somebody you know. And you know you have to kind of go through their problem with them without making it personal. That's about it. And the hours. [Chuckling].
Problems - People	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	You do need to know the area. And you need to know how to look at a map and determine, you know, where people are and a lot of times we get a lot of calls from people who will not know where they are. It's amazing how people don't know where they are [Laughing]. Like I get adults that don't even know their address. And so you do kind of have to know how to say, well, how are you from this place or do you remember passing this store or something like that. So yeah, it's important to at least halfway know your area.
Problems - People	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	... But the other officers, for the most part, it's good working with them. Sometimes they get like, I guess 'cause it's predominantly male and we're females, they get like these little macho attitudes or whatever but

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								if you just brush them off and don't entertain them they normally just calm down.
Problems - People	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	... We know the questions to ask. So sometimes it feel like belittling, like well I'm the one that's doing this and you just sitting there all night. Like they'll say stuff like that. Like you just--I mean you just sit there all night. But I'm not just sitting here like...
Problems - People	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Hmm. It's... [Laughing]. It's a task to really communicate with them 'cause I mean like I said I'm thinking that it may be more because we don't know each other and it's almost like talking to strangers every day.
Problems - People	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	But it's almost like I can tell you something and then I bet you before you get there you're going to ask me the same thing again like I just told you that. But if I say I just told you that then I would be wrong 'cause that's not my job to be, you know, rude and just have attitude.
Problems - People	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Hmm. Not really. We have a paging system, like a text message type thing and I don't really know the thing with that is I don't know if you got the message. I don't know if you cared about [Laughing] getting the message. I don't know if you saw the message and it's just like, oh okay, and put it down.
Problems - People	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Egos, huh. I think egos. Not even the equipment, like I think it's just people, like I think it's just everybody has different personalities. Some people just, I guess, have points to prove. Some people come to work with all their issues and don't know how to leave them at the door. So I think it's more people than anything.
Problems - People	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	... Because we don't want people just packing in here and having a social hour in here when these guys are really taking 911 calls and dispatching real emergencies, the background noise will get there...that's a real person whether it's the dispatcher being ugly or it's the responder being ugly or short or snippy on the radio or even the phone. They're real people up here.
Problems - People	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	... The lack of understanding of what those responders look at and see and feel and hear and smell and taste and everything in the field, we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								don't get to see that from the communications side so often. So I think those are probably the biggest of the stressors is the actual work that they do, not having any closure is probably one of the big ones.
Problems - People	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	Yeah. It's becoming a bigger--we've had calls where, hey, this large drone is flying over the interstate and we get 30 or 40 calls on it because people are seeing this unmanned aircraft flying. Nobody's told us. It ends up being, hey, it's a survey company for the Department of Transportation who's flying the interstate to get good pictures of the interstate but no one let us know. Mosquito control. We don't have a mosquito control plane here but we do as a [County] hire [City]'s plane to come and spray certain times and then all of a sudden somebody forgot to just let the local 911 center know, now we've got a bunch of people calling that there's this low flying plane spraying stuff in our neighborhood. We probably know it's a mosquito control but nobody's told us and they're supposed to.
Problems - People	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	... They may not have signed up for being an investigator on a kidnapping that somebody took a video of and they missed something in that video that was critical and then some attorney down the road 6 months, 2 years down the road gets them on a witness stand and says why didn't you see this whenever he's and 2 years to review that video and go, you know, you should have seen this piece of evidence in the video. I just don't want to have anything to do with it.
Problems - People	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	...I don't think and I hope that the public will not use that as a way to communication regularly with 911. I don't think they will because I think most people are going to go, you know, this is an emergency let me speak to someone. And I hope that our public education efforts will center around you only text 911 if you can't talk.
Problems - People	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	I think, number one, a lack of communication. It's not the technology, it's the human interface that is our number one problem of communication. Then I think you can get into technology because by far that's going to be your biggest, biggest risk in communications is people not communicating, physically communicating with one another.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - People	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	But again, I don't think that that's the technology because I think that can be overcome quickly with technology and interfaces can be built for a lot of things but that human communication, one to another, and do we play in the sandbox well with another group? That's why I say I don't think technology is going to be our problem. I think it's going to be more of the human interface than it is the technology.
Problems - People	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	... And technology is to a bad thing. It's how it's used. And but we've got to look at the bad because of human nature basically.
Problems - People	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	And we'd be going that we can use. But not here. Here's where it can be used better. So I think those companies and developers of technology that are going to the users, no matter what it is, if it's public safety, if it's healthcare, if it's school, if they get that user input from the very beginning and not some engineer sitting there and saying, oh man, I'm a good [Job title] and I can build this bridge that doesn't do anything...
Problems - People	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	I think that the media, and I'm not just talking about news, I'm talking about the whole gamut of media has given such a false impression of public safety that during a 24 or... 60 minute television show with commercials they have been able to have the crime happen, it'd be investigated and solved, why can't you do that today in 911? Why not? Or it only took them a minute to get there. I mean whenever the operator hung up with them on NCIS, huh, they were there. Well how did they get from one state to the other and you can't get here in 15 minutes? I think they've given a really, really bad impression and I think that started with the television show back in the early 90's called 911. Late 80's, early 90's called 911. They never showed the real outcome of most of our calls and they're not good.
Problems - People	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	I get more stressful. I try to get more information as quick as possible so I can get them off the line. Lately on day shift you usually have back to back to back calls. Some days like Tuesday, I had five, six calls the whole day, 12 hours. It was [inaudible]. The day before I had 22 case numbers. And that's back to back to back to back. So that got a little stressful. Sometimes it get stressful with your partner, and they're,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you're like hey, you're miscommunicating with me. I do that too. Sometimes I'm miscommunicate a lot. It happens.
Problems - People	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	... And with all the access to, parents allowing their kids just to play on cellphones, I believe if you were to go to EMS, you would see that they get probably, one person I saw in probably 20 minutes had like seven 911 hang-ups, or less. It is a, that is a major problem. I don't like that at all. I think you should have to go through some other way, avenue. There has to be another way, that it just accesses different, just 911, you know.
Problems - People	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: Yeah and I don't think it's -- it's not so much that we can't just like build our own radios. Not so much that we can't communicate -- we just don't communicate well. Sometimes, maybe I don't tell you what I need to and sometimes I will tell you too much and you don't pay attention. I think a lot of it is miscommunication, it sounds.
Problems - People	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: But I think with media, it's not only like what we think of as media, you know, like local TV stations or newspapers but people see everything on TV and because it is on TV, we can do that.
Problems - People	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: Okay, because new technology and people are here and people are having trouble with it and misrouting calls so we're just going to wait. Okay, so we waited and we waited, and we waited, and we waited.
Problems - People	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: I think public education there and like [Name] mentioned because you would be surprised -- number one, they call -- they think we are the police department. Because, you know, we get that and maybe public education is the one. However, I actually say that -- I'd actually go where you are really not talking to the police department.
Problems - People	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: I told you. And when the power is out -- they call us.
Problems - People	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: Yeah. And so, that really does tie us for emergencies. My fear, and I don't know whether it can be fixed. I've got 62-year-old women and men both in their -- how are they going to handle a text call from a 14-year-old girl with TBT and just all the abbreviations and all that. Yeah, I think it is going to create a lot of in a bad way -- actually I think it is going to put a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								toll and take a toll and run off a lot of people because they can't.
Problems - People	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Or [CAD] pulled the right truck and the dispatcher sent the wrong truck. You know told them the wrong truck, they're human, they make mistakes.
Problems - People	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	Some people won't say enough on the radio so people come into the call maybe like-- he may just very briefly just say something and then the incoming crews are like, "Do I get another update or what? Is this it?"... I mean, I think the biggest breakdown would be is people not talking to each other. That would be the biggest thing or assuming things [inaudible] should say. Like I said, we don't have that a lot here because there's big expectations for what you will say.... But I am expected to say things that could help the incoming crews. I got to give them a task, and I got to give them an update on the patients, or where they're going, or what we're dealing with. I mean, I don't have to give this-- paint this beautiful picture, but I need to start painting the picture.
Problems - People	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	I think where we've encountered some struggles is the jurisdictional terminology and kind of the etiquette they use on the radio. We overcome it. It's really not that hard. But the first couple times you communicate with another jurisdiction, you learn how they communicate with their dispatch and--
Problems - People	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	More or less the radios are not a problem at all. People are chatty, which ties the channels up if you've got a very long-winded person on the other end. But, by and large, that's not really the problem. I think a lot of the issue is just shortening the time it takes from the time a resident calls 911 to the time the call's dispatched. Both fire and the ambulance.
Problems - People	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	...It would be much better to have that information. And they do a good job and sometimes callers are not great. So the Beltway is a good example of people don't know if they're on the inner or the outer loop.
Problems - People	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	That's not a technology thing as much as it is a agency sharing information thing. Because we're not there yet, between human services and us.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - People	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	I think, first off, user experience. If somebody's unfamiliar with the radio system or how to communicate, it can delay it. Those dead zones that I mentioned earlier, the Metro, some cement apartment buildings that have large wings. If we're in the core of the building, we can't communicate out. They can't communicate to us.
Problems - People	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	Yeah. I think we've integrated well between fire units, EMS units. Where we haven't integrated well is between hospitals and the pre-hospital providers.
Problems - People	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	And everybody has a radio, and everybody has something more important than the other person to say [laughter].
Problems - People	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	What causes communications? People not doing it. So people not communicating or vague in the delivery of their message. So I will say firegram because that's common terminology for us, but as a medic, ALS provider, on the firegram in the sense of going to someone's house - the incident location, firegram, however you wish to - is somebody may say, "Come around back," but not say, "Utilize the left side because that's where the sidewalk is." So they're very vague in their means of communicating. Again, we don't want to talk a lot on the radio because what we say on the radio, somewhat the whole county is listening and doesn't need to know that the gate's locked on the right, use the one on the left. So we just don't do a very good job of delivering basic messages.
Problems - People	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	So we have a Whiteboard. So basically, it's like a-- it used to literally be a whiteboard, like a grease board that you would write on and wipe off. And I would have everybody on the schedule that day, and where they were, and who-- whatever... Then you can see the whiteboard on the phone and that's a newer thing... I like it fine. I usually go by memory. But that is not always right. ...
Problems - People	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: the paramedic dispatcher] ... But a lot of times, there's other information that they can see if they look for it, that they don't read out to you. They just don't. I don't know if they're busy. I don't know if they're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								just reading the first four sentences. I don't know if it's buried after like another bunch of notes and they don't have time. I don't know why. So if you're listening to the police channel, a lot of times you'll hear the police get sent on the same call, the same information. And then all of sudden, they add two extra sentences and you're like, "Oh, that's helpful information that I got indirectly by eavesdropping on another--" we're totally allowed to do it. But that gives me information about that.
Problems - People	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	Also, you can read all of those notes on your laptop. It drops into your laptop. So you can read all of those notes, if you have time on the way to the call, to open it up and take a look about what's happening. And you can see the stuff that they have told you. And you can see stuff like, "Why didn't they tell me that? Why didn't they tell me that?" They try though. And they'll try to give you information like, "We're sending the police with you, and this is why we're sending the police with you." And so you're like, "Okay, good." So yeah, so that happens all the time. And some dispatchers are better than others at always giving you the right information, or as much as they have, or reading through all of it before they just send you on something. Some dispatchers are like they're just-- it's like they're not even thinking. They're just reading the words in front of them. They don't even know what they're saying to you. You're like, "Do you realize you just said what you said?"...
Problems - People	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...doctors and paramedics and other people who take care of people used to-- people who had done it a long time had a finely developed sense of when somebody was sick. They could look at him and go, "There's something wrong there." They don't have that anymore. It's like firefighters, there's a whole generation of firefighters who is out there now who have never fought a big fire because there aren't any, other than wildfires. A lot of agencies don't have big structural fires, especially if you're not in a city with all the buildings...
Problems - People	EMS	R	Other Public Safety	56-65	31-40	Male	EMS-R-008	.... I mean, I'm usually a little understaffed in the winter and a little overstaffed in the summer, and I try and smooth out those curves a little bit, but it's-- everyone complains when the ambulance doesn't show up

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					for 10 minutes or something. It's like, "Where were you guys [laughter]?"
Problems - People	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	Yeah. And it's tough for them from what I know is because they're in a cubicle. So you might be the police dispatcher and I'm the fire dispatcher. You can just stand up and tell them, "Hey, we got an emergency. Send everybody to Engine One's call." But then they got to remember to push the button and talk it through, too, so it gets recorded and stuff like that.
Problems - People	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...so often, the information that dispatch is receiving from people is very much exaggerated. "Oh my God. There's blood everywhere." "Well, compared to what you're used to, yes, there is blood everywhere. But it's right here and it's right here. It's not that bad." So that stuff really does never-- I don't have a lot of value in that...
Problems - People	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Some battalion chiefs want their ambulance crews listening to the radio 24/7 sans sleeping with the idea of, if the police are going into an incident, we can get a jump on it essentially. But it's a difference of opinion for some folks, because then you desensitize yourself to the radio. So on paper, we don't-- there's no real policy there.
Problems - People	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	...We have very little to no communication with our police agency. We are able to scan their channel, but I don't think they want us on their channel, and they don't come onto our channel. And that's been identified as a huge problem in some of these large-scale incidents around the country of, for instance, the [City] shooting. There was no communication between the police and the fire on one scene. So I think that needs to get bridged. I think that's done through policy and procedure. I think the technology is there. I just don't think we utilize it efficiently.
Problems - People	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...So for us, our problems are more in the area of coordination both with our own people and interoperability. We do do more interoperability stuff than, I think, probably any other agency because we sit at the center of the metro area. And so we border on everybody, and everybody borders on us.
Problems - People	EMS	U	Field	46-55	21-30	Male	EMS-	[RE: federal interoperability channels] ...we have those in our radios. And

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				U-003	if we ever need to use those, which the last time we needed to use any of those was when the northern front range was having all those floods about five years ago. We sent ambulances far up north that they couldn't use our Harris system anymore and they had to jump onto those channels. Probably 80% of our guys couldn't find them; they use them so rarely. So we sent a lieutenant out before we shipped the ambulances out of the city, like, "These channels here on your radio, this is what you're going to be using." So the commanders know where they are. Our medics typically don't know where those stuff for ground-air operations and things like that. We have them, but we have to put some special effort into using those if we ever need them...
Problems - People	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] Occasionally, the patient will call back and say, "You know what? I changed my mind. I don't want an ambulance at all." It does happen. It's somewhat infrequent. More often, what happens is a call generates for whatever reason. It's assigned an ambulance, a fire truck, or the police. And when they get there, they do kind of the initial assessment.
Problems - People	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] ...Sometimes I wish a little bit more information came across on a pager because sometimes the Toughbook, it doesn't stay connected to the Wi-Fi and that type of thing. And sometimes, it depends on the dispatch, on just what's happening in dispatch within the call sometimes. Sometimes the police call taker is getting different information than our call taker is, and so sometimes if you monitor a different channel, you can get new information that way. It's nobody's fault per se. It's just people answer questions differently.
Problems - People	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: change in technology and communication] It's very difficult for us to change but it has improved.
Problems - People	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	Where I'm saying bad is, there were people who were on for 20, 30 years and when you have that amount of time in a certain company, you're set in your ways and whatnot.
Problems - People	EMS	U	Supervising	46-55	21-30	Male	EMS-	...they have to know the people that they're delivering the patient to.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder				U-010	Some nurses and doctors are nice and kind to them. Others don't give them the light of day, which is unfortunate. So they're not partners in that way...
Problems - People	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	If people are not clear, especially if you're on the scene and you need additional help or other things you have to do manually, things can kind of get confused or messages can get missed, I think, sometimes. For the most part, I think it works well. But when you have the human element in there, there's always the possibility, at least, that there could be some things that don't always work with the radio's communication.
Problems - People	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Okay. Well, one big thing is when you have multiple companies trying to talk at the same time to the dispatcher because there is only two EMS. You got EMS [City] South, and EMS North or Main. And it's split down the middle. So I believe the jurisdiction or map-wise, it's [Street], 2200 south. Anything south of that is called [City] EMS. And anything north of that is called Main, North. So you have two dispatchers for EMS. So you could have a big incidence up north where there's six ambulances and they're all trying to talk at the same time. And dispatch will say, "Okay. Hold on, guys." He'll triage via, he'll "Let me see what's going on first, okay? Ambulance 10, go ahead with your message. Okay. Now ambulance 15, go ahead with your message." So he has to triage that over them all.
Problems - People	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	It's advanced far beyond us. Especially us older people where you see sometimes jokes on the Internet like, "Thank God I didn't have cell phones when I was younger." All the stupid stuff that we used to do as kids. But I find that to be very sad. And millennials again. I have a class of 42 paramedics in here right now. They're millennials. I cannot tell you how hard it is to educate them. Because they come in here, they've been on some sort of iPad or gaming device for their later part of their life, they're in their 20s. So for the last 10 years, they've been gaming, they've been on the computer, they're on their phone, they're not disciplined. When you get in their face to discipline them, they shrivel up. They're freaking out because they don't do that. I mean, there's no-- my last candidate class, I asked a girl, I said, "Have you ever been yelled at?" She

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								said, "Never." Never in her whole life.
Problems - People	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	[RE: too much technology or information] I think that people might say that as far as like the heart monitor, [LifePad?] 15, it's a lot. That device does an awful lot. Just the recording alone and what you do and send those runs over Bluetooth and do all kinds of stuff with that. I think that the addition of having such intense technology is intimidating to those who were maybe skating by or the thought that now they might be of the mind-set where like, "Oh my God, well I could get caught for what if I didn't do that or--?" And it makes them fearful. So now that technology is causing anxiety because they're wondering, "Oh, am I going to get in trouble? I didn't send that run. They're going to know." We download the runs from a distance. We can do that like anytime we want.
Problems - People	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	The LifePad 15, it's a newer model for us. It's a better monitor. So I like it. I like the fact that it can do all that stuff, but I know that people who are maybe 10 years older than me, they don't like it. They don't like the change in technology. I was younger, so I can go with that. Now, the older they are, firemen included, they do not like technology... They do resist it. Yes. Are you kidding? I can't get these old firemen-- I'm saying old firemen, and they may be 55, to answer city email. "Now, you know I don't log on that city email stuff." "It's just an email, it's not like it's--" I don't know. Yeah.
Problems - People	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	I think that your communication style is just part of you. Some people are very good at it and some are not at all. And if you are not good at communicating, you are not going to be good at communicating on the radio either. And you know people when you hear them on the radio trying to call a run or something happened and they're trying to convey it over the radio. You know that they-- those are the people-- if I know them I can tell their voice-- you know that they have terrible communication skills. They can't even convey on the radio what it is that they need. And then sometimes, yes, I believe that there are sometimes a little bit lost in translation...
Problems - People	EMS	U	Other	46-55	21-30	Female	EMS-	... We have the dispatch center, the [dispatch center name]. They take

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel				U-009	the runs, they dispatch our runs. We sometimes will have to ask, we would like more information. Sometimes they'll say, "Well, what do you need that for?" And then you try not to get smart and say, "Because I'm the one out in front of this house where there's a shooting victim and you're tucked away safe up at the Office of Emergency Management. I need more info." Or "[Ambulance?] time, we need the police." "What do you need them for?" And if you hear somebody screaming, "Send me the police!" I think you should send the police and then maybe ask them why. Yeah, so.
Problems - People	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	...you can go on YouTube and listen to fires in [City]. I don't know if you ever have, but the [Address] fire, that was a good one. That was very good communication. There's some out there where you're like, "Oh my God. They're not even listening. Dispatch isn't even listening to what they're saying." And that's because they're being walked on by everybody else. Too many people are talking at the same time... That can absolutely be an issue. That and your buildings, your cell signal-- your radio signals I should say... I would say maybe not real common, but it happens. Yeah.
Problems - People	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	... The problem is you have people that may not like this certain guy so now there's a little tension you know.
Problems - People	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Speaking on the radio with full words and enunciating what you're saying because we're not playing games here. You know we need to know where to go when you tell us where to go so don't say don't slur your words to where we're sitting there going what? What road are we going to? I mean we can't see it written out anywhere so we're relying on you to tell us so let's enunciate a little bit, speak up and that's a big thing. Codes, ten codes and all that mess.
Problems - People	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	...it's difficult to learn new programs. But if it will help keep all of our information tracked because that's information the information that's put in the PCR's is where we also get our grant money so when it comes to needing money to get new supplies or trauma things for our trucks they look at all of these numbers that are entered as far as our patients

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								go and if you can't keep track of them well because we don't have a system then it makes it more difficult for us to get money for the things that we need to be progressive and become a better service and better serve the community.
Problems - People	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	[RE: cause of communication issues] There are. You know us being human. Dispatch will misinterpret what a patient said and relay incorrect information to us. We may they may relay the right information but we don't hear it right whether it's because we've got the sirens going or we may not be paying attention whatever it may be so human error of course plays a big role picking up and then I think sometimes again that human error just not asking for enough information as well. So part of it is our own fault and what we do and don't do but the better radio system and I think that I think that in general dispatch people that work in EMS all of us as a group could be trained better as far as how to use the things that we do have like the radios.
Problems - People	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	As far as technology and communication I don't think so. It would be much easier if we had better technology that's for sure. I love my job and but that's one of the more frustrating parts of it is to be somewhere need help or need to communicate and not be able to and I love working in a small community like this very rural. You get to see a lot of those people you get to know them by first name and a lot of the folks are related and stuff like that but it's also difficult because they all listen and then so if Aunt [name] down the street has had a cardiac arrest they hear the address on the radio and then you've gotten people at the scene that you're trying to take care of your patient then you've got family members and they actually had one this morning and they had all of this family that was rushing them. They were only on the scene for 7 minutes which is extremely good and so that's frustrating.
Problems - People	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	[RE: public frequency scanners] They do all the time especially older people. You know they sit there and sip tea and they listen and hear things going on and they're not the ones that you usually have to worry about showing up. It's the you know the middle aged or the younger

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								people but especially if there's an accident. Everybody it's like a train wreck everybody wants to see what's going on and you know if they realized some of the things that you do see and the fact that those things can't be erased they wouldn't want to but it's sometimes hard for us to do our job when you've got so many people that show up...
Problems - People	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	[RE: public frequency scanners] Like I said the family is one of the big things because this is a family member. They're upset, they're angry at the situation. They may not be angry at me but I'm the person they're going to take it out on because regardless of how fast I move or how efficiently I'm doing their job all they can see is that their family member is hurt and no matter what I do it's not going to be fast enough or good enough at that moment so those are the ones when psych patients and things like that those are the ones that it's scary not to have a working radio because if I need help I know I'm not going to get it because they don't know...
Problems - People	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	If you look at The NIOSH 5 and see the reason people die from-- communication is always in the top, not following SOGs, not being accountable, having situational awareness. And if I don't have situational awareness and the crews too, boy, that really puts us in a bad spot.
Problems - People	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Just overwhelm with information because if it's really big and you've got, let's say, 100 people to evacuate, the building is half on fire and the water supply is jacked, not very good. You have 30 things to do and you've got 4 people to start. And so what you pick and how you start to act and operate, just that whole communication stream is-- somebody else isn't on the page as you, it could just be muddled.
Problems - People	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	And face-to-face communication will always be the best route. If I'm talking to you right here, if we just put a barrier up right now, inference and stuff will be lost, there may be so many things that we would lose.
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	And in our organization whoever's got control of this wins and gets to talk. There's some on that channel, and so that has been problematic in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								some of our-- people that should be talking and saying things can't get out on the radio because someone else is talking.
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Well, we have lots of channels but typically we operate on one channel in an incident, but anybody's got a radio. They're all the same. My radio's no different than the kid that came on the job yesterday and he has a radio, too. And so, he can talk same way I can--
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	I think it's more from incident dynamics, and human emotions or error or things-- people's ability to handle incident, emergent problems. It's not a communication issue, it's a human error issue. I've been a part of incidents that have gone downhill, gone south, gotten people hurt, and our ability to manage them have been complicated because of human error. And again, that's a training component. We try hard to get better at that, and the radios can help with that and they can hurt with that.
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	You know, any new communication doctrine will tell you that we speak in plain text, ever since-- the presidential directives, NIMS, all that kind of stuff, we're supposed to speak in plain text. There are still organizations that do not, and why they don't, you'll have to ask them.
Problems - People	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	Yeah, but there's so many things that go into it, but I say that communication side of it's the hardest thing, the technology. It's helped us, and hurt us. Because the easier it gets, the more people want to use it.
Problems - People	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	I would just like it to take a step back. I would like us to just become more reliant on our implicit communication, on using less radio traffic, only saying things that are necessary, really bring things back in because I think we've gotten a little out of control.
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	And it's hard to understand the guy who's screaming on the radio through his air mask. And sometimes there is a real mumble and you can't understand it. Clear communications. And then, even more, data as far as you could put some kind of the command, the guy at the command truck would be able to get, like, "Okay. This is our location in the building.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - People	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	They say eight words when they could say two [laughter]. Or they say eight sentences when they could say two sentences.
Problems - People	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	And maybe it's not so much the communications. It's almost just is getting it solved to communicate better with law enforcement. But we had a fire recently where someone had a gun inside of the house on fire, and so we all had to back out. And then we weren't really sure what police was [doing?], but we can kind of hear their communications, but they don't use plain English, they use 10 codes that we really can't make sense out of. But just if there was a way for us to communicate with police more easily
Problems - People	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	communications with law enforcement and just getting them to block off streets so we can get in there. A lot of times, too, we'll get there-- and this is part of our not communicating well with law enforcement-- they'll park to block people out, but then they'll have a fire apparatus needing to get down there and you don't know who's car it is or where they are, so just trying to get people there. But this communicating better with law enforcement thing is our big issue and it's probably just more of a policy issue than it is a technology issue.
Problems - People	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	But as far as talking to the cops, that's not-- we have the ability to do that. We have the channels that are in our radio. We get the same text on our MDC that they get. So, there's that. But it's not really interoperable because we would never switch over to talk to them. And they would never switch over to talk to us because, what unit is that? Who is it? We don't know the nomenclature, we don't know the personalities
Problems - People	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	we have this tendency to just talk and talk and talk and talk, but it's meaningless and nobody's taking action, it's just to hear ourselves. And then that can adjust the radio waves and then when someone needed to get something out, maybe they were delayed.
Problems - People	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	Q: You mean people no communicating? SME: Yeah

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - People	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	So information should be funneled through the rank structure. There are times where I don't know communication. There are times that communication gets held above me or there are times that communication is brought down to the station level, and I don't know it. Yeah. So communication, not communicating, is a big deal. That's a thing that we struggle with.
Problems - People	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	...I have to help the incident by listening to the police channel and telling people that are on the call, whatever the police are saying, "Hey, there's somebody that's in the house with a long rifle, so you should be parked a long ways away because if you're right in front of the house, you're in danger." Kind of depending on what type of communication it is. But communication is the biggest thing, obviously not within our job, but on the fire ground too. So it's important. The only problem is, I have to tell you, is that everybody wants to talk.
Problems - People	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	And you can't. Not everybody has an important message. Not everybody needs to talk, right? Again, so it's controlling the communication, the amount of communication, and also what's said.
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	I've really only had a few issues with a couple of them, so it's-- I don't really even know how to describe it. You have two different people with two different competing interests, working in the same place where I'm supposed to oversee what they do, but I don't have any authority over that.
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	The police is harder, more difficult, and more important. And it's only because they're the majority. The majority of the dispatchers are police dispatchers versus fire, so it's-- all their dispatchers speak fluent English with no accents, whereas the fire side we get all the dispatchers that have very strong or very difficult to understand accents.
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	That's a huge negative. That affects it. Computer crashes, just the standard computer crashes. The CAD crashing. CADs actually crash quite a bit and they can't replicate it. Why? Some of it's caused by operator error on the dispatcher's part.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	That's literally what happened on a tablet. They'd say, "Oh, no, no. You didn't--" We would unplug the docking station, the cord that would go into the docking station, and plug it directly into the tablet because it wouldn't charge on a docking station. And our tablet shop would say, "Oh, no, put it back in there." And they'd say, "That's your problem, is it needs to be through the docking station. Oh, no, we fixed it." And you would get maybe four, five blocks out of the tablet support center and it would crash again and die or turn on and-- yeah, no, at that point, we just-- you get to the point with some of these IT people or some of the support staff that they-- a lot of them, I mean, they don't actually know what they're going to do, they know what they're trained to do. And they're trained to install a docking station. They're trained to follow these steps for troubleshooting. Well, if they can't fix it with that then they'll just keep telling you, "Well, no you're doing it wrong. You need to do it this way", "No, it's fixed." No, it's not. So we just get to the point where us, as a department, or even us as firemen, we just stop asking. And we'll just let it stay broken and we'll never actually get it fixed because--
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	Yeah, a lot of that actually is because of them. The call takers are horrible in this city. It's pretty much a jobs program and their turnover rate is--
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	...Well, not only do they not follow the script so they can't get accredited, but also even within the way they put their information in, the first thing they can do is they can put in the chief complaint.
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	--in the hallway." Yeah. They say stuff like that. They're don't say structure fire. So we're already behind the eight ball because they're giving us-- they're being lazy, basically.
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	Now the dispatchers have to send it as quickly as possible, so by the time they free it and everything else, the information still hasn't come into what it actually is. I don't want to say nine times out of 10, but probably 75% of the time, if they don't put that first comment in accurately, the incident is dispatched incorrectly. Because then they'll put the follow-up information, it'll be like, "Sparks from an electrical

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								outlet." Well, we just sent it as a house fire instead of an electrical short because we didn't get that information. So yes, the majority of the incidents that we go on because of our Office of Unified Communication, we're not getting complete information because the call takers either-- a lot of them are poorly trained. They don't put the proper information in. And the whole ProQA model, I think, is inefficient. I don't think it truly-- for fire calls. It's great for EMS calls but for fire calls, I don't think it's right. I don't think it works.
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	They don't actually know what they're sending. So to further answer your question, yeah. Almost every incident we get, I feel like we're not getting enough information. And it's not because of technology, it's--
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	So every time a different call taker gets that call, or if it's all at once, they're going to all start it as a new ProQA and send the call, and it's going to automatically send over with potentially the address, different addresses, all of that. Eventually, the same call takers will start taking the same call for that and they just won't put it in.
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	Instead of introducing all this extra new stuff let's, one, make sure what we have actually works better. And then, two, let's not rely on it so much. I mean, it's great that everybody-- a safety thing that everybody has radios now, but now that's a problem because of the feedback and the emergency buttons going off. And too many people think because they have a radio they have to talk on it [laughter].
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	--as a whole. But then, they also work with the city's IT department. So there's so many levels that it gets lost [inside?]. (talking about the department's IT people)
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	--put in a ticket, then somebody's going to call you back. And a lot of our stuff, we'll call; we'll put in a ticket. Specifically, I always give them my cell phone number because, especially when you're in operations-- I'm at the firehouse today. The guy's not going to answer the ticket till tomorrow. So I'm off shift. So now, what ends up happening is they usually call the firehouse. Even though they ask you what's your best

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								contact number, and you say, "Hey, it's my cell phone number," they call the firehouse.
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	"--Yeah, I don't know what you're talking about. He's not here. I don't know what you're talking about." Okay, ticket solved. Done. Closed.
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	Yup. And they don't know, so it must not be that big of an-- and they'll just close the ticket out on you. And they [know it?].
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	...So we have our MOUs with them, and I don't know what the MOU is. So that puts me at a disadvantage to say, "Hey, you need to do this, or you should do this."
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	I look at the charger, and then in the bottom of the charger it tells you what the milliamp capacity was of each battery. So I'm going to pick the one that's somewhere around 21, 23 hundred milliamps as opposed to going in there and seeing, "Hey, it's got the green light. But it's only reading at 1,400." So yeah. They were both 100% charged, but mine's got more capacity than the other one. So if we could train people to look at that, then they would be like, "Oh. Well, this one's going to last longer." But, at the end of the day, they just need to get rid of the bad batteries per se. There's also a discussion on when we should change them. Again, our guys usually wait until they're--(chirping)
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	"Throw it back to the charger. Grab a fresh one." And then that might stave of some of our battery problems. But I think the guys-- it's mindset. I didn't have to do--
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	And they're like, "Yeah, you need this new charger. They're supposed to go and replace all the chargers." Okay. So, drive up to the radio shop and say, "Hey, I got the old charger. I need a new charger." And they're like, "Oh, man. We're going to have to rewire it, and do all this stuff." And, fortunately, I knew better. I was like, "Listen, do you have a new charger?" And they're like, "Yeah, we got a new charger." So okay. So I went out - it's a pigtail - Unplug the pigtail, pull the little screws out.
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	But even when you tell a lot of our guys, they're like, "Yeah, I don't have time for that." And then, to me, that's where it gets back to the MOU. I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								was under the impression we had an MOU that all these old vehicles, the radio shop was responsible for going through, changing all the old chargers out, and putting new chargers in. Well, nobody on our department is holding them accountable, if that's the case, because there's still old chargers in old vehicles. And it's like, we had this MOU, supposedly, that says, "You were going to go do this work. You never did this work." Now we have vehicles that are rolling around, and you don't have that ability to swap out.
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	Any battalion chief could do it. But it's a matter of how long is it going to take to get there. When the fire department managed it, we could call fire department personnel in. And they're emergency responders, so they can jump in a vehicle with lights and do whatever they want, so to speak. Now it's been taken over by communications, so it's under their purview. They're not really responders. They don't get a lot of the environmental concerns. And they have just more of an office-work mentality in handling things, where we're more about tactical and operational efficiency. So I don't have much faith that it's going to be rapidly deployable. Whatever. At a minimum, we have every battalion chief carrying five portables around with him. So that's--
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	But it's a lot, I think, that they're understaffed, probably. And sometimes it's a lot of promises, and I feel like we're not getting our full, you know. So we'll see how it works.
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	...So I can't have this app on it. I can't have that app on it. Bandwidth is probably a huge issue. And then actual device capacity. So I have metro maps. They're PDFs. It's a whole ton of PDFs. They're on my iPhone. I can use my iPhone and scroll through them. Every once in a while, it's going to crash on me because it's just too much.
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	I should be able to go to metro maps and pull the maps up right then and there. But, again, I think that's more of a IT people on our side of things because it would require them managing every image for the desktop on each tablet, times however many thousand tablets.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - People	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	People. People. I'll just leave it at that. People are probably the number one cause of some form of communications, whether it was programming or whether it was lack of doing something. It's people.
Problems - People	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Law enforcement can be a challenge. Typically the law enforcement people don't want to come to the command post. Funny how who's in charge at the scene is usually-- sometimes difficult.
Problems - People	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	The staffing office. It's ridiculous. So we have one guy who's supposed to staff the entire fire department. And we use Kronos TeleStaff. I just don't think it's up to the job.
Problems - People	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Only 25% of our employees work overtime. Everybody else, they fill their 42-hour commitment and they go home. And do they pick and choose shifts here and there? Yeah. Maybe. So then the overtime hounds will complain that the guy who never works signed up and he got it, but I'm always-- it's--
Problems - People	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Yeah. The guy who is ultimately in charge of IT, I don't think he's very well-suited for his position. I don't think he has the vision. I think it's a lot-- actually, a lot of our people here are just-- they don't understand what the possibilities could be. All they know is what we've always done. They have their blinders on. And this is the way we do things. Which I guess is counter-- because I said I want to go back to my guys with pencils, but--
Problems - People	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	...So it's definitely a challenge. I know that I did quite a bit of work during the inauguration and it's almost impossible to talk to a federal resource whether it's a hazmat resource or a police entity, anything like that.
Problems - People	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	I think another, I guess because everyone of us has a radio, every operational person has a radio, a lot of times that incidents there's people talking over each other. And then that's our own internal issues because we should be able to really teach our people to practice better radio discipline.
Problems - People	FF	U	Other	26-35	11-20	Male	FF-U-045	I think a lot of it is-- Some of it is company officer understanding of the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel					situation. And then not only maybe understanding the situation but then being able to paint that picture and portray it to whoever needs to make a decision on whatever's going on.... So I think it's almost the processing of the information that that's what the issue, not necessarily the medium in which it's spread. If I were to pick one, it wouldn't be our radios would have the problem or our phone communication was the problem. It would be, we're probably not saying what we always need to say, and then even if we are, the person on the other end may not be receiving it the way we intended.
Problems - People	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So some people are very good at communications around here. Some people are not very good, and I'm a fairly good communicator, I'd say. I find that the people who are not as good, get very frustrated. Not about communications, but in other aspects. And it usually can trace back to that... So people who, they might say, "Hey, should we go take care of that thing we were talking about earlier?" "What thing?" "You know, the cleaning you wanted to do?" It's like, "Just refresh my memory. We talked about this a couple of days ago. Just what did you want?" And you have to drag it out of some people.
Problems - People	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	Has got in the way? I'd say, one time when it does get in the way is when people are communicating on the radio too much. When you're running a fire, and I can't think of a specific example, but I definitely know this happens all the time. If you're responding on a fire, instead of clicking the button on the computer, which you're supposed to do, sometimes the computers will go down. And people will say, "Engine Seven whatever, responding." And then they'll just say that the radio. And so then you've got five engines, two trucks, a rescue squad, and an ambulance, and potentially four chiefs, all saying that on the radio. Meanwhile, one of the engines is on scene and they're looking at a house on fire with somebody hanging out the window.
Problems - People	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...there is definitely a push for people to follow their SOPs, their standard operating procedures more. And to communicate less of the stuff that should be assumed... But a lot of times you'll hear, command will ask,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								"Hey rescue squad, can you please do the search." And we're already half way done the search because we already know that we need to do that. "Yes, sir. We're doing it." That's two more communications. Then they'll ask us two minutes later, "Hey, is that search done?" "Still doing it." That's two more communications. Then when we're finished with it we'll say, "We've finished the search and it's negative." And they'll say, "Okay, can you do utilities?" And we'll say, "We're doing that." And so now we're at like seven or eight communications, when we really just needed one or two. So that can be a challenge because someone else has to listen to that and it's distracting to them. But then they also can't get a communication across if they need to.
Problems - People	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: what causes communication problems] ...the terminologies stuff that people are using, terms that people aren't really familiar with, or they're using the terms incorrectly.
Problems - People	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...if people don't talk loudly enough. That happens from time to time. So where it's like words like, "Paramedic Engine 707, low volume." You can tell that they're saying something because you hear a mumble and you can see on the radio that they're trying to communicate. But you just don't know what they're saying. And I think that has to do with a person talking into the mike more than the technology, but it might also have to do with the technology too. I'm not exactly sure.
Problems - People	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...The other problem is if somebody is driving an ambulance, and they sit on their mike, and so it's open. And so it's transmitting while they're driving or something, and they don't realize it, then everybody in the county hears that.
Problems - People	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	And that opens up that radio, in case there's an emergency because, sometimes, I think there's too much communication to where if you really had an emergency, you can't even talk.
Problems - People	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: radio communication] Well, there's too many people talking that are 20 feet apart. And they're talking because they're 20 feet apart because of the noise on the fire ground. Because in a hazmat suit, you're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								wrapped in a giant Ziploc bag [laughter]. So you're trying to talk to each other, and you're 5, 10 feet apart. Which, the technology also exists to communicate 5, 10 feet apart, but it's not integrated together...
Problems - People	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...But in terms of when we get with multi-agencies, that's when it's kind of a measuring contest. We should all work together, but it doesn't always work that way. Like I said, we are on a north area team that we do a trench rescue on. And we've had a couple calls. [Yeah?], it gone smoothly. It got the job done, and outcome probably came out the same. But it's just too many people. Everybody wants to be a chief. Too many chiefs, not enough Indians [laughter]. So [inaudible] [that is?], but how do you fix that? We train on it. But I just think, again, you have your certain guys that you work with, and all of a sudden you're off on vacation, and I'm not working with you. So were not on the same page. And I'm working with some guy from A shift, and he does it totally different than the guy I used to work with.
Problems - People	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We use a multi-channel dispatch concept, which I'm sure you've heard of a lot. You have your primary dispatch channel, and then you go to another channel to check in. So [Name] is just an automated voice that announces what the call is, the call type, and all of that. And then we dispatch on channel three-- or channel two. I'm sorry. Either one. So we dispatch on channel one. [Name] happens on channel two. And in a typical system, you would change to a TAC channel. We don't do that. We don't do that because our admin is older, and they don't like the switching back and forth between channels, which I think is a big thing for us. It's caused a lot of radio communication on one channel. It muddies everything...
Problems - People	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...when we do have a fire, we do utilize a TAC channel because there is a lot of traffic that we don't want to interfere with daily traffic. But we will always, inevitably, have at least one or two apparatus, or one or two officers, that are checking in on the wrong channel, or that are getting a size-up or getting something on a wrong channel. And so then, as a dispatcher, you become the, "Hey, change your radio to channel--" and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								then jump to the other channel real fast, try to give the relay to keep everybody up to date. And then they give the same size-up because they're still trying to get out, and so it uses up a lot of radio traffic...
Problems - People	FF	S	Manager	46-55	21-30	Male	FF-S-023	...So those people talk about what they want, and then you've got your technicians over here. God love them, technicians are wonderful, but they often can't talk down enough so our fire chiefs can understand. So often that's a miscommunication. We want to do this and they're like, "Well you can't do that. There's no way in hell you can do that," and then there's friction there until that gets ironed out...
Problems - People	FF	S	Manager	46-55	21-30	Male	FF-S-023	...We had a structure fire where there was two buildings involved... In this particular case, one of the dispatchers on PD got bad information and thought that one of the buildings might have been occupied. We change our operations if we think there's people at risk. We'll very, very, very, very aggressive if we think people are at risk. As it turns out that wasn't the case, nobody was in either building. The PD didn't give that information to fire, but they aired it to a couple of their officers. One of our dispatchers happened to hear that and gave that information out. What they didn't hear was the officer said, "No, I have these occupants here."
Problems - People	FF	S	Manager	46-55	21-30	Male	FF-S-023	...During that when his radio melted through, one of their two radios did an emergency broadcast and set off alarms. Well, [City]PD at the time just silenced those alarms and didn't tell anybody...
Problems - People	FF	S	Manager	46-55	21-30	Male	FF-S-023	...I think one of the problems-- well, one on the problems with getting information from dispatch, is the people who are giving you the information. They're not experts, and they're trying to understand the situation they're in. So they're very confused. And usually, we'll get a lot of information from dispatch that turns out to be not even close. But it's because that's what they got. Garbage in, garbage out...
Problems - People	FF	S	Manager	46-55	21-30	Male	FF-S-023	I think the hardest thing that I'm seeing throughout this industry is, industry adopting stuff without ego. Bigger departments feel like the littler departments don't have the right to have a say. Littler departments think bigger departments are clunky and old and don't know what they're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								doing. Volunteer departments feel one way. Career departments feel another way. All of it's bad. So I started off with bigger departments picking on littler departments and we're a littler department. I'm not saying that I don't have my faults [laughter]. Ego has to get out of this system...
Problems - People	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...I know where my fire stations are, I know where my coverage holes are, so I can, based off of who's available, I know where I need to move them and I can make the move-ups, usually fairly accurately on my own. I am looking forward to having the move-up module look because I think it will look at it a little different and we have some chiefs who just don't think that way. And that's going to really help them to go, "Dispatch, I just want you to do--" whatever the module is saying, do it. Because a lot of times our chiefs only look at the internal resources and I'm lucky, after I left Arson, I went to training. I built a lot of relationships with the neighbors. I know what resources they have so I know how to use those chess pieces too. Some of the chiefs have that awareness and some are just-- all of them are very well aware of what's going on in our city, it's just what else can you do? ...
Problems - People	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...We're going to new microphones that have five port-- five, I guess, speakers because we're having issues with people. We don't like to wear our radio belts. So we all talk like this. While the microphones are on the front, and we all talk at the top of our radio. And now the new ones have a microphone on the top so they have five microphones. Back, front, top. Hopefully, that'll improve some of our communications too, as we switch to those. Because you're supposed to take them and turn them and talk at them. And we don't because we're all wearing these. We all talk into the top of our-- in analog it, would pick up fine. In digital it does not.
Problems - People	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Change is hard in the fire services sometimes because, for the most part, I would say people are pretty good with technology. But not everybody's an expert. And when you change the whole system, it's hard for people to make that transition on just basic stuff on how to use

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Office 365 and transfer documents and opening documents and what it'll read for Google and what it won't read, all that stuff, so
Problems - People	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: change] I mean most of it's just been the difficulty of learning a new system. Like he said with our pre-plans. Everybody got used to one thing and then we switched it. And then that didn't really work, so we switched it again.
Problems - People	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	...sometimes there's been information that's been lost in translation from people on the scene to the officer, to their dispatch, to our dispatch, to us, confusion about if somebody's inside or not which really changes what we do tactically. So we're doing something, thinking there's potential rescue when there's not. So you're really putting guys in quite a bit more risk...
Problems - People	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	There's always the misunderstanding of something. We're big on echoing verbiage back to whoever sent the message, "Message sent. Message received," something like that. We don't just say copy. But, yeah, again, people not saying stuff or--
Problems - People	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	I think terminology has come into play in the past where if somebody says something, calls this a radio, and everybody else calls it a portable. I mean, that's just an arbitrary example, but that's caused some problems in the past. Or if somebody tactically does something that is kind of out of the ordinary, sometimes, kind of, screws communication up because everybody else is expecting them to do one thing based on the conditions. And they do something else, and it just, kind of, screws everybody up.
Problems - People	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	...a few years ago we went to a new incident command system kind of thing. And then how we do size-ups on an incident and it's common verbiage and doing certain steps. So that transition was interesting because you would have somebody get on scene and, kind of, use a different set of verbiage for size-up. And everybody's, kind of, "Wait. I thought we were doing it this way." But that's just growing pains of getting used to a new system and things like that.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - People	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	the issue is you have a dispatcher that's taking the information and typing it, and you have another dispatcher who's reading that partial information and sending out the apparatus. So you get a disconnect there...
Problems - People	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...And then you get a law enforcement who interprets that differently. So law's getting different message and fire's getting different message. And through no fault of anybody, we don't always get all the info. And on top of that, you have the RP who is stressed, distracted, driving, something who really isn't giving a good picture...
Problems - People	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...So you have dispatchers trying to interpret poor data. Not that it's malicious or anything. It's just not accurate, so
Problems - People	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...Unfortunately, with firemen, you can trust them with a million-dollar truck, but a freaking radio, they'll lose. If you just have them check it out, then they'll leave them on bumpers and stuff. It's a personality thing. They just don't seem to have that accountability versus when it's their radio, they care if it works. They'll tell you if it's broken. Otherwise, you can put a bank of six radios and within a month, none of the batteries will work, half of them will be broken, and no one knows anything about them. Or two will be missing [laughter]. Yeah. We've had them get turned in from the rec center when we tried this before from all over. They're right on bumpers. It's just lack of accountability, so it kind of forced us to go one on one.
Problems - People	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...we have a radio manual that's supposed to go out to everybody on the system. But we can go through that page by page, line by line, and we can listen to the radio for 10 minutes and see where those things have failed us, and not everybody follows that manual. But, I mean, we just have so many users, and not everybody's going to do that. I mean, follow the intent of it...
Problems - People	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...We also have a PowerPoint. And I think he said-- so we created a PowerPoint, and we do it here in our department. You're supposed to do it in every department. There's that group, tech ops, built the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								PowerPoint. All the agencies are supposed to do it but they don't. But here, we actually stick to it, and it's about an hour and a half training. Every volunteer that comes in, it's part of their task book. They sit with me for at least an hour and a half, and we talk radios...
Problems - People	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...It's kind of a huge issue. Why didn't an officer come support the team? There's a lack of trust that develops out of that. There's a lack of trust against the officer, against the dispatch center. And it was nobody's fault, other than the two software's not talking to each other.
Problems - People	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: FF dispatchers] ...Very few departments have-- it's just not the norm. And it's something we have fought for. We give up things so that we can keep it because we see the value in it. With that said, there's been some recent activity that's kind of been like-- where we've had a lot of dispatchers that have done exactly what I just described as being a benefit, they have done the opposite. "Hey, I can't do that. CAD says I can-- CAD only says this." So at the upper levels, we're kind of like, "Hey, your only value is from being-- as a firefighter, is saying that you can take a look at a situation and make a human judgment to say, 'Yeah, I get that the computer is saying this. Makes complete sense, but I understand the total picture and I'm going to say this.'" So we're running into some of those issues.
Problems - People	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Communication problems in our work? Number one, I would say, a lack of understanding of whatever that process might be, whether it's radio or email or chain of command or whatever that specific process is for communicating that information. And a lack of information sharing. So, frequently, we get just-- frequently, we get people that will bypass the chain of command...
Problems - People	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...Let's say it is something to do with a policy or a procedure, and now this lieutenant calls up our administrative captain and says, "Hey, I need this. There's a pay thing and I don't know why it's doing that." They didn't go through the captain or go through their chief to come through the administrative captain. They went through the administrative captain. And so now their captain and their chief miss out on that opportunity to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								learn on how they could have solved that problem. So frequently, I think, from a communication standpoint, we miss out on opportunities for people to learn and kind of just, I don't know, maybe-- I don't know...
Problems - People	FF	U	Manager	46-55	11-20	Male	FF-U-021	Oh verbally [laughter], the lack of people listening... They get bits and pieces of information and they pass that along and kind of add a little bit, maybe add their own spin to it, and by the time it gets to the 50th person, it is not even remotely close to what the initial message was.
Problems - People	FF	U	Manager	46-55	11-20	Male	FF-U-021	...when you're in that situation where you're BP is 180 and your heart rate is 200, there's a lot going on, I don't think people realize how fast they speak and how unclear they speak and then you've got things going on on the background...
Problems - People	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	We do. If dispatchers and if everybody sticks to protocol, it's not so difficult for us to get on the same radio channel, but it doesn't always happen. So EMS and fire are pretty much on the same channel. Law is on their own set of channels. Dispatchers will tell them to move over to our channel if it's a big, long, drawn-out call. Otherwise, if not, then we got to tell dispatch to tell law enforcement. Law enforcement has to give-- tell dispatch the answer. Then they have to tell us.
Problems - People	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Medicals are probably the second most frequent call for us. Motor vehicle accidents are up there. We run a lot of winter accidents that are really nothing. Any car that slides off is going to get 50 phone calls. It's pretty outrageous. It's job security, I guess.
Problems - People	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Another challenge that we have right now is we have two dispatchers that English is their second language. So they're speaking English but it's terrible. It's terrible. One is, I think, it's Hispanic. It's Spanish speaking. The other one, we're not even sure. She's new. Maybe German, but it's really thick in accent. I want to ask him his opinion. And so to go the automated route, everybody is getting the same exact tone, the same voice. There's no excitement. We have dispatchers that get excited. When the shit's happening, they're getting amped up. So that keeps our guys amped up. The language thing gets them pissed off...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...The challenge that we had starting shortly after is the people side of it. So just because you can talk, police chief to fire chief, the cultural limits, the busyness, who knows whatever reason, they still may, to this day, not talk to each other. In which case, I can give you all the technology in the world but I can't force you [laughter]. We like to describe it in the national level, with FirstNet and SAFECOM and whatever, that we manage the pipes, we don't manage, necessarily, what's going through the pipes. That's up to every fire chief, police chief out there.
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So, I mean, we all studied the whole communications model in undergrad, right, as far as sender, receiver, feedback, message, content, and all of that. Those are where the breakdowns are, right? I mean the technology's there. Again, after September 11th, you literally get almost any device to talk to any other device. But coming back to our communications model as far as the people, if you're not willing to receive a message for whatever bias, or if the feedback loop is not there, you may send the message to me and either-- so our city has-- when we put out voters' pamphlets or something like that, I think they publish them in 32 different languages. So the message may be coming, but [laughter] if it's in a language that I-- I can't even recognize what language it is, let alone pick out some of the important words or something like that, that's a breakdown in communications, right? Again, an important one...
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...One of the biggest challenges that we have, I think, is data collection and data management.
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...So for a typical high-rise, for example, we may have what a typical floor plan looks like. Where the emergency shutoffs are. Where the elevator controls are. Where the gas is. For all of those types of things... So those may get input initially and then they may never get touched again...
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: pre-plans] Right. So schools is another big one and probably more important to the police because of the school shootings and stuff that have happened in our country. They're very interested in where the hallways, what ways do doors open, all of that type of information. You

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								can get a grant to fix it the first time or to put it in there the first time, but as soon as you hit done, then the clock starts ticking before it's so outdated that it's worthless as far as, "Yeah. Switch this. Switch this. Switch this," and whatnot, so.
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	Some of the other challenges with data is, again, I already mentioned its latency. How old is the data? Is it still current? Those are probably some of the first items that kind of come to mind.
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	the pre-incident, the pre-fire-type stuff, that's very tough to kind of keep up and keep maintained. Unfortunately, because it goes into the [inaudible] system for dispatch, if that information gets kind of sloppy, you may think you're going to a 7-Eleven or a BP gas station, and it may have changed hands. You may drive right past the Shell gas station because you're looking at old data that says, "Oh, this is a BP gas station." In which case, you're like [inaudible].
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: NG 9-1-1] ...The downside from everybody we've talked to and everybody that's doing the Data911 is it's so much more labor intensive because just processing that information. And we strive to finish- or not finish, but on a 911 call to be able to dispatch an appropriate resource within a minute. If you're having to look through text messages and JPEG photos and all of that, there's no way. I mean, your averages are going to go way up just because of the time and the responding and figuring out what's what.
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: Dispatch] ...But I think the big problem that they have right now is not being able to see or not be able to know and gauge what the level of response is or anything like that.
Problems - People	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	I think the problem with it would be too much information. And what someone perceives, what the general public perceives as a dire emergency threat, we would perceive as well, it's not really a priority incident. It's steam coming out of a vent, versus smoke coming out of a building. And if we got every cold winter day, all the dryer vents going off, if someone keeps texting hey, there's smoke coming out of the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								building, there's smoke coming out of the building.
Problems - People	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	...There's a little more-- I suppose people are a little more familiar with Outlook email, but even some of our processes of just interdepartmental communication and the way that we utilize technology. The mindset, I think, is the thing that hasn't changed. So the people that are trying to develop systems to make this department work are very much in the technology of 10 years ago that they experienced when they were maybe coming up in the department. So there's not much in the way of training on new technology, or certainly no incident for motivation for us to try to reach out to the newest, latest and greatest because of those reasons, that reliability and resistance.
Problems - People	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	...I don't believe we're going to get it from the third-party system out there that's building it. It needs to come probably from some sort of like-- and there's not an economic motivation to just build something like that. Maybe somebody could build something that's big enough for everybody adopt it, and then you'd have it, but it seems like the more appropriate way is some sort of nationalized standard or government funding or something like that.
Problems - People	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	[RE: incident information during response] That's a big question is how to get that information in a usable fashion in front of you. And I think the part of the problem we had is those attempts either from individual departments or from third-party developers that have said, "Hey. What is it that you want to see?" Well, the challenge there is that everybody kind of has their own different idea of how it's displayed. And it's kind of sent out in whoever kind of had the last decision on what this [crosstalk]. But how that would be done in a way that-- how you can pull up your smartphone and see something, the UI on that smartphone is so intuitive and it's just there for you. So that level of design that is achieved there comes from a level of funding and expertise and necessity that we don't see. So I would have an idea of how I think I would like that information laid out in a way that makes sense. The most prevalent information is displayed at the top, and in a big instant in a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								certain way. But there's a level of art and science to how information is displayed. And I don't think that those who are creating the applications for us now either understand that or have the capacity to invest in the infrastructure necessary to display it cleanly in a way that works.
Problems - People	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	...And of course, if there's no radios, there's probably no cell phones either [laughter] but-- there's a fail-safe. You can fall back on something else. So I think if you focus too much on something that's not working then that would probably be a hindrance.
Problems - People	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	...One, I think it would lead to people being much more thorough and in-depth with their reports if they can type them as opposed to writing them. Since most people now operate computer, [literate?], and they can type faster than they can write.
Problems - People	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	So I know that dispatch has a hard time with this because they'll have people that are in a heightened sense of emergency, right? Because something bad is happening. And so they' have a hard time conveying a clear message to the dispatcher sometimes.
Problems - People	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Sometimes a new comment will pop up on the computer screen, but if you're not looking at the computer screen, then you never see it.
Problems - People	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	And the way our current system is designed when something new pops up, it's supposed to be yellow. But you won't know that it's yellow unless you clear that you've seen it. So if you look up and if you're in the habit of never clearing it, it's always going to be yellow. And then when something new pops up, you won't--
Problems - People	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	That's one form of miscommunication. Now, another form of miscommunication in on the radio channel. What if you're on the wrong radio channel? Which happens. Sometimes it gets changed on your pocket or you're so used to being--
Problems - People	FF	S	Other Public	36-45	11-20	Male	FF-S-033	... And so you're telling people information that they're not receiving. And then, by the time you've figured it out and you realized it--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Yeah. Yeah. I mean, obviously, there's all different types of personalities. And sometimes, some don't always mesh well with others. But for the most part, we are family.
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	One of the difficulties that we probably have specific to our district is our clientele that we worked with, the majority, probably 90% of them are all of the homeless, the shelters. And so you end up in this-- society has changed to people-- before, it's like fire department showed up and they were real happy to see you. Now, the majority of our clientele, they're just like-- they're just as happy to tell you to go screw off. They just don't really care. So it's not like you're out going to the 80-year-old grandma that's most likely to bring you a plate of cookies the next shift, right, and really are happy to see you. Most of our people-- and you've got a huge mental health problem. So a lot of times, it's difficult trying to deal with the individuals that don't want help, but they need it.... One of the difficulties that we probably have specific to our district is our clientele that we worked with, the majority, probably 90% of them are all of the homeless, the shelters. And so you end up in this-- society has changed to people-- before, it's like fire department showed up and they were real happy to see you. Now, the majority of our clientele, they're just like-- they're just as happy to tell you to go screw off. They just don't really care. So it's not like you're out going to the 80-year-old grandma that's most likely to bring you a plate of cookies the next shift, right, and really are happy to see you. Most of our people-- and you've got a huge mental health problem. So a lot of times, it's difficult trying to deal with the individuals that don't want help, but they need it.
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Just specifically when you're on scene and you're trying to get a hold of somebody, but you've got dispatch shooting somebody else or somebody else not kind of-- a lot of it, to me, comes to radio discipline. It's like a lot of people will just-- they need something, they turn around and they just key their mic. Rather than take a half a second, make sure

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								nobody's communicating. That you're not catching somebody right in the middle of it, and then going ahead and doing your request. A lot of people just talk all the time, and they don't recognize the fact that I just arrived at a fire scene. I'm trying to do my size up. Trying to get a hold of my next in engine and tell them what hydrant I want them to take, and next dispatch is telling the [inaudible] what unit they're getting or something. And it's just like-- not that it's not important, but the lack of recognizing when it's important and when it's not. To be able to kind of sit back for a second, allow what's vital to communicate, and then you can kind of do the secondary stuff. So a lot of it, I would say, would be radio discipline.
Problems - People	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] I would say-- I'm not on the street anymore but-- I would say our biggest challenges are not cultural or ethnic diversity, it's really more social or socio-economic diversity and more mental health or substance abuse. Those present certainly the biggest challenges to us.
Problems - People	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4]...." Because it's so easy for people to get focused on the app or the cool stuff on something like that. And we need our people to be relating to our patients. We need our commanders to be looking at the fire. And there is a saturation point too. It's like, okay, now we got this new app that's going to do this.
Problems - People	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] Everybody has something to say about what they see or what they're doing. And everybody thinks it's the most important thing out there, right? But if you all try to say at one time then nobody's getting through and you get bogged. Only one person is going to get through at a time in one type of a channel. So if you have 30 people there in certain portions of that building or under whatever they're going through, someone's going to be waiting a while to get on the air. And it's hard.
Problems - People	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] Trying to make it second nature for people is the biggest thing, because there's a lot of channels--
Problems - People	FF	S	Supervising Field	Not specified	Not specified	Male	FF-S-036	[S2] Not really. One of the challenges these days, obviously, is with minority community communicating language-wise. That can be a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					challenge. But it's not a huge-- not a big deal for us.
Problems - People	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] If you're trying to get into a thing, and people are-- you can say anything you want on Facebook, and people believe it as-- so if somebody says, "Hey, there's a bomb at [City] High School, you should get out there." That's gospel, and it hurts us in some of the bigger incidents a little bit.
Problems - People	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] And it's hard to protect-- we have a lot of protected information, HIPAA protected information. And crews are on the scene, "Oh look what I'm doing today," and sent it out on Snapchat. It's illegal but how do you catch them. So some of that's challenging.
Problems - People	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[RE: information from dispatch] But sometimes we have dispatchers that say too much when we used to do it. Now it's all MDC, but there was an injury accident. It was a Ford probe that turned in front of a green SOB. The people are talking. Now they're on the sidewalk. Just tell us it's an injury auto at the center section and people are up.
Problems - People	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[s3] Usually it's just somebody that's just out hobbying and checking it out and don't know the rules. And wildland wise, it's been a big push on social media. "Do not fly your drone, do not fly your drone, because it instantly grounds everything."
Problems - People	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	Yes, exactly. Exactly. Whereas I think 10, 20 years ago, we were able to give our message to the media, and they typically just went with what we were telling them. Whereas now it's like, "Okay. [Name]. Public told us this, and you're telling us this. Why is it different?" And so then you have to explain those differences, and--
Problems - People	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	-- I think we're able to control the information that we put out a lot more today than we used to be able to, but we have no control over what other people put out. And it doesn't have to be true or accurate, and so that sometimes causes us more work [laughter].
Problems - People	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	I think the bad are some of the things I already talked about like the ability of just random people to post things about your organization, and you really don't have a lot of control over what they're saying. Whether

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it's true or false, and things like that. And just the fact that sometimes the expectation now is that things are going to be immediate. I think that is a downside. Prior to having a cell phone, I mean, people left you a message, and when you got home, you called them back. And now the expectation is that, "I texted you six times. Why didn't you text me back?" "Well, I wasn't in a place where I had service." But the expectation is that immediately you're going to respond to people.
Problems - People	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	We usually take a rig. And that's-- everything we do is crew-based. So we get asked sometimes if we're shopping or something, why does it take four of you guys to shop? And it's not that it takes four of us to shop. It's that we all have to be together in case we get a call because we're not off-duty while we're doing that
Problems - People	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Yeah in that they're limited a lot by the information that they're getting from the caller also. So it's--
Problems - People	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	I would say, for the most part, it's the accidental transmits and then it's people getting too excited and not trans--or not communicating effectively over the radio and not knowing how to speak into a microphone and have that come out clearly on the other side. A lot of people get up too close and you hear over-modulation [laughter].
Problems - People	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	My pet peeve is that there's no specific class on radio ethic, and so you want to be short concise and some people just love to hear their voice and if they're always talking. And in an emergency situation, it should be just what's needed to be said... Because you imagine, if it's a fifth alarm, there are so many people. And people are just stepping on each other when they're talking... And not everyone needs to be talking at the same time.
Problems - People	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	...So the downside is you don't have very many channels to talk on, and some people look at this as a negative. In some ways, I look at it as a positive. Sometimes, I think too many radios on the fireground get too many people talking, start to tie up airtime. And I've always said this, that radios don't put fires out. And people like to talk them out. And if

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you're talking, you're not working.
Problems - People	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	So I mean, the people problems are just a matter of-- I tell people, "I need you to talk to me in words, not sentences, or sentences, not paragraphs," and so limiting what they say and how they say it.
Problems - People	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	So we have three channels that are interoperable with our radio. We're all on the same radio system. The cops' radios are loaded differently than the fire radios, but we have three channels on our B bank, B four, five, and six that we could interface with the cops if we want to. Does it always work? No. Is it problematic? Is it user error? Yes, all of that. But there's a little bit of a misnomer, I think, in interoperable communications. We don't want firefighter number 27 talking to officer number 36. We can't have an officer giving a firefighter direction at a scene or vice versa. The interoperable part has to happen when the two Incident Commanders stand together. Because we're two different disciplines, having a low on the totem pole firefighter talking to the low on the totem pole cop is not what need to happen, per se. If you don't know how to talk to each other, you don't who is who, you don't know when the cops go and say, "This is floorboard [Name]," we don't know what that means, and his responsibility as a role. We don't understand any of that.
Problems - People	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	It's very difficult for a large organization to change and embrace technology, and go to new things. People want to give up on it, and can't wait to prove that it failed, versus giving it a chance. And we're not able to give it a full chance because we don't have the hardware, we don't have the training, we don't have the money to invest in that infrastructure and the application tools
Problems - People	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	There's great business intelligence solutions out there but we don't have the budget, we don't have the thinking, we don't have the proactive thinking to want to be proactive and change, and be on the forefront of technology. Very frustrating being in the heart of technology in [State] and we are very slow to change. And we're not able to take advantage of all these great tech companies here.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - People	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	The West Coast is very progressive. But in a big city it gets more difficult to be progressive. It's a bigger animal to change something. It's harder to train 1,700 people on one of your changes, so you can get the word out to everybody.
Problems - People	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	Everyone's going to turn it off on purpose to screw you up or not even put it on or dump it in--
Problems - People	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	It is because people think that technology is easy and I run into a lot of these developers that are very smart.
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...I think at first, there was a lot of overtalk. There was a lot of-- everybody had a radio, so everybody felt like they should use it at first. So there's been kind of a transition of learning with that and more listening versus talking...
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	I would say, initially-- I would say the first maybe five minutes of the scene because there's a lot of overtalk. There's a lot of companies talking over this person and talking over that person. So that's when we run into those issues, is when they first arrive and there is a lot of things going on. And so there's a lot of times where people want to say something and they're not listening to the radio. They just want to say what they think and what they want to say. So there's a lot of communication crosstalk that cut out...
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...The only way to really help that is to be more focused on listening rather than talking, so is to minimize your transmission, especially when we know that a lot of decisions need to be made...
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...there's a lot of resistance to learn or to accept new changes...
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...That's really, I think, where our communication suffers sometimes, is poor size-up and poor size-up communication.
Problems - People	FF	U	Field	46-55	11-20	Male	FF-U-027	...The only thing with having more radios, we have to have better radio

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					discipline. There's a lot of things that don't need to be on the channels. A lot of people like just hearing themselves on the radios rather than-- clogging up the airways when pertinent information needs to get through. I mean, you'll see. If you listen to our radio channels, there'll be a big fire, one with a lot of messages. Then some other company - it's not even close - and all will be like, "Yeah, we're on the scene for an ambulance assist," instead of just hitting the button to let them know they're on the scene, right in the middle of an incident going down.
Problems - People	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	It's probably two-fold. First, a lot of it is operator error. Like I said, radio discipline - being able to use your equipment and also being able to make the correct communications at the appropriate times. And I'm sure there's also a technological aspect where you have to make sure it works. If anything, there's a tendency that things may break, need to be replaced. As a whole, our department, we don't embrace change very well. So we have a lot of people that-- I mean, I don't think it's as much now, but I know that whenever I get a radio, in the beginning, some people are like, "I'm never going to use it." Just like the computers, "I'm never using that." 150 years tradition unimpeded by progress. We're just getting to the part where we don't file forms with carbon paper anymore.
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	[RE: cause of communication issues] Failure to communicate is one of them, yeah. But as far as communication from a technical aspect - buildings, dead zones, again, metal buildings, being encased in concrete - you're just not getting that signal out. What is causing communication is possibly the-- in fact is that we have possibly too many radios operating on one fire realm. It can be cumbersome, and lost messages will occur. Some of those are crucial, or non-crucial.
Problems - People	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	I've never noticed an issue with that as far as you're looking at weight or user-friendliness. You never give it a thought. There was no problems. There's nothing to draw from is that I have a problem. I haven't had no problems with these. There could be a problem with the portable radio if left outside of your protective equipment due to thermal insult or a thermal exposure to it. Yeah. You'll melt the thing and it becomes

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								useless, then you've got to rely on yelling, or if you're lucky enough, escape a pre-flashover. So if worn right, worn correctly, and following the procedures or guidelines of the fire department, it won't fail you. Most of those things that occur in the fire service, a lot of it is then human error and miscommunication. Communication is a big factor.
Problems - People	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	[RE: radios] We just went to digital, and it's getting better. I mean, when you first went digital all the voices were very metallic. Now I can recognize voices on the radio, so it's much more natural now. Add an extra alarm where the-- the problem with everybody in my opinion-- the problem with everybody having a radio is, there's people who are on the radio that don't need to be. Whether it's need more radio discipline-- and I mean, there's just-- it's just the nature of beast...
Problems - People	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	Now everybody in the company's got a radio... there are some people-- well, some people when they get nervous they talk, and they don't shut up. They think what they're saying is important, and most of the time it isn't. I mean, in the past you've had a company showing up on the radio on a rubbish run, and giving a two-minute dissertation about the rubbish. And there might be a guy trying to-- there might be a fire down the street and them trying to talk, and they got cut out if they need help. I mean, you pull a mayday at a fire and nobody hears it because everybody's on the radio.
Problems - People	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	[RE: radio comms] Frustrated,.I don't know if overwhelmed, but frustrated just because you can't get through. I mean, for me that's the biggest thing about technology is with everybody having a radio, everybody wants to talk and everybody thinks what they're doing is most important. And I don't know how you prioritize that, you know? And they all might be important, but.
Problems - People	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	My biggest problem with communication is too many people have radios. I mean, not enough radio discipline, I would say. I mean, we've got our firehouse, he just loves to talk. And I have to tell him, "[name], shut up." Very inexperienced, and he thinks he's the only one who sees stuff. And if he sees something, everybody else sees it. So I just think

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that-- and overwhelming the channels with-- if you do a fire in a high-rise, it's overwhelming right away because you have eight companies showing up. So that's eight times five. That's 40 radios, and they're all on 1 channel.
Problems - People	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Too much communication. I would say, yes, you can have too-- I'm not trying to dwell on anything specific, but you definitely can have too much at once, depending on how many players there are in the process. As a chief running a fire event, I've many times had to tell people, "Standby, because somebody's breaking in," maybe. And so, there's a problem there, too. I would have to wonder, "Why are they breaking in?" They should be able to hear me having a transmission already, so possibly on their radio, they weren't hearing. So, you have to wonder. But then I would have to stop, contact that person, transmit a message to them, standby so that I could finish what I have going on here. But it becomes a juggling act because I have to decipher in an instant, is what he's trying to tell me more important than me finishing my communication with the person who I-- you know what I mean? So yeah, it could be a little hairy sometimes. So can there be too much? Yeah. I've had incidents where there was too much at once. But I don't know if too much is a word you should use with communication, because the more, the better, right? I mean, the more, the better.
Problems - People	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: cell phone use] Or it's something that winds up being bad public relations, or a news crew may be filming a 20-second spot for the news at the scene of a multiple shooting, let's say. And then in the background, you have two or three firemen on their cell phones. And they may be laughing and joking at whatever's being discussed on the phone, which is irrelevant to the scene, but how is it perceived on the news?
Problems - People	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	So [laughter] I know I'm talking to you, but you've got communication, so you have a sender and a receiver, right? And in order for it to be officially termed a communicative process, there has to be feedback, right? Without feedback, how do you know if the message was actually

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								perceived on the other end by whoever transmitted it in a proper way, or was that information disseminated properly from one place to another. So the problem that we have is-- and this could probably be made better through training, but we train so much on other things, we run out of time to train. The way that people talk on the radio. They cut each other out. Sometimes, when we went from analog to digital, analog obviously was not as powerful, for lack of better terms, but it was more instant, at least on the fire ground. Whereas, digital you have to key the mic, almost pause a second, or else the front end of your transmission will be cut off. We have a lot of that going on...
Problems - People	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	... we'll have communication problems, and this one sticks in my craw. There may be somebody reporting the first fire companies for a reported fire that hasn't been confirmed yet. They'll pull up and say, "Hey, we have a fire", and they'll start giving-- because we have protocol for how we report a fire to the firearm office. We'll give them building dimensions, whether we have fire showing, or just smoke showing because sometimes it can be burnt toast coming out of the window. We'll tell them the size of the building. Is it occupied or not? And is it commercial? So we have certain things that we'll say from the very instant that we pull up. You'll have that going on, and then you'll have somebody cut into that to say something really insignificant over the radio, like we're returning-- they'll just tell the alarm office we're returning to quarters, and now that very pertinent information was cut off by a guy who did something cut him off, and all he had to do was push a little RTQ button on his on-board computer, and they receive that message, as well. So we have a lot of that going on, too. Every time I hear it, I wince a little bit because if at that fire scene, somebody's calling for a mayday, that's supposed to initiate a whole new response to that fire for the purpose of that mayday. And if it's going to be cut out by some guy that just wants to get his voice heard by the whole city that he's returning to his firehouse. That's a problem.
Problems - People	FF	U	Other	46-55	21-30	Male	FF-U-029	Since we went digital with all these other-- and this is more at the chief

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel					level. We have people that carry the radio but don't know how to use it. Even though they've had classes that there isn't any chief out there that hasn't been schooled on how to use it. But I don't know what it is, [laughter] there's a lot of them that just don't know how. So there is a process, too, just operator error, and that can be detrimental, depending on what you're doing or what you're responding to.
Problems - People	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	... At the company level, within the firehouse, when I was an up-and-coming lieutenant and captain in that, I would encounter guys that were carrying dead batteries. When they would relieve another fireman in the morning, and they would hand the radio from one guy to another, and that [inaudible]-- and they wouldn't even-- so I guess that's user error, as well. I mean, it could save your life. That's what I used to tell them. How can you not care about something that can personally save your own life? That I don't understand. Yeah. To me, it would be the same as a police officer carrying a gun with no bullets. I mean [laughter], this is all we have to reach out, so.
Problems - People	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: issues with radios in the field] Well, I mean, the things that I mentioned are pretty much the most common things. People either not being able to use them properly, not maintaining them properly, simple battery changes or sometimes a radio will malfunction. And we have a process for work order numbers and it can be replaced in an instant. That's not an issue with us at all. But guys are very reluctant or lazy, and I don't understand it, I really don't. Not a radio. Something else, maybe, not a radio.
Problems - People	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Yeah. [Name] was his name and he meant well he just couldn't get along with people was his biggest problem and so he's got a huge system because just using IP addresses we can he has the system set up with all these other counties across the state so we kind of can just link them all together and that was what the grand build out for this was supposed to be but he has apparently given up on all public safety and gone back to working for the movie industry so it didn't really start.
Problems - People	FF	R	Supervising	Not	Not	Male	FF-R-046	Anyway and then it's just progressed over the years to more and more

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder	specified	specified			stuff and I think the biggest challenge to it is if you're like me and kind of a radio geek you get it but trying to even have full time people that just don't get radio stuff, don't get changing phones or what repeater means versus direct and then of course volunteers is a totally different story so they just want to turn on their radio and talk on it and have it work.
Problems - People	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Another kind of aspect I guess would be when if somebody starts saying something on the radio that's different then the volunteers hear it and think that's what's supposed to happen so then they start using it so then it becomes a bigger problem again and yeah I guess communication in general is one of those things that if you can just most problems can be solved if they're brought to people's attention and talked about it but that doesn't always get through to people and so it kind of builds up and becomes a bigger issue.
Problems - People	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	You know there's people that push the talk button to think. They don't have what they don't have a formulated what they're going to say before they push it and they uh, uh you know and it's like oh my God. You need to keep it short and sweet.
Problems - People	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	When we've had some incidents where people have tried to use incident command where like on a wild line fire. You have the communications unit right and they do all the radios, they clone everything so everything works, they put repeaters out but it's a big incident so we've had people who think of smaller incidents as needing all this stuff and the reality is we don't have the staff and if it's an isolated incident that's a low frequency you know high risk thing that involves ten people we don't need a communications unit with all these different channels. And we got to go put a repeater here if it's say a 3 hour incident like a back country rescue so the people have overthought it trying to use technology to do more than we need it to do by just using tack channels we accomplish it.
Problems - People	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	I think part of the one problem with technology will be people's reliance on it to not be able to react unless they have certain forms and so people's brains kind of shut down if something happens and it doesn't

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								work when it comes to that they go well I can't do anything when it could be solved in different ways.
Problems - People	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	And that's another deal with kind of resigning as chief as I feel like a broken record you know every meeting we waste so much time on going over stuff I've said a million times and I don't know it's almost like kids in grade school they get in here and they just want to chit chat and show pictures and this and that some of them not all of them but for the most part once everybody I may have to get on my phone and call that person and say hey get your radio on this channel you know and because I mean your adrenaline gets to going and around here we don't have a lot going on and you don't know who it's going to be that shows up to the call who is available so you may run if we have a call everyday there may be five different people every one of those days so it varies.
Problems - People	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	And that's been an issue too not to put down our dispatch center but they hire they're probably the least paid person there. They need to have as much training if not more than we do because they're getting a call from let's just say a panicked, excited wife that her husband is laying on the floor not breathing so she's hysterical, she's got to take that information put it in the computer, type it out and then get us the right directions and all the right facts. A lot of times that don't happen and I mean that's the key of it all right there is that dispatcher.
Problems - People	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	I'd say probably not really just if you could just get your fireman to turn their radios on or you know not forget to turn their radios on get them on the right channel because once we get here we've got to call dispatch and let them know that we're responding. If not, they're going to have to call another department and so we're on one channel there well then we need to switch channels so we're not using up or overrunning the sheriff's channel so they can talk on other things and then you know we kind of be on a separate channel so I mean that'd be probably the biggest issue to me is just making sure everybody gets that done and it's hard to do you know because we can't be in every truck.
Problems - People	FF	R	Supervising	36-45	11-20	Male	FF-R-047	Well yeah and it's I mean it's difficult to get guys to go to training you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					know especially if you got to go somewhere else.
Problems - People	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Yes we all have our handheld radios. Whether or not the guys carry them you know I mean that's the thing. We all have our handheld radios that way we can carry, we can be toned out through well we are excuse me toned out through here so if I have it on the app will go off on my phone and I will get a message through this. We don't always have our radios with us. We always have our phones.
Problems - People	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	I don't know that it has. Me personally I haven't had a time where technology has come in the way. I mean I know there's improvements out there I know there's with better service and better you know reception in areas. I can't say that communication wise that there has been a necessary issue it's just human error is more than anything on our communication side.
Problems - People	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	[RE: human error interfering with communications] Yes, yes. People not having the radios on you know and say you know say they don't have well I guess there's like say we have a guy on the truck, inside the truck driving, we have a firefighter on the back sometimes communication between them you know say our headsets don't work because here at the department at [City] we don't have a headset for the guy on the back that communicates with the guy in the front and so the guy on the back can't I mean he's not going to hear the radio, he's not going to be able to talk because you know he's in full gear, he's got engine running, he's got a pump running back here, he's not going to hear that so we don't have those headsets...
Problems - People	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	They pay us but we provide a service for them so as you know public safety is tax based and you know customer service is number one that's something that can fall short sometimes as new generations come about but the core and tradition of the fire service is the customer is number one so that's why when it comes time to risk our lives and put other people number one you know that's where the customer service really comes in on that level.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - People	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	Sometimes it just depends on your level of dedication. We've got some people who are great at showing up to calls and terrible to showing up to meetings which you have to take that with the good with the bad. You got some people who are great at showing up at meetings but hard to get them to a call. So it's kind of a I guess a 50/50 shot on that. I guess you're talking about being in station when a call may go out something like that?
Problems - People	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	I have no problem with volunteers getting the pension but I want them to put in a little bit of work and dedication to earn it. You know just being on it and having someone forge a document for you to me that's taking away from more money I could possibly get.
Problems - People	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	Are we talking about on a scene which to me is what's going to be the most important. Lack of communication. Lack of being familiar with the incident command system. That being said lack of knowing how to use the incident command system in the setting with the resources you are provided. So you ask people to go out raise money for barbeques, respond to calls in the middle of the night and then you say oh you need to go take some classes too. I mean there are some people in this county that I don't know why they don't do it professionally because they take it very seriously.
Problems - People	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] ... We were talking about problems with the MDT and I was asking them has there ever been a fooled laid out class of how to fully work it? How to troubleshoot it? How to fix it if it goes down? Because usually we get a call or they'll say they missed the run time or something because it went down when it could be a simple restart and brought it right back up so that's my knowledge, that's my thoughts to have more sort of troubleshooting class how to fix certain problems.
Problems - People	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] That is a huge problem right there. There is a lot of personal know how of a lot of problems that they may think is a problem but really isn't a problem but if you look at it there is no younger guys really in charge right now so you will always have a generational gap right there.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - People	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Either connection or forgetfulness. Very much so forgetfulness but sometimes connections but very much so forgetfulness, yes.
Problems - People	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	The people making the calls out on the road, get along without a problem. Yeah, you know there's always--there could be a hiccup here or there. Anytime you put personalities involved. But for the most part we have no issue. And when we do we work those out. We have some excellent dispatchers. We have some that just like anybody else, you can have a personality issue here and there. But from where we were... let's say 15 years ago, today is night and day. This building has a little bit to do with that. But they train. The person who had [Name]'s job before [Name] got it came from a whole bigger organization, brought a whole bunch of different ways of doing things and was better in terms of who he hired.
Problems - People	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[RE: comms issues] Some equipment, some training, and some lack of personnel and then I get a shit type attitudes. In other words I know I'm supposed to do it but, you know, I'm busy right now so I'm not going to do that. You know they pick their functions.
Problems - People	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[RE: solving comms issues] Training-wise, again, I'm going to talk to [Name] when I leave here about getting their people to prompt them to go to respond coord. And it's going to have to be that they tell everybody on particular calls and if they have more than one call they're going to have to move them to something else which we all have. We have a response--every one of us have response channels on these radios. And you can segregate your two calls and only they would hear the two of them. A lot of it, I say that the fire service is 250-something years of history unencumbered by progress. And what it is is it's just hard to get the people to change when something better is out there because it's easy to do what you know. It's hard to go learn something that's new that you'll really like.
Problems - People	FF	R	Supervising Field	46-55	21-30	Male	FF-R-051	But and some of it is just... some of it is just, you know, more stubbornness than anything I guess. You know they... well why do we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					want to do it that way, this works? Well it works but it is efficient, it is good? You know?
Problems - People	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	Equipment failure or operator error could be a big deal. You know somebody's--whether they're new or not they may or may not necessarily know how to use a certain piece of equipment. They may not use it every day that they come to work.
Problems - People	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	You know? And so I guess the training of it would be a big, big thing. And then... failures, you know? I mean there's going to be failures because of--because it's manmade there's going to be failures because of human error. So you never know.
Problems - People	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] So you have some challenges with certain clientele, I dont want to stereotype anyone, and the community is great, they all seem really to look after each other, you know not necessarily a neighborhood watch but they do call the neighbors, hey do you see so and so or did you see this happen or any other, they are a pretty close community. Everybody helps everybody so to speak, there is a lot of history in this community with certain names, so it is a unique community in my book.
Problems - People	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] That's different situation. We shouldn't ever go in there without back up from law enforcement and that happens a lot. If we can't get through 911 call takers to get the accurate information that we need to be able to respond appropriately. We get a call for a car crash, sometimes we have got a tractor trailer carrying hazardous materials; we walked into the scene that can potentially be life threatening for us. You know we need that information, so you are asking what kind of information we need, we need everything supposedly we could put together before we get there because when we are driving to a scene our hamster wheels are spinning rapidly.
Problems - People	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[RE: cause of communication issues] [S3] Too many people on there sometimes.
Problems - People	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S2] Say I am talking and he is talking at the same time, no one can hear us, because we repeat over each other and not really proper

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								communication techniques.
Problems - People	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	No, we have a lot of brush fires and people starting their -- they don't do it on purpose. A lot of farmers burn the field off when they grow the hay or the grass back -- well, they'll leave it unattended.
Problems - People	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	Some days you will get -- excuse me, you get two and then sometimes when the moon is full, you will get -- I mean, I will be going down the road five times a night, siren, lights and everything, just because either cardiac arrest or somebody's had a stroke or there is a fire on [Street] or I mean, we have had people just go crazy and set their mattress on fire in the driveway and we are called to go put the mattress out and the cops are called and then -- I mean.
Problems - People	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	I have one and I can get a hold of Dispatch in -- I have a personal, but we are about to switch over to digital. We are trying to get a jump on digital before the county does because we have (what I call them) Scanner Queens [laughs] that get on there and they listen to everything that is going on and then get Facebook and just blow everything out and it is like, you don't even know what is going on, like the school thing the other day at the high school, they blew that all out proportion.
Problems - People	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	...Most of the time, there is a guy there that usually gets a truck and he is gone and I am behind him. If he will call me and go -- where you at? I'm like -- right behind you dude, let's go. But sometimes, you get people that want to fight you. I had a guy who wanted to fight me one time.
Problems - People	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Maybe if it's a bank robbery, and there's other agencies in the neighborhood, it can be overwhelming because once you start introducing different agencies other than [City] or even specialized units, because the specialized units in [City] operate on different channels, as well. So you'd have a massive miscommunication because you have these different entities talking on their own separate channels. Supposedly, the dispatcher is supposed to be connecting everybody, but rarely does that happen. So it makes for a big breakdown in communication, which causes confusion and adds stress to the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								situation.
Problems - People	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	I mean sometimes it's just the game of telephone, too. So you have the watch commander tells me this. I hear it that way. Then I call the responding officer. He tells me something different. I talk to his supervisor. It's something different. So for me personally, if I had just a streamlined maybe even just email type response from somebody, which is what those significant notifications are.
Problems - People	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	So in general, I think law enforcement, because of the lack of community support, because of the lack of political-- because of the lack of support as it relates to our administrators and our politicians and elected officials because they are more consumed with the pressure from the public, it is making our job very difficult because the average patrol officer does not feel like the administration has their back, which is why I think, quite candidly, you see violent crime on the rise and you see crime nationwide going through the roof. Officers are not patrolling the way that they used to patrol
Problems - People	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	Exactly. Exactly. Exactly. So sometimes that's a hindrance. But other than that, I mean, I don't want to ever think it gets in the way. (talking about people texting you even if they are face to face)
Problems - People	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	but sometimes our dispatchers, the ones that give us the call, for one reason or another, may omit something maybe by accident or something that where they may not think it's significant as they're reading the call to you. And if you don't read the call on your computer, you'll miss it too, so.
Problems - People	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	But sometimes, more cases than not, you'll notice that they omit something. They may just think it's insignificant, but sometimes, we have found out later that they omitted something but it was an important
Problems - People	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	...They have their own radio channels, and like I said before, that kind of makes it a problem for us because then we can't speak to them especially if they have a call where they're asking for our help because somebody's acting up or whatever. We may have a question because

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								typically, they'll show up with four or five people, so at least one person could get on the air and say, "This is what we have," and then we can determine--
Problems - People	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	I'm a believer at this point now that we're kind of unique here at [City]. We have multiple federal agencies all around us and we have to work in unison with them. But whatever the event, there's only agency takes the lead. So finding that balance is kind of hard because the [City] Police is the primary agency in the city regardless of who else is in here.... So being able to share information between agencies, a lot of that has to do with individuals allowing it to happen.
Problems - People	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Because it's so busy, and people are saying frivolous things over the radio that they don't need to.
Problems - People	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	We try and limit that because when you're on those types of calls, there's a lot of people on them, and there's a lot of people trying to talk on the radio. And some people are very undisciplined when it comes to radio conversation [laughter], so.
Problems - People	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Well, yes. But I say that because, most of the times, the deficiency in communication is on the complainant end, not on the police side. It's not the dispatcher that's not providing you the information. It's the dispatcher doesn't know that information. And either they ask the question and the person calling wouldn't or didn't answer it, so we don't have that.
Problems - People	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	So I know they have protocol to try and get all that information, but sometimes they either can't or the person just refuses to give it. So you're limited on the amount of information you get sometimes.
Problems - People	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	Now with social media, people can start gathering online, and in 2 hours you can have 10,000 people at the White House. So it doesn't give you much time to rally enough officers. As long as the thing is peaceful, that's fine, but you need to make sure you have enough resources there to A, keep the people safe. You're out there, and a lot of times they want to march from one location to the other.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - People	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	The issue that we find is we have an electronic correspondence form but a lot of our correspondence requires attachments. Such as, if somebody is in a traffic crash, our electronic correspondence form and the traffic crash form, one is a PDF fillable document and one is generated through our Cobalt management, report management system. So it's two different places, so you can't combine them unless you physically combine them or you change them into Adobe Pro, which a lot of people can't do that. And there's very few people that can email those documents who wants you to put them into a PDF.
Problems - People	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	And it's a lot easier sometimes than trying to electronically correct something because people miss it. You're not going to learn with an accept changes, but you will learn if you're looking at red penned document, and we literally use a red pen, so.
Problems - People	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	Because if they're not looking for that, or there may be specific knowledge that we have that they didn't have at the time, or it may be something that it's-- people don't catch it. Like a word that is a real word but it doesn't belong where-- you know how auto correct doesn't catch everything. Like cans instead of can't, you'll miss it. So we want to make sure that people are just very careful about it. Because there is nothing that should come out of this office that should need any correction whatsoever at this level..... Every month, we get their reports. Well, I remember that some new people came in and got permission to take their cars home but I didn't see it on the monthly report, and I remember because those went through our approvals. These three approvals went through our office to be approved. So I'm like, "Okay, these three guys have take-homes, where there's monthly report?" So I send it back. And that was just because I remember that there were those three. And institutional knowledge, we have the overall of the bureau, so we work on coordinating everybody's efforts but we may know that on this date Harbor has this exercise so they can't help with this over here anymore, so.
Problems - People	LE	U	Field	46-55	21-30	Female	LE-U-040	But we didn't have enough information from the dispatcher. They didn't

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					ask enough questions, and that's something that you'll hear us ask all the time. Respond for a suicide attempt, well, how are they trying to commit suicide? We need to know that because if it's a gun, it's different than if it's pills, things like that. So there's been a couple of times where you wish you had-- and there's always hindsight, that you wished somebody asked the questions that you needed to know, or they didn't give it to you fast enough. Because there can be a delay and that has gotten so much better over the years. And sometimes you just have to wing it just because you don't and you never will have the information you need until months afterwards, so.
Problems - People	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	Because if there's a shooting in the seventh district, it takes a while for it to settle down, enough to be able to get the correct information. By that time, you had 18 reports that are wrong, from [Name], who saw one side on the street and judge it. And it's a matter of being able to release the necessary information quickly enough so that we get the correct-- whether you like it or not, it's the true and accurate facts of the representation, rather than social media, because that's the biggest damage to us.
Problems - People	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	So station life is-- life at the office is you avoid it as much as you can... it gets very frustrating that the boss is always coming in and derailing your train of thought... That gets to a point where you get bothered so much. You just lean back. All right. Let's just talk. You don't even try because if you're going to pay me, and you're okay with doing this, then I'm just fine with it too. But that's why a lot of us will work before and after, before 9:00 when the bosses get there and after 5:00 when they leave.
Problems - People	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: cause of communication issues] SME: Egos. Cowardness. They're afraid to confront each other... I can't stand keyboard commandos. Keyboard tough guys. And it also shows a bit of laziness.
Problems - People	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...People just getting new on the job don't have that ability to talk to people... Some do but others in the majority, they think there's going to be an app that's going to save their life, where they can send an emoji or a meme that's going to get them through a situation. There's not.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Sometimes you just got to figure out how to talk to people... they'll bring me something, "Hey, what about this one?" "Did you ask them that?" "Well, no." "Go ask them [laughter]." "I don't know how."...people hide behind technology.
Problems - People	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	body-worn cameras, by far and away, there are more issues with body-worn camera technology than any other of the solutions we deal with. But there are also just user error, lack of understanding...
Problems - People	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: MDCs] Yeah, any time that goes down, you get officers, they have to be on the radio and ask two or three times for the address because they didn't write it down.
Problems - People	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Well, the computer has the ability that I can see every call that's on the screen. I can click on it, and I can technically hit the button to assign me that call, and I would pop up, and it would be assigned to me. But patrol's not allowed to use that. Our animal control officers, they can look at it, and they can hit the button and self-dispatch. So again, I think it's just stuck in the-- the biggest fighters we had about going to self-dispatching, which we tried a dozen years ago, was we had a few old time sergeants who wanted to hear absolutely everything that happened. And they told their people not to engage in the testing, so then it went downhill. And without support from the supervisors, it didn't progress...
Problems - People	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...Some people are really old-school. "I can't do anything else. I write on a piece of paper." ... there's a mentality there that I think is going to prevent a shift in that direction for actually using the tablets like they are designed
Problems - People	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...we have a few people who will not use the computer, use only the radio, which then takes up bandwidth for everybody else, but they won't change, and they're our trainers. So when you have trainers who are teaching people to constantly do that, it's like, yeah I can teach them how to, but you don't need to do it all the time. So it just, there's a lot of things that we can do with technology that our people are preventing.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Whether that's dispatching, whether that's running inquiries and stuff like that on computer, because we just get a mindset of, "Well, this is how we've always done it."
Problems - People	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: electronic v. paper forms] ...We have access in our RMS system to do affidavits which then keeps it as part of the permanent record in there. But, again, at the command level, we haven't forced the officers to use that, so some still use Word and type it up. And then we're scanning and attaching, all to six different systems, and I think that's the big challenge...
Problems - People	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: electronic v. paper forms] ...There's a lot of things that-- there's really almost nothing that we have to do on paper anymore, I don't think, but we do. Even our eticketing, it imports directly into the court. They have it the next morning. They still print out paper copies. Our records department, it could import directly into our RMS system, but because they had to click three times to merge the records, they print them out, and they hand type them in. There's job security there [laughter]...
Problems - People	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	And there's only one thing cops hate more than change, staying the same [laughter]. So it's a constant battle, "Why are we changing this?" and "Why aren't we changing this?" You're stuck.
Problems - People	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: information ever missing] Probably. I'm trying to think of a time specifically when that happened, but it's a technology issue because, from my time in [Job title], I know that talking to people in crisis they don't always answer questions the first, second, third, fourth or fifth time you ask.
Problems - People	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	So a lot of times, [Job title] will get kind of upset when dispatches doesn't tell them exactly what a suspect's wearing, or doesn't know if there was a weapon involved, or anything like that. Sometimes that has to do with the radio channel being busy, Sometimes it has to do with the [Job title] just not knowing because the call taker hasn't been able to get a word in edgewise to ask. Sometimes it's just missing information. So I can't think specifically a time that it was necessarily a technology issue

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								other than just being somewhere where you are out of range, or you are three floors down in the garage and there is no coverage there for the radio or cell phones.
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: electronic discovery] ...the person in records was literally printing it out, rescanning it, and attaching them as a PDF. A said, "No, no, no, I meant just print it to PDF and attach-- it's all electronic. You don't have to physically use paper for anything." Then there's a whole discussion on, do you still keep paper files?
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: electronic discovery] ...if they were to call us up, we'd just make a new copy of whatever and take it to them, which we probably already gave them a copy and whether it got lost, got misplaced. So there are a few safeguards built in and a few potentially helpful things as these systems come up. And that's sort of the tracking, the data integrity, all the other stuff that people think that any system should have when you're talking about data and data transfer.
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Just knowing the people within the department and who likes to play with stuff and who doesn't like to play with stuff, and which guys just took it and threw it in their bag [laughter] and said, "I don't have time to figure this out."
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: general technology] ...you're not going to use them because I don't have time to do that. And you're going to go back to what you know, which is the radio that just kind of engages your ear and maybe your thumb and finger for talking.
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...The other day when I picked up a car, I knew I wanted to display my clock and my miles per gallon and where's my temperature thing going to go, and then the display for the audio and the climate stuff, and how can I configure that myself when I back up. Do I want the little lines to turn when I turn the wheel? ... And I didn't realize all of those were in there until I just had a little more time in the car. So if a patrol guy jumps in a car, are we telling them all these things are there? Are they just discovering it for themselves? Should we, as an agency, take

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								responsibility in saying, "Here's the things that should be turned on"? You can't turn off your backup sensors because we don't want you backing into poles. You can turn off the lines turning left and right when you're backing up... More things I don't think anyone was aware of is there when we get these cars.
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...in our training, we told people, yes, we recognize as we introduce more technology, information comes out faster. Don't forget the human factor. As a call taker receives a call and is typing notes and it pops up on your computer, the dispatcher is probably reading as fast as you are. Don't start asking them questions about what you're reading when they may not have done all their reading because maybe they sneezed and they're two seconds behind you. So sometimes everything just comes so fast but you need to slow down and wait just a minute and let the dispatcher do their job and actually come over the radio because not everything may have been in the notes...
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...So if you see something and it's questionable, we had to come up with a time or say how long do you see an event and you think it looks good and juicy, and the dispatcher knows the location's wrong because the caller had wrong information and it's really not in your county. So don't start turning on your lights and siren and running somewhere because that's just where they live but they're calling about their friend who lives somewhere else. So we've cautioned about self-launching...
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...What came in as the structure fire is the reflection of the sun at night. But it gets billed as a structure fire because that's what the caller said. And you see it on your computer, and if the tones go off at the station the guys are ready to run out, so we've got a structure fire and then they never hear the radio come on and do the formal process of dispatching...
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...So from a liability standpoint, I'd say, look, that is your formal dispatch. If you choose to go out on your own, we're not saying you can't. You're all adults here, make decisions, but just be cautious because that event may never turn into what you thought it was and what the dispatcher

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								thought it was. So we are talking about the technology dependencies on how one part can really affect the other part and just understand they're related...
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...The speed of the information flowing is not always great... So it usually manifests itself as an issue, somebody complains about something, we try and go through the problem, realize why, what can we do to mitigate it, what can we do to not mitigate it, whether we just have to say that's just the way it is and there's really nothing we can do to make that easier on either side right now. But at least you understand why it's happening.
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	When I started, we were on VHF single system, the dispatcher would change which tower they were broadcasting from. So you regularly get half the conversation because you can hear the tower but not the person talking who may be on the other side of the county...
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...we stood up an 800 MHz system within our county. So we all had each other's talk groups but everyone was still afraid to change the channel on the radio or talk in somebody else's talk group because they just didn't do that before. So that took a while to convince people that we have new response protocols. And if multiple agencies are responding to a scene, we're going to move off the various dispatch talk groups and go to one response talk group. It took law enforcement a long time, and they're still not really there, that they're going to go off their channel to go to that response channel because their thought is they're always waiting for the bigger and better deal to come along and go do something that is more fun than directing traffic on an accident scene. So they always listen to their talk group...
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...So we try and do that from a resource utilization standpoint, from an information sharing standpoint. If we're all driving up and down the interstate and no one's found the accident, it's nice to know that. The biggest thing we used to joke about is the law enforcement officer does not need to tell the dispatcher that the fire truck is on the scene. The fire trucks knows they're on scene [crosstalk]. This goes both ways. We have lots of tapes of the fire truck telling the dispatcher that the law

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								enforcement is on scene. So that was the training years ago. They know they're on scene. You don't have to tell anybody that. Resource utilization, talk time...
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	We all know who likes to ramble on the radio. As we said, if you have to say break when giving notes about a call, you probably should have typed it to your computer by yourself. That's just a little much for the dispatcher to be hearing and typing and doing everything...
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I go to hit my radio and I get a busy signal. I'm like, "Why am I getting a busy signal? It's a clear day. There's no accidents." Well, there's more people out there now. Or it could've been somebody didn't turn off their radio and they drove through and they're dragging a talk group and tying up my resources. So trying to explain some of those to people, again, we try and mitigate it by putting more repeaters in a site if we have to so we don't get busies...
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...the example we use was years ago, the balloon boy incident on the front range of [State] and the guy was saying his kid was in the balloon, while we had just set up recently, this state-wide radio system. Well, people up here realized they could tune in and listen to what was going on on the front range. Well, the state deactivated those radios. They realized that the entire system was getting tied up by people who were not in the area of operations, listening to what was going on. And they were able to go through and deactivate those radios...
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: building traffic stops on MDTs] ...So that was a process of working through. I'll say it was a little letting go of control from the dispatchers. They disagreed with a lot of this. I think, as a field user, we said, "We don't care. This isn't your decision. We love you guys. We appreciate what you do. The person most responsible for my safety is me. And so if I need to build it on the computer, don't try and give me a policy that says you shall not. It's not going to work. Highly discourage. Make it as strong a language as you want. It's going to happen."
Problems - People	LE	R	Field	46-55	21-30	Male	LE-R-019	... The expectations that are being put on law enforcement. I mean, if you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					sit there and listen to radio on probably anywhere, and you hear the calls that gets dispatched out, you would probably sit there and go, "Okay." If you wrote down every call type, and realized, "Well, what is it the police officer's been given all these calls has to know?" Pretty much everything. And I understand when the citizens call in and they don't know where else to go. Maybe we don't have enough 211 services, 611 services, but I listen to some of these calls going, "How are we supposed to know that?" But we're going to answer the phone and they're going to expect something, and we don't want to look like fools.
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...Personally, my handwriting is horrible. The office people would love if I did electronic ticketing. I wouldn't have had tickets dismissed that I'm sure were dismissed because the judge couldn't-- because someone probably couldn't read what I wrote. I accept that. So I can see benefits of that, but do I do it on a little hand held device? Do I do it on a bigger computer? How do we take this concept, and then through technology actually implement it?
Problems - People	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So I would say, as far as the technology goes, it's very difficult to get the judges and everyone else to understand the technology. And understand it's not this CSI-effect thing where you're just doing voodoo and we didn't just magically create this. It's actually based off of technology and diagrams and measurements.
Problems - People	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...our officers are authorized to use these for recording audio, video, pictures, any of that. And then they can bring it to us or email them to us in order to upload them into Lumen. So we've looked into the technology of being able to allow them to plug in their own phones and download it themselves. But there are some issues of, "Well, will they delete or will they upload them properly?" So at this point, it's just easiest to have them either bring in their phone, we plug it in and download it ourselves, excuse me, or if they're technologically-inclined, they can just download them and email them to us. So we discourage it for major crime scenes...
Problems - People	LE	S	Other	26-35	6-10	Male	LE-S-021	So when we're in training, we have a trainer and a trainee in the same

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel					car. Well, if one's using an earpiece and the other one is not, chances are somebody's going to squelch at some point. So I don't know if there's a way around squelching, if there's just not, but earpieces, I think, would be a huge fix to that. But everybody has to accept the fact of, "I'm going to use an earpiece." A lot of people don't use it because they don't want to go deaf and you can easily go deaf...
Problems - People	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: apps] ...we handle a lot of calls where it's hard to communicate. We have certain officers that can speak Spanish and stuff, but nobody that can speak Russian, to my knowledge, anyways. So having Translation, which is just basic communication with different languages, is very helpful...
Problems - People	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	I think, in general if there's ever information that's not provided to us prior to arrival, it falls upon the reporting party or their inability to communicate effectively through dispatch. People are in states of panic or whatever, so it's very hard to communicate. And so dispatch has to do the best that they can and provide us with the most succinct and direct response to what they're being provided. So yeah, a lot of the time we show up, and it could be a suspicious incident or something, and it's actually an active domestic. So you get on scene and it's, "Okay, well, I wasn't provided this information," but it's not necessarily their responsibility to tell us everything that we need to accomplish our end goal...
Problems - People	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	...you have a lot of strong-headed people that are very intelligent people, and it's not that one way is the right way or-- no one way is the right way or another way is the right way, they're both good paths to take. But everybody wants to do it their own way, so sometimes that gets a little conflicting especially when you have a sergeant that'll tell you one thing and another sergeant [inaudible]. It's not like either one's wrong, it's just they don't always tell you the exact same thing, so. There's a little bit of a communication breakdown, I think, in those regards, which it isn't a bad thing necessarily, it's nice to have different perspectives...
Problems - People	LE	S	Other	36-45	6-10	Male	LE-S-027	We have two people in two different locations. It helps us with the plan,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel					how we're going to approach that. So the more information, the better. But we don't always get that because the victim might not be able to provide that to us--
Problems - People	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	... But then you have to make sure, "Okay. Is this the right person? Is this the right thing?" Because you're there in a frantic, so people can get things wrong as well. But that would be enough to at least start the process.
Problems - People	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	There's a few. There's a few that talk way too much on the radio.
Problems - People	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	And the ability that people will just report everything, so.
Problems - People	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	It goes up and down. What unfortunately happens sometimes, and the reason we have the liaisons that communicates with these folks is there will be a new story about something, about a contact between an officer and someone in the African-American community and it'll turn into a news story and emotions will flare, but then the goal is to have this liaison that they can reach out to and go, "What happened?" And we can try to provide information to the degree that we can. So I think it's pretty successful. It's important that we continue to do that. But again, it turns on what happens if there's a bad news story then we usually have some damage that we might have to repair.
Problems - People	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Yeah. I mean, if people that aren't efficient with their [crosstalk]-- yeah. And so there's somebody talking about something that may not be super important, which I can't override that person and say, "No, get off the radio. I've got to put something out that is." Yeah, only person can use the radio at a time.
Problems - People	LE	U	Supervising Field	46-55	31-40	Male	LE-U-029	Usually, at least from my experience, and again, it's mostly critical incidents, protests, things like that, what causes the largest problem is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					when something happens we have-- at a protest, you'll have a big fight will happen. Everybody has to get on the air.
Problems - People	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Yeah. MDT is right here, and I end up getting a lot of cars dented because people are looking at this to look at the call, and they kind of don't realize the traffic has stopped. A lot of updates come up on here. I would love to figure out a way-- I know they can do it in fighter planes.
Problems - People	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	We're losing as many people as we hire. And I think it's-- talking to other agencies, they're saying the same thing. It's just not as many people want to be a police officer as they used to.
Problems - People	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	...And then when they run the license plate, we ask them, "Is there any RMS on it?" which is Report Management System. So is there any prior thing associated with that plate? But our 911 center won't give us that information over the air anymore.
Problems - People	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	So in a police car, we had and used cameras and microphones. And to be honest with you, it wasn't that big a deal. I don't really understand what the problem-- they make a big deal about it here in [City] when people forget or they crash, or whatever.
Problems - People	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	You shouldn't talk on there for frivolous things. So I don't spend a lot of time on the radio, but I find now, a lot of our dispatchers are saying a lot of things that are really [inaudible]--
Problems - People	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	[RE: information overload] Well, as I'm preparing for roll call, that's exactly what I'm looking at is-- I'm looking at information that I think is important to the officers but if I give them too much, they're not going to remember it all, or... The really important stuff is going to get forgotten, and the minor things get remembered. So that's kind of-- one of my pet peeves actually is when-- I'll be honest with you. There's another sergeant on the watch-- we get a lot of things in our emails and those go to every officer, but it's things like-- well, there was an email from somebody at the 911 center saying, "Hey, please ask the officers not to talk between themselves on their MDT, but talk to radio so I know," because apparently, they said, "Well, we saw the suspect." Well, in my

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								mind, that is-- one set of officers, why would I go to the entire department and say, "Hey, quit talking amongst yourselves or don't-- make sure to share that with radio." Plus, you got the email yourself, but that sergeant, she likes to print those things out, and she puts them on the board. But they read it in their email, and now they hear it from me, and they just roll their eyes. So to me, that's information overload. I will go and I will put that-- when I'm in charge of the roll call, I won't even read that. I won't read it, because they already know it. We train them a certain way.
Problems - People	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	It's redundant information, and these are officers that-- what should have happened was at the time was the dispatcher should have called their sergeant or called them and say, "Hey, listen, I know you see the guy, but you didn't share that with me. Don't--" send it to each other, send it to me. But instead, they save it up and they add it to a couple other problems and they send it out for the entire department.
Problems - People	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Exactly. And sometimes I'm not sure what he wants me to understand. I'm not by any means stupid, and neither is he. But there's a piece there also. I'm not quite getting what--
Problems - People	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	See, I've always thought my job was to anticipate my boss' needs and take care of those before he has to ask me for them. But when it comes to what the captain sends me, I'm not sure what he's sending to me.
Problems - People	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	And there was a time, before I came to bikes, where I was in the community police team. I used that a lot, but most officers don't know how to use it.
Problems - People	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Q: On the road, in the [inaudible]. Got it, got it. So what, if any, that causes communication problems, in your mind? SME: Usually the dispatchers.
Problems - People	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	The talking over each other so the radio will bonk. So if I key the mic the same time another officer keys the mic, somebody gets bonked out but you don't always know it....-- if we're going to a really hot call, one of the things the officers will-- the first couple of cars need to get on the radio

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and say, we're going, but the rest, I don't them to take air up to say they're going. Just go. Because by the time they get on the air, maybe they're already there trying to transmit something, and you're saying, "Yeah. I'll be there from [[Name] and [Name]?]. And those three seconds could have been, "I need help."
Problems - People	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Yeah. That's a minor thing you think, but if you add those together, those little snippets, they take the air away. You don't need to say you're returning.
Problems - People	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Yeah. I think maybe a small number, and it's probably small, is unwillingness to, I think-- "I'm a cop, or whatever. I'm a first responder. I know how to do my work. I don't need any of this stuff. I'm not going to even deal with it. And I'm going to do as much as I can to keep circumventing it as long as I can."
Problems - People	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] So that's difficult to communicate with callers. We have language barriers, but we do utilize a pretty great language service so we can get translators online fairly quickly. Other issues would just be, I think, callers maybe not understanding that. "Hey, I'm going to get interrogated." And either they don't understand sometimes how the call taker is getting information and maybe are upset because they're not hearing the right things or that help's on the way, which we'll tell them eventually. But it's hard sometimes to corral and control the caller, depending on what's going on. Among the communication employees, communication-wise, difficulties--
Problems - People	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] ...So I just want to get back to the communication. They may mention communicating with us may be a challenge, but they have our radio frequency, but quite often they don't know what channel to turn it to. I think that they have our frequency. So if they get in a jam and they're in a dangerous situation, there was originally just an EMS call.
Problems - People	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Hey there's a guy over, have a knife then it kinda goes through their dispatcher, it goes through our dispatcher, and I come flying down there, you know, 'cause I'm thinking there's a cop in blue calling for help. Their

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								politics are different from our politics.
Problems - People	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	We were switching over to 700, and they have a huge hub at Fourth that's going to go underground at [Street] which might help with the radio at [Name] Mall. Because now we're separate, we're on 700 MHz now and their in the process. These radios are all 700, 800 capable. So when they do hit the switch to 700, it's hit the switch and the cop's not going to notice a difference.
Problems - People	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	And that one radio unit would do all the grants, get all the-- at Westfield Mall, we need communications, they do all that stuff. They don't.
Problems - People	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	So he's Asian, the other guy is straight from Ireland, so obviously they're going to go, "What did you say [inaudible]," and we mess with them all the time around here. That's why you see all these pictures of-- so [inaudible] that's me and all the radio mics.
Problems - People	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	We don't talk the same language than CHP. Now, being a radio person I understand their-- our version of a 10-25 in [City] is an officer needs back up. CHP's version is there's a truck that's flipped over and it needs help.
Problems - People	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	But that's what and right now and that's the biggest issue we have and the biggest divide is you can't communicate with anybody anymore.
Problems - People	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	I think law enforcement, is they're not getting out and not talking to you. Every once and a while, you'll get a clip of a cop playing basketball with a kid out in the street or something like that. But they're not doing that. You can't communicate with them unless it's PlayStation 4 or some crazy stuff. There's nothing to relate to. There's no Monday night basketball. I remember you had to be home before the streetlights came on. And if I screwed up, my neighbors had permission to whip my butt. Then I got two of them, from them and then from my parents when I got home
Problems - People	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	And then, some bosses get mad when you're at the station early, but you're there doing paperwork or information.
Problems - People	LE	U	Field	36-45	11-20	Male	LE-U-013	I say yes. But the newer generation, they live on their phones. And I get

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					mad at the newer officers because they do that. They're on their phone. And I'm like, "You know we're on a traffic stop. We don't know who that guy is. We don't know," and they're on their phone. And I tell them, "Please get off your phone until we finish this traffic stop." But it's the younger generation. They live on their phones.
Problems - People	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: using body cameras] ...sometimes you're figuring out your route and you're doing a lot of other things in your head and you get to the call and you're like, "Oh, I forgot."...
Problems - People	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I think, partially my generation, but definitely, the generation that's coming after me, we're more apt to text than make phone calls. And so I think we're not as good of communicators because of that. We're used to being able to plan out what we're saying before we send it and stuff like that. So that phone calls, sometimes you-- when I first came to the department, we had to start making notifications. I'm like, "Oh my God, I hate talking on the phone this much." It was just, it was something to even get used to, to be on the phone regularly.
Problems - People	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...Everybody tries to get on the radio at the same time. Sometimes the dispatcher just-- they have a hard time controlling the entire situation. The officers have a hard time not cutting each other out...
Problems - People	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...on the radio, a lot of people try and get out at the same time, and then were walking over each other.
Problems - People	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	Sometimes we have problems with dispatchers, and they're the ones who are relaying the information. For instance, somebody is chasing somebody outside and we can see it on the cameras. The dispatcher doesn't always acknowledge the people in the room. She'll purposefully not listen to them. Or if ShotSpotter goes off and, "Hey, there's nine rounds here. Now there's seven rounds," you can clearly see people are shooting at each other with the way that it's going off, she'll purposely not answer. Just disregard, "I have other things to do. You need to wait."
Problems - People	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: cause of communication problems] Some people don't want you to give out information, let's say if they had, about an offender because

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they would like to make that arrest or they think somebody else is going to steal that arrest from them. Sometimes detectives won't give out offender information because they want somebody in a unit that they know to take that arrest. So that's part of it. "I want to hold that information for myself because I want the credit for it. I want the pat on the back."
Problems - People	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	[RE: new technology adoption] A few people, a few people. Majority of the guys think it's garbage. Majority of the guys feel threatened by it, I would say. They feel like, "Oh, what's a computer going to do? We lock people up. We're the real deal." And they don't understand that it's a tool, that it's not meant to replace you. It's a tool. But we are getting conversion. People are starting to pop into their heads as they roam little more and say, "Did you see this in the camera?" And the reason for that is because-- that's kind of why commander brought me in, because he knows I'm proactive. I have a good attitude. I want to do this. So he figured, "Hey, this kid will run with this and try make something out of it." And I have. And we've been able to get top-10 targets taken down fast. There's top-10 targets that drive violence, principal drivers of violence, in the district. And we've been finding them and locking them up. And we've been doing it with technology, plate reader. Kind of figuring out, well, what area the car is being seen in, and putting ourselves in that right area.
Problems - People	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	I use cell phones, but the cell phone [inaudible] platform, it's got limited use. The other thing I'm afraid of is if they replace radio communications with a mobile communication-- you don't want too much communication. You don't want too much radio traffic. You don't want over-communication because that's just going to confuse everything. So right now, the way that we have the radios, it is pretty concise. You have to stand at a point, and you just communicate with [inaudible]. You get it out there, and that's it. So I'm afraid that people may begin to speak too much, if we have a mobile communication.
Problems - People	LE	U	Field	26-35	6-10	Male	LE-U-023	[RE: over-communication] No, I don't find that problem on the radio. The

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					radio, through the limitations of technology, it actually serves as-- it has its own discipline mechanism built into it [laughter], into its limitations, yeah. So it's good. One person speaking and everyone's listening, and that's the nice thing about it. On the mobile phone, which we've done this when we're doing surveillance and stuff, and we're in multiple cars, and we're following people, it gets crazy. So-and-so's talking, and they feel like the most important thing that needs to be said is what they're saying right now. They're saying it, and now you're saying it, and it's getting confusing.
Problems - People	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: cause of communication problems] Humans primarily. I think our technology works well. I think the failures and communication often are human caused. Some of our partners communicate better than others.
Problems - People	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	... I mean even the phone right I mean the whole election they used advertising to try and manipulate people into how they were thinking or feeling based on what ads they were already looking at, what new sites they were already looking at so using an algorithm to say okay look at this and people could make their site so that it would hit those algorithms so they knew that people had looked at this but also look at this which would help recourse that so technology is kind of scary that way and I guess I don't know I don't know if there is something pie in the sky that I think that would be super awesome great.
Problems - People	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Right from where you're from right and one of the instructors was from Baltimore and he was talking about how you know after 9/11 they bought their 700 megahertz radio system and everybody was on the same radio system but they still can't talk to one another and it's one of those things where even if you get technology the next part is teaching people how to use the technology and so you can have pie in the sky technology dreams but then you got to teach people got to be willing to learn it and be willing to you know they don't.
Problems - People	LE	R	Other Public Safety	36-45	6-10	Male	LE-R-043	Right yeah. There's a lot and it's really getting tough with the technology, with the internet right because you're afraid the internet has taught us that you can't really be honest anymore because people then can use

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					the internet to take whatever you said honestly and turn it against you. It's really tough and frustrating and so you don't know any more that's not work that's just life right? You don't know who to trust or what you say to who or where it's going to go and how big it's going to get. Again that cell phone thing right? It's cool I got this cell phone. I got this like thing that follows me around and Uber can find me. Yeah well guess what you know everything you put on it's like you put a thing on Facebook I don't care how tight your privacy rules are someone is going to find something and somebody that you don't like you know is going to potentially share that (00:26:57) information screenshot it you know Snapchat right deletes in 30 seconds. Oh gee screenshot now I have this you know thing you sent to me or this photo you sent to me and now I can blast it all over the internet.
Problems - People	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	... I mean people are going to say things that you didn't inform this person or you didn't do this properly or you know you're doing this too much or that too little or you know this, that and the other thing and it's just like okay you know I may have three different people telling me to do something but and it's all three different things... Don't get me wrong I mean it's hard thinking that anything you say or do that one person might get you fired because that person is technically a boss of yours right and could cause issue but that person might not agree with the other person so you have to play that mediator role so you kind of just do a lot of smiling and nodding and yeah just let people do their thing.
Problems - People	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Yeah and we're human, we make errors, we screw up so end of story. Not end of story but end of comment. How's that?
Problems - People	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Yeah you never know. I think it's just it's pretty simplistic and that's why people get left out right because you forget to add certain people to an email and all of a sudden they get left out.
Problems - People	LE	R	Other	36-45	6-10	Male	LE-R-043	... Once a company decides not to make them anymore and nobody

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel					supports the technology so yeah I don't know. It's the hard thing about the living in the society we live in. (00:43:00) You kind of get stuck with whatever you know people create and people embrace. People embrace Google Glass and it did become a thing.
Problems - People	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	...You know you hear the same thing you hear coming from the vehicle and I mean they hear everything we hear and they see everything we see and so it's and so from a tactical advantage standpoint we lose a lot of that surprise on what we've got going on so and our dispatchers have made the comments that you know when they're on the phone when somebody who is calling 911 to report something they'll hear themselves dispatching us through the phone because people have scanners and you can get a \$29 scanner that picks up all UHF traffic for the entire county and that's TEN, fire, EMS, police anything like that...
Problems - People	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	...The other thing that we do is in a rural agency a lot from my perspective is we disconnect with the caller a lot and the reason is is our dispatch center has one dispatcher generally in the evenings for fire, EMS, police and general calls. So that one person doesn't have the ability so when you have a dispatch center that has five call takers they can stay on the phone for five minutes with somebody it's not a big deal. They can't dispatch particularly on like a crash or something like that. I mean you think about a crash that generates twenty five 911 calls you know we have to get all of those and still get the relevant data so the first caller generally you're getting data sometimes not always the best and so they're having to figure that out...
Problems - People	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	I think that the individual's understanding of technology is probably the largest thing. We still have guys with flip phones. I didn't know you can still buy a flip phone. You can apparently. They're expensive. So we have one guy in particular love him to death he doesn't text, doesn't do text messaging right he also has a flip phone so I think and then you got myself and some younger guys that are like you know we're watching our dopers on [social media].
Problems - People	LE	R	Field	26-35	6-10	Male	LE-R-044	There's a huge disconnect between society and people's perception in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					law enforcement and what actually happens.
Problems - People	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	And I've seen the industry change around I want to help people who want me to help them but if you're the guy that's saying screw the police and you call because your neighbors are harassing you I don't want to have to respond to you but I have to. You know what I mean? And so trying to bridge that gap can be really frustrating because we actually have that happen where people post things on [social media] or send a nasty gram to the department, tell us how horrible we are and then their car gets stolen and guess who they call for help.
Problems - People	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] We have to go to every call with non-prejudice, non-biased opinions and try to make a justified in a justified perception of what exactly we're dealing with because people lie to us all the time so it really you have to be able to maintain a clear head with every call you go to.
Problems - People	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] ...If the evidence isn't there and we make a decision that somebody doesn't like they're going to go all over social media and just dog us or absolutely nothing for just going off of what we have. Investigations for the most part are ongoing. It's not just an open and close case.
Problems - People	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] ... there's also on the downside of it where if there's ever a chance where we get into an altercation with someone in the large crowd everybody's going to watch that video, everybody's going to want to see what happened but it's always going to be halfway through.
Problems - People	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] The people that watch those videos they don't see the full story. They don't actually understand well that guy had a knife or he had a gun or whatever he may be intoxicated and tried to fight one of the bouncers and we said hey you need to go and he starts to fight us. They start the video after everything's already begun. They don't start it from the very beginning of what happened.
Problems - People	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Don't get me wrong there are some videos that you can watch out there that is the full thing. Usually it comes from us with the body cams. When it comes from a cell phone video you know I've never met anybody that walks around with their cell phone camera on 24/7 so they're never

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								going to catch the initial contact of what actually happened.
Problems - People	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] I mean for the most part for the vast majority of it that's the case but there are some that there are some bad there are some people that are in the wrong and they'll end up getting their just desserts for what they do.
Problems - People	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] ... whenever it's just basic talking without the GPS getting in the way or something like that our radios work very well but you know there are times where we have certain officers that work with us he knows who I'm talking about specifically but you know when we go on especially on a SWAT call out there.
Problems - People	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] There's a lot of people down here that have listening problems. Not listening to the radio but I mean there are guys that I work with I'll call four, five or six times on the radio and they'll say nothing just because they listen.
Problems - People	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] It's come a long way. There's a lot of things there's a lot of people that don't use their computers they have access to them. There's a lot of people that have the chance to use the technology they just choose not to because they don't want to learn something new.
Problems - People	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] ... There are shifts where people call for help and some people don't want to go help so they send someone else which is bad...
Problems - People	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] .... A lot of people like you said they don't see that whenever we're busting in a door or something like that because we're not just going in there for a reason we're going in there whether it's a drug related call, a domestic related call, child abuse whatever it may be we have a good reason to be there. They may not think it at that time but we're actually helping them because if it's a drug related call who is to say that the next step they take might be it.
Problems - People	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] And when they do talk about that it's also negative.
Problems - People	LE	R	Field	Not	5 or less	Male	LE-R-045	[S2] They don't see when we go out like on a SWAT team when we have

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder	specified				grades and stuff we go out let the kids play on our Harvard vehicle which we call ARV and they don't see that stuff but whenever we kick in their door because they're selling drugs to kids then we're the bad guys. So they don't see both sides of the story.
Problems - People	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	Outside of that it's usually human error not really technology but there are times where sometimes radios when you key up they won't work right then and you have to rekey up and do it again but websites only stay up with something like that.
Problems - People	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] ...We try and keep off the radio as much as possible because in [City] we have a lot of people that we like to call standard land so we have a lot of people that listen to what we say so there's a lot of times we get sent to a party call they'll have a scanner pulled up on their phone.
Problems - People	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] ... We're upstanding officers we don't work outside our badge, we don't abuse our authority or abuse our power in any way. We do our job, we have families. There are officers that do abuse that power. If you put a body cam on them the chances are they're going to be forced to do their job and nothing more which is a good thing. It'll either tell them to smarten up or it's going to get them it's going to take the badge off their chest which should happen.
Problems - People	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Listening always listening to the radio even though it's a complacent problem.
Problems - People	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Used to hearing that number because that's the bar right from now on it's never going to be said anything on that radio other than that number so if you don't listen to your number and you get sent somewhere and another officer goes and you don't show up and he gets hurt that's on him. That's on that other officer so listening it's bad.
Problems - People	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	If you have people doing 80 miles an hour and there's a lot of agricultural people down that road you have a cattle trailer that's 40 feet pull out into a road that's a 4 lane and somebody comes down a hill at 80 miles an hour that's going to be a bad day so people need to slow down through

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there because there is this issue that you see here. It's not the fact that you can drive straight down the road it's the other stuff that interferes with your path and people don't think about that. They go I never thought about that. You explain it to people they get it so I forgot what the question was now.
Problems - People	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	A lot of that has to do with pay. And I'm picky about people. If you put somebody in a badge and put them near a community as to the wrong person it really hurts your department so I really work short then work wrong and one thing we had is when I came into office here we were paying \$12 an hour for deputies.
Problems - People	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	... and I'm over dispatch here I'm on the radio just the basic stuff they never fixed is ridiculous.
Problems - People	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	They had no battery backups so it would take 10 to 15 minutes for radios to come back up. If anything happened during that time it was just tough. No it didn't work and so I actually went and bought battery backups for everything so now when the power goes out or if the generator kicks on you operate through it because you know when you have severe weather and stuff that's not time you need the radio going out so we fixed that issue.
Problems - People	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	... because most of what fire association does is try to make the radios better. They're doing that independent of everybody else and I don't like that. I think we need to all come to a solution together so we came through and now we're at a point I'm kind of a pushy person about getting stuff done and now we're at a point where I can't imagine I'll spend the money just tell me what you want that's fine.
Problems - People	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	Currently we don't back up. We backup our RMS system, our reporting system. We do not backup our CAD system. So if something were to happen in that room all the CAD data would be lost because we had no backup. That will change once we get the new system in place. I think changing from the 100 megabyte switches to the gigabyte switches is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								going to make a huge difference just in speed.
Problems - People	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	We're improving. Before they didn't communicate with anybody. They truly didn't. Some of the fire guys they had one guy in particular that was very difficult. He wanted to be in charge and he didn't want to do stuff. He wanted to make me do what he wanted me to do and I'm not that guy. I'm like listen I'm respectful of you be respectful to me. He refused to come out to a call one night because I hadn't called him back yet and he called out here and cussed out my dispatchers and then he got in court and was ugly so I said that's fine so I went through and documented everything. At the fire association meeting I said hey this guy is making you look bad. This is your business you deal with it but I'm not going to call him back.
Problems - People	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	Now I think sometimes people's egos get caught up and don't want to ask for help and you should and there's a possibility someone's in the house and if they can get there before I did and help get somebody out or see if there was you know makes a big difference.
Problems - People	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	The human side of it is ego is the biggest thing. I find ego gets in people's way and they don't feel like they should have to answer somebody else and they don't want to humble themselves and work as a team. You got certain people who are the top of their tower and don't want to talk to anybody else because they're at the top of their tower...
Problems - People	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	... I think that's what you look at here is you have the guy who wants a new car every year and he wants the big shiny, shiny or you got the person who wants something to be functional and get the job done. You got the guy that's got the 1975 Dodge Ram Power Wagon or you've got the guy that's got the brand new 450 jacked up and never been off road.
Problems - People	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S2] We try to eliminate dispatch if we can because it's just too delayed. You give them information while they got other things going on they might not put it out right away they might wait a few minutes. It takes way too long to relay information so now we have much better ways to do it instant I mean it's been very successful.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - People	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S3] I think the only thing that would cause problems is the unnecessary people being on the communication level. You know what I'm saying? There's certain people that you want putting information out because they know what is the pertinent information. Sometimes you got too many people putting out unnecessary details that don't necessarily involve other people. I don't know.
Problems - People	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] Any kind of communication discipline even on the apps. Some people get out of hand with in turns into chitter chatter.
Problems - People	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S3] And if you think about it it's just like anything if you have too much of it then you get complacent with it. You're not really paying attention to it you know your phone's going off I'm not looking at it because you know that's [Name] goofing off sending out unnecessary stuff. Doesn't necessarily involve us.
Problems - People	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	...but it's yet another password so yeah you definitely hear people complain about you know I got to keep track of all of these passwords and they use weak passwords because they don't want to forget them or their passwords are on sticky notes like here are my passwords on a sticky note next to the computer but yeah that would be something that bothers people.
Problems - People	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	I would say with this Live Safe thing there has been some people are sending fairly trivial kind of tips and then you got to go check it out and go this isn't really a thing so I don't know if that's hindering us as opposed to maybe making a little more work for us but that's fine that's what we're here for. I don't know I think when the analog system occasionally would go down that was certainly a hindrance.
Problems - People	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	...I think sometimes people are looking for obstacles like oh we don't have this and it's like well you don't you wouldn't use it but we should have it you know we can't run things in the cars well so what you can run things over the radio. Find another way. Oh I can't I have to hand draw my accidents. You don't do that many accidents you can do ti but we should be it's not hard. We're well funded, we don't have the budget

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								issues that some of these smaller municipalities have we should have these things just because that's the standard and I know our chief feels that way and so we move in that direction.
Problems - People	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	... Some officers and it drives me crazy want too much information from dispatch and expect dispatch to have ESP but I have to know like you have to dispatch me the right location, you have to dispatch me the right type of call, code or signal.
Problems - People	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	Stress, lack of training ability and then some people can just be difficult. Sometimes we've got officers that give attitude over any of us. It's like why are you getting an attitude? Sometimes we get dispatchers that get an attitude on officers. People are having a bad day but it can really impact our ability to communicate but I think when the situation gets stressful or it's a high you have officers messing up, you can have dispatchers messing up and I think when if people just don't have the intellectual capacity to do the job or are not properly trained you run into problems. They don't know what to ask, they don't know how to ask it, they don't know how to relay that information.
Problems - People	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	I think it can make it better or it can make it worse. I think you run into like you know long time officers making like agreements with dispatchers don't give me this call, don't give that call. Give it to this guy that kind of thing and then that's on a Sergeant I think to stop that but that sort of stuff happens playing favorites those sorts of games or sometimes dispatch will be uncomfortable saying something over the radio so they'll ask you to call dispatch or they'll ask you to come and meet them in dispatch and it's like well that's defeating the purpose of all this.
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	There's certainly, we were brought up recently with legal updates and some, through the years some of them are concerned about using their personal phone for office business because there are some lawyers, defense attorneys who will try to subpoena that information. And then you're worried about your private messages on your phone, family pictures or something. Just stuff they don't need, but I don't know if it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								was a scare tactic used by these defense attorneys, but it's just something that comes to mind for the deputies.
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	... And to the technology, it works even for bad guys. We've been on calls where the bad guy has that friend on the outside videoing a live feed and he's watching it on Facebook live feed. And we've had SWAT call outs or a shoot in where we're trying to do stuff and you have people videotaping, showing and sort of the bad guy is on the inside watching what's going on on the outside. Technology's great but it's also, it can hinder our security and our operations.
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	I think misunderstandings. Because a dispatcher knows, how can I say it? It's kind of like having been married. My wife may know what she wants to say, may say it not in the way she intended it, and I may interpret it the way I am understanding it. The same thing, a dispatcher may get the information from the complainant who's either not relaying it correctly or relays it overly enthusiastic. The dispatcher gets it, puts it in, so you're reading just words. So unless they... sometimes they'll we have what we call silent dispatch whereas they would just type it in, tell you you're assigned to this case. They send in an assignment to you and you open up the case and you see what you have. They may never even-- dispatch over the radio. So, but on hot calls then we're talking to them because their dispatcher knows over the radio. And you're looking at it. So as far as problems because again you're going back to silent dispatcher, if you're not even understanding the exact verbiage, you may read it without understanding it. So I think miscommunication is our worse communication if that makes sense, because the way they may have intended it may not be the way we're reading it. Simple things reading one sentence could throw an entire case off because that's not the way we read it.
Problems - People	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	...And then because, and then they didn't understand what we were talking about because of our accent, because of our verbiage. For instance, we may dispatch somebody down to the bood [phonetic]. Someone from out of town doesn't know what the bood is. Basically

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								what the bood is is a rockpar [phonetic]. Rockpar is French for rockpar. Well that's where we're telling you to go, go to the rockpar, it's called the bood or the plant, the plant is the point, the point of something. So it's for them that was like what? So even though you could talk plain talk, you still had to--and it hindered it, it's in the verbiage.
Problems - People	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	... When you're trying to start patching all them people together, you've got, I mean you've just got multiple agencies, and then you got your like, people like the [Organization] that's coming and they're handing out radios to them which they don't, they're not radio etiquette, they're not properly trained, they're hollering things out on the radio, so yes, I do think it causes a significant issue. They're not properly trained on how to work the radios. So yes, I do believe that somewhere along the line there needs to be some more training and education involving the radios and the communications.
Problems - People	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Look, don't get me wrong, I agree that some of that work in favor of rescuing people, but it also worked against us too because then we had to focus our efforts on going rescue some of them, because they weren't properly trained, they didn't have proper life vests, they didn't have safety equipment. So some of our efforts that, I under sand they were trying to do what they thought was right, kind of hindered our ability. Look, if a person is trapped on a roof, and they've been there for a day, another four or five hours is not going to hurt them to stay there where we can get there and do it safely and then get them back in one piece. The law enforcement fire department, ambulance, we have the resources and the training to be able to do that. When you send somebody out there that doesn't have that, now you've taken a person off of a rooftop that's getting in a boat that came out of somebody's backyard, it's possibly sinking, it's having mechanical issues with it, they're just not properly trained to do that. Or if a person really is critically injured and you're not medially trained, then you're taking them off of this rooftop, you could injure them further by putting them in this boat and bringing them back there, so I guess it's kind of a double-edged

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>sword. And then I mean, people want to help, they want to help but in a sense sometimes it of hinders you especially first responders it hinders you because you've got to go out there and now rescue them.</p>
Problems - People	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	<p>The technology as far as hearing the radio, that's kind of a--probably, I'd say 80 percent of the time, is pretty good, when you get dispatched, and when you start to lose that is once you get to the scene of the location, and depending on the obstructions and type of building, then you start to lose that communication. Now, on the other end of the dispatch, you've got the human element that it's only as good as the information that the dispatcher gathers and relays to you.</p>
Problems - People	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	<p>That could improve. We've had some issues in the past that not all the surrounding agencies were on the 700 initially, and now that they've gone to it, we kind of have a lag between the time they need our assistance, if something is coming towards our direction, and getting everything patched together to where we can talk directly to their officers, and when their officer that's in pursuit at 100 miles an hour needs us to be at a certain point in our [County], then by the time he calls his dispatcher, which distracts him driving like that, contacts the dispatcher over here, they in turn contact us, and it's kind of--it's kind of like one of those little drills where somebody passes a message among 15 people, and what the message is at the other end may be a little different than what it originated as, so yeah, there's some difficulty there.</p>
Problems - People	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	<p>Correct, and that's where accidents occur, deputies get injured, that's where you get a lot of complaints from the citizens. Again, with animals, deer in the wild, hogs and so forth we have up here, when you're responding to a really hot call where you need to get there quick, you really--you're putting yourself out there even before you get to the call, not to--nonetheless, when you get there, what you get into.</p>
Problems - People	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	<p>Q: Okay. What, if anything, do you think causes communication problems? SME: Hmm. Human error [chuckling].</p>
Problems - People	LE	U	Field	26-35	6-10	Male	LE-U-056	<p>It can be. It's never horrible. My perspective on it, because there are very</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					specific things you would say on the radio when I was in the Marines, versus in law enforcement, the tasks we're doing are vastly different, and so a lot of times, we need to speak more information out. People do--some officers occasionally do have the tendency to ramble a little bit. That's almost day to day, it's just a custom, remind them, hey, try to keep the messages as short as possible. Before I went to Motors, I got this job, we used to have laptops and a couple cars, and we could send messages via that to each other. Which they do now, I believe, they all--pretty much every officer here has been issued a laptop.
Problems - People	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	... I think the biggest problem that comes from that is if I use that landline in the back room, and I call somebody, and then I have to leave the office, or I'm out of the office and no one is in there, people don't seem to check their messages anymore, I guess that's not a thing, because leaving a voicemail or using voicemail, so they just call the number that they saw, if they saw a couple phone calls from it, and they're calling back to an empty room. We had a big problem with it in the Traffic Office, because people were transferring over there, and there's nobody there. There's nobody there to talk to, there's nobody there to take a message, or nobody is there to know they had called.
Problems - People	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	They're new enough. We--there are still a couple growing pains every now and then. It's mostly an officer just forgetting to turn it on, or they'll turn it on partway through, because they'll remember--they work, they'll talk about--back to, I guess, growing pains, as I've had it running for about half, and I brought the question of--I'm just waiting on a record, this person is in another car [inaudible], do I need an hour and a half of a video, do I turn it off, do I turn it back on when they come up to me?
Problems - People	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	Well, they always call me on it when I'm trying to eat lunch, really just seems as soon as I sit down, try to get something to eat, they call me on it, but as far as get in the way, no. Several times, technology has failed, like the cameras, certain times one of the reasons I like--I stressed to them, keep the traffic on Dispatch 1 and 2, but sometimes you'll be out with a car and a situation is changing for an officer, they're trying to key

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								up on the radio, but they can't key up on the radio because someone else is using it, so they've got no means to override that, an emergency. Now, they've got a--they'll have a little button on the radios, if it was a dangerous enough situation, they could reach down and press that and at least Communications will know, it would be between them.
Problems - People	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	...If Comms doesn't ask the right questions, or [inaudible] follow through with a good [inaudible], that's not going to get to the officer. The streets out here, a lot of the parking lots have changed names at least twice since I've worked here. The Communications Officers, whereas they used to be--whereas they used to be uniformed officers... It's bad enough that off--the complainant is the victim of a violent crime, aren't necessarily capable of giving us exactly information as they can, and since things--there are very few cross streets, it's a very foot traffic heavy area, they were going to--they generally just tell you the last building they remember, or the building that they actually know that they're closest to, rather than a more specific location, and communications officers don't have anything else to go on, because a lot of times, a complainant or the victim can't give any more information, so just the officer has to just drive around in circles, get out and walk around, and never be able to find it.
Problems - People	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	... The person who called isn't the one making the complaint, or will have [inaudible] work around here who have a captain's number, or chief's number, or the major's number, or just an officer's number, who think, here's a crime, and sometimes, that's an active crime, or it was an active crime when they should have called us, and they'll just tell somebody about it that they know, like, send an email to somebody who works in administration here, or call their friend of theirs so they know, who's a patrol officer, who then gets around, and I think that's just the nature of where our work is sometimes, where it can be difficult enough moving that information through two different people or one different person to get back to the officer, ask him if there are extra people, that's happening after the fact. No one knows, no one remembers.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - People	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	<p>Training, certainly. The--training is the only thing that could solve the human errors. There's nothing that can suddenly prevent them from putting too much information on the net or keying up too much. I used to work with a guy who didn't like to let go, and he would say something, and he would get his thoughts together, and he would say something again, and he wouldn't let go of the button, whereas you have ten other people who rely on being able to use that same channel to do things, so there's no override, and there doesn't always need to be an override, but there's nothing--if somebody is talking, and I can't--it doesn't automatically go to the same dispatcher. There's usually maybe just one dispatcher in there. Everybody has laptops now, but out here in the rain, [inaudible] keep asking for a suspect description, all I can think of is like, you literally all have laptops on your things, look it up. They shouldn't have--they should have put it in there. I don't know if they're always doing that, but if there's a call, and I think it has to do with the integration over using these systems, they're not necessarily going to use the same programs through everything we need them to do, and they're--and then they're trying to transfer that, which got me impatient, into CAD [phonetic] that comes up on the screen, not every officer--I'm convinced that [inaudible] open the laptop, and they just want to ask it over the net. So now it is, just looking at it, the technology is there, but because we have such low call volume, you could get away with things like just asking for the description again, or giving more information than you need to give over the net, so stricter on the reins, because the more you put out, the more you're using your radio, and you don't want to use your radio that much at all. You don't hear it--you do hear it, I'm not going to say [inaudible] other agency talks, so there's always going to be this one person who talks too much, especially to my opinion on it, and isn't looking that stuff up, and there's the person who's not giving enough information, he's leaving everyone else just confused, but I find it--I find this all compacted in enough places where an officer should be able to access everything he needs to access, and he's just failing in that regard, I can't think of any additional piece of equipment, putting some</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								kind of crazy heads-up display in my eyeball from contacts, like I'm watching--playing Bladerunner or something, that they could really make it more efficient, when they have a laptop in their vehicle that--if Communication is putting information into the notes, they should be able to click on that call and see those notes and have what they have. They have a radio that they can communicate with each other, tell us what they need, but then, you know, somebody else might be on the radio, talking about something else entirely different.
Problems - People	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	[RE: cause of communication issues] Not listening. It's not listening you it's getting called up and -- it's getting called up and where you want to be not understanding where you are at. I mean really. You -- I think that is the biggest problem in communication, not listening.
Problems - People	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	You know? And that's the biggest part of communications -- people would not listen. You know, they make up their mind before anybody ever opens their mouth.
Problems - People	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	... there is not a day that, I shouldn't say a day, but there is not a week that goes by that I don't have to change some sort of password to something, and you know, that is truly - that can be a real potential issue. Now, we have to balance that with, you know, why it is that we have to make these changes, but it can very, very detrimental; you know, I spend a lot of time - administrative time, simply changing or resetting passwords that people have forgotten or, you know, misplaced or whatever it may be, so certainly that is an issue for law enforcement, not just us; I mean, I am talking law enforcement in general.
Problems - People	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	... If your dispatcher is not paying attention to an armed robbery or something that happens in Elm Park, potentially your officers could not even know that it is heading their way or it's happening or suspect vehicle, and for the most part we try to - the two of us working the desk tries to monitor all that stuff and let the officers know that there is something going on in the surrounding city but if they are not specifically scanning, the communication between the downriver departments is minimal.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - People	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Well, for the most part, they are good. You got, you know, you have got your problems; you know, you have got 24 Alpha-type personalities in a station with you see each other more than you probably see your family, so do they get on each others' nerves and pick at each other and complain? Oh yeah. So, but for the most part, they are very forgiving and they move on.
Problems - People	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	... We are not busy enough. If you want to go out and do - get out and walk around and talk to people, you are got plenty of free time to do that stuff. Honestly, I don't think - oh, I know for a fact it's not done much because I think the whole perception with the whole police thing people are just -officers, they get blinders and they don't wanna deal with people unless they have to a lot of times; I really, really do see that; they just - you could go up on a just a normal meet and greet just to talk to people and it always, you knowing, the interest turns negative or they want to complain about something, you know, citizens have a habit of really complaining about every single thing that goes on in this city, whether it my neighbor is cutting their grass and it's on my sidewalk to they want to complain about the mayor. So, a lot of times, the officers, they have the opportunity to go out and talk to people but they don't want to because they don't want to hear it.
Problems - People	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	It's a change of - it's a generational thing. To me, it is a - they spend too much time worrying about Facebook. They spend too much time talking and texting back and forth to their friends. I don't like that and it's a pet peeve of mine because I don't pay you to come in here and play on Facebook all day because you have to be updated with your social media all the time, but it's a never-ending battle because these kids, they have to be talking to somebody all the time. It's like, I don't understand it but it's me, but that technology part I think is actually a negative impact on the work place overall.
Problems - People	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Nothing real crazy in particular. I would like to see the overall image of police be run up so that I can - you know, these guys are so strongly affected, they are being baited on traffic stops and trying to get them to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								smart off or something like that and the morale is so low that it is affecting not only the officers but it is affecting the community because they dont want to work. So I think if anything, we get the impression of us back up.
Problems - People	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	The problem with a small department is you see these people more than family and you know, guys get on each others' nerves and have disagreements and it is a small station, a small department, so you are always, no matter where you go there is one of the same people.
Problems - People	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	...We are roughly 10,700 people at this time. I would say about 60% of the town is home owners, owning their own homes. Those are your generally more supportive, more involved residents, people who take care of their stuff really well. We have had issues with renters. We have a large rental population here because a lot of people became more affluent, or retired or whatever, moved out to a bigger house or more land, and here things are close together and I think [inaudible] sounds very nice but, you know, if you go around the east side of town, the houses are very tiny, they are [unintelligible] because we needed houses for factory workers and you know, they don't age all that well necessarily and people dont take care of them, you know, if you are renting a house, you are not going to landscape it or put a lot of money into it because it's not yours.
Problems - People	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	... Most of our residents are - I would say 90% of the residents across the demographics are supportive but there are a lot of people who don't like us, either, you know. We get the 10% who just don't like cops, that is just how it is, and certain groups keep to themselves more than others. I know it is like white people and black people call for just about everything. Arabs don't open call us, they don't want to be involved unless somebody outside the Arab community needs, you know, if they are involved in an altercation with a white person or black person or Hispanic person, they call right away. If it's just Arab people entangled in some mess, we get there, they don't want to make a report, they want no part of it, they settle themselves, they handle everything internally, they

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								don't want reports, they dont want names, they don't want embarrassment. Hispanic people don't speak English, are not here legally, so a lot of times they don't call us. A lot of people call for absolutely nothing.
Problems - People	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	But then you know, certain areas are certainly less friendly, like [unintelligible] is a large apartment on [Street]. We have a lot of trouble there. It's just a very problematic place so we go there and, you know, lots of times a very uneasy feeling because you get people peeking out the blinds glaring at you, you get people throw stuff at your cars, screaming and calling you every name in the book and you're not even there to deal with them, they just happen to see us, so it's a little different there.
Problems - People	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Not really, I mean; if you are here for a while, you kind of learn what to say and what not to waste time with. But once we get a new guy and they just talk too much, you know. They will key up the mic and hold the thing so they are on the air but they don't know what the hell to say or [unintelligible] to think and yeah, ahhh, you know, it's not like [unintelligible] nobody else can talk because you are on the, you know, so we are pretty good about working that stuff out.
Problems - Policies-Procedures	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	So I get it that there's a bigger picture, but on occasion, technology gets in the way of that because I think we think, "Oh, it's just a mandate. Just push the memo through the electronic system. Guys will check the box, and we're covered."
Problems - Policies-Procedures	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	You're fine. And it's because the technology is so bad that it's not realistic. And for what it's worth, it's not-- when we see that on the agenda, we're like, "Okay. That's a check box." And that gets in the way to where you're like, "That's a waste of my day," because we don't have too many days that we can really either go train or do something that's very station-specific--
Problems - Policies-Procedures	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yeah so we are required as employees here to work eight hours overtime a month which is not a lot especially considering we work you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								know 12 hour shifts so you can just pick up one day and not even a full day and you thought you'd be satisfying your overtime but a lot of people work overtime because the pay in this job is not as great so that's where a lot of people make their money and then also a lot of people also work to help out other shifts because our staffing is so poor. So a lot of time even though it sometimes has a lot to do with money it is also to help out other shifts so that they can get breaks and stuff because if you don't have the appropriate staffing you're not going to get an hour break. You know you're not even going to get a half hour break and also the people that need to get trained are not going to get trained because we do all basically one on one training here.
Problems - Policies- Procedures	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yes. So to my understanding keep in mind I've only been here since January but to my understanding it is a chronic issue. Independent research would suggest that it is a nationwide issue. It is especially felt here. We just sometimes we barely have enough people to cover our minimum and in fact we've had several studies that have been conducted by various contractors with the county that have suggested that our numbers should be around 15 given our population and our call volume and we most of the time will have eight... And our minimum staffing is ten and mostly we'll have eight.
Problems - Policies- Procedures	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	So even just one person is a massive difference. So and a lot of things contribute to the lack of personnel. Partially it's retention, partially it's recruitment and then also it's just you know when you have people that work like overtime all the time sometimes they get really over taxed so got to take a break and stuff so yeah so and again the only reason why we're at our minimum above our minimum today is because half of the people that are on our shift today are working overtime.
Problems - Policies- Procedures	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	[RE: length of training] Because there's again a lot of factors contribute to that. One is you know do we have the staffing available to get someone trained because like I said we do one on one training for the most part for these positions which is great because you get really good training but on the other hand it can't be a challenge because you are

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								basically taking two people off of the floor to kind of go and do this training you know and that can detract from your numbers so it reduces the amount of people that can answer calls and then that can be bad you know because we're just not answering the calls.
Problems - Policies- Procedures	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS- U-006	It can take 20 minutes to trace a phone because we're going through the cell company. The cell company has to then ping the phone it just takes forever you know we don't have that ability so even if you're having a life threatening emergency we got to wait 20 minutes for them to fill out their paperwork in order for us to get help to you. People don't know that.
Problems - Policies- Procedures	COMMS	U	Manager	26-35	6-10	Female	COMMS- U-007	Now we have issues with their being no regulations at the moment. There are supposedly some coming on applications.
Problems - Policies- Procedures	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS- R-009	[RE: NG 911] We have heard about it. I don't really know much about it no but we've heard about it yeah. I don't know what it'll mean for us or if it'll get out here or work out here.
Problems - Policies- Procedures	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS- R-009	I don't think so. I think that's about it. It's a good job but we do have trouble getting people. It's not like it's a lot of money or a glamorous job but it's a good job that helps your community and I hope we can get more people here to do this work because we do need help, we do need help.
Problems - Policies- Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS- S-001	[RE: WebEOC] [S3] So the manufacturer of the software offers single sign-on capability. It's cost prohibitive so we... Yeah, it is a bummer. But they know they kind of got you. So we did not opt in for that. So everybody gets their own set of credentials and then we just time them out for security reasons if they don't log in or whatever. We also go through a process of making sure that their managers get to review their list of active users or whatever. So that encourages new users, right? And it also gets rid of the people who have moved on.
Problems - Policies- Procedures	COMMS	S	Other Public Safety	36-45	11-20	Male	COMMS- S-001	[S2] RGIS is so expensive that... So they pretty much have the corner on the market and there's lots of people who are trying to compete but they're just so far advanced from their technology stack that... Pretty

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					much they got it.
Problems - Policies- Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS- S-001	[RE: Free CalTopo SW] [S3] Yeah. Contrast that with a single-seat license for RJSRGIS. If I want it on my work station, it's like \$9,000.... and that's not even the server license, right? That's just the work station to connect to the server... It's probably a six-figure implementation for just a basic implementation.
Problems - Policies- Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS- S-001	[S3] I know that there are times when people who aren't technically savvy get sold something technical, and then they get stuck trying to implement it. Those are really difficult situations. They typically cost a lot of money [laughter]. And so those are the challenges. Implementations like WebEOC, if they aren't done correctly, can be a significant hurdle to communication. All the problems you were trying to solve you just make worse if you don't do it right. It's my understanding on average an agency does two to three implementations of WebEOC... They don't get it right the first time and it becomes a real challenge. And so they have to start over and do it again, so those are my examples.
Problems - Policies- Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS- S-001	[S3] Yeah, so I mean, what happens is [laughter] the average person will say, "Okay. Well, here's our process," right, "and I'm going to take this process and I want to put it into WebEOC and my process is 30 steps long," right? "And so I'm going to go and I'm going to build a process in WebEOC that mimics that same thing," right? And so now you have a 30-step process in an application it's like, "Ugh, I could have condensed that to three," right? And if I'd really thought it through-- it's very hard to translate real world. Here are the 30 things I do and condense it in from a code perspective and a UI perspective even more so a UX perspective, into something that is succinct...
Problems - Policies- Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS- S-001	[S3] ...What people don't understand is that simplicity... is your friend. And it often masks the complexity behind the scenes. So if you're successful, it looks simple but behind the scenes it's really taking a fairly complex process and making it appear simple. And I think what happens to these agencies is they go through and they say, "Okay. We're going to tackle this process," and they run through it and then that's a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								challenge on its own. And then you do it 15 times for different processes and it's just easier for me to write it on a piece of paper.
Problems - Policies- Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS- S-001	[S3] Right. Yeah. And there's limitations because you have to be able to see the drone while you're operating it... The next level up drone you don't have to, but they're expensive... And you land them and fly them from an airport and that kind of thing.
Problems - Policies- Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS- S-001	[S3] Yeah. We're crossing media technologies to push stuff around and that causes some issues.... In the mobile space, in the bring-your-own device is really going to be a critical thing. People don't want to have to carry a work phone, a private phone, a NCIC capable secure device, you know what I mean? You just start adding them on and on and on.... You're running out of pocket space. It's a waste of hardware... So, it starts adding on. So if we can reduce that number...and logins as well. That's the big one...
Problems - Policies- Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS- S-001	[S3] ... And then you know for us in the county, one thing that we could do better on is our governance and risk management compliance while adopting new technology. I know most of the organizations in the county kind of have a little technology committee or whatever but I don't think those committees share information. And I would like to have standardized-- a standards committee for technology across the board. So that, for example, we're trying to make this work right now with the FirstNet equipment manufacturers. It's like, "Yes, I am law and emergency management and my counterpart is fire." But 90% requirements overlap, you know?
Problems - Policies- Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS- S-001	[RE: cause of communication issues] [S3] More than anything, it's less technology and more culture. We have a lot of communications capability, and technology I think really is just culture. Who am I allowed to talk to? Is it outside of my organization? In the law enforcement world there's a rank structure, not always an open door policy--
Problems - Policies- Procedures	COMMS	S	Other Public	36-45	11-20	Male	COMMS- S-001	[S3] Yeah, you've got to follow chain-of-command. Some things have to be formal, some things can be informal, but you just need to inherently

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					know that. And so I think culture really is our biggest inhibitor to having better communications. One of the things that on the incident side right, out there, cost of technology is a significant inhibitor to-- not everybody can have a radio. Right? Even though they really need it for their job. To spend \$7,000, 8,000 on a portable radio is just, it's wrong.
Problems - Policies- Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] It's wrong, [laughter] just to be honest. To spend \$70 million dollars on the infrastructure is just mind-boggling to think about it. But there are other technologies emerging. Software applications that you put on your phone, integrate with those. What's inhibiting from that happening is, we really wanted to have a completely independent radio communications infrastructure from the internet. We don't want to open that Pandora's box from a security perspective. And so in order to facilitate that you stuff you actually have to have networks converge. That would make it more cost advantageous. And then people don't like to carry big bulky radios anymore. They'd rather have it on their phone. Now you spend a bunch of money to give all these people radios and now they're just going to use their phone. So it's cultural but it's also cost. And grant funding has been the primary stream for all that. Most if it didn't come out of budget. Once this starts to need to come out of budget because grant funding isn't available or needs to be for other things, then that becomes kind of a challenge. A tug-of-war over what gets priority.
Problems - Policies- Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] So exactly, right? So people end up carrying two phones everywhere they go. And not everybody's issued laptops or computers either. They might have a shared one or whatever. So if they could do all of their jobs from one device that would just make everything easier, more seamless.
Problems - Policies- Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S2] I think the more we can do the better. I mean, we have a lot of processes that are all paper-based. If I have to fill out an overtime card, they're still printing them out on pieces of paper. It just doesn't make any sense, right? I should be able to put in my pay. I should be able to submit my time off request. I should be able-- and all those kinds of things should be accessible from a connected device. Call-offs, call-outs, my on-duty status, my off-duty status; all those kinds of things really should

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								be as simple as pushing a button. And today it's all done phone calls, face-to-face, all those kinds of things. So yeah, I've got a whole list of things that we are going to try and tackle.
Problems - Policies- Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS- S-001	[S3] ...what I'm specifically speaking about is, there might be a large fire and we never know about it, right? Emergency management wouldn't be notified. That's a breakdown in communication. Why aren't you being notified? "Well, we've never done it before." I mean, it's those kinds of things that I'm talking about from a communications perspective is, everybody understanding everybody's job. Also, the escalation when things go bigger, right? I think that's where there was significant lack of communication. We have a large earthquake, it's not as simple as, "Okay, well I'm just going to add 500 more firefighters and 200 more police officers." No. It needs to be a lot more coordinated, a lot more organized. And done by function and geography and all these kinds of things. And I think here in this office they knew that, but nobody ever knew how it would actually play out, right? And nobody really had the ability to have the conversation about it.
Problems - Policies- Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS- S-001	[RE: FirstNet] [S3] And then when you're looking at-- when you start to look at the design, and you say, okay, well you know it's an independent system, but your core radio network is shared with the consumer. How's that going to work, right? It's going to be a challenge. So I think you'll see around here where you potentially have FirstNet as your primary device, then you'll have a backup cellular device with another provider, and you're right back to where you were before. It doesn't really make any sense...
Problems - Policies- Procedures	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS- R-012	We typically call them. We don't have challenges communicate with them, but sometimes we do with other agencies 'cause they have different policies on how they work. Like I can call one agency and ask about a warrant check. They'll give it to me. But if I call another agency, they'll say send me a teletype, which is also ran through NCIC. So like you have to get off the phone and then type up, which takes, it takes a minute to type it up, 'cause you've got to make sure it looks professional.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								You've got to make sure, hand it off correctly. That way they know who sent it, where it came from, and who is it addressed back to.
Problems - Policies- Procedures	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: [inaudible]it's like I have said a minute ago in you know, everything that we have a public safety takes so long to get there and, you know what I mean, it's got to go through regulations, then it's got to go through funding and by the time you finally get it, it's that old.
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So you have one in your headset which is your primary channel, but then there's 12 more channels that come over your speaker at the same time. Well our fire dispatcher dispatches four different fire departments. So if each one of them has a major event going on, they can't do it. So our supervisor steps in, takes -- so when they have a fire they're supposed to stay on that fire and let everything, all the rest of the work load is supposed to go to the other people and that 99% of the time works, but we can have other major events like a hurricane or a tornado that's come through. It's just chaos.
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So I also have the third party compliance software called First Watch. We worked with them and we built a lot of triggers, we also built triggers for the health department. So there's things they watch during the year, such as heat emergencies during the summer, cold emergencies. Right now it's narcotic overdoses we're looking at, anytime those things come up, and they'll trigger in First Watch and they'll be able to go in and get that data out of our CAD immediately and by going through that third party there's no HIPPA data exchanging, all that stuff's clean, and I also pull my daily reports, hourly reports, compliance reports, because we have a county contract. We have to be at all emergencies in 10 minutes or less, 90% of the time. If we don't, we pay fines. We have another thing set up to where we have first response for ALS engines in the county. So if an ALS engine gets there in 10 minutes it bumps the ambulance time up to 17 minutes, so we still got Ucare in 10 minutes, and if we don't make that in 17 minutes it's a fine of \$250 and in a minute it's \$500 and then in three minutes, it's \$1000 and it goes up, to be allowed to do that; so there are economic reasons for us to be efficient. Unfortunately, the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								reasons that was in place is because a lot of places contract ambulances and nobody paid attention to that and at one time the county paid ambulance services, so we get no money from the county, we're held under that contract. I get my overtime, every time we are in with the county; I tell them they gotta pay my Mafia money. I say this is the only business I've ever worked in where I pay you to be here and they're like stop saying that, like its extortion.
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS- R-020	The reason for that is politics. So the people that ran rural metro helped create some of the bankruptcy issues. They all quit, walked out the door one day to go start a new ambulance service and part of that they knew what was going on, so they entered into this contract that we're in now, some things to make it difficult for us to remain here, but we're smarter than they are; we're doing financially well and they're suffering so, but it's politics, so they got in and they agreed, 'we will do this for free, we will pay those fines if we can't do it', so it's a mutual agreement from our side of the company, those people don't work here anymore, so that's how you end up in a thing like that, but if you look at a lot of -- we've gone full circle so, we used to get at one point if I can remember \$90,000 or \$100,000 a year to pay for the indigent people in [City] who couldn't ambulance, to offset those possibilities. And then negotiated a way and it went down to \$ 30,000 and then it totally went away. So we get no money for anything, for indigent.
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS- R-020	It's not a nationwide thing it's a State thing, and some county thing, but the Sherriff's department is supposed to be responsible for that, but because of the contract we entered into saying we take no money, we can't bill the sheriff's department for that, so it's another one of those contract things. So as everyone knows, that cost gets passed on to the consumers without money. Medicare doesn't pay for full boat. Medicaid doesn't pay anywhere near full boat, so that gets passed on to the other insurance companies, it gets passed on to you, the consumer; you know the drill.
Problems - Policies-	COMMS	R	Comms	46-55	31-40	Male	COMMS-	EMS is not. So we're working on some legislation changes. So in the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Procedures			Personnel				R-020	ambulance service requirements for the State of [State], there are certain frequencies that we have to carry - VHF, 155, 205, 295, and 304 those are the disaster frequencies. So the State does not migrate it, but all the hospitals are on UHF to talk to them. Now we're going 800, so I've been meeting with the State and other people so we got to change the laws, because all you're doing is creating expense. So for EMS to go to 800 right now is an added expense, because we still have to maintain those older channels because we can't get rid of them because the State requires them. And there's no funding for us because we're a private company that is not getting grants, and I'm like we got to work on this, and not only for us being a private company, but in [County], where there's three ambulances and they're already squeezing every penny out of that county's budget, they can't afford to go buy three \$20,000 radios.
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS- R-020	Stressors. There are some and it ebbs and flows, so most stressors...all stressors are tied to money. Well there's a stressor for the employee, there's stressors for me, there's a stressor for the system. It's usually because we don't have the money to fix something real quick that we need to fix. Not that it doesn't get fixed or taken care of, but if it's more than \$10,000 it's a capital request. If you don't get capital approved the year before, you don't get it, so then you have to declare an emergency and you have to go before the board and you have to do all this stuff to get it done. So that takes time. AMR is a lot better with this new company. The radio system as well is unbudgeted, totally unbudgeted and we got to a point I couldn't get a part, I called them and said I can't get parts for this, one other failure and I'm in trouble, we do. They found the money, so they're really keen on keeping technology and stuff up to date too. It's not been as difficult. Right now, it's probably the workload for them; it's a stressor for them.
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS- R-020	The workload's high because the flu is running rampant, so we're short on ambulances for short dispatches. The guy that went out today has probably got the flu. He's like I can come in - absolutely not. We're in a closed locked in building, once the flu gets in here it'll run to that end of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the building and then it'll run back and we'll keep it for an extra month that it shouldn't be in here. So no, don't come to work. So, we're on our second round of flu... so it just started, so we went a good three and half weeks to four weeks without, everybody was sort of done and now it is starting back up again.
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS- R-020	The family's [indiscernible] so he's taking care of you, he's frantic, he calls one of your kids, your kid calls us, I don't know, they don't know the answer to the question. So anytime we have anything that's a flag like that, an emergency to the hospital, we look at every one of those calls; two reasons, one is the medic new and should've been an emergency to the hospital, did we code it correctly, so anything that we could learn from any of those calls we do. So we don't have those much anymore, rarely have those types of calls and then we really, we went from the cards to the software on the screen, so it pops up because the cards are hard, you got to know where the card is... But on the computer screen, its set up to when you answer that question, depending on the answer it gets rid of all the others, goes directly to that third card down. Makes it quicker, makes it more efficient. We found out there were some issues when it first got set up, anything that is an extremity fracture is automatically a non-emergency, that's a national standard. I don't agree with that.
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS- R-020	But if you don't know when you call a cell phone, you say road, but you're on trail, it may not trigger, and we may go to the wrong address, may go to the wrong street.
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS- R-020	I will still have three because the VHF, UHF and 800. The goal is for all of us to get to 800... There's just some barriers of political things in the way of getting there.
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS- R-020	[City] is on 800, they're moving to the same new technology, so [City] like great we're going to go 800 too. [County] just went to a brand new 400 trunk UHF trunk. So that whole county just went in the opposite direction of what every other county is going to... We're going to have tri-band portables; we'll have VHF, UHF and 800 on the same radio... they are like

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								\$4000 a portable.
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS- R-020	[RE: frequency patching] We can do it now, but it's very difficult, it's very time consuming, it's not easy, because we're on two completely different radio systems and that's why I want my technology to conform with everyone else's technology to make that easier. So then if we have these political issues that last ten more years before we can get off VHF or any of those things change, it's easy; those three trunks when they are calling, we can out them on a tac channel.
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS- R-020	[RE: cause of communication issues] Lack of preparedness... It's due to the financial - so if we want to prepare we need 200 radios; nobody's going to pay for 200 radios that sit there that we use twice in 10 years before it goes out of date. So that's a lack of preparedness. It's a broad term; there are many reasons for it. We know we need it, we can't figure out how to fund it.
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS- R-020	...and now for the same amount of money you can upgrade to newer stuff. So the problem with us was we weren't in a financial place when everybody else started doing it and now we're playing catch up.
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS- R-020	So when you get multiple agencies together and they've got their way of doing it and you've got your way of doing it and nobody -- you just...I'm doing my thing and not realizing that the ever changing make affects everybody on that system. We had some of that in the beginning with this CAD, but we worked through, we figured it out. We will occasionally we'll have a cowboy that says 'well I talked to [unintelligible] they said it wouldn't affect anybody else, I don't know why they lied, I just changed all my stuff.'
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS- R-020	That part of technology, we've had some issues. There may be a little bit even going on with this new radio system, we have egos. Depending on who is in that position, there's egos, there's politics, so we're able to get through all of that because of the relationships. I'm a big relationships guy. I mean if you have a relationship with somebody that they like you and they somewhat trust you, or do trust you, it's much easier to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>conduct business than 'oh crap, here comes that guy again.' So I'm really big on that, so I take time to meet with [City]PD leadership outside of here, same with the communications liaison for [City]PD, he and I talk all the time. If an issue come up, I shoot him an email, 'go ahead and check into this', because I'm not first blush and there's personalities in there. It could be a personality conflict. But I look at everything as so we do adjust culture within EMR which is how I've always done business. I don't headshot people or go yell at everybody when we have an issue. So I look at it as a system issue, is it a training issue? Is it a personnel issue? And I look through that. I end up at personnel last so by the time I get to the person I pretty much know the answers before I ask the questions and if it's a personnel issue I'll deal with the person. But a lot of the times you find out that 80% of things gone wrong, you find out it's a communication training issue. We taught it and it didn't stick, we taught it and it didn't hear right, we didn't teach it at all, or we taught it wrong, or we changed some things and missed that one, we didn't update them on the training. So you have to look at all that. You know they get upset sometimes, so if we don't get to that call in 10 minutes, we review that call; and it's either distance because they just couldn't make it in 10 minutes. Crewe Air, they didn't move right away when they got the call; they went the wrong route, or it's a dispatch error. Dispatch error even being that the CAD did or did not pull the correct truck because we have a recommend and it pulls by road miles the closest truck. So they might've pushed the button and the CAD told them the wrong truck, so it's still a dispatch error, but it's not the dispatcher.</p>
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	<p>It is much easier to fix it with less social media repercussions. Now you're going to have some social media that will tell one truth and trying to get attention [indiscernible] I don't address it, I don't touch them. But the mayor does. They've got some stuff on the social media and I've gotten a call from the mayor over the [inaudible] 'hey you need to look in to this' and I go "already looked at it and its not true and here it is" and he'd be like "okay". But they, the politicians pay attention to social media. They do.</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS- R-020	I would like to see technology to continue to move forward to true total interoperability between every agency. I've heard that my whole career. For 30 years, we've been talking about interoperability and politics always gets in the way of interoperability. More than money; egos, politics. I'm in charge. There is no "in charge" and there is less of that here than I see in other places but, you know, over the years the police and the fire get about -- [State] code states that if a fire department on the scene of a fire then the highest ranking fire official is in charge of that scene. The police hate that... Especially if it's turned into a criminal thing. So you've got to work together. Yeah as far as the fire operations we are in charge, but we do have to be considerate of your criminal aspect and not destroy [crosstalk]
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS- R-020	...You know we get into level three in our contract, we do not send a truck on a non-emergency call. We have to keep three trucks available for emergencies, that's the way the contract is written. So [City]PD gets a drunk, they want us to come pick up and take to the ER, the only reason they don't want to take it is because they're going to get stuck at the ER; we're having two and three and four hour holds at the ER right now with the ambulances because of the flu and other things. So they want to take one of our 13 ambulances, which ends up being seven of our 13 ambulances are now tied up for two or three hours at the hospital because they don't want to go stand against the wall for two hours. So we have those talks go on. Look there's give them a ticket, call them to court, there's got to be a better way to do this than tying your resources and our resources. Psych is huge, it's a national problem.
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS- R-020	No, I think that technology is coming whether we're ready for it or not, so I think we better figure it out how we're going to play it. I do know that there's mandates which I think the next gen 911's are supposed to already be in place by the mandate and it's not.
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS- R-020	So we have to -- I want to be on the front end to learn more about it and understand how we can make it help us and not do it because we have to and it'll hurt us and I don't know that that's...because everybody's got

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								an agenda. AT&T right now has an agenda about selling up this new system. If the State buys into it, which they did, now they have an agenda to make that work, because it's a politician thing.
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS- R-020	Oh, I knew it would. But we've got to have voices of people that use it that are non-ego voices and that's where we struggle sometimes because politics falls into, "oh I want so and so because he believes like I do" and then somebody else says "no I want to put that in the board because they believe in that and they lined that up and now what should be a true user group is now another political group and I see that happen a lot of times.
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS- R-020	It does. Staffing is all about money. You can either sell it and get the staffing you need. But again, do people do true studies on what staffing should be. I know what I need in there, but there is no magic number that if you take his many calls, you need this many people. We tried to do that, we tried to use that as a number, but we could every one of those calls in four hours... And then what? Right. So that's kind of why we looked and staggered our stuff. We see what's our average for this hour span? And do that, and we need help, and we need coverage. You got to give them breaks you know, two 15-minutes and a 30, you can't, you can't.
Problems - Policies- Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS- R-020	Well it is because EMS has been the -- EMS is the stepchild that everything gets kicked to when nobody else wants to do it. So for instance: you are elderly, you fall down at home and you're not hurt, but you can't get back up and you just need help getting back up, but you're not injured. In the county, the fire department, or the metro fire department will go do that, pick them up. In the city, they won't... So they try and put them off in an ambulance. Like why do you want us to go pick somebody that's not hurt, kill our resources and then you want us to send them a bill? So it gets dumped on us. The police aren't going to do it. The rescue squad wouldn't, and a lot of them quit doing it because they had back injuries, so that is Workman's Comp claim, [indiscernible] and I'm like "come on, we've got to figure this out"

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So there's all kinds of things that we need to work on, but when you get to the political its like "we can't afford lawsuits; you've just got to treat it." I mean were endangering people when we are in emergency traffic calls that we should not be running around [indiscernible]
Problems - Policies-Procedures	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	And so we've already been in discussions with them and our chiefs, the executive staff, and already met collaboratively. It's baby steps. The FAA continues to change their laws. Sometimes they're advantageous and makes things a little bit more streamlined, sometimes they're not. And so, it's bureaucracy at it's best, and so we are slowly moving in that direction.
Problems - Policies-Procedures	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	We were providing everybody a pager which would get away from the argument of utilizing, calling on your personal cell phone. But then, as anything else, people were ignoring them or not utilizing them or they were tired of having them, and so the compromise was, "Okay, we'll take your pager back but you will provide a contact number so we can get ahold of you 24/7/365."
Problems - Policies-Procedures	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	At the same time though, it's moving so rapidly that things become outdated. And so by the time they become outdated, now you're having to go in front of the city council and ask for a large capital improvement expenditure because what you just bought five years ago is now slow and antiquated and there's better technology out there. But by the time you get that produced and that purchased, then you're probably already two years in and something else is on the horizon.
Problems - Policies-Procedures	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	That's why we're having an imaging policy drafted. And we wrote it. And it's going through the executive staff, it's going through the pitfalls and through city-legal, and going back and forth, because there's always the argument of the First Amendment right and you're not paying for my cell phone, so this is my data, this is my content. And from our standpoint, it's you are a taxpayer-funded employee, and you are on the clock, and you are being compensated. And you took that picture, regardless of whether it's on your personal cell phone, your spouse's personal, your child's cell phone, or the department's cell phone. That image, audio,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								whether it be still, video, audio, that image or that product is subject to open records. So it doesn't belong to you. It has to be archived because there are state laws about archiving information related to government. You know, what we do as a governmental agency and a governmental body. So that cannot belong to you. In fact, what makes it worse is if you refuse to relinquish it, then someone's going to write a subpoena for the whole family and say, "Give me your phone."
Problems - Policies-Procedures	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...Operating and communicating with police can be difficult, because there's only a certain group of people that their radio is capable of talking to the police. So I believe I can talk to the police on their radio. We can all hear what they're saying, but we can't talk to them, back and forth... So it can be very difficult.
Problems - Policies-Procedures	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	We need to know the channels, yep, and if you don't really operate in those channels too much, you pretty much don't know them, but we do have charts, and being able to tell us which ones they're on. A lot of the firefighters and EMTs tend to listen to police channels, because we do operate on the same calls, but I say, we very rarely can talk to them by radio.
Problems - Policies-Procedures	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Obviously, I think some technology can cause some problems. Technology advances can be an issue, maybe as not catching as fast as we want. Or maybe we're using a system that's one down from what's already happening because I'm sure you know as well as I do, technology is always moving, and a jurisdiction has to operate under here because they've already spent a lot of money on a particular ends, and it may not communicate with that technology because it's outdated...
Problems - Policies-Procedures	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...But yes, so some of the technology can be more advanced than what we're able to operate within, and that can be definitely a hindrance. And that's certainly something that we were watching unfold with our old system, but now we've come in line. And it may be another 10 or 15 years before we get another system, and what technologies are going to come out that we won't be able to communicate with.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Policies- Procedures	EMS	S	Field Responder	26-35	11-20	Male	EMS- S-015	...I am not embarrassed to say of the amount of information that I am required to know and utilize very much outweighs how often I use it...
Problems - Policies- Procedures	EMS	S	Field Responder	26-35	11-20	Male	EMS- S-015	But the police could be there for 15, 20 minutes, and the assault person be another state away. But while they're doing their reporting and talking to one another, they don't realize that we're sitting two to three blocks away, so it may take me to call and ask, "Hey, are the police there? Did it?" "Oh, yeah, yeah. You can come in." To find out that it was safe the whole time. So there is a delay in that. I think we've gotten better with some time, but I also don't know every officer that's in my area. I don't know their first names. I don't have their cell phone numbers. I don't know their radio identifiers. We don't have that relationship to communicate that personally, I guess.
Problems - Policies- Procedures	EMS	U	Field Responder	36-45	11-20	Male	EMS- U-017	The one up front has a hard-wired keyboard attached to it. The one in the back does not. It's one of the things that, again, during the pilot program, we said, "Hey, look. We really need a hard-wired keyboard. It's not easy to type these reports on this [software?] keyboard." The department said, "No. We're not doing that." From what I've heard, and also, I don't have any first-hand knowledge, but from what I've heard, their basic response was, "Hey, look. These people walk around all day texting on their cell phones, they can use an onscreen keyboard." You know, but.
Problems - Policies- Procedures	EMS	U	Field Responder	36-45	11-20	Male	EMS- U-017	...But actually going back to the keyboards, too, it's not just necessarily a matter of having a hardware hard-wired keyboard or in some cases, I mean, a lot of our providers have said, "Hey, look. I'd bring in my own Bluetooth keyboard if I was able to use it." The problem is they've locked the systems down to where we can't get to the Bluetooth to connect a Bluetooth keyboard or anything. So even if we wanted to provide our own equipment, we can't do it.
Problems - Policies- Procedures	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS- R-007	So we hire people seasonally... But it's really, you never know. There's not two or three positions every year. You don't know. There might be one one year, three the following year, no for six months. So it's just hard because other people have other lives too.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Policies- Procedures	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS- R-007	... So and then the radios have gotten smaller and lighter throughout the time that I've been doing this. I mean, they used to be like-- you could them as a weapon if you had to [laughter]. And now they're as big as old cell phones. It's happened so slowly that-- I can't really think-- I hated the chirp-chirp thing because I'd like to know what other people are doing, and where they are, and that kind of thing. That was the biggest reason why I hated it. And I also thought it was just-- they only did it for financial reasons. I mean, it was cheap, so that's why they did it.
Problems - Policies- Procedures	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS- R-007	...And then pagers are gone for the most part. I mean, some services use-- the volunteers, use pagers, or very rural places use pagers because they can reach places that phones might not reach, or radios might not reach. But the pagers cost money for services, so [City] got rid of pagers. So now, you can get a pager but I would say 5% of the crews use an actual pager. And they almost all get texts. So they can just get a text instead...
Problems - Policies- Procedures	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS- R-007	Yes. We use laptops for trip reporting... different places have different abilities to make it better for the crews. And some places focus on-- I mean the billing is important because you need the money to keep doing the job. But some places it seems like a little higher priority [laughter] in making it better for billing, or QA, or research, versus the people that are running the 10 calls a day, who have to write the 10 trips reports per day...
Problems - Policies- Procedures	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS- R-007	...it's all about billing. It's because Medicare, specifically, likes to deny. They look for ways to deny billing. So they have all these codes, and all these different patient types, and all these different things that they want everybody to fit into, and it doesn't work that way. People aren't numbers. So there's a lot more drop boxing stuff into stuff in order to make it successfully billable. And less focus on just making it something that I can do that's accurate, legal, but also concise. And I can get it done in 15 minutes instead of 25. It makes a big difference...
Problems - Policies- Procedures	EMS	R	Supervising Field	46-55	11-20	Male	EMS- R-007	...So right now, let's say we have 15 ambulances. We might have a little more or a little less. We might have closer to 20. So we have one

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					ambulance that has this newer technology, and everybody hates it. And so it's set up differently. The chair you sit in is different. The place where equipment is is different. The idea is to be safe, and I appreciate that. But moving equipment around messes with your mind memory. So you're like, "Wait, where is the--"
Problems - Policies- Procedures	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS- R-007	And now they've started to implement it, and the government's enforcing it. So if you get a grant for an ambulance and they have certain safety features that they want to implement, you have to get the safety features with the grant, whether or not whatever... But now we're getting a couple of new ambulances with a multi-hundred thousand dollar grant that we got. The grant's awesome, the technology is kind of back with the new ambulances in some form. So there's technology that isn't good, or that we don't understand the use for it. It doesn't make our job easier. The goal is safety, but it doesn't really seem to make it safer.
Problems - Policies- Procedures	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS- R-007	... But a normal size ambulance, like we have, that's basically a pickup truck [inaudible] or whatever, nobody wants to make them anymore. So Ford and Chevy are the last two-- Mercedes makes something, but they've gone from diesel. Nobody makes diesel anymore. So now they make gasoline like a V10 engine. So they get five miles to the gallon. But they're powerful enough and they're more reliable than diesel, but there should be some sort of incentive for companies to keep creating ambulances and there's not. They've stopped. There's no money in it...
Problems - Policies- Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS- R-008	What happens when it doesn't work? What happens when we have trouble with it? Who fixes it? Because I can't just call downstairs to IT, okay? I've got a contractor that does our IT because we don't have an IT department. They're budgeted two days a week, maybe
Problems - Policies- Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS- R-008	[RE: in-house tech] I mean, we have to, and there's technologies out there that I'd love to use right now but I refuse to implement because we don't have the-- I don't have the bandwidth, the personal bandwidth, to manage it...
Problems - Policies-	EMS	R	Other	56-65	31-40	Male	EMS-	...If you get grant money for an ambulance, you have to have some kind

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Procedures			Public Safety Personnel				R-008	of driver monitoring system in it. Well, all those things are connected technologies. They all have to be downloaded. They all have to be analyzed. They all have to-- and that's just one technology. That's not the radio system. That's not our patient care reporting system. That's not our scheduling system. It's a whole nother system that somebody has to deal with.
Problems - Policies- Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...So it becomes a-- technology becomes a huge time suck and I mean, I just keep saying over and over the promise of technology is awesome but that actual performance is so much less most of the time... I mean, I waste as much time as my technology saves me every day, I think... I mean, and it's-- there are so many connections. Is it your computer, is it the connection, is it their website? Where's the breakdown? ... It's often impossible to tell. Okay, so I rebooted my computer. What do I do [laughter]? ... It gets to be very frustrating... Especially when you can't, like I said, pick up the phone and say, "Hey, get up here. Something's not working."
Problems - Policies- Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	But very few agencies have GPS location on their vehicles...
Problems - Policies- Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	We do have tech support but we have to bill as well. And in case you haven't turned the TV on in a few years, medical reimbursement is not going up... It's about how to pay everybody less. So it's a struggle.
Problems - Policies- Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...they won't even go see a patient without X-rays, or cat-scan, or something first. They want the X-ray, they want the cat-scan, they want the lab results. They want everything when they walk into the room to see the patient, because it's time. They're allotted so much time to see the patient. They want to have everything in front of them before they do. And so we are spending billions and billions of dollars doing this, instead of just going, looking at the patient...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Policies- Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS- R-008	...That's what technology has done to us. I'm not sure that's all good either. A tremendous waste of resources. We don't fix anything anymore. We don't make it to fix anymore. We just make it to replace because that keeps the economy churning, right [laughter]? I mean, but we're getting into big philosophy issues.
Problems - Policies- Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS- R-008	So the cost of doing business keeps going up, and reimbursement keeps going down, and cost of living keeps going up, so.
Problems - Policies- Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS- R-008	... It's a nightmare [to?] staff because how do you staff full-time, qualified people when your call volume in May might be 200 calls in a month, and my call volume in January is 700 calls in a month. So I have to be able to expand and contract responsively, because you can't build [the church?] for Easter Sunday [laughter]. Taxpayer's money, it just doesn't work. It's not sustainable...
Problems - Policies- Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS- R-008	.... I mean, I'm usually a little understaffed in the winter and a little overstaffed in the summer, and I try and smooth out those curves a little bit, but it's-- everyone complains when the ambulance doesn't show up for 10 minutes or something. It's like, "Where were you guys [laughter]?"
Problems - Policies- Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS- R-008	We move assets up and down, depending on time of day, and how the roads are, and things like that. We use as much predictive technology as possible, but it's still a guessing game a lot of times... So if I guess wrong and understaff, and the economy is booming, and everybody wants to go to [City], skiing, I'm in trouble [laughter]. And I'm in just as much trouble if I guess wrong, and the economy tanks, and nobody shows up... But I've got all these people working. So it's a challenge.
Problems - Policies- Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS- R-008	I was at a technology conference that's put on by our vendor of a lot of our software, and it was-- everybody was complaining about this one software program like, "Why hasn't this been updated in years?" And they're like, "We bought this company from a company that bought another company that bought another company. And the guys that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								wrote this code, there are still people that are using the initial version. If we change something here, we have no idea. We might shut that service down that's still using that old technology." So backwards compatibility is a big deal, too...
Problems - Policies- Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS- R-008	... Because you got districts in this county, like us, who are pretty well funded. You get districts in this county, like [City], they are completely volunteer. Their budget is, I mean-- we give them our used equipment because they need it. They have no money to spend on anything, so how are you going to apply technology evenly across even as small an area as our county and make sure that it benefits everybody?
Problems - Policies- Procedures	EMS	S	Field Responder	26-35	11-20	Male	EMS- S-005	Our department has those MDCs, but it's kind of underutilized for a computer... So many of us on calls, if we have a unique situation, sometimes we will take a picture with our own personal phone and send it to our chief's personal phone so he can look at it, because the department doesn't issue the rigs smart phones. Only a flip phone, and then a separate digital camera. So we can't make it all work. So having an updated tablet or an updated cell phone for the unit would be very helpful.
Problems - Policies- Procedures	EMS	S	Field Responder	26-35	11-20	Male	EMS- S-005	...So how do we portray that to the hospital sooner? EKG monitors. Our monitors don't have WiFi or Bluetooth capability. They purchased them right before I got hired here, so I think they bought them in 2006 or 2007. And if you think back then, WiFi was still kind of limited. We can't send our 12-leads. We can't send our heart monitor pictures to the hospital. If I thought it was important, which I never do, I could lay out their EKG and take a picture of it and send it. But again, we don't have that capability with the department. The ambulance company does, but they don't utilize that either with telemetry and stuff like that. So there's a lot of underutilization. Yet, because those things are so darn expensive, they want to get 10 years out of them. It's kind of like a car, you know? You want to get as much time out of them as you can before it's necessary to progress. So labs, blood draws, stuff like that, we just can't take advantage of that due to that limitation.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Policies- Procedures	EMS	S	Field Responder	26-35	11-20	Male	EMS- S-005	<p>...In our agency, and then for our specific department, we have a problem due to staffing issues with dispatch. This is just my opinion on it. I don't have the-- I'm just a firefighter. I don't have that upper-level knowledge. But every EMS call we get goes to our TAC channel called TAC 2. Unless it becomes a complex issue, maybe we have an EMS call because a building collapsed, we will change channels for that. But if we have-- which happens often, if we have eight EMS calls going on, which eight EMS calls is 16 units, we still stay on TAC 2. So we can never get out, even to tell-- if all I want to tell is the ambulance to come from the north, not the south, I can't get that. Because other units are doing the same thing. 16 channels is just too many. And it's my understanding that the limitation is when we switch it to a dedicated private TAC channel, TAC 4 is for fires, or if something major comes up, hazmat call or something, then a dispatcher, some other dispatcher will go and monitor that channel. But now we've strained dispatch and they just don't have enough dispatchers to say, "All right. We don't want any more than six units on a TAC channel." ...And then so, six units on TAC 2, six units on-- all it takes is-- and this happens every day. As you know, it's true out east. We get two accidents on the highway on top of our four EMS calls. A highway call is two units because we try to keep a shadow of safety. I mean, we have almost 15 units on one TAC channel. It's just too much...</p>
Problems - Policies- Procedures	EMS	S	Field Responder	46-55	Not specified	Male	EMS- S-006	<p>...Because, obviously, the system is in place--which is a good thing, and there's policies and procedures in place, but a lot of times, I think when it's retroactive to the effect of if one of use needs help, we need it now. And it looks good on paper to have these policies in place, but I don't care. I just want the help I want and need right now. So I think there's always a time delay in that... So it's not that it's disheartening. It's just frustrating. I think it's frustrating for the end user when you need all that stuff now and it's, I think, hampered a little bit by policy and procedure, which needs to be in place. So it's a Catch 22.</p>
Problems - Policies- Procedures	EMS	S	Field Responder	46-55	Not specified	Male	EMS- S-006	<p>...We have very little to no communication with our police agency. We are able to scan their channel, but I don't think they want us on their channel,</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and they don't come onto our channel. And that's been identified as a huge problem in some of these large-scale incidents around the country of, for instance, the [City] shooting. There was no communication between the police and the fire on one scene. So I think that needs to get bridged. I think that's done through policy and procedure. I think the technology is there. I just don't think we utilize it efficiently.
Problems - Policies-Procedures	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I think the end-user organizations make decisions that don't bridge that gap well, so I think that there is plenty of channels able to be used that can be a common channel between police and fire, for instance. I just don't think we utilize it to the way that it should be used on incidents that both agencies are responding to...
Problems - Policies-Procedures	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	...And again, like we were talking with communication issues being a contributing factor to a lot of poor outcomes on incidents all around the country, police and fire interface has been a large part of that communication problem. And I think that the technology is there, i.e., mutual-aid channels or radio frequencies. I just don't think the organization leadership in the fire and police side use them. I think the fire side tries to. I think the police are the ones that are more apprehensive to have that interface than the fire agencies are. That's a pity, though.
Problems - Policies-Procedures	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...Although we have access to a sort of an enterprise level messaging system, it's locked down so tight by IT that it's essentially unusable. So nobody uses it.
Problems - Policies-Procedures	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...We asked for something more mobile-friendly, and we got access to the box.com platform which is very nice. But again, they put enough security limitations on the use of it that there's typically a lot of ghost networks built off of free Google accounts that offer a little more flexibility...
Problems - Policies-Procedures	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...Here in [City], they mostly operate under the aegis of the north central region of UASI, the Urban Area Security Initiative, which is the federal program for large metropolitan areas. So they have a communications

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								committee that has kind of become the lead organization for planning all of this stuff... And they've actually come a long way to smoothing that all out. And so now, actually, the front range does all the work, not as tight-knit I would like to see or as ideal. Every time somebody buys a radio system or wants to make changes to a radio system, all that stuff does get taken into account. And we don't always get the answer that we want, but we spend a lot of time hashing it through in an organized and efficient manner before people start doing stuff. So that helps a lot.
Problems - Policies- Procedures	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: federal interoperability channels] ...we have those in our radios. And if we ever need to use those, which the last time we needed to use any of those was when the northern front range was having all those floods about five years ago. We sent ambulances far up north that they couldn't use our Harris system anymore and they had to jump onto those channels. Probably 80% of our guys couldn't find them; they use them so rarely. So we sent a lieutenant out before we shipped the ambulances out of the city, like, "These channels here on your radio, this is what you're going to be using." So the commanders know where they are. Our medics typically don't know where those stuff for ground-air operations and things like that. We have them, but we have to put some special effort into using those if we ever need them...
Problems - Policies- Procedures	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...So although our voice radio is excellent, our data stuff definitely lags a little bit behind. And because of that, I think we're missing an opportunity both to get a lot more information out to the crews more easily because we're busy enough. Our main dispatch channel before-- we just split it into two main dispatch channels. Prior to that split, which occurred about six months ago, was three million transmissions a year on one channel. And so you physically couldn't give them some of the information you wanted to give them. You just didn't have time on that channel. And now we've taken care of that problem but at the expense of splitting everything into two. We have to have a second dispatcher. You can't monitor both channels, so you're only listening to half of the system at any one time...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Policies-Procedures	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] ...There are different codes per agency. You could be called a 108, or 1055, or a code 10 cover. That's different. And then some ambulance services have no way to communicate with PD, so they just tell their dispatcher, and that dispatcher calls PD and then PD whatever. So there's not a lot of uniformity across systems throughout the country in a lot of things.
Problems - Policies-Procedures	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Yeah, if I'm already hearing it on the PD side, I'm hearing it at PD-- someone's calling 911. I believe someone fell and they injured themselves. But I can't. But I have to wait until EMS dispatch tells us to go. Which is fine. Something critical like that and I'm hearing it, at least I'm ready. I'm always in a ready position, "Okay, hey, guys there's a fire. There might be a fire coming out. We'll be ready. We're going to go."
Problems - Policies-Procedures	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Oh, tremendously. But that information doesn't even go on my EMS ticket. It doesn't go on my EMS ticket.
Problems - Policies-Procedures	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Yeah. I have it. So when we get to the scene of the address, I have that ticket with me because I don't have nothing else, besides my radio and that ticket. Because we could go to a high-rise, the [Name] on the sky level, and the security there's like, "Hey, what do you guys have?" I pull out my ticket, "This is what we have." "Oh, okay. I'll take you to that person." A lot of times, they don't know we're coming.
Problems - Policies-Procedures	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	They haven't been notified. You have a thousand people in the [Name]: visitors, tourists, people that live there. And there's security. And someone who actually is living in the [Name] called for shortness of breath, and security may not know because they're dealing with the tourists and whatnot. So at least I have that printed ticket here. We're going to go to room [Address], they're complaining of shortness of breath. And that ticket tells us also how many stairs there is. It tells us exit points, entry points.
Problems - Policies-Procedures	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	I don't know if-- in our run reports, a lot of information-- see but then you're breaking HIPAA. So I was going to say, a lot of the times we do get remarks, information that's helpful for us to know. I wish that can be

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								put in our run reports.
Problems - Policies- Procedures	EMS	U	Field Responder	26-35	6-10	Male	EMS- U-013	Well, especially during the summer, we're really busy and there's only two channels for EMS for the entire city. We have a EMS main and a EMS [Neighborhood]... You get people stepping on each other. 20 different rigs trying to talk at the same time. Dispatch trying to dispatch someone. If you have a big event, you've just got people barking on the channels at all times... Oh, it's terrible [laughter]... for [City], they probably need-- downtown could probably use its own, not channel, but its own-- I guess, channel, yeah... Frequency, break it up a little more.
Problems - Policies- Procedures	EMS	R	Field Responder	18-25	5 or less	Male	EMS- R-018	We're using paper here right now. We just went from an iPad back to paper because something happened with the copyright of this company yada, yada above my pay grade so I'm just filling it out on paper.
Problems - Policies- Procedures	EMS	R	Field Responder	18-25	5 or less	Male	EMS- R-018	...so your 1022 here maybe somebody else's you know it's cancel here so somebody tells you 1022 well if you get in the wrong mindset and go to [name] and get told a 1022 that maybe speed up. So now we're flying to a call that we've been cancelled on so you know it's that is a big deal. Everybody needs to be speaking in plain talk.
Problems - Policies- Procedures	EMS	R	Field Responder	18-25	5 or less	Male	EMS- R-018	Not until the county builds a plan and lots of money for it. I mean there's nothing you can do other than make it work which is a lot of what emergency services does that nobody understands.
Problems - Policies- Procedures	EMS	R	Field Responder	36-45	5 or less	Female	EMS- R-019	Yes especially when we had we had like an iPad system to do our reports and they were absolutely horrible. You know and the bad part is is that our county tried to get us a good system and unfortunately we can't afford what some of the other counties can afford so it is a price thing and it ended up being more of a headache than anything.
Problems - Policies- Procedures	EMS	R	Field Responder	36-45	5 or less	Female	EMS- R-019	[RE: technology requiring internet connection] Yes ma'am. I think that when they're bringing in technology I think they and maybe they look at this but it seems like they don't to me because I'm on the outside. I'm just the person that uses it. I don't know the ends and outs but it seems as though when you're in a rural setting that those things should be considered when they're choosing yes. There may be a cheaper way to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								go and it maybe budget friendly to our county but when we're one of the more rural counties and we have all of these areas that we can't even get radio reception, we can't get cell phone reception then you need to recognize that some of these things are not going to work for us.
Problems - Policies- Procedures	EMS	R	Field Responder	36-45	5 or less	Female	EMS- R-019	... it's difficult to learn new programs. But if it will help keep all of our information tracked because that's information the information that's put in the PCR's is where we also get our grant money so when it comes to needing money to get new supplies or trauma things for our trucks they look at all of these numbers that are entered as far as our patients go and if you can't keep track of them well because we don't have a system then it makes it more difficult for us to get money for the things that we need to be progressive and become a better service and better serve the community.
Problems - Policies- Procedures	EMS	R	Field Responder	36-45	5 or less	Female	EMS- R-019	You know it's funny you don't because I spent a year in [Job title] school and then I spent 15 months in [Job title] school and the only thing I really learned about a radio through those 2 ½ years was things that I don't remember now like is it what frequency and things like that. They really don't teach you correct communication, what needs to be said, what doesn't need to be said, how these things really work, like a class on you gain experience by getting on the truck...
Problems - Policies- Procedures	EMS	R	Field Responder	36-45	5 or less	Female	EMS- R-019	...I think of most people when you first go in to EMS, fire whatever it is that's probably one of the biggest fears as silly as it sounds is talking on the radio because we have no experience and we have no idea. It's silly the new people they'll just push the button and start talking but there's that little delay so you push the button you've got to wait for a few second delay and then start talking. It's just little things that could make communication much easier so I think it's something that we should talk about more.
Problems - Policies- Procedures	EMS	R	Field Responder	36-45	5 or less	Female	EMS- R-019	[RE: radio use training] I mean I definitely think it's needed even ten codes there's some counties that are trying to do away with those and just speak plain English but again it's not something that you're really taught or go over. I'm sure they concentrate in school about you know

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								patient care and how to take care of the patient but this is your lifeline whether it's a portable or if it's one in our truck so I think it's pretty important to know that and some people you don't even know what channel to switch to. I think it should be taught in school as well as when you come to a new service that they should do some classes with it as well.
Problems - Policies- Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Yes. Right. But it's locked down. I can't use it as Google, I can't do other administrative functions because our CTM group, it's a--
Problems - Policies- Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	So if I said, "Hey, I want Google on that." Before I had this, I said, "I need Google." I need Google because when I show up I'm going to Google Ethyl Methyl Terrible, Death." And they're like, "Yeah, we can't give you a browser because that opens us up to--"
Problems - Policies- Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	The new radios themselves, I feel like the price of them is kind of high [laughter]. But I'm a little nervous about-- well, it's new equipment.
Problems - Policies- Procedures	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	There's more rules regarding how much you should say, how much you should not say. We strive to keep our communications short and to the point. And there's lots of different tactical benchmarks and things that you're expected to say depending on the call that you go to. So that's something that's changed in the last few years, that becoming more structured and rigid and paying more attention to what you're saying on the radio.
Problems - Policies- Procedures	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	I could do it face-to-face but then only the person I told it to knows. And something like that is some big significant deviation from our policies needs to be on a radio so everyone can know, especially the chief and dispatch.
Problems - Policies- Procedures	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	So, cost would probably be on the top of that list. You put public safety on something and then it cost more. And as we like to say about Motorola, "You might find better but you'll never pay more."
Problems - Policies- Procedures	FF	R	Supervising Field	46-55	21-30	Male	FF-R-008	Unless of course, I bought a dual band. So now I'm in a situation where I've got to pay an extra \$1,000 for a radio in the off chance that the world

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					came to an end and I was going to go to [City]. So, that doesn't make-- who would spend that money for that? But if somebody could set that as a standard, that public safety radios, and it's not an option, then I think in a generation we drive towards that capability
Problems - Policies- Procedures	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...So newer construction in the county frequently ends up with at least partial in-building coverage solutions. Bi-directional amplifiers are typically what's employed. Many buildings, once you get a few stories above ground, everything works pretty well. It's the lower stories and then when you go below grade where we have a lot of problems. So where new buildings are going up in [City], [City], [City], they have this code requirement that says you have to meet this. So we generally don't have a huge problem with the new buildings in terms of coverage in the new building. The problem we have is that the new building impact coverage on the buildings surrounding it
Problems - Policies- Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	I've really only had a few issues with a couple of them, so it's-- I don't really even know how to describe it. You have two different people with two different competing interests, working in the same place where I'm supposed to oversee what they do, but I don't have any authority over that.
Problems - Policies- Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	...So we have our MOUs with them, and I don't know what the MOU is. So that puts me at a disadvantage to say, "Hey, you need to do this, or you should do this."
Problems - Policies- Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	But even when you tell a lot of our guys, they're like, "Yeah, I don't have time for that." And then, to me, that's where it gets back to the MOU. I was under the impression we had an MOU that all these old vehicles, the radio shop was responsible for going through, changing all the old chargers out, and putting new chargers in. Well, nobody on our department is holding them accountable, if that's the case, because there's still old chargers in old vehicles. And it's like, we had this MOU, supposedly, that says, "You were going to go do this work. You never did this work." Now we have vehicles that are rolling around, and you don't have that ability to swap out. So, again, on our fire truck, we'd be on a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								call.
Problems - Policies-Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	...Now is the time to get in there and get all that, and identify what type of construction each type of building is. Yet there's no leadership here on the policy side from our agency to say, "This is what we need to do."
