Problems - Policies-Procedures	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...So I know that the federal departments have their own radios and that can be problematic. I know we ran a fire on the Walter Reed Base six months ago and they were operating on their own radio system, but we were responding to them and we don't have their radios. So when we got on scene, they actually handed us their own types of radios that we had to use. Even though, when they respond to us, they already have their own [County] radios, so... Not vice versa. So that was definitely a challenge, and they have one for our whole unit. So our officer got one, but the rest of us didn't have a radio that would work, so that was definitely something we were all like, "Woah. I did not know they still did that stuff. That's kind of weird." ...
Problems - Policies-Procedures	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	SME: He just says, "Radio Silence." Or, "Emergency communications only." Or, "Priority traffic only." Something like that. Q: How long's the silence supposed to be [laughter]? SME: As long as people adhere to it [laughter].
Problems - Policies-Procedures	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...a difference of opinion that a lot of people are debating right now is that do you prioritize the call that's happening right now or the next one? If our rescue squad is on the air, and so it gives us a one minute advantage, they might send us on a BLS, Basic Life Support, very simple sick person call as a first responder, because we'll be there a minute and a half before the ambulance, and we get there and we don't really add any value. But while we're on the scene of this BLS call that we shouldn't have been on in the first place, they might put out a house fire right there. And now we can't respond to that. So we might be able to render aid to a sick person who has a headache. But now, they have to send a rescue squad from [City] that's going to take 15 minutes to get here to that house fire that we would've been one minute away from. So they do prioritize the next call or this call instead of the next call. And that's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								definitely up for debate. And I think that's a kink that they'd probably work out. But the technology is there.
Problems - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...they're trying to create a standard. But to do that all across the United States is almost [tough?] because you got to look at data back in the history of years past. And you might have done yours in Excel, and he did his in DOS, and I just did mine on paper. So there's really no set system, just like [Name] said that we had Fire Zone, we have different software programs, but none of them communicate with each other. So it's just a lot of data entry. Then all of a sudden, we'll start doing it. And then all of a sudden, the computers don't run on certain programs. So then you got to get rid of that program, and then you end up with a new program. So it's constantly changing.
Problems - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...another item of contention right now, especially in our fire department, is gear. So right now, all of our bunker gear is made by Honeywell. And so Honeywell has a program that tracks model number, serial number, all of those things. And so all of our bunker gear is inventoried in a particular program that our fire department bought. But then, all of the repairs, warranties, and stuff like that are tracked in another piece of software that's accessible online through Honeywell. And we use a third-party vendor to do our repairs. So when they do the repairs, they have to certify the repairs, and they enter them into Honeywell so that they can track them. But when we do in-house cleanings or things like that, we don't have access to that system. So then we track it through our inventory software, Wasp. And then, at the end of the day, there's accreditation. So accreditation says that you have to have programs to track your inventory to certify repairs. But it's two pieces of software that don't talk that have, each, about half of the information that you need to compile together to make one.
Problems - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: lifeline ropes] SME S3: ...we have an inventory software that we can track when we bought it, and we can track when we throw it away. But the only way to track all the stuff in the middle is a piece of paper. SME S2: So once that form fills out, you have no idea every time it was used

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								before. SME S3: And then there becomes the problem of you have to archive it. So do you archive it in a book? Do you archive it as a digital copy? Where do you keep it? ...And then when the accreditation shows up, or when OSHA shows up because there's a problem - somebody fell off a rope or something - now you have to dig all this stuff out.
Problems - Policies- Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...in terms of certifications. So based on what my certifications are, may be different than Seth's certifications. So when do those expire? How many CE hours do you have to [inaudible] that certification? And then you have injuries. You can throw injuries on top of that. So here's this individual. Here's all the injuries to date. Here's what happened. Here's the surgeries. There's so many different aspects of it that's not tracked. A lot of it's paper-tracked, like [Name] said, but it's never really data input...
Problems - Policies- Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Gmail's an interesting thing, because at a firehouse you can move, and you can go to different places. And so when everything lived in Gmail, it lived in the cloud, which was really nice because you could go to the firehouse, and you've got access anywhere. Outlook and Microsoft products are a 50/50 split between the cloud and a desktop. And so if you're not on the particular desktop that it worked really, really great at, they have a really terrible user interface for their web version of anything. And so we made the transition for, I think, the wrong reasons, but it's been a hard lesson here in the fire department.
Problems - Policies- Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	And then there's just the compatibility issue... And so, finally, they just said, "Okay, we're going to buy Excel for everybody." But then you could buy one for every desktop and then still continue a cloud-based service, which is now buying two programs. Or they just buy Microsoft 365, which gives you the web version, but then also gives you five free licenses, or desktop, or whatever. Then, that creates a whole nother problem for our IT department because... you have to support them, and you have to load it on the computer. And then access and all of that, so.
Problems - Policies- Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...But you get one thing, and you're starting to lose something else. And the other thing that we lost was just the distance and how well the other

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								radio used to work. And so they're doing things now to fix it. In the city, there's a new push to do an amplifier into large buildings. And so it's just a based repeater that they actually would have to install in new construction. But that doesn't fix old construction.
Problems - Policies- Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: Bluetooth mic system] ...because of some of the older administration and the fact that they don't like having to find these work-arounds - and they didn't understand that when it was sold to us, it was promised to work this way, and it didn't - we'll probably never buy one until somebody comes out with a better mousetrap.
Problems - Policies- Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: Bluetooth mic system] Yeah. And so we've only ordered one truck like that. It is something that I think is a neat concept, but if they could tailor it more towards the fire service or just be more upfront that-- probably have to do this.
Problems - Policies- Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. And then that's one of the other technologies that's kind of neat is our Tier II reporting used to all be paper. And it used to actually sit in a box underneath the captain's desk, and that's where it lived. And now, the Tier II reporting is in PEAC. So things are getting there. Things are getting a lot better in forms of communication, access to the technologies, access to the data. But it's moving slower than the world, I think. It's the politics and the--how fast government works to make the change...
Problems - Policies- Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	I'd say, I was just on a call a couple of days ago. It was an officer-involved shooting. And we basically have a set system of, basically, command structure, right? And there was no command structure in that. So nobody's knowing what is going on because you have multiple jurisdictions. You got [City], where it happened at. You have [County] sheriff that was serving a warrant. So he was serving a warrant and he got shot. So obviously, he's calling us, calling [County]. So everybody's coming in. So is there really-- they should have a command post and the command post will delegate, "Okay, you're going to be my safety officer." And it just goes down chain of command. Well, it was just free for all. And that was one thing I was going to talk about with the radio that's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								gotten better is, in the past, anybody could get on the radio...
Problems - Policies- Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...it just so happens that the [State] metro area has the largest integration into this one particular program. So where we're at, out at the hospitals-- what'd they say? Six of the eight? Six of the eight hospitals that we commonly transport to are going to this new RMS program... And we're in that RMS program. So it just happens that it's working out now... That wasn't planned... That's a happy coincidence...
Problems - Policies- Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...So there's still a lot of steps that need to be taken to make the thing work. But I think it's just-- there hasn't been the big push to get EMS, and hospitals, and everybody working together... Well, and the thing is, is one's government. One's the hospital. The hospitals are a business, I guess. They're out to make money. And so they want people into their system. And so now they're building these outlying EMS places...
Problems - Policies- Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	We have stand-alone ERs everywhere. And so the idea is, they want to funnel in-- they want to funnel in somebody to their system. So if they build a stand-alone ER in suburban areas, they can take care of a certain amount of things. But then, if it's really bad, it already puts them into the system and they kick them over to the hospital. And so now we've kind of become the transport between these stand-alone ER's and the big ER. Or if somebody goes to the stand-alone ER, but they're really, really, really sick, they won't even take them. We just go pick them up and then take them over to the hospital.
Problems - Policies- Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...But in terms of when we get with multi-agencies, that's when it's kind of a measuring contest. We should all work together, but it doesn't always work that way. Like I said, we are on a north area team that we do a trench rescue on. And we've had a couple calls. [Yeah?], it gone smoothly. It got the job done, and outcome probably came out the same. But it's just too many people. Everybody wants to be a chief. Too many chiefs, not enough Indians [laughter]. So [inaudible] [that is?], but how do you fix that? We train on it. But I just think, again, you have your certain guys that you work with, and all of a sudden you're off on vacation, and I'm not working with you. So were not on the same page.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								And I'm working with some guy from A shift, and he does it totally different than the guy I used to work with.
Problems - Policies- Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...Now that we're moving into the new Annie Alley system and the level three 911, it's really cool because we used to just get an address. But that was really neat because everybody had a landline. Now everybody has a cell phone. And that's created another level of communication and problems, because you have your different level PSAPs. And so most cell phones usually go to the PSAP one instead of PSAP two or three. And so, like here, the PSAP one is the county. And then, they will transfer you to the PSAP two, which, in [City], is PD. And then, if you need EMS, you go to the PSAP three, which is EMS and fire. So now you've been transferred three times. If you hit a tower that they know specifically is in the city, you probably will go straight to the PSAP two, which is the City of [City] Police Department. Then they say, "Police or fire?" And then, you get transferred to fire.
Problems - Policies- Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We try to do a silent dispatch here. And, again, it was more admin and technology than just-- admin didn't agree with it and the technology wasn't quite there. That was about five years ago. We haven't brought the idea back up. I think, personally, it's a great idea if you could prove it to happen-- prove it to work 99% effective.
Problems - Policies- Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So you can get in the truck, push the responding button, get the call on the MDT, know all the information. Because to have that back and forth that's already on the screen that's right in front of you, but to just hear it from a person-- I don't understand why, if the technology could work.
Problems - Policies- Procedures	FF	S	Manager	46-55	21-30	Male	FF-S-023	It's a lot. For instance, so I've got logistics. So we're doing a lot of data with that, as well. How often our stations are ordering stuff. Where it's going? What's getting wasted? We're trying to lean that up a little bit, where we have a just-in-time delivery for all the expendable supplies, which is all medical supplies which is an industry joke. None of that stuff should expire, but it all expires very quick, so.
Problems - Policies-	FF	S	Manager	46-55	21-30	Male	FF-S-023	...Exploring things like how do we, maybe, partner with a hospital to get

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Procedures								the stuff that they're going to use in a heartbeat, and just do a swap with them so that it doesn't expire, because that's just a waste of money.
Problems - Policies- Procedures	FF	S	Manager	46-55	21-30	Male	FF-S-023	Q: Absolutely. Now, you know that you might have to create your own sort of data link. Is that something that you guys are looking into doing in-house? Like is your IT support, is that something that they can do or--? SME: They can do. Q: Do they have the time for it? SME: So that's probably the biggest key, is do they have the capacity to get it done, the work capacity? Because we still have to keep the trucks maintained and all of these systems... So yes and no. Not really. If I had more staff, it would be quicker. Unfortunately, now it's becoming a higher priority, so I might have to kick the can on some other stuff, and try to bring this together.
Problems - Policies- Procedures	FF	S	Manager	46-55	21-30	Male	FF-S-023	Right. And then there's, PD has their own little gig, which is they want to encrypt all of their transmissions, which is fine, but that adds one more layer of complexity. Do they give us permission? Can we read it? Can we hear it? Can we get their security keys? So all of these different systems we have to actually get physical permission to use each system. There's agreements that we have to iron out, and most of those are done, but we have to do that, but you have to review that periodically and look at those agreements. Make sure that they are all still good.
Problems - Policies- Procedures	FF	S	Manager	46-55	21-30	Male	FF-S-023	...We had a structure fire where there was two buildings involved... In this particular case, one of the dispatchers on PD got bad information and thought that one of the buildings might have been occupied. We change our operations if we think there's people at risk. We'll very, very, very, very aggressive if we think people are at risk. As it turns out that wasn't the case, nobody was in either building. The PD didn't give that information to fire, but they aired it to a couple of their officers. One of our dispatchers happened to hear that and gave that information out. What they didn't hear was the officer said, "No, I have these occupants here."
Problems - Policies- Procedures	FF	S	Manager	46-55	21-30	Male	FF-S-023	...During that when his radio melted through, one of their two radios did an emergency broadcast and set off alarms. Well, [City]PD at the time just silenced those alarms and didn't tell anybody...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Policies- Procedures	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...I think as our technology opportunities change, if we get to a point where our CADs are talking to each other, we could look at some-- we have some areas where dual responses, coordinated responses would work out really well for us. But it takes some time for us to have the comm center, notify a comm center, and then they process it. A call gets shipped out, and there seems to be some delay. Whether it's a training issue or a technology issue, not super sure yet because we haven't pushed that far into saying, "Yes, we're going to run dual responses together." But I think there's some opportunities in the future as money gets tighter, and that you just can't build fire houses wherever you want anymore. You have to figure out how can we work together to cover areas on the fringes of your protection area. So I think there's some opportunities in the future. It's just, okay, how do we work through that?
Problems - Policies- Procedures	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...Organizationally, to this point, we haven't chosen to turn it on, because we've tried to control how many responses our rigs get by setting a response area that will control how busy they are. The new fire chief-- we just got a new fire chief, and he's interested in turning the AVL on for everybody. We know that it will cause some of the apparatus to spike. Their call load is going to spike because they will be the closest. So really, I think we didn't turn it on to try to balance our call load by setting response areas versus having the AVL turned on.
Problems - Policies- Procedures	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: dispatch] ...We used to have free standing fire dispatchers years ago, and they were really good at free-think. I mean they'd be like, "Have you thought about this? What about this? Do you want this resource? Should I be calling this?" That's just not the way our comm center works right now. They're super busy. They crank out a ton of calls and try to process a lot of information for us. And with priority dispatch, I think it's really increased that. I mean, the demand on them is tremendous, I think. Just trying to keep a full workforce for them, I think, is a battle, let alone teaching them how to be advanced in free thinking for the fire department. I just don't think they have that opportunity right now.
Problems - Policies-	FF	S	Supervising	46-55	21-30	Male	FF-S-017	...TAC four is almost always fire... If there are two simultaneous fires

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Procedures			Field Responder					going on, house fires, then they'll open four and five. The biggest issue is the comm center has to have certified or trained people to function on those channels. And a lot of times, we can't get extra channels open. They just don't have the staffing to-- either the people trained or the people period to open extra channels for us, and that's where it becomes difficult. And you can hear-- they'll open it, but you can hear a dispatcher working multiple channels and trying to handle the call volume that's going on...
Problems - Policies- Procedures	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: working in arson] ...we struggled back then trying to move to some kind of automated-- we really wanted a tablet back then, when I was in there, where you could do your sketches, and you could take your pictures, and you could do your notes. And we really struggled back then trying to find something that could meet our needs and could be supported by not only the organization money-wise, but by the IT department who already has a ton of stuff going on. And then here we are going, "I want this, it's special." And they're going, "Right. You're not special. We need to meet the whole need of the whole city." ...
Problems - Policies- Procedures	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: communicating with LE] ...we have access to all their channels. And within the last year, they've added our channels onto their supervisors radio. So they can come up on our channels now to-- up until a year ago, they didn't have that access. They didn't want it. All of the sudden, something happened where they couldn't get a hold of us and they realized they really wanted it and they've got to add it on to their radios.
Problems - Policies- Procedures	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...I would love, at some point, whether the technology exists or not, the bigger issue will be funding and working with IT... I would love to see that. I would love to have that where everything was just on one thing. The officer could carry it around. He could use it. A caller comes in, you could go to the rig and just put it in the dock. But we're all fighting for the same dollars. And IT is doing the best they can to try to keep up with everybody's needs right now.
Problems - Policies- Procedures	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	SME S2: And it was a process to do the change. And then, once we got it-- again, it may just be me, personally-- but, how I use it. SME S3: I think

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it's frustrating because, I think, you have this huge Google platform and we never had any issues from it. SME S2: And then everybody learned it. And everybody was fine with it. SME S3: So then, sort of, changing to change.
Problems - Policies- Procedures	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: change] I mean most of it's just been the difficulty of learning a new system. Like he said with our pre-plans. Everybody got used to one thing and then we switched it. And then that didn't really work, so we switched it again.
Problems - Policies- Procedures	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	...sometimes there's been information that's been lost in translation from people on the scene to the officer, to their dispatch, to our dispatch, to us, confusion about if somebody's inside or not which really changes what we do tactically. So we're doing something, thinking there's potential rescue when there's not. So you're really putting guys in quite a bit more risk...
Problems - Policies- Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Financial and staffing are the two biggest-- volunteerism across the country, we know, is plummeting. The expectancy or the expectations of firefighters continues to astronomically grow, and so it's becoming more and more difficult to have volunteers who have time, commitment, and ability to do what's expected. And then with all those expectations comes enormous cost and trying to keep up with everything.
Problems - Policies- Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	We also live in a resort community, and we have a lot of transient population. And so as a volunteer comes in here, and the society expects them to have the same certs as a paid individual, even though they're volunteers. And we live in a high-cost area, so they have two or three jobs in order to maintain a minimum standard of living. On top of that, they're now required by the public to have the same certs as a paid guy, which takes time away from their job... the life expectancy of a volunteer to maintain that internal and external standard is really, really difficult.
Problems - Policies- Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Everything's different. We have certs that expire at two years. We have certs that expire at three years. We have certs that "never" expire as long

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								as you train on them every year. So everything's different. Everything is at a different cost. Everything is at a different educational facility. Some things you can get renewed through the college. Some things you have to do it through the Green Machine or the Forest Service. There are some things that you have to get renewed at a local level or by a specific certifier, like ice rescue. It can only be done through two different certifiers in the nation. So that's a struggle as a volunteer. That's tough.
Problems - Policies-Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...So our average for volunteer retention reaches right about the time [inaudible] get to Fire 1, EMT, Fire 2, CDL, all these certs. So now they can get plucked and away they go. So yeah, it's a very high turnover. And that comes with costs. I mean, several studies out there, and we kind of did our own assessment, and it's right around that \$17,500 for a volunteer, to get a volunteer. And then they go. So it's really expensive.
Problems - Policies-Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	We have never been fully staffed [laughter]. That doesn't exist.
Problems - Policies-Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...We use our radios for incidents, but we don't use our radios for just communication. Some of that is-- well, we get charged. The way our radio system is up here, we get charged for every push-to-talk. So it costs us money... the more we talk on the radio, the more it costs us. And with our financial situation, we don't. So we find that we don't use our radios as much because of that.
Problems - Policies-Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...they learn how the systems work, how the radio works, how we communicate, procedures, best practices, all the stuff. And then we test them on it. We don't just give them the information and go away. Okay. Now, they test out a bit. And like anything, it's like a license to learn. Once you learn it, you're not expected to be an expert. But now you're not afraid of it, and you're going to use it. And one of my pet peeves is that for law enforcement, all these other people, we train all these people. Law enforcement has to train twice a year. They have to prove they know how to use their gun. But they never once get trained or have to prove that they know how to use a radio, which in reality, what's going to save them the most, the radio.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Policies- Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	it has to be affordable, and that's the challenge. Of course, they're loosely related. I mean, there are companies out there that sell all this stuff, but it's never achievable for us. We'll never be able to spend \$10,000 on a radio. We have a hard enough time spending-- right now, I mean, our radios are costing almost 4 grand for radio. And that's why we have older radios because we can't afford the new stuff. So, I mean, we're barely-- having a hard enough time buying cell phones. So it's one of the challenges, I would say...
Problems - Policies- Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: in-house tech support] We just don't have money for that. So we don't have IT.
Problems - Policies- Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...Or just even new technology. We hate when the fire service is so stuck in tradition. We try to be a little bit more aggressive. I mean, you could go to different conferences around, and they're like, "Oh no. You just got to do a solid stream," and they don't embrace technology. We use CAFS. We use straight stream. We use [solid force?]. We use everything as a tool for the toolbox. And then, through education, you learn when to use that tool versus one thing fits all. But it'd be better if-- there's got to be a different way of fighting fires. I mean, yeah, there's home sprinklers and they do stuff, but I don't know...
Problems - Policies- Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...If there's some of this stuff, why are we putting people in harm's way to put out a house that's probably getting knocked down anyway? I mean, you have all these houses down here. We've had a rash of fires lately, and we're actually getting comments from the insurance company. They actually wish we'd burn it down because it's cheaper for them to replace it than it is to mitigate it. We lost the third floor off of a house. You'd think we'd rebuild. Well, all of the stuff that they're having to do to mitigate what was left in the hall is more expensive than if it had just burned to the ground and replaced.
Problems - Policies- Procedures	FF	U	Manager	46-55	11-20	Male	FF-U-021	...This one is personal, this one's department. So I tend to forward my department to my personal. Probably not the smartest in the world, legally wise. But to me, it's just easier... I don't like carrying two phones...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Policies-Procedures	FF	U	Manager	46-55	11-20	Male	FF-U-021	...I've got an iPad that I can link in from home. So I can just log on to my computer from home see if I need to look at any files or folders on my computer things of that nature. So it's good and bad, it's good because it's convenient, but it's bad that you never get away from work.
Problems - Policies-Procedures	FF	U	Manager	46-55	11-20	Male	FF-U-021	...We can always use a little more help with budget or just like anybody else, the staffing... We feel like we're definitely at the bottom of the totem pole when it comes to safety agencies, when it comes to money. But it's difficult, I'm sure when you're making those decisions at the top because we're not bringing any revenue in. A little here and there but for the most part, we're just a cost, a pretty significant cost.
Problems - Policies-Procedures	FF	U	Manager	46-55	11-20	Male	FF-U-021	[RE: TICs] ...there is a lot of technology that's up and coming where they're built in rather than a camera you're physically having to hold where they have it built into the mask now... that's kind of out of my realm, it's out of my division but it's something that we're paying attention to. I know we've met with [Name] and a few other manufacturers, they're very costly, but the benefits of them would be huge because right now only there's one assigned per unit... And generally it's on a truck, engines don't have them. And we have them in chiefs' cars but it's one of those things where it's better to have and not need in my opinion than to not have and need it. And they are costly but the benefits of having it integrated into your mask rather than having a hand that's taken away from you that can be utilized for other things... So to me that's a technology that's up and coming that I would love to see us be part of...
Problems - Policies-Procedures	FF	U	Manager	46-55	11-20	Male	FF-U-021	...There's also a lot of stuff on-- my passion's auto-extrication and there's a lot of stuff out there that are in the form of applications but there's nothing that we're utilizing right now. So to give you an example, the way technology is changing with car stuff either being hybrid or fully electric, there's a lot of dos and don'ts and it's good to know where those components are shutting off the vehicles, the high voltage versus medium voltage versus low voltage. There's schematics that are available in these apps where you can pull up any type of car and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								automatically know where the high voltage is running, where you can cut it, where you shouldn't, where fuel lines are, things of that nature. So does the car have one battery? Does it have two? ... A lot of things that are important, and airbags. So that's technology that's there. But again, it's on an app and that's costly, but that's something I would like to see us go to eventually where you should be able to pull up on a scene and either on your computer in the rig or an iPad automatically puts in the first ten of the VIN number, it'll pop up that car. And you'll know right there that you have in your hand where it's safe to cut, where it's safe to stabilize, how many batteries there are, if it's electric, if it's partial hybrid, if it's even hydrogen. There are a lot of different vehicles that are out there. That'd be beneficial for us.
Problems - Policies-Procedures	FF	U	Manager	46-55	11-20	Male	FF-U-021	...just like everything else, we're running 40% more calls with the same amount of people and we have 40% more inspections. So you kind of hit a place to where you only have so many hours in a 24-hour shift...
Problems - Policies-Procedures	FF	U	Manager	46-55	11-20	Male	FF-U-021	...We're definitely always behind technology-wise...
Problems - Policies-Procedures	FF	U	Manager	46-55	11-20	Male	FF-U-021	They're generally improving but, just like anything, we only have so much money and... we've got to prioritize and technology is not cheap so... it's always changing. So what are we going to get the most bang for our buck?
Problems - Policies-Procedures	FF	U	Manager	46-55	11-20	Male	FF-U-021	The biggest thing that I feel we're getting better but we're still not there is intrinsically safe radios. I mean just like any type of- I don't care what field you're in, communication is the key to either success or failure and you're only as good as your communication components and your knowledge of communication. So we're always lacking, in my opinion, when it comes to radio communication. There's always problems, there's always problems getting on the right channel or being able to communicate with a different entity or different agency.
Problems - Policies-Procedures	FF	U	Manager	46-55	11-20	Male	FF-U-021	You see that in, unfortunately, but you've got mass shootings and there's always a problem with cops being able to talk to firefighters. There are

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								paramedics. There are [City] being able to talk to [City] Metro, or this or that. And I don't know what the answer is, but I mean, there's hundreds of millions of dollars of grants that have been thrown towards it and we get better but I don't know if-- I don't know what the answer is to that streamless communication. Practice. But I mean, there's always technology that's going to give you problems.
Problems - Policies- Procedures	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	We do. If dispatchers and if everybody sticks to protocol, it's not so difficult for us to get on the same radio channel, but it doesn't always happen. So EMS and fire are pretty much on the same channel. Law is on their own set of channels. Dispatchers will tell them to move over to our channel if it's a big, long, drawn-out call. Otherwise, if not, then we got to tell dispatch to tell law enforcement. Law enforcement has to give-- tell dispatch the answer. Then they have to tell us.
Problems - Policies- Procedures	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...The other thing about station alerting is right now someone answers the phone, they start taking information, who, what, where, why, what's going on, and then they hit a button, whatever their procedure is, and then it goes to the other consoles. Then the person who's dispatching sees the call, they read the notes, okay. They start building the calling CAD, and then they have to go to this other screen and they have to choose which radio channels need to be awoken, if you will. Then they use a button, they make the noise, and then they send out the dispatch... So we want them to get this done in under a minute, and there's no way... There's a lot going on...
Problems - Policies- Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...If we're weak in any one part, maybe, in some of the training. At technology level, every responder in the region has the ability to talk to every responder in the region, but sometimes, people aren't using it a lot. They may not remember or they may not know where do I turn in my radio or whatnot. It's a perishable skill. Use it or lose it...
Problems - Policies- Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...Satellite communications tend to be very expensive. So they don't get used a lot. And when things don't get used a lot, then they can kind of get a little buggy...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Policies- Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...So for a typical high-rise, for example, we may have what a typical floor plan looks like. Where the emergency shutoffs are. Where the elevator controls are. Where the gas is. For all of those types of things... So those may get input initially and then they may never get touched again...
Problems - Policies- Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: pre-plans] Right. So schools is another big one and probably more important to the police because of the school shootings and stuff that have happened in our country. They're very interested in where the hallways, what ways do doors open, all of that type of information. You can get a grant to fix it the first time or to put it in there the first time, but as soon as you hit done, then the clock starts ticking before it's so outdated that it's worthless as far as, "Yeah. Switch this. Switch this. Switch this," and whatnot, so.
Problems - Policies- Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	Some of the other challenges with data is, again, I already mentioned its latency. How old is the data? Is it still current? Those are probably some of the first items that kind of come to mind.
Problems - Policies- Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	the pre-incident, the pre-fire-type stuff, that's very tough to kind of keep up and keep maintained. Unfortunately, because it goes into the [inaudible] system for dispatch, if that information gets kind of sloppy, you may think you're going to a 7-Eleven or a BP gas station, and it may have changed hands. You may drive right past the Shell gas station because you're looking at old data that says, "Oh, this is a BP gas station." In which case, you're like [inaudible].
Problems - Policies- Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: NG 9-1-1] ...So in this area, the 911 services are administered at a county level. And so we have, I want to say 12 to 14 PSAPs in this county. And so trying to coordinate those and getting everybody going at the same time has been kind of a challenge...
Problems - Policies- Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: NG 9-1-1] ...The downside from everybody we've talked to and everybody that's doing the Data911 is it's so much more labor intensive because just processing that information. And we strive to finish- or not finish, but on a 911 call to be able to dispatch an appropriate resource within a minute. If you're having to look through text messages and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								JPEG photos and all of that, there's no way. I mean, your averages are going to go way up just because of the time and the responding and figuring out what's what.
Problems - Policies- Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: radio etiquette] It has gotten worse over time.
Problems - Policies- Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So public safety is horrible, collectively speaking, at ongoing communications training. Most police and fire folks will get initial training in whatever academies they're going to. But then anything ongoing, so often it's just taken for granted that, "Oh, here's your radio, and you turn this knob to turn it on, and you turn this knob for wherever they tell you to go." The real rub about that or the irony is that other than the station uniform itself, I can't think of anymore equipment in the fire service that gets used more than the radio.
Problems - Policies- Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: radio communications training] ...So we require annual training on our apparatus to drive them, and move around, and whatnot. We require annual training on everything that's on there: the hoses, the ladders, all of that. We require all manner of specialty training, as far as, "Oh, Ebola hits the coast, and here's what you do. Here's how you prepare and everything like that." The one device that-- I mean there are stations around the country that may not go anywhere during a given day just from slow call volume or something like that, but even they will be listening to the radio and making decisions whether, "Am I listening to the right stuff? Do I need to change the channel?" or something like that.
Problems - Policies- Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	We could do a lot better on training. Training is probably one of the single biggest costs that public safety has, just because the citizens pay us to be able to respond. And so they'll put companies out of service for mandatory training and whatnot, to all drive to central points to get a message, or whatever, or to drive to a central point to do some kind of manipulative stuff. If there's a lot more of that that could be done, either in an online environment, or some kind of interactive environment through technology, that would save lots of time and money on that regard...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Policies- Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	From a technology aspect, one of the challenges that I've seen is that a lot of efforts, DARPA, and some of the other federal efforts and stuff, are really focused on kind of the short-term stuff, as far as how can I get some OTS, off-the-shelf-type stuff, maybe slightly modified and into public safety. There don't seem to be a whole lot of people, if anybody, that are doing the long-term stuff, certainly for public safety. Maybe more for Internet of Things, for the bigger general population... There doesn't seem to be any public-safety longer-term stuff that, yeah, this is going to take probably five, seven years to get it, but there's a big-need-type stuff. So that might be a big gap, or a shortfall that I've seen.
Problems - Policies- Procedures	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	...So 911 call-takers take information, and they have to triage that and basically push the right buttons to get the right resources out. And it's tough to sometimes coordinate that because they're getting an influx of information, and we're trying to come up with the decision-making process.
Problems - Policies- Procedures	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	That technology is out there but for a third-party company to build it on their own, there's a ton of motivation because the end-user group is not gigantic. So it's not something that you can, "Why do I want to build a system for the fire service when I can go build Instagram and try to make billions of dollars, right?" So there's that element that's at play. And we're just trying to see some of that change as the barrier to creating that software declines but a little bit but yeah.
Problems - Policies- Procedures	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	...I don't believe we're going to get it from the third-party system out there that's building it. It needs to come probably from some sort of like-- and there's not an economic motivation to just build something like that. Maybe somebody could build something that's big enough for everybody adopt it, and then you'd have it, but it seems like the more appropriate way is some sort of nationalized standard or government funding or something like that.
Problems - Policies- Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	[RE: cell phone use] I wouldn't say in all honesty that I feel-- I kind of know the [inaudible]. I mean, obviously it's the convenience. You can carry it, pull it out. But the way the city manages it, it's always locked, so

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you always have to unlock it to use it. So there's a level of inconvenience in kind of the restrictions that you're put under in using it, except those are fairly minor. But then it's nice to have access because I can store phone numbers for different agencies, rather than having something written down or having to go through dispatch. For example, if we go to a white powder run and there's some threat associated with it based upon the location and/or the letter, and I want to make notifications to-- two of our standard are the bomb squad and our local FBI coordinator, WMD coordinator. I've got their phone number directly in my phone. It makes it really easy. So probably easier than not.
Problems - Policies- Procedures	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] Well, you do have to worry about what you have, as far as taking pictures, knowing that that can become-- it is public record when you're taking pictures on a call. So that's obviously a big issue. So that's why it's beneficial when we have the work phones. So when I do go on calls, when I am going to a fire, I make sure to take all my pictures on the work phone. Because anything could be requested.
Problems - Policies- Procedures	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] There's definitely some rules about personal use of cellphones, both personal use of personal phones while at work and then personal use of department cell phones. It is allowed. But there's no expectation of privacy or exemption. And then once again, if you're conducting business with a personal cell phone, it is subject to disclosure as well, so.
Problems - Policies- Procedures	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S4] And we, as a fire agency, we said, "Sorry, no. You're not going to tell us what we're going to get to or not. You leave it wide open, and if you see a problem, one of our people doing something inappropriate, you'll let us know, and we'll deal with it. But we're going to use these tools and not have you guys restrict us down where it becomes unusable for us." And I imagine there's a lot of-- I see it in other departments. In this department, our IT people work for me. Where in a lot of cities, there are department directors, and they have the same say as the fire and police chief. And here, they are a support function of our main mission. So they can give us advice, but we'll still make the decisions.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Policies- Procedures	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] And if we're going to teach a bunch of people here to use drones, it's going to be a lot of overtime to get them up to that pilot level for a commercial pilot.
Problems - Policies- Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	My pet peeve is that there's no specific class on radio ethic, and so you want to be short concise and some people just love to hear their voice and if they're always talking. And in an emergency situation, it should be just what's needed to be said... Because you imagine, if it's a fifth alarm, there are so many people. And people are just stepping on each other when they're talking... And not everyone needs to be talking at the same time.
Problems - Policies- Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	I would say that our radios are up to date, and that our MDT terminals are not. You can do better with an iPad that you could spend 600 bucks on the Apple Store today than the information and the user interface in it's intuitive level, currently, that we have on the rigs. They're trying to make it better. They keep improving, and that's fine. But we're also governed by lowest bidder and other restrictions that prevent you from just getting what you want. You may have to get- well, this vendor has this, this and this. They're an approved vendor. And that's what you get.
Problems - Policies- Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	A lot of technological solutions exist in the current fire service if you can pay for them. And I say this as you don't have to pay for them. So a lot of times, a lot of the technology needs - before I get to the pie in the sky - of most American fire service members is just the state-of-the-art stuff that whatever company is already making. Just it costs 10 grand a member, and they're not going to buy it, right? They have things like thermal imaging cameras that can check heat. Well, they make them now where it can be embedded within your SCBA mask, so you don't have to carry a camera. It's like Terminator vision, right? So those kinds of things actually do exist. They're just incredibly cost prohibitive...
Problems - Policies- Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	...So a lot of the technological solutions aren't that it's a pie in the sky like, "Oh, I wish they invented this," it's more, how do we get it to an economy of scale that a fire helmet costs \$200? How do we get a thermal imaging camera that anyone can use, and that is state of the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								industry, state of the art, full color, let's you know temperatures when hot, and find victims? How do you get that to be also like \$200? So that way a city can go, "Yep, every single member is going to have one on their mask." And that way every single resident is protected by that fire department, right? You walk in and they can scan a room and go, "[inaudible]. There's a warm body right over there." That technology does exist. It's just that it's cost prohibitive. Same with things like iPads on all the rigs. It's an expensive thing, and people like to steal them. And so there's a replacement cost and a maintenance cost for things like that. But if you had those on all the rigs you could do a lot more. For example, when you do the hydrant checks, you could just have the iPad with you, and you don't have to do it on paper.
Problems - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	[RE: hydrant checks] they go to the computer. Print out the paper. Take the paper to the location. Write on the paper. Come back here and transcribe it, right? There's a lot of duplication of effort that just comes from the expense of technology. Not necessarily the existence of it.
Problems - Policies-Procedures	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	[S2]Oh, the cops always get the-- they buy toys all the time. They're always way out ahead of us. When it comes to communications though, we share a lot of stuff. And then our communications is also going to be affected by heat, and smoke, and visibility, so you throw that into the mix. You know that there's some military or higher technology available that's out there that would help us. I don't know what that would look like, but I think it probably exists.
Problems - Policies-Procedures	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	[RE: police officers] [S2]Their budgets have always been much higher than us.
Problems - Policies-Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	And I still have to answer my phone, be available 24/7, because I'm a senior command staff person in the fire department.
Problems - Policies-Procedures	FF	U	Supervising Field	46-55	21-30	Male	FF-U-016	That picture instantly goes to the Fire Prevention Bureau and if so, that is a violation, we need to come out and follow up on that. And then that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					picture is instantly added to the dispatch of that address. Technology is capable of this. We are not capable of it.
Problems - Policies- Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	It's very difficult for a large organization to change and embrace technology, and go to new things. People want to give up on it, and can't wait to prove that it failed, versus giving it a chance. And we're not able to give it a full chance because we don't have the hardware, we don't have the training, we don't have the money to invest in that infrastructure and the application tools.... To create that infrastructure. It's kind of a saying in the government as well as the fire department, probably more so in the fire department is, "Yesterday's technology, tomorrow."
Problems - Policies- Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	There's great business intelligence solutions out there but we don't have the budget, we don't have the thinking, we don't have the proactive thinking to want to be proactive and change, and be on the forefront of technology. Very frustrating being in the heart of technology in [State] and we are very slow to change. And we're not able to take advantage of all these great tech companies here.
Problems - Policies- Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	It's one of the things I'm trying to develop a program for our department right now. It's much more expensive than anybody thinks. It's not 1,000 bucks in our business. It's much more.
Problems - Policies- Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	These are great things that technology can do, but how do you change an existing system such as a emergency radio communications and go, "Oh, we're going to switch to this new system and invest all this money." And the Wave Relay technology probably isn't there commercially yet. They probably can't deploy it on a commercial level but it's amazing what Wave Relay can do.
Problems - Policies- Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	It is because people think that technology is easy and I run into a lot of these developers that are very smart..... So you want to do this technology, someone's got to monitor it. If you want to have a drone that does a windshield survey of every district in the city, that's great, but the engine company is gone. They're helping people in the collapsed building. Who's going to run the drone? Who's going to look at the video

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that the drone is producing? Who's going to assess that video and rank it and know what to do and who to give it to and prioritize what you see on it?
Problems - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...And something that they're also looking at is, which they should have done years ago, are more of a GPS-type direction of travel, which is huge. City's big. And if you are moving around from one area to another, say, I was a relieving officer, so I would go this firehouse and to that firehouse and then that district. So there was a lot of areas where I wasn't real familiar with, so even going from point A to point B, I couldn't tell you. So it would be nice to have that immediate, boom, hit a button. It shows you the travel route, just like the GPS that we use to go anywhere else, should pop up immediately and give you the quickest route and the more-- so those kinds of things are coming, hopefully.
Problems - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	...I don't know why it never was completed, but there was like a high rise survey. So some buildings we'd get how many stories, standpipes, what stairwells, have smoke towers, stuff like that. It could definitely be used more efficiently.
Problems - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	It's probably two-fold. First, a lot of it is operator error. Like I said, radio discipline - being able to use your equipment and also being able to make the correct communications at the appropriate times. And I'm sure there's also a technological aspect where you have to make sure it works. If anything, there's a tendency that things may break, need to be replaced. As a whole, our department, we don't embrace change very well. So we have a lot of people that-- I mean, I don't think it's as much now, but I know that whenever I get a radio, in the beginning, some people are like, "I'm never going to use it." Just like the computers, "I'm never using that." 150 years tradition unimpeded by progress. We're just getting to the part where we don't file forms with carbon paper anymore.
Problems - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	Well, I mean, you could probable use-- the mobile data terminals are really just laptops bolted into the rig. So they're used at very little of their capacity. I mean, we could do that. I'm sure there's a way to do it, but many of the reports that we do are more back at the station after action

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								reports. There's not a lot that you do in the middle. You know what I mean? I don't think they'd make us-- for the fire side? No. But for the medical side, definitely.
Problems - Policies- Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...I think what we have suffices. But it only builds up from it. Things will be different next year. Instead of fire fighting 101 next year, you might have bumped to the 500 series level. It's always outpacing us. But I think by today, I think what we have now is plenty enough. Again, at least in my opinion. We may have more who says, "Oh, we need more technology." I'm happy with what I've got, believe me [laughter]. Yeah. You got any more, I'm going to be overwhelmed with all this stuff...
Problems - Policies- Procedures	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	[RE: radios] We just went to digital, and it's getting better. I mean, when you first went digital all the voices were very metallic. Now I can recognize voices on the radio, so it's much more natural now. Add an extra alarm where the-- the problem with everybody in my opinion-- the problem with everybody having a radio is, there's people who are on the radio that don't need to be. Whether it's need more radio discipline-- and I mean, there's just-- it's just the nature of beast...
Problems - Policies- Procedures	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	[RE: radio comms in high rises] because there's so many people doing so many different things. There's so many people on the radio, and the radio channels are getting overwhelmed. And then the bosses show up, and we're in the middle of doing something, and they're showing up, and they're taking over, and they're giving other commands now. And they have the command channel, but sometimes you're not transferring over. Then they have to monitor both. So you're trying to get a person on one channel, and they're talking on another channel. But I don't know if there's an answer to that.
Problems - Policies- Procedures	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	Now everybody in the company's got a radio... there are some people-- well, some people when they get nervous they talk, and they don't shut up. They think what they're saying is important, and most of the time it isn't. I mean, in the past you've had a company showing up on the radio on a rubbish run, and giving a two-minute dissertation about the rubbish. And there might be a guy trying to-- there might be a fire down the street

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and them trying to talk, and they got cut out if they need help. I mean, you pull a mayday at a fire and nobody hears it because everybody's on the radio.
Problems - Policies- Procedures	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	[RE: radio comms] Frustrated,.I don't know if overwhelmed, but frustrated just because you can't get through. I mean, for me that's the biggest thing about technology is with everybody having a radio, everybody wants to talk and everybody thinks what they're doing is most important. And I don't know how you prioritize that, you know? And they all might be important, but.
Problems - Policies- Procedures	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	My biggest problem with communication is too many people have radios. I mean, not enough radio discipline, I would say. I mean, we've got our firehouse, he just loves to talk. And I have to tell him, "[name], shut up." Very inexperienced, and he thinks he's the only one who sees stuff. And if he sees something, everybody else sees it. So I just think that-- and overwhelming the channels with-- if you do a fire in a high-rise, it's overwhelming right away because you have eight companies showing up. So that's eight times five. That's 40 radios, and they're all on 1 channel.
Problems - Policies- Procedures	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	... At a big incident, just trying to get through sometimes is frustrating, and I don't know what the answer to that is because if you're trying to talk to the commander and one of my guys is trying to call me on the other channel, we use hazmat channels sometimes. So sometimes, I'll tell-- I'll pair up two people. I'll put one on hazmat and one on fireground. And if we want to talk to each other, we'll go to hazmat. So I have that option because we're the hazmat channel-- and they don't use it at fires. So that's how I get around it... And I mean, they're coming up with search and rescue channels. They're coming up with other channels. But it's just overwhelming when everybody-- you have 2 companies leading out, and there's 40 guys upstairs, and it's just-- and again, I don't know what the answer is.
Problems - Policies- Procedures	FF	U	Other Public	46-55	21-30	Male	FF-U-029	...when I came on 28 years ago, only a warrant officer on every piece of apparatus had a radio. And he only had a fire ground frequency which

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					would only be good for me to you on the fire ground but not transmit to our firearm officer, I think. So in the case of something that went horrible, we could only talk to each other, or actually, that one officer could talk to another officer. And his four firefighters that were with him couldn't talk to anybody-- no radios, we had one radio. And so, that was a big issue because the lack of availability of the radio...
Problems - Policies- Procedures	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	So [laughter] I know I'm talking to you, but you've got communication, so you have a sender and a receiver, right? And in order for it to be officially termed a communicative process, there has to be feedback, right? Without feedback, how do you know if the message was actually perceived on the other end by whoever transmitted it in a proper way, or was that information disseminated properly from one place to another. So the problem that we have is-- and this could probably be made better through training, but we train so much on other things, we run out of time to train. The way that people talk on the radio. They cut each other out. Sometimes, when we went from analog to digital, analog obviously was not as powerful, for lack of better terms, but it was more instant, at least on the fire ground. Whereas, digital you have to key the mic, almost pause a second, or else the front end of your transmission will be cut off. We have a lot of that going on...
Problems - Policies- Procedures	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	we have a big problem when we're responding seeing the actual address of places, believe it or not. We're pretty good at getting close because our blocks generally, at least in the residential areas, they generally run from 0 to 60. In other words, if this was the [Address] block of south whatever, doesn't matter what the name of the street is. Generally, we know that there's a hydrant on this corner, there's a hydrant on this corner, and right around [Address] there would be another hydrant, so that's how we think. Everything is about where the hydrants are. But we know that our addresses on most of our residential blocks would run from [Address] to [Address], and then there would be cross street, and then it starts again. So we always have a problem a lot especially in the evening of seeing addresses. Some buildings just don't have them on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there. And others have them, but they're not even reflective, whereas if we even shined a light on a house or a multiple story building, that the address-- and that could be a problem in response time. Again, it's always about time. So if there's a smoldering fire or a fire that's growing that we can't see from the outside and we're wandering and wandering spending a couple, just a couple extra minutes finding the right building, it becomes an issue.
Problems - Policies- Procedures	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: address placement on buildings] --it's a real common problem... You see them in every different way. They're actually, sometimes they're scripted... And not numerical, is what I'm saying. It's just written word... And then sometimes they don't even exist. In [City], we have a lot of vanity addresses that aren't even real. Yeah, and it became a big issue. I'm surprised it still exists because it became an issue with a very famous high-rise fire in the downtown area where there was a female there that was after hours working, and she was afraid to leave because the fire was in a floor below her. And she kept calling, and calling, and calling. And they had all these audio tapes that they kept playing on the news. And she kept giving them. And they were like, "We can't find you. We're on that floor." And she kept saying the address over, and over, and over again. Well, it was a vanity address for the building. It wasn't a real address. And she wound up dying in the fire. She wound up dying, and it was horrible. So I'm surprised that they still exist because there are some addresses. But even in the neighborhoods, which is 80% of our city is all residential. And man, I can't tell you how many times I have just wandered looking for an address.
Problems - Policies- Procedures	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: address placement on buildings] I'm just saying. I'm just saying it's pretty crucial. It's pretty crucial. And so, I don't know what the answer is in a large city because to mandate in the poorest of areas that's-- but it's definitely, we respond to addresses. That's all we get.
Problems - Policies- Procedures	FF	R	Other Public Safety	26-35	6-10	Male	FF-R-048	[RE: human error interfering with communications] Yes, yes. People not having the radios on you know and say you know say they don't have well I guess there's like say we have a guy on the truck, inside the truck

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					driving, we have a firefighter on the back sometimes communication between them you know say our headsets don't work because here at the department at [town name] we don't have a headset for the guy on the back that communicates with the guy in the front and so the guy on the back can't I mean he's not going to hear the radio, he's not going to be able to talk because you know he's in full gear, he's got engine running, he's got a pump running back here, he's not going to hear that so we don't have those headsets...
Problems - Policies- Procedures	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	...you know there's always things like gear. Gear is more important. I was at a training deal extrication class and one of the instructors was the [city name] Fire Department and he's like yeah he goes it's funny listening to you guys talk you know you're going gosh I wish we could get a truck you know, I wish we could get you know jaws, get this he goes we got guys complaining because their gloves are a month old and I looked at him and I said we got gear that's been out of date for ten years. [town name] Fire Department over there that I'm on we got a couple of guys don't even have gear and well until they just got some wild land gear but at a structure fire they can't go to a structure fire. They can show up on a car wreck...
Problems - Policies- Procedures	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	...you know we've got guys here that are you know it's getting to the point where we've got to get some more gear but you're talking just the coat and pants alone are about \$3500 that's not including boots, that's not including helmet, that's not including gloves you know, that's not including you know radios, you need hand tools, flashlights you know I mean there's a lot of hand tools that would be nice to equip every guy to have you know just for breaking glass you know but we have to have everything up to code. We can't just go down the hardware store per se and get a hammer you know to do this and that. Would it probably work? Yeah but inspection wise we got to have everything you know the fire tools that work better you know for our stuff.
Problems - Policies- Procedures	FF	R	Other Public	26-35	6-10	Male	FF-R-048	[RE: volunteer department equipment] It is a huge issue. I mean funding is a huge issue. Up until I think we're coming up on the first year of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					having the sales tax for our county and other than that we were funded by a yearly fundraiser. It was basically the town donating their personal money to protect them basically you know and that was I think the state did allow some funding but I mean it wasn't enough to make a difference. If a truck went down that truck's gone until we can save up the money or get a grant or figure out something to fix that truck. I mean we were living year to year as a department you know and that depended on the size of the department and the size of the town.
Problems - Policies- Procedures	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Okay from the government standpoint that makes our regulations understand we're doing this on our spare time. This is not you know we're not paid, we're not sitting here at our fire department going okay we got to have a call any time you know we're at home, we're at our jobs, we're at our kid's basketball game, t-ball games, we're at our kid's birthday parties, we're at our family Thanksgiving's and when our phone goes off we leave those you know and so and then when we have training you know it's like I've been on three calls already this month you know I've taken enough time off. It's hard to get guys yes, we need the training but you know whenever the state's going you guys don't have enough training...
Problems - Policies- Procedures	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	[RE: state required training] Well first off you get them here and second off you keep them here. I mean even a paid department you know just the regulations to drive these trucks if we were in [city name] they ain't a person on this fire department that would be qualified because the amount of driving, training they require to do that. Now do I make sure my guys are safe before they go? Yes and I have a rule if they don't know how to drive it it's grass it's a house as long as nobody your safety is first. Leave the truck. Wait on somebody else to get here don't drive it. You know that's the thing you know if you don't know don't go in but it's just you know the amount of time it takes.
Problems - Policies- Procedures	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	And it is like when I come home from my main job I sometimes it's not that I don't want to go out and do the work fight the fire you know work an extrication something job related it's the BS in politics that go with it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Policies- Procedures	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Yes, yes there is. Is it trained in the right way? To me no but there is training on it. We were just talking about that not too long ago. We were talking about problems with the MDT and I was asking them has there ever been a fooled laid out class of how to fully work it?
Problems - Policies- Procedures	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	We're focused on task oriented things at that--that have to be done right now. We don't always get the same information that they sheriff's office gets sometimes. And it's simply because one person is taking it and another person is doling it out. Well the person doling it out... and part of that's our own fault. This radio has a response coord--coordination channel so instead of us moving to it which we've discussed and we try to do, we failed at it and it's an administrative issue on our side, on the sheriff's office side, on the EMS side. We should be switching to a response frequency where everybody hears the same thing and then when we get to a scene if we need to do something outside of that we need to just move that part of--we'll still hear it, it scans... But that's a training issue that we will work with the sheriff's office to address but that's our biggest problem.
Problems - Policies- Procedures	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	...our biggest problem is limited number of people. But we have a large area, spread out, without a water system that covers the entire thing. So we have to bring a lot of our water to fires. So that's what we deal with here.
Problems - Policies- Procedures	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	It's--they're--everybody--people will come through the door and volunteer. But when they start figuring out what's involved, there are more... there are more volunteers at the animal shelter than there are at the fire department. And, you know, there's also a bunch of volunteers at the school. Some of them are different groups of people. But, you know, like we tell them, there's nobody that can't go do the first aid stuff. And that's the bulk of our runs. We only burn... we burn less than 20 hours a year in this [County]. So I mean. But when you need firefighters, you need firefighters. So.
Problems - Policies- Procedures	FF	R	Supervising Field	46-55	21-30	Male	FF-R-051	But when I go to another region channel you don't know whether those organizations monitor it. State police usually do. They can get you to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					one of the others. But. 911, I'm not doing anybody else any more good than [Name] driving down the road because I can call them on the radio and say this is what I have, this is what I need, and bang, it should be done. Where instead calling 911 and they're going to just go through their normal deal and they may be sending me what stuff I don't need when I can say, hey, this is all I need for this particular thing.
Problems - Policies- Procedures	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[RE: solving comms issues] Money which is you never have enough of. And... money gets you the equipment that you can put the technology on that can take some of the human factor out. If that person is sitting over there typing in dispatch notes and it's showing up on the terminal in front of me, I don't have to wait for them to tell me what they have. And I--and I know departments that have that. They've got dispatch terminals, you know they've got a terminal sitting right here. And let's say that I go out and you know if I'm doing law enforcement stuff and I want to run a license plate or a driver's license, type it into that machine, boom there it is. That technology is available, it's just a matter of do you have the money and the infrastructure to do it and the bandwidth to do it?
Problems - Policies- Procedures	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[RE: big events] And so you've got those levels of things. And they should be communicating amongst themselves and only certain ones, as you move up, should be talking to the next level. That's training. That's frequency. Allocation. That is, you know to make sure you have enough of them. That's the ability to talk to other agencies when you bring them in. Like we do Auto Aid with the two of [City] but we're on the same radio system. We do aid with the city of [City] and [County] and [City] and [City]. I can't just talk to them. It's--you know [City] is not in my radio but [City] comes here and [City] goes there and we go there to do things. I can't talk to them. I have to get on a response channel instead of being able to say--tell my dispatch I'm going to be on [City]'s frequency. And just dialing over to be able to get to their primary 2 or 3 things.
Problems - Policies-	FF	R	Supervising	46-55	21-30	Male	FF-R-051	I can sit in my house with a hard line coming in and get maybe 6 mg

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Procedures			Field Responder					service. I can go to my phone and get 25 mg service. That's stupid. Why are we spending the money on one when we can do the other? I got a price to put... I got a price to put fiber to my house from AT&T. \$64,000. I am a mile from the fiber. There are other things on the road and I'm stuck with 6 mg DSL instead of I was going to buy a 10 mg fiber fed digital service. I don't mind the \$500 a month for my business but how-- you know I can get almost the same thing with an over the phone system, over the wireless cellular system. It's just you've got to build the backbone for it. What's cheaper to do? And you know the government maintains this on a budget.
Problems - Policies- Procedures	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	It's all--everything in the public sector is about money. You have a limited supply of it. People think you don't. But we get 6 mils property tax that's all we have. No sales tax. No user fees. No nothing. We get 6 mils property tax and our tax is based--is dependent on the value of the nuclear plant which reduced 4% every year. So my budget constantly goes down and my expenses go up and my needs go up. So I mean... that's where we're at.
Problems - Policies- Procedures	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] We just had you know a several million-dollar upgrade to our carrying system in our dispatch center but it's limited capability based on calls, or the political arena is not letting anyone support each for some reason. I am not educated enough to speak on any more than that.
Problems - Policies- Procedures	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	There are people that oversee us, [CJIS?] oversees us, and says "you can do this, you can't do that, you can do this, you can't do that." And so with every piece of technology that we get, there's a requirement that goes with it. And so, to make sure that we meet the requirements, sometimes it's easier to just maintain what you have right now if it works effectively.
Problems - Policies- Procedures	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	They're mainly for if for whatever reason you're doing law enforcement stuff out of state or whatever, then I guess you can add some new channels with that. But majority of the officers are never going to do that. So it's like a newer radio with some new technology that, as far as I know of yet, the city has yet to-- they have GPS and then [this and that?],

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								but the city's not paying for it, so we're not using it. So it's like bigger, badder new radios that we're not really using to the full capacity
Problems - Policies- Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	I think it depends on how it's implemented. I mean, if you roll out a new technology that's supposed to be good, and then you roll it out poorly, or it becomes cumbersome because you don't configure something right there, you can make it difficult.
Problems - Policies- Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	Now, with city-owned cell phones, that kind of alleviates that part of it. But then it brings in it's a city-owned property, and then an officer decides to download something they're not supposed to. So that already comes into an idea of control over the device, which is very manageable as well. So there's some issues with having a cell phone, but they can be managed.
Problems - Policies- Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	And that's just a solution that each individual solution or source that we have. We've got one design for body cams, we've got one design for in-car cams, we've got one design for CAD, and then we've got all these other small things. And they're all from different vendors, because of whatever reason. The city was trying to beg, borrow, steal these things from different vendors and they didn't want to pay full price, so none of them integrate well together, which is a huge issue for us.
Problems - Policies- Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	At some point, we have to start putting technology in our go-bags and it sits next to us until we need it. And of course, it's expensive that way too.
Problems - Policies- Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	Our department does not pay for our phones. So the officer themselves take it upon themselves to use that. Obviously, there are some concerns from our officers when we tell them-- I will tell them, "This is how you can do this on your phone. Keep in mind, you're not doing work on your phone, so if something happens, you might get subpoenaed. You're going to lose your personal phone."... So there's no data. You can have my phone. You will find nothing on it related to anything I've done for the Taser body camera. But probably - and I'll give them the benefit of the doubt - the defense wants my phone because they either don't believe it,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								don't understand it. All they know is that I looked at my phone and I saw the video. So they want to see what's on my phone. And I can explain it until I am blue in the face that this was just a connection to this device. I was really playing it from here; it just streamed it like YouTube. If I watched a YouTube video, you wouldn't want my phone to see it.
Problems - Policies-Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	So there's definitely a top-down. Sometimes we have a vision, sometimes we see something, and then it's our job to make the case. And then, the chain of command will decide whether we have the budget. We also will help with trying to find grants and things, of course. But ultimately, they're going to be the ones making the decisions. All the way up to the chief.
Problems - Policies-Procedures	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	The tricky thing with that is it's kind of like if we get our work email on, we're basically granting our CTM access to all that is on a phone. And then also when I try to remind officers, because not all of them are aware, too, for open records requests, if you put work specific stuff on your phone and they ask for it and you haven't gotten rid of it, you have to provide it. So I always tell officers to be careful about texting things about work or taking pictures with your phone or that kind of stuff. Having things on your actual phone, you've got to be careful of. So that's a concern. And we don't have phones in the department issued to us as patrol officers. So you use your personal phone a lot.
Problems - Policies-Procedures	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	whatever the priority or political climate is for public servants or the department's going to go. So when I started in PTU, there were six or seven of us and now they're down to four. So I think it's wherever-- and I think it's very important to have officers in that role.
Problems - Policies-Procedures	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	But then that would require us to go through one company, which in this department has kind of-- or companies that will play nice with each other. Which is sometimes-- because like our CAD system, for example, they would charge ridiculous amounts of money for us to have an interface with other companies for whatever reason, so. But yeah, everything kind of worked together.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Policies- Procedures	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	So when you talk about the system itself being adequate, we are using decent systems, but whether it's as a result of government contracts, whether it's as a result of bad policy, typically, the stuff that we are using isn't as user-friendly and ends up being outdated sooner than later...But even when you tell a lot of our guys, they're like, "Yeah, I don't have time for that." And then, to me, that's where it gets back to the MOU. I was under the impression we had an MOU that all these old vehicles, the radio shop was responsible for going through, changing all the old chargers out, and putting new chargers in. Well, nobody on our department is holding them accountable, if that's the case, because there's still old chargers in old vehicles. And it's like, we had this MOU, supposedly, that says, "You were going to go do this work. You never did this work." Now we have vehicles that are rolling around, and you don't have that ability to swap out. So, again, on our fire truck, we'd be on a call.
Problems - Policies- Procedures	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	...And because of government contracts and because of training and implementation, we constantly stay so far behind the technological curve that I don't know that we'll ever get to that pie in the sky because the T&E, the safety development, the safety committees, all that sort of stuff that has to take place, puts you two years constantly behind the curve. But the technology is there. The fingerprints are a good example of that, where we have fingerprint readers. Again, but the software is not the swiftest of software and by the time someone who's sitting behind a desk makes the decision, you're years and months ahead.
Problems - Policies- Procedures	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	Right. And I don't know why they-- and I don't know the reasoning behind why they've changed it or if that's maybe what whoever developed it thought it would be an easier way to communicate or what. But for us, I could tell you, it makes it harder.
Problems - Policies- Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	We use plain speech, and it's a double-edged sword. I see the necessity for it, but it takes longer to get through transmissions. If you have a code system and your agency knows the code system, you can cut down transmissions significantly.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Policies- Procedures	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	So instead of me going directly to the source, I now have to go through somebody else who has to communicate what I'm saying to somebody else. And then that person gets a response from the ECC, and then they communicate it to me what I'm trying to deal with whatever situation I'm dealing with. Same thing within the basement. If I'm in a struggle in the basement, and I don't have-- this person outside could be inside helping me, but they can't because they had to be able to communicate with everybody else coming in, what's going on.
Problems - Policies- Procedures	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...You got utility belt. The last thing you want is a printer. They make it thin so you can slip it into a container on your belt and keep it there. I've seen, and I'm like, "Oh, enough. Just calm down." But you still have to do that...
Problems - Policies- Procedures	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...I'm not saying open the flood gates and start spending like a drunken sailor. But there's got to be a median, comfortable. And the decisions made by the command staff, usually with little or no impact on the people that it's going to affect the most... There's not that open lines of communication. It's decided up on a high, and it's dumped on, and you shall accept and make it work even if it doesn't work.
Problems - Policies- Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	One of the things we have, it's called the Safe2Tell program, which is it's for kids to call anonymously to report incidents involving in schools... we've seen two consecutive years over 70% increase in use... we found their sweet spot. Unfortunately, we don't have a lot of extra personnel to handle those now, but it's amazing the number we do have, but that's just the technology leap.
Problems - Policies- Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	But there's a lot of agencies that will get-- and this is the frustrating part. They'll dispatch an officer to the scene and then he gets there and says, "Oh, no. It's State." And then they call us so they've already waited an amount of time, and they have an officer on scene. And then they ask us for an ETA. So even if it's 15 minutes type of thing, when we get there, the people are upset because they've been waiting there a half hour.
Problems - Policies-	LE	U	Manager	46-55	31-40	Male	LE-U-020	...there are some where, oh, no that's state, call state. But they don't call

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Procedures								us on the initial call if there's a question. They wait till they get there and then they decide, and then they call us. So that's a frustration piece, but working with 63 different counties and multiple local jurisdictions, you're going to find the good and the bad and the others.
Problems - Policies-Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	...We don't have an MDC for each person right now, so they do swap them out sometimes. So there'll be multiple troopers using the same MDC type of thing...
Problems - Policies-Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	...It's always a struggle because everybody has email but nobody reads email. I mean they get email, but they don't read email. You don't have time to have face-to-face meetings with everybody...
Problems - Policies-Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	...if you wanted a truly custom whatever it is, you're going to pay for it. And they're going to write it for you and it's going to become proprietary and then when it breaks you've got to go back to the one source and... Go out of business, or they're going to charge you a whole bunch because they know that nobody else is going to fix it. So that's difficult to providing communication, I think.
Problems - Policies-Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	...clearing flow of traffic as soon as we can with accidents. If people are involved in a fender bender, we get them off the highway so the lookie-loos don't run into each other...But there are some agencies that have no concept of this and they'll lock up a lane in traffic for hours and then we just see multiple things back up, and eventually, if it's in the city, it's going to back up into our area. So that's frustrating, trying to get them all on the same page because they have their own leader they're responsible for...
Problems - Policies-Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	...In law enforcement, it's different because typically your sheriffs are elected, so they're going to do things to keep themselves in a job... You're at the whim of the city council or whatever that they'll hire and fire or do whatever they want if you don't do what the mayor tells you to focus on. So they have their own things that they have to do and I understand that. But just, when you get into, well, you're all law enforcement. Well, yeah, we are, but it's difficult so. It's just kind of a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								perspective of internal communication and then external communications
Problems - Policies-Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	... And I think moving more towards a - and I know this will never happen, but - a common platform for emergency communications. Well, who's it going to be? Is it Motorola? Is it going to be Harris? Is it going to be-- there are too many companies selling their own thing for it to be a one-type ability. And I know that's not going to happen, but pie in the sky, it'd be great if everybody could use one. But [State] is very local-oriented, so we can't get that done in the state, much less the nation [laughter].
Problems - Policies-Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	...[State] is very difficult. We're having very difficult time. They run their radio system differently, and their legal department has indemnity issues type of things about sharing their resources with others. And so when you start getting into legal problems, I mean, it's, why are you involved?
Problems - Policies-Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	...They don't understand. They don't get down with the boots ground, that this Kansas highway patrolman may need to come into [State] and they need to talk to us.
Problems - Policies-Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	...sometimes, when we get politics involved, it kills processes.
Problems - Policies-Procedures	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...From a technology standpoint, I don't know the-- quite honestly, we were lied to by the company when they said they could do a lot of what they can't do. So that's what the primary issue is. It won't do a lot of what they told us it would do...
Problems - Policies-Procedures	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...and then the ability for that particular product to integrate with other systems, we're finding, even though we were told, "Oh yeah, it's easy." It's not. And they're using it as a way to increase revenue by saying, "Okay. Well, if you wanted to integrate this way, it's going to cost." So, yeah. It's been a really, really disappointing process. And that's one of the things just for in technology in general with, I think, most law enforcement agencies is there are many disparate systems that need to communicate, and that's one of the real challenges is getting our CAD

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								system who's made by one vendor to talk to our RMS, records management system, who's made by another vendor and get all that information to feed to our analytics system, which is a completely another vendor, so those kinds of things are really a challenge. I'm sure you've heard that from other agencies, but that's a challenge for us.
Problems - Policies- Procedures	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	It's another new thing they just did was a got to [Pro QA?] dispatching. I hope you are familiar, but that scripted thing that the call-taker do when they get a call. It affects how the call prints out, or how it displays in the car, and it affects how it's aired, and when it's aired. And so there's been some growing pains with that. But everybody is getting more, and more used to that too. I think they, for the most part, they do pretty well. There's been some problems, some complaints, and one of the solutions that they just went to is to bring dispatch back under the police department umbrella rather than having it as a separate entity that it was before, so that means they can do rest here.
Problems - Policies- Procedures	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...I can tell you from my perspective just our biggest constraint is always budget, budgetary concerns. We mentioned we had 10 fingerprint readers. We'd like to have 400 fingerprint readers. So those kinds of things are-- usually, it's just constraint by budget.
Problems - Policies- Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...when that comes about, it will be the entire team of [County], ongoing CAD system, which is between police and fire, there's like 26 agencies. Which in my mind, is a very big step backwards as to where we are now because our dispatchers now know us. They can hear differences in our voices. They can tell when something isn't right. They have an idea as to how our city is laid out, how it works. And I think we're going to lose that when you go to a comm center...
Problems - Policies- Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...But I think, in reality, we're going to have a dispatcher on the radio today, that may have never worked with [City] at all. And tomorrow they're working for [County] or [City] because while it's one regional comm center, each agency is still going to maintain their own radio systems. So we're on Harris. [City]'s on Harris. I think [County]'s on Motorola. [inaudible] on Motorola. And so, we're not going to combine

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								radio systems, just dispatchers... So that patching is going to be an issue...
Problems - Policies- Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...Now, our animal control people, they can put themselves on dispatch calls. They're going to the same houses and their not armed, so a little confusing as to why they don't have to do it on the radio either, but it's how that works.
Problems - Policies- Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...Our traffic unit, we have ecitations, so I have a handheld Android device to write tickets. I can actually do an accident report on there and exchange the information. But, again, with our systems, I still have to come back here and then cut and paste from that application into our native RMS system. So even though technically, I've got the accident report done in 15 minutes, I still got to come back here and spend another 15 or 20 minutes to transfer it into the system that they want.
Problems - Policies- Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: RMS] I cut and paste because it'll put-- it's [inaudible] technology, it'll puts it in a PDF-- fills out this data accident report. But because systems don't talk as well as our records department would like together. It's click, click [laughter]. But for me, it's faster than our other traffic guys. We're using our phones, and we're taking pictures of license, registration, insurance information, and then we come back, and they're either pulling it up on their phone or using a generated PDF on the phone of that data, and put in the next-- split the screen and then manually typing it in. So that's another thing we use our phones for. Take a lot of pictures for that type of stuff
Problems - Policies- Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...Technically, our printers are not mounted in the car. So I got a little belt clip. If I wanted, I could carry it on my belt... it's not very comfortable. It's cumbersome...
Problems - Policies- Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...sometimes we do, sometimes we don't. Traffic, very seldom do we actually run people because I don't care. I don't want the warrant because if I get the warrant, then I have to have somebody from patrol come over and take them because I don't have a cage in my car. Motorcycles don't have cages. Our job is to go out and impact traffic and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								run with that. So it's very seldom that we run people unless they don't have an ID...
Problems - Policies-Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...we have a few people who will not use the computer, use only the radio, which then takes up bandwidth for everybody else, but they won't change, and they're our trainers. So when you have trainers who are teaching people to constantly do that, it's like, yeah I can teach them how to, but you don't need to do it all the time. So it just, there's a lot of things that we can do with technology that our people are preventing. Whether that's dispatching, whether that's running inquiries and stuff like that on computer, because we just get a mindset of, "Well, this is how we've always done it."
Problems - Policies-Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: electronic v. paper forms] ...We have access in our RMS system to do affidavits which then keeps it as part of the permanent record in there. But, again, at the command level, we haven't forced the officers to use that, so some still use Word and type it up. And then we're scanning and attaching, all to six different systems, and I think that's the big challenge...
Problems - Policies-Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: electronic v. paper forms] ...There's a lot of things that-- there's really almost nothing that we have to do on paper anymore, I don't think, but we do. Even our eticketing, it imports directly into the court. They have it the next morning. They still print out paper copies. Our records department, it could import directly into our RMS system, but because they had to click three times to merge the records, they print them out, and they hand type them in. There's job security there [laughter]...
Problems - Policies-Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: electronic v. paper forms] ...we still have stacks and stacks. "Paper and printer is expensive." Then stop doing it [laughter]. But we keep doing it, even though we have other places to store all that stuff.
Problems - Policies-Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	And there's only one thing cops hate more than change, staying the same [laughter]. So it's a constant battle, "Why are we changing this?" and "Why aren't we changing this?" You're stuck.
Problems - Policies-	LE	S	Field	36-45	21-30	Male	LE-S-016	[RE: body & in-car cameras] We've made that decision, we're not. Data

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Procedures			Responder					storage is extremely expensive.
Problems - Policies-Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...The thing with technology, we used to dictate all of our reports. We never typed. I mean, we'd fill out the face sheets but then our narratives we would call in-- when I started our records department typed them. They ended up getting so far behind that we ended up laying off our [inaudible] clerks, and we moved to a private company, a dictation company. And we'd call in there, and they would type our reports for us, and we would get them back within a day or two. Or within hours if they're a emergency type thing. And again, that's a quarter million dollars a year...
Problems - Policies-Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...And then, "So okay, well, maybe we can save this money." So we went to Dragon Dictation, doesn't work. I mean, for us. We have a few people around who beat up and train their dragon enough that it works-ish, but the quality of reports weren't there, and then the reports got shorter. So then, most people just stopped using Dragon altogether. They went back to just hand-typing their reports...
Problems - Policies-Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...primarily we're secretaries. We take reports. The emergency responses are limited here, but everything has to be documented, so you do that. So our officers were in here all the time, so now we're going back, and we're now going back to another dictation system. And that's an app, it'll be on our phone that I can record, and it'll send it to them, and they'll type it up for us. So hopefully our reports will get better and faster, as far as that type of stuff goes...
Problems - Policies-Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: drones] Policy's written, we just haven't made the purchase yet. In fact, two of us are going to [City] on Sunday to the training to get our pilot's license. Because we're the government, so you have to go through extra hoops [laughter]. Yeah, I could buy one on my own and fly it over my house today. But because I'm the government, I have to get a license and all kinds of other approval...
Problems - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I started supporting more of the in-car computers as those systems started getting more robust and they could do more things. And so you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								start to see there's more of a support need but then there's still the work flow tieback. So as you talked about, sometimes new stuff gets introduced and the sales guys or the tech guys may say this but it doesn't transfer the work flow...
Problems - Policies- Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...We've had a big challenge lately with the increase in surveillance systems that private businesses have and which formats or what types of files do we want to bring in to our evidential storage system, and which files and formats we're saying, "We can't really say these are secure." I can't testify that the video's authentic because I didn't take it anyway. So do we treat it the same as a witness statement? Because whoever owns the system is going to have to come testify. So what's our procedure for making copies of that to get to discovery?...
Problems - Policies- Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...the frontier and the work always has to keep going as new things are always popping up, such as you've got a box of thumb drives that we're issuing to everyone because we realize people started using their own private thumb drives. When they go to the gas station, the guys say, "Well, I've got this video I can give you." Well, how do you transfer that stuff?
Problems - Policies- Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Certainly, there's a public expectation now that, "Well, where's the video? Where's the pictures?" That's so ubiquitous in this world that they expect to see it. And then it's going to get to the point of if your agency doesn't have that, you're now not up with standards. And certainly, there's an expense and a cost to all that... And the data storage, cloud-based, and then how do you get that file to the defense for discovery purposes. Sometimes we don't get to have the final say. Most often, we don't get to have the final say. It's going to come back and the attorneys and the courts that are going to make us change our practices, whether it's in evidence storage...
Problems - Policies- Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...We've gotten state-wide a new electronic discovery process. Just adds that much more time to our records folks to do what they used to do. And, okay, now stop and now go into another system and make sure everything gets transferred over from our system and uploaded. More

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								stuff keeps getting added in. I'd like to look at it holistically and say, as a system, we're saving time and there's efficiencies. You, as an individual person in this position, it may not help you.
Problems - Policies- Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: electronic discovery] ...the person in records was literally printing it out, rescanning it, and attaching them as a PDF. A said, "No, no, no, I meant just print it to PDF and attach-- it's all electronic. You don't have to physically use paper for anything." Then there's a whole discussion on, do you still keep paper files?
Problems - Policies- Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...finally, the department bought smartphones. Of course, it costs a little more. The cost of the device. The cost of the service. That has to get absorbed into the budget. Then I start hearing from people who are upset going "Well, they give me a gun and all this other stuff. We have to do all this training and now I get this handheld computer and I'm just expected to know how all the parts work." Some of it was in jest, some of it was legitimate from people who weren't that tech savvy.
Problems - Policies- Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...The other day when I picked up a car, I knew I wanted to display my clock and my miles per gallon and where's my temperature thing going to go, and then the display for the audio and the climate stuff, and how can I configure that myself when I back up. Do I want the little lines to turn when I turn the wheel? ... And I didn't realize all of those were in there until I just had a little more time in the car. So if a patrol guy jumps in a car, are we telling them all these things are there? Are they just discovering it for themselves? Should we, as an agency, take responsibility in saying, "Here's the things that should be turned on"? You can't turn off your backup sensors because we don't want you backing into poles. You can turn off the lines turning left and right when you're backing up... More things I don't think anyone was aware of is there when we get these cars.
Problems - Policies- Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...It was a challenge when the MHz stuff first came out because, on the VHF world, that air-to-ground communication was pretty clear and they could just dial in whatever frequency they wanted. With the 800 stuff coming out, for a while the standards didn't allow a direct air-to-ground

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								channel. They're worried about, on a repeated system, the helicopters getting up too high, lighting up too many repeaters, and tying up resources...
Problems - Policies- Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...So for a while, we sort of lost communication if the helicopter was up in the air and that created some frustrations as a new technology came out and people realized, you get up in the air, kind of like, "Why are you not supposed to use your cellphone on airplanes," because you'll see so many towers. Not that that's going to bring down the airplane. We would hope that airplanes are made better than that. But there's other reasons and they don't always get explained properly as to why they make these rules that say "No." The helicopters there and flying around regularly...
Problems - Policies- Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...Within our county, we were split. East end of the county was on one radio system, west end was on another radio system. At the sheriff's office, we carried a pack set that had the east end system because, obviously, we drive through their town, and if we needed help, they had to come out of their town to help. Just staffing level being what they were. We still have that today. It's going to be mitigated in one part of our county where they're still on different radio technology than we were. So the cars assigned over there get those radios in the cars...
Problems - Policies- Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...Imagine the other day, then people start to complain, now I can't hear everybody that is on my scan list. And I am trying to explain how a current radio system works where you are affiliated to one tower. And so we don't have that many resources on each of our towers that we can designate certain talk groups to always transmit. So you have to be affiliated in our county to that tower for that talk group channel to transmit. So you might not hear your secondary talk group even though it's on your scan list if nobody else is affiliated to that tower has that on...
Problems - Policies- Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I know a lot of other areas, they have got enough repeaters within their sites, the certain talk groups they designated are always turned on. So if it was on your scan list, you'd always hear it. But that was a big change early on when people were complaining they didn't hear traffic, they'd call each other. So the result of that it goes to a little more talking on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								your main talk group that everyone is listening to, to tell them to go to their secondary talk group, and that's just the only way to get around it.
Problems - Policies- Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...Now that we're on this shared state system, we don't know how many units the Department of Transportation has that may be using the same tower I have. We're no longer an island, where it's just the people in our little county and our responders. Anybody could be driving through here and tying up those resources...
Problems - Policies- Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: building traffic stops on MDTs] ...So that was a process of working through. I'll say it was a little letting go of control from the dispatchers. They disagreed with a lot of this. I think, as a field user, we said, "We don't care. This isn't your decision. We love you guys. We appreciate what you do. The person most responsible for my safety is me. And so if I need to build it on the computer, don't try and give me a policy that says you shall not. It's not going to work. Highly discourage. Make it as strong a language as you want. It's going to happen."
Problems - Policies- Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Do we expect the frontline guys to pay for that electricity out of their own household budgets? Because you're going to take it home and charge it? Because it's issued out? Do you have big bank chargers at the office and you say, "Okay. You get an extra five minutes each day just to get all you devices set-up and running and going." That's going to decrease the amount of time you're on the street. I think these are all considerations as they keep adding the stuff and I keep trying to tell my administration, "At some point, you will have to add more support staff." You can't keep adding more and more stuff... without adding someone dedicated to understand how it works and supporting the guys when they have questions about it. Or it's going to get thrown in the back of the car and forgotten and just told, "It's another project that didn't work," because the support wasn't there. And then that support level is going to have to maintain because we know there's going to be more stuff coming down that we're not aware of yet. And so someone's got to figure that out.
Problems - Policies-	LE	R	Field	46-55	21-30	Male	LE-R-019	...We've got lots of open positions. I'm having a hard time filling those

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Procedures			Responder					positions. Some of the towns that we contract with would like to have more positions, and the feeling is, "Well, we can't fill the positions we currently have open. So we can't really go and promise you, 'Yes, we're going to do more.'"
Problems - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Going to the airport and the guy at TSA's holding it up now. They see licenses from everywhere that they have to understand and even they're like, "Wow. These are kind of tough to read." So yeah, I don't know who came up with that idea. So that's, yeah, I guess, another frustrating part that sort of technology related on the printing and the style format. Again, they're trying to use more security in their driver licenses. The REAL ID Act necessitated that, so responding to the federal stuff...
Problems - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...If you don't have Bluetooth in your car, going back to technologies, the sheriff doesn't want us driving and talking on a cellphone. Public perception, it looks bad. Okay. Cars can pair up with only so many devices. So if it's a pool car, someone's got to go through and clear out that list and unpair everything so the next guy that uses it could pair his phone to the car.
Problems - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: Bluetooth in cars] And some people are going to get in but who's going to do it for me? If you come in and say, "I don't know how to do it." What are you going to say? You told me I can't hold it up to my ear. I don't know how to pair it to my car. I got a cheap old car and I don't do that in my own life. That's legitimate. As supervisors, you can roll your eyes and complain the guy's a fool, but that's a legitimate concern.
Problems - Policies-Procedures	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	Well, technology was great because we had a tracking device that the bank teller had given the suspect. So we're trying to track through that but here's your problem, is you have the Feds that are doing their Safe Street program for the bank robberies, they have the tracking device. We also have a tracking device here or a tracking system here, [County] has one, I don't know if [City] does or not, but all of them are looking at their systems. They're then all calling up to our dispatch, so our dispatchers who are already handling two channels are now handling three different people calling into them to give them information instead of that source

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								coming straight to the officers on patrol. So if they could just air up with us and then give us the information straight, that would be great...
Problems - Policies-Procedures	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: tracking device / suspect] ...And then there's the relay to the dispatch and then our dispatch has to relay to us while they're trying to maintain the channels and then also provide the information that we're giving to them to other people. So then they have to run a third channel, MetroNet, so they're relaying out all of our information to the rest of the metro area...
Problems - Policies-Procedures	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: tracking device / suspect] ...So our channels are encrypted so no one can listen to our channels. But they take it to Metro and now they're telling all the information, so now everybody else is-- if you're scanning the Metro channels you're hearing that we're tracking someone. So if the suspect is listening to that, they now know to get rid of the pack, which they did. Okay? So if we can-- I don't know how it can happen because you have to share encryption across everybody. So I don't know if it's a monopoly then if everybody has to have the same system or same-- plus, then, if the encryption code gets out, then now you have to deal with all of those issues. But if there's a way...
Problems - Policies-Procedures	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...we won't just work in our agency, we work in other agencies. So now when we go over there, we kind of have to buddy up with another agency member... We then come over here and okay, now we need to get somebody to that CSP officer so that we can do the buddy system again unless we can get to a toggle station that's active. But the problem with that toggle station is we don't have enough dispatchers to cover that additional jurisdiction station.
Problems - Policies-Procedures	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: 10 codes] Just 10-4 [laughter]. No, we really don't. We use a specific one for when an officer is in danger, or captive, but otherwise, no, it's plain speak. We use phonetic alphabets but it's a police alphabet versus military alphabet. So that's a little confusing... half of them use military, half use police. Half use 10 codes, half don't use 10 codes... and they all don't use the same 10 codes...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Policies- Procedures	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...military has their own set of 10 codes. So it varies from branch to branch, it varies from agency to agency. So, yeah, if we went to a place like [City], I believe they use 10 codes, we would have no idea what they were saying. Even if we did just toggle over to their channel, we wouldn't have any idea what's going on. Whereas ours is plain speak, but maybe it does take a little bit longer to get things out...
Problems - Policies- Procedures	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...So right now, we have, I want to say four main channels that we use. So our first one is the main, "Tell us what we're doing". The second one is we do clearances, so it's like administrative work, so like, "I need you to clear this person," or, "I need you to do this for me, I need you to do that." Third channel, it's for animal control so that they can operate on a channel, not ours... And then the fourth one is car to car, so we can go through and just talk plain speak to each other. But our dispatchers should only monitor one, two, and three of those, but they monitor four, which is fine because then they pick up on what we're talking about. But it's hard because we're shorthanded on dispatch too, so then we're trying to do the communication with that, so
Problems - Policies- Procedures	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: user testing] Yes, do it for a while before you jump in and fully implement it. I think some of the agencies, ours included, they find something and they think it's fantastic, so they buy it for every one of the cars. Sometimes, they say, "Oh, we're just going to start it with a couple of cars," but they don't give a long enough test period.
Problems - Policies- Procedures	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: vehicle internet connection loss] So getting dispatched somewhere, it was basically-- I had a pen-- one of the other officers kind of rigged this system up with rubber bands across-- I think it was on his steering wheel actually, with a notepad so he could just jot stuff down in front of him. I just had mine in my lap, so when they dispatch me to something, I had to take a second and pull over or whatever, write down the address, and kind of a basic description, names, whatever. So it took me a little bit longer, but it wasn't that inconvenient...
Problems - Policies- Procedures	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: vehicle internet connection loss] ...On a Code 3 run or something like that, it'd be kind of-- because you're higher stress, you're driving

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								faster, you have lights and sirens on, so that makes it more intense. I don't have the time to pull over and write that down, so you just have to function at a higher level, I guess, than you're normally used to.
Problems - Policies- Procedures	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	And if we're going to teach a bunch of people here to use drones, it's going to be a lot of overtime to get them up to that pilot level for a commercial pilot.
Problems - Policies- Procedures	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	When they signed up with this new Xerox machine-- because the city is trying to save money, they don't want us to print willy-nilly in color. When I go to print, I'd have to choose. It automatically defaulted to black and white.
Problems - Policies- Procedures	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3]...The vendors have been in this space for decades and so it's more or less patchwork and iteration after iteration rather than a full platform redo. And there's, I think, a really big gap right now in public-safety technology of being sort of vendor-locked with those big giants and not being able to explore some of the newer things that are out there.
Problems - Policies- Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	So when you-- we have policies in place-- and it's still-- they change policies all the time because they rushed the cameras out really fast. So there was a lot of kinks in it. But you turn it on when you make contact with somebody.
Problems - Policies- Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	" So they'll go, "Hey, Sarge, we just arrested this guy, this is a charge. We're going to go to the hospital with him because he has an altered mental status. But he has a warrant for his arrest." "Oh, yeah, no problem," because they need permission to go out there and do that, because now I have two cops going to be at the hospital with a prisoner, who was high on drugs, but he has a warrant for his arrest. For me, to book him at the county jail, those drugs have to be out of his system. So what do I do? I have to sit out there until those drugs come out. That could be up to 24 hours.
Problems - Policies- Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	It can be really chaotic in here because we bring prisoners in here. I mean they're screaming, they're hollering, they're yelling, "Eff the police,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you stopped we because I'm black." They're throwing up in here. I mean it sometimes it can get-- especially if we get, let's say we get a big robbery, and it's a crew of four or five. Similar to the [bar?] incident when they had a bunch of people in the [bar?] [inaudible] I grabbed all eight suspects. They have to come in here. They all have to be separated. Sometimes we just don't have the room in here to separate them. Because if I put them together, they're all going to talk, right, so you have to separate them, everybody. "Oh, so you're a juvenile. You have to be separated from the adult."
Problems - Policies- Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] I think our biggest thing is because we hire outside [City], like, hypothetically, [inaudible] recruit from, [come to train officer for the recruit?], I'll get that recruit from [City]. Has never been to [City], never been on the bus, never been on a cable car, seen the box when his mom was making Rice-A-Roni one day, and that's it. And all of a sudden now, he's a cop in [City].
Problems - Policies- Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	So now the advocates are telling us that, "Well, you should be CIT trained, crisis intervention training," which we are. So, basically, I gotta talk cuckoo to this guy who's already cuckoo. But there's no cop that wants to get hurt. So we've already been doing this. It's just that right now, because the videos and what's been going on nationwide about these shootings, we had no reason to shoot them
Problems - Policies- Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	You can walk down the street butt-naked in [City] and nothing would happen to you here. You got to [County], and you'd be arrested. However, if you go butt-naked and you sit down on a bench, and you don't put a piece of paper down to cover your stuff, I'm supposed to cite that person [laughter].
Problems - Policies- Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Yeah, yeah. "Here's a contract in your blood. Here's your blood," just you know. But and then our cars. The biggest thing is our cars. We have cars that have 160,000 miles on them and they're just barely getting through. They keep on putting Band-Aids on them. It's not the department's issue; it's a City Hall issue. You ask for five cars, and they say, "Okay, well, we'll give you two." And then what happens we go through so many chiefs,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that when the chief [inaudible] by the time he goes through all the paperwork and a new chief comes in, they have to start the whole thing all over again.
Problems - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	The cop is in the middle of a pursuit, and he's chasing somebody on foot. He's not going to take two seconds, because now he has to try to find that switch to go over. It would be a lot easier if the dispatcher just hits the button and it patches it through to the BART dispatcher, but that takes money, the technology is there, it just costs so much.
Problems - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Yeah, it's underground, but they actually put repeaters down there and so you can communicate down there, and it costs money.
Problems - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	We were never proactive. We're always reactive to different things and that's just the history of the police department. A smaller city is a little bit more proactive, because that's what they demand from their city council and things like that. A big city like this, we're just catching up. We're constantly catching up.
Problems - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] We are. I mean, the background. I have guys that come back from the Army, and they can't get into the police department here because the backgrounds. Because they've seen [their death?], "I've been to 18 shootings. I've shot 18 people." You think they want-- the police department doesn't want that guy here, but the city might hire him because other cities go "Jump!" and they go, "How high do you want me to jump?" They're already set.
Problems - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Dispatchers want to get the runs dispatched. There are the mandates with A priority, B priorities, and then the C priorities in time frames that don't necessarily equate with quality of service, which is a newer concept. It used to be clear the board at all costs and keep moving. And gradually, in this kinder and gentler world where we pretend to live in, the runs aren't as easily dealt with. The majority of the runs now were complex in nature, not that they're different, but they just require more, either documentation, more follow-up. Your standard domestic violence call used to be family fight. And then it was, "Okay, stop it. Go away." But

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								as time has come on, there are certain things now you must do. That call, which would've been 5 or 10 minutes dealing with, now it can take hour, an hour and a half depending on notifications and whatnot.
Problems - Policies- Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Yes. They were issued with a stern warning that if anyone were to use them for non-police work, there would be hell to pay. So everyone took the receipt of their phone and threw it in their bag. I'm not going to carry two phones.
Problems - Policies- Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	"--it's a problem. If you are using the phone to film your partner, problem. If you do anything incredibly stupid with the phone and then another incident occurs where I'm going to want your phone and all that stuff is there, don't be surprised when all of a sudden, you're in deep shit over how you used the phone." As I told people when we put the license plate recognition cameras on the cars and they had GPS tagging for the photos, everyone thought I was following their cars or I was tracking their cars. They were cutting my CAT 5 cables for fear that these things would work, and that they would be caught doing something they weren't supposed to be doing, which for the most was going outside of their sector or outside of their district, not outside the city, just crossing a street into another district. Some would say would be a violation of rules and procedure. So they were very reluctant to allow a device in the car that would allow me to track that. The new police radios have this antenna and it says GPS on it [laughter]. Well, so now, people are taking this antenna and going back to their old antenna that wasn't designed for this radio because they think we now know where they are.
Problems - Policies- Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Genius. Most of the big agencies got away for that thing about 10 years ago. Somehow, they saved them all for us. So you have to have a fob. You can get a day off for losing the fob. You can get threatened with a day off. You might get a day off held in a band if you lose the fob. Back to trust.
Problems - Policies- Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Yeah. Yeah. And then be able to access-- and I don't know where this comes back into play, but I would probably go with a bigger phone and change the policy. Use it all you want. I'm paying for it anyway. Use it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Use the shit out of it.
Problems - Policies-Procedures	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	They try to get the best stuff and everything is-- again, when you do the technology upgrade, you have to start and then you have to finish. But you can start, but you still have half of the city that is on the old stuff, because it's what? It's budgetary. It's money. Everything--
Problems - Policies-Procedures	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	Yeah. Everything revolves around finance for-- we have conversations with the vendors. It's always, "What's it going to cost? What's it going to cost us? What are we going to get for this-- the savings or is it going to pay back dividends for our officers out in the field where they have less time spending in the station and more time out in the field?"
Problems - Policies-Procedures	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	I did a test run for six months on my own-- I was the only who had it, me and my buddies, the programmers. It worked. And then, people were like, "Oh, my God. I've never seen this before." And I told them, "I'm beta-testing this." Even our old chief said, "You're not supposed to do that," and I go, "Well, where does it say in our department general orders that I can't get forms digitally." It doesn't say you can't give someone a form digitally. It just says, "You shall give them a form." I had a business meeting with the department. I sold it to the old chief, but with any government agency, there's a lot of red tape. So they got aced. They got canceled. My programmers and me don't talk anymore because there was a guaranteed amount of money from the department. I never got it, and basically got a "No, thank you. We're not interested," from our technology department. So it's kind of a touchy subject for me.
Problems - Policies-Procedures	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	Well, just if you look at that number, you have to put that together with, between 2007 and 2011, 2012 - probably that six- or seven-year period of time when there was a huge downturn in the economy - in [State], in particular, nobody was hiring anybody because shutting down fire houses-- yeah. A lot of fire houses that were shut down during that period of time - not in [City], but across the [Location] - have not opened up again because of the economic downturn that happened. Fire departments didn't hire, and so they ran short firefighters and they used overtime to fill the gap. And then all of a sudden, we're hiring a third of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								our department in the last five years. And so we are probably the norm of what's happening in [State] and probably across this country. So you take those 400 people that have been hired in the last five years, I would venture to say that more than half of them have not been first in at a working fire. So they don't have that experience, right? So the first time they burst in at that working fire, they might do some things that-- and you can try and train them all you can, but--
Problems - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...they go down for maintenance if the car goes down and we get a pull car that PDT doesn't necessarily work in that car because it's different mounts and since it's just a pull vehicle, they're not going to put all the newest latest and greatest things that are going to work in it. It's just a car to use while yours is being repaired.
Problems - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	Q: So it sounds like you've got to call your dispatch. Your dispatch has to call state dispatch. State dispatch has to contact their folks?... So it sounds like that's challenging. SME S3: It can be if you need information quickly.
Problems - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...when you're going by the fact of State Troopers calling for assist, that's all that will come through. It won't say, does he need an-- it should be more clear. Sometimes, they'll put out an officer needs assistance, and they'll make it like almost like an emergency, where the guy just needed a transport.
Problems - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	... We recently got a lot of our computers updated, but prior to that, buggy or broken [laughter]. I think the computers are probably the most dated, but they're probably the most expensive to fix as well.
Problems - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	The vigilance system, I mean, the city has it, but there's limited access to it, and they wanted to give it to certain districts, but they haven't done that yet, and that to me would be fantastic to have, like if a private company has a hit, it should automatically somehow get transferred to dispatch, like say, "Hey, there's a stolen car here," not 10 hours later when somebody at headquarters runs it and finds out where it's at and then sends it to us, and then by the time we send a car there, it might not be

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there.
Problems - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...Last week, we had a robbery pattern where three guys were targeting Hispanic women, and they were using the same stolen vehicle, and we had to choose to get that plate run to find out if there's been a hit on it in the area. And it probably took 45 minutes before we were able to convince them to do it...
Problems - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...I think that's the most cumbersome thing in our job is where technology and where laws and privacy intersect.
Problems - Policies-Procedures	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	Q: do they get the same phone every day? Same car every day? SME: No. We used to and that was nice. We no longer do that.
Problems - Policies-Procedures	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...It'd be nice if we would be able to buy our own radios so we wouldn't have to turn them in. There's much smaller ones. So if we didn't have to, or even if we were able to buy one from the department and just keep it as ours, that would be nice. Because sometimes we run out of radios. Like at special events, it's one radio for a group of people.
Problems - Policies-Procedures	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: cell phones] I don't think they've made a whole lot of difference. I mean, they have HunchLab on them so that makes it easier for the officers. If we could get that on the PDT, they wouldn't need one more thing to take out. ShotSpotter is on the PDT. So I think it would depend if you had a PDT in your car or not. Because if you have the cell phone, event numbers, stuff shows up on there.
Problems - Policies-Procedures	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: cause of communication problems] Some people don't want you to give out information, let's say if they had, about an offender because they would like to make that arrest or they think somebody else is going to steal that arrest from them. Sometimes detectives won't give out offender information because they want somebody in a unit that they know to take that arrest. So that's part of it. "I want to hold that information for myself because I want the credit for it. I want the pat on the back."
Problems - Policies-Procedures	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	It's pretty consistent with people who come in with arrests on a regular basis. 7 has a newer station. They have computers. In my office, we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								would like to get one more computer. That would be nice. We have four people in the office, we have three computers... So sort of sometimes it's just we need more computers... And upgrading them.
Problems - Policies- Procedures	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	Well, at the start of the day, you've got your PDT. You're logging into your PDT And then you're logging into your full band system. This is the micro for the co-band. And then you've got your thing here with another username and password. And you got your body camera here. So you've got all this stuff, and I think that's a thing too with police is that, you're carrying all this gear, and it's like every system has its own username, every system has its own password, every system-- well I got to take a number to get this fixed but yet I got to call these people to get this fixed, and I got to call this person to get this fixed. I think that's a problem too.
Problems - Policies- Procedures	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	No. Usually, you get a-- yeah, but it's like there's the one officer that's always having a body camera problem. So I always say it's something wrong with his camera. He needs to get a new one. But who do you call to get this? Usually, you tell the sergeant, and the sergeant's got to figure out, "Well who am I calling to get this?" You got to tell somebody because if you're operating without it then you get caught by an inspector, "Well why don't you have your equipment on?" I think that's the biggest thing. I always bring it to the in-car camera guys, "My camera is broken today." They actually came and fixed it. And that's when I'll talk to them about it and say, "You know, what's up with this system?" And they say, "Well they're junky systems. They're not meant for the harsh punishment." And I say, "Well what about the body cameras?" And he's like, "Well, they're trying to get a vendor--" I don't know what he said, but he's trying to get them both incorporated as far as the-- and that would be beautiful. if I could walk around with one body camera to activate my COBAN System and this, I think that's pretty good. I think the less equipment, for me, the less stuff to lose and the less stuff to fall on, more or less. With the phone, I'll just leave this in the car and I'll never carry it with me.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Policies- Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	[RE: case reports] They are paper. They're on a computer. It's a rather archaic system that we have for storing our case reports. It's called CRIS. So we refer to it as the CRIS system. And it's not linked with other systems, so you have to-- if you want to get a copy of a case report, you have to log into another system to print it out. But we would at this system. No, we're not allowed. I know how to download it as a PDF, and I could easily throw it on my laptop and review it there, but we're not allowed to do that. So we just print out a paper copy, and then we just sit down and go through them, make our notes on them, and then just go meet people, and then just keep building our notes on the back of those reports.
Problems - Policies- Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	[RE: personal cell phone use] No issues, other than it gets banged up [laughter]. Yeah, it gets banged up. Other than that, I mean, the latest update when I was trying to-- I had my department email routed to my phone, and there was some kind of a disclaimer. And it said basically, "We're going to be able to access your phone." They figure, "If we're going to use the Internet, we're going to be able to access your entire contacts of your phone if we want." Which it was like, "Oh, man, that kind of sucks." My partner went off of it after that. He was like, "Man, I'm going to have to not get my email on my phone anymore." So now, he took, literally, 10 steps back because of that. Yeah.
Problems - Policies- Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	[RE: CAD] Well, we really didn't have one because we barely had cars that worked, and we barely had PDTs that worked. I would say, 70% of the time, we didn't have a PDT... Because we were trying to fight to get phones, to get [inaudible] on the phones because we heard that there's a free service. There's some organization that offers them for free, but your department has to authorize it. You can run plates and names through your phone, which I can't now. They gave me one of those now... Which is awesome, phenomenal. Because many times, we worked in a covert capacity. Many times, I was undercover in a regular Toyota Camry driving around being a police, and I need to run this guy's plate because I see some car pull up to a suspect we're watching and exchange

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								something. And I need to run that plate, and can't do it.
Problems - Policies- Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	...I mean, I'd be wearing Indian clothes, walking up and down [Street], looking for people. And I'd have a radio-- what I would do is, I would hook up to my Bluetooth. And we had found a Bluetooth adapter that works with the department radios, so I'd hide the radio in my pocket. And then, I'd just have a Bluetooth on, like anybody else. And I'm just walking around looking like anybody... So we did whatever we had to do, and that was just our own-- we were spending our own money and doing our own thing.
Problems - Policies- Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	Social media? I mean, yeah, that's a wealth of information, but the way of accessing it and the-- there's red tape around that. So how you can access it, what you can access, how you were privileged to get that information, and all that is up for discussion. So we were pretty much told that you kind of had to be careful how you do that. You can't befriend anybody. It's got to be publicly available, stuff like that.
Problems - Policies- Procedures	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Well I think I personally don't use it but our patrol guys have mobile data terminals in their vehicles. [Name] might be able to speak more to how they function or work because I don't really know to be honest but I think yeah in our county we've had some issues with inoperability which I don't know if you're going to touch on but it's something that you know we have our law enforcement partners here in the [County] are on board with our getting a grant when a national grant when we switched over from UHF to 700 and some of our fire departments chose not to make that switch and so I think when I hear from a radio communication standpoint a lot is the inoperability issue...
Problems - Policies- Procedures	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	And I think that's a fairly timely topic too just because I know the state legislature is currently reaching out to law enforcement agencies through the [state] Sheriff's Association and the Chief of Police Association on what should be a standard retention policy and what's reasonable and I think right now it's my impression that the state is asking for more and a lot of agencies are struggling with being able to comply with what they're asking...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Policies-Procedures	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] That's where we lose our applicants. It's not anything that they can really say they just drag their feet you know which don't get me wrong now that I work here I can understand sometimes because our detective division does our background checks so sometimes they get wrapped up in a case that sometimes they can't get to that background check as quick as they would like to but there's some people that just drag their feet they don't want to do it which is the sad part about it.
Problems - Policies-Procedures	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] We get a lot of applicants but we have to through that whole screening process we lose a lot as well because for the most part I mean our department we don't want to hire any of these bad cops you're going to see on the news in two or three years. We don't want to see them fighting with their subjects just because they talk bad about them and stuff like that acting like the ones that we're out there trying to prevail.
Problems - Policies-Procedures	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	... I'm over dispatch here I'm on the radio just the basic stuff they never fixed is ridiculous. They didn't have battery backups in the radios so if the power went out if they went to the we have a generator here we have a natural gas power generator and so it run a wing but whenever it would cchange over once a month to check the thing the radios would go out because everything's computer based.
Problems - Policies-Procedures	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	...We actually have a public safety committee that talks about stuff and we've had 2 meetings this year and we've talked about radios. That's all they talked about and part of the problem here at [County] is the fire association is not under the county. Did you know that?
Problems - Policies-Procedures	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	...We currently have a microwave link which is unreliable. It's not a licensed microwave link. It's one from [name]. Our tower is down by EMS now so if the wind gets to blowing and it shifts a little bit the microwave kind of gets a little fuzzy. I don't find a microwave link to be the most reliable source.
Problems - Policies-Procedures	LE	R	Supervising Field	36-45	21-30	Male	LE-R-048	Currently we don't back up. We backup our RMS system, our reporting system. We do not backup our CAD system. So if something were to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					happen in that room all the CAD data would be lost because we had no backup. That will change once we get the new system in place. I think changing from the 100 megabyte switches to the gigabyte switches is going to make a huge difference just in speed.
Problems - Policies-Procedures	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	When I worked at [County] they had that they didn't know they could track people's speed and stuff and the issue is when you start tracking that you incur a liability with that where if you don't monitor it and then somebody has an accident and you know it was issued then you know you can be held liable for it whereas if you never had the data to start with you're not incurring that liability.
Problems - Policies-Procedures	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	What I found with that is a lot of time the police start policing the police a lot more than they should. They start second guessing going well you're doing 75 here you really only should have done 70 or you're doing 85 here you know and people respond to a call you know and it depends on the reasonableness of the (00:38:57) supervisor and their administration of that. What they had up there is they had a guy in traffic you know they wrote this guy up, they went back three months, pulled all his data and said well we have this many things we're going to suspend you three days. Whereas a previous supervisor had told them if you have a serious injury accident get there, do what you got to do to get there, drive safe get there you know in the law there's no due regard. It doesn't say you can't do 15 over or 20 over it says due regard which is very you know very vague you know and so people started putting in their input and their opinions on stuff and it wasn't what the legal standard was it was their standard and actually had a lot of people leave from up there because they started getting you know micromanaged on their speeds and stuff and you got to constantly think about it.
Problems - Policies-Procedures	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	... you're limited on the technology you have and you also don't want to expose your personal and private life in a court system as far as your technology goes you know so I'm trying to do something nice and let somebody use my phone to call their mom and now you're subpoenaing my records on my personal cell and my email to my wife and text and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								stuff. You tell me how this is fair.
Problems - Policies-Procedures	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	We have the same bad guys that plaque our campus year after year after year breakdown in the court system that allows them to come back in such a short timeframe job security I guess for our officers for myself but where we could begin to automate and increase the speed with which we identify these individuals.
Problems - Policies-Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	Their portables reach whatever the ISD connect point out there. Before that up until very recently the officers carried a cell phone and everyone out there knew the number and they'd call the cell phone and say we need this and we need that and that's how they operated and out there they really were not happy when that cell phone went away and that was only a transition we've gone through in the last year or two but here in [City] we've always been on a dispatched radio system where people call in and there's no we're not slaves to the cell phone.
Problems - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	The only challenge we have is, you have different thought processes, visions, the way things should be carried out.
Problems - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	It can be. But there are some troopers that do monitor our radio so they'll relay that information to their chain of command. The only problem is, again, laying for the state police, they work out of [County] of [State] which is right next-door to us, and they cover our region. But their dispatcher is actually in [City], [State]. So they don't know what--they know what's going on, but they don't know what's going on. Because like we'll--they'll call out something there, these guys have no clue what the layout of [County] is, or how it's affecting us. So that can be, for them that's a major hurdle.
Problems - Policies-Procedures	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Well, as a patrol officer it's really not too bad, but when you get into the administration portion of it, you start to realize that fighting the criminals is only is the easy portion of your job. When you get into administration, fighting the politics and the bureaucracy that goes along with the administrative work is hard. I mean it's, sometimes you've got to pick the battles you want to fight, and other times you've got to let things go that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								really bother you when, I mean it's--sometimes I mean you're just speaking on deaf ears and you try to do the right things for the right reasons but I mean all in all over the span of my career it's been a good career. I mean I don't... I don't really have nothing I regret. I mean not too many people have been able to say they'll be able to retire at 47 years old and collect their full salary.
Problems - Policies- Procedures	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	[RE: problems with radio etiquette] I do believe it is. I do believe especially across jurisdictional lines. National incident management says that we all should be doing the plain talk version. Some agencies still are doing the 10 code so if I'm trying to communicate with somebody from a different agency; they're not necessarily inclined to what was going on here. Take for instance Katrina; we had a lot of sheriff's departments and police departments that came down especially from Tennessee man. Tennessee was sent in the sheriff's office and people come and work. They were working checkpoints, we gave them radios when they got here, but once again, their codes and our codes were different, so they really wasn't exactly sure. So you almost had to just tell them like me and you are talking face to face, key, look, we have a disturbance at this specific location, or they would just follow us there. So yes, I do believe that especially across American, we need to become more standardized in radio etiquette especially when a major incidence goes down that we can communicate between police and fire and ambulance and all be on the same page. And I think national incident management has done some of that for us but we still have a long way to go.
Problems - Policies- Procedures	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	So, you know, and then we were hiring people to take care of that that can really hold you hostage because they talk in a language that is foreign to me and I don't want to have programmers and people working -- we are law enforcement, so let those folks take care of that. Let us do -- I don't need to be hiring those people working in Sheriff's Office. I need that to be a service that we hire.
Problems - Policies-	LE	R	Supervising	46-55	21-30	Male	LE-R-058	No. No, we have done more with less than at any other time in history.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Procedures			Field Responder					[Inaudible] you know, the toughest economic down time in modern day history. We have done more with less. We've had things shoved upon us though we have had now in position since 1998 law enforcement. We've double bunked two pods out of the [inaudible] facility without hiring a soul. So --
Problems - Policies- Procedures	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	But now, we are very, very stretched, very stretched. Closing [town], we take all of the mentally ill that are up for evaluation to [inaudible] in [City] now, did that on our own.
Problems - Policies- Procedures	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yeah, incredible. And we do it all with, you know, we used our reserve unit, that are people that volunteer for our agency to work for free and to do the mental transports. We lost 21 reserves this year. I think a lot of it was -- some of it was attrition, some of it was, you know, I've done this long enough, I want to do something else and but I think some of it, you know, this isn't what I signed up for. You know, I am not Uber for, you know, the mentally ill, you know, and they are spending their volunteer time doing that instead of doing other things they could be doing. So, I think that was a big part of losing some of our reserves, but just can't continue to -- we were just talking in here already. We have not had any -- although our budget has increased but it is we picked up juvenile or because we picked up, you know, animal control or other things have been handed to us to do and it comes with that budget increase but as far as us getting law enforcement positions because we have more people, we need more policeman on the street, we haven't. We just went from five shifts to four shifts so we could put more officers on the street. These guys are working 12 hours a day now and we got to stop that.
Problems - Policies- Procedures	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	[RE: purchasing mobile fingerprint readers] I mean, their comment was -- nobody was ready to carry his ID you know and that was a bizarre comment as a law-abiding citizen, I am like I always have ID with me. You know, so -- yeah, yeah.
Problems - Policies- Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Oh, for sure. You know, like if I have to pass on something to the fire department, I generally call back to Dispatch. Dispatch then will call the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								county dispatch. County dispatch will then relay it on the Fire frequency over to the Fire department, so there is a huge delay.
Problems - Policies- Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	So, for instance, this interview room, since we interview witnesses, suspects, arrestees, it would be nice to have a video camera here... Nobody is going to pay for it.
Problems - Policies- Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	You got different people in different frequencies and that becomes an issue, especially - I shouldn't say especially but the way the county works is they have got one dispatcher on Fire frequency and one dispatcher on Police or, you know, two and two, whatever, but it's separated, so we find a lot of times doing both; [unintelligible] Fire gets information that isn't sent to the police and vice versa.
Problems - Policies- Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	You know, because the big push is to stay off - we really only have the main frequencies in all - I shouldn't say all, like we have our own frequency, [City] police have their own and the sheriff's department those are pretty much the three. But every fire department has the main, so everybody tries to stay off the main because you don't want to tie it up, so they go to their second channel, and not everybody has those. Fire does, to a degree. At least the frequencies are variable, available for them if they want to put them in their radios, but nobody else has them... Access and you know, the ability to transmit and receive, you know.
Problems - Policies- Procedures	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	They are either on a different frequency or they just dont want to - I dont know what the issue is, I dont know if [City] doesn't wanna cooperate with giving out their frequencies or allowing other agencies to program them because I haven't seen anybody yet that has had [City] frequencies programmed, so I dont know if it is a thing with [City], they dont wanna allow it, but I think it would make sense to - what I think would make the most sense is to have like one system that you can access everybody, or one system where everybody at least has like a monitored frequency for all agencies where I could get on there and call [City] if they would be monitoring that frequency.
Problems -	FF	S	Other	36-45	11-20	Male	PS-S-001	But this technology, with my old technology, of which-- I'll show you.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Public Safety Personnel					Because I used to have the ability-- when I was up on the roof working as a supervisor with my guys, I used to have the ability to just press my button and talk just like we are, and it would be crystal clear on the radio. Right? So the minute we went to a digital platform with this algorithm standard-- and I'm not an engineer... That's the other part of the family, okay? But MSA told us flat out. They go, "Yeah, your stuff isn't TDMA compliant. We'll work on a retrofit." So it's been like three or four years. I mean, there is no retrofit coming. There probably is, but it's so slow and slow-- I mean, they have a new product that works. It's like another generation forward. And so we're really stuck with a piece of technology, of which, this doesn't work anymore with that when it's on my face. Which stinks, right?
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	And I think at the local level, we have such a problem, right, with budgets, right, because we don't have a pot of gold. We have a very structured financial [inaudible]. I can't replace this every five years. This thing's got to last 15-plus years. Right? Otherwise, I'd break the bank. And so when that new technology comes on board, typically, we are really kind of the last piece in line to actually adopt it.
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	We can complicate everything to a point, but it doesn't make any sense to put more bells and whistles. I just want functionality.... They track it more of an approximation in their head, with their watch. And so I'm sure a lot of programming went into features like that, but it's almost like we don't need that.
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	The cab of a fire engine is loud... With all the stuff going on it's very difficult to hear and manage multiple radio channels. I have a unit where I got 600 channels available to me, right? Everything on that fleet map, I can rotate to. But the problem is I only have two ears....-- those are so problematic, of which, that technology-- that's kind of the add-on to the unit, like Motorola makes the head, and the microphones, and all that. But all that add-on stuff, they don't want any part of, right, because it requires servicing [laughter] because it's the end user and it's not a mil-spec unit. So those are tough, right, because they break all the time, the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								earpieces leak. I mean, they're absolutely terrible. And it's because they get worn on every single call.
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	"Yeah, we were listening on the phone, and we couldn't hear anything those guys were saying, and we knew they were inside the fire. Did you guys hear that?" And I'm like, "No, we couldn't." They're like, "That's shocking! Don't you guys have some sort of in-mask?" And I'm like, "Well, we used to." And so when the public brings that to our attention, you know it's an issue, right?
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	our manufacturer is still kind of somewhat behind on providing a solution. I'm being told, recently, that they developed 50% of the solution. Because there's an earpiece, and a microphone, and then there's a talkbox. They fixed the talkbox, which would be the lapel mic, but then the earpiece plugs in
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	[RE: technology getting in the way] I think when you have either a system lockup or-- right now, we use-- I think we use a Dell laptop. It's really rugged. I mean, it's touchscreen. It's great. I've had very few problems with it, but we use a modem/router with a Verizon card, I believe. And so that modem, on occasion, because of either firmware issues or some sort of power issue, or let's say a cable gets bumped or something like that, will go down. And when we lose that, we lose CAD because CAD is no longer analog. It's all digital through that connection, and then we also lose the ability to see maps and things like that. And so having an iPad or having your own phone tends to be kind of a backup to those systems, of which, some of my response times are right across the street. And so I don't have a lot of time to deal with a product failure.
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	And I can honestly say I don't know if that's good or bad. I think it's more on the bad side because we're losing a focus of this job is all skill-based, is all perishable skill. And the more time I'm behind a computer is the less I'm good at something that's hands-on.
Problems - Technology	FF	S	Other Public	36-45	11-20	Male	PS-S-001	[RE: lack of hands-on training] It's across the board. All of our guys-- I mean, we utilize our online trainings and stuff. And we would have to sit

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					in a classroom with a proctor doing the same thing. So it's more efficient, but it's more of a checkbox, like, "Okay, yeah. You went to the DMV. You submitted your paperwork. Check," versus-- yeah, we do some of the best training I've ever seen at this station and out back. And you would have just-- a few days ago, you would have been, I think, impressed with-- you walk out back, and you go, "Whoa."
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	[RE: lack of hands-on training] I mean, there's four or five cars are on their sides. We're doing auto extrication. I mean, the next day we're doing truck operations. So I get it that there's a bigger picture, but on occasion, technology gets in the way of that because I think we think, "Oh, it's just a mandate. Just push the memo through the electronic system. Guys will check the box, and we're covered."
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	[RE: training] ...some of the mandates are techno-based. So the county, through a grant through [City] Regional Public Safety Consortium, which is kind of our POST academy for the region, they have this mobile trailer. And I'm sure it cost a bunch of money, right? You got all of these mobile simulators in your car. And I kid you not, like 75% of people, when they go in there, they get car sick... Because it's not the real thing. But you put them in a race track? ... You're fine. And it's because the technology is so bad that it's not realistic. And for what it's worth, it's not-- when we see that on the agenda, we're like, "Okay. That's a check box." And that gets in the way to where you're like, "That's a waste of my day," because we don't have too many days that we can really either go train or do something that's very station-specific--
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	We had training the other day that our training officer, [[Name]?], set up on a building that was going to come down. We trained on July 4th. No, I'm sorry. On July 2nd and 3rd. Hey. And got us this old building they were going to bulldoze the next day. Some of the best training we've had all year long. But the minute you take that same group and you put them into that simulator, they're going. It's just a joke. And it's a joke because they already know how to drive well, and they do it almost every day...
Problems -	FF	S	Other	36-45	11-20	Male	PS-S-001	[RE: simulated training environment] I mean, it's terrible. That's one

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Public Safety Personnel					example, though, of technology, I think, where somebody meant really well, and they had a good idea, but they never really said, "Okay, is this realistic? Is it applicable?" And it's my take on that... But, again, that's what you're looking for, man, if we're building these things or building a technology that's going to be used for years-- and, I mean, we're stuck with that thing. It's not changing.
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	But with a \$100 smoke machine and a tower that I can lock down, and train with zero visibility, and then use a thermal imager in their hands, I can do the same thing. And so I couldn't afford VR, even if you discounted it to a point where you weren't making any money. And it's frustrating, right? Because everybody goes, "Oh, this is so awesome." [Jet fighter?] [inaudible]-- yeah, but the helmet on the Raptor is like 3 million bucks. And [laughter] that's why it works really well. The version you'd give me would be like the \$1,800 one, which there'd be no way I could, one, afford it, or number two, it wouldn't be robust enough that it'd be actually good. We train a lot with wax paper, and you're like, "What's that?" I go, "You put a firefighter with wax paper in their mask, you don't need a smoke machine, even, and then your instructors can see them do their work. And so sometimes that simple, that KIS, keep it simple method--
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	like heads-up displays and things like that, even. I think on some of the past devices and on some of the SCBAs, the ideas of the three lights coming on, where full, three-quarter... Somebody missed the ball so much, and we talk about it in training a lot, because our turn-back bell is set for a quarter, but our turn-back bell should be really at 50 because we're operating into a box that we're going in and we're assuming that I can get out in the same path.
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	But that bell, that warning system, is great, but it goes off at the wrong time because, really, I want it to go off when I've reached that no-return point versus I shouldn't have to be running out of the building for my life if for some reason something happened. And nor do we want our crews exposed in [inaudible]. I mentioned the other lab with modern day fuels

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								like [inaudible] fuels, the difference between the tools, we're seeing flashover when we get there these days. And so [crosstalk] are hotter. They're more dangerous.
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	[RE: public perception of drone use] Hey, it's an invasion of my-- there's a lot of concerns with that type of program, and I completely understand that. But for that fire, that gave it an overhead perspective. It was a large building fire, huge, of which, the operational section chief could look down, and he's like, "Good, we've got everything in place." But for us to get a helicopter up and do the same shot, it's not only thousands of dollars more per hour, we just don't have those resources. I mean, they're busy. They're doing other things. My buddy's a helicopter pilot for CHP, and they get to fly just a few hours a day because of the cost these days. It's just expensive. So, yeah, drone technology is pretty amazing.
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	[RE: responder biometrics] I think, again, cost, right? I mean, what's it going to do to turnout prices? Is it going to be [inaudible] SCBA? Does it need a Wi-Fi connection? All those things represent, to me, something that might go wrong.... So I pull out a folder, and I go to my rig. I get my clothes on, and I'm right at about the minute mark. Right? So for me to go, "Okay. I've got to put my armband on or I got to put--" it'd be hard, right?
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	...I've been on several legitimate CO-- cracked heater block, it's leaking natural gas. You got CO and you got natural gas in the air. And, fortunately, nobody died. So these alarms are actually really good. The problem is, 1 out of 1,000 are legitimate. 999 calls are fake because either they're not reading the-- oh, yeah, this unit is end-of-life or you need to replace the battery this way. So we go out on tons of CO alarms all the time. And we'll check. We'll grab two meters to be redundant. We'll go out and go, "Yep, there's no meter, [inaudible] zero, zero. You have a bad battery. You have bad unit; you need to fix it. Call your landlord, get them to fix it, whoever." 1 out of 1,000, it's legitimate. I mean, okay, we'll pinpoint this thing. And, typically, it's like some sort of open flame, or like a sooty flame, or something like that.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	So what we're looking at right now is because we're running so many of these currently because we're a couple of years after they implemented that law, and we're starting to see unit failures to the point where we're getting two or three of these false alarms a day. And for a department of our size, that doesn't sound like a big deal, but it's just three more calls that we're running all the time...
Problems - Technology	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	[RE: LMR] ...As you got towards the 2000s, you started to see some of the failures of the systems because they weren't maintained properly or they started to not spend money on them. And then you had this window in the early 2000s where broadband was becoming big and people were saying, "Well, you know what? You don't need these super costly Motorola systems to buy something that you can communicate with." So you had people that were trying to use bridge-gap solutions, or that's when you have the KENWOOD's or the Yaesu's or the other companies that come out-- Vertex Standard, that come out with these radios that are a lot cheaper and they say, "Oh, they work great." Well, you drop one of them and then it stops working. Well, why did it stop working? I was reading some articles on this and, oh, well, the speaker on the radio, the case was hardened, but the speaker wasn't, so when it fell, the speaker broke. So, well, okay. I can throw that anywhere I want and it works.
Problems - Technology	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	then you have the Motorolas of the world showing you how technology can work on my iPhone that can help me communicate over the radio. People think it's neat stuff. Well, then you get, again, the concern. Well, I don't have time to take this out of my pocket, open it up, unlock it, whatever, and communicate. I still need a radio. Well, what if the radio could go directly through-- what if the radio was a broadband radio? Now Motorola has the dual purpose. They have the broadband through a portable. I think the biggest thing we still see with broadband is the, I guess-- whatever. And since we haven't seen FirstNet in full swing-- but from a broadband perspective or Verizon, or AT&T, or any of them, you run into those traffic issues...
Problems -	LE	S	Not	Not	Not	Male	PS-S-002	We've been very slow to adopt a lot of that and part of that is [State]. So

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			specified	specified	specified			you go to Arizona and you run a driver's license, you get back the thumb print and you get back a photo of the person. [State], there is no connection to the photo database which is held by [State]-Photo in the Department of Justice versus Department of Motor Vehicles. They make us do it separately. So you would have to log into a completely different system. They treat it completely different. You have to have a case number in order to get in and get the photo. I mean, in my mind, I should be able to take my phone, do a QR scan of a driver's license and see the driver's license return right there.
Problems - Technology	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	So then I don't know. I don't know who's in charge now, but it doesn't sound like-- I mean, DMV's in a world of hurt in [State]. They've been trying to upgrade their systems for years. And they've had all sorts of issues. So their technology is so far behind the times.
Problems - Technology	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	[RE: communication substitution for radios] I think we would in a heartbeat. I mean, if there was something that was smaller or easier to work with. I mean, I know they've got Bluetooth microphones and things like that now. Well, I've heard it's gotten better. But the first generation Bluetooth stuff was terrible.
Problems - Technology	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	Our motor officers have Bluetooth and their mics were disconnecting all the time. The new stuff that they put in after a firmware update is improved significantly.
Problems - Technology	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	[RE: bluetooth mics/radios] It's still not 100%. But they use it. But they have the backup of being able to just grab the radio.
Problems - Technology	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	Yeah. I mean, obviously cords getting in the way.
Problems - Technology	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	When we've talked to Motorola about the use of theirs and why they make them that big, it's because they said, "The smaller we make them, the more complaints we get." You get guys that if their hands are too big, it covers the whole thing. They can't hit the button right on. It just feels flimsy. These have gone down in size. I mean, I remember my first one was probably like that.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	[RE: microphones] I feel like we've seen-- yeah. So these are a lot lighter. Weight-wise, yeah. I mean, if it could shrink down, but then you got to get into the function because you've got to be able to rotate, so it's-- and that's why, talking to Motorola, that's one of the difficult parts, is they say, "Well, they want it smaller because we carry so much stuff on our belt." But then they get it smaller, and then the guys were like, "Well, we can't get to the knob." Right. So it's a catch-22.
Problems - Technology	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	So one of my friends works for another agency. And they did a standard Dell Latitude laptops, and they just broke... They didn't hold up to the vibration in the car. They didn't hold up to the sun beating. So we've stuck with ruggedized, but I think this is going to be our last round of laptops.
Problems - Technology	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] It's our single biggest challenge is communications. [talking about the challenges from 23:11: the different radios and the technology of the fire versus the BOM and the forest service and aviation and law and those new changes with 700 megahertz versus VHF versus everybody's different pieces and the challenges there and it's because we've progressed to a new system that everybody can afford or wants to move to that so it creates challenges that hamper communication.]
Problems - Technology	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	... there's also some of the sheriff's office over here and then in addition to that we also have ECC here as well and it's convenient but also in terms of public safety critical infrastructure this is not perhaps the wisest setup because everything is one place and then I don't know if she spoke to you as well but across the street actually literally right across the parking lot is our backup center.
Problems - Technology	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	[RE: backup center across from the ECC] So that is not a great idea. Yeah it's really nice because like I said we have all these offices that are right here and also the main county offices which are at [address] are just across the street as well.
Problems - Technology	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	So if anybody from here ever needs to have a meeting over there with someone from the county or if the police department needs to go have a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								meeting with the county or whatnot the county offices are right there, the county board offices are there, that's all very convenient, the fire department offices are over there but you kind of have this there is an issue of geodiversity in the sense that all of our critical infrastructure is in one spot.
Problems - Technology	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	[RE: public safety offices in neighboring buildings] Which is not good and there's a perfect example I don't remember the year before my time but a couple of years ago there was a suspicious vehicle that they thought may have contained a bomb and that was parked right on the street between the backup center and the main center and if that had gone off [City] would not have a public safety answering point, it would not have a PSAP. So that is great and that's something that's been expressed to the county but one of the frustrations I feel like that we have here is we do feel like they don't the county does not prioritize public safety as much as you know maybe we should and so when we've expressed that we need a geodiverse separate building for public safety specifically for the PSAP they're like you know interested. They don't want to pay for it because it is expensive to set up and they just don't really see the value because they don't think the way that we have to think.
Problems - Technology	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Right. So we say we need two [separate public safety buildings] that makes sense to them but then we say we need something geodiverse and they're like why? Because they don't think that way so that can be frustrating sometimes.
Problems - Technology	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yeah we do do geo-training and we do make an effort to become familiar with the county but it's 26 square miles you know so it's very and especially when you're not out there everyday. We're here right so it can be challenging to know you know and I definitely overtime become familiar with our hotspots where we get most of our calls.
Problems - Technology	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	... One of the things that I know that a lot of centers struggle with and some invest more effort than others is common place names. The problem with an environment like [City] is we have a lot of development that goes on here especially in the last couple of decades and again I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								wasn't here but this is to my understanding is that area and you can see it too just being here for I've been here since January you know just being here since January you can see there's even some places that have totally changed just in my time here. It's really great. It's a very vibrant community, there's a lot of change going on here, there's a lot of change going on in the [City] area in general. [State] is a constant state of construction right so you know it's there's a lot of changes that are going on and with that there's a lot of influx and up flux of businesses right? So businesses, apartments all that sort of stuff.
Problems - Technology	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Exactly. We have to have those built in [talking about WiFi]. It has to be it's something that we're looking into adding into our building code where when new builders build things in they need to have the radio redundancy built in. Our issue right now is we don't have anybody to go and check to make sure that they're maintaining that.
Problems - Technology	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	I do. I work afternoons and so that's by choice and I've been here long enough I can you know I kind of get the shift that I want. We do have trouble getting dispatchers and keeping dispatchers so sometimes you know we might have to cover an evening shift or we might have to cover a weekend shift or you know somebody might ask you to take a shift for them but generally yes we're doing the same shifts all the time and that usually means we're communicating with the same deputies out there because they also they rotate maybe a little bit more than we do but not a lot and so we know each other. Again this is small enough to that there aren't that many of us so we do know each other and we come in and we can talk and I know who I'm talking to over on the radio.
Problems - Technology	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Yeah we're not like [City] for example you know which is bigger town. They've got a bigger population and there's definitely more diversity up there. We don't really have much. I think in general folks are pretty basic here mostly farmers or people who are living on farms working someplace else. We've lost people in really the last five to ten years especially populations in these towns have really gone down and that's really been a problem certainly for dispatch for example we have trouble

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								getting people to work, to find dispatchers and so that is just we don't have folks who want to live here anymore and that is a problem.
Problems - Technology	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[RE: county-based communication effort] [S3] Well, I think they had to buy into the idea because, status quo. Like, "We're fine." ... Well, I think they thought they were fine [laughter]. And what they didn't realize is, there's just a lot you didn't know.
Problems - Technology	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	I would say some manning right now. Being short-shifted right now is causing, it causes a little problem with us, because sometimes you can't find, as I said, we can't find anybody to work that shift, and it's short, and we're already short
Problems - Technology	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	That's an animal of a different color. It's real hard because volunteerism across the country is going down, not just in rural areas, in majority of rural areas or volunteer fire departments...But long story short, there is the inevitability we're going to end up having to go to a paid or four different departments. It's not how, but when. It's just so, daytime hours is just so bad for us as far as fire coverage, so it's coming.
Problems - Technology	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Correct. [City] is real heavy on petrochemical, but there are a lot of people that live here but work out of the [County]. So we are still fortunate that some of the companies or individuals work for, they do let them leave for emergency situations
Problems - Technology	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Q: So what if anything do you think causes communication problems in your work? SME: [Laughing] Lack of communication [Laughing]. That's absolutely funny to say but that's it.
Problems - Technology	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Yeah. I find the lack of communication is the worst problem. Our section of communications is its own section, patrol is its own section. So I find a lack of communication between them.
Problems - Technology	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Which I just spoke to someone about that this morning. Sometimes it becomes a hindrance because we don't know where each other's... supposed to be pointed to but we're supposed be together sometimes.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: And moving on a little bit to what I think we are going to get into -- the storage and connecting NextGen and connecting FirstNet, that data -- I see a lot of diagrams and always first to raise my hand and point out because which we see a diagram with two arrows like this, then it is NextGen and FirstNet but there is a little box here in the middle called 911 that gets left out of those diagrams a lot of the times. So, you know, the person in the field is calling 911 and talking directly to the police officer, then that diagram is wrong because all this data that comes in NextGen, pictures, text, everything it's got to go through us to get back out. So, that's a little thing that -- about [Crosstalk]
Problems - Technology	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: The problem is when you have a cold and your pre-recorded announcement answers.
Problems - Technology	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: I think as far as location-wise, we are not as far along location-wise as many apps are.
Problems - Technology	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: Like what [Name] said, I can go to the app store now and get stuff that's better than what public safety has got and I think that's the biggest thing, how to speed that up but we move it to speed [inaudible] and everybody knows what that means.
Problems - Technology	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]...Okay, first of all we bought a phone switch that is next get ready. So, okay -- we are ready for NextGen. Oh, well -- you're going to have to upgrade your phone switch to really be ready to go in there because things have changed in the past year or so, things have changed. So, you have to do an upgrade your phone system to make it compatible to go on NextGen. Oh, okay. Okay, so, you know, the funding and all the stuff. And so okay, we are going to upgrade the phone switch, which we did. But then, our wall boards that tells us how many calls are waiting, that's what wall boards are, like foot work, way back, they quit working. Well, we found out that the computers that are driving the wall boards are not powerful enough to drive the wall boards with the upgrade.
Problems - Technology	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: It really doesn't matter who they are. They couldn't make it work. So, now I've got to go and tell my board that I've been telling them for a year

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and a half now, we are going on NextGen. Okay. So, it didn't work. So, let's regroup and everybody go back and look and see what the deal was and let's schedule the next time. Okay. It's scheduled now. Everything is ready to do. Everybody has got their stuff together. Me and [Name] are back on the phone. Guess how long we were on phone this time.
Problems - Technology	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: So, now what's the deal? Well, we need to do this. We need to do this. We need to make sure everybody is here. And we scheduled it the third time, almost, but we had to cancel it and schedule it later because AT&T was having to upgrade their stuff...
Problems - Technology	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: Which now means that [Everyone laughs] -- that we couldn't make it work, and then we couldn't make it work and now we've changed it so it may not work this time because it is different. So, now we have it scheduled --
Problems - Technology	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: So, it sounds like let me pat you on the back while I am stabbing you in the leg.
Problems - Technology	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S1]: Yeah, yeah. Well, and I do know that, I think it's Verizon that has also said they have come up and are going to offer super rates and better options for the public safety community too so the battle hadn't ended here.
Problems - Technology	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: Oh you see all the commercials -- it's really small if you know to [inaudible]they said, who would've have thought that you could do this which is FirstNet up to one side and down the other and it says Verizon did. So, I love AT&T to death. As soon as they settle the lawsuit, I will be right onboard with them and we will be the best buddies in world but it is just really hard to have a close relationship with we can't get on the [inaudible][0:47:27] or paying out big bucks for attorneys that are involved in the law unit. Okay, that's it.
Problems - Technology	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: I put it here. If the -- if the lawsuit is over the fact that I don't think you did what you were supposed to do years and years ago, would you have paid me what you were supposed to me. That's what the lawsuit is all about, but now you've got to contract with FirstNet and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you've promised me what, the world.
Problems - Technology	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: Yeah. And so, that really does tie us for emergencies. My fear, and I don't know whether it can be fixed. I've got 62-year-old women and men both in their -- how are they going to handle a text call from a 14-year-old girl with TBT and just all the abbreviations and all that. Yeah, I think it is going to create a lot of in a bad way -- actually I think it is going to put a toll and take a toll and run off a lot of people because they can't.
Problems - Technology	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: This might be a good place to throw in, and you can ask may be other agencies because we are in a really -- I don't want to say bad -- but we are trying to get the officers and the fire fighters to understand that a dispatcher can only do so many channels.
Problems - Technology	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: So, you've got 10 new radio channels but you've got one dispatcher. Are you expecting that one person to handle 10 channels? So, what is the limit? I mean, what is the cut-off in that -- right? Because there is no specific -- I can handle seven conversations at once but if you give me above seven, it gets iffy. But, some people can. And a lot cant. What is the -- and there is no defined number, you should be responsible for your primary channel and two side channels or three side channels.
Problems - Technology	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S1] ...That part has been done for months like August; we finished our part. Now the users on the other hand, they've had to deal with encryption, they've had to deal with this, they had to deal with multikey and they have been going through all this and we are sitting here, my grouse is I am sitting here paying maintenance on the new system and the old system and they've got the channels split because they can only have 10 on each until they transition. So, that's where we are trying to get to is to get them dialled in. Now, as far as it's going to be [inaudible], you know, I mean, they are going to have plenty of capacity because, you know, there are going to be [inaudible] that's not going to be a problem but they have never been encrypted before and, you know; it's going to be all new them, new sound and everything, that's what we are waiting on right now.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Not completely, no [talking about 911 going down]. We had a gas leak so we had to leave the building one time. [Indiscernible] really quick. No, and those are things [Name] and I talk about weekly.
Problems - Technology	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	We just bought those Broselow tape for years for babies. We still have one, but you have to replace them every so often and they're expensive. So Broselow tapes, you lay a kid out, and it not however long they are, and then it'll say they weight this and this is the color of the kid and here are the drug dosages for that weight, so it's a really quick thing for the [indiscernible]. So there's a new program called the PD-SLEEVE, because in a Broselow tape if something changes, and I just bought 10 of them, I got to buy 10 more because it's a prank call.
Problems - Technology	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So when you get multiple agencies together and they've got their way of doing it and you've got your way of doing it and nobody -- you just...I'm doing my thing and not realizing that the ever changing make affects everybody on that system. We had some of that in the beginning with this CAD, but we worked through, we figured it out. We will occasionally we'll have a cowboy that says 'well I talked to [unintelligible] they said it wouldn't affect anybody else, I don't know why they lied, I just changed all my stuff.'
Problems - Technology	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	That part of technology, we've had some issues. There may be a little bit even going on with this new radio system, we have egos. Depending on who is in that position, there's egos, there's politics, so we're able to get through all of that because of the relationships. I'm a big relationships guy. I mean if you have a relationship with somebody that they like you and they somewhat trust you, or do trust you, it's much easier to conduct business than 'oh crap, here comes that guy again.' So I'm really big on that, so I take time to meet with [City]PD leadership outside of here, same with the communications liaison for [City]PD, he and I talk all the time. If an issue come up, I shoot him an email, 'go ahead and check into this', because I'm not first blush and there's personalities in there. It could be a personality conflict. But I look at everything as so we do adjust culture within EMR which is how I've always done business. I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>don't headshot people or go yell at everybody when we have an issue. So I look at it as a system issue, is it a training issue? Is it a personnel issue? And I look through that. I end up at personnel last so by the time I get to the person I pretty much know the answers before I ask the questions and if it's a personnel issue I'll deal with the person. But a lot of the times you find out that 80% of things gone wrong, you find out it's a communication training issue. We taught it and it didn't stick, we taught it and it didn't hear right, we didn't teach it at all, or we taught it wrong, or we changed some things and missed that one, we didn't update them on the training. So you have to look at all that. You know they get upset sometimes, so if we don't get to that call in 10 minutes, we review that call; and it's either distance because they just couldn't make it in 10 minutes. Crewe Air, they didn't move right away when they got the call; they went the wrong route, or it's a dispatch error. Dispatch error even being that the CAD did or did not pull the correct truck because we have a recommend and it pulls by road miles the closest truck. So they might've pushed the button and the CAD told them the wrong truck, so it's still a dispatch error, but it's not the dispatcher.</p>
Problems - Technology	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	<p>Right. They don't go to the meetings, they don't go to the monthly stuff, they don't go, they don't -- not doing it, so they don't know because they have three jobs. [County] the [indiscernible] director.</p>
Problems - Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	<p>So we're still going to use pagers but it's going to be a more multimode system where we can do text messaging, email, voice, alpha paging, but all from one system. Where right now, we don't really have that capability. We can send pages, or we can send emails, or we can make phone calls, but we can't-- well, for what we're doing day-to-day with the city, we can't do that. We have some emergency management software that we can do to send messages out, but it's a little clunky. To get messy, you have to have some code reds. You have to have these launch codes they call them. It's kind of a pain. It's not good for quick-- what we're doing in dispatch and when we're trying to get ahold of somebody to give them information, ask them to take a shift.</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	Probably the biggest evil that we see in 911 are uninitialized cell phones. So the cell phones that don't have service anymore, but the FCC requires that they be able to call 911, which it makes sense for people that can't afford it, to have that ability. I know they hand them out at shelters and places, which is great. But when they fall into the wrong hands, they are really difficult for us because we don't have any way to track them. We get false 911 calls
Problems - Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	That's been a big problem for us. Another, it's not an evil, but it's a shortfall, is the location, the phase 2 wireless locations. Works pretty well now, but it's still not 100% and it's definitely not what we get from [inaudible]. We see more and more people are dumping landline phones, just using wireless devices. So if somebody's calling from their house, and for whatever reason can't speak, because whatever's happening or because they're-- illness, or whatever's happening, a kid, but they call from a landline phone, we get pretty reliable location information. It's not 100%, but it's like 99.5%. It's really, really reliable. From a phase 2, from a cellphone, if I were to call 911 right now, especially in here, under concrete and everything, you're probably going to get the tower location to start, which is somewhere within three or four miles of this place, potentially. And if you get coordinates, it's not going to say we're at-- whatever the address is here. It's going to get us in the vicinity. If they're calling from the apartment complex across the street, it's junk. If you're trying to-- we can't find you if you're--
Problems - Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	Trying to find people when they're inside a building, this doesn't work. Not only are you not going to get the address but you have no idea what room, or what apartment, or what suite they're in. And you don't know how high up they are.
Problems - Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	At the same time though, it's moving so rapidly that things become outdated. And so by the time they become outdated, now you're having to go in front of the city council and ask for a large capital improvement expenditure because what you just bought five years ago is now slow and antiquated and there's better technology out there. But by the time

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you get that produced and that purchased, then you're probably already two years in and something else is on the horizon. So, it's trying to keep up.
Problems - Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	...we're having an imaging policy drafted. And we wrote it. And it's going through the executive staff, it's going through the pitfalls and through city-legal, and going back and forth, because there's always the argument of the First Amendment right and you're not paying for my cell phone, so this is my data, this is my content. And from our standpoint, it's you are a taxpayer-funded employee, and you are on the clock, and you are being compensated. And you took that picture, regardless of whether it's on your personal cell phone, your spouse's personal, your child's cell phone, or the department's cell phone. That image, audio, whether it be still, video, audio, that image or that product is subject to open records. So it doesn't belong to you. It has to be archived because there are state laws about archiving information related to government. You know, what we do as a governmental agency and a governmental body. So that cannot belong to you. In fact, what makes it worse is if you refuse to relinquish it, then someone's going to write a subpoena for the whole family and say, "Give me your phone."
Problems - Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	So, interoperability is a big deal. Being able to travel outside the range of your radio system is a big deal. Especially now digital radio systems. It's not like the old days of, you can go as far as the antennae will reach. Once you're outside of the foot [inaudible] radio system, you're stuck.... from the emergency management side as a responder it could take off and blast off five ambulances to Dallas, because there's something going on up there. Once they get north of Temple, we don't have any radio contact. We're relying on cell phones which, pending on what the event is in [City], may or may not work.
Problems - Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	But if I drive to [City], once I don't have towers anymore, then it would just fail over to LTE and now this is basically a big push to talk but still let me maintain that contact back. And then in the same way, figure out some way to make it all interoperable. So when I get to [City], that we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have the ability that I can talk to [City] on this as well through that or on this or whatever the device is that we can interoperate, and be truly interoperable, and have about the same level of technology.
Problems - Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	And I contact their PI people and say, "Hey, we had this patient, here's his name and DOB." And they go, "Yeah, he's in the ICU. He's stable, blah blah blah, or he's in the morgue." But once that patient moves beyond that and they go to a cardiac rehab, or they go to another hospital where I don't have a relationship, we have really almost no way to get that information.
Problems - Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	[RE: patient tracking] We have some of that. The stuff that we control and the stuff that's local to us, but it's not automated. So I can call [City] and ask how this patient did or what their outcome is, and we do that with STEMIs and strokes and cardiac arrest, but it's not seamless. And if they have a question, it's just a clunky process.
Problems - Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	[RE: patient care record] It's very siloed. You'd think within the hospital networks, it wouldn't be. The hospitals that are all in the same chain, but it's siloed with them sometimes where they're using different patient tracking. And so, that interoperabilities, standardization, and being able to-- everybody, at least some of the information, that critical information, is available regardless of what system you're in, regardless of where you're at, and we can get to it, keep it secure, but get to it to take care of people.
Problems - Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	But still, there's gaps out there. So as we get into those gaps and I get away from where those systems are, I lose that. [City] is our best example because we don't have any interoperability with [City]. We have the national channels and all that, but I can't drive to [City] and talk to [City] Fire Department on my radio in a reliable way. All the cell phones would totally change the game for us from 911 and what's going on in the field.
Problems - Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	Ease of use and usability is a big deal and we're doing the same things over and over and over again, so we want those to be as efficient as they

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								can be. Sometimes the software needs to be tweaked, sometimes I hit this button and it's supposed to do X, and when it doesn't that creates more work for me and I've got to do-- and it's gets frustrating. Reliability and usability, radios work when they need to work, it's a lifeline. If I need help, I need to be able to get a hold of somebody and get me help. Big deal for technology. That's another one. Tracking individuals, we have some capability to do that. Well, the radio system has some capability to do that. We have not started to use that functionality, but being able to not just know where an ambulance is on the map, but being able to see where those medics are as they're [crosstalk] [inaudible] for safety, and even for response. If we've got responses going out where we have people on foot out walking around at a venue or walking down [Street], to be able to say, "Hey, there's a guy with a gun at the next corner." The PD has a gunpoint stop or, "Hey, there's a guy at cardiac arrest. We need-- I know you're walking," [crosstalk].
Problems - Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	We go sitting and have lunch somewhere, and there's cardiac arrest happening next door. And we may hear it if the radio's on. But like right now, none of our radios are on. So there could be a [inaudible] on the trail up there.
Problems - Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	[RE: EMS vs. Fire medics] here, our medics always want more, they want more. And it's hard because technology is only moving so fast in the clinical world, especially in the pre-hospital environment, so that's a challenge. And so what you all will find, or maybe find, or may be challenging for you when you come to your endpoint, is you may come out and say, "Oh wow, people like [City] [County] EMS want this? But [City] Fire Rescue wants nothing to do with any of that because that's just another thing that they're going to have to learn." And I'm picking on the fire department, but we do see it. We do see it. That is a common belief and common thing that people have seen. So that's the challenges. Whatever you come out with, it's not going to be one size fits all.
Problems -	EMS	R	Field	26-35	5 or less	Male	EMS-	So we were having an issue with our microphones. They weren't as clear,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder				R-002	so he actually got us better mics for our radios, and they were way clearer. And we also, for a while, we actually went to this Scott mask that had that clip-in mic that you could-- hands-free. We didn't like them because the Bluetooth was messed up, so we went away from them.
Problems - Technology	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	Trying to think. I think for a while we showed our MDCs because when they were updating them, I think sometimes they were having bugs. So we would drop our wireless connection and it was super frustrating because you're trying to go to a call and you're responding to a call and your laptop crashes. And you're like, "Whoa!"
Problems - Technology	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	[RE: personal cell phones ] One time our MDC building, I ran into a call that way because that was the only option I had. It was far away, not my-- so my first due territory I know like the back of my hand. You start getting out a little further and I know roads, but you get into the tiny, itty bitty roads and I actually-- one day we were driving and it failed on the screen, the computer did, and I just typed it in.
Problems - Technology	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	So it's actually attached to the buckle on there, and when I have my thing tight, I can't look at it right, so I have to keep one side a little loose. I thought that having both your hands-free was super beneficial because you know two hands are better than one [laughter].
Problems - Technology	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	So I try to minimize-- point my phone out so I don't want them to think I'm uninterested. So usually, what I'll do is if it's something dire, I'll set it down and I'm talking to somebody and I'm like, "Okay. That's it." And so I'd rather type it than talk it just because I don't want them to think that I'm... So it's pretty big because I want that person to feel like we are there for them.
Problems - Technology	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	...There are a couple of dead zones that we know about that our radios will not work in
Problems - Technology	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	[RE: hospital statuses website] ...it's a public website, so they have linked it on our computers, but sometimes it takes a while to load. And it changes. So it's better to have it ready to go on your phone so that if you're standing inside you could update and say, "Oh, actually they're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								open now," or, "Oh, they're closed." ... But if we're in a large building, we may switch to a talk around, just direct mode, so that we don't have to go through a repeater, because there are buildings that are dead and the Metro-- the [City] Metro is very deep so we have to use a relay. So we use those workarounds if we encounter dead space.
Problems - Technology	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	[RE: refurbished radios] So we have, essentially, brand-new ones. And they get dirty over time. We run 10,000 calls a year out of this station so stuff gets dirty, but that's more cosmetic.
Problems - Technology	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	I think on the fire side, I know that it's a bigger concern. The time from the 911 call to the time the call is dispatched, in a house fire, seconds count. So if it takes 90 seconds to query the number of questions about, "Oh, how many stories is the house?" It could mean we get delayed.
Problems - Technology	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	[RE: pre-alert, before call been put into CAD, an alert will be sent out to everyone] And then there's a pause while the CAD catches up. And then all of the tones go off... think a lot of the issue is just shortening the time it takes from the time a resident calls 911 to the time the call's dispatched. Both fire and the ambulance.
Problems - Technology	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	At the beginning, it was trying to route people through parks on trails. Which made it seem like they could get there faster than they really could. So they're fixing those problems.
Problems - Technology	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	I would say, location can never be specific enough. A lot of times, in this area, we have large buildings and so someone will say, "[Address]," but that building has three sides.
Problems - Technology	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	I think, first off, user experience. If somebody's unfamiliar with the radio system or how to communicate, it can delay it. Those dead zones that I mentioned earlier, the Metro, some cement apartment buildings that have large wings. If we're in the core of the building, we can't communicate out. They can't communicate to us.
Problems - Technology	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	I don't think so. I think we talked about all-- the big issues with our communications are the dead zones and kind of holes in our communications thing.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	We have mutual aid agreements. We all have very similar SOPs, whether it's fire and EMS, but once again, talking to some of these jurisdictions can be difficult. It's gotten much better. Years ago we could not talk to each other. Had different radio frequencies. We also used to have separate radios. So if you worked in a border station, like down in [City] or [City], you had separate portables to be able to grab when you want to call into their area, but now we're able to utilize our radios, and go to their channels.
Problems - Technology	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Yes. It gets to be a little bit more confusing when you go mutual aid. But we have taken a lot of steps in [County] to be able to communicate with other jurisdictions now. But we typically have to be within range of that particular jurisdiction as well. Like I wouldn't be able to talk to [County] if I'm all the way out in [County]. And I wouldn't be able to talk to Frederick County if I'm all the way down in [City] because... It has to do with the reception, yes.
Problems - Technology	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Yeah. It all goes kind of [cyclic?] where things get dated. It doesn't take long for technology to get dated. But as they're doing that they're always thinking of new stuff to be able to provide. In fact, we just went to a brand new computer-aided dispatch program and fire alerting system at the firehouse. And that was an extensive project that was done that took many, many-- probably well over a decade to develop.
Problems - Technology	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Has gotten in the way? Absolutely. Absolutely technology has gotten in the way on certain incidents and some of our operations... Obviously, when a lot of these mobile data computers have come about the coverage was not that great. The computers would turn off just going down the road. A lot of the communication from those computers to a cell tower would be horrific...
Problems - Technology	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...So it's kind of trial and error as we get something. It's better than what we had, but there's a lot of hindrances as well to it because the technology had not caught up to what we were operating under. And, but yeah, I know, I remember the days of mobile data computers going in and we could be going on the road. I'm looking at a dispatch on a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								computer, and all of a sudden, the computer just completely shuts off on me. Or I'm trying to respond on a call and the computer communications is too slow...
Problems - Technology	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Obviously, I think some technology can cause some problems. Technology advances can be an issue, maybe as not catching as fast as we want. Or maybe we're using a system that's one down from what's already happening because I'm sure you know as well as I do, technology is always moving, and a jurisdiction has to operate under here because they've already spent a lot of money on a particular ends, and it may not communicate with that technology because it's outdated...
Problems - Technology	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...But yes, so some of the technology can be more advanced than what we're able to operate within, and that can be definitely a hindrance. And that's certainly something that we were watching unfold with our old system, but now we've come in line. And it may be another 10 or 15 years before we get another system, and what technologies are going to come out that we won't be able to communicate with.
Problems - Technology	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Definitely one of my wish lists would be we operate with a portable radio and everybody does - firefighters, paramedics, EMTs. It would be nice to have some form of remote. Like what you see how we utilize a cord that can get damaged in fires, if someone just shuts it in a door, or whatever, it would be nice to have some form of Bluetooth capable radio system. It would be nice to have something if we're wearing our SCBA mask to be able to click a button and be able to talk on a radio versus having to fumble around with a portable radio. That's certainly something that I've always envisioned to be a really nice thing to have. Be able to listen to the radio while wearing an SCBA. A lot of times we're operating in a fire or whatever--
Problems - Technology	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Tethered like this, and it depends on where you have it. You might have it in your coat pocket. You might have it on a radio strap. These things tend to be, depending on how everybody holds them, may get dropped on the ground, may break, and so that was always like a wish list item

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								for me. It would be nice if we had something piped into our ears, be able to touch a button instead of having to fumble around with a radio. So that's kind of like a pie in the sky type ordeal [laughter].
Problems - Technology	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...When we back away, we would allow the police to do what they do, and then we would operate under a face-to-face [inaudible]... Rather than radio because we really can't operate that way. But what happens is, let's say, sometimes our communication center will tell us, "Hey, scene is not secure, based upon what we're hearing. Wait." Then we will stage at a certain location away from the incident, so that the police can come. Well, then the police has to call their dispatcher. Their dispatcher has to talk to our dispatcher, and then our dispatcher tells us that we can go in.
Problems - Technology	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Means of radio communication of we can talk from one person down to the other. There are slight hiccups every once in a while if you're in certain basements or buildings or large box stores, so if you go into a grocery store to the back towards the deli or far corner of a store, that you may lose means of communication. But we work around that with different policies or adapting. Or on the river, we may not have complete radio communication but we still have cellular communication should we need to make a phone call. So hopefully that answers, so I think communication is good. Depending what you need to accomplish, you go to the best means to communicate.
Problems - Technology	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...So if we have to respond mutual aid to an outside county or, for us, it could be another state is, how are we going to talk to them? Mostly, that would be done by radio communications. We have the ability to do radio plugs or communicate to a free channel, but that's above us in the sense of that's communications or dispatchers to assign us to a mutually acceptable channel that interface. Since we went to the 800 megahertz system, where it's a lot easier to do that. Easier for us, but if not every agency that we respond with has 800 megahertz, that could be a challenge...
Problems - Technology	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Or another example would be is if I want to listen to a neighboring county that's not too far away from us, if I want to listen to an incident

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								from my station on a portable radio, the frequency isn't strong enough to be able to hear that response and the distance would probably be less than 10, 15 minutes away. It's not very far, but if we were, I guess, maybe on the eastern shore or more of a visible line of sight, less mountains, less terrain, it may be easier.
Problems - Technology	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So it's not, it's just frustrating and then we-- I just don't listen to the call, what's going on. And it's just being, I guess, situational awareness. I'll even use the word just nosy. To just hear what firefighters are doing and the types of calls. We all try to see what other agencies are doing during their calls, from a tactical standpoint to evaluating it. Self-critique. If I was in their shoes, what would I do? So you try to listen what's going on to hear the calls, and sometimes you can't. And if they switch to another channel that we don't have in our radio bank, then you're done.
Problems - Technology	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	[RE: AVL] I would say I don't know enough about it to truly make-- I mean, every day I learn something new about it. It's definitely like any form of technology, the more you use it, the more you understand it, the more you can utilize it. As it is right now, it's a computer screen with a map on it that can do hundreds of different things. It takes the user to have to apply themselves to be able to use it.
Problems - Technology	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	[RE: technology getting in the way] I'm sure there has. In the way, in the sense of just where it fails or it takes a dump, in the sense of using the computer to follow directions to get to a location, and you hit a bump and the computer shuts down. So then you go back to a mapping system, which is just a hard... Paper, hard copies. So we always have redundancy in everything that we do.
Problems - Technology	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Technology getting in the way of if I utilize my phone and one of the applications, FireApp, to use that to get directions to a call, if the address isn't an updated address, or the mapping software, Google, or apps, or whatever browser you're using doesn't know it, it defaults to a generalized location. So I'll be honest when I say that, embarrassed as I may be, that I didn't realize it and that the app was smarter than me and took me way out of the way... Rerouted me to another location, and that I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								need to be smarter than the software to know that was in a complete different station's area, and that there was no reason for me to be there. So it failed me. It made me look bad, and I've learned from that.
Problems - Technology	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	... Sometimes radio, if it's a major incident, a major emergency, only one person can talk at a time. So if you're trying to get urgent messages out, technology will not allow you to do that because only one person can talk, and you can only talk for limited periods of time.
Problems - Technology	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	What causes communications? People not doing it. So people not communicating or vague in the delivery of their message. So I will say firegram because that's common terminology for us, but as a medic, ALS provider, on the firegram in the sense of going to someone's house - the incident location, firegram, however you wish to - is somebody may say, "Come around back," but not say, "Utilize the left side because that's where the sidewalk is." So they're very vague in their means of communicating. Again, we don't want to talk a lot on the radio because what we say on the radio, somewhat the whole county is listening and doesn't need to know that the gate's locked on the right, use the one on the left. So we just don't do a very good job of delivering basic messages.
Problems - Technology	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...I mean, I think we have a really good-- for [State], as far as the medic aspect of it, for me to be able to talk to any hospital at any time and deliver an EKG system. Some of the technologies in a sense of troubleshooting or shortfalls on, I think it's on our end, per se, if I'm trying to transmit an EKG that it could be a cloud in the sky that interrupts that, and I can't deliver that EKG to the hospital. So I wish it always worked every time I needed to send it-- but I don't know what that issue is as to if it's operator error on my part or-- bad signal...
Problems - Technology	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...I know we have issues with WiFi every once in a while. If I'm on the WiFi of the computer and then I drive to the hospital and now I'm inside the hospital writing my report and I'm on the hospital's WiFi and I go to leave, there is a space in between where I'm on neither network until I get away from the hospital. And I've had reports just get lost. They end

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								up in a cloud, so to speak, somewhere but it's that interface of trying to get stuff to connect...
Problems - Technology	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...We do have a talk around channel, which is like a chitchat channel that I can-- I'm going to be lazy and say that it's really hard to get to and you really have to double-check. It's not a quick fix and then I can deliver a message that I don't want the whole county to hear. So you have to switch to--Oscar. Yeah. O, Oscar. So it's all the way towards the end of the alphabet. If I'm always on Alpha or Bravo to go all the way to Oscar, confirm that I'm on seven's talk group. It would just be easier if a push button or something that would just give me that talk around just to be able to deliver that message a lot quicker...
Problems - Technology	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Maybe more hospitals or more-- so I use the example of communicating, maybe if they're able to do radio phone patches like they do with voice control or the language line, but being able to switch to whatever channel and that channel will give me someone that can translate via my radio because I depend on my own cellular device-- to deal with it. And I depend on that all the time because I can't depend on-- the radio has limitations. Doesn't do everything I need it to do.
Problems - Technology	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...But if you could take a smartphone and put it on a radio, it would be ideal. So I could have five to six dependable apps that I use on my radio, I can utilize it as a phone if I needed to or wanted to, as well as to a radio communication and delivering messages. So the radio does not make noise if there's a tornado coming. My own phone does [laughter]. I'm not required to have a cell phone. I'm not required to have it activated, but I do so because the two together-- make me successful.
Problems - Technology	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	We usually interact with them frequently and well, usually if we need to talk to other first responders, police officers, or whatever, usually it's face-to-face on the scene. We don't have radio communications with them. Our radio systems aren't connected to theirs. So if we need to relay information to them before they get there or something like that, then we have to do it through our communications. Our CAD systems are connected, though. So the CAD tablet in the front of the unit will

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have remarks for the call. And any remarks that [City]PD's dispatcher puts in there, we can see this because they're documented on the same call. So we can see any remarks that their dispatcher puts in, but we can't hear directly what they're saying on the radio... Most times, it's not really needed so I wouldn't say that that's a real big issue.
Problems - Technology	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	I mean, yeah. A lot of it has to do primarily with the patient care reporting software. A lot of it's just software configuration issue stuff. A lot of times, the information I'm looking to put in there, it's not available to put in or it can't be put in the way....
Problems - Technology	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...And a lot of the issues that I brought up-- I was actually one of the 5 to 10 years they were using when they were pilot testing the new tablets with the new version of the software. A lot of the issues that I reported, that I told them, "Hey, look. You need to add this in there or we need to do something about this." A lot of this they couldn't do because of the way the software is tied to NEMESIS, which is the national EMS reporting thing, and they said that NEMESIS didn't allow certain things in there to be put in the way we would like....
Problems - Technology	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...But a lot of that, I think, it still seems to be just general configuration issues that could be changed, but just hasn't been done very well. And how much of that configuration can be done by the department themselves and how much requires the software vendor to go and change the programming, I'm not sure either, but.
Problems - Technology	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Well, I guess, the one thing I can think off the top of my head is oftentimes, asthmatics, we are giving nebulized albuterol to. The [stuff?] that I realized albuterol is in there, but of course, any kind of breathing problem, the software requires you to document that you gave oxygen, but nebulizer is not in the oxygen administration allowance. So you can't say that gave an [inaudible] nebulizer. I always end up working around it by just putting blow-by or something else that's on the list, and then in the comments, I put the nebulizer and I just put no in my narrative. Hey, unable to document proper route. See comments. Yeah. So I can work around it but it's frustrating.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...The way that the current system's working, I'm not sure how far it goes back. But basically, because it maintains that large currently-used data set, that active data set of like three years. If we've transported somebody anytime in the last three years, it'll pull up at least. Now, with the new systems - we just transferred over the new system at the beginning of this year - I don't think they moved all that data over from the old system. So sometimes there's patients that I think-- that I'm pretty sure should have been in there that aren't. Sometimes they surprise me and say, "Oh yeah, I was transported, but it was a year and a half or two years ago. It was a while ago," and I'll try and it'll pull them up anyway. So either they were transported more recently than they thought, or maybe they did transfer some of that information over, I'm not sure. But right now, it's a little bit more of hit and miss...
Problems - Technology	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...I'm pretty on top of a lot of technology stuff anyway, but obviously better wireless coverage. I mean, our tablets do operate off of mobile networks when we're out of the firehouse. We connect to the department's Wi-Fi in the firehouse, but outside the firehouse, they are utilizing Verizon, or Sprint, or T-Mobile. And right now, I believe it's Verizon. But no matter what data provider you're using, especially if you're in the city, there's always dead spots. And we haven't had it-- it hasn't been an issue where we're out of a coverage area for long enough that it really makes a huge difference. But again, yeah, just better data coverage maybe, especially as technology advances...
Problems - Technology	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	The one up front has a hard-wired keyboard attached to it. The one in the back does not. It's one of the things that, again, during the pilot program, we said, "Hey, look. We really need a hard-wired keyboard. It's not easy to type these reports on this [software?] keyboard." The department said, "No. We're not doing that." From what I've heard, and also, I don't have any first-hand knowledge, but from what I've heard, their basic response was, "Hey, look. These people walk around all day texting on their cell phones, they can use an onscreen keyboard." You know, but.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Yeah. And that and some of us aren't that adept at using text messenger either [laughter]. So for me personally, I could probably do my report, at least the narrative portion of my report, probably in half the time with a hard-wired keyboard.
Problems - Technology	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	... They dispatch out the call. The crew acknowledges the call. They start on the call. And this tends to have a little bit of a lag behind it, and then you'll see drop in it. It just drops in on your screen, and it goes away. It doesn't disappear until you specifically erase it. But it's my understanding that-- two things I don't like about it is you can't click on it and map to it. Oh, yeah you can. Okay. I was wrong about that. You can't look at the details of the call. So a lot of times, the details are more important than what they're calling it. They might say shortness of breath and it might be-- the details are if it's a 28, female who just got into a fight with her boyfriend, that's a different call than an 87, female who has COPD. Those are two different kind of calls ...
Problems - Technology	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: Active 911] And then we use the Map, just the Google Maps. I use Google Maps and the Apple maps. And there are addresses that do not exist in there, in both.
Problems - Technology	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	... So and then the radios have gotten smaller and lighter throughout the time that I've been doing this. I mean, they used to be like-- you could them as a weapon if you had to [laughter]. And now they're as big as old cell phones. It's happened so slowly that-- I can't really think-- I hated the chirp-chirp thing because I'd like to know what other people are doing, and where they are, and that kind of thing. That was the biggest reason why I hated it. And I also thought it was just-- they only did it for financial reasons. I mean, it was cheap, so that's why they did it.
Problems - Technology	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	And then, in the urban systems I've worked in, you could talk to the police on the radio. You can talk to the fire department on the radio, and you have a radio in your ambulance, and each person has a radio. So you're constantly listening to different channels, where here, you're mostly listening to your own channel. You can talk to the police on this. Although, they're not as used to it, so when we come up, they're like,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								"Whoa." And we're not as used to it. So it takes a little longer to find it. These radios have improved, technology-wise, since I've started here as far as they've gone from I believe it was analog, although, I'm not sure, but they've gone to digital. And during the transitional phase, it was kind of bad. It sounded really digital, like you'd hear a weird thing, or it didn't work as well in [City]. It didn't work as well in places with more canyons, with higher mountains, with more obstacles, physical obstacles. But they've added enough I guess repeaters and antennas, stuff like that. So it works a lot better than it used to work. And same in [City]. It used to be fine, and then they kind of went for this transition, and there were lots of problems. It wouldn't work in elevators, wouldn't work in garages, wouldn't work in concrete buildings that you're in, parking garages. Wouldn't work in certain parts of the city. You could park 10 feet away and it would work, but right here, it was like, it wouldn't work. But that's gotten better also
Problems - Technology	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	... I mean, some services use-- the volunteers, use pagers, or very rural places use pagers because they can reach places that phones might not reach, or radios might not reach. But the pagers cost money for services, so [City] got rid of pagers. So now, you can get a pager but I would say 5% of the crews use an actual pager...
Problems - Technology	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	Yes. We use laptops for trip reporting. So every patient, we have a trip report that we have to write about them. And then it goes to a server, and it goes to billing, and it goes to the hospitals. So they can have a report of what happened before they ever got there. And different places have different abilities to make it better for the crews. And some places focus on-- I mean the billing is important because you need the money to keep doing the job. But some places it seems like a little higher priority [laughter] in making it better for billing, or QA, or research, versus the people that are running the 10 calls a day, who have to write the 10 trips reports per day. So [City]'s used to be-- I used to like it better than this place. But now [City]'s getting a new one and it's very similar to this. But it's all about billing. It's because Medicare, specifically, likes to deny.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								They look for ways to deny billing. So they have all these codes, and all these different patient types, and all these different things that they want everybody to fit into, and it doesn't work that way. People aren't numbers. So there's a lot more drop boxing stuff into stuff in order to make it successfully billable. And less focus on just making it something that I can do that's accurate, legal, but also concise. And I can get it done in 15 minutes instead of 25. It makes a big difference. So yeah. And some of them, they can drop-- the dispatch can drop the patient information into their call
Problems - Technology	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: laptops/toughbooks for trip reporting] Yeah. It's been in [City]-- here, it's working pretty well. There's some little blips but it keeps getting better...
Problems - Technology	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	... So the safety hinders you from doing your job. So right now, let's say we have 15 ambulances. We might have a little more or a little less. We might have closer to 20. So we have one ambulance that has this newer technology, and everybody hates it. And so it's set up differently. The chair you sit in is different. The place where equipment is is different. The idea is to be safe, and I appreciate that. But moving equipment around messes with your mind memory. So you're like, "Wait, where is the--"
Problems - Technology	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...we used to have a technology here that would, you had fog and you would beep it in when you would drive, and it would keep track of your driving, your speed, around the curve thing. I'm sure it had some kind of driver scope inside the ambulance to tell you if you're taking the turn, all that stuff. Everybody hated it and the day it got uploaded every month. And they didn't really use it punitively. But it made noise. So it clicked when you come around a turn. And if you take the turn too fast at all, it would alarm. It was so annoying. And even if you were hitting this at a normal speed, it was telling you you were taking it too fast. Let alone when you were actually going fast, then it would just alarm the whole time. So everybody hated it. We kind of mutinied. And when we merged, we got rid of it...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	What happens when it doesn't work? What happens when we have trouble with it? Who fixes it? Because I can't just call downstairs to IT, okay? I've got a contractor that does our IT because we don't have an IT department. They're budgeted two days a week, maybe
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...there's tons of proprietary stuff out that's not Microsoft Office [laughter]. And each one has to be learned, and you have to learn all of the little intricacies of them. And lots of times, that's not a big user base because we're not that big an industry, and so it's very sort of-- what do I want to say? It's very specific. You have to learn very specific things to run a certain vendor's safe software platform.
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...My experience in most software companies, if it's a big install, they'll come out and they might spend a half a day or a day with you and they're like, "Here you go, good luck [laughter] it's all yours. And then as you use it, you go, "Okay, so how does this work, how does that work?" And this is not my full-time job, I've got things to do [laughter]."
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...So it becomes a-- technology becomes a huge time suck and I mean, I just keep saying over and over the promise of technology is awesome but that actual performance is so much less most of the time... I mean, I waste as much time as my technology saves me every day, I think... I mean, and it's-- there are so many connections. Is it your computer, is it the connection, is it their website? Where's the breakdown? ... It's often impossible to tell. Okay, so I rebooted my computer. What do I do [laughter]? ... It gets to be very frustrating... Especially when you can't, like I said, pick up the phone and say, "Hey, get up here. Something's not working."
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: electronic reporting] ...You have to deploy it on portable equipment, which is out of your control a lot of times. It's out on an ambulance somewhere. If somebody's having a problem, a technology problem in the ambulance, they're paramedics, they don't go to IT school, they go to paramedic school, okay?...
Problems -	EMS	R	Other	56-65	31-40	Male	EMS-	[RE: electronic reporting] ...it's a hit or miss slow process because there's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Public Safety Personnel				R-008	no one person who is the expert on that cause we got so many different technologies working at once. So it's a big source of frustration for the staff cause they can't go back to bed at 4:00 in the morning unless the report's complete because the computer won't let them close that report until all the information's entered. And if there's a software glitch or it can't connect to the server or something-- they can't close their report and they're just... They just want to toss that thing right out the window.
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...everything has to be HIPAA compliant since we're in healthcare, and so there's all kinds of security functions that have to be installed on the computer [inaudible], but also make it more difficult to use because there all these firewall issues...
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I find often, technology drives us in directions that we aren't necessarily ready to go yet as a small organization.
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...You learn how to use something, you get used to using it, that's obsolete, next generation, or that company just went out of business. I just got an email today saying that our scheduling program, which is very complex and I schedule 65 employees, they're discontinuing it... Now I have to go research all kinds of new schedule programs, what's going to work best for us, how it connects with payroll, how is-- you see what I mean? ... So one little change suddenly creates enormous amount of work... Everybody else in the agency has to now get used to doing this right. So it has payroll implications, over time implications, it's just-- in EMS, they say there's three things you don't fool with, the three Ss: schedule, salary and spouse [laughter]. You don't mess with those three things.
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...A lot of river activity in this county. [River] runs right through the county in one of the [inaudible] parts of the county, of course. So if somebody dumps their raft and is drowning or something, we have to go an hour drive up to the river and figure out how to fix that situation. So lots of long response. Lot of expenditure of resources for one patient, for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[smaller?] patients, for those kinds of things. And no, really, communication, so we built a lot of things that are sort of automatic like our medical protocols.
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: backup SAT phone] ...of course, that's been an issue. Since some meteor shower or something knocked out part of the satellites like five years ago.
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	But very few agencies have GPS location on their vehicles, so what happens is the dispatch computer, they can draw a geofence around an area. And so we have five stations pretty much spaced evenly down the interstate because that's where the volume of most of our business is... There's pretty much five little municipalities in town. And so when there's a call for [City] they just air the call and they say, "Attention, [City] ambulance. Here's your call. Here's your location. Here's what's going on." We can get that information on a mobile data terminal, as long as we have cell service [laughter]. And so that's all great...
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: ambulances with GPS tracking] ...We don't have the technology installed, currently, to do that. And it would solve problems and it would create some, too, because it creates increased workload on dispatchers, who aren't that familiar with how our system works. I mean, they don't work for us. They don't know all our policies and how people move around and how long it takes to do this, that, or the other thing.
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...The electric load in these ambulances is just nuts. I mean, they are just maxed out right now on power capability because we have a refrigerator in there to keep refrigerated drugs. We have a warmer in there to keep IV fluids warm. We have a cardiac monitor which plugs in because it's battery operated. We have a suction unit that is battery operated. We have this, that, and the other thing that's all battery operated. It's all plugged in. When an ambulance is not running, it's on a shoreline plug. And if you forget to plug your ambulance in for an hour, it's dead. I mean, it's just the electric load, which is a technology issue as well.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	There's always issues [laughter]. There's always issues. That's my big pick on technology. It is sold as the solution to everything, but what happens when your cell phone doesn't work? I mean, everybody's like, "Cell phone doesn't work, oh, my God," or, "I can't get my application to load," or whatever it is. I mean, there's just times when it either doesn't work, or it's slow, or something's down, or whatever. And you start this long develop process like, "Oh, okay is it me, is it the ISP, is the vendor, is it the-- where is it?" You call around, "Hey, are you having a problem with this? Hey, can you try this on your computer?" Think of the time that takes to do that... And you don't even know what's wrong yet, and sometimes you never do find out [laughter] [crosstalk] gets better...
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I mean, we just signed on to a new billing add-on to our technology and basically, it's just an aggregator. It takes information from multiple different places, that their billers have to open, one screen for this and another screen for that, go to a different program for that. It brings all of that into two screens. So that you don't have to keep changing screens, looking back and forth, going to different websites, to get this bill ready to be sent out.
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I'm not really sure they've gotten all that much better, from paper to what we are now. I mean, I understand why we're forced into using technology. I mean, it's volume, basically. We just couldn't do what we do any more on paper, it just takes too much time, and it's, shuffling the papers around. But, like I say, the time wasted on technology is enormous. I don't think anybody admits what it really costs.
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: cost of technology] It's very difficult to measure. Vendors aren't going to measure it for you because it reflects poorly on them [laughter]. And every time you have a technology problem, it's this, it's them, it's them, it's them. My thing's working fine. I don't know, ask them. It's very difficult to pin down.
Problems - Technology	EMS	R	Other Public Safety	56-65	31-40	Male	EMS-R-008	...That's what technology has done to us. I'm not sure that's all good either. A tremendous waste of resources. We don't fix anything anymore. We don't make it to fix anymore. We just make it to replace because that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					keeps the economy churning, right [laughter]? I mean, but we're getting into big philosophy issues.
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...Like I say, the promise of technology is always overshadowed by its faults or its unintended consequences or whatever. I mean, I think the whole AI thing, these things are going to kill us off in the long term. I'm serious. They're going to get so smart and then pretty much we're going to have hell. They're going to lock you out of your house. They're going to [laughter] make your plane crash, whatever. It's spooky.
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I don't have any of that stuff because I don't want somebody hacking my house and turning my heat down in the winter or opening my garage door so they can rob me or any of that stuff. It's just too unreliable...
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I don't care if you're government, industry, whatever. If it can be hacked, it will. It's just a matter of time. So I use online banking because it's so convenient, but I understand the risk. I mean, how many times have you replaced your credit cards because somebody hacked it? I mean, who hasn't? What's the cost of that? ...
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...I mean, certainly, you access programs that say, "Okay, you have to change your password. It's the end of the month" or something. It's like, "Great. How am I going to remember this one?" Write it on my hand or use something stupid that everybody can figure out. I mean, I use a password manager, and we encourage our employees to, and we help them learn how they work, and stuff like that. They're not foolproof either. And it's just like, if you make it hard enough, people won't use it. And I'm dealing with mostly college-educated people who are smart enough to be paramedics. But even they reach their level of frustration. I mean, they're millennials. They'll go so far and [laughter] it's, "Screw it. I'm not using this."
Problems - Technology	EMS	R	Other Public Safety	56-65	31-40	Male	EMS-R-008	I want technology that works... There's so much awesome technology out there if you read the ads, but when you try and apply it, it's like, [inaudible].

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Even what we have now, so our little Toughbooks, they have two jobs. You write your patient report, okay, that has to connect to our internal server to download that information so the billing people can get it. And then it's their mobile data terminal as well. So it has to connect to dispatch over the cell network and get that information. It just has such a hard time some days [laughter].
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: MDTs] It's just like, "This shouldn't be this hard! How can it be?" It's like, "Oh, well, the cell is fighting with the network connection." Reports go missing and the staff gets yelled at, and they're like, "Where is this report?" ... I wrote it. It wouldn't download. It was 3:00 in the morning. I got frustrated. I just shut it down. Or they will type all kinds of information in their report and they'll hit download and it'll just, poof... Yeah, not often. But how many times does it take to do that before you park that laptop underneath the rear wheels of an ambulance and say, "I don't know what happened to it." I mean, technology can create terrorists, and by that, I mean internal terrorists. If you frustrate people enough, they'll find a way not to use your system.
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	people just don't understand all the fall out that a new technology involves. It's, like I say, a lot of unintended consequences. You deploy this thing, and somewhere down the road, somebody didn't think of, "Gee, why is that happening? Oh, it's because we didn't change this."
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I was at a technology conference that's put on by our vendor of a lot of our software, and it was-- everybody was complaining about this one software program like, "Why hasn't this been updated in years?" And they're like, "We bought this company from a company that bought another company that bought another company. And the guys that wrote this code, there are still people that are using the initial version. If we change something here, we have no idea. We might shut that service down that's still using that old technology." So backwards compatibility is a big deal, too...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	... Because you got districts in this county, like us, who are pretty well funded. You get districts in this county, like [City], they are completely volunteer. Their budget is, I mean-- we give them our used equipment because they need it. They have no money to spend on anything, so how are you going to apply technology evenly across even as small an area as our county and make sure that it benefits everybody?
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	As you know, technology is very expensive. You don't just buy it and you're good. You've got to maintain it... You've got to upgrade it.
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...we deal with some very challenging and physical conditions. A lot of our computer sites are above 10,000, 11,000, 12,000 feet. You can't get to some of them unless it's summer. If one them breaks down, well, just have to wait until the weather clears [laughter]. I mean, we have ice loading on some of our tower sites such that it shuts them down... we wait until it warms up and it falls off. But in an emergency, sometimes we have to hire a helicopter. Sometimes we go up in a snow cab or the technician does. I mean, that's dangerous, expensive work. And the radio system is kind of like your iPhone. You shut it down and people are like, "Whoa. What happened [laughter]?"
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I mean, but there are just areas-- there's one area in particular in this county that is-- we've never had good radio coverage, never had any radio coverage. We never had any phone coverage. It's an absolute mess in the winter time. There's a little section of [inaudible], a couple miles long, there's nothing. It's a total blackout. There's no power up there. There's no radio up there. The [repeaters?] don't hit it because it's in a canyon. I mean, that's a big safety deal for us...
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...But if you're working on the interstate, most people expect to be [laughter] able to use their cell phone at least. There are just dead areas of this county. And a lot of counties, frankly... There's lot of parts of the country there's no cell service. And it's because there's no people [laughter] to pay for it. I mean, AT&T doesn't put a cell site where there

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								isn't anybody to pay for it. It's the interstate corridors and even then there's places where, like I say, you don't have power, or you don't have fiber, or you don't have a microwave link, or something, you're not going to have anything. And the geography just makes that impossible some places.
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	we got high volume, big accidents a lot of time, and poor communications. That's a big problem for us.
Problems - Technology	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	The problem is the technology versus the actual performance. I mean, that's my big pick... I understand advertising people have a job too. But you better get out there and use it before you try and sell it to some people. Because you can kill people if it doesn't work right.
Problems - Technology	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...how much time does it take to get the ladder down because we have a hydraulic lift for our ladder rack. It actually takes 10 seconds for it to get down to where we can take it off. So if you got a family that's yelling at you, "Hurry up! Hurry up!" and you're just holding the button, waiting, it's kind of nerve-racking...
Problems - Technology	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: call for help through dispatch] Yeah. And it's tough for them from what I know is because they're in a cubicle. So you might be the police dispatcher and I'm the fire dispatcher. You can just stand up and tell them, "Hey, we got an emergency. Send everybody to Engine One's call." But then they got to remember to push the button and talk it through, too, so it gets recorded and stuff like that.
Problems - Technology	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...Some people have been given a earpiece. So they can hear everything right in their ear. Nothing will come out of this. But those people are easily distracted then. Every time they hear a noise, they're like-- they got to train themselves to--
Problems - Technology	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	Our department has those MDCs, but it's kind of underutilized for a computer. I mean, all we do is get this generalized information that we probably could have sent in the '80s. We just didn't have the ability to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								make it small. Nowadays, it should be like an iPad. Something simpler that's easier to touch, and you could almost pick it up and take it with you so you could continue relaying information. So many of us on calls, if we have a unique situation, sometimes we will take a picture with our own personal phone and send it to our chief's personal phone so he can look at it, because the department doesn't issue the rigs smart phones. Only a flip phone, and then a separate digital camera. So we can't make it all work. So having an updated tablet or an updated cell phone for the unit would be very helpful.
Problems - Technology	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...It's changed a lot. I mean, it went from that to then having computers get dispatch information and with the GPS technologies, able to automatically be on scene within 500 feet of something, which has its own problems of its own. To now, I feel like our department kind of underutilizes technology for that. Yeah. It could be so much sharper. I mean, I get text messages from my ex-wife more than I would like [laughter]. I can't get information from dispatch straight to me that says, "Hey, this is a dangerous--" without having to make it out loud and everybody hears it [laughter].
Problems - Technology	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...from the EMS side, we do so many things where we talk and we experience, based on what we see. Whether your face is drooping or if I'm talking to you and you're not quite making sense. You are making sense, but I'm picking up on something that isn't quite right. So how do we portray that to the hospital sooner? EKG monitors. Our monitors don't have WiFi or Bluetooth capability. They purchased them right before I got hired here, so I think they bought them in 2006 or 2007. And if you think back then, WiFi was still kind of limited. We can't send our 12-leads. We can't send our heart monitor pictures to the hospital. If I thought it was important, which I never do, I could lay out their EKG and take a picture of it and send it. But again, we don't have that capability with the department... So labs, blood draws, stuff like that, we just can't take advantage of that due to that limitation.
Problems -	EMS	S	Field	26-35	11-20	Male	EMS-	So for us, we don't have dead spots, which is generally pretty good... We

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder				S-005	had one. I think they fixed it. For the most part, we can get information out. Unless we're inside of a concrete building which everybody has that problem. We can't fix that yet. But we have pretty good radio communication outside...
Problems - Technology	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...In our agency, and then for our specific department, we have a problem due to staffing issues with dispatch. This is just my opinion on it. I don't have the-- I'm just a firefighter. I don't have that upper-level knowledge. But every EMS call we get goes to our TAC channel called TAC 2. Unless it becomes a complex issue, maybe we have an EMS call because a building collapsed, we will change channels for that. But if we have-- which happens often, if we have eight EMS calls going on, which eight EMS calls is 16 units, we still stay on TAC 2. So we can never get out, even to tell-- if all I want to tell is the ambulance to come from the north, not the south, I can't get that. Because other units are doing the same thing. 16 channels is just too many. And it's my understanding that the limitation is when we switch it to a dedicated private TAC channel, TAC 4 is for fires, or if something major comes up, hazmat call or something, then a dispatcher, some other dispatcher will go and monitor that channel. But now we've strained dispatch and they just don't have enough dispatchers to say, "All right. We don't want any more than six units on a TAC channel." ...And then so, six units on TAC 2, six units on-- all it takes is-- and this happens every day. As you know, it's true out east. We get two accidents on the highway on top of our four EMS calls. A highway call is two units because we try to keep a shadow of safety. I mean, we have almost 15 units on one TAC channel. It's just too much...
Problems - Technology	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I think about what it is that the radio system's always has their challenges in different reception areas and different parts of the county or response district. I think, always, at fires it's an issue. And I think with communication specifically, when you have-- let's take a first alarm assignment of firefighters inside of a residence, you could have 16 or 20 folks inside of a residence with radios on, which need to be on for their safety as the incident evolves. When you get all the feedback and the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>scelching and all the background, the ambient noise, anyways, and communications is always an issue of fires, specifically.</p>
Problems - Technology	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	<p>I've been on structure fires where either it's stabilized or you're asking for specific resources, and you can't transmit out the radio. So either it's a connection issue or somebody's walking all over you. And so, any needs that you need in the short term are not being met because you can't talk to your supervisor. Which 90% of the time, it'll be consequence-free. But we don't live in best-case scenario worlds. So I think we want 100% and I think we won't accept anything less than 100%. So it makes a lot of people's jobs difficult to try and improve the system...</p>
Problems - Technology	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	<p>I've been standing at the door just ready to go in with a nozzle and my officer was waiting for open air before he could communicate...</p>
Problems - Technology	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	<p>...one of our paramedics was involved in an altercation in the back where the patient was fighting and biting him, and he was trying to get out on his radio. And I don't know if it was lost in the system somewhere or whatever the case was, but it wasn't until another crew in their firehouse was listening to the radio and pretty much stopped the systemic response...</p>
Problems - Technology	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	<p>...I think those emergency transmission buttons on the radios need to be more effectively monitored or used and or protected so the incidental bumps don't happen...</p>
Problems - Technology	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	<p>Theoretically, that orange button... if you hold that, it holds an open microphone to the radio. And every dispatcher console has an alert that shows up on their screen. Again, I don't know if that was in place, if that worked if it was pushed-- I don't know... And so, I think we default to the incidental bump versus a real-life emergency, because 9 times out of 10, it is accidental. But that one time we need it, we need it to be real.</p>
Problems - Technology	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	<p>You always have your cell phone, usually as a back up in case you need-- and we have an old flip phone that may--</p>
Problems - Technology	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	<p>So we have a lot of software with connectivity between the patient care records we have on our laptops to our monitors, which are the 12-leads</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and defibrillators and all that. So I think a lot of times there could be ways to improve the connectivity between that because it's so integrated. And you can't finish reports if the connectivity is not there, and you can't upload your monitor to your computer. So WiFi is plan A, and then there's also USBs that we can use if the WiFi's not working. But it just seems like that's a hang up in our system often and increasing the time of the reporting. And getting back into service until the report's done. So once again, technology issues there. But aside from that, that's about it.
Problems - Technology	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: speaker system in ambulance] Because the back of the ambulance is loud, so the driver up front will just hear all the static and background noise from the road, driving down the road. But I mean, you can manually turn it on and use it, but it's easier to just yell back there. And if you need to talk to your partner, it's effective communication [laughter] front to back.
Problems - Technology	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I think technology's supposed to help make things better, and sometimes I think it complicates things more, makes it more difficult.
Problems - Technology	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	How about downloading our EKGs? A lot of times, they'll want that included in the report, and it just won't connect. So sometimes they'll use a little zip drive. If there were just a hard wire where we could connect it. Again, old school, just run wire from here to here, but it won't do that. So I mean the simpler the better.
Problems - Technology	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	...we are so enthralled with technology, and we use it so much to become more efficient that when plan A isn't working, we are so deficient in our job responsibilities because everything was tied into plan A. So if plan A is down, we get so backed up with reporting or trying to get back in service or whatever, which is frustrating to the end user. And obviously, the bosses do a good job of trying to understand that, but their company line is still just figure it out and move on. But when plan A fails and plan B is so negligent in trying to bridge that gap, I think it's tough and frustrating. I think that's where people get frustrated the most.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I think everything is so attached to technology that if an internet server is down or the connectivity is not there or whatever, and we can't complete trips and get back in service and get information from the hospital that they need, we just start getting backed up quickly. And our system is, I mean, not overly busy. But it's busy enough that it has an impact crew after crew after crew. So that's my opinion.
Problems - Technology	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	SME S3: The only thing I can really think of is our confined space that we use, so it's a hard line that's connected with our air hose, our air line. And it's hard to believe that that technology hasn't gotten any better. It's these old connections that they've used forever. You hear people say, "Spit on it and that will make the connection." But it's all this horrible stuff. But again, just like any other call, confined space, definitely the communications is the weak link there. So that wireless that you're talking about, yeah, that would be great. However, a lot of times we're underground or something like that. And so it makes it almost impossible. So that's why we have to have the hard line connection. And you're dragging all this behind you... Your air hose and your communication line. Your life supports. SME S2: 300 feet of cable.
Problems - Technology	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	wireless EKG cables. That's obnoxious. I can't believe that's not wireless yet. That's all I got.
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...Although we have access to a sort of an enterprise level messaging system, it's locked down so tight by IT that it's essentially unusable. So nobody uses it.
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...We asked for something more mobile-friendly, and we got access to the box.com platform which is very nice. But again, they put enough security limitations on the use of it that there's typically a lot of ghost networks built off of free Google accounts that offer a little more flexibility...
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	Well, the messaging is essentially-- you can only use it from desktop to desktop. And you have to remember to sign in individually. It doesn't pop

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								up with your profile, for example. So nobody ever remembers to sign in, so it doesn't get used...
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...Box, the one that really irks people is they made it so that you can't download anything to a local mobile device. So you have to be in continuous contact with the internet in order for it to function. And, of course, when you need stuff like that the most, when you're trying to move maps and stuff around, is the big incident at the football game and the cell sites are hopelessly oversaturated and you lose connectivity, and all of a sudden you can't rely on it anymore because you couldn't preload that information onto your device. That's the really big one that gets us there.
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...A denial tone, also colloquially known as a bonk, it sounds like mah. And it's the computer telling you, "I don't have a channel to give you right now. You need to wait." We never get them. If you talk to the guys up in [County], they will generate them at a rate of 150 a month because they just have a much less robust backend system...
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...So our radio system, if we are in [City], is excellent. It's very reliable. It has very few dead spots. When we do get a dead spot-- for example, we had, oh, down at [Street] and [Street] downtown - this was probably 12 or 15 years ago - Verizon put up a cell site and we just lost the whole intersection to interference from the cell phones. And you couldn't talk within about a half-block radius of that. But it got reported. Our [City]'s radio engineers went and talked to Verizon's engineers. And it took them about six months to get everything sorted out so that both people could use the site. But it got fixed. We had a temporary hole...
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...So a lot of our holes are like that. Either you're really deep inside some building where no system's every going to reach or it's something like that where you're getting interference or something...
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...So for us, our problems are more in the area of coordination both with our own people and interoperability. We do do more interoperability stuff than, I think, probably any other agency because we sit at the center of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the metro area. And so we border on everybody, and everybody borders on us. And then we also have all the privates in town, the private email services that we work with, because they do event coverage as well. And so we have-- typically, if we're going to have a big event, it's not infrequent for it to overlap with multiple outside agencies. And so we need to coordinate using the various interoperability channels, make sure everybody has communication systems that are either compatible with [City]'s or with the state's, interoperability radio system, make sure that if we're going to use the state's-- the green channels is what they're known as, that we're not going to overload that system, and making sure that everybody who's going to show up with an ambulance has some way to talk to everybody else and that they know what channel to do that on.
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: system interoperability] ...It was not good initially. So, like many things in EMS, a lot of this work came after big system failures. Probably the first of them was the Pope did a World Youth Day here back in the early '90s and they had a volunteer medical system that essentially collapsed. They had the not such a great idea to have all the kids do a day of fasting and then walk from Downtown [City], the 20 miles, to where the Pope was going to address them. And It was in August, so it was a very hot day, and the obvious mass dehydration occurred and it overwhelmed them. And so we sort of cobbled together a system that nobody had talked to anybody else...
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: federal interoperability channels] ...we have those in our radios. And if we ever need to use those, which the last time we needed to use any of those was when the northern front range was having all those floods about five years ago. We sent ambulances far up north that they couldn't use our Harris system anymore and they had to jump onto those channels. Probably 80% of our guys couldn't find them; they use them so rarely. So we sent a lieutenant out before we shipped the ambulances out of the city, like, "These channels here on your radio, this is what you're going to be using." So the commanders know where they are. Our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								medics typically don't know where those stuff for ground-air operations and things like that. We have them, but we have to put some special effort into using those if we ever need them...
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...Uniquely, in this system, our ambulances don't have MDTs, mobile data terminals. They sort of have a back-door mobile data terminal in that the laptop that they use to type their reports on has a wireless link that also uses the-- we automatically download the dispatch information to them to be plugged into the call. They can look up the call notes on that, but they have to open that computer, call up the right call, and do some things. It's not just like riding around like in most modern units. They don't have an MDT that can see CAD...
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...at the end of the call, when they call out at the hospital where we refer to it locally as Code 24, it gives them their times and their mileage. So it will say you were dispatched at this time, you arrived at this time, you're transported at this time, and you got to the hospital at this time. And it pulls all that from the CAD system. So they're giving us that information, the call. We're on scene, and we'll mark them on scene. We're transporting nine to St. Joseph's Hospital with one patient. We'll put that all in and then we dumped it all back down to them. And that is primarily it's supposed to automatically go into the trip report, but sometimes that system hiccups. So if it does, they can then manually type in the times and [the figures?] that they need.
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	They can get them on the laptops most of the time. Because, again, the system it's not primarily intended to be a mobile CAD system, so it can be slow. There's a gateway between the CAD system and that system that sometimes fail, so you can't really count on that to be there. Excuse me. But 99% of the time, if they want to, they can go in and look at the CAD notes.
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	The only real issue we have with cell phones is, again, certain events, New Year's Eve. Really giant crowds can overwhelm the system, and so occasionally we'll have connection problems there...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...There have been occasional hiccups. We had one, oh, six months ago for about two days. Verizon was just delaying the pages for about two hours and we're not sure why. Problem resolved itself after about a day and a half. But in general, that kind of thing has been pretty rare so we haven't had enormous issues there. But occasionally, yeah.
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...The back channels and the car-to-car channels, that is something that you're going to mostly see officers using on a big event where they want to have a conversation that isn't- and it's not even that they're trying to keep it secret. It's just that the primary event channels is something that just gets clogged. There's so much stuff that everybody needs to hear that if you have something that's only important to a couple of people, it's good to get it off of that channel, if you can...
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	So we've looked at a few things, never seriously. But there's some, especially private email services, a lot of them are using the commercial push-to-talk type broadband devices. We have looked into those. We see enough cell phone failure, especially at the large events. We don't trust them yet to be reliable enough. We think that especially when we really, really need them is when they're going to do down. So we've looked at a few things like that. We've kind of explored some- I don't know if they're really new technology, but there's some of the - I don't know what you call them - the internet-mediated sort of- ReadyOp is one. There's a couple of others. These are essentially programs that allow you to tie phone traffic, radio traffic, pager traffic, SMS traffic, all into these kind of central hubs. We actually have that capability. As a hospital, we don't use it super heavily, again, because the systems we have right now are robust enough that we don't have to, and it's an added layer of complexity that we don't really use. I mean, we can if we're going to do, say, an all-call- if they're going to do a hospital-wide emergency notification, the hospital actually uses that to send a message. "The blizzard's coming. Leave early for work today." But the paramedic division has enough other stuff between the pagers and the other systems that we typically don't bother to use that stuff because we have

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								all of our user groups set up and on there. So yeah, we're not opposed to it.
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...we've been looking at trying to exploit that a little better, maybe doing some medical telemetry stuff with that, uploading EKG tracings and that sort of thing. We haven't really done a lot with that yet. And again, I mean, there's all this cool stuff that people are like, "You could send the doc pictures of the patient, and upload the EKG, and do this, and do this." But we're a purely urban system. We're very high-paced. Our guys run about a call an hour. That's a lot by ambulance service standards. And our transport times are so short that they don't mess around with that. I mean, by the time you've mucked around with getting a connection, getting somebody on the other end to see it, transmitting the information, having them do something with it, and then talk to us, we've been in their waiting room for five minutes with the real, live patient. Like, "Here, just take a look at him now." So we tend not to mess around with a lot of that kind of stuff just because our average transport time is 9 or 10 minutes. It's very short... You have to move quick to get the basics done in there. We're not looking to do a lot of extra stuff in terms of communications in that time period.
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...So I would definitely like to be able to have more robust data communications in terms of getting the details of the call. We've had horrible problems when we tried to put MDTs in every ambulance that was not robust. It was not reliable...
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...We have an AVL system, an automatic vehicle locator system, which works via data radio and it's constantly you have to tweak the configurations because it's Tuesday and, for some reason, the computer doesn't want to track car 51 on Tuesday...
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...So although our voice radio is excellent, our data stuff definitely lags a little bit behind. And because of that, I think we're missing an opportunity both to get a lot more information out to the crews more easily because we're busy enough. Our main dispatch channel before-- we just split it into two main dispatch channels. Prior to that split, which

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								occurred about six months ago, was three million transmissions a year on one channel. And so you physically couldn't give them some of the information you wanted to give them. You just didn't have time on that channel. And now we've taken care of that problem but at the expense of splitting everything into two. We have to have a second dispatcher. You can't monitor both channels, so you're only listening to half of the system at any one time...
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...The stuff where you're getting the caution notes. Right now, if you're not a commander, the maps, we have no really good way of getting the maps to non-officer crews. And so you'll hear a dispatcher trying to describe how to get to the back corner of some elaborate-- we have this gigantic apartment complexes with several thousand units within them, and they all have one address [laughter].
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...And just a general reliability upgrade on the data side would be probably-- so that we can really trust that stuff and start to lean on it. Because right now, no matter what we implement on that side, it has to be the nice-to-know stuff, the, "Yeah, this is great, but we can't rely on it."
Problems - Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	Yeah. I mean, the big thing is every thing we use, I mean, we don't have time to mess with it, or tweak it, or play with it. It has to work the first time, every time, or people will just stop using it. They will just refuse to use it and go back to the old way of talking on the radio.
Problems - Technology	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] ...Historically, the city has had a single channel for kind of mutual aid, and it was traditionally just called grain, and it was just a frequency that all of the varying agencies used, and it was at times difficult to transmit back and forth. There was a lot of relaying between dispatch between different agencies.
Problems - Technology	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] ...So whereas I can't specifically talk to [City] Fire, say, if we had a big incident on the border in the case of the [City] shooting a number of years ago, when there was a lot of different agencies talking on various channels, I don't have their channels, and they don't have ours, but we do have several citywide mutual aid channels

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] ...Moving to technologies can be very stressful if you're set in your ways and you have old channels and old radios. They may not even work very well, but you're used to them.
Problems - Technology	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] ...I love the fact that my keyboard is attached to my computer because it's a laptop. I worked on a tablet system before where the keyboard was separate. That was a nightmare. We broke keyboards like you wouldn't believe. Most of the times, the connection wouldn't work, and we had to manually tap, tap, tap, each letter on a tablet.
Problems - Technology	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] But anything that's a movable piece, a paramedic can break. So that attachment point is, I believe, challenge accepted by paramedics. We will find a way to break it and break it often.
Problems - Technology	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] ...And some of the things that we field-tested a few years ago with the two channels were a near disaster.
Problems - Technology	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] ... It's been fairly definitively proven to reduce the number of at work back injuries. They also weigh three times as much as the other ones. You can argue that that weight is for-- the pros outweigh the cons. Our Toughbooks are old. Some of our equipment is a little bit clunky, but some of our stretchers are the big ones.
Problems - Technology	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] ...We get comfortable in something and then we don't want that to change. So when they started rolling out the power stretchers in my service, I hated it. I was like "Ra-ra-ra-ra, this is terrible. This is heavy.
Problems - Technology	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] ...There are Glidescopes that you can see, visualize your intubation on a screen in front of you. Okay, it's really clunky. The battery is not working. What are you going to do? You learned how to manually intubate somebody with a blade and a light bulb. It works. There are fancier ways to do it, but, why?
Problems - Technology	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3]...It's at least consistent in the quality of CPR that it gives you. It's also very expensive, and they're rather clunky for extricating down stairways and that type of thing.
Problems -	EMS	U	Field	26-35	Not	Not	EMS-	[S2] ...If I'm trying to go on scene, this happens all the time where the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder		specified	specified	U-004	patient can see me pull up and the fire department can see me pull up, or maybe there's a bystander trying to flag me in because it's their emergency, and so they're the ones freaking out. And I sit there in my ambulance, and I try and key up and the radio's okay. So then, I try and key up again and the bystander's freaking out and waving me in. And I'm just waving to them like, "Hi. Yeah, I'll be there in a minute." ... And then I try and key up, and this time, it goes through, so now I can put myself on the scene.
Problems - Technology	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] ..So dispatch is not necessarily going to be reading all the call notes for the 15 calls that he has people responding to right now. So, if something interesting pops up, he doesn't know, so it doesn't get relayed to me.... Our computers right now will pull up the last page to the CAD, and it's no longer updated in real time. So I can get some general call notes of what happened in eight inches, but if there's a continuing progression to the call before I get there, I have no idea.
Problems - Technology	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] ...Sometimes I wish a little bit more information came across on a pager because sometimes the Toughbook, it doesn't stay connected to the Wi-Fi and that type of thing. And sometimes, it depends on the dispatch, on just what's happening in dispatch within the call sometimes. Sometimes the police call taker is getting different information than our call taker is, and so sometimes if you monitor a different channel, you can get new information that way. It's nobody's fault per se. It's just people answer questions differently.
Problems - Technology	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] ...The house radios are very bulky, and they're very heavy, and they're just much, much stronger range, much higher output. T
Problems - Technology	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	Q: ...when you would have to communicate with other first responders, with fire or law, how easy or difficult was that... if you were out on a run...? SME: That was very difficult. We didn't have communications with them on the radio. We communicated with our fire alarm office and the fire alarm office would communicate with them, somehow [laughter]. And not necessarily they would communicate with them but they would

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								communicate with the operator on the other side of the police dispatcher.
Problems - Technology	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	Q: ...it's easy enough to maneuver amongst the channels? SME: Yes. At least for us. I could tell you that paramedics are better at the radios because they constantly have to use it on every run. We used to be able to communicate with the hospital through our mobiles, and we have to give reports over a clinical radio to the hospitals. So we were in tuned to using the radio then than a regular fireman because back then, not all of the firemen had their own radio. Only the officers did.
Problems - Technology	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	So now we do provide phones for them, however, they're flip phones, and they're locked down. So they can only call the hospital, they can only call the office, which is the fire alarm office, so they don't have the opportunity to send a text or make phone calls. And the same thing with their mobile reporting unit, the computer where they do their patient care reports. It's locked down for security reasons so they're not able to go on the Internet, they are not able to go search Google or whatever, do some research on it; it's locked down, so.
Problems - Technology	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	In a mobile recording unit back way back when we started documenting patient care, people thought that, there were certain individuals at a higher level who thought that, "Hey, if we give them a drop-down list of things that they can select, all they have to do is select, select, select, select, and that'll tell us-- it will be easier for us to grab data so that we can do some Q on it." So they don't have to write a report anymore, and I didn't agree with that. I think that we always have to paint the picture is what we call it. What you saw. What you found. Give me some facts. What you did. What you didn't see. And so I think technology may get in the way of-- that we take that human aspect out of it and you're just tapping drop-down lists or typing yes or no, and you're not actually giving good and accurate information to the other side, to the reader. So I think that that's one way technology can get in the way.
Problems - Technology	EMS	U	Supervising Field	46-55	21-30	Male	EMS-U-010	The AEDs, they're bulky. They're heavy.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					
Problems - Technology	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	The life pack monitors... You have to know how to use them. Every monitor is different. Sometimes that does get in the way where our paramedics are there for 24 hours and they go home for 3 hours. Obviously, we don't have it, the medicine in their head all the time so they go home and it takes them a while to remember, "Oh yeah, this is how you do it on this monitor." So technology is constantly getting upgraded so by the time you come back, it may be something new and the information on how to use that piece of technology may not have gotten to you.
Problems - Technology	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	The shift has gone from, like I said, something personal even when you're writing something. You're writing a letter and whatnot, it was personal. Now it's not personal anymore, now it's just a message and a screen. With what is it, Twitter's 150, 200 characters and that's it? So yeah, it's taking that personality out. So I think that's for the worst.
Problems - Technology	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	I guess technology is constantly getting upgraded. As a matter of fact, we're in the process of upgrading our mobile computers, our patient care computers to newer versions, so they have to relearn it. Even if you've known the system for a while, even though we've kept the same company, it's still a new program. You're going to have to relearn the whole thing. So that may frustrate some people.
Problems - Technology	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	As far as radio communications, it's better now than the past. We're able to listen to a lot more channels, police channels... But it doesn't always happen. They forget. Or either [question ID?], don't know how to use the radio, or it's on our side. And then how to set your radio, like I said, some people come in and they want to know everything about the radio. Other people, they're just like, "Give me what I have to know so that I can do my job. I don't want to know anything else [laughter]."
Problems - Technology	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	The one thing that seems to have been lacking on our ambulance for years is a built-in GPS. So we don't have the ability to open CAD computer and sort of GPS ourselves if we're confused of where we're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								going. They did buy everybody like the old, individual ones that kind of set up on the dashboard with the small screen. But I'd say if there's one thing lacking from our CAD that I've seen other systems have integrated is, everybody goes around now with their iPhone or whatever they have and UGPS and it tells you where to turn or where to go. But for [City], we still don't have that component in our ambulances. You're still relying on street-smarts and if you have your own second device to find your way around.
Problems - Technology	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	...they did put the Garmin that you can use if you need to. But if you use the Garmin, by the time that you boot it up and to use it, I think it's so much easier if you got any one area where you're confused about with maybe railroad tracks or angle streets and stuffs like that. If you throw it in your phone, it's so fast, to help you get there. But our CAD right now does not have that integrated.
Problems - Technology	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: medical run info transferred to Toughbook] Q: And all that will autofill into the form for you? SME: Yes, it does. Sometimes. It doesn't always happen if there's-- if something's wrong with the system, if the system's down, the alarm office will tell us, "We had a system failure or system's down," then it has to be done by hand. So that's when I would do it manually on the Toughbook.
Problems - Technology	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Q: So why a cell phone if you've got a radio? SME: Just in case my battery dies. But of course, that's something that I need to be aware of if my battery dies. We do have extra batteries that we keep in the ambulance.
Problems - Technology	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Well, let's get back to my handheld radio. Under the subway station, there's no communication except for one channel and it's CTA metro channel. But I'm not 100% sure if the alarm office has a channel to listen to us. But when I do get a call for the subway, I do let them know, "Main OEMC, I will be switching to new metro CTA." So at least they know that I'm--Just recently in the last couple of months, we've been told that if we do get a subway call we have to get a firetruck or an engine truck, a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								company with us, for line of communication. So it will be the ambulance, and then it will be the company of the firetruck in the subway station because we have one fireman up at the engine, and then we'll have a channel called fire, and we'll be able to communicate through a fire line. It's a short-distance channel. We're able to communicate. So kind of like telephone, we'll have one channel to the fire station and to the fire channel, and then back to the firemen that's up on top who can communicate to the alarm office, kind of like that...
Problems - Technology	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Q: Are there any issues with the radios in the high-rises? SME: I've come [encounter?] with that too, where I switch it over to my hospital base station. If I have a trauma call up in the 30th floor and I can't communicate with my hospital, I've got to call on my cell phone landline. I don't know if it's really a landline if it's a cell phone, but they call it a landline cell phone and I call it my cell phone.
Problems - Technology	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	And then I have my portable Toughbook laptop where I keep all my information for a medical run. We can't communicate through that. There's no communication through that. That'd be great in case something happens. I could send an email out to maybe the alarm office or to my field chief who takes care of the district, through my Toughbook. That's a good idea.
Problems - Technology	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Q: how would you describe the technology that you're currently using? SME: Definitely, it could be better. I don't want to say it's poor. I think it's okay. It's okay. I really don't have too much issues with it. The only issues I do have with it is the subway. If I'm at a high-rise, I can't really--no, there's a few times where the alarm office can't hear me if actually--in like the John Hancock or-- maybe because there's other things that are going on in that building. There's a lot of technology going on... In the hospital, that's another one. They can't hear us in the hospital. Sometimes, I've got to come out into the bay so they can hear us. So if I'm in the hospital in the ER, and I'm transporting patient care and, "Ambulance 42, we need you. Can you--?" Yeah. I won't be able to hear them... I think because in the hospital, there's so much stuff going on,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								technology-wise, in the airs.
Problems - Technology	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	I Google maps and then the regular yellow page maps, I use. But the thing is, in downtown, it bounces. That's the word they use, it bounces off. We do have a GPS in the ambulance. We don't use it because it bounces off too. We've tried it. We'll put in an address from my firehouse, [Address] to-- get me to the [Name]. And it doesn't... Yeah. It bounces off walls or recalculating. So-- maybe the model's old. I think we got those GPSs, I want to say, probably about six years ago.
Problems - Technology	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Yes. Yeah. I can tell you now I'm very more pro-- I know this radio really good now. Not 100%, I want to say I probably have-- I know this radio like 85%.
Problems - Technology	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: looking up call taker information via MDT] ...I mean it's a learning thing. I learned that in the field. I learned that in the field. It's all just asking questions, like "How do you do this? How do you do that?" So, and then it tells me everything. The person's complaining of this, and this, and this, and that. Or the offender's still on the scene. It has much more information on there. And I already know that, already going into the scene... But that information doesn't even go on my EMS ticket. It doesn't go on my EMS ticket.
Problems - Technology	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Okay. Well, one big thing is when you have multiple companies trying to talk at the same time to the dispatcher because there is only two EMS. You got EMS [City] South, and EMS North or Main. And it's split down the middle. So I believe the jurisdiction or map-wise, it's [Street], 2200 south. Anything south of that is called [City] EMS. And anything north of that is called Main, North. So you have two dispatchers for EMS. So you could have a big incidence up north where there's six ambulances and they're all trying to talk at the same time. And dispatch will say, "Okay. Hold on, guys." He'll triage via, he'll "Let me see what's going on first, okay? Ambulance 10, go ahead with your message. Okay. Now ambulance 15, go ahead with your message." So he has to triage that over them all.
Problems -	EMS	U	Field	36-45	6-10	Male	EMS-	Yes. And when it's summertime, it's so busy. Dispatch is trying to send

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder				U-012	ambulances and send them here, send them there, and we're telling them, "Okay, we're on the scene. We're leaving the scene." We have all these ambulances just telling dispatch. So with me, when we're leaving the hospital on our MDT on the ambulance, I'll hit returning to base on the MDT. And I'll look to see if it registered. So there's two icons. When I hit the button, it'll say, "Okay. Ambulance [Name]'s returning." I'm going to look at the other icon to see if dispatch acknowledged that. If they acknowledged that, then it will say return. If they don't acknowledge that, it won't say return. And I'll look. And I'll look to see. And I'll hit return on the button again. Return. It'll say return on my company, and if I see if it's not acknowledging by OEMC, then I think the system may be down.
Problems - Technology	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	... It's a safety thing too, because they're monitoring us. They want to make sure that we're safe. That we're on the scene. And also too, they want to make sure that we've made it to our patient. So they want us to say over the radio. Tell us we're on the scene. But there's only one channel. There's only one EMS channel.
Problems - Technology	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	...What would I think that would help us out there? I think at this point, I think that little things like our waves - I don't know the terminology - could be stronger. If I could be in the subway and just know that I could communicate with them if that wave is stronger. I know that I'm in a high-rise and I, "Main, can you hear me?" "I can hear you crystal clear." compared to other places where, "I can't hear you. Can you get a better location?" And it happens. It happens in the subway or a high-rise. I want to know deep down that, you know what, if there's something like some type of technology ways that they could come up with where it's a stronger signal that I know that at any point they're there for me...
Problems - Technology	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: sending blood pressure information to doctor at hospital just like EKG] ... Like the first line vital signs. Because we do the blood pressures automatically and it does come on the monitor. It definitely comes on the monitor. How come that pressure can't be, "Hey doctor, my--" I tell them through the telemetry but what happens if I can't call? And there's many times where we'll go to Saint Joseph's Hospital, and that's another

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								telemetry channel that's really bad. If I'm bringing them a cardiac arrest, that we probably brought back, and I can't tell them that, I'll send it through my modem. Like, "I didn't know you guys were calling but I know now because I got the EKG here. Now I know you guys are coming to us." But on that EKG it'd be great to have the blood pressures on there.
Problems - Technology	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	Well, especially during the summer, we're really busy and there's only two channels for EMS for the entire city. We have a EMS main and a EMS [Neighborhood]... You get people stepping on each other. 20 different rigs trying to talk at the same time. Dispatch trying to dispatch someone. If you have a big event, you've just got people barking on the channels at all times... Oh, it's terrible [laughter]... for [City], they probably need-- downtown could probably use its own, not channel, but its own-- I guess, channel, yeah... Frequency, break it up a little more.
Problems - Technology	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	For us, down in the subway, in a building. I mean, a lot of these in the high-rises, we can't communicate, can't get out. If we're down in a sublevel of a high-rise, like we're with an employee or something like that, down. They're usually, like in a hotel, they're down. And we can't communicate out... Reception issues.
Problems - Technology	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	[RE: cell phone use in poor radio reception areas] We can call [dispatch] or something like that. Usually, now, we tend to-- a lot of of the downtown rigs will ask for fire companies when we're going to-- even if it's a simple call, like in the [transit authority]. Just so the fire company-- because no one's in the ambulance where we can communicate. But if a truck's out there, we can usually reach the truck or the engine. And then they can communicate. So we have, at least, an outside source. So if something did turn ugly, we can get more help there, if needed.
Problems - Technology	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	[RE: comms with LE and FF] It's okay, I think. What I don't like is there's so many channels. When you're in a situation where you're really-- you're pressed and you're under the gun, and you're trying to look down on these little knobs and change channels and hit your radio-- or if it doesn't work you've got to run back to the ambulance and try and communicate. That's not safe. Now, mind you, we don't really have issues like that. It

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								could be much better though.
Problems - Technology	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	[RE: too much technology or information] I think that people might say that as far as like the heart monitor, [LifePad?] 15, it's a lot. That device does an awful lot. Just the recording alone and what you do and send those runs over Bluetooth and do all kinds of stuff with that. I think that the addition of having such intense technology is intimidating to those who were maybe skating by or the thought that now they might be of the mind-set where like, "Oh my God, well I could get caught for what if I didn't do that or--?" And it makes them fearful. So now that technology is causing anxiety because they're wondering, "Oh, am I going to get in trouble? I didn't send that run. They're going to know." We download the runs from a distance. We can do that like anytime we want.
Problems - Technology	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	The LifePad 15, it's a newer model for us. It's a better monitor. So I like it. I like the fact that it can do all that stuff, but I know that people who are maybe 10 years older than me, they don't like it. They don't like the change in technology. I was younger, so I can go with that. Now, the older they are, firemen included, they do not like technology... They do resist it. Yes. Are you kidding? I can't get these old firemen-- I'm saying old firemen, and they may be 55, to answer city email. "Now, you know I don't log on that city email stuff." "It's just an email, it's not like it's--" I don't know. Yeah.
Problems - Technology	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	You could easily have a radio glitch, something happen, especially if you're at a fire at a high-rise and whatever band you're on, if it's not the one that bounces back and forth, and you don't know what-- you're on the wrong one and you can't hear communications from someone who is only 10 feet away from you, that's bad...
Problems - Technology	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	...you can go on YouTube and listen to fires in [City]. I don't know if you ever have, but the [Address] fire, that was a good one. That was very good communication. There's some out there where you're like, "Oh my God. They're not even listening. Dispatch isn't even listening to what they're saying." And that's because they're being walked on by everybody else. Too many people are talking at the same time... That can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								absolutely be an issue. That and your buildings, your cell signal-- your radio signals I should say... I would say maybe not real common, but it happens. Yeah.
Problems - Technology	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	Subway channels are the worst. And you have to be on subway channel or else you won't be able to hear anything. High-rise, terrible. I mean, yeah, if we had one device that could get us from subway to high-rise to whatever, that would be ideal. Because remember, when you're going into a subway and you have an incident, not only are you worried that you're not going to be able to communicate. That's my biggest concern. If I can mitigate what's happening down there, how am I supposed to get help? I got to run all the way back up there just to get a signal? I don't like that at all. I think that the one thing that we lack is probably-- that's probably the worst, it's the subway incidence.
Problems - Technology	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	...Communication on the radios is a little sparse. I mean you know really I mean this radio we carry it but it doesn't work once you get out of [name] really so you have to be on the truck radio. You still may not get to anybody. When you get to the hospital you have to tell them you're at the hospital but our only hospitals our in another county so when you get there they don't reach so you have to know exactly where in the road to call dispatch and tell them you're at the hospital or they won't ever know. You got to call them on the cell phone so I mean you know it's just rural EMS and you just deal with it.
Problems - Technology	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Excuse me our handheld radios do not. They don't work. We can reach from here to the dispatch center but it's only a couple miles that way.
Problems - Technology	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	A lot of the time you'll have to call but still you'll run into places out here where cell phones if you don't have any service either. For example, the place we just went had no cell phone service so you know being able to know where you're going it was an unmarked dirt road off of another dirt road and if you didn't grow up here you know been here for 30 years or you didn't have GPS you wouldn't have found that so cell phones are important but you run out of reception. I mean as soon as we got down the dirt road reception went off.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Oh sure yeah. I mean you use data you know that you're paying for but and we have GPS's but the GPS's are spotty. We can use the GPS though it's just easier for me to type it in my cell phone so I often times will do that. I mean if it means us getting to the call I'd much rather do that than ride around for 25 minutes trying to find the call.
Problems - Technology	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	[RE: communications out of the truck] So for the most part here you hear dispatch calling to see if you're okay. So you send somebody back to the truck to tell them you're okay. You can hear on your portable you know it's garbled but you can hear you just can't respond. So you'll tell them you know yeah we're okay then come back. The problem with that is you know service where you just have you and your partner now you're down one in the house there trying to work on somebody so often times if it's a real bad situation we just won't answer. I mean you know we just won't answer until we can get back to the truck because we're more interested in the patient's wellbeing than we are letting dispatch if they send us somebody else great we got somebody else you know. So that's typically what it's like.
Problems - Technology	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	... We just went from an iPad back to paper because something happened with the copyright of this company yada, yada above my pay grade so I'm just filling it out on paper. My other both of my other companies I work for use computers.
Problems - Technology	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	[RE: whether computer is easier than paper] It depends on what software you got on there. Some software's are real difficult to use. They're not at all user friendly. Some of them are very user friendly and but it's all you know a private enterprise deal where whoever's the cheapest price and whoever's direct their license the most that's what they do.
Problems - Technology	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	[RE: status of current technology] Probably pretty primitive in comparison to other places. For 2017 we shouldn't be having problems with the radios like we are. You know we shouldn't I understand that cell phone signal runs out but when I look at the [name] on the TV it's completely covering [name] so I'm having a hard time understanding

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>why I don't get service out here you know so service with your phone, service with you know just have repeaters. If you can't communicate think about the firefighters in [name] that were taken hostage in 2010 I believe. If they didn't have radios that worked I mean how would anybody have ever known? Out here you get taken hostage something happens to you and you can't get out what are you going to do? You going to crawl till you get service somewhere? I mean so it's the communication technology is pretty primitive and nobody seems to want to pay the money to fix it because it's not a big deal to the commissioners. You know they can't just spend the money on it so I fear it'll take somebody getting hurt or a lawsuit of some kind because the crew couldn't get somebody out ended up passing away or having long term effects from a stroke or something like that, the crew was trying to get on the radio, couldn't get out, the family sues.</p>
Problems - Technology	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	<p>[RE: technology getting in the way] Sure I mean paper reports are the easiest you can get. I mean they were quick. I had paper reports down to a you know a 10 minute deal and it could be a complete report you know now I got to write my paper report but I can't write my narrative yet so I write my paper report with all my demographics then I go on to the computer and write my narrative then I have to go to a separate computer app to pull up my times to write on my report and then after that I got to take a copy of it and put it with whatever drugs I use, submit that, then I've got to put my we used to have to put that into a computer system then after that. So I mean which one do you want us to do so they went to the computer. That was good because it was all in one place. Everybody sign on it and just submit it and it's done. Now we're back to writing on the paper, typing the narrative, looking up the times and putting them on the sheet then you have to put them on the big sheet that goes in the computer. So yeah it gets in the way. I just wish somebody would decide whether we're going to go paper or computer. Computer does take longer because you have to wait for the thing to load, you got to wait for it to fax but it does a lot I can do a lot more fairly easily than before where somebody else would have to look at my</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								report, fax it, put it in for billing and now I can with a push of a couple of buttons I can do all that so it saves that person other job basically.
Problems - Technology	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	[RE: situations when the in-car computer doesn't work] I mean your computer shuts down so you're so used to hitting route okay now I know how to get there you know well if you hit route in [County] we get in we hit responding we do everything off our Toughbook. You press responding, route, figure out where you're going, figure out what you're going for, read about it, go. Here you don't have any of that so everything is radio best but if that tablet in [County] goes down your radio traffic goes through the roof and you know it's hard then to figure out where you're going, what cross street you're going to, where it's at because you're so used to using it. So that's a detriment I guess.
Problems - Technology	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	[RE: communication when dispatched to a call] ...And then of course we let them know that we've heard them and either clarify information if we couldn't understand them, if the radio was staticy whatever and then we respond and then once we get on scene we radio back in, give them our mileage, let them know that we're there and they usually check on us every 5 to 10 minutes something like that which in this area we're very rural so there's large parts of the county where we don't get any radio reception so once we get to where we're going our communication with dispatch sometimes is null and void.
Problems - Technology	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	It's very rural and [county name] I think is I want to say the third largest county in the State of [state name] and I don't know exactly the details of the radio system here but you know if we're close by they work pretty good but there are far stretches to the ends of the county where we have absolutely no reception whatsoever and then you know dispatch will try to call us on our cell phones but most of these places you don't have cell phone reception either so sometimes you're just kind of stuck out there and when they can't get in touch with us if they have a deputy that's available they'll send a deputy in route to come out and check on us and make sure we're okay which most of the time we're fine it's just that we can't hear them.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	[RE losing radio communication] It does pose an issue. As far as I know no one has been hurt because of lack of communication but there are definitely calls where you need to be in touch with dispatch. That's your really that's our lifeline. If we get on scene and we have a lot of psych calls so if we get on the scene and there's a psych patient that is planning on hurting themselves, hurting us we're the first people a lot of times that have contact with them and if we can't if they don't know for instance they don't know it's a psych patient, if they do they try to send out the Sheriff's office but if they don't we get on scene and we realize oh, this is pretty bad and we need help if we can't communicate with them they have no way of knowing...
Problems - Technology	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	[RE loss of radio communication with dispatch] ...And then in that 10 minute timeframe or whatever it is that they go by has to pass before they and they don't communicate with us before they say okay we need to have a deputy check on them and reality ten minutes could be way too late so for us to not have communication is really bad not for just our safety for our patient's safety. If we get on a scene and there's a cardiac arrest or something like that and we need backup if we need an extra set of hands someone my partner and I both need to be in the back of that truck with the patient we're going to need someone else to drive and we tend to back each other up when we have calls like that but if it doesn't dispatch out that way and you don't know until you get on scene and then you can't get out to your dispatcher you're kind of on your own.
Problems - Technology	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	We do. There are times when the radio is just really static so dispatch tries to keep a list of who is on the truck each particular day and has our cell phone numbers and sometimes they'll request that we call in because there's information they want to provide over the radio that they don't want the general public to hear especially in a rural area like this everybody listens to the scanner so they know what's going on before we do sometimes and there may be especially a lot of our elderly patients they may keep a key hidden somewhere for us to get access to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the house. Those aren't things that they can say over the radio so we'll try to call them on our cell phone if we have service to do that.
Problems - Technology	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	[RE: communication with FF and LE] If we have a fire for instance and we get dispatched to that fire unless I switch over to either their channel or I put it in scan mode I don't hear their traffic, they don't hear my traffic but you can't keep it on scan all the time because then you also hear SO's so every time they pull over a car we hear that information and if you have a patient you definitely don't want that going on. We can speak to if I need to speak to SO directly I can either go through dispatch or my MS channel or I can switch over to SO's channel and try to get in touch with them that way. I can do the same thing with fire.
Problems - Technology	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	[RE: switching radio to FF or LE channels] I mean it's easy to do as far as you know you're basically just turning the knob and with this particular radio which they're all really old but it'll show you who you're talking to like this is [county name] and when you switch it it'll say fire or SO. It just depends again where you're at in the county because regardless of what channel you're on you may not hear. SO seems to pick up a little bit better than us.
Problems - Technology	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	[RE: state of technology] We're pretty far behind compared to other counties in the state and elsewhere I'm sure. We're one of the few I think that even do paper reports. We did have a system they finally got one last year and it was horrible, didn't work out so they've done away with that so we're waiting now to see if the county picks up something different.
Problems - Technology	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	[RE: technology getting in the way] Yes especially when we had we had like an iPad system to do our reports and they were absolutely horrible. You know and the bad part is is that our county tried to get us a good system and unfortunately we can't afford what some of the other counties can afford so it is a price thing and it ended up being more of a headache than anything...
Problems -	EMS	R	Field	36-45	5 or less	Female	EMS-	[RE: trial of iPad reporting system] ...It took 2 to 3 times as long to do

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder				R-019	your report which when you have a day where you only have 2 calls it's not that big of a deal because you have plenty of down time to get that report done but when you're running back to back calls and you're on a second call and you haven't even gotten to finish your first report it's very frustrating and they shut down a lot especially when these things depend on internet and we are so you get out here somewhere and then the information the things that you need won't load so then you just kind of got to wait until you head toward [City] and pick something up and go from there.
Problems - Technology	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	[RE: technology requiring internet connection] Yes ma'am. I think that when they're bringing in technology I think they and maybe they look at this but it seems like they don't to me because I'm on the outside. I'm just the person that uses it. I don't know the ends and outs but it seems as though when you're in a rural setting that those things should be considered when they're choosing yes. There may be a cheaper way to go and it maybe budget friendly to our county but when we're one of the more rural counties and we have all of these areas that we can't even get radio reception, we can't get cell phone reception then you need to recognize that some of these things are not going to work for us.
Problems - Technology	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	Yeah there are people that definitely don't want [technology] as far as our paperwork goes. You know especially some of the medics and EMT's that have been here and been in the service for 15 years they like the old way, they don't want to learn new technology because to them it's kind of cumbersome and a little bit harder for them to pick up and learn so they would much rather do what we're doing now...
Problems - Technology	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	...I think of most people when you first go in to EMS, fire whatever it is that's probably one of the biggest fears as silly as it sounds is talking on the radio because we have no experience and we have no idea. It's silly the new people they'll just push the button and start talking but there's that little delay so you push the button you've got to wait for a few second delay and then start talking. It's just little things that could make communication much easier so I think it's something that we should talk

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								about more.
Problems - Technology	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	I think once you've got it you got it unless that technology changes you know these are pretty old in comparison to other radios but if we were to upgrade then you know the bones I guess push the button to communicate and turn the knob to turn channels very basic but I think that any time a new technology is introduced whether it's a radio, computer what have you then there should definitely be some training provided to make sure that everybody is proficient not just that they can turn it on and they can talk on it but to be proficient at it.
Problems - Technology	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	As far as technology and communication I don't think so. It would be much easier if we had better technology that's for sure. I love my job and but that's one of the more frustrating parts of it is to be somewhere need help or need to communicate and not be able to and I love working in a small community like this very rural. You get to see a lot of those people you get to know them by first name and a lot of the folks are related and stuff like that but it's also difficult because they all listen and then so if Aunt [Name] down the street has had a cardiac arrest they hear the address on the radio and then you've gotten people at the scene that you're trying to take care of your patient then you've got family members and they actually had one this morning and they had all of this family that was rushing them. They were only on the scene for 7 minutes which is extremely good and so that's frustrating.
Problems - Technology	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	[RE: public frequency scanners] They do all the time especially older people. You know they sit there and sip tea and they listen and hear things going on and they're not the ones that you usually have to worry about showing up. It's the you know the middle aged or the younger people but especially if there's an accident. Everybody it's like a train wreck everybody wants to see what's going on and you know if they realized some of the things that you do see and the fact that those things can't be erased they wouldn't want to but it's sometimes hard for us to do our job when you've got so many people that show up...
Problems -	EMS	R	Field	36-45	5 or less	Female	EMS-	[RE: public frequency scanners] Like I said the family is one of the big

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder				R-019	things because this is a family member. They're upset, they're angry at the situation. They may not be angry at me but I'm the person they're going to take it out on because regardless of how fast I move or how efficiently I'm doing their job all they can see is that their family member is hurt and no matter what I do it's not going to be fast enough or good enough at that moment so those are the ones when psych patients and things like that those are the ones that it's scary not to have a working radio because if I need help I know I'm not going to get it because they don't know...
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	So I have a cell phone, that's an iPhone, that's super helpful because I can get emails any time. I have a personal cell phone. I'd say that public safety is probably on the back end of technology, because we didn't have these-- I had my personal cell phone way before the department gave me one, probably years.
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Although, remember what I said earlier, we're all on the same channel, so if somebody says, "I need help," or somebody says, "I need another line," everybody hears that, and we will also start to move in that direction. They're not just waiting for me to say it. So that's super helpful that we're all one. Now the downside of being on the same channel is, picture you have five kids at home and everybody has the same phone number and line, and when you're on it, guess what the others can't do? They can't talk.
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	And also, technology-wise, dispatch, we have a certain number of dispatchers. You can always overwhelm any system. There is no such thing as a bulletproof system. And so we have a certain staffing level. And when we have a fire, we also put a dispatcher on it, meaning they're listening to that channel with the people inside. And they are dedicated to listening to what's going on.
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	The bad part is that most emergent things happen in that first 10 minutes and you may not have that help quite yet to hear. So [Name] does rear its head. So technology with radios, technology with calling on the phone, taking pictures, using thermal imaging cameras. Computers

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								help us in staffing and doing reports and just, the more administrative stuff. Right now I find, kind of, a roadblock on the network part of it. So we're linked into a network, but as soon as I leave my desk, now I've lost my ability to operate administratively as a battalion chief.
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	So if I said, "Hey, I want Google on that." Before I had this, I said, "I need Google." I need Google because when I show up I'm going to Google Ethyl Methyl Terrible, Death." And they're like, "Yeah, we can't give you a browser because that opens us up to--"
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Yes, location detection. So seeing where they are at, I know that our new air packs have the ability but the software isn't there yet. So to send out how much air they have, that's a really big deal because as people get close to low on air, it doesn't tell me where they are in the building, but it tells me how much work time they have left. And actually older software allowed us to have that, but something glitched about with [Name].
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	I know where it's at? if I could-- and we have printers in the back of our car to help us, although I will tell you it's anything that's meant for a sterile environment. Computers are ready, printers are glitchy, mine probably works maybe 40% of the time, I'm saying. So I don't really-- I can still--
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Like the greenbelt, if you go down obstructions or below grade, then that can be an issue. In high rises, repeaters, they go to direct which isn't monitored, but it's a powerful radio-to-radio.
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Well, if you're down right here, and I come into this room and let's say you're two stories up, or whatever, we have certain techniques and strategies to try to find you by listening, going in that direction. It was a training issue, we gave them the Pak-Tracker to just see how it would work. They went in and tried to find and ran-- because it still points to you even if there's a wall in between us. And they got caught up in, I know the direction, but if they hadn't used it at all, they would've used just basically a rope, done a right-hand search pattern, and they would've kept going. They wouldn't have just been so focused on it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	[RE: monitoring capabilities, relying on the measurements] Because it was raided from somebody in prison and how are they going to get a hold of weapons-grade anthrax. This says it's not a protein and so we run down that road. So we can have a false sense of security with technology, so you really have to take that into account.
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	And I'll say this, the more integrated it is into our protective equipment that it's not so ancillary or exterior that it bogs us down, the more-- because I really am asking somebody to be a triathlete. And all these extra clothes and anything that's cumbersome, wires or anything, is going to be a hazard. And so the more streamlined we can make it, lie faster, longer battery life, all those things, protection--
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	I've got more buttons I've got to deal with now that don't--
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	That's a great thing because as I mentioned when we started this, our entire discipline depends on talking on these things. Whether I'm inside, outside, in the wilderness, in a big tall building, my success to bringing that instant under control depends on me being able to communicate down on the radio. So now that everybody has them, that's a great thing but the flip side of that is now everybody has a radio and everybody can talk, so--
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	So, we have to struggle with-- you couldn't interview a firefighter in this city or probably any city that would not tell you that radio communication's a problem on fire ground, or in an emergency incident, because when I see something important and I want to talk about it now all anybody has to do is get on here and talk.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	And in our organization whoever's got control of this wins and gets to talk. There's some on that channel, and so that has been problematic in some of our-- people that should be talking and saying things can't get out on the radio because someone else is talking. And so, I know some departments handle that through certain people. People are on different channels, or something, people have the ability to talk to certain people.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								In our organization, there's no difference--
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	We try to train our people on what we want them to say. I think one the biggest, one of the bigger problems we have in terms of our radio is that the more people that show up on the scene, now that everybody has a radio, the more that talk and can garble that message, right? And so now suddenly you have lots of different viewpoints and what I'm responding to and what I'm-- if I'm not there, if I'm not looking at it as opposed to a training component where I'm saying, "These are the high points I want you to hit when you talk on the radio."
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Q: I see. Yeah. Because everybody can hear the conversation, right? SME: Right. And if I'm talking, it prevents you from talking.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	"Watch out for the wall." So it's two totally different messages on the same incident scene, and whoever has control of the radio wins. That becomes problematic. Now there are ways around that with this orange button, but--
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Sure. There's been times where, in a way-- I've been on incident scenes where the technology has failed. And radio systems or channels have failed, and completely prevented our ability to communicate with each other. Other than line of-- right? I mean right now I can communicate with guys in the next room, just by not moving, by pushing this button. If that fails, how do I communicate with the guys? And I can communicate with you, because you're right here, but I can't communicate with them. And so it's a communication failure, and it's technology failure, that complicates-- when we rely so heavily in our job for this to work. When it fails - which is rare - how do I communicate?
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Sometimes there's too much technology. In a sense of-- right now, I've got computers in my fire truck that have lots of really good information that, sometimes we think, there's a lot to look at there. And if I don't have time to look at it, based on how far I am from the emergency scene, they can be overwhelming. And it can complicate things. So, again, simple can sometimes be better. But having the ability to use technology--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								sometimes we don't have time to use all the technology that we gave at our disposal.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	[RE: SME's daughter can find phone easily] She goes to a computer and she types in Find My Phone and it pings the GPS signal off of her phone, and she goes, and she finds it underneath the couch or it's on the bus at school or what have you. And so that's kind of where I think I'd see us going is our-- if everybody in the globe has the technology to find their phone, why can't they find me based on my radio?
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	Q: Tell me about your communications equipment. How would you describe the communication equipment you commonly use? SME: I would say on a 1 to 10 scale, it's an 8 on a regular fire ground. Inside high-rise buildings, inside buildings with lots of metal it's a zero.
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	Q: How would you describe the communication equipment you commonly use? SME: If I go into a basement of a high-rise, I have zero-- I might as well pull my cell phone out and call-- and call [crosstalk]--
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	Q: So cell phone works inside a high-rise? SME: Some of them. Depends on which one but you can go from different buildings, some buildings have repeaters and they have different things. But at this day and age, the technology's way too good for us to still-- to walk into the hospital over there and all you hear is, "Boo," and it's that out of range signal and you don't-- yeah, and that's the brand new hospital at [City] at [Street] and [Street], it's--
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	I don't know why. I was blown away when I walked in because it just opened, so we did a tour and I walk-- when we walked in the emergency with a patient. Today we walk in, our radios balk and they give you out of range signal.
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	They might be working on that but it's our worst, it's a call that we need the radios. We have crews that operate all over the building. If there's a building on the eighth floor we're going to have four crews operating, just say, on the eighth floor, we're going to have another three crews working on the floors above and another three or four crews working the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								floors below, and then we're going to have a crew outside set up the FDCs, we're going to have a crew in the lobby working the elevator, we're going to have a crew at the fire pump. And they all need to communicate to the command post and it's usually a nightmare.
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	[RE: radios] This microphone has a drain in it right there. You see that hole right there? That's a drain, which sounds good... But they went ahead and covered, like I can't change the channel on this without taking the plastic cover off, so... I can pull this off and see it. You can see it on top also but it's not user-friendly. This is what we're used to and the clip was on the back, the clip was right here... And it's two pieces. It's two pieces, right, so this gets lost in the cab, but the covering... not being able to see this and changing channels is, I mean, I think after that many years it was a shame that this was the solution.
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	[RE: radio] So, I can't change the zone... without taking the cover off. But I can change the channel... And that's not good because when I go to traffic injury, I'm here. But say I leave that traffic injury and I got assigned to fire, then I have to change... I have to change this.
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	We used to be able to change the channels on the top of the radio too-- we can't do that anymore. Now, that's probably a good thing. They did that because of firefighter safety because you don't change the channel but, so... Yeah. I mean, it can get hung up on stuff. That definitely can happen, but I've known anything else.
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	You know what I mean? The cord, I think one of the problems is it's very long, which helps you in some-- again, they can wrap around, but it can get hung up on stuff like wiring--
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	One of the things I would have wished they would have helped out was the radio feedback. So if my captain is talking on the radio and I don't turn my radio almost off, all you hear on the other end is garbled radio feedback. You know what I'm talking about, feedback in the radio?
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	Feedback is a huge issue for us. And what it leads me to do is I turn my radio down and then I forget to turn it back up.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	Yeah. I can buy a Garmin or whatever. I mean, my cell phone's not waterproof but it should be.
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	So if you rely on-- and if you rely on, if there's a storm and the computer's down and the mapping's down, now you really don't know where you're going. Like I said though, I don't know the whole city but I have a general knowledge of the city. But the rescue runs a big portion of the city but my first-due area that's--
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	We've had a few times, now, where there's been some issues with a few of the radios, and batteries, and stuff like that. And some of those issues are not known until after the radio's been used for a little while. So like we've had a few radios now, you turn them on, they just turn themselves off.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	So it just seems like we have people that think they have [inaudible] service. When their MBC is down like, "Oh, we don't have to do anymore. Our computer's broken, we're out of service." And so I see that as the negative side of-- I feel like we've kind of have almost had an over-reliance on technology.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	Well, we talked about the failure of just the systems. Sometimes it's just the learning curves. The only people and weather, obviously it can knock systems offline. And just maintenance. That's probably our big one. Sometimes we have to take systems down to do maintenance, which is an opportunity for us because then it forces people to go without that technology.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	Or when it breaks and it that-- because we do have-- people lose their, we call AVL, automatic vehicle locator, that sometimes it loses the signal because the modem or whatever in the truck broke. People will complain because they're not being tracked or they were not anywhere near that call because the last place the computer saw them was here, so--
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	Now I could see that being, okay when that one breaks then you lose everything, but I know that you could get a radio that you could do your

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								status, your-- if I'm an available station or if I'm responding to a call, you could hit the button on the radio and stuff like that and more of a device it would-- our MBCs are mounted in the trucks or locked in the trucks, but we're looking at going towards tablets, so once you leave the fire truck you could take that with you.
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	Yeah. And I'll tell you, a lot of times we'll use our cell phones on-scene to call each other. Sometimes there's things, a lot of where we work downtown, we get in some of these buildings, these huge buildings that are made out of concrete. We go one floor underground and radio communication is done for. You can't talk. So we'll try and go to our direct channel, which is kind of a walkie-talkie mode, that works sometimes. But sometimes, it's kind of funny, with all the technology that we do have. We had a call a couple weeks ago, where we were getting somebody unstuck from an elevator. So we had people down in the machine room and we had people on the fourth floor. Radios don't work. Direct is kind of garbled so we just were calling on our cell phones, talking to each other. That works for us but no one outside of that and dispatch didn't know what's going on. And we have a lot of that downtown where we have radio disconnect when we get inside these big buildings.
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	No, the only thing is-- I know our high-rises are supposed to have built-in communication systems with inside repeaters and things like that but there are dozens of buildings in downtown [City] where we go in and we walk eight feet inside and we can't talk. We get the little beeps that your radio's out of range. In one building, it's a brand new hotel. It's a JW Marriott. Beautiful hotel. Hundreds of dollars a night to stay there. And the fire control room is in the first level of the sub-basement. You go down there. You can't talk. So you're at the fire control room. You can't talk to anybody outside. You can't talk to anybody above you.
Problems - Technology	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	...but there's an emergency ID thing where it changes channels and, basically, it's for if a firefighter goes down in a fire or there's a mayday situation. There's an activation button which they made a lot larger, so

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it's more user-friendly when you have gloves. The only problem is these radios, with their actual holster, are a little bit bigger. Without the holster, it's fine. But the design of the holster is to protect the keypad. So when we try to stick it in our coat pocket it's a little tight, but it fits. And the other thing that I think we've all kind of agreed on is the antennas aren't very flexible anymore, at least not on these radios.
Problems - Technology	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	Accidental. Yeah. That's the term I was looking for. Accidental activations. But I'd rather have it easier to get to when you need to get to it than trying to fight around with little small buttons. Excuse me.
Problems - Technology	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	We have TICs, thermal imaging cameras. This actually kind of goes back to the radio thing. On the ladder, the TICs are actually a lot larger than they are on the engines, which, we're already carrying a lot of equipment. Usually, it's just clipped onto our air packs, but I think in that situation, smaller is better. I think the ones that we do have on the ladder, though the batteries do last a lot longer, I think they only last for maybe about 45 minutes to an hour if they're strictly on. So maybe a little bit more battery life on those would be nice. But at the same time, a smaller more compact thing. But if you're going into a fire, you're going to use that camera pretty quick and usually, fires are out in a pretty fast manner if you're actually going inside and using a TIC.
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	Our data terminals on it are really [inaudible]. Our MDCs just kind of slow to operate and kind of-- you got to kind of dig for information. It's not just you whip out your iPhone and you have a map and you can move it around, do what you want to. It's just a lot of-- the technology on that is kind of a big hiccup. But yeah. I guess we're probably on the cutting edge of technology on that step. I mean, it's just not there for the fire service or the emergency services in general.
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	It's expected that you should know your area and know how to get there. We'd have just that function on our MDCs that we can route to a call. Maybe that is the biggest problem we have with technology, it's just horribly out of sync and, you get turn right now, you know. Five miles after your-- or, just continue ahead, and, it's just kind of odd directions.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								But, yeah. There's that kind of stuff, too.
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	Just the big thing is-- so it's kind of-- sorry. There's a case covering all the buttons that you need to have taken out of the case to manipulate the hard buttons on the front. Yeah, yeah.
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	So when we went downstairs, we're on just a regular channel, repeated channel; didn't get out, just because we were down in a parking garage. So we ended up having to run the incident on the direct channel.
Problems - Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	So that's a department cell phone, but one of the things that our guys do is they get Active911 pushed to their personal cell phones. And we use that as just kind of a redundancy issue of tones didn't drop, maybe there was something wrong with the radio at the station and it still alerts on people's phones. So they're like, "Well, maybe I need to go check and see if there's something going on." So that's the only way in which we would use that. Other than, obviously, we get a lot of news media and they have a single point of contact. And we could go to a major incident and your phone will start to blow up from the news.
Problems - Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	They're stationary. That hampers us, because there's times that you would like to pull it out and use it. We have had three or four [Event] in a 24-month period, and so you're not working out of the back of a vehicle. You might be in a building. This is also true for, say, a wildfire. Any Type 1 event. And so we don't really think of that because 90% of what we do is out of the back of a vehicle. Now, the cops on the other hand are much smarter than us because their MDCs actually can come out. That's something [that's being?] played with. And there's a difference in the views of security, in regards to the firewalls, and whether or not somebody's going to steal this, and all these kind of things. When you have the IT Nazis, it's easier to just say no and lock it down, as opposed to make it useful for other purposes. We've got a \$10,000 computer system in each of these apparatus, and all I can do is push a button, I'm on scene or I'm not. But if I wanted to get Google, and say, "Okay. Well, what is this material that's in a hazmat event?" Well, now I've got to use my phone. That doesn't make sense.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	And then the other piece of that is actually scaling things to actually something that you're going to use. We buy a system, and we buy a radio that's going to hold a million channels in it. When am I going to use a million channels? And so I'm paying for capacity that I'm not probably going to use in a life of that piece of equipment.... Right now, most of those systems are passive, so I would have to know, oh well, number one, somebody's actually gone out and done a pre-incident survey, or a tactical survey. What is the information? Is it uniformed? Does it have pictures on all four sides of the building? Does it have a picture of the roof? Does it tell me the building construction? The size of the building, the closest water supply. Yes. No. Maybe. Oh, well. So I can push this and see is there's a pre-fire plan, but it's not really pushed to me to point where it's useful. And so, since you don't use it 99% of the time, when you need it you don't have the tendency to reference it. So, as an example, it would be nice if you knew, if I'm going to an EMS call, what is the information that I would want? Well, if it's an apartment building, the building number, maybe a map--
Problems - Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	So we have GPS in the vehicles. We don't have GPS for the individual. Now, obviously GPS becomes a whole new issue because if you're in a building, then you're not going to get that. But we certainly could, with a mesh network, have the ability based in the vehicles to triangulate based on where somebody is and their radio. So when you're looking for a firefighter, that would be ideal.
Problems - Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	But every once in a while, that becomes an issue because during these events you put more resources in one area all competing for the bandwidth of one tower; whereas before, under UHF or VHF that wasn't such an issue.
Problems - Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	MDCs were dead terminals. All you could do was push on scene. You got call, text, but no mapping, no GPS. We didn't have AVL and sending units based on closest unit, so that's changed. IDs on your radios, that changed.
Problems -	FF	R	Supervising	46-55	21-30	Male	FF-R-008	And there's an automated voice, the speakers open and assigns it to the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Field Responder					MDC, and there's no thought process. That becomes an issue with you have multiple calls and it just cascades. Because of experiences of that they've learned that, "Okay. Well, there are incidents where we might want to turn that off." Right? So, that can be overwhelming because now you've got more resources than you need, or maybe not enough resources.
Problems - Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	Now somebody's like, "Well, what? Wait a minute." We've now caught on that this is probably a single event, all right? So sometimes that technology for the 90% or 95% , it requires some human intervention to step in on the 1, 2, or 5 percent.
Problems - Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	That can become problematic. Let's see. Going back to the question. Too much information. Because we do things the way we normally do on a daily basis, again, the same concept, the 99%. You have a flooding incident and you're treating these calls as individual calls, and you're keeping a record of them. It bogs down the system. So now your MDC doesn't work as well, and you've got this just laundry list of incidents. And which one is a priority?
Problems - Technology	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	I don't know what the temperature is on there, like how hot it can get before it malfunctions. Probably something I should know, but we put it in our coat pocket in case we get a fire. That's something I should probably be aware of because we have a thermal imaging camera. We had that melt on us before.
Problems - Technology	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	So you'd get dispatched off a radio which we do over here, but we don't turn ours on because we have speakers and stuff. They didn't have tones at their stations so you had to monitor a radio. Which, I think that was probably not beneficial, I guess because at nighttime you'd have to monitor everybody's calls in the area which you didn't get any sleep.
Problems - Technology	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	So we didn't get a replacement. It melted, but I think it still records. So I think it still works. It's just they're super expensive for those.
Problems - Technology	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	[RE: SCBA HUD tried out] We didn't go to this, but we tried it out. It was a microphone attached, so we wouldn't have to use radios. But we found

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								out that it just didn't work, it pulled your mask down.
Problems - Technology	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	But yeah, and even it doesn't really have to be inside, but we don't have a system right now that is fast enough where if they gave us the address, that house would pop up somewhere. Instead of having to type it in Google Maps, find it, and zoom in.
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	So communication's often very difficult..... I mean, we can't go across this area-- something the size of [County], 500 square miles. But if it's a town or a small city or something like that, we have enough capability that we can set up some repeaters on high buildings and get reasonable coverage over a reasonable area. But if it's an incident that's spread out over a large geographic area, like when I responded to Hurricane Katrina, I went to New Orleans but we had resources spread all along the Gulf Coast because that impact that-- such a large front in the Gulf Coast. So we had resources over in Alabama that we were trying to coordinate some stuff with. And it was still challenging, even with the satellite phones and all that other stuff, just to be able to get a hold of everybody and make sure we were all sorted out and knowing what everybody was doing.
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	No. Sometimes it happens that we can program radios to whatever the local resources are but that's kind of unusual because you got so many variations and bands that they can be operating on. And then within the bands, you got variations into whether they're analog, or digital, or trunked, and analog trunked or digital trunked, and all these different permutations of radio infrastructures that they could be operating on.
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...So early on, when public safety started using radio, they would throw up an antenna on a roof somewhere. Maybe if they were lucky they had a tower that they put it on, and that was the coverage you got. And then they would start complaining and say, "Well, I don't have coverage over here." So they would throw in some coverage solution over there... It was very ad hoc solution. And we still had a lot of coverage problems with that....And as the lower parts of the county have urbanized, we're having more and more coverage problems.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	It's the lower stories and then when you go below grade where we have a lot of problems.... The problem we have is that the new building impact coverage on the buildings surrounding it,
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	[RE: coverage interference]--exist prior to any requirement for internal coverage. So we have a older legacy building that we've never had problems with, they put up a new high rise next to it, oh, all of sudden we've got a problem there. So that's become more and more of a problem, that even though the new buildings we generally have good coverage because of the code requirement, we're overall seeing a degradation in our coverage level in those urbanizing areas of the county because of the interaction of the buildings with the existing coverage, the new buildings with the existing coverage.
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	So there was still coverage problems that we would occasionally hit.... A single VRS often doesn't provide enough coverage
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	Because as you start to go through the building, it provides good coverage on one side of the building but it can't penetrate all the way to the other side of the building.
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	[RE: radio repeaters] We would get channel contention because if I was standing in the middle, both repeaters would hear me and then both repeaters would try to repeat me. And then we would get a feedback problem. Right? It would actually cause a degradation in the signal as opposed to an enhancement of the signal.
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	And that's really great as long as the battalion chief's there but it doesn't help a lot if you're on a call that the battalion chief's never going to show up on because if you're just running an EMS call in [City], and the battalion chief doesn't want every EMS call in [City] because if the battalion chief did, he would do nothing but run EMS calls in [City]. So if you're those providers and you go into some random high rise in [City] where the coverage doesn't work, then you're just out of communication.
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	[RE: Battalion chief's VRS] So it works. It's not a perfect solution.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	somebody basically has to walk back out to find coverage, use a cellphone, or pick up a landline phone to communicate what they need, if they need help or whatever. So that's the most challenging circumstance, is when you got those two person crews, everybody goes into the incident, and then they find themselves out of coverage.
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	Well, out in this area, really we don't have that many problems. But every now and then you walk into just some random house, the radio decides it's not going to work.... it's not going to work anymore. I know the battalion chief's there but the battalion chief's not thinking that he needs to turn on the VRS because we're just at some random house and the radios almost always work out in [City].
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	[RE: what causes communication prob.] .. we have just confusion that gets introduced. I mean, that's just a miscommunication or misunderstanding. And people end up off on the wrong resource. Or they do something like I was talking about where you bump something on your radio and your radio goes someplace that you don't expect it to be.... But if people don't get that, you end up with a communications mismatch because they're off talking somewhere else.
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	They have missed the fact that their radio is on the wrong resource. Occasionally, they get told to go to the wrong resource, and they go where they're told to go, but it turns out that's not the right place to be. That occasionally happens when there's a breakdown in communication between communication centers.
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	But that means users have to change modes on the radio, which we don't normally do. Because 99% of the time [crosstalk] we're using 7 Charlie or 7 Golf. And most people don't get too confused over that, but occasionally, that introduces confusion. So occasionally, there's problems there.
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...But because our new computer-aided dispatch was not available yet, we couldn't move into the new communications center where the new radio system was. So we had a radio system sitting here all ready to use

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								for about 18 months or 2 years but couldn't use it because the CAD wasn't ready.
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	Read their mind and know that they're trying to talk to this group of people and that the radio automatically somehow, magically is talking to that group of people.... so one of the challenges that we have in the fire rescue world is that, it's getting better, but's it been a problem with stovepipe solutions to our needs in terms of our protective envelope and our communications needs... Sometimes those different needs antagonize one another... Now, the bad thing is, if I find myself in that situation where I am trapped, one of the things I want to do is to be able to communicate. I mean, I've got the alarm sounding but I want to be able to communicate. Well, when you go to communicate, that alarm that's sounding is often a problem because as I'm trying to talk on the radio, I've got this very loud alarm that's also in my environment and antagonizing my ability to communicate.
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	if you've gone through a floor or the building's come down on top of you or all the other crazy stuff that can happen, you might not be able to reach that to mute it.
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...Well, you got 10 of us in a smoky room and somebody's bell starts sounding. You didn't know whose it was. And normally, the guy it was, was so focused on whatever he was doing or she was doing that they didn't think to reach back and see if it was them. So everybody's hearing this bell.... And the speaker diaphragms on our SCBA that we're trying to use to communicate on our radio are right next to the regulator. So if the vibralert is sounding, that's a barrier to communications.
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	[RE: vibralert sounding as a barrier to communicate] If the vibralert and the PASS device are sounding, it's really bad.
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	It used to be it was completely unintelligible. The vocoder in particular on the digital radios was terrible at isolating these background sounds, particularly when there is such a foreground sound, if my vibralert's right next to my microphone that I'm talking on.... Listening to the radio, it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								sounds like you and I sitting here talking. And without that, even with no background noise, I would still sometimes be hard to understand just talking through the face piece, using the voice emitter on it. It still distorted my voice some. But now, with this voice amplifier with the Bluetooth, it's like you and I are sitting here talking... So even though I can talk out clearly, and if you're my incident commander, you can hear me clearly, when you go to talk back to me, I'm still listening to this microphone that's on my chest here.
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	-I got the face piece. I'm distracted by everything. It's oftentimes difficult to hear me. Now, there are solutions out there that require a bunch of wires and stuff. Wires are bad. Wires are bad because when I got out on a building fire, I've got a lot of stuff to be doing: getting my gear on, figuring out where we're going, figuring out what we're going to do when we get there. If I've got to be plugging in a whole bunch of wires, it's probably not going to happen.... And even if it doesn't entangle me, for me just to damage it inadvertently because I get it snagged and then I pull away and I cut the wire or pull it out of the port it's plugged into to or pull the whatever it's connected to off of wherever it's supposed to be. Just all sorts of things.
Problems - Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...Battery life is always an issue... Now, the challenge with that stuff is providing it in a way that is useful but it doesn't saturate the user. Because if you provide too much stuff, the user gets too distracted and they forget what they're supposed to doing and it actually becomes detrimental instead of helpful.
Problems - Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	[RE: print out lineups instead of using cell phone] Only because of the screen.
Problems - Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	It's not real time. This is not communicate with our scheduling, with our schedule format. This is hand--
Problems -	FF	S	Supervising	46-55	21-30	Male	FF-S-041	Yeah. And I hate to say this, but it depends on whether you're blocked by

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Field Responder					high rises, if it's a valley or hills—(talking about the radio)
Problems - Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	Or a basement. Sometimes, that doesn't work. (talking about the radio)
Problems - Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	Drive one hand, pick up the mic. Yup. I have to look down, switch over the channel. Yeah. I have to see where I'm going and make sure I'm going the right way. Yeah. There are a lot of things that take me away from let's say driving.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	We don't even have the email on it. Because I tried to install it and it won't do it and there's really no point because we have it at the desk.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	..Hey, we need this not to lock because our emails." We have to basically keep logging in and checking the email because there is no way for us to know that there's an email that's come through.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	Because even if you turn your speaker up all the way, the default Microsoft Outlook notification ping isn't loud enough that you're going to hear it over--over the radios
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	I can't wear a headset. I use portable radios and the speaker. In fact, I don't think any of the four of us wear headsets. I literally can't but-- so yeah, you're never going to hear it over that. You wouldn't even hear it on--
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	That's a huge negative. That affects it. Computer crashes, just the standard computer crashes. The CAD crashing. CADs actually crash quite a bit and they can't replicate it. Why? Some of it's caused by operator error on the dispatcher's part. In terms of on the fire apparatus, the tablets, they're not reliable.... We were going to the tablet shop almost every day because the way that the bracket and the way it was mounted in there, the tablet would shake so much that essentially it'd just shake the thing to death and it would just crash. In the docking port, it would not get a charge because anytime you were moving, it wouldn't be able to keep the connection so it would just die all the time. That's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								across the board. I'd say people call all the time down there at least a couple of units a day about issues that they have to go to the radio shop because their tablets aren't docking, they're not staying charged, the location services are dying on them, they're not tracking accurately and the [inaudible] units they'll drift. Or you'll look and then next seeing that they're out at Andrews Air Force Base but they're not.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	[RE: AVL tracking drift, inaccurate, showing the unit at [Airport] So they shouldn't be showing-- yeah. They shouldn't be showing out there. So it's not reliable enough yet, location services specifically. Because of the drain on the battery, it's got to balance between the two.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	...I don't 100% know. I know that the way it pings or refreshes, and that's why the CAD is crashed a bunch of times on there's multi-alarm incidents because it wants to refresh the information. I want to say they said something like 20 or 30 times a second.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	..it's just too much-- you can't pull it quick enough. You can't process it quick enough. And then even the way ours is set up, we're Intergraph. I want to say that they even have it so it's even-- the units they're already dispatched, it's even trying to refresh their location. So it's just trying to get too much data all at once. So it's just not-- yeah, it just freezes up the system and freezes up their, I guess, their dispatch station or their computer.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	Yeah. Well, the way it's set is if they hit a button, well guess what just stays in queue until it reboots itself and unfreezes. So now it's not a third alarm. Now it's just dispatched a fourth alarm and nobody knew or nobody knows because it just comes up and just sends it out.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	That's literally what happened on a tablet. They'd say, "Oh, no, no. You didn't--" We would unplug the docking station, the cord that would go into the docking station, and plug it directly into the tablet because it wouldn't charge on a docking station. And our tablet shop would say, "Oh, no, put it back in there." And they'd say, "That's your problem, is it needs to be through the docking station. Oh, no, we fixed it." And you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								would get maybe four, five blocks out of the tablet support center and it would crash again and die or turn on and– yeah, no, at that point, we just– you get to the point with some of these IT people or some of the support staff that they– a lot of them, I mean, they don't actually know what they're going to do, they know what they're trained to do. And they're trained to install a docking station. They're trained to follow these steps for troubleshooting. Well, if they can't fix it with that then they'll just keep telling you, "Well, no you're doing it wrong. You need to do it this way", "No, it's fixed." No, it's not. So we just get to the point where us, as a department, or even us as firemen, we just stop asking. And we'll just let it stay broken and we'll never actually get it fixed because–
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	I actually like the older better. I mean, we have more channels, we had more talk group. It's more talk groups, more channels, which is nice. You have the ability to separate stuff out whereas we used to only have, I think, 10 channels in [County] when I started. And they still operate kind of strange with their radios but you didn't have the ability to talk [inaudible] off stuff. You didn't have the ability to put administrative stuff on extra channels. You had a lot of people stepping on each other and a lot of operations going on in the same channel whereas now you can really break it down. So that, I guess, is good. But we also have a lot of problems with the radios now than we did with those old, basically two-way radios. They didn't break. They were fairly reliable. They weren't computers. I mean, computers have problems.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	...And they didn't pay any attention to the interoperability with these other jurisdictions because a lot of jurisdictions don't have the ability to have the encryption keys.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	I mean, you had some reception issues but in terms of problems, emergency activations are a huge problem on fire grounds because you've so many people moving around with the radios positioned in different spots... And then you're trying to, in a smoky building where you can't see anything, there's zero visibility, one, figure out if you're the one who did it, with everything else going one, and then you're trying to reset

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it with a gloved finger in a lot of cases. So it's just that's a huge thing.... God forbid you hit the emergency button and you have the ruthless presumption or whatever the hell it's called. Then you literally have priority on the channel and there's no way anybody would ever be able to talk over you. That's a huge issue.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	And we've actually had that issue on a fire and it was a fire where we burnt some guys up pretty bad too where one of them's cord burnt through and he had priority on the channel and nobody could talk, nobody could talk over him until the key out time timed out.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	[RE: radio mics] In [County] they recalled them. When they first got the radios they took back all the mics until Motorola could come out with the new ones...
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	..Well, not only do they not follow the script so they can't get accredited, but also even within the way they put their information in, the first thing they can do is they can put in the chief complaint. And that's what the caller tells them. So a lot of times we'll have on fires it'll just say structure fire is the chief complaint. No one calls 911, and when they say, "Police, Fire, and Ambulance. What's your emergency?" goes, "Structure fire." No one says that. Yeah. They say, "No, my kitchen is on fire. There's smoke--
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	...So you get misinformation on that. So now ProQA, they've got one chance to put a comment in. They've gone through ProQA. After a certain question, it triggers it where it sends it to the dispatchers even though they're not done with ProQA and they've put no follow-up comments.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	Now the dispatchers have to send it as quickly as possible, so by the time they free it and everything else, the information still hasn't come into what it actually is. I don't want to say nine times out of 10, but probably 75% of the time, if they don't put that first comment in accurately, the incident is dispatched incorrectly. Because then they'll put the follow-up information, it'll be like, "Sparks from an electrical

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								outlet." Well, we just sent it as a house fire instead of an electrical short because we didn't get that information. So yes, the majority of the incidents that we go on because of our Office of Unified Communication, we're not getting complete information because the call takers either-- a lot of them are poorly trained. They don't put the proper information in. And the whole ProQA model, I think, is inefficient. I don't think it truly-- for fire calls. It's great for EMS calls but for fire calls, I don't think it's right. I don't think it works.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	One technology problem though, speaking of that with the information. So let's say there actually is a fire across the street right here. How many people are out on the street with cell phones [laughter]? So you're probably going to get 50 calls for it.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	So every time a different call taker gets that call, or if it's all at once, they're going to all start it as a new ProQA and send the call, and it's going to automatically send over with potentially the address, different addresses, all of that. Eventually, the same call takers will start taking the same call for that and they just won't put it in....So you have your initial one on the tablet, and you as an officer are going down the road looking at this bumpy ass tablet and you're trying to scroll down to read the comments, and then the dispatchers are taking those runs and they're combining them. So guess what that does. That throws the comments from the new incident at the bottom, so that means as soon as a new comment comes in, it scrolls your tablet all the way down to the bottom. So now you can't see the comments you were trying to read because now you're getting these other
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	--you're getting all these 10 incidents. They're getting thrown on us. Now you're trying to read the comments in that one while they combine another one into it [laughter], so it scrolls that down to the bottom. So technology-wise [laughter], yeah, the way that a lot of these CADs and the way they interact with tablets, their setup is they're not for actually relaying the information or reading the information. It just runs it like a running log, like you're looking at a phone bill, basically, whereas they

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								should be set up more where it's more filtered information. It shouldn't just have all the generic information displaying. And that's across the board. That's [County], that's here, that's everywhere that it just-- the way the CAD vendors do it, it just dumps whatever information is in the CAD remarks all into one rather than actually having it more of a filtered stuff. I don't care what the contact log information is. It should be in the background. I just want the actual remarks.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	So I don't know if that makes sense to you, but it's very difficult when they're throwing all this extra data into a incident and it essentially, now it's defaulting it down to the bottom again as if it's a new message transmitted.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	--spending on Intergraph or spending on these different companies for these contracts, and it's just too cumbersome and it's too-- the changes and the needs in development aren't there. And then because of how much data, you can't-- eventually, I guess, I hear with a new CAD we're supposed to get, you can color the comments. You can open them up more. But right now, it treats it basically like a log where there's no way to open up comments or make it so that--
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	I mean, it's great that everybody-- a safety thing that everybody has radios now, but now that's a problem because of the feedback and the emergency buttons going off. And too many people think because they have a radio they have to talk on it [laughter].
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	[RE: training software] ...It seems like it has problems. It might be a IT thing on our side. I'm not quite sure where the problems are.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	My level of permission, I can only see like half the department. I can't see the other half. So I have to find another guy who's got permission to see them and then get him to assign them a program. Yeah.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	Yeah. So, again, I don't think its the program's problem. I think it's our problem with proper IT management
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	Now with the newer batteries, they're smaller, they don't last us as long, so they're lasting like 8 hours...Well, now the batteries are two years old,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								so that 10-hour battery is really like a 4-hour battery, 6-hour battery maybe. And they're like, "These batteries are horrible." They don't last at all. So they're changing them three times during the day... Well, that's because the battery can only charge up to like a quarter of what it was before.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	[RE: extended-life batteries that will last almost 24hours] But you're talking about a battery that you just added potentially another two inches to the bottom of it. So I'm already carrying this radio that's like this. Now do I want to add it-- we're going back in technology where we're carrying around bricks because we're adding... I mean, we haven't even gotten to, I think, well, I know, our full potential on our portable radios. Motorola's pushing out different things now where the radios can receive picture messages and things like that, and we're not using any of that technology yet. We're not there in a firmware aspect or any of that. So when you start pushing data like like that, what's that going to do to the life of the batteries?
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	So we went from these XTSs, which were long, skinny, stand-up batteries, to Apexes, which are short, stubby ones. Completely different charging [contacts?], everything.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	So we've got all these vehicles that have these XTS chargers in them, and we get brand new Apex radios, and not a single one of them is capable of charging one of those batteries.....And they're like, "Yeah, you need this new charger. They're supposed to go and replace all the chargers." Okay. So, drive up to the radio shop and say, "Hey, I got the old charger. I need a new charger." And they're like, "Oh, man. We're going to have to rewire it, and do all this stuff." And, fortunately, I knew better. I was like, "Listen, do you have a new charger?" And they're like, "Yeah, we got a new charger." So okay. So I went out - it's a pigtail - Unplug the pigtail, pull the little screws out.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	...But when you get the charger, you either put a whole radio in the charger, or you put a battery. But because there's no radio to support-- the battery's L shaped. Because there's no radio to support it, there's a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								special clip that sits over it, right? So you have to use the clip to hold it and put it in position. Well, when they buy the new firetrucks, the radio shop never made sure that that clip makes it to the firehouse. So now the guys think, "Well, I stick the battery in there, and it fits. And it lights up and it starts charging." The don't know that they need a clip to hold it in place. So they go bumping down the road, battery's-- yeah.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	Now, when you have that longer-duration incident, you might not be able to make it back to the firehouse. So now we're searching for batteries to swap out. Now, the department has other means, but did we deploy them? I mean, we have a radio cache, which is a whole other thing that we have available to us.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	[RE: 250 spare portable radios to interoperability devices] Any battalion chief could do it. But it's a matter of how long is it going to take to get there. When the fire department managed it, we could call fire department personnel in. And they're emergency responders, so they can jump in a vehicle with lights and do whatever they want, so to speak. Now it's been taken over by communications, so it's under their purview. They're not really responders. They don't get a lot of the environmental concerns. And they have just more of an office-work mentality in handling things, where we're more about tactical and operational efficiency. So I don't have much faith that it's going to be rapidly deployable. Whatever. At a minimum, we have every battalion chief carrying five portables around with him. So that's--
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	...You go in as far as you can go from there. And then, potentially, you could run out of site of that. So it tends to cover out and up pretty good, but not so much down. So with a lot of car fires, parking garage, things like that, you hit the P2, P3 level and--
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	I know exactly who's keying up. If they push the emergency button, I know exactly-- we get all those features still. Whereas, if we're doing line-of-sight relay or talk around, you have none of that.
Problems -	FF	U	Field	26-35	11-20	Male	FF-U-043	..The problem is you have to manage your alias database. So you have a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					database of aliases, and let's say this radio right here was broken. So I had to take that radio, reassign it to this alias. So now I have to change that alias in the system. And if I'm not doing that--
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	[RE: IT won't allow stream audio over WiFi] "Yeah, it's great, but I can't use the WiFi in the district." If you're going to come up with this, again, potentially mission-critical thing that I can't use WiFi that might work when the cell phone's down, you just blew the technology out of the water, so.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	We had a ton of issues getting stability with the BPNs and everything. And then tablets wanted to connect to other-- and it's better now. But what ended up happening is we ended up-- our patient care reports, because those things tend to come out of the vehicle, they ended up having to give them cell cards. And the tablet, which is your MDT, pretty much stays in the unit. So they let that ride on the router. A lot of that is, there's installation issues. Where they choose to install them, how they choose to protect the installation from physical damage. Everything from we'd put our coats over the seats. We'd throw a go bag over the top of seat. Well, between the driver and the layout guy, they put a router. And there's no protection. And you got these little [Gumby?] antennas, and all your--
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	[RE: router in the rig] We're throwing stuff over the seat, and it's hitting it, and it's ripping wires, and doing stuff like that. So it's physical aspects like that, as well as just the whole IT side of, how is it going to connect? If you didn't plug the firetruck in, and the shore guard shut the power down, then it would boot the router off.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	And then the router would take about 15 to 20 seconds to reboot. So you caught a run. You were lucky enough while you were sitting in the firehouse that it was connected to the guy next to you, so you were able to at least say you're responding. But then, once you went out the front door, you lost the router, so there was a down time. So if there were critical notes coming in 15, 20 seconds behind, until maybe it reboots and then connects, and yeah. So we had a lot of issues with that kind of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								stuff...
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	...Even just things like-- again, it could be the programs, but the MDTs have the ability to take pictures. So let's say I go on a hazmat, and I want to take a picture of said white substance so I could pass it back out to the hazmat unit. I mean, in theory, the way the infograph program works, I should be able to take a picture and send it in a message. It would never send the-- it would never send the picture. I could send messages, but I could never send the picture.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	I should be able to go to metro maps and pull the maps up right then and there. I think that's more of a IT people on our side of things because it would require them managing every image for the desktop on each tablet, times however many thousand tablets.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	..So we have partners with DDOT that have cameras everywhere, right? I can't access probably a quarter of them because [it goes through?] tunnel. It's not piped in. It's just here, and there's no means of getting it piped in. And then, again, the bandwidth on the servers. Yeah, I might be able to see this video, but it's very broken up because, you know.
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	So the tablet is the biggest complaint. It's clunky. It's slow. I mean, if I can pull up my iPhone and get a map of the scene quicker than I can on there, then what's the point? I don't know why it's so slow....And then there's a separate icon and Internet site that has our hydrant apps and GIS. And then I have to go to a third website to get the federal railroad map of the railroad system. And then I have a separate app for metro
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	I was using the federal railroad one, and the map changed from street view to satellite view, which made it harder for me to get perspective on exactly where I was, and I couldn't figure out how to get it back. On my phone, on this one, it's very easy, but for some reason on our tablet, websites always look a little different. And so I couldn't figure out how to do it.
Problems - Technology	FF	U	Supervising Field	46-55	21-30	Male	FF-U-044	Yeah, I've used that actually app twice last [tour?]. So we use it a lot and it's a great resource, but I need it to work every time.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	It's like when you bring up a PDF, there's never enough memory to-- there's always a pause. I can't just scroll scroll scroll scroll. It's like, "Loading, loading, loading."
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	So once I bought it, I probably had the tac sheet loaded up in the first day, my first tac sheet. And then I was playing with it. I was on Drawboard, and that didn't really work. You can go back to Drawboard. Is it on here? Drawboard wasn't intuitive enough for me. I could get it-- one of these icons was the tac sheet, I think. I don't know. I could never get it to work.
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	One day I just clicked on the hydrant app and none of the hydrants were on there. That's the whole reason you're here is for hydrants and [laughter]--
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	So we're on a subway issue and sometimes radios don't work underground. And Chief [Name], calling me on my personal phone, Facetimed. He's like, "Hey look, we're going down here. Come on, come with me." He's like, playing. He thought it was so funny. He was like, "Here, watch the incident." He pointed it towards with this thing sparking. So I'm upstairs in my buggy, Facetime. I can see what's going on in the tunnel.
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Because sometimes it's extremely hard to hear. (talking about the radio)
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	And actually you missed it. There was a fire when I first got here. I could not understand what that guy was saying. And I'm sitting here in a quiet room because he's got his gear on and everything was so muffled.
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Yeah. So also there's our staffing office. So there is a technology improvement, which, I think, has just crippled the fire department...It's ridiculous. So we have one guy who's supposed to staff the entire fire department. And we use Kronos TeleStaff. I just don't think it's up to the job.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	[RE: TeleStaff, supposed being automated program] And yet we, our interpretation of it, is we want to make it fair because the computer wouldn't make it fair, which doesn't make much sense to me [laughter]. You give it the parameters and program it, and it's going to do what you tell it to do.
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	I just want this stuff to work. [inaudible] the computer in the fire-- in the car. I can't access my Office 365 mail... I log in as me, with my credentials, but then I can't bring up-- I'm like, "Really? Isn't that the whole point of this?"
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	So I have to use my phone to try to read the email with my glasses. I can't read my phone without glasses anymore. I'm really mad about that.
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	It is a tiny phone. So my aide, [Name]-- so we went to Office 365. On his computer he's got Office-- I'm sorry, Outlook '13, which, come to find out, the fire department doesn't even have the license to, so it doesn't work. I have Outlook 2010, which works and is still supported. It's like, "Can you guys get your crap together?" Give me the tools; have them work. And it's--
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Centricity [electronic medical records program] would talk every night to PeopleSoft. And there were always issues there because people would show up on our list and some are dead. Most were retired. Not most. Retired and dead people were still showing up.
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	So each apparatus phone could only hold 200 numbers. You cannot add numbers, which is problematic for us because we communicate on a daily basis with the FBI and Secret Service and other law enforcement agencies. And yet the 200 numbers is filled up with lots of useless numbers of different firehouses that we're never going to need to call. So I think the person who implemented that program never talked to the end user of what they actually wanted, or expected, or could use.
Problems - Technology	FF	U	Other Public	26-35	11-20	Male	FF-U-045	[RE: department issued phone] By smartphone, it's horrible because it's not iPhone and I happen to be an iPhone person. But it's a Windows

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					Phone so it does anything. You can browse the net, get email...
Problems - Technology	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	[RE: AMR, 3rd party transport service for non-emergency EMS transports] That's a little bit challenging because they don't have the same radio system we have so the communication-- you would have to go through-- I would have to call the office for you to find-- or dispatch center, OUC, and have them relay the message to AMR. So you're adding a third person--
Problems - Technology	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	So it's definitely a challenge. I know that I did quite a bit of work during the inauguration and it's almost impossible to talk to a federal resource whether it's a hazmat resource or a police entity, anything like that.
Problems - Technology	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	So we have that, but as far as actually being able to pick up a portable radio and talk to an officer, it doesn't happen.
Problems - Technology	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	Yeah. I think quite a bit, actually. I think to have any sort of personal interaction, technology is always in the way whether it's work or not. We're bombarded by emails. 90% of them aren't relevant, right? So to sit here and talk to have a personal interaction, I'm always constantly doing this. So I think, for me, that's getting in the way. Now, that may be relevant. It may need to get in the way but it's still getting in the way. As far as the radio system, we had quite a few issues in the Metro system for a while. Most of it us had changed after we had an incident on [Street] where--
Problems - Technology	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	...But it turned out to be a false alarm, so to speak. But when we went down into the station, our radios had no reception at all. It was so bad that I actually had to get on my phone and call the Battalion Chief, the incident commander on his personal phone.
Problems - Technology	FF	U	Other Public	26-35	11-20	Male	FF-U-045	-- I guess the best example I could give is, however many years ago when we had the earthquake here, everybody's talking on the radio,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					nobody can call anybody on their cell phones. So you're going to get to a point where everything is just jam logged.
Problems - Technology	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...Also, our computers aren't synched to [City]... so we can't just push on-scene and DC won't get that message. We have to tell them on the radio...
Problems - Technology	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...So I know that the federal departments have their own radios and that can be problematic. I know we ran a fire on the Walter Reed Base six months ago and they were operating on their own radio system, but we were responding to them and we don't have their radios. So when we got on scene, they actually handed us their own types of radios that we had to use. Even though, when they respond to us, they already have their own [County] radios, so... Not vice versa. So that was definitely a challenge, and they have one for our whole unit. So our officer got one, but the rest of us didn't have a radio that would work, so that was definitely something we were all like, "Woah. I did not know they still did that stuff. That's kind of weird." ...
Problems - Technology	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	Yeah. So we were responding to a fire this morning, and the driver didn't know the exact location how to get there, and we have maps and everything up front, and the MDCs have pretty good map, but our officer on the squad didn't know how to use the computer's map system. So he was looking through the map book.
Problems - Technology	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	Has got in the way? I'd say, one time when it does get in the way is when people are communicating on the radio too much. When you're running a fire, and I can't think of a specific example, but I definitely know this happens all the time. If you're responding on a fire, instead of clicking the button on the computer, which you're supposed to do, sometimes the computers will go down. And people will say, "Engine Seven whatever, responding." And then they'll just say that the radio. And so then you've got five engines, two trucks, a rescue squad, and an ambulance, and potentially four chiefs, all saying that on the radio. Meanwhile, one of the engines is on scene and they're looking at a house on fire with somebody hanging out the window.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: CAD]...a difference of opinion that a lot of people are debating right now is that do you prioritize the call that's happening right now or the next one? If our rescue squad is on the air, and so it gives us a one minute advantage, they might send us on a BLS, Basic Life Support, very simple sick person call as a first responder, because we'll be there a minute and a half before the ambulance, and we get there and we don't really add any value. But while we're on the scene of this BLS call that we shouldn't have been on in the first place, they might put out a house fire right there. And now we can't respond to that. So we might be able to render aid to a sick person who has a headache. But now, they have to send a rescue squad from [City] that's going to take 15 minutes to get here to that house fire that we would've been one minute away from. So they do prioritize the next call or this call instead of the next call. And that's definitely up for debate. And I think that's a kink that they'd probably work out. But the technology is there.
Problems - Technology	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...if people don't talk loudly enough. That happens from time to time. So where it's like words like, "Paramedic Engine 707, low volume." You can tell that they're saying something because you hear a mumble and you can see on the radio that they're trying to communicate. But you just don't know what they're saying. And I think that has to do with a person talking into the mike more than the technology, but it might also have to do with the technology too. I'm not exactly sure.
Problems - Technology	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...The other problem is if somebody is driving an ambulance, and they sit on their mike, and so it's open. And so it's transmitting while they're driving or something, and they don't realize it, then everybody in the county hears that. And I don't know if there's a way that they can shut off that radio so that everything else can go [crosstalk] right, right. Or if it should do that because maybe there's a situation where they're in danger, and so they need it like that. But that happened like a week ago where, for a minute straight, someone was just sitting on their radio. And it was transmitting.
Problems -	FF	S	Field	18-25	5 or less	Male	FF-S-039	...When somebody's talking, you can't talk over them... So if they're on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					Alpha, then someone could go on Bravo and hope that they're listening. Or you could send them a message on their computer, something like that. But you couldn't communicate to anybody on that same channel until they release the talk button.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: Digital inspection system] ...There isn't anything that-- when you make that notation in the database, once you start it over on the next day, it kicks it out because it doesn't retain that data set...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...one of the big changes in the last 10 years that we've seen, is a lot of stuff went on paper, or a lot of stuff went into unusable databases. And now, we're finding that there's programs out there that we can extract some of that information. But we're also finding that there's 50 different vendors, and nobody... wants to work nice with each other. And so you have to then hire-- you have to hire a programmer to make the patch from program A to program B so that you can get it to spit out some information that would be usable.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	It's a huge issue because there isn't one vendor that does everything. And from the fire service, it starts in administration. So with scheduling, right now we have one vendor for scheduling. We have another vendor for payroll. And so there has to be a patch built between scheduling and payroll, because the scheduling software doesn't talk to the payroll software...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...Then we have our fire marshal's office, which is downstairs. And they have a particular piece of software that they do all of their inspections, pre-plans. And they also do the fire systems. So the fire control systems, all of that. That's a piece of software that doesn't talk with our CAD system...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...so our CAD system is what sends us out on calls and dispatches us. But all the pre-plan, and fire flow, and all that live on another piece of software. So when we show up to the call, we have the data that says that this has a sprinkler system, that this has this much flow rate, and all of that information. The square footage of the building, building

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								construction. But that lives on a piece of software that doesn't work with the software that's in our truck.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	It's very clunky. So we do the pre-plan drawing in PowerPoint. We then do the data entry into the fire marshal software. Then the fire marshal software spits out a PDF of the information that we have. We take the pre-plan document and cut and paste the PDF into it from the fire marshal software. We then export that into a PDF. And then the PDF of the combined two documents get sent to TriLink, and that gets put into the CAD as a viewable PDF. But not queryable data, because the queryable data lives inside of the fire marshall software. So you can't just say, "Show me where the Knox-Box is."
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...there's 50 vendors. And there isn't one vendor that's done everything very well. And even at that, the vendors, the 50, or 100, or whatever, they've really focused on one area. And they try to do the other two or three things, but they never do them well. And so we've created work-around after work-around to try to get everything to work, but it doesn't work well. It creates a ton of work on our side to be able to make all of this work.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...they're trying to create a standard. But to do that all across the United States is almost [tough?] because you got to look at data back in the history of years past. And you might have done yours in Excel, and he did his in DOS, and I just did mine on paper. So there's really no set system, just like [Name] said that we had Fire Zone, we have different software programs, but none of them communicate with each other. So it's just a lot of data entry. Then all of a sudden, we'll start doing it. And then all of a sudden, the computers don't run on certain programs. So then you got to get rid of that program, and then you end up with a new program. So it's constantly changing.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...another item of contention right now, especially in our fire department, is gear. So right now, all of our bunker gear is made by Honeywell. And so Honeywell has a program that tracks model number, serial number, all of those things. And so all of our bunker gear is inventoried in a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								particular program that our fire department bought. But then, all of the repairs, warranties, and stuff like that are tracked in another piece of software that's accessible online through Honeywell. And we use a third-party vendor to do our repairs. So when they do the repairs, they have to certify the repairs, and they enter them into Honeywell so that they can track them. But when we do in-house cleanings or things like that, we don't have access to that system. So then we track it through our inventory software, Wasp. And then, at the end of the day, there's accreditation. So accreditation says that you have to have programs to track your inventory to certify repairs. But it's two pieces of software that don't talk that have, each, about half of the information that you need to compile together to make one.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...when you talk about technology in the fire service and our rapid adaptation to it, we've never found anything to bring everything together. So there's inventory of equipment, and tracking the equipment from birth to death. And then the costs of repair, and when is it time to replace? And then inspection, and service tests to show that you've inspected it, and how it's lived...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...there's not just one program that communicates with everything. It'd be tough. I mean, I think it can be done, but there's a lot of aspects.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	The payroll's a big one, believe it or not. Because if I'm off on vacation today, it doesn't track that... And these guys track it, our payroll, but we just changed it, and it was a nightmare. And it's still a nightmare. And we weren't getting paid. And nothing against these guys, but it's just another program that this program wasn't communicating with our scheduling. So it's constantly evolving...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...You change the CAD, and now this program doesn't communicate with that CAD. So then, all of a sudden, you got to change the program, which is what we've been going through...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	SME S2: ...We used to run everything through Gmail. We got rid of Gmail, and now we're on Outlook and totally different... I think it's much worse...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								SME S3: ...Outlook and Microsoft products are a 50/50 split between the cloud and a desktop. And so if you're not on the particular desktop that it worked really, really great at, they have a really terrible user interface for their web version of anything...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	And then there's just the compatibility issue. So some of our admin is pretty old, and they would do something in Excel and then send it out for the membership to look at or to use. And then that creates a compatibility issue of having to upgrade it or change it. And then, when they would get something back, they would get it back from Google Sheets, not in Excel format. And they didn't understand how to change it back...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...One of our latest IT guys does a lot of building forms and sheets for us now, which is kind of a new technology that's started to come out. And we're using that more as a patch to fill the need to track some of our data in a very simple form because when you build a form, it just dumps it into a spreadsheet. And so it gives us at least something, but it's not a great something because you still have a lot of back-end work with the spread sheets. You have to stop the form every year and start it on a new spreadsheet, or you end up with this giant data set... And then how do you break up the original sheet into useable data? And then it's just a sheet, so it doesn't talk with all the other sheets, so.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We still have, with the radios, we have dead spots. It's a big concern. So [when you?] get inside of a building, you have no communication.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	... Now, we have is a voice amp. So when you have a mask over your face and it's muzzled, now you can actually communicate, and you're a little bit more clear and precise. And we can hear each other. The problem with that is you're going to be getting some feedback on your radio, based on how loud you have your radio up. So there are definitely pros and cons...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We explored a TIC that was integrated into a helmet. It was about \$1 million a piece when we were looking at, and it proved to be a very

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								cumbersome piece of technology. It was 10 years ago, so the screen was really thick. The camera was really heavy. It added another 10 pounds to somebody's head... And if you'd look like an orange sitting on top of a toothpick, that's basically what it was. So it just proved that it just wasn't a good technology.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We've gone into a UHF, which started some of our communication problems because we used to have a longer range. And it was actually a longer-- it was a lower lower frequency which got out of buildings better. But when they've gone to a completely digital system now, it's clear, but it's also a shorter length that it can transmit. And it's also susceptible to more interference.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: change from VHF to UHF] when they first did the system, we had a lot of interference because of cellular, because we're moving closer to cellular bandwidth. We had a lot of bleed-over from a cell tower. And they brought out a company that did monitoring around the entire city for about a year and try to find all the cellular bleed-over. And it was actually a digital system that was between two points. And I don't know the exact information. [Name] may be able to tell you. But it basically sounded like it was sending a Morse code between two points. And depending on the weather and other things like that that affect radio signals, we would get the beeping of the Morse code, the dee-dee-dee-dee-dee-dee through our system. Or it would either just be this low-tone static through our system that was just bleeding over because the bandwidth has become so used. Or not the bandwidth, but the radio waves had become so used that it's just saturated...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...But you get one thing, and you're starting to lose something else. And the other thing that we lost was just the distance and how well the other radio used to work. And so they're doing things now to fix it. In the city, there's a new push to do an amplifier into large buildings. And so it's just a based repeater that they actually would have to install in new construction. But that doesn't fix old construction.
Problems -	FF	S	Not	Not	Not	Male	FF-S-022	I think that radio's, in my opinion, probably one of our biggest

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			specified	specified	specified			weaknesses and my biggest fear. Absolutely. Because you'll find three guys in a room, and every guy, he'll say the same speech. Every one of them you can hear or not hear, just based on where they put the radio and how they put the radio.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	The mic in the fire service has become kind of a big issue. We're pretty early adapters at [City]. We tried a Bluetooth system. And the problem with a Bluetooth system is it has to pair every time you turn it on. And it doesn't always pair. And then you're trying to smash the button to make it pair. And so we got rid of it [laughter]...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	... We also tried to do a Bluetooth system in the cab of the truck. So as the engineer, my position, we tried to buy one so the engineer could jump out and still have his headset on. And he could listen to the radio and then be able to operate the truck, not be exposed to the noise of the truck and all of that. And same thing. So you'd have to pair it, and then the battery died. We ended up with a David Clark that's MIL-SPEC that works really, really well for the military. Because they get in in the morning, the HUMvee, or whatever it is, put in a new battery, pair it up, and they can go about their day. But it wasn't built for the fire service. So it's not built for the truck that gets backed in, gets turned off. Then, you get a call, start the truck up, it still needs to be paired or connected.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: Bluetooth mic system] ...we found a work-around there. We took the module that communicates to the headset. And instead of wiring it into the ignition switch, we took it straight to the battery. So that module now is powered up 24/7. So you'll get in in the morning, put a new battery in the headset, sync it to the Bluetooth module, and then, because it's not tied into the ignition like it's supposed to, it stays connected all day long. And so it was a work-around, but it worked for us.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: mic placement] ...But still, you can get in a unique situation, just like we do in TRT and SET. And you get in that one space, and you can't actually be spread out like that. So now you're communicating like this, where maybe [this?] your choice...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...if I have my radio up too loud and my officer's next to me, we get feedback. So you got to be careful of that. And it may not even be my officer, it may be the next firefighter next to me. So then if your radio is down too low, then [crosstalk].
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...that's why the big push was for the in-mask communication. But then it had the Bluetooth pairing problem, and we abandoned it. And then we went to this radio, which has a microphone on the back that's supposed to do noise canceling, but it works 50/50.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...part of the other thing with the radio is how we wear it and what we do with it. Because I wear it in a radio strap; [Name] puts his either in his pocket or in his front vest. And so the noise-canceling microphone is on the back side of the radio, because it was manufactured to be held like this, hand held. And so you talk into here and it's got the microphone right here in the corner. This is the speaker. And then these two little notches in the back are the noise canceling. But when you put it into a radio strap that-- which a lot of firemen do, or you do something other than just stand there like the picture is [laughter]. And the features that were made with it, they don't work.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	And so a lot of firemen do the strap because their radios aren't rated to 1,300 degrees like our bunker gear. We had a fire six years ago where the cord melted on the radio.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: radio not rated to 1300 degrees] ...And so now, a lot of guys are wearing their radios inside their coat to protect the radio and to protect the cord, and then just having the mic sit on the outside. But again, that stops all of the functionality of the radio. You can't change channels. The noise-canceling is now buried in your coat. And so there's a lot of things, I think, that could be fixed with the radio.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Exposure Tracker. We use Exposure Tracker because the CAD and-- the CAD sends us to calls, but the scheduling is what schedules you. And so there's no real direct tie-in between your name and the call that you ran. And so we use a web-based program, which has an app called Exposure

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Tracker. And it's just on your own. It's your own responsibility...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: Exposure Tracker] SME: ...It would be nice if everything talked together and you could actually open up the program and say, "Oh, look. You've ran 10 fires this year, and you've ran 50 car accidents." And even if you had to download the data yourself every year. But to run the call, go back to the firehouse, have to type it all in-- Q: ...So why can't you get that data? SME: Yeah. But it's because it's spread across three different platforms.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	we had a whole bank of books, and that's where we did all of our research. So from the ERG, the emergency response guide that comes from DOT, to the CHRIS manual, which comes from the navy, I think... It comes from one of the armed services. And then we had just chemical dictionaries, things like that. Now you can just type it in and everything gets queried for you. And we've actually just got a new program from the county, which is kind of an-- it's an interesting concept. They pay a ton of money to a company and they gather all of this free data and put it into one piece of software. And so you type in ammonia, and it brings up the ERG. It brings up the NIOSH Pocket Guide book. It brings up all of these free pieces of information, but it's all together. It's called PEAC Software... So it's really cool, but it's unfortunate that it's that expensive. So it is kind of cost prohibitive for other places to probably purchase... [RE: before the new program] once you click on Ammonia, it just gives you a bunch of tabs. And you just click on every one of the tabs, and you can get all the information, so. That used to take half an hour to pull up all of these books to find that one particular product.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	It's in one resource that you can go to, [access?] it, depending on the page you want. You'd have your weather on there. You'd have your chemicals. Not only that chemical at that site, but maybe next door has a thousand pounds of ammonia, right? Just because we're fighting this fire; we're safe here, but what happens if it gets next door? And we have some of that in place, but like [Name] said, it's just in too many different areas.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...The communication side, I think we're getting to the point that we can talk to anybody, but we just can't talk to anybody in the environments that we talk. We can talk to anybody sitting in the truck on a nice calm day in the middle of the road. But when you're in a structure fire, it would be really nice to have a great radio system where we can talk just like we're talking...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...The other thing I think that would be really nice is to have talking from me to him...So if you could have a Bluetooth, or a VOX system, or something where I could just talk to Chris, and then we could push the button and you would talk on the radio. That way we could communicate in a lot better environment. And even if you did get separated by a few feet, you could still know that you're there. And you don't have to have that hand on the back of his leg, or hand on the back of his boot type of contact.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	And that opens up that radio, in case there's an emergency because, sometimes, I think there's too much communication to where if you really had an emergency, you can't even talk.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: radio communication] Well, there's too many people talking that are 20 feet apart. And they're talking because they're 20 feet apart because of the noise on the fire ground. Because in a hazmat suit, you're wrapped in a giant Ziploc bag [laughter]. So you're trying to talk to each other, and you're 5, 10 feet apart. Which, the technology also exists to communicate 5, 10 feet apart, but it's not integrated together...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...The stuff that's coming out, with the thermal imaging cameras, it's neat to have it in your mask. I don't know if it's necessary. It might bring a level of safety. But I don't know at that point, do you become sensory overloaded where you're getting information about where you're at, what's going on, when-- focus on the task.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...in the past, when we had the LifePaks, you would turn it off or do a summary, and then all the information was gone. And all you had was the printout of the summary. Now you can actually hit Download, and it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								downloads anytime that there's a change or event that happens, they're recorded on the monitor, which is really cool...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	... I know all the monitors now have the ability to send the EKG to a hospital. But it's just the receiving hospital has to have the right technology to receive it...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...With the transition to the technology, there's been a lot of-- [I?] do say that-- we've started to depend on it a lot. There's a lot of dependence on it because we got away from the Rip-N-Run. If the MDT doesn't work, or if the cell phone module in the truck dies, everything goes bad because we went to an IP-based alert system in the stations...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We had Comcast. Their line got cut one day. And we had no alert system in the firehouse, so nobody could go to bed. You had to stay up and stay with the radio...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...When the radios go down, so, say, the cell tower that goes into its backup, then we have to move from-- we have a cell-- we have a radio tower in [City], so we're lucky. We have pretty good radio. But then, when it goes to the neighboring radio tower, we have really spotty issues. And so when it goes bad, it sucks bad...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...That's probably the biggest common thing, if the CAD goes down. Then they're running off of their old run cards, which are 3x5 flip cards in a big book. And everything goes really, really bad. And so I don't know how, other than just redundant systems, how you could fix that. But we've become very dependent on it...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We moved to a-- we moved to a closest apparatus dispatch system. So they don't listen to the radio as much, because the CAD's supposed to be working in the background and picking who's going to go. Yeah. Just a lot of that. That's probably the biggest failure is, when it doesn't work, it really doesn't work.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: meters work over radio frequencies] So we can actually take a monitor-- we have to physically take it. But we take a monitor, and you can actually leave it inside of a structure. You can leave it around a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								facility, and then we can actually monitor that remotely...So it's one of the things-- it's cool, but that's on another piece of software that doesn't talk with anything else...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: NextGen 911] ...there's a lot of ways to get information to a dispatcher to be able to get people en route to a call. Some of the texting and some of that, when you're getting away from the phone call, it's difficult to be able to gather the needed information to get the right truck to the right call, which is one of the biggest problems. It's being able to ask the right questions, being able to get the right answers...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...So the text thing I think is neat, but it doesn't give you that rapid communication where you can get all the information...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...Now that we're moving into the new Annie Alley system and the level three 911, it's really cool because we used to just get an address. But that was really neat because everybody had a landline. Now everybody has a cell phone. And that's created another level of communication and problems, because you have your different level PSAPs. And so most cell phones usually go to the PSAP one instead of PSAP two or three. And so, like here, the PSAP one is the county. And then, they will transfer you to the PSAP two, which, in [City], is PD. And then, if you need EMS, you go to the PSAP three, which is EMS and fire. So now you've been transferred three times. If you hit a tower that they know specifically is in the city, you probably will go straight to the PSAP two, which is the City of [City] Police Department. Then they say, "Police or fire?" And then, you get transferred to fire.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We use a multi-channel dispatch concept, which I'm sure you've heard of a lot. You have your primary dispatch channel, and then you go to another channel to check in. So [Name] is just an automated voice that announces what the call is, the call type, and all of that. And then we dispatch on channel three-- or channel two. I'm sorry. Either one. So we dispatch on channel one. [Name] happens on channel two. And in a typical system, you would change to a TAC channel. We don't do that. We don't do that because our admin is older, and they don't like the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								switching back and forth between channels, which I think is a big thing for us. It's caused a lot of radio communication on one channel. It muddies everything...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	That would be really cool. If I could say, "Okay. Rescue 54 in these four portables are assigned to that truck," and I know that I'm toning them out to [Street] If I could make that truck and all those radios go to TAC four, and I don't have to worry about them changing their radio channels-- which is why our admin doesn't like it. Because if [Name] remembers to change his radio, but I don't remember to change my radio, and then I need to get ahold of [Name] I can't. And then I have to wait for dispatch to tell me to change my radio, or dispatch needs to become my relay...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...when we do have a fire, we do utilize a TAC channel because there is a lot of traffic that we don't want to interfere with daily traffic. But we will always, inevitably, have at least one or two apparatus, or one or two officers, that are checking in on the wrong channel, or that are getting a size-up or getting something on a wrong channel. And so then, as a dispatcher, you become the, "Hey, change your radio to channel--" and then jump to the other channel real fast, try to give the relay to keep everybody up to date. And then they give the same size-up because they're still trying to get out, and so it uses up a lot of radio traffic...
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We try to do a silent dispatch here. And, again, it was more admin and technology than just-- admin didn't agree with it and the technology wasn't quite there. That was about five years ago. We haven't brought the idea back up. I think, personally, it's a great idea if you could prove it to happen-- prove it to work 99% effective.
Problems - Technology	FF	S	Manager	46-55	21-30	Male	FF-S-023	Adequate-- yeah. It's Records Management System. And it's just a regular in-first-type records management system. It's adequate, but there's a lot of stuff missing
Problems - Technology	FF	S	Manager	46-55	21-30	Male	FF-S-023	[RE: GIS modeling] ...I probably have a one-year model that's pretty accurate, but after that, the error is just huge.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	S	Manager	46-55	21-30	Male	FF-S-023	...We have a business process improvement manager and our IT are part of that. So IT, of course, we have our servers, our systems administrator and then we have the person that goes out and helps try to keep things going. And that's also the person that I lean on a lot to get some of the data. And don't get me started on the data because it's pretty fragmented...
Problems - Technology	FF	S	Manager	46-55	21-30	Male	FF-S-023	...currently we have, just on an incident we have three systems that capture data for us. That's our dispatch system, our CAD, computer-aided dispatch. We have an infer system. Which is just as the in-first reports. And we have a PCR System, a patient contact report system. In our current system, none of them talk...
Problems - Technology	FF	S	Manager	46-55	21-30	Male	FF-S-023	...But to analyze that data I have to download those three data sets and have to figure out some commonality between them because they don't have the same common numbering system. So I have to download it from an off-site server, which is our CAD, and two SQL databases...
Problems - Technology	FF	S	Manager	46-55	21-30	Male	FF-S-023	So now I still have two separate systems out in the cloud that I have to figure out how I pull that information to a place where I can analyze it. They keep saying, "Well, we've got great analytics," which is true, but it's not going to give me a holistic picture in the long run.
Problems - Technology	FF	S	Manager	46-55	21-30	Male	FF-S-023	...So there's all of this data: so I have a finance system, I have a fleet system, I have a facility system. For our community ,risk reduction, they have their own system. It does permits and inspections. So all of their commercial information is in a separate system. Then we've got - well, let's see what else we have - our human resource and our training systems, payroll systems. So all of these systems and none of them actually talk. So we have to figure out a way to... create our own data lake to kind of get to it and actually work through it. So that is a huge undertaking, and it's a big problem.
Problems - Technology	FF	S	Manager	46-55	21-30	Male	FF-S-023	So there's a lot of emails...And quite honestly, that's a highly overused medium. We find that most of our emails are for trying to educate or inform through email, don't go out to the masses. It's just junk. In their

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								head, it just goes away...
Problems - Technology	FF	S	Manager	46-55	21-30	Male	FF-S-023	I do. Well, so a lot of the interagency cooperation stuff I'll be a part of. As far as the meetings and trying to get it set up. Up until recently, I was on a company so there was a lot of listening to PD, talking with [City]PD, talking with [City] at the time. We couldn't get [City] PD, but trying to get a hold of them. So yes, I mean I've had that experience. I've done that a lot with the system that we currently use. Getting together with other fire agencies as they respond. That kind of thing...
Problems - Technology	FF	S	Manager	46-55	21-30	Male	FF-S-023	So when I first started we had UHF and VHF radio. So the 100 and 400 frequency radios. The 100 stuff we still use for aviation and I think wildland is still 100. So it's the VHF stuff. Those radios were pretty much radios. They were crystals. You'd tune it in and you had only a select number of channels you could get to. They were highly reliable and they had good penetration out of buildings. You didn't have to have as much infrastructure. You didn't have to have as many radios on repeaters and all that stuff in the area because they had a little bit more power, UHF is slower wave. One of the reasons wildland hasn't gone to any of the 800 or anything like that is because you don't have repeaters and you don't have-- and that 100 level radio that we have is actually much longer distance. It's still line of sight but it goes a little bit over the horizon I kind of thing...
Problems - Technology	FF	S	Manager	46-55	21-30	Male	FF-S-023	...The reliability of those first generation 800s was less than stellar. And because we don't have good penetration on our buildings, and we didn't have the infrastructure, we had a lot of dead spaces. And in our business, dead spaces are not a comfortable place.
Problems - Technology	FF	S	Manager	46-55	21-30	Male	FF-S-023	Yes. So, over the last several years, we've gone through a couple generations of these radios. We're now on the most recent generation, and we've added some towers. We've added some computer capacity and some communication between computers and stuff. So it's pretty reliable, but we still have a lot of weird dead spaces. Valleys where [City]'s radio can out broadcast our radios, and all of a sudden we can't talk. However, the interoperability of those radios is remarkable. I can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								put 15, 20 banks and have a bunch of different talk groups in each bank. In the past, we'd have to pick a couple of fire agencies that we wanted to talk to, and then we would tune that in to our 400s. Right now, I have [City] PD, [City] PD; I can talk to the state PD. I can talk to [City], [City]. Anybody in the area, I can talk to on their channels or we can code to a common channel...
Problems - Technology	FF	S	Manager	46-55	21-30	Male	FF-S-023	...Anybody in the area, I can talk to on their channels or we can code to a common channel. So the interoperability of that information, or getting that stuff, theoretically, is awesome. It requires a lot of programming and a lot of coordination, and that fails, occasionally. So there's pretty much the state system. [City] has a system. [City] has a system. A couple of the counties have a different system, and if those don't coordinate how that technology talks - even though in theory it would work really well - when I change the channel, or change my tuner, or whatever, and I try to talk to them, it's not working, because it can't recognize that computer. It can't recognize that thing. So in our state system, since we're all our own individual communities, it takes a lot of coordination, a lot of people talking at a lot of levels. There's a good part of that. That means we're all talking. There's a bad part of that, a lot of errors.
Problems - Technology	FF	S	Manager	46-55	21-30	Male	FF-S-023	...They try to work out all of the technical pieces, like how many banks do we have, how many frequencies, or how many talk groups do we have on any bank, and all that stuff. Then we have operations chiefs that meet and talk about what they want to accomplish: they want to be able to have several different EMS groups, they want to have several different fire groups, regionally PD wants their groups, too. They don't always mesh as far as boundaries go...
Problems - Technology	FF	S	Manager	46-55	21-30	Male	FF-S-023	...They set up programming, and then we have to go through and touch every radio with a programming. We have to touch each console with programming. So it's a pretty heady and very time-consuming process. So we don't usually do like, if one person wants to change or if one little thing wants to change we don't do much. We wait, get a big change

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								together, and go out.
Problems - Technology	FF	S	Manager	46-55	21-30	Male	FF-S-023	Right. And then there's, PD has their own little gig, which is they want to encrypt all of their transmissions, which is fine, but that adds one more layer of complexity. Do they give us permission? Can we read it? Can we hear it? Can we get their security keys? ...
Problems - Technology	FF	S	Manager	46-55	21-30	Male	FF-S-023	...Our more senior fire fighter says, "We got to go," ran outside. Well, he's fine at that point. Turns back and his partner wasn't with him. So he goes back in. Tries to call for a mayday, but his radio melted through...
Problems - Technology	FF	S	Manager	46-55	21-30	Male	FF-S-023	...it was just a few weeks ago we had a fire fighter hit the emergency activation button and now I need PD at this location and ran back because his partner in the ambulance was getting beat up. Sort of. I mean there was a fight going on. Well, now those emergency terms come to our center and it went up and they didn't hear what they needed because it beeps it goes, "Beep," and then it shuts and during that beep is when he said I need PD at that location.
Problems - Technology	FF	S	Manager	46-55	21-30	Male	FF-S-023	Okay. So here's another set of data that would be awesome. I've taken Uber and Lyft recently, and there's an application out there that will tell them where accidents are, and which roads to avoid. If that's out there, shouldn't we get that? Shouldn't we get that information back to the fire trucks and say, "Hey, look, this road's closed, we know this," instead of us having to it get into the system and type it in, because if we don't know, we don't know. But there's so many cars out there reporting so much information to so many people, road conditions are, I think, known now. It's just we can't get that to the responders. If we can get that road information up there I think that would make their responses more-- I don't think it would make it much faster, but it would probably make it safer.
Problems - Technology	FF	S	Manager	46-55	21-30	Male	FF-S-023	...So radio information in headsets, in the masks, mic and when they are on air, if there's some kind of an integration of the mask radio. It's hard enough to talk through the mask anyway even though there's these speaker holes and stuff. And we practice, and we try to figure out where

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the best place is to talk....
Problems - Technology	FF	S	Manager	46-55	21-30	Male	FF-S-023	...there's a lot of data we're not collecting. There's a lot of data points that are inaccurate. I think the interface we have with technology for the people that need to be giving me this information is very clunky.
Problems - Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So we'd go to this interoperable talk-group, Red Southeast, a regional channel. And we would use that for all Mutual Aid calls. Sometimes it works, sometimes it doesn't. It really wasn't meant for us to run large-scale operations on, and we were, and sometimes you could have multiple events going on...
Problems - Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...Our radio system, because it was freestanding, didn't really interact with anybody else's and the range on it wasn't very good, once you got outside our four antennas really.
Problems - Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...So you had multiple call-takers taking the same calls and when they generate, they load it into the system and it would show up in our record management system as four calls but only one got resources. The dispatcher filled one out, added resources to it. The other three show up in our fire manager as unfulfilled calls. But I don't remove them, it shows up in the incomplete report list that I send out to the battalion chiefs, and then they're trying to weed through these calls that have no resources assigned to them... We don't see duplicate calls unless it's something where you're just getting multiple callers and they're all loading the system at the same time, the dispatcher grabs one and adds resources to it. I just go in and get rid of them so they don't show up as incomplete reports.
Problems - Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...I think as our technology opportunities change, if we get to a point where our CADs are talking to each other, we could look at some-- we have some areas where dual responses, coordinated responses would work out really well for us. But it takes some time for us to have the comm center, notify a comm center, and then they process it. A call gets shipped out, and there seems to be some delay. Whether it's a training issue or a technology issue, not super sure yet because we haven't

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								pushed that far into saying, "Yes, we're going to run dual responses together." But I think there's some opportunities in the future as money gets tighter, and that you just can't build fire houses wherever you want anymore. You have to figure out how can we work together to cover areas on the fringes of your protection area. So I think there's some opportunities in the future. It's just, okay, how do we work through that?
Problems - Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...Organizationally, to this point, we haven't chosen to turn it on, because we've tried to control how many responses our rigs get by setting a response area that will control how busy they are. The new fire chief-- we just got a new fire chief, and he's interested in turning the AVL on for everybody. We know that it will cause some of the apparatus to spike. Their call load is going to spike because they will be the closest. So really, I think we didn't turn it on to try to balance our call load by setting response areas versus having the AVL turned on.
Problems - Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: dispatch] ...The computer says this and they do it. If the computer says this is the run card, they send it and we have dispatchers who go from telecommunicators, to learning how to be PD dispatchers, to them learning how to be fire dispatchers. But they really do what the computer says to do. And I think the biggest glaring example of that was the day that everything crashed. And our comm center vapor locked and I completely understand why. All of a sudden you're going, "I have no CAD recommendations. I don't know what the run cards are. I don't know who should be going to those areas. I don't necessarily know what resources should go." ...
Problems - Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: dispatch] ...We used to have free standing fire dispatchers years ago, and they were really good at free-think. I mean they'd be like, "Have you thought about this? What about this? Do you want this resource? Should I be calling this?" That's just not the way our comm center works right now. They're super busy. They crank out a ton of calls and try to process a lot of information for us. And with priority dispatch, I think it's really increased that. I mean, the demand on them is tremendous, I think. Just trying to keep a full workforce for them, I think, is a battle, let

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								alone teaching them how to be advanced in free thinking for the fire department. I just don't think they have that opportunity right now.
Problems - Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	It was a power outage at the comm center... Yeah, the UPS didn't kick in.
Problems - Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: comm power outage & system crash] ...we lost our mapping, everything. So just in case we had to route somebody in then we could route them in...
Problems - Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: working in arson] ...the biggest problem was, is even when we found something, unfortunately, it's such a dirty profession, that any decent piece of technology, you couldn't bring into that scene anyways. Because I'm either exposing it to gases or smoke, or I would completely soot it up. So then it was covered with soot, then some engine would come in and spray it down with water, and then you're like, "You know what? Everything just stays out in the car."
Problems - Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	People were touching your stuff and moving your stuff and dropping your stuff, and at some point, you just went, "I'm going to write on a piece of paper with a pen." And that's it. And I went back to pen and paper. And a good pen that could write when it was 20 below and that was it. Because trying to use technology in that-- it made sense, but it just was impossible to do. It was just too hard.
Problems - Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	The old one was just as free, truly free-standing MACOM system that worked well within the city, but was incredibly frustrating when you try to leave the city because other than going to the red channels, you really-- or the statewide Mutual Aid channel, you had nothing else to communicate on. And if you had a complex multi-agency incident, you weren't able to communicate. And, like I was saying, the red channels were not meant to be this large intense operation that system just can't tolerate it...
Problems - Technology	FF	S	Supervising Field	46-55	21-30	Male	FF-S-017	...Cell phones have made life better and life worse because I get text messages 24/7, whether I'm at work or not. And the belief is they know

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					you're going to see it so they expect that you're going to answer it...
Problems - Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...Hopefully, with our mask, because talking on the digital radios, we've-- when we switched radios, we went all digital. We still had a lot of analog channels. Our organization embraced and loved analog channels because the communication was so clear and we have struggled to make that transition to digital because you get those digitized or scrambled communication. We just weren't used to those and we're finally understanding it. But some of the in-mask communication stuff we're excited about. We hope that that plays out so you're not holding your radio up to your mask and then having it move through an amplifier and through your microphone...
Problems - Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...We're going to new microphones that have five port-- five, I guess, speakers because we're having issues with people. We don't like to wear our radio belts. So we all talk like this. While the microphones are on the front, and we all talk at the top of our radio. And now the new ones have a microphone on the top so they have five microphones. Back, front, top. Hopefully, that'll improve some of our communications too, as we switch to those. Because you're supposed to take them and turn them and talk at them. And we don't because we're all wearing these. We all talk into the top of our-- in analog it, would pick up fine. In digital it does not.
Problems - Technology	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: equipment checks] Our ambulance do it all electronically. But it just seems if you can click a box that was yes or no-- we kind of do the same thing with our pack, our daily SEBA check. We have to log in into a computer and log into this other program and enter in that we checked our SEBA and we log our daily workouts in there, also.
Problems - Technology	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	And as far as talking with our SCBAs, we train where to put the mike where you can hear it the best. I know in the past, we've been trying to get in mask communications that will clip in there. And I don't think that technology has ever surfaced that it has been worth it, so
Problems -	FF	S	Field	26-35	11-20	Male	FF-S-018	SME S2: Some people on the throat, some on the non-voice amp side

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					and some people on the voice amp side. Yeah. We tried out a Bluetooth thing that would just be in the mask and it never... It didn't work. SME S3: it was the technology wasn't working correctly. SME S2: The pairing and the-- it would lose connection and all that which, yeah.
Problems - Technology	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	SME S3: Each station has its own cell phone. We have very fancy flip phones [laughter]. I'll pull this bad boy out so you can gaze upon it [laughter]. SME S2: You can't do much more than just talk on the station's cell phone. And, I mean, we all have smart phones so if we need-- it's been a lot where we've needed to look something up, and we just use our own phones and stuff like that.
Problems - Technology	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	I mean, I've, personally, been on mutual aid, where we went to a house fire in a neighboring district, and it was pretty easy. Our dispatch just said, "This is where you're responding." And the map came up on our MDT, and they said, "This is the tactical channel you need to be on." So we could listen, obviously, at a delayed response for us. It took us a while to get there. But we could listen to the incident as we got there...
Problems - Technology	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	...We've gone through different programs in every different aspect of it through the years, some good, some bad. But I think they're always trying to find the best one which it's hard because if there was one program that did everything, I think that would be the best. But they all don't talk to each other, so.
Problems - Technology	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Well, we had a Pre Plan software. Different CAD drawing systems that you'd get good at one and you'd have to learn a different one, and it was hard to use. And I don't know if it was bad or just I was bad at it [laughter].
Problems - Technology	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	The only thing is over the last-- since Target Solution's been introduced, there's two separate places where you can do trainings and training reports which is a little cumbersome sometimes because just going back and forth, it would be nice if it was just, "Here's where you do it."
Problems - Technology	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Or if you log in once and you log into one program and you can do your daily-- pass off your reports, you sign up for overtime, it'd be nice. But I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								don't know if that exists in the world. It'd be nice if some company just came out and said, "Here's everything you possibly need to run your fire department. And it all talks with each other.
Problems - Technology	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: different system logins] I mean, so we have the Office 365 for all the email and calendars and things like that. And then, we have Target Solutions which will be our kind of main training report stuff. And then we have High Plains which is another kind of semi-all-encompassing thing... There's iOS which is station supply ordering and EMS supplies ordering. There's the new maintenance... we're transitioning from our maintenance to this new one. It's called Dude Solutions... There's our payroll system, EWS, that we log in to, to see our, all of, I think, hours, and all that... And then our system to do reports which is, for me, it's easy. Even if we were at a medical call, I have to log into one place... But our ambulance crews have to do two different places for reports. So there's a lot.
Problems - Technology	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	...occasionally I have to log into the MDT if I do... But usually, that's not every day or even every week or even every month sometimes. But sometimes I'll have to restart the computer if there's any issue or it's not connecting to the vehicle location and stuff like that. It's not very often
Problems - Technology	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: MDTs] The only issue I've noticed lately is the map updates. It'll tell you that this is a through street, and it's not. So the way it routes you is wrong because it thinks it's a through street, and in this case, there's a 14 foot concrete wall in the way. That's kind of a problem. But most of that we know.
Problems - Technology	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: change] I mean most of it's just been the difficulty of learning a new system. Like he said with our pre-plans. Everybody got used to one thing and then we switched it. And then that didn't really work, so we switched it again.
Problems - Technology	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: change] And all these, you're putting in the same info like medical reports, all that. It's all the same info, it's just learning how to put it in the database. Nothing's changing on that end. You're not now entering

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								different information. It's all the same. It's just the platform which you're doing it. And yeah. I think it's just learning the new program. That's anything. You get a new phone, you learn that, so.
Problems - Technology	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	...I guess as far as other communication systems is, on the tech rescue team, we have a confined space communication system so it has hard lines that go back to the - if you're sub training, your radios won't work - so it's a hard line and it's finicky... I think just the age and, I mean, the use of the system, just the connection points.
Problems - Technology	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: tech rescue comms system] And sometimes where that throat mike is, I mean, if you move it half an inch, you can't understand what the person is saying.
Problems - Technology	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: SCBA comms] ... I don't know, seems like the technology needs to catch up with-- I mean, people that have those things in their ears all day long for their cell phones. But we can't get it to work for our radios.
Problems - Technology	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	SME S3: There's other software that some of the surrounding departments use as far as staffing, like TeleStaff. That would be really nice because then it's a lot more in one place. And for us, we're doing it in three or four places to-- SME S2: We are. We're telling chiefs, support officers, and then we have an office administrator, that she builds the schedules. And I don't know what the process is on all that. You may want to talk to them. But as far as what I hear with this TeleStaff, I hear it does it all. It calls people. It's automated. It's a computer that does it all, so. SME S3: So if someone calls in sick, they call TeleStaff, and they say, "This is so and so. I'm out for 24 hours." And then TeleStaff starts rebuilding the schedule for them instead of-- for us, it's our time chiefs have to start calling people. Sometimes it goes really quick, but it can be a lengthy process.
Problems - Technology	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	...being able to talk to each other more clearly in a fire. And then being able to talk to command more clearly to where the same transmission doesn't have to go over two or three times because nobody can hear you.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	If it's garbled and they're yelling-- I mean, it's happened on several fires where dispatch, "Can you hear them?" "Nope." "Can anybody in there relay what's going on?" You've had that happen. And that'd be a nice communication and time saver on scene.
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...Well, unfortunately, as a volunteer, we have WhenToWork. We have emergency reporting. We got their training program they log into. There's a state cert system. So, unfortunately the devil's in the details. As a volunteer, you could actually become inundated with apps and all these different log-ins because there is no one program that solves everything for volunteers. So that's actually a detriment to our program, are the apps and the availability of all these technologies because they don't interface with each other. Some of them only do iPhones. Some of them only do the Android stuff. So even that's a problem.
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: apps for volunteers] If you have a Blackberry, you're totally left out [laughter].
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...I spend a lot of my time as the IT guy just fixing-- helping people log in to seven different apps, or the passwords, their emails, whatever it may be. And I realize is that they're a volunteer, right? This is a volunteer thing we're asking from them. With their job, they have all these. And their second job, they might have all these. So a volunteer might have 15, 20 different apps and some of them are duplicate. We have people who work up at [City] full-time. They use WhenToWork. We use WhenToWork. But certainly, in the app, you can't just change users. You have to totally log in differently...
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: apps for volunteers] They're all duplication of efforts, and not any one of them completes the job. Most of them are just good enough.
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	I mean, gee, I have logged into-- between all the government stuff I have to do, I have 25 different web portals we're supposed to do something on.
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	I have 78, as a [Job title], to log, 78 different log-ins. This one needs characters. This one needs capitals. This one needs numbers. You can't

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								just have one log-in for all this stuff either because they're all different... It's a nightmare... I enjoy the corner fetal position, a lot of tears [laughter]. No.
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	We spend so much time just dealing with web portals and updating stuff for everyone's portals. Then you have to learn their portals, and then they do an update on it, and you have no idea. So, yeah, it's just managing the information
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: password management] But then the challenge, of course, with LastPass is if you leave it logged in, then people have access to everything there. So there's that whole risk of security.
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: communications with other first responders] ...so far, it's pretty descent. I mean, there are challenges, of course, talking with the Forest Service, totally different radio system. We have totally different [units?]. And honestly, our radio system is far superior than the Forest Service's, so it's like when you go back a couple of decades in quality. It's sometimes hard to talk to them and hear them. So that's a challenge, talking to these [inaudible] in the states...
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	We have the [inaudible] MDTs, but I think we would call it a failed technology. Because it relies on Verizon to communicate, it just doesn't work. We spend more time wasting time trying to keep that thing working than we do doing our job. So we've given up on it. My vehicle, which actually is an old [Job title]'s office vehicle, because they built it in certain ways and it's actually one of their old terminals and all that stuff, it works okay, but I certainly would never rely on it or make it a priority.
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	We'd love to have better MDTs but it just doesn't work...
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...There's more mechanism, but then there's that challenge. Right now, you have so much communication, and it's branched out that there's no consistency that now you're almost overcommunicating with people, and there's that app problem. We have so many different things that now you can't- which one are you carrying? I can only carry so much stuff. I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								can only answer so much stuff. So now there's this distraction.
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...with every new whatever, new fire truck, new gadget, new app, new everything, there's always that double edge of both negative and positive of whatever it is. So even with radios-- I mean, as we've gone through generations of communication, that 50% negative and that 50% positive, they're still there, no matter what it is.
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...we have all this availability of all this technology, but it doesn't communicate with each other, and it transposes information differently...
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...We have our other officer, listens to types of medical calls, Alpha, as in almost medical, all the way down to E, which is an absolute emergency. So A, B, C, D, and E, and he filters that information on whether or not he's going to go help the crew. And the computer itself transposed an E call into an A call, and therefore he didn't go, and the crew was obviously overwhelmed with the E call...
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...It's kind of a huge issue. Why didn't an officer come support the team? There's a lack of trust that develops out of that. There's a lack of trust against the officer, against the dispatch center. And it was nobody's fault, other than the two software's not talking to each other.
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: radio] And it's got to be functional. I mean, it's great that we have mics, but mics don't work. It's got to integrate better with our masks. It's got to be clearer. There's nothing worse than talking through a mic when you're wearing an air mask [laughter].
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: in-mask mic] Nobody wants to hear how good in shape I am. They want to hear what I have to say, right? So if you're working hard in the hot sun, "It was 91 degrees. Everybody was bunkered up. We have water." I mean, I don't know what he said, other than he's got water. That's a struggle, so.
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	it has to be affordable, and that's the challenge. Of course, they're loosely related. I mean, there are companies out there that sell all this stuff, but it's never achievable for us. We'll never be able to spend \$10,000 on a radio. We have a hard enough time spending-- right now, I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								mean, our radios are costing almost 4 grand for radio. And that's why we have older radios because we can't afford the new stuff. So, I mean, we're barely-- having a hard enough time buying cell phones. So it's one of the challenges, I would say...
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...It's careful what you wish for, right? I would love to have everything-- radio, everything into one thing. That's why we used to love our Nextels. When Nextel existed back in the day, the iDEN format, that was awesome because you had the cell phone. We could use them as radios. And then that technology kind of became unsupported and went away. But we really kind of miss that. But the challenge to us is then everything's in one thing. I lose the one piece of equipment, and now, I've got nothing. Or there's so much information coming into it that I can't sit there. It's just like when you're trying to type a text and things binging you, email here, calling here. It's like, "All I want to do is send a text. Knock it off." ...
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	But I think it comes down to the manufacturers of an SCBA to have an integrated radio with one channel in their mask, and they can talk out from their mask and not have to take in the radio that they took in the fire and have an extra thing hanging off to get caught up on, or that I have to keep dry or not get wet, or that I have to worry about where the mic is keying up against my chin because it's bouncing back and forth. I think it's the radio guys meeting up with the mask manufacturers and coming up with a one-channel radio that's on the mask, that's affordable, waterproof, built for a three-year-old.
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Mainly, it's computer stuff. I mean, we waste so much time trying to get the computers to work right. "This PDF won't work here. Oh, I can't modify that. I don't have the software for this. I have to [inaudible] that." We lose a lot of time, just stuff that should be simple. It's almost easier sometimes to write you a note. Here's a note. But if you try to do it on a computer, well, this didn't work, and that didn't work, and this didn't work.
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: attachments] Or it's too big. It's bounced back. Now, I got to try to reformat. Now, I got to resize it. Oh, I don't have the program that can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								resize it correctly. It's those stupid things.
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: attachments] I'm sending from a Windows 10 to a Windows 8, which sends it to a Vista, which sends it to an XP, which sends it to an Apple... We spend more time dealing with that. We did not have our normal IAP [inspection plan] for our annual [Event] because all the computers were down in the station, I think.
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	And that's more stuff that takes away from my job. The more time I'm dealing with computers, I'm not running the department.
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: drones] Not in a professional capacity. I mean, we have the recreational stuff, but nothing-- I mean, the problem is that our elevation. You'd have to have a lot more lift. It's not as easy as if you're at sea level.
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: drones] we have an airport pretty close, which obviously, a lot of other people have too. But, I mean, we're just so close to it, and you can't get anywhere with a drone without the FAA...
Problems - Technology	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	We have a single source variety or for Internet. We have [Organization], horrible company. You can't get anything to work through them. I mean, we used to have smaller companies, and competition, and stuff, but now [Organization] has sucked up everything, and they're horrible. And it's actually debilitating us on a lot of times because they're so bad that Internet connection, TV, everything-- they want to control everything. And they're screwing it up so badly that it's actually blocking us from watching the news... So that is a very big problem, having one big company that...
Problems - Technology	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...sometimes CAD will come in and say, "Engine one, respond to this call." Well, it's not taking into account that this road is closed, and so engine 11 may actually be closer because right now there's a protest going on, and so this road is closed. And so it just automatically assigned engine one... So, us having firefighters up there who actually understand firefighting... They understand, "Hey, you know what? I got this road closed." And usually, they're not quite as-- I don't want to say fearful of making a decision as maybe a civilian who's hired to be a dispatcher.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								"CAD told me to do this so that's what I'm going to do." I have firefighters who are like, "No, this is the best reason why I would do this." Or, "Hey, Chief. Do you want me to start you a second company on that? It looks like you're running a little low on truck companies. I'll start you another one." So having those firefighters up there is kind of a-- every time we come to collective bargaining every three years in the city we always fight to keep our dispatchers up there.
Problems - Technology	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	... we currently use iPads for inspections, which has really significantly increased our ability to-- like any technology tool, we've had some glitches with it, but I think, overall, it's helped us...
Problems - Technology	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So, usually one of the bigger challenges-- I mean, and this is-- it's not an iPad-y app thing, it's our radios. And so what we found is that they're-- I don't want to say they're cumbersome. They're difficult to use in the sense that I think they could be-- radios could be made more simple to use. Really difficult to use with big, blocky gloves...
Problems - Technology	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...So we have the radio itself, the little brick, and then it has a cord and the cord comes up to a mic. We've had, with our new ones, we've had some challenges with that, with water and cutting out. And then you have the whole issue with the cable that goes from the radio up to the mic...
Problems - Technology	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...And so this little mic, maybe. Just that piece right there has been an issue that we've had recently that we've been looking at. So trying to figure out something that would be more-- I wish there were a way to somewhat similar to our AUGA masks with diving under the water where I can be under the water blowing bubbles and I can hear my tender perfectly and he or she can hear me perfectly, yet in a structure fire, [inaudible], and the incident communicator's like, "Engine whoever that was, could you say your last transmission?" They're having a hard time because they've got their face piece on. The hoses are loud. The saws are loud. And the microphone is out here. My lapel mic is way out here or down here or somewhere out here...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...It would be nice to have it integrated somewhere near my ears. And I don't know if that ends up being something wireless. It seems like they could have something that would be more wireless that you could or when I was in the military, we used to use little, like a little throat thing. So you just put it on right here and then my transmissions are completely clear and an earbud piece that goes in your ear and now I can hear really well instead of this exposed to the environment and not close to my speaking thing and my hearing thing...
Problems - Technology	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: challenges with radio communication] It seems like they could have something that would be more wireless that you could or when I was in the military, we used to use little, like a little throat thing. So you just put it on right here and then my transmissions are completely clear and an earbud piece that goes in your ear and now I can hear really well instead of this exposed to the environment and not close to my speaking thing and my hearing thing. ...For me that's, especially at the task level, when the firefighters are trying to actually communicate critical functions during critical times to an incident commander or to somebody else that's a supervisor of a task. "Hey, I'm trying to get this done," or whatever. We seem to be missing that piece.
Problems - Technology	FF	U	Manager	46-55	11-20	Male	FF-U-021	[RE: cell phones] ...This one is personal, this one's department. So I tend to forward my department to my personal. Probably not the smartest in the world, legally wise. But to me, it's just easier... I don't like carrying two phones...
Problems - Technology	FF	U	Manager	46-55	11-20	Male	FF-U-021	[RE: opening the Firehouse app] I just updated, so it's going to have to install again.
Problems - Technology	FF	U	Manager	46-55	11-20	Male	FF-U-021	[RE: TICs] ...there is a lot of technology that's up and coming where they're built in rather than a camera you're physically having to hold where they have it built into the mask now... that's kind of out of my realm, it's out of my division but it's something that we're paying attention to. I know we've met with [Name] and a few other manufacturers, they're very costly, but the benefits of them would be huge because right now only there's one assigned per unit... And

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								generally it's on a truck, engines don't have them. And we have them in chiefs' cars but it's one of those things where it's better to have and not need in my opinion than to not have and need it. And they are costly but the benefits of having it integrated into your mask rather than having a hand that's taken away from you that can be utilized for other things... So to me that's a technology that's up and coming that I would love to see us be part of...
Problems - Technology	FF	U	Manager	46-55	11-20	Male	FF-U-021	...So the big thing is in the past, you may or may not have chalked a car whether it needed it. But if you have a hybrid, you don't hear it running. You don't chalk the car and maybe you're just going to put spreaders and move it away from the Jersey barrier to get someone out that doesn't need to be fully packaged and put on the backboard. They can walk, but they just can't- you don't want them to open the door on the busy side. We've had instances, not here but in the country, where they moved the car away and the car goes driving down the highway because it's silenced.
Problems - Technology	FF	U	Manager	46-55	11-20	Male	FF-U-021	...We're definitely always behind technology-wise...
Problems - Technology	FF	U	Manager	46-55	11-20	Male	FF-U-021	They're generally improving but, just like anything, we only have so much money and... we've got to prioritize and technology is not cheap so... it's always changing. So what are we going to get the most bang for our buck?
Problems - Technology	FF	U	Manager	46-55	11-20	Male	FF-U-021	The biggest thing that I feel we're getting better but we're still not there is intrinsically safe radios. I mean just like any type of- I don't care what field you're in, communication is the key to either success or failure and you're only as good as your communication components and your knowledge of communication. So we're always lacking, in my opinion, when it comes to radio communication. There's always problems, there's always problems getting on the right channel or being able to communicate with a different entity or different agency.
Problems -	FF	U	Manager	46-55	11-20	Male	FF-U-021	You see that in, unfortunately, but you've got mass shootings and there's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology								always a problem with cops being able to talk to firefighters. There are paramedics. There are [City] being able to talk to [City] Metro, or this or that. And I don't know what the answer is, but I mean, there's hundreds of millions of dollars of grants that have been thrown towards it and we get better but I don't know if-- I don't know what the answer is to that streamless communication. Practice. But I mean, there's always technology that's going to give you problems.
Problems - Technology	FF	U	Manager	46-55	11-20	Male	FF-U-021	...As far as, I think, some type of a portable, something similar to an iPad but more of a-- that's obviously a little more durable because we're really good at breaking things. But that way we can utilize, automatically you get on scene, you can pull an address and automatically have a Google map of this is the roof, we have skylights here. This is what the Charley side or the back of the building looks like. These are where the utility shutoffs are. I mean, I know it's out there, so you should-- I mean I'd love to have technology going to a call where you can pull it up on your computer and look at a map, look at aerial views and have a general idea of the makeup...
Problems - Technology	FF	U	Manager	46-55	11-20	Male	FF-U-021	Warehouses, same thing. I mean it's a highrise on its side. You get in there pretty far, things go bad. Where are the water supplies? Where are roll-up doors? Same thing with hazmat with chemicals. I know we have the capability, but it takes a long time. You put the chemical in or you put the number in, it will show up on the computer what element it is or what's good, what's bad. Does it interact? Does it react with things? ... you have to take the time and you're logging it in. Yeah, but it would be nice just to have something right-- and again, fingertip technology, we could just type in a quick number, off the side of the real car instantaneously. But there's connections. WiFi, there's things of that nature.
Problems - Technology	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	that was one of the selling points for going to 800 megahertz up here was we could talk to road and bridge. I mean, none of us talk to road and bridge. I mean, it was-- I am very anti 800. It is terrible. It's gotten better, but up here, we have to deploy technology hardware. We have to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								deploy hardware to get through and around the mountains, where in the Front Range or in the Midwest, they can use half the hardware because there's nothing in the way...
Problems - Technology	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...And so the first-- man, I was here-- so I've been here since the implementation of 800, and it was tough in the beginning because you-- it take care of the valley, the I-70 corridor, we call. Everything on the ground was-- on the valley floor was covered, but so many neighborhoods are up in the hills and stuff, and it's taken years to figure out how to place everything, microwaves and what not, to make sure it all works. So we still have some dead spots...
Problems - Technology	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...when I started in [City] in '96, it was still VHF or UHF, one of the two, and at the time I didn't have nearly the responsibility or the knowledge, so to me, it was fine. It worked. It worked great. And then throughout the whole 800, it's just taken years to try to get every coverage where we need to get it. It's gotten better. Depending on the size of the structure, we'll require BDAs, bi-directional amplifiers, so then that just takes the radio communication that's outside and available, and it pulls it in through the concrete into the buildings because we could go into a parking structure and have nothing...
Problems - Technology	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: switching to 800 megahertz system] No. I mean, it's getting better. It's just taking a lot of money and time and stuff.
Problems - Technology	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Well, there's towers at 11,000 feet, at 10,000 feet, and they're riding snowmobiles in the middle of a blizzard to go make a repair. They had pictures last year of the tower in East [City] that was completely covered in ice because there had been so much freezing and thawing and precipitation. And then they get up there and the pictures were incredible. Just blue ice, just dripping or solid frozen on this thing, so.
Problems - Technology	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: when radio tower goes down] Well it's finally robust enough that other repeaters will take over for that. But there are probably some spots in [City] that were not covered. The[City] Pass is tough. [Street] is really

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								tough going to [City]. So it's gotten better, but that's one of the tough ones. And we had to switch to MAC channels so that we can talk to state patrol. They're not even on the same system as us.
Problems - Technology	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	No. That's one area where we will just pass the information through our dispatch, and then we'll just call them on the phone, their dispatch. But we do have the capability to talk to them if everybody moves to these certain channels. But they're so rarely used that a lot of our guys, they have to search for them. They're literally going bank to bank in the radio to try to find it.
Problems - Technology	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Well, I mean, I can't keep up. One of the complaints I get is that we're trying to use technology to fix all of our problems. And there's some truth to that and I don't like it. I can't remember the name of it. Oh, [Organization]. We're trying to bring something called [Organization] on, and it's been a nightmare. It's been 30-some thousand dollars and they've been trying to help develop it to our needs and I'm still not sure exactly what it's going to do. And we haven't even implemented it yet. So it might be something that we need. But purposely, I just don't get on those committees. I don't. I just don't.
Problems - Technology	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	My only thing in 20 years and I'm hoping we're going to get there, is station alerting. So the way it works now is... they send out this sound high-low sound to alert people. Well, the problem with that is that it's the same sound at three in the morning as it is at three in the afternoon. So you are startled up. I mean heart palpitations, it sucks. And so what station alerting does-- there's probably four or five companies that are actually really good at it. Unfortunately, it's very expensive, as all of it is, but basically, it is a system that is embedded into the CAD at dispatch and then at each station then has equipment that receives the call. So instead of this high-low thing, it will provide kind of ramped tones, so it's soft, louder, louder, louder, louder. And with that is a ramped LED lighting that's red...
Problems - Technology	FF	R	Supervising Field	36-45	21-30	Male	FF-R-024	[RE: station alert system] ...So each bedroom, for instance, will, when there's a call, the sound will come over, the light will come out-- will

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					also come up. The red light's important because it preserves your night vision so that you're not turning on the light and then going right back out into the dark. There's a lot of components. They add a lot of bells and whistles to entice people to buy it, but I just want us to get away from this high-low thing. In the '80s and '70s it was a bell, like a bell, a buzzer, so we've come a long way. But we're just stuck here because with station alerting-- because it's an all or nothing thing. Everybody has to have it or nobody gets it. And so then you go out west to [County] and [City], where they don't have a lot of money so they can't really invest in it. [City] doesn't even have people in the station every night, so what use it for them? ...
Problems - Technology	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Well, I mean, I think, I guess, for me is if we're going to explore technology, let's explore and keep it and quit jumping around or trying to solve this with that. I mean, technology evolves so quickly that I don't know how anybody keeps up, but we're not going to slow the private sector down. They're going to keep evolving and keep creating all of these incredible, awesome things, and we're just going to keep shelling out the money for it. Yeah [laughter]. We can't keep up so.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...If we're weak in any one part, maybe, in some of the training. At technology level, every responder in the region has the ability to talk to every responder in the region, but sometimes, people aren't using it a lot. They may not remember or they may not know where do I turn in my radio or whatnot. It's a perishable skill. Use it or lose it...
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...Satellite communications tend to be very expensive. So they don't get used a lot. And when things don't get used a lot, then they can kind of get a little buggy...
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: cellular]...here in this region, we've experienced where saturation has caused problems even talking to our own devices...
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...So the map's kind of a convenience thing. But sometimes it doesn't always work. So, for example, our apparatus are parked in the stations, they can't see the GPS... Once they pull out then they can. And so using

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the maps exclusively if you don't know where you are, you would have to wait for it to see the satellites, link up, start talking. And that could take like a minute. And time is life [laughter] for us. If we just sit and wait for a minute, somebody could die and stuff, so.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So, yeah, time is everything. And because of that time, the data management, the being able to get the information that you need, when you need it, how you need, is huge. And quickly people find that operations company officers and what not, if it doesn't work for them, then things get shelved and get dusty very quickly [laughter].
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...I mean, there's kind of, I guess, different levels of challenges. Some of the low-level-challenges stuff would be like connectivity. I mean, like anything, there's areas where you connect and where you have no service...
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: NG 9-1-1] ...The downside from everybody we've talked to and everybody that's doing the Data911 is it's so much more labor intensive because just processing that information. And we strive to finish-- or not finish, but on a 911 call to be able to dispatch an appropriate resource within a minute. If you're having to look through text messages and JPEG photos and all of that, there's no way. I mean, your averages are going to go way up just because of the time and the responding and figuring out what's what.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So, I mean, we all studied the whole communications model in undergrad, right, as far as sender, receiver, feedback, message, content, and all of that... So other communications challenges that we've had are there's the-- we've talked already about dead spots, where the stuff just doesn't work, or it works. I mean, yeah, again, it all comes back to that communications model as far as the breakdowns maybe in any one spot, critical failure; or they may be in multiple spots and stuff, so.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: earpieces] ...The problem that we found is, as far as just one, there isn't one solution that fits all. So we're walking around like this, with just nothing else. I may be able to use my earpiece in here and it may stay in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								fine. But if I go into the firefighting mode where I have to put in a hood over myself and I have to put on the SCBA mask with straps, that same mechanism may just not be able to stay in the ear or something like that.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: earpieces] ...I may go onto a hazardous materials response, where we get into the big moon suits, the self-encapsulated whatnot. They've got a helmet and whatnot and your arms are in gloves, you can't really reach so you're kind of doing this kind of stuff... We'll keep the radio in a holster on the inside, but as far as the audio stuff, we've tried conductive mics, either on the throat or on the head. We've tried hands-free stuff, but we just have not found any one solution that meets all of those needs.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...So, we often joke in the fire service that in the late '60s and early '70s we were able to talk to people on the moon just fine, but here 45 years later we still can't have good, reliable communications from the outside of a fire to the inside of the fire. So there's a huge need...
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	Personnel issues throughout the department. It's kind of a pain in the butt, as far as something happens to one of my crew members. I get notified as a company officer by voice, or they talk to me. I have to notify the chief. There's this whole up and down, and stuff, and then there's the paperwork shuffle that catches up with it...
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	Here's your solution. What was your problem [laughter]?
Problems - Technology	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Our dispatch center is in [City]. It's called NORCOM, N-O-R-C-O-M. And they dispatch for approximately 20-plus fire agencies and several police agencies, and so if I wanted to talk to the [City] Police Department dispatch center, separate, just down the street, I would have to talk to my [City] communications specialist. And then they would have to contact [City] police and we relay that information in three-way communication versus just getting on the radio, turning the knob and contacting the dispatch center myself.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	So sometimes if some of our stations that are near the border of [County]-- we're zone one, they're zone three. They'll just get on the radio and they already know because they work at that station that you go to Valley Com automatically and you just communicate with them directly and leave NORCOM out. However, that causes some problems because if I'm just going to communicate with someone over here and I don't let you know that I'm doing that, that puts confusion on your end... So there's that patch. That link of that communication model. If I tell him something how is that information going to get to you?
Problems - Technology	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Yeah. So we're on 800 megahertz. We also have moved to Surface tablet technologies for all of our information reporting. For all our EMS work. We don't use paper anymore. So we take Surface tablets and iPad tablets to our calls. And whether you're using the web based server or you're using cellular technology, there is that communication link break down. So there isn't cell reception everywhere around here. There's times when you're on a call, or you're going to a call at two in the morning, and you log onto the database and the server, where ever it is, is updating. And so you can't input any information and you're forced to write it on a piece of paper and then put that information in later.
Problems - Technology	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	...And it's being worked out. But communication is definitely a major gap in terms of the technologies and the layers of-- okay, this is the first-generation iPad. This is the second-generation iPad. And then, now we're transferring to Surface tablets because there's more stability in the platforms.
Problems - Technology	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	The computer on the fire truck is a three-year-old computer and now the new computers are faster so they have to be replaced. And it's always that catch-up with what technologies are coming out. And all we want to do is go on the call and make sure when we type the information in or log on or turn it on, that it works.
Problems - Technology	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	I don't think anything's bad. I think it's some technologies failed and had to be re-thought in terms of how they're deployed. But starting off with a physical map book or a map on the wall, and cross-referencing the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								streets based on the dispatch, that's how you found your responses. I would have to say probably in the last ten to 15 years, the introduction of the mobile data terminal computers became prevalent. Where instead of getting on the radio you'd push a button responding. And when you get on scene, you push a button that you're on scene. But the platform for that delivery failed at the dispatch center. The failure rate of communication and system failures and software crashes was predominant, and--
Problems - Technology	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Yeah. Again, it's the communication link-up. So if there's a delay in inputting data that you have to input because you're waiting for a connection, or you're waiting for an update on your tablet, that delays you from finishing the report and going back in service for another call. So that's primarily the biggest problem.
Problems - Technology	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	[RE: tablet] --enter a password, and a username, and everything else, and hit the right button, while you're bouncing down the street, or it's dark out. It's two in the morning. That's where that interface of, "Okay, do I really need to logon each time I use this thing?"
Problems - Technology	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	But the problem is there's that, I have to logon every time, and then there's a time delay. If I put this down because we're doing CPR or we're at a trauma call, and I come back and I've logged out because now I have to re-login again, and it's just tough. That delays that delivery of service.
Problems - Technology	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Well, I don't want to blame it always on technology but that's certainly, again, that factor of if I get in the fire engine and for some reason, my mobile data terminal needs to be shut down and restarted because there's new software upgrades, that's not a good time to do that. And if I choose not to upgrade that, then I can't get that information and I have to go to an alternative means, and that's radio communication.
Problems - Technology	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	It's very easy when the calls are small, and it's very challenging when the calls are big. So most of the communication is done through radio, and radio is a one-time, one-person-gets-to-talk type of thing, technology,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								right? So if we just need to talk to one other unit or we need to talk to the dispatching agency or we need to talk to one police officer, it's not that difficult. I suppose it is a little more difficult for us to communicate to police just because they're on a just different channel-
Problems - Technology	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	...The only other challenge with that, I suppose, is just the reception of the radio [inaudible]. That's the other thing that can maybe throw a little bump into that statement, that it's always easy. If you're in a challenging area of coverage, then even if it's a small call, that is another thing that could be hard. On larger calls, where it can be very difficult to communicate effectively just because of that notion that it's one person gets to talk.
Problems - Technology	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	[RE: radio communication] So if you have a lot of people that want to talk, or a lot of people that want to talk to different people and not necessarily to one point, then you have to wait or things get messed. And we try to create protocols and procedures to help deal with those challenges to try to keep our radio traffic short, very formalized way, to try to communicate to one point of contact so that everyone can kind of hear, as opposed to a lot of different side conversations going on. But, inevitably, the other thing that's kind of a challenge is in those situations where there's a lot going on, the level of stress or the level of uniqueness to that call for us is also elevated, which kind of jeopardizes our ability to stick to that very short, succinct radio traffic, right? So typically on large-scale incidents, or typically on any incident where we have a challenge or where we have a significant issue where we harm or kill a firefighter, the communication is almost always identified after the fact as one of the contributing factors to it. So day-to-day, small incidents, pretty routine. Larger incidents, very, very limiting.
Problems - Technology	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	...So you have to think about, "Oh, okay. Well, now which communication channel are they on and how do I get my radio to communicate with them?" If we go beyond the direct immediate outside area, then it's even more challenging because then, at that point, you get to the level where you're asking Dispatch to do some sort of patch-throughs to get people

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								in the right capacity. So the further out you go, the more challenging it becomes to talk to those agencies. Outside of response, it does seem like you can typically get ahold of people via email if you needed to reach an outside jurisdiction to talk about something not emergency related. It seems like, typically, you can find the right contact via email. But on emergency response and through radio, it gets harder, I suppose, the further out you get. And also the less frequently you do something.
Problems - Technology	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	In-house, yeah. And we have an IT department that at least facilitated that. Now it's not a large enough department to continue to improve it and deal with all the bugs, so we've had some issues on that front. But all in all, the adoption of technology and the level of technology that we have is pretty outdated, it seems. Yeah. And I think that that-- as prevalent as the kind of hesitation to change is throughout the department, I would say it's also, maybe ironically, there's also a very common feeling that our technology is old and outdated and doesn't work. So it's kind of an-- it's kind of a catch 22, right?
Problems - Technology	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	...So there's not much in the way of training on new technology, or certainly no incident for motivation for us to try to reach out to the newest, latest and greatest because of those reasons, that reliability and resistance.
Problems - Technology	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Yeah. I suppose in the-- just like we were chatting before about when a technology doesn't work and you're really dependent upon, it to get that information you need in such a time critical fashion, then I guess you could say that it got in the way. You're trying to respond somewhere and you utilize a mapping application and it sends you to the wrong address and then now you're in the wrong spot because of technology
Problems - Technology	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	There's been instances certainly where the mapping application has got it wrong and tried to send you to the wrong spot. So, yeah. That's an example of it getting in the way, I suppose.... The other thing, I guess, I'll be able to spin that and think about technology getting in the way is that using outdated technology for the wrong purpose.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	[RE: building info] ...And then, again, those are kind of things that are currently somewhat managed by our pre-fire system, but it's a very outdated method compared to the capacity that currently exists and is coming to capture and collect and utilize that information
Problems - Technology	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	...That technology is out there but for a third-party company to build it on their own, there's a ton of motivation because the end-user group is not gigantic. So it's not something that you can, "Why do I want to build a system for the fire service when I can go build Instagram and try to make billions of dollars, right?" So there's that element that's at play.
Problems - Technology	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	...I don't believe we're going to get it from the third-party system out there that's building it. It needs to come probably from some sort of like-- and there's not an economic motivation to just build something like that. Maybe somebody could build something that's big enough for everybody adopt it, and then you'd have it, but it seems like the more appropriate way is some sort of nationalized standard or government funding or something like that.... I think it could be solved on that size, but then I supposed the challenge then is the bureaucracy that's involved with that and the speed which is associated with that, versus the people that are a third party like building quick with latest technology.
Problems - Technology	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	.... But there's a level of art and science to how information is displayed. And I don't think that those who are creating the applications for us now either understand that or have the capacity to invest in the infrastructure necessary to display it cleanly in a way that works. So I think that would be a question best answered by studies of what are you looking at--
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	[RE: ACTIVE 911 app] Not usually. No. No, because I don't have the same-- I don't have the same app. So my phone doesn't get notified when we have a call.
Problems - Technology	FF	S	Other Public	36-45	11-20	Male	FF-S-033	...Reliability is always an issue. And that can be attributed to-- you might be in an area where you just don't get a good signal. A good mobile

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					signal. So some of our apparatus, they don't always get their calls on the iPad but they'll get it on the iPhone, which is interesting.
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Sometimes the computer in the rig won't get calls, but the iPad will, or vice versa. So there's a little bit-- technology is not a perfect system, right?
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Another thing too is the apps don't always work. So I know that we've had some issues with that and that's one thing that they're looking at. But trying to get everything to work exactly, ideally in a perfect world, we're not there yet.
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	I think the only time technology would get in the way is if it's not working. And you might spend too much time trying to figure out why it's not working and trying to get it to work. And what needs to be done and what usually gets done in those situations is you just put it aside--
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	--and you forget about it. That would be the only instance that I can initially think of where technology would get in the way. If you get too focused and you only know how to work with technology then what happens when it doesn't work? That's the problem.
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	The PDFs. So you can access it. I don't think it's the most fluid system yet. I think there's room for improvement. But you can get them on your tablet. Yeah.
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	...So the mapping system right now has definite room for improvement. So typically, if you look up a map on your phone, you can with two fingers easily zoom in, twist around your perspective, rotate. And our current tablets and mapping system don't do that. They're much slower and clunkier. And when we're responding to an incident, when we're more probably going to be there in five minutes or less, plus I have whole a bunch of other things to figure out, I don't have time to be trying to figure out how to make my map work the way I want it to. It's got to be quick, and it's got to be responsive...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	...And the way our current system is designed when something new pops up, it's supposed to be yellow. But you won't know that it's yellow unless you clear that you've seen it. So if you look up and if you're in the habit of never clearing it, it's always going to be yellow. And then when something new pops up, you won't--
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	--recognize it because it's still yellow. That's one form of miscommunication. Now, another form of miscommunication in on the radio channel. What if you're on the wrong radio channel? Which happens. Sometimes it gets changed on your pocket or you're so used to being--
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	So our current radio system-- the current radios that we use, they're not specifically designed for fire. And obviously, fire's hot. And once it gets-- I think our current radio-- I read about this a couple of years ago. But it's surprising that they're only tested in like 175 degrees.
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Yeah. And the average temperature of a flashover event is over 800 degrees. So if a firefighter should hopefully never get caught in a flashover happen event, their portable radio equipment could malfunction. If it gets wet, the radio might not function. We spray water all over the place all the time.
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	That's another huge problem. So that's one thing I'd like to see. The fire service, anyways, to have radios that are specifically engineered and designed to withstand water and heat. And I'm sure somebody's working on that, hopefully. But as far as I know, it's not there yet.
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	And it's the same radio for military, and police and SWAT, and the fire. So firefighters are trying to develop ways to protect their radios. So some of them will wear then underneath their protective coat to protect the radio. The problem with that is that might interfere with the signal and the reception then. We also have the extended mic cords. So you got your radio in your breast pocket, and then the cord because that's the speaker. So that we can also hear-- we have to have the speaker close to our face so we can hear and then talk into the speaker. But those cords

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								aren't rated for heat. One huge place where those radios can fail is the cord. If they're exposed to 160 degrees, they could fail... And now you can't talk to anybody and you can't hear anybody. But you might not know it.
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	in a catastrophic event and you needed to radio out, you might not be able to because your radio just got fried.
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	We can [see our air level on the TIC]. There's a little gauge but we have to look at this gauge... And if it's dark, you might not see it. We have a variety of different warning systems of [when there's no?] or air is running low. But if we could-- that could be in the head-up display.
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Yeah. And I tested out some remote communication systems when I used to work on the HazMat team. But having something where you can hear and speak clearly is key because right now, we're talking through a mask so our voice is muffled by [just running?] through a mask.
Problems - Technology	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	It's hard to hear and it's hard to understand. And then you try to project your voice to be heard and it sometimes that makes it worse. If we could get integrated microphones in our face piece that connect to our radios with built-in speakers in or near our mask by our ears, I mean, that would be huge. And it's got to get there. It's going to get there someday. I just don't know when it's going to be but I am sure it's going to get there someday. So that's my wish list.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	...And then two, from the fire side, we do a lot of false alarms. And a handful of them can be from malfunctioning systems in high-rises, but most of them are still maintained by their engineers.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	...So now we've moved into the electronic age and we're using Microsoft tablets, and I hate them. And I understand with anything - and that this is what they keep telling you - is that there's just a learning curve to it. So there's two parts of it that I dislike. One is the program. It's a bought off-the-shelf program that somebody developed for somebody else, and it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								doesn't use terminology and stuff that we've been using in the department, right? And so instead of having something that's kind of catered to us a little bit, we're having to get used to somebody else's program... Anything electronic, right, it ends up having bugs. Or things, you're moving and you're trying to enter a password because it locks out after 60 minutes and it's just like it won't take your password, and so things like that.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Well, now, everything's electronic and there's no real note-taking scribble spot and everything's on different fields, right? Different tabs, different screens. And somebody says something, but I'm not on the right screen. I got to-- it's just very cumbersome that what happens is I'm focused on this, and I'm not focused on this. And it's a huge-- I think it's dangerous personally for us.... But I like technology, it's not like I don't want it. I just don't think this is the answer for our environment.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	But we, downtown specifically, use the direct channels all the time. Because most of the trunk channel's in high-rises and you go down into the basements of parking garages, it won't get there.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	...The tablets being a negative because of the learning factor, and the clumsiness, and the lack of awareness. Other than that, as far as the tech-- I would say that the [MTCs?] on a rig are huge. I can remember when we first started, it was a little box, about that big and it had a little green arrow, and it was like you could kind of see lines. It was basically worthless.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Some of the downsides is obviously it's got a battery. So the battery's got a certain amount of life to it. So there'll be times, if you're using it multiple times during the day, if you haven't had the opportunity to maybe swap out a fresh battery, you can get to points where it starts balking on you, indicating that it's getting low. So that's a negative because there's a set level of power. And obviously as that battery works down, the less power you've got, the less actual transmission power you're getting to send your signal out. That's all based upon battery too. So that's a downside, as far as signal strength. The mic chord. I mean, it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								would sure be nice if we were able to get to a point where you had wireless earbuds, kind of communication that was voice-activated or something like that.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	So there is some limit with the radio, as far as the communication aspect of-- especially when you're in a fire, when somebody's running a chainsaw and different things, that makes it very difficult to hear out of a mic that's not in your kind of your locale, so to speak. So that has its limitations, as well as the cord can sometimes get grabbed or caught. But they seem to kind of be getting, to some degree, smaller than what I first started with. We call them bricks because they were probably about that big. About that tall.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	[RE: aid forms] ...We're not there yet. My form doesn't go to the ER. My form right now doesn't even go to the ambulance, even though they're using tablets, because they're not using the same program.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	The radios themselves, they're pretty limited as far as how many channels we have, how many zones that we work with as far as on a regular basis. So once you start to grasp that, then it becomes just second nature. So it's not something that I think the radios have some huge learning curve, like we're experiencing with the tablets right now.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	...back to our tablet, and I think that there's a time frame. I think it's a month time frame, is what I was told. So if I enter a person and I'm diligent enough to enter all their history, their medications, their allergies. Which in all honesty, because of the people's frustration with this, I don't know how diligent they really are in completing the forms properly. But if you're diligent to put that in, if you have the name and birth date. And we do it a lot down here because we got a lot of repeat offenders, so to speak. If I put that in, I've got a button that I could query and it will pop up how many times we've seen that. And so if I click on one of those and somebody has been diligent with their history, I can add that into my form and write there, look at what their medications are. So we, in theory, kind of have that potential. I've been told though within our tablets, after a month, that drops off. So I'm not sure if that's kind of like

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a rolling thing or not...
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Technology sometimes. You get in a place [inaudible], you're not-- the signals aren't either getting out or being received. So technology is always going to be a factor, because it's never perfect. I would say the other thing besides technology is - like I said earlier - is just radio discipline.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	And from that, we've got bottles that only have so much time in them. It could get to the point where we're required to manage our own time.... Without me even knowing it, already somebody out at the IC is tracking it and they know that Engine 10, the officer is getting low on air. We're going to have to think-- now, already they could be planning for a transition, for a replacement crew.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	... And, of course, we're not all using one same database that I can tell this building, when was the last time it was inspected by the building inspector, or it just had an upgrade, or they were just [inaudible] because they were caught doing an illegal structural change of they took out a bearing wall. I don't know, whatever. But it's something maybe another agency catches that's within their database, but we have no knowledge of it because it doesn't get passed along.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] There's always going to be some hiccups, but the transfer part of it works pretty well and then it keeps a consistent report between different rigs.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] If you're very, very deep in a heavily walled structure, or say if you're a couple floors down in a parking garage surrounded by cement, it might be a little tough. We have certain structures where we have issues, too. I'm trying to think of one on the top of my head, I can't remember.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] But, it is designed to function at 98% coverage, but it's basically based upon the radio being at the hip level in the street anywhere in the jurisdiction. It's not designed to penetrate through buildings, it's not designed to be in the basements. And that's where police and fire fighters operate.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] You get so far away from that, you've lost your connectivity so you walk back close to it. So therefore you can't transfer data to the medic that's standing beside you with the patient. You would have to remove those devices and go back out to a rig. So we've recently got cell phones with the updated technology to get a wifi hotspot.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] Yeah, in the last three years, four years, we've really slammed these guys with a lot of technology. We were actually kind of on the back end of technology for several years, and we've had a shift in leadership and then finally we felt like the technology was to a point where we needed to sort of step up and could jump in because we're always kind of waiting.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] There's a number of commercial applications like that that are out there, available. It's a continuous balancing act because the MDTs use a non-commercial app that's basically based upon our computer-integrated dispatch. The requirement for reliability of the maps in there is extremely high. And so sometimes the technology lags behind, because it's really sort of has to be bomb-proof. Whereas with Active911, it's a commercial platform. There's no requirement for accuracy.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] ...Because it's so easy for people to get focused on the app or the cool stuff on something like that. And we need our people to be relating to our patients. We need our commanders to be looking at the fire. And there is a saturation point too.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] Because end up having this tablet, well, someone's got to run it. Before you used to have a wooden board with a piece of paper on it and you could quickly jot down notes. Or you didn't have boxes that had to be populated to lock a record and have a tablet you had to keep track of, and have connectivity to it....
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] ...And those things have to be handed to the next person. So you got to make sure it doesn't get lost. It doesn't fall off a rig, or you set it on a bumper. Squashed in something, spilled water on it. Dropped in a fire.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								There's all kind of different things you got to keep track throughout the course of a 24-hour shift or a 12-hour shift and they all cost money.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] So you're always worried about what you have on you and where's it at. A cord gets in the way of a radio. It's come behind you, it gets stuck in a door. Those things are always limiting. Cords, in our business, are a terrible thing, in my opinion. If everything could be wireless, perfect.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] I think the only other thing that gets in the way sometimes is, the tablet has a tendency to decide to crash a few times in the middle of the night in the way of calls. But it's a matter of figuring out how to circumvent the issue and figure out a way to make this work for now.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] That's one of the technology things that we are continually struggling with, is compatibility. I personally try not to get uni-taskers. It's very easy to have 12 different devices that all do one thing.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] ... Because you got guys like me who come onto a rig that is usually-- I'm in a day shift capacity and I don't always use that platform anymore, although I did when I left and I will when I return. You might find me calling certain individuals, "Hey, what's the password to get onto this tablet?" And then all of a sudden I figure it out but then you go into a different app. It's got a different password and a username.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[RE: info from dispatch] [S4] ..."We've got a better system now that would manage that information." But still, there's never going to be a perfect thing. Never a perfect system in terms of always having good, real-time intel.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] I think there's varying issues depending on the mode of communication, whether it's the cell phone or that radio or the tablet. At least on our end, the tablet would just be that every once in a while it has errors and crashes but you have to just kind of figure that out. And then as far as the radio goes, it's just radio traffic and people using radio traffic effectively as well as speaking calmly and clearly.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] Everybody has something to say about what they see or what they're doing. And everybody thinks it's the most important thing out

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there, right? But if you all try to say at one time then nobody's getting through and you get bogged. Only one person is going to get through at a time in one type of a channel. So if you have 30 people there in certain portions of that building or under whatever they're going through, someone's going to be waiting a while to get on the air. And it's hard.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[RE: radio channel switching] [S3] Trying to make it second nature for people is the biggest thing, because there's a lot of channels-- [s4] We just don't do it very often so it's just not second nature.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] ...So when you have a mask on and you're inside your building, we recently got the wire earpiece, kind of like a Secret Service agent, if you want to call that. But you've got to remember to put that on before you put a mask and helmet on, because once all that stuff's on, you can't get it back in without taking it off. So now you're not just listening to a lapel mic - which you can miss a lot of things in the heat of battle, if you want to call it that - that thing's squawking away. You don't realize that you're being called.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] Because I've noticed, sometimes, with that, I would prefer that ear piece far more when trying to listen to that without a mic, because there's so much going on, it's hard. You have to lean over anyways. Having an ear piece in is great, but I've found several times they were popped out.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] There has to be a choice between the things that everybody's going to have. And then some people are going to self-select. And then some people, because of their abilities or needs, are going to select 20 different applications and are going to be [inaudible] them all and effectively using them all at the same time, whereas some people are going to struggle with three. Some people are going to be trying to-- some people are going to be ineffectively doing 10 when really they shouldn't be doing three because. So that's the challenge. I mean, everybody has a different bandwidth of making sure that they match their capability of the information [inaudible].

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] we have Apple phones, we have the Microsoft tablets, we have whatever it may be. And some of those don't mesh well, as far as trying to transfer information, or whatever.
Problems - Technology	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] .... It's just right now, we have four different dispatch units that we have potentially to interact with, and they're all operating on different CAD systems..... So we have a lot of interoperability challenges. The technology's there. Ask of any technology, "Can I do this?" The answer is always, "Yeah. It just takes money."
Problems - Technology	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] Well, our big issue is our radio system is getting at end-of-life. It has been a wonderful radio system, and it works really well. But they can't get parts anymore for some of the transmitters, and it's getting-- like I said, Motorola has quit making parts for some of it. So we do need to replace it.
Problems - Technology	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] We don't want to go spend hundreds of thousands of dollars replacing all our radios when number one, we can get the taxpayers to pay for it and not come out of our other budget. But number two is, we don't want to buy radios that aren't going to work with the new system.
Problems - Technology	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] If we go downstairs in our basement, you miss phone calls and pages. There are very few places like that. Main buildings that have those issues are required to replace them now. So we used to have that problem at the hospital. They were required to put in repeaters. We could fix ours downstairs. It's just not-- technically it's a storage area--
Problems - Technology	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] They're still [crosstalk], we're limited on some of our data communication, a cell tower, to where you might drop for a second before it's picked up. There's little things that--
Problems - Technology	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] Depending on where you go and sometimes down at [City], and you drop over, and it switches to whatever tower it's on over here to the [City] tower you'll drop for a nanosecond, just enough to drop a call or drop communication to relog it.
Problems - Technology	FF	S	Supervising Field	Not specified	Not specified	Male	FF-S-036	[S3] --that brings up a good point for [County] county of North [City] talked about it, but the farther you get north in [State] State, the closer

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					you get to Canada. And the phones will switch over to Canadian, especially data, and you start paying 50 bucks a minute.
Problems - Technology	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] Yeah, until you get up in the woods. Remember, we've got eastern part of the county that's rural, and it's forest land, and the radios don't work everywhere there up in the mountains.
Problems - Technology	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] But they have repeaters up there when you actually get into the woods where there's no population. You're going to run into communication problems.
Problems - Technology	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] I would say we collect so much information now. It's hard to figure out where it all sits. And everything now is done databases, and we develop all these databases put information in. But it's always later, they figure, "Okay. How we can get that stuff back up in a usable method?" That's probably the biggest challenge.
Problems - Technology	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3]...some guys get focused too much on making sure the right box is checked. I don't know if that makes sense. They're focused on click, click, click that you sometimes lose sight of a bigger picture or something over here that if you weren't so on your tablet. It used to be you just-- you wrote. You just scratched. Now, you are click in any way. Go back and then-- so I've heard that you kind of-- sometimes, it can look like you're losing a little touch of that personal side of you. You're talking to the computer. That's more self-imposed. It's really not the technology doing that. It's just how we use it. So it's getting in our way. Our board, that's what they want. They want the data
Problems - Technology	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] Sometimes we get pushed back, but when we added this new world MDT system, I mean it was no way, "Jeez, I just need a radio." This is crazy now if that computer system goes down for 30 seconds. Here's your microphone, "[inaudible]". They don't know how to act without it now. So.
Problems - Technology	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] ...And they are so tied to that phone and all the information that they get all the time - Facebook and all that kind of stuff - it's very difficult for them to put that down for any length of time.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] So from the worker's standpoint, has technology hindered us? Little bit what I said, but from a fire departments standpoint, Facebook and Twitter and whatever the new hottest one is out there this week--
Problems - Technology	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] Snapchat, those can be extremely challenging for us because the data is flowing unchecked. they'll have thing within, "They said there's a bomb in there." It goes so unchecked. It makes our job 10 times worse. If you're trying to get into a thing, and people are-- you can say anything you want on Facebook, and people believe it as-- so if somebody says, "Hey, there's a bomb at Valley [City] High School, you should get out there." That's gospel, and it hurts us in some of the bigger incidents a little bit.
Problems - Technology	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] And it's hard to protect-- we have a lot of protected information, HIPAA protected information. And crews are on the scene, "Oh look what I'm doing today," and sent it out on Snapchat. It's illegal but how do you catch them. So some of that's challenging.
Problems - Technology	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[RE: communicate with other agencies] [S2] Well, that is a great question here. We're working on it. So without going through all the history, we have two dispatch centers in [County] county, okay? Snowcom and Snowpak. And the dividing line is-- you're probably sitting on it, or very close, okay? So half the fire district goes up to the dispatch center north, the other half goes to the dispatch center south, and the sheriff's office - which is the police agency for the unincorporated area - is at Snowpak, and we get dispatched by Snowcom. So we're covering this area with two different dispatch systems, one for police, one for fire. Now, it's better because we're all New World One computer system now. So it is better, but still, if one of our people have to voice something to the sheriff, it goes from our guy, to the dispatcher here, a phone call up to Snowpack, then they have to call the deputy on their radio. So you can see the back and forth. Now, can we talk on their frequencies, meet them somewhere? Yeah, we can, but it takes two dispatchers to coordinate that.
Problems -	FF	S	Supervising	Not	Not	Male	FF-S-036	[S2] So, bigger picture now with our incident management team, is one

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Field Responder	specified	specified			thing we struggle with is when we go to-- I've got my 800 radio, but when we go to Eastern [State], we go on wildland fires, we work with different federal agencies, I can't talk to them. So locally, we do pretty good, but when we get outsiders coming, or we go to the outside, all bets are off.
Problems - Technology	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[RE: large scale event with hundreds of agencies] [S2] We can take our radios from up there down there, and they won't be worth a dime because you can't use them.
Problems - Technology	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] Of course. I can't remember my own password.
Problems - Technology	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] Yeah, by the time there's-- used to be. I had one or two passwords. Now, I have a document on my phone. Luckily my phone just uses my thumbprint, but I have to open that to open up my document to tell me what password I'm signing in to what unit I have because I have 14 different passwords depending on what piece of equipment I open up. So yes, it stinks.
Problems - Technology	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] Now what we do on our rigs - the dispatch centers and the [trainees?] don't like it much because it's not HIPAA compliant or CJIS compliant- but we use generic passwords... So if you float from station to station, you can get into that computer immediately... everybody knows every unit is set up that way. But it doesn't provide the accountability sometimes, that the IT people want that they know the individual that's using it. You have to do a little more research. "Okay, it's engine 11 that day," and we have to go look at, "Okay well, the captain was this person." We can always put it together, but... The rules pretty much say you have to, and we just said, "We can't live that way. It just won't work." So we do it generically for the units.
Problems - Technology	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] One of the issues with drones right now, though is, right now to fly it-- I've got my own drone, and but you have to have the commercial license if you're going to do anything but personal use, and that's pretty hard to get.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	[RE: hard or easy - entering reports on MDC] Depends on the individual [laughter]. And, I mean, they sometimes have-- at least from what I hear, they sometimes have technical difficulties. Like maybe it's not connecting to the Internet, and so they have to wait and do it later, that kind of stuff. Or maybe if their MDC goes down, they have some difficulties doing stuff, so I know that happens quite frequently.
Problems - Technology	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	[RE: with other jurisdictional agencies] A lot of it, we had to go-- while we had the cell phone numbers, they weren't always answering. So a lot of times, we actually drove to the site where the other group of PIOs were to ask those questions because just-- but what we did that we found worked well, was having a conference call every morning at a certain time, so that people had it on their schedule in the morning. So that worked pretty well. But, again, if you didn't have phone service, I think it would be really a struggle. Same with if there was no email, or text
Problems - Technology	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	...We were using a different program, which was Internet-based, and we found that our Internet coverage was terrible and so it didn't work. It was miserable. Our inspectors were taking twice as long to do inspections, and the whole point of the technology was for it to take less time.
Problems - Technology	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	Because just the wheel of death was on every time. That's what I call it [laughter]. But they would be trying to enter their inspections, and they'd be out in the field, and they get the wheel, and they can't move forward until they get everything entered. So we went away from the Internet-based program and went to the app-based program because we didn't need the Internet for it.
Problems - Technology	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	[RE: internet connection] -- but just from the prevention folks, it was very much a struggle, and so we went away from the Internet-based program and went to the app-based program so they could enter things. And then when they get back to the station, it uploads, which is great.
Problems - Technology	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	It seemed to be widespread. And I don't know if it was the iPads they were using didn't have good connectivity, or if it was just the connectivity. I don't know what the cause was. I just know it wasn't

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								working, and so we made the decision to go away from it for something that would work for us.
Problems - Technology	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	[RE: damage control on information getting out immediately].. Maybe it didn't even come from us, it came from somebody else but it's not true, so now we have to go back and we have to fix it. "Okay, that is not what's happening. This is what's happening." So I feel technology gets in the way in the fact that anybody can post something to social media, it doesn't have to be true [laughter].
Problems - Technology	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	[RE: damage control on information getting out immediately] Yes, exactly. Exactly. Whereas I think 10, 20 years ago, we were able to give our message to the media, and they typically just went with what we were telling them. Whereas now it's like, "Okay. [Name]. Public told us this, and you're telling us this. Why is it different?" And so then you have to explain those differences, and--
Problems - Technology	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	[RE: damage control on information getting out immediately] -- I think we're able to control the information that we put out a lot more today than we used to be able to, but we have no control over what other people put out. And it doesn't have to be true or accurate, and so that sometimes causes us more work [laughter].
Problems - Technology	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	[RE: crews having access to fire inspection data] Yeah. And currently, there is no way for them to know what we've done on our inspections, and the things that we've found. And sometimes we try and communicate some of the big stuff like hazardous materials and things like that.
Problems - Technology	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	[RE: changes] I think the bad are some of the things I already talked about like the ability of just random people to post things about your organization, and you really don't have a lot of control over what they're saying. Whether it's true or false, and things like that. And just the fact that sometimes the expectation now is that things are going to be immediate. I think that is a downside. Prior to having a cell phone, I mean, people left you a message, and when you got home, you called

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								them back. And now the expectation is that, "I texted you six times. Why didn't you text me back?" "
Problems - Technology	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	[RE: out of box Question] I think something that brings all of the tools that we use together, so you can get all of those pieces. Right now, I have to go here to get this, and here to get this, and here to get this, and here to get this. If I had something that brought all those things together, so that I am working on XYZ project, and I need something from here, here, here, and here, it all can come together.
Problems - Technology	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	[RE: out of box Question] I would like to see some sort of alternate communication plan should cell phones go down. Like how are we going to communicate with other folks? And I know that radios are a great way to do that, but what if those go down? Is there some kind of backup to-- I would like to see some kind of backup just in case.
Problems - Technology	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	I'm sure there are a million apps out there. I mean, I think that's part of the problem too. There are so many options for things. Everything is super cool, and let's have that in its latest and greatest.
Problems - Technology	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	I will say right now sometimes I think the technology's moving faster than the equipment we have on the rigs because it's not completely reliable right now. So the crews, they don't put a whole lot of stock into it right now. There's some that work well, but it just seems like we haven't gotten there quite yet with a good consistent product.
Problems - Technology	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	[RE: tech on rigs] Locking up, those type of things, or the mapping feature, it's not doing what they need. And actually, they'll fall back on the Active911 that's in their phones and on the-- there's iPads on each rig, too, that they do their reports-- their field reports, they do on iPads. That has active 911 also. So they can hit it and that has a mapping feature. But it doesn't give any secondary information on the call other than the call type.
Problems - Technology	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	We've got backups in the rigs to help us if technology fails us or if our mind fails us.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	Yes. Since we've gotten the new system, the 800-system, that was [City] 911, that's an 800 Mega Hertz system versus a VHF, what we used to have. We struggled with the VHF. I mean, we couldn't even hear in our own district if somebody was talking here in [City] compared to a company talking in [City] down here. We couldn't hear them.
Problems - Technology	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	[RE: communicate with other first responders] ...We're challenged at times to get us all on the same operating channel out there, and we're actually working through that right now.
Problems - Technology	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	[RE: state of current tech] Overall, I would say that all combined, it's very useful information. I mean, we're getting a little bit here, getting a little bit there, but the common thing that I hear from the field guys and gals is that the MDCs just aren't reliable enough for them to count on. So they're using them when they can or when they're working, but they're just not reliable.
Problems - Technology	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	There are some limits to the radio system with some of the buildings that we have, basements for instance and some of the bigger concrete-type structures.
Problems - Technology	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	I don't think it-- every once in a while someone will have a problem with their sign-on but it's not a recurring problem that we have that I'm aware of with that. Everybody has their individual logins.
Problems - Technology	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	[RE: tech got in the way, example electronic reporting program] ... The guys have gotten more used to the program and more proficient at using it. But it slows things down a little bit in the field sometimes because there're so many steps, so many drop down boxes that you got to do for each field, versus back in the day I'd just scribbled some information on there, and then I would decipher it to the report once I was back in the station. You know what I mean? You got to be more thorough in the field now than you used to.
Problems - Technology	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	[RE: electronic reporting program] ...The form was right there in front of me. So, I mean, I could jump around-- if I'm sitting here writing medications down that I got the shoe box full and I'm going through it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and somebody rattles off a blood pressure in the old paper form, okay, right, go down to the blood pressure, I look at my watch, that's the time. Okay, and then I get back to my-- you could jump around with the form. Now, you've got the iPad and trying to just rattle the blood pressure, but I'm writing them.
Problems - Technology	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	[RE: older gen using new techs] ...I see more frustration with that because it feels like they're being forced to do this and this is the way it's going to be and it's not the way they're used to being. And they don't like to see compromise in the field either. They have their way of dealing with the patients and doing their business and taking care of things and now you feel this element and it's kind of slowing them down a little bit--
Problems - Technology	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	[RE: what causes communication prob] Well, we are hampered by SCBA masks. So when they are inside a building they are on air and we have amplifiers that will amplify a voice. And we did testing on these when we got our new portables because what we're finding was they were so good at picking up sound in our old VHF radios, a guy or girl would turn and talk right into it right here. Well, now we found that you could hold the radio out here and just talk and it picks it up. And depending on what's going on inside with other noises and things, that can sometimes challenge it. But every once in a while you get a garbled communication coming from somebody wearing a mask just because of placement of the radio and where they're talking and some outside influence as might be working on that.
Problems - Technology	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	[RE: track patient] Once we deliver the patient to the hospital the-- field guys typically don't have the ability to contact the hospital, and it depends on the hospital sometimes too.
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	I think the new units will do that, but I've tried it a couple of times and it's not quite the same as using Google Maps. [talking about the new MDT providing the address and the cross streets]
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	[RE: tech got in the way] The MDTs. That was mostly on the old ones, but they do have a map feature so if there is some streets that you're not

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								too familiar with, like alleys or something that come in, you'll get a call on a side street between two alleys and you're thinking "Where is that?" and you hit the map button. Sometimes the map button doesn't work right or they have a route button that will show you a little bread crumb trail of where you are and where you need to go, and sometimes that doesn't-- you hit the route button and the screen just goes blank.
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	[RE: everyone has a radio] The only way it's a hindrance is if the person you're next to, usually it's your officer that's going to be talking on the radio, if they talk on the radio and you're right next to them, you're going to get feedback. So, some officers will address that in the morning by saying either, "Keep your volume down or keep your radio off until you need it." They'll say, " Set your channel that we're going to and just leave your radio off. Unless you're in trouble or something, you can just turn the volume on and you'll already be on the right channel."
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	[RE: out of the box question] The only thing that I ever really thought of that I think might make an improvement is on the push-to-talk button. Having to push two on each side before you can transmit because a lot of times you know, like I said, everyone has a radio. If you're up on a roof or you're in confined space, and you're beating away at something with an ax, your push-to-talk button gets hit [crosstalk] on accident frequently, and when that happens, it ties up the radio for about three or four seconds.
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	...When somebody is trying to transmit over someone else, it comes out on a radio system as a buzz and you'll hear, like somebody trying to give a report off the roof and let the incident commander know what's going on behind the building. Since we can't see it from the street, they'll look down and see if there's fire coming out of there. And right at the key time that they're about to say something, you'll hear that buzz. So somebody else bumped their radio. It's kind of unavoidable. It's not necessarily a fault thing.
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	[RE: about accidental buttons pushed] I wouldn't say it's sensitive. It's just that everything we have is so big and bulky, that it just pushes it, you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								know.
Problems - Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	[RE: what causes communication prob] I would say, for the most part, it's the accidental transmits and then it's people getting too excited and not trans--or not communicating effectively over the radio and not knowing how to speak into a microphone and have that come out clearly on the other side. A lot of people get up too close and you hear over-modulation [laughter].
Problems - Technology	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	[RE: checking emails] So the department just recently-- you can assign your server to get updated on department emails. So you can get it on your tablet, your phone, or you can log in at home, as far as email, but then as far as the fire calendar, we're not there yet. Other departments do it so you can check your shifts and see who's working but we don't have that yet.
Problems - Technology	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Well, in a fire-- you might have to do a face-to-face with the incident commander, the chief that's planning the call. Because there's so many people talking on the radio that if it's important enough, instead of waiting, I'll just go outside and do a face-to-face.
Problems - Technology	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	So on the squad, our systems are so dated. So Google Maps doesn't really work and they're not precise, so we rely a lot on our phones. So a lot of firefighters-- if I'm driving the squad I'll have the person behind me go, "Can you map this out and tell me directions over the headsets?"
Problems - Technology	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	[RE: general about tech] It works but it could be better. The city, the way it works, they always go with the lowest bid. Whoever. So the better technology, we could have, and it might be useful, we don't know, but we have to deal with what we have.
Problems - Technology	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	[RE: technology getting in the way] The only example I could give you is Lyft and Uber, because before with a cab, because they were marked yellow or they would actually say, "Taxi," if you're driving code three, you would know that maybe that person might be stopping for a fare or something. But now any other car could be Lyft or Uber and they do that. They're going direct and they just stop, all of the sudden and you don't--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you're not expecting that. So in that sort of way, technology has gotten in the way.
Problems - Technology	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	[RE: out of the box question] So our radios, if they could be more of a smartphone. They wouldn't be as cumbersome. So anything like that and you could actually get text on the call itself. So you could be-- so instead of being on a radio, you could just be on the phone or speakerphone. Yeah, so if you're dealing with a medical and you've read it on a text on the NDT, but then you're at the scene, and you're all, "What was that apartment number again?" And it's on the-- so I have to walk back and if it was just... right there, it would be much easier.
Problems - Technology	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	The ones we have does have the capability of an instant read, as far as directions, that would be helpful. And I know that this technology is out there. That it's location-specific. I think the ones we have now is all the routes are from the fire station, as far as directions, but if you could do it like Uber or Lyft does, it's all site-specific.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	The mapping on the MDT is challenging. It's not as intuitive as some of, say, the Apple products and the smart phones that we're all used to. So a lot of folks, especially if they're not familiar with the area, will keep their smartphones with them at all times. Even transition on a medical call, I'll wear this. And then we get a fire, I'll change. And you'll see guys actually take their cell phones out of their pocket and put it in their turnouts because they may go, "What? Where is this street?" or, "Where is this alley?" And someone in the back, who's not driving, can look it up and say, "Go left then go right." And people know their own smartphones very well.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	I would say that our radios are up to date, and that our MDT terminals are not. You can do better with an iPad that you could spend 600 bucks on the Apple Store today than the information and the user interface in it's intuitive level, currently, that we have on the rigs. They're trying to make it better. They keep improving, and that's fine. But we're also governed by lowest bidder and other restrictions that prevent you from just getting what you want. You may have to get-- well, this vendor has

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								this, this and this. They're an approved vendor. And that's what you get.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	A lot of technological solutions exist in the current fire service if you can pay for them. And I say this as you don't have to pay for them. So a lot of times, a lot of the technology needs - before I get to the pie in the sky - of most American fire service members is just the state-of-the-art stuff that whatever company is already making. Just it costs 10 grand a member, and they're not going to buy it, right? They have things like thermal imaging cameras that can check heat. Well, they make them now where it can be embedded within your SCBA mask, so you don't have to carry a camera. It's like Terminator vision, right? So those kinds of things actually do exist. They're just incredibly cost prohibitive...
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	...So a lot of the technological solutions aren't that it's a pie in the sky like, "Oh, I wish they invented this," it's more, how do we get it to an economy of scale that a fire helmet costs \$200? How do we get a thermal imaging camera that anyone can use, and that is state of the industry, state of the art, full color, let's you know temperatures when hot, and find victims? How do you get that to be also like \$200? So that way a city can go, "Yep, every single member is going to have one on their mask." And that way every single resident is protected by that fire department, right? You walk in and they can scan a room and go, "[inaudible]. There's a warm body right over there." That technology does exist. It's just that it's cost prohibitive. Same with things like iPads on all the rigs. It's an expensive thing, and people like to steal them. And so there's a replacement cost and a maintenance cost for things like that. But if you had those on all the rigs you could do a lot more. For example, when you do the hydrant checks, you could just have the iPad with you, and you don't have to do it on paper.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	I think the self-contained breathing apparatus, the bottles that we use, right? The cylinders. As they're adding technology they're adding weight. And I would say that one of the number one complaints of [City] firefighters is the Scott pack that we used to have with no bells and whistles, just air, that was it. It was 18 pounds. The thing we have now is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								like 27 pounds. Now, it has technology built in. It lets you know when your bottle is low. It has all these things. And if you go down, it has a computer chip and someone can use a homing device to find you. And that's all amazing, except it's 50% more on your back. And the minute you put that on, you're not thinking about the fact that the microchip might help somebody find you, you're thinking about the fact that, "I'm slamming this thing against my back 12 times a day. I'd really rather not slam 27 pounds. If I had to slam something against my back, I wish it was 18," right?
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	...the direction the equipment went for our job went, "You need more protection. You need more protection. You need more protection." And they put us in, essentially, these bubble suits. And now we have all the protection in the world, but our mobility is reduced. It's hard to move. It's hot. And one of the big line-of-duty injuries is heart attack, usually related to heat exhaustion, dehydration. Which is usually related to that person's wearing 75 to 100 pounds of gear. Lugging around in 90-degree heat. Climbing up 80 flights of stairs, right? And you go, "Holy cow! That guy is going to have a heart attack or that girl is going to have a heart attack before they even get to the fire." ...
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	...So you've created this situation in which they have all the technology and all the protections, but the protections don't do them any good because they're actually a detriment, right? Imagine you could probably get yourself to a place, where the suits that the bomb diffusers wear, would probably be the best things for us to wear too because if there's an explosion we'd be protected. Except, have you ever seen those guys try to walk around? Right? You get to a point where you go, "That's not working."
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	I would say thermal imaging and distance estimation would be two things that we can't ever have too much of. How far away is that? How tall is that? How hot is that? Where are the viable bodies? Because even the thermal imaging technologies and the heat reading technologies that are out there are limited, not severely limited, but they're limited. So

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that would be something that you could- they can't see through glass because it reflects the way they read the heat, right? Even if there's a body out there, I'm just going to get a reflection of that, so you go, "Damn it! I wish I had one that was more logical than that."
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	Battery technology is always a limitation for any rescue service because-- how great is that radio? It's terrific. How long's that battery last? 45 minutes. Okay, so it's not [laughter] that terrific, right? I could get you from [City] once, and then the battery dies, right? And that's with our thermal imagers, with our radios, with our rescue tools. You name it. We are limited by the distance of a power cord or the distance of battery. Or sometimes, if you are not going to go electric, the amount of fuel that you have to power the machine that's going to give you-- that you're bringing to the scene to-- you know what I mean? So I think battery life is the new future towards, how do we fix some of those problems you're-- if the batteries lasted longer on anything you have, everything would be better.
Problems - Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	[RE: smaller, faster batteries] That's all what we're waiting on. Everything has to be powered. How are we powering it? And power is your limitation. And it could be a cord or battery or fuel, but that is your limitation. And how do you extend that and get more efficiency and more power? Got to get that too because it's got to be more effective. You don't want the same thing 10 years later, but it lasts twice as long then, but that thing hasn't improved. That tool isn't stronger, or that camera can't zoom further, or whatever it is.
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	We actually have our MDT on here, but it's a little slower than that one. And then when it's running all the programs, just because we have a delay in [City], they don't. The other departments, they run everything through-- okay, so I'm not a tech person, okay? So bear with me. When the information has gotten to dispatch, it goes straight to the iPad. We have a 10-second delay, or a 20-second delay, or a something delay. So it has to go through a filter or something, they won't just let it-- [City] won't just let it go through.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	[RE: showing the Tablet Command app on his iPad] ...But what I was going to say also is that things that could do better with them is either have it color coded. So when we have a single alarm or a double alarm or as it gets a greater alarm, each company, each code would be different. Because the problem is when we move people in and out, if I have a greater alarm, I don't know where they came on. Or even a line that just kind of moved them back into the box of where they came from.
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	...So we tend to split our crews, the truck companies, so one will go inside and half will go to the roof. So they'll cut a hole and some people are looking. This, he doesn't have the technology yet to actually physically split them. I just have to make another-- I have like, truck 7 and truck 7B... So yeah. So they can't do that. They can't split.
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	[RE: showing the Tablet Command app on his iPad] ...there's little notes that you're going to put in there, like what if it's under control. I'll put the person, like the owner of the building and their address and phone number and all that kind of stuff if they are on scene. Although the other day, too, the stuff wasn't saving. Even though I was saving it I came back and it was gone. I'm like, "What happened?" So kind of it's hit and miss. And I don't know it's because of WiFi service in the city, and data collection, and depending on where I am, if I'm just in a dead pocket and it's just not going to work as well or what.
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	Well like with our radios and stuff, sometimes they don't work when you go below grade. They don't work some in the high-rise because the concrete and so then that-- and that for our job realistically, 99.9% of when things go bad is because communications has either been nonexistent or muffled or miscommunicated or something.
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	[RE: out of the box question] Like the Google Maps or even the Apple maps on this is good. It's just because it gives you options, so then you can pick. The MDT maps or whatever, they just-- they take you the weirdest way.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Yeah. So we have radios that you're able to scroll to and get to those places, but because we don't do it very often, it's not real easy. It's kind of clunky. In fact, we're working on a new radio load right now. I was just talking to the person in charge of our communication center, and we're trying to break down-- just from a simple-minded perspective.
Problems - Technology	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	...Somebody gets with a stuck-open mic. So if you're working doing something, and your microphone ends up in the wrong place and it opens, then everybody on the fire ground loses communications... And you can't talk, right? So it ties things up. It blocks them until we can get a hold of the communication center and say, "Who's radio is that?" And then they can either shut them off, or we can find the person and shut them down.
Problems - Technology	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	[RE: stuck-open radio mic] And that's fine if it's not an emergency, but if I'm in the middle of something significant and I have an open radio frequency, that becomes a problem.
Problems - Technology	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	[RE: tech changes] So we used to have 2 tactical channels on a simple 4 or 5 channel radio, and only the officers and the chiefs had radios. So instead of 35 radios going to a call, you had 5 radios going to a call. So the downside is you don't have very many channels to talk on, and some people look at this as a negative. In some ways, I look at it as a positive...But I don't think they're that-- I use them more often so I can get around them fairly easily, but for your average firefighter that doesn't do it very often, it's not very user-friendly. But I mean, from a radio-technology perspective, it's still a radio. You talk on it, somebody hears, and you talk back and forth. Past the radio stuff, talking about repeaters and all that stuff, I don't know how the technology has changed there. I'm sure there's been some significant changes. For me, that's behind the scenes.
Problems - Technology	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	I do know that one of the downsides of what we have right now is with all the radios that we have out there. And because we're on a combined radio system or a trunk system with the cops, sheriff, is that, if 24 people in the entire city can be talking on their radio and 2 speaking to each

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								other, the 25th person that can use their mic gets a busy signal. So I've always said, "When we get our earthquake--" or on a first alarm, I've got 35 radios that are showing up. Second alarm, I've got another 35 radios that are showing up. At some point, there's 120 radios there. And you know that some amount of people are going to try speaking at any given time, so the limitations to the radio system, to me, are dangerous. Especially when we have a-- if we have our earthquake, or when we have our earthquake, because we're sharing that same trunk system with the police department, the sheriff's department, and the department of emergency management." And so lots of busy signals. And the busy signal is just that. You get a bong. A bong, so you can't communicate.
Problems - Technology	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	...And then I'll just say number three, that without the Bluetooth technology and the limitations of that, the current microphone cord that we use is way underrated. And I think it's almost criminal that they are giving any firefighter in this country a microphone cord that, at 160 degrees, begins to degrade.
Problems - Technology	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	And those are on multiple frequencies, so that's not just on one frequency. So the entire talk-group shares all of the frequencies. So our 16 channels-- if we had 16 different incidents going on, it would only take a couple of people from other departments speaking on the shared radio frequencies where we wouldn't be able to communicate with each other. So it's not just on that one channel. It's on all of the channels.
Problems - Technology	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Yeah. Yeah. It's all of the police channels, all of our channels. No matter what, only 24 people can be speaking on all of the frequencies at any given time. The 25th person gets a busy signal. And I know that we're talking about a radio upgrade, but we're still several years away from that happening.
Problems - Technology	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Oh, it happens. It happens quite a bit. I'll be in front of a building and go and hit the microphone, and bonk. And then you try again, and then maybe you get through and maybe it bonks again. And it hasn't happened yet in a situation when it was an emergency, but it takes that--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	--much time for that to happen. So yeah, I think there's a lot of-- you know as well as I do, there's a lot of military technology that exists that hasn't crossed over into the semi-military world. And everything is very expensive.
Problems - Technology	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Oh, the cops always get the-- they buy toys all the time. They're always way out ahead of us. When it comes to communications though, we share a lot of stuff. And then our communications is also going to be affected by heat, and smoke, and visibility, so you throw that into the mix.
Problems - Technology	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Exactly. Buying a radio is cheap, but changing the repeater and all of the other stuff that goes along with it is very expensive.
Problems - Technology	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	If you listen to any of my tapes from my fires that I get, I would bet-- I ask 30 to 40 percent of the transmissions to repeat. Repeat what you just said. Yeah. Some of it is because radios are turned up and you get feedback when they go to transmit, and I get that feedback sound. But a lot of it is people that just are not comfortable speaking on the radio. And that's all fine until you get that one call that you missed where somebody's calling for help.
Problems - Technology	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	--and I go to talk, then I get feedback from them. And plus, I can't filter that out from background noise and what's actually happening, and you have a lot of ambient noise that, of course, is going on, but.
Problems - Technology	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Yeah. I believe that we're-- if we're comparing it to the private sector, I would say that we're years behind, probably 10 years behind the private sector. I mean, you know as well as I do if you have a cell signal, that these things have the ability to do so much more than one of our radios.
Problems - Technology	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	...But there is a department phone in the vehicle, and it's a, probably, three- or four-generation-old Apple phone. But we don't use the phone for anything other than communicating.
Problems - Technology	FF	U	Supervising Field	56-65	31-40	Male	FF-U-014	[RE: satellite phone] It's not user-friendly. And I know you're waiting for that time for when the satellite is crossing through the sky, and you have

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					to be facing a certain direction.
Problems - Technology	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	[RE: satellite phone] No. We can show you or not, but there's just a lot of buttons that need to be pushed, and the way that the antenna's got to facing, and it's just not user-friendly.
Problems - Technology	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	I know that one of the chiefs from our department is on that committee, [Name]. And - I don't know if it was mentioned to you - he became involved-- we had two firefighters that were killed in the line of duty up on [Street], and I was the incident commander for that fire. And one of the things that we recognized after the event was the officer, his microphone cord had deteriorated. And during the event, I had an open mic for a significant amount of time. And that's why I gave you that 160-degree-- I know in the studies that have been done that at 160 degrees, and the higher the temperature goes, that those microphone cords will send these radios into a transmit mode, an open-mic mode. And we did not hear from [Name] from 10:52 until-- no. I think the last transmission from him was at 10:52 or 10:54. Numerous attempts to contact them. We never heard back from him, and I believe it was because of his microphone cord failing. The practice in our department has been, you put your radio in your pocket and the cord is on the outside of your coat because there's nowhere else for it go. So it's not protected. And yeah, the pictures are pretty dramatic. If you have a chance later, if you go-- I believe it's on our website. It's the [Street] Fire Report. The fire was in 2011, and the lieutenant and a firefighter were killed. And we were unable to get a hold of them for some period of time. And I believe that part of the reason was is that he may have been trying to transmit, but his radio went into open. So that's why Chief [Name] has been assigned to this technology committee that was developed after our fire. And dealing with Motorola and the big companies, they're going to tell you what their microphone cords are capable of doing but that there's no requirement for them to be able to withstand anything over 160 degrees.
Problems - Technology	FF	U	Supervising Field	56-65	31-40	Male	FF-U-014	So that's why I'm saying. So why are we so far behind technology-wise? And the more that we put this out there or the more that we heard from

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					other fire departments that had suffered-- not necessarily an injury or worse, but they suffered the same events taking place where firefighters were operating in a very warm room and their radio stopped working. And it goes back to their microphone cord.
Problems - Technology	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	So both [Name] and [Name] died from burn injuries to their trachea, even though they had their Scott Air-Paks on. So they're on air. What ended up happening is that when they fell to the ground, the fire was heating up their air packs, and so they ended up breathing in the hot air that was coming in through their air packs. So I think the next generation of air packs has to be better insulated to prevent that from happening.
Problems - Technology	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	But the challenge is, if we get a really big incident where we have a lot of people talking, they're going to be limited on how much, I mean, conversations they have. And I don't think they really understand that concept. Kind of like going into the grocery store and standing in line. That's what a trunking system is. And then that's what we try to teach is it's like standing in line at a grocery store. You can only have five conversations at one time across the whole system in a particular area. So when you have that sixth conversation that needs to happen and nobody's available, you're going to get a hold signal
Problems - Technology	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	[RE: MDT] But sharing information on a screen is focusing on the screen and having your awareness of what's around you as well. So it's multitasking, and it goes back to how much can we actually do in multitasking, and what do we have available to us.?
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	It does because the department, we only have iPhone 5s because they're free and that's all they give us. And it's almost inadequate for this day and age. So I can't add any applications. When people say, "I want to look at something new," I can't do that on my iPhone 5.
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	The downside is when a firefighter goes down in a basement, and his radio doesn't see a repeater, he can't call for help, so the radio is useless. So the fix to that is to go to a direct channel. The downside of being on a direct channel is only people within a mile can hear the radio, so other

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								people across the city or incoming to the fire don't get to hear what's going on before they get there until they get into range of the direct channel. So that's a conundrum. I guess there are some fixes. You can put a repeater on every chief's buggy that will also take that direct channel and put it into a repeater system that way everybody to hear it that way. That requires infrastructure, investment, and installation, and so forth, and money, so.
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	There's already our existing radio system and it's too big of an animal to try and change a \$80 million radio-upgrade project with Motorola, then to switch over to a different radio system called Wave Relay. And there's a benefit for Wave Relay, they can penetrate the ground, so they can do the camera aspect and I can instantly see the arrival video in the operations center, where at home on my iPad. These are great things that technology can do, but how do you change an existing system such as a emergency radio communications and go, "Oh, we're going to switch to this new system and invest all this money." And the Wave Relay technology probably isn't there commercially yet. They probably can't deploy it on a commercial level but it's amazing what Wave Relay can do.
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	The mask is an issue. It's not a radio issue, it's more of a mask issue. Talking in a mask is a problem. I still, to this day, don't know why if a fighter pilot can talk into his mask so clearly, why can't we? Why can't our radio exist in our SCBA mask just like a fighter pilot?
Problems - Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	[RE: what causes communication prob.] Buildings. We have a lot of subways here, not as much as New York, but we have a two-layered subway. A lot of buildings, train features, a lot of hills in [City], so.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	Well, communication for us has been a major player when things go wrong. That's normally one of the-- probably the main, I would say, most common denominator of anything that's gone wrong in the fire service is the communication breakdown. So we use radios. The radios that we use are fairly good. Where it comes into issues with communication is when you're actually interior and you're actively doing something, and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								being able to communicate what's happening or what you're doing may not be as easy as it may seem. So plus talking through a face piece and into a radio mic, the clarity isn't the greatest...
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...I think where we may run into some issues are the durability of technology because we're not very delicate with things, so everything that we use that is going to be-- whether it's a tool or a communication device, has to be durable, for sure...
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...Radios we used to have years ago just didn't have the transmittable capabilities, didn't have as many channel selections. And they weren't really high-tech radios. They were very basic, which is okay too. But I think the level of high frequency versus very high frequency and those kind of things, the capabilities of radios have changed...
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...A lot of things that hit the fire ground or the fire service in general, especially with this new technology, we're worried about losing it. We're worried about it breaking. And then, at the same time, now you have to train firemen that are 25, 30 years on the job who-- they didn't grow up with technology, so now they've got to learn something. So those aren't easy tasks, especially if the technology they are using is a little more high tech than they're used to. A lot of different steps. A lot of different pushing this and pushing that. A lot of different frames that they have to go through to get where they want to go. The less is better...
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...if I have a radio that's expensive and something happens, I lose the radio or it gets stolen, the officer gets time. So it comes out of his pocket or he gets time with suspension. So that's a big concern, is that, say I'm an officer in engine, we get these new tablets that are easy to break. I'm not going to be happy about it because then now, that's something else I got to worry about. And when you're slinging tools around and your big concern is getting off this rig, putting your stuff on, and getting in there, you're less worried about delicate things. We're not delicate. We're just not delicate people. So when you put something on there that is a level of technology that is where we are today but is not durable, that's a concern for us as firemen.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...So now, the radios that we have, they're digital. So if I click and talk and half of my message doesn't go through, you don't get any of the message. You don't get, "Hey, this is Engine 93. We've got this," or, "We're looking at this." And then somebody say, "You know what, 93, we didn't hear that." What would happen is they wouldn't even hear me say, "Engine 93, we've got this." The whole message would be deleted. So there would be no reason or any kind of a reflex to say, "Hey, 93, what was that?"...
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	It's the type of frequency. I guess it's called digital. It's a digital. So when something goes out in a digital format or message that-- the only way that the whole message can be read is by getting the whole digital. It's almost like a-- I guess, almost like a DNA sequence. You know what I mean? So it's got to get the whole thing, otherwise, if it gets half of it, it breaks up, so.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...But when you look at something that is very complicated or if you hit the wrong button by accident and it completely changes the whole thing and you don't know how to go back and fix it, those are where issues begin. And even with some of the radios, you may grab the radio and pick it up and your thumb may hit a button by mistake. And it completely puts you in a different channel or a different zone and you don't know how to go back to it. Those are some situations where technology can be a problem.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...Back when I was on ambulance all the time, some of that equipment that came out were a little complicated at first, but then it just takes time, were ones that actually did 12 EDKGs versus pacemaking and all that kind of stuff...
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...one thing that we have seen happen in the fire service with interior tech is the thermal imaging cameras in which, if you wanted to go back to that one question, that technology is something that could be hindering to someone who doesn't understand it and doesn't understand what they're looking at, what color forms they're looking at, what does that mean...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...I guess you could say that's the information that sometimes you want to know because we're coming in, we're listening to a different channel. But then they all go to fire ground, and we're not listening to on fire ground communications, so we're still coming in almost kind of blind until you get there. That's what I don't like. But everything is certainly radio communication. And there are some issues with transmission, and especially in your higher buildings with frequency travel and radios...
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	Subways are huge. A lot of issues with subway radio communications. I would say there have been a lot of issues with high rises just because of all the interference, frequency interference in downtown, for sure. And I would say that's probably the biggest communication issue, especially when you're on fire ground. Sometimes our fire ground frequency only goes so far. It's not a very strong signal. And so if you're 25 floors up or 40 floors up and you're trying to talk to someone on the ground floor, it may not go through as well...
Problems - Technology	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	...I mean, there's times where they don't work as well, especially in high rises. You may not get out as much, but apparently, they're always working on that. Subway incidents are another hard thing to use radios at. They have phones in there for us to use...
Problems - Technology	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	...The only thing with having more radios, we have to have better radio discipline. There's a lot of things that don't need to be on the channels. A lot of people like just hearing themselves on the radios rather than-- clogging up the airways when pertinent information needs to get through. I mean, you'll see. If you listen to our radio channels, there'll be a big fire, one with a lot of messages. Then some other company - it's not even close - and all will be like, "Yeah, we're on the scene for an ambulance assist," instead of just hitting the button to let them know they're on the scene, right in the middle of an incident going down.
Problems - Technology	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	It's probably two-fold. First, a lot of it is operator error. Like I said, radio discipline - being able to use your equipment and also being able to make the correct communications at the appropriate times. And I'm sure there's also a technological aspect where you have to make sure it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								works. If anything, there's a tendency that things may break, need to be replaced. As a whole, our department, we don't embrace change very well. So we have a lot of people that-- I mean, I don't think it's as much now, but I know that whenever I get a radio, in the beginning, some people are like, "I'm never going to use it." Just like the computers, "I'm never using that." 150 years tradition unimpeded by progress. We're just getting to the part where we don't file forms with carbon paper anymore.
Problems - Technology	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	[RE: current technology] I guess I believe it's adequate for our needs, but it could be so much more.
Problems - Technology	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	And then we do a lot of-- with our high rises a lot of technology in terms of having the panel. An engine company does need it to run the lobby and need to run the alarm panel. And our alarm panels are very complicated, telling you where the alarms are at. They have internal communications within the building in case ours are ineffective. They do announcements. They have loud speakers. They also maybe can pinpoint the alarms, can run HVAC and stuff like that. So I have to be in communication with them and the lobby command.
Problems - Technology	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	Well, I mean, you could probable use-- the mobile data terminals are really just laptops bolted into the rig. So they're used at very little of their capacity. I mean, we could do that. I'm sure there's a way to do it, but many of the reports that we do are more back at the station after action reports. There's not a lot that you do in the middle. You know what I mean? I don't think they'd make us-- for the fire side? No. But for the medical side, definitely.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	I think that from my personal-- I haven't had any issues. I think our equipment is pretty much up to date. When we compare ourselves, you have to have a comparison to other people. Other big departments are pretty much on the same wavelength as us and we're vice versa with them. So I think our technology has finally caught up. I can't really think of any issues that could pose a problem, but we could be operating portable radios, for instance, in dead zones, high rise, metal, concrete buildings where you might not be able to get that transmission out.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								That's what's important because their transmission may be very important. It's important that everyone hears it.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	In the field, we have the mobile radio on the rig. And then, once we're off the rig and ambulating on a scene, for primarily, on our portable radios that we have and both are made by Motorola, digital. I think we work on an 800 meg system. We have plenty of repeaters throughout the city. So they hear us except for those trouble spots. But those are our two primary ways of communication as far as getting hold of, for better sake of term, our dispatch center. It's relaying critical and non-critical communications.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...But also the reliance and also these components that we've talked about. The computers or radio system that has some degree of complexity. Of course, you will get used to it. On the fire drum, there's a million things that are going through your head. There's a million things that must be observed to come up with the solution. Any incidents giving you the problem, it's your job, again, to come up with the solution. And it's not something that's just, "Let me go back to the fire truck and think this one out real quick." It doesn't happen that way.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	So I call that saturation overload. And that happens a lot on incidents that are kind of beyond your scope. Obviously, a medical call is within your realm or your scope. It's easily handled. Bigger the incident, you're dealing with the human factor, the mind at the process. But if you coupled that with more degrees of difficulty with today's technology, you run into a-- it's like two trains running into each other. I have to go and get data from here, or from this computer, I have to listen to this radio, this channel has 20 different frequencies, 10 different-- there is a point that says keep things simple and you do have to-- because of the task at hand...
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...Again, what I talked about was the task saturation. You're overwhelmed with the incident itself. That's why today's technology, it should be very user-friendly and it should not require a huge degree of brain energy or expending mind-thought, when you have to actually use

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								some of that, at an incident, and calling your plans, and your shots, and what you're going to do for successful outcomes. Everything we do is successful. It requires a lot of mind-thought. I would rather dedicate it here than as opposed to technology or using things at hand. It might have it because there is an issue of complexity.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Whoever said face to face, that's the best method of communication. Receiver and sender and sender and receiver. You got me and I got you, and we understand our messages from face to face. Relying on technology so, "Oh I hope he got that message." Or, "I hope I got this message to achieve that might be three blocks down the road on a large scale inset." The assurance of knowing that you got your messages across and especially critical messages. There should be no doubt or wondering if this is going to fail us, this system. Did he get the message or-- again, nothing beat face-to-face communication. I say, "Well, I'll write him a letter."
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...Gaining complexity is the real killer of simplicity from my perspective. And how to improve that? A lot of face-to-face communication, maybe having one guy operate the radio. Giving messages instead of everyone having radios, and all this talk and garble. I have to be responsible for listening to all this, because it may apply to me. So funnel. So you take your five people in a room. You tell them all be quiet, one speaks. So that would be just a suggestion for that, just not being in a position where you're going to be overloaded with, where this technology has become rather burdensome in your decision making or thought processes right now.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...I think what we have suffices. But it only builds up from it. Things will be different next year. Instead of fire fighting 101 next year, you might have bumped to the 500 series level. It's always outpacing us. But I think by today, I think what we have now is plenty enough. Again, at least in my opinion. We may have more who says, "Oh, we need more technology." I'm happy with what I've got, believe me [laughter]. Yeah. You got any more, I'm going to be overwhelmed with all this stuff...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...So yeah, the cell phone is a great tool to use if you have time. If you're in haste, you cannot. So their technology would not benefit you. So calling and looking at my phone going into a fire will not happen. You don't need it. You don't have the time.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Everything there's a fine line in every detail. Do we have time or do we not have time? Or when we process data, you don't have the time. When things that are happening real quick and real fast, it's hard to go through the technology to find things...
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...Going to an apartment building fire, for example, the only technology piece that I would find useful is the thermal-imaging camera and obviously the portable radios that communicate messages back and forth among people. Not overwhelming with messages, but enough to get the gist. It's what is putting the fire out, is using your hose line. It's not the computer. It's not the technology that's doing this stuff. We're still going into time-proven ways of doing things without the presence of technology. From that aspect, as a line officer, I look at that. Later, down the line, you can use the technology to look at some things that again you may have forgotten. Things that are going to enhance your ability at, perhaps, another incident, learning new techniques, new practices that they have done. Try this cultivation of change, of technology. Using that in a positive manner for you and your fire department. But I've seen it from a different perspective, because during emergencies it's really not quite useful. But those are the technologies that you take for granted. The portable radio and the tech camera have benefit.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	[RE: cause of communication issues] Failure to communicate is one of them, yeah. But as far as communication from a technical aspect - buildings, dead zones, again, metal buildings, being encased in concrete - you're just not getting that signal out. What is causing communication is possibly the-- in fact is that we have possibly too many radios operating on one fire realm. It can be cumbersome, and lost messages will occur. Some of those are crucial, or non-crucial.
Problems -	FF	U	Field	46-55	21-30	Male	FF-U-028	[RE: radios] They're pretty complex. Not during the fire scene. When

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					you're back at the firehouse and then trying to get familiar with the radio changing zones and channels and programming this, highly complicated. But at a fire scene, very user-friendly because we're sticking on one channel. While you're figuring that, fumbling through channels. You're operating on one fire channel. So to switch into two, "Hey, lieutenant. Contact me on fire ground five." And then you're like, "What the heck does he want?" One channel, keep it simple, no complexity.
Problems - Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	I've never noticed an issue with that as far as you're looking at weight or user-friendliness. You never give it a thought. There was no problems. There's nothing to draw from is that I have a problem. I haven't had no problems with these. There could be a problem with the portable radio if left outside of your protective equipment due to thermal insult or a thermal exposure to it. Yeah. You'll melt the thing and it becomes useless, then you've got to rely on yelling, or if you're lucky enough, escape a pre-flashover. So if worn right, worn correctly, and following the procedures or guidelines of the fire department, it won't fail you. Most of those things that occur in the fire service, a lot of it is then human error and miscommunication. Communication is a big factor.
Problems - Technology	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	[RE: radios] We just went to digital, and it's getting better. I mean, when you first went digital all the voices were very metallic. Now I can recognize voices on the radio, so it's much more natural now. Add an extra alarm where the-- the problem with everybody in my opinion-- the problem with everybody having a radio is, there's people who are on the radio that don't need to be. Whether it's need more radio discipline-- and I mean, there's just-- it's just the nature of beast...
Problems - Technology	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	[RE: radios] ...They don't work in high-rises that well sometimes. You need more wattage or whatever. So if you're up in-- we cover most of the high-rises in the city, so radios at high-rises can be overwhelming the communication between like the [tap of the hancock?] and the ground floor, we need a communication van. And then you have search-and-rescue channels who have fire-fighting channels. It's hard to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								communicate. And if I want to get through to one of my company, we split up into three teams. If I want to get through to them or they want to tell me what they found, if I gave them something to do, it's almost impossible. So sometimes we do face-to-face.
Problems - Technology	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	[RE: radio comms in high rises] because there's so many people doing so many different things. There's so many people on the radio, and the radio channels are getting overwhelmed. And then the bosses show up, and we're in the middle of doing something, and they're showing up, and they're taking over, and they're giving other commands now. And they have the command channel, but sometimes you're not transferring over. Then they have to monitor both. So you're trying to get a person on one channel, and they're talking on another channel. But I don't know if there's an answer to that.
Problems - Technology	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	The other thing we don't have in the city that a lot of the suburbs have, and it might be a nightmare, is the control of the lights. Where they can [shade?]. They're going on a run, they come up to a corner, that can turn a light green for them. We don't have that in the city because-- still on the high-rise, you have four engines, four trucks, a squad, a command van, four battalion chiefs. You have everybody going to the same address from different areas, so that would be a nightmare, especially with traffic downtown. And that's where most of the high-rises are, so I could see why they don't have that.
Problems - Technology	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	I guess chiefs could be overwhelmed. I mean, because they're talking [on main?], and then people are calling fireground. Still on the high rise, you have all these-- people are calling the alarm office and the alarm office calls the van and says, "Check on apartment 1023," and then they have a list of handicapped people to check on and they're sending people, so they're waiting for eight different people to get back to them, and I mean, I think that could be overwhelming. But to me, it's not about the technology, it's about trying to get the job done. So if the technology's not helping me I ignore it.
Problems -	FF	U	Field	56-65	31-40	Male	FF-U-026	I mean, I think the mapping thing would probably help getting to-and-

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					from runs, and I don't know if a tablet, as far as getting information, but most of the time that doesn't bother me because most of my stuff is talking to people... And if radio gets overwhelmed I do a face-to-face. Or I send somebody else.
Problems - Technology	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	We have a full range of meters, from the radiation meters to four gas meters, two meters that do-- the hazmat rig has meters that identify a product specifically, it just takes a while to set up and that. We have more radios than anybody else. Everybody at my company has a radio and we have three TIC cameras so we split up in three different-- in the high-rise, will go three different places. I mean, we have the-- like I said, we monitor the marine radio on a dive run or a boat run. We have a lot of different kinds of meters, more or less. More electrical outlets is what we need [laughter].
Problems - Technology	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	[RE: whether tech helps] Maybe for the bosses, it could help, but as far as the company level, it's what's in front of you you have to deal with. And I know people are doing the command and general staff, and what that has to do with. Our situations on a company level are so fluid that by the time they would set up a command area and stuff, we would have the incident done. I could see where it'd work on the large-scale incidents, but for the most part, I just think that it takes focus away from doing the job, and it takes people away from doing the job. I think the quicker you get people to doing the job-- I've never been into management. I manage six guys, so that's not my forte, so.
Problems - Technology	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	[RE: using cell phones] As long as it helps to get the job done quicker. If technology slows you down, then I don't like it.
Problems - Technology	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	[RE: HUDs with built-in TICs] I would have to use one first. And if it's a pain in the ass, then it wouldn't be-- I mean, our first TIC cameras are like this big. The batteries lasted like maybe half hour. Now, they've progressed where you could use the battery for an hour. And they're smaller and they're not-- I mean, I got one that hangs right here. It's just small. The problem with that is the screen's smaller. But it's color coded. The hotter it is, the redder it is. I mean, it's fantastic technology. I think a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								lot of the technology for the company level is already out there. Like I said, sometimes when you throw too much technology, it slows you down. And people lose focus when there's too much technology. They lose focus of what the incident and they're focusing on the technology. And I don't think that's a good thing.
Problems - Technology	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	... At a big incident, just trying to get through sometimes is frustrating, and I don't know what the answer to that is because if you're trying to talk to the commander and one of my guys is trying to call me on the other channel, we use hazmat channels sometimes. So sometimes, I'll tell-- I'll pair up two people. I'll put one on hazmat and one on fireground. And if we want to talk to each other, we'll go to hazmat. So I have that option because we're the hazmat channel-- and they don't use it at fires. So that's how I get around it... And I mean, they're coming up with search and rescue channels. They're coming up with other channels. But it's just overwhelming when everybody-- you have 2 companies leading out, and there's 40 guys upstairs, and it's just-- and again, I don't know what the answer is.
Problems - Technology	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	there's always room for improvement. We're much better at radio communications, the equipment itself has gotten a lot better. Our frequency availability, at least from the chief officer's standpoint, I can direct companies. Say we had multiple fires in a close proximity, that could be an issue because we would get bleed over communication from a fire. And you wouldn't know if, "Am I hearing a guy that's in trouble at my fire or at the fire that's three blocks from here?" So we have the ability to-- we can offset that now by changing frequencies. There has to be an initiation made by somebody to make sure that that goes down properly...
Problems - Technology	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: change to digital radios] We carry-- it's a radio, as well. But the battalion chief-- well, each district in the city here carries a-- they call it a RIB radio, and basically, it's a little stronger. We tend to use it more in high-rises than anything else, just because of the same problem, talking from grade level to the, say, 25th floor became an issue sometimes. And

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								so we would triangulate our communication which, obviously, now you're involving more people. So now our large-scale incidents or fires in high-rise, or anything else that may happen in a high-rise, because the event would be escalated in our city to extra alarms, that radio comes in the building, as well. They set it up and then it aids in the communication from the command, the people that are in command throughout, it trickles down throughout the ranks that are at that incident. So that's been good...
Problems - Technology	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: old analog radios] I mean, just way better now than it was 28 years ago. 28 years ago it was very simple. It worked, and I'm sure in its day, it was great. It was all analog, though, so there were issues about transmissions that were never heard. And I know that that was an issue around the country and I'm sure around the globe, too. Where, I mean, there were people in distress that were never heard. On sending radio transmissions that weren't heard just because the technology wasn't there.
Problems - Technology	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	...So we still have hurdles with digital technology. It's not perfect. For instance, we've done some simulated active shooter events just to prepare for chaos. And we have some pretty large-scale buildings in the city which you might remember, like [building] and things like that. So we've had large-scale drills there with the police and SWAT and everybody involved. And even on our digital channels have had some serious issues with transmissions, and that was during a drill. So I'm like, "I hope this doesn't go down when we really need it to." So our alarm office is pretty good and we're trying to get a handle on that.
Problems - Technology	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: digital radio issues] Just transmissions not being heard is really the number one thing. And that's where it all goes to hell, so... it can jeopardize not only the civilians, tax payers that are paying us to respond, but the first responders. So without us, now we have a big issue. But like I said, it's so much better than it was. And so many more people have radios now. I'm sure it's going to get tweaked in the digital world. It's always a large-scale building or a building, in my opinion, that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								has floors and floors of concrete. It's just digital transmission can only do so much. I have a layman's understanding of how it works, so I get what the issue is. But it seems like the people that are involved in the actual manufacturing of radios have to work a little closer with the building people, maybe [laughter], and just from the onset of a building being put together, maybe have repeaters throughout the [laughter]-- you know what I mean? Be proactive a little bit and just because of the state of the world. That wasn't a thought 25 years ago, but today we have to think that way. Yeah.
Problems - Technology	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: information need] I can't read so much information on a small screen like that, not while I'm en route. It's not going to happen. I mean, I may try, if I have a moment or two to glance at it, but... It's too much, yeah. And I have a lot else going on. In high-traffic times when we're responding, I'm actually helping the driver. I'm always scanning because he may not see somebody.
Problems - Technology	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: building information via CAD] So if it was something that was really legible and bigger, but how big can you go? You can't have a 36-inch screen on a dashboard, so it's a catch-22, sort of... Unless it was audible and was looped, where you would-- but then how do you do that without it interfering with me making radio transmissions in route, as well?
Problems - Technology	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: cause of communication issues] So [laughter] I know I'm talking to you, but you've got communication, so you have a sender and a receiver, right? And in order for it to be officially termed a communicative process, there has to be feedback, right? Without feedback, how do you know if the message was actually perceived on the other end by whoever transmitted it in a proper way, or was that information disseminated properly from one place to another. So the problem that we have is-- and this could probably be made better through training, but we train so much on other things, we run out of time to train. The way that people talk on the radio. They cut each other out. Sometimes, when we went from analog to digital, analog obviously was not as powerful, for lack of better terms, but it was more instant, at least on the fire

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								ground. Whereas, digital you have to key the mic, almost pause a second, or else the front end of your transmission will be cut off. We have a lot of that going on...
Problems - Technology	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: cause of communication issues] ... we'll have communication problems, and this one sticks in my craw. There may be somebody reporting the first fire companies for a reported fire that hasn't been confirmed yet. They'll pull up and say, "Hey, we have a fire", and they'll start giving-- because we have protocol for how we report a fire to the firearm office. We'll give them building dimensions, whether we have fire showing, or just smoke showing because sometimes it can be burnt toast coming out of the window. We'll tell them the size of the building. Is it occupied or not? And is it commercial? So we have certain things that we'll say from the very instant that we pull up. You'll have that going on, and then you'll have somebody cut into that to say something really insignificant over the radio, like we're returning-- they'll just tell the alarm office we're returning to quarters, and now that very pertinent information was cut off by a guy who did something cut him off, and all he had to do was push a little RTQ button on his on-board computer, and they receive that message, as well. So we have a lot of that going on, too. Every time I hear it, I wince a little bit because if at that fire scene, somebody's calling for a mayday, that's supposed to initiate a whole new response to that fire for the purpose of that mayday. And if it's going to be cut out by some guy that just wants to get his voice heard by the whole city that he's returning to his firehouse. That's a problem.
Problems - Technology	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Since we went digital with all these other-- and this is more at the chief level. We have people that carry the radio but don't know how to use it. Even though they've had classes that there isn't any chief out there that hasn't been schooled on how to use it. But I don't know what it is, [laughter] there's a lot of them that just don't know how. So there is a process, too, just operator error, and that can be detrimental, depending on what you're doing or what you're responding to.
Problems -	FF	U	Other	46-55	21-30	Male	FF-U-029	[RE: reception] There are places in the city, I'm told now, I can't off the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Public Safety Personnel					top of my head give you. But there are some known dead zones in the city itself. The only problems I ever encounter are in large-scale buildings or like I said, buildings that have sub-basements or high-rises. Other than that, I don't think there's a large problem...
Problems - Technology	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: drones] ... We had talks a couple years ago with the [local university]. And they have a doctoral program where all these students were, I don't know if their major was robotics, but they were in robotics. And that was going to be what their careers were. And so they had grant money where they were trying to develop a drone, let's say the size of your recording device there. So only a couple inches in diameter, that would fly into a fire building. So the problem was the technology of it flying in conditions that were super-heated. Now it's flying in low oxygen, so it would affect the flight itself of it... The ability for it to real-time Bluetooth the information it was seeing or sensing if it had meters involved. They have a real good idea, but we haven't heard from them in a couple of years. And I know that they're not the only ones working on it. And it usually starts in the military...
Problems - Technology	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	It will not stay working in my car. I don't know why. [talking about the mapping tool in the car]
Problems - Technology	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	We have that technology in the field when we don't have a cell signal which in the mountains here is soon as you get north of town 5 miles you start losing signal. You don't get it back until you're like two spots on [name of town/city] and then not until you're down on the valley floor
Problems - Technology	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	.... A couple of other things that we jointly use one thing that is kind of unique I mean communications are an issue no matter where you are. It's always communication is the biggest problem now we have to add on terrain to our problems because of our location in the mountains.
Problems - Technology	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Being a very active community we do a lot of back country rescue and communications again is one of our biggest issues so we kind of look at different ways that we can improve communications and have backup

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								communications for those responders that are going out into the field because especially during winter with avalanches there's so many additional hazards that the responders face out there added on top of it...
Problems - Technology	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	[RE: Active 911 app on the cell phone] A lot of times it comes in as a lat long and active 911 won't put the negative sign in front of 114 so you get dropped in the middle of the ocean.
Problems - Technology	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	...What was interesting back then those big brick radios worked really well. A lot better than today's radios and narrow bandwidth for this terrain.
Problems - Technology	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	Oh I would say not as far as communication. We did have trouble with communication but within the last year we brought in a company out of [city name] City and they came to every department and they redid everybody's radios, got all the exact same channels in everybody's trucks and handhelds and everything in all the departments and I think [county name] County also I think we purchased a new tower repeater out there west of [City] so I'd say within the last year it's gotten a lot better. Before that yes we did have troubles because this department used this person to set up the radios and the channels and the frequencies. We would use this person over here and even though everything was supposed to be the same it wasn't the same so we had difficulties before but I would say right now as far as our radio communication is probably the best it's ever been right now.
Problems - Technology	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	In certain areas. I mean this place here we have no I mean there's no cell phone reception, there's no nothing. You got to walk outside but for the most part yes, locally here radio is good I would say.
Problems - Technology	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	[RE: radios] For the most part. The trucks work better than the handhelds. I mean I've been on what is called task force runs to far west [state name] almost into [nearby state name] and I mean our radios can you know we can communicate with other departments other non-county departments very well so they work pretty good. Our handhelds

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								are hit or miss sometimes you know you can get some spots where it's hard to find a tower to bounce off of.
Problems - Technology	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	[RE: cellphones] They're getting better. They're getting better. We do have pretty good service out here. We have a cooperative cellular company that does pretty good in our immediate area and there are some outside services that do pretty good too so it's usually not a problem. I mean we do have our dead areas that I mean we get down along the river and not much is going to work down in there.
Problems - Technology	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	...Me personally I haven't had a time where technology has come in the way. I mean I know there's improvements out there I know there's with better service and better you know reception in areas. I can't say that communication wise that there has been a necessary issue it's just human error is more than anything on our communication side.
Problems - Technology	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	... say we have a guy on the truck, inside the truck driving, we have a firefighter on the back sometimes communication between them you know say our headsets don't work because here at the department at [City] we don't have a headset for the guy on the back that communicates with the guy in the front and so the guy on the back can't I mean he's not going to hear the radio, he's not going to be able to talk because you know he's in full gear, he's got engine running, he's got a pump running back here, he's not going to hear that so we don't have those headsets. On another department that I am on [city] they have one rig that does have a headset that is very beneficial because the guy on the back can say hey you know we need to go over here where if the guy driving can't see it but then the guy driving is the one communicating and can listen inside. So that can be a problem you know if we're out and just not being able to hear our devices.
Problems - Technology	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Yeah well we had a [Event] just west of town here and I was first on the scene in my personal pickup because it was between my house and the station. I knew we had guys in route I didn't know how long. I had a guy I'm not trying to be graphic here but he was basically it chopped the cab off the semi-truck. We're talking an oil field tanker truck and the truck

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								was on its side and his legs were pinned underneath the dash and he was literally dangling, screaming. I'm there helping there was 2 bystanders that had called it in and that's a helpless feeling. Our truck I got there and I was no more there 2 minutes and I see lights of our trucks coming I'm thinking praise God we've got tools coming. Our jaws would not start up, start cutting him out of there. Luckily the ambulance where it came from in the town of [Town] about 10 miles from here they sent out a truck, their rescue truck with them because we work together with that department a lot so they knew that hey let's go give them a hand. They were already in route and luckily their jaws fired right up but in seconds.
Problems - Technology	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	[RE: equipment failure] You got a helpless feeling that you can't help you can't do anything. I mean yeah we can support and kind of you know our EMR's can you know get the guy stabilized. Yes the guy survived I mean we may have flighted him out and he did survive but I mean that's seconds, seconds matter you know and what makes it harder in this area I didn't know him personally but when you're on a scene and it's involving your friends who people that you know and treat like family it makes it harder and everybody knows everybody you know kind of a deal in these small towns so we want our stuff to work.
Problems - Technology	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	First and for most I'd ask I want all my firemen to have brand new gear. I want them safe. I want well we've got a couple of the trucks that we need updated. Those would be the first things and then from there it would be the tools. It would be jaws, it would be just new hand tools you know whether it's Halligan's whether it's you know just I mean anything you know just seat belt cutters just stuff that you know we could equip all of our guys that way we're not searching in trucks going which truck is out again you know everybody's like okay I've got mine right here we're good...
Problems - Technology	FF	R	Other Public Safety	26-35	6-10	Male	FF-R-048	...you know just that way our new SCBA's, our air masks. I mean ours are getting we're able to still do them but I don't know the price wise on those but I know they're expensive to replace and I know ours are

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					getting old you know I mean because I can't afford to have a guy in a building in a structure and that thing messes up because then we've got to focus all of our attention on our firefighter and that's what it's going to be.
Problems - Technology	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	[RE: cause of communication issues] On the scene just guys being able to you know hear their radios you know if they're in and out because you get on scene things are loud. You're going to have to yell at guys you know face to face. I mean you and I are what five feet apart we'd be hollering at each other most of the time trying to communicate you know depending on the scene. Just being able to hear each other and you know so we can understand each other that would be a main thing I think on a lot of it. So just you know just improvement radio wise I think would be huge. You know we could have every guy have ear pieces on their gear or something included in there where we can be talking and doing stuff and hands free stuff would be great.
Problems - Technology	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	...Mapping in trucks I mean if we could get to a point where we could have GPS in trucks to where we cannot have you know one guy searching on his phone we can just punched something on the truck give us directions right there in his truck you know just to get there quicker you know to save on confusion.
Problems - Technology	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	...When a fire is paged out here they may page out the appropriate response it may or may not go out over the radio. We have somewhat of an outdated underfunded antiquated communications here in our county.
Problems - Technology	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	As of right now we have no TAC channels to operate on. We can go to mutual aid but if there's another incident going on on mutual aid which could be you know over trafficked by another county or another entity within in our county it's definitely an issue communications are.
Problems - Technology	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	...We've tried and attempted 2-way radio, traffic on scenes depends on heavy the humidity is if that works and inside of a structure fire even the radios we have now inside of a structure fire would probably be I'd say

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there's a 50/50 shot of whether it would be beneficial or not.
Problems - Technology	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	... Again there is the option of mutual aid channel but the way our radios are setup out here incoming units if they were on mutual aid and they're a certain distance out they wouldn't be able to hear vial information that command is trying to relay so it's you know it's a danger.
Problems - Technology	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	Cell phones are great but again we're on a very rural county and if you get to the far ends of our county towards the east good luck. Radio traffic is null out there as well as cell phone is.
Problems - Technology	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	It is and I stated maybe antiquated I'm not savvy enough to say how antiquated it is but we've had some upgrades but I think its been band aids. It's not been good fixes.
Problems - Technology	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	[RE: wishlist of robot putting out fire, but someone still needs to control the robot] That's right, that's right and technology fails. I don't think it'll ever happen. There are things out there that technology has helped us stay safe with thermal imaging cameras.
Problems - Technology	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] It could be upgraded a lot. It could be upgraded a lot. (describing the current state of technology)
Problems - Technology	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Computers, MDT's, tablets could be upgraded a lot. A lot.
Problems - Technology	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] More so the need and use of this changing. I look at it when the world's changing with the phones, with how small computers are now. We need an upgrade too because we're not an entity that just sits there on the spot. Our whole job is about so we need something that can actually move on us.
Problems - Technology	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[RE: wishlist] [speaker 2] I'd have to say just from and I'm being biased now because of what I do my assignment now is along the lines of WMD and Hazmat response is the standardizing of equipment at the state and local level. Why do I say that? In my research for my thesis I found that between especially in the health public health between public health and the federal level when it comes to WMD biological the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								training and equipment is standardized across the board. When you get down to the state and local level everybody's stuff is different which makes it difficult to accomplish the mission.
Problems - Technology	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] Always the equipment isn't actually reliable. That's the other thing I'm finding. Once it goes to a criminal investigation you know a brand new student out of law school can probably get their client off if that equipment that was used is not correct.
Problems - Technology	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] I want technology but it would need to be an easy use. Nothing complicated nothing where it takes more than four or five steps to get something to them and that we have a problem. As long as it's a do this do that we have no problem. For me fixing everybody's equipment the more steps it is the more problems they have.
Problems - Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[RE: what communication is like] We switched to the 700 system pretty much last year because we have a 150 megahertz system. And in the terrain we're in it works pretty good. Portable to portable. We've got multiple tower sites and repeaters and Vodur systems and it's kind of complicated but it works until lightening hits it and just fries a bunch of it. And the last time it took out most of it. And we're still trying to put it back together. That's our main dispatch where we get our tones from. But we switched to the 700 system that the state takes care of. And other than some dead spots particularly in certain buildings it does okay other than its alerting feature...
Problems - Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[RE: what communication is like] ...we have 11 stations. Each of those stations are supposed to have a different dispatch tone so that you don't wake up the whole [County] because one of them has to go to a first aid call... And really you have 12 stations because the town fire department is on our radio system. So we can do different tones for each of those stations. The problem we run into is that that system, like I say, it's up for dispatch purposes, it's not necessarily up for radio or portable to portable communication. That's--we've got an antenna to replace. The 700 system has 3 tones. That's it. Or 3 toning capabilities is my understanding. It's limited in what it can do dispatch-wise. So we're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								currently carrying multiple radios or multiple systems to get alerted because like this one does not work in this building. The 700 system does not work in this building. I cut it off 'cause it was beeping tell me it didn't hear.
Problems - Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[RE: what communication is like] Now the people I'm going to hear next door, right through the window. So we have a nuclear plant that neither system really works inside, the 700 system will work radio to radio, so will the other one, but we have portable repeaters on our other one that we can park right outside and get--we can talk through the concrete to the truck then hit our regular radio ad hear back. You can't do that with 700 unless the people install equipment at the facility 'cause we don't own a system that can do that. Other than that I mean... that's pretty much... what goes on with how our radios work and don't work.
Problems - Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[RE: coverage issues] ...Penetration into buildings is the biggest issue. We have more trouble.... The school. When we, being a deputy we go to the school for active shooter training. So the 3 arson investigators we go, too. And... we have to switch to a direct channel in the school because we cannot talk out. And I have that same problem in that fire in there. I've got to switch to--we've programmed the radios so it's just a click, you know? It's just a turn of the button. But we're still dealing with, you know, if you're--if they don't remember to do it, you know, going in, they're deaf.
Problems - Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[RE: radio channel switching] And they don't realize it until their radio starts beeping at them and you don't necessarily want your radio beeping at you if you're looking for somebody shooting at you. And if you're wearing fire gear and you take it out of the pocket, trying to make that change, that's not the best... these things also, we have issues with some of the new equipment coming out will not--you can do a... a remote... a mask mounted microphone and communication. This radio does not do it. They're going to obsolete these radios in a couple of years according to what they're changing. So they're expensive. And in a chief officer role that radio right there is a budget buster. I like the fact

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that I can talk from almost anybody I want but that's not as easy as they make it out to. You have to go through this, that and 16 steps.
Problems - Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	I can't talk to the guy in [City] very easy. Okay? And a lot of that's programming but the radio only does so many things. I've got a bazillion channels for my fire department because that's how many is in the band but I don't necessarily need all of those because I--but I can't get outside of my band in one of the A, B, or C zones. I've got to go start changing, it's got 9 zones to it I think outside of A, B, and C and they're separated and creating things and some of them aren't even used. But I've got [County] over there that we ran a call, we run a fire with them occasionally, I can't talk to them. The [County] next to us, they--I can't go just get into their fire response.
Problems - Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[RE: Active 911 app on cell] Now let me tell you this. We have... other than the 2 radio systems that we're dispatched across 'cause we're dispatched still across 2 different ones because that's a rating thing, for rating purposes. But we also use other technology that we don't get credit for but a lot of people get their messages this way. We have a tech service that we use that comes out of here that AT&T does. It's through the AT&T system and then we pay for what's called Active 911 and that system sends a message to our phones. And those 2 things seems to go down more than--frequently. And it's not--usually it's just some little glitch and once they figure out it's down, the biggest thing is figuring out it's down. Once you know it's down, you tell them and they figure out how to fix it most if the time.
Problems - Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[RE: Active 911 app on cell] If they don't have one, they don't get that service. But other than that, no. I mean none of us complain about the fact that we're using our own. You know? It's a nice feature for 2 reasons. One) I don't have to carry the radio. Let's say I want to go to dinner which I carry mine if I'm in the [County] but if I'm close by, I can leave, you know, I can leave the radio outside. It'll--there is a delay in it though. The text messages, some of them come before the tones do because as soon as they're generating the call it'll generate the text

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								message. So we'll--a lot of time and I've got a couple of people, we call it across the concrete divide or the road between the two, as soon as they get a text message they want to start calling on the radio do we have a call?
Problems - Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[RE: comms with state police] Impossible to talk to. We have--it's not impossible. We'd have to go to a region frequency. See one of the things that aggravates me about the 700 system in [State] is that that radio works everywhere in the state. But if I'm in [City] which I regularly--I go to I go to [City], I go to [City], I go to everywhere, if I'm going down the road and run across a problem I have to go into that radio to find something that might let me talk to somebody. I can go and have immediate help or I can pick up the phone and dial 911 and have to go through a series of operators instead of saying, hey, I need a trooper to come to this area or , hey, I need, because I--they monitor our region channel, okay? And I can get to our region channel pretty easy.
Problems - Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	But when I go to another region channel you don't know whether those organizations monitor it. State police usually do. They can get you to one of the others. But. 911, I'm not doing anybody else any more good than [Name] driving down the road because I can call them on the radio and say this is what I have, this is what I need, and bang, it should be done. Where instead calling 911 and they're going to just go through their normal deal and they may be sending me what stuff I don't need when I can say, hey, this is all I need for this particular thing.
Problems - Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[RE: software Firehouse manages run reports] That this dispatch system feeds some of the information in, it just doesn't track our times as well. And it's because, again, number of people... They acknowledge it but they don't always record it.
Problems - Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[RE: big events] And so you've got those levels of things. And they should be communicating amongst themselves and only certain ones, as you move up, should be talking to the next level. That's training. That's frequency. Allocation. That is, you know to make sure you have enough of them. That's the ability to talk to other agencies when you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								bring them in. Like we do Auto Aid with the two of [City] but we're on the same radio system. We do aid with the city of [City] and [County] and [City] and [City]. I can't just talk to them. It's--you know [City] is not in my radio but [City] comes here and [City] goes there and we go there to do things. I can't talk to them. I have to get on a response channel instead of being able to say--tell my dispatch I'm going to be on [City]'s frequency. And just dialing over to be able to get to their primary 2 or 3 things.
Problems - Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[RE: preplans] And if you deploy the data you kind of--the data distribution, you kind of solve more than one problem. The [County] has terrible internet service. When you get out town you either got to the cable system who they ran some fiber, they buy their data service from AT&T. So they can only afford a certain speed. They're not being fed by, you know, a T-3 or something. They're getting X number of gigabytes and that's all they can do. AT&T and Verizon both have excellent--I don't know what Sprint has. I just have AT&T and Verizon devices. I can get 4G service all over, 75% of the [County].
Problems - Technology	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	--usually it all comes from here. And also we get text messages sent to our phone with the basically the same information. Some people get both. Some people don't get any, it just is a preference I think whether people want it or not. It's there available if we want it. Some people think that their text messages goes off too many times in the day and they don't want to be, you know, bothered with it but.
Problems - Technology	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	[RE: CAD dumps info in Firehouse software] And so you--it--you may have 30, 40 people sometimes on calls that may come in, you know, 15 or 20 different fire department vehicles and all of them have to be listed on that report. Well with the way their system is it usually dumps it in every bit--from time to time we do have, I guess, some communication problems amongst the systems. And so I've had to call [Name] a few times. And you know we didn't get this call or whatever and then she check into it to see if it's something on their end over here or if it's something on our end with servers connecting or communicating and all

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that kind of stuff so.
Problems - Technology	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	[RE: with other jurisdictional agencies] Or if there's something that I need to tell them like I need their truck put in a certain spot or something, well I don't know that I can just find their frequency on my radio and say, you know hey, when you get here, we're the third driveway on the right but I need you to stage by the oak tree or you know whatever. And they're not going to know that unless I call back to communications and then communications probably calls their dispatch center, you know, on the phone or landline or something and I don't know how that works.
Problems - Technology	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	[RE: in full gear with radio] It certainly can be. Unless you can take it off your hip or wherever you have it in your pocket or something, you don't necessarily know if you're on the right channel. We have lapel mics that we can use to key them up but if you're not on the right channel then that's not going to do you a whole lot of good. So that, especially wearing bulky, you know, firefighting gloves that becomes an issue for sure.
Problems - Technology	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	[RE: what causes comm probs] Equipment failure or operator error could be a big deal. You know somebody's--whether they're new or not they may or may not necessarily know how to use a certain piece of equipment. They may not use it every day that they come to work.
Problems - Technology	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] We just had you know a several million-dollar upgrade to our carrying system in our dispatch center but it's limited capability based on calls, or the political arena is not letting anyone support each for some reason. I am not educated enough to speak on any more than that.
Problems - Technology	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[RE: not able to talk to the city's fire department] [S4] If you know anything about bandwidth they are the 800 MHz and we're on the 400.
Problems - Technology	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] Yeah, yeah, with the just ridges themselves and get down in the valley sometimes it is difficult to get out but usually now we can at least if we're on our hand-held unit, we can go to our truck and still be able to get out.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[RE: new CAD send closest responders to incidents] [S4] Well we have the capability for a long time, but they had to work bugs out of the system so they can only just recently have turned that on within the last month.
Problems - Technology	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S1] Repair the cell towers and bring communications back up with everybody on their phones trying to call over or text or whatever it is flooded, I mean flooded the bands and then the emergency guys didn't talk because of the cell phone services were so jammed with data they couldn't keep up and then the towers went down [indiscernible] that was awful.
Problems - Technology	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S2] So we had a house fire [indiscernible] from here and the actives they sent us the wrong location. We was going towards [City] and the fire was on the other side of the city towards them so. [S3] But it was the same address.
Problems - Technology	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S2] The big thing about that is they just went to a new radio which is like a, it is called Digital, it is like the quality when you are talking on it, say like there is noise in the background on there you can hear through these radios but on theirs it like blurs the background out so you can hear the actual person talking.
Problems - Technology	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[RE: radios] [S3] Since we got ours, in our district we can't even get out on them.
Problems - Technology	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S3] Well we just use cell phones lot of times especially when you get on some place down [indiscernible] Plains, you can't get nothing.
Problems - Technology	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S2] If you sit in our station you can't even call you, can't even go on the radio, you got pull out the route before you get to road, than you gotta say, like Agent 2 respond, which is the agent down there... Well same thing with cell phones.
Problems - Technology	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S3] Yeah I mean it is just like we got one right over here this tanker truck over here. You start that thing start out it might go or it may not go because it has got all its computer stuff on it, if they don't go you got to cut everything on and off and start all over.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S3] Its always the computer stuff, I mean they had the same problem [indiscernible] the same truck. Sometimes they will pull the red light they will stop, turn everything off, they have to reprogram, go again.
Problems - Technology	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	Yeah because sometimes at 2 o' clock in the morning, sometimes she is at work and I will call her and go, I'm in [City] or I'm off at another fire, like the [Event]. She couldn't contact me for like three days because we had no way of talking, because the cell lines were so jumbled up -- there was no way to -- every time you called they would say some line is jumbled up for whatever reason. So, you couldn't -- we were trapped over for probably three hours trying to tell everybody we were up there. And the only people who knew we were up there was the other fire departments.
Problems - Technology	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	...But we have handhelds, walkie talkies and they are hardest thing to hear when you are in a fire, I mean, there is no way of changing that. That's what we talk to most of the time, is that we have a base station at the station and we do have radios in all the trucks and most of those are hand- held but we are going to digital, which [inaudible] doing, those radios will be obsolete because they are analogue, so does not matter.
Problems - Technology	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	You know, I have trying to help him. He had a [Event]. And sometimes there are numerous stressors and sometimes the communication is the problem with as far being in the fire, you can't hardly hear sometimes, you got to yell on the radio or, down here is a big problem. We need a repeater down here.
Problems - Technology	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	That is what we are trying to get because you get further back in the band, my radio won't pick up.
Problems - Technology	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	Yeah, we've got tons of dead zones in [City]. If you are going around to [Street], you can get halfway down, you can hear for a second and you get to the other half, you can't hear it nothing.
Problems - Technology	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	We either call on the cell phone and/or we try to get one of the other guys, we are doing something calling so and so, telling them what's going on. I mean, it's not rare but it is rare, does that make sense. It

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								seems like when we want it, we've got it. When we don't want, we ain't got it. And it's like -- Oh crap. The radio is not working, go up there. You know, when you are on a hill and we have been telling Dispatch for a long time, we need a repeater down here so, you know, it can relay and can go back and I mean, and you get down here in the band, there are some nights that would be like -- did you hear that call? I'm like -- No. And I would look at my phone and crap, my phone went off but my pager didnt go off. So, I'm like. And they are like -- well, don't worry about it. So and so was there, they responded -- blah, blah, blah and then you feel like --
Problems - Technology	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	[RE: state of current technology] It is going outdated.
Problems - Technology	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	It's not -- it's probably 10 years old may be, maybe give or take, but, you know how technology works. Like, iPhones -- you get the one, the best one and then two months later they come out -- you know, they come out with a better one. It does one thing different and you are like, ah. Because I'm the same way and like -- aw man, that takes better pictures. I want that one. And that one is waterproof.
Problems - Technology	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	I mean, we could hear other fire fighters and other groups but there were certain moments or certain times when you could hear nothing and, you know, it was like, oh gosh we're -- I mean, you could hear the radio chatter but it was like -- it was muffled and -- because so much was going and I think some of the towers got burnt up or something I am not sure, but I am pretty they did, but a lot of the lines were down, landlines, stuff like that I don't know if that made a difference but a lot of -- there was a lot of people screaming into the radio trying to figure out what was going on and I mean, you had a couple of people that were -- you could tell the people were agitated and the people that were calm and cool about it like, we need to do this. And the guy we had was superb. He was on it. And when he said pull out, we picked it. We dropped what we were doing and got out because it was like -- I mean, it was --
Problems -	FF	R	Field	46-55	5 or less	Male	FF-R-055	[RE: with other agencies] Not all to the same. You know, everybody is on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					a different frequency, but they would, I don't know how they handled that really. I think that communications building was -- but however they were doing it.
Problems - Technology	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	No. We had all our radios and by the time we got to done well, about the third --no, it was about the second or third day our radios died and the only thing we had was our truck radio. We had had no mobile communication, you know, handhelds because they were dead. We had no way of charging them. So --
Problems - Technology	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	[RE: charge radio battery] Through the truck, no because they are battery, you know, they sit on a charger.
Problems - Technology	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	And by that time it was like -- pftt. This ain't no good. So, you put it into the truck and just when you got back you had to charge it.
Problems - Technology	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	I think a lot of it has to do with money. Grants, and some of these departments -- I mean, they are -- I don't know how they are making it really. Every one of them, all of us are struggling to keep, you know, the head above the water because we got truck insurance, you got to pay for the trucks, and that is all fund-raising grants, but I think a lot of it has to do with money and purchasing the right radios, you know, for the situation. Because you know, you don't want to get a Japanese cheap model that is going to fall apart in two weeks. You want to get either a Motorola or Kenwood or something that's --
Problems - Technology	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	[RE: info delivery format] Right now it's via radio. We have a program called [Organization], and we utilize it. There's a messenger function on there. But the problem that we have and that we are trying to balance is how much time does the officer-- I don't want the officers using the computer while they're driving. So that's where our...s o when they're driving down the road, trying to get information via a laptop, it's much more dangerous than hearing it via the radio. And so trying to figure out where the balance is.
Problems - Technology	LE	R	Supervising Field	26-35	11-20	Male	LE-R-001	...So we don't have a mechanism in place yet to dispatch us via the computer. We don't have a-- you know what I'm saying? The sheriff's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					department can't send me the call on the computer, it's always audio right now or telephone. Long term, it will probably be more computer, but right now it's still radio
Problems - Technology	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	They would have to stop or be stopped when the call would come in or pull over to see it. And so then you have to figure out, "Well, was that wasting more time than if they would have just told us on the radio?"
Problems - Technology	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	Our radio system is better than it used to be but still not 100%. So there's places in the city that you can't get out on your radio, on your portable radio. Your car radio will typically work, but you--
Problems - Technology	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	And then the same thing for the cars and internet stuff. You know, it's okay but it's spotty sometimes. Different areas of town you lose reception, so then you lose communication.
Problems - Technology	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	That's kind of when we started putting the jetpacks in the cars and the internet in the cars. And now, from where we were to where we are, it's improved significantly. Like I said, we still have spots in town where you'll lose service on your internet or whatever.
Problems - Technology	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	[RE: internet connection] -- it's not super sporadic. It's just in certain areas of town you just lose coverage. From the most part, I bet you probably 95% of town is covered, 96%. But there's a few areas that are still spotty.
Problems - Technology	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	Radio's probably less. You're probably in the-- because you get inside of a building and you lose service, so you're probably in the 80s, I would think.
Problems - Technology	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	Our systems today are obviously much better than they were 5 years ago, 10 years ago, and so the processes have gotten tremendously better. But there's still always a chance for failure. And if there is a failure it can be critical to us because it may miss the crime. It may miss somebody making a false complaint against an officer that we could have alleviated if we would have the video. So, failure to us isn't really an option.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	And far as stories we've -- a few years ago, our server went down and we lost some records because the data was not backed up properly
Problems - Technology	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	Then we had to go back and re-enter a lot of stuff and things. So that's one time that it happened to us. Videos, the old systems that we used to have. Sometimes they wouldn't transfer properly, they wouldn't load properly and so then it caused a problem for court and everything else.
Problems - Technology	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	Probably, just for it to work 100%. I mean, there's no such thing as 100% of the time, but just to try to maximize the percentage of times that it would work versus not work, and every aspect of it.
Problems - Technology	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	And so, everybody having a device that they carry around is great, but it's also dangerous because if they lose it, that device is out there. And we can remote in, and we can get it stopped or whatever, but it's still the fact that it's out there. They're not going to lose the laptop. It's in the car, secure and stuff. So there's some good-- there's bad with good.
Problems - Technology	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	One of the problems we had one time with that thinking behind it is, everybody's coming up with the next best thing. And we had a certain in-car camera company, and we were demoing another in-car camera company. And their microphones, they would cancel each other out. So then your body mic wouldn't work. So if one came on scene--
Problems - Technology	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	Well, we have the computers in our car. I came from a really big agency from where I dispatched, where the system that they used everything to generate calls and transfer information from officer to dispatch was really up-and-coming and smart. And the I came to this, where we use Cox Inc. and things like that. And in my opinion it's dated, and it's not very convenient for the officer, and same thing with the radios. Obviously we're rural, so the radio communication isn't the best, and sometimes it presents officer safety issues because you can be somewhere and need to call out and need to say, "I need help," and your radio doesn't work, so.
Problems - Technology	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	You adapt and you pull your radio out of the holster and try to find a signal, or you ask your partner to try to call or different situations.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	It's got a better antenna, I guess, but it's more reliable so if you can walk back to your car and use the radio to say, "Hey, I need help," or something then that's great. But typically in that situation, if you are calling for help, if you need somebody right there, you can't walk back to your car
Problems - Technology	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	But their CAD system that they use up there, to enter in 911 calls and things like that, is not linked at all to our computers. So what they see up there, I can't see. And it was the opposite from where I came from. Where I came from in [County], you can look at your computer and see that there was a call holding. And you might be close to it, and you can pick it, and assign yourself and put yourself on the scene, and all those things.
Problems - Technology	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	And if it's a priority call-- here in the city, if they send me to a man with a gun call or something, the city's so small that I will be there within a minute or two, and if they're busy on the phone, they can't give me pertinent information that I could potentially look at.
Problems - Technology	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	It would be nice if we all had the same kind of computer system or something so that there was always at least one way to communicate with that person. If a natural disaster happens or something and we lose radios and cell phones, how do we talk to each other?
Problems - Technology	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	I mean it can and I've gotten in fights and things where the clip that the cord is attached to, the lapel, where that comes off. But I mean, same thing with the cameras. A lot of the times the clip on the camera on this particular model is not very strong, so if you have somebody, all the time it rips off.
Problems - Technology	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	But with the radio channels, if I'm flipping to a channel that I don't know, it would be nice to not have to pull it out, and for the radio to say which channel it is so I don't have to physically look.
Problems - Technology	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	Because I've gone to traffic court many times and the defendant has said, "Well, I can't see what speed you saw." And it's true because I would have to put on my body camera and point it towards my radar, and that's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								just one other thing that I have to focus on while I'm trying to pull somebody over, you know?
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	[RE: what info needed] Location. I need to know as much as I can about what's happening in a timely manner. There's a little bit of a disconnect-- I'm sorry, not disconnect. There's a little bit of a delay, because currently, when someone calls 911, the information goes from a call taker to dispatcher to us. So there is a few seconds even to a couple of minutes delay in getting the information. So I like to-- especially if it's a hot call, I like to kind of get as much as I can, as soon as I can before I get there. I like to know who's responding, how far away they are, their approximate arrival time for when I get there, traffic [accident?]. Our current system is, like I said, it's kind of a very like slimmed down version of Google Maps. More like MapQuest, like 1990 style where [laughter] it doesn't give you a whole lot of info other than the streets. When I was on patrol, I usually-- if I was going somewhere new or if I was having to go across town, I would just pull up Google Maps. I wouldn't really look at the work computer because Google Maps knows traffic. And so I would kind of plot the fastest route based on active traffic post to-- the computers we have now, it's just kind of-- it just purely is road maps, and you don't get to see what's going on.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Q: So the computer in the car is limited? SME: Yeah. Limited and restricted. So--
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	[RE: computer in the car being limiting and restricted] So, for instance, I can't-- it may have changed since I was on patrol. But when I was on patrol, I couldn't pull up Facebook on the computer. The few websites we were able to access were very controlled. I mean, it was just the [City] Police Department website, a couple of others, and that was it. But I couldn't just do a search for something like in Google or Yahoo.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	[RE: computer restricted/limited- bandwidth or other reasons] That I'm not entirely sure. I would imagine it's both. It's probably a little bit of both. The bandwidth, yeah. I mean, we have a lot of cars out there.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	What I had in mind-- currently, our laptop and the computer is it. Right? Now we can take it out with us, but it's a Toughbook, so it's kind of bulky. So most people don't take it out unless they're on lunch break. Something that would be awesome would be if we had cell phones or small tablets where we could continuously get updates from the call instead of having to go all the way back up to the call and look at it or sort of having to carry that big thing with us. That would be great.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	at a-- because we go to New York all the time. So what happens if we're in New York, and there's a terrorist activity? We're police officers. We're badged. We have our guns with us, but we're pretty much useless because we don't have any of their-- we have no way of getting in contact with anybody [laughter], other than just running around with our badges out [laughter].
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	So when [Name] kind of mentioned what you guys were doing that's one thing I thought of. Man, that'd be so awesome if there was a way that I could-- some way of kind of-- if it was a big emergency-type situation of-- kind of like an all-call, all law enforcement in the area. Because even here in [City], we have constables, marshals, sheriffs, state troopers, police, and we don't communicate. Rare is it that-- the only time I've ever had communications with a state trooper or a deputy is if a call that they're working-- if I had to go help them for whatever reason, or if it was a pursuit, if a pursuit came through our area. But it took a lot of finagling. You have to kind of figure out what channel they're on, and it's just kind of a hassle.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	There are also a whole bunch of other features that were on that radio. It was a lot more intuitive, and it was kind of more or less self explanatory on how to deal, whereas our current radios are-- half the buttons are worn off. So I couldn't tell you what to do [laughter] even if they are labeled properly.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Well, I think in general, law enforcement's always been way behind the curve in terms of technology because we're government. We're lowest-bidder type of government, so the stuff we have is the cheapest. It's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								usually decades old. Yeah, [crosstalk] far between--
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Well, even as a recruiter, the stuff I have to work-- I mean, we're using Excel and stuff for our database and whatnot. I mean, we don't even have recruiting software or legit recruiting software. It's all just kind of a hodgepodge of-- we have this spreadsheet of all our applicants, and this is all-- you know what I mean? It's just kind of not an actual program that we've been-- we're testing one right now, but we don't actually have anything yet. So yeah. I mean, even our communication technology, our computers-- we usually run a couple generations behind on Word and all that kind of stuff, so
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Q: So you said it's in the car mostly because it's so big, and heavy, and whatever you very rarely take it out. SME: Well, we'll take it out if we're going to go eat lunch or if we're going to write a report, we'll go park somewhere. But if we're actually on a call, I don't know any officers that brings it with them on a call.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Yeah. Well, and I'm even thinking-- so I'm thinking about your radios, for example. They're big. They're bulky. They're heavy. Has that changed over the years? Do they still remain big, bulky, and heavy?
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Well, the main part is the battery. It's a longer-life battery, but it's huge, which is why I'm kind of resistant to going back and getting one because I like my small radio I have right now.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	So it's just kind of one of those things. When I travel, I'm expected to check my email and stuff, but the only way to do it is if I pull it up on my cell phone or if I bring that big laptop around with me which just adds weight to my backpack and whatnot.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	So unless you know what channel you need to go to, it can be difficult trying to find what zone it's on, the channel label. Because our display screens in the car are like that big, so it can only fit so many characters. So there's just kind of a hodgepodge of letters and whatnot. So yeah, tuning to different channels that you don't normally use is a little bit challenging with our current radio system.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	[RE: cell phones] But in terms of law enforcement, we really haven't found a way to utilize that. I don't think. Because like I said, we all have to use our personal cell phones for one. And then two, I haven't really seen anything come out or the departments even looking at that takes advantage of a small form. It's always the big laptops.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Well, we have pagers, too. And I think [Name] already told you guys that the idea of the pager is that if an incident happens - I mean, that's still an open line of communication - we're supposed to carry those. They still use AA batteries, so they go out from time to time. But a lot of officers don't carry them. But yeah, if there was a way for-- if we were getting police cell phones for them to be on a whole separate net or something greater. So that way, if something were to happen, and all the phone lines or all the cell towers get clogged up, we're still able to communicate.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	[RE: city surveillance cameras] We have our own. We call it the HALO camera system, I guess. Downtown, we have a whole bunch of cameras. Being able to pull those up would be great. But as far as I know, we don't have a way of doing that in the cars. We have a unit that does, so you can ask them. If you want to find out-- if you want to utilize this camera and find out what's going on over here, you call this unit. And they look at it, and they relay to you what's going on. But there's no way for that officer to pull up that particular camera.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	I think, mainly due to bandwidth, we do not have that feature turned on. But that would be something that would be kind of nice. If you were going to a call, to be able to look to see what your partner is currently seeing would be very helpful. So you can have an idea of maybe where I should come in from or if he's in trouble, what's going on or I look at the suspect before you even get there in case he bolts and just starts run.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	So if it's a known person that we dealt with before, we can pull up their mug shots. But we don't access to the driver's license database. That's DPS, so we can't do that. We've had some companies come through with missing persons type software where you can take a picture of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								somebody. It does facial recognition. Some type of facial recognition software would be great, because a lot of times, people lie to you about their full name, or their real date of birth, or whatever. Yeah.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	From a recruiting aspect or as an officer that travels a lot, I think the main thing is-- my biggest concern with where we're at technology-wise is just being able to communicate with outside agencies. Like I said, traveling a lot to different schools and military bases, especially in today's day and age where you're seeing attacks happen more frequently. Yeah. I would hate to be at an event and have something happen and, I think I would probably feel useless if I wouldn't be able to communicate my position or communicate what I've seen to any of the law enforcement around unless I get on the phone to their dispatch, which that ties up a hand now.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	I saw an agent-- man, I forgot which department it was. And we were traveling. But they had a tablet. Instead of having a Toughbook, they had a tablet. And it was in an OtterBox, I think. But they had a dock. So they could pull the tablet out, and then dock it, and have the keyboard and all that. But it was still a pretty good-sized tablet. So it still wouldn't be something that I think you would want to bring on a call just because you have to carry it.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	I think one of the main downfalls in our communication is handheld devices. One way to communicate that something as simple as overtime is available, or something as serious as the city is burning, we need as many officers as possible. One of the main ways they're going to communicate that is through a pager, which is great, but not everyone checks their pager.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	So there's not a whole lot to be fixed. The communication mostly, when I think about it, is through the radio. And it's so, in the grand scheme of things, basic. It's hard to kind of mess up. Now, there's reception issues from time to time. You go into a hospital, a lot of times there's no reception in there. That can be fairly important, and that's improved through new radios.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	I mean, you still need evidence-collection tools. You still need a computer. I can see a cell phone replacing a computer, but I don't think that would be that beneficial. I mean, it's nice to have something to type on, something big to see. Need all your regular tools: guns, flashlights, Tasers, all that good stuff. Cell phone can't replace that. So, I mean, yeah, it would save some space, but not a huge amount of space. But I don't think that's a huge problem either, personally.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	[RE: what cause comm prob] I'm sure there's probably some user error that could be thrown in there with issues. I think most of the communication, besides reception-wise and just being able to reach, is device issues with the radio malfunctioning, or the officer not plugging it in to charge the battery, or stuff like that. But, as far as radio stuff goes, I think reception is the biggest thing. As far as cell phones go, I can see a problem in bandwidth. As far as, we're working at a [City] football game, while there's a concert going on right across the street, everyone's texting, and then - I don't know - somebody blows up something. Everyone's texting. Everyone's calling. There's an obvious issue there.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	[RE: prob with comm tech] I never found it to be. I never heard people complain about it. The only thing I can think of is the radio-- the wire that comes from the microphone to your radio. I mean, we had a guy almost get choked out by that. I never wore one. I had a earpiece that went under my shirt, and then into my [inaudible] for that, basically for that exact reason, and so I could hear it better. I could hear better with it right here, as opposed to right here. And so that if I'm talking to someone, and they say, "Hey, he's wanted for such-and-such," he doesn't hear that. Only I hear that.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	They're great for heat, great for everything else. They're very slow on the connectivity issues that we have. We also have what's called DMAV on audio/video also needs to communicate via the Toughbook to either offload it, offload video that we got, or to get updates for the computers as well. A couple of that, we got a CAD. Which CAD, I'm sure you've heard, has lots of issues in itself, needs constant updates. All these

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								things all have individual passwords. They all have individual updates and then coupled with that are Windows. I think we're using Windows 7. We finally moved off from XP. Well, we're using Windows 7 and for whatever reason, whatever CTM parameters they have, it takes a very long time for communication to make sure that the correct passwords in there are being uploaded. So it can be fifteen, twenty minutes just for the computer to boot up.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	And I don't want to get off on a tangent, but one of the big issues that I brought up last week with these guys is, this is going to be compounded 5 to 10 fold once we go to body cams. The community hasn't quite realized that we're already short on bodies, and now you're throwing a piece of equipment that's not been field-tested and their city's not buying the appropriate equipment to allow that piece of technology to communicate effectively with our other toys. So we have to be the middleman as far as documentation and metadata as far as making sure case numbers are inside, auditing all that information that goes in. So that's going to be a tremendous amount of time for us not being on the street as well.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	It's definitely a burden. I mean, I like the idea of having a body cam and I understand that there are going to be extra issues with having a body cam. It's just the nature of technology and it's a necessary evil at this point in our society. But there are definitely better solutions that we could go about doing and we're not taking the appropriate steps to take those into account.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	Our toughbooks have a GPS and then CAT has an integration for voice-over, so it tells us how to get to places. It's not as effective as say Google Maps because it's more rudimentary but it's still pretty. That still works.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	[RE: MDC toughbooks] Well, it's got a lot of errors. We do run into problems with it quite frequently. There are times when it will turn on when you don't want it to be on. That's problematic for us. That's just the placement of having a lot of different buttons in a very small limited

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								area. So it's possible to hit the wrong stuff.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	[RE: cell phones] In my experience as being a police officer, we've always had them available, but prior to me being a cop, I know that they would have to stop and actually use a pay phone and stuff to make calls.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	I wish, and especially once we get the body cams, that they integrate in with each other better. And that's just a solution that each individual solution or source that we have. We've got one design for body cams, we've got one design for in-car cams, we've got one design for CAD, and then we've got all these other small things. And they're all from different vendors, because of whatever reason. The city was trying to beg, borrow, steal these things from different vendors and they didn't want to pay full price, so none of them integrate well together, which is a huge issue for us.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	t's a pain in the butt if I can't carry all the gear with me and if now I need to go to another car and log into it, I have to go back to my car to get the damn token.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	[RE earpiece] Currently, we have a single one that just stuffs in your ear, and everybody is deaf in the ear they use it in now because they have to turn it up so dang loud. People that work downtown, they all wear earpieces and they can still never hear anything. So there's no way of something working for both.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	So it connects in for here via here (earpiece), runs in through my shirt, which is kind of a pain the butt. And then, it clips-- my trigger clips here. And then, there's a piece that runs around the back of my shirt and goes into my ear.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	Having our tech work everywhere. It doesn't work everywhere. It doesn't work in the jail, it doesn't work in some apartment complexes, it doesn't work in the woods sometimes, as far as radios and even our cell phone. That would be nice. Couldn't tell you anything else. Taser's don't work for crap. That's a little outside of what y'all are going for, but maybe 50% of the time, so more effective less-lethal means would be very nice, too.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	[RE: concerned with using personal cell phones] This is probably the same reason they won't use their phones. I have the same mindset. I don't give anybody an access to my personal piece of property, especially the city. Be it some disgruntled CTM person that wants to do a data dump on someone's device then that would be fun for the media I'm sure.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	[RE: mobile fingerprint] But right now, we're really consumed with body cameras, getting that rolled out. So for monetary reasons and for, again, just, we just only have so many resources. It's hard for us to start thinking about that, but that is on our road map, so to speak. It was helpful and officers liked it because it saved them a trip to Central Records to physically ID someone, which is a lot of-- that's a lot of time off the street. But the problem became, if it's only local, you're only dealing with someone that we already know. And again, knowing if I have to take someone's ID, it's someone that I don't know, someone that I haven't seen recently
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	I mean, I can tell you again, because of my position here at the Technology-- Police Technology, part of what I do is [CGIS?]? So it was a [CGIS?] problem.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	So actually, to sum up your questions, I think it was an earlier question about how we would like it to work. Along with every one of those devices, there's a log-on for [laughter] every one of those devices so--
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	Those fingerprint devices, they're not-- I won't call them dummy devices, but they are. All they do is they take the fingerprint and they transmit it back to our Toughbook. The problem with that is, there's no way for an officer to log on. So therefore, he or she cannot be authenticated to the [CGIS?] database, so you can't get anything back. So that was specific error, what it really came down to. And so, we had to wait for something that had a single sign-on. I mean, that would be-- that would make officers days.
Problems -	LE	U	Field	26-35	6-10	Male	LE-U-006	[RE: same password on different systems] In some instances. So some

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					of the stuff, like our electronic ticketing, that's a big one that doesn't. It doesn't have any connectivity on it. So you could have the same password, but you don't have to. Same with our CAD system, believe it or not.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	Yeah. So since you have all these devices, when you get out of the car you have to know what you need or you--... We'll make multiple trips or you call for backup, say, " Hey. I need someone to bring me a camera."
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	We want to page out the most like dire work stoppage type stuff, and now it's like if a piece of technology doesn't work, it's-- that's it. We have to get this fixed right away. If we have a planned maintenance, we're going to get emails and tickets, and I can't run anyone, I can't login. So my view has changed to now it is so intertwined with our daily life that it would be very difficult if we ever had to take calls without CAD.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	I mean, if an officer can't scan a driver's license, we're going to get that call. And they are going to probably be at a work stoppage until we get them a resolution, whether it's go get a new ticket device. Bring it to us and I'll look at it. I'm trying to think. I mean, obviously the radios are a big deal. You've got to be able to communicate. But all of the software in there. We write reports in the field, but if that ever went down, they could go into a substation and do it at one of those computers. But they're not. If it doesn't work right, they're going to want that address at that moment.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	I would say almost all of them. Again, in my opinion, from what I've seen, I think they're outdated, personally. I think they have not kept up with the times. Again, if this is not what you're asking for you can stop me.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	But I feel that vendors develop a product and they spend a ton of time and a ton of research making it, and then they just patch it and make it limp along. And that's fine to a point, but I think our RMS-- it looks like it was written in DOS [laughter]. I mean, it has that feeling to it. And it probably was. They added features to it and it does it's job, but it hasn't kept up. My phone has more computing power than what's needed to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								run the RMS now. And it's not-- again, they've invested a lot in it. And also on our end, it's very difficult to upgrade. The upgrades can be quite painful. There's migration and if they change types of servers, then are we going to lose data? How long are we going to be out for? Back to the high availability. Sometimes an upgrade takes us down too long. And in Austin, we have south by southwest, ACL, there's always something. So we have to look in the schedule and say, "Here's one week that maybe we can go down." But it's hard for us. It's very rare. I just don't think they've kept up with the times, so to speak. And then, the new companies that come along, we don't want to be on the bleeding edge and it takes a lot of money and time to get there, so it's a bit of a catch-22, I suppose.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	[RE: personal cell phones] I'm not going to assume that it's some conspiracy. It's probably just a misunderstanding. But officers need to protect themselves from that misunderstanding. So if it was a city phone and whatever, you guys can have it, you're not going to find anything on it. Good luck. Personal phone, you run the risk, and you're going to get it back eventually, but until then, you're going to be without your phone.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	From a software perspective, I am tired of having a new sandbox for every single thing that I do. Our RMS doesn't really speak very well to our CAD. So again, maybe-- it's easier to explain this way, I think. If I am going to take a call and I need to write a report, I'm going to run the person on the way to the call. But that never makes its way into RMS. So I'm going to type them into my CAD, even though it's on the same computer. I'm going to then-- I'm proficient. So I alt-tab between the screens. But some officers click the bar at the bottom. So they click over, they type the first name. If they can remember the whole thing, then they click back, look at the middle name, click back. And it's a long process. And we duplicate work... So I would like to see an integration between all those separate systems that make it so I'm not repeating the same work over and over and over again, giving me more time to go

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								out and do what I'm supposed to do, which is take calls.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	But the joke is, officers today, our job is paperwork. We spend more time on the administrative side of the coin than actually answering the calls for service, which is what we want to do. We want to get out there and help you, but every time I do that, I have a mountain of paperwork I have to fill out. And again, I know technology can bridge that gap for me.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	So you have to run them in this side, and then type it in this side. Well for a while, we were able to automatically pre-fill it by pushing a couple buttons. And we had some officers who messed up, and they pre-filled the wrong person and didn't fix it. So there was a-- in my opinion, well, I won't even say my opinion. There was a decision made to correct that by disabling the technology which-- I mean, really, in the grand scheme of things, after everything I've told you-- I mean, that's one less time you have to do it, but you still have to do it 20 times. But you would have thought that we had just taken away their days off [laughter]. I mean, it was that bad and--
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	We get push-back, but from them it's, "This is old. This is outdated." Again, my phone--... So not pushback for using technology, push back for not being current.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	And you can really get some interesting perspective from-- I would get it from the complaints-wise. I have my complaints with our systems, but then I hear other users complain about theirs, and it's like, "Eh, it's not so bad." But that's all in the overall. No one's truly happy with what they have. No one really thinks that what they have is [the perfect solution]... It's not where we're going to be forever; it's where we're going to be until we find something better.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	We spent a whole summer trying to find paper for our electronic tickets and what we ended up doing is getting all the different providers - because it's thermal paper - we put it on a piece of cardboard and put in one of our cars on the dash. And the only one that didn't turn black by the end of the summer is the one we went with.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	I don't know that overwhelmed is the sense I get, but certainly flabbergasted or-- it's more of a sense of, "This again." As opposed to, "I can't handle it," it's more like, "Why? Why do I have to have two hand-held devices?" We had talked about rolling out an iPod or a phone with our cameras. We're going to have a Windows device, mobile device, that could be a phone. It is a phone. You could just turn it off. And a phone for our camera, and again, we're talking extra logins, more stuff to charge when we get home. You have officers have to run these banks of charging bays so they can charge everything every night.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	[RE: cause of communication issues] There's definite limitations, and I think that we do a good job of documenting those so they don't cause problems. But certainly, there have been things that have popped up, like in an upgrade that we miss. But again, we do try to get those documented.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	[RE: body cam auto-orientation feature] But from an officer's perspective, that's scary. Because if I walk into a dark room and someone knocks me over on my head, I don't want you seeing everything in the room better than I see. I don't want the room to appear straight up and down when I'm upside down, because I'm going to make decisions based on what I'm experiencing. And if your video that you're watching in a nice cool air conditioned office later doesn't match what I experienced, you are now going to be conflicted.
Problems - Technology	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	[RE body cams] To have everyone to have a cell phone, because you have to go find a dock I guess now. I mean, I don't know the whole spiel about it. I've heard bits and pieces. But you have to find a dock, upload the video, and then where if you had it on your cell phone, you can classify the video right on your phone and be done with it. But they don't issue a cell phone.
Problems - Technology	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	We always think that there's stuff that we could have better, right? And then once we get something we're usually so antiquated and behind. It's like [inaudible] the last version was at its end of life by the time we implement it into the department.... But again, there are things we could

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								definitely do better. Just the functionality and the car itself too. Like the big Toughbook right here, you've got the big console, everything in here. Why can't we just have a flat screen or something on the dash that you can touch or something like that? Because I was in a really bad crash on duty. And I got hit on my driver's side door. And you get stuck in there. And it's like a coffin because you've got one side and you can't get out. And it's just so big and bulky and then you have all your gear and everything else. So that would be nice to have something, maybe, more built in to make our car functional.
Problems - Technology	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	So you have the Toughbook right here and when your lid's up you can't see. So we have a new policy that you got to keep your lid down. We've had a lot of officers get into crashes because their lid was up. Because they were on their way to a call or sending the dispatcher a message, whatever the case, they shouldn't be doing it when they're driving. But just so you know, sending something and then they crash into somebody or hit a pedestrian, which is horrible. But you can't see. So it's in your vision. So it's also an officer safety issue. So you have to close the lid. And they're still pretty high up, though
Problems - Technology	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	When I started we had VHS tapes so, so happy to move to digital. It didn't even really matter at that point. I was just tired of the [State] sun eating my tape and having to tell my sergeant, "I had a tape. I can't get it out of there. It's stuck. And so there's the evidence or everything else is melted in the--" it used to be like a little VCR in the back that was in a metal thing and you had to use a key. And you put your tape in and out and every day you had to check out your tapes.
Problems - Technology	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	So with the e-ticket writers, I think they're a bit bulky and big. So if we could have something even just a little bit smaller. Because when you're approaching a car in a traffic stop, you don't really want a lot of things in your hand or big things in your hand. You kind of want your hands to be as free as possible. We have a lot of things that we carry. So there's so much on our belts. And then we're adding body cameras. We've got a mic. And we've got everything just weighing you down.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	So I have a hard time trying to fit everything on my belt as required in policy. Especially if you're some of the smaller officers, male or female just depending on your waist size, it's like you don't have enough real estate to fit all this stuff that's required. So a lot of people have dropped tasers or that kind of stuff. Now they're adding the body camera's right here. And you have a radio right here. You have the mic. This is just here. And then you're like-- and then you've got your notepad. You've got your pens and then everything around your waist and your gloves.
Problems - Technology	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	[RE mic cord] Yeah. Because it just zips and then you have your wires hanging out the bottom. But you don't want them exposed or hanging out because that's an officer safety issue, too, people grabbing on them and stuff. They're pretty big. I mean their mics are like this.
Problems - Technology	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	[RE mic] And so if some officers have room, they can put them on their belt. I don't. So I'll usually hang it on the lapel or stick it somewhere. I try not to do this side because if you have to shoot the shotgun, you'll hit the mic,
Problems - Technology	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	So a big thing when I was in that unit is we did crash reports, which are big forms. And so then you have that, which is separate. But then you also have your call screen, which is CAD. So when you show up to a crash you run somebody's license plate. You run their driver's license. We would of loved if that information from the CAD screen would have populated onto our crash report. But the interface for the two is just out of the question. So we have to get the information from there. We either copy and paste it if we can.
Problems - Technology	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	Just if we had something kind of available at our fingertips if we needed to without lugging that Toughbook everywhere. If you have somebody in the hospital or something you've got to go sit with them. You've got to lug that thing around or lug it out into the jail. And then you're carrying all this other stuff. And then you got this. And your hands are full again. I mean, if you get in an incident, you're just going to drop everything.
Problems -	LE	S	Field	26-35	11-20	Male	LE-S-033	And you can use the radio to communicate with other jurisdictions and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					other areas if you know what you're doing. It can be kind of confusing switching from one jurisdiction to another.
Problems - Technology	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	[RE: MDC] That new system is not user-friendly, as it relates to communicating with officers... Now, you have to essentially-- it's as if you have to go three layers deep to send a message. And then, the receiver has to then go three layers deep. Read it. Respond. Send it. And then, I have to go back. It's essentially opening and closing emails versus just having that back and forth texting.
Problems - Technology	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	Yeah. So it's not user-friendly.... So that is one of the new systems that's probably the biggest-- I would say that out of all the pros and cons, that's probably one of the strongest cons that you'll get from most of the officers on the street. The communication, it has adversely been affected by that new system. You can still text. You can still call them on the radio and whatever else, but it was much faster via computer, but it's no longer the case.
Problems - Technology	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	[RE: telephone game between LE and Fire] --because there is that middle-man. I mean, if you call the police and you say, "Hey, I'm being robbed," there will be a three-minute, if not longer, give or take, 30-second delay before it comes across my radio. If we sit here and stare at that cup for three minutes--
Problems - Technology	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	So compared to other agencies in the area, we get pretty good equipment. The problem is, most of it is outdated and I'll give you a great example of that. [RE: system to run license plates, to run person checks]
Problems - Technology	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	...So when you talk about the system itself being adequate, we are using decent systems, but whether it's as a result of government contracts, whether it's as a result of bad policy, typically, the stuff that we are using isn't as user-friendly and ends up being outdated sooner than later. Another good example of that is our report writing system called PacketWriter. We no longer use it. It was in existence for three to five years, somewhere in that neighborhood. My understanding is [County]

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								itself spent hundreds of millions of dollars on this system. Once they got the system and all the servers and everything set in place, it needed another \$100 million fix. And then, once we got that \$100 million fix, 18 months later they decided, "This system sucks and we're going with EJustice," which is now the current system we're using. It's called EJustice. Now, EJustice, it allows folks to communicate better, but we spent five years and spent hundreds of millions of dollars on a program that was inadequate. And it didn't do the job that it needed to get done. Again, we're a day late, a dollar short.
Problems - Technology	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	SME: So that is a glaring example of why that report writing system, in terms of the technology, we couldn't even search a name. We would have to go to a second or third system before you could search that second or third system. And if it's not something you do on a daily basis-- now we've got five different systems that we've got to use and check and it just gets overwhelming with all the passwords and all the stuff that we've got to utilize. Q: Every system requires a log-in, right? SME: Yeah. So it's thoroughly confusing. We've got Linx, L-I-N-X, which is a nationwide database that you can use and you can cross-reference reports and all that other sort of stuff. But I don't know that Linx [laughter] syncs with EJustice. So other states use Linx. We use EJustice...
Problems - Technology	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	No. I mean, even the radios, for example. I mean, post-9/11, the fact that we can't immediately switch to a mutual A channel immediately-- I'm sure our radios have the capability of doing it, but we don't know how to do it. I don't know how to do that. I mean, I've got an \$8,000 mobile radio that I have on my belt. Technically, I can dial a number on it and I can call you on your radio and we can use it like a telephone.
Problems - Technology	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	I can't think of when it's actually gotten in the way. I mean, it's obviously-- it's cumbersome for all the programs and the equipment you have to carry around that that sort of stuff. But in terms of getting in the way, not necessarily. I would just say it's more of a-- it's not inhibiting you to do your job. It's just a nuisance at times for all of the stuff, and the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								microphones, and this and that, and all that other sort of stuff to be around.
Problems - Technology	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	I guess I would just go back to the computer system again because we just made that switch. We now have no data as it relates to the history of the calls for service.
Problems - Technology	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	--they were not able to integrate all of that system. So now all of that history is no longer there.
Problems - Technology	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	Yeah. I would say April. March or April, somewhere in that neighborhood. So we lost all of that-- yes, we lost all of that. Both interfaces didn't communicate.
Problems - Technology	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	Yeah. If we wanted to call the timeliness of the information exchange as being a problem, that would be the relay. If you wanted to explain or if you wanted to identify communication from agency to agency as being a problem, that would be the inability to quickly communicate with another agency.
Problems - Technology	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	[RE: fingerprint scanners] We do have mobile versions, but they're just not as competent as what I would like to see.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	When we were at the fire department, it's difficult. One, some of their channels and some of our channels, we can't get to. You can hear, but you can't transmit. And that goes both ways. They can't transmit on--
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	[RE: communicate with other disciplines] Sometimes it takes longer to get things done just because there's a lag time, obviously. If I'm telling my dispatcher to tell the fire department dispatcher to tell the firefighter or paramedic to do something, however long it's--
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	Yeah. But I've never tried it. But the way our radio is set up, it's in plain English as it can be. So it's just a matter of scrolling and find, but there's so many radio stations to find the right rate, the channel. But other than that, I mean--
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	[RE: new CAD sys] Yeah. And to me, it's very confusing. The old system was very easy to use. This new system, I think they call it the P1 system

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								is-- I don't know. I haven't used it a lot. So maybe that's the issue but it's--
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	[RE: contact another officer in the CAD sys] Yes. It will just show up on his computer, and we can go back and forth. Now, it's a little more difficult. It's almost like an email. So then you have to wait till the email gets sent, and then they read it, and then-- it's a little more difficult. Also, with that is-- and in K9, what we use a lot, it was-- on the old system, it was called the Announce Screen.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	..For example, certain buildings we go into, we've been told before, "Have an officer stay outside. Have an officer on a different radio channel. And then have other officers go in and handle the call," because the call won't be able-- you won't be able to call out in the radio, the radio signal or whatever. I'm not big on how the radios work and everything. But basically, what we've been told, and I've experienced myself is, you can't transmit in certain buildings, or if you go down into a metro tunnel, some of the tunnels you can't transmit. So that's kind of hampered us. And sometimes, when you can't transmit, the dispatchers will ask if you're okay. And if you don't hear them, the dispatcher will start sending more cars to you. And then people are like, "Are you okay?" And then you go, "Well, yeah." And they say, "The dispatcher's been raising you for 10 minutes." And you're like, "Well, I can't hear anything. I haven't heard anything go off."
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	[RE: texting instead of calling] So sometimes that's a hindrance. But other than that, I mean, I don't want to ever think it gets in the way. I think it just-- I don't think it's been developed as-- they keep making it better and better, but we still have the same problems.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	[RE: new CAD's messaging feature] Right. And I don't know why they-- and I don't know the reasoning behind why they've changed it or if that's maybe what whoever developed it thought it would be an easier way to communicate or what. But for us, I could tell you, it makes it harder.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	And if you're not near another county building, you'd have to pull into a gas station and use the-- when the dispatcher would call you-- now, the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								radio was even worse back then. I mean, the reception was bad. But there was no computers, so you had to write down every call.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	[RE: new sys not having the talk-around channel like walkie-talkie function] We lost that. So now if I want to talk to you on a separate channel, I have to scroll to a different channel to get to it. I have to turn-- I think we have to go to a different letter and a different number.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	Well, I guess, it all depends. I mean, I don't have a specific incident because I've been training, but sometimes our dispatchers, the ones that give us the call, for one reason or another, may omit something maybe by accident or something that where they may not think it's significant as they're reading the call to you. And if you don't read the call on your computer, you'll miss it too, so.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	For something like that, I would have to pull over and read. I mean, it's just too much to try to read and drive at the same time, so.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	I'm sure there is. We have policies on [laughter] everything. So there probably is, I would imagine. But I think for the most part, we all adhere to that anyway. It's just because you have this big screen here, and you're trying to drive like this, it's hard
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	I guess, sometimes, there needs to have certain channels encrypted. For example, the fire department. They have their own radio channels, and like I said before, that kind of makes it a problem for us because then we can't speak to them especially if they have a call where they're asking for our help because somebody's acting up or whatever. We may have a question because typically, they'll show up with four or five people, so at least one person could get on the air and say, "This is what we have," and then we can determine-- we're going to get there quickly, but maybe we should try to get there even quicker because of what they have, or sometimes, we've had cases where the dispatchers told us one story the way the patient's acting, the fire department is, but by the time we get there, the person's not acting the way we were--
Problems -	LE	S	Field	36-45	11-20	Male	LE-S-034	[RE: tiny monitor on wrist to see video from camera mounted on a K9

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					dog]...The only problem with it is, one, the antennas usually go bad. So how far they can go from us, we lose reception. So it would be nicer if we could see that a little bit better. And it's only black and white, it'd be nice to see either color or infrared would be nice.
Problems - Technology	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	Yeah, the officers. They may have accidentally turned off the WiFi, or they've lost Internet connection somehow. The problems that they're having is that they can't access it. They can't access the particular application. So that's going to be either something on our end, I can look and see where our system's down.
Problems - Technology	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	Servers working or it isn't working and I know that that's immediately that's the problem. That's a problem. And then the other thing is, if I know the server's working, I'll be checking with them to making sure that you didn't accidentally turn off your WiFi or you lost your connection. Maybe your device only. So there's certain tests that I would have them go through. Quick tests that they can go through.
Problems - Technology	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	...Video is video. And video takes up space, so it's a huge space hogger. So what it's going to do is that eventually you're going to have places to put that data. And if you maintain your own servers, that's going to be a problem down the road. Probably sooner than later because the cameras are-- all your offices have them now. Plus, you got your cameras coming in from the city, your neighborhood cameras, your Homeland cameras. So all the cameras that you own, that's all coming-- so that video has to be stored.
Problems - Technology	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	[RE: city with multiple agencies] They're not all on the same frequency. And they probably can't all be on the same frequency without some type of a control because you will overtalk. It would be a whole lot of overlapping in talking.... The thing is is just that the only thing you have to really control is the noise level because there's so much of it coming at once. But you still have a problem with-- I know there's a plan to make this private network and I think that's very important because I think it's going to help-- well, one, it will be a private network that law enforcement could utilize. If law enforcement is just on that network, it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								will be a great thing because now you don't have the commercial networks competing. And anytime there's something as big as inauguration, the commercial networks generally go down anyway,
Problems - Technology	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	Yeah. And so they shut all that stuff down, and so you're only working off of your frequency but still, they're not on the same band, so you have band issues. So now, you're missing a lot of stuff unless you have somebody in that command center.... But radio communication is still a problem because of frequencies at this time. But I think it's getting better.
Problems - Technology	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	...It's the surrounding jurisdictions, they as PGs is a little different. So well actually PGs, we can now get that over-- I bet they've upgraded to 800 megahertz I believe. But there a couple of them that are not on the same frequency, so we got to-- so that makes it a little challenging when they're involved in it. If they're not involved, then there's no challenge.
Problems - Technology	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	So now, the problem has been what are you going to do with all this video? And it will continue to be a problem. And it's something that will continue to get more and more become a challenge down the road for every agency. And the thing is, you just have to be-- most companies now, agencies now, aren't looking to manage their own video anymore as far as the storage because it's just too much money. So they're utilizing companies like evidence.com and companies like that, that will store the cloud storage. And it passes all the standards of national security as far as you can-- they validate that this is secure. This company can manage a video with no problems. So that's basically the way that you-- I think a lot of smaller company, I mean, agencies are doing. But videos, it's a storage hog. Everybody has a cell phone and they're recording on the cell phone, so that video has to go somewhere. And everybody's looking to record.
Problems - Technology	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	..The problem becomes where you have to retain that video and store that video and it becomes evidence. Once it becomes evidence, we have to retain it. So what are we going to do with that video? So right now, we have storage. We have server farms that set up right now and backup

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								locally-- I mean, data storage houses. Not just here, warehouses. Not just here, but offsite as well. They're storing it. But I would imagine at some point with the way-- just what has happened over the last year and a half, that those data stores is going to be filling up quickly. So managing that is going to be something. But that's not just us, everywhere. But technology has this thing where there are a lot of things that are taking place. Cutting edge technology is something that you always look at, but you have to look at, is it really going to work for me? Or is it really stable? A lot of new stuff comes out, but eventually, it didn't work the way that they planned it. I remember when-- actually, I think it was HP came out with Microsoft and Bill Gates was displaying it and it actually crashed. I mean, that's just what-- the breaks. That happens. That's all. It crashed and that was just showing people what it was going to do [laughter].
Problems - Technology	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	You still can with PCs and all that kind of thing as far as servers and actual hardware but you can't do that for a data warehouse because the data structure that's coming in, and the amount of data that's coming in now is filling up these data warehouses or these server-based server farms or whatever you want to call them, and these colo facilities very quickly.
Problems - Technology	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	[RE: need for wireless support] ...even today, when we have network-- sometimes you might have all the cameras running, and if I'm pulling it-- if camera's running through a URL's no problem. But cameras running through where I have to-- like ours, we have to log in to a system that's a client server base, that's running on the same system that all my other servers are running on as well that's handling day to day operations. So sometimes if I run them all at the same time, bring them up, I could start having problems.
Problems - Technology	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	[RE: need for wireless support] You have resource issues. Bandwidth issues. And so I think that that's-- I think it's important that if we could get all of that under-- and primarily, like I said, since it is the hog of information right now, I think that if the audio/video had its own-- literally

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								had its own broadband network where it traveled on, and it didn't touch any other part of your network, I think it's a good thing. I think it would really help solidify the quality of video that we get, we can get even more high def quality video coming. Because sometimes we got to dial it down because of the network that it's running on. You still see what you see but it could be a whole lot more high def. The cameras have the capability. We just got to dial it down because the system can't take it.
Problems - Technology	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	The applications that they could bring it to the cell phones, but the complication is they got to get the mobile version tweaked a little bit because it's a little bit too much. It's not optimized correctly.
Problems - Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	[RE: tablets in the car] But primarily, the ones for patrol connect to a Wi-Fi in the car, so even if you were to take it out, you can't go too far.
Problems - Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Although they just put carbon monoxide detectors in there because of that whole thing with Ford because there was some problem with officers getting sick from carbon monoxide poisoning
Problems - Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	The tablets at first, they had a lot of issues with connecting to the Internet and all of this other stuff because, in order for the internet connectivity to work, the Wi-Fi had to be up in the trunk. But then sometimes, they didn't set it up properly, so there was issues with the battery because the Wi-Fi, it would shut off if it got less than-- I don't know anything about electricity--
Problems - Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	But let's say it got less than five amps. I don't know that-- but if it drops below that thing, the Wi-Fi shuts off. And so if you have a poor battery in the car, then the Wi-Fi will shut off all the time, and it will only work when the car is on. I mean, there's a whole bunch of things that they had to fix or work out between when they brought the tablets in.
Problems - Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Well, hopefully not when the vehicle's off. They tried to have technology that even when you turn the car off, the lights will stay on to conserve gas. Because when you're on a scene for a long time, you're just idling. You're wasting gas and wasting gas. And so they tried to have technology that if you turn the engine off, the lights will still stay on, but

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								if the battery gets below a certain mark, it automatically turns the car back on. But that technology never worked. So we end up just-- so that's why police cars are idling all the time. Because if we turn the car off, everything shuts off.
Problems - Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	[RE: how each system requires a login] Because we have a [City] court system you have to log in for. There's a national system that you can check. I mean, it's ridiculous how many passwords we have for everything.
Problems - Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	[RE: he likes to do reports at the station] Yeah, because it's a little less awkward because sometimes in the car, it's not the best position for you to type easily.
Problems - Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	[RE: the emergency button is close to channel switching knob on the radio] Yeah. That's why a lot of people hit it by accident. So a lot of times when you hear it-- most of the time when you hear it, because everyone's radio makes a tone when that happens, she asks and they say, "Accidental." And you have to take your battery out and put it back it to reset it.
Problems - Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Q: Do you change your channel often? SME: It depends. So for example, if we go down into the metro system, into the subway system, the only radio channel that works is MPD1-- or is our citywide channel.
Problems - Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	That's the only radio channel right now that works in the subway system. And so we have to let our dispatcher know, "Hey, I'm going down in the subway. I'm switching over to citywide 1." And so when we switch over to the citywide channel, the dispatcher on this dispatch can hear us. Because otherwise, you lose signal if you're in the subway.
Problems - Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	[RE: body cam, magnet mount] Yeah. So trying to handcuff people or if you get in a fight with someone, they all fall off.
Problems - Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	[RE: body cam, magnet mount] And there was protesters that were basically attacking the people attending the ball. And so we had to stand in between them. And people had this in the Magnum mount, and we were losing body cameras left and right because we were pushing and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								shoving.
Problems - Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	But now that we have body cameras, I don't think you necessarily need dash cameras, although you can't really see above the steering wheel in your body camera because we don't have the glasses body cameras. We have the ones that's all-- everyone's is on their chest--
Problems - Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	[RE: dash cam usefulness vs body cams] And so the steering wheel's-- you can't see anything in front of you. So it'll probably be helpful, but I don't think--
Problems - Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	[RE: dash cam usefulness] The dash cam would help, yeah, but the problem is once you're out of view of the dash cam, it doesn't really help you at all.
Problems - Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	[RE: camera embeded glasses] Yeah. But I think it would be too much because people aren't used to wearing glasses, and they can get knocked off, I think, easier. So I think the chest with the new clips is the best way to do it. But there's always going to be downsides. You're never going to be able to capture everything. It's impossible.
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	With firefighters and EMS is virtually impossible. And it's vice versa. It's virtually impossible for them to talk to us. It's very, very slow and very, very convoluted, because what we do is we get on the radio and we call our dispatcher. That dispatcher is one dispatcher for each district channel. And then, that dispatcher sends a message from their computer to the fire rescue dispatcher for that geographical area. And then, that person either contacts their-- either answers the question or has to ask their firefighter or EMS person whatever we're asking.
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	...Yeah, and the thermal imager isn't very useful in the day because you need the contrast. The temperatures are much more even in the day time. No. There's probably more radio traffic in the day time just because there's more people moving around.
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Everything else is fairly old. Our night vision stuff is at least second or third generation. It's not up to date. It's military surplus is where they're getting it. I guess I can't say too much. Our radio system seems to have

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								been updated over the last 10 years a lot. We're going through our growing pains with our current computer dispatching system. They just changed to a new software system. And it's been ugly, but it's a new system. So hopefully, when everything gets worked out, it will be more efficient.
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	[RE: new CAD sys] It has had difficulties. We've had problems with the computer system not showing when an officer clears either on their computer. We can hit a key to show that we cleared the call. Or for dispatcher, we'll hit a key. For whatever reason, it doesn't register properly, and it still shows the police officer held out on a specific call when they're really not there. They're off doing something else. So that's a problem. Or it's extremely slow and the updates aren't coming through. And either the dispatchers aren't getting the updates fast enough or the dispatcher gets them but we're not getting them, and it takes them a minute to put it out over the police radio.
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Other than that, I'd say it's-- well, our computers are really old. And I think that's part of the reason the new CAD system runs so slow is that the computers were not updated when they updated the software. They just updated the software
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	The only other thing I would say is we use-- the program we use to run license plates through the state of [State], that seems to go down quite frequently. And so you can't run a tag or you can't run a person because this computer system is down on the state end, not on-- there's nothing our dispatcher can do. That actually seems to have gone down more frequently in the last five years than it used to.
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Computers in the car has been extremely helpful. And it's like anything else, technology is great when it works. When it doesn't, you got to fall back to pen and paper. And if you've been using-- there's my generation or my group of officers, anybody who's been on pre-computer understands, yeah, well, sometimes you've got to write it all down.
Problems -	LE	S	Field	36-45	21-30	Male	LE-S-037	Computer goes down, you have to write down the address, the nature of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					the call. And if you don't know where you're going, you either have to look it up on a map, or if you have a personal GPS, which most officers do, on your dash, you got to plug it in to find how to get to the call, unless you know your area.
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Some of the things, I think, that would benefit our profession and some of it even already exists - it just needs to be improved a little bit - are shoulder mic system for our portable radios. It would be awesome to have that cordless opposed to a long cord that tends to either get caught in something or it can theoretically be used as a weapon against you, strangled with. I mean, typically, they're not, but quite frequently, we run into it getting pulled off your uniform shirt, or stretched, or gets caught on something where a Bluetooth-affixed microphone would be really nice or even a better headset system. And they make some nice stuff, but it's really expensive, and they're not going to buy that for 1,100 officers.
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	[RE: reliable cordless microphone] ...there's a delay when we scan our portable-- or even in our car radios. Say, I'm on channel one, but I'm scanning all the other six districts. So if somebody in district two is talking and I scan it, scanning it, flips over, and they try and raise me on channel one. The dispatcher's talking to me specifically. There is a second or second and a half-- which isn't long but delay of when they call me when it switches from channel two back to channel one. So sometimes, I only get the last half of the dispatcher's transmission.
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	[RE: delay when switching radio channels] Well, sometimes you can catch-- you'll catch the end of a nine or something, and there's not a lot of nines out there other than K9. So I would answer them, "Hey, were you calling K9?" Or sometimes you wait. And typically, they will ask twice before they start shopping around looking for another dog. So sometimes, you're like, "All right, was that for me?" And then, you wait, and then sure enough the next transmission is, "Hey, K9 so-and-so, are you on the air?" "Yes."
Problems -	LE	S	Field	36-45	11-20	Male	LE-S-038	[RE: new MDT system] Like I said, I don't know too much about it, but I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					know that they had issues with the roll out so they postponed it. And then there were other smaller fixes they were doing. But I don't know if they're still-- I don't know if it's all fixed or not at this point. But it all works fairly well. There's some issues with the radio and different locations, like the inside buildings, basements and things like that. In some rural areas also. But for the most part, it works really well.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	[RE: workaround for radio coverage issue to have officer stay outside to communicate] I think it's an officer safety issue. I think that-- I know that-- I don't know exactly how the system works but I'm assuming you can't put towers everywhere. So I know that's an issue, but I think it's-- if I need something-- if I need help now, I don't have time to communicate to somebody else and have that person try to communicate what I just said to ECC. Sort of like the game, I think it's called phone, where I tell you a message, you tell someone else the message and it goes down the row. Eventually at the end it's all messed up. So instead of me going directly to the source, I now have to go through somebody else who has to communicate what I'm saying to somebody else. And then that person gets a response from the ECC, and then they communicate it to me what I'm trying to deal with whatever situation I'm dealing with. Same thing within the basement. If I'm in a struggle in the basement, and I don't have-- this person outside could be inside helping me, but they can't because they had to be able to communicate with everybody else coming in, what's going on.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	I think if you-- if you start doing too much with technology and relying on it too much when it goes down, you won't know how to-- or a person wouldn't know how to respond if you relied too heavily on technology. I think I think it's good for us to move forward with it, but I don't think we should put too much weight into it because then, like I said, if it goes down-- like when a computer goes down at work, and you're scrambling to find a notepad so you can write down addresses and things of that nature.
Problems -	LE	U	Supervising	36-45	11-20	Male	LE-U-039	...We had an older system before that that was less user-friendly. And it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Field Responder					would have been much harder to do with a touch screen in a car, whereas, now, with the laptops being shifted out and bringing in the tablets, it's not really much of a difference.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	The issue that we find is we have an electronic correspondence form but a lot of our correspondence requires attachments. Such as, if somebody is in a traffic crash, our electronic correspondence form and the traffic crash form, one is a PDF fillable document and one is generated through our Cobalt management, report management system. So it's two different places, so you can't combine them unless you physically combine them or you change them into Adobe Pro, which a lot of people can't do that. And there's very few people that can email those documents who wants you to put them into a PDF.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	[RE: communication with other agencies] The communication we have mainly is established through command centers on large details. There are different agencies that-- Special Operations has the ability to switch in between certain jurisdictions and to speak with Secret Service on secured channels, but it's not a department-wide thing. A lot of the members with take-home vehicles have the ability to communicate with outside jurisdictions. They do obviously don't want 3,500 people to be able to talk to their county or local. It would be too cumbersome, or too invasive, or people would use it not for the reason it's intended.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	... The ability to give out iPads and put out your plan manual so we're not carrying this 100-page manual. But we have to figure out how to turn it into a brick, without turning them all into bricks, if in case something happens to it, that type of thing...
Problems - Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	[RE: lapse in adapting the tech: eTicket Program] ...The ability to give out iPads and put out your plan manual so we're not carrying this 100-page manual. You need to be able to handle very quickly, because I can't be standing there with a ticket writer, having to enter 16 codes. I need it to be set in a manner where I can enter my specific jurisdictional code to make a traffic violation pop up, or type the first three letters. I can't sit there and type out, right turn on red, seat belt, but it has to be a quicker

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								method of doing it. And I think that's where there are sometimes some challenges in the ability to make something work quickly and efficiently with the technology we have.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	Because you don't want that ability, if somebody gets into our iPads to try and find a manual for what are our plans for a large-scale march or demonstration, then you don't want them to be able to access all of our camera footage. So they're very independent operating systems.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	[NIST-Q: negatives as being very compartmentalized?] Sometimes if, this happens with Special Operations a lot, is you don't have a home base. One week I'm here, then if I go to seventh district to handle something or somebody's going to the first district, then you have to go in and log in on of their computers to do a certain report. Or some cars don't have computers in the car, so you have to go back to the station. If you're not at your home base, it can be a little disruptive because you can set up your computer safely to be able to have access and you're like, "Name. Password. Oh, I should have done a backslash, I didn't." To remotely login can be difficult when you have so many different-- but if you can log in on your phone, you're fine and things like that for evidence recovery and things like that.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	[RE: log in]...But when you get outside of the administrative-- if I need to know where somebody's assigned, if I need to look at my paycheck in our PeopleSoft report, then it's a single sign on system for administrative functions. But it's not when you go to other portions like our-- unless you make it a single sign on system with your, how you set up your ID and things like that. But when you log into the mobile data computer, it's different than it could be log in for the body camera system on your phone, or it could be different than the one you have for your desktop. And patrol district personnel don't have a specific desktop assigned to them, so they're always using group computers.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	...when you have to do in a rush report where you have a suspect at the station, then you're going to use the station computers, and there's a report writing room. Or if your computer's not working for a day for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								some reason, then you have to go back to the station to do this, so.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	[RE: using paper and pencil - old school] ...And it's a lot easier sometimes than trying to electronically correct something because people miss it. You're not going to learn with an accept changes, but you will learn if you're looking at red penned document, and we literally use a red pen, so.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	Everybody on the department that has a body camera has a phone. However, those phones are not set up for anything other than the body cameras for each individual of that department.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	...But we didn't have enough information from the dispatcher. They didn't ask enough questions, and that's something that you'll hear us ask all the time. Respond for a suicide attempt, well, how are they trying to commit suicide?.... Because there can be a delay and that has gotten so much better over the years. And sometimes you just have to wing it just because you don't and you never will have the information you need until months afterwards, so.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	Yes. It's sent to the MDTs. One of the things that we've-- when I go out on patrol, I don't have a computer in the car. I have to borrow a car from motor pool. They don't have computers.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	[RE: motor pool cars without computers] it's just the nature of the beast because they're used for mainly administrative purposes. But I have to snag one when we go on patrol, so.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	In some ways, my personal thought is that we need to stop making everything social media-based and relying on social media to drive policies and procedures. And that is a technology-based issue, but I don't know if there's a better way to not necessarily control the release of information, but have a better way to get ahead of the negative.... Because if there's a shooting in the seventh district, it takes a while for it to settle down, enough to be able to get the correct information. By that time, you had 18 reports that are wrong, from [Name], who saw one side on the street and judge it. And it's a matter of being able to release the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								necessary information quickly enough so that we get the correct-- whether you like it or not, it's the true and accurate facts of the representation, rather than social media, because that's the biggest damage to us.
Problems - Technology	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Q: ...How else do you communicate with people? SME: ...Text messages all day long. We all have iPhones for better, for worse.
Problems - Technology	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	We just got our patrol but everybody at the Sheriff's office has an iPhone. Text messages between co-workers and bosses about things you can need. And sometimes it's as simple as, during the workday, "Hey." I'm interviewing somebody in the jail, "Can you bring me a form?" Cool. Or it can be 10 o'clock at night, "Come find me in the morning," or, "I need to do this in the morning." And some of that bothers me, some of it doesn't. That's why I try not to go through the emails. But some of them are-- there's a lot of junk mail...
Problems - Technology	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	They don't buy some nice ones. I mean, the one I got now is a 5C. C stands for crap [laughter]. But we get the ones that-- they're not upgraded if I break it. I might break some stuff. I'm kind of clumsy like that. Because they'll give you the new Penny phone, the new Penny iPhone. I'm like, "I cracked the screen on one of them. I'll just go get it fixed. I'll pay you the 20 bucks." No, they'll just give you a new one. And everything is backed up through our cloud. So it takes half an hour to swap everything over, so is what it is.
Problems - Technology	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	And then for our county email, it's all through Gmail. I'm not a fan of because I don't like the fact that Google keeps everything. I'm sure Apple does too. And I'd be naive to say they didn't.
Problems - Technology	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	And then for our county email, it's all through Gmail... But then through that, then we have two step verification. So I can access my Google drive, I guess, every 30 days. And it's always at the most inopportune damn time. I've got to go into the Authenticator app and get my six digit number or whatever it is, and then go back and type it in.
Problems -	LE	R	Field	36-45	11-20	Male	LE-R-017	There is a DUI app... but I don't like using it on the street because I think

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					you're too busy. You get dug into your phone and safety issues...
Problems - Technology	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...the word processor in our report system stinks always. Just garbage. And we've taught everybody. And I was one of the original instructors. And I almost think that I was told this by the company. "Just type it in Word, copy and paste."
Problems - Technology	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...But it's getting to the point of there's so much stuff in the car. You're like Emerson, Lake & Palmer trying to go to a call. There's a computer here. And it's giving you dispatch updates. You've got siren controls. You've got a radio. You may have two or three radios. And then, what burns my ass is when dispatch tells to switch a channel. And you're like, "I'm doing 100 and I'm driving, and I'm dodging man, and machine, and critters, and everything"... But there's tons of technology in the car.
Problems - Technology	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...And then the e-ticketer, it's a brick... The pain in the ass is the thing is clunky. It's got an old BlackBerry-style keyboard... I got big fingers, I got bad eyes, so little screen, and it's not user-friendly from the physical aspect of trying to look... You've got to keep track on your suspect, who's in his car, who knows he's going to county and may or may not want to fight you, and he may have something hidden under his seat. And you're trying to type an e-ticket.
Problems - Technology	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...the new [State] driver's license, they've got so much information on them. It's - I don't know - like a six font. These guys have literally gone out and bought the Home Depot or Walmart and got magnifying glasses so they can read the-- so you're doing this.
Problems - Technology	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...the new [State] driver's license... There are workarounds, [State], and there's other states that are now going to like a QFR code on the back so you can scan it. But of course, it doesn't work all the time.
Problems - Technology	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	... at some point during that contact - and we do e-tickets for warnings and tickets - you're going to have to be focused on this damn thing. It's about the size of the original Game Boy. Except with a keyboard. And I'm like, "Put it on an iPhone. Put it on a Samsung. I don't care what Android or iOS, Apple platform it's on. Don't put it on Microsoft because that's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								why it's on, and that's why it's garbage."...
Problems - Technology	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: e-tickets for warnings and tickets] ...put it on my phone, so it's an app. I hit my button, type in my ticket, walk up there, take their picture, it send, I still have to go back to my car to get the ticket, which unless-- and they have a thing we can wear, the printer, hook it onto our belt but... it's a pain in the ass because you've already got gun, taser, bullets, handcuffs...
Problems - Technology	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...You got utility belt. The last thing you want is a printer. They make it thin so you can slip it into a container on your belt and keep it there. I've seen, and I'm like, "Oh, enough. Just calm down." But you still have to do that...
Problems - Technology	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Well, in technology-based is nothing talks to each other. And if you want it to talk to it-- if you want program A to talk to program B, A and B is going to have their hand out for a monetary supplement to give you the patch that they've already created or to create a patch. So that's frustrating.
Problems - Technology	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	You can't get two phones to talk to each other sometimes or-- we all have the issues where you're trying to sync your phone to your new computer, and they may catch flight now and then, and you flip the table over. "I'm out of here, but [laughter]--" no. Technology does the lack of communication
Problems - Technology	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...When I first started here, there were, I think, five or six agencies in the county. And we each had our own report writing system. In that report writing system, you each had your own name section of names, the addresses, and everything. Well, then we all joined up, and we got on one common one for the country, so all agencies because you'd have the same person entered six times in each of these things. Now, we're all just entered once, one big name database. And I guess, we kind of have that with the NCIC... But it's not user-friendly.
Problems - Technology	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	I'd love to be able to pull up somebody's name, information, criminal history, warnings, and whatever on the phone... But it gets to a point of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you're going to have so much technology that-- and we're seeing it now, where people don't know how to communicate and sit down and talk.
Problems - Technology	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...patrol cars, there's just so much crap in there that it's tough for me to fit.
Problems - Technology	LE	U	Manager	46-55	31-40	Male	LE-U-020	In the process of doing a CAD upgrade. So my week started Sunday morning at 2:00 AM... we were doing the CAD upgrade and we're supposed to be done by 8:00. I didn't leave till 6:00 in the evening, and it's been going since.
Problems - Technology	LE	U	Manager	46-55	31-40	Male	LE-U-020	...the ability for the officers to take, say, a response from our DMV and be able to put it into our RMS system, eliminating duplication of entry and those type of things. So those are some of the big upgrades that we did functionality-wise. On the dispatch side, there's very limited. But on the officer-trooper side, it's more intensive, and that's where we're having [inaudible] issues on that...
Problems - Technology	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: cell phone apps] Apps are very limited. We don't issue our officers phones.
Problems - Technology	LE	U	Manager	46-55	31-40	Male	LE-U-020	...when our CAD went down, we went back to manual. And we used to be on a card system, and writing things down on cards and the frustration level of our dispatchers was through the roof because they're not used to it, writing things down... when it came back up, they had to go back in. The frustration of back-filling information.
Problems - Technology	LE	U	Manager	46-55	31-40	Male	LE-U-020	...we were bound by the geographic of a VHF system where when we went to DTR you can talk from one end of state to the other, and it's seamless, and those types of things. So it's been very much a transition but mostly everything for the better...
Problems - Technology	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: free call *277, i.e. star CSP on the phone keys]... But as technology changes and-- just for an example we-- Star CSP, we tell you to call Star CSP. But, typically, and on a lot of phones the alphabetical piece is... non-existent.
Problems -	LE	U	Manager	46-55	31-40	Male	LE-U-020	...It's always a struggle because everybody has email but nobody reads

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology								email. I mean they get email, but they don't read email. You don't have time to have face-to-face meetings with everybody...
Problems - Technology	LE	U	Manager	46-55	31-40	Male	LE-U-020	...for [State]... we get into terrain issues with the mountains and no matter how much we use to try to fill in our gaps, we're not going to put a 750,000-dollar tower to fill in one canyon. But it's important for us to talk in that canyon...
Problems - Technology	LE	U	Manager	46-55	31-40	Male	LE-U-020	...We're surrounded by five different states, and not only do we have interoperability issues with people in [State], but bad guys don't stop at borders.
Problems - Technology	LE	U	Manager	46-55	31-40	Male	LE-U-020	...the ability for us to do that better, if there was the ability to have the ability for satellite-type of things... But our radios only run so far. We don't put towers in [State]. So there's a reason. And they don't put their towers in [State]. So when they get into our areas, it would be nice if there was the ability to do that.
Problems - Technology	LE	U	Manager	46-55	31-40	Male	LE-U-020	... And I think moving more towards a - and I know this will never happen, but - a common platform for emergency communications. Well, who's it going to be? Is it Motorola? Is it going to be Harris? Is it going to be-- there are too many companies selling their own thing for it to be a one-type ability. And I know that's not going to happen, but pie in the sky, it'd be great if everybody could use one...
Problems - Technology	LE	U	Manager	46-55	31-40	Male	LE-U-020	...In [State], when we go into [State], we have some of their talk groups into our radios. They have some of our talk groups into their radios. The only problem is if they go to somebody else, our dispatchers lose track of them, so now they're on their system...
Problems - Technology	LE	U	Manager	46-55	31-40	Male	LE-U-020	...[State] is very difficult. We're having very difficult time. They run their radio system differently, and their legal department has indemnity issues type of things about sharing their resources with others. And so when you start getting into legal problems, I mean, it's, why are you involved?
Problems - Technology	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: some counties have their own radio systems] What they did is they've put up a silo because now the officers, boots on the ground,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								where they had the ability to talk to each other. They back each other up. They knew when each other was in-- that because they went on a different system, even though it's the same system, but it's theirs. And now the two cars can't hear each other. And it's been very difficult on the boots on the ground to say, "We lost this, and we can be right here and this other officer can be getting his butt kicked. And we don't know about it." It's going to take multiple phone calls to-- and then dispatches, and time. And it wasn't a good decision, but it was a political decision that they created our own silo. And that's tough, but that's what I'm hoping that FirstNet won't become as well.
Problems - Technology	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...So today is a good example of dealing with camera problems that we have to resolve immediately and then doing audits of the body cam system. If there are-- sometimes there are problems with our in-car video camera systems. We're also responsible for that. And then the interview rooms that are in the three district stations, if any problems arose with that-- so we're basically-- start our day with managing different technology issues or different technology-related issues that we have to fix and then figure out why whatever broke broke so that it doesn't continue to break...
Problems - Technology	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	body-worn cameras, by far and away, there are more issues with body-worn camera technology than any other of the solutions we deal with. But there are also just user error, lack of understanding...
Problems - Technology	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	User error login issues with computers or, a lot of it, they contact us first and then we refer them to CIT department if it's an IT computer access-related issue. So that's probably our, I guess our biggest--
Problems - Technology	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	Yeah, I think, or maybe lack of understanding of it, with the body cameras. People not docking them properly, not making sure they're charged properly, how to get in to access stuff or change things. I think a lot of it is that.
Problems - Technology	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...And then, as far as our role in repair or diagnosing problems, typically, what happens is an officer will email-- we have email accounts set-up. It

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								goes to all of us. Our team consists of seven people. It goes to all of us, and the officer will email us and say, "Hey, my camera fell or was knocked off in a fight and broke." Or, "My video isn't downloading," or whatever the problem is. And then we try to respond within a couple hours even on weekends and overnight if one of us sees the email. We'll respond, just tell them what they need to do until we can get the camera repaired. And then typically, first thing in the morning, we replace or repair the camera...
Problems - Technology	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: information officers manually transmit (not done automatically)] ...If they want to add notes to any videos, they can get into the back office of the systems, and they can add case numbers notes and that sort of stuff. If they see an error in the way it was tagged, or if they just want to add additional information.
Problems - Technology	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	No, we do have MDCs in the cars, and those are connected through Verizon, so it's just a data-cell connection. We don't transmit video that way because we were afraid it would just bog down the system...
Problems - Technology	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...I think overall, the computers were pretty reliable... So they don't go to the shops a lot for issues unless a key's broken or there's major damage on the screen or something.
Problems - Technology	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	Not very many people like our computer-aided dispatch system that we have right now. We have one very different company before that everybody liked a lot. We switched away from it. Now, they don't like this one because there's some issues with it. So that contract comes up every 5, 10 years, so we'll get out of that sooner or later.
Problems - Technology	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	We pretty much have the worst computer-aided dispatch system [laughter] [of all?].
Problems - Technology	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...From a technology standpoint, I think that probably the biggest issue with it is, it has really, really inferior mapping and routing capabilities which are really critically important to public safety to be able to get to where you're trying to get to efficiently and by the shortest route. So that's one of their huge shortfalls...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...and then the ability for that particular product to integrate with other systems, we're finding, even though we were told, "Oh yeah, it's easy." It's not. And they're using it as a way to increase revenue by saying, "Okay. Well, if you wanted to integrate this way, it's going to cost." So, yeah. It's been a really, really disappointing process. And that's one of the things just for in technology in general with, I think, most law enforcement agencies is there are many disparate systems that need to communicate, and that's one of the real challenges is getting our CAD system who's made by one vendor to talk to our RMS, records management system, who's made by another vendor and get all that information to feed to our analytics system, which is a completely another vendor, so those kinds of things are really a challenge. I'm sure you've heard that from other agencies, but that's a challenge for us.
Problems - Technology	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: using cell phones for mapping as a CAD workaround] Especially going out even a block outside the city, I'll pull out my phone, look at it, see where I'm going because it's quicker and easier.
Problems - Technology	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...we live and die on our MDCs. There's been times we've had CAD [out of just?] dispatch, and the programs go down, and you got to jot stuff on pen and paper again as to where you're going, what the call is, to catch it up later and people just-- [they pull on getting?] more. They don't know anything different.
Problems - Technology	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: MDCs] Yeah, any time that goes down, you get officers, they have to be on the radio and ask two or three times for the address because they didn't write it down.
Problems - Technology	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	And really from my perspective what's happened over the last probably five years is that there've been so many advances in technology that's related to law enforcement that it's, I guess, I don't know if overwhelmed is the proper term, but it's overwhelmed some officers that worked for years with really the only real technology they had was the laptop in the car, the MDC, but really nothing else, and now with the advent of the body cams, the surveillance cameras, the license plate readers, we have our motorcycle enforcement team has hand-held e-citation devices. Or

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								exploring now, putting printers in all of the patrol cars, so we can do more electronically and print in the cars...
Problems - Technology	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...So I think particularly a lot of the younger officers that don't have that history of doing a lot of the paper, it's probably not affecting them as much as the officers who have been around for at least 10 years, and they're getting hit from all sides of okay this is all being changed now, and we're making things-- this technology is going to make things easier for you, and really, it's not. From their perspective, it's, "Gosh now I've got to make sure all my video from all day long is tagged correctly." And so it's creating a lot of--
Problems - Technology	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	It's another new thing they just did was a got to [Pro QA?] dispatching. I hope you are familiar, but that scripted thing that the call-taker do when they get a call. It affects how the call prints out, or how it displays in the car, and it affects how it's aired, and when it's aired. And so there's been some growing pains with that. But everybody is getting more, and more used to that too. I think they, for the most part, they do pretty well. There's been some problems, some complaints, and one of the solutions that they just went to is to bring dispatch back under the police department umbrella rather than having it as a separate entity that it was before, so that means they can do rest here.
Problems - Technology	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: fingerprint readers] ...Overall, unless there's something wrong at a state level where the system's down, they work super fast...
Problems - Technology	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: HUD] And we explored that technology a while back. It's actually been a lot of years ago, and there was some issues with how you project it onto the windshield and where that camera placement is to project it. And if you're in a collision, you don't want any kind of equipment by your head, and then the other issue is the reflective-- if it's a light that's then reflecting off the windshield at night, it can be an issue too so. To illuminate the officer [inaudible].
Problems - Technology	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...facial recognition is a huge thing. There are some significant privacy concerns revolving around facial recognition, so my advice to our chiefs

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								now has been let's hold off and wait and just kind of see how this technology shakes up. First of all, it doesn't work really well, and secondly, there are just some huge privacy concerns over the law enforcement use of facial recognition. So I think that will come at some point...
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...But a lot of times, once the scene's stable, we'll be using our cell phones back and forth to get the stuff we need instead of using up the air time because we're limited. Only one person can talk at a time, and some stuff is more important, some stuff isn't, so there's a lot more cell phone usage...
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...And back when I started, I could listen to the radio and on a Friday night, where we have 25 guys working, I could tell you exactly where everybody was in the city. As we've become more and more dependent on computers, I can't do that anymore. Which I'm doubting that anybody here can do that anymore, which kind of makes it hard for me to understand why we don't use more the technology, instead of using the radios. Because the radio, like I said, the bandwidth is such that we can get busy, and I have to make traffic stops where I cannot call out on the radio because I can handle the stop and be done before they're done yammering on about something.
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...there's some state channels that I can go to. It's like Blue Northwest, and I can go there, and everybody in the state has access to that channel. So technically we can talk back and forth. There can be some delay, because everything goes into one place and then gets reformatted in digital or analog and then gets pumped back out, and so it's not always the perfect thing. I can be standing right next to the guy, and I can key up, and it takes a second for him to hear. And it does work when we absolutely have to. But when it comes down to emergency type situations, it's very difficult.
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...one of the deputies was in our city, actually ended up firing shots at a suspect. We got the call from another party in the house, and we were already responding had units on scene, before we got relayed that it was

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a Jeffco deputy involved, and then we've got the scene shut down. We're taking care of it when the Sheriff's Department and all their resources start rolling into the scene, and we're immediately screaming at them, "Stay in your car! Stay here! We've got this." We don't want any blue-on-blue stuff because you don't know where we're at. We don't know where you're going. Because in order to switch everybody to a channel, it takes time. You would think that they could hit a button and do it, but it doesn't work and so--
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...I've gone to [City] and [City] to help them with crime scenes. And [City], even though we have the same radio system and we bounce off of each other towers, I cannot talk directly to them, because we don't actually share the channels [laughter], so. And then up in [City], they're on something completely different, and so we don't have access to that at all...
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...In my house, our radio works just fine. I can call back and forth, no problem at all. I get down here to 72nd and Wadsworth, half a mile from here, and the radio's drop because we have dead spots. We have interference from-- we have interference from the high-rises in [City] that it's ricocheting back off and it's blocking the signal so it's dropping. So we're building extra towers and stuff like that, but we have areas of our city out west that we don't have coverage. They're building now towers, but that takes time, so.
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	So interoperability, it's very difficult. There are ways to do it if you're planning ahead or have time, and we do that quite often if we know what's going on, and we have time to respond, and we can all switch over to a channel.
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...I make traffic stops. I make, I don't know, 20, 30 stops a day, and handle wrecks, and do all the reports associated with that. And whether that be-- because of the way our systems are set up, most of those reports have to be done-- are done back here. We have access to various things that we could do in the field, but we don't, honestly. I could do my crash report in the car, but it's not very comfortable. I could technically

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								take my tablet out of the car and do a report there, but again, it's not as feasible as they had thought it was going to be. Our traffic unit, we have ecitations, so I have a handheld Android device to write tickets. I can actually do an accident report on there and exchange the information. But, again, with our systems, I still have to come back here and then cut and paste from that application into our native RMS system. So even though technically, I've got the accident report done in 15 minutes, I still got to come back here and spend another 15 or 20 minutes to transfer it into the system that they want.
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: RMS] I cut and paste because it'll put-- it's [inaudible] technology, it'll puts it in a PDF-- fills out this data accident report. But because systems don't talk as well as our records department would like together. It's click, click [laughter]. But for me, it's faster than our other traffic guys. We're using our phones, and we're taking pictures of license, registration, insurance information, and then we come back, and they're either pulling it up on their phone or using a generated PDF on the phone of that data, and put in the next-- split the screen and then manually typing it in. So that's another thing we use our phones for. Take a lot of pictures for that type of stuff
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...the screen is mounted into the dash of the Explorers. They're now changing that, and we will keep those Panasonic tablets, but then we're changing the screen configuration because some people didn't like it built into the dash...
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...those old Toughbooks are going away. One, we can't get the screens anymore, so that's why we're going to the tablets. And the idea's that now the car's a hotspot, you can take your tablet out, and you can go in and do a report. Easier said than done [laughter]... Nobody does it.
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: writing reports] The technology's there. If you could drop the tablet into a keyboard quickly, you could. Touch screening it on that tablet doesn't work very well...
Problems -	LE	S	Field	36-45	21-30	Male	LE-S-016	[RE: bluetooth eticket printer]...Technically, our printers are not mounted

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					in the car. So I got a little belt clip. If I wanted, I could carry it on my belt... it's not very comfortable. It's cumbersome...
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...While I like my eticker, it's fantastic for what it does, and technically I can use it as a phone. It's got a place I can put a SIM card in it. It's a little too big for my phone. It's just a little bigger than this. It's this Panasonic N1, so it's not much bigger than this. And technically I can run that application on my phone, but the camera doesn't work as well as the scanner. So in the handheld, for ticketing, it's got a built in scanner that scans drivers licenses, scans VIN numbers, and imports all that data in there. The camera doesn't work as well. It'll still do it, but it takes longer than to do that. So combining that type of thing-- if I could carry one device that I could use with my phone, was smaller, and then I can do that stuff from, that would be great. If I could have all that on one thing and essentially kind of as a radio as well, that would be great.
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...Like you said, we carry a lot of crap. And I think technology is fantastic, but finding one thing that does everything, I don't see that ever happening. You have some things that do something very well. And when you try to combine that stuff together, then you have one thing that does everything kind of half-assed. So I don't ever like that. We'd had a deputy chief here for a while that he didn't like the one-trick pony. He didn't like our etickers because that's all it did. But our taser, that's all it does. And so I think if you try to combine everything, you're not going to get the best use of anything. So the more things I can put together, that actually are the same thing, I think you're better off. But trying to combine a lot of stuff that doesn't naturally go there, isn't going to work.
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...We have an app to resources that I can pull-- the Line of Duty Death resource, the Patrol Pocket Guide, and all those type of resources. We have access to them in our phone, as compared to the plastic cards we used to carry in our pockets. Can actually add some other ones that are for radio channels and that type of stuff. Because while we have our consistent ones, if we are doing interoperability, or if our radio system goes down, the back-up, remembering how to switch to those back and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								forth...
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...we have access to most of the technology that we can, we're just not making as effective use of it as possible.
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Yeah, it's not a Bluetooth, but I have the earpiece for my radio. The problem is I have to run chords all the way down through my shirt to plug it into the handheld or to the radio.
Problems - Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...And then, "So okay, well, maybe we can save this money." So we went to Dragon Dictation, doesn't work. I mean, for us. We have a few people around who beat up and train their dragon enough that it works-ish, but the quality of reports weren't there, and then the reports got shorter. So then, most people just stopped using Dragon altogether. They went back to just hand-typing their reports...
Problems - Technology	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	...We've got a tablet that we have just for the detectives that we can take out to a crime scene if we need to and do evidence remotely or connect to any of the computer systems in our office remotely if we need to, which would work a lot better had I not dropped it two weeks after we got it.
Problems - Technology	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	And we've got a pretty good relationship with all of them. I think the biggest issue is that State Patrol's on VHF or UHF, I can't remember... And we're on 800, and our dispatch center has the ability to patch our radio channels so that we can talk to each other. And then we've got certain mutual aid channels that we can all get on from our individual radios and talk to each other, which is very helpful. But on a kind of day-to-day basis when there's nothing important really going on, it's not a huge issue. We can either call their dispatch center and get patched through or whatever we need. We've got their channel on ours, that's patched, and they can get-- a lot of the State Patrol guys carry an 800 radio so that they can get a hold of us. So it's not uncommon for us to be talking back and forth. And then obviously the fire departments, they're all on the same radio system, so you've just got to change channels.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	I know we went to [County] two weeks ago, and they don't have 800 radios, so our radio channels were incompatible... So I was working on a wildfire up there, so I was just helping man a checkpoint, so I was with a guy from [County]. So I just didn't really worry about the radio. That was his issue. So usually cell phones will work or, yeah, just call dispatch and get patched through.
Problems - Technology	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	So a lot of times, [Job title] will get kind of upset when dispatches doesn't tell them exactly what a suspect's wearing, or doesn't know if there was a weapon involved, or anything like that. Sometimes that has to do with the radio channel being busy, Sometimes it has to do with the [Job title] just not knowing because the call taker hasn't been able to get a word in edgewise to ask. Sometimes it's just missing information. So I can't think specifically a time that it was necessarily a technology issue other than just being somewhere where you are out of range, or you are three floors down in the garage and there is no coverage there for the radio or cell phones.
Problems - Technology	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	...the CAD system logs pretty much every time someone calls the police or calls for a fire department. The report writing-system only logs anytime we take a case. So if someone calls for something, and it's not really to the point where we need to take a case on it, it's still documented in one system, but not necessarily the other. So they have a lot more short-term information. Everything from the call to the time we get there, pretty much. And then the report-writing software is pretty much everything from the time we get there, whatever follow-up, anything that we've saw, what video we need to get, this, that, and the other. So it's kind of dispatch has the shorter term, immediate information, and then the report-writing system has the longer term.
Problems - Technology	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	...So from the time that I started being a patrol officer, my first call that I ever went to, I have all those reports saved on my file. Which is nice because when the report-writing software goes down, as it has before court, I can just go back and print the Word document out
Problems -	LE	R	Field	26-35	11-20	Male	LE-R-018	When I first started in dispatch, 2001, 2002, the software that we had...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					sometimes obviously it would just crap out and go down. But we had a system of cards and so write everything down by hand, and file, and hand off, and whatnot. Which I don't think they have to do very much at all anymore. I think it's gotten a lot better.
Problems - Technology	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	Technically, I think radio quality-wise it's gotten a lot better since I started. But there are certain buildings that are real thick concrete or parking garages that the radios just don't go through. Cell phones just don't go through. So whatever you're doing down there, you wrap it up and then you go upstairs and talk about it...
Problems - Technology	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	...Interpersonally, email is a blessing and a curse in that it allows everyone to talk to everyone. But you kind of miss the non-verbal cues. You don't know if it's necessarily directed specifically at you if there's an email to the whole department, that sort of thing. So I know communication interpersonally is something gets brought up at pretty much every department meeting that we need to improve on, so.
Problems - Technology	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	I really like our body-worn cameras in concept... They are big and blocky and hang off my shirt like this. They're not quite as high quality as GoPros, but they're two or three times bigger.
Problems - Technology	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: body camera data] So it's held locally on the camera until it's put in the dock to charge and download at the office, the system that we have. I know [City] PD just down the road has a different manufacturer, and they can pull up the-- they have an app on their phone. They can pull it up, tag it, do whatever they need to do, and it's done. So they can sit in the car and do that, or be wherever and do that. We have to physically go back to the office, put it in the cradle, and wait for it to download and cycle and all that stuff.
Problems - Technology	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: car cams] Those record when you turn your emergency lights on, when you exceed 85 miles an hour, if the air bags go off, or you can start them manually... obviously there's occasions where that, for whatever reason, if you don't have all the overhead lights on, if you just have the back lights on, that doesn't trip it. So that sort of thing.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	...One that we do have is an e-ticket machine which I detest because the buttons are the size that my three-year-old can push but not me. So there's a lot of fat fingering on those. In my opinion, it's a very good idea. It will save on paperwork. It's a terrible follow-through... it's a big chunky device with little, itty-bitty, Blackberry buttons. But I'm almost certain that they just got a whole bunch of spare Blackberry buttons [laughter] and put them on there.
Problems - Technology	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: e-ticket machine] I think you could do the exact same thing on the computer in the car, and it would be infinitely quicker. It would be easy to type. It would be easy to read. And there's no reason to carry another piece of equipment with a heavy battery in it. That's just my personal opinion. I'm certain there are other implementations of it that are easier to use. But the one that we have, I don't like.
Problems - Technology	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	Short of dropping the brand new tablet [laughter], there's always little gremlins and bugs. Currently, my computer, I can print almost anything except from one piece of software that it doesn't know where the printer is. And there's always some little aggravation like that...
Problems - Technology	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	...They've got a license plate reader that they put in the parking structures, which I was trying to log into yesterday, and apparently, it crashed. They put it on a different server, and now I don't have any of the login information because it changed... So I'm trying to get them to solve that. And all of these pieces of technologies would be helpful if they were working properly.
Problems - Technology	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	...The e-ticketing machine is a good idea, but the implementation is just not quite there. I think there's way better ways to do it. So I would consider that one getting in the way because it still takes me longer to do that than hand-write something.
Problems - Technology	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	...I'm trying to think. I think my biggest gripes are that e-ticketing machine and just the fact that it's not well thought-out for the application. I don't think there's any reason why it couldn't be done on the phone that I already carry or the computer that's already in the car.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								So integrating technology with stuff that we already have, that we already carry. Because when I'm on patrol, I carry 30 extra pounds of stuff, which doesn't count the two bags which are probably 30-pounds each of stuff that I keep in the car. So adding more stuff to all my stuff is more weight and redundant. So I think finding ways to use what we already carry...
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...We've had a big challenge lately with the increase in surveillance systems that private businesses have and which formats or what types of files do we want to bring in to our evidential storage system, and which files and formats we're saying, "We can't really say these are secure." I can't testify that the video's authentic because I didn't take it anyway. So do we treat it the same as a witness statement? Because whoever owns the system is going to have to come testify. So what's our procedure for making copies of that to get to discovery?...
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...the frontier and the work always has to keep going as new things are always popping up, such as you've got a box of thumb drives that we're issuing to everyone because we realize people started using their own private thumb drives. When they go to the gas station, the guys say, "Well, I've got this video I can give you." Well, how do you transfer that stuff?
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: electronic discovery] ...if they were to call us up, we'd just make a new copy of whatever and take it to them, which we probably already gave them a copy and whether it got lost, got misplaced. So there are a few safeguards built in and a few potentially helpful things as these systems come up. And that's sort of the tracking, the data integrity, all the other stuff that people think that any system should have when you're talking about data and data transfer.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I got a text today of the CCIC system for running people and plates, wasn't staying connected for them. He thought it was related to an update we pushed out to the computer which- I said we made an update to this part of the program and it shouldn't affect that part of the program but we'll see. But that is something they've come to rely on and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								so that's an immediacy thing, that they want to know what's going on...
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	The department issued cellphones. Well, now, a lot of people communicate primarily through text. So if you're trying talk to a suspect and you have a cellphone number and they just wanted to text with you or they're using just an app that doesn't even have cellular service, whether, it be a WhatsApp or any of those, those are creating issues in guys out in the streets doing their jobs. So finally, the department bought smartphones...
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Just knowing the people within the department and who likes to play with stuff and who doesn't like to play with stuff, and which guys just took it and threw it in their bag [laughter] and said, "I don't have time to figure this out."
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...You can't give people more stuff [crosstalk]-- on my radio, I can talk on my radio and watch and see everything that's going on. We all practice and train for that. Now, you give me something I have to hold and I have to data input. You can't maintain both of those...
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: general technology; more tech will require pairing up officers for safety concern] ...you're not going to use them because I don't have time to do that. And you're going to go back to what you know, which is the radio that just kind of engages your ear and maybe your thumb and finger for talking.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...Cellphone technology's coming up. We talk in our county because the cellphone coverage is pretty much along the interstate. We've got a bunch of communities that are just far enough off the interstate, cellphone coverage was fringe so we started putting boosters in all of our cars probably seven years ago. And it was just enough to hit a couple of the communities that we're regularly in and maintain cellphone coverage.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...The other day when I picked up a car, I knew I wanted to display my clock and my miles per gallon and where's my temperature thing going to go, and then the display for the audio and the climate stuff, and how

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								can I configure that myself when I back up. Do I want the little lines to turn when I turn the wheel? ... And I didn't realize all of those were in there until I just had a little more time in the car. So if a patrol guy jumps in a car, are we telling them all these things are there? Are they just discovering it for themselves? Should we, as an agency, take responsibility in saying, "Here's the things that should be turned on"? You can't turn off your backup sensors because we don't want you backing into poles. You can turn off the lines turning left and right when you're backing up... More things I don't think anyone was aware of is there when we get these cars.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...It was a challenge when the MHz stuff first came out because, on the VHF world, that air-to-ground communication was pretty clear and they could just dial in whatever frequency they wanted. With the 800 stuff coming out, for a while the standards didn't allow a direct air-to-ground channel. They're worried about, on a repeated system, the helicopters getting up too high, lighting up too many repeaters, and tying up resources...
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...we'd recognize, from a workflow standpoint, if a dispatcher does something, how's it going to affect the unit out in the field on the computer? And vice versa. It was starting to create a lot of frustration because somebody would do something on the computer and all of a sudden they would disappear from the dispatcher screen. And they didn't know why.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	When I started, we were on VHF single system, the dispatcher would change which tower they were broadcasting from. So you regularly get half the conversation because you can hear the tower but not the person talking who may be on the other side of the county...
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...Imagine the other day, then people start to complain, now I can't hear everybody that is on my scan list. And I am trying to explain how a current radio system works where you are affiliated to one tower. And so we don't have that many resources on each of our towers that we can designate certain talk groups to always transmit. So you have to be

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								affiliated in our county to that tower for that talk group channel to transmit. So you might not hear your secondary talk group even though it's on your scan list if nobody else is affiliated to that tower has that on...
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...Now that we're on this shared state system, we don't know how many units the Department of Transportation has that may be using the same tower I have. We're no longer an island, where it's just the people in our little county and our responders. Anybody could be driving through here and tying up those resources...
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...the example we use was years ago, the balloon boy incident on the front range of [State] and the guy was saying his kid was in the balloon, while we had just set up recently, this state-wide radio system. Well, people up here realized they could tune in and listen to what was going on on the front range. Well, the state deactivated those radios. They realized that the entire system was getting tied up by people who were not in the area of operations, listening to what was going on. And they were able to go through and deactivate those radios...
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: how much to use MDC vs. radio] ...the in-car computers are great, and yes, you get a confirmation of what you did. But your supervisor sitting in the office doesn't have the computer in front of him to know that that's what you're doing. And they've all said they'd like to hear that you've cleared your traffic stop. That you went out on a traffic stop. They want to keep a little situation awareness and they're currently using the radio. So how do we take advantage of decreasing the radio time by using the computer and what's an acceptable amount of use of just the computer versus here's a hard stop and here's the minimum traffic you have to do.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...Big audio quality on body cameras is still kind of tough. We all joke about you've got a body camera on your chest, but as soon as you go into shooting stance, all you see is the butt of your gun. But it's too cumbersome to put the cameras on your glasses that a few places have tried. And if you need to wear prescription glasses, and you don't like contacts, how do you overcome that? So I think working in some of the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								technologies that have come out recently to make them more usable for both sides, both for the person who has to wear all this stuff...
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...We joked recently about we need to get bigger flotation devices for our river rescue procedures because we're having to wear so much more stuff, so if you fall in, you have more buoyancy these days because we issue river rescue equipment on our patrol cars.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Yeah. We ran into an issue. Everyone carries the radio and whether they have a shoulder mic, whether they have a microphone just on their purse and somewhere else because they're a little more covert. And then we're all issued new helmets and vests for active shooter type situations. Well, soon as you put this additional layer of body armor on, it covers all the stuff up. And everyone's like, "How do I talk? How do I rearrange my stuff now?" And as I'm trying to say, you should always have an earpiece... So then we started looking at the shoulder mics and everything else, and because it's fairly new and we've only had a few trainings wearing all this, people are realizing you're going to have to rearrange stuff to maintain those communications. And then even putting these helmets that are not very comfortable. Just learning to work with all the new equipment that's out.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Even going back to the ski race. So many people, fans screaming, and not unique to the ski race, so actually took an earplug, one of those foam ear plugs, put a hole through it, and then instead of having my standard ear piece, it's a little more comfortable, I put the speaker tube through that ear plug so it could go into my ear, so I knew I could hear just the audio from the radio coming out of there.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...even telling some of the guys, going, "You really should have an earpiece in. I know you don't want to, and you never had before, and it hasn't been an issue, but it's going to be at some point." As they talk about, well, Bluetooth, and I think, "That's just more batteries to charge." And batteries are always an issue now. Making sure the batteries, after so long getting rotated out, so they can go a full shift. Everyone knows the dead or low battery chirp and what that means [laughter]. So I do

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have some concern as all these new technologies come out and everything's taking more juice.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	So as all these new technologies come out, they're talking about Bluetooth speakers and microphones, well, something else you've got to remember to charge. If it's not charged, is it hot swappable? I think, as we look at new devices coming on potentially with the Broadband for Public Safety, that was a question. If we go to mission critical voice over LTE on a phone, do we get a hot swappable battery? Because I forgot to charge it that night or I've been on a shift longer than I thought, how is that going to be figured out?
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	I think that battery consumption is going to start to be more and more of an issue as you bring more and more body-worn devices. If your battery's dead, I don't care how good a body camera you have, it's not going to work.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Usability stuff. I tell you the one thing I've noticed because I wasn't doing patrol shifts for a long time, and that's part of getting old, is having to wear glasses [laughter]. Now, focusing differences, you're out and you're watching everything that's out there, and now I'm trying to come back to focus in on the computer again and my eyes having to adjust. I guess it annoyed me that I was getting old, that I had to do that. And as I've talked to everyone else that I was hired with, I'm not alone. I mean, we're all having to recognize that. It's just a new challenge because sort of back in the day-- what a terrible term to use. I didn't wear glasses at all and my eyes were just fine. So I could read plates and then when I was writing stuff so I-- but I think the computer is what's really showing that and the requirement of those eyes to change their focus levels... It's just something really annoyed me when I went out recently, I was doing some nighttime patrol work, that I had to wear my glasses to do that and I'm just adapting to wearing those.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: the state's driver's license design] Yeah, you can't [read] them. Yeah, we've all talked about that. It's the coloring. It's the size of the font at nighttime. You've got to get a flashlight out to get it bright enough... I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								don't know who thought of that design but we're all looking at it and go, "That is terrible."
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Going to the airport and the guy at TSA's holding it up now. They see licenses from everywhere that they have to understand and even they're like, "Wow. These are kind of tough to read." So yeah, I don't know who came up with that idea. So that's, yeah, I guess, another frustrating part that sort of technology related on the printing and the style format. Again, they're trying to use more security in their driver licenses. The REAL ID Act necessitated that, so responding to the federal stuff...
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... The one issue that has come up because of the use of cellphones is if you have one ear that's better than the other one, do you put your earpiece from your radio in there, or do you put it in your bad ear because your cellphone is going to go in your good ear? ... So I've got one ear that's better than the other one. I had to kind of make that decision. It's kind of an annoyance. It's an annoyance, absolutely. And if the earpiece isn't, in, then the cellphone goes back to the good ear, but I'd rather have my radio ear in there. But that's a muscle memory thing because now I'm holding it with the other one.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...If you don't have Bluetooth in your car, going back to technologies, the sheriff doesn't want us driving and talking on a cellphone. Public perception, it looks bad. Okay. Cars can pair up with only so many devices. So if it's a pool car, someone's got to go through and clear out that list and unpair everything so the next guy that uses it could pair his phone to the car.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: Bluetooth in cars] And some people are going to get in but who's going to do it for me? If you come in and say, "I don't know how to do it." What are you going to say? You told me I can't hold it up to my ear. I don't know how to pair it to my car. I got a cheap old car and I don't do that in my own life. That's legitimate. As supervisors, you can roll your eyes and complain the guy's a fool, but that's a legitimate concern.
Problems -	LE	R	Field	46-55	21-30	Male	LE-R-019	[RE: Bluetooth in cars] The car you and I were in yesterday, I tried to pair

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					it. Well, the device list is full and the delete function wouldn't work... it goes, "Delete Device?" "Yes." And page just went gray and it never deleted a device for me.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	The one I thought of was on microphones and other programming directionality, but you don't know based on which microphone you have, what its directional pattern is. As we've had more and more just a speaker mic, now we're going with more of these little lapel mics because people want the undercover stuff. I said, "Well, does it matter which way it is?" If you put it here, what's the pattern that that microphone is looking to capture? The noise reducing microphones that are coming in and the good and bad with those. Up here, we always have to tell people about consider of wind and that you actually turn into the wind. Because the microphone's here and then the wind's behind you. If you go this way, the wind's hitting the same microphone your voice is trying to hit. Seems counter-intuitive.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... if the dispatch tells you it's windy, that was a big discussion. If when the new system came in, if you're digital, do you want dispatch to tell you you're digital? Do you want them to tell you why your transmission didn't go through based on their point because it was too windy and they couldn't hear it, because your microphone was too far away and they couldn't hear it, because it was digital? Or do you just want to be asked to repeat? Big topic at discussions, guys like, "I can't do anything about being digital. What good does it tell me you're digital? Just tell me to repeat." But if it was windy, you should be told, "A lot of wind noise. Please move." Little annoyance things. I try and count. Some guys are, "I'm glad this is the biggest annoyance you have today, and we can resolve this."
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Was it South Dakota? That the pipeline thing? I know the protesters were using a lot of drones to fly over. And I heard they were charging the police and harassing them.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Make sure you change the font size on a small e-ticket or display.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: e-tickets and situational awareness] Which they are. I mean, if you put in digital items, it will detract. There's no way that they would not detract.
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	The earpieces that we use, we have a few different types that you can choose from, but they all have the basic tubing. The problem with the tubing is it gets clogged. So it will actually get air bubbles inside the tubing and it blocks off. So what it sounds like, it sounds like you're in a tunnel and you can't hear. So we frequently have to disconnect this, take one of those cans of spray air, blow it out. And then you can only do that so many times with a tube before it just gets faulty and it doesn't work anymore. And then you just have to get a new tube...
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: earpiece for radio] ...You can see it's kind of-- it's not too invasive as far as wearing, but of course, the shoulder mic, I wrap my earpiece around it to try to hold it in place. Then I've got cables that go back and attach to my vest to hold onto this. And then I've got the cable that comes around to my radio and then it locks on. So it's kind of cumbersome because you only have so much space to put so much technology and we're running out of room
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...So anytime somebody puts information about a person, a vehicle, a house, anything, it goes into this database. Then that gets shared amongst any of the agencies that sign up to go with this organization. Well, COPLINK used to do that but it didn't do it very well. Because it was just not a very good template, I would say. So it was very difficult to search. It's not a very good search engine. It would take forever to get any results and then it didn't upload things like reports from individual agencies. So you could find out this person had a contact at this address and you can get a date and a time, but you can't find out why, like what was the situation behind this?
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: COPLINK information sharing software] And we want to know associates. So that's one of the main reasons that we do this. So if a car runs from us, or if it's involved in a burglary or robbery or something, we want to know the players that are connected to it. So some people view

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it as Big Brother, that sort of a thing. But it's a means of you-- it's just like CCI, CNN, CIC, where you have to do it for a valid legal reason. You're not just searching for the fun of it.
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...Lumen is actually, basically, a storage of data. So it's a new version of COPLINK and it's a better one. It has analytics so that our analysts here at the department can pull up stats and keep track of things and try to figure out trends. So they tried a program here for a little while of trying to track those trends and then tried to think ahead and think-- it was called ProAct. Okay, so they tried it for a while, it didn't work out. In theory, it's a great idea. But at the same time, we're not psychic and analytics can only take you so far. You have to use some cop skill and intuition...
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: Lumen information sharing app] ...I don't know if I have Internet in here, you see, this is one of the problems [laughter].
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: Lumen information sharing app] So brings you up mugshots. So that's one of the problems is it depends upon the agencies that are connected with this whether we get their booking photos. So our own local jail is actually not connected to this yet... But our photos, if we booked them here in this building, they go in there...
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: Lumen information sharing app] ...it gives me nicknames, heights, weights, tattoos, these are all tattoos and scars, personal data. And then if you keep scrolling down, it will give you associates, it will give you vehicles, addresses, any of that stuff, so it's extremely helpful. And it's great that I can get it right on my phone because before, what we were having to do is I would have to contact dispatch on my radio and I'd say-- tell the type, DMV, and request from them for a DMV photo. And then they would email DMV and say give me a DMV photo and then you have to wait for a person at DMV to go to a computer, type in that person's photo, download that photo, email it back to our dispatch, then our dispatch emails it to us. Then we have to log in to our computer in our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								car and then get the photo and then you-- meanwhile, you're sitting on the side of the road with this guy ...
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: Lumen information sharing app] ...we've tried out things like ProACT and we gave it a shot, but it just didn't work. But things like this really, really work because information sharing is our number one problem. I think when it comes down to any technology or anything, it's about sharing...
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...So on channel one, we have a incident of somebody trying to kill themselves. So they hold the air, so they give us-- all the traffic that's on that channel is specifically for this call, so everybody else needs to move from channel one to channel two. So now on channel two, we get the bank robbery. So now all the traffic is isolated to that channel. But the problem is you're having scanning covering, so we're getting channel one covering channel two even if you take off your scanning functions. Sometimes it happens, sometimes it still covers it. So right when the bank robbery was giving out the information, the dispatcher was giving out the information, channel one relayed up something and it covered over channel two, so I missed the description of the person going out as we're rolling up to the bank...
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: tracking device / suspect] ...so it's on a delay already from the tracking because the GPS is not immediate. So that would be one of the biggest things that we could get...
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...so we have all of these channels. We have like 16 channels. We have inter-agency operational channels so that we can communicate with other ones. But they're selective, so it's like blue northwest and red northwest. So it's you can only be on one or the other, you can't be with everyone at the same time...
Problems - Technology	LE	S	Other Public Safety	26-35	6-10	Male	LE-S-021	...So if we could get on and just air out our information that we're doing this but have it be encrypted for everyone, then it would be good. And then those people that have the trackers can just air up for us and give

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					us direct information because at this point, throughout today, I'm following, trying to catch up to this car, and I'm already two steps behind because the tracker's so slow. And now I'm another step behind because of the information getting relayed.
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: tracking device / suspect] And then I have to wait to get on the air, and by the time we find out that the tracker has stopped, we now block off the roadway, but by then, the person is already long gone. We don't realize that because we think it's immediate information, which it's not. So speeding up technology. I mean, as fast as we can...
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...When it comes to the radio systems themselves, we got these new ones which I think are better. They still, of course, have issues. We have issues. We need more towers all over the place because you go into a low spot then you lose it. If we go south and we go east, we've got a straight shot, no hills, no bumps, or anything, you could go miles and miles and miles and still listen to the radio. You go two blocks in our city north, and you hit on the other side of the hill, and you lose transmissions. So the more towers we can get, the better. The more signal that we can get out, the better...
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...Then we have the issues of, "Well, I'm sitting next to someone, somebody's radio takes all the information. So you can hear it coming out of their speaker and there's nothing coming through on mine." And how that happens, I have no idea...
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...One of the issues right now with our new radio system is volumes, is certain people and-- it all depends, everybody's different. They're going to hold it a little bit different, and that's one of the things with these, is you have to talk right into it. You have to be within three inches away, and some people talk like this or they talk like this. And some people, like my voice is-- it's just naturally loud and I'm talking just normal like this, but I transmit loud on the radio. It's echoey. And there are other people that talk very, very loud and it comes across as a whisper. So it's the balancing of all of that and then between terminals too...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: radio volume control] ...So the motorcycle cops, they have helmets with microphones, and when they got new headsets, they went through a trial period where they can't hear very well. So they're talking extremely loud.
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: radio volume control] So we're constantly, all day, just twisting our knob back and forth. So dispatch is loud, MCs are loud, everybody else is quiet, so you're just back and forth, back and forth, until you can get a balance...
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: radio volume control] ...Then with the earpieces again, so you turn it up and then your earpiece goes dead... you clean it out, and now you're deaf. You're deaf because you can't hear. So if you could do away with something like this, I don't know.
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...The nice thing about this system that I use, I use a small earbud because I want to be able to hear not only this, but whoever's over here. There are specialized ones that you can get that are form-fit to your ear. They make it to where you can hear really well on the radio, but I can't hear anything on this side of my head. So I want to make sure that I can still hear so it can't completely shut off. It can't be like earmuffs are...
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: data storage issues with body cam] Yeah. That's what we came across with ours when they did the study is it's just not compatible to the system that we're doing. And right now, we have certain levels of storage through Lumen. But this would drastically increase that. We've had just a couple of officers that use body cameras and then submit their video, and it's gigabytes and gigabytes of data that's just like one or two calls from like an hour or two. And then the question is, do you go lower quality in order to get more, less storage. But I disagree with that. I think it should be the highest quality you can and- I don't know. And then retention, it comes down to retention of how long do you have to keep things?
Problems - Technology	LE	S	Other Public	26-35	6-10	Male	LE-S-021	So they have tablets installed into the dash so that you can now manipulate it. They have the secondary tablet that's on a docking station

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					right in front so you can take that out and do your reports. But it's literally like this big so... if you have giant hands, it doesn't work so well. But they tried to do that to make it easier for officers to come and go, and do their reports in their cars. But with the advances of technology, you put the tablet in the dash, now you're staring down like this instead of looking up like this at your computer. So some of our cars still have the old-fashioned, big [MDC flipbooks?]. And we actually prefer that for the most part, I think.
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...once they put in the tablets, and then people started saying, "Look-- number one, I can't brighten my screen anymore." Before, with the old rotation ones, if the sun's coming in one direction, I can rotate it and block the sun. Now, I have to sit here and do this [crosstalk] to try to see on the screen. Or I turn my brightness way up and then it starts making the dash real hot and everything else
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...some of us live out of radio range from the station and we're on call. So we get called out in the middle of the night, and immediately, they say "Hey, we need you to go to this spot." So we go grab our radio and turn it on because we want to hear what's going on the call on our way in. Well, you can't hear it at all. So if we had something that-- if we can't get the radios to go that far, if you can get your radio to transmit to a cell phone or a tablet-- I don't know how that technology works, but if you could do something like that, that would be extremely beneficial. Even if it just went to that car, to the take-home car, then that way, you're driving in, you have all the information, and you don't show up on scene blind and say, "I have no idea what I need to do."
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: surveillance videos] ...So where it comes to the size too, we're starting to go to an online paperless system through the courts. So [County] has had this for a while, where they can do online submissions and they would upload-- they scan all the documents and then send them electronically, but then they would still send a disc of all the photos or surveillance or whatever else. Well, now they're able to upload that electronically, but it's got a limit of two gigs...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...then it comes down to the sharing capabilities between us and the DA's office. So we create what's called a web share which is actually giving them not just the raw data, but the raw data that's been turned into the product so they can view the product up there. When it goes to the public defender's and they get the raw data, they have to create the product themselves. But it comes into constraints of, "How do we get this up there?" [County] is soon going to a paperless system. And we've been learning through [County]'s problem that if they don't make the pipe bigger, we're not going to be able to get it up there. And at this point, there's no solution for it. It's just flash drive after flash drive. And so every photo disc request that we send to the DAs office, we have to send three copies through. So three discs of the same photos up to them, so that one goes to the courts, one goes to the prosecution, and one goes to the defense. And that's per defendant. So then if you have multiple defendants, you're having to do it multiple. But if it exceeds the capabilities of the DVD, you either make multiple DVDs or if it's a phone dump, then you have to do flash drives. So at this point, they're willing to accept one thumb drive to accept it, but then they will have to make their own copies, but if they're trying to get away from the paperless system, it's not going to work unless we figure out something else.
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...The better transmissions somehow. I don't know how other than more towers. Inside buildings is a big problem too. We have hotels and stuff here that you go inside, and as soon as you go in, before you go in, you get on the radio and you tell them, "I'm going inside the building," because nobody's going to hear you once you go inside. You're just done, and I can't imagine-- we only have two big buildings here. I can't imagine what it's like in [City], when you walk into the steel towers and it's just like-- you can't get through.
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...right now we use the FARO for our accident scenes, right? If we have one that's three blocks long, we can get all those scans from the ground. But right now, we're limited vertically. We have to get into the back of a firetruck, climb up on the ladder, and sit there while it's rocking and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								shaking, and try to get a still photo. And if we can-- the one drone that we're looking has the capability and the software with a 4K and a FLIR that you can go up there, it can create its own point cloud, and then that point cloud is actually connectable to the FARO SCENE program. So we'll be able to get the overhead views of everything. So it's endless possibilities for that. I don't know. If everybody could have a drone, that'd be great...
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: radios] ...when I first started here, we'd drive in certain areas and we just knew, "This block to this block, I'm not going to have coverage, and if I try to key up, I'll not be able to get out." So we would purposefully wait or call out ahead of time and say, "I'm on scene," and then not really be out until you get to that location because you know once you get there-- and we still have locations like that. [Street] in [City]. It's a dead zone. They've tried to do everything that they possibly can, but there's just certain spots. And then that's where the hotel is, of course, so you walk in and now you're completely dead.
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	In our car, so squelching, that's one of the biggest problems. So if you have a portable like this and you plug in with an earpiece, you're not going to squelch. If I key this up, yes, it will squelch off of my car radio. If I use my car radio, I'm not going to squelch anybody. But if I'm not plugged into an earpiece and I use either this or my car, you will have this loud squelching and it's just like a giant chirp and it kills everybody that has an earpiece in.
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So when we're in training, we have a trainer and a trainee in the same car. Well, if one's using an earpiece and the other one is not, chances are somebody's going to squelch at some point. So I don't know if there's a way around squelching, if there's just not, but earpieces, I think, would be a huge fix to that. But everybody has to accept the fact of, "I'm going to use an earpiece." A lot of people don't use it because they don't want to go deaf and you can easily go deaf...
Problems - Technology	LE	S	Other Public	26-35	6-10	Male	LE-S-021	...Like I said, when I'm on the highway, I cannot hear my radio. So I will have my radio, even with an earpiece, I'll have it at almost full-blown on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					the highway, and I'll barely be able to make out what people are saying. If I don't have my earpiece, then I'm even in a worse situation. So we have the toggle button for volume, so this is low, push it in, it's high. I keep mine on high all the time. And it's because if I have it on low, I have to have my volume turned almost all the way up on my portable...
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...So some people use two radio systems. I use my car radio when I'm in the car. I use my portable when I'm outside. Well, when you shut it off, now you have a delay when you're waiting for your portable to boot up. Or you get back in the car, you shut that off, you turn on your mobile, and you have to wait for that to boot up. Because it's not instantaneous, it takes probably about five, six, seven seconds... So I personally leave both of them on and that way if, like I said before, where you're standing next to someone and a radio will pick up on this person and not on me, if I'm in my car, either my mobile will catch it, or this one, so I'm not missing it. One of the two will catch it. So I don't know what the catch is with that, why it's doing that, but that's always been the way it is. So this is the only solution workaround for it, is earpiece. So I think a lot of it comes back to earpieces.
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: earpieces] Yeah. And we've tried all sorts of different things, the different types of connectors, and how they work. See, I can't even get it off my vest.
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: earpiece] ...But I would say before the radio changeover, our radios used to be bad and you couldn't understand them, but the volume was consistent across the board. And since the volume's been so inconsistent everybody's just been unplugging these things. So you've got your basic wire that runs to your shoulder mic, but then you've got a different connection, either a twist-on, like that, but if you start seeing the tube's going black like it is right here, that one's dying, so--
Problems - Technology	LE	S	Other Public Safety	26-35	6-10	Male	LE-S-021	So I just recently just started doing this again because I can't stand listening to it just blaring out through the mic here. But when I was on patrol, I would say I could probably make one last three weeks and then I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					have to buy a new one. It's usually, generally, not the earplug itself, it's generally the tube. But I mean, there's a variety of selections, like I said, of these. This one I cut down because there's all sorts of different flaps and stuff that they come with. There's ones that come conformed to your ear that still allow some of the sound to come through. They bought us and had us made specific ones that actually conform and fill your whole ear cavity, and it's supposed to have an air hole in it, and it does have an air hole, so it relieves pressure, but it's supposed to allow for sound but it doesn't allow sound. So there's got to be a better solution than this.
Problems - Technology	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...we have a bus that's down there that we use as our crime scene vehicle. We have to run a generator off of it, and an alternator in order to-- or an inverter in order to get more power and to keep things running, and electronics, and all that. In the wintertime, our MDCs, if you don't leave your car running, your MDC freezes up, and then you have to wait for it to thaw out in order to get your information [back?]. So if there's a better way to keep the computers warm so that they operate during all temperatures. They get too hot in the summertime if they've been running too long, so you have to keep your AC running. I think that's it.
Problems - Technology	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: earpiece] I mean, it's not good for you, so if at all possible, I try to take it out. So when I'm in my vehicle, I'll turn it off, I'll turn it or-- I'll unplug it, just listen on my radio. So basically, that's what it is. If I'm in the vehicle, I listen to that radio. If I'm outside the vehicle, I have my ear piece plugged in.
Problems - Technology	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: logging into 4 separate SW systems] Usually you have the same user name for all of them. But then the password is whatever you want. But some of them change every 90 days or so, and some of them don't... It's pretty irritating.
Problems - Technology	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: car tracking] Yeah. Technically, yeah, I guess it would be considered GPS tracking. It's not entirely accurate all the time, and there's a delay, so if you're trying to see where one of your sector partners is or something, you can see kind of a general area. But it's like I said on the delay, so

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								everything might be over here and kind of know where they are, but it's not exact or anything like that.
Problems - Technology	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	...Our vehicles are kind of accurate as to where we're located, but we can't establish jurisdiction based on what our vehicle reports, we have to do it on that phone or with a map or something, a physical map.
Problems - Technology	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	...a few months ago, the line got cut to Xcel, so we didn't have any Internet connection to our vehicles, and so it was like reverting back to 1950. And so you kind of get a perspective. It was like, all right, well, you do have a lot to work with, and these tools are very valuable, so complaining about them isn't making anything better. It's just utilizing what you have and making the most of it...
Problems - Technology	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	...you do miss out on certain things, like when you're radio switches over, or there's a malfunction in the radio or we're in an area where certain people can't key up, or it's just a dead zone of something like that. So directly related to the technology, we do miss out on some stuff, but I think that's just the nature of how things are in this time. If there were a better solution, I feel like it would already be here, but I don't know what that would be.
Problems - Technology	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: vehicle internet connection loss] So getting dispatched somewhere, it was basically-- I had a pen-- one of the other officers kind of rigged this system up with rubber bands across-- I think it was on his steering wheel actually, with a notepad so he could just jot stuff down in front of him. I just had mine in my lap, so when they dispatch me to something, I had to take a second and pull over or whatever, write down the address, and kind of a basic description, names, whatever. So it took me a little bit longer, but it wasn't that inconvenient...
Problems - Technology	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: vehicle internet connection loss] ...On a Code 3 run or something like that, it'd be kind of-- because you're higher stress, you're driving faster, you have lights and sirens on, so that makes it more intense. I don't have the time to pull over and write that down, so you just have to function at a higher level, I guess, than you're normally used to.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	But I know that [State] State Patrol has radios that can do different bands and can get anybody, any different frequency. We're a little more limited, I think, or we can't get theirs, but they can get ours, so. But I don't know as much about that.
Problems - Technology	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	And so originally, in my career, I used an earpiece. But finding the right earpiece that fit in your ear, one, didn't fall out all the time. That's one of the things you'll hear a lot.
Problems - Technology	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	[RE: earpiece] A con, though, is if you're-- let's say you get into a fight. You're wrestling with the guy, it pops out. You can't put it back in while you're fighting somebody. You're not going to hear what's going on. Not that you wouldn't-- you're going to be fighting. You're going to be focusing, but you still can't hear anything. You don't know what's going on, if someone's coming to help you [inaudible] nothing. So for the first four or five years, I wore an earpiece since I have it. I just kind of-- and it was more of a-- the one that I had broke. I didn't want to buy a new one. I wanted to try something different, and now I've gotten used to not having one. But without it, you have to worry about the person listening to your radio traffic. Also, when you get into the car, when you walk from outside and you jump into your car, and if your radio, your portable is up, and you try to talk on - because when you're in the car, you use your car radio - if you use your car radio and this radio's up, it's a horrible noise.
Problems - Technology	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	-- that's why every time I get my car, I turn down my radio. And then every time I get out of my car, I turn up my radio because then sometimes you'll turn down, you won't turn it up, you're not going to hear what's going on.
Problems - Technology	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	[RE: comms with other disciplines] So they can get on. Well, at least on their fire engines or in their rigs, they can get onto our air and talk to our dispatch, but we can't talk on their air. So I don't know what the difference is, like [VG?]. See, I don't know all the radio terms.
Problems -	LE	S	Other	36-45	6-10	Male	LE-S-027	Well, we do have mutual aid with everyone. But some of that is difficult

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Public Safety Personnel					as well, depending on what frequency you're on. Because let's say, well, [City] is the closest city, bigger city to us, which is only-- we border them, so it's close. They're a fairly good-sized city. They go through, I think, it's NORCOM is their communication. We have our own communication.
Problems - Technology	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	...So that's the issue is that with NORCOM, our dispatch can patch air together sometimes, and they can put it together, but it has to be requested. So I can't talk to [City] unless someone else-- there has to be other help. I can't just get on my radio and go click, click, click and find them.
Problems - Technology	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Sometimes. It seems like, at least in our batteries, they tend to go out pretty quick. But we've got--
Problems - Technology	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	The radio batteries. So we change them. That, I think. Every once in a while, some locations, there's some blind spots where the radios don't work very well.
Problems - Technology	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	They're plugged in. Unless there's a problem with the car, those are going to be good. It's usually our portables, if anything, that we have a problem with. Once we're out of the car, battery life-- I mean, some people don't change their batteries, but sometimes they just go bad..... I don't want to lose radio control because what happens then they don't know where I am. So radio is important.
Problems - Technology	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	And that's depending on where you are. So it's important to keep. So I think working on having the best-- the better the radio, the better you're going to be when you're on. But getting in a fight, hitting a button-- you turn on to the different stations here. I've hit it so many times where just that little button
Problems - Technology	LE	S	Other Public Safety	36-45	6-10	Male	LE-S-027	...the radio is extremely important. It is our lifeline. When we need it, it doesn't always work. It works most of the time. I mean, a high percentage. But there are some dark spots.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					
Problems - Technology	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	... I mean, to people I know have cell phones, I'll send pictures through my phone. So that definitely happens. It's just not everyone has a phone on them. Because the phones that are in the cars are not all iPhones. Some of them are flip phones.
Problems - Technology	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	.. But we don't want to add anymore crazy technology necessarily to that scenario. But what we already have, if you can take and just deliver the right pieces to us at that time, I think is the key.
Problems - Technology	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	And as far as radios go, I mean, I feel like any issues that we've had with connectivity haven't been much. And you could certainly see areas in the city where the connectivity isn't as good as it is in others.
Problems - Technology	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	There was a period of time where we were using cell phones as hot spots. Where we were having an issue there, we don't have to do that anymore.
Problems - Technology	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	And the technology just wasn't there yet at the time, but it had a button where you could actually talk, like a Dragon Speak or it would fill in the blank, but it wasn't super effective. It would miss things and stuff like that.
Problems - Technology	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	...And you always talk about how you want communication to go perfectly, and you tried stuff beforehand, and the first thing that fails is communication, every single time because there's an interoperability between radio systems, or I can't talk to-- yours doesn't go to the same frequency mine does, or something breaks, or a battery runs dry, or something like that. Communication is always the first thing to fail through radio systems. And that's across the board.... But we are in a more urban environment, and in a more rural environment, that fails faster, because there isn't those abilities to tie in so easily.
Problems - Technology	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	But once I change my channel, then I lose the original channel, so I won't have-- I've been in situations before where we'll go out, and we'll work in some type of traffic [emphasis?] or with another agency, and you switch

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								over to a common frequency, but I'll keep my portable on my home frequency so that I know what's going on back here
Problems - Technology	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	so if it's pre-planned or if dispatch is involved, it's really easy. Like I said, if we're trying to figure it out standing on the scene, it becomes a little more technical and less easy. So it's usually done here at our dispatch center than everybody go to some random radio frequency, and then trying to communicate that across the group that's all deployed on a scene, so it's much easier to do it at-- we're at the trunk than it is to do it at all the branches. And we can monitor other agencies' frequencies as well as state patrol, and so I can go and I know where I can talk to other agencies on my own radio frequency, if I, for some reason, need to reach out without being patched. I can find that avenue, but it's a little more difficult to do that.
Problems - Technology	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	... There's a few spots in the cities that might be dead spots or whatnot. So if you were out on a portable in certain areas that can be a little more difficult, but for the most part, there's no issues.
Problems - Technology	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	.... Right now I can get a lot of information in my car, but if I'm standing out some place, it's very difficult for me to get that-- if I'm away from my car, which does happen on patrol on a really regular basis, for me to be able to get that data, I almost can't. It has to go through an email, and you can get to it, but it's clunky.... But until we get to that day, we miss the ability to connect with large-scale data outside of our cars, so.
Problems - Technology	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	And certainly, getting it in the car is very helpful, but not being able to get that-- not being able to have the ease of access through my personal device. And so I think that's where I would like to see-- as radio technology is going to kind of-- radio technology is kind of a standard-- I don't see a lot of-- I mean, and I'm not super technical, but I don't see a lot of the ability to increase-- you can increase the quality of the radio transmissions. You can increase, but in the end we're just-- you can take two cans and a string, and we're just starting to do the exact same thing. The technology that is going to increase our-- that's going to enhance our ability to do our job is going to come down to data, not talking, so.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Yeah, that can start with people. And then when you talk about technology again, there's always spotty coverage, especially when you then get out of that car, and you're talking off a mobile device as opposed to a boosted car device. Like you said, what we talked about earlier, the interoperability between agencies and/or radio systems, and/or frequencies. I mean, I don't even know if we can communicate with somebody who's not on 800 megahertz. I don't know enough about our system to even understand whether that's even possible. Talking outside of organizational, so going from police-to-police or police-to-fire, and without the cumbersome ability to have to change radio frequencies, and that type of thing. I think that a lot of radio systems and the methodology in which we communicate is still pretty cumbersome.
Problems - Technology	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	[RE: earpieces] It's very uncomfortable for me. I don't like it, so.
Problems - Technology	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	...I mean, we have an older video camera that can be used, but it's not real high quality because that technology changes so fast. If you invest in it, a year later it's worthless. And so having the ability to do that in a better realm.
Problems - Technology	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Oh, I'm sure you have 100 batteries in there, yeah [laughter]. So I know that's what my little notebook looks like because it's invariably the most important interview you ever do, the battery will die, so you better have another one.
Problems - Technology	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	[RE: hazard flags on people] Yeah, it's there, but a lot of times just not automatic. Somebody has to look for it and the officers may not know where to look for it.
Problems - Technology	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	[RE: radios] The airtime is usually what causes things to crumble because if I can't communicate because everybody's trying to get on the air-- if I can't communicate to people, I can't tell them what I need them to do. And you can have incidents fail because you can't get that direction out.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Yeah. I mean, if people that aren't efficient with their [crosstalk]-- yeah. And so there's somebody talking about something that may not be super important, which I can't override that person and say, "No, get off the radio. I've got to put something out that is." Yeah, only person can use the radio at a time.
Problems - Technology	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Usually, at least from my experience, and again, it's mostly critical incidents, protests, things like that, what causes the largest problem is when something happens we have-- at a protest, you'll have a big fight will happen. Everybody has to get on the air.
Problems - Technology	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	...one of the things that really bothers me is we have officers staring. You're in a car and a call comes in and I'm having to look down there... MDT is right here, and I end up getting a lot of cars dented because people are looking at this to look at the call, and they kind of don't realize the traffic has stopped. A lot of updates come up on here. I would love to figure out a way-- I know they can do it in fighter planes. There's got to be a way to put that information up where I can look through it.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	[RE: communications with other disciplines] ...There has been some difficulty at times. If we're trying to get information from the fire department over our radios. So our dispatcher has to ask their dispatcher, and so it becomes a four or five step process. So that's a little cumbersome, but it's understandable because if we all shared the same radio air. Their free time on the air, right? I mean, it makes sense to keep them on different radio systems...
Problems - Technology	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	[RE: in-car computer login] Well, I mean the cons-- for the particular system that we're using, it's prone to crashing unexpectedly, and the login process is-- I mean it's not hugely complicated or hugely time-consuming, but it just takes somewhere between 5 and 10 minutes to get completely logged into the system.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	[RE: long login process] It does sometimes, yeah, because you have to log into the computer, and sometimes that's a little bit slow. And then you have to log into the in-car video system, have to make sure that's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								working. I've had any number of times that you're halfway or 80% of the way through, and it just isn't working. So you have to shut everything down and start all over again.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	[RE: in-car computer login] I think that's more of a-- I mean I don't know if it's more of a hardware issue or a software issue, but it's a cumbersome process to log in. And then--
Problems - Technology	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	[RE: in-car computer login] Q: So do you always try to login in the beginning of your shift? SME: You're obligated by policy to log in. Q: Does it stay on, logged on for the whole shift? SME: It's supposed to. But as I said, it's prone to crashing unexpectedly and inexplicably. And for a long time, there was an issue because the technology, the electronics is a huge drain on the car's electrical system. And so if you turned off your car, the computers are still running... It would drain the battery. And so then, officers got in the habit of just always leaving their cars running. And they'd always have an extra key with them. So if they had to walk away from their car they would leave it running and be able to let themselves back in. But that proved to be a little bit unworkable in some ways.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	...So much of police work is just being able to talk to people, and I think that those among us who rely too much on the technology lose those interpersonal skills or never develop those interpersonal skills... I think, overall has improved our ability to do police work, but I rue the loss of those interpersonal human interaction skills that sometimes, I think, get sacrificed for technology.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Right? So I mean in broad terms, that's the double-edged sword of technology, right? Technology can bring us answers that we want, but it also opens up, to use a cliché, a Pandora's box of other issues because yeah, I might want to know where my child was last seen, but I don't want that camera pointing at my house all the time.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	[RE: communication via radio] ...And now, if you're in a noisy chaotic environment and now you're shouting, it just complicates it even more.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								But I honestly can't think of a single thing you could do to resolve that because you still have to talk on the radio. You still have to listen to the radio. Sometimes the technology fails and the radio doesn't broadcast clearly. There's static. It's broken up, and that makes it even more frustrating. And that's fairly rare. But there are kind of little dead pockets all over where if you happen to be-- of if you're inside a building, sometimes, the radios don't work well.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	And so I mean there are technological challenges that impede effective communication over the radio. You just deal with them as they come up and try to resolve it.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	.... So sometimes, it's much easier to conduct business by cell phone as opposed to the radio. But if it's information that everybody needs, then cell phone is an ineffective way of doing it.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	It would be nice. It would be nice. I mean, in a lot of ways, it's archaic technology. You have this big, heavy radio, and it's tied to you. I use the shoulder mic. Some officers don't. But if you don't have the shoulder mic, then it's hard for you to pick up what's coming out.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	The radios have gotten smaller, lighter, and, I think, clearer. But there still are issues of being inside buildings or being in those little dead pockets that occur throughout the city.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	[RE: earpieces] Instead of this flopping around on my belt, just something really almost miniature-type communication. But then if it falls out of your ear or gets knocked out of your ear, then you have the problem of finding the contact lens in a sandbox [laughter], right?
Problems - Technology	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	I suppose you could have a cellphone-sized radio, easier to carry in a pocket as opposed to having this, we call them, bricks but-- as opposed to having this brick hanging off your belt.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Nobody that I know of along the department is impressed or thrilled with our current in-car video system. It's just fraught with misery. So I mean improvements in that where we didn't have to worry about the cameras dropping out of service, the remote microphone is not working. I mean,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								those kinds of improvements, I'd be very much in favor of.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Yeah. I know the body-worn cameras are fairly large and bulky. I mean, it would be nice to have something closer to business card size as opposed to that big box because it's just awkward. I try to carry. Actually, I try to carry as little equipment as I possibly can, but there are other officers who carry, it seems like, an entire warehouse of equipment with them. And to add one more piece to that, but--
Problems - Technology	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	[RE: cell phone] ... So it's nice to look at those wanted bulletins but one of the problems I'm finding with the wanted bulletins is our detectives are oftentimes writing those wanted bulletins - I can't remember which way it goes - but if they do the picture in a JPEG, I can't pull it up out on the street. I have to look at it before I go out on the street.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	So the app for the bulletins is-- there are two different issues, okay? So everybody should get bulletins. And everybody can log on that has that cell phone, but right now, the bulletins aren't helpful to me because I can't see the faces.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Well, one of the things I did notice. We have Outlook email and I'm unable to look in my other folders with this cell phone. I can only look at my inbox. So if I've taken things and put them in-- like I have a folder for things I've sent to the lieutenant or--
Problems - Technology	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	No. It's all via radio. Some other bicycle officers have the ability to log into CAD and can write reports from a pad or a device. But I can't do that right now. Right? So I can imagine for bike officers-- right now, it's no big deal but in the winter, that would be a problem because it gets wet, because we're out in the rain and so we'd have to put it in some kind of a--
Problems - Technology	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	... Because the bags will wear it out and make holes, so I can get a new bag because they're just plastic bags. But I need something that's small. I don't need the-- I mean, I can't have my phone on my bike because I may be away from my bike and I need my phone. I need it on me so if I-- a big [GIK?], those-- I forgot what they're called but outer boxes and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								stuff. They're too bulky, yeah.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	...So one of the problems that we're having is-- so in a patrol car, the current CAD system that we have is, let's say they dispatch us to a certain address. The CAD will show that, oh, we've been to that address before. And you can click on that underlying thing, and you can look at these other calls... But I don't get that on a bike. So police work's kind of changed. A lot of times, bike officers will see things that don't fit and we will get on radio and we'll ask, "Hey, can you run that license plate for me?" And then when they run the license plate, we ask them, "Is there any RMS on it?" which is Report Management System. So is there any prior thing associated with that plate? But our 911 center won't give us that information over the air anymore.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	I can't look at anything historical, and radio won't give me that information
Problems - Technology	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	But they're getting on radio and they have to tell radio that, "Oh, my ICV isn't working," or "I wasn't able to log on." And we have to get this on radio, which is another stupid thing, so the officers don't get in trouble.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	[RE: body cam] It's just another piece of equipment we have to carry and think about. And in that regard, it's a little distracting. It used to be that to activate it-- a lot of guys would wear it right here. You had to push this button twice--
Problems - Technology	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	[RE: body cam] So it's a two-- it comes apart and it's a magnet... And you put this on the inside of your shirt. But when you're biking and it flops around--
Problems - Technology	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	...I mean, how much equipment do I have to carry? This stuff all weighs probably-- I mean, I'm probably pretty light at probably an extra 15 pounds. One of my officers wears a vest. It's 30 pounds.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	They use the earpiece, but they're rather-- well, they're kind of inexpensive and they don't hold up for long periods of time. They really only last a year or two and then you need to buy a new one. They're not that expensive, but it's not like the department provides them and--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	So in the police cars just-- one thing that I've always been aware of is they have so much stuff in the front seat, so you've got the computer and you've got the screen. This car went through national highway safety transportation tests with crash dummies, right? But now we put all this crap in here and when officers have accidents, and they have accidents, nobody has said this is safe or not. I'm sure there's been a lot of injuries from-- we don't look at that stuff when we buy this equipment. We just shove it in there. We just shove it in there and say it's good to go.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	[RE: proprietary sys - CAD, RMS, search] They don't use it very often, so that's a perishable skill for them. The filter to look for some things is very-- well, it takes some time to sit down and figure-- you would know what I'm talking about. It's about the database and how you get into the data you need. It's difficult to use.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	[RE: whether property owner signed a contract with LE or not] And if they come back again then we can-- they're subject to arrest. Well, to look to see whether they've signed that contract, you have to go into this system. You can go into CAD and do it, but it's hard to do and--
Problems - Technology	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	On bikes, to be honest with you, kind of a downside of technology in iPads and stuff, and I think it's the same in a car, is now my eyes are here and I'm not paying attention to what's going around me.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	I'd like to see great cell phones and great MDTs but really this is it... Because you might have a nice MDT in your car, but when you're down in that ravine because the suspect crashed his car and has ran down there, the only thing I have is this. That's the only thing I have and whoever is around me.
Problems - Technology	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] ...You can be called for the simplest of things and then you can be dealing with a CAD system goes down. So it runs the full gamut
Problems - Technology	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] There's a whole lot of data being ingested, analyzed, spit back out in various different reports and things, but the technology from an operational point of view is sometimes kludgy still. It's got the old kind of Windows 98, 2000, XP feel still.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] ...tier-one CAD vendors just aren't where technology is today, and you can understand why. I mean, they'd have to totally wipe out the platform that they're built on and start fresh and over, and there's not a whole lot of money to be made in CAD systems anyway... It's just that I just wonder where we're going to be. How are we going to go from that old tier-one legacy vendor to new technology with how we dispatch? And it's kind of exciting. I wonder about it.
Problems - Technology	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] all the body-worn-- all the video that's happening. All of that needs to get integrated. Every bit of it needs to get integrated, and we're so far from that. I mean, we're struggling with that right now with how are we going to take body-worn and know what the call was and what was the officer doing and just all of that? As simple as a number for the event getting somehow tied to that video.
Problems - Technology	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[RE: has technology gotten in the way] Yeah. You could probably say that [laughter]. There are many more examples that I can-- well, it depends. Like existing technology that breaks and causes an impact or gets in the way-- or new technology that we're trying to implement that sort of gets in the way. Either or [laughter].
Problems - Technology	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[RE: technology getting in the way] I think technology gets in the way often from a end-user education and training perspective, maybe. A lot of times, I think that technology is sound. It works. We wouldn't deploy it if it didn't. But you mentioned something earlier too, and that reminded me. If you don't get that initial buy off on technology, that people don't understand it, then they don't use it and then it just becomes a shelved item that collects dust. So we've seen that happen countless times.
Problems - Technology	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] Also as the CAD vendors have become more sophisticated, and I say that loosely, more bells and whistles and things like that, it gets in the way of your actual core, once again, your basic call-taking, dispatching, clearing functionality. You get so much stuff on there, they're having to deal with too much input, too many things to look at.
Problems -	LE	U	IT	Not	Not	Not	LE-U-032	[S2] ... Just the sophistication of our networks and all the other things

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Specialist	specified	specified	specified		that are interconnected to that. We never had near the downtime to our systems that we do today. And to me, that majorly gets in the way. Our network is constantly-- well I shouldn't say that.
Problems - Technology	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] But yeah, it's just the disparate knowledge. Technology's moving too fast. How can you possibly keep everybody at the same knowledge level, on the same platform, on the--
Problems - Technology	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[RE: form autofill] [S2] There's a little bit of that right now. It's not perfect. We're looking at potentially new RMS here, and so we're absolutely wanting to make sure that that remains. So yeah. I mean, you need all of that. Anything that can make the job quicker, more efficient, less repetition of entering the information, which just opens you up to more mistakes, right?
Problems - Technology	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] ...But I also think we're in a weird environment right now on that whole topic. There's a lot of silo-disparate systems, as you mentioned earlier. Some of them talk to each other. Some of them don't. Some should. Some shouldn't. And I think we're in that one foot in this pond, one foot in the other pond situation where you want some things to be decoupled and sort of segregated for certain reasons. And then you do want lots of interoperability in other areas. And I don't think we've figured all of that out yet. What needs to be kind of over here and siloed and what should be all together over here. We're kind of in a hodge podge, at least I feel like-- some systems, again, talk to each other. Some don't. Some should that shouldn't, and vice versa, I think. That's a personal opinion. It kind of reminds me of shoe strings tied together sometimes between our process of report writing and how it gets over to the court system and all of that. There's a lot of moving pieces in that whole puzzle, which means more failures or potential failures which we have had recently with our enterprise message bus sending reports and things of that nature.
Problems - Technology	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Well, a good example is our tweets by beats. So we have an automated process that puts out calls that happened in certain beat sectors of the city, and you just subscribe to that Twitter feed if you live

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								in that area, or don't if you just want to know what's going on. But there's a delay involved. There's address blurring. There's all of these things incorporated into that to walk that fine line of transparent but not in the immediate sense to where it could hurt somebody or impact an operation. And then also the privacy part with the address blurring and things of that nature.
Problems - Technology	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] It's a mess. I mean, we all have 15 different passwords for different things that we're getting into. Different usernames sometimes. It's our unique identifier that's numeric for us as employees.
Problems - Technology	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] And every person manages passwords in a different way, whether it's electronically, or on a piece of paper, whatever it is. Just looking at the [heat queue?] or ticket service that comes through for end user support, I see a whole lot of password resets just about every day.
Problems - Technology	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] We had to walk the fine line at least in the 911 center of using a pool or shared password or username. If we didn't do that, operationally, we're talking about a minute to two minutes of time switching people in and out of seats which happens all day every day all day long to the point where, yeah, two or three minutes doesn't sound like [inaudible] minutes. But yeah, when there's calls pending and everything else--
Problems - Technology	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[RE: when calls pending] [S3] Yes. Logging on is the last thing you want to think about. So we try to be compliant, and are in most cases unless there's a severe operational impact. We'll say, "We can't do that. We got to find some other compromise or work around."
Problems - Technology	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[RE: general technology] [S3]... So because it's changing so rapidly and you've got all these sort of directions you can go, I think there's misdirection happens often.
Problems - Technology	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Yes. Well here's the easy one, because when we're interfacing with the public and if there are any communications issues, you can chalk it up to cellular communication issues, if you want to go that route. So we have really poor location service technology provided by the carriers....
Problems -	LE	U	IT	Not	Not	Not	LE-U-032	[S2] And then you already mentioned kind of-- I mean, the equipment

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Specialist	specified	specified	specified		itself and the technologies and all of that can contribute. I mean... Just about anything and everything can cause a communications problem.
Problems - Technology	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] We can't get an SMS. I can call Domino's and they know what I ordered four years ago. They probably would make a good recommendation for me but I can't do that in 911. So that can be frustrating sometimes.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	But the batteries of those Toughbooks, because you kept on recharging it, recharging it, and when the batteries went bad, the computers went bad, we weren't able to write the report in the car. I don't have time to write a police report in a car, because I am going from call to call to call to call to call. So what happens, the cop ends up-- and then you can't print.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[RE: department cell phone] Mine is being charged right now, cause the battery went dead. Mine's up there being charged. And this sergeant's on vacation. 'Cause you're still responsible for it. You leave it in your bag and you go somewhere, yeah-- so you don't [inaudible].
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[RE: body cams] No. You can't have it on all the time. It's physically impossible, because I would be filming you, and there's a lot of information that has to be downloaded and stuff. So when you-- we have policies in place-- and it's still-- they change policies all the time because they rushed the cameras out really fast. So there was a lot of kinks in it. But you turn it on when you make contact with somebody. And contact can be anything from an encounter on the street, arrest. You'd like to try to have it on on an arrest. Honestly, though, you're supposed to turn it on, hit the button, sometimes officers forget, especially if you're used to the same thing for the last 25 years like I have. My last thing when I got out of a police car is I see where the suspect's hands are, and I'm approaching them, and I forget to turn this on at times. It's just one of those things, and then I remember right in the middle of everything, "Officer, officer, I was just robbed." "Hold on for a second. Let me turn my camera on." It's just one of those things.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[RE: button to turn on body cams] but a lot of the times it doesn't engage right. Yeah, just like a remote control at home. You hit it so many times that that one time, what's wrong with this thing? Right? Or the batteries go bad or the batteries are weak. Or. Right?
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[RE: body cams] That happens all the time especially when you have the seatbelt on. I have my seatbelt on in the police car, and I come out of the car [inaudible] or every altercation I've ever been in or helped out, it falls, because it's on a magnet and you can't attach it to your uniform because it'll rip your uniform. Some cities have them on their lapel here. It's limited. And the other thing that's limited too is that this is for the shootings, and they want to see, but officers shoot like this. This covers it, the camera part. And if you wear your rain jacket, you don't have that connection but this is still in the steps as I can hear technology things start to get better, clamps start to get better, magnets start to get better, just like anything else.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[RE: foot patrol communication] ...the cop doesn't know. You know, if he has his phone aren't hooked up to CAD, to where he can see the waiting calls as he's driving down the street. Okay, and that's an issue with DOJ, okay? Having access to CAD and all this stuff, it's more--
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	So the foot beat - the people on the bicycles - do not have the same information as the people in cars... because they have-- they can see-- and that's if the computer's working. But yeah, if they can see-- it could go, you know, just like anything else. It could go down, it's broken. So it's a computer. So, oh, [inaudible] Code Three and stuff. After a while, that computer hard drive doesn't like it. "Uh-oh!" And it goes out to the radio shop, it gets repaired, and it comes back. Sometimes it goes down.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[RE: dispatch try to give limited info as possible over radio] They can't give the whole story, because the radio will be tied up constantly. And then we have 10 district stations so, and it's split up to district [inaudible] we're sharing channels.
Problems -	LE	U	Field	46-55	21-30	Male	LE-U-010	Yeah, so I'm sharing that channel. There's some stations are shared--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					there's three stations all in one, but the call services are low so they're not getting [inaudible] so the dispatchers they - with Lieutenant [Name] - they've all balanced that out to figure out-- to make calls to service, stuff like that. "Okay, we can put these three stations on one." The [Name] district, which has [Name]-- they share with [Neighborhood]. They're constantly humping, and you're trying to fight with radio-- get in the radio. They call it repeater, you're constantly trying to get the repeater on a lot of things. So officers actually switch to a different channel if they have to get on [inaudible], to another channel.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[RE: airplane crash incident] We had to send like four or five from each station down to the airport. The airport is on a different channel so but they told our officers to switch to, it was a B channel. We did. Still couldn't communicate because the airport switched over to 700 MHz... So those are the challenges...
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	...Now the only thing that worked was command van because the command van has every type of radio in there. You can talk to the moon and get a response back, but I couldn't talk to the officer 10 feet from me, right? So then I had FBI come in, we can't talk to FBI. We can't talk to other agencies because other agencies aren't, A, some of them didn't reband yet. I can't talk to [City] PD because they haven't rebanded yet. It's not our fault because they haven't rebanded. Our communications at [City] Mall. As soon as I walk in there, they're done. They don't work. But that's just not me. We're on 800 MHz. It's on fire. It's on everybody that used the 800 MHz system. The radios do not work at [City] Mall.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[RE: radio dead zone in mall] So what I have to do is I have to call 911 on my phone when I have to go-- when I need additional sources. As a supervisor I won't send more than-- if there's a call in there-- say we've been getting a lot of juveniles going in there and 15 at a time and acting stupid. I don't send two cops in there by themselves. I order the cops, "You stay outside and wait for two more officers." So at least I have four together, than just two. This is an officer safety issue because now I've got this huge mall. Now cops are-- so say they go-- even when they go

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								on foot pursuits we can't find the cop. And hopefully I know who the cop is so we can call him on his cell phone to find out, "Where are you?" We've had cops that have been in doorways, stuck behind-- you know when you go through an emergency door where you can't get back out? We can't find the cop. He can't get on the radio. We don't know where he's at. That's as a supervisor, my heart's going du-du-du-du-du-du... And now I'm going, "Oh, is he okay?" Now you got everybody and their mother going down there. Now I've got so many cops down there I don't know who's who, where that's and that to get a sheet of paper and find out, "Okay. Where are you? Okay. You're here. You're here. You're here."
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Even then we had communication issues, because they're [City], we're [City], we gotta figure out what channel to go to, you know,
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	So many people, so much traffic on the radio.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	So if two towers go down, the whole system crashes. That's why we have the backup for the cars. However, we have another backup. We have call boxes.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Yeah. Well, that's because the copper will last through a earthquake. It will last. However, it is very, very expensive to maintain.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	And that's another tracking tool and that's great. What's nice about that unit, it doesn't fail. It's like the low band, it's pretty fail-safe unlike some of these radios, they go bad. Just like any other piece of technology. They get wet, they can go bad. They get overcharged in the charger, and that's a Motorola thing.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[RE: body cam video sync via cell phone] Or I can come back to the station and do it at the station. Normally if I don't want to come all the way back to station, I would do it right-- I just take four minutes or so and pull over to the side, and I'll tag it, and I know it's done. Instead of coming back here and trying to figure out later all the 15 entries that I have on my camera, and now I have to tag each one of them, and then you have to pull the CAD of your history for the dates, and it's kind of a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								pain in the butt.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	So [City] has always been famous for we're so behind at times. You would figure with a big city like this, I mean, we just got email not too long ago. We just got these cell phones. Other cities have had this stuff for years.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[RE: radios stay on that one channel] The cop is in the middle of a pursuit, and he's chasing somebody on foot. He's not going to take two seconds, because now he has to try to find that switch to go over. It would be a lot easier if the dispatcher just hits the button and it patches it through to the BART dispatcher, but that takes money, the technology is there, it just costs so much.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	We had a huge battery issue with these radios. We had cops that were carrying two batteries with them, because the battery lasts on these radios from the manufacturer only three years. That's not three years that we receive it; it's three years that we made. So sometimes the battery will sit there for six months before it's even put out to the different stations. So then and then you keep on charging them over and over again, so that 100% charge is no longer 100% and that time you can only maybe get maybe 50% out of it. So cops carry-- we work a 10-hour shift. So originally we went these, they are buying 8-hour batteries on 10-hour shifts that didn't make any sense.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Yeah so they had cops that are carrying two batteries in their pockets walking around with their tag book, with everything else. So that was a big [failing movement?]. But since we just moved to these new APXs and Lieutenant [Name] been really on it with that stuff and making sure, you know. The problem with the commanding officer or lieutenant above when they're at a unit is they can be transferred at any time. So if he has a project, he's doing all these different steps. All of a sudden he gets transferred to a station or gets promoted. Then the next person that goes in there has to start all over from one. Learn radios, learn this, learn all that stuff and then as soon as he gets up to speed, the new Chief comes in and they move him around.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	At least that's my-- they should mandate, "Hey you want federal funds for radios, then you have a radio unit." And you keep the-- and that way the new technology comes in, the new radios, the re-banding. I mean, I was taken off the street. Which I do what I'm told. But I was off the street for a year to do a re-banding project. So I went through 6,200 radios citywide, the cars-- I was taking the radios out of the cars, unscrewing them--
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[RE: wearing earpiece] As a trained officer, I tell cops I want-- I suggest that they wear them. When you go to protests and it's so loud, you can't hear what's going on. When you do building searches, the bad guy's going to know who you are before you know who he is. Because you hear the radio going off in the background. Even if you turn it down. Now you turn it down so much that you can't hear the other cops going. I tell them it's like a watch. So I've had a earpiece in for the last 20 something years. I used to work all the night clubs. So I couldn't hear. I had [Name] go in there for fights or something like that, I can't hear what's going on. And I worked baseball games. It's so loud down there. So I'm doing this, you're trying to hear. Concerts...
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Now Motorola provided a single one, but it was one of those cheap ones, similar to this.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	They want to be really cool and put it out here, but then what happens, we try to tell them that this wiring gets frail after a while. And [if you?] lean against it. But it's a training thing, so, sometimes I let it get frail. Like, "Hey, that oven is hot, don't grab that cookie."
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[RE: receiving information via CAD or radio] Probably both. I can't always give them-- we can get like a-- remember I shared a channel with two, with another station, and we have a code 33, there's a cleared emergency channel, for something, some cops chasing a [inaudible] suspect, all of a sudden a cop is in front of the station calling for an ambulance at the same time. Sometimes I can't get on the radio. I'd rather get the information from CAD, or I can switch it to another channel.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[RE: cell phone caller information] Sometimes we do, sometimes we don't. It just depends. Sometimes we get those burner phones and there's no call back to those phones. We get those burners, we call Obama phones. Used to have Obama free phone giveaway they have these little kiosks up, and now everybody has free phone. You can't call back on the phone normally. Oc they called the non-emergency number. So they call the [Phone_Number], which they'll call that and it doesn't pop up on the dispatcher's screen where the call came from.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[RE: need to develop radio ear] The dispatcher, because the way that our megahertz system is set up, if a bunch of cops are talking on this channel now, the dispatcher from the other side has to scream over and say, "Hey, there's a cop calling for help." That dispatcher has to hopefully try to step over the cops to tell them to shut up. In order to do that, you need to grab the repeater. And if the dispatcher can't get the repeater, the cop [inaudible] repeater. So I like to listen to the [boring end?] for the calls of, "Hey, a robbery just happened a block away, but it was in somebody else's district."
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Make things more simplified. In order to do that, it'd cost money. And the agencies have to sit there and bend over backwards to be above everybody else. This department's always falling behind. And we fall behind because we have to deal with all the red tape.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	By the time that gets through, oh, now it's cheap, now we have this radio, now we have to test it. And by the time that all comes through, and we get the equipment, it's already outdated. And now we keep on trying to catch up and trying to catch up.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[RE: license plate cameras] Cameras that are associated with that. So now I get the car, I can put it on officer safety [inaudible] go get the bad guy. Our job is to catch bad guys, not be hampered on technology and stuff... And that's why we're doing it-- we did this to go catch the bad guy. "Oh, you can't catch it, because the car is broken down, the radio is broken." Okay. So now I got the-- how did the old guys do it?

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	...something happens, what do we do? Cops will run into places, everybody's running out. So it's a very good-- say you're a firefighter, that building's on fire, well you run in. Put it out and run out. You go get the bad guy, who has the gun and is shooting everybody, and we run out. That's just weird. Now you get technology in the way, and then people are like, "Oh, but." They're hesitant. They don't know how to talk.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	With these cell phones, and people filming you, all right? It's very, very difficult to-- and even with our shootings, when you get an officer go off shootings. And the next thing you know it there's a protest, because it's already been on YouTube on the civilian side. It'll be four or five days before they put out the real video.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[RE: technology] The more you have, then you have the, "Big Brother's watching," advocates which it-- and that gets involved, and we-- at one point we almost lost the license plate readers, because the advocates were saying, "Big Brother's watching us," going in and, we need to shut down the Golden Gate Bridge and the Bay Bridge, because you go through the toll plaza and they copy down their license plate.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	...Somehow, three or four years ago, there was a disconnect. A physical equipment software program split between the CAD system that they use here in this building and what we're using in the field. So the police department didn't take an active role in what they were buying. They kind of the deaf nod, yeah, yeah, yeah, and then when they got what they got, it was like, "This is not what we want." So the CAD in the car, really important for the more detailed issues around trying to document what they're doing. But issues with bandwidth, issues with the modems, issues with the equipment in the car, trying to upgrade things that should have been tossed a long time ago.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	... So we're in the middle of-- we've almost completed the replacement of all the peak radios, with the new latest and greatest from Motorola, and it has some shortcomings so there are some issues right now with the quality of transmissions. So we're going from a-- we have an analog system with some digital components on a brand new digital radio. So

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the technology is fighting itself for that noise level and the noise canceling and just creates popping and crackling and things. The in-building coverage seems to, at least perception wise, decrease with the new radio over the old radio.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Well, the Motorola people have a hard time. They haven't been able to quantify it. We've done lots of radio-- I've actually participated in lots of field-testing in the open air. In-building things are coming soon, but with the new building codes and requirements for the BDA systems and whatnot, there was a two-year waiver that our fire marshal granted to all the big buildings. So they weren't required to jump right on the wagon and started improving their in-building communications. So certain areas, you can get away with it. There's no calls for service. The [Name] Mall at [Street], horrible comms.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	[RE: dead zones in tunnels, subways] So you chase the young woman down, under the-- to the mezzanine of [Street] and then she ended up going to the food court and into a stairwell. No comms. Officer and the female. Female fought like she had her life to-- and got complete advantage over the police officer and ended up pepper spraying him. Couldn't get his gun out of the holster, tried though. Tore the mic off, disconnected. So his partner couldn't find him. So then the suspect was seen running. She ended up going back down to the BART platform and hit. Once again, the radio's don't work down there.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	[RE: channel switching for subway incidents] ...And then should you have to-- say, you chase someone down to the BART platform, at what point do you stop and say, "Excuse me, I need to go to C8 [laughter]? Hold on a minute. Hold on." And then go to C8...
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	[RE: channel switching for subway incidents] ...So then our bus system, which rides in the tunnel above the BART system, they're in the process of putting a new system in that is almost three years behind now. They're trying to get me to give them a blessing to allow them to turn the old system off and the new system on even though they've found that a new system causes interference with our system, but they're working on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it...
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	...So just recently, I was asked how we create more room in the trunk of the car. Because now I'm told they want to put a printer in the trunk. Yeah. Granted, they can't give us the laptop that will function inside the car, but somehow they think a printer with thousands of moving parts is going to hold up in the trunk.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	[RE: in-car printer] Oh, and it's such a great idea that I think they went with it. Because now they're trying to figure out where to put it in the car. But of course, they can't figure out how to get the modems to—(S1 interrupts interviewee's answer by saying "to connect anyway and make it work")
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	[RE: in-care modems not working] So we just add a new air card to it. They're only 60 a month [laughter]. So now, we'll go with three air cards because you couldn't get one air card that's functioning for your mobile, and your MDT, and the printer. That's just crazy.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Oh, yes. Now the GPS component of this radio won't function until the new radio system, the whole system is in place with the new computers and the new everything. It's just an antenna.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	[RE: communication problems with highway patrol] It's happened to me. You go over the [Street]. I was in an unmarked car, me and my partner, following what, at first thought, was just an auto-booster, but we didn't have enough for the stop. But as I worked, my private cell phone calling the car rental agency to find out who had rented the car, and then doing some follow-up computer work to realize this guy was a very bad guy that I knew of, who always had a gun with him. And so once we got over the [Street], got towards the [Street]. We started to lose comm, so I'm talking to dispatch on my phone. And I'm trying to get them to talk to CHP, to get CHP to come out because I'm in an old hoopty car, and so it turns into a chase, goes up [Street] to [Street], and then all of a sudden, there is 16 outside agency, police cars chasing me. And I have the phone on speaker on the dash, and my partner was driving. And I'm talking to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the dispatcher, and I'm telling her, "Okay. Listen. I don't know what you told them, but you got this all [Expletive] ."
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	We had a \$3 million grant that we left on the table about 12 years ago for dash cams, but one of the bosses didn't want them, the troops didn't want them, so they left the \$3 million grant on the table for dash cams because they were bad. Because there is no trust.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	--whatever do I need, what's that going to do different? But my phone won't connect to a printer.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	[RE: microphone design problems] ...like the 10 people who were chosen to carry these test radios way back. When I went through the list, like this microphone, \$400. Now the other mic is about \$80. Doesn't have this. Doesn't have the volume control, doesn't have-- but most people wear it like this. Now when you put your hand to activate the mic, you're covering the mic. Motorola designed this mic to work perfectly a Dixie cup distance from your mouth... Their own words. A Dixie cup distance. So I had the whole... In front of you... And some now because the new cords are running it this way. And so they have this, so they're not covering the mic.
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	[RE: microphone design problems] Motorola chief technology officer was here about three months ago. And I don't know how they made the mistake of allowing me into the little pow-wow. But so they were going all around and I said, "Who designed this?" Two of the guys at the table. And I go, "Who did you talk to before you did this?" I mean, I don't know how often I was ever able to use it like this in a real-world situation. And I go, "This noise reducing thing and everything else, big fucking deal."
Problems - Technology	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	[RE: microphone design problems] The civilian, on the radio team, he really felt that he was buying the better mic. But he's a civilian so he doesn't necessarily know... and then over many months after, it was one of the first conversations we had that wasn't positive, and we weren't sharing the same office. The noise reducing for the motorcycles. I go, "Listen, we just went to a Bluetooth. They're not even using this mic. The

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								noise reduction component, yeah." If the motorcycle officer was trying to talk on the mic and operate the motorcycle at the same time, yeah, you see it. And then all the dispatchers like the sound of this one better. Okay, well that's quantifiable. Yeah. Nice little earphones on and quiet environment, but you're not trying to get it off your shoulder in a pinch.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	Yeah, and for the computers, the computers in the cars, probably last a little longer than that. Maybe four to five years. I would have to check with our fleet operations. They could give you an accurate number on how long they retain the vehicle computers, because those have to be upgraded also. And it all comes back to the same thing, bandwidth. The more that you want the officers to be able to receive on their computers, you need the bandwidth. The more applications you have, which requires either like video files, photo files, stuff that you're going to be uploading, downloading, you're going to need that bandwidth to push through to the cars. Yeah. I mean, that just is a critical point for us. And the hard thing in [City] is we have mountainous terrain, so sometimes you'll get these little delays because of the hills and the valleys. But for the most part - knock on wood - it's been pretty good.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	Probably a lot better now with the newer technology, with AT&T, 4G LTE. We had spots in the city that were under the road infrastructure and if you were using an old cell phone, you can only communicate in those-- you would be able to get coverage, but it would be spotty in certain areas that haven't been upgraded yet. So what we ended up having to do, we had to upgrade all of our phones department-wide for patrol and investigations, plus the command staff for the chiefs. So that they would all be on the AT&T, 4G LTE network itself. So coverage has been really improved. Improved till they pass.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	They try to get the best stuff and everything is-- again, when you do the technology upgrade, you have to start and then you have to finish. But you can start, but you still have half of the city that is on the old stuff, because it's what? It's budgetary. It's money.
Problems -	LE	U	Field	56-65	31-40	Male	LE-U-012	But if I were to just give my opinion of that, it probably would be based

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					on either, again, bandwidth because if you're putting a search, you want a response right away. If you're searching something in the car, you want a response right away. You don't want to have to wait. And if you go through a tunnel or a hill and all of a sudden your signal's cut off and you're following someone that's a potential threat, then you're waiting. Waiting, that is the a waiting game before your communication comes back into the vehicle.
Problems - Technology	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	[RE: cause of communication issues] Faulty equipment. Coverage issues, even with police radios, even with cell phones. When I say coverage issues, you can walk into a building that's concrete, you're not going to get out. Metal, you're not going to get your signal out there. If you walk into a basement area, your communication's cut off.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	CAD and sometimes we have dead spots, with a radio you can't transmit in certain buildings and in certain areas of the city where the buildings are-- you can't transmit.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Old buildings. A lot of the older buildings, you can't transmit. When you're in the basement and in certain floors, you can't transmit. So you have to get on your cell phone to call dispatch and let them know you're okay.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	[RE: MDT] It's vital. It's vital. I know what I'm going in to. It's hard to drive, and listen to the radio, and look at the computer screen, and watch traffic and the bicycling. It's hard to everything. So at least with the computer, I can read kind of what's going on. Because I'm trying to hear for other cars, other police cars... There's much traffic, you can usually get a couple seconds to read the computer really quick.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Hard. It's hard. We're not on the same channel, so we have to tell our dispatch to contact the fire dispatch...
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	[RE: communication with other disciplines through dispatchers] They're in the same center, but they still have to contact them who's at a different desk maybe 20 feet away. We're not connected with fire or the medics. The medics and fire are connected to their own channel, so we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								would have to switch our radios to go to a different channel to contact fire.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	[RE: communications with other jurisdiction] Specialized units can contact [State] Highway Patrol. We can in our cars. We used to because their was channel was different. They have better technology now, but we still have old radios on our car that would connect to [State]HP. And the sheriffs are on our-- some of them are on our channel; they do patrol in our area. But it's still hard to contact [City] PD. We literally have to either call the dispatch on our cell phone or have dispatch call them on a phone and notify them that we're on the border.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	[RE: email] Yes, but they don't use it properly. They over-abuse it. You're getting a list of suspects that you want to look for, and then you're getting [Name]'s retirement party in your emails. It's not broken up. It should be separated to where you have pertinent information you really should need, and then someone's retirement party in six months.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	We have some in the cars for license plate readers. But in our department, I think we only have one, and it doesn't really work. It always breaks. We have fingerprint readers at the stations. And I haven't used one in a long time, but the one that I did use, it never worked.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Very mediocre. I mean, the cars alone are almost 20, 30 years old, 100,000 miles, and a lot of times, they break down. There was an article recently. There was a shooting at our UPS center, and two officers were trying to respond from [Location], which is about five minutes away. Their car won't start because the battery, it died. A lot of our cars are designed to have a certain amount of technology in them, not what they're demanding now. They're over demanding the car, so a lot, they break down. They're old. They just die for no reason. I've had that happen on me where I'm trying to drive, the car just dies.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	We got new radios, but they're almost as worse as our old radios. We're in the middle of our station, and we can't transmit and receive information static. In the middle of our station. Specific areas where you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								can't transmit, buildings, you still can't transmit in the basement of buildings. But the main thing is our station. You're in the middle of the police headquarters on the first floor, and you can't transmit or hear. You literally have to walk to a hallway or walk outside the transmitter, because dispatch can copy you.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	In the beginning, when we got out phones, no. They were really bad. You couldn't really do anything with the phone.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	When I talked about earlier, is we have to use certain things now on the phone or on the computer. It takes you away from being observant on where you're at because you're like this. You're not paying attention. And now, they're assassinating us in cars where we're not paying attention. And I think that's why a lot of guys are getting jumps on us, because we're not looking around.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Maybe doing work or family or something, but the phone takes you away from the environment.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	No. It's over-complicated. I call it 'dumbifying.' They should 'dumbify' a lot of-- just make it simple. Cops are smart, but we're smart in a different way, but adult learning is different. When you're older, you don't want to learn new things. You don't want to learn how to utilize this iPad for work. You don't want to learn how to utilize this new MVT system because it's-- now, when you would get in the car, you only needed like one password to get onto the computer. Now, you need like 5. And they have to be all different, and it has to have a hashtag. It has to have this, a number. It has to have-- so me, I put them all on my phone, because I forget. I'm only almost 40, but I'm already forgetting things. But you have to know nine passwords to get on your technology.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Yes, I forgot my password, and I had to e-mail technology division. I had to call them, and he had to give me a temporary password, and I did a temporary password. And I put a totally different password now, so I have like five different passwords to get on three different systems.
Problems -	LE	U	Field	36-45	11-20	Male	LE-U-013	[RE: cause of communication issues] It's a mix of everything. It's people,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					technology. It's improper use. It's the cheapest product, which city agencies will always get the lower bid. And I know about that a little bit. So it's a mix of everything.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Just loading your car is a headache, right? It's a headache. You go to your car. The computer might not work. The battery's dead. So you have to go get the jump box, charge the car. And then, all of a sudden, you're getting a call to go to this guy with a gun, and your car won't start. And now, you're running back to the office to get new keys, and now you can't find that car, because it's somewhere in the building.
Problems - Technology	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	[RE: comms with other jurisdictions for large events] And then to try to put an event in there and try to coordinate in an event on their channel would be very difficult. Because in addition to just having the activity that goes on there, the ambient noise with the stages, the speakers, just the overall den, you wouldn't be able to get it out. So it's a big part of-- we coordinate communication with the event planners, the stage managers, often by their radios that they have there because we're not giving them ours. Because that just doesn't happen. So we try to have either a liaison from us with their staff, into a command post type situation, and then have that information pushed out.
Problems - Technology	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	[RE: department cell phones linked with body cams] It's not a guarantee because, depending on where they're at, some venues we have zero cell service or they would just be poor cell service. So it's a good backup if we need it, kind of send out a message, "Shift your personnel over this direction." Maybe we'll communicate it that way. But first line communication we use is the radio.
Problems - Technology	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	it's a huge officer-safety issue having an officer doing a report, or whatever, on the phone, looking down at the phone and stationary in one particular spot for too long. That's a concern. I know that we-- at some point, we're talking about having an ability to write the reports on the computers. We had laptops in the cars at one point. We could take them out, and you can write them, which was maybe a good idea, but the infrastructure as far as the wireless connections and that were

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								inadequate or weren't working well enough to make that take foot. So that's something, I think, we're constantly dealing with is that level of technology on a call for service not being frontloaded into whatever system that we're going to be needing. So if we're running people on the street, and we have a particular call for service that the information that you already have there isn't automatically just pushed over into a report or into wherever.
Problems - Technology	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	[RE: body cam] It's a good resource for officers and the public. I don't think it's everything the public wanted because I mean, it is limited in its ability itself. I mean, I think there's a perception that maybe this is a 360 view of everything else that's going on, including the intents of everybody else involved. But it's a huge resource compared to what you had before was nothing.
Problems - Technology	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	So one system is allowing you to enter in more of a little narrative, the field interview, of what a particular contact is, whatever the uniqueness of the contact. Field interviews, if there's a gang element to it or there's a robbery series element to it or whatever could be that information is there, but that information is not in the eStop because the eStop is covering-- the reason for the stop, the reason for a search is if there is an arrest case numbers, the officers at their scene, the race, and age, and gender of the person contacted and whatever the reason for the stop is. But then the other information that would be available or useful for investigations is in the FI, so.
Problems - Technology	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	[RE: communication between eStop and Field Interview programs] Currently, they don't. And then currently the FI information is intertwined with our crime data, our report writing system, but the information is not pushed in there. So if there's a query--
Problems - Technology	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	--for the investigators when they're doing their work on particular case, if they're running out [Name] for whatever contacts he may have had, they'll see the FI contacts, and they'll see the police report notice, but they have to run out each contact to get the actual extracted information. So it's not like you run [Name], all of them come up, and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								now you can see the panel and just kind of click those little contacts and see it.
Problems - Technology	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	I can't even imagine the amount of, I don't know, collaboration or cooperation from other units and then dealing with the department's old systems and marrying that information or pushing that information from the old systems to the new systems when some people may not know how that was coded back then or now to try to push it here and then how it's going to get populated. So that's a them problem, not a me problem. I'm sure they're working on it. It's a me problem because it would be nice to have that information...
Problems - Technology	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	Yeah. I mean, I think you'll find the biggest argument from people or the biggest critique from people is the amount of passwords that we have to use. It's ridiculous. Your email passwords, your level one passwords, your login passwords, so they've gotten better with some of that, kind of drawing down some of those passwords, but you've still got six or seven passwords, and then they change on a periodic basis and never consistently at the same time. Or if you've logged out of one and you've had it on your desktop forever, now you can't remember what it is. Now you've got to change that again, but you can't use the old one, so now you need a new one. So they came up with that RSA token, which has a revolving security code ID, which is, I think, great. But that RSA token is not married to all these other systems, so we use that RSA token where we're going to log into our phone and then use any kind of the apps on the phone. So if we're using the eStop, the CalPhoto, or the level two or whatever on our phones, we have to use the RSA token to log into that for the connect, but we don't use it at the station level.
Problems - Technology	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	Yeah. And then I know that they're transitioning right now to the eCites, which is the electronic tickets on the street. And so that's starting to roll out. I think our traffic company may be doing those already. But having that ability to be able to generate the ticket right there on electronic, the downside of that is it's another device for officers to hold, to bring up. But again, if it's an ability to marry your CAD stop into your computer,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								then you just do it on the computer. And it just prints up the ticket and you bring the ticket up, and that's it. That would be good. And they can sign the phone for the ticket. That would be better. But then the down side for that is you're presenting your phone to somebody to do whatever. Currently, I think it's a little box or whatever for the tickets. The printers in the car are tough just because of where they're situated and there no real estate.
Problems - Technology	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	[RE: cause of communication issues] Reception. So the beauty of a big building is the fact that it's a big building, and it interferes with your transmissions. And we're rolling out the new radios. We're running into that, but these are areas that we've already known existed for bad communication or no communication.
Problems - Technology	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	But other than that for communication, really, the reception for the area that we run into. [City], really poor reception. [City], I get the back side of [City]. Almost no reception. You get towards Westfield Mall, which is [Street], it's nothing. Inside the Moscone, which we have these larger events, nothing. Some of these other venues or locations and you get zero transmission. But go two feet in one direction, now you got something. It might be scratchy.
Problems - Technology	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	Yeah, consistent reception, yeah. So for whatever the reason. I mean, Motorola's been out checking out everything for the last few months. And they've been out to [Island] and it's whatever. But if we go into [City], we start to lose our repeaters, and hopefully, that's where the new radios will help because going for [Island], pursuing somebody out in [City], once we get out beyond a certain distance, either we're canceling the pursuit for whatever the reason is. But if it's a murder suspect or something severe, they're not. Now the officers are switching over to a cell phone to try to stay in touch with dispatch. So that's at the same time they're trying to drive and follow their current form.... And the same thing, going down towards the airport, we've got officers, [City] officers that are stationed at the airport. But if they have a protest that goes on down there, they're communicating with [County], we may or may not

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								hear-- the dispatch will get a relay up here. But a lot of officers, when they get that far with their radios, our radios may not work down that area.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...say, I'm digging for a warrant or something on the beat I'm looking to look for that day, I would be through a database. It's typically easier to navigate at a computer on the station. And if not, it'd be in the car. The car is sometimes not updated enough to get those systems to run.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...the radio would be the initial call getting put out. Maybe you need an update or you need dispatch to call that person back because we don't have access to their phone number after they call.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: in-car computers] They've replace a lot of them with the newest generation, but they're still-- they go down for maintenance if the car goes down and we get a pull car that PDT doesn't necessarily work in that car because it's different mounts and since it's just a pull vehicle, they're not going to put all the newest latest and greatest things that are going to work in it. It's just a car to use while yours is being repaired.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: ShotSpotter app] I like it. We just got to work out some kinks. As long as we get to the point where they said that they could for sure be accurate. I think it was 80%. If we get there, I think it'll be a great tool.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	The phones have the ability to pretty much do what you can do on the PCAD... the difficult part is you're staring at the phone like this trying to type information and there's multitude of lines, and you have to put your PC password each time you do the search. So it's kind of redundant in a way that it takes a lot of time. Even in the station, if I'm trying to run reports, if I run somebody's name and I've decided I'm looking at a different name, I have to again put in my PC password and fill in all the boxes. Some of them stay constant, but your password, you always have to enter... And there's ways of cheating. I cut and paste it, and I just paste it in each time...
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	And we have different systems. Like if you want to pull a case report, you have to go into the [Clear?] system. If you want to look at people's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								names, you have to go to Data Warehouse. If you want to run somebody's name through like the Hot Desk or to see if they're clear or have a warrant, you have to go into a different screen, and again, log in, and run that... It can be the same login you have for everything but you have to log in to things separately.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	So you log in to the computer. If you want to get your email, you have to log in to your email. And then if you're going to do an arrest, to do anything, you have to log in to the Clear system. So a lot of repetitive things that would seem like they should be easier...
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	What username are you going to use? Is it going to be your email? Is it going to be your PC number or you make up your own?... I mean, there's just-- it's not difficult, but I'm getting older and I never thought I would admit it, but I have to write my stuff down...
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: communication with other jurisdictional agencies] ...And I think that we could do better with it, especially with something like [Espurn?]. With state police running in the city and we don't have their emergency network to know when they need help, I think is a little-- I mean, I don't know how we would integrate it...
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...trying to coordinate between the dispatcher talking to the state police dispatcher then to us, and getting all the information back, there's a lot of confusion going on. I mean, we had people chasing people. Nobody knew who the offender was. Until you get there and somebody can actually put it out that this is what happened, there's-- it's confusing sometimes.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	SME S2: ... on the radios, we are able to change networks. So for example, if we did have a chase from state coming to my old jurisdiction and we communicate with state dispatchers... So it puts all of us on states network with their dispatcher. So it's all going through one instead of... SME S3: Our department radios aren't like that.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: department radios] They're also not encrypted like they should be... Especially by us, we have a lot of Hispanic [inaudible] listening to see--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								hear what's going on because then you-- you know, if there's somebody doing a shooting over there, the police are all going to be on that side. And if I want to settle that with somebody else, I can go over [spot?] out the less likelihood of something happening.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...We can't exactly always talk to somebody on the phone or say, "Hey, come into the station." People still want that type of business to be handled privately. So even though we have all this wonderful technology, there are still people that are shy to get into-- some people don't even want their names put in reports, let alone phone numbers and all that kind of stuff...
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...the body cameras are very new. I think most of the in-car camera systems are the same. Unless something is messed up, it works [inaudible]. There's not a lot of bugs in that system. We recently got a lot of our computers updated, but prior to that, buggy or broken [laughter]. I think the computers are probably the most dated, but they're probably the most expensive to fix as well.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: cell phones] I use them mostly just... The Wire, it's kind of like our homepage. We have access to it, but there's certain aspects that we can sign into and then there's other stuff that we can't sign into. So like I said, sometimes the station's the best place because everything's fair game there. Everything's going to work in there.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: writing reports in car] It can be a little buggy sometimes. You'll have a signal and then it'll drop out. So you might be in the middle of a report, you go to update it or go to the next page and there goes your whole report [laughter].
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	A lot of times, too, if the officers go to save it and they want to go back to it, it'll go into checked out mode, our supervisor has to go into it, uncheck it out.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	And I already found that if you start it in the field and you save it and you go to open it in the station, it's not what you saved [laughter]. So I usually try-- if I'm going to do it in the station or the car, I do it 100% and then

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								save.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	Q: Have there been times when technology has gotten in the way? SME: I wouldn't say in the way, but I think it fogs. You're looking like he said, sometimes you're in the computer or you get sucked into whatever information you're being presented with and you need to be up here Q: So a little more situational awareness than what the computer allows you to be. SME: Yeah. Even the phones can be the same way.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...You're distracted no matter what. You're not paying attention to your surroundings. I mean, back when I started, we didn't have computers... But now, with all the different functions, it makes actually seeing what's going on in the neighborhood harder. And somebody's looking at this box to tell them what's going on as opposed to actually looking at the surroundings and figuring out what's going on.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	Part of the thing too, everyone's focused on this box of information as opposed to figuring out, talking to people, whatnot, and actually getting the full story. And I know I've been there too. You get a stolen car and it's like you're trying to call it in and figure out where you're at at the moment.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: using body cameras] -- it's not too conscious yet to say, "Okay, now I got to turn this on." Because you're used to hit the lights, "Okay, where am I going? What hundred block is that?" And sometimes you're figuring out your route and you're doing a lot of other things in your head and you get to the call and you're like, "Oh, I forgot." So I think it's still-- it'll eventually be in most officers just your natural thing to, "Oh, I'm going to a call, I turned it on." But it still has to be-- it has to get to that point. Time will fix that, but it's you push a button, it's really not that hard to use.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...the body camera's a little bit more of a-- you have to physically remember that you have to turn it on.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...We can push out information quicker, but I don't think the process is smooth yet. It'd be nice to integrate everything into the computer, like with ShotSpotter or with HunchLab where you have the screen, at least

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you can see where you're supposed to be or where it's going off, as opposed to if you hear it go off, you unclip it and you have to open the phone, put in your password and then go to the app to see where it's at...
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: preference - audio vs. visual of text on PCAD] I'm more of an audio learner. So, even when I do read-- if I'm going to a call and something's on the PCAD, I tend to read it out loud to myself. Or if I do have a partner, somebody does read it out loud.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I could look up the whole district but I can only say I'm going to or on scene for the call that I'm personally assigned to. If I want to jump onto a call, I have to go on the air and say, "I'm going to the call with this person." It's not something I could do on the computer.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	On the street, I preferred the radio as opposed to PDT just because you can hear it and you're still paying attention. If you're trying to read it off the screen, you're distracted...
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	SME S3: ...when you're alone, it'd be nice if the-- if you got a job and you could hit a button and it-- have the computer read whatever to you, like talk to text almost where it would just say, "Hey." That, I think, would be ideal for some officers especially-- even when you get older, it's harder to take the glasses off sometimes. SME S2: Color contrast can be rough sometimes.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	SME S3: And the computer where it's at, it's not really comfortable. I mean, I would hate to have to write a report in the car. My back would be killing me because you have to turn, and lean, and type, and it's not-- it'd be nice-- it's supposed to be a portable data terminal but it's not. It's fixed in the car. SME S2: You could take it out but if you're in the driver's seat [laughter], your steering wheel is in the way... Q: But it's not like you've got a Toughbook or an iPad or something you can take with you out of the car? SME S2: No... We just leave it in there and would function off of a computer in the station.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...on the radio, a lot of people try and get out at the same time, and then were walking over each other.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	And then our radios tend to get a little staticky, we've had some issues especially if we're in the station. Like I'll have a hard time listening to the radio in the station, trying to hear what people are doing. You hear-- always [mentally?] listening to it and trying to get a sense of what's going on in the district.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: communication in subways] But if we were to say there was a 10-1 on the red line, we would be out of range. If we went down there.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: radio communication] Hospitals are tough. [Hospital], [Campus hospital], I can hear you, but I can't broadcast out. So if there is an issue, we have a problem.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I just think I would want the computers to be designed better in terms of the programs on them. After seeing different ways-- from state to how suburban department's PCADs function, ours is very poor. And I tend to think of technology now is, can I hand this to somebody who is from an older generation and they can just figure it out? And I would say our PCAD don't work like that. Even just for the ease ability of use. And I've kind of found a few shortcuts, but this is just me playing around, nobody told me...
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: PCAD] ...in the city, you're like, "Okay, I'm going from running this person to running them." And sometimes if you have a truck plate, you got to put in the truck code, whereas in however the previous system I used was designed, it knew it was a truck, it knew it was a firefighter plate and so on...
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: PCAD] ...you can't go forward and back in your messages. Whereas [at previous city where participant worked], you can go back, back, back, back, back. Okay. Now I got to go back to his ID. Forward, forward, forward, forward. Whereas here, we're kind of in how we describe that screen, sets up a second screen. And it's all your pages. And you're like, "Okay. Which one is it?" And you could click through 10 of them and still not find the one you're looking for. So it makes it hard.
Problems -	LE	U	Field	Not	Not	Not	LE-U-024	RE: PCAD SME: And then have a voice activated, "Hey, run this plate,"

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder	specified	specified	specified		where you don't have to even look at it... I mean, I know of supervisors and people that have gotten into car accidents because they're— Q: You're looking down. You're trying to type in. SME: Mm-hmm.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...Everything kind of needs to be tied in together because everything you have to pretty much run separately through different databases and through different ways. I think it would be a lot easier for officers if all that information was just all kind of integrated into one nice package. Federal warrants and stuff-- I would think we're at the time where instead of just a description of the person, you should have his arrest photo come through with that.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	LEADS 2000 which not every officer has access to for [City] but you could get driver's license photos. So, if someone's playing the name game and says that their brother-- well, of course, you know your brother's birthday and his address, so you can easily say, "Yeah, I'm him," and we would never know the difference.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: license plate readers] I think some officers do not like it at all. I don't know how to describe it. It's just more noise in the car.
Problems - Technology	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...I think it would be nice if the plate reader knew if you were in motion or not. So, for example, if I'm driving, I may get a hit on a suspended plate. Well, I can't do anything on that car if it's parked. I can pull it over if it's moving, but I can't do anything on it. So then I have to sit there and acknowledge that, yes, this was a positive read or a misread, and it's a little cumbersome to actively be on the plate reader all day.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	They can write their report in their car. Everything that's on the computer in the district is on that computer if they have a new computer. If they have an older one, they don't.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...In our station, our computers are not good. Our computers are very old. They don't work. They don't work well; they're slow. So the computers in the station, even our processing rooms, are outdated. It's very hard to do things by yourself because of the way it's set up. So if you're sitting in a room, processing a prisoner, it's just you and him.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								You're sitting in a room with half of a door and a computer that may or may not work. And if there's two of you, somebody may have to sit with the prisoner while your partner goes into another room to do an arrest. So inside the station, it's different. Things don't always work. Fax machines don't always work. Copy machines don't always work.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	Q: But the technology that officers are going to use out in the field-- SME: If they have a working computer, then it's great. If they don't have a working computer, not so great.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	A lot of people trying to remember which password, which login goes to which password, to which everything. You have one login for your PDT in the car, you have a login for the HunchLab, you have a login for ShotSpotter, you have a login for Data Warehouse, you have a login for your email. And I'm sure there's some other ones that I don't remember.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: login and passwords] It causes them to get frustrated with the technology. It doesn't make the transition of getting them to do these things much easier. They would have one password, one email, and after so many tries, if they can't log in into HunchLab one day or log in into ShotSpotter, they're just not going to do it. They're just going to put it in their pocket and like, "No."... Especially if you're going from job to job, from call to call and you just want to log in and go. You're going to try to log in; you're not going to get in. You're going to get a call of a person shot, stabbed, or a domestic and you're just not going to do it.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: seeing lineup of calls] They can but they can't. Supervisors can see all of the calls waiting. There is a way to look on the computer. Regular patrolmen cannot see this the way that sergeants see this. However, there is a way to look on the computer to see it. Not all of them know how. It's not easy. It's almost like an Easter egg on the iPhone, sort of like you might sort of kind of know how to do it.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	With the cameras, you can buy your own attachment for your vest. So if what the department gave you isn't working out, you can go get your own.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	Well, the in-car camera does not work very well. Those are always going down. They don't upload, they don't-- yeah, those don't always work well, especially when you would like them to...
Problems - Technology	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...Logging in is a big deal. Yeah, it's very difficult for some people. They have all this stuff going on in their personal lives and now I need them to remember more passwords.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: single sign on] Yeah, that would be very nice. Just log in and that would be it and you have access to everything. I think that would have more people looking at it, and exploring it, and not being so scared of it.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	The computer doesn't work. The computers are slow. It doesn't work. You're missing a mouse. You're missing letters on the keypad.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...Just having updated technology in the station, computers that work. Some of them are not all desktops. Some of them are the very old version of the PDT that was in the car that is mounted to a table.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	Even updating the software that are on some of the computers. Just upgrading Word or Adobe... A lot of updates. Adobe and Acrobat Reader, just-- Adobe would be nice so that if there was something that popped up on the computer, I would actually be able to type on it. Because it hasn't been upgraded, we don't have access to it. I have to print something out, type it on Word, cut it, put it on the photocopy machine, photocopy it, email it to myself so I can send it out, so it looks like I typed on it... It's just the very long version of I know if we upgraded this, this would make this easier.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	That would be nice. We could upgrade our computers in the station. That's very frustrating when officers come in and they're like, "I have this arrest. I would like to do it but there's no working computers." There are no working computers. So then they would actually have to wait. So we could actually get officers on the street if we had stuff that worked.
Problems - Technology	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	...So there is that gap where I think a lot of officers really-- I don't know if I want to say really care or really don't want to be bothered looking on the computer all day. They'd rather just hit the street and focus on what's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								in front of them... Because it seems what's in front of you is more important than what you could get from a computer. The here-and-now versus what happened in the past maybe. I don't know, I mean, it's a hard one. Like I said, every day, I give you a set of keys and I say, "Go do what you want to do?" So for me, me finding it, no, it's not a problem for me. But like I said, I'm pretty good with the computer aspect. Every once in a while, I'll fill in the commander stuff or the comps desk stuff. So I know how to pull [police database], and upload the gun reports, pull any major incident that's happened in the town districts or the area. So I don't really have-- for me myself, I don't have a problem reaching that information if I want to dig into it. But the issue is you're a beat car. Why are you in the station looking up all this stuff when you should be out there patrolling.
Problems - Technology	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	... I could go on my phone in here and look up the major incidents that's happened in the last few days in the [district]. But the issue with that is, whatever is on your phone, are you paying attention about what's happening around you? ... Because even with your personal phone, and I'm not going to lie, every police officer uses their personal phones. But a lot of the times it's where you going to park and access this information. I would say that the station is more controlled and you're safe there, whereas being out on the streets-- you see, everybody sees the squad car. Okay. You can't see everybody looking at you. I think that's a big thing in every police officers mind is, "Who's looking at me?" Well, they're not, they're just, "Oh, this guy's on his phone all day." That's the prime example. You're here looking at them and they're all on their phone or they don't do nothing. Is that good for community relations, always looking down? But that's the thing. For me, no, I don't have a problem accessing that information. Okay. But I could see other officers, yeah that's a big issue.
Problems - Technology	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	[RE: apps] the only really one is this HunchLab. But you see, I think there's a big-- I don't know what the word to use is - but this is where I usually work. So if I click on here, it's just saying, "Aggravated battery firearm." But it's not just telling me anything. What was it about? Who got

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								shot? Who was the victim on here? If there would be something that you could kind of get a little bit more in-depth. Because really, does this really tell you anything? No. This whole area right here, this is [neighborhood]. This is where all the majority of the shootings are happening in [district]. Yeah, you know who's supposed to be to be out there, but like me having a day off, and I come here and I know that's a hot spot, but is it going to tell me anything [crosstalk]? I know that's a bad area. [crosstalk] It's been a bad area for 10 years. Okay. But now, it's saying, "Let's do this mission." From what is the mission? What happened? Who was shot [crosstalk]? What is it gang related?
Problems - Technology	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	I think that's the issue that I have with the HunchLab. If it could be a little bit more in-depth or a couple more boxes just to click on. Just to click on and see there was shooting [inaudible] blah, blah, blah. They don't want to give-- and just a quick briefing of what was it about. What is it drug related? That's something that when I log in on the computer, I want to find out that shooting, that's what I read. And there would be some from the detective's division saying, "Okay, victim, possible offender information, possible gang problem." And the detective's good with it because they will always label preliminary what they think the justification that shooting was. Was it gang related? Was it calculated? Was it road rage? And they'll say, "Male standing in the corner was approached by blah, blah, blah." And it's a pretty short paragraph like, "Okay. That's what that's about." But that's something that you really can't access on here. I'll have to go back, and here I am, head down in the middle of the worst area in the town district, and now I'm logging in here trying to find it. So I mean, that's the biggest thing. The information is there. It's the problem of accessing it and get the information. Cops are very impatient. We want everything here-and-now, okay? And if it's going to take me too long to try to find it, then why bother?
Problems - Technology	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	...I think we're at a phase in the police department where you got the technology come in but you still got the old school people. It's nice to have more information at your fingerprints but you have to really kind of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								dig at it right now to try to get that information. Do you want to be patient to do it...
Problems - Technology	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	I've never had a problem with a radio... Well, in [district], we don't-- see I've always been in the [District]. So every once in a while you'll have a dead spot in a school, maybe surrounded by cinder blocks, but then you kind of pretty much know it that you're not going to get a signal. Going to the county Jail, yeah, that's the other one. But hospitals, yes and no. But there are dead spots but that's usually-- the dispatcher knows where you're at. But trying to find you find you, that might be a little different story. But I think that's just a radio frequency of the channel more or less.
Problems - Technology	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	... I think the PDT is that the information now is coming real fast compared to maybe two years ago. I can't remember when they had the last upgrade. I want to say about three years, maybe three years ago or four, that you'd run a license plate and it'd take maybe a minute to get that information back. And there was a serious lag between the responses coming. I don't know if you've ever seen a PDT hit on a license plate but when the first one come back, clear, whatever, and the next one, it will tell you it was stolen. The next one will come back to the registered owner. Well, now as soon as I send that information, you're getting it like three seconds later. So I think that's really, really helpful.
Problems - Technology	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	Well, at the start of the day, you've got your PDT. You're logging into your PDT And then you're logging into your full band system. This is the micro for the co-band. And then you've got your thing here with another username and password. And you got your body camera here. So you've got all this stuff, and I think that's a thing too with police is that, you're carrying all this gear, and it's like every system has its own username, every system has its own password, every system-- well I got to take a number to get this fixed but yet I got to call these people to get this fixed, and I got to call this person to get this fixed. I think that's a problem too.
Problems -	LE	U	Field	36-45	6-10	Male	LE-U-025	No. Usually, you get a-- yeah, but it's like there's the one officer that's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					always having a body camera problem. So I always say it's something wrong with his camera. He needs to get a new one. But who do you call to get this? Usually, you tell the sergeant, and the sergeant's got to figure out, "Well who am I calling to get this?" You got to tell somebody because if you're operating without it then you get caught by an inspector, "Well why don't you have your equipment on?" I think that's the biggest thing. I always bring it to the in-car camera guys, "My camera is broken today." They actually came and fixed it. And that's when I'll talk to them about it and say, "You know, what's up with this system?" And they say, "Well they're junky systems. They're not meant for the harsh punishment." And I say, "Well what about the body cameras?" And he's like, "Well, they're trying to get a vendor--" I don't know what he said, but he's trying to get them both incorporated as far as the-- and that would be beautiful. if I could walk around with one body camera to activate my COBAN System and this, I think that's pretty good. I think the less equipment, for me, the less stuff to lose and the less stuff to fall on, more or less. With the phone, I'll just leave this in the car and I'll never carry it with me.
Problems - Technology	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	I think each district has one plate reader. But that plate reader is kind of-- I really don't care for it. That's just me. I mean, it's like a totally separate system too, where you get tired of hearing that ding, and ding, ding. Every time you pass a car it's dinging and then it, [inaudible], and then it hits and you're like, "Oh, shit." You stop, then it's like, "Oh, a lost plate," or something. The other thing we have is the LoJack System in the cars. I can't tell you the last time that thing went off. So I don't know if they're functioning properly or not, but honestly, it's probably been five years since I've seen it go off.
Problems - Technology	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	A couple of the old timers will go, "Here goes cooking the general orders," about me. "But dude, I'm not really cooking the general orders. I'm doing things that I'm supposed to do so I don't get in trouble." ... Whether or not you want to do it, that's on you. But like I said, those are the older guys. When it comes to technology, they really don't care. But

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to me, why am I going to get in trouble because I was too lazy to log in the system? Why am I going to I get in trouble for having a faulty list? Because the day that something happens and they're looking for that, how are you going to justify it? I don't want to take that chance. I mean, like I said, we've got a lot of stuff out there but it's just the time to access it and the ease of accessing it.
Problems - Technology	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	...These cameras, I don't know, really, what to say about them. Because really, the only time I really access it is if I have an arrest or something and I want to actually plug it into a computer to view my recording. I mean, this works pretty good as far as that aspect. It's kind of hard at first, trying to figure out what website to go into to put your username, put your password. There we go again. So I got a username and password for this. I've got a username and password for this. I've got to use a name and password for this. I've got to use a name and password for the terminal. So I mean, I've got four different usernames, four different passwords.
Problems - Technology	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	[RE: SSO] I think obviously that would be helpful. I tried to put one or two passwords the same for everything. I know that's something that IT guys don't like. They want real long passwords with numbers and letters and commas, but for functionality, the average officer doesn't want it. They want the simplicity of using one or two passwords only. And then e-learning on the computer, that's a different username and password. I mean, it just kind of gets-- I could see how officers get overwhelmed by having different usernames and user passwords to access all these different systems and that's why I think a lot of them don't take advantage of it.
Problems - Technology	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	Like I said, are you going to do what's in front of you, as far as stopping a car, or are you going to be more-- I think the technology is good when you've got the time to use it. Meaning it's safe to do it. As far as, well I got eight people in the corner, but I'm on my HunchLab looking. I mean, first and foremost, your safety first and using your head. If you got time, and I don't want to say distance, but a safe area where you could access

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								this computer and not worry about somebody taking a shot at you. I think that's my biggest fear. That's me personally is. I know what areas are bad in town. I know where those hotspots are. I got to look at the Hunch and they're going to tell me that. So do I really need to look at the HunchLab? Like I said, the nice feature-- the HunchLab, if I could click on a box and they provide, what is this box? Why is this an aggravated battery? What's happened in the past few days? That's one thing that I think it would be good to be incorporated on the phone.
Problems - Technology	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	I think the biggest calls for service are the ones that are violent. And certain houses that you know are really bad, when you go there, you know they're bad. Okay. But I don't know if it would be good to know, well, this person who called is a battery victim, or-- you could always do a history on the location. But like I said, ease of access. Now I got to hit the menu, then I got to hit the address, then I got to do this.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	[RE: case reports] They are paper. They're on a computer. It's a rather archaic system that we have for storing our case reports. It's called CRIS. So we refer to it as the CRIS system. And it's not linked with other systems, so you have to-- if you want to get a copy of a case report, you have to log into another system to print it out. But we would at this system. No, we're not allowed. I know how to download it as a PDF, and I could easily throw it on my laptop and review it there, but we're not allowed to do that. So we just print out a paper copy, and then we just sit down and go through them, make our notes on them, and then just go meet people, and then just keep building our notes on the back of those reports.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	...say, we have a caseload of 15 open cases. We'd go meet with 15 people. That takes half a day going back and forth, meeting schedules, talking. Maybe you have to talk to a neighbor. Maybe you have to download video. Maybe kind of find out, "Oh, the offender left this way," and then we just backtrack down the alley and see who's got garage cameras. And now, we've got to meet that neighbor, ring their doorbell, set up a time to meet with them. All right? And then, we'll come back

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								later on and pull that video. That video is really hard to pull. The DVR is not working or was burned out, or the monitor doesn't work. So now, we have to go get our own monitor and hook it up. This is all above and beyond, way above and beyond [laughter] stuff.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	[RE: CAD] Well, we really didn't have one because we barely had cars that worked, and we barely had PDTs that worked. I would say, 70% of the time, we didn't have a PDT... Because we were trying to fight to get phones, to get [inaudible] on the phones because we heard that there's a free service. There's some organization that offers them for free, but your department has to authorize it. You can run plates and names through your phone, which I can't now. They gave me one of those now... Which is awesome, phenomenal. Because many times, we worked in a covert capacity. Many times, I was undercover in a regular Toyota Camry driving around being a police, and I need to run this guy's plate because I see some car pull up to a suspect we're watching and exchange something. And I need to run that plate, and can't do it.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	...I mean, I'd be wearing Indian clothes, walking up and down [Street], looking for people. And I'd have a radio-- what I would do is, I would hook up to my Bluetooth. And we had found a Bluetooth adapter that works with the department radios, so I'd hide the radio in my pocket. And then, I'd just have a Bluetooth on, like anybody else. And I'm just walking around looking like anybody... So we did whatever we had to do, and that was just our own-- we were spending our own money and doing our own thing.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	...They brought watches to us, smart watches to us, and we had to send those back because we didn't have any use for them. And the technology hadn't developed to the point where-- it was either you log into your PCAD and your computer, or you'd log into your smart watch, and then you can't log into the computer. And we can't give up the computer. We need that computer... We couldn't log into both at the same time. The company that was piloting it hadn't developed it to-- they could develop it, they said, but they hadn't developed at that point... So

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that was just a complete [inaudible]. I mean, that was putting us at disadvantage. So to rely on watches and not have that PDT-- you can't really do everything we need on the watches..
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	[RE: smart watches] ...You have to kind of look at your display. Ultimately, the display will dictate how you can use that technology - that's what I believe. Because that what you interact with, is that display. So based on the size of the display and what you can do with the display, you have limitations in what you can use it for. This display would be great if I needed to know, "This guy's got a warrant." Say, I run something. And say, I have a person who's wanted in front of me, and I run their name. The display should be like, "Are you clear to copy?" I literally have to turn my radio down and put the ear to my radio or step away from the person, who's probably wanted and is probably creating more distance to get away from me. And it would be like, "Yeah, he's wanted. Blah, blah, from out of this county, and he's got this warrant." And then, I walk by and like, "Sir, can you put your hand here?" Just dumb, you know? ...It'd be nice where is, "Ding. All right, got it." You now? ...That would be a good functionality for the watch, but they were trying to replace the entire PDT on the watch. That's not going to happen.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	I use cell phones, but the cell phone [inaudible] platform, it's got limited use. The other thing I'm afraid of is if they replace radio communications with a mobile communication-- you don't want too much communication. You don't want too much radio traffic. You don't want over-communication because that's just going to confuse everything. So right now, the way that we have the radios, it is pretty concise. You have to stand at a point, and you just communicate with [inaudible]. You get it out there, and that's it. So I'm afraid that people may begin to speak too much, if we have a mobile communication.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	Oh, man. The CADs, I mean, they're outdated, man. I mean, even the new PDTs, they're super outdated. If you want to pull back something you ran-- say, you ran a plate, and you want to go back and look at what you ran. You have to hit this button called Quick List, and then it gives you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								this list where you can barely tell where the hell it is. And you have to scroll, and then you have to hit it, this link, and then you got to look at it and be like, "Oh, that's not the one I wanted. Maybe it's three or four queries before that." And I hit that one and, "Is that the one?" It's [tough].
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	[RE: PCAD] ...I want to be able to get-- I think the visuals in a dynamic situation-- in an unfolding situation, the visuals, there's no replacement for that. A picture's worth a thousand words, literally. You can put it out there. You can see a Taurus, but if they see that Taurus, and they see it in their face, that's going to be awesome. If there's a possible offender we're looking for, a named offender that may be fleeing, and we know who it is, I would like to push that out. The officers can do that. They can go to data warehouse, and that's never going to happen. You're driving around. You can't do that. And you're moving, and the car's bumping, and the links are so tiny, you can barely get your finger on it. So I would like to be able to have SDSC where you can command some type of a data flow to the PDTs and be like, "Oh, this is the guy we're looking for." Just that easy... It'd be so much easier.
Problems - Technology	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] Yes. She just asked if we communicate with the MDT. And right now, they don't have digital dispatch.
Problems - Technology	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] So before they had the phones, the only tool they had was the radio. They couldn't run any checks on plates. They couldn't run checks on peoples' names, or perps. And now they can in the field.
Problems - Technology	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] Above ground and below ground really couldn't communicate, but he worked on getting it. It's UHF, right?
Problems - Technology	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...There was no communication between above ground and below ground, and people having to potentially either carry two radios or a really expensive dual-band radio that's just not justified.
Problems - Technology	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] Is it 100% perfect such as radio coverage is perfect anywhere? The truth is that it won't be anywhere because some buildings are just so thick. Maybe they're reinforced steel--
Problems -	LE	U	Not	46-55	Not	Male	LE-U-041	[S4] We have the tools now and, actually, we're fixing many of those

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			specified		specified			particular areas. So some of the other challenges on the cell phone side in the subway is it's not designed-- the contract is not designed for tunnel communication. So if you ride the subways, you'll say, "Oh, I'm connected. I can get cell phone and Wi-Fi while I'm in the station." Right? But the minute you start into a tunnel, it shuts off. And so there's really no guaranteed service for any smartphones in tunnel communication cross-river between-- while you're crossing under the river tubes for smartphones. But all our radio communication works through the tunnels, in the tunnels, and all the-
Problems - Technology	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] ...There's never enough radio time on a busy zone. It's nonstop. You'll see the dispatcher literally going nonstop with either-- whether she's typing - he or she - or speaking. And some zones we-- there's one zone, because we don't have enough radio frequencies. I mean, I don't know if you wanted to say that could possibly--
Problems - Technology	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...So someone's actually in [City]. They hit a cell tower in [City]. It goes to [City] 911. [City] 911 transferred it to us but we'd get nothing. No location. No phone number. No any information.
Problems - Technology	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...And there's such a disparity between the worlds of mission critical voice and the infrastructure and the types of devices that we use, and the simplicity of it. I mean, really, when you're out there and you're a cop and you're not doubled up, you need something that you can just click and know that you're going to get a voice on the other end of the line. Whereas the more advanced these get, the more I have to click in, the more I have to do this, the more I have to do that, and it's a challenge.
Problems - Technology	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[RE: EMS/Fire communicate with LE] [S3] ...But I guess it's not easy even to do that if you're pinned up against a wall, to turn the channel and go over our frequency. So I could see that being an issue, but I do feel that part of that is the training issue as well on their behalf. Just because they do have our frequency.
Problems - Technology	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[RE: GPS on every cop] [S3] ...He may be in a very bad-- and we need to get their location, and the dispatcher needs to get their location, and it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								still something that has to be said. The location needs to be said because we just can't see, "Oh. That radio transmitted. He's on [Street] and [Street]." Sure. I would--
Problems - Technology	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...GPS has its limitations in the subways, in the canyons, in certain aspects... What floor are they on, the Z coordinate? ... I mean, we can get close... I mean, we don't-- you can talk to fire about how they handle and dispatch the closest units. They don't really rely-- they have a decision dispatcher. Because technology is not perfect, it's really hard to-- you select this one, but it should have been that one...
Problems - Technology	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...And now we're in the world on conversion and-- whereas everything once it's digital, digitized and IP-based, we'll be able to kind of get the information that's accurate, more timely, and less delays and more accurate. But, again, also not ignoring the cybersecurity aspect of it as well. That's going to be a challenge.
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Well I think I personally don't use it but our patrol guys have mobile data terminals in their vehicles. [Name] might be able to speak more to how they function or work because I don't really know to be honest but I think yeah in our county we've had some issues with inoperability which I don't know if you're going to touch on but it's something that you know we have our law enforcement partners here in the [County] are on board with our getting a grant when a national grant when we switched over from UHF to 700 and some of our fire departments chose not to make that switch and so I think when I hear from a radio communication standpoint a lot is the inoperability issue...
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: radio interoperability] ...And it's something that always seems to be somewhat of a struggle I think primarily for the fire departments because they're kind of the ones that do not get it on the grant and now I think they find themselves in a place where they're saying well how come we don't have any inoperability and I think on the law enforcement side sometimes it's like well you guys had your chance. You guys can come on board it is a good system. It works well for us but I think they have had or have some concerns on how it would work for them not

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								having a full understanding of what their issues are with the functionality of that type of system for them. I probably couldn't speak to that...
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I think all in all the communication is a good system for us here. We do have some geographical challenges. We have parts of our county where we have no radio coverage at all and it's been that way for many, many years. We have started trying to work towards installing a repeater in the north end of the county. We're actually just in the process of that right now. We've met with the forest service, we've met with the radio tower owner and I think our goal is in the spring once the snow melts and we can get up there is to have it all installed and up and running by early summer.
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: talk with FFs on the radio] We can on a limited basis. I think as part of the grant the fire departments were provided with a couple of 700 radios for their command vehicles and maybe some portables. I don't quite remember. We do have a dedicated fire launch channel. I don't see it get used that often because I think it's primarily like the command vehicles will have the channel that the actual like EMS and fire don't have it so technically yes we can talk to them but I don't see it getting used very often. I hear a lot of gripes about interoperability but I don't always see the users use the interoperability that we do have.
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: video data storage quota] We are challenged and the retention period that we would like to have is not currently what we have and so that's always a challenge to make sure that that information is being archived correctly and deleted on a basis that is not rolling off the back. But allow that information to roll there's someone in the building here that's tasked with managing that, archiving everything that is of value that gets tasked by the individual officer's valuable, individual officer takes that information whether it's from the detention center, the recording systems down in the investigative interview rooms or from the officer's body cams or vehicles so the individuals are tasked with making sure that information gets moved into records management and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								then there's an overarching position that manages the retention and the archiving and the deletion of that information that is in someone's garage for 6 hours in the middle of the night when their camera didn't shut off.
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...Certainly for our body cam systems I think so far we've not run into a storage issue but we will at some point. It will get full but we've only had body cameras for about a year and a half or almost 2 years perhaps but you know as far as the video systems we have the surveillance systems in the building, we have the in car video and the body cam video and I think at some point you know it'll be maybe more difficult to manage...
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I know some agencies pay a lot of money for Cloud based storage. Whereas we do not as far as I know and I think so far we're finding that's really the best way to spend our money up front on the storage rather than over time. I know a lot of big agencies some of the companies that sell the body cameras you know they're all Cloud based and those agencies pay a lot of money for storage whereas we pay more on the front end for the camera itself and the storage but it's something I think it's pretty timely topic just because I think storage at some point will become more of an issue. I don't believe it's a huge issue right now for us but at some point it's got to be.
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: body cameras] ...I think for the most part I think it's been very valuable as a way to capture evidence in criminal cases and I think we've had one or two instances where you know a citizen made a complaint against an officer and we were able to review the video and either show that it didn't happen or show that it did and address the issue that needed to be addressed and so all in all I have not heard anything negative about it other than sometimes the at first the functionality of it and getting it up and running was I think fairly difficult for us to do and some of our staff really pulled their hair out over getting it to work properly but it was really on the manufacturer's side not on our side or our IT department side. It was more the instillation of the product and the lack of support from the vendor that sold us the product.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: body cameras] They did but it just didn't work. I don't think they knew how to make it work and the manufacturer didn't really help them until there was quite a bit of time that passed until we finally had to put their feet to the fire and say we're not going to pay you unless you get this up and running and so they did get it up and running but there was a lot of frustration but it's working well now and so that's good.
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: CAD and RMS integration] Sure and there's challenges there. Both of those systems are standalone systems are extremely expensive and so to replace one you're either going to have to build an EPI it'll seamlessly allow that to happen. The CAD also ties in with our mobiles and so officers can see notes that are being communicated via dispatch notes that they're taking those will pop like to a certain degree within the mobiles as well.
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: RMS access from MDT] They can access the RMS yeah. It's mostly a text driven system or they're inputting various pieces of information whether it's referencing photos that they've taken or recordings that they've handheld, voice recorders that they've used so all of that is difficult to do in a vehicle and I think most of their time is spent rolling as opposed to sitting staffing information so they can access it via the VPN technology that we have in the mobiles but it's of limited use. I think mostly your supervisory staff is accessing those records so that when they have a 15 minute break they can go they can review other officer's notes, approve those and keep the process flowing.
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: cell phone apps] ...There's a couple of them and I can't remember which one they decided was the most useful. As far as my cell phone goes very little of what I do on a day to day basis happens on here. I'm monitoring emails, my calendar is a big deal on here so when you need to go talk to somebody about something but I don't have any specific apps. I do have VPN technology available here but I find it challenging with such a small screen to manage or serve effectively without accidentally rebooting it or changing something. So I'm very limited this is mostly notification (00:31:31) device for me to monitor. I don't even like

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								sending emails from me because they're terse and quick and to the point and so I prefer to keep this device most of the time.
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: technology getting in the way] Probably daily. I'm trying to think I mean aside from the radio not working, limited self-service in certain areas of our county we do have a lot of we have fairly good cell service up here but because of the geography of the county there's places where you don't have cell service. I think one of the big problems of our radio system in this building particularly and the need for technology which I think we did explore a little bit but the cost kind of prohibited was in this building our deputies cannot receive or get out on their radios in certain areas.
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I think it's because of the construction of the building. If you walk down the hall here with our command stuff you'll see everybody's radio sitting on the window sill because that's the only place it'll be able to link up with the system so we have explored I can't remember the name of the what it is but some type of repeater for in the building so if typically if our one of our deputies is in their office or back in the room where they write reports you'll hear dispatch calling them and they can't hear it because they're kind of towards the innards of the building and so I don't remember the name of what it was but I think we did get a bid or a quote to have it installed and it was like a hundred thousand dollars or \$90,000 and we're like oh I guess we're not getting it.
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: place radios on the window to get coverage] Yeah but that would certainly be just from a safety standpoint and a communication standpoint of the deputies can't get out or hear things going on on the radios because we often times have a dispatcher come walking down the hall saying where is so and so and they're like oh they're in the back writing a report and they can't get a hold of them so that's a challenge.
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...You know with so many different software packages we're constantly updating and maintaining these devices. I'm monitoring an email thread right now between one of my guys and the [Job title]. We're installing new anti-virus software and monitoring firewalls rules and so to do that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								on 37 different servers and 320 computers is invasive. We bump into things that get blocked. Like I say we're using multiple security protocols at different levels in our network and there's always somebody bumping into something...
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...so for us it's always a balance of security, functionality and usability and those three have to balance. And so the usability portion of it is something that we often don't see. We're not in these applications on a day to day basis and so we cause a lot of havoc along the way and I think it is a daily occurrence. Technology is constantly changing as you well know and you guys are in a laboratory looking at technology on a daily basis and trying to figure out how to secure it, how to use it, how to make it better and so yes, I think it's a common occurrence and I don't think that that will get any better along the way. I just think it takes teamwork to make stuff work effectively.
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	We certainly didn't I think I remember we had maybe one video camera and it was like a camcorder and you lashed it to your dashboard and you pushed the button. It was a handheld type of thing and I think I remember people didn't like it. Officers didn't like it because it recorded them doing stuff they shouldn't be doing or saying things they shouldn't be saying and so I think that's just a sign of the times but I mean yeah I don't want to sound like my grandpa or anything but it has changed a lot since we all started I'm sure.
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Another one of the challenges that we see with communication one is the diversity of channels that you have. You can send somebody a text, you can FaceTime them, you can send them an email, you can leave them a voicemail on this phone, that phone and the other phone and so often times just a lack of clarity of how best to communicate. You know you can send me a ticket and I'll most send something but if you leave me a voicemail on my desk phone I may not find it for four or five hours...
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	So the different channels and how quickly the latest flavor of communication arises sometimes somebody says hey, you know send

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								me a Marco Polo. I don't use that anymore so it's just diversity of technology that you can use to reach out to someone sometimes causes confusion and delays in communication.
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	From my perspective... One of the challenges that we see not just in this environment we have approximately not quite 30 different organization units within the county from the coroner to the road and bridge to the weeds department. Obviously the Sheriff and some of the more well-known ones but you have so many different silos of information and communications that it is often difficult to consolidate that. A lot of these systems don't talk to each other, they weren't designed to and they have no way to interface and so a move towards a more integrated or consolidated technology in my mind for me you know my email is kind of my lifeline...
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	... I probably receive close to a hundred notifications a day from various systems whether they're an alert or just hey, this backup ran and we're good to go and so I try to consolidate as much of these different communications across my platforms as possible and of course that that takes three separate applications or systems just to get the information to the point where I can go and look at that and see it in a single painted glass or three panes of glass actually but I think that the integration and consolidation of information across systems for me is critical in my day to day business operations.
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Not necessarily from my perspective. There's so many things available right now. I mean if I had an unlimited budget I could pretty much solve any problem that I currently face. There's new problems everyday coming down the pipe. A lot of those are created by new technology. Implementation is something new creates new issues and challenges to be solved and so as far as my main concerns really with our environment here as a whole I'm more on the infrastructure side. I care about how big the pipes are, I care about the communications of the systems between the different facilities...
Problems -	LE	R	Not	46-55	Not	Male	LE-R-042	... if [name] comes to me five years from now with his list it's going to be

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			specified		specified			totally different than what's available today, the capabilities and the ease of use, the interfaces that they have the ability. You know we see a lot of head's up displays in certain applications. We'll see high in military and stuff like that. I'm sure someday that officers will have the ability to broadcast information from their vehicle upon the dash so that they're head's up and they don't have to be looking down at their mobile touching media buttons. It's all visible and they're not worried about endangering citizens as they access all this information coming at them so it's all coming, it's all there. It'll be here before we know it.
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	As far as the human interaction right the hardware interaction often times what we found as we implement these systems and we'll talk more about this probably this afternoon and if I'm here at three but in a lot of the systems that came into this building initially they were touch screen and they were designed to easily manage and we found out that longevity and the robustness of these systems is severely lacking so a lot of these touch screen devices are gone now and the touch screen devices that were deemed to be critical and valuable have a very short refreshed life...
Problems - Technology	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: touchscreens] ... and so as these new technologies come into the work force. I think that some environments 24/7 operations 365 they're always being used they're just not robust enough for some of the environments that we have here in county to put a computer out in the recycle center out on the floor. It has a short life span and so the robustness of the technology I think is something that often fails us and we're challenged to keep it functioning properly even though it's super cool sometimes it just doesn't work in that environment so it would be nice to see some of these technologies the organic technologies and different things that are coming out of these research labs to be designed to be robust and usable instead of fragile and cool.
Problems - Technology	LE	R	Other Public Safety	36-45	6-10	Male	LE-R-043	[RE: cause of communication issues] ...sometimes you tell people too much information than they need, sometimes you don't tell them enough, sometimes you don't tell the right people the right things,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					sometimes you tell the wrong people the right things, sometimes you have communication technology that doesn't work. I mean it's computer, it's technology, it's electronics right? They don't always do what we want them to do. You know software has bugs. It breaks and so you have problems with software, you have problems with equipment, you have problems with any of it yeah it's just the cost of doing business. It's kind of the good cliché for that.
Problems - Technology	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	[RE: technology getting in the way] Absolutely. That's I mean you know even things that aren't not oh that's good English even things that are not what would be considered technology at least modern technology right they still have bugs and flaws. Things break it's just the way the world works you know so yeah there's been times when technology hasn't worked the way we wanted it to. We adapted and dealt and moved on.
Problems - Technology	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Yeah, yeah there's no reason to get caught you know dwelling on the past of what occurred and what didn't work you know. Yeah at some point my GIS software crashed. I had no idea why it just did and of course I didn't save the work I was doing so I lost all my work right that sucked. Other times my radio wouldn't properly get tuned to the right channel for whatever reason. I turned it off, turned it back on all of a sudden it worked right? Maybe there was a knob that was loose or who knows.
Problems - Technology	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	... I mean I'm more aware of the fact that I have smartphone and somebody knows a lot of stuff about me. At the same time I don't want to try and think of what other you know like Google Glass right like or you know like things where they're implementing electronics into you because then I kind of get paranoid about the fact that yeah they could use it to control you or who knows what. I mean even the phone right I mean the whole election they used advertising to try and manipulate people into how they were thinking or feeling based on what ads they were already looking at, what new sites they were already looking at so using an algorithm to say okay look at this and people could make their

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								site so that it would hit those algorithms so they knew that people had looked at this but also look at this which would help recourse that so technology is kind of scary that way and I guess I don't know I don't know if there is something pie in the sky that I think that would be super awesome great.
Problems - Technology	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Right from where you're from right and one of the instructors was from Baltimore and he was talking about how you know after 9/11 they bought their 700 megahertz radio system and everybody was on the same radio system but they still can't talk to one another and it's one of those things where even if you get technology the next part is teaching people how to use the technology and so you can have pie in the sky technology dreams but then you got to teach people got to be willing to learn it and be willing to you know they don't. It's just like okay I'm on my channel I don't want to learn how to move to different channels and do other things. It's like I just want what you know so it's tough, it's frustrating and that's where that inoperability breaks down because nobody wants to learn how to turn their radio to different channels.
Problems - Technology	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Right yeah. There's a lot and it's really getting tough with the technology, with the internet right because you're afraid the internet has taught us that you can't really be honest anymore because people then can use the internet to take whatever you said honestly and turn it against you. It's really tough and frustrating and so you don't know any more that's not work that's just life right? You don't know who to trust or what you say to who or where it's going to go and how big it's going to get... I got this like thing that follows me around and Uber can find me. Yeah well guess what you know everything you put on it's like you put a thing on Facebook I don't care how tight your privacy rules are someone is going to find something and somebody that you don't like you know is going to potentially share that information screenshot it you know Snapchat right deletes in 30 seconds. Oh gee screenshot now I have this you know thing you sent to me or this photo you sent to me and now I can blast it all over the internet.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	... You can have all the technology you want but it's garbage in garbage out 1980's you know the technology can only do what you tell it to do.
Problems - Technology	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	...There's a loss of creativity in technology. Shouldn't say a loss-- there's a change in creativity you know, which will be interesting if we do-- like if some day like the Aztecs and we all collapse as a civilization and we're left to our own devices what we could do.
Problems - Technology	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	... Once a company decides not to make them anymore and nobody supports the technology so yeah I don't know. It's the hard thing about the living in the society we live in. (00:43:00) You kind of get stuck with whatever you know people create and people embrace. People embrace Google Glass and it did become a thing.
Problems - Technology	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	... the same with like the MDT's you know when we have issues or when we were running everything over the air when we do the warrants checks over the air that takes longer than me typing into the computer.
Problems - Technology	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	the biggest update that we've had and then from there you know our radios so we use unfortunately a UHF repeater system. We have no encryption available to us so all of our communication is unsecured... Some UHF radios that have the ability to do encryption now dot repeated so it's only local traffic and so when we have a tactical element that we know like if we have a drug buyer take down or something like that then we'll just use those but it's not nothing's getting back to dispatch so and we're on a different radio and it's clumsy and it's like okay well what radio and I'm talking on and so it's not great but it's all we have.
Problems - Technology	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	[RE: personal cell phones] Yeah and we just spend a lot of time calling each other because we don't have any encrypted communication so everything that we hear I mean literally will stop people as you're checking out you'll hear dispatch and their scanner in their vehicle talking. You know you hear the same thing you hear coming from the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								vehicle and I mean they hear everything we hear and they see everything we see and so it's and so from a tactical advantage standpoint we lose a lot of that surprise on what we've got going on.
Problems - Technology	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	[RE: records management software]...What we don't end up seeing are some of the individual maybe like investigation notes, thoughts, comments stuff like that and so then from our vehicles the way that that interacts is we can see basic information. They just added where we can now see photos, booking photos so we can actually look and see like hey, here's that guy whatever so we're just now starting to see some of that come through, we can't type reports from a vehicle which would be really nice...
Problems - Technology	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	[RE: technology getting in the way] We have some mobile repeaters and some other devices that we use because our county extends up into the mountains and so when we have search and rescue and stuff like that communication is very limited and so some of that stuff hasn't been deployed because I think there's a lack of confidence around how to properly operate it... We have had issues with CAD not necessarily working correctly or not getting us the data
Problems - Technology	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	...When we have a pursuit or something go over the hill or across county lines 8 counties on 700 or 800 (00:43:03) megahertz so we go to valley on call which works sometimes, doesn't work other times,
Problems - Technology	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	It's a love/hate relationship. So the technology is cumbersome and I think when you talk about the design of them I don't know that a lot of thought was put into the end user result so for example our body cameras have a red flashing light on them when they're activated so if you're in the middle of a dark area in a critical incident right hey shoot at the red light so you know we have to just take a little piece of tape and put a little piece of black tape over it you know it's not a big deal but there's just some things like that. The storage or the data has presented a real problem for a small agency like ours so we have data retention policies on how long we have to keep stuff and there are some privacy issues around that. We cannot delete anything.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] .... I usually use an earpiece with my radio but there's no way to put an earpiece into my radio without having the actual handheld walkie talkie so I'm without it and I'm having to kind of wing out but as far as civilians with cell phones they had them for a while. I mean when I came on they already had them so it's nothing that I really had to adapt to.
Problems - Technology	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] Well I'm surprised right now they still have a signal. I mean we have problems going into buildings and even in our police department in our station we won't get a signal. It comes to structure buildings like 2-way radios are always going to have problems in a structure building based on concrete, lead, steel, it's going to have its problems understandable but how far can we get out of town?
Problems - Technology	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Once we get to [Street] out east of town our handhelds once you hold it at the right angle it's pretty much non-existence.
Problems - Technology	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[RE: radio antenna] [S3] Also if I just touch this thing my bars go from three to zero.
Problems - Technology	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] They got new ones but they were hooked with GPS which made it absolutely horrible so I had to go back to a normal one because that was one of those if you (INAUDIBLE 00:15:37) it was not operational at all and I think I was the only one that actually had to try out the GPS at the handheld (INAUDIBLE 00:15:45) but they put the GPS in our car it does a data send every 15 seconds, every 30 seconds so for example where you see something that's really bad right and you need to call out you better hope you're not in that second window you go to hit the button and it's not coming out it's just sending data, receiving data and it's a good 5 second loss.
Problems - Technology	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[RE: radio] ...but if you can't get to an emergency button and this thing has a call receive data message that's an extra five seconds that you got to wait and try to get out on top of if there's other radio traffic out there because there is no overlap it's all digital so when it was analog we could over [INAUDIBLE] people, we could step on people especially with emergency stuff but now that it's all digital it's only the person that's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								talking nobody can overshoot.
Problems - Technology	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] They have talks about getting new radios in our cars. The GPS that they put actually in our vehicles it wires directly to the back end of the radios so that it sends and transmits radio signal that says where they are right now. Well half the time mine says failed so it doesn't actually send a GPS signal. It'll say sending data but then it'll say failed and then that'll be it.
Problems - Technology	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Yeah absolutely. There's been times like you said you know whether we get into a fight that I remember one particular time I got into a pursuit I went to key up and it was sending that data and it all does is it sets a big long pause and just a long tone that's all it does and then you know you get into fights and stuff. There was one guy his emergency button didn't work and it's a little yellow button on your microphone and he was hitting it and he was in a fight but it wasn't going off and people were still talking over him so it's always something.
Problems - Technology	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] ... we adapted to adjusting to the fact that well our radios aren't going to work so we're going to have to do this on our own so and there's times where that does happen and that's pretty sad that as a law enforcement agency where we're supposed to have people that can help us that we have to use the fact that we adjust to well I guess I'm on my own here.
Problems - Technology	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[RE: using personal cell phones] [S3] The only issues I've well aside from the data issue that would probably be the only thing. [Organization] has never gone down for us. [Organization] that one goes down quite a bit and that's a very important program that we have. It really hampers us to have that program go down because that's what we use when we're running our running tags and stuff like that and driver's license and all that stuff. Without that website or program that we use we have nothing to go by.
Problems - Technology	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] ... If we could run our own tags not to have to ask dispatch because if we see a tag that's not issued then we'll call it in it'll take up to 10, 15,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								20 minutes to return you know (INAUDIBLE 00:30:45-00:30:50) on the computer.
Problems - Technology	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] .... Comfort is a bad thing because it's a one size fits none type headset. I got a big head. I don't my Taser one was uncomfortable and it wasn't adjustable at all but as far as the quality goes when it worked awesome. The battery life was really short for the most part. You'll see all the ones that have their body cams when they turn them on before their shift is done they've already had to timestamp their body cam out of service so battery issue is a big thing. The video quality is usually really good. Getting it to actually turn on there was a couple of problems but that might just be due to normal wear and tear.
Problems - Technology	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[RE: body cam videos] [S2] ... it can add quite a bit of time because for the most part the upload time is the real time. It's like minute for minute type thing almost maybe 50% or 40% faster so if you have I think the longest recording I have was probably about 3 hours which it breaks it up into thirty minute intervals but it took almost 2 ½ or 3 hours for that one video to upload then I had 10 other ones that I had to upload so the upload speed is absolutely horrible
Problems - Technology	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[RE: large video size on average 10megabytes] [S2] And that's probably the short end exactly and that's the one thing and that's why not everybody has a body cam. We can't afford the server and the upkeep on them.
Problems - Technology	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] Well that's we are the main people that use them. I haven't seen a patrol officer or a traffic officer wear a body cam probably within the last four or five months. I think they're actually having problems connecting wise with the body cams and everything that's going on uploading to the server of too much space issues so most frequently we have not been wearing them as much. I don't personally have one. I'm okay with that. They're kind of a pain.
Problems - Technology	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] And it's mainly don't catch me lying but we don't have the filler space available for those videos because we record everything.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	Q: Okay which is why the data issue is a big one? [S3] Yes. I've had to upgrade twice.
Problems - Technology	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] We have certain things that we try to do to avoid having to do that as far as if we know the radios are not doing very well because sometimes it's a day to day thing and sometimes they're perfect sometimes they're not. Sometimes the power is working sometimes the power needs to be worked on.
Problems - Technology	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] As far as social media goes it's got it's positives and negatives. I mean we've lost over a hundred officers due to social media in the last couple of years.
Problems - Technology	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	Yeah generally I'd say you know like anything there are lots of places especially in our county where stuff drops out that's a problem but we all know that, we all know that we can adjust to that. Sometimes we use a cell phone that's not real common. We don't find we need it a whole lot but sometimes if I'm in an area and my radio is not working then I know that sometimes I'll have a cell signal and I can make a call with my cell phone but that is an issue. There are a lot of places especially in our county that are remote where we just don't get a signal so that's a problem.
Problems - Technology	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	[RE: comms with other disciplines] We really don't. It's very difficult for us to communicate with fire. They've got radios and we've got radios but they don't really talk very well together and so I know we can we just don't really.
Problems - Technology	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	... we're in some kind of a remote location and sometimes you know we don't get cell service either. I mean we do have a co-op up here, a telephone co-op and that's been so much better now but it's not perfect either and so we've got some areas too where it's a little more difficult even with a cell signal.
Problems - Technology	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	[RE: current state of radios] Well they're fine ma'am. They're just fine. They're not the newest or the greatest probably but they work just fine for us other than where we don't get you know coverage where they just

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								don't work but I imagine that's everything right it's we've got a lot of remote locations up here so but otherwise yeah I think they work just fine.
Problems - Technology	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	[RE: technology getting in the way] Well they aren't always real comfortable right. We got this microphone here and you got the cord and it kind of wraps around and you got the radio and it's a little bulky sometimes but you know that's part of being an officer here right it's that's what we need to communicate, that's what we need to do our jobs and so I think I don't know we're just very used to it.
Problems - Technology	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	We already talked about the fact that the radios don't work everywhere that's the biggest problem really. We use the radio all the time that's what we're using to communicate and so when that doesn't work then we got to find something else that works and maybe that's a cell phone but then if that cell phone doesn't work then we're out of luck then we got to drive someplace else until we get a signal or the radio works so that can be complicated there so I would say that's our biggest problem.
Problems - Technology	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	And we have a lot of places in the county especially the eastern end of the county or the northeastern side of the county where phones don't work you know of course it depends on who your carrier is. I went to Verizon because it picked up better down there and I don't know if Verizon changed or what but my phone started dropping calls all the time so I went back to AT&T which actually picked up better than Verizon did but Verizon traditionally was a better connection down here and so a lot of times when your phone don't all you have is a radio.
Problems - Technology	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	...They didn't have battery backups in the radios so if the power went out if they went to the we have a generator here we have a natural gas power generator and so it run a wing but whenever it would cchange over once a month to check the thing the radios would go out because everything's computer based. They had no battery backups so it would take 10 to 15 minutes for radios to come back up. If anything happened during that time it was just tough. (00:25:33) No it didn't work and so I actually went and bought battery backups for everything so now when

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the power goes out or if the generator kicks on you operate through it because you know when you have severe weather and stuff that's not time you need the radio going out so we fixed that issue. A lot of the cars have 45 watt radios and for something this size and especially the topography of [County] 45 watt radios just don't get it...
Problems - Technology	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	There's a lot of areas where I don't have coverage. Specific areas in the county especially where the topography is, is bad. The main corridor around [Street] we have pretty good coverage because it kind of runs up and down from where we're at. You get further south or further north it's kind of bad coverage.
Problems - Technology	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	... And we also got a second one to download our cameras because it's really hard to upload cameras but the problem was they would back the upload and download speeds after a certain amount of data we used. Theoretically law enforcement is not supposed to be thrown but for some reason with ours with these two they did and we're going through about 120, 130 gigabytes a month on video for the one and the other one is after two or three days of use they got so (00:33:57) slow that the DSL was faster so it would be a good solution for us right here had they not fought it back but so instead we're going with the 100 megabyte pipe, we're going to go to IP phones and all that kind of stuff. Now we also have a 100 megabyte switches in there.
Problems - Technology	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	[RE: personal cell phone with Google number] ... The problem with Google if you don't have cell phone reception and you don't have LTE or anything like that this is incredibly slow but you try to separate that out and you're limited on the technology you have and you also don't want to expose your personal and private life in a court system as far as your technology goes you know so I'm trying to do something nice and let somebody use my phone to call their mom and now you're subpoenaing my records on my personal cell and my email to my wife and text and stuff.
Problems - Technology	LE	R	Supervising Field	36-45	21-30	Male	LE-R-048	[RE: body cams]... Some of the issues I saw with that is when somebody runs or you start fighting with somebody the camera comes off and you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					can't see anything. It does give you a far superior evidentiary video as far as what you saw when you saw it. When things get physical that's the drawback from it.
Problems - Technology	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	... we're looking at we had a tag reader for part of the time this year and along with a tag reader I had some issues with some of the software the tag reader and the one we got the tag reader will log down every single individual's GPS location and tag number. I don't like that. I think that's a little big brother and you're starting to impeach a little bit on people's privacy as far as one who had not committed a crime so when we got the tag reader I specifically asked for that not to be enabled because I don't want that information because I don't want to be sued over that information.
Problems - Technology	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	[RE: call playback in dispatch center] ... One thing we have here is our playback doesn't work exactly right because the way our network is setup once we switch it over they'll actually be able to playback the call because we have the capability we just don't have the technology support and infrastructure to really do it in a timely manner but you can go back and listen to the last 10 seconds of the call but our system is so slow because of the switches and stuff it doesn't work very well but when we get our new system in it will so now it's not as important and once that gets in place and being able to write everything down because you can say (01:18:59) what did he say?
Problems - Technology	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	... We did a missing person scenario down towards [County] in the national forest and nobody's radio worked.
Problems - Technology	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	Where we run into issues largely inside structures we have a lot of old buildings on campus and a lot of thick concrete walls. In some cases because of the type of researches being done they're level line walls or others so you get down into the bowels of some of these buildings and you lose radio reception. Nothing you can do about that unless you're going to install repeaters but for the most part I know I've got radio reception at our farthest building which is a mile off campus that's not

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								an issue.
Problems - Technology	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	[RE: Unmanned Aircraft Systems (UAS)] ...I don't truly see police officers utilizing the technology in the near future. I don't see our department utilizing it. We are too densely populated. We are so heavily treed we have such a thick tree canopy that the potential for a drone to strike an off school and fall on someone is just too great right now. I don't trust that the technology the off school avoidance and the redundancy and the lift and mechanisms are to a point where it's safe to operate above people. It's not legal to operate above people right now. The FAA hasn't authorized it so we're not there yet. Will we ever be? Maybe I don't see it in our foreseeable future...
Problems - Technology	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] The way it would work is the LPR behind the computer would tell [State] Communications then [state name] Communications would contact [County] County Coummunications. [County] County Communications would then put it out over our radio so there's such a big delay with the app with the guy that's sitting at the LPR computer takes the picture sends it out to 185 people right away.
Problems - Technology	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[RE: radio coverage] [S4] Down in the country a little bit of issues in the far end because it gets hilly because the whole west side of our county is the Chattahoochee River and it gets kind of hilly especially towards the south end of the county there's several dead areas but you can walk 20 or 30 feet and get it.
Problems - Technology	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S2] I think sometimes it can be detrimental in terms of traditional policing methods you know like you know some of the newer officers aren't as good as say maybe him you know just being on the street and knowing what to look for because there's such an overwhelming amount of information that directs you now. You almost don't even need the old methods anymore you know. Too much technology.
Problems - Technology	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[RE: radio chatter] [S4] Any kind of communication discipline even on the apps. Some people get out of hand with in turns into chitter chatter... Because every time a message sends a 185 cell phones ring and since

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we've been here there's been 50 so 50 times 185 that's a lot of chatter.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	[RE: communications to city and/or county] Oh absolutely yeah I mean you're just going to have a longer time if it has to go through their call center and I know both of them have issues with putting people on hold and things like that and then it gets to us and then they have to dispatch it to us. I can't speak to statistics but I know for sure it's going to be slowed down.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	Yeah, yeah I mean yeah certainly keying up with the radio. We do have some going into this digital system and it being a digital system that wasn't designed specifically for us we do have some issues with communications in buildings and certain places where you can't get out and I think eventually they're going to try and remedy that with repeaters you know repeaters in strategic areas so sometimes if you have that situation you have to just tell radio with it being an area where I can't transmit.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	There's coverage issues for the portables.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	[RE: MDTs and CAD] ...our system is obviously just ours. So we can message within ourselves, but it's not the same as DeKalb's, it's not the same as Atlanta's, so our MDT is sort of our MDT. It works amongst ourselves but it doesn't work outside that. We also don't have-- we have an NCIC terminal but we don't have them on the MDTs. So we can't run tags, we can't run individuals-- you have to do that over the radio and dispatch does that. So that I think a lot of officers who come here get kind of dismayed by that because it's not new technology. I mean they've been doing it for 40 years but it has to do with licensing and kind of old attitudes, campus policing attitudes, we're not going to ride around running tags, we're not going to be running people, but I think there's also just some technological issues that have to do with licensing because we exist in this world where... we're part of campus services. That's who we answer to in the structure. The name alone implies services.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	[RE: body cam] Storage is the primary issue and right now our issue is and again it comes back to our there are these big banks we have them where you can plug them in charge them and have them download. Well there's interoperability issues with getting them on our network
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	You need a password to get into your post records, you need a password we've just implemented another technology power DMS which is a document management system so it's where you put it's basically instead of when you do policy updates or training updates having people sign for them. You put them in there, they login and they electronically sign for them and so that is a new username and a new password and it's a great step forward for us because it's a much better way to maintain your policy manual and stuff and for us it's sort of a leap forward but it's yet another password so yeah you definitely hear people complain about you know I got to keep track of all of these passwords and they use weak passwords because they don't want to forget them or their passwords are on sticky notes like here are my passwords on a sticky note next to the computer but yeah that would be something that bothers people.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	...In the past we had issues with that where it would go down a lot at night [records management system] where every Sunday it would kick off for maintenance because it's not designed again for 24/7 operation. We complained loudly about that and they heard us and a lot of those issues have been resolved where you can access the remote every time and it works and it has not been such a problem but that's where technology has gotten in the way where you get in the car and the wireless card's not working where you get in the car and the remote desktop's down and then you just have a laptop that you can like play a DVD on and what good is that to anybody. That's a hindrance too. It's a distraction.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	... So it's hard to--and our radio system, it's hard to hurry up some emergency when you're flipping through the different zones, through the different regions to find the state police's radio number. So it sometimes

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it takes a--in an emergency, yeah, it's, unless they're monitoring our radio, they're not going to hear it.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	... Because it--there are places in the [County] where the radios still don't work. If they do work, it's hard to get out on them, or they can't hear. There are places in the [County] where cell phones won't work. Or the computers won't work. So you have to have all three of these nowadays. It's hard in our job to limit one and expect it to be 100% successful in any operation.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	[RE: cellular coverage]... It covers everything that we want, however, there are places once you get into it, your signal drops to one bar, you have no Wi-Fi, you have no four light, you're back to the stone age. A Dixie cup with a string is more effective at that point. And our, my file [phonetic] on the computers is a Verizon. So the same problems that you're having with your phone, you're going to have with your computer. So that's when your radio really kicks in and is helpful. But we have several failed safe, so if the radio's having an issue, we have a repeater that we can go to back to our regular channel, just using a regular repeater, 700 Mhz.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	It gives them what you call AVL, automatic vehicle locator that is allowing us to see where they're at. When the computer drops or they have a service go down temporarily, or they're doing an update and you have to sign out for at least, sometimes an hour, you're in panic mode. Like man, where's this deputy, where is he at? I can't see you. Where... it drives you batty. And I never thought it'd be that way, because you always worried about somebody tracking you, big brother watching you. But now, as a supervisor aspect, I couldn't see doing this job without the technology. Without the ability to see where everybody is at.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	It's adequate. If it could be better, yes, because I know there's certain other bands out there we've tested several other ones. It's just for what we have now it's doing the job, but there's, I know there's better technology. I would like to see us go to that direction, but again due to budget restraints and stuff like that we have to follow and prioritize

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								where we're going to spend our money. And right now because our system is doing its job, it's not something we want to spend that money on at this time?
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	Yes. The hardest part it become... two ways that has hindered our job is, not hindrance, but like say interference. When I'm driving to a hot call, I find myself looking at my screen because the dispatchers as they're typing it, is feeding across our screen. So I'm responding to a hot call, and I'm looking, and I even type in--trying to respond to their message, then you're trying to send information to them, so you find yourself focused where you should be focused on something else. And to the technology, it works even for bad guys. We've been on calls where the bad guy has that friend on the outside videoing a live feed and he's watching it on Facebook live feed. And we've had SWAT call outs or a shoot in where we're trying to do stuff and you have people videotaping, showing and sort of the bad guy is on the inside watching what's going on on the outside. Technology's great but it's also, it can hinder our security and our operations.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	Hurricane, what we experienced in Hurricane Katrina was catastrophic phone failure. There were no phones. We even talked on the radio or we had to meet up face to face because most of the towers here from Hurricane Katrina were destroyed. They looked like pretzels, there was no communications. They brought in some satellite trucks to help, and I think at that time it was Nextel. Nextel was the only one that was really still working, and we could only basically use push to talk. It will push to talk feature. That was it. And they helped that only because we had use of the satellite trucks. But other than that until they were restored, communication was poor. Even with the radios because again at some [County], part of the [County], because back then we were just getting the new radios so we still had bad reception areas. So there were times when you were literally by yourself. You were cut off for lack of better terminology.
Problems -	LE	R	Supervising	36-45	21-30	Male	LE-R-053	Social media on both hands whether it's the fire service or the police

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Field Responder					service, it's a great tool. But it can be a tool that can hurt you. I believe especially, especially an emergency, emergency work, police work and fire department work, that social media as far as us is public service should be a one way direction. We should only be sending information out. We should be informing the public of what they need to know, in other words we shouldn't be commenting on other people's posts. We shouldn't be allowing people to comment on our posts.
Problems - Technology	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	...Nowadays when you go to a restaurant, rather than seeing face to face conversation, everybody is on their phone texting. So I do believe that in some technology has hurt us. It has helped us along the way, but it has hurt us a good bit as far as that face to face communication and being more isolated. Rather before a police officer would get out there on the street and talk to somebody and develop information. I can remember walking down the street as a detective, canvassing and talking. Now they're on their phones, on their computers in there, searching somebody's bank records, searching their phone records, they're going through all of--it puts them in a bubble. It puts the police office in a bubble where no longer does he have to get out there and interact with the community.
Problems - Technology	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Correct. Yes, yes, we had an accident not too long--a couple of weeks ago where an officer totaled his car. Actually it wasn't the officer's fault but the lady pulled out in front of him, but yes, he was clicking on his computer saying he was in route to the complaint. And I believe that if like in the olden days if that would have been me driving, I don't have no computer, I could have seen the lady pull out in front of me and use the training that we get if emergency vehicles operations and he had been able to avoid the crash. So yes, I do believe that it has hindered us in that, is taking the officer's eyes off of the road for that.
Problems - Technology	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Well, in the police service, I mean as far as here we're more modernized, okay. One of the issues that we see is that the equipment that's being issued is not rugged enough. I mean remember that as police officers were out there in the sun, we're out there in the freezing cold, in the rain,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they're getting in and out of their police units so they equipment needs to be more rugged. It needs to be more for the last couple of years we've had Panasonic notebooks and they--we had a lot of trouble with them just recently we went with Dell Toughbooks and they seem to be working really well out in the field. They are much more rugged, they're more durable. The processors work a whole lot faster. So once again, improving the technology as far as ruggedness exactly, may not think that that's where we need to be, that's where we need to focus our efforts on is--I mean because it does you no good to have the computer or the radio on your side and when you go to use it, it doesn't function. Or you're in the middle of a rainstorm, and a tree falls on the people's house and you're trying to get them out, you're trying to rescue them, and your radio doesn't work because it got wet. It needs to be able to function in any type of environments.
Problems - Technology	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	Not so good. The radio coverage on a 700, when you get into a building, it probably drops out on you. We have areas of the [County] that, the terrain, because of iron ore or nickel in the minerals in the makeup of the soil, block a lot of the communications. I'd say the cell phone coverage is probably as good as our 700 coverage from our repeaters, but again, most of our official communication goes over the radio, and we've got some really bad areas in the [County]. We have a nuclear power plant rubber band that was built here by Entergy [phonetic] probably 30-some odd years ago, and they had to locate their wireless siren [phonetic] system around the [County] within a 10-mile EPZ, and I think that's a map over there. Well, Entergy paid, at that time, I think Motorola may have done the propagation study of the [County], so they have a good map of the [County] where things work, radios work and do not work, because their alert system is based on radio signals, but our radio system leaves a lot to be desired.
Problems - Technology	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	Coverage issues, and the 700s, like I say, you get in a building, they just don't want to work.
Problems -	LE	R	Field	Over 65	11-20	Male	LE-R-054	[RE: getting information from dispatch] The technology as far as hearing

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					the radio, that's kind of a--probably, I'd say 80 percent of the time, is pretty good, when you get dispatched, and when you start to lose that is once you get to the scene of the location, and depending on the obstructions and type of building, then you start to lose that communication. Now, on the other end of the dispatch, you've got the human element that it's only as good as the information that the dispatcher gathers and relays to you.
Problems - Technology	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	[RE: comm with other jurisdictions/agencies] That could improve. We've had some issues in the past that not all the surrounding agencies were on the 700 initially, and now that they've gone to it, we kind of have a lag between the time they need our assistance, if something is coming towards our direction, and getting everything patched together to where we can talk directly to their officers, and when their officer that's in pursuit at 100 miles an hour needs us to be at a certain point in our [County], then by the time he calls his dispatcher, which distracts him driving like that, contacts the dispatcher over here, they in turn contact us, and it's kind of--it's kind of like one of those little drills where somebody passes a message among 15 people, and what the message is at the other end may be a little different than what it originated as, so yeah, there's some difficulty there.
Problems - Technology	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	[RE: current state of technology] I'd say it's--for a rural area and the limited resources and so forth, that it's adequate, but it's like anything else, it could be better.
Problems - Technology	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	Yes. We used to have in-car dash cameras that, for some reason, they've gone away, that again, I made a comment about the bleeding edge and the cutting edge of a sword. Well, at the time, the people making the decision what cameras we purchased, they wanted the latest greatest, and I think they got them on a grant, but I don't think they were quite ready as far as the use of the camera and what it did for us as officers and stuff, we felt like we were better protected personally with the cameras, and all our actions were more--you know, we could justify a lot of our actions, because they were live on film, and the shortfall of that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								was, at the time, the cameras they bought only had, like, I think a 2 meg storage card on it, which would do four hours' worth of data and that was it.
Problems - Technology	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	[RE: what causes comm probs] Both. Again, the reliability, the radios dropping our mid-conversation. I'm surprised I'm not deaf, because sometimes you get the dispatcher's soft, sweet voice, and then the deputy over here answers with his big booming voice, and you're constantly cranking the mic up and down. Again, the signals dropping out when you really need them sometimes, and sometimes, again, that's why I think it's good that the dispatchers ride with the deputies sometimes, and then again, we see what they do, that the first thing, if you're on a call where you feel somebody is going to give you trouble, the last thing you're worried about is answering that dispatcher unless you need somebody..., if you're going to clear a house, you know, you think you've got a burglar up in a house, you're in a house, a lot of our deputies, myself included, turn that radio off, because I don't want a tone going off, and I don't want somebody calling in a radio until I clear that house.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	No, I mean not that I can think of. I think the, you know, the obvious things are battery life if you have those issue with having new radios, new batteries, we're not really experiencing that now. We were in the past. Like any technology... it can be buggy. It can get a little garbled sometimes if a tower is down or whatever, but no, I think for the most part we're good on that side of it.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	--but we supply an officer there. And it's right by Our Lady of the Lake Hospital but I can't understand why we have some issues there with cellphones and radios or it seemed to be better with these newer radios but we have had issues in the past there. And that's really the only location we've had issues. We don't have problems in buildings or basements or anything like that.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	[RE: big incidents like hurricanes] But at a more upper level, you know you're looking at how are we managing security for these sites,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								maintaining security on campus. I have to communicate with this patrol group. I have to communicate with this shelter group. We have to communicate with EOC. So the reliability is the biggest word I can use in situations like that. You don't want to have, I know my cellphone jammed, I couldn't get the call to go through. The radio tower went down. So reliability is the key I think when you're looking at those situations.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	[RE: MDT] Someone like myself, who came from Motors and just hasn't been back in Patrol long enough to have gotten my hands on one yet, we'd have them, there was always concern that they would just get beat up or overheat, that we couldn't leave them on the back, on the bikes.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	Right, we have a body camera, I have my radio, I have a--just the handset for the radio. Mine is--we have several, my radio is different from everyone, most people here, the newer radios just weren't compatible with our helmets, so we have an integrated system, a push to talk system on the bikes, there's a box for it in the bike that works for push to talk, the thing attaches--like, goes inside the helmet, and the handset, when I was at Patrol... That is supposedly the biggest drawback, because I can't always hear [inaudible] radio, depending on where it is on me. This places it--I prefer to wear it towards my chest, where I can get to it with both hands to hear it.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	... I've used apps--though they're a bit--though they're out of date now, so I need to find some new ones, they went out of date this year, and they stopped upgrading, that were just a law search, I had one for criminal and one was for traffic laws in [State], so I could search up and find a statute number if I couldn't actually remember that number, or many more specifics in there, just seeing somewhere I need to look up specifically what I was looking up there.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	It's all in pretty good shape. It--the spike this mic does not like to get too wet, so if I am riding or I'm moving, doesn't seem to bother it, but if I keep it too exposed, like I have done, been on the bike all day, and just been riding all day, if I get outside the jacket, it likes to activate itself all

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the time, which is a problem, and I couldn't--of course, couldn't tell, because you can't hear yourself when you talk through a mic, so I didn't know, and so there were a couple times, after a nice rainy day, or a couple days of getting rained on, the communications will just hear me whistling to myself while riding a motorcycle somewhere.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	[RE: using personal cell phone to take photos] It has happened. We used to have cameras, like actual cameras, but they've--I don't know what happened to them. We had them when I was at Patrol, now nobody knows where they are, or there's different batteries for them, and no one is here to give us batteries for them. Things like batteries, or the cameras, or things you would get necessarily from--or things you would get from an administrator who has access to that stuff, but it never goes out on the hours that they're here, it always stops working, because they're only here for eight hours of the day, but we're a 24-hour department, so at night or whatnot, you'll still only try to use the camera, or you can only take one picture and can't find another camera.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	I mean, the situation on a football--responded to a domestic, and we had--pulled out the camera, I had to get another officer to get it out to me, in the game, so there's contra flow, so we tried to take a picture, camera stopped working. Apparently, we didn't have enough room. We're not supposed to delete anything, so we couldn't do anything about that, and there was no way for us to get back to campus. Everybody, every road for contra flow becomes a one-way road out, so there was no chance for us to go get another camera, so we had to take things on our personal phones and email it to ourselves and load it into the system like that. But now we have body cameras, so--
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	[RE: body cam's helpfulness] I think so. Yeah, I would say so. I still would prefer a camera, camera for taking pictures of evidence, taking pictures of a crash. That way, I can see it in that screen and know I'm getting a good picture of it, whereas the camera, I'm just kind of holding it there and guessing that I've gotten a good look at what I'm talking about. The first week I had it, I had it--well, it was in my badge, because it was just

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								where it was going to fit well for me on when I was wearing a jacket, it was a little colder then. The problem was, that would put it on my right side, which meant it was angling to the right, and suddenly I'm talking to people, and I tend to be [inaudible] up against them with my left side towards them, so it wasn't seeing anything, it was just pointing in the wrong direction, so I just had to learn how to move it around.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	Well, they always call me on it when I'm trying to eat lunch, really just seems as soon as I sit down, try to get something to eat, they call me on it, but as far as get in the way, no. Several times, technology has failed, like the cameras, certain times one of the reasons I like--I stressed to them, keep the traffic on Dispatch 1 and 2, but sometimes you'll be out with a car and a situation is changing for an officer, they're trying to key up on the radio, but they can't key up on the radio because someone else is using it, so they've got no means to override that, an emergency.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	... Also, I find that the breakdown in communication is generally more human error or lack of training in a specific area than [inaudible]. I mean, whereas work--we used to always have problems, no guarantee with a new--it'll eat your battery, run out, this one has almost run out, I had enough of that in the Marines, you get all this--do the right stuff, and all of the sudden, when you actually hit, it stops working, and that's just how it works sometimes, because you never remember the times that you needed it, and it did still work, you just remember the times you needed it and it didn't work.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	I feel like the whole--as far as communication, I guess it touches on that some, they have to--just almost too many moving parts that an officer has to carry their laptop to their--plug it in, they don't like to release the hold, [inaudible] wasn't on, or it was never integrated in in the first place. You were taking a car, then you put a police package in that car, it was never designed to have all these things integrated into it from the beginning, and it probably won't be, because it would be too expensive. A lot of training, I find most technology errors are interrelated, so--and people just calling things out of order. It's from raising 10-4, people love

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to say 10-4, it's like, oh, 10-4, what 10-4 means is something very specific, you're not supposed to say 10-4 before you start your conversation.
Problems - Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	Training, certainly. The--training is the only thing that could solve the human errors. There's nothing that can suddenly prevent them from putting too much information on the net or keying up too much. I used to work with a guy who didn't like to let go, and he would say something, and he would get his thoughts together, and he would say something again, and he wouldn't let go of the button, whereas you have ten other people who rely on being able to use that same channel to do things, so there's no override, and there doesn't always need to be an override, but there's nothing--if somebody is talking, and I can't--it doesn't automatically go to the same dispatcher.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	I think technology slows things down maybe sometimes with just all the redundancy and notifications and emails. And I understand the reasoning for it. But if you're just talking about solving case, get people in jail, let's get it cleaned up, sometimes it may slow things down. But I mean on the back end, there obviously are reasons that it's done, and it is for the public and to make everybody feel a little bit better and to notify them and keep them informed. But as far as solving crime, I think some of these things could slow down investigations a little bit.
Problems - Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	I think email can sometimes cause communication problems to be honest with you. I know it's a trend, and I don't want to bang on emails. I get all the great things that we get from emails. But you don't always get the full picture when you're just emailing, and people maybe don't feel comfortable sending their questions because they're afraid of who else might be on the email trail or who it's getting sent to afterwards. So I think sometimes having those face to face, people are more comfortable to ask a question and not be embarrassed later or something that they didn't know or that they wanted to ask and didn't ask.
Problems -	LE	R	Supervising	46-55	21-30	Male	LE-R-058	But yeah, the storage is where it is at. And that's -- and for us, storing

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Field Responder					that evidence, I mean we had a room back here with a server in it and had the fans blowing on it and had a water that's in these sprinklers right across top of that. I don't know much about technology, but I know water does not make [crosstalk].
Problems - Technology	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	[RE: earpieces] Some, not much. It gets cumbersome and you know, it bothers them at times.
Problems - Technology	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	[RE: drones] ...my techie guy, he first in the [Job title] -- they first got one a couple of years ago I guess. And it was -- and then they got another one last year that was \$ 2400. It was so much far advanced than the first one they had bought. That had the camera that had the ability to lock on to something but the battery lap on those things are the biggest drawback right now. I think it can fly for 20 or 30 minutes but -- but look, if you've got a couple of them, you know, you got three or four batteries, then you can be up for a while... Yeah, you can be up for a while and a lot cheaper than jet fuel.
Problems - Technology	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	[RE: FirstNet] I think so. I may be wrong about that. [Name] [inaudible] just called me while we were talking, it was [Name], but I'm not sure -- but, it's an expensive process to get through, but if something happened at [Name] Stadium on a Saturday in October, you know, you would never be able to get out on a phone, you just wouldn't. So, you know, you saw that in 9/11, you saw it in other places at tragic events where, you know, bandwidth was gone. I mean, you know --
Problems - Technology	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	Again, you know, it is their personal cell phone, so they will be taking, you know, their personal phone calls but as far as department related, it may be of sensitive nature that we don't want to broadcast over the radio. Now, with the advent of the in-car computers, we do a lot more of that information via - that means versus cell phone any more, but again, there is a time delay there. So if there is critical information that we need to relay that is of a sensitive nature, right now you need this information, the cell phone will be, you know, the first priority.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	Unfortunately that is one thing that, because we don't have just a single vendor for all these different applications, that is one of the things that we really, really struggle with in law enforcement, is having some sort of single sign-on, or you know, we are constantly - there is not a day that, I shouldn't say a day, but there is not a week that goes by that I don't have to change some sort of password to something, and you know, that is truly - that can be a real potential issue. Now, we have to balance that with, you know, why it is that we have to make these changes, but it can be very, very detrimental; you know, I spend a lot of time - administrative time, simply changing or resetting passwords that people have forgotten or, you know, misplaced or whatever it may be, so certainly that is an issue for law enforcement, not just us; I mean, I am talking law enforcement in general. No question.
Problems - Technology	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	[RE: auto-fill reporting] ... Now, because we went to a different report management system, we have lost some of that capability - not all that capability but some of it. We anticipate our dispatch center going to the CLEMIS module of dispatch of CAD soon, so we will regain some of that. I am not sure that the jail will ever transition from the vendor that they currently have because they are very happy with it, but that, again, that is something that is universal and really of major problem nationwide with law enforcement is, you know, all these different applications and things that we do, not talking or having interfaces with each other; now understand the interfaces are probably available but not at a cheap cost, and that is really one of the major issues that we have, not only with data sharing but, you know, I am sure we are going to talk about communications at some point. The technology is there. It is the cost of interfacing that technology together that is prohibitive - excuse me [coughs].
Problems - Technology	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	[RE: report writing] We have the ability to do it in the patrol cars. Again, you have to weight that with officer safety. Do you really want an officer with his head down in a computer for 10 or 15 minutes while he is writing a report, not being cognizant of his surroundings, or would you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								prefer that officer to come back into a secure location where they are comfortable and can do that? So you really have to weigh that - excuse me [coughs]. You know, we work in a - basically if it is going to be more than a five or ten-minute report, I want them back in the office. There are advantages to them being out there and being seen, but again, you have to really weigh the officer safety factor there - do I want them, you know, not paying attention to what is going on for that time, or would I rather have them in here? I would rather have them in and off the road where they are comfortable; they can do what they need to do and then get back outside.
Problems - Technology	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	[RE: comms with other first responders] You know, and this is what I am talking about; there are only two frequencies for radio frequencies within the county that all law enforcement can talk on. Okay. When I talk about all law enforcement talk, small - exactly - sheriff, state police, local jurisdictions throughout the county, there are only two frequencies that we have access to at any given time where we can all come together and have conversation if we need to, in a major event. Fire and EMS has only one frequency that I am aware of. Now, the problem with that being is, I am not sure that all law enforcement can talk to Fire on that one frequency.
Problems - Technology	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	You know, as far what we currently have, again, you know, what we truly miss is the bigger picture interoperability, you know. We don't have the ability to talk to [County] with our current radios, or [County]. Again, if we have a major incident that occurs in our jurisdiction and we are pooling resources from all these other areas which we would have to do in that type of situation, we have no ability other than, as I described to you, those two primary radio frequencies within the county and [County] may not have that frequency or [County] or [County] may not have those frequencies to come in and patch in to talk to us, so if we have a major incident, it is going to be a challenge and certainly I know this to be fact, in an after-action review, it is going to be something that we fall down on, there is no question.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	Yeah. With any radio system, you are always going to have a certain level of coverage issue. Because we can't truly plan for every type of building that we go into, I can't - I have - I don't wanna say this. We have to have coverage at street level; that is where we do the majority of our work. I can't truly plan to be in the basement of a high school or a hospital that is, you know, fifteen to twenty feet below street level surface surrounded by concrete and dirt and still expect to have the same level of reception and transmission.
Problems - Technology	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	You know, it really depends. It could be weather affected, you know. You just never know what you are going to get with our current radio system, quite honestly. [short laugh]. We don't - historically, we never learn from our lessons, we just don't, you know, and I know that you mentioned, you know, 9/11, and this being part of what has following from 9/11. I don't think that we have yet learned our lesson from those talking points that were brought out of 9/11. We are talking about the same exact thing, you know, how many years later, fifteen years later; sixteen years later now. That is not acceptable, but again, it is not because we haven't identified the problems, it really truly comes down to is the technology there to connect? You know, if I were to jump on the state 800 system right now, we have the ability to talk from [City] to Guam, okay, but you know, I just - it's the dollars and cents in order to make that happen, and until - and I am not sure what it is going to take; if 9/11 didn't spawn enough, you know, upheaval to get us some funding to accomplish that, I don't know what is, honestly. This is just like I said, we just don't learn from our history, and here we are still in the same place, you know, sixteen years later, so..
Problems - Technology	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	in any type of critical incident, that is one of the first things that goes is the communications on cell phones. While we have become so reliant on that technology that it is very, very scary to think, you know, how do I get the resources I need if I don't have that ability? So, again, like I said, we try to have the redundant systems in place, probably more so in public safety than any other profession; we try to have those redundant

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								systems but it still doesn't mean that, you know, some of them haven't been utilized in years and we are not sure that they are going to continue to work if we need them to do so.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	I mean, I think technology does have a component into just basically how everybody is so connected where it used to be divided, but now with social media and the different apps that you know, while connectivity I think we use the present tweets. Okay, that is always positive, right? So, normally - I shouldn't say normally; historically, you didn't really have that kind of medium to be opinionated; there were some filters before it actually got out the mainstream public. We don't have that, and as far as police work or firefighting and public safety in general, you have people YouTube, you know, traffic stops and so forth and you know, the problem with that is - I mean, I don't mind if somebody wants to videotape me. The problem is they might only get half the story, and nobody wants to listen to the other half.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	[RE: personal cell phone use] What is foible and who would have access to that phone if it... Generally if we take pictures, we email them right away to our department email and then delete them.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	S2: I mean, I can't call [County], call on the cell phone. I can't call [County]; we don't have their frequencies available, so it would all have to be relayed from us to here to County, to their dispatch to their officer and then back to the state again. S1: Which creates the delay you talked about earlier. S2: Right. And what is lost in translation.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	So, cell phone text. We use Facebook as a department so put out information on Facebook. So the radio, computers; there is not a whole lot of - they do have a message capability county wide through the MDTs through CLEMIS there is supposed to be but we don't know how to use it. We are just new to CLEMIS so I don't know exactly how to send messages just yet. E-mail.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	We, if we are in the building and say that a call comes in right now and [Name] dispatches it, they don't hear it... So we either have to be close to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the front or have our radios on and the portables dont always pick up inside, so there have been cases where somebody would be in the bathroom or in the kitchen and not know what's going on.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	I think it's when they switched from - they just did a switch not too long ago; narrow band, I'm not a big technology guy on that - the radios, but I can be - for instance, if I am at [Street], I can't talk back here. I can talk to the county but I can't talk back here sometimes.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Pretty much can't get out in any building. If you are on a porch or something, that is not a problem, but if you are inside the home, had a heroin overdoser snoring and couldn't really get out from the basement.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	So they are thinking about going to 800 but that doesn't solve that problem; it probably actually increases that problem because 800s are nice outside but you get inside, then they are not really that powerful.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Yeah, because everybody wants their own password and it can't be the same as the last ten and I use a password generator now so...but it's a pain.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	[RE: technology getting in the way] Oh, for sure. When it doesn't work, it always becomes a problem because we are so reliant upon it that - you know, if [unintelligible] goes down because they are doing an update or whatever, can't run bad guys... So we may let somebody go. I mean, you are stuck in the dark because you dont know who they are.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	[RE: hardware (e.g., radios, mics, MDTs)] I mean outside of them having performance issues, no, not really. I mean, I prefer the enhanced technology.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	...Again when the technology is working, it makes things easier but when it is not working, whereas when you used to write everything, nothing is going to break that you can't fix. So now if the reporting software goes down, we can't utilize it until it gets fixed. So we are not doing reports in a timely fashion which dictate when it gets to the court and so forth. But when it is working nice, I enjoy it. Some people are a little technology averse here but.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Lack of exposure in their personal lives, so they get - so we get a technology upgrade here, you know, and they are just used to a flip phone and we are using an I-Phone here, you know.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	[RE: relying on technology] Oh, potentially. For sure. You know, we usually are pretty good at adapting and deal with it, but you know, it definitely could become a problem. You know, for instance, you have a mass casualty or something and cell phones aren't available; I mean, if you rely on your cell phone a lot, then, you know, it's going to be an issue.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	[RE: cause of communication issues] You got different people in different frequencies and that becomes an issue, especially - I shouldn't say especially but the way the county works is they have got one dispatcher on Fire frequency and one dispatcher on Police or, you know, two and two, whatever, but it's separated, so we find a lot of times doing both; [unintelligible] Fire gets information that isn't sent to the police and vice versa.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Oh, absolutely. You know, computer programs would be nice to enter the person's information one time and have it populate across the applications... No [unintelligible], so you are duplicating, which is time lost doing other things.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	You know, you mentioned after 9/11 there was this big push for interoperability and here we are seventeen years later or sixteen years later and we still dont have it. We are not even any better than I think we were sixteen years ago.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Which was identified as a big problem then and it still is. You know, our inability to have dedicated channels to talk to different folks where the Fire has the capability to go to different channels, so for instance, there is the main Fire frequency that everybody gets dispatched on and then if there is - if it is a big enough incident, they might go to a secondary channel, but once they go to a secondary channel, people that dont have that, whether they are, you know, coming in or not, you know a lot of time, agencies that respond in won't have that secondary frequency so

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they won't know what's going on. And there are certain things you have to do once you arrive on scene, so how do you get that? ... And interoperability would be a big piece.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	You know, because the big push is to stay off - we really only have the main frequencies in all - I shouldn't say all, like we have our own frequency, [City] police have their own and the sheriff's department those are pretty much the three. But every fire department has the main, so everybody tries to stay off the main because you don't want to tie it up, so they go to their second channel, and not everybody has those. Fire does, to a degree. At least the frequencies are variable, available for them if they want to put them in their radios, but nobody else has them... Access and you know, the ability to transmit and receive, you know.
Problems - Technology	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	When we talk about, you know, we got all this technology people, you know, things that fighting cancer by training different cells to attack different cancers but we can't talk to our neighbor, you know. It seems kind of foolish.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Well, originally when I first started, there was like a north and south PD as far as, you know, channels. I mean, it was like six of us on the same channel, so we did know what is going on, but once they went to 800 MHz and they kind of switched up to everybody having their own channel, it kind of just isolated everybody.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Our cell phone use policy is basically nothing within the public view, - obviously not on the phone while you are driving, anything like that, but for the most part, a policy like that isnt possible to enforce; I mean, unless I got a citizen coming up showing me that he is on his phone, you know, in a parking lot for an hour, we have no way of knowing that, so, yeah, that's definitely a negative impact as far as technology.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	We got body cameras. I think they are phenomenal. I would like to have some better ones. They dont have any night vision capability and that is a big damper. I have noticed definitely the way officers talked to citizens as my complaints have gone substantially down. So that is definitely a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								positive impact. On the same note, I dont know if anybody has ever said this, but I believe the cameras have kind of had a negative impact also. I dont believe that they are more - I dont want to say caring, but more open with somebody when they are on call when you used to be able to go to a call and like freely like, listen man, come on, which, you know, you really dont wanna do this, let's do this or do this or maybe- hey, just separate for the night. But now, since everybody is videoed, it's yes ma'am, no ma'am, and they are afraid to make a discretionary call with the fear that you are gonna get in trouble and because you are being recorded... So sometimes it takes - it almost kind of takes the human-ness out of it because instead of just talking to somebody on like a one-on-one thing, it's like yes sir, or - you can't do that sir, and you lose that, I think.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	The problem is that with any technology, it goes down because of age and a lot of times - one of the biggest problems we have is interfacing different devices with different car printers with the computer and stuff like that because we cannot afford to buy all one brand at the same time.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	So we gotta take an old printer, take it into a new NDT and it won't recognize it and we are kind of rigging it up so it will and so in that aspect we spend a substantial amount of money on a private IT company to come in and do work and you know, it's a never ending battle.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	You know, but random computers will go down and then they will come in and switch cars and stuff like that because they can't do police work without a car computer. So, but, yeah I think they are relatively very dependent on it.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Yeah. I mean, our current computer system [unintelligible] is phenomenal and user friendly and I have had limited use of CLEMIS just getting ready for training but I think it the system that we are going to is going to be a disaster. I think the guys are going to really be complaining.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Well, face to face in terms of the diagram, we put something on the board, there is no way to diagram or make a drawing on the MDT and send it to somebody and as far as us here at [City], you know, you say you take the east side of the house, you take the west side, north, south; we all know what that means. But if you get some agency from out of town that doesn't spend much time in [City], you know, they are like, it's a grey day and there is no sun for reference, and like...what is the west side and which is east, you know?
Problems - Technology	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	[RE: info dissemination on MDC] ... The downside is that every once in a while, if you are sending it with the MDT, sometimes these things will crash, you got to restart the computer, this and that, so you may be dispatched on a call and if somebody is sending over the airwaves or they forgot or too busy whatever, it may be 2 or 3 minutes by the time your computer is back up and running and then instead of being at that call, you are parked halfway across town and just realized you are supposed to be over there with everybody else. So, sometimes when the technology goes down, we have issues.
Problems - Technology	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Our computers themselves are really good, our printers are good, the radio unit, all that stuff is good, but the technology we use and the brand of modems that - there is so much to choose from as a police agency but like the modems are not just that great, so at times it will lose signal and it will look like your computer is up and running and you look down at the clock and you realize it froze up 20 minutes ago, lost signal, so, you can still do stuff, but if you gotta actually transmit something, like, oh, nobody can send you a message. So there are reliability issues at times with that. It's almost exclusively due to the modems.
Problems - Technology	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	For the most part. I think most of our - I mean, you print something; it's almost always instantly printing. There is one car for some reason we can't figure it out but you know, we will print something and it will be 20 or 30 seconds before it actually starts to print before I can take it, but everything else is immediate.
Problems -	LE	S	Field	26-35	6-10	Male	LE-S-062	The radios are very good. I do actually want to upgrade mine. They sell a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					shorter antenna - these antennas a long and they get caught on stuff; I mean, everything from door frames to seat belts to you know, on uniform, and they sell a shorter antenna, it's about half the size and it's about \$20 and some of the guys have invested and bought one and I think I am going to do that for my radio. This radio has a very poorly designed "on" switch. A lot of times you get in the car and it turns on and off on you, sometimes it will turn on accidentally when you are getting into a seat and all of a sudden you get this blasting in your ear [sound of radio traffic].
Problems - Technology	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Yeah, we get that. These are not the radios I had when we started here. Those were actually better and less problematic as far as design goes, but then the batteries all wore out and they didn't have quite the signal strength. These are very good radios, they just, I dont know if the switch moves too easy or what, but [unintelligible] a little bit, everyone here has got their complaint about them and as well as every other department who uses them.
Problems - Technology	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Our computers are. Our printers are. Like I said earlier, we have a lot of problems with the modems themselves, not as bad as it used to be but it is still problematic. Our radios, these are 800 MHz, they are pretty top of the line; we just got those a couple of years ago.
Problems - Technology	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	The body cameras we got, there is no old body camera technology, it's all newer. I dont like the brand we got, they are horrible cameras for what brand they are. They die all the time, they break easily, the battery is supposed to last for a shift, a lot of times I will have to change out cameras 2 or 3 times in a shift.
Problems - Technology	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	[RE: technology getting in the way] ...Then we upgraded to like the \$75,000 touch screen 911 system and all that, and for all that money, you know, they give you the receiver, they dont give you a place to hang it, you just set it on the counter and I can't tell you how many cords we have been through, how many receiver hands have been dropped and damaged and for all this money, they couldn't spend you know, 10 cents to make some plastic mould to hang it on but and there is a big learning

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								curve for me to figure that out and sometimes the glitches - it just freezes up and then, you know, everyone is in panic mode, how do we fix this, because, you know, with the old stuff, if something goes wrong, you hang up, you pick it up, everything is fine and we have a phone that we use to dial out on, you know if you gotta call somebody to ask, you know, whatever, or even call for a lunch pickup order, I mean, just anything.
Problems - Technology	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	[RE: body cameras] Well, theoretically, yes but like I said, it's the brand. The battery life is horrible, they die all the time, they break easy, sometimes they say they work and then they dont but when they are working right, they are fantastic and if we had a different brand of cameras, I think we would probably be a lot better off, but it is nice to have [unintelligible]
Problems - Technology	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	A couple of things. Number one, I would want better body cameras. The ones we have suck, plain and simple. And I thought of this in my mind many times, I dont know if it exists out there with some rich departments or not, probably not, but I envision a system where you are driving down the road and [unintelligible] patrol car and what you would have would automatically scan license plates and then almost kind of like a video game where you see [unintelligible] square floating above their head or something of that nature if you are in the car, how much gas you got, whatever.... I don't really like our 911 thing, the way that it is laid out with the phone that just sits on the desk and falls on the floor, it falls in the garbage can sometimes which is out of the desk, you gotta try and wipe the pudding off of it or whatever and, you know.
Problems - Technology	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	It does make us change our password every 90 days. I just make it something like one digit off from the last one and then.
Problems - Technology	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	We - I know some departments have it but we do not have internet in our cars, so if we need to look some information up, we usually use our personal phones. It's only the detectives that are issued city phones, so; look at our numbers or addresses or other resources like that, calling on people's behalf...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Problems - Technology	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	Generally it's kind of - generally our equipment is fine but we are not a big department. We don't have a huge budget for maintenance or replacing equipment or kind of maybe venturing out with emerging technology or something like that, so a lot of the higher end equipment that we have we got on a grant from either the government or the state or the DDA or something like that, so, I would say it is generally dated equipment but it still works for the purpose of what we need it for currently, so - like both of our [unintelligible] unit's are - they are functional but they are kind in rough cosmetic shape and some of our modems in our cars go down frequently so it's always kind of balance of in the car that you want that is still working fine, so.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	Sure. Body cams when they work.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	MDTs also don't work very often; they lose connection quite frequently and if you are trying to do something and it drops the signal so it's frustrating.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	Yeah. It - I mean these things half the time don't work. They fall, you know [unintelligible]
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	Body cams, the computers do not work when the signal goes out all the time, like multiple times a day and I would be trying to do something and it will lose connection. It's frustrating.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	Radios - I have no issues with radios for the most part as long as they have the newer batteries that are conditioned. In some of the older radios, the batteries wouldn't last and they would, you would have the radio on for 15 minutes and the thing would start chirping that it has got a low battery. These have been pretty good so far. These are new, within the past 5 years, so.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	The only other issue with the radios would be - I think it would be more beneficial to have like a - you have only so many frequencies on this radio that are programmed into them. Like you got this city, you got [City], [City], [City], [City] I think, maybe a handful of other ones in the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[unintelligible] area but if we ended up going into [City] for anything, we wouldn't be able to communicate with [City]Dispatch at all, which is dangerous. Like I have gone into [City] and had people coming out of the woodwork and can't get on the right frequency to call for assistance so you are pretty much at the mercy of the other - like [City] usually backs us up pretty and I got in a chase and I crashed in [City]. I was there for an hour, still in the car; [City] never showed up. It would have been nice to be able to switch over to [City] and call them and say hey, you know, send a car over here.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	S2: I have used Google maps before to find the location fast; I wasn't 100% sure where it was. S1: Okay. And that is better than using the MDT because the MDT doesn't have connectivity or - S2: That; and the MDT map program is useless.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	Most of the agencies out there all have different systems and I think it would be nice to have something across the board that had all the functions that are user friendly. There are different computer systems out there; like the one that we have currently is pretty user friendly; it's real easy to use, it has kind of a lot of new features, one that they might go to if there is a merge with [City], that it is still going to go to a different system that is not as user friendly and doesn't have the features that the current one has and we will have to learn a brand new one over again that is not going to have the same features, not gonna be as good, in my opinion, because it is not going to - we are gonna lose the functionality that we had before that we took for granted, like the large database of names and stuff that we already have for the downriver area; not in that system anymore, we are not gonna have that anymore.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	So it would be nice to have like a fully functional system that everybody could communicate with anybody in the state, you know, if you had to easily, without, you know; I mean obviously, you can send like a LEAN message to anybody in the United States, but I dont have the access to do that in the car.
Problems -	LE	S	Field	36-45	11-20	Male	LE-S-064	[RE: station merger] They were just going to take over our Dispatch and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology			Responder					our housing of prisoners and then we would use their computer system which, to my understanding, is pretty barebones basic software. It doesn't have a lot of bells and whistles, so it's kind of like a downgrade in my opinion.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	Just the ability to have user friendly report writing functions and search functions and stuff like that, you know; when it is not user friendly, it becomes frustrating because it is time consuming and then if it doesn't work that's even more frustrating because then it eats up your time by trying to get around - it's easier if you could just write your reports in the car when it works, instead of having to come in here and do it. It is faster, it is easier. If the network is down, then that's impossible.
Problems - Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	And add functionality, I mean, if you have one that doesn't have a lot of features that you take for granted with the one you currently have, then that's kind of frustrating too because then you - for example, the one that we have got now has got a huge name database that - and if you have a first and last name and that's all you have for somebody, like oh yeah, [Name] did it [unintelligible] there are a million [Name] but all I gotta do is type in the first and last name and it comes up with a list of all the contacts if they have ever had, like if they were even arrested or got a ticket or say been a name in our record, it pops up with all those options to choose from. Now you go to a new system all those names are not gonna be in there... So it hinders our ability to investigate stuff and it takes us a step back.
Rules-Politics	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Yeah. I guess one of the biggest things is, I guess, stop letting politics run the fire department, and start focusing on doing what's right for the citizens and for us, the firefighters.
Rules-Politics	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	The county line splits them if you have a rectangular it splits them like this and this is [name] and this is [name] and we had to decide who was going to take that house so if they paid their taxes to [name] we put the line like this and if they paid their taxes to [name] we did the line like this so we had a lot of little spaces where we needed to make sure that our lines matched up. In more rural areas a house may sit in one jurisdiction

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								but they have a very long roadway to get to them that goes into another jurisdiction five or ten miles down the road so even though that house lives here insurance is way down here so we had to come with grievances with all of the GIS.
Rules-Politics	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	It doesn't mean that they're not going to get the right police department or the right fire department, it doesn't mean that they're not going to get the same responses the same service we're just saying that this particular house should their 911 calls should reach this primary app so in this whole region we all got together in a room and put together all of our information and then once the information was together we meet on a quarterly basis. We all got together in a room and looked at computers and said yeah this line needs to go here, this one needs to go here, this one needs to go this way so there was a lot of collaboration because with the new next gen 911 with the ezenet it's all going to be Cloud based, IP based and that's how calls are going to be routed to us now.
Rules-Politics	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	Q: Interesting, okay. And so do you have to live in the [County] to be a dispatcher here? SME: No
Rules-Politics	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Not really because I think the boundary lines if you will, the areas of jurisdiction are pretty clear-cut. There's no gray areas.
Rules-Politics	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	... And when I say that, it's the way the [state] Disaster Act is written, is that the emergency preparedness director is also the Homeland Security director of the [County]. We have always had the posture of it's law enforcement. There's a law enforcement side of it, and there is an emergency preparedness side of it or emergency response out of it. And we draw a line of demarcation, if you will, between those two facets.
Rules-Politics	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	... And we activated our point-to-point, but we have already agreements in place with the school board of [County] through the Office of Homeland Security in [County]. We brought toward 289 residents to [County] to get them out of harm's way.
Rules-Politics	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	911 inundation, we have three 911 trunks. Like I said, we average about 16,000 911 calls a year. Me being a fire [inaudible] that I am also, we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have to, we have the Property Insurance Association of [state] which is ISO in many other states. Property insurance kind of takes some of the ISO and kind of puts a spin on different things. But we do have to file an NFPA 1221, which is the answering, one part of that chapter seven I think it is, is the answering section of it to where all incoming emergency lines have to be answered within 15 seconds 95% of the time, within 40 seconds 99% of the time.
Rules-Politics	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	If you read the book, the book says somebody from that facility is supposed to send somebody to EOC. But we're so small that we can't fill every SF [phonetic] role. So we fill, and it's always been a practice in this [County], that we go to their facility. Granted, if it's a natural disaster, hurricane, tornado, yes, we do [inaudible] our EOC. But it's mostly for the EOC staff.
Rules-Politics	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	... So that tends to be frustrating. And other times you have other agencies, if they're calling for a warrant, before they even handcuff the guy, even if they're in danger from this man, they want the warrants in their hands, when we're trying to express you're putting your officer in danger. It's just different ways, different agencies communicate, which this agency, we tend to be more, best way to describe, I just described it to one of my trainees. You have siblings?
Rules-Politics	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Yeah, because we work. We flow with all agencies, and then we find at other agencies if you don't do it this way, we're not going to help you.
Rules-Politics	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	It's a little different in dispatching for the police. With the fire department they have to understand that there are property insurance rules that we have to follow. It has to be done in so much time from receiving the call. Besides that we actually set up tones prior to dispatching them to where they need to go whereas in the police department we don't set off tones for the most part. We do have an alert tone that is used if there is endanger of life in the call, like someone threatening someone with a gun or a report of shots fired or anything like that. We do set off an alert with our police just to basically tell anyone that's got a radio on I need to turn it up and I need to listen to what's going on. It works great.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Yes, but you don't have to live here.
Rules-Politics	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Q: All right. And are you deputized or civilian? SME: Yeah, we're deputies.
Rules-Politics	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	It's easy 'cause we have access to their radio and also we have their phone numbers, we can call them.
Rules-Politics	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Well we have some downtime but most of the time if we do have downtime we'll go through like our NCIC book and make sure everything's up to date in there. We're in the process of trying to write out new policies and procedures so we kind of do that and then I'll talk to my partner basically.
Rules-Politics	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	[Sighs]. Busy. Many times overwhelmed with... with the amount of responsibilities that they have. They are expected to do so much with... with not just the technology but with learning new things, keeping up with multiple policies and procedures and being able to apply them in a situation that is very, very fluid. An emergency situation is not just, oh, it's the same old thing.
Rules-Politics	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	They are civilian deputies. So they are not commissioned post certified telecommunicators as far as that. But they are commissioned deputies of the sheriff.
Rules-Politics	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	... But I think, [sighs] one our biggest problems is... that I believe with any system, especially radio, is that our local laws, our local regulations and building codes, we're building all of these buildings and then a lot of it is the government building them, schools, that when they build it there's no radio coverage in that building. And then all of a sudden we go to do a school shooting drill and we find out the police can't talk to each other. They can't talk to dispatch. Nobody can talk but we've got this huge building with 1,000 or 2,000 kids in it and your first responders can't talk to them.
Rules-Politics	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	That's not the federal government's responsibility. That's not the state government's responsibility. That's the local government's responsibility

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to have put into place regulations that said when you build a building like that you've got to have some radio coverage for public safety. That's where those rules and regulations come from.
Rules-Politics	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	Well I'm one of these that believes in our civil liberties. So I think we're bumping up against some of those civil liberties now. And I'm not really big on that. I think that there needs to be a lot of personal responsibility rather than additional rules and regulations made for us. So I don't think that--I think that being able to mine the data that we already have access to that's public in nature to help people is probably one of the good things that I'm seeing. I'm just really leery of that because of the civil liberties.
Rules-Politics	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	...We're not really supposed to interact with people. We have a bulletproof glass for that purpose.
Rules-Politics	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	Yes and no. We're actually supposed to be plain talk.
Rules-Politics	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	... We do whatever we need 'til about 12:00. We do not get to take breaks, really. We do leave and go stuff. Like I have to go get lunch later.
Rules-Politics	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	... We have a playing computer that we're only allowed to just play on. The rest of it we're not allowed to play on.
Rules-Politics	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	Most of the time if I can give them a call back, 'cause you have to call them back, and most of the time if not, I have to send out an officer to that last location, 'cause EMS will tell us where it happened at. And if I can't get a contact back, then I have to send them. Like they'll say it's next to the tire cage. Okay, well I'll send somebody, and they'll be like okay, I don't see anything, [inaudible], case number.
Rules-Politics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: You know that's illegal in Texas, by the way. They cannot be associated; they can't even roommate a dispatcher with an officer or a fire fighter.
Rules-Politics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: Illegal. You will lose your job. Period. [talking about that it is illegal in Texas to get involved even if a roommate as a dispatcher with an

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								officer or fire fighter]
Rules-Politics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: I would too. They found out – we just hired a girl that spent her whole career in Texas and she had two friends, had nothing relationship-wise going on other than they shared rent and they were quiet about it, although they found out and they both lost their jobs.
Rules-Politics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: No. No, we just have to know their policies...
Rules-Politics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: And if there is new FCC rules already pertaining to that, it's becoming now where the carriers are trying to narrowing it down to within 50 feet or 100 feet, so it is getting better in other words.
Rules-Politics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5] ... Okay, so, you know, the funding and all the stuff. And so okay, we are going to upgrade the phone switch, which we did.
Rules-Politics	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...And we used to be two separate agencies. One in the west end. One in the east end. So there was a little bit of cultures to mix when we merged...Around 2012, 13. It was kind of a slow process that was happening behind the scenes without the people knowing that it was happening. We all kind of had our suspicions [laughter] that it was happening, and then it was announced that it-- I think they had to do some legal things behind the scenes to make sure that it could happen before they told us it was going to happen, and then said, "Oh, never mind. It's not going to happen." So there was that. And I worked in the east end first, and we had three stations, and they had two and we merged. So now we have five. But it's gone fine. It just took a couple years to transition into and changed things for both ends of the county when it happened.
Rules-Politics	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	And you're coming from the slow end and this sort of seasonally busy end, and that never end transfers and their end transfers, and had a way higher property value, and that was managing themselves okay financially. But because of financial downturn, and because a lot of our money is based on property taxes, and because it takes two years for the property taxes to actually trend one way or another, even if they're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								going down, it still takes two years. They were in trouble financially. So it was to their advantage to merge with us. And their person that was in charge of them, saw all of that. And I think it also makes us stronger overall as an agency, to be together with five different fire departments. Fire departments sometimes like to take over EMS agencies, and if you have one through out the county with five different fire departments, it's a lot harder for one fire department to say, "I'm going to take your whole thing over when they only cover a certain part of the district."
Rules-Politics	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	And so when they first did the system, we had a lot of interference because of cellular, because we're moving closer to cellular bandwidth. We had a lot of bleed-over from a cell tower. And they brought out a company that did monitoring around the entire city for about a year and try to find all the cellular bleed-over. And it was actually a digital system that was between two points. And I don't know the exact information. [Name] may be able to tell you. But it basically sounded like it was sending a Morse code between two points. And depending on the weather and other things like that that affect radio signals, we would get the beeping of the Morse code, the dee-dee-dee-dee-dee-dee through our system. Or it would either just be this low-tone static through our system that was just bleeding over because the bandwidth has become so used. Or not the bandwidth, but the radio waves had become so used that it's just saturated. But it's gotten really cool, because when we were in the other radios, we couldn't talk to anybody. Now we have the ability that every one of our radios has FERN on it. Everyone of our radios has--that's the Fire Radio Network.
Rules-Politics	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...We don't have all of the equipment. If someone offers it, we have to decide whether or not we're going to take on that liability. That's a pretty rare occurrence, but they handle everything. But we work together. River rescues, any time we go on a river call, we're always going to be first because we're right there and mountain rescue's always notified and they may or may not respond.
Rules-Politics	FF	R	Field	36-45	21-30	Male	FF-R-052	I know at the fire department I work at full time, we do that through an

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					app on the tablet in an iPad, go in and do inspections and we can even, you know, if we find some kind of life safety code, we're not the enforcing agency, we just doing like a courtesy inspection, say the exit sign is not working, whereas if the [Job title] comes in and finds it they're going to say all right you've got so many days to fix that. And then they're going to send somebody back in so many days and it had better be fixed, if not then they may fine you or whatever. Whereas when we find it all we say is, hey, this is an issue, you need to take care of it.
Rules-Politics	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] You have a trash business that collects trash for money, while we put out fires or we are in service to community for a certain amount of fee. That doesn't mean we wouldn't respond, we are required by law to respond no matter what the incident is, based on the jurisdictional acts of the state laws and federal laws that we have to act. We don't get paid by taxes. We are supported by each community; each community who is a member of our department pays a certain fee based on the square footage on their home or any other structures on the property. How they come up with that I don't know. They do research studies all across the country with fire protection, fire departments to come up with a fee for that.
Rules-Politics	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] You have the option whether to subscribe to us or not; if you don't that's fine, it's okay. If you have a fire incident then we will respond, we charge a certain amount of time for each truck per hour on the scene.
Rules-Politics	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4]: We don't bill for EMS because our company is also merged with the ambulance company that is exclusive to 911 calls so we support that, so the fire department doesn't bill for emergency medical calls.
Rules-Politics	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] Well you know you gotta - we try to educate people how to look at it. If you live in the [City], you pay city taxes; the city taxes cover your police and your fire and your trash pickup or whatever. If you live in a volunteer service, I have seen more cars or some of the volunteer, you get a lot of door to door sometimes you know. Per year the fire department asks for some help and then people usually donate a little bit of money because it keeps them there, keeps being able to respond if you do have an

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								emergency. We look at it the same, way but how it is worded as subscription based, people look at it oh my god it's a magazine subscription, it is terrible.
Rules-Politics	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] But in reality they would be paying something for fire protection no matter where they live. It may be little bit more that what you would pay for volunteer services. It is pretty comparable to what you pay in the municipality so.
Rules-Politics	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] And once I am on the scene and they see my face and they take a head count for accountability, then that's how we get our payroll. But I can use that app to respond to that call.
Rules-Politics	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] That's a hindrance of course. We can make it work but it is little bit more red tape
Rules-Politics	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] We are required by our company, our fire department to be familiar with our response area.
Rules-Politics	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	...I mean, there is just different ones but they don't want us to be part of another department in our county because they don't want the conflict and all that and a lot of people will -- Oh, we've got a wreck or a fire and now run to that and then this other -- my department or somebody else's department will get to something else and they will just over there and won't come to theirs. SO, you know, it is kind of a touchy thing.
Rules-Politics	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	You have to show up, our department -- yes, you have to show up for so many meetings and so many calls, percentage-wise. Now the state requires you to show up for so many calls percentage-wise and you have to have so much training, so we have to have and it is getting further and further up to the state that 240 hours is not becoming enough man hours. They want us to have the same as paid fire fighters and that is 300 and something hours.
Rules-Politics	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	So, it's getting up there and now we have to take a course on wild land fire-fighting because of the [City] fires which I was in. We have to take a course -- a 16-hour course for wild land fire-fighting now, that is required by [State] to go on any calls that is wild land.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	S1: Okay. Does everybody who -- everybody will take the radio with them then? S2: You will have it at home.
Rules-Politics	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	...We have to give so many hours for the state. You have to take tests and if you fail the test, you got to, you know, look at re-training on it and then kind of take it again to make sure you understand it so you are not just saying -- Oh, that guy knows how to do this and he is out there fighting fire.
Rules-Politics	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	That was just [Organization], you know, covering our ass. Because if a fire would have broke out and the hydrant wouldn't have worked, because I mean you can go back and find why the hydrant didn't work, we didn't have water for the tanker or the engine, so -- sorry, but we couldn't put your house out.
Rules-Politics	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	...They have their own board of commissioners three rule district commissioners and they have contracted since then with the city for personnel services. So the rule district has equipment buildings live in quarters for firefighters but they have no employees. They pay a contracted amount to the city each year for all the employee services.
Rules-Politics	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Because of [name] there was a little blow up about us being linked to them all the time so it's not a link that's on anymore all the time and we have to ask permission before I can link the two channels together.
Rules-Politics	LE	U	Manager	46-55	31-40	Male	LE-U-020	What they did is they've put up a silo because now the officers, boots on the ground, where they had the ability to talk to each other. They back each other up. They knew when each other was in-- that because they went on a different system, even though it's the same system, but it's theirs. And now the two cars can't hear each other. And it's been very difficult on the boots on the ground to say, "We lost this, and we can be right here and this other officer can be getting his butt kicked. And we don't know about it." It's going to take multiple phone calls to-- and then dispatches, and time. And it wasn't a good decision, but it was a political decision that they created our own silo. And that's tough, but that's what I'm hoping that FirstNet won't become as well.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	[RE: cell phones] The deputies have personal, each shift lieutenant and certain section supervisors have department issued.
Rules-Politics	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	There's certainly, we were brought up recently with legal updates and some, through the years some of them are concerned about using their personal phone for office business because there are some lawyers, defense attorneys who will try to subpoena that information. And then you're worried about your private messages on your phone, family pictures or something. Just stuff they don't need, but I don't know if it was a scare tactic used by these defense attorneys, but it's just something that comes to mind for the deputies. But again this is a department phone so any time they want to look at it it's their phone. They can say, turn it in tomorrow, or whatever.
Rules-Politics	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	The only challenge we have is, you have different thought processes, visions, the way things should be carried out. You have different leaders, policies, their policy, maybe like for instance in here in the City of [City], just for instance, they don't do lock jobs. Their chief said, no, that's not our responsibility, we're not doing those. Where our sheriff is, we would do whatever it takes to serve the public. If they need their car unlocked, we'll go and unlock it for them... At nighttime, their Chief of Police is at home asleep, he has no chain of command other than the two deputy or two officers that are working that small area, so if they get in a high speed pursuit, our policy is our shift lieutenant controls all of this, but they don't work for our agency, so it's hard to control.
Rules-Politics	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	Yes, ma'am. There's an app we use on our shift, it's just our shift it's called GroupMe. And it allows us, it's like a large chat program, and we basically we'll send a message out, hey look, instead of coming out tomorrow early, take a short shift, or hey, somebody's having a birthday party this week. It's more of a talk, we call it talk around channel where we can just talk and without people controlling it, they can't say let me see it because it's a private app, and it's just something... They've been given the rules, they've been given limits, don't post this, don't post that kind of mess. You want to talk about your family, kids, or party this

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								weekend planned or something, that's what it's used for.
Rules-Politics	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Cell phones, absolutely. I mean now the city doesn't buy everybody cell phones, only the command staff has cell phones but we do have, we do allow the officers to get onboard our paging system at the police department to where every time an incident happens we send it out over text messages, whether it's a natural death or anything that goes on, our dispatchers automatically send out a text alert like shots fired at this location, or a medical emergency at this location. So yes, and we have a structure that the dispatchers go by on any type of incident that's being sent out.
Rules-Politics	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	I do believe it is. I do believe especially across jurisdictional lines. National incident management says that we all should be doing the plain talk version. Some agencies still are doing the 10 code so if I'm trying to communicate with somebody from a different agency; they're not necessarily inclined to what was going on here... we need to become more standardized in radio etiquette especially when a major incidence goes down that we can communicate between police and fire and ambulance and all be on the same page. And I think national incident management has done some of that for us but we still have a long way to go.
Rules-Politics	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	I think it's kind of, in my view, it may be I'm a little more removed than maybe some of the other people that you'll talk to. Most of my interaction now is through email or text. I'm very little on the radio unless there's a major incident or we're working some large event. From the department side, hmm, we put a lot of emails but not... not critical information. Yeah, if we have a certain call or a certain thing that needs to be done then we're going to do that either via radio or pick up the phone and make a phone call. So I think it's maybe the shift is just mine and not necessarily the trends of what's going on in the department.
Rules-Politics	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	And so it's--it's unique. You know I think we're blessed in the fact that, you know, we don't deal with a lot of domestic situations. There are some and now that dating violence laws are classified under the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								domestic violence laws that number is going up but you don't deal a lot with custody disputes and so it's... it's challenging in that you may be talking to the president of the university at one point and then 5 minutes later you're talking to a homeless person who's begging for change in the next 5 minutes. And so it takes a really unique officer to be able to thrive here and figure out the nuances and, you know I think if you talk to officers who are working with us now who came from municipal departments it's just a completely different kind of police work.
Rules-Politics	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	I think it's in pretty good shape. We just purchased new portable radios and mobile radios. We've been cycling those in for the last 3 years so they're, you know, hardware-wise they're up to speed. The MDTs are-- seem to be working good. But those are only available to our patrol officers. So you have another component: our detectives, our administration, our satellite locations, those people don't have access to that so they're not seeing that information come in like the patrol guys are.
Rules-Politics	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	Most of it is radio communication. I stress with my guys, I like to keep the net as clear as possible, I don't like a lot of radio traffic that doesn't need to be there, if it can be sent in an email, or we can talk by phone, or we can meet face-to-face again, we're small, so I can usually--at the office and go find them and meet with them in about five minutes. Important information, emergency information over the radio, I don't need an entire synopsis of what they did back over the radio, it just ties up the radio for an actual emergency.
Rules-Politics	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	I mean, the situation on a football--responded to a domestic, and we had--pulled out the camera, I had to get another officer to get it out to me, in the game, so there's contra flow, so we tried to take a picture, camera stopped working. Apparently, we didn't have enough room. We're not supposed to delete anything, so we couldn't do anything about that, and there was no way for us to get back to campus. Everybody, every road for contra flow becomes a one-way road out, so there was no chance for us to go get another camera, so we had to take things on our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								personal phones and email it to ourselves and load it into the system like that. But now we have body cameras, so--
Rules-Politics	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	... I'm just waiting on a record, this person is in another car [inaudible], do I need an hour and a half of a video, do I turn it off, do I turn it back on when they come up to me? Do I leave it running continuously, do I mute it in that time period if they're not talking to me or anything like that? We've--I've watched videos, an officer will turn it on, but they'll get back in their car and it'll be an additional 30 minutes or so, or--it'll chime if you've left it on too long, or it'll chime every so many minutes that it's on.
Rules-Politics	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	... A lot of training, I find most technology errors are interrelated, so--and people just calling things out of order. It's from raising 10-4, people love to say 10-4, it's like, oh, 10-4, what 10-4 means is something very specific, you're not supposed to say 10-4 before you start your conversation. A lot of training, I find most technology errors are interrelated, so--and people just calling things out of order. It's from raising 10-4, people love to say 10-4, it's like, oh, 10-4, what 10-4 means is something very specific, you're not supposed to say 10-4 before you start your conversation.
Rules-Politics	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	Everybody carries personal phones but they have been, there are a lot of different issues with utilization of personal phones. Our folks are - we still have more of the sense of being for the community and allowing the department to have access to those phone numbers and utilize their personal phones for business activities. A lot of other agencies are not quite as receptive to that; again, we still have a little more of a working relationship between the officers and the actual department in regards to that.
Rules-Politics	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Yes. Back in 2005, we had a pretty mass retirement. It was the guys that all came on together back in 1975 and they all left. At that time, the city felt that it was more profitable for the city to save money by lowering the pension; they eliminated the pension for new guys and bringing in 401K. Then they decided to pay a substantial amount and the new officers pay a substantial amount into the healthcare benefits. So at one point when

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we started hiring officers, for about a good solid 7 to 8 years we were probably at almost a 60% turnover rate.
Rules-Politics	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	No. We are the same standards, hiring standards as everybody else you know. You know, you have to pass the background, then psychological, then the physical but with the 401K, they come in, they don't work and then they say, okay well, you know what [inaudible] is getting 50 more an hour. They have got no investment here because they [unintelligible], where me, I was the last one with a pension, so I do have a good pension and never - I don't care down in [unintelligible] offered me ten more thousand dollars a year, I am gonna leave it. And so that is why it is directly related to why we have such young car men. It's our turnover rate because of a poor benefits package.
Rules-Politics	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	... [city] received a \$3.5 million grant from the state to build a new dispatch center with the premise that they bring on somebody else to combine and consolidate dispatches. Now, with that being said, there are positives and there are negatives on that. The positive part is going to be - if this goes through, it is going to save the city a substantial amount of money. I am going to be able to take manpower off the desk and put it on the road over time.
Rules-Politics	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	We have never run across that issue. They have all been made aware that if you use your phone for taking pictures and stuff like that - and we supply them with a patrol camera that one of the officers has to have on the road with him at all times to respond to whenever they need to, we kind of discourage it, but they still do it because it's easier for them to take the pictures with the cell phone and email it. So - but we have never run across that problem. I imagine the first time we do, that will put a stop to that.
Rules-Politics	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	That is the absolute way to go but again, when you bring politics into it, nobody is going to give up their own individual kingdom. If I could have one thing, it would be one centralized dispatch for all the police departments where we have dispatchers able to communicate with everybody on the same - so they will need one room - knew everything

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that was going on in entire communities and could relay and use departments appropriately. I mean, I am a huge proponent of I think they need to combine all the downriver departments; having 16 separate community police departments is redundant, it is a waste of money, it's a complete communications disaster and the only way that will ever change is the state would come in and just offer up a grant where it would make it worth these guys to give up their kingdoms.
Rules-Politics	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	S1: Okay. It stays in my gear every night. I don't - unless something breaks or needs to be reprogrammed or upgraded or updated or something like that, like a cell phone they do software updates; other than that, yes, it is in my possession all the time when I am here. S1: Okay. But if you wanted to, for example, upgrade the antenna, that is kind of up to you? S2: Correct. Yup. As long as I get the proper one, they don't mind. S1: Okay. S2: I mean, you gotta pay for it out of pocket, so -
Rules-Politics	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	Not currently. I mean technically I recommend they not put that in the reports or anything like that because we're trying to make do and get what we can get to do the job.
Rules-Politics	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	I go alright that's you so okay buddy have a good day you know just the whole point of make sure you have the right person and technically that's the use of your personal cell phone to do business with and you can come into some issues with that if you start doing stuff with as far as courts and stuff being your personal information and stuff and guys are a little leery of that so what I do is I have everything text through my Google number. If you want to subpoena something you can subpoena my Google number. That's what I use business for. I try to tell my guys the same thing.
Rules-Politics	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] The fourth amendment. The whole fourth amendment right to privacy and stuff you know.
Rules-Politics - Budget-purchasing	FF	S	Other Public	36-45	11-20	Male	PS-S-001	... So I'll show you my radio here in a second, and that unit is, I think, the digital. It's not the MTS2000. It's the 7000. So it's a Motorola base. And

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					this \$8,000 piece of equipment-- which is very expensive, mind you, and so you researchers got to figure out how to make things cheaper, okay?
Rules-Politics - Budget-purchasing	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	Right? And so price point is everything in our business. If it ain't cheap, we aren't going to buy it. I mean, and I say that openly because we work for the government.
Rules-Politics - Budget-purchasing	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	And the feds have got a little bit more money than the states and the local people have a little less than the state, and so when you're really talking about municipalities and how do we integrate, it's really cost-based. And so that cost-basis, right, has driven this and a lot of federal grants. Local grants have supported the build [out?] of this robust system.
Rules-Politics - Budget-purchasing	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	And I think at the local level, we have such a problem, right, with budgets, right, because we don't have a pot of gold. We have a very structured financial [inaudible]. I can't replace this every five years. This thing's got to last 15-plus years. Right? Otherwise, I'd break the bank. And so when that new technology comes on board, typically, we are really kind of the last piece in line to actually adopt it. Whereas, it was really proud of our department to really see kind of some forward momentum and forward progress. But a lot of this was driven in part, is we just built this brand new Levi's Stadium next door for Super Bowl 50.
Rules-Politics - Budget-purchasing	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	And I'm like, "Okay. I got to push that [over to the side?]," and I grab my clipboard, and I just start writing. That's okay, too. I mean, nothing's perfect, and I totally get that. I've never had my iPhone die [laughter]. Imagine. Imagine that. But I pay a premium for that service. I use a Verizon carrier. And I'm telling you, it's the most expensive phone, it's the most expensive carrier, but I've never not had cell phone service in the entire continental US. Sierra Nevada mountains, I can still talk. So I'm a true believer, you get what you pay for sometimes. And sometimes, because of kind of the limited robustness of some of our contracts and things like that, we're not getting top products, whereas maybe some elite units in the military might be, but we're not.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	So our iPads [on our rigs?] are kind of-- even though they're our EMS Portal-- those are all paid for with other funding from our local dollars that are not [City] specific. So our local EMS agency kicked down some money for iPads for-- and we use ImageTrend ePCR, so ImageTrend's a provider like Tiburon
Rules-Politics - Budget-purchasing	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	I've seen [laughter] some of the most incredible VR stuff up in some of the labs that are around us. It's amazing. Technology is amazing. It looks really neat. But with a \$100 smoke machine and a tower that I can lock down, and train with zero visibility, and then use a thermal imager in their hands, I can do the same thing. And so I couldn't afford VR, even if you discounted it to a point where you weren't making any money. And it's frustrating, right? Because everybody goes, "Oh, this is so awesome." [Jet fighter?] [inaudible]-- yeah, but the helmet on the Raptor is like 3 million bucks. And [laughter] that's why it works really well. The version you'd give me would be like the \$1,800 one, which there'd be no way I could, one, afford it, or number two, it wouldn't be robust enough that it'd be actually good.
Rules-Politics - Budget-purchasing	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	It really brings it back to, you can over engineer it to a point to where it's so cool and so awesome, but your price point's going to be out the window. And, really, if you can do it-- think about the T-Card example. Have I made a better T-Card? And the answer is no, because those are cheap, and they work great. And I always joke, because the guys that laminate their cards and come to the fire scene-- at the end of the fire scene, if we have to mess up their card, they have to go and buy a new super card, right [laughter]? But, I mean, yeah, okay, there's not much else you can do to a T-Card, other than laminate it, to make it better. But, likewise, on some of the technology and like virtual stuff, that'd be really cool, but I mean, I just don't see it happening. Only because price, right? I mean--
Rules-Politics - Budget-purchasing	FF	S	Other Public Safety	36-45	11-20	Male	PS-S-001	Hey, it's an invasion of my-- there's a lot of concerns with that type of program, and I completely understand that. But for that fire, that gave it an overhead perspective. It was a large building fire, huge, of which, the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					operation section chief could look down, and he's like, "Good, we've got everything in place." But for us to get a helicopter up and do the same shot, it's not only thousands of dollars more per hour, we just don't have those resources. I mean, they're busy. They're doing other things. My buddy's a helicopter pilot for CHP, and they get to fly just a few hours a day because of the cost these days. It's just expensive. So, yeah, drone technology is pretty amazing.
Rules-Politics - Budget-purchasing	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	... As you got towards the 2000s, you started to see some of the failures of the systems because they weren't maintained properly or they started to not spend money on them. And then you had this window in the early 2000s where broadband was becoming big and people were saying, "Well, you know what? You don't need these super costly Motorola systems to buy something that you can communicate with."
Rules-Politics - Budget-purchasing	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	..You're going to see different styles of portable or things that would be different types of form factor. I think you'll probably see a reduced cost in some of those.
Rules-Politics - Budget-purchasing	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	Well, the phone in the car, that's just because officers share cars so we don't issue them all.
Rules-Politics - Budget-purchasing	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	It is. Overall, I mean, our radio system, we budget-- so [City] is somewhat unique. We do a 20-year plan. So we do a 10-year budget, 20-year plan, and then we do a 2-year budget cycle. So every two years we budget for two years out. We have some flexibility in that. It's more difficult to move money. But then we budget for the 10-year realm and then we put a forecast for 10 years. So that gets us 20 years out. Microsoft actually adopted our budgeting process.
Rules-Politics - Budget-purchasing	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	..She was in [City] and [City] prior to that. And she's changing some of the way we do business that makes it a little bit more effective. So money is not necessarily the issue if you can make the business case [laughter]. And we--
Rules-Politics - Budget-purchasing	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	...We just bought phones that are on the Inmarsat system, and we're paying whatever service fee we are. But if we had a FirstNet service, that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								their phone not only could work off of the land system and that, then they wouldn't have to carry the phone in a box in the trunk of their car. We can cut those costs.
Rules-Politics - Budget-purchasing	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	You're eliminating very expensive costs. So I think that that's-- and I think that's within 10 years. I mean, that's--
Rules-Politics - Budget-purchasing	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	So the mobile data computers, we're going out for a bid right now. So we replace those every five years. So we have a-- part our budget, we have a replacement project every five years. So the radio stuff, that's all budgeted. The minute we buy something, we budget for the 20 years.
Rules-Politics - Budget-purchasing	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	...Well, geez. If I do that it's \$10,000 a year, if I do that it's \$20,000 a year, and by the time I'm done it's \$50,000 a year and now I got to ask for the money." So I think it's figuring out a way to really know what's reliable, what works, how it works. In most law enforcement agencies that I know or even fire agencies where something like that gets implemented, it's usually the one guy that's the hobbyist that loves it and then he gets it implemented
Rules-Politics - Budget-purchasing	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] It's a personal phone that they pay a portion towards.
Rules-Politics - Budget-purchasing	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] They don't have the we haven't purchased the software yet for the fire and police but the fire's getting purchased this year for the line of questioning that they'll be asking. So yeah it's really call specifics but in order for them to get help on the way they have to have the address and the call type.
Rules-Politics - Budget-purchasing	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] Well just having come out of the radio discussion for radios I would want the responders to not only be able to have a radio in their hand but for all of them to be able to operate on frequencies that they can communicate with each other on. We just we see it time and time again that the left hand they can literally almost be standing next to each other and they don't know what the other is doing if it's not fire and law. Sorry. And so that would be I think my top priority is that funding. You know the first 911 event that caused that movement needs to be supported in a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								higher level. I think the responders should be able to communicate and I think there should be grant funding for that not just now I know it was out there in the beginning but it kind of just went away. With our state they now the [state] Public Safety Communications Commission now oversees the radios as part of the umbrella of not only 911 but also the radios and my goal this year is to make sure that funding those system is made a top priority because the repeater sites cost money, the radios cost money, the consoles or the base stations or whatever they all cost money and that's where some of the argument comes from. You know where 911 is trying to prepare for the next generation and there's many agencies that are still using funds for radios or whatever because there is no funding for that and so 911 ends up kind of behind the eight ball just because of the funding aspect alone so funding for the next generation 911 also has to be those are going to be the top stuff that will be happening in the state of Idaho I know this year so it's always having to do with funding I guess. You can't tell people to do things and then not fund it it's kind of hard.
Rules-Politics - Budget-purchasing	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S3] Another technology initiative that we saw fail in this valley was the fire several fire agencies were trying to get mobiles in their vehicles and right now there's very limited capabilities for fire to see the important information in their mobiles that law enforcement sees and again it comes down to just lack of funding and ability for them to tie into these calling systems and so I think that interop just isn't radios there's more to it with these officers, these first responders need to have certain information, they don't need to see arrest records and things like that but there's a lot of information that they crave from dispatch and they just don't have any way to get to it because they can't have the tools that are funded by the law enforcement side.
Rules-Politics - Budget-purchasing	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] 2008 or 2007 well actually 2006 is when they actually started talking . 2007 is when I think it got purchased.
Rules-Politics - Budget-purchasing	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Well, right now we're in budget season, so I'm doing a lot of budget work. Our budget process goes through the town of [City]. So everybody

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								pays them, and then that goes into a dispatch services fund. So right now what I'm doing is, I have to do a report on my report on my payroll. What's that going to be? Because that's our biggest expense usually. And then we're writing some supplementals. We're getting a couple of new radios consoles in dispatch this next year.
Rules-Politics - Budget-purchasing	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Last year we did a complete remodel. Actually this year in May of our comm center. So we took everything out of it. Moved it into a different room for a couple of weeks and we stripped it down to zero and put new furniture, new computers, new everything pretty much.
Rules-Politics - Budget-purchasing	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	...Yeah, so we just did that big change and then re-cabled everything for all the different computers, and we finished that, but we replaced six dispatch consoles with eight. But we didn't have enough money to put the radios and phones in the two extras. So that's what we're looking at for next year
Rules-Politics - Budget-purchasing	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Yeah, we did almost \$400,000 this year. So pretty cool. [talking about upgrades]
Rules-Politics - Budget-purchasing	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	It's going to be-- like I said, we've been working on it for months, so I think it's close now. The town of [name] has been very proactive with the technologies. We have fiber everywhere, and we have cloud servers, so we have everything we need. They've taken care of that. So I don't think it's going to be that big of a project. We're hiring an outside company to do the initial set, and so, she'll provide us with that, "Okay here's is your base."
Rules-Politics - Budget-purchasing	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	...The number one thing is funding because we get paid differently for cell phones than we do for landline phones. So everybody's losing their landline phones, we lose that tax. There's a \$1.25 right now per phone that goes to 911. And as those phones go away, we need to raise that tax because we don't get as much funding.
Rules-Politics - Budget-purchasing	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	...And the way that it works is it's hooked up through dispatch, so they have to have this equipment in order for us to dispatch for them. They don't want me to-- I can't pay for it because if I pay for it, I have to go ask

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								them for the money anyway, and they just don't have it. So if want to give my people a raise, I have to go ask them for money, they're getting tax.
Rules-Politics - Budget-purchasing	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	And when I looked at it, it was a quarter million dollars. And in 10 years, I'm going to need a new one, which is stupid to me because we found another company called [name]. And they make a voice recorder that is very similar to [name]. It runs on a server. It's web browser-based and never sunsets. You pay a maintenance fee, though. So every year, you don't never buy another \$167,000 purchase. But every year, you've got to get another 10 grand so that they can maintain and upgrade the software.
Rules-Politics - Budget-purchasing	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Yeah. I don't like having to buy the whole system and forklift completely in. But that's a lot every year that you have to come up with.
Rules-Politics - Budget-purchasing	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	So in 10 years, I've still spent 100 grand.
Rules-Politics - Budget-purchasing	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Which is not good and there's a perfect example I don't remember the year before my time but a couple of years ago there was a suspicious vehicle that they thought may have contained a bomb and that was parked right on the street between the backup center and the main center and if that had gone off [city] would not have a public safety answering point, it would not have a piece up. So that is great and that's something that's been expressed to the county but one of the frustrations I feel like that we have here is we do feel like they don't the county does not prioritize public safety as much as you know maybe we should and so when we've expressed that we need a geo-diverse separate building for public safety specifically for the piece app they're like you know interested. They don't want to pay for it because it is expensive to set up and they just don't really see the value because they don't think the way that we have to think.
Rules-Politics - Budget-purchasing	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yeah so we are required as employees here to work eight hours overtime a month which is not a lot especially considering we work you know 12 hour shifts so you can just pick up one day and not even a full

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								day and you thought you'd be satisfying your overtime but a lot of people work overtime because the pay in this job is not as great so that's where a lot of people make their money and then also a lot of people also work to help out other shifts because our staffing is so poor. So a lot of time even though it sometimes has a lot to do with money it is also to help out other shifts so that they can get breaks and stuff because if you don't have the appropriate staffing you're not going to get an hour break. You know you're not even going to get a half hour break and also the people that need to get trained are not going to get trained because we do all basically one on one training here.
Rules-Politics - Budget-purchasing	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	So unfortunately we are limited in our ability to move forward with this technology because of outside entities. Carriers, the jurisdictions having the budget to join the [name] as ezenet. For us because we are built so up we have a lot of infrastructure that we need to build in order for us to fully connect into the ezenet so our budget is much higher than the rest of the northern [name] area.
Rules-Politics - Budget-purchasing	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Because of the how up how Z our jurisdiction is. So it's finding the funding for that, finding making sure that the carriers meet their goals and I believe that there's a 15 year goal---
Rules-Politics - Budget-purchasing	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	We have to have those built in. It has to be it's something that we're looking into adding into our building code where when new builders build things in they need to have the radio redundancy built in. Our issue right now is we don't have anybody to go and check to make sure that they're maintaining that.
Rules-Politics - Budget-purchasing	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Some of them are very disappointed that we don't have certain applications that are out at the moment. One of those being smart 911 and the reason that we chose not to purchase smart 911 it is free to the citizens but it costs the county an annual amount. That annual amount for [county] is large and that would come out of our budget. Out of the budget in which we need to pay our employees, in which we need to buy new technologies all for an application in which [City] who has had it for several years now still only has 2% of their population signed up. It does

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have some great features in it but it is expensive and it is not used very much.
Rules-Politics - Budget-purchasing	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Have downloaded it and it's not cheap for the jurisdictions to pay for. So we do have citizens who are upset that we that [county] is not purchasing it. [name] has it, [City] has it, [name] might get it and they're like you're right in the middle of all of them why aren't you purchasing it?
Rules-Politics - Budget-purchasing	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	They want us to do more but the county itself cannot afford to give us additional bodies. We can't get additional positions to hire somebody so it makes it difficult because we are doing more with have to less than half of what we should be having as operations.
Rules-Politics - Budget-purchasing	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	And they may not want to view those things so we're working really hard on making sure that they don't have to view them. Do we need to have additional bodies hired that are paid and they know and they're trained how to deal with what they're going to view? It's one thing to hear it on the phone it's another thing to view it and hear it on the phone. So those expectations from the citizens have to kind of be managed and then we have to then put it into place but also protect our people.
Rules-Politics - Budget-purchasing	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	...with CAD's when I first started here we've only been through two CAD's and we are we have the budget right now to go and search for a new CAD. It's time for us to upgrade again but that's a five year process roughly so technology can come slow and if you don't involve the right stakeholders you end up with something that may work really well on the technology side but not very well on the operations side.
Rules-Politics - Budget-purchasing	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	...And we're going to give you money and funding and that kind of stuff so and our situation has been a little bit different than what we found around so it's kind of stepping on a little bit of new territory but it's also some stuff that has been done.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	I think probably the biggest problem in this county, and I think they're trying to rectify that, is our radios are really old. And they need to be upgraded, but sometimes the money comes into place where there isn't a lot of money for today's technology.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	...There's also a dispatch side to it where the whole system would be incorporated, but we can't afford that part so we are dispatching on the old system, the New World, so then what happens is we dispatch them and do all of our traffic on the CAD through New World, but then the guys have to go back into [name], which is a completely different program and then they have to write their reports and do all that documenting, so there's like all this duplicating of work because it's so expensive to get the whole system.
Rules-Politics - Budget-purchasing	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah, it is a bummer. But they know they kind of got you. So we did not opt in for that. So everybody gets their own set of credentials and then we just time them out for security reasons if they don't log in or whatever. We also go through a process of making sure that their managers get to review their list of active users or whatever. So that encourages new users, right? And it also gets rid of the people who have moved on.
Rules-Politics - Budget-purchasing	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] RGIS is so expensive that--
Rules-Politics - Budget-purchasing	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah. Contrast that with a single-seat license for RJS. If I want it on my work station, it's like \$9,000.
Rules-Politics - Budget-purchasing	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] I know that there are times when people who aren't technically savvy get sold something technical, and then they get stuck trying to implement it. Those are really difficult situations. They typically cost a lot of money [laughter]. And so those are the challenges. Implementations like [application], if they aren't done correctly, can be a significant hurdle to communication. All the problems you were trying to solve you just make worse if you don't do it right. It's my understanding on average an agency does two to three implementations of [application].

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Right. Yeah. And there's limitations because you have to be able to see the drone while you're operating it.
Rules-Politics - Budget-purchasing	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3]And then if you have to deviate for certain conditions, that's fine. But we can weed out the manufacturers that are just are not going to be any good for the county - it would all just big waste of money and cause problems - and do that together. And then, taking a deep dive into what those technologies are. I know, it's off from your original question [crosstalk]--
Rules-Politics - Budget-purchasing	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] There hasn't been any interest that I've seen. County is really cautious about spending money and a cost benefit analysis on those kinds of things. There's also a limited sophistication of IT support, so you start introducing encryption everywhere, biometrics, all those kinds of things, that's above the pay scale of 95% of the workforce. I mean, those are advanced things so that causes a problem. If those things should be there-- right, we should have encryption of all information but we're far from that.
Rules-Politics - Budget-purchasing	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah, you've got to follow chain-of-command. Some things have to be formal, some things can be informal, but you just need to inherently know that. And so I think culture really is our biggest inhibitor to having better communications. One of the things that on the incident side right, out there, cost of technology is a significant inhibitor to-- not everybody can have a radio. Right? Even though they really need it for their job. To spend \$7,000, 8,000 on a portable radio is just, it's wrong.
Rules-Politics - Budget-purchasing	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] It's wrong, [laughter] just to be honest. To spend \$70 million dollars on the infrastructure is just mind-boggling to think about it. But there are other technologies emerging. Software applications that you put on your phone, integrate with those. What's inhibiting from that happening is, we really wanted to have a completely independent radio communications infrastructure from the internet. We don't want to open that Pandora's box from a security perspective. And so in order to facilitate that you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								stuff you actually have to have networks converge. That would make it more cost advantageous. And then people don't like to carry big bulky radios anymore. They'd rather have it on their phone. Now you spend a bunch of money to give all these people radios and now they're just going to use their phone. So it's cultural but it's also cost. And grant funding has been the primary stream for all that. Most if it didn't come out of budget. Once this starts to need to come out of budget because grant funding isn't available or needs to be for other things, then that becomes kind of a challenge. A tug-of-war over what gets priority.
Rules-Politics - Budget-purchasing	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[RE: source of funding for new technology projects] [S3]: I would say 90% is through grants.
Rules-Politics - Budget-purchasing	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah. Yeah. So we've been really lucky. We've been the beneficiary of a significant amount of money from grants.
Rules-Politics - Budget-purchasing	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] So I mean, they did buy the tablets with the biggest screens possible. Those kinds of things.
Rules-Politics - Budget-purchasing	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	Well I monitor the schedules for the four dispatchers that we have on our 911, in our 911 COMMS center. It's both sheriff and EOC, which is [County]. And it's manned by the both of us. We are cross-trained, so either one of us can run whichever console that we're on. It's just a different pay by different entity.
Rules-Politics - Budget-purchasing	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Not, it does. They bring the invoice to me. In a nutshell, I guess if you were to [inaudible] my job into one, it's public safety more than just emergency preparedness.
Rules-Politics - Budget-purchasing	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	...Our dispatch center is a little unique in that we have a consolidated dispatch. However, we have a law enforcement, sheriff's office

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								dispatcher, and a [County] dispatcher both cross-trained in each other's jobs. The only difference is one gets their, one's on the payroll of the sheriff, one's on the payroll of the [County]. There is a supervisor for each shift or each, I'm sorry, not each shift, each discipline. We are 24 by 7, 365, two position [inaudible].
Rules-Politics - Budget-purchasing	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	... The two municipalities, one's a little bit smaller than the other, so naturally would not have the funding sources the bigger one has. So it's a little hectic sometime on the dispatchers insomuch that the smaller municipality does not always have a sheriffs, a law enforcement officer on call, and t may have to be the [County] backing up the municipality. So it can be frustrating at times, but I have to say they hold their own, and they do their best.
Rules-Politics - Budget-purchasing	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	So lots of time, it is very, very, very stressful that people are not trying to help themselves. And I didn't grew up in a culture like that. And it's, granted, times change. But at the same time, it's like folks, we cannot buy 9,000 tarps for 9,000 residents in [County]. [Inaudible] residential structures. I mean it's just, can't do it.
Rules-Politics - Budget-purchasing	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	... So kind of like my job is to where it gets, they get bogged down or have something else or priority, they can switch up. So it's work in progress, but it's come a long way. We've shown it [County]-wide. We've shown to our Homeland Security region also. A lot of people like it, and they're also looking for some guidance. So it was pretty much something that we already paid for through our GIS department that we didn't know we were paying for. So it's a pretty neat application.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	If you are a full-time employee in the dispatch center you actually attend what is called the 360 post academy, just like a regular police officer. We have a night academy and a day academy hosted at our agency. Our communications officers attend the night academy from 5:00 p.m. to 10:00 p.m. Monday through Friday after shift. They get paid and compensated for that. And at the end of it you are a post certified deputy just like a police officer on the road.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	And we had just signed a contract to construct this facility that we're in now which is the third floor of the new courthouse. And so that kind of sped that project up to get us moving into a new facility quicker than what we had planned. But also gave us the opportunity because we had planned on moving some equipment and purchasing some new equipment with having insurance we were able to apply those savings or those insurance claims to the new facility.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	So we were able to upgrade our communications better than we had. We are currently on our own 450 UHF radio system for the sheriff's office and fire departments locally. But in that move and upgrade to this facility we went on the 700 system with the state which is the statewide [State] radio system. And then our CAD system is several years old. We have a pretty new--I mean it's a new version, we keep it upgraded. We have a very new 911 system that was put in just before the flood, I think a year before the flood and then we upgraded it when we moved into this facility to have a backup center at our emergency operations center and this facility so we've got a diverse back room. We staff 7 positions on a normal basis: 5 radio positions and 2, well, a sergeant to supervise and a call taker for most of the time.
Rules-Politics - Budget-purchasing	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S1]: Well, this and keep up, and you've heard this before I know. But what didn't keep up was the funding mechanism and of course that was a problem all the way around and when we will get in more into FirstNet, I will all have more to say about it but.
Rules-Politics - Budget-purchasing	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S4]: Oh yeah. And I think the mapping is a little -- like if we could somehow manage to afford, like live mapping or whatever. Like Google Maps or whatever.
Rules-Politics - Budget-purchasing	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: Well, I am charging you \$ 300,000 a month and now you are going to get something that the state is giving you for free. So, I am going to recommend that you keep what I am selling you.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	But we run it together. So by being efficient and me being able to be involved in all that stuff, we make that more cost effective and more

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								efficient. I don't know, if you got to go inside but when you are done, I will take you into the center and I'll kind of show you what we're talking about. So we have a fire dispatcher, we have an EMS dispatcher, we have a call taker and then I have what I call a [Job title] that sits between the Fire and EMS and then we have two IFT dispatchers; one is out sick today and then I have a couple of trainees in there today too. So each one of them have a job, but all of them answer emergency phone calls and take emergency calls.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So to keep from having this separate, my IFT could be down and our ambulance build and setup, but with them being up here, they help out on the 911 side. The 911 side also takes calls for IFT; we can get more done with less people, it's more cost effective, those type of things.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	...We are, I mean our business guys so anyone in our meetings I tell these guys that "you guys have got to understand we're a consumer. At Dispatch we're a consumer, EMS is a producer, and Fire is a producer. We make no money. We don't do anything that provides any income for this business." S2: I would never have thought about it that way. S1: But we can save them hundreds of thousands of dollars. S2: Yeah. Yeah, yeah, yeah. S1: So we produce savings for them; but we produce nothing, we make no widgets, we don't do anything.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	You know we do things a lot different than the other -- how do I put this? I am not a government agency, so I don't have government money. I have to be a fish, if I want my money.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So we have to, we do more work with less people than government does. So if you go in and look you will have people sitting around on that side, that's government, not doing anything, now [indiscernible] you can see on our side too, the phones are ringing, go off, but they're usually doing some training or something going on. So we do more with less and we have to because if we don't make a profit, I can't buy new radio systems, I can't do all that stuff, so we have to be frugal with our money.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	At least that's my personal look on it and it's got to be cost effective so for me to go to a board and sell, which I just did, so ATCO, if you are familiar with that.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Part of it is our fault because our dispatchers quit using it because it doesn't work 100% right, so they quit and we had a meeting yesterday by phone, I said, I gotta know what's wrong or I can't fix it, you got to use it, and by buying this CAD we spent just as much money for our small corner as they did. We spent over three million dollars in buying the new CAD and OPTIMA and First Watch.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So I also have the third party compliance software called First Watch. We worked with them and we built a lot of triggers, we also built triggers for the health department. So there's things they watch during the year, such as heat emergencies during the summer, cold emergencies. Right now it's narcotic overdoses we're looking at, anytime those things come up, and they'll trigger in First Watch and they'll be able to go in and get that data out of our CAD immediately and by going through that third party there's no HIPPA data exchanging, all that stuff's clean, and I also pull my daily reports, hourly reports, compliance reports, because we have a county contract. We have to be at all emergencies in 10 minutes or less, 90% of the time. If we don't, we pay fines. We have another thing set up to where we have first response for ALS engines in the county. So if an ALS engine gets there in 10 minutes it bumps the ambulance time up to 17 minutes, so we still got Ucare in 10 minutes, and if we don't make that in 17 minutes it's a fine of \$250 and in a minute it's \$500 and then in three minutes, it's \$1000 and it goes up, to be allowed to do that; so there are economic reasons for us to be efficient. Unfortunately, the reasons that was in place is because a lot of places contract ambulances and nobody paid attention to that and at one time the county paid ambulance services, so we get no money from the county, we're held under that contract. I get my overtime, every time we are in with the county; I tell them they gotta pay my Mafia money. I say this is the only business I've ever worked in where I pay you to be here and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they're like stop saying that, like its extortion. [Laughter].
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	The reason for that is politics. So the people that ran rural metro helped create some of the bankruptcy issues. They all quit, walked out the door one day to go start a new ambulance service and part of that they knew what was going on, so they entered into this contract that we're in now, some things to make it difficult for us to remain here, but we're smarter than they are; we're doing financially well and they're suffering so, but it's politics, so they got in and they agreed, 'we will do this for free, we will pay those fines if we can't do it', so it's a mutual agreement from our side of the company, those people don't work here anymore, so that's how you end up in a thing like that, but if you look at a lot of -- we've gone full circle so, we used to get at one point if I can remember \$90,000 or \$100,000 a year to pay for the indigent people in [City] who couldn't ambulance, to offset those possibilities. And then negotiated a way and it went down to \$ 30,000 and then it totally went away. So we get no money for anything, for indigent.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Well it's a bill; you'll get an ambulance bill, we'll bill your insurance company.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	But the subscription doesn't cover emergency calls. They'll cover fire, so then we will come out and it will cover. So if you had our subscription and you're having to go to dialysis or radiation treatments or chemo, or something where you cannot drive or function and you're truly bedridden, there's a huge discount buying that subscription.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	We don't make any money out of this, it's just a nice perk to help people out.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Indigent is huge here in [city]. We have a huge homeless population. We have a huge psych [crosstalk]. It's...so if you're in jail, you're supposedly deemed indigent, which I still argue that, if you're in jail and you have the insurance, why am I taking you for free. We should be able to bill your insurance, you know, but by the law, you are deemed indigent when you are in jail.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	It's not a nationwide thing it's a State thing, and some county thing, but the Sherriff's department is supposed to be responsible for that, but because of the contract we entered into saying we take no money, we can't bill the sheriff's department for that, so it's another one of those contract things. So as everyone knows, that cost gets passed on to the consumers without money. Medicare doesn't pay for full boat. Medicaid doesn't pay anywhere near full boat, so that gets passed on to the other insurance companies, it gets passed on to you, the consumer; you know the drill.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	EMS is not. So we're working on some legislation changes. So in the ambulance service requirements for the [state],there are certain frequencies that we have to carry - VHF, 155, 205, 295, and 304 those are the disaster frequencies. So the State does not migrate it, but all the hospitals are on UHF to talk to them. Now we're going 800, so I've been meeting with the State and other people so we got to change the laws, because all you're doing is creating expense. So for EMS to go to 800 right now is an added expense, because we still have to maintain those older channels because we can't get rid of them because the State requires them. And there's no funding for us because we're a private company that is not getting grants, and I'm like we got to work on this, and not only for us being a private company, but in [county names], where there's three ambulances and they're already squeezing every penny out of that county's budget, they can't afford to go buy three \$20,000 radios.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Forever, and I can't get parts for them. So we're going to a new radio system. So for one console from Motorola is \$110,000. Through another company, I was able to do the whole center for a less than \$100,000.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Because I found something that is Motorola capable, that's just as capable, I can tap into that system and I've always been one that goes do we care who we use? I am like, I want it to work. I don't care what name is on it. I want good customer support. We run 24/7, internet is important to me, phone system working is important to me, radio

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								system working; those are my top three priorities. Fourth is that my employees and their needs to make sure they can do a good low stressful job because without those first three they have no job. So those are my priorities and how I take care of things. So yeah so, for a lot less than \$110,000 for one console, I'm doing nine.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Stressors. There are some and it ebbs and flows, so most stressors...all stressors are tied to money. Well there's a stressor for the employee, there's stressors for me, there's a stressor for the system. It's usually because we don't have the money to fix something real quick that we need to fix. Not that it doesn't get fixed or taken care of, but if it's more than \$10,000 it's a capital request. If you don't get capital approved the year before, you don't get it, so then you have to declare an emergency and you have to go before the board and you have to do all this stuff to get it done. So that takes time. AMR is a lot better with this new company. The radio system as well is unbudgeted, totally unbudgeted and we got to a point I couldn't get a part, I called them and said I can't get parts for this, one other failure and I'm in trouble, we do. They found the money, so they're really keen on keeping technology and stuff up to date too. It's not been as difficult. Right now, it's probably the workload for them; it's a stressor for them.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	And it's more a stressor probably for our new people than it is for our old people. What I mean by that is when I said earlier, so one of them went through the whole training program got a child CPR call, had to give the mom direct instructions on how to give CPR to a 2-year-old, went through all that, that was it, she quit, can't do it. So if you're a parent and you have a 7-year-old and you have the 7-year-old call that day, it's close to home, it's a huge stressor. It's the same when I was on the fire truck and the ambulance, you know there are many times I've walked up and seen the back of a kids' head in a car wreck and it looks just like your kid and it triggers that in your mind. The longer you do this, the more callous you get to those things, the more cold you become, which can also be a stressor for other things at work, so it is, and its different triggers for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								everybody, just like people are motivated differently. And employees that - money, I'll cut your overtime off and I'll get your attention quickly, but the other guy could care less and never works any overtime, so I can't use that to motivate him.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	We'd get Narcan because we give directions so we had the direction cards: how to give CPR, how to control bleeding; so if those things are going on we will give those instructions to the layperson on the phone. So we will ask, he's not breathing and I can't wake him up - do you want to do CPR? - I don't know how - I can walk you through it, do you want to do CPR? And we walk them through to do CPR on the phone. So we had to add Narcan administration because we've never done that before, so it's really simple with them. It's easier with that; with cards, you had to pay money and print out all the cards. With the new, we will pull off a script, we write out what we want it to be, how we want it to flow, we send it to our medical director, he approves it, same as we do with our policies and procedures for standards of care and then we send it to APCO, and they add it and we load it into the software.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So (unintelligible] says, hey, we want you to stay with us; APCO says if you want it to be APCO, you're going to have to go build this new software. It's a \$20,000 cost to me. Either way I go. I've got to pay 20 grand or I'm not going to have nothing. I'm going back to cards. So I go to my boss prepare to settle on how I can save money and you know, one fine is going to pay this \$20,000 and this and that and this is what we need it, and he is like yeah, all I want to keep up with technology, I don't want to go backwards and I'm like [sigh of relief] thank you.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	S2: So how will you communicate with them? S1: We're going to have tri-band portables; we'll have VHF, UHF and 800 on the same radio. S2: Wow. That's going to raise the cost of radio. S1: Yeah, they are like \$4000 a portable.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Right, for us it's uncommon. [state]? They do it all the time. They do it all the time, so they're set up with a lot of grants and funding and all that.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								We tried to take those lessons, but how do I sell to somebody that we need to buy a half a million dollars' worth of radios that we are going to use twice before they have to be replaced because of upgrades. That's just hard to do.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Lack of preparedness... It's due to the financial - so if we want to prepare we need 200 radios; nobody's going to pay for 200 radios that sit there that we use twice in 10 years before it goes out of date. So that's a lack of preparedness. It's a broad term; there are many reasons for it. We know we need it, we can't figure out how to fund it.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	The other is, is if somebody would do that and not communicate. We're really, really fortunate here. So in [Cities] and [Counties], we all meet all the chiefs; we have the LAPC meeting once a month. After that meeting, all the chiefs, we have a meeting and we talk about these things. Fire department, police department, sheriff's department, rural metro, we're all there. So we do great; our EMS region, Region 2, our 16-county region, we meet monthly. We have the best of the best people to work together. I'm a private ambulance company, and we work great with all the other private ambulance companies and the other government ambulance companies. We meet and we take care of each other, we pool our money, sometimes we get money from the health coalition. We just bought those Broselow tape for years for babies. We still have one, but you have to replace them every so often and they're expensive. So Broselow tapes, you lay a kid out, and it not however long they are, and then it'll say they weight this and this is the color of the kid and here are the drug dosages for that weight, so it's a really quick thing for the [indiscernible]. So there's a new program called the PD-SLEEVE, because in a Broselow tape if something changes, and I just bought 10 of them, I got to buy 10 more because it's a prank call.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	The PD-SLEEVE's you can change [indiscernible] it's the same thing as the Broselow, it's got the dosages from the weight and the size, but we can individually change and update and it costs half as much. So it costs half as much on the front end., but we got a grant through the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								health coalition and we just brought those for every ambulance service in 16 counties, through that grant. So, when we do stuff we don't do it just for us, we do it for everyone on the region.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Honestly, what it comes down to, we all got to go to it, so we got to find the funding so that we can get there and it'll be and it'll work, because there's going to be some small counties in this State that can't afford to do this, and that funding's got to be there for them.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	And that's what we have you know, they went to a new system and we didn't because it wasn't talked about, planned financially, or any other reason to plan and then now the ones with the most money [indiscernible] the technology get farther and farther away from those who can't afford it, or have the knowledge, I mean they may not even have the -- I wouldn't be surprised that there are some [City] 911 centers that have no idea about next gen.
Rules-Politics - Budget-purchasing	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	It does. Staffing is all about money. You can either sell it and get the staffing you need. But again, do people do true studies on what staffing should be. I know what I need in there, but there is no magic number that if you take his many calls, you need this many people. We tried to do that, we tried to use that as a number, but we could every one of those calls in four hours.
Rules-Politics - Budget-purchasing	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Technology advances can be an issue, maybe as not catching as fast as we want. Or maybe we're using a system that's one down from what's already happening because I'm sure you know as well as I do, technology is always moving, and a jurisdiction has to operate under here because they've already spent a lot of money on a particular ends, and it may not communicate with that technology because it's outdated...
Rules-Politics - Budget-purchasing	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	[RE: involvement in purchase decisions] Very, very little. I know I was involved in a meeting with some of the technology groups just to see from my vantage point. I'd very little input with it all. The fire chief has his people that he goes out and does a lot of these meetings. So I have

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								very little role when it comes down to choosing these products, but certainly, I can give my input as to, "Hey, I've got this radio. It works great for me but I wish I had this." Very little for me.
Rules-Politics - Budget-purchasing	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	[RE: current state of technology] I would say we're probably at a happy medium. There could be bigger, better, faster out there. Knowing a little bit more than I probably should with some things, it takes a while to be current. For the size of the department that it is, it's not like you can just walk into Best Buy and buy thousands of radios, and there's obviously a price tag and a budget that comes along with it...
Rules-Politics - Budget-purchasing	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	[Q: is protocol a pdf?] No. It's split up. And actually, the department just provides the current copy of the current protocols to the software development. The app is actually developed by a third party and they do protocols not only for [City]. It's a protocol app, but they provide protocols for various places in the country. So basically, anybody who wants to connect with them or whatever. The only thing the department does is they have some sort of agreement with them. I'm not sure exactly how all the agreements work out to. but the app normally costs \$10 and with us, somehow the agencies will get a deal with the developer so we can actually use the app for free.
Rules-Politics - Budget-purchasing	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	So, yeah. [inaudible] the app for free instead of paying the \$10. A lot of people were paying the \$10 before the department did that so [laughter] [inaudible] feel like It's a one-time \$10 fee. It's not that much so a lot of people went ahead and did that, but then the department, they-- [inaudible] [how much and how that works out?]. That's something between the agency and the developer. I mean, the developer, there's two [inaudible] versions of the app. There's Paramedic Protocol Provider and there's Paramedic Protocol Provider Agency, which is the one that we can [inaudible] and do and use for free. So, again, the specifics of things, I don't know how that works out, but.
Rules-Politics - Budget-purchasing	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	At a basic level, yeah. And then, I guess, was around 2000 or 2002, somewhere in-between there, they actually started working on putting paramedics on the engine companies. And the first way with that was

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								actually taking paramedics who were already paramedics in the EMS division or the EMS side of it and having them run on a couple of the engine companies as a pilot program. But since then, they've started actually hiring firefighter paramedics. And when they initially started putting medics on the engines, those medics were still just single-role medics. They weren't trained for firefighting at all. They were just riding on the engine to say they had a medic on the engine, that they could possibly get to the scene faster than a actual ALS transport unit with a medic on it. But as I say, since then, it's become a lot more. [As I said?], almost everybody the fire department hires now is cross-trained...
Rules-Politics - Budget-purchasing	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...they're hiring both firefighter paramedics and firefighter EMTs. I don't know exactly what the proportions are and how the numbers work out. And as far as I know, I don't think they're hiring more single-role EMS providers at this point. The ones who are here-- a lot of the ones who are here are actually crossing over and becoming firefighters. And the department, every so often, will have a class specifically for EMS people looking to cross over to the fire side and do both.
Rules-Politics - Budget-purchasing	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	There's private ambulance services in [City]. In the past, they haven't been used for 911 services at all. I guess it was starting about a year and a half ago, I want to say - I think it was last March - they did start using a private ambulance service for some of the basic calls to try to reduce the load on because it was getting to the point where we just didn't have enough ambulances and personnel to transport everybody.
Rules-Politics - Budget-purchasing	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	And you're coming from the slow end and this sort of seasonally busy end, and that never end transfers and their end transfers, and had a way higher property value, and that was managing themselves okay financially. But because of financial downturn, and because a lot of our money is based on property taxes, and because it takes two years for the property taxes to actually trend one way or another, even if they're going down, it still takes two years. They were in trouble financially. So it was to their advantage to merge with us. And their person that was in charge of them, saw all of that. And I think it also makes us stronger

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								overall as an agency, to be together with five different fire departments. Fire departments sometimes like to take over EMS agencies, and if you have one through out the county with five different fire departments, it's a lot harder for one fire department to say, "I'm going to take your whole thing over when they only cover a certain part of the district."
Rules-Politics - Budget-purchasing	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	In a lot of places, they work in a fire station. They're a part of the fire department. They're either cross-trained as firefighter paramedics, and then they work in a fire station and they do that. And then what we have is a county-based, tax-supported system that is separate. It's a separate tax district. So it's a special tax district, a health services district, and it's a-- I don't know if that's only a [State] thing, or if it happens all across the country. But they had to go and create this thing 30 years ago. We used to be part of the hospital. The hospital thought we weren't revenue-generating enough, and they didn't realize [laughter] the potential. And so they dropped us and then they created a special tax district...
Rules-Politics - Budget-purchasing	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...So we are not fully funded by taxes, but I think the budget that we have - I could be wrong about this - but roughly half of it comes from taxes and is property taxes. So on whatever hundred thousands of dollars your house is worth, you pay - I don't know what it is - \$28 per hundred thousand-- it's not a phenomenal amount of money but it is every year. And it's a couple hundred dollars if you own a regular house, a year-- I don't know. I don't know what it is. \$100,000 if you own-- anyway, but we have some houses in valley that worth a lot of money. So they pay more, but that's how that's worth. And then the rest of the money we collect from billing. So we bill patients when we take them to the hospital, and it's not cheap.
Rules-Politics - Budget-purchasing	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	And then we also take people to [City], and that's even more expensive. And there's different level of care within the valley, and then there's different levels of care when you take them away to another hospital too. So that's where we get a lot of-- and then there's a very small amount of money that comes from grants and stuff that we get, and I'm certain that they only last for a certain period of time though. And then

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								I'm sure there's other money that we literally-- we have leftover and we invest. We try to make it so that when things go down, property value wise, we still have enough money to function [crosstalk]. So that's how we work.
Rules-Politics - Budget-purchasing	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...the radios have gotten smaller and lighter throughout the time that I've been doing this. I mean, they used to be like-- you could them as a weapon if you had to [laughter]. And now they're as big as old cell phones. It's happened so slowly that-- I can't really think-- I hated the chirp-chirp thing because I'd like to know what other people are doing, and where they are, and that kind of thing. That was the biggest reason why I hated it. And I also thought it was just-- they only did it for financial reasons. I mean, it was cheap, so that's why they did it.
Rules-Politics - Budget-purchasing	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	But I think we've gone way more towards phones. Everybody has a phone, everybody texts. So a lot of that. And then pagers are gone for the most part. I mean, some services use-- the volunteers, use pagers, or very rural places use pagers because they can reach places that phones might not reach, or radios might not reach. But the pagers cost money for services, so [City] got rid of pagers. So now, you can get a pager but I would say 5% of the crews use an actual pager. And they almost all get texts. So they can just get a text instead. And you get all your information on a text and or on the radio...
Rules-Politics - Budget-purchasing	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	Yes. We use laptops for trip reporting. So every patient, we have a trip report that we have to write about them. And then it goes to a server, and it goes to billing, and it goes to the hospitals. So they can have a report of what happened before they ever got there. And different places have different abilities to make it better for the crews. And some places focus on-- I mean the billing is important because you need the money to keep doing the job. But some places it seems like a little higher priority [laughter] in making it better for billing, or QA, or research, versus the people that are running the 10 calls a day, who have to write the 10 trips reports per day...
Rules-Politics -	EMS	R	Supervising	46-55	11-20	Male	EMS-	[RE: new ambulance setup] ...It's not a challenge to be up as much as

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Budget-purchasing			Field Responder				R-007	possible during the call, but when you're running 120,000 calls as a system a year, you need to kind of-- spending an extra 10 minutes on every call makes it that you're going to need more ambulances, and that costs you millions of dollars a year. And the more ambulances you have, the less calls you're on. That makes your paramedics not as good as the ones that are on more calls. And so it's not like-- they're trying to solve a problem, but I don't think they're doing it in the right way. And some company came, a couple years ago here, they were all excited about this thing that they had with, "Let me show you how we can do this," and it was the beginning of this. I saw it coming, and I was all like, "Oh, no. Here we go."
Rules-Politics - Budget-purchasing	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: new ambulance setup] And now they've started to implement it, and the government's enforcing it. So if you get a grant for an ambulance and they have certain safety features that they want to implement, you have to get the safety features with the grant, whether or not whatever...
Rules-Politics - Budget-purchasing	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...so we used to have a technology here that would, you had fog and you would beep it in when you would drive, and it would keep track of your driving, your speed, around the curve thing. I'm sure it had some kind of driver scope inside the ambulance to tell you if you're taking the turn, all that stuff. Everybody hated it and the day it got uploaded every month. And they didn't really use it punitively. But it made noise. So it clicked when you come around a turn. And if you take the turn too fast at all, it would alarm. It was so annoying. And even if you were hitting this at a normal speed, it was telling you you were taking it too fast. Let alone when you were actually going fast, then it would just alarm the whole time. So everybody hated it. We kind of mutinied. And when we merged, we got rid of it...
Rules-Politics - Budget-purchasing	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: new ambulance setup] ...But now we're getting a couple of new ambulances with a multi-hundred thousand dollar grant that we got. The grant's awesome, the technology is kind of back with the new ambulances in some form. So there's technology that isn't good, or that we don't understand the use for it. It doesn't make our job easier. The

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								goal is safety, but it doesn't really seem to make it safer.
Rules-Politics - Budget-purchasing	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	we've gone from-- so I've started where we had van ambulances, which they still use in some places, but they're all diesel, and they've slowly, slowly moved. If you want a certain size ambulance, specifically one that works best in a city or isn't huge. And mostly, people that buy the huge ones are firefighters, and I'll leave that alone. But a normal size ambulance, like we have, that's basically a pickup truck [inaudible] or whatever, nobody wants to make them anymore. So Ford and Chevy are the last two-- Mercedes makes something, but they've gone from diesel. Nobody makes diesel anymore. So now they make gasoline like a V10 engine. So they get five miles to the gallon. But they're powerful enough and they're more reliable than diesel, but there should be so sort of incentive for companies to keep creating ambulances and there's not. They've stopped. There's no money in it.
Rules-Politics - Budget-purchasing	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	So I'm very reticent about-- I mean, I am, in spirit, an early adopter. I mean, my first computer had an 8088 processor on it and two floppy-disks that I traded back and forth, and I did all kinds of stuff on that and I think that's great. And it's fine for me to play around on, but if I'm-- my service is going to depend on a technology. I want to be damn sure that, number one, they're going to stay in business; number two, it works the way they say it's going to; number three, I can afford it; number four, I can support it. All those things, they don't say those things in the ads. The salesman just doesn't bring that stuff up for some reason.
Rules-Politics - Budget-purchasing	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I mean, we just signed on to a new billing add-on to our technology and basically, it's just an aggregator. It takes information from multiple different places, that their billers have to open, one screen for this and another screen for that, go to a different program for that. It brings all of that into two screens. So that you don't have to keep changing screens, looking back and forth, going to different websites, to get this bill ready to be sent out... So it has great promise, like all technology. It's affordable, we think we can support it because it's written by the vendor we already use. So we're going to try it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: billing] It's how we get paid. It's how we stay in business.
Rules-Politics - Budget-purchasing	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I mean, I can't make any of my employees do anything. Okay. They're here 24 hours a day. I've done their job. It's not easy. If you throw all kinds of harder stuff to make their job harder on top of it, it's not going to work. I mean, I can put all of the sanctions and rules and everything I want on it, but I have to motivate people to want to use this technology and show them the advantage of using it. We get paid faster. We can post statistics that show us what we're really doing, how it's useful. But if it's not to them, what's in it for them [laughter]?
Rules-Politics - Budget-purchasing	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	So the cost of doing business keeps going up, and reimbursement keeps going down, and cost of living keeps going up, so--
Rules-Politics - Budget-purchasing	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Ask anybody in this county or anywhere [inaudible] area, really. I mean, you could go to Martha's Vineyard, same thing. It's a nightmare [to?] staff because how do you staff full-time, qualified people when your call volume in May might be 200 calls in a month, and my call volume in January is 700 calls in a month. So I have to be able to expand and contract responsively, because you can't build [the church?] for Easter Sunday [laughter]. Taxpayer's money, it just doesn't work. It's not sustainable. So I have two paramedics in every ambulance, and then in the winter, I hire EMTs who do seasonal work, and have some other job as their main job. You have to get very creative about staffing around here.
Rules-Politics - Budget-purchasing	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...you got districts in this county, like us, who are pretty well funded. You get districts in this county, like [City], they are completely volunteer. Their budget is, I mean-- we give them our used equipment because they need it. They have no money to spend on anything, so how are you going to apply technology evenly across even as small an area as our county and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								make sure that it benefits everybody?
Rules-Politics - Budget-purchasing	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	there's a separate governance to kind of set the policy and how much we're going to spend this year, and how much we have in reserves, and all that kind of stuff.
Rules-Politics - Budget-purchasing	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	As you know, technology is very expensive. You don't just buy it and you're good. You've got to maintain it... You've got to upgrade it. And we deal with some very challenging and physical conditions. A lot of our computer sites are above 10,000, 11,000, 12,000 feet. You can't get to some of them unless it's summer. If one them breaks down, well, just have to wait until the weather clears [laughter]. I mean, we have ice loading on some of our tower sites such that it shuts them down. I mean, it's just--
Rules-Politics - Budget-purchasing	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...But if you're working on the interstate, most people expect to be [laughter] able to use their cell phone at least. There are just dead areas of this county. And a lot of counties, frankly... There's lot of parts of the country there's no cell service. And it's because there's no people [laughter] to pay for it. I mean, AT&T doesn't put a cell site where there isn't anybody to pay for it. It's the interstate corridors and even then there's places where, like I say, you don't have power, or you don't have fiber, or you don't have a microwave link, or something, you're not going to have anything. And the geography just makes that impossible some places.
Rules-Politics - Budget-purchasing	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	But from the EMS side, we do so many things where we talk and we experience, based on what we see. Whether your face is drooping or if I'm talking to you and you're not quite making sense. You are making sense, but I'm picking up on something that isn't quite right. So how do we portray that to the hospital sooner? EKG monitors. Our monitors don't have WiFi or Bluetooth capability. They purchased them right before I got hired here, so I think they bought them in 2006 or 2007. And if you think back then, WiFi was still kind of limited. We can't send our 12-leads. We can't send our heart monitor pictures to the hospital. If I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								thought it was important, which I never do, I could lay out their EKG and take a picture of it and send it. But again, we don't have that capability with the department...
Rules-Politics - Budget-purchasing	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: EKG transmission capability] ...The ambulance company does, but they don't utilize that either with telemetry and stuff like that. So there's a lot of underutilization. Yet, because those things are so darn expensive, they want to get 10 years out of them. It's kind of like a car, you know? ... You want to get as much time out of them as you can before it's necessary to progress. So labs, blood draws, stuff like that, we just can't take advantage of that due to that limitation.
Rules-Politics - Budget-purchasing	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...Our engineer is the one who does the documenting on our EMS calls because we're fortunate with staffing...
Rules-Politics - Budget-purchasing	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...We're currently just finished up doing an RFP for a new LMR radio system, so I was involved in that. If anything breaks, I get involved in making sure the right people are coordinating to fix it. And then just the everyday stuff, too. I just listen to the radio, I make sure ambulances are behaving themselves on the radio, dispatchers are behaving themselves on the radio. When mistakes are made, I send a lieutenant out to investigate, and then I take the results of those activities and would go ahead and take whatever action's appropriate there, so.
Rules-Politics - Budget-purchasing	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	So we just message each other, so standard commercial messaging systems. Again, at an enterprise level, for sharing files around, we have our own intranet with shared central drive systems. That gets heavily used. We asked for something more mobile-friendly, and we got access to the box.com platform which is very nice...
Rules-Politics - Budget-purchasing	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: cell phone use] To communicate with the hospital, to communicate with each other, to communicate with their field chief, with their higher ups, whether it's a text message, whether it's a, "Hey, we're going to be going to get some fuel right now," and their chief responds, with their personal phone, "Okay," because they need their permission basically. "Hey, by the way, [Name] not feeling well today. I going to take him to the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								hospital." "Okay." So they're using their personal phones for business, which is sometimes some people have an issue with that because they're not getting paid to use their personal phones. And they believe that we should be providing a phone or some sort of communication to them so that they can communicate easily with their chiefs, and sometimes that's difficult on our side because now we would have to supply phones for everyone and it's just not; money-wise, it's not going to happen.
Rules-Politics - Budget-purchasing	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	The one thing that seems to have been lacking on our ambulance for years is a built-in GPS. So we don't have the ability to open CAD computer and sort of GPS ourselves if we're confused of where we're going. They did buy everybody like the old, individual ones that kind of set up on the dashboard with the small screen. But I'd say if there's one thing lacking from our CAD that I've seen other systems have integrated is, everybody goes around now with their iPhone or whatever they have and UGPS and it tells you where to turn or where to go. But for [City], we still don't have that component in our ambulances. You're still relying on street-smarts and if you have your own second device to find your way around.
Rules-Politics - Budget-purchasing	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: community visibility] No, no, and that's sad because we don't have enough manpower to do that, at least on our end... I would love to go out when it's not really busy and drive around and talk to the community and see what they think of us or what do they want from us. I do notice our sirens are really, really loud, and it's for a reason. And they tend to put their hands over their ears, and we do get a lot of bad civilians that are very unhappy about that, but we need it because the cars don't pull over.
Rules-Politics - Budget-purchasing	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	...I see very often folks will pull a phone out and they're using Google, using their phone to find that because we don't have a solution for them to have a-- we don't do smartphones on the ambulances. They're just cost prohibitive. We can buy them cheaply up front, but for us, the part that becomes cost prohibitive is when they're lost, or stolen, or broken which happens--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	Okay, our radios, our chief's really cool about that. He buys the best radio stuff. So we were having an issue with our microphones. They weren't as clear, so he actually got us better mics for our radios, and they were way clearer.
Rules-Politics - Budget-purchasing	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	...So that's really important to have, I guess, the latest technology helping you. What else do we use? So he doesn't skip on lights for our gear. I guess that's technology related, right?
Rules-Politics - Budget-purchasing	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	So we have everything we need to do as far as the truck company does. We have two saws, two chainsaws, two K12s. The best cutting tools and extrication tools known to man. So I think that's super important, because if you skip out on things that save people's lives, it could take you longer than the [inaudible] if they break.
Rules-Politics - Budget-purchasing	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	I'm trying to think of what else we've had. So our fire department's really big about technology advances. Our chief is really cool about that. He sees something he likes that's new and he goes like, "Let's try it. Let's do it." And that's awesome because I feel like some fire departments are a little old school, and like, "No, we're going to do the same way every time." And honestly, I've seen some of the things change around here for the better, because he's not against pushing the envelope to try new things out and see if it's faster. The biggest thing with our job is you pay us to be fast and efficient and be professional. And if something old school isn't as fast as something new school, I'd rather save those seconds to help somebody. It all adds up
Rules-Politics - Budget-purchasing	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	... I mean you use data you know that you're paying for but and we have GPS's but the GPS's are spotty.
Rules-Politics - Budget-purchasing	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	It depends on what software you got on there. Some software's are real difficult to use. They're not at all user friendly. Some of them are very user friendly and but it's all you know a private enterprise deal where whoever's the cheapest price and whoever's direct their license the most that's what they do.
Rules-Politics -	EMS	R	Field	18-25	5 or less	Male	EMS-	[Date] is what I was told today. We because of the problems with the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Budget-purchasing			Responder				R-018	copyright or whatever it was on the old system we had to stop using it and they've been testing out other systems trying to figure out what's going to be best between the field to the billing to you know our records and I'm sure that that's a balancing act you know that the director has to work on but that's just not my thing.
Rules-Politics - Budget-purchasing	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	At my other job the stretchers on our ambulances are not like here. They lift up on their own and all you do is just pull them out and then you press a button and they go down so you never have to lift which is a huge deal on your back. I mean they'll lift 700 pounds or 800 pounds really so that's huge. I mean you don't have the issue of throwing your back out you know trying to lift a big patient, having to call for extra trucks but it's just you know it's money. I mean it's a \$30,000 system.
Rules-Politics - Budget-purchasing	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	... Funding is an issue everywhere I would say. You have to prioritize where you're going to put the money that's you know set aside for you. You have to have somebody that's going to keep the interest of the personnel as well as the county taxpayers in mind when they're buying stuff for the year, when they're budgeting out their year.
Rules-Politics - Budget-purchasing	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	They don't have enough money to proactively do much of anything so you know there's no tax space out here relatively speaking.
Rules-Politics - Budget-purchasing	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Not until the county builds a plan and lots of money for it. I mean there's nothing you can do other than make it work which is a lot of what emergency services does that nobody understands.
Rules-Politics - Budget-purchasing	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	...They'll take their own box that they pay 10 bucks for at [name]and they'll bring it in and put everything in there you know so it's organized and easy to get to help everybody out. You see us just working with it you know making it work but nobody really sees that unless they are told or are shown because they just think oh that's the way we paid for all that. You know we pay your salaries, we pay for all of that. No we pay for like we pay out of our own pockets for a lot of this stuff so you know that's just something that we do. If we need it we'll pull money together and we'll do it you know.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	We're pretty far behind compared to other counties in the state and elsewhere I'm sure. We're one of the few I think that even do paper reports. We did have a system they finally got one last year and it was horrible, didn't work out so they've done away with that so we're waiting now to see if the county picks up something different.
Rules-Politics - Budget-purchasing	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	Yes especially when we had we had like an iPad system to do our reports and they were absolutely horrible. You know and the bad part is is that our county tried to get us a good system and unfortunately we can't afford what some of the other counties can afford so it is a price thing and it ended up being more of a headache than anything.
Rules-Politics - Budget-purchasing	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	Yes ma'am. I think that when they're bringing in technology I think they and maybe they look at this but it seems like they don't to me because I'm on the outside. I'm just the person that uses it. I don't know the ends and outs but it seems as though when you're in a rural setting that those things should be considered when they're choosing yes. There may be a cheaper way to go and it maybe budget friendly to our county but when we're one of the more rural counties and we have all of these areas that we can't even get radio reception, we can't get cell phone reception then you need to recognize that some of these things are not going to work for us.
Rules-Politics - Budget-purchasing	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	But if it will help keep all of our information tracked because that's information the information that's put in the PCR's is where we also get our grant money so when it comes to needing money to get new supplies or trauma things for our trucks they look at all of these numbers that are entered as far as our patients go and if you can't keep track of them well because we don't have a system then it makes it more difficult for us to get money for the things that we need to be progressive and become a better service and better serve the community.
Rules-Politics - Budget-purchasing	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	he works on a really neat program that actually lays out where our call volumes happen, what time that they happen... He can actually show you a density map that shows the densities of our calls. He can show you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the unit hour utilization. So that's the time that we actually spend on a call. So from dispatch until checked back in service, they track the times that we're busy and the times that we're not. And then that helps position fire apparatus, helps position ambulances, so that we can be at the right place at the right time by statistical data. And then, also, where to put our next firehouses and things like that, so... It helps for funding, and it helps for grant money.
Rules-Politics - Budget-purchasing	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: data analytics program] it also shows where the need is and where the need isn't. And so that's been one of the big changes in the last 10 years that we've seen, is a lot of stuff went on paper, or a lot of stuff went into unusable databases. And now, we're finding that there's programs out there that we can extract some of that information. But we're also finding that there's 50 different vendors, and nobody wants to work nice with each other. And so you have to then hire-- you have to hire a programmer to make the patch from program A to program B so that you can get it to spit out some information that would be usable...
Rules-Politics - Budget-purchasing	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So, I mean, like I said just a minute ago, that when you talk about technology in the fire service and our rapid adaptation to it, we've never found anything to bring everything together. So there's inventory of equipment, and tracking the equipment from birth to death. And then the costs of repair, and when is it time to replace? And then inspection, and service tests to show that you've inspected it, and how it's lived...
Rules-Politics - Budget-purchasing	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: switch from Gmail to Outlook] The reasons were financial, because we're also in a weird-- I mean, I'm sure you know that, doing interviews about technology, there's a weird transition right now between gen X and gen Y, who are very technologically savvy, and the boomers, who are on their way out into retirement. And so I think that that older generation is still stuck on Microsoft Word, Microsoft Excel, those types of programs, because that's all that they were exposed to for 15 to 20 years. And Google and the cloud-based softwares don't work exactly like the software that they were used to. And so they have this big affinity to going back to what they know and not learning something new. And

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								even though Google Sheets worked as well as Excel, it's just things are in different places. You don't have the ribbon on the top or whatever. You can do everything you need it to. It's just different.
Rules-Politics - Budget-purchasing	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: switch from Gmail to Outlook] And then there's just the compatibility issue. So some of our admin is pretty old, and they would do something in Excel and then send it out for the membership to look at or to use. And then that creates a compatibility issue of having to upgrade it or change it. And then, when they would get something back, they would get it back from Google Sheets, not in Excel format. And they didn't understand how to change it back. And so, finally, they just said, "Okay, we're going to buy Excel for everybody." But then you could buy one for every desktop and then still continue a cloud-based service, which is now buying two programs. Or they just buy Microsoft 365, which gives you the web version, but then also gives you five free licenses, or desktop, or whatever. Then, that creates a whole nother problem for our IT department because there's-- and I don't know what your background is in computers... But you have to support them, and you have to load it on the computer. And then access and all of that, so.
Rules-Politics - Budget-purchasing	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	We explored a TIC that was integrated into a helmet. It was about \$1 million a piece when we were looking at, and it proved to be a very cumbersome piece of technology. It was 10 years ago, so the screen was really thick. The camera was really heavy. It added another 10 pounds to somebody's head... it was an extra 10 pounds on your head. And if you'd look like an orange sitting on top of a toothpick, that's basically what it was. So it just proved that it just wasn't a good technology...
Rules-Politics - Budget-purchasing	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	The mic in the fire service has become kind of a big issue. We're pretty early adapters at [City]. We tried a Bluetooth system. And the problem with a Bluetooth system is it has to pair every time you turn it on. And it doesn't always pair. And then you're trying to smash the button to make it pair. And so we got rid of it [laughter]. We also tried to do a Bluetooth system in the cab of the truck. So as the engineer, my position, we tried

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to buy one so the engineer could jump out and still have his headset on. And he could listen to the radio and then be able to operate the truck, not be exposed to the noise of the truck and all of that. And same thing. So you'd have to pair it, and then the battery died. We ended up with a [Name] that's MIL-SPEC that works really, really well for the military. Because they get in in the morning, the HUMvee, or whatever it is, put in a new battery, pair it up, and they can go about their day. But it wasn't built for the fire service. So it's not built for the truck that gets backed in, gets turned off. Then, you get a call, start the truck up, it still needs to be paired or connected.
Rules-Politics - Budget-purchasing	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: radio mic placement training] Absolutely. I mean, we do it all the time. But still, you can get in a unique situation, just like we do in TRT and SET. And you get in that one space, and you can't actually be spread out like that. So now you're communicating like this, where maybe [this?] your choice. And they've tried this. [Name] said they actually have headsets built into the masks. And there's a cost affiliated with them. And I'm not sure how those work. We haven't had them. I think we tried them and messed around with him, but didn't really come out.
Rules-Politics - Budget-purchasing	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Well, and that's why the big push was for the in-mask communication. But then it had the Bluetooth pairing problem, and we abandoned it. And then we went to this radio, which has a microphone on the back that's supposed to do noise canceling, but it works 50/50.
Rules-Politics - Budget-purchasing	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. Some of them are paid. Some of them are free. Some of them are mandated, like the AskRail is a mandated app. And so the railroad companies actually maintain them. But you do have to send in an application to get access to it. And then they'll send you a username and password.
Rules-Politics - Budget-purchasing	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...And we've actually just got a new program from the county, which is kind of an-- it's an interesting concept. They pay a ton of money to a company and they gather all of this free data and put it into one piece of software. And so you type in ammonia, and it brings up the ERG. It brings up the NIOSH Pocket Guide book. It brings up all of these free

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								pieces of information but it's all together. It's called PEAC Software. PEAC-WMD made by AristaTek. That's out of Gillette, Wyoming. So it's really cool, but it's unfortunate that it's that expensive. So it is kind of cost prohibitive for other places to probably purchase...
Rules-Politics - Budget-purchasing	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...But to have all that information in one piece of software that once you click on Ammonia, it just gives you a bunch of tabs. And you just click on every one of the tabs, and you can get all the information, so. That used to take half an hour to pull up all of these books to find that one particular product... And now, it's all there in one place, so.
Rules-Politics - Budget-purchasing	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...we have one thermal imaging camera. We send one in with every group of firemen that go in. So they have that technology there. But the people in the front that are on the nozzles that are doing the job-- to be able to talk to them and to tell them, "Hey, I see this," or, "I see that," because you're focused on your one job. I think that would bring more value than everybody having \$50,000 worth of stuff attached to them... When maybe not everybody needs that. Everybody needs to be in contact and to be able to communicate everything that's happening. Because I think now, everybody wants to have a TIC because they can't see it. But if you were just being told in a regular voice where, "I didn't have to push a button. I didn't have to do this. I didn't have to do that," you wouldn't feel the need to have to have everybody have a TIC to be able to see...
Rules-Politics - Budget-purchasing	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. There's a huge cost issue. And so I think that a lot of things can be done on a lesser scale. You can give one guy the \$10,000 TIC, but then give him \$50 worth of communication that he can now more freely speak and be able to communicate to get out what he needs to do that doesn't take over precious radio time. Because we're getting dispatch. We're getting command. We're getting all of these things that-- it's turning into a lot right now. And I think we're just trying to figure it out.
Rules-Politics - Budget-purchasing	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: prams/automated stretchers] I think that's huge. I mean, just the amount of injuries that that prevents. It's worth it... . I mean, you could lift up an 80-pound person and just lift her on and hurt your back. But it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								just that there's a cost affiliated with that. And we're gradually getting there...
Rules-Politics - Budget-purchasing	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	That's a happy coincidence. So that's some of the neat things that are happening with EMS. I know all the monitors now have the ability to send the EKG to a hospital. But it's just the receiving hospital has to have the right technology to receive it... And somebody looking at it. We're getting there. One of the hospitals we go to, they're only a trauma... so they don't have a doctor on staff for strokes at night. But they do have this little robot that drives around. And then it's got the camera, and it has a screen. And the doctor can actually drive it around, move up, move down.
Rules-Politics - Budget-purchasing	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: stand-alone ERs] You save that money. You save that ambulance transport... Puts us back in service quicker for the next patient. There's still a lot of kinks that need to be worked out. A lot of it's insurance and what they're paying for, and what they're not paying for. So I don't know how it's going in [City], but we've had it here through a private agency. It's called a CCT unit... Critical Care Transport. So that unit would show up and then, like I said, based on what it is, they [would either?] take care of you right there and send you a bill or transport you. So I really think that's the wave of the future for multiple reasons, and I think it's a great idea. You're going to have those people where you absolutely have to transport them... But from the hospital's perspective, they don't want you to do that. They would rather see you in their building...
Rules-Politics - Budget-purchasing	FF	S	Manager	46-55	21-30	Male	FF-S-023	Yeah, when we look at our data, when we look at our-- we've got two properties out there that we had our board, many years ago in the 60s decided that when we had that area, they bought this land... They were very smart. We have a bunch of little places of property that's pretty cool.
Rules-Politics - Budget-purchasing	FF	S	Manager	46-55	21-30	Male	FF-S-023	[RE: medical supplies] Yeah, it's all about the money, I think. So anyway, so we're trying to reduce the waste that way, by using data again, to analyze how much they need: what they really need at the station, what's expiring, and maybe move stuff that's not expiring, or expiring to a more

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								busy station so it can be used up. Yeah. Exploring things like how do we, maybe, partner with a hospital to get the stuff that they're going to use in a heartbeat, and just do a swap with them so that it doesn't expire, because that's just a waste of money.
Rules-Politics - Budget-purchasing	FF	S	Manager	46-55	21-30	Male	FF-S-023	...We're now moving to a web-based PCR in [inaudible] reporting. So now I've got all of this historical data that is out in SQL and other places, and we're going to this other thing that-- when we were buying this system, they swore up and down that they had two systems, that PCR and Fire weren't just going to be the same, and that is not the case.
Rules-Politics - Budget-purchasing	FF	S	Manager	46-55	21-30	Male	FF-S-023	So now I still have two separate systems out in the cloud that I have to figure out how I pull that information to a place where I can analyze it. They keep saying, "Well, we've got great analytics," which is true, but it's not going to give me a holistic picture in the long run.
Rules-Politics - Budget-purchasing	FF	S	Manager	46-55	21-30	Male	FF-S-023	Correct. Correct. And not only that, but I think when we really start looking at data as we go, we can start looking at things like, well, how many miles does engine one put on versus on-calls, and what is that costing us maintenance-wise? How can we project out what that maintenance cost is going to be over the years? So I have to bring on my finance data, my fleet data, and my fuel data, and it all has to somehow coalesce into something that we can look at.
Rules-Politics - Budget-purchasing	FF	S	Manager	46-55	21-30	Male	FF-S-023	And the same thing with even facilities. How often does that garage door go up and down and is that counting as far as our financial commitments for the next thing? So we have to really project out into the future where we're going. And again, that first year's good, then that cone gets really wide, but if I can budget out that one year-- there's nothing worse an apparatus getting a call, getting to that garage door, hitting it, it's dead. So if I know that I'm that only going to get 50 garage door up-and-downs, I'm of course making it up... but if I know that I can put a thing where it says, "Boom, we're getting close on this one, we need to get somebody out to look at it," preventative maintenance, zero failure. That would be the goal...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	FF	S	Manager	46-55	21-30	Male	FF-S-023	Money is tight. And a lot of that comes down to how much can we, in your purview, how much can we research? How much can we figure out what we need? And will departments adopt it? Vendors will go where the money is at. So if nobody is going to adopt it, they're not going to put their time and money into it.
Rules-Politics - Budget-purchasing	FF	S	Manager	46-55	21-30	Male	FF-S-023	So there's several different facets to that I think. I've been trying to look into the future, my IT administrator is futurist. So we talk a lot. There is technology that's coming, that's going to make us safer. Robots, drones, that kind of stuff actually doing some of the hazardous work. So there's that kind of technology that's coming. And it makes sense, you've got building on fire, it's just like a bomb. We sent robots to go defuse bombs, why not send a robot into a burning building? If it's not something we have to actively go search for somebody. That way if it collapses, what do we lose? ... A million dollar robot, who cares? It doesn't have a family, so there you go.
Rules-Politics - Budget-purchasing	FF	S	Manager	46-55	21-30	Male	FF-S-023	...Sadly, most of the money we have to spend has to be in that ideal [inaudible] that immediately dangerous to life and health environment. That's where we put our money and that's good.
Rules-Politics - Budget-purchasing	FF	S	Manager	46-55	21-30	Male	FF-S-023	So the unit hour utilizations came from the ambulance community. And what they try to do is if they can get there-- what it is is how many hours you are on calls over available hours. It's just a percentage. So in the private ambulance industry, they try to get that as high as they can because that's profit and that's them getting things done. In the public sector, if you look at an engine or anybody else who's located at a specific geographic area, and we're at this 90th percentile, is how we rate everything, anything approaching 10% means that they're giving into that 90th percentile. They're going to be ineffective. Medic units, we try to look at that because there's more than just responding: you've got to recover, we required to work out, we're required to do training. We require all this stuff--
Rules-Politics - Budget-purchasing	FF	S	Manager	46-55	21-30	Male	FF-S-023	[RE: UHU] So we're looking at like 30% during the day and 20% at night. That's kind of where our cautionaries are. Whereas private ambulances

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								look at it, not as cautionaries, but as profit areas. I'm not trying to be negative. That just... --that's how they use it. Yeah, they use that to see their effective force and how it's making them money. We're looking at it as to how we're burning our people out. If we go too high, tired people make bad decisions; bad decisions kill people. So we look at it from that direction. So it's just really time on-scene over overall time.
Rules-Politics - Budget-purchasing	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So some of the projects I'm working on now is working with the training bureau and the engineer that has oversight of our fleet. And we're purchasing new hose. So, inch and three quarter and two and a half inch hose. Purchasing new nozzles. We're looking at the way we do water supply. So we are looking to changing and adding gate valves on to our hydrants so we can get more water out of our hydrants than just using the five-inch supply line. So working on those projects to do the R and D. And there's crossover between training and operations, so working with them to kind of make-- right?
Rules-Politics - Budget-purchasing	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	I think really good. We work very closely with a similar size or smaller departments. We have a good working relationship with [City] Fire, but they're big city fire department, with a lot of big city calls, a lot of issues going on. We have some border calls that we work together. We don't do a lot of aid back and forth to each other. But I would say, otherwise, and especially now that we've improved the radio systems, that's made it even better. I think as our technology opportunities change, if we get to a point where our CADs are talking to each other, we could look at some-- we have some areas where dual responses, coordinated responses would work out really well for us. But it takes some time for us to have the comm center, notify a comm center, and then they process it. A call gets shipped out, and there seems to be some delay. Whether it's a training issue or a technology issue, not super sure yet because we haven't pushed that far into saying, "Yes, we're going to run dual responses together." But I think there's some opportunities in the future as money gets tighter, and that you just can't build fire houses wherever you want anymore. You have to figure out how can we work

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								together to cover areas on the fringes of your protection area. So I think there's some opportunities in the future. It's just, okay, how do we work through that?
Rules-Politics - Budget-purchasing	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...back then, the neighborhoods were kind of smaller. You've got a neighborhood firehouse, and if you look at our fire stations in the older parts of town, their response circles lay over each other so they're 6-minute, 30 or 8-minute circles lay over the top of you. And you have circle over circle over circle over circle. When you get out to the new portions of town, the circles just barely touch each other... You've only got a certain amount of money and you've got to have fire protection police, and water, and IT, and parks, and streets, and all that. But it's been a challenge because you're trying to push infrastructure so far away from the core of the city. How do we deal with all that?
Rules-Politics - Budget-purchasing	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	My personal cell phone, I get a small city stipend for carrying it.
Rules-Politics - Budget-purchasing	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So, here in [City], primary dispatch channel, and then we have TAC channels two through six. TAC two is almost always medical. TAC four is almost always fire. If there's a lot of medical, so six or more are going on simultaneously, they can open TAC three. If there are two simultaneous fires going on, house fires, then they'll open four and five. The biggest issue is the comm center has to have certified or trained people to function on those channels. And a lot of times, we can't get extra channels open. They just don't have the staffing to-- either the people trained or the people period to open extra channels for us, and that's where it becomes difficult. And you can hear-- they'll open it, but you can hear a dispatcher working multiple channels and trying to handle the call volume that's going on...
Rules-Politics - Budget-purchasing	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: working in Arson] ...we struggled back then trying to move to some kind of automated-- we really wanted a tablet back then, when I was in there, where you could do your sketches, and you could take your pictures, and you could do your notes. And we really struggled back then

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								trying to find something that could meet our needs and could be supported by not only the organization money-wise, but by the IT department who already has a ton of stuff going on. And then here we are going, "I want this, it's special." And they're going, "Right. You're not special. We need to meet the whole need of the whole city."
Rules-Politics - Budget-purchasing	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	Me, personally. I would love, at some point, whether the technology exists or not, the bigger issue will be funding and working with IT. I would love to have a tablet that I could get my calls on, that I could do my maps on, that I could do my pre-plans on, that I could have my inspection ship too. Because we still get stacks of dot-matrix-printed paper inspections. That I could do my EMS reports on...
Rules-Politics - Budget-purchasing	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	I would love to see that. I would love to have that where everything was just on one thing. The officer could carry it around. He could use it. A caller comes in, you could go to the rig and just put it in the dock. But we're all fighting for the same dollars. And IT is doing the best they can to try to keep up with everybody's needs right now.
Rules-Politics - Budget-purchasing	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: switch from Google to Office 365] It was a bunch of-- well, I don't know if through the grapevine, you hear stuff. It was a budget thing. We're paying for the whole Office Suite and we're paying for Google versus this. We just paid for 365. And it's a money saver, I believe, which obviously has to account for stuff. We're not just going to waste money on two separate programs. But they're similar, the two programs.
Rules-Politics - Budget-purchasing	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Financial and staffing are the two biggest-- volunteerism across the country, we know, is plummeting. The expectancy or the expectations of firefighters continues to astronomically grow, and so it's becoming more and more difficult to have volunteers who have time, commitment, and ability to do what's expected. And then with all those expectations comes enormous cost and trying to keep up with everything.
Rules-Politics - Budget-purchasing	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	We also live in a resort community, and we have a lot of transient population. And so as a volunteer comes in here, and the society expects them to have the same certs as a paid individual, even though

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they're volunteers. And we live in a high-cost area, so they have two or three jobs in order to maintain a minimum standard of living. On top of that, they're now required by the public to have the same certs as a paid guy, which takes time away from their job. We also live in a... very beautiful place, so having time off is super valuable. That's why you come here. And like you said, the life expectancy of a volunteer to maintain that internal and external standard is really, really difficult.
Rules-Politics - Budget-purchasing	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Everything's different. We have certs that expire at two years. We have certs that expire at three years. We have certs that "never" expire as long as you train on them every year. So everything's different. Everything is at a different cost. Everything is at a different educational facility. Some things you can get renewed through the college. Some things you have to do it through the Green Machine or the Forest Service. There are some things that you have to get renewed at a local level or by a specific certifier, like ice rescue. It can only be done through two different certifiers in the nation. So that's a struggle as a volunteer. That's tough.
Rules-Politics - Budget-purchasing	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...So our average for volunteer retention reaches right about the time [inaudible] get to Fire 1, EMT, Fire 2, CDL, all these certs. So now they can get plucked and away they go. So yeah, it's a very high turnover. And that comes with costs. I mean, several studies out there, and we kind of did our own assessment, and it's right around that \$17,500 for a volunteer, to get a volunteer. And then they go. So it's really expensive.
Rules-Politics - Budget-purchasing	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	My long-range planning is really what I spend a lot of time on because it's hard to determine, again, with our transient volunteers, again, through no fault of their own, what are their needs going to be. How do we need to make them successful in our organization? What classes are going to be available and at what cost? Classes are getting more and more expensive. We were just talking this morning. There is a class-- we're getting our last guy through it, which as we've gotten everybody else through, was 100 bucks just to-- the tuition to get into class. That doesn't include the supplies, and hotel, and everything to get through it. But that class is now 500 bucks.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	So, I mean, everything is getting more and more expensive. There are classes out there that are 1,000 bucks for a week. There are classes out there that are 3,000 bucks for the week. And so the more active the volunteer, the more we're going to be able to throw at them for training, but anticipating those needs is really long-range...
Rules-Politics - Budget-purchasing	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Email, text. We use our radios for incidents, but we don't use our radios for just communication. Some of that is-- well, we get charged. The way our radio system is up here, we get charged for every push-to-talk. So it costs us money... So the more we talk on the radio, the more it costs us. And with our financial situation, we don't. So we find that we don't use our radios as much because of that.
Rules-Politics - Budget-purchasing	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: password manager] We use a program called LastPass that we pay for individually.
Rules-Politics - Budget-purchasing	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[County] works because we've always gone into everything as a county, and we continue everything we do, technology-wise. I sit in the same-- the reason I know [Name] here, we all have that tech ops group, and I happen to be the chair of the group. So we make sure that we include everybody in the county, and so we're as a whole. And then that ties into the state. So our state has gotten better. The state spent a lot of money in investment into a state digital trunk system, and it helps...
Rules-Politics - Budget-purchasing	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Currently, we use Motorola as our vendor, and that can change any day. We're not stuck on them. We use the digital trunk system because that's what we're on in the county, so whatever best works there. We issue radios per person, which is very expensive, especially with the cost of these radios. But we've found that then you can ensure accountability of them...
Rules-Politics - Budget-purchasing	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	it has to be affordable, and that's the challenge. Of course, they're loosely related. I mean, there are companies out there that sell all this stuff, but it's never achievable for us. We'll never be able to spend \$10,000 on a radio. We have a hard enough time spending-- right now, I mean, our radios are costing almost 4 grand for radio. And that's why we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have older radios because we can't afford the new stuff. So, I mean, we're barely-- having a hard enough time buying cell phones. So it's one of the challenges, I would say...
Rules-Politics - Budget-purchasing	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: tech support when computers go down] We just don't have money for that. So we don't have IT.
Rules-Politics - Budget-purchasing	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	We're sitting in the million-dollar addition that we had to build because we were no longer getting volunteers from the town. And we were having guys coming here from [City] and [City] sleep in bathrooms because there was no place for them to stay here. Because prior to that, everybody had a house relatively close to the fire station. They used to respond here and grab a truck. Well, nobody lives in town, and we're still getting calls, so--
Rules-Politics - Budget-purchasing	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	And it had to change. And that wasn't budgeted. Our budget certainly doesn't support a million-dollar building. And it's obviously not a Taj Mahal. We don't have marble. We don't have all this stuff that really costs a lot of money. This is bare bones, drywall and wood addition, so.
Rules-Politics - Budget-purchasing	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So we're currently moving forward with our drone program. We haven't actually purchased the drone yet, although we are in the process of purchasing several drones. We've done all the research on it. The other captain and I have taken several-- we've gone to different conferences and have talked to various people around the country in the industry, both from a public safety standpoint and the commercial user kind of TV commercials, bridge inspections, and we've collected all of our data and kind of-- we're at the point right now where we're actually next week sending out for bid the drones that we actually want to get, so.
Rules-Politics - Budget-purchasing	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...So we have some venues like [Name] Park, which is right across the street from the City and County of [City]. And the fire department that serves it has got like three fire trucks. So, obviously, if something happens there with 50,000 people, they're going to be overwhelmed. But in our policies, procedures, and protocols, that's not in the city. We don't really concern ourselves. But it is a shortfall to say, "Hey, if there's an

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								active shooter, or there's a bombing, or if there's a drone that just crashes into it because a hobbyist is flying it around and it just happens to hit the crowd and a bunch of people start running for the door and start trample over each other, we're going to respond." And so we came up-- we were given some money. We presented to the city council, and what's called the [Name] Committee, to invest in technologies that would allow us to create a situational awareness tool. We brought in several companies. One of them was IBM. And I think they said something for like 850 billion-- no, I'm just kidding... So, for some extraordinary amount of money, they could work and create a tool. What happened was that it was just too much money...
Rules-Politics - Budget-purchasing	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	He's very interested in advancing the department. A lot of times we don't have firefighters that stay in key critical positions for a long time because we love to get back out and do the firefighting thing. And so those key positions that keep the organizations moving forward, in the fire service in general, we get huge amounts of turnover. I'm a brand new captain. A brand new chief. I'll do my 18 months in hell. Go work in an office and then I want to leave. But anything, if you want to advance the organization, if you want something... If you want to increase your budget, get a new piece of technology, those things aren't just like--
Rules-Politics - Budget-purchasing	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Yeah. And I think especially when you're looking at a lot of city projects, everybody's competing for funding. So even with a very well-laid-out, high-priority project, the timing on it may be--the city could have other really-- in two years from now, this project could get pushed right through. But right now, there's three other projects that are super important. So it could just be killed. So, by Chief [Name] being where he is, he understands what's going on in the city and going, "That's a great idea. We need to push it. We're not pushing it right now." ... Because the timing is bad... And so he understands that. And he's a master at that.
Rules-Politics - Budget-purchasing	FF	U	Manager	46-55	11-20	Male	FF-U-021	Basically, under the umbrella of administration all of the administrator components of budgetary, HR, all of the department directives and guidelines fall under administration. We also oversee all of the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								recruitment efforts, all of the PIO efforts of the department, also internal investigations, external investigations, anything to do with on-duty or off-duty behavior. We deal with City of Attorneys Office on litigations and lawsuits come this way. Claims against the city from accidents so on and so forth. We get all the citizens complaints, and then also around arson. Some of the arson investigations everything from fires falls under the administration as well.
Rules-Politics - Budget-purchasing	FF	U	Manager	46-55	11-20	Male	FF-U-021	...then from there, I'll go to speak with all the rest of the team in administration of what's going on with modified duty because we're in charge of that. So every day, how many bodies do we have broken, who's off, who's not, when do they go back to the doctor's, our paperwork filed properly, am I going to have any problems with risk management? So we try to stay on top of that. And then I'll meet with or get on the phone with risk management because obviously, cancer is something that's, unfortunately, becoming very prevalent now. And we've got quite a few people that have cancer right now. So I kind of give them updates of people having a problem with billing and things in that nature, so we can get that taken care of. And then kind of, just start the day after that, so.
Rules-Politics - Budget-purchasing	FF	U	Manager	46-55	11-20	Male	FF-U-021	...We can always use a little more help with budget or just like anybody else, the staffing... We feel like we're definitely at the bottom of the totem pole when it comes to safety agencies, when it comes to money. But it's difficult, I'm sure when you're making those decisions at the top because we're not bringing any revenue in. A little here and there but for the most part, we're just a cost, a pretty significant cost.
Rules-Politics - Budget-purchasing	FF	U	Manager	46-55	11-20	Male	FF-U-021	[RE: in-mask TICs] And generally it's on a truck, engines don't have them. And we have them in chiefs' cars but it's one of those things where it's better to have and not need in my opinion than to not have and need it. And they are costly but the benefits of having it integrated into your mask rather than having a hand that's taken away from you that can be utilized for other things... So to me that's a technology that's up and coming that I would love to see us be part of.
Rules-Politics -	FF	U	Manager	46-55	11-20	Male	FF-U-021	A lot of things that are important, and airbags. So that's technology

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Budget-purchasing								that's there. But again, it's on an app and that's costly, but that's something I would like to see us go to eventually where you should be able to pull up on a scene and either on your computer in the rig or an iPad automatically puts in the first ten of the VIN number, it'll pop up that car. And you'll know right there that you have in your hand where it's safe to cut, where it's safe to stabilize, how many batteries there are, if it's electric, if it's partial hybrid, if it's even hydrogen. There are a lot of different vehicles that are out there. That'd be beneficial for us.
Rules-Politics - Budget-purchasing	FF	U	Manager	46-55	11-20	Male	FF-U-021	[RE: communications technology] They're generally improving but, just like anything, we only have so much money and we've got to prioritize and technology is not cheap so it's always changing. So what are we going to get the most bang for our buck? ...
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Yes, Evenza Maps is pretty awesome. You can go in, and basically individuals will create maps. And then they can then make them available, so some of them cost money. Some of them are free. [Organization] has all of their maps on there. So you go in and pick a region. You download the maps you want. The other cool thing about Evenza Maps is for crews that are deployed to, say, a wildfire anywhere in the country, the [Job title] team can send those maps to the people's phones of the area they're working, and so they can interact with those maps. It's pretty awesome.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: Evenza maps app] Well, it's free, and then you can either buy maps individually, or I just saw an email where the state of [State] has worked out some deal where we can purchase multiple subscriptions, I guess. I haven't really looked into that. But yes, I believe if they're being sent out, anybody can get them as long as they have the app.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: laptops] So the battalion chiefs and upper issued them. It allows us to work remotely. We can bring them to meetings. I can do work at home. I try not to. I don't get overtime. We're exempt. But really, it's a way to kind of free us from the desk so we can work at the table. We can take it to the stations and use it for training if we want or whatever.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[City] has a resident program. So [City] is all career, and then they have student residents. They live in the station for free, they get their own room, their own kitchen. They pay for their schooling, and in return-- and now, they get an hourly rate of-- some sort of hourly rate. And then, in return, they work at that lower rate for the fire department. I went through the same program in [City] 20 years ago, and it was-- they paid for my schooling and that was it. They didn't pay us. We had to go get jobs, and then we would work two days a week, but it's gotten a little bit better than that. I thought they were going to get rid of it, but it's just too much potential savings on paper for the town council. They just can't ignore it, even though it's-- anyway, we got rid of it.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...VHF, UHF, I mean, that was awesome, but the voters-- in '96, the voters said no and then sheriff was-- we're three sheriffs away now. Then sheriff said, "Okay, we're just going to pay for it and just do it."
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Oh, yes. I mean, yeah. We've got TICs. Our equipment is very well taken care of, very new. We're on replacement schedules now.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...So if Motorola decides to change their portable radio, it doesn't mean we have to change, but if we have to replace any with the newer model because they don't make this model, that's when we will make the change. So they're pretty good about giving 7 to 10 years before they make changes. This one has been pretty good. I don't know if they'll do that even at 10 years. Bu anyway, so we have an equipment replacement fund where we will take that amount that we paid for all these radios, we add a 10%, and then we divided it up into 10 years. And then every year, we have a budget, a line item for that, and we apply funds to that so that when we get to the 10-year mark we can just pay cash and we don't have to fund it.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: station alerting] So anyway, they send out this high-low sound to alert people. Well, the problem with that is that it's the same sound at three in the morning as it is at three in the afternoon. So you are startled up. I mean heart palpitations, it sucks. And so what station alerting

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								does-- there's probably four or five companies that are actually really good at it. Unfortunately, it's very expensive, as all of it is, but basically, it is a system that is embedded into the CAD at dispatch and then at each station then has equipment that receives the call. So instead of this high-low thing, it will provide kind of ramped tones, so it's soft, louder, louder, louder, louder. And with that is a ramped LED lighting that's red...
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: station alerting] ...So each bedroom, for instance, will, when there's a call, the sound will come over, the light will come out-- will also come up. The red light's important because it preserves your night vision so that you're not turning on the light and then going right back out into the dark. There's a lot of components. They add a lot of bells and whistles to entice people to buy it, but I just want us to get away from this high-low thing. In the '80s and '70s it was a bell, like a bell, a buzzer, so we've come a long way. But we're just stuck here because with station alerting-- because it's an all or nothing thing. Everybody has to have it or nobody gets it. And so then you go out west to [City] and [City], where they don't have a lot of money so they can't really invest in it. [City] doesn't even have people in the station every night, so what use it for them? ...
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...So anyway that's kind of my number-one thing is getting station alerting. Our chief is to the point where we may just foot the bill for, say, the dispatch end of it and then figure out a system to-- because if we put in the dispatch part of it, everybody's going to be enjoying the fruits of it, if you will.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Oh yeah. So, US Digital Design is the one we've chosen. G2 is their alerting system. And the reason we chose them is because the dispatch module is far less expensive than the other companies that offer it, and so to be able to at least do that part of it and get the quicker tone time was huge. And so for \$43,000 or \$63,000, we can get those quicker tone times. And that's the other thing, too, is the higher priced version-- which, \$63,000 is nothing in the technology world. For that version, it's automated. So now there's no dispatchers trying to talk. So as soon as

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you hit the button, it alerts the stations, and then an automated voice gives the whole dispatch. And so now dispatchers can concentrate on EMDing, which is the giving of direction over the phone, CPR, if you will. The other dispatcher can work on collecting the information, updating the firefighters.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	We have a system for callback, but we don't require it and it's rare. We might get one or two. But now, with five-staff stations, we have a minimum staffing of four, which is [Organization]. The chief, we spend hundreds of thousands of dollars in overtime to make sure that these engines have four. So we can do a lot more now than we could 10, 12 years ago. 10, 12 years ago, we were doing callbacks for a lot of things, but it's rare now.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Well, I mean, I think, I guess, for me is if we're going to explore technology, let's explore and keep it and quit jumping around or trying to solve this with that. I mean, technology evolves so quickly that I don't know how anybody keeps up, but we're not going to slow the private sector down. They're going to keep evolving and keep creating all of these incredible, awesome things, and we're just going to keep shelling out the money for it. Yeah [laughter]. We can't keep up so.
Rules-Politics - Budget-purchasing	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...At the local level, our region is replacing their 800 megahertz trunked radio system [with] a new P25 Phase 2 system. But I chair the operations committee, which is all the end users kind of advising that project as far as, what our needs are, what our problems are, shortfalls, training, all of that... I believe the ballot measure was passed, I want to say like two years ago, so it's an expected or anticipated completion date somewhere in 2019, 2020.
Rules-Politics - Budget-purchasing	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...When Sprint/Nextel for example were looking at adopting the iPhone platform, they had to figure out are we able to move a million of these devices a quarter? Or I think the numbers might have been even more inflated, like a million and a half a quarter or something, a month. If you total up all of public safety in the United States, every cop, firefighter, volunteer, numbers estimate, you may have three and a half million of us

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								total here in the entire United States and we're certainly not replacing our radios every two years like average customer is with their cellphone.
Rules-Politics - Budget-purchasing	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	And so the whole idea to have public-safety technology, public-safety equipment that is free with a three-year signup [or?] lease, whatnot, has been a real interesting paradigm to try to address with public safety as far as technology: how we have it, what we do, what do we need. But it's for no lack of needs. Public safety definitely has technology needs, but it's always been kind of this push pull as far as, "Well, here's what's available," or, "Here, how can we make this work for us?" versus just saying, "Industry thou shalt do it for us because--" I mean, we just won't buy enough of them, they think, so.
Rules-Politics - Budget-purchasing	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: current technology] Some are better than others. Satellite communications tend to be very expensive. So they don't get used a lot. And when things don't get used a lot, then they can kind of get a little buggy... Just because people don't know. So then that's from the cost of it...
Rules-Politics - Budget-purchasing	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: NG 911] We have not rolled out, yet. So in this area, the 911 services are administered at a county level. And so we have, I want to say 12 to 14 PSAPs in this county. And so trying to coordinate those and getting everybody going at the same time has been kind of a challenge. So I know that they started buying some equipment for some of the 911 stuff, but they have not installed and configured it as of yet.
Rules-Politics - Budget-purchasing	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...I think the tablets may have its benefits as long as they're durable. That's big. That's big. And when you get to talking about us, if I have a radio that's expensive and something happens, I lose the radio or it gets stolen, the officer gets time. So it comes out of his pocket or he gets time with suspension. So that's a big concern, is that, say I'm an officer in engine, we get these new tablets that are easy to break. I'm not going to be happy about it because then now, that's something else I got to worry about. And when you're slinging tools around and your big concern is getting off this rig, putting your stuff on, and getting in there, you're less worried about delicate things. We're not delicate. We're just

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								not delicate people. So when you put something on there that is a level of technology that is where we are today but is not durable, that's a concern for us as firemen.
Rules-Politics - Budget-purchasing	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	[RE: SCBA with built-in HUD] It would be a potential but then you go into cost. You can only buy what is allotted to you. And you got to address what your needs are, not what your wants are. There's a little money extra at the end. But in today's economical environment, there is no money... unless that technology becomes a mandate.
Rules-Politics - Budget-purchasing	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	It is. But it's expensive. [talking about a helmet cam for every fire fighter]
Rules-Politics - Budget-purchasing	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	...So we didn't get a replacement. It melted, but I think it still records. So I think it still works. It's just they're super expensive for those. So just taking the ticks, just an example, the one on the quint is really- I don't want to say it's really expensive, but it's a lot more high-tech than the ones we have on the squad.
Rules-Politics - Budget-purchasing	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...So when a bad thing happens like Hurricane Irma or Hurricane Harvey, two very recent events, what happens if FEMA calls those organizations, there's a whole rotation with everybody and all that, and they look at who's closest and who's up in the rotation and they start going down through that list and activating resources. Like for Hurricane Harvey, all the task forces, all 28 task forces, sent some elements to help with that response. So then the local folks like me, I become essentially a federal employee and I get paid by the federal government for my time. So it really doesn't cost [County], or whoever the sponsoring agency is, anything in that moment to sponsor the team. Now, there's other associated costs that the sponsoring organizations do bear to some extent but they also get other the benefits because they get access to training and equipment and resources that otherwise would probably be beyond the means of most organizations to be able to house organically because they're really expensive assets to own and maintain for the very infrequent time you would ever use them in your own home jurisdiction.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	So we had a warehouse loaded with 8,000 radios sitting in a warehouse in [City]. So the [County] rep said, "Hey, I know where there's a whole bunch of radios sitting in a warehouse. Let me talk to [County]." The [County] rep came to us and said, "Hey, [City]'s wanting 1,000 radios. You've got 1,000 radios. Do you mind if we take them?" And [County] said, "Sure. Take them. We don't care." As it turned out, our warehouse provided not only radios to [County], but also to [City]. And they ended up pulling a couple thousand radios out of our warehouse and sent them to both incidents. Then they just replaced them with radios ultimately. But that taught the region that we needed to have some organic capability to surge radios into a significant incident.
Rules-Politics - Budget-purchasing	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	There's always the desire, and I understand the engineering constraints and materials constraints that cause us to have what we have. There's always a desire for it to be lighter, smaller, cheaper because they're very expensive devices. It's hard to explain to folks why I can get this cellphone that does all this stuff for a few hundred dollars, but it costs thousands of dollars for a radio that does not near as much as the cellphone does with current technology.
Rules-Politics - Budget-purchasing	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	--very high. They've decided that they don't want to be accredited because they can't be accredited because they'd have to retrain everybody and then that'd cost.
Rules-Politics - Budget-purchasing	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	All these CAD vendors spend so much money. There's so much money in the development of the products. There's so much money invested. I mean, you're talking hundreds of millions of dollars that they're--
Rules-Politics - Budget-purchasing	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	Right now, it's me and a lieutenant. And I think we're way understaffed... I mean, there was a group that was doing it prior to us, and it was a lieutenant and like five sergeants. So they all could kind of take little areas and share-- right now, what we have to do is-- the program we came up with, we have to find people to do the training. So we came up with the program. Now we have to find people to do the training. And they'll come in on overtime and kind of be adjuncts for us and work for us as adjuncts...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	... Your tablet or your computer had its own cell card. In an effort, my understanding, to make things cheaper, we decided we were going to buy routers, put a cell card in the router, tie two laptops or two tablets to a router. So we'd pay for one card as opposed to two cards, right? We had a ton of issues getting stability with the BPNs and everything. And then tablets wanted to connect to other-- and it's better now. But what ended up happening is we ended up-- our patient care reports, because those things tend do come out of the vehicle, they ended up having to give them cell cards.
Rules-Politics - Budget-purchasing	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	... I don't think are as up-to-date as some of the newer ones because it would cost so much to change the-- but that would be tremendous. I can't think of-- I mean, every year there's new-- there's masks that are coming out now. They have heads-up display as far as what your-- what your air is left. And there's heads-up displays for cameras where you can look in your mask without holding the camera up. The camera's built. I mean, there's technology out there but it's all so expensive.
Rules-Politics - Budget-purchasing	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	.... But if I had a display that was very legible and easy to read on board, and obviously the way the apparatuses are - and they can be different from different firehouse to different firehouse - because budgets don't allow us to buy the same thing throughout the city.
Rules-Politics - Budget-purchasing	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	... And again, it goes to budgets and accessibility to more money because there's heads-up displays in masks where-- let's face it, even big departments like this one are going to have a big problem coming up with the money for everybody to have that kind of technology. So that's the big one, it really is, because we're mainly about saving people.
Rules-Politics - Budget-purchasing	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	I know that I'd submitted an AFG grant, this year for additional portable radios and mobile radios. It was unsuccessful. We haven't received any notice yet, that we've been awarded that. But, we're looking at alternative ways to fund for our radios in our department.
Rules-Politics - Budget-purchasing	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	I guess it would be stable funding of the fire service. And I don't mean just more money, what I mean is stable funding so we're not reliant on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								levy's and votes. And we have adequate staffing, so we're not-- let me just close this door. So that we're not trying to get by with the very minimums.
Rules-Politics - Budget-purchasing	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	I think so. We definitely are short staffed because of injuries, because of vacations. But overall, if you're looking at staffing models, based on the population density, and the call volume, we're still under staffed. It's a delicate balance with budgets and revenues from taxes and other means. It can have a detrimental effect.
Rules-Politics - Budget-purchasing	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	I don't know if it's-- I can't think of anything that I got to tell you, that maybe we haven't already discussed. Unless if you're thinking of anything specific, question-wise? I would just think more probably where we could really, really jump forward, but it's all money, right? Because it's-- that you want to talk about being leading edge, that's where I think it would be advantageous, is the fire scene.
Rules-Politics - Budget-purchasing	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S5] ... But people want to know where their tax money is going, so often when we go for these levies a lot of people, all they see is, "Oh, gosh. More taxes." We have had such a great response with our-- every time we've gone to pass those, so I feel like my job is to make sure they know where their money is going. To make sure they don't just see-- we do a lot of community events. But I try also to show what we do on a day-to-day basis by taking what I know they're going to be doing in a certain drill over the North Shore wherever it may be. I
Rules-Politics - Budget-purchasing	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4]... And the other thing is the expense associated with-- when you look at our computing, let's just say the GIS files from NAS and so forth like that, we don't have a revenue base other than the basic revenue base that we have, to generate high-technology solutions for mapping and things like that. Whereas on the commercial side, where reliability is not as critical, they can move a lot faster. And they have a lot better resources to develop those technologies.
Rules-Politics - Budget-purchasing	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4].... We're kind of here wedged in between. [City]'s a completely different zone, different dispatch center. [County] county's completely a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								different zone, different dispatch center. And then ours, it goes that way. So we have a lot of interoperability challenges. The technology's there. Ask of any technology, "Can I do this?" The answer is always, "Yeah. It just takes money."
Rules-Politics - Budget-purchasing	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4]... They don't have to have Microsoft and Apple on the list. They don't have to use the common emergency speak. And then everybody has to-- the other issue it has to be funded. Everybody has to be sort of on the same version at the same time and that requires money. That's the reason that we don't have this version versus they have that version is funding. And we're at capacity support, and it's all this. And it's all very expensive. And the company is out there making a lot of money and the reason they're developing all this is new wristband things is because people are going to want to buy it.
Rules-Politics - Budget-purchasing	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] And one of the difficult things, I think, is you're developing standards, but sometimes standards come out, and we don't have the funding to meet some of the standards. That's one of the challenges we have when standards are created. As the federal government and the state government, there's a lot of unfunded mandates, and it's very difficult to do sometimes.
Rules-Politics - Budget-purchasing	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] Because we are taking up airtime and it costs money at dispatch centers.
Rules-Politics - Budget-purchasing	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] Yeah. And a lot of that is public education, but we also know as a fire district we go out to our voters for money issues. And the more positive and the more communication we can have with our citizens, the better off at election time obviously we're going to have, too.
Rules-Politics - Budget-purchasing	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] Yeah, we're getting short on radios, but we don't want to order new radios when-- we're probably going to do some type of a countywide bond issue to pay for it. We don't want to go spend hundreds of thousands of dollars replacing all our radios when number one, we can get the taxpayers to pay for it and not come out of our other budget. But

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								number two is, we don't want to buy radios that aren't going to work with the new system.
Rules-Politics - Budget-purchasing	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] Yeah, I mean, there is some out there that, I guess, I'll go one step further. And financially feasible, I guess. So I've got-- I don't know how many apparatus we have on that, on the streets. 14 station of 25 to 28 apparatus are out there all with air-packs on. They do have some communication one that do work better throw mics and things like that put on that help, but they're really expensive. And to outfit every body with that is not financially feasible at this time.
Rules-Politics - Budget-purchasing	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S1] So some of it, it sounds like, is not necessarily technology that's not out there. It's bringing the cost down on the technology that is. Which is another piece of this, right, to make it feasible? And if the goal is to make this feasible for agencies, then maybe that's part of this is saying to folks who are developing technology, "Not only do we need you to develop it. We need you to develop it at a price point that people can afford."
Rules-Politics - Budget-purchasing	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] And if we're going to teach a bunch of people here to use drones, it's going to be a lot of overtime to get them up to that pilot level for a commercial pilot.
Rules-Politics - Budget-purchasing	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	I actually have a personal phone, and the department gets me a stipend.
Rules-Politics - Budget-purchasing	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	Yeah, yeah. And then there's that whole cost benefit of do you train more for something that you don't use, and then that's the time that you could be doing something else too? So it's kind of that balancing act of, well, it sounds great to train more, but in reality it's-- yeah.
Rules-Politics - Budget-purchasing	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	Not for work related communications. If the battalion chief needs to call and talk to the crew up here, he would call not the personal cell phone but the company phone. So it's not expected that employees need to use their personal phones at work.
Rules-Politics -	FF	S	Supervising	46-55	31-40	Male	FF-S-038	Yes I would. And we are a-- as far as how our department's funded, we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Budget-purchasing			Field Responder					get our regular taxes, but we also have an excess levy that we go out for every four years, and that's a vote of the citizens. And we have to get 60% plus one vote to get that to pass. So we put a lot of emphasis into that because we know that when it comes time for the citizens to-- basically, they're grading us. When they get that ballot, they're going to see [City], "Yep. We're going to vote for them," and then we're going to continue on with our operation and get the funding that we need, so.
Rules-Politics - Budget-purchasing	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	It works but it could be better. The city, the way it works, they always go with the lowest bid. Whoever. So the better technology, we could have, and it might be useful, we don't know, but we have to deal with what we have.
Rules-Politics - Budget-purchasing	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Yeah. Yeah. It's all of the police channels, all of our channels. No matter what, only 24 people can be speaking on all of the frequencies at any given time. The 25th person gets a busy signal. And I know that we're talking about a radio upgrade, but we're still several years away from that happening.
Rules-Politics - Budget-purchasing	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Their budgets have always been much higher than us. [referring to the cops]
Rules-Politics - Budget-purchasing	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	...I mean, the cost of our equipment, like a fire engine or fire truck, is way more expensive than a police vehicle, so they can buy-- and they always want to stay ahead of the power curve in dealing with the bad guys and so they can justify it. I mean, let's face it. Being facetious, fires haven't changed, right? Fires start; we put them out. Fires have changed in that they are burning hotter because of what's burning compared to 25, 30 years ago. But the fire service has always been able to get by and skimp a little bit compared to the police department.
Rules-Politics - Budget-purchasing	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Yeah. I mean, that's a huge training issue. Yeah, you can have it here, and if you let go of it, it's still attached to you. And if it's here-- I think that's great technology if it works, but like I said, that all comes down to the training factor. Yeah. And the other thing when it comes to radio budgets

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								in a department in a city this size, is that any change to technology takes-- or not technology. I shouldn't say it that way. If we were to change our radio system, it's going to take 15 years for that to happen, right?
Rules-Politics - Budget-purchasing	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	And once again, you know that technology exists. It's just, how are we going to convince somebody and who's going to pay for how that's going to get transmitted?
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Budget time is a nightmare.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	A new CAD system for dispatch. I know they're working on it but of course funding is a big problem for everything we'd like to see in a CAD system.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	...think they pay out of our tax money that we just recently got for this system. I mean the app's free for us but as a department we have to pay our portion to whoever it is that has or owns it you know.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	...I can have up to 25 [staff] that the town will pay for but anything over that as far as their dues because we have to pay yearly dues on each fireman then I mean that's the max that they will pay for is twenty five.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	the fire department puts it on and that's what we ran off of the whole year was the money we got donated at [name] Day because I guess the state or the government or the state they give us used to be I think about \$5,000 a year and that's got to be all itemized so you can only buy gear or flashlights and every penny has to be written down. And like I said and you know scrutinized pretty hard but \$5,000 doesn't get you very far you know when tires are \$150 or \$200 a piece or a nozzle is \$400 you know I mean it doesn't get you very far at all so there was times like I was saying earlier those older folks they took our town pump to go help another town that was on fire they blew the engine in it. It was \$10,000 to replace the engine. The department didn't have any money to replace that so they had to I really don't know what they did.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								I think they took out a loan and everything else. I guess since I've been chief I've always remembered that and actually probably been a little too tight with money but I'd rather have it there than not you know and this sales tax I thought was going to be a great deal and it is don't get me wrong but it is a pain in the rear as far as being able to use it because I had it in my head that you know between those seven departments actually there's eight...
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	...You have to go to the chief's meeting and if you want if it's over x amount of money you have to get three bids, you have to get approval by all the other chiefs by everybody in that meeting, you have to then have your own money, pay for it and then get the receipt and then it'll be not until the end of the next month before you get reimbursed for that. So it's kind of a pain to be able to use it.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	) In this department not much. If we had more money we would have other things. Thermal imaging camera would be awesome to have for structure fires but I mean that's a lot of money for one of them you know...Well it's to rig out one fireman is almost eight grand completely that's boots, hats, bunk gear everything. So I mean you know our little department didn't have that you know. We're getting money now because of the tax but we need to use it in other places.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	Training in pay. I mean if and that's not putting anything on [County] or the department I'm sure that's just the average pay that they pay them but you know as well as I do the more you get paid probably the better you're going to do your job or the more willing you are to take training or learn.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	My wish list would be newer trucks. I mean newer gear. We probably got some of the oldest equipment. I mean we need new jaws of life, we need more time, more training, more time to take training, a slower paced life but I guess that's kind of my biggest deal maybe a little bit bigger, I'd like to have a few more pieces of equipment as far as vehicles and I mean I'd take all the new technology they got out there for fire or EMS or anything like that I mean you know we've got well even training

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								stuff.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	I would yeah have more volunteers that don't have to have a day job. I'd love to have a full time probably and I am paid like I said but I guess when I became chief the old chief decided that the town pays \$45 a month to the chief well he decided that wasn't enough so he the department agreed that they would pay \$45 also so I make \$90 a month which still isn't I mean you ain't here to make the money because it ain't going to get you very far but I mean I really think it would be awesome to have anybody that just didn't have to work
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	That's something else though as far as technology would be nice to have but it's very expensive is being able to communicate from the driver to the guy on the back of my truck. Now they make the headphones and the mics but I think last time I priced them it was like close to \$3,000 per maybe set for truck but there's times that fire is roaring so hard and fast and loud and cedar trees are blowing up depending on where you're at you know but especially if you're out west on those big task force.
Rules-Politics - Budget-purchasing	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Yes ma'am. There is additional training. Our EMR is mostly done through the area vo-tech which is paid for by the department and I think we had two guys just do that and I think it was I think \$350 if I'm not mistaken that we just had two new guys just finish the course.
Rules-Politics - Budget-purchasing	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	...I mean but you know we're working on a tanker right now to replace the one we've got and it's going to cost over a hundred thousand dollars just for the tank part and the bed and that's not including the cab and chassis on the truck which was donated thankfully and like our jaws you know ours are hand me down, hand me downs and I mean you're looking at ten to twenty thousand dollars for a set of those you know stuff like that you know there's always things like gear.
Rules-Politics - Budget-purchasing	FF	R	Other Public Safety	26-35	6-10	Male	FF-R-048	It is a huge issue. I mean funding is a huge issue. Up until I think we're coming up on the first year of having the sales tax for our county and other than that we were funded by a yearly fundraiser. It was basically

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					the town donating their personal money to protect them basically you know and that was I think the state did allow some funding but I mean it wasn't enough to make a difference. If a truck went down that truck's gone until we can save up the money or get a grant or figure out something to fix that truck. I mean we were living year to year as a department you know and that depended on the size of the department and the size of the town.
Rules-Politics - Budget-purchasing	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	...I mean ours are getting we're able to still do them but I don't know the price wise on those but I know they're expensive to replace and I know ours are getting old you know I mean because I can't afford to have a guy in a building in a structure and that thing messes up because then we've got to focus all of our attention on our firefighter and that's what it's going to be.
Rules-Politics - Budget-purchasing	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	...Educators, advocates which there's a line there you know you have to educate the public a lot of times on what you do because we are public service, we're funded by the public. Being an advocate that means let's just say you're in an area where you work you know you have different demographics pay scales on what people make.
Rules-Politics - Budget-purchasing	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	We have so many limitations here. Again communications, funding for equipment, for apparatus and I mean equipment as in safety gear. There's a lot of people out here who take the risk using nearly expired gear. We have some apparatus out here that probably shouldn't go down the road and right now we've taken some unfortunate steps to make sure those apparatuses are not being put in service anymore and that's a good thing but at the same time it's a bad thing. We're limiting our suppression capabilities to fulfill the fire service admission which is to preserve life and property. Out here you have to become a very good fundraiser. We do get a little bit of funding from our county but considering the funding that we know could be available to us we're very underfunded.
Rules-Politics - Budget-purchasing	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	It's the general picking on each other, complaining about this, that and the other and the topic is talking about how to keep it running out here.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								What our next fundraiser is going to be, how bad is the county going to short us this year with money you know.
Rules-Politics - Budget-purchasing	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	It can be difficult at times. Our EMS is paid, our SO is paid, our volunteers are not obviously. There can be same type of confrontation between those entities and a volunteer setting as there is a professional setting. I'd say 80% of the time things go great. We all get along, we get it right and it does great but that other percentage left over when we get it wrong we get it wrong big and you know we have to mend some fences and the thing about out here is the mending fences happens and it has to happen because we all know each other.
Rules-Politics - Budget-purchasing	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	It is and I stated maybe antiquated I'm not savvy enough to say how antiquated it is but we've had some upgrades but I think its been band aids. It's not been good fixes. We've been initiated some repeaters for the fire side of our county and you know been limited funding.
Rules-Politics - Budget-purchasing	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	We have that was like dogs begging for bones but we went and talked to these people who were controlling the money out here and said this is what you can use this for. This is a fire prevention tool. This is a life locating saving tool. A lot of people just thought TIC's, thermal imaging cameras worked to find fires no.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	There's not. And the... hmm, the only way that's going to happen here is you have to come in--us affording to put the terminals in the truck is no big deal. Us affording to put the data linkup is where the money comes in. We're looking now at when we replace the equipment on the 155 system or 154 system that with the new digital repeaters it's a little easier to do but then you've got to get into all the computer part that backs that up. And that has to be a [County] function not just a fire department function to make it feasible because our call volume is about 1,000 a year, a little--it's under 1,000 call a year and that's for everything.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field	46-55	21-30	Male	FF-R-051	...these things also, we have issues with some of the new equipment coming out will not--you can do a... a remote... a mask mounted

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					microphone and communication. This radio does not do it. They're going to obsolete these radios in a couple of years according to what they're changing. So they're expensive. And in a [Job title] role that radio right there is a budget buster. I like the fact that I can talk from almost anybody I want but that's not as easy as they make it out to. You have to go through this, that and 16 steps.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	The [County] next to us, I don't even think they use it. They don't use the 700 system. They don't have the money to buy them.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	They'll have a few over there but in terms of me dialing into the [Organization], I have to go to my old radio that I'm not always carrying 'cause they're on that kind of system. So. The biggest problem with all of this is money
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Yeah, and the subscription to is it not a lot of money.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	But we... you know, our biggest problem is limited number of people. But we have a large area, spread out, without a water system that covers the entire thing. So we have to bring a lot of our water to fires. So that's what we deal with here.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	We only have... we had 4, we're down to--well we're fixing to be down to 2 career people because the fire chief is retiring to take a private sector job. We lost our deputy chief. We will figure out end of the year what we do about replacing the chief, replacing the deputy chief or what position gets filled after that. We staff 3 people 24/7 right now as part-time people. We're discussing going out--we've made the steps to go out for a tax, to see if the voters will give us some money to put some more career staff on. And after that we have 60-something-ish volunteers.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Money which is you never have enough of. And... money gets you the equipment that you can put the technology on that can take some of the human factor out. If that person is sitting over there typing in dispatch

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								notes and it's showing up on the terminal in front of me, I don't have to wait for them to tell me what they have. And I--and I know departments that have that. They've got dispatch terminals, you know they've got a terminal sitting right here. And let's say that I go out and you know if I'm doing law enforcement stuff and I want to run a license plate or a driver's license, type it into that machine, boom there it is. That technology is available, it's just a matter of do you have the money and the infrastructure to do it and the bandwidth to do it?
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	And if you deploy the data you kind of--the data distribution, you kind of solve more than one problem. The [County] has terrible internet service. When you get out town you either got to the cable system who they ran some fiber, they buy their data service from AT&T. So they can only afford a certain speed. They're not being fed by, you know, a T-3 or something. They're getting X number of gigabytes and that's all they can do. AT&T and Verizon both have excellent--I don't know what Sprint has. I just have AT&T and Verizon devices. I can get 4G service all over, 75% of the [County].
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	I can sit in my house with a hard line coming in and get maybe 6 mg service. I can go to my phone and get 25 mg service. That's stupid. Why are we spending the money on one when we can do the other? I got a price to put... I got a price to put fiber to my house from AT&T. \$64,000. I am a mile from the fiber. There are other things on the road and I'm stuck with 6 mg DSL instead of I was going to buy a 10 mg fiber fed digital service. I don't mind the \$500 a month for my business but how--you know I can get almost the same thing with an over the phone system, over the wireless cellular system. It's just you've got to build the backbone for it. What's cheaper to do? And you know the government maintains this on a budget.
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	If you let the private sector build it out and give them a break for what they supply to you, I think it winds up cheaper because they're getting 2 uses. They're making money off of one side of it, you know, but by the way I could--oh, I could design a Cadillac of a system of--but I can't

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								afford it. You know?
Rules-Politics - Budget-purchasing	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	It's all--everything in the public sector is about money. You have a limited supply of it. People think you don't. But we get 6 mils property tax that's all we have. No sales tax. No user fees. No nothing. We get 6 mils property tax and our tax is based--is dependent on the value of the nuclear plant which reduced 4% every year. So my budget constantly goes down and my expenses go up and my needs go up. So I mean... that's where we're at.
Rules-Politics - Budget-purchasing	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	...The worst thing about that I guess is the price tag that's on them when they first, you know, hit the market. And of course may be like most anything else, being a government agency, you usually have to go with low bid I understand but I don't agree with. But it is what it is. I can't--I'm not the person to change that. Not singlehandedly.
Rules-Politics - Budget-purchasing	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	I guess if the prices of the gadgets weren't so expensive and/or if we as government entities did not always have to go with low bid type stuff maybe more people could have, you know, the better technology... and that technology may make the difference between whether somebody comes home one day or somebody shows up at their house to tell their spouse and their children that they're not coming back so.
Rules-Politics - Budget-purchasing	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] You have a trash business that collects trash for money, while we put out fires or we are in service to community for a certain amount of fee. That doesn't mean we wouldn't respond, we are required by law to respond no matter what the incident is, based on the jurisdictional acts of the state laws and federal laws that we have to act. We don't get paid by taxes. We are supported by each community; each community who is a member of our department pays a certain fee based on the square footage on their home or any other structures on the property. How they come up with that I don't know. They do research studies all across the country with fire protection, fire departments to come up with a fee for that.
Rules-Politics -	FF	R	Field	Not	Not	Male	FF-R-053	[S4]: And usually that is all conflicted by whether it is a political issue or

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Budget-purchasing			Responder	specified	specified			money.
Rules-Politics - Budget-purchasing	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S3: Right, a little bit of money we get from county.
Rules-Politics - Budget-purchasing	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: I paid for mine. We pay for it, don't we? S3: Some pay for them and some didn't, the fire department paid for them. S2: This is \$12 per year, pretty much a dollar a month.
Rules-Politics - Budget-purchasing	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: All volunteers, no money is involved S1: And that's a hardship? S2: I mean you got 100% dedication.
Rules-Politics - Budget-purchasing	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	Or we will fill them up. We will pull all the equipment out, make sure it all work because when you get on scene, sometimes stuff don't work like it is supposed to because we are not a paid department so try to keep track of as much as we can because it is all grants, that is all that pays for us is grants and money out of our pockets and we say, one of us wants to buy a bunch of tools, you know, a couple of hundred hours we will put it in and buy the tools that we need; some people will.
Rules-Politics - Budget-purchasing	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	I did, but now they are talking about getting us all our personal from a grant that we will be in charge of, but the grant will help us buy the radios for, you know, all the new technology coming out.
Rules-Politics - Budget-purchasing	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	I think a lot of it has to do with money. Grants, and some of these departments -- I mean, they are -- I don't know how they are making it really. Every one of them, all of us are struggling to keep, you know, the head above the water because we got truck insurance, you got to pay for the trucks, and that is all fund-raising grants, but I think a lot of it has to do with money and purchasing the right radios, you know, for the situation. Because you know, you don't want to get a Japanese cheap model that is going to fall apart in two weeks. You want to get either a Motorola or Kenwood or something that's --
Rules-Politics - Budget-purchasing	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	So, but we usually assign one guy. He is on it right now, looking at getting a grant to purchase new radios to get digital because we are -- a lot of the departments right now are tired of the scanner people. We get these people on scanners and they blow Facebook up and then there is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								rumors everywhere and that's destroying everything -- to me.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: department-issued iphones] So the detectives got them and command staff got them before everybody else. Patrol just got them the last year and a half or two years. And I want to say I've had one for-- well, since the five came out, so probably three to five years. They don't buy some nice ones. I mean, the one I got now is a 5C. C stands for crap [laughter]. But we get the ones that-- they're not upgraded if I break it. I might break some stuff. I'm kind of clumsy like that. Because they'll give you the new Penny phone, the new Penny iPhone. I'm like, "I cracked the screen on one of them. I'll just go get it fixed. I'll pay you the 20 bucks." ... No, just give you a new. And everything is backed up through our cloud. So it takes half an hour to swap everything over, so is what it is.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: apps] Once called the US Cop. It's basically the only one I would tell people to actually buy when I teach in the academy. And I'm like, "It's five bucks. Buy it. It's worth it." ... It's got all kinds of stuff on it. It's got drugs, schedules, news feeds, traffic laws, law enforcement contacts... It's got some Spanish stuff. It's got a little bit of everything. So if you have traffic laws, traffic questions, you got something about tire size, speed difference. I mean, this is a big one here, front license plate states, and it'll give you a list of-- I mean, we could have the measured power of Google and just do it that way too, ... And then compact and non-compact states. Compact is states that have gotten together and signed. So if I get a speeding ticket in California, or-- no. Let's say Florida. Florida. It affects my [State] driver's license. But what I love about being from [State] is it's a non-compact state. So as long as I didn't get a speeding ticket in [State] it didn't affect my [State] stuff.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	So there's that. But yeah. English, Spanish, and German are the three most spoken in Colorado. I know people that, if I need to, I can call, and they can handle all of those. We have deputies that speak Spanish. We have deputies who speak German, deputies who speak Portuguese because we get a lot of the ski resorts. They bring up people, and I think they're J-1 visas. So they bring a lot of South America. And then you'll

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								get Portuguese up here, and they commit crimes and-- I'm sorry not Portuguese but Brazilians who speak Portuguese. And then so we've got somebody that speaks Portuguese that can speak to them. And their eyes about fall out of their head when they run into somebody because-- but if you run into somebody that speaks Mandarin, you're not going to know it's Mandarin. You're just going to know, "I don't know what the hell you're saying." We have phone call language lines that we can call up, and they'll provide translators for us.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Yeah. That gets to a point where you get bothered so much. You just lean back. All right. Let's just talk. You don't even try because if you're going to pay me, and you're okay with doing this, then I'm just fine with it too. But that's why a lot of us will work before and after, before 9:00 when the bosses get there and after 5:00 when they leave... Because between 5:30 and 6:30, you can get more done than you did in the previous nine hours.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: e-tickter] ...it would be so much easier on the phone as opposed to an outdated and acquitted technology that's your user interface when everything else with the system is awesome. It's cost-driven. I'm sure if the demand was there, they would probably much prefer to put it on a Windows- or Android-based system. But the company has to sell it to agencies. And everybody's got a bunch of crisis in. So they're like, "Well, how can we do this?" And they probably all want Blackberry [back stuff?]. "Pay me some dollars, and I'll be pushing that out.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	And I get that. I'm not saying open the flood gates and start spending like a drunken sailor. But there's got to be a median, comfortable. And the decisions made by the command staff, usually with little or no impact on the people that it's going to affect the most. Someday I'll probably be in that command staff position. But one thing I always want to remind myself is how is this going to affect the boys.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: communication problems] Well, in technology-based is nothing talks to each other. And if you want it to talk to it-- if you want program A to talk to program B, A and B is going to have their hand out for a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								monetary supplement to give you the patch that they've already created or to create a patch. So that's frustrating...
Rules-Politics - Budget-purchasing	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: nationalized name database] ...So if I could just tap into his stuff in [State] and then have it pushed over to our end, that'd be fantastic. But it's a monetary thing, and too many people have their-- there's different record management system. So like I said, everybody's going to have their hand out.
Rules-Politics - Budget-purchasing	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: new CAD system] That was a good thing, and that's kind of why we stuck with Motorola, that there are very few dispatch-related changes. It's more functioning-type changes, working with our RMS, a smart copy feature... And the ability for the officers to take, say, a response from our DMV and be able to put it into our RMS system, eliminating duplication of entry and those type of things. So those are some of the big upgrades that we did functionality-wise.
Rules-Politics - Budget-purchasing	LE	U	Manager	46-55	31-40	Male	LE-U-020	Not really. Apps are very limited. We don't issue our officers phones... We do for supervision, but not the individual officers. Obviously, everybody has one. And nowadays minutes are unlimited. You know it's not like the old day. Texts are unlimited. Data is the only thing they charge for basically now so.
Rules-Politics - Budget-purchasing	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: consolidating 17 dipatch centers into 6] Part of it was we were mandated by the legislature to do it. So it was a mandate, but it was one that was a money saving, instead of having to keep up 17 individual dispatch centers we can consolidate. So, you don't have 17 recorders, you don't have 17 copy machines, in the equipment end of it. But people, mostly all of them, we kept the majority of what we had. So it wasn't an FTE savings, it was more of an equipment savings. And an efficiency savings with one of the biggest pieces-- most of those were one-man centers. So, if you got into a situation, you were it.
Rules-Politics - Budget-purchasing	LE	U	Manager	46-55	31-40	Male	LE-U-020	But a while back we had one of our smaller that only has 13 people, but they were down to 8 and so even though they were only down 5 people, the effect on their center was much more than it is for [City]. When you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								see that even the 10 out of 45 you're talking, you're down 20% maybe, but the other you're down 50%. So then your scheduling becomes a problem... Yeah, and initially people like over time because you're getting the money and then you get to the point where, I need a day off. I don't care how much you pay me.
Rules-Politics - Budget-purchasing	LE	U	Manager	46-55	31-40	Male	LE-U-020	...one of the things we ran into is since we're a statewide-based system, we have a statewide salary. So the salary in [City]-- cost of living is very expensive. Rentals are very expensive. So what we pay people in [City] is middle of the road, so the ability to lose people here is-- they have a lot of opportunities around to go, even in the same business, multiple centers, they would pay them more.
Rules-Politics - Budget-purchasing	LE	U	Manager	46-55	31-40	Male	LE-U-020	We enter the smaller town and our communication officers are making as much, if more, than sergeants, captains, uniform people, at the local police departments. They're one of the higher-paying jobs in the community. So sometimes we have less turnover there because they can't make anything more if they're going to stay in the area. Where here, the opportunities abound...
Rules-Politics - Budget-purchasing	LE	U	Manager	46-55	31-40	Male	LE-U-020	...There are some counties in the state that will cover traffic accidents. They actually have a traffic division. And they do accidents on the county roads. And we still monitor main state highways and major thoroughfares. But they handle their county roads unless it's something big and type of thing. But that's fewer and far between because, on the other side, they're taxed on resources as well. So the first thing that they want to give up is traffic because, well, traffic's the state patrol's problem [laughter]. Yeah. So we're getting some of those back. But we do very well in working with other agencies. We have a very good working relationship with the sheriffs and the local PDs.
Rules-Politics - Budget-purchasing	LE	U	Manager	46-55	31-40	Male	LE-U-020	And that's another thing we're working to. That we would like them to be their individual cars, but it's all budgetary thing.
Rules-Politics - Budget-purchasing	LE	U	Manager	46-55	31-40	Male	LE-U-020	And we've gone a way to-- another trend that we got a way with, there use to be a-- we build the patrol car and then we put in all the other stuff.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								You know, the light bars, the radio, and everything, so a lot of stuff, push bumpers. Now we're ordering a lot of that on the car. So where we use to switch out type things, for a budgetary person, it was probably a really good thing, that you can-- but the down time of the cars and the ability that you've got four-year old light bar on your car that you're going to run for another four years is probably not the best thing. So we order these things and then they come in one package. The only thing is when they're done, they belong to our fleet management. Then everything involved, we take the specialty stuff off of it, but like the push bumpers and type of things, they go to sale at a fleet so-- it's a good thing that we have the ability to tap into it because we know those cost and we don't have to retro fit-- And our build outs are a lot quicker.
Rules-Politics - Budget-purchasing	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: patrol cars] Four years. Four years, 100,000 miles, is what we lease them for.
Rules-Politics - Budget-purchasing	LE	U	Manager	46-55	31-40	Male	LE-U-020	And one of the things we have in [State], we set up a-- it's Star CSP line which we use for road rage, and impaired drivers. And those calls are directed to State Patrol dispatch centers whether they're in a metro area or not, because we're not taking away from true 911, it's not a 911 call. But they did direct it to us and we typically are responsible for the highways. Those calls obviously go through the roof as well. One of the huge numbers that we have. So, again, it's a technology that we saw an issue and said, "If there's a way we can get some of these calls direct to us, we'd get better information." So we worked with the carriers, all the major carriers, we met with them and set it up. And initially, when we did that, time on phones was an issue, people didn't want-- so we got it to be a toll-free call.
Rules-Politics - Budget-purchasing	LE	U	Manager	46-55	31-40	Male	LE-U-020	...in this day and age it takes a while to implement things, and especially if there has to be money involved and going out to RFP and those type of things where you're line level person has no idea of the frustration that that is.
Rules-Politics - Budget-purchasing	LE	U	Manager	46-55	31-40	Male	LE-U-020	Time and state government and all the rules, and oh, you guys, you always give us a low bid. No, we don't always give you low bid, but it is a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								process and they don't make-- we typically buy off-the-shelf products because they're cheaper, that-- if you wanted a truly custom whatever it is, you're going to pay for it. And they're going to write it for you and it's going to become proprietary and then when it breaks you've got to go back to the one source and... Go out of business, or they're going to charge you a whole bunch because they know that nobody else is going to fix it. So that's difficult to providing communication, I think...
Rules-Politics - Budget-purchasing	LE	U	Manager	46-55	31-40	Male	LE-U-020	Well, I think for me, for [State], I think if there were more reasonable satellite-type of communications because we get into terrain issues with the mountains and no matter how much we use to try to fill in our gaps, we're not going to put a 750,000-dollar tower to fill in one canyon. But it's important for us to talk in that canyon...
Rules-Politics - Budget-purchasing	LE	U	Manager	46-55	31-40	Male	LE-U-020	...So the ability to look at, and especially the mountain areas, the ability to implement satellite communications for cellular, or for broadband, for land mobile radio, those type of things. But satellite capability is there. It's been there a long time, but it's just not been financially feasible. And I think that would solve a whole lot of things for law enforcement, EMS, 911. It would be a big deal. But I know it's expensive to keep a satellite and launch it...
Rules-Politics - Budget-purchasing	LE	U	Manager	46-55	31-40	Male	LE-U-020	...So we're just one of-- it's a different dynamic. So we do have very good working relationships with some. Some we don't because they're self-sufficient and they want to have control over everything. And that's why we a multi-county thing that they bought their own digital trunk radio system, that is the exact same system as the state is on. But they don't have control over the state system, so they got their own in a tune of over a million dollars.
Rules-Politics - Budget-purchasing	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...we're just now getting into drone deployment, and I'm sure that's going to escalate and be a big deal in the future. We haven't done too much of that yet... Right now we only have three pilots who are-- can do this, and we've been doing a little bit of training. We have one drone for the department. Hopefully we'll get a budget for a little bit of more stuff, but we are able to do some crime-scene mapping. We haven't done that yet.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								On certain types of SWAT calls, we're allowed to go out and assist on that part around the outside of whatever the target area is, and we have on one instance deployed a small drone inside of a residence to try and get an idea where the target person was.
Rules-Politics - Budget-purchasing	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	Not very many people like our computer-aided dispatch system that we have right now. We have one very different company before that everybody liked a lot. We switched away from it. Now, they don't like this one because there's some issues with it. So that contract comes up every 5, 10 years, so we'll get out of that sooner or later.
Rules-Politics - Budget-purchasing	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: CAD system] ...quite honestly, we were lied to by the company when they said they could do a lot of what they can't do. So that's what the primary issue is. It won't do a lot of what they told us it would do...
Rules-Politics - Budget-purchasing	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...From a technology standpoint, I think that probably the biggest issue with it is, it has really, really inferior mapping and routing capabilities which are really critically important to public safety to be able to get to where you're trying to get to efficiently and by the shortest route. So that's one of their huge shortfalls and then the ability for that particular product to integrate with other systems, we're finding, even though we were told, "Oh yeah, it's easy." It's not. And they're using it as a way to increase revenue by saying, "Okay. Well, if you wanted to integrate this way, it's going to cost."...
Rules-Politics - Budget-purchasing	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	It depends on your assignment, but for the most part, the officer on the road working a patrol assignment doesn't get a cell phone. There are officers who are on call or something like that, then they get a stipend for their cell phone.
Rules-Politics - Budget-purchasing	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	Some officers are given a choice of a stipend for their cell phone or a department-issued cell phone. There are other officers working in covert units that are going to need to use their cell phone for that type of operation. So those are city cell phones that they're given to the officer.
Rules-Politics - Budget-purchasing	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: city-issued cell phones] There was some resistance from some of the officers when it got to the point where you just couldn't do your job

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								without a cell phone or some of the older officers were resisting doing that unless they got some sort of compensation. But I think any more, everybody's just so used to using their cell phones that they do it and don't think twice about it.
Rules-Politics - Budget-purchasing	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: new technology] ...by policy, everything has to flow through our section, and then [Name] who was here-- he's my liaison with IT, so [Name] and I then coordinate, research, and determine whether or not it's even worth looking at. And then our next question is, okay, where's the funding source? Because we're not going to do a whole bunch of research and everything if okay, we do all this and then there's no money for it. So that's kind of how that workflow goes that somebody comes up with an idea. They contact me. We make a determination whether or not it's worth looking at, or maybe, we've already looked at it, so that's kind of how that works....
Rules-Politics - Budget-purchasing	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...I can tell you from my perspective just our biggest constraint is always budget, budgetary concerns. We mentioned we had 10 fingerprint readers. We'd like to have 400 fingerprint readers. So those kinds of things are-- usually, it's just constraint by budget.
Rules-Politics - Budget-purchasing	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: smart phones] We've had both. I'm on call pretty much all the time, so I was carrying both, and I stopped paying my \$80 phone bill and let the city pay it.
Rules-Politics - Budget-purchasing	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...There's a lot of things that-- there's really almost nothing that we have to do on paper anymore, I don't think, but we do. Even our eticketing, it imports directly into the court. They have it the next morning. They still print out paper copies. Our records department, it could import directly into our RMS system, but because they had to click three times to merge the records, they print them out, and they hand type them in. There's job security there [laughter]. So it's there, but... we still have stacks and stacks. "Paper and printer is expensive." Then stop doing it [laughter]. But we keep doing it, even though we have other places to store all that stuff.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: body worn cameras] We've made that decision, we're not. Data storage is extremely expensive... they want 250,000 a year for our department to do that. We're actually spending 250 a year...
Rules-Politics - Budget-purchasing	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...The thing with technology, we used to dictate all of our reports. We never typed. I mean, we'd fill out the face sheets but then our narratives we would call in-- when I started our records department typed them. They ended up getting so far behind that we ended up laying off our [inaudible] clerks, and we moved to a private company, a dictation company. And we'd call in there, and they would type our reports for us, and we would get them back within a day or two. Or within hours if they're a emergency type thing. And again, that's a quarter million dollars a year...
Rules-Politics - Budget-purchasing	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: data storage for body worn cameras] So we decided, yeah, yeah, \$250,000 a year is better spent on dictation of our reports because we have good relationships with our community. We're not in trouble all the time. And for the most part, if we say that this is how it happened, then we're believed.
Rules-Politics - Budget-purchasing	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Our community is very supportive of us. We pretty much get every thing we ask for. Since I've been here we've past two different tax initiatives to pay just strictly for police, and equipment, and manpower, and stuff like that. So we get along really well with them, and they like us to be innovative and encourage us in that direction.
Rules-Politics - Budget-purchasing	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: drones] Policy's written, we just haven't made the purchase yet. In fact, two of us are going to [City] on Sunday to the training to get our pilot's license. Because we're the government, so you have to go through extra hoops [laughter]. Yeah, I could buy one on my own and fly it over my house today. But because I'm the government, I have to get a license and all kinds of other approval. So yeah, it's coming. Strictly for the purpose of [inaudible] crime scenes, search and rescue, tactical situations, and that type of stuff. It's not for the spying. So we've had to-- everybody gets concerned, so we have to put all these special caveats in our policy that this is what it's for. Again, [Name] can do it, but we have

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to be careful.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	... But our agency gives people the option of if you want to pay, I think it's 10 bucks a month, you can use your work-issued phone as your personal phone. So there's a lot of people that do that and don't have the separation of, all my personal stuff's on this phone, and all my work stuff's on that phone. So then you have the issue of if I take pictures of a crime scene, and I have pictures of my kids on here, not getting those all mixed up and in the wrong place.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	... obviously, we're in a very ideal place because we have the budget to have computers in every car, and have cameras for every cop, and have cameras in every car, and all that...
Rules-Politics - Budget-purchasing	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	When I first started, there was a bag phone in the car, but don't you dare use it because it was so darn expensive...So that was only for a true emergency that you can take it, and you had to unplug it from the wall and then plug it back into your car. So you didn't really have the cellphones. And then as it progressed, then I started supporting more of the in-car computers as those systems started getting more robust and they could do more things...
Rules-Politics - Budget-purchasing	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...the frontier and the work always has to keep going as new things are always popping up, such as you've got a box of thumb drives that we're issuing to everyone because we realize people started using their own private thumb drives. When they go to the gas station, the guys say, "Well, I've got this video I can give you." Well, how do you transfer that stuff?
Rules-Politics - Budget-purchasing	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	I guess, sort of fortunately, I don't have a daily routine because I've got kind of the patrol deputy side of the sheriff's office. But then when I'm working with the in-car computers, that's more connected to the dispatch center. So it actually bills out separately, even though I'm an employee under one agency, all the work I do on the mobile data computers gets billed to the dispatch center, so it's kind of a hybrid...
Rules-Politics -	LE	R	Field	46-55	21-30	Male	LE-R-019	...For a while, I was in a contract position so I went full-time, was

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Budget-purchasing			Responder					fortunate enough when my children at the age that it was important to be there. And as I say, the impressionable, age I was able to pull back and go part-time and then maintain things on a contract basis. And as they got older, I was able to step my work back up, do some contract work, and then roll it back into a full-time position with putting together a couple of contract positions.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: smart phones] ...Of course, it costs a little more. The cost of the device. The cost of the service. That has to get absorbed into the budget. Then I start hearing from people who are upset going "Well, they give me a gun and all this other stuff. We have to do all this training and now I get this handheld computer and I'm just expected to know how all the parts work." Some of it was in jest, some of it was legitimate from people who weren't that tech savvy.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...the old days of the police car had an AM/FM radio and nothing more... Now they've got the auxiliary audio input. There's USB ports for charging your phones. When you first get into your car, you have to log in to the video system. Everyone has an assigned USB stick with their identifier that they have to plug into a port to log on to the video system so the display shows their name. So all those things just keep building and more power and more plug-in stuff. Again, it goes back to customizing the cars and all the technology that's in there now far exceeds just the cost of the car.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: helicopters from military training site] So there is a more formal process, the chain of command to make a request for a resource. And then they approve it, or don't approve it, and then it comes down to logo base to say, "Yes, you can use the resource," whether it was a budgetary standpoint. Fortunately, we didn't have a bad situation that necessitated this. No one got hurt and was told, "You weren't even approved to be up flying." So that's a good thing. But I think they wanted to tighten things up and know when the resources were being used and why they were being used...
Rules-Politics -	LE	R	Field	46-55	21-30	Male	LE-R-019	[RE: battery consumption] Do we expect the frontline guys to pay for that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Budget-purchasing			Responder					electricity out of their own household budgets? Because you're going to take it home and charge it? Because it's issued out? Do you have big bank chargers at the office and you say, "Okay. You get an extra five minutes each day just to get all you devices set-up and running and going." That's going to decrease the amount of time you're on the street. I think these are all considerations as they keep adding the stuff and I keep trying to tell my administration, "At some point, you will have to add more support staff." You can't keep adding more and more stuff in without adding someone dedicated to understand how it works and supporting the guys when they have questions about it. Or it's going to get thrown in the back of the car and forgotten and just told, "It's another project that didn't work," because the support wasn't there. And then that support level is going to have to maintain because we know there's going to be more stuff coming down that we're not aware of yet. And so someone's got to figure that out.
Rules-Politics - Budget-purchasing	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So [information sharing software] does do it by account. So they charge by the account. [city] has a beta testing agreement with [information sharing software] so everyone at the agency that wants one has a [information sharing software] login. Other agencies have to pay per login so some other agencies have one login for the whole department. I think it's unbelievably invaluable.
Rules-Politics - Budget-purchasing	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: thumb drives] so we go out and buy them with department cash. We used to have four thumb drives. We would go out, we'd collect surveillance, we'd bring it back, upload it to [information sharing software], and then now we use the thumb drive again...
Rules-Politics - Budget-purchasing	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: learning geography] So that starts prior to-- I mean, it should start if you're anticipating working in a general area, then you should do it on your own. But in the academy, [city] had geography assignments, and we would get overtime pay for them, so there's two hours a week, which is pretty significant, just to go drive around or do whatever they want you to do, find locations. Within the academy it's hard because it's combined regional academy, so you have different departments like [city], [city],

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[city], [county], who don't all patrol in the same area. So I don't need to know the stuff that [city] knows. And I actually got in trouble for that, for not knowing [city]'s geography, which is ridiculous to me... But yeah, if you're not taking the time to learn it on your own, it's not going to happen.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	Obviously, the body cameras are very new. I think most of the in-car camera systems are the same. That seems to work for the most part. Unless something is messed up, it works [inaudible]. There's not a lot of bugs in that system. We recently got a lot of our computers updated, but prior to that, buggy or broken [laughter]. I think the computers are probably the most dated, but they're probably the most expensive to fix as well.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: cordless microphone] I think things are designed well. With the cameras, you can buy your own attachment for your vest. So if what the department gave you isn't working out, you can go get your own.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: work cell phones] I don't think they've made a whole lot of difference. I mean, they have HunchLab on them so that makes it easier for the officers. If we could get that on the PDT, they wouldn't need one more thing to take out. ShotSpotter is on the PDT. So I think it would depend if you had a PDT in your car or not. Because if you have the cell phone, event numbers, stuff shows up on there. It would work very well for, let's say-- some things work well for bike officers. Like if you could get the phone to run a name on there, if you had access to leads on the phone, that would be great for people who are on the bicycle. Because they don't have a PDT, they have to run everything over the air. So some things could be used for-- they're a great technology, but if you have a PDT some of it is the same technology.
Rules-Politics - Budget-purchasing	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Mine's personal. In the Sheriff's department we don't issue telephones but we do provide cell phone allowance to employees each month but yeah mine's a personal phone that I use for personal and work reasons.
Rules-Politics -	LE	R	Not	46-55	Not	Male	LE-R-042	Well I think I personally don't use it but our patrol guys have mobile data

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Budget-purchasing			specified		specified			terminals in their vehicles. [Name] might be able to speak more to how they function or work because I don't really know to be honest but I think yeah in our county we've had some issues with inoperability which I don't know if you're going to touch on but it's something that you know we have our law enforcement partners here in the [County] are on board with our getting a grant when a national grant when we switched over from UHF to 700 and some of our fire departments chose not to make that switch and so I think when I hear from a radio communication standpoint a lot is the inoperability issue...
Rules-Politics - Budget-purchasing	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: radio interoperability] ...And it's something that always seems to be somewhat of a struggle I think primarily for the fire departments because they're kind of the ones that do not get it on the grant and now I think they find themselves in a place where they're saying well how come we don't have any inoperability and I think on the law enforcement side sometimes it's like well you guys had your chance. You guys can come on board it is a good system. It works well for us but I think they have had or have some concerns on how it would work for them not having a full understanding of what their issues are with the functionality of that type of system for them. I probably couldn't speak to that...
Rules-Politics - Budget-purchasing	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	We can on a limited basis. I think as part of the grant the fire departments were provided with a couple of 700 radios for their command vehicles and maybe some portables. I don't quite remember. We do have a dedicated fire launch channel. I don't see it get used that often because I think it's primarily like the command vehicles will have the channel that the actual like EMS and fire don't have it so technically yes we can talk to them but I don't see it getting used very often. I hear a lot of gripes about interoperability but I don't always see the users use the interoperability that we do have.
Rules-Politics - Budget-purchasing	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I know some agencies pay a lot of money for Cloud based storage. Whereas we do not as far as I know and I think so far we're finding that's really the best way to spend our money up front on the storage rather

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								than over time. I know a lot of big agencies some of the companies that sell the body cameras you know they're all Cloud based and those agencies pay a lot of money for storage whereas we pay more on the front end for the camera itself and the storage but it's something I think it's pretty timely topic just because I think storage at some point will become more of an issue. I don't believe it's a huge issue right now for us but at some point it's got to be.
Rules-Politics - Budget-purchasing	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: CAD and RMS integration] Sure and there's challenges there. Both of those systems are standalone systems are extremely expensive and so to replace one you're either going to have to build an EPI it'll seamlessly allow that to happen. The CAD also ties in with our mobiles and so officers can see notes that are being communicated via dispatch notes that they're taking those will pop like to a certain degree within the mobiles as well.
Rules-Politics - Budget-purchasing	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I think it's because of the construction of the building. If you walk down the hall here with our command stuff you'll see everybody's radio sitting on the window sill because that's the only place it'll be able to link up with the system so we have explored I can't remember the name of the what it is but some type of repeater for in the building so if typically if our one of our deputies is in their office or back in the room where they write reports you'll hear dispatch calling them and they can't hear it because they're kind of towards the innards of the building and so I don't remember the name of what it was but I think we did get a bid or a quote to have it installed and it was like a hundred thousand dollars or \$90,000 and we're like oh I guess we're not getting it.
Rules-Politics - Budget-purchasing	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Not necessarily from my perspective. There's so many things available right now. I mean if I had an unlimited budget I could pretty much solve any problem that I currently face. There's new problems everyday coming down the pipe. A lot of those are created by new technology. Implementation is something new creates new issues and challenges to be solved and so as far as my main concerns really with our environment here as a whole I'm more on the infrastructure side. I care

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								about how big the pipes are, I care about the communications of the systems between the different facilities...
Rules-Politics - Budget-purchasing	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Yeah the wish list is there. I'm constantly bugging the board about what's coming next just to give them a head's up so that when I do hit them up with it that I can--
Rules-Politics - Budget-purchasing	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Oh, yeah. Yeah. I think the 7000 we're getting in, I thought I heard somewhere that they're like 10 grand a piece. I mean, they're expensive radios.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Well, I think in general, law enforcement's always been way behind the curve in terms of technology because we're government. We're lowest-bidder type of government, so the stuff we have is the cheapest. It's usually decades old. Yeah, [crosstalk] far between--
Rules-Politics - Budget-purchasing	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	..We've got one design for body cams, we've got one design for in-car cams, we've got one design for CAD, and then we've got all these other small things. And they're all from different vendors, because of whatever reason. The city was trying to beg, borrow, steal these things from different vendors and they didn't want to pay full price, so none of them integrate well together, which is a huge issue for us.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	It's in our 50-foot view. But right now, we're really consumed with body cameras, getting that rolled out. So for monetary reasons and for, again, just, we just only have so many resources. It's hard for us to start thinking about that, but that is on our road map, so to speak.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	...But it's hard for us. It's very rare. I just don't think they've kept up with the times, so to speak. And then, the new companies that come along, we don't want to be on the bleeding edge and it takes a lot of money and time to get there, so it's a bit of a catch-22, I suppose.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	And then, the chain of command will decide whether we have the budget. We also will help with trying to find grants and things, of course. But ultimately, they're going to be the ones making the decisions. All the way up to the chief.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	...But I guess they didn't get the funding that they needed for more officers but they were able to get the funding for more civilians. So they were filling in the gaps. So that leaves myself and my sergeant. And we respond to any homicides, robberies, squad call outs, or any officer involved shootings. And we handle the daytime hours. We have officers that are considered adjunct public information officers and they work in all different types of assignments throughout the city.
Rules-Politics - Budget-purchasing	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	Which is sometimes-- because like our CAD system, for example, they would charge ridiculous amounts of money for us to have an interface with other companies for whatever reason, so. But yeah, everything kind of worked together.
Rules-Politics - Budget-purchasing	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	And just a county. I think it's geographically a little over 300 square miles, give or take. There's 1,100 sworn police officers. So I guess by agency size, that's about midsize. I mean it's not like a Chicago or a New York, but that's still a lot of police officers, but realistically, it's less than what we should to serve a million people. We should have almost twice that to adequately serve the community. But we're fortunate that it's still a fairly quiet community.
Rules-Politics - Budget-purchasing	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	So that's a huge benefit. And they're all going that way. They're not retrofitting all the old cars, which makes sense because it's an expensive system [laughter].
Rules-Politics - Budget-purchasing	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] --if we need to expand our coverage, it takes funding and we have to expand our infrastructure. We can do that. And that's done and we're doing it now. We're expanding coverage into the airports. Those are sort of the special grants that we apply for. We get them and then we solve issues that come up.
Rules-Politics - Budget-purchasing	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	Well, I think what we're-- well, we have an RFP out on the street. We have an RFP out on the street. So it's that program is initiated, I do it. But, again, it's going to be a program that's going to help us be able to eliminate some of the boundaries and challenges we have. Maybe those cross-geographic boundary issues and the way calls are presented to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[City]PD, and also alarm companies and the hearing impaired, and being able to handle those types of requirements, and in a platform that is all integrated. It's all IP-based, end to end. A lot of the capabilities we have now are-- everything's analog and then it's converted to IP. And now we're in the world on conversion and-- whereas everything once it's digital, digitized and IP-based, we'll be able to kind of get the information that's accurate, more timely, and less delays and more accurate. But, again, also not ignoring the cybersecurity aspect of it as well. That's going to be a challenge.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	Because we were trying to fight to get phones, to get [inaudible] on the phones because we heard that there's a free service. There's some organization that offers them for free, but your department has to authorize it. You can run plates and names through your phone, which I can't now. They gave me one of those now.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	So we did whatever we had to do, and that was just our own-- we were spending our own money and doing our own thing.
Rules-Politics - Budget-purchasing	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Yeah. So now we haven't seen a lot more apparatus in our vehicles that would-- the laptop that's been there for-- obviously, we changed laptops. But the laptop that was the new big thing in 2000 is still there. But the software that we've been using on it continues to change and increase. And the radio technology has increased a couple of-- they dumped extra money into it.
Rules-Politics - Budget-purchasing	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Yeah, a diagram. Yeah. So I certainly would like to see that kind of technology for us. Unfortunately, those are very expensive and we don't have enough incidents I think to really bring up the need for that-- the need for that. Although, in the future. Let's see. What other technology is out there that we would like to have? And more mainly just talking kind of communication and/or--
Rules-Politics - Budget-purchasing	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	They're fantastic. That's just a cost. I mean, they're very expensive. [automated license plate readers]

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Yeah. I would if I could in a second, but it's about a half a million dollars. And for me, that's kind of a big deal.
Rules-Politics - Budget-purchasing	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	..You can't get on the radio. So part of it's internal of getting people to understand, "Listen, this is the hierarchy. Get on the radio if it's an emergency." And then for me, it's just going to be finding the money to get the technology to the officers - of tablets, of cell phones, things like that. Our department's trying to get larger. We've actually gotten the authorization to hire up to 200 more officers.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Yeah. So I think there does have to be certainly a political balance struck but also a moral and ethical balance struck about just how invasive do we want technology to be in our lives? I have a department issued cell phone because technically, I'm supposed to be at my captain's [Name] and call. So when I'm acting captain, my captain is out of town so I'm in charge of the precinct, well, my assistant chief wants to be able to get in touch with me whenever he thinks it's necessary. So it's really cool the department gave me this almost newest generation smart phone that I can do all kinds of wonderful stuff, but when I'm acting captain, I can't go anywhere without that phone because I'm supposed to be--
Rules-Politics - Budget-purchasing	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Right. Right. And on the bigger picture, I mean, I know the department is going through a phase right now where they're trying out-- I think they've actually purchased a new report-writing computer system. Nobody that I know of along the department is impressed or thrilled with our current in-car video system. It's just fraught with misery. So I mean improvements in that where we didn't have to worry about the cameras dropping out of service, the remote microphone is not working. I mean, those kinds of improvements, I'd be very much in favor of.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	I have the cell phone. I just don't have the program because they ran out of the licenses. And so I can't run names. The other thing I can look at is-- I'm not going to show it to you. But when I log onto the city network and it's encrypted because it's sensitive-- it's wanted bulletins.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Yeah. And as a matter of fact, it's funny. When they signed up with this new Xerox machine-- because the city is trying to save money, they don't want us to print willy-nilly in color. When I go to print, I'd have to choose. It automatically defaulted to black and white.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	They use the earpiece, but they're rather-- well, they're kind of inexpensive and they don't hold up for long periods of time. They really only last a year or two and then you need to buy a new one. They're not that expensive, but it's not like the department provides them and--
Rules-Politics - Budget-purchasing	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Yeah, and those standards are interesting too. So we have a call answering standard that says we need to answer all 911 calls within 10 seconds, 90 % of-- no I'm sorry, we need to answer 90% of 911 calls within 10 seconds, 80% of the time, and there's funding from the county tied to that standard. You bring in something like a text message and there's not a lot of data to do analysis on yet, but the typical call time is-- or processing time is 10 to 13 minutes now and so it just blows that out of the water. So you're right. I think the standards maybe have to change and adapt as well.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	The bigger cities all pretty much, yeah. Because this is a win-win for AT&T. Because the phone doesn't cost anything. It's the service. The phone is free. That's why if this breaks, we just go get a new one. We just write a two line report on what happened. "Well, I was chasing somebody and it popped out of my pocket. I broke it." "Oh, here's a new one." So a new phone, that's why even when you buy your personal phone, "Hey for 9.99, you get a brand new \$800 iPhone," right? They get you on the service.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Yeah, yeah. "Here's a contract in your blood. Here's your blood," just you know. But and then our cars. The biggest thing is our cars. We have cars that have 160,000 miles on them and they're just barely getting through. They keep on putting Band-Aids on them. It's not the department's issue; it's a City Hall issue. You ask for five cars, and they say, "Okay, well, we'll give you two." And then what happens we go through so many chiefs, that when the chief [inaudible] by the time he goes through all the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								paperwork and a new chief comes in, they have to start the whole thing all over again.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Yeah, it's underground, but they actually put repeaters down there and so you can communicate down there, and it costs money.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Make things more simplified. In order to do that, it'd cost money. And the agencies have to sit there and bend over backwards to be above everybody else. This department's always falling behind. And we fall behind because we have to deal with all the red tape.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	[S2] We are in the midst of a three-year \$72 million project to replace our whole radio system, portables, mobiles, desktops, tower infrastructure, transmitters, repeaters, everything. This contract was just signed about 9, 10 months ago, so we're just getting geared up, working on permits and other issues to try to get everything ready for the subcontract. Motorola won the contract. Now, we're working with Motorola and their contractors to make sure it's done on time.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	[S2] Yeah. And there's vendors that want to get paid. There's more lawyers involved in that project now than engineers, and so they want-- everything's tied up. Until the system goes on, no one gets paid.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	[S2] There was lots of grumbling about that. And the chief at the time wanted to be the guy that had the first department in the country where everyone had a cell phone. They spent, I don't know how much money, on the brand new Samsung. I think back then it was a four or a five. And the Otter cases and everything else, and the coverage, the contracts--
Rules-Politics - Budget-purchasing	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	[S2] That's a funding because the public doesn't want it. Law enforcement is expensive, and they don't want to pay for it in a traditional sense. They don't want to--
Rules-Politics - Budget-purchasing	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	[S2] Well, I don't think they thought. And I go, "What is this for?" And, "Oh, it's-- you sell this thing so I can pull on it and then it'll go back." And so I go, "\$80 mic, and then I have to buy the \$400 mic to get the piece for the ear piece."

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	[S2] Yeah. Yeah. And then be able to access-- and I don't know where this comes back into play, but I would probably go with a bigger phone and change the policy. Use it all you want. I'm paying for it anyway. Use it. Use the shit out of it.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	Radios, couldn't answer that one. Yeah. That's something. I know the people that work on them, our radio shop, but I couldn't attest to what the officers-- if they're having problems out in the field or not with them. They try to get the best stuff and everything is-- again, when you do the technology upgrade, you have to start and then you have to finish. But you can start, but you still have half of the city that is on the old stuff, because it's what? It's budgetary. It's money.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	Yeah. Everything revolves around finance for-- we have conversations with the vendors. It's always, "What's it going to cost? What's it going to cost us? What are we going to get for this-- the savings or is it going to pay back dividends for our officers out in the field where they have less time spending in the station and more time out in the field?" That's a positive thing that you want rather than, "We thought it would work, but it's not working like you thought it would be and there's no gain there. They're coming back up to the stations just like before," and then It's all, "What if that was a lost investment then?" So those kinds of scenarios you have to identify to make sure that you're getting the best bang for your buck, and it's working.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	It's a mix of everything. It's people, technology. It's improper use. It's the cheapest product, which city agencies will always get the lower bid. And I know about that a little bit. So it's a mix of everything.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	...I think the biggest part of keeping it flowing is the parking control officers because they're able to manage the flow, see the flow, adjust the timings on the streetlights, and that kind of thing. So as far as PDs response of being out there, and walking around on foot, and trying to address that, no, and we don't have the staffing for that. And again, if there's nowhere for a car to go, you're just looking at a car, you know? You might as well park it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	...In addition to that, when you're trying to locate officers that are non-responsive at a scene but you're able to see them on the board, you can have a coordinated response to go to that particular location and actually see if there's a reason they're not coming up or responding. You can actually do that. You can click on that board, send them a direct message to either their MDT or to their phone because you now have that ability on the board or on the board under your screen on the computer whoever it is that you can actually go to that and everything is just interlinked. And I don't think that that is unrealistic, but I think it's a monetary thing for sure and an infrastructure thing, but that's something that can be done.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	Yeah. It's much better. The cars, I think we're moving towards hopefully getting newer vehicles. That would be nice. We'll see how that goes. I mean, there's something in the budget that's in play for that, so we'll wait.
Rules-Politics - Budget-purchasing	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	... You kind of what's the word I'm looking for continual list of to do's and so depending on what those to do's are and how active they are and how high priority they are you do those different activities so at any give point you know I'm going to a meeting to discuss planning for the next disaster or next event or discussing like recently you know going to talk about grant applications that we're going to be doing or talk about you know like this summer just talking about updates on the flooding that we had or the updates on the planning that we did for the eclipse to the commissioners and then once again more of the GIS so updating some GIS stuff whatever comes in and needs to be updated so it's kind of hard I mean it's there's not a lot of days that are similar.
Rules-Politics - Budget-purchasing	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	... Just because the fact that rural America unfortunately kind of gets left behind because they don't have enough money and they don't have the numbers right. It's funny how grant stuff is based on numbers.
Rules-Politics - Budget-purchasing	LE	R	Other Public	36-45	6-10	Male	LE-R-043	...And then a consultant of course would get that and he mixes it all together and makes it look pretty and puts it in a format that everybody

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					else in the world has the he consults for so yeah there's not really anything and I guess I just recently learned about different technology, there's different software out there or technology excuse me that helps you develop plans you know where you just put it's like a template and you just got to type stuff in there and out it goes and spits out an EOP so I don't know if that's something that I'd ever use because it's really expensive but I guess maybe like the one person that I was talking to that's promoting it was The [State] had purchased it and the county was using it.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	...We don't have any part time in the jail or anything like that and really it's kind of a funding strategy because if you have a part time you don't have to pay all the benefits, you don't have to pay all that kind of stuff so if you can kind of have your base and then have you know part time guys then supplement so when you have guys on vacation as you probably know when a guy needs to take vacation you can't just leave the shift open.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	So from a communication standpoint we just our department uses [name] radios. They're inexpensive. I don't even know if I think they're public safety rated but whatever so we use Kenwood radios and you know a lot of us end up doing so we don't have department cell phones, ...
Rules-Politics - Budget-purchasing	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	...I think the communication really in my mind is not limited part of it is limited from funding and we don't have we don't ever get to show the cool gizmos and gadgets to try to sell anything but I think part of it is personal style. Our small agency we're a rural county so you know we don't have condos and lofts and high rises and that kind of thing.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	It was part of the initiative that [name] had put out after a couple nationwide incidents so we bought some on grant funding so we do. [talking about body cameras]
Rules-Politics - Budget-purchasing	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] ... He's very informative, he tries to let you know exactly how things work, he's always looking for new equipment and stuff like that but we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								also go by budget and it just depends on funds so if they go onto an universal law enforcement thing that we actually get a piece of I can see that there might be some kind of improvement just depending on it but right here that's our biggest thing just being able to get out.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] ... It would cost the department not just more money in server space and server upkeep they would have to hire probably one or two more IT guys just to man that. Plus the equipment upkeep, the contracts and stuff like that that they would have to have with [company] and with [company] or [company] whoever they decided to go to and it just comes down to money really.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Money number one absolutely. It's got to come down to money. I have no idea what are budget looks like but they have it spread out equally amongst the different divisions. We have special operations division, we have uniformed services, we have investigative services, we have (INAUDIBLE) we have all this different stuff that money has to go to which is why it's put on us to be able to have to get some of this equipment if you want to be patrol rifle certified. There's probably a seventy-five percent chance you're going to have to get your own rifle and a thousand rounds of ammo just to go to school that's not supplied to us so if the ammo alone is three hundred bucks, my rifle costs me \$1600 and his was probably over two grand with the additions that he had to it and just you know and coming into this profession we both everybody knows we're in (INAUDIBLE). It's a given. We're going to have to buy flashlights and all that you know but probably between me and him just for the things that we have bought for the three years we've been here---
Rules-Politics - Budget-purchasing	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] I would probably say more than that. Between the guns that we bought you know we both had to buy our pistols, we both had to buy our ammo, our magazines, our flashlights. I bought they gave us handcuffs but we get better ones. They gave us a leather belt but if we want to wear nylon we have to buy all of that. I mean just for my felt setup alone it was around three or four hundred dollars just for everything and the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								only thing that's on the belt that isn't mine is the [name]. Everything else on there I bought, I paid for and the radio but everything else we bought. They gave us our uniforms, our vest and our pants. We buy boots, we buy socks, gloves, beanies, jackets.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] Because they issue one but you're only allowed to have it for the first year. They give you one just until you can get your own. You buy back up guns and stuff like that you have to buy on our own.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Not really it's just if you do get funding and stuff like that don't forget about the smaller departments and I'm not specifically just talking about [town]... It's a manning thing so with that manning with that little budget they can't afford any of this new stuff so it's I understand that big departments have big needs but smaller departments have those same needs so if there's any kind of federal grant money or anything like that that you guys are able to do with the communications don't forget about the little guys because you could probably knock all of us out and we'll only put a little dent in it before you go to the [department] Police Departments and stuff like that.
Rules-Politics - Budget-purchasing	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	We have we are truly blessed in having an incredibly supported community both from the administration of the institute who has a solid finger on the pulse of the department and a good working relationship with our chief so that they know what our budgetary needs are and they do their best to meet those budgetary needs in providing us with the manpower and the equipment and the technology that we rely upon to succeed all the way out to the students. This was largely felt by the department in the recent officer involved shooting that we had of a student in crisis who committed suicide by cop
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	A lot of that has to do with pay. And I'm picky about people. If you put somebody in a badge and put them near a community as to the wrong person it really hurts your department so I really work short then work wrong and one thing we had is when I came into office here we were paying \$12 an hour for deputies. I raised it to \$13.23 and I went over budget this year and I knew I would but I wanted to do it the first year to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								get it right. You know a lot of stuff had not been done here for a long time so I'm trying to fix everything the first year and then after that stay on budget and next year with the raises and stuff we're going to be paying \$14.46 which is commiserate with the other agencies around here you know. We were 20 to 30% below everybody else just rural.
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	Next year I'm going to ask for another 5% which will put us up to \$15.08 starting out. And \$15.08 is actually above some of the other ones but because we only have twelve deputies we don't have 30 deputies that little increase is not a significant amount. We have about a 2.7 million dollar budget, a 5% increase for every employee here is about \$47,000. You toss \$47,000 in the context of 2.7 million it's not significant you know but it is significant because it goes a long ways to keeping people here but any given day I mean you could jump off, you could be running the whole day. We don't have any special units here.
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	Our actual compensation rate for everything for regular deputies is \$18.89 an hour is what they cost us so I'm paying them \$17 an hour. We're still saving a \$1.89 an hour paying them to make sure they show up you know because people will come to work for that kind of money and you can really get good people and they come in here and all they do is just traffic and drugs that's it so they're on top of everybody else 6 days a week and just do traffic and drugs that's all they do.
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	It's a work in progress. I made upgrades since I've been here. We don't have a lot of money so you have to kind of figure out where you can upgrade. They've been talking about changing up the radio system for 6 years.
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	I would like a 300 to 400 foot tower just because 441 miles a 400 foot tower topography wise this is a high point in the county here and the fire tower just up the road is within 20 feet of each other so if you put a 300 or 400 foot tower up you'd actually have to angle your antennas down a little bit to stay within the county but you also get to those nooks and crannies and down into the lower part of the topography to really hit those areas so I feel like you know things are going to be about \$80,000

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								or \$85,000 for the tower. We're probably looking at \$150,000 or \$200,000 for the repeaters and the electronics that we need just to optimize the system we already have which is I don't have an issue with analog system I'll be honest.
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	...We're going to pay for the 12 computers with that, the computer mouse with that, we're getting 6 license from [name], our reporting system for the E-tickets
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	What we're going to have in the next 4 weeks we're actually implementing all this stuff right now is we're going to have the computer systems in the car where they can actually run GCIC, they can do E-tickets for 6 out of 12 because it's \$950 per license. It's not worth it to keep on writing tickets. If you write 5 tickets a month I'm not spending that kind of money on you. If you write 50 tickets a month it's worth it you know so we get that in and getting all the licensing down and stuff like that and we should be able to do that for less than \$15,000 and have a computer in every car and each deputy will have a computer assigned to them with a [Name] license.
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	...All the radar I've bought have all been used. A new radar is about \$2100. (01:14:19) I haven't paid more than \$400 for a radar unit. It costs me \$70 to get it serviced so less than \$500 I got a perfectly good radar unit and it's not shiny and brand new in the box but you know what it comes down to function and I think that's what you look at here is you have the guy who wants a new car every year and he wants the big shiny, shiny or you got the person who wants something to be functional and get the job done.
Rules-Politics - Budget-purchasing	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S2] ... They have their own police departments okay so generally we only patrol the unincorporated parts of [county] which does not have its own city and not have its own police department so that's everything on the south end of [county] was unincorporated up until November of last year they voted to be cumbetent city okay so we're a county police department and the new city is paying the county for the police services.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S2] ... It's a federally funded program that major jurisdictions, federal government provided equipment to help with Homeland Security. Our tactical rescue vehicle, Bearcat was purchased with UASI federal funds our command vehicle, our huge RV command vehicle so us along with other jurisdictions have been provided training and equipment in case there's a mass critical incident that all these jurisdictions say for instance a tsunami was to come through town and all these jurisdictions have to come together and you know a tornado whatever.
Rules-Politics - Budget-purchasing	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S3] ...We UASI purchased a downlink system for all the metro helicopters. Basically it's a live feed from a camera system and it can broadcast through repeaters all throughout the metro area.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	...Here you know your dispatchers. Everyone knows them they know us first name basis that kind of thing because we have about 50 or 55 sworn positions I think we're budgeted for somewhere close to sixty but fifty to fifty-five would be our number and then we have about 10 dispatch positions.
Rules-Politics - Budget-purchasing	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	Absolutely. I think every time we get closer to kind of industry standard it makes us better and the people we're trying to recruit and the people we're trying to retain are happier. I think sometimes people are looking for obstacles like oh we don't have this and it's like well you don't you wouldn't use it but we should have it you know we can't run things in the cars well so what you can run things over the radio. Find another way. Oh I can't I have to hand draw my accidents. You don't do that many accidents you can do it but we should be it's not hard. We're well funded, we don't have the budget issues that some of these smaller municipalities have we should have these things just because that's the standard and I know our chief feels that way and so we move in that direction.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	... Because to download, the data is going to cost is, and then you have to pay somebody to watch the videos, to download the videos for the lawyers and script it and what they can and can't see. So for those reasons we've stuck with our in-car cameras. Anytime I turn on my

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								lights, they're automatically activated. As soon as I get out my car, you have to physically activate it. And we--it's actually required any time we make contact with a citizen, we activate our in-car camera because it also picks up your body mike that everybody's supposed to wear, so it helps us.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	It's adequate. If it could be better, yes, because I know there's certain other bands out there we've tested several other ones. It's just for what we have now it's doing the job, but there's, I know there's better technology. I would like to see us go to that direction, but again due to budget restraints and stuff like that we have to follow and prioritize where we're going to spend our money. And right now because our system is doing its job, it's not something we want to spend that money on at this time?
Rules-Politics - Budget-purchasing	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	It is. It's--I'm not sure, 100% sure, but I believe there was one point where we bought the new radios that it was supposed to GPS locaters. I'm just not sure if they turned the device on or it's something you had to pay extra for to have activated. I never got--I'm not 100% sure on that. I don't know how to play with it and break it, I like the new tech, like in our answer center when something new comes out, oh yeah, it's cool and I want to, you know. I'm a freak, a geek when it comes to that, I want to be able to turn it on and see what it does and check out the cool updates and new features. But I'm not sure if the back story of why they didn't get turned on and stuff like that. But our GPSs are in our car. As soon as they turn the car on, it begins. Actually it's always tracking them because it's programmed into the computer of the car. The internal car computer. So it tells us if they're wearing a seat belt, if they hit the brakes too hard, if they accelerate too hard it's sends out all these notifications. If technology could do anything, you could take quit sending me loads, because we get inundated with notifications because we have to know when anytime somebody's going out the [County], they need the car again, so, but the GPS is strictly for the car.
Rules-Politics -	LE	R	Supervising	36-45	21-30	Male	LE-R-053	And, and we've actually, we've at the [city] police Department we just

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Budget-purchasing			Field Responder					sent about \$350,000 and upgraded our communication system which gives us a lot more ability to do interoperability.
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Yeah, in the fire service not so much because remember that technology is driven by money. In the volunteer fire service we don't get that much money. I mean the money that we get every year we spend on buying new fire trucks and bunker gear and air packs and just the basic necessities to be able to run the fire department. I mean we don't get a lot of funding. I mean look, to give you a prime examples, the [city] is about 7 square miles, geographically that's what we cover. We have 100 police officers. Our budget for the police department is \$7.4 million. [city] Fire Department we cover everything on the outskirts of the [city], 77 square miles.. Now don't get me wrong, a lot of it is farming, a farming community, we have three stations and nine fire trucks, and we collect about \$500,000 a year. That's our operating budget. No paid people, so don't get me wrong, I would love to have laptop computers in our units. I would love to have an automated dispatch for us, but the funding just isn't there. We don't collect that kind of money to be able to buy that type of equipment. I mean we was very fortunate to be able to get that grant after [Event], to be able to put all of our fire departments on one, on one fire department frequency where when you go to a fire, you could switch the channel, and you talk into the neighboring fire department.
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Well I think one of the issues that we face is funding. Funding wise, do we have the money to be able to try to keep up with the times and technologies? I mean let's face it, without money, you can't buy all the things that you need and then on the flip side of that, who does it hurt? It hurts the public. It hurts the public if you don't have the tools and the resources that you need to be able to do the job. I mean look, there's computer programs out there that are made for hazardous materials spills and different things that are great. Okay, so if you don't have that then you've got to physically do all of that and in the meantime this chemical spill is not waiting on you. It's steadily moving and people are

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								getting hurt, they're getting burnt, people are dying. So once again, but if you don't have the money to be able to buy that program, who suffers? The people you serve suffer. So I do believe that yes, I mean I would love to see us have every bit of technology at our fingertips to be able to use because that's really what it's all about. It's about protecting and serving the community.
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	...I mean there is some technology out there in the fire service, but one again it cost money where they've integrated like GPS systems into the air packs where you can actually track the firefighters going in and out of that. But once again that cost a lot of money. We, unfortunately we're just unable to be able to buy that type of equipment. But I think that it's-- the fire service is slowly progressing there too. The fire service is slowly progressing there... Now once again, there's a cost in that. The gear that we're upgrading to cost more money. Where years ago we might be able to buy that protective hood that goes over you for \$25 or \$30, now that hood costs \$100. So the technology is increasing but so is the cost.
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	..Absolutely it does because you're only--you're limited by the amount of funding that you get. You're limited by the amount if funding, once again especially in, I mean as the [Job title] and the [Job title] of my fire department, there's so many places that I want to go, things that I want to do for the community, but you only bound by the amount of money that you can spend... So we are having to skip two or three years in between and once again, who are we hurting? We're hurting our citizens because you get the best training there is in America there, and then they come back and they teach us. So once again, it's limited on the amount of funding that you have.
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	... But there again, in today's time, whether it's [City] or it's Detroit, Michigan, people aren't approving funding. They're not approving new taxes. We just had a local fire department here that asked for mileage [phonetic] increase and it failed. It failed tremendously. So that fire department is going to have to start closing down stations and now they're having to go back to the public and just ask for a renewal to keep

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								what they have going.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	Yes. We used to have in-car dash cameras that, for some reason, they've gone away, that again, I made a comment about the bleeding edge and the cutting edge of a sword. Well, at the time, the people making the decision what cameras we purchased, they wanted the latest greatest, and I think they got them on a grant, but I don't think they were quite ready as far as the use of the camera and what it did for us as officers and stuff, we felt like we were better protected personally with the cameras, and all our actions were more--you know, we could justify a lot of our actions, because they were live on film, and the shortfall of that was, at the time, the cameras they bought only had, like, I think a 2 meg storage card on it, which would do four hours' worth of data and that was it.
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	... Generally I sit down and I review what complaints from the previous shift, the night shift before, what type of runs that we responded to and had to deal with, see if there is anything that I need to direct our staff to follow up on or I feel that needs to be followed up on. After that, it is generally, you know, working through invoicing and budgetary issues after I come in and get the fires put out, if you will, then it becomes more the mundane, you know, type of things, the paperwork type of things, so after that it is generally, towards the afternoon we start looking at any type of, you know, we review our policies very, very often, so that is something that I generally try to do towards the afternoon even it is just five or ten minutes, taking a look at one of our policies and seeing if there is anything that we need to readjust or look towards, you know, revamping.
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	... We anticipate our dispatch center going to the CLEMIS module of dispatch of CAD soon, so we will regain some of that. I am not sure that the jail will ever transition from the vendor that they currently have because they are very happy with it, but that, again, that is something that is universal and really of major problem nationwide with law enforcement is, you know, all these different applications and things that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we do, not talking or having interfaces with each other; now understand the interfaces are probably available but not at a cheap cost, and that is really one of the major issues that we have, not only with data sharing but, you know, I am sure we are going to talk about communications at some point. The technology is there. It is the cost of interfacing that technology together that is prohibitive - excuse me [coughs].
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	... We have that ability, but we are one of the larger, you know, law enforcement entities in this county, so it makes sense for us. It may not make sense, and again, what we are talking is cost prohibition, because each one of these radio frequencies that we have in our cars or our base stations costs us money to have.
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	Yes. Yes. Clearly - and again, it is cost prohibitive but we have identified some funding sources to allow us to - we knew the gaps were there. This allows us to potentially fill in some of those gaps. Now there are still going to be some things that we will never be able to completely account for, but you know, this certainly is going to help us.
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	... it's the dollars and cents in order to make that happen, and until - and I am not sure what it is going to take; if 9/11 didn't spawn enough, you know, upheaval to get us some funding to accomplish that, I don't know what is, honestly. This is just like I said, we just don't learn from our history, and here we are still in the same place, you know, sixteen years later, so..
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	... We should all have that ability because what they are doing out there is no more or less dangerous than we are doing here so just because a jurisdiction has been more frugal or has more money to spend on these type of things, I think that is probably the most frustrating thing, is this technology is available for everybody to work in a safe environment or a safer environment than what we currently have, and trust me, you know, our system is certainly not the worst system, you know, in this country; I guarantee that.
Rules-Politics -	LE	R	Field	46-55	21-30	Male	LE-R-060	... We work well with each other. I think part of it is - I see it a little bit

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Budget-purchasing			Responder					different because I know most of them from the fire training as well; there is always a little animosity between the two. A lot of it is just done in jest, but any time you got two departments, it doesn't matter if it is Police or Fire vying for the same budget, you know, relationships can get strained, or it trickles down, but as far as you me not wanting to show up to help them, we don't have that.
Rules-Politics - Budget-purchasing	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	I don't feel overburdened with it. Some people might have a different opinion. The issue that you typically run into in technology is - you know, we know it is available, but nobody wants to pay for it.
Rules-Politics - Budget-purchasing	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Yes. Back in 2005, we had a pretty mass retirement. It was the guys that all came on together back in 1975 and they all left. At that time, the city felt that it was more profitable for the city to save money by lowering the pension; they eliminated the pension for new guys and bringing in 401K. Then they decided to pay a substantial amount and the new officers pay a substantial amount into the healthcare benefits. So at one point when we started hiring officers, for about a good solid 7 to 8 years we were probably at almost a 60% turnover rate.
Rules-Politics - Budget-purchasing	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Basically, we are not competitive with surrounding departments. We are about \$10,000 to \$ 15,000 under everybody else. We got our pay rate up a little more, we were able to keep some more people but I can't even get anybody to apply for the department - and everybody is having people having problems getting people to apply but on average I will send out 100 emails from the testing agency and I will get 10 people to come in and actually interview and out of those 10 people that I interviewed last time, I only hired two.
Rules-Politics - Budget-purchasing	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	... [city] received a \$3.5 million grant from the state to build a new dispatch center with the premise that they bring on somebody else to combine and consolidate dispatches. Now, with that being said, there are positives and there are negatives on that. The positive part is going to be - if this goes through, it is going to save the city a substantial amount of money. I am going to be able to take manpower off the desk and put it on the road over time.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	So, and the initial telling the citizens that, a little bit of an uproar but I mean, these are the times we are in. It's either save \$200,000 or invite the state in.
Rules-Politics - Budget-purchasing	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Yeah. And our stuff is getting outdated. We spend a lot of money fixing programs and stuff like that because our computers are old. The problem is, you can go to Best Buy and buy a \$600 laptop but you go and buy it for the car and it will cost you \$5000 to put in a computer with a mouse and just because it is a MDT -
Rules-Politics - Budget-purchasing	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	S1: Okay. When you think - if I think about communication problems too, it could be again, it sounds like the radios are in pretty good shape so it's not that kind of an issue. S2: They are \$5000 apiece.
Rules-Politics - Budget-purchasing	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	S2: We have looked at those - the little, little mobile stuff, you know. It's one of those wish-list things, especially when you have the situation that we are going into with S1: Yeah. S2: It would be phenomenal, but again, that a cost factor and is not gonna happen.
Rules-Politics - Budget-purchasing	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Night vision, technology like that. God. I mean, I would like to get some less than lethal equipment. I would love to get like pepperball guns and stuff like that. They are phenomenal tools that save lives and officer safety. Again, we can't afford it. So it all comes down to money but yeah, anything less lethal, anything to help the guys see at night, I mean, I would love to get one of the flare systems just so that the people out there know that we have them and maybe they won't come here.
Rules-Politics - Budget-purchasing	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	S1: And this is technology that is available that unfortunately is just not always affordable. S2: Oh yeah, it's available, you know. S1: Okay. S2: But can't afford it.
Rules-Politics - Budget-purchasing	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	For the most part, pretty good. And we have got a lot of business owners here in town that are very supportive and when we got our last canine, we had to do fundraising - we didn't have money to get a canine and we went out to businesses. Businesses don't have a lot of money, I mean; they really come out for us.
Rules-Politics -	LE	S	Field	26-35	6-10	Male	LE-S-062	Most of us use our personal phones. Certain jobs here get a city phone.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Budget-purchasing			Responder					Our Chief has a city phone; the detectives have city phones if they want one. A lot of people don't take it, they don't want it.
Rules-Politics - Budget-purchasing	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	They are really - Chief does not do much homework before - you know, I personally review everything before I buy it and I think we did no reviews, we just bought it and other departments that use the same ones dont care for them either from what I have heard and are switching. We would be a lot better off if we had a better brand of body camera. That makes it pretty current here. We upgraded our computers I think about a year and a half to two years ago, we got new computers in here. We kept the old monitors which were small. I wish we would have spent a little extra money to upgrade those, too, but -
Rules-Politics - Budget-purchasing	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Well, as I mentioned, a couple of years ago we upgraded our radios. I think for the most part we still work good. We got a couple of good computers and most of the ones in the car we just upgrade the software and keep the actual computer itself because those are very expensive, very heavy duty computers, like \$5000 a piece for a laptop, but they hold up to, I mean, spills, banging around, all kinds of weather conditions, but we upgraded the actual software and technology here and there. We did get new printers, they are not the same ones we started with and they are much better, much faster and I would say a little more reliable too. Now and again they jam up or have problems but for the most part they are pretty good.
Rules-Politics - Budget-purchasing	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Well, the cost, obviously. Those are very expensive to buy, get the server to host a video, stuff like that, but no, not in my opinion; I like having them.
Rules-Politics - Budget-purchasing	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	Generally it's kind of - generally our equipment is fine but we are not a big department. We don't have a huge budget for maintenance or replacing equipment or kind of maybe venturing out with emerging technology or something like that, so a lot of the higher end equipment that we have we got on a grant from either the government or the state or the DDA or something like that, so, I would say it is generally dated equipment but it still works for the purpose of what we need it for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								currently, so - like both of our [unintelligible] unit's are - they are functional but they are kind in rough cosmetic shape and some of our modems in our cars go down frequently so it's always kind of balance of in the car that you want that is still working fine, so.
Rules-Politics - Budget-purchasing	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	There is a device that reads plates automatically and looks for stolen cars. My understanding of it is that it is very expensive so very few places have it and the ones that do usually have it [unintelligible]
Rules-Politics - Budget-purchasing	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	Probably just like mobile data, like a computer, CAD software that was fully functional that worked when you needed it to, that had you know, good map function that you could rely on where you can see where everyone else is at, just for your safety. Something maybe that you know, would give you audio alerts. I mean, that stuff exists; it's just a matter of cost.
Rules-Politics - Budget-purchasing	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	It's a budget issue, it is a political issue, it all comes down to [cities] coming to an agreement to put it into place; no one knows what's going on at this point.
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yes we have. Every two and a half years is the contract we wrote and get the lightest and greatest updates every two and a half years at no cost to our taxpayers. So, it is a five-year contract with a five-year extension. Two five-year extensions that are in and they've increased our storage and everything so we are really -- we are pleased. I mean, it is Axon, the same people that made our -- the taser weapon system and we are happy what we got so far.
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yeah. Well, you know, I imagine [Name] you're making money on the stories. It's not very expensive to make a camera anymore, you know, you can [crosstalk].
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	No. No, we have done more with less than at any other time in history. [Inaudible] you know, the toughest economic down time in modern day history. We have done more with less. We've had things shoved upon us though we have had now in position since 1998 law enforcement. We've double bunked two pods out of the [inaudible] facility without hiring a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								soul. So --
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	... So, I think that was a big part of losing some of our reserves, but just can't continue to -- we were just talking in here already. We have not had any -- although our budget has increased but it is we picked up juvenile or because we picked up, you know, animal control or other things have been handed to us to do and it comes with that budget increase but as far as us getting law enforcement positions because we have more people, we need more policeman on the street, we haven't. We just went from five shifts to four shifts so we could put more officers on the street. These guys are working 12 hours a day now and we got to stop that.
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	We've got young guys. We've had a big turnover with retirements that we have had. We have a pension that's in place that's allowed people to retire with a defined benefit, you know, a percentage of their income. So, a lot of guys have taken advantage of that and that gave us an opportunity to be younger and younger agents. And when you get out of here and you are doing that work, I'm 53 okay. Some of my years were dog years, so I have lived 7 and 1 a few, but I am telling you, that's a young man's forte there. When you are out there in that patrol car and you are chasing bad guys, you ain't chasing a 53-year-old man.
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	About too common, may be used on the floor on a trial basis and we have worked with agencies that have used license plate readers but yea we have a couple that were bought or will buy.
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	We've got drones, yes. We've got drones and have cameras on them and we have an aviation unit with, you know, flyable helicopters, we've got a Huawei and some OH-58 Jet Rangers, but these drones I think are the future for aviation. I mean, for us, you know, it's a very expensive proposition to own, maintain a fleet of helicopters. Our helicopters were free. We got them on a government program. It was, you know, surplus military equipment but the way the drones are growing in technology, it is just -- man. If I call for the aviation unit, if they weren't flying, you know it would take them an hour, you know, I mean, once they got somebody

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to hangar, pulled the bird out, warmed it up, and got up and got to you -- I mean, really. But a drone, you can off from your car. So, if you needed to do some surveillance, if you wanted to know what was behind the house, that you are fixing to hit, you know if it drone, and you can get it on your phone, you know. They've got iPads that you can operate a drone from.[Name], my techie guy, he first in the [Organization] -- they first got one a couple of years ago I guess. And it was -- and then they got another one last year that was \$ 2400. It was so much far advanced than the first one they had bought. That had the camera that had the ability to lock on to something but the battery lap on those things are the biggest drawback right now. I think it can fly for 20 or 30 minutes but -- but look, if you've got a couple of them, you know, you got three or four batteries, then you can be up for a while
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	I think so. I may be wrong about that. [Name] [inaudible] just called me while we were talking, it was [Name], but I'm not sure -- but, it's an expensive process to get through, but if something happened at Neyland Stadium on a Saturday in October, you know, you would never be able to get out on a phone, you just wouldn't. So, you know, you saw that in 9/11, you saw it in other places at tragic events where, you know, bandwidth was gone. I mean, you know --
Rules-Politics - Budget-purchasing	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	That they can order commissary, sick call, they can email, they can do visitation on them, and there is a cost associated with that, it is paid through their commissary accounts. But, that technology is bringing efficiencies to us so we don't have to lay hands on an inmate to bring them to a visitation booth, let their people visit, then take them back, you know. It cuts contrabands -- contraband from being brought into our facility and it cuts that office-inmate contact that drives confrontation. So, our inmates love it. Some people, there was 40 or 50 people that protested it because they were not getting face to face visits anymore and cost associated with it but you can go down to the jail and visit for free. It does not cost you anything. But if you want to set it at your house and visit, like a Skype -- you can do that.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Budget-purchasing	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Even though I don't need it. So I have a computer in there, and then I have another laptop or MDC in my office that technically could be taken out, but it's the newer one. So they're going from some of the old Panasonic Toughbook, which are almost all gone. They bought new ones. I still have one of the old ones in my car, but I don't use it very much. Because that function is more for patrol. If you're on patrol, you need to be logged in all the time, so when you're in and out of that car, you can see the calls, you know what's going on. I mean, I log in sometimes, but half the time when I'm driving, it's to go to a meeting and go and come back. I don't always need to log in with my position. Here, though, I need it. I'm always logged in because I use it here. If it's just in the car-- I'm not in the car very much.
Rules-Politics - Policies-Procedures	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	That's the other part of the family, okay? But MSA told us flat out. They go, "Yeah, your stuff isn't TDMA compliant. We'll work on a retrofit." So it's been like three or four years. I mean, there is no retrofit coming. There probably is, but it's so slow and slow-- I mean, they have a new product that works. It's like another generation forward. And so we're really stuck with a piece of technology, of which, this doesn't work anymore with that when it's on my face. Which stinks, right?
Rules-Politics - Policies-Procedures	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	...So I think when you're talking about researches and kind of mirroring an NFPA standard and then this standard, and matching those two things, I think you have to take into consideration, are we creating a standard that is so tight-- of which, when somebody buys a platform and then we have new technology come on, is it going to cost them millions to retrofit? Because if it is, the technology, it just won't work. And that stinks, right? The newer ones, I guess, the guys demoed the other day. They have a little key fob that says [Name] on it. Right? So I come to work. I turn on my unit. I tap it with my RFID kind of thing. It recognizes that, and then it syncs with my radio. And so it's like a Bluetooth, like a thing that you'd wear in your car going home
Rules-Politics - Policies-Procedures	FF	S	Other Public	36-45	11-20	Male	PS-S-001	Yeah. And so people are addressing some of those things, which [are?] really great, but I'm telling you, the in-mask communications, making

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					sure that there's some sort of standard. We have a standard - I'm sure you're aware of it - like the universal air connect fitting that MSA developed many, many years ago, and it's now become the standard for [RIT?] connections, right? So that standard, that's the NFPA standard, is huge. And so for us, we're like "Okay, it doesn't matter what pack." It doesn't matter if [City] buys Scott brand, or I buy MSA brand, or the next guy buys Viking or whatever's on sale that week, we could still run a fire, and if there's an emergency, I can auto-connect. And so those bigger issues are huge.
Rules-Politics - Policies-Procedures	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	Just having some sort of-- okay, this is the standard for radio systems from now on to connect with an in-mask communication system. That would be important long term. Because, currently, there's really no standard, which blows my mind because there's money to be made [laughter]. If you could invent the whiz-bang gizmo, you probably could do okay. Again, it's a smaller market, of which I've tried a lot of different systems over the last couple years, and some are great, some are marginal, some are terrible, some just want anyone to sell you something every five years. And so I think those standards become important because if you don't have them, you're not going to meet them with some sort of demand. But, again, if I had a wish list, I'd want in-mask communications.
Rules-Politics - Policies-Procedures	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	.... And not so much system wise, but just somebody needs to be able to go, "Okay, here's the standard and we're going to use this standard. It needs to meet this standard. NFPA because [of your recommendations to them?]. This is the standard going forward." And that would be helpful long term.
Rules-Politics - Policies-Procedures	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	Right there. I mean, there's a lot. Our policy-- I mentioned Lexipol, [so?] [Name] company. I don't know if you know that gentleman. So he's a former law enforcement guy who created a policy company. He's a lawyer. So Lexipol, L-E-X-I-P-O-L. That is kind of the premier law enforcement policy group.
Rules-Politics -	FF	S	Other	36-45	11-20	Male	PS-S-001	Yeah. Yeah. Primarily. Yeah. Unless I need to, in the field somewhere,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Policies-Procedures			Public Safety Personnel					refer to some minor-- for example, our hazmat policy, okay, who at the Department of Toxicology-- what is it? DTSC, so Department of Toxic Substances Control. They're in [City]. Okay [laughter]. But I don't have their phone number. So, maybe, okay, I know I can look it up in Lexipol [inaudible] field because I have web access. But things like that. I mean, it's amazing.
Rules-Politics - Policies-Procedures	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	I'm finding more and more that we have more mandates and more unfunded mandates, right, that are being pushed, of which, we are using technology in a training mode or some administrative capacity to check the box. And I can honestly say I don't know if that's good or bad.
Rules-Politics - Policies-Procedures	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	Whereas, well, is that real training? Is it valuable? Is it meaningful? Is it going to-- is it realistic? And I think part of it is, okay, we're just trying to check the mandate box and move on. And I'm sure you'll hear that from other agencies that you interview, not that that's bad or good. It's just I've noticed over the years, we are way more heavy of, "Okay, you got to go to this policy update thing, training or webinar." And I'm like, "Well, that's not the same." It's not the same. Talking about interior firefighting or talking about a tactical stop, it's not the same as actually getting out and doing it.
Rules-Politics - Policies-Procedures	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	Yeah. Yeah, absolutely. So I used to be our training officer for fire, and I was in that position for a few years prior to rotating back, actually, here. So in our mandates for the fire, law, and EMS, right-- so there's mandates in all of them. So for law enforcement, we have POST, which is the Police Officer Standard Training, okay, which is [State] specific, right? We don't have a national standard for police officer. Shocking to me, somewhat.
Rules-Politics - Policies-Procedures	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	... Even though it satisfies mandates and it trains that way, it'll be the same thing of if I host a fire academy, and I go, "Okay, guys, here's a video of [interior?] firefighting." But you're going, "Well, what does it feel like?" And so [laughter] we do a lot of lecture about fire chemistry, and basics, and all the stuff your chemists, and your--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	I don't know if we are looking into that or not. I've heard that we might be looking at some type of policy that would assist us with that. My personal thing on it is that that's an absolute great tool, and I'll give you an example. So this station, that roof right there, the guy in the red hat's me, I think, and that's my crew there, not [Name] but [Name], and [Name], and [Name]. And so that picture was taken by a drone, of which, was owned by the [City] Fire Department. So they have a volunteer firefighter that their job is to come out to the scene and fly that drone and get aerial footage, relay it to the command post. And they are very open about it and they have a policy, I believe, of which, they say, "Yeah, we were going to use this in an operational setting, and we are going to use it for training purposes." And, again, it may be flying up over airspace above the-- I remember Chief [Name], that night, some reporter asked him that question. Because it's a hot topic, right?
Rules-Politics - Policies-Procedures	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	Yeah. So that's not a joke [laughter]. That is we're not allowed to bring turnouts past that point, okay. Which sounds silly, but, I mean, we're talking about technology, but even some of the simplest technology, like a policy, can have huge rewards like something like that, right? And again, we haven't figured out how to stay away from the fire to actually fight the fire or a hazmat event from afar. I mean, there has to be some interaction with tool-on-task, and unfortunately, people are susceptible to some of those bad things.
Rules-Politics - Policies-Procedures	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	...And so I kind of pressed the issue a little bit and he came back in and he didn't have my yellow pad with him. And I said, "So if you want your laptop you can go get the yellow pad and you can come back and get the laptop." And so he did. And I said, "And just so you know, I pulled up the Internet history on the laptop while it was sitting on my desk here." And I said, "You like this laptop because you get to go and surf the web and do all the things you want to do." I say, "Guess what? We pay for this laptop. You're going to do some of the things we want you to do with the privilege of being able to do the things you want to do." And then I told him also that, "You need to go back to your briefing and tell all those

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								guys that this thing is actually a decent piece of equipment."
Rules-Politics - Policies-Procedures	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	It was done in the '70s by a city manager that we had and it's called performance-based budgeting. And then it put a 20-year plan out there. So we've had zero layoffs during the downturn.
Rules-Politics - Policies-Procedures	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	We actually do a pretty good job of making those business cases when needed. And it would be interesting to see with the FirstNet, when FirstNet finalizes their plans and if they get to a satellite realm. Because with the satellite phones that all these cities buy right now in the programs, we're on Inmarsat. We just bought phones that are on the Inmarsat system, and we're paying whatever service fee we are. But if we had a FirstNet service, that their phone not only could work off of the land system and that, then they wouldn't have to carry the phone in a box in the trunk of their car. We can cut those costs.
Rules-Politics - Policies-Procedures	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	So the mobile data computers, we're going out for a bid right now. So we replace those every five years. So we have a-- part our budget, we have a replacement project every five years. So the radio stuff, that's all budgeted. The minute we buy something, we budget for the 20 years.
Rules-Politics - Policies-Procedures	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	Now, administratively if I was ordered to turn something over, I could be disciplined for refusing an order or whatever. But that's why I say, "If they want to see the text messages between me and my wife and my kids, fine." I mean--
Rules-Politics - Policies-Procedures	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	And technically, they can't go on a fishing expedition, so it has to be relevant to what they're looking for. Even a PRA has to be relevant to the topic. A search warrant specifically has to describe it.
Rules-Politics - Policies-Procedures	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	Whether related to a case or belonging to the law enforcement agency. They want serial number, make, model, and they want the case number and the crime involved with any case number on any case that we have. Well, one, we believe we're standing on good ground, that we don't have to release any information about the firearms that we own, which the public records would show accounts of what we've bought. As far as the cases, that's a huge effort.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] We have a minimum of two on shift at a time. We try to have three. We have we're authorized to fourteen full time employees but typically it's two and that's our minimum for our mandatory minimum.
Rules-Politics - Policies-Procedures	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] They rotate every 6 months. They don't rotate from they bid on their shifts so it goes first by rank and then seniority and so supervisors get put where I put them and trainers will get put where I put them if needed but I try to give them as much flexibility as I can with their scheduling and they bid they work 4 on 3 off, 3 on 4 off schedule so it's a 12 hour shift and they have the ability to bid on that type of shift as well as opposed to another that is a little different.
Rules-Politics - Policies-Procedures	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] With our CAD system you have to have an address and a call type to get a recommend to send a to page out for police or fire so those are the primary pieces of information that they have to have immediately and then from there it's just data collection of you know depending on the call type whether it's clothing descriptions or suspect's names, weapons, children involved, vehicle descriptions, road of travel and if it's an accident it's related to injuries, leakage, Hazmat stuff so they have their with EMD they have their line of questioning.
Rules-Politics - Policies-Procedures	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] Technically it's from the officers requesting it but we do receive requests from the prosecuting attorney's office if they have somebody who is requested discovery that we send it to them so yeah that's used. I wouldn't say a lot. We probably do two or three a month.
Rules-Politics - Policies-Procedures	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] The questioning comes from the [software]. You're not supposed to vary from it only mildly but there is a lot of decision making processes that are happening outside of that related to the CAD because calls can change or escalate in seconds so you're listening to what is happening in the background so you might have somebody that's just making little noises but then you can hear something else. So you have to be able to think outside of the box and kind of capable of building a bigger picture of what's actually happening if we're willing to but yeah decision making and decision making in short time frames.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	I think it's handled pretty well. Here it's all funneled through me, but I can always go to my Chief if I need some more brass or something. But we have a pretty good system. The fire chiefs meet regularly, and they decide if they want to have a policy they all have to agree. We don't do different things for different departments. And same thing for law. The chiefs meet. If somebody wants to propose a change, they all have to agree to it.
Rules-Politics - Policies-Procedures	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Well, for instance, we have a radio users guide. It's a handbook that everybody that has a radio in [county] gets this guide and they have to abide by its rules. That's made up of all the different organizations; the fire departments, police departments, the mountain rescue all have people on that committee that write that manual. And then once they produce that they give it to the Public Safety Council I guess, overlooks that and then they do the training and everything. So that's one example, I guess.
Rules-Politics - Policies-Procedures	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	You're ahead of me, and it doesn't make any sense to me at all, but it's part of the packet that we buy for testing. And if they pass through that, all of those tests, they get it, I interview them. And then we start their background, if we like them to come to work for us, then we start their background and our detectives do that, [Name] does a lot of those. And they go through that, sometimes three to four weeks of that and then they have to interview with chief. And then the last thing they do is a polygraph and psych because of ETA rules.
Rules-Politics - Policies-Procedures	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	...We've been cleaning data for months trying to get to that, and we've come up with some solutions that we're going to probably change our processes. And I think that it'll actually really be helpful for us to have these expectations and these standards that we have to meet because it'll be helpful for people when they say an address we know where that's at. It should be that way.
Rules-Politics - Policies-Procedures	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Sure. Several things come to mind. The number one thing is funding because we get paid differently for cell phones than we do for landline phones... If you were to call 911 while you were visiting here, your tax on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								your cell phone, you pay a tax a surcharge, and that goes to wherever you pay for your phone.
Rules-Politics - Policies-Procedures	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	...And so, every time I turn around, somebody wants a bucket full of cash, and I just can't find it all. But we have some capital funds. And I can use some of that. I don't know if you're familiar with [name] laws, but we have a [name] Amendment that won't allow municipal governments to spend all of their capital. You have to keep a certain amount on hand. It's not a bad idea to keep some capital around in case the lightning strikes or something.
Rules-Politics - Policies-Procedures	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	--to your job experience, so you get extra money, and one of the lures to come up here is they bait you with extra time off. We're given extra days off, so we actually get paid more money and work one or two less shifts a month than the guys out in the field. So that's just a draw them to come up here.
Rules-Politics - Policies-Procedures	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	.... So from a call taking perspective that's a high stress, because you add in the regular stress of, "Help. Help. Help. Help. Help," to, "Tell me exactly what happened," and then we have our policies that we have to verify the address, we have to verify the phone number.
Rules-Politics - Policies-Procedures	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	... So you call 911 because your roommate, spouse, family member, neighbor falls down, split their head open, they're bleeding, they're unconscious, and I'm asking you what the address is. Then I have to ask you, "Can you repeat that for verification? What is your phone number?" And then someone will say, "Well, just give me the ambulance." What is the phone number for verification? So you have to duplicate that, then we get into our medical questions. They don't understand our medical protocols that are nationally based, and that it's [name] state law that we have to ask. It's the EMD, or the emergency medical dispatch and emergency fire dispatch and then emergency police dispatch, so all three disciplines have protocols we have to ask the 911 caller, that helps pinpoint exactly what type of help that they need because of all those variables.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	... And you go through your protocols appropriately, the protocols work because you know them, you're asking them and the person is receiving them. And you actually make a difference on the phone before the first responders arrive, because you can control the bleeding, you can help out with the seizure, the person's having a diabetic emergency, and we have protocols. Or the person's having a pregnancy problem and you're able to actually able to help them, or they're in a serious car accident and you're able to keep them safe until someone comes because they're listening to you.
Rules-Politics - Policies-Procedures	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	A perfect call would be they called from their landline phone because when the information comes over we have their address, we have their phone number. So we only have to verify it once. Protocol says if it comes over on the landline phone and we have it, that's one source of verification.
Rules-Politics - Policies-Procedures	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	...Then the first thing we ask is, "Okay, tell me exactly what happened." That's the first protocol question. Then based upon that we're trained, because someone can say, "I stubbed my toe because I fell down. I have chest pains, I am a diabetic, and I have a history of cancer."...So we've been trained to go "Okay if somebody stubbed their toe and fell down, why did they fall? Is it because they had a heart attack?" That's more important, or did they just stub their toe and fall down? Then it's just a simple fall, or are they having trouble breathing because of something else? Or is their arm broken because they got hit by a car, or something else? So exactly, there's a huge difference. So we need to kind of investigate that. Some other people will say, "I'm not feeling well, I have a fever, and I don't know what to do." Then we know automatically, sick person card. We have 33 different cards. Yes, 33 different cards and each card has a specific set of questions.
Rules-Politics - Policies-Procedures	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	...if it's a car accident, they can drive their car, they're not too hurt, but they don't know if they need to exchange information because all the states have different rules according to that. [State] is a no-fault state. [State] is not. So in [State], you have to have a police officer write a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								report, if you come into [State] the police officer is like, "No, I didn't witness it. I'm not writing a report. Go to your insurance company." Well, people travel back and forth all the time. There's always accidents. So people call in and say, "I need the police." "Why?" "Well, I got in an accident." "Okay, are you injured? Do you need to go to the hospital?" "No." "Is your car driveable?" "Yeah." "Okay, in [name] exchange your information and go about your day. The police will only respond if your vehicle needs a tow truck, or if the person won't give you the information."
Rules-Politics - Policies-Procedures	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	And they will make them. So a lot of people, "I don't know if I need fire or police." So you have to ask them. And even medical, "Well, I don't know. Can you just tell me over the phone if I--?" "I'm not a doctor. I can't give you medical advice over the phone. What I can give you is an ambulance and the ambulance will come to your house, they'll take your vital signs, they'll ask you a whole bunch of questions, and then you can ask them if, between the two of you, you can go to the hospital." Some people think if they call 911 and an ambulance shows up, you have to go to the hospital. You're a hostage. No. We can give you a free check to see if you need to. We'll give you our best-educated guess at the basic level. If we have any questions, of course, we'll turf it to the hospital and say, "We think you should go to the hospital." But in the end, its still-- we have a specific form that's called a patient refusal, they have to sign it, we sign it, we give them a copy, and then we're out of there, in case something happens. We've had cases where people have refused and then later on we've responded back to their house emergency and they've either died or they're close to death, because they ignored the signs of either a heart attack or something that we had advised them to go to the hospital, and they ignored it.
Rules-Politics - Policies-Procedures	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	... And I would say the call taking has gotten better, because before we only had firefighters. We had no script. So when someone called up, we'd kind of say like, "Fire department, where's the fire?" "Oh, I need a medical." "Oh, where does it hurt?" "Oh, I have an arm injury," "All right,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								well cool. Thanks, we'll send you help." And then we'll just, at our own discretion, decide whether it's ALS or BLS. Very few follow up questions. There was no set standard, at all. So that was a huge change, having this nationally certified, state-mandated program come in. So now for a firefighter, it's kind of hard to say these questions because we're trained at a medical level. This EMD program, this set program is trained for a non-medical person, who can just come off the street and start asking questions. They have no medical background at all.
Rules-Politics - Policies-Procedures	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Once for the address, and the second time to verify it. So address verification, you have to ask it twice for a cell phone caller. Then they ask for the phone number, and that's usually correct with [inaudible] that comes over. The phone number is usually right. And then we ask their name, not a big deal but if they're struggling or-- it's really not a big deal. Then we move on to we open our protocol, EMS protocol or fire protocol. And then we begin asking them the questions on the protocol.
Rules-Politics - Policies-Procedures	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Mm-hmm. The call takers will-- there's a question about a call like, I'm not sure which protocol to use, they'll come to the supervisor and say, "I'm not really sure what protocol to use here.
Rules-Politics - Policies-Procedures	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	I mean, they did have planned outages, usually they occurred in the middle of the night. If they wanted to upgrade the system, they'd take it down for an hour from 2:00 AM to 3:00 AM.
Rules-Politics - Policies-Procedures	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	We don't. We don't. I'm not sure if they're working on one, but I know our code of conduct policy kind of is the umbrella over all of that, and that's-- I'm not even sure what they would put in a social media policy. But I think the code of conduct is a pretty good policy, like I said, that covers all of that.
Rules-Politics - Policies-Procedures	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Right, because you're held accountable on or off duty. It's pretty clear in our code of conduct policy.
Rules-Politics - Policies-Procedures	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	--call. We have something called condition red, which means that we have so many calls to answer that our resources are very limited so we go on condition red and that means that I can send whatever I want to a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								call.
Rules-Politics - Policies-Procedures	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Usually so for a perfect example would be one that I took a couple days ago in which a person kind of expressed that they didn't like the look of a vehicle and there was nothing that they could express about why they found the vehicle to be concerning.
Rules-Politics - Policies-Procedures	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yeah so we are required as employees here to work eight hours overtime a month which is not a lot especially considering we work you know 12 hour shifts so you can just pick up one day and not even a full day and you thought you'd be satisfying your overtime but a lot of people work overtime because the pay in this job is not as great so that's where a lot of people make their money and then also a lot of people also work to help out other shifts because our staffing is so poor.
Rules-Politics - Policies-Procedures	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yes. So to my understanding keep in mind I've only been here since January but to my understanding it is a chronic issue. Independent research would suggest that it is a nationwide issue. It is especially felt here. We just sometimes we barely have enough people to cover our minimum and in fact we've had several studies that have been conducted by various contractors with the county that have suggested that our numbers should be around 15 given our population and our call volume and we most of the time will have eight.
Rules-Politics - Policies-Procedures	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Because there's again a lot of factors contribute to that. One is you know do we have the staffing available to get someone trained because like I said we do one on one training for the most part for these positions which is great because you get really good training but on the other hand it can't be a challenge because you are basically taking two people off of the floor to kind of go and do this training you know and that can detract from your numbers so it reduces the amount of people that can answer calls and then that can be bad you know because we're just not answering the calls.
Rules-Politics - Policies-Procedures	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Exactly. And so right now our training model uses hours and then kind of as subjective evaluation from the trainer as to see if you're where you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								need to be. It's not the most robust training model and it's something that I think we're looking at reevaluating. I think what would be a better model to look for is like a core competency model and then if you happen to meet this core competency within 2 hours of being on training then you should be released you know but that's something that I know that's in the works and above my pay grade but I know it's something that they're discussing and looking at so in answer to your question it's complicated.
Rules-Politics - Policies-Procedures	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	The thing that I think that we tell recruits when they come in is eighteen months but again---
Rules-Politics - Policies-Procedures	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yes. And then if you are there for enough years and you demonstrate you know that you're dedicated and you're committed they'll move you into a dispatcher position. And then you either go fire side or police side even then.
Rules-Politics - Policies-Procedures	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Right. [city] will train you in three of the four competencies. They train everyone as a call taker and then you get to pick which two you want to do.
Rules-Politics - Policies-Procedures	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Okay so let's say I'll use a domestic because a domestic I think is a pretty good example of a regular call that we take so the most important question that we ask always is the first question we ask is what is the location. We need to know where it is right? Our technology in terms of locating people is just not there. We don't know where you are you know I've used the map as a reference but based off of the cell tower that you're hitting off of I don't know where you are. You could be anywhere you know and that's why we get a lot of calls for different jurisdictions.
Rules-Politics - Policies-Procedures	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Mmhmm and then we'll have to transfer and it's not as time consuming or as bad as people think it is but if you're calling in not giving us information or you're being you know or you're not able to give us the information.
Rules-Politics - Policies-Procedures	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	... If they don't have a street address or they don't know ask for the closest intersection and then if they don't know the intersection or they

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								don't even know that I'll ask for like a hundred block or something like that just like what street are you on and then I'll ask them for landmarks for a last resort if they really don't know where they are. I don't like using landmarks because there are some areas of the county that I'm really familiar with and some areas that I really know and if you describe something to me I'll know what you're talking about but a lot of that is very subjective and it's based off of my own experience.
Rules-Politics - Policies-Procedures	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	So anyway so location and then after I collect their location I want to know a brief description of like what's going on so usually I'll say okay well tell me what's going on there you know tell me exactly what happened and you know if there's type of whatever they say you know say like arguing with my boyfriend or you know my girlfriend just hit me or my wife is you know doing whatever I'll enter that information and then I'll get them started. That usually takes maybe 30 to 45 seconds for me to get that call in and depending on the cooperation of the caller, the clarity of the information they're giving me and then I'll go straight into my main officer safety related questions. I'll ask them okay are there any weapons in the house? Yes, no? If there are weapons where are they located? Does anybody have one? Are they guns, knives, what do they have? Has anybody been drinking? Is anybody under the influence of anything? Where are you? Where is this other person? Are you both in the apartment? Is this going on right now? You know did they leave? Okay let me get a description of them. Are they black, white, Asian, Hispanic? What color shirt? Pants? And then I go back around. I do my next descriptions you know how tall are they? How much do they weigh? Heavy, thin, medium build? What color hair? You know and then I'll say you know which way did they leave? Did they leave on foot or in a vehicle? If it's a vehicle I can look up a description. If they went on foot I want to know which direction of travel they went. How long ago did it take them? That sort of stuff.
Rules-Politics - Policies-Procedures	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	So different jurisdictions handle it differently. [city] again like I said they invest a lot of time into personal---

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	..I know how I want to get a description of a person and we're trained on that and then I've added my own flair to it you know and so once you learn that stuff it becomes a lot easier to process a call even if it is a high stress environment and then also that being said we also work you up to that you know we start you off on phones. You take really basic calls and then you take the non-emergency line and in the non-emergency line you are going to need to use some of those skills you know in a trespassing person or a disorderly subject or something like that. You still need to get a person description but you don't need to get it as high as important as you might need for like a hot call or something like that's really active.
Rules-Politics - Policies-Procedures	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	...You'd be talking to them you stress for them and then on the other hand you're also stressed for the officers because or the paramedics or whoever's responding you know because we're all kind of one family and we all care about each other and your job and this is how we think of ourselves our job is to keep them safe and make sure they get the resources they need. Make sure that they are prioritized you know and we're sending them into these crazy situations and we want to make sure that they're going to be okay. So there's a lot of stress about just again the unpredictability just don't know what's going to happen and then in addition to that the liability that if anything that goes wrong you are responsible.
Rules-Politics - Policies-Procedures	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	It can take 20 minutes to trace a phone because we're going through the cell company. The cell company has to then ping the phone it just takes forever you know we don't have that ability so even if you're having a life-threatening emergency we got to wait 20 minutes for them to fill out their paperwork in order for us to get help to you. People don't know that.
Rules-Politics - Policies-Procedures	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	So I do a few things with the repair side, I'm also the administrator so any new employees I build them profiles. In the current system there are three different places that I need to build profiles. There are 8 profiles per employee and there are 2 different systems because our backup

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								system is on a different server.
Rules-Politics - Policies-Procedures	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	So it's a lot of even bridging of SOP's and also setting the expectations for the city and council so they know what the expectations will be if we are put into one of those situations.
Rules-Politics - Policies-Procedures	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	... So we're at least five years off from having the first initial steps of it capable to us and then another five to ten years from the carriers. The reason that the FCC had to mandate the carriers was they didn't want to do it before.
Rules-Politics - Policies-Procedures	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	[RE: 911 call from cell phone] ...They think that if they call 911 we know where they are and we don't. We know what cell phone tower your cell phone hit off of and that's it and then if you call on a VoIP phone or a voice over IP phone it's wherever your voip was registered to... Now we have issues with their being no regulations at the moment. There are supposedly some coming on applications. There are apps out there promising that you can call 911 through their app and you will have a police officer on video and you can hold your phone up and we will record the bad guy's face and give them commands from your phone. Not even remotely close to being possible at the moment but that's what these applications are promising. They're promising we know exactly where you are and it's not possible yet even though Uber can find where you are on your phone. You have given Uber permission to have your GPS location on your phone. We have to get that through the carriers and the carriers right now don't want to spend the money to give us that information because it costs them more money than what they would get out of it... I mean they aren't really going to get anything out of it so the FCC had to mandate that they make these changes that they gave them time--
Rules-Politics - Policies-Procedures	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	[talking about WiFi] Exactly. We have to have those built in. It has to be it's something that we're looking into adding into our building code where when new builders build things in they need to have the radio redundancy built in. Our issue right now is we don't have anybody to go and check to make sure that they're maintaining that.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	So it's kind of hard because we have to really start getting down on our builders to make sure that they're doing the right thing. Being a county it's harder for us than it is for like the City of [name]. We are for us we have to work with the state government. Our roads are state roads not county roads not city roads so we have to really work with the state government to be able to do some of those things and regulate. We can do some things but we can only do it to a certain limit before it's regulated higher than us because of the county aspect of it.
Rules-Politics - Policies-Procedures	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	It makes it a little more difficult yeah so I mean it's off topic but it's something that brings it down to such a simple thing but something as simple as changing the name of a road. In [name] once the city decides on it they do it. In [name] we can't. The state government has to decide that because it is a state road because we're a county so we can't just change the name of a road because the citizens want us to. The state has to say that we're allowed to change the name of the road. So that same kind of regulation affects us in other aspects as well.
Rules-Politics - Policies-Procedures	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	It is yes. So I do have a department issued phone and that is because I am I'm not paid to be on call 24/7 but I'm on call 24/7 for telephony phone issues.
Rules-Politics - Policies-Procedures	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	So it's once you get to be assistant supervisor and above everybody is assigned a county issued phone.
Rules-Politics - Policies-Procedures	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	No I don't think so. I'm sure you know that we're doing a lot of stuff with like ezenet and Cloud and things like that in not just [name] or [name] in the whole [name] region. It's an initiative by COG so---
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	We're only open 16 hours a day, 7 days a week. So 8:00 AM to midnight... But generally, we'll have three officers on each shift. The officers work 12-hour shifts.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	You need to know the area. I'd have to look up the policy. It used to be you had to live within an hour of the department, and I'm not sure if that's still a requirement because I heard there were some questions on that stipulation. [when asked if you need to live in the area or know the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								area]
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	That's the biggest thing really. You've got to be a really good communicator. You have to be good with people. We do have people sometimes coming into our offices so you know you've got that one on one and you have to be able to deal with people. Sometimes they're not happy, sometimes it's just you know have a chat. We have a lot of older folk in our community and sometimes they just like to stop in have a good old chat and then go on their way and so got to be good with that. You have to be able to follow a protocol right because when people call we have to be able to get the right information to give that information to the deputies so they can go out and do their job and actually help those people so communication skills, communication skills, communication skills you've got to have those.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Well we just come in to the office, you talk to the dispatcher who is going off, they tell you what happened over the course of their shift and maybe anything you need to pay attention to but generally no you just start your day, you're on the radio, filing paperwork or whatever needs to get done. We don't use much else here other than a radio and a filing cabinet so that's I think kind of the way things go until you get a call and then really you're following a protocol. We have got a protocol that a list of questions that we're trying to get information about and then you're calling you know that you're calling out and giving deputies that information or fire or whoever needs it and also then sometimes trying to stay on the call if you think that you need to be helping still those people who have called in and that's maybe when things get complicated here is when you're on the phone with people but you've got to be on the phone with the deputies and so you're going back and forth. That can be complicated sometimes.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	We start out by asking who this is and where they're at. Those are the two pieces of information we really have got to get. Who is this and where are you at? Then we need to know what's going on. Is this an accident? Is this a fire? What's the nature of the call because then we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have to send out the appropriate people so that's the main information at the minimum that we need to get. Kind of who is this, where are you and what's wrong? Once we get that we really need to dispatch because that's all they need to get going and because we are such a large area it might take one of our deputies a while to get wherever they're going so we want to get that information out to them and then we might go back to the person then and ask we're going to ask things like is anybody hurt?
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] So the answer is no. And the way that it works in our county, and particularly in the fire world, we will start out on our trunk radio system which provides the best coverage and audio quality. But we have to go down to the most common denominator which is an analog VHF radio. And so we move from that digital trunk world to the analog VHF world so that the agencies that are responding - and they came from all over northern [state] to help out - can show up and have communications.
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah, it is a bummer. But they know they kind of got you. So we did not opt in for that. So everybody gets their own set of credentials and then we just time them out for security reasons if they don't log in or whatever. We also go through a process of making sure that their managers get to review their list of active users or whatever. So that encourages new users, right? And it also gets rid of the people who have moved on.
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah, we're actually proponents of using our daily tools to manage the incidents that we actually use and that's because people are already familiar with it. They're ubiquitous, right? And if you can just modify it slightly to handle your incident work load then you're just much better off. So we use the standard types of tools, right? Email communication, phone communication, radio as well, and the application suites that we integrate into the whole process. But from a communication perspective, that really encompasses the majority of it. My group is an all hazards communications unit. There are other siloed groups that just do it for their organizations but ours is cross-cutting because we have

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								so many departments. Within the county itself, we have EMS and hazmat and law, so all those groups are facilitated through our communications unit. But yeah, on a daily basis it's the basic tools.
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] And it's a good question because, operationally speaking, when an incident first happens, we've found that it's better to let a command and control type scenario work out from the communications perspective. So if those that are in command get together and have a conversation, then they can push that information back out to their respective employees and partners. If the incident is going to be prolonged it's better for us to all figure out a communications plan, and then segment that up by function as opposed to silos of law, fire and EMS. So there's a time factor to when we decide, "Hey, we're going to enter operate communications," or we're just going to let it ride because everybody knows how that operates on a daily basis.
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] We don't really have pre-canned comms plans. Essentially, as a comm [owl?], we essentially look at the situation and we look at what's available and then kinda match that up. In our county, we developed a tool for doing online reservations of talk groups. So we're all sharing a pool of interoperability talk groups, and those can get used for a variety of purposes but they can also become conflicts. So we use a tool that de-conflicts that process by basically reserving them in advance, and then there's a process to-- if I have a higher priority incident, basically bump people. And that's a mobile application that people use from their phones or on their computer and then they get notifications when a new reservation goes in. In essence, that replaces many comm plans, right?
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Right? Fire, as an example, we know that it's a certain rate of growth. So as we start to overlay our operational periods we're going to say this is our plan attack, op period one, two, and three. Same thing for the search and rescue world, right? We only have a certain number of resources, this is areas we are going to be able to check in this op period, this is where we're going to go next. Those kinds of things. So mapping is becoming an integral component of the overall planning

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								process in response to different types of incidents. So yeah, it's becoming a big deal.
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah, it's really slick. And then the State offers a version called Scout that they're rolling out right now. And then obviously, there's RGIS. And the majority of our functions and interactions RGIS is for high fidelity mapping, as opposed to kind of a situation where there's like, "Here's a pen, here's a pen". If we needed detailed mapping like, for example, we have a large landslide that took out a road in our county. Cut off a community. We needed high fidelity mapping to say, "Okay, this is where the pipelines are, this is where the utilities are, poles, and all that kind of stuff". To look at it from a detailed perspective how we are going to fix this problem. So it's a right size-- you pick the tool based on the scenario [crosstalk] and who has access to it.
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] The whole process is coordinated with state and federal partners. They have their own processes. So as an example, we recently had significant weather events in [State]. We had lots of mud slides and roads that were taken out and private property damage and those kinds of things. So when the inspectors - they're basically inspectors - when the recovery folks come to town, they're going to want to go around and look at all the damage, right?
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Well, there's a team that goes with it. So if you requested an operator--
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Right. And in our program they actually use pilots. And then they have an operator that goes with them so they can do the TFRs and all that kind of stuff.
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety	36-45	11-20	Male	COMMS-S-001	[S3] Yes, and logins as well. That's the big one. And then you know for us in the county, one thing that we could do better on is our governance and risk management compliance while adopting new technology. I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					know most of the organizations in the county kind of have a little technology committee or whatever but I don't think those committees share information. And I would like to have standardized-- a standards committee for technology across the board. So that, for example, we're trying to make this work right now with the FirstNet equipment manufacturers. It's like, "Yes, I am law and emergency management and my counterpart is fire." But 90% requirements overlap, you know?
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] And then if you have to deviate for certain conditions, that's fine. But we can weed out the manufacturers that are just are not going to be any good for the county - it would all just big waste of money and cause problems - and do that together. And then, taking a deep dive into what those technologies are. I know, it's off from your original question [crosstalk]--
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] More than anything, it's less technology and more culture. We have a lot of communications capability, and technology I think really is just culture. Who am I allowed to talk to? Is it outside of my organization? In the law enforcement world there's a rank structure, not always an open door policy--
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah, you've got to follow chain-of-command. Some things have to be formal, some things can be informal, but you just need to inherently know that. And so I think culture really is our biggest inhibitor to having better communications. One of the things that on the incident side right, out there, cost of technology is a significant inhibitor to-- not everybody can have a radio. Right? Even though they really need it for their job. To spend \$7,000, 8,000 on a portable radio is just, it's wrong.
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah. Our office pretty much facilitates the grants for the county. Yeah. We don't have a grant manager, but it basically falls here. And then we have two boards that approve grant proposals. One that kind of looks at the big list and narrows it down. And then we have a smaller group that puts the stamp of approval on it. And then we look for all sorts of grants. We have our main grants. And then we look for opportunities for other grants as well.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] So our department just made the decision recently to give every person that's on patrol a cell phone from the agency. They're doing that for a couple reasons, one: they can't have the excuse of I didn't have the ability to make a phone call. But it's also a lifeline as well in that case, if you really need it. Our county is so big geography-wise that people can be out in places where there-- we have 95% coverage from our radio system, which is significant. I mean, you don't really find radio systems that high. But the fringe areas that our county patrol works in are the 5% that you don't really get it so you need to have an alternative way of communicating.
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Right. No. You probably get another 1%, maybe [laughter]. But at least they're doing their part to give you another tool to train. And so patrol has it. Anybody that's in the sergeant position above will have an issued phone as well, but everybody still brings their own phone, right? That's just the way it is.
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] So exactly, right? So people end up carrying two phones everywhere they go. And not everybody's issued laptops or computers either. They might have a shared one or whatever. So if they could do all of their jobs from one device that would just make everything easier, more seamless.
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] And that's true from a cultural, political perspective. But what I'm specifically speaking about is, there might be a large fire and we never know about it, right? Emergency management wouldn't be notified. That's a breakdown in communication. Why aren't you being notified? "Well, we've never done it before." I mean, it's those kinds of things that I'm talking about from a communications perspective is, everybody understanding everybody's job. Also, the escalation when things go bigger, right? I think that's where there was significant lack of communication. We have a large earthquake, it's not as simple as, "Okay, well I'm just going to add 500 more firefighters and 200 more police officers." No. It needs to be a lot more coordinated, a lot more organized. And done by function and geography and all these kinds of things. And I think here in this office they knew that, but nobody ever knew how it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								would actually play out, right? And nobody really had the ability to have the conversation about it.
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] And so it's those kinds of communication challenges that I wanted to tackle. And if I could put a layer in between, have a communications group or unit where I'm coming in to help you communicate, and they're thinking to themselves, "What do I need to communicate about?", now it's an education opportunity. I can start educating you. These are the things that they're going to use now and these are things that they're going to want to tell you and those kinds of things. Those have been the real positive, strategic moves that we've been doing over the last couple of years.
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah. So there's a process and procedure for all those kind of things and it's different by agency. And it's different by incident type. So refineries have a very specialized process. We have a community warning system, and so there's an automated process put into place for that. So if I have a problem at my refinery there's levels of notification that go on from,"Hey, just an advisory," to, "Hey, emergency services you need to know because we might need your help." To, "Hey, now the community outside of our perimeter needs to know," and, "Hey, I need to blast this to everybody." And you sound sirens and send notifications and those kinds of things so there's a whole process around-- we have a whole unit here dedicated to the community warning system and its implementation. We use that same system for our reverse 911 out to the public, those kinds of things. So it's all tied together in one cohesive system. And that's been a big component. So that's one factor, right? Notifications from individual agencies. If it affects their community, the notification may get a community warning system out back to us.
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah, so it's interesting, right? So [inaudible] commander may say, "Oh, this fire is going to run this way and there's potential evacuations or whatever." He'll call and say, "Hey, I need a community warning message to go out," and then we get notified that way. Technically, they're supposed to notify our dispatch as well, so dispatch center to dispatch

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								center. So there's just a variety of different ways that things-- information is getting shared. We are working on a project right now to kind of standardize all that through a guide process. And then, working with each dispatch center on what triggers a notification for us, what doesn't. So.
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	Q: Excellent. So about this community warning system, is that something that your residents opt into or is it an automatic blast that anybody-- I mean, how--? [S3] It's both.
Rules-Politics - Policies-Procedures	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Well, so if the big one really does happen within [application] there's a status board, right? So if you're online literally, right, you have the ability to connect. You'll update your status. So that's a pretty operational thing that we've worked out. That way if you don't check in we know that there's probably a problem, right? And now we can start to understand situationally that, "Hey we have three cities on the west-end that haven't checked in. That's probably where a significant amount of damage is."
Rules-Politics - Policies-Procedures	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	In the event of our 911 system going down, if it ever, if it has to, normally the last time we ever had to do a rollover was during one of the hurricanes. And it hit a tower, one of the cell towers. We lost our capabilities to receive any calls coming through from AT&T and Boost Mobile, the different cell phone providers. It'll roll over to our neighboring, our sister stations as [station], [city]. And what they'll do is they'll call us and give us that information, what they just got from that call, and we'll give it out like that. So we have a partnering system in the event of that. We have everything in place whereas, okay, we got a problem. Let's call [city], let's do this, and we have our plans.
Rules-Politics - Policies-Procedures	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Emergency preparedness is a little different in [County], being we are very, yes, we are very rural. As emergency preparedness director, I'm in charge of 911, radio infrastructure, GIS, IT, and prisoner care. [State] is a little unique in which the sheriff operates the jail, we have to pay for all the upkeep, whether it be transportation of inmates, keeping of inmates,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								medical care, dental care, the whole 9 yds., we have to, we have to foot the--
Rules-Politics - Policies-Procedures	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	...Right now is the time to prepare in February 20, whatever we are today, not June 1st when hurricane season starts. I try to preach as many places as I go, if I talk to a civic group or some kind of group or something, have a plan for hurricane. Have a plan for tornado. Have a plan for cold weather events when the roads are closed and you can't get to the grocery store. We're not used to that like you are in your part of the world. But that's really the most stressful thing, really is.
Rules-Politics - Policies-Procedures	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	No, we do talk, I guess depending on the shifts, 'cause every once in a while they'll mix the shifts up. You have to get used to working with different people and people you haven't worked with before for 12 hours straight. Versus working with them maybe 30 minutes, you're working with them 12 hours straight now, so now you have to get used to how they're working.
Rules-Politics - Policies-Procedures	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	... So they don't want you answering phones, which we still answer if it's too busy. But you're going to be the last person to pick up the phone. You're going to be the last person to do anything in the office other than listen to the radio.
Rules-Politics - Policies-Procedures	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Yeah, it stays the same. You're just trying to pick up more calls. I mean you do try to work more efficiently. But you definitely make sure that you answer all the questions you're supposed to answer. You're supposed to get all the information that your deputies, you know your deputies are going to ask.
Rules-Politics - Policies-Procedures	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Yes. State police has to respond to all of our highways for crashes. And then if there is any fatality, no matter where it is, they handle it because they have I guess better technology, so to speak, or better, I guess better ways to map out how the crash happened.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	If you are a full-time employee in the dispatch center you actually attend what is called the 360 post academy, just like a regular police officer. We have a night academy and a day academy hosted at our agency. Our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								communications officers attend the night academy from 5:00 p.m. to 10:00 p.m. Monday through Friday after shift. They get paid and compensated for that. And at the end of it you are a post certified deputy just like a police officer on the road.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	The protocol is the protocol.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	It's a little different in dispatching for the police. With the fire department they have to understand that there are property insurance rules that we have to follow. It has to be done in so much time from receiving the call. Besides that we actually set up tones prior to dispatching them to where they need to go whereas in the police department we don't set off tones for the most part. We do have an alert tone that is used if there is endanger of life in the call, like someone threatening someone with a gun or a report of shots fired or anything like that. We do set off an alert with our police just to basically tell anyone that's got a radio on I need to turn it up and I need to listen to what's going on. It works great.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Oh, yes, we are assigned partners. The only time we'll switch out is if somebody takes off or if you're working overtime and you work on another shift but, yeah, we have the same partners.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	We have the same shift. We're assigned to shifts. It's the same. If somebody takes off or works--working overtime that's the only time they'll switch up.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Well we actually had to go to the courthouse and get sworn in as a regular road officer would We were, you know, we're held to the same standards as them.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	I think they have to be even tempered. They have to have a customer services attitude. But then they have to be willing to and able to learn and adapt, overcome the challenges whether it's one event or whether it's a new piece of equipment. They have to overcome the challenges that each one present and they have to be able to change because policies change with everything in here.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	It just... just the ability to... look at history and look at the response capabilities. We have AVL which is the automatic vehicle location of all of our units now. And that's another resource that they can use but it's also one of those liabilities and responsibilities that they have to look at and go, ooo, that guy's closer but he's on a call, do I pull him from that call to go to another? So they have to make good decisions on that. But if he's on a call taking a report they can't just pull him from that call because he's sitting talking to a victim. But if it's a major event then they may have to pull that deputy from that call. But knowing that they have additional resources that they may not know are there such as detectives or civil units that may be in an area that is very close to a high priority call.
Rules-Politics - Policies-Procedures	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	...It's exhilarating when I can catch the perp, when we have someone, that we're behind someone chasing them, or we're dealing with possible bomb threat or something, we're able to take down that individual through protocol, properly, without any things being crossed, that's the most perfect, exhilarating day.
Rules-Politics - Policies-Procedures	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	Right, you have the names, and yeah, so we have to learn the names, the streets, where they're located at, you know, so--
Rules-Politics - Policies-Procedures	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]...So, what we have to do is we -- we are not allowed to hold the call without permission. So, I get a call from the call taker. I pull it up. There is nobody to send. I've got to call the Sergeant or Captain, you know, whoever the supervisor is and say I've got so and so call here, permission to hold. And he really doesn't have an option other than say -- "Go ahead and hold it," because there is nobody to send.
Rules-Politics - Policies-Procedures	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S1]: So we teach all that with 5 weeks of classroom training and then by but we do have a call handling guy. If it's -- you determine when you answer if it is a police call, then you refer to their call-handling guy. They have a set amount of questions they want -- if we can get them to the best of our ability, we will get all these questions answered. Very rare that we get everything answered.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	We're always looking at technology solutions, and not looking at technology to replace people, looking at technology that will make it easier and more efficient and less stressful.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So I also have the third party compliance software called First Watch. We worked with them and we built a lot of triggers, we also built triggers for the health department. So there's things they watch during the year, such as heat emergencies during the summer, cold emergencies. Right now it's narcotic overdoses we're looking at, anytime those things come up, and they'll trigger in First Watch and they'll be able to go in and get that data out of our CAD immediately and by going through that third party there's no HIPAA data exchanging, all that stuff's clean, and I also pull my daily reports, hourly reports, compliance reports, because we have a county contract. We have to be at all emergencies in 10 minutes or less, 90% of the time. If we don't, we pay fines. We have another thing set up to where we have first response for ALS engines in the county. So if an ALS engine gets there in 10 minutes it bumps the ambulance time up to 17 minutes, so we still got Ucare in 10 minutes, and if we don't make that in 17 minutes it's a fine of \$250 and in a minute it's \$500 and then in three minutes, it's \$1000 and it goes up, to be allowed to do that; so there are economic reasons for us to be efficient. Unfortunately, the reasons that was in place is because a lot of places contract ambulances and nobody paid attention to that and at one time the county paid ambulance services, so we get no money from the county, we're held under that contract. I get my overtime, every time we are in with the county; I tell them they gotta pay my Mafia money. I say this is the only business I've ever worked in where I pay you to be here and they're like stop saying that, like its extortion. [Laughter].
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	The reason for that is politics. So the people that ran rural metro helped create some of the bankruptcy issues. They all quit, walked out the door one day to go start a new ambulance service and part of that they knew what was going on, so they entered into this contract that we're in now, some things to make it difficult for us to remain here, but we're smarter

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								than they are; we're doing financially well and they're suffering so, but it's politics, so they got in and they agreed, 'we will do this for free, we will pay those fines if we can't do it', so it's a mutual agreement from our side of the company, those people don't work here anymore, so that's how you end up in a thing like that, but if you look at a lot of -- we've gone full circle so, we used to get at one point if I can remember \$90,000 or \$100,000 a year to pay for the indigent people in [city] who couldn't ambulance, to offset those possibilities. And then negotiated a way and it went down to \$ 30,000 and then it totally went away. So we get no money for anything, for indigent.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Well it's a bill; you'll get an ambulance bill, we'll bill your insurance company.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	But the subscription doesn't cover emergency calls. They'll cover fire, so then we will come out and it will cover. So if you had our subscription and you're having to go to dialysis or radiation treatments or chemo, or something where you cannot drive or function and you're truly bedridden, there's a huge discount buying that subscription.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Indigent is huge here in [city]. We have a huge homeless population. We have a huge psych [crosstalk]. It's...so if you're in jail, you're supposedly deemed indigent, which I still argue that, if you're in jail and you have the insurance, why am I taking you for free. We should be able to bill your insurance, you know, but by the law, you are deemed indigent when you are in jail.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	It's not a nationwide thing it's a State thing, and some county thing, but the Sherriff's department is supposed to be responsible for that, but because of the contract we entered into saying we take no money, we can't bill the sheriff's department for that, so it's another one of those contract things. So as everyone knows, that cost gets passed on to the consumers without money. Medicare doesn't pay for full boat. Medicaid doesn't pay anywhere near full boat, so that gets passed on to the other insurance companies, it gets passed on to you, the consumer; you know the drill.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So our dispatch is. We have shift work. So they used to be straight 6 am to 6 pm when I took over two years ago and it wasn't efficient, because everybody coming as 6 to 6, all the dispatchers and the call takers.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	It went crazy, the whole things. So I staggered the shifts, so we now have, we're looking at our busy time, so we have three: the supervisor and then two 6 to 6, we have three 6 to 6, we have a 7 to 7 and then we have a 10 to 10 and then at night we have three more 6 to 6 come in and relieve the other 6 to 6's, and then we balance it after 10'o clock at night, there's just four of them in there, because we're not as busy. Then we have my two IFT guys that one comes at 7, one comes at 8, they work 10 hours, 50 hours a week and then we have a 5 pm to 1:30 am Tuesday through Saturday, that comes in at midnight because that's our little busier time and they work 40 hours a week.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	They work the same, so our EMS has a union and they're part of that union so through that all shifts are bid by seniority. So all the senior older people on days and all my new people on nights when I'm not here, so that's a nice...
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	No. you'll see more the private. Its union driven because of bad management practices in the past I think.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	I don't have any problem with it out here. I mean it's simple for me in Communications, so what I do is we build policies and procedures so something else I've really redone and still working on, over the last two years and we got to re-do EMS, so I have a set of policies and procedures that condone how we conduct business in the center. You come to work on time, you wear this uniform, and then I have a procedural manual about this is how the CAD works, this is how we put in a call, this is how we dispatch calls, this is how EMD is, and then when it comes to your volunteer fire department say [City], it's your policies and procedures on how you want us to dispatch it because it's your department. I will not make policy for your department. I will give you advice on what we should be and what the national standard is, which we have done and we've worked with them to build up policies, but I've

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								gotten away from, EMS you make your own policies and procedures; if you want me to send you an ambulance an hour before off-duty so we can do these tasks, you put that policy in place, I will issue it, and we will follow it.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	I'm 52 years old and I really don't want to keep doing what I was doing when I was 20. So this position came open and I migrated to here because I was really the only one that knew the CAD, knew the communications center and all that stuff, so we hired a new so I help him. The fire department, the fire chiefs, once I came from there [indiscernible] we need policies on how you want this truck dispatched on calls, how many trucks do you want dispatched on this type of call, this type of call, we built all those policies, and then it's easy for me training my dispatchers. If you're within policy, I got your back 100%. You violate policy; you're on your own. APCO; you APCO a call correctly and we find out the APCO codes need to be updated, you're covered. You don't use them, or don't do them, you're on your own, I can't protect you.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	They would come in and log onto the computer and pull the CAD up, get OPTIMA. Depends on which station they're at. Fire does a few little different things they have to do and I will show you that when we go I there, because they're just taking care of our fire department, [indiscernible]. So they have...Fire's a totally different piece than Ambulance. Fire, you know they run out of one station, they have their area; if they're on a call you send the next station that's closer, whether it's on the right or left hand side of that station; it's strictly straightforward and simple. Ambulance is dynamic, they are moving all. We could have 15 available and then 10 minutes later we will have three ambulances available because we had a bunch of calls come in. So we're constantly moving and if you look at that map, you'll see the shaded areas?
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	No, they post. Now we do have a couple 24-hour trucks, so right now the fire department has one getting ready right now too, so this Medic 241 that's down here in [City], the fire department has put an ambulance on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								in that fire station for the [City] community and it belongs to the fire department and it runs out of the station. Now we have two critical care trucks, 747 which is right here and they [indiscernible] they run out of station 15 where they post, because they're on 24 hours we post them somewhere they can get out of the truck and go on scene.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	EMS is not. So we're working on some legislation changes. So in the ambulance service requirements for the [state], there are certain frequencies that we have to carry - VHF, 155, 205, 295, and 304 those are the disaster frequencies. So the State does not migrate it, but all the hospitals are on UHF to talk to them. Now we're going 800, so I've been meeting with the State and other people so we got to change the laws, because all you're doing is creating expense. So for EMS to go to 800 right now is an added expense, because we still have to maintain those older channels because we can't get rid of them because the State requires them. And there's no funding for us because we're a private company that is not getting grants, and I'm like we got to work on this, and not only for us being a private company, but in [County], [County] where there's three ambulances and they're already squeezing every penny out of that county's budget, they can't afford to go buy three \$20,000 radios.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So yeah, we had APCO cards for a long time, so you ask the same questions: where are you calling from, the number you're calling from and what's your location? That way if we get disconnected we can at least or help that way and then try to re-establish to find out. And then the next thing is so in the medical field, it's very difficult when you want to talk to someone that has no medical training, to give you enough information to know if it's a life-threatening emergency or not because we get calls for '[indiscernible]' for 3 weeks, I need an ambulance'. We get calls for 'I called the doctor and I let him in, so I need an ambulance to go to [Hospital] to get meds'.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	But on the computer screen, its set up to when you answer that question, depending on the answer it gets rid of all the others, goes

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								directly to that third card down. Makes it quicker, makes it more efficient. We found out there were some issues when it first got set up, anything that is an extremity fracture is automatically a non-emergency, that's a national standard. I don't agree with that.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	We'd get Narcan because we give directions so we had the direction cards: how to give CPR, how to control bleeding; so if those things are going on we will give those instructions to the layperson on the phone. So we will ask, he's not breathing and I can't wake him up - do you want to do CPR? - I don't know how - I can walk you through it, do you want to do CPR? And we walk them through to do CPR on the phone. So we had to add Narcan administration because we've never done that before, so it's really simple with them. It's easier with that; with cards, you had to pay money and print out all the cards. With the new, we will pull off a script, we write out what we want it to be, how we want it to flow, we send it to our medical director, he approves it, same as we do with our policies and procedures for standards of care and then we send it to APCO, and they add it and we load it into the software.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	There's a lot of land around here. It creates a problem. We don't have, we've not had the issues of them being on a wrong street. Of course we got rid of all that, we changed our -- the metropolitan planning commission changed where we can't have two street names the same.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Yes. So the great thing is we worked on that with EMA and through the [state] we now have -- so it's kind of we now have this TBRS system, which is the State system. So we have what's called Tac. We have a U-tac, a V-tac and an 8-tac. So if I - I don't know if I will find it here - I don't know which band it's in because I don't use this that much. [state], I don't want [state] - fire department. They have a bunch of fire department mutual aids, but there will be a - and we have EMS mutual aids. But we have a V-tac, a V-tac, and an 8-tac, so if I am on a UHF and I go to U-tac, and you're on an 800 radio and you off to 8-tac, and a VHF radio goes to V-tac, they're tied together in the building and we are on the same channel even though we're all on three different frequencies.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	If we have to leave this building and go out and get in that truck, or if I go to our AOC, our operational center, I'm going to be operating those cell phones. Now my CAD is set up, our CAD which we have that they don't have, so we use Citrix, I don't know if you know Citrix so anything that I need, and again this is because of the HIPAA rules and security of it, so we built a secure Citrix system, so when I go to Citrix on my laptop anywhere outside this building, I can get to everything I need to sitting in my office. Or I can dispatch calls. So we also like [city], is not tied into here, like we are. They're on Citrix, so [city] dispatches all their calls on Citrix, and it talks and it feed backs through. Because the Citrix server is sitting in [indiscernible] [0:54:30] right here. Now if this building goes down and we lose complete power and I lose this room right now, we're on cards; we're back to the 1970s.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	I probably have a few new ones in here that are in training that we have knocked down cards with that have a meltdown that they have to go to, but on the whole, we do and its part of our CAD [indiscernible]. I'm trying to get our comps on our [0:55:01] accredited. The part of accreditation is that you have redundancies, you have those things, you practice for when your systems go down, and to be able to keep that accreditation, we have to be able to prove every year that we've done those things.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	No. So on game days, I don't come up here, [names] comes up from Ambulance. Normally I go to the game. So on game days - which I didn't go to any of them this year - normally I go to every one of them, but we caught it this year; [indiscernible] but we take a laptop and our EMS supervisor that sits in the command post at the [Univeristy] takes a laptop and this was the whole idea of Citrix and how it'll work and to practice that. So they pull the CAD up, so we have three CADs - we have [city names] and [indiscernible]. So when they go to an event whether it's the UT ball game, a marathon that we're doing, they go and set up and we bring ambulances on for that with different numbers and we put them over on that CAD, and they run that system and it doesn't impact up here. So they have the CAD, they have their own radios on their

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								channel, they have all that, so we set up a complete operating system, and we do that different from what anybody else does.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	No. The only time they talk to them is when they areas transporting, from the stadium, they'll call them and tell them they're transporting to wherever and we can see them on the map and then if we need them for an emergency, we will pull them out into our system, we just move them. So they have their own agency for events. It's the same with [city] so if we need an ambulance right now from [County] because we're low level, we'll call them and then we'll transfer them from the [County] to [County] or change their agency and they'll show up on our [inaudible] and when we get done, we are going to transfer them back to [County] and they show up on [County] systems and they know that they are back.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	No. Internally it's a huge problem for us because you know a lot of mistruths, hurt feelings and all that about stuff and then everybody feels into that can't happen to me, so yeah that's going on, so it creates a 'the dispatcher is picking on me, the dispatcher is showing favoritism.' I take all that out, we I go back and review. I can see every keystroke is recorded, every phone call is recorded, every movement is recorded. I want this to be the most transparent place in America. I have nothing to hide. If you called me and said we have a complaint - and I've had to make these calls, I have called family members and said "I appreciate you calling me, we made a mistake and here's why, and here's what we're doing to fix it. If you hadn't called me I wouldn't have known to fix that issue," and just making that phone call to a lot of people, just calling people back? Huge call. I really think that they might call me back and I want to fix it, we have nothing to hide. I will tell you that we made a mistake, and that is all I am going to tell you because I won't tell you what our procedures are for -- and they would be like "we don't want to get anybody fired" well it's not your concern. I'm not going to tell you that I am or I'm not going to fire them, but I appreciate you calling because we do want to fix it. And people don't - I guess they're not used to hearing that, but I am the most upfront, honest and transparent. My

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								boss is crazy sometimes when I say stuff, because they wanted to get the politically grey answer and I'm like nope we screwed up and they're like 'okay' and I'm like 'here's what caused it; here's what we're doing to fix it; here's the training we're implementing and we totally missed that, it's our screw up.' And they're like "Okay. Cool." So now when I go to a meeting with these people, and it's really funny, so I go to meet certain people, the higher ups in other agencies and the hospitals and things [indiscernible] [1:09:26] I am, my boss will say something and they'll turn and look at me and I'm like "y'all got to quit doing that" and they'll be like "we can tell by looking at you if he's telling the truth or not." [Laughter] And I'm like "Stop. You got to quit doing that."
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	I would like to see technology to continue to move forward to true total interoperability between every agency. I've heard that my whole career. For 30 years, we've been talking about interoperability and politics always gets in the way of interoperability. More than money; egos, politics. I'm in charge. There is no "in charge" and there is less of that here than I see in other places but, you know, over the years the police and the fire get about -- [State] code states that if a fire department on the scene of a fire then the highest ranking fire official is in charge of that scene. The police hate that.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	And get you included and those are the things that I have been working on tremendously over the last 10, 12 years trying to fix and get those -- and we have that here; we'll talk, we'll communicate, and they'll say something and I'll go "I had no idea that was an issue for you" [indiscernible], alright, let's look at changing that, how do we fix that? How do we make it better for you, but not punish us? And then they're like "oh we didn't realize that went on for you" and it's all about that relationship and communication and that talking. Because if you don't have those talks then [indiscernible] freaking pigs. But if you're not out there, you don't know, if you're not having those talks, you don't know. I mean there're a lot of people the thing you say, "I didn't know that", people won't know. You know we get into level three in our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								contract, we do not send a truck on a non-emergency call. We have to keep three trucks available for emergencies, that's the way the contract is written. So [City]PD gets a drunk, they want us to come pick up and take to the ER, the only reason they don't want to take it is because they're going to get stuck at the ER; we're having two and three and four hour holds at the ER right now with the ambulances because of the flu and other things. So they want to take one of our 13 ambulances, which ends up being seven of our 13 ambulances are now tied up for two or three hours at the hospital because they don't want to go stand against the wall for two hours. So we have those talks go on. Look there's give them a ticket, call them to court, there's got to be a better way to do this than tying your resources and our resources. Psych is huge, it's a national problem.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	No, I think that technology is coming whether we're ready for it or not, so I think we better figure it out how we're going to play it. I do know that there's mandates which I think the next gen 911's are supposed to already be in place by the mandate and it's not.
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So they try and put them off in an ambulance. Like why do you want us to go pick somebody that's not hurt, kill our resources and then you want us to send them a bill? So it gets dumped on us. The police aren't going to do it. The rescue squad wouldn't, and a lot of them quit doing it because they had back injuries, so that is Workman's Comp claim, [indiscernible] and I'm like "come on, we've got to figure this out"
Rules-Politics - Policies-Procedures	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	The federal government I guess, there's nobody that regulates it. Now we have put in ordinances that says if you're having an alarm and you sound it so many times, we could start going after you for a penalty or a fine, or whatever, but until that happens there is no regulatory. It's a call. I can't say let's send a non-emergency and then well the first time I do it's going to be a cardiac arrest and then we treat everyone of those as an emergency. Because all it is an alarm.
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So I do use a cell phone. So I guess this is what would stand out for me as an ALS provider. So if we're just talking about technology in general,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there's multiple applications that I use on my phone from a simple calculator to do and double check mathematic formulas to my protocol of my medical guidelines that I need to follow within the state. I have that as a computer app as well that I easily look back on. I am not embarrassed to say of the amount of information that I am required to know and utilize very much outweighs how often I use it. So checks and balances of just to make sure before I do something that I double-check myself...
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	If I need to utilize a language line to talk to a patient of a different language base, I can't do that through my radio. I can, but there's a lot of extra hurdles that go through that. And in my profession as an ALS provider, time may be of the essence. And I need that time and don't have the time to talk to three to four other people to find someone of that language to then convey and talk on the radio.
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Within the last couple of years, it's the the first that I've ever had to really work hard to maintain that professional image, in a sense of a lot of negativity within community or the changes of social media, civil unrest. And not going into too much depth of that, but everybody loves a fireman per se. Some people may not understand salary or taxes or why we're sitting in front of a grocery store, but I think education's the best part of that.
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Means of radio communication of we can talk from one person down to the other. There are slight hiccups every once in a while if you're in certain basements or buildings or large box stores, so if you go into a grocery store to the back towards the deli or far corner of a store, that you may lose means of communication. But we work around that with different policies or adapting. Or on the river, we may not have complete radio communication but we still have cellular communication should we need to make a phone call...
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...If I go to an assault call, and the police are on their way there, I don't go until it's safe for me to enter... So dispatch tells us that, but it's also a formal policy that we have that we stage or maintain a distance.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	What I mean to say may be different from what you mean to say. So it can stem all the way down to basic cultural differences and diversity to department policies and procedures of if I work tomorrow, the captain may have a completely different way of operating and may call me on the phone rather than delivering a message on the radio, something I'm not used to. I may not have my phone with me and he's been trying to get a hold of me, well I'm not used to that. I'm used to my officers talking on the radio or so.
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	I would say, and I know there are some rules and legality as to what you can say on the radio so that consumers or civilians don't hear it, but urgent messages, even if it's-- and I'll use the example. If there is a issue at a college or a school, they have the means of delivering a text message to everybody. I wish we had means in the county as a whole to deliver that via radio and to our phones, but even isolated to just those that are ... involved in that incident.
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	I mean, I guess it's the day and age radios have changed a lot and I think we're just talking about more or less the interview was communications in general. But if you could take a smartphone and put it on a radio, it would be ideal. So I could have five to six dependable apps that I use on my radio, I can utilize it as a phone if I needed to or wanted to, as well as to a radio communication and delivering messages. So the radio does not make noise if there's a tornado coming. My own phone does [laughter]. I'm not required to have a cell phone. I'm not required to have it activated, but I do so because the two together make me successful.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	[RE: CAD via tablet] ...I don't know if they took the at at-quarters button off or not because they recently changed policy and we had the status in-quarters from the terminal in the firehouse now instead of doing it from the mobile unit. So I don't know if they took that button away, but that may still be there. No, we don't use it [laughter].
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	the way the city is run, they send [City]PD to a large range of calls that may or may not end up actually requiring the police. But they go on-- they end up on pretty much any call that is out on the street. So if we get

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								called for a person down the street or something like that, [City]PD is going to end up getting dispatched. Any cardiac arrest, they'll get dispatched on. And part of that-- I think they've always done that, but especially now with them changing our policies...
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...they're allowing us to actually-- if the person is in cardiac arrest, we don't transport them as often as we used to. Because it used to be we would just start CPR and do what we had to do on the scene, and then take them to the hospital. Now, we've kind of changed our policies a little bit, where mostly ALS care that we can do is the same thing they do at the hospital anyway. So rather than transport them to the hospital and have them declare the patient dead pretty much when we get there, we'll work them for 20 minutes on the scene-- at least 20 minutes on the scene. Do everything we can. If we don't get a rhythm back or anything, then we'll call our medical controller and ask for permission to just terminate there on the scene. And at that point, it becomes a [City]PD issue because then they got to call the-- they'll handle notifying the coroner and anything else to do with their investigation. Usually, it's an apparent natural, so usually, it's not anything related to a crime, but they still have to do their little investigations.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...it's changed a little bit over time. They've changed their criteria for when we can terminate on the scene and when we can't, so. But the initial push started probably about two years ago, I think
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	No, it's not even a-- yeah. It's actually, it's like a basic flip phone. It's not even a smartphone. So it's just your basic flip phone. I think they might have even disabled the data capabilities on it. So even the limited data capabilities it has on it, I don't know if they're enabled on the phones. They're used pretty much just for telephone communications.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...I know that at one point, they were, at least, working on, I guess, a CPR app or whatever that would help citizens with CPR. But as far as in my daily work, there is a protocol app which the department, I believe, provides information to the developer to keep updated so I can quickly pull up protocols on my phone, if I need to.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...There are some that I personally will use. Children's Hospital has a pediatrics app that I will use for pediatrics. It pretty much has the-- it lines up pretty much with our pediatric protocols anyway because our pediatric protocols were written by Children's Hospital. So it's pretty much the same information, but it can be a little quicker to find the information than digging through the protocols to find it in the protocols. And there's a drug reference app that I'll use for medications occasionally.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	At a basic level, yeah. And then, I guess, was around 2000 or 2002, somewhere in-between there, they actually started working on putting paramedics on the engine companies. And the first way with that was actually taking paramedics who were already paramedics in the EMS division or the EMS side of it and having them run on a couple of the engine companies as a pilot program. But since then, they've started actually hiring firefighter paramedics. And when they initially started putting medics on the engines, those medics were still just single-role medics. They weren't trained for firefighting at all. They were just riding on the engine to say they had a medic on the engine, that they could possibly get to the scene faster than a actual ALS transport unit with a medic on it. But as I say, since then, it's become a lot more. [As I said?], almost everybody the fire department hires now is cross-trained...
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...they're hiring both firefighter paramedics and firefighter EMTs. I don't know exactly what the proportions are and how the numbers work out. And as far as I know, I don't think they're hiring more single-role EMS providers at this point. The ones who are here-- a lot of the ones who are here are actually crossing over and becoming firefighters. And the department, every so often, will have a class specifically for EMS people looking to cross over to the fire side and do both.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	[RE: patient responsibility] It's a bit of a gray area, and I don't know for sure how exactly that works out. I would say, it's at the very least, a gray area. From what I've heard, there are some statutes and that are in place that basically say once a patient arrives at the hospital's doors it's their

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								problem So if we're sitting there waiting to be triaged and whatever, and something happens to the patient, they would say, "Hey, it's the hospital's fault. It happened inside their facility." On the other hand, since we haven't actually-- until we actually give a report to the hospital and tell them what's going on, it's still somewhat our patient. So again, it's a little bit of a gray area, I think, at the very least.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	So they started using these private ambulances to take the, what we consider priority three calls, the ones that are stable, don't require any ALS care on the way to the hospital. They may or may not get an ALS assessment on the scene, depending on what the complaint is, but the ones who basically, where-- basically, the patients that aren't going to need treatment on the way to the hospital. Basically, they just need to get to the hospital. And [inaudible], they're using private ambulances a lot for those. Actually, they're in service for us from 7:00AM to 1:00AM so they're 18 hours. From 1:00AM to 7:00AM, then our [inaudible] handle it all. We just handle it all internally...
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Well, the private ambulance service that we actually use for the basic calls-- the way it's working right now is our communications will always dispatch a fire department resource to every call. So, at the very least, you're going to get a first responder, engine company, a truck company, and in most cases, you're probably also going to get an ambulance and/or medic unit dispatched to the call. If we get there and we assess the patient and we say, "Okay. They're stable. They don't require any treatment on the way to the hospital," then we'll call and request that they send a private ambulance.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...the way the agreements are done with the private ambulance service, they have units throughout the state. The way that the contracts and agreements are written, the private ambulance when we request a private ambulance for transport, they're supposed to be able to get to the scene within 10 minutes. So we don't usually have to wait too long for them. And because it's structured in a-- because of the way that contract's structured, there's no requirements saying, "Okay. Look.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								You've got 50 private ambulances available for us to use." It's not about how many are available, it's a matter of how many they need to get there within that time frame or whatever. But at the same time, the private ambulance service does have ambulances. The way they have their stuff set up-- they have ambulances that are pretty much designated for emergency response for us.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Yeah. Because even the private ambulance service that we're using for our 911 stuff, they also do interfacility stuff in the city, too, that's not related to us. So they have some units that are designated-- from what I've heard talking to their crew members, I think they have some units that are designated for interfacility transport and some units that are designated for emergency response.
Rules-Politics - Policies-Procedures	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...So the schedule, so we have a schedule of people. They're on a schedule. They work 48 hours and off 96 hours, and there's-- let's just say to make it safe, there's 12 on each schedule, on each shift. So there's three shifts. So basically, you work 48 on and you have four days off. And during your four days off, somebody else is working two days and then somebody else is working two days. And then you come back and do the whole same thing. That's the general schedule for the field employees that work on the ambulances, and they get put in fire station. You know where you're going...
Rules-Politics - Policies-Procedures	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...The schedule gets built a couple of months ahead of time. Then people ask for time off, or get sick, or get pregnant, or get hurt, or want to travel around the world, or whatever they want to do. So then holes come up in the schedule. So then about two months before the schedule, two months before the actual date happens, [Name] builds the schedule. He's the number two person here. He builds the schedule, and he puts out the openings in the schedule. So he says, "Everybody want this stuff?" And we have them make sure a full-time people and part-time people. Almost all the full-time people are paramedics. There are a few full-time EMTs and almost all the part-time people are EMTs with exception of one part-time paramedic.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	So we hire people seasonally. They get full-time benefits, full-time schedule in the ski season. And then there's a few people that, because we're busy enough and big enough, we have them full-time, part-time. So it's like they get benefits, they get schedule, that type of thing. But they're still not a real full-time employee, but they get it for-- and it gets extended and extended and extended and extended. And those are generally younger people, and they generally have a more flexible schedule. They generally have less home responsibilities. They're generally more eager to work on trying to get a full-time job...
Rules-Politics - Policies-Procedures	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	... So we home-grow a lot of those people into paramedics here. Not all of them. In fact, probably the majority of them end up going some place else after doing a few years here. And then some of them stick it out, rest at the top, whatever they do to get our attention, and we hire them full-time. But it's really, you never know. There's not two or three positions every year. You don't know. There might be one one year, three the following year, no for six months. So it's just hard because other people have other lives too.
Rules-Politics - Policies-Procedures	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: full-time, part-time responders] Anyway, we use a lot of them to fill the schedule, either the winter time or when there's just holes in the schedule. You have to have at least one paramedic on the ambulance, so you can't just put two EMTs on the ambulance together. So there's that kind of thing to take into consideration too...
Rules-Politics - Policies-Procedures	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	So one's personal, one's work. So we have a supervisor phone, one for each. Every ambulance has a phone-- so there's supervisor. Each has a phone. And then, each ambulance has a phone with phone number. But then, I also know most of the people's personal phone numbers.
Rules-Politics - Policies-Procedures	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: trip reporting] ...And this is not happening with anyplace that I've ever worked yet, but I've heard it talked about so It's probably going to happen, where if somebody doesn't want to go to the hospital you can be like all right, "I'm going to video tape you, and I'm just going to talk to you and say, here's the risks of you refusing. You understand that this could be going on with you? This could be going on with you and you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								accept those risks?" And they say, "Yeah." And that's way better in court if the family's saying, "This paramedic--" ... That look, they clearly had decision-making capability. We clearly explained to them the possibility. We told them five times, "Will you please come with us?" And they would go. So now I think it's better in some ways...
Rules-Politics - Policies-Procedures	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: trip reporting] ...some places have ways to transmit like the EKGs. So you take an EKG of a picture of somebody's heart on the ambulance, you can transmit it to the hospital. The agencies where I work, we don't have to do that because we have a relationship with the hospital that they trust that we can interpret it as well as they can interpret it. What we're saying is happening is what is happening. So I haven't worked in an agency where you have to transmit it before. Some places you upload the EKG into the trip report and then I have had that, and other stuff that you upload. And it's mostly to try to protect you...
Rules-Politics - Policies-Procedures	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: trip reporting system] So each ambulance has it. And then the people do different-- in [City], one person runs all the calls all day long, and then in here, they usually switch every other call, so you just share with somebody. Sometimes if you have multiple patients in [City], then you're like, "Here I got [inaudible] and you write it." Like if it's a car crash and there's three people and they refuse or whatever, I'll write that one up, or I'll write those two up and you write this one up, that kind of thing then you switch it back and forth. And you log in each time as yourself so it knows that you're creating this trip so it can come back to you if there's any issues. And here, it's the same way but they usually just switch off person. You just identify yourself as the person that was taking care of that patient on that call.
Rules-Politics - Policies-Procedures	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	Yeah sure. So here, I cover more calls than I'm primarily running. So I'll give [City] examples, plus I run more calls in [City]. So in [City] I work part-time, but I work on the ambulance. It's 10 hours a day. I work with another partner. And we listen to the police channel often...
Rules-Politics - Policies-Procedures	EMS	R	Supervising Field	46-55	11-20	Male	EMS-R-007	...So you'll get dispatched by your dispatcher, the paramedic dispatcher, to a call and they'll say-- they're generally right about the address, almost

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					always right about the address. They're generally right about the patient's gender. They're generally right about the patient's age, within five years, usually right to the date but even if they're guessing like it's a person sleeping on the street or something, they're usually right within five years. They're generally right about the nature of the call to a certain degree, kind of based on a series of questions that they ask the caller...
Rules-Politics - Policies-Procedures	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...They keep trying to push safety... safety in the ambulances. So ambulances aren't really safe. They're basically... like plywood on a pickup truck chassis. I mean it's really not the-- and they crash, and people die all the time. And they crash on the most routine things. And they crash for the same reason that anybody else crashes. They fall asleep, or somebody runs a red light, or somebody doesn't run a red light, or a tire blows, or patient jumps out of your ambulance in the middle... or something. I haven't had that. That's a career ending call [laughter]...
Rules-Politics - Policies-Procedures	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...so they keep trying to do these things, and I think they're trying to do it with safety in mind, but they're not really keeping what really your day-to-day job is in mind. So the safety hinders you from doing your job. So right now, let's say we have 15 ambulances. We might have a little more or a little less. We might have closer to 20. So we have one ambulance that has this newer technology, and everybody hates it. And so it's set up differently. The chair you sit in is different. The place where equipment is is different. The idea is to be safe, and I appreciate that. But moving equipment around messes with your mind memory. So you're like, "Wait, where is the--"
Rules-Politics - Policies-Procedures	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...so we used to have a technology here that would, you had fog and you would beep it in when you would drive, and it would keep track of your driving, your speed, around the curve thing. I'm sure it had some kind of driver scope inside the ambulance to tell you if you're taking the turn, all that stuff. Everybody hated it and the day it got uploaded every month. And they didn't really use it punitively. But it made noise. So it clicked when you come around a turn. And if you take the turn too fast at all, it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								would alarm. It was so annoying. And even if you were hitting this at a normal speed, it was telling you you were taking it too fast. Let alone when you were actually going fast, then it would just alarm the whole time. So everybody hated it. We kind of mutinied. And when we merged, we got rid of it...
Rules-Politics - Policies-Procedures	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	I think also there's a whole side of technology, but I'm sure they can do a study that said if you get to the scene and you realize a patient is sick, and you need to go emergent back to the hospital, then you spend less time at the scene. You package up the patient. You put the patient down in the ambulance. And you start driving, and you never turn on your sirens. You would get to the hospital just as fast as if you get to the scene and go, "Oh, my God," and get in the back, spend 10 minutes or 12 minutes trying to do something with the patient before driving 60 miles an hour through lights. That, I bet, they would show that the time was the same, and the outcome was the same, and there's less crashes when you're not driving emergent. I just think there's ways to-- some people think that the lights and sirens are there to save people's lives, and it really-- there's 1% of the calls, 2% of the calls, where it can make a difference. So that's where maybe people could chill a little bit and use research to prove something.
Rules-Politics - Policies-Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: patient care reporting] So, again, the technology has driven us in that respect. So electronic reporting is mandated by lots of government agencies now, so everybody has to learn that system. You have to deploy it on portable equipment, which is out of your control a lot of times. It's out on an ambulance somewhere. If somebody's having a problem, a technology problem in the ambulance, they're paramedics, they don't go to IT school, they go to paramedic school, okay? Now you would think that most young kids coming out of college would be computer literate, and you would be wrong [laughter]. I don't find that in my population. Some obviously are, some aren't. So it's a struggle teaching these--
Rules-Politics -	EMS	R	Other	56-65	31-40	Male	EMS-	And then, of course, everything has to be HIPAA compliant since we're in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Policies-Procedures			Public Safety Personnel				R-008	healthcare, and so there's all kinds of security functions that have to be installed on the computer [inaudible], but also make it more difficult to use because there all these firewall issues...
Rules-Politics - Policies-Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: being in a rural area] ...And no, really, communication, so we built a lot of things that are sort of automatic like our medical protocols. In this situation, you can do this. You don't have to call on the radio because... it doesn't do any good because you can't talk to anybody. A lot of systems are very tightly regulated. You have to call medical control to do this or that or this. We have a much more - what should I say - liberal system, in that, there's a lot of things we can do just based on "you can do this if you can't have communication." That kind of thing.
Rules-Politics - Policies-Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	So, in big systems, you have your own dispatch and you have grid control over-- the dispatcher can collect the billing information and all that kind of stuff as they send out the call. Here, nobody is big enough to own their own dispatch. So we [are counting on?] dispatch for everything from the dog catcher, to the town buses, to the fire, EMS, police, all of the police agencies, the division of wildlife, the animal control. I mean, it's everything. And so they do a great job at that, but you don't get the level of detail that you would if you had your own dispatch. I mean, they're not trained medical people. They have a card they read off, like if you need to start CPR, okay, do this, do this, do this, do this. Medical priority dispatch, it's called. Most systems use it. You don't have to be medical to read directions to somebody.
Rules-Politics - Policies-Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	There's pretty much five little municipalities in town. And so when there's a call for [City] they just air the call and they say, "Attention, [City] ambulance. Here's your call. Here's your location. Here's what's going on." We can get that information on a mobile data terminal, as long as we have cell service [laughter]. And so that's all great...
Rules-Politics - Policies-Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...Now, in EMS, you never know how many calls you're going to get or when, or anything else. You may get three calls in [City] . All of your other ambulances are 45 minutes away, so that's not going to do you any good. So all they know to do is throw out the call on the open airwaves

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and say, "[City] ambulance, you've got another call." And it's up to us to sort of triage those calls. Supervisor picks up the radio and says, "Hey, ambulance 2. Can you come up here to [City] and help with this call?" as opposed to location based dispatching, which, if you had a map and you could see all your ambulances on a map, you could tell which ones were available and which ones was the closest. Then you would optimally send that one. We don't have the technology installed, currently, to do that. And it would solve problems and it would create some, too, because it creates increased workload on dispatchers, who aren't that familiar with how our system works. I mean, they don't work for us. They don't know all our policies and how people move around and how long it takes to do this, that, or the other thing. And so, that's probably the next big step we'll take. So we're looking into hot-spotting each ambulance...
Rules-Politics - Policies-Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: billing] It's how we get paid. It's how we stay in business.
Rules-Politics - Policies-Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Our critical thinking skills. Everything's protocol-driven. It's like, "Oh, what do I do? [inaudible]. I do this and if that doesn't work, I do this," instead of having that sort of on your brain from seeing patient after patient after patient after patient, and knowing that, "Hey, I've heard that before. And I remember that patient. I had one just like this and he had this wrong with him." You don't develop that sort of sense of how to take care of people. It's like you call any customer service line, let's say your refrigerator is broken, what do you get? You get someone who's reading a script. They don't know anything about refrigerators. They're not a refrigerator repairman. They may not even have ever seen a refrigerator. They are reading in the script. It's like, "Okay. What was that keyword again? A refrigerator? Okay, let's type that in." It's just like, "Isn't there anybody I can talk to there who actually knows what a refrigerator is [laughter]?" Because nobody [fixes?] anything anymore.
Rules-Politics -	EMS	R	Other	56-65	31-40	Male	EMS-	[RE: app logins] Oh, all of them do... I mean, again, the whole HIPAA

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Policies-Procedures			Public Safety Personnel				R-008	thing. It's a pretty high security deal. So, I mean, certainly, you access programs that say, "Okay, you have to change your password. It's the end of the month" or something. It's like, "Great. How am I going to remember this one?" Write it on my hand or use something stupid that everybody can figure out. I mean, I use a password manager, and we encourage our employees to, and we help them learn how they work, and stuff like that. They're not foolproof either. And it's just like, if you make it hard enough, people won't use it. And I'm dealing with mostly college-educated people who are smart enough to be paramedics. But... –even they reach their level of frustration. I mean, they're millennials. They'll go so far and [laughter] it's, "Screw it. I'm not using this."
Rules-Politics - Policies-Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: using unreliable technology] They won't do it. I mean, I can't make any of my employees do anything. Okay. They're here 24 hours a day. I've done their job. It's not easy. If you throw all kinds of harder stuff to make their job harder on top of it, it's not going to work. I mean, I can put all of the sanctions and rules and everything I want on it, but I have to motivate people to want to use this technology and show them the advantage of using it. We get paid faster. We can post statistics that show us what we're really doing, how it's useful. But if it's not to them, what's in it for them [laughter]?
Rules-Politics - Policies-Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	So the cost of doing business keeps going up, and reimbursement keeps going down, and cost of living keeps going up, so--
Rules-Politics - Policies-Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Yeah, yeah, yeah. So I got my base staffing is six ambulances for the entire county. Well, my farthest western ambulance is almost 50 miles from my farthest eastern ambulance. So when they get busy, they're not going to drive 50 miles to go out. It just doesn't work that way.
Rules-Politics - Policies-Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Yeah, I keep my call [log?] by day, for every year. I look at it for last ski season, and I can try and figure out how it's going to work this ski season. Because, we're affected a lot by the economy. Are you going to take a \$10,000 vacation in [City] this year? I don't know. How's the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								economy? What kind of job do you have? Do you have a job? Things like that. So if I guess wrong and understaff, and the economy is booming, and everybody wants to go to [City], skiing, I'm in trouble [laughter]. And I'm in just as much trouble if I guess wrong, and the economy tanks, and nobody shows up.
Rules-Politics - Policies-Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: Tech ops committee] It deals with the 800 megahertz radio system in the county. And we recommend technical fixes. There's another committee that oversees the financing and the funding that actually runs the system. But we deal with like, "Okay. What vendor are we going to use for radios? Is there somebody besides Motorola out there [laughter] that would give us a better deal?" or, "whose equipment will work better, has better features?" or something like that. So we recommend things like that. We deal with things like the radio template. Who gets how many channels? What bank are you on? And how does it work? [inaudible] running after a guy with a gun in your hand and you can't change channels to call for help. Where does your channel need to be versus the other guys who are mobile who had the chance to look down and change over things like that? How many [repeater?] sites do we have? How many can move forward? Where do we need new ones? How long does it take to get them installed? Things like that. Just all that sort of technical operating parameters of the system. So it's somebody from each discipline volunteers their time and we all kind of get together and go, "Oh. How's it working for you [laughter]?"
Rules-Politics - Policies-Procedures	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	We meet every month. And there's one paid radio tech for the county. The county [Job title] is the administrator of the radio system. The county sort of takes the-- they're the bank. They take on sort of the pass-through for the cost and everything, do the accounting and things like that. And again, it's another cooperative effort. So that's what the tech ops committee is.
Rules-Politics - Policies-Procedures	EMS	R	Other Public Safety	56-65	31-40	Male	EMS-R-008	there's a separate governance to kind of set the policy and how much we're going to spend this year, and how much we have in reserves, and all that kind of stuff.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	Sure. So we should all be carrying a portable radio, and we do. And then there's specific codes that we use if we need police emergent. If we just say, "Have him come emergent," we'll get like one officer, maybe two, to come and then we'll tell them whatever the problem is. But if we say, "Code one," then that's like a mayday call to the police. And then we'll get every officer that can drop what they're doing. They'll come available and come to help us.
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	it's tough for them from what I know is because they're in a cubicle. So you might be the police dispatcher and I'm the fire dispatcher. You can just stand up and tell them, "Hey, we got an emergency. Send everybody to Engine One's call." But then they got to remember to push the button and talk it through, too, so it gets recorded and stuff like that.
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	Well, our department has paramedics and firefighters on our engine. The ambulance service is a third-party ambulance service. So we do have to communicate with them and then the police, of course. So we do have three separate entities that we'd have to communicate with. To go in order, if it's just the fire department to the fire department, we just would say, "Hey, you from me." So, "Hey, Engine Two from Engine One, this is what we have." For the ambulance, the company, then we call them whatever ambulance-- the call sign they are. Now, we know that when we're dispatched. They'll say. So we would call-- [Name] is the ambulance, say. [Name] from Engine One...
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...Now, we don't traditionally talk directly to the police. There's a switch we have to switch to talk to police. We can get onto their channel and turn, but we have to ask dispatch. We do that when we have standbys for SWAT or whatever. We'll switch to their channel and then we'll listen. And we can hear the police request entry, and then, "Okay. We'll go in." And a lot of times, there's a minute or two delay before the fire dispatch will tell us that we can go in, whereas if we're just listening to that police channel...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...Now, when we communicate with the ambulance, as far as I know-- because they don't use the same communication program, computer program, that we use. So they don't get dispatch notes. They only get what they hear on the air. Right. And so there can be information lost based on that. But dispatch airs all our notes. They talk it out loud and we can read with them. We see exactly what they're going to do. But the ambulance providers don't know that. They only hear the notes.
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	So on paper, a firefighter paramedic and a firefighter EMT are paired together, where on a month-to-month basis, those two partners stay together and they rotate to an ambulance for a month, which is five 48-hour sets. And at the end of those five sets, they'll go to the engine for a month, and back and forth. So they have a partnership opposite of them, as well. And the reason for that is-- I think most people enjoy it because it divvies up the responsibilities between fire and EMS more equitably, and the EMS units typically are busier with longer utilization hours. So I think it helps paramedics with the fatigue and burnout of the EMS side of the system. And it also keeps all the workforce sharp in both fire and EMS skills, knowledge, and abilities.
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I think - and this goes in the technology side - I think our system does a pretty good job of utilizing the worldclass dispatching center with dispatchers and EMD and the EFD. Is that what it's called? The priority fire dispatch.
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Currently, [City] fire has their own dispatch center, and that is soon to change in the next year or so where [City] fire will be going to a [County] communication center. So it's a county-based dispatched center with all the fire and police in one house. That's essentially all I know about it. I think countywide it's a good thing. I think there's going to be some challenges in the short term going from in-house to countywide dispatch, but the red light goes off in the fire house, we've got a call [laughter].
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: emergency radio communication] ...Because, obviously, the system is in place--which is a good thing, and there's policies and procedures in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								place, but a lot of times, I think when it's retroactive to the effect of if one of us needs help, we need it now. And it looks good on paper to have these policies in place, but I don't care. I just want the help I want and need right now. So I think there's always a time delay in that... Yeah. So it's not that it's disheartening. It's just frustrating. I think it's frustrating for the end user when you need all that stuff now and it's, I think, hampered a little bit by policy and procedure, which needs to be in place. So it's a Catch 22.
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Some battalion chiefs want their ambulance crews listening to the radio 24/7 sans sleeping with the idea of, if the police are going into an incident, we can get a jump on it essentially. But it's a difference of opinion for some folks, because then you desensitize yourself to the radio. So on paper, we don't-- there's no real policy there.
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I think the end-user organizations make decisions that don't bridge that gap well, so I think that there is plenty of channels able to be used that can be a common channel between police and fire, for instance. I just don't think we utilize it to the way that it should be used on incidents that both agencies are responding to. And again, like we were talking with communication issues being a contributing factor to a lot of poor outcomes on incidents all around the country, police and fire interface has been a large part of that communication problem. And I think that the technology is there, i.e., mutual-aid channels or radio frequencies. I just don't think the organization leadership in the fire and police side use them. I think the fire side tries to. I think the police are the ones that are more apprehensive to have that interface than the fire agencies are. That's a pity, though.
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I'm on our wildland team, so I think the communication is pretty good with the state and federal resources for a lot of wildfire incidents. I think the county is doing a good job overall of county and state resources for the fire districts. So I think you just have to have strong leadership to assert those channels early and the communications plan early. But all the technology is there to use. Again, it's just whether or not the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								leadership chooses to use it the way it's intended to, because the county actually has a communications plan for inter-agency operations for the wildfire side of things. So it's all drawn out. Every season, all the channels get cloned on the radios, and it's just a matter of people utilize it the way it's intended to be used.
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I came from very small single firehouse fire department, mostly volunteer, to start and it was one radio amongst the entire fire truck. We had a county-based notification center that was not a really dispatch center for fire. So it was really self-made. So you live or die by the decisions you make versus when I come here, it's very systemic with policies and procedures and guidelines and very rank-and-file. And the guidelines are all put in place for you to just try and apply those guidelines to your daily routine and incidents you respond to.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	Although we have access to a sort of an enterprise level messaging system, it's locked down so tight by IT that it's essentially unusable. So nobody uses it.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: box.com] ...But again, they put enough security limitations on the use of it that there's typically a lot of ghost networks built off of free Google accounts that offer a little more flexibility. So you'll see a lot of those in use on a day-to-day basis. People moving files around via Google Drive or whatever commercial service they can get a hand on. You just have to be real careful you don't put any PHI, anything that's HIPAA-protected... PHI is personal healthcare information... Or is it private healthcare information? I forget. So it's the stuff that's HIPAA-protected that gets you into big trouble with the feds, both as an institution and personally, if it leaks out. So we don't play around with that stuff or take chances with that stuff. But operational information, which is less secure, we rely heavily on commercial networks as well.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: pre-plans] Yeah, so a lot of the ones that repeat are going to have--like a [Name] game is actually so automated that it doesn't get rewritten every week. We just know what's going to be there. There's one, but we have all of those phone numbers written down already. The command

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								center numbers are already in there...
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: pre-plans] ...[Name] is a huge event every year, and unfortunately it's fairly active for us because, well, a lot of the participants are cancer survivors or current cancer patients and they get out there and over-exert themselves and we get involved. So that one, they just pull out last year's plan, make sure the phone numbers are still good, change the names, double-check the crowd size estimates, and kick it back out. So we don't have to-- a lot of it is boilerplate at this point because we've done so many of these things...
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: pre-plans] ...every once in a while, something really weird will happen. President [Name] decided he wanted to address a crowd. I don't remember what it was but at a local high school. So the man can draw a crowd [laughter]. Basically, on four or five days' notice, we had 20,000 people showing up to hear the president speak on what was essentially just a high school football field. So it's not really geared for that kind of crowd or anything and you just wing it. Those are the ones that are a little more interesting in terms of getting that information together and then out to everybody, especially because those change up until the last moment when you get-- he, the president, whether it's [Name] or not, they're just notorious for-- I mean, the president, if they change their mind, everybody else changes around them, not them. But other events do it to a lesser extent, where you're adjusting on the fly and you need to get all that information out to everybody.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...Basically, there's a committee that's made up of representatives from all the public safety agencies, a few of the state like the state government coordinators, communications coordinators, and all of the various radio technical IT departments, and they put a lot of work into-- initially, they used a kind of an ad-hoc. They called it-- was it Network First? Network First, which was an ad-hoc, behind-the-scenes set of operability channels which had a server. What did they call it? Star Game. I think they named it that [laughter] - why not - that could talk on a limited set of channels, that could talk from central server for the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								various systems up and down the front range, and that has grown as P25 technology. We're pretty close to being P25 compliant here in the front range...
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...so all of the interoperability stuff has been taken off of the old Network First servers and been transferred to P25 ISSI connections. And that was challenging technically, I'm sure, although I didn't have to deal with it. But, of course, the political piece of it is a big chunk, too, making sure that everybody has permission to be on everybody else's channels, getting the various programming keys shared around for the radios and sort of basically coordinating who can have access to what, and the inevitable argument over who pays for the talk paths, the interoperability talk paths, who can use them, how we keep them from-- that has been the function of the NCR/UASI committee. And they've actually come a long way to smoothing that all out...
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...so now, actually, the front range does all the work, not as tight-knit I would like to see or as ideal. Every time somebody buys a radio system or wants to make changes to a radio system, all that stuff does get taken into account. And we don't always get the answer that we want, but we spend a lot of time hashing it through in an organized and efficient manner before people start doing stuff. So that helps a lot.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: unified radio system] ...so that's a group of-- there's probably about 12 of them, full-time radio engineers. It's all they do. They're very, very good at it. They run the system. They do all their own maintenance. They take care of the repeaters, the transmitters, the [backhaul?], the programming. We do all that in-house. So we do have-- currently our vendor is [Name]. So there's a contractor who's involved as a supplier and as a consultant, but we're lucky enough to be big enough as [City] that we have the capability to pretty much fix almost anything in-house with those guys, which is very nice.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: frontline supervisors] ...So in terms of how we communicate with them, they have a number of different ways they can get information. We talk to them. We dispatch them on certain calls which are sort of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								pre-selected for, "This requires a lieutenant's attention." Certain tactical police standbys, large fires, plane crashes, things like that, automatically get a lieutenant dispatch. And in that case, they're dispatched similar to an ambulance. We call them on the radio, tell them where they're going, and off they go. We can also page them as needed on our paging system. Obviously, they have radios.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE cell phones] So it's bring your own device. They receive a statement to help pay for the bill... So every single person gets-- I think they get \$25 a month towards their cell phone bill. Commanders get 80 because we're required to have smartphones so that we can access Box and some of the other things that we-- and we're acquired to put our work email. We use the BlackBerry system. And so anybody who's an officer has to have that on their phone. So we get a smartphone stipend at \$80 a month, and that's how we-- but you are required to have a device. You don't have to use it, but you have to have one. And we'll actually issue you the pager, but you can't just carry the pager and not have a cell phone because you're expected to have the ability to call hospitals and other things with that cell phone. So it is a requirement of our employment that you have a functional cell phone.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: 911-participating hospitals] There are some of that are not like, for example, the VA hospital. That's a local rule. Where I trained in [City], the VA hospitals took ambulances. Here, the VA will not accept any ambulances whether it's a person or not. Other hospitals like [Name], which is a tertiary care hospital - they specialize in pulmonary care and immunology - they have no ED. They call us when someone has an asthma attack, oddly enough, because that's not what they do...
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: 911-participating hospitals] ...There are also a few hospitals that are in the metro area like [Name], [Name], move so far to the west that when they were in the city - we sent them a lot of stuff - we no longer send them anything just because they're too far away. So some of the more suburban hospitals, we won't transport to. Some of them, we won't transport to because they're not an emergency hospital and some of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								them won't let us in the door. We could bang on the VA all we want and they won't open the doors for us so.
Rules-Politics - Policies-Procedures	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: comms with other jurisdictions] No, I never had a need to do that. I think that was handled at a higher level... Or chief level actually. We did respond to a highrise fire here. I think it was [address] but for the most part, we got direction from our chief...
Rules-Politics - Policies-Procedures	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: personal phone use] I can tell you that they do. Sometimes it's easier because we do supply cell phones to the paramedics. Sometimes it's more of a burden and it's easier for them to just take out their phone. They already had their hospital listed on there. You just hit a button and you can communicate them and give them report over there, right, so.
Rules-Politics - Policies-Procedures	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: posting pictures of patients and accidents on social media] ...So the issue is that when you post something regarding a patient, what your location is at this time, at that time, or what you're doing with who, or whatever, it's out on the internet forever, I tell people. "I don't care what Snapchat says, it's recorded." And so sometimes we have people who forget that, and they may be violating patient confidentiality. They may be violating their partner's confidentiality. They may be violating their department's orders...
Rules-Politics - Policies-Procedures	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: posting pictures of patients and accidents on social media] ...when it comes down to communications in that form, a lot of people forget or they don't take that into consideration when they're posting things. Even in our personal- I'm sorry, in our city emails, I can tell you that there are other people who are reading our emails, whether we like it or not because it's a city email, they're allowed to do that, And so I tell people, "Be careful what you write, how you write it on here because obviously an email can be taken out of context. There's no personality in an email." And so yeah, we've encountered a couple of issues with that sort of communication.
Rules-Politics - Policies-Procedures	EMS	U	Supervising Field	46-55	21-30	Male	EMS-U-010	[RE: cell phone use] To communicate with the hospital, to communicate with each other, to communicate with their field chief, with their higher

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					ups, whether it's a text message, whether it's a, "Hey, we're going to be going to get some fuel right now," and their chief responds, with their personal phone, "Okay," because they need their permission basically. "Hey, by the way, [Name] not feeling well today. I going to take him to the hospital." "Okay." So they're using their personal phones for business, which is sometimes some people have an issue with that because they're not getting paid to use their personal phones. And they believe that we should be providing a phone or some sort of communication to them so that they can communicate easily with their chiefs, and sometimes that's difficult on our side because now we would have to supply phones for everyone and it's just not; money-wise, it's not going to happen.
Rules-Politics - Policies-Procedures	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: paramedics] So now we do provide phones for them, however, they're flip phones, and they're locked down. So they can only call the hospital, they can only call the office, which is the fire alarm office, so they don't have the opportunity to send a text or make phone calls. And the same thing with their mobile reporting unit, the computer where they do their patient care reports. It's locked down for security reasons so they're not able to go on the Internet, they are not able to go search Google or whatever, do some research on it; it's locked down, so.
Rules-Politics - Policies-Procedures	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...our paramedics are there for 24 hours and they go home for 3 hours...
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	So our hardware is a Panasonic CF-19 Toughbook that we use to create the report. And then we partner with a software company known as SafetyPAD. And they create the software, and they modify it for the City of [City] in order for us to do the report. And then there's a function that is at the 911 Center, or the OEMC, and that's the main server, or the CAD component, that's maintained by Northrop Grumman. So we get a run. It'll push out to the fire house. It'll actually push out to the tablet itself. We accept it, create a new report, and then based on your disposition which would be, "No patient found," "Refusal of care," or, "Transport," then

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there's a number of fields that are required for the medics to fill out before they can complete a report. There's also a component known as NEMSIS, which is the National EMS Information Systems. And we're required to collect data for them and to also send data to the state under NEMSIS. So there's quite a few components that are involved in data collection.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	[RE: GPS location tracking] The ambulance itself is. The tablets, this current version is not. The tablet is not. But the ambulances all have a GPS component. So that the 911 center-- actually, that's how the computer dispatch works. If you're not in-quarters, it'll do a GPS track to a run and recommend the closest ambulance to you. So, yes, the tablet itself is not but the ambulance is.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	...if you take a promotion, depending on what they can charge, were your job would be more doing the paperwork than driving, we give them a full day class or a refresher on how to document on this particular program. And then we have support all the time, so I'm here 40 hours and then we have somebody available 24 hours. If there's any kind of questions about a run, you can't get it to close out, you can't get a field to pop up, something going on with the program, we have people available 24 hours for that.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	So if we are unfamiliar with the area and we're not on a call, we will go up in-service, through the alarm office, called area familiarization. So we will go around the community and just look around to see what's new, new roads, especially in the [city] area, they're building and subdivisions... [City], they're building a whole new community in that area. New roads are being built. So, the summertime, me and my partner will drive around and see what's new, road closures, there's always road closures, there's always construction. So if it's not a busy day, which every day is busy, but if it's not busy, Sundays, maybe we'll go drive around, see what's new and get to know the area a little bit better.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: comms with PD] We don't. We don't communicate with [local PD] in our frequency. And our frequency is only just EMS. I am able to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								communicate on the fire side frequency. That's not a problem. Let me backtrack. We can communicate with PD on the frequency, only a few people know how to do that, and I know how to do that because I learned it. I wanted to learn it. But there is no really set memo, or order, or documentation where they tell us, "If you need to communicate with police, do it." There isn't. I just know how to work my radio really well that if I need to get a hold of the police I could switch to the frequency and do it that way. A lot of people don't know how to do it and a lot of paramedics don't know how to do it. I'm teaching my partner how to do it. He's liking it...
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: listening to PD frequency] if I'm already hearing it on the PD side, I'm hearing it at PD-- someone's calling 911. I believe someone fell and they injured themselves. But I can't. But I have to wait until EMS dispatch tells us to go. Which is fine. Something critical like that and I'm hearing it, at least I'm ready. I'm always in a ready position, "Okay, hey, guys there's a fire. There might be a fire coming out. We'll be ready. We're going to go."
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: handlehd radio] It's not heavy. I kind of like it. It's not heavy, it's not light. I can maneuver it in different positions. I could put it in my waist, lock it. I could put it in my jacket and seal it. We're not supposed to take it out of the holster, but if I need to in an emergency, take it out of my holster and use it. So I like it, it's convenient. It's really easy to use.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Just recently in the last couple of months, we've been told that if we do get a subway call we have to get a firetruck or an engine truck, a company with us, for line of communication. So it will be the ambulance, and then it will be the company of the firetruck in the subway station because we have one fireman up at the engine, and then we'll have a channel called fire, and we'll be able to communicate through a fire line. It's a short-distance channel. We're able to communicate. So kind of like telephone, we'll have one channel to the fire station and to the fire channel, and then back to the firemen that's up on top who can communicate to the alarm office, kind of like that. And that's just recently in the last few months we've been told to. If we get a fire call or

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a medical call in the subway, we have to get a fire truck with us, which is great.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: using radio to communicate with dispatch] We're supposed to use it all the time. There's a memo out there, there's an order out there that we've got to tell them. We have to tell them we're on the scene. We're facing northbound, [company]'s on the scene. I think it's a personal thing. It's my personal thing. I do follow the orders if it's nothing really busy going on. I will say, "[company] northbound. We're on the scene." and I want to make sure they acknowledge. But if it's so busy out there, that's my personal thing. I'm going to make sure I'm going to hit that button. Did they acknowledge? Okay, they acknowledged me. If I'm in the call, whatever, radio traffic has subsided, "Hey. We're on the scene." "Okay. I got you on the scene." Cool. It's a safety thing too, because they're monitoring us. They want to make sure that we're safe. That we're on the scene. And also too, they want to make sure that we've made it to our patient. So they want us to say over the radio. Tell us we're on the scene. But there's only one channel. There's only one EMS channel.
Rules-Politics - Policies-Procedures	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	The FAA continues to change their laws. Sometimes they're advantageous and makes things a little bit more streamlined, sometimes they're not. And so, it's bureaucracy at it's best, and so we are slowly moving in that direction. I t
Rules-Politics - Policies-Procedures	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	I think our policy says that you have to maintain a form of contact. We have to be able to get in touch with you in some way. It has to be either a cell phone or a home phone
Rules-Politics - Policies-Procedures	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	We were providing everybody a pager which would get away from the argument of utilizing, calling on your personal cell phone. But then, as anything else, people were ignoring them or not utilizing them or they were tired of having them, and so the compromise was, "Okay, we'll take your pager back but you will provide a contact number so we can get ahold of you 24/7/365."

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	...So now that attorney wants that picture or video, okay? Because, number one, we're going through it right now, we're trying to get a stronger, an existing but strong imaging policy. Because if- we're all being paid today, so if we go out and we capture videos or images, that belongs to the department. It's not the individual's because it's subject to open records requests, and that's exactly what this guy wanted.
Rules-Politics - Policies-Procedures	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	...So we're trying to work with technology, but trying to be creative with it so that we provide our medics a platform so that they have a voice, they can share in the content and the messaging of our department. But we just have to do it responsibly.
Rules-Politics - Policies-Procedures	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	Yeah, there really isn't anything that- sometimes with dispatch, I guess you could say, they're talking to me on the phone, and it takes a little bit longer to get the information on the MDC because they're talking through it. Or if they're talking fast, it'll jump real fast, and I have to scroll down. So I guess my one thing would be with dispatch is prioritizing what they're telling me sometimes.
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	Correct. If residents call us that we are allowed to go in. We notify [City], obviously, that we're coming but our memorandum understanding is that we'll run the call, transport them wherever they'd like, and then we just go back home.
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	...And so our rule is that we don't enter a scene like that until the police have cleared it. But we can listen to the police radio on the way to the call. And as soon as we heard on the radio that the police were saying, "Let fire rescue know the scene is secure," we were able to then drive-- because we stayed somewhere else, so we were able to drive--
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	...The first thing they say is the person they want to listen, and then they say who they are. So they would say, "[City] from Medic 401." So for us, we're listening to the last part of the greeting. For them, they need to listen to the first. So once you've heard it a couple times, you expect it. And when we go into [City] we, at least I, try to match their style. But that's the kind of thing that we're not going to probably standardize

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								across the region and it won't impact calls, but it is a little bit of a nuance you have to be aware of.
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	It can be detached by IT folks or the chiefs, but the providers, we can't. The one in the back, though, is much more lightweight, and it's actually a partial tablet. It unlocks, we take it into the scene, we document everything on it.
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	No. We have to do it-- the policy is that we have to complete the patient care report before we leave the hospital. Because the report is uploaded to a server, and the hospital can download our report.
Rules-Politics - Policies-Procedures	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	Yes. The patient care reporting is provider login. So the state manages it. The Institute for Emergency Medical Services Systems in [State], based on your EMT license. If it's active, they will give you your EMed's login, is what we call it. And then with that login, you can write your reports and author them as yourself. But you can't access the system until you have your login. So that's password based.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] Yeah, so they'll either send us on a post assignment or they'll dispatch us on emergency right away. They have all the ambulances on GPS. They have all of the equipment and their special training and protocols to decide how coverage needs to be situated throughout the city.... So dispatch, generally speaking, dictates where we go. And then we drive to the post if we've been given a post assignment, and we hang out in that area. We're supposed to be within a six-block radius of the designated post assignment, which is a [City] Health standard, so everyone knows that 601 post is [Street] and [Street]. So when they send us to 601, that's generally where we're supposed to be in.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] So today, we're Ambulance 25, so they'll just key up and say, "Ambulance 25," and we're supposed to respond with our location.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] I would say the one where we sit the most is we have a contract with DIA, and we're required to keep two ambulances out on their property at all times.
Rules-Politics -	EMS	U	Field	26-35	Not	Not	EMS-	[S3]... And with the new dispatch updates, it's improved a little bit more

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Policies-Procedures			Responder		specified	specified	U-004	just with the access to different frequencies that we've never had before. And it can be pretty technical. There's a lot of federal laws with a federal merger like the FCC. They regulate all kinds of things. And having us, as field crews access all of that can sometimes be tricky. Historically, the city has had a single channel for kind of mutual aid, and it was traditionally just called grain, and it was just a frequency that all of the varying agencies used, and it was at times difficult to transmit back and forth.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] So whereas I can't specifically talk to [City] Fire, say, if we had a big incident on the border in the case of the [City] shooting a number of years ago, when there was a lot of different agencies talking on various channels, I don't have their channels, and they don't have ours, but we do have several citywide mutual aid channels. There's various levels of green. There's also various other tactical channels that span jurisdictions that the whole metro area is still a work in progress. They're getting all of the agencies updated to the same standards....As far as [City], we have a lot of private ambulances that do- we call them OVFA's or the overflow calls. And those calls are not dispatched over our main frequency but are dispatched over a green channel, for example. Then that unit, if it's one of the private ambulances. They'll talk to dispatch through that channel, and their call will be run to its conclusion.
Rules-Politics - Policies-Procedures	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3]... EMS is a government agency, and government is by definition all complex. It's large. There's a way or there's a method to do things. There's various steps. There's various procedures and things that need to be followed to change anything, and that can be very technical. And there's a whole lot of people who are in charge of this part, and then a whole lot of people that are in this part and getting everyone to meet on the same page. That can take years. And culture is a hard thing to change.
Rules-Politics - Policies-Procedures	EMS	U	Other Public Safety	46-55	21-30	Female	EMS-U-009	... The paramedics come in as licensed paramedics so we teach them how to work on the [City] Fire Department and the rules and regulations and procedures.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					
Rules-Politics - Policies-Procedures	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	The only app I know of is one that somebody on the fire department developed, and that's for Fire Department Region XI standing medical orders and policies and procedures. It's an app that you just go right to your phone and it'll tell you what is a standing medical order for asthma, respiratory, pediatric. It'll pull up everything that we have to know right there.
Rules-Politics - Policies-Procedures	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	... I just wish somebody would decide whether we're going to go paper or computer. Computer does take longer because you have to wait for the thing to load, you got to wait for it to fax but it does a lot I can do a lot more fairly easily than before where somebody else would have to look at my report, fax it, put it in for billing and now I can with a push of a couple of buttons I can do all that so it saves that person other job basically.
Rules-Politics - Policies-Procedures	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Speaking on the radio with full words and enunciating what you're saying because we're not playing games here. You know we need to know where to go when you tell us where to go so don't say don't slur your words to where we're sitting there going what? What road are we going to? I mean we can't see it written out anywhere so we're relying on you to tell us so let's enunciate a little bit, speak up and that's a big thing. Codes, ten codes and all that mess. You know you come out here they still try to use ten codes. In [City], we plain talk. In [town name] we have our own ten codes and signals so your 1022 here maybe somebody else's you know it's cancel here so somebody tells you 1022 well if you get in the wrong mindset and go to [town] and get told a 1022 that maybe speed up. So now we're flying to a call that we've been cancelled on so you know it's that is a big deal. Everybody needs to be speaking in plain talk.
Rules-Politics - Policies-Procedures	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	Most people would actually know me better as an ambulance driver because that's how the general public sees us. They pretty much call everybody an ambulance driver whether an EMT or paramedic. Paramedic means I respond on the ambulance in the county I'm

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								serviced that I work for and able to go out and treat a patient pretty hospitably, take care of them and do what I can as far as medications and treatments and so I'm able to get them to the ER.
Rules-Politics - Policies-Procedures	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	You know if we're busy we have calls if you mean radio communication. What we do is first thing in the morning at 8 a.m. our dispatch will send over a test tone and just basically tell us good morning, we respond back so we know the radios are working. They do that every morning and then when we get an actual call we'll get a loud tone there in our bunk area or throughout the station and then dispatch will give us information, dispatch information you're responding to 42 year old male for instance at such and such address, this is the problem
Rules-Politics - Policies-Procedures	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	We do. There are times when the radio is just really static so dispatch tries to keep a list of who is on the truck each particular day and has our cell phone numbers and sometimes they'll request that we call in because there's information they want to provide over the radio that they don't want the general public to hear especially in a rural area like this everybody listens to the scanner so they know what's going on before we do sometimes and there may be especially a lot of our elderly patients they may keep a key hidden somewhere for us to get access to the house. Those aren't things that they can say over the radio so we'll try to call them on our cell phone if we have service to do that.
Rules-Politics - Policies-Procedures	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	I don't mind using my personal cell phone. It hasn't come into play yet but I would assume that there is always that possibility with using my personal cell phone to communicate with dispatch that maybe it could be taken if anything should go to court. It could be confiscated and then I lose my phone and all the information in it.
Rules-Politics - Policies-Procedures	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	I mean I definitely think it's needed even ten codes there's some counties that are trying to do away with those and just speak plain English but again it's not something that you're really taught or go over. I'm sure they concentrate in school about you know patient care and how to take care of the patient but this is your lifeline whether it's a portable or if it's one in our truck so I think it's pretty important to know

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that and some people you don't even know what channel to switch to. I think it should be taught in school as well as when you come to a new service that they should do some classes with it as well.
Rules-Politics - Policies-Procedures	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...With police, I know that they have certain different-- I think they still use codes like--10 codes, yeah, in the police departments around here, which I don't know anything about those, really. I think 10-4 means okay, but [laughter] that's about all I know. So, I don't get into any of that. It would be easier if they used plain language, but I don't know what their plan is. I know that the FEMA Plan is to use plain language, so I trust that. It works for us pretty well to have the unified communications systems, but we also don't do that much with police...
Rules-Politics - Policies-Procedures	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...They also have slightly different dispatch procedures. So if you have a lift assist, for us, that's usually just an ambulance, but for them, if you say, "We're responding for a lift assist," they'll usually send you an engine to help you out. So I don't know if they still do that, but when I was driving the ambulance more, that was something we dealt with. And you had to specifically say, "I don't need any manpower," or, "I need additional resources," something like that...
Rules-Politics - Policies-Procedures	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So the ambulances have an MOU with [City] which says that they can-- it's a special exception to the rule, that they can run mutual aid, but the rescue squad cannot.
Rules-Politics - Policies-Procedures	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	Has got in the way? I'd say, one time when it does get in the way is when people are communicating on the radio too much. When you're running a fire, and I can't think of a specific example, but I definitely know this happens all the time. If you're responding on a fire, instead of clicking the button on the computer, which you're supposed to do, sometimes the computers will go down. And people will say, "Engine Seven whatever, responding." And then they'll just say that the radio. And so then you've got five engines, two trucks, a rescue squad, and an ambulance, and potentially four chiefs, all saying that on the radio. Meanwhile, one of the engines is on scene and they're looking at a house on fire with somebody hanging out the window.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	But there is definitely a push for people to follow their SOPs, their standard operating procedures more. And to communicate less of the stuff that should be assumed. Like, I know if we were in a fire right now, our job is to do a search. That's our primary job. That's our primary job. Our secondary is to is to control utilities. No one needs to tell us to do that. So if we're really adhering to this policy of less radio traffic, no one should have to tell us to do that. When we're done with those things we'll say, "Rescue squad 741 to command, we've completed the primary search and it's negative. The utilities are gas and electric and they're both controlled." That transmission right there took 20 seconds, and that should be the only transmission...
Rules-Politics - Policies-Procedures	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: AVL] ...Instead of dispatching us back somewhere two miles that way, they might send a different unit that's actually closer. And they can see if that unit is closer. And it tells them. It will recommend that unit above us. So we might think, "But hey, that's our area. We should be there." But in reality, the computer is doing all these calculations. They know we're on the air so we'll be able to start responding sooner. So it gives us an additional minute. So it gives us, or I guess it takes a minute off of our response time. But they also know that that other unit is physically a mile closer. So even though it takes them an extra minute to get out the door, they can get there faster anyways. So it's doing all those calculations that a human dispatcher can't really do as well.
Rules-Politics - Policies-Procedures	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: AVL] ...So a perfect example is we went to a house or a building fire with entrapment two Fridays ago in, I guess it was [City], where we know for a fact that [City]'s rescue squad is due there before us. But we were on the air. And so that one minute advantage got us there. And we were there pretty quickly. And I think the computer was right that we would have beat [City] there. But six months ago, they wouldn't have put us on that call.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Everybody's required to be EMT... Well, on line we're required to be EMTs or higher.
Rules-Politics -	FF	S	Not	Not	Not	Male	FF-S-022	So every day, we have a daily inspection and inventory. And then,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Policies-Procedures			specified	specified	specified			depending on the day of the week or the-- depending on the station captain, you either have an inventory of a particular cabinet or section of the truck. And then some of the smaller apparatus, they'll just do an inventory once a week. So we work on a really large apparatus. So we break it up into six days. And some of the smaller trucks we'll just break up and do on one day.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	throughout the day we'll a training. We run, like [Name] said, a heavy rescue and a hazmat. So we do quarterly trainings. So depending on the time and where that training is at that time, we'll go out of service. And then we train for that day. And that's just not-- the hazmat and heavy rescue are SET and TRT. But we'll do in-house training, as well. So it doesn't necessarily mean we do multi-company. But every department requires, at least our department requires, that we train in the 24-hour period some type of training. And then we do physical fitness training. That's mandatory. Two hours a day...
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. So the daily schedule, other than, like [Name] explained, the first hour, is pretty inflexible because we always do our pass-off, and we do our video conference. And then you try to get to your truck check. Barring calls, we try to stick to that very regimentally. But other than that, everything else just happens as it happens. We try to do all of it-- we try to do everything we can as early into the first day as you can because that way you can make sure that the equipment's there and everything's working correctly. But if a call happens, then you just start getting to it in the afternoon, or whatever you do, so.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So I was on the fitness committee. And, basically, we run a test every year. And there's really no thing that says, based on you being a firefighter, you should have to do 20 sit-ups.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So they're trying to create a standard. But to do that all across the United States is almost [tough?] because you got to look at data back in the history of years past. And you might have done yours in Excel, and he did his in DOS, and I just did mine on paper. So there's really no set system, just like [Name] said that we had Fire Zone, we have different

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								software programs, but none of them communicate with each other. So it's just a lot of data entry. Then all of a sudden, we'll start doing it. And then all of a sudden, the computers don't run on certain programs. So then you got to get rid of that program, and then you end up with a new program. So it's constantly changing.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...at the end of the day, there's accreditation. So accreditation says that you have to have programs to track your inventory to certify repairs. But it's two pieces of software that don't talk that have, each, about half of the information that you need to compile together to make one.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...Rope is another thing that-- on our truck, any time you use a piece of lifeline, a rope-- so you have two different ropes. You have utility ropes, and you have lifeline ropes. And a utility rope, we don't care about. So we would just track that we bought the rope, and then you would say, at the end of its life, that you threw away the rope. But a lifeline needs to be tracked anytime you inspect it, anytime you use it. Because you need to show how many times it's been weighted or unweighted, things like that.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: lifeline rope use history] And then when the accreditation shows up, or when OSHA shows up because there's a problem - somebody fell off a rope or something - now you have to dig all this stuff out.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Then it even goes deeper than that, in terms of certifications. So based on what my certifications are, may be different than [Name] certifications. So when do those expire? How many CE hours do you have to [inaudible] that certification? And then you have injuries. You can throw injuries on top of that. So here's this individual. Here's all the injuries to date. Here's what happened. Here's the surgeries. There's so many different aspects of it that's not tracked. A lot of it's paper-tracked, like [Name] said, but it's never really data input. And you can actually look back at a history...
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...I mean, we send our gear out for a deep cleaning. Our station, we clean after every fire. And that's come around a long ways. It used to be you have your gear, you do your fire, you go back and wear your same gear.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								You don't wash it. Now we changed it so we have a backup set of gear. So it's changing, it's evolving, but there's not just one program that communicates with everything. It'd be tough. I mean, I think it can be done, but there's a lot of aspects.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. Some of them are paid. Some of them are free. Some of them are mandated, like the AskRail is a mandated app. And so the railroad companies actually maintain them. But you do have to send in an application to get access to it. And then they'll send you a username and password.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. Like [Name] said, the one thing I think is neat about it is there's Tier II reporting, which is mandatory reporting. PEAC is a little bit behind, but they'll take our Tier II reports, which should be digital, but aren't always, and if they're in a digital format, they'll actually load it into the software, and then flag the address.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. And then that's one of the other technologies that's kind of neat is our Tier II reporting used to all be paper. And it used to actually sit in a box underneath the captain's desk, and that's where it lived. And now, the Tier II reporting is in PEAC. So things are getting there. Things are getting a lot better in forms of communication, access to the technologies, access to the data. But it's moving slower than the world, I think. It's the politics and the... how fast government works to make the change...
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	I know we do-- we use the red channels a lot... Because of the hazmat and because of the rescue. So we go to a lot of other jurisdictions because of that. And then [City] decided to split their-- or [State] split the state into four quadrants... So we have red northwest, red northeast, and then so on and so forth. And then they actually used [Street] and [Street] as their kind of boundary because it actually works as a perfect square through the state. And so that's been pretty neat around here. And then the fact that, up until we went to the digital radio, we couldn't talk to our neighbors. And so that's helped a lot... And now you can just switch the channel and get there.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So depending on the type of call, if it's a long extended call, then we'll view off of the primary channel. Or, depending on how busy our dispatch center is, every fire goes to channel three automatically. Very rarely, we get local.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: radio channels during mutual aid] Yeah. When you respond, they'll tell you to check in on red northwest or whatever.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We used to do inspections, and now we do what we call pre-plan. So any new construction, we walk through the building. We look for hazards. In the event that that building starts on fire, we'd say, "All right. In that corner, that's where an ammonia is. And that's a roof access over here. That's our FBC." ... "These are exits. This is how we're going to lay hoses, and this is where we're going to throw our ladders." So it helps us out.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...I mean, they're calling for one of us - I was on the ambulance - calling for a paramedic. Well, we don't ever just go as one. It's a rule: two in, two out. So we ended up fixing that, but our command staff was not happy, either. They wanted to set up a designated command staff in that post. And then we work and they say, "Okay. We need one medic. We need two medics. We need five medics. We need six beds." And then our command staff calls our dispatch center and they say, "All right. We got six reds, five blacks." And then they start delegating to where you need to be transported to, and who's available and who's not. So it just all happens. And if you don't do that, then nobody knows their right foot from their right hand from the left hand, so. It can be a mess real quick.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...they're still doing calls on the phone. So every time they take somebody to the hospital, they're calling the hospital and saying, "Hey, this is what we have. This is what we're bringing you." And so that used to happen over the radio. Now it's a lot clearer signal because we're using phones...
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: sending EKG strip] ...it will be neat if you could attach all of that, and then somehow send it. And they can just say, "Okay, received. And go to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								room five when you get here." Now when you show up there's a big, giant TV on the side of the entry door in the EMS lounge and it says [City] Fire, kind of a little brief description of what the nurse or the receiving nurse reported, and then the room that you're supposed to go to...
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: sending EKG strip] ...So there's still a lot of steps that need to be taken to make the thing work. But I think it's just-- there hasn't been the big push to get EMS, and hospitals, and everybody working together... the thing is, one's government. One's the hospital. The hospitals are a business, I guess... They're out to make money. And so they want people into their system. And so now they're building these outlying EMS places. And I don't know if that's a big thing where you're coming from, but.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	We have stand-alone ERs everywhere. And so the idea is, they want to funnel in-- they want to funnel in somebody to their system. So if they build a stand-alone ER in suburban areas, they can take care of a certain amount of things. But then, if it's really bad, it already puts them into the system and they kick them over to the hospital. And so now we've kind of become the transport between these stand-alone ER's and the big ER. Or if somebody goes to the stand-alone ER, but they're really, really, really sick, they won't even take them. We just go pick them up and then take them over to the hospital.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	I think it's evolving. It's going to be to where you'll have ambulance show up on-scene and they'll help you transfer to the hospital. Hospitals are inundated, big time. So you cut your finger and you need a couple stitches. We'll send a unit. We'll stitch you up. We'll give you some [of your?] medications. And then after that, you get with your pharmacy. I think that's kind of the wave of the future, I really think, now.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[City], they've hired a nurse to ride with a paramedic in a pick-up truck with more equipment than you would have in an ambulance. So they could slide the bed out, and he actually had a small suture set. They had small things that they could do in house. And so they could actually do it there and then not transport him.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: stand-alone ERs] You save that money. You save that ambulance transport... Puts us back in service quicker for the next patient. There's still a lot of kinks that need to be worked out. A lot of it's insurance and what they're paying for, and what they're not paying for. So I don't know how it's going in [City], but we've had it here through a private agency. It's called a CCT unit... Critical Care Transport. So that unit would show up and then, like I said, based on what it is, they [would either?] take care of you right there and send you a bill or transport you. So I really think that's the wave of the future for multiple reasons, and I think it's a great idea. You're going to have those people where you absolutely have to transport them... But from the hospital's perspective, they don't want you to do that. They would rather see you in their building...
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	It all works out. Well, like I said, we get the job done. It's just doesn't work as [smoothly?] as it should sometimes. And it could be maybe that's our disadvantage. I mean, we tried to do a training with a palm nailer a couple of weeks ago. The guy's like, "We never do that this way." Well, it's in the book. That's how you can do it. So not right or wrong, just different opinion.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	The CAD that they have now, now that we're doing closest dispatch-- so the CAD monitors via GPS, which apparatus is where. It's actually creating shorter response times, because we're getting apparatus that are driving between the station and another firehouse, or the station and a store. So they're at a position, but they're still in better position for the call, which I think it's a lot better for everybody. So that's neat...
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: cell phones] ...And that's created another level of communication and problems, because you have your different level PSAPs. And so most cell phones usually go to the PSAP one instead of PSAP two or three. And so, like here, the PSAP one is the county. And then, they will transfer you to the PSAP two, which, in [City], is PD. And then, if you need EMS, you go to the PSAP three, which is EMS and fire. So now you've been transferred three times. If you hit a tower that they know specifically is in the city, you probably will go straight to the PSAP two,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								which is the City of [City] Police Department. Then they say, "Police or fire?" And then, you get transferred to fire.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...we're going to a regional dispatch center next June or July. So that'll help in halving the transfers. You'll just be transferred in house by primary dispatcher to maybe somebody that specializes in fire EMS, because they can ask the particular questions. Because we do EMD. We also do the EMD for fire. So they have all the cards, and they'll ask the particular questions to be able to get the information that they need. And it's helped. It's helped a lot on the streets...
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...When I first started and we were just on the streets, you would just get an address, very generic information. Now we actually get pretty specific information. So age, gender, hopefully a good idea of what kind of ailment they have or how big the fire is. The dispatchers now have a very regiment set of questions to ask, which it was just more of kind of conversationalist and trying to get what you could out of them. But when you start to ask those questions, you can then determine whether the apparatus needs to go emergent or non-emergent. And that puts a lot less strain on the system. It puts a lot less strain on the citizens because you're not going lights and siren and tearing through a city when it's just a car fire...
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...So for the dispatch side, it's neat. I think our dispatch side, we could get a few more technology things that would it make it nicer and better. But it's neat where it's gone. The Rip-N-Run was a concept that's actually kind of coming back into vogue. But it's coming into vogue in more of a technology standpoint. Not the rip the piece of paper off, but they're doing a monitor next to the garage door so that, once I type in everything in the dispatch center, you hit the button to tone the truck. It pops on the monitor next to the apparatus. You can actually physically see something instead of having to hear it.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	The technology that [Name] was talking about, [Name]. We use a multi-channel dispatch concept, which I'm sure you've heard of a lot. You have your primary dispatch channel, and then you go to another channel to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								check in. So [Name] is just an automated voice that announces what the call is, the call type, and all of that. And then we dispatch on channel three-- or channel two. I'm sorry. Either one. So we dispatch on channel one. [Name] happens on channel two. And in a typical system, you would change to a TAC channel. We don't do that. We don't do that because our admin is older, and they don't like the switching back and forth between channels, which I think is a big thing for us. It's caused a lot of radio communication on one channel. It muddies everything. Personally, if I could do anything, I would like to see us move to a more dedicated TAC channel type of environment. I think if you could have a perfect world, it would be neat if I could dispatch, and push a button, and make all the radios on that truck go to that TAC channel.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We try to do a silent dispatch here. And, again, it was more admin and technology than just-- admin didn't agree with it and the technology wasn't quite there. That was about five years ago. We haven't brought the idea back up. I think, personally, it's a great idea if you could prove it to happen-- prove it to work 99% effective.
Rules-Politics - Policies-Procedures	FF	S	Manager	46-55	21-30	Male	FF-S-023	So we have two properties and we use time analytics like a GIS modeling. So I've got a part-time GIS guy, one of my IT guys do [JAZ?] pretty well. And they run response times from those stations and then we look at call volumes in those areas, growth in those areas. And we're trying to dictate which one we're going to build. So we're going to build probably next year or the year after.
Rules-Politics - Policies-Procedures	FF	S	Manager	46-55	21-30	Male	FF-S-023	[RE: new station placement] ...But it's kind of a scary prospect because you never know exactly what's going on. You're going with gut feeling a little bit and going with a lot of data. And futuristic modeling data is always a little bit weak... I probably have a one-year model that's pretty accurate, but after that, the error is just huge.
Rules-Politics - Policies-Procedures	FF	S	Manager	46-55	21-30	Male	FF-S-023	[RE: department-issued cell phone] Well, it should be... It's my cell phone that I've got out, and all the calls I get are department related... Someday, I should just change it so the department owns it, but I just keep forgetting [laughter]. It's an option open to me and I just keep forgetting

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to do that...
Rules-Politics - Policies-Procedures	FF	S	Manager	46-55	21-30	Male	FF-S-023	So when I first started we had UHF and VHF radio. So the 100 and 400 frequency radios. The 100 stuff we still use for aviation and I think wildland is still 100. So it's the VHF stuff. Those radios were pretty much radios. They were crystals. You'd tune it in and you had only a select number of channels you could get to. They were highly reliable and they had good penetration out of buildings. You didn't have to have as much infrastructure. You didn't have to have as many radios on repeaters and all that stuff in the area because they had a little bit more power, UHF is slower wave. One of the reasons wildland hasn't gone to any of the 800 or anything like that is because you don't have repeaters and you don't have-- and that 100 level radio that we have is actually much longer distance. It's still line of sight but it goes a little bit over the horizon I kind of thing.
Rules-Politics - Policies-Procedures	FF	S	Manager	46-55	21-30	Male	FF-S-023	So there's an area radio meeting, where we have technical people talking about technical issues, one of our IT people, or actually our business information manager takes care of that for us. They try to work out all of the technical pieces, like how many banks do we have, how many frequencies, or how many talk groups do we have on any bank, and all that stuff...
Rules-Politics - Policies-Procedures	FF	S	Manager	46-55	21-30	Male	FF-S-023	...Then we have operations chiefs that meet and talk about what they want to accomplish: they want to be able to have several different EMS groups, they want to have several different fire groups, regionally PD wants their groups, too. They don't always mesh as far as boundaries go...
Rules-Politics - Policies-Procedures	FF	S	Manager	46-55	21-30	Male	FF-S-023	...then you've got your technicians over here. God love them, technicians are wonderful, but they often can't talk down enough so our fire chiefs can understand. So often that's a miscommunication. We want to do this and they're like, "Well you can't do that. There's no way in hell you can do that," and then there's friction there until that gets ironed out. And then that gets fixed. And then those technical people take it back to their areas. They set up programming, and then we have to go through and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								touch every radio with a programming. We have to touch each console with programming. So it's a pretty heady and very time-consuming process. So we don't usually do like, if one person wants to change or if one little thing wants to change we don't do much. We wait, get a big change together, and go out.
Rules-Politics - Policies-Procedures	FF	S	Manager	46-55	21-30	Male	FF-S-023	...PD has their own little gig, which is they want to encrypt all of their transmissions, which is fine, but that adds one more layer of complexity. Do they give us permission? Can we read it? Can we hear it? Can we get their security keys? So all of these different systems we have to actually get physical permission to use each system. There's agreements that we have to iron out, and most of those are done, but we have to do that, but you have to review that periodically and look at those agreements. Make sure that they are all still good.
Rules-Politics - Policies-Procedures	FF	S	Manager	46-55	21-30	Male	FF-S-023	[RE: FF access to PD channels] Yep. Make sure that we still have permission to use [City], or whatever system that we're using. So it takes a lot of coordination from a lot of different people with a lot of different interests if that makes any sense... Those different interests don't always coincide, even though realistically we are trying to make operations work. Sometimes their pie-in-the-sky ideals won't match the technology or the agreements...
Rules-Politics - Policies-Procedures	FF	S	Manager	46-55	21-30	Male	FF-S-023	...at that time-- now this has changed, but at that time what happened is two more fire fighters went into the exposure building that was catching on fire, did a quick search but while they were upstairs it blow up on them. A lot of fire came down to the floor. Our more senior fire fighter says, "We got to go," ran outside. Well, he's fine at that point. Turns back and his partner wasn't with him. So he goes back in. Tries to call for a mayday, but his radio melted through. So he grabs his partner who was getting melted to the floor which is part of this too, so he grabs his partner bodily and it's kind of humorous because [Name], who's the hero here, he's only about yay high. He's a very small troll-looking dude, very, very strong. So he pitches out this guy that's taller than I am out the door. During that when his radio melted through, one of their two radios

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								did an emergency broadcast and set off alarms. Well, [City]PD at the time just silenced those alarms and didn't tell anybody. So that was information that you might have helped [laughter]. Now, we fixed this, but there are other agencies that are of dealing with that I'm positive...
Rules-Politics - Policies-Procedures	FF	S	Manager	46-55	21-30	Male	FF-S-023	...it was just a few weeks ago we had a fire fighter hit the emergency activation button and now I need PD at this location and ran back because his partner in the ambulance was getting beat up... Sort of. I mean there was a fight going on. Well, now those emergency terms come to our center and it went up and they didn't hear what they needed because it beeps it goes, "Beep," and then it shuts and during that beep is when he said I need PD at that location... Our police department didn't hesitate, they went ahead and sent an officer, they started an officer that way and one of our other medics was getting a call at the same time and this was 2 o'clock in the morning, just happened to be scanning, heard that and let the police know what was going on...
Rules-Politics - Policies-Procedures	FF	S	Manager	46-55	21-30	Male	FF-S-023	...That was 2011; we almost lost two. 2017, and it all worked out pretty well. But that had to deal with us coordinating those two centers. And like I said, that's our history. I'm sure this is a lot of people's present [laughter], having to deal with that kind of stuff.
Rules-Politics - Policies-Procedures	FF	S	Manager	46-55	21-30	Male	FF-S-023	But the CFAI, our accreditation-- body has asked, "How do you prove the outcomes of your actions?" And right now all we measure is inputs. We measure how fast we get to the scene. How many pieces we send, what their capabilities are when they get on scene. Some of the more progressive agencies are doing, "When do they get water on the fire?" "When do they make entry?" "When is ventilation complete?" All of these priority tasks, what does that mean? Are we saving a building? Are we saving a room? Are we saving nothing? Are we saving lives? Are we not saving lives? So if we send all this stuff, which we're trying to meet standards, what does that mean? How does that affect that incident? So there's the after-action incident or even the before-action incident, what does it look like when they get there? If I could capture that, and what does it look like when they're done? If I could capture that. What did we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								accomplish? And if I change my responses do I change that outcome? If I add people or subtract people, or put robots in, or whatever, am I making a difference? Right now, we don't know and there is no way to know. We don't have insurance information. There's no coordinated information that says a building of this size and this region is worth this much so here's what you saved.
Rules-Politics - Policies-Procedures	FF	S	Manager	46-55	21-30	Male	FF-S-023	So one more piece of technology is, how do we prevent all this? How do we get people to start sprinklers and all that stuff, but that's different. That's probably not radio technology stuff but that technology-- there are so many ways we can prevent all these incidents from happening anyway. How do we get industry to change how they build stuff so that that they're not building pretty much just liquid flammable stuff? Which is what they've built in the last several years...
Rules-Politics - Policies-Procedures	FF	S	Manager	46-55	21-30	Male	FF-S-023	So the unit hour utilizations came from the ambulance community. And what they try to do is if they can get there-- what it is is how many hours you are on calls over available hours. It's just a percentage. So in the private ambulance industry, they try to get that as high as they can because that's profit and that's them getting things done. In the public sector, if you look at an engine or anybody else who's located at a specific geographic area, and we're at this 90th percentile, is how we rate everything, anything approaching 10% means that they're giving into that 90th percentile. They're going to be ineffective. Medic units, we try to look at that because there's more than just responding: you've got to recover, we required to work out, we're required to do training. We require all this stuff--
Rules-Politics - Policies-Procedures	FF	S	Manager	46-55	21-30	Male	FF-S-023	[RE: UHU] So we're looking at like 30% during the day and 20% at night. That's kind of where our cautionaries are. Whereas private ambulances look at it, not as cautionaries, but as profit areas. I'm not trying to be negative. That just... --that's how they use it. Yeah, they use that to see their effective force and how it's making them money. We're looking at it as to how we're burning our people out. If we go too high, tired people make bad decisions; bad decisions kill people. So we look at it from that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								direction. So it's just really time on-scene over overall time.
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: AVL] So, we have it. And right now the only rigs that we use the AVL technology in is the battalion chief vehicles. So it picks the closest battalion chief. We have it in the fire trucks. Organizationally, to this point, we haven't chosen to turn it on, because we've tried to control how many responses our rigs get by setting a response area that will control how busy they are. The new fire chief-- we just got a new fire chief, and he's interested in turning the AVL on for everybody. We know that it will cause some of the apparatus to spike. Their call load is going to spike because they will be the closest. So really, I think we didn't turn it on to try to balance our call load by setting response areas versus having the AVL turned on.
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So, here in [City], primary dispatch channel, and then we have TAC channels two through six. TAC two is almost always medical. TAC four is almost always fire. If there's a lot of medical, so six or more are going on simultaneously, they can open TAC three. If there are two simultaneous fires going on, house fires, then they'll open four and five. The biggest issue is the comm center has to have certified or trained people to function on those channels. And a lot of times, we can't get extra channels open. They just don't have the staffing to-- either the people trained or the people period to open extra channels for us, and that's where it becomes difficult. And you can hear-- they'll open it, but you can hear a dispatcher working multiple channels and trying to handle the call volume that's going on...
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	We're mandated by policy to have microphones on our radios. So if you don't have a microphone on, you'll get talked to and told to put your microphone on.
Rules-Politics - Policies-Procedures	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	We have another training this afternoon that's a department-wide training.
Rules-Politics - Policies-Procedures	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Yeah. And that last set, we're doing all the same stuff, different trainings and stuff that we're required to do. We do in-house training also that's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								kind of what we decide we want to train on versus what is dictated through the training calendar and then training division. Meals and, yeah.
Rules-Politics - Policies-Procedures	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: equipment checks] So we'll scan them and send them to maintenance. I believe our maintenance secretary enters them for that for the ISO and all that.
Rules-Politics - Policies-Procedures	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: equipment checks] I mean, it works fine for us. I think there probably be a more efficient way to do it with technology that's available, whether that be on an iPad which we tried for a little bit... And I don't know really what happened with that. It sort of-- we had them, and then didn't have them anymore. It just sort of went away.
Rules-Politics - Policies-Procedures	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	SME S2: Since we're do the search, we use the thermal imaging on scene a little more. They bring them to us and let us see what we like, and see if we like it. SME: S3Usually, when they bring a new technology in, going back to when we mentioned the iPads, they gave them to certain stations and said, "See how these work." But that varies on who gets them and things like that.
Rules-Politics - Policies-Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	We are all-hazards... So we have to maintain certifications for hazmat, swift water rescue, ice water rescue, EMTs, wildland. I mean, we do it all. If there's a certification out there that's required for a position, we have to do it.
Rules-Politics - Policies-Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Everything's different. We have certs that expire at two years. We have certs that expire at three years. We have certs that "never" expire as long as you train on them every year. So everything's different. Everything is at a different cost. Everything is at a different educational facility. Some things you can get renewed through the college. Some things you have to do it through the Green Machine or the Forest Service. There are some things that you have to get renewed at a local level or by a specific certifier, like ice rescue. It can only be done through two different certifiers in the nation. So that's a struggle as a volunteer. That's tough.
Rules-Politics - Policies-Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...they're volunteers, too. I mean, we can't impose mandatory sanctions. I mean, we just can't do it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Networking, I would say, is probably the biggest thing, and partnering with [School], the local community college. I think that has been, because the demographic that we're pulling from is those college-aged kids looking for-- so if you can get in there, they're going through to get the education to become a firefighter. So if we can kind of partner with them to get them experience, that's so far been, I think, our biggest pull lately.
Rules-Politics - Policies-Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...And then, after coming up with a plan, I have to be able to relay that to the fire board, the fire chief, and either defend and make it happen or come up with a different game plan based on what they need. The State of [State] has a pension plan for volunteers, and that takes a fair amount of time administering that on the background. There's minimum requirements from the volunteer to achieve that, but tracking that and making sure that people are getting appropriate credit or not getting credit or whatever, that takes a tremendous amount of time. And then, when the chief's not here, I help take care of whatever administrative issues come up, so.
Rules-Politics - Policies-Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	And that's just because of the [State] Open Records Act. So within [State] Open Records Act, you can come and say, "I want to see your phone," and [crosstalk].
Rules-Politics - Policies-Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	That's our radio template. This exists for every single radio in [County] County. All 1,200 radios have the exact same template. It doesn't matter if you're a public works person, trash collection, or the county manager. We all have the same template. That's something, again, as a group in [County] County, we've really embraced. And this has helped us really work well together, that we know how to find each other, and it's open. I mean, you're not going to get your hand slapped because you went over and called someone and talked to somebody.
Rules-Politics - Policies-Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	So it's all a group. There's a lot of duplication in here for tactile reasons. So there's not literally that many channels. It's just kind of some-- there's some duplication for the layout to make it easier for people. But they have input on it. We're actually just now going through another revision

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								of our template. We have a subcommittee that sits down and works with us. It's sort of representative of all the agencies. And then it'll take about a year actually, from start to finish, to make sure everyone's good with it, happy, and gets what they need.
Rules-Politics - Policies-Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	So obviously, we're a volunteer fire department. We have to take an individual, such as yourself that's never done fire, and we have to make a fireman out of him. And in order to do that, we're going to have to-- we also have standards to meet. And the NFPA 1001 dictates the minimum amount of training that's required. Now, we don't follow all of that. We take the best of that and the best of our internal needs, and we take the best of the county needs, and we put those baby steps into a book. And that's the task book. You have to go through that book and learn the book...
Rules-Politics - Policies-Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: volunteer task book] ...for example, the very first step is how do you put on your boots, and how do you put on your hood, and your jacket, and your pants? Can you do that safely, quickly, and efficiently? And then, after you've learned how to do that, and you've practiced it a couple of times, then you have to test. So at the completion of that book, you're a asset to this organization, not a liability.
Rules-Politics - Policies-Procedures	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	SME S3: Right. So in addition, do all the certifications that are available. The bare minimum is that you have to complete the task book before you run on calls. SME S2: We have a task book for every level. SME S3: For every rank. SME S2: So to be a probationary firefighter, to actually be a full firefighter, an engineer, lieutenant, we have different task books.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Yeah, and I think there's only two-- there are two departments in [State] that are currently using drones. They're not using them 100% the way they-- I shouldn't say the way they should. There's just some certain regulations and rules that are needed to be followed but they just started so they're kind of moving down that path, so we didn't want to-- because we wanted to make sure that we were-- we had all of our ducks in line prior to starting the program. We wanted to make sure that everything was vetted through the city attorney's office, through the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								state. Governor [Name] actually formed a drone commission.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...I don't know if you know that we're a bit different here with the way we run with our EMS system... Unlike most fire departments, there's been a bit of a-- we have evolved in the city as the [City] Paramedics, which is [City] Health and Hospitals, which is not truly a city agency. It is just the [City] Hospital. It's a private hospital. And the paramedic division has-- it works for them. The [City] Fire Department is obviously a city fire department. We work for the city. They provide the advanced life support and transport. We provide basic life support, unlike most fire departments around the country where the fire department houses both advanced life support and basic life support. And the fire department has its own ambulances and there's paramedic firefighters that could work on the ambulance or there's just firefighters who work on the ambulance that work on a separate...
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...like New York City has an EMS division. And so I work for the FDNY as an EMT on an ambulance. In [City], we don't have that. Now, we do have quite a few firefighters who are training as paramedics, but they don't get to operate because they might have day-off jobs or they came here from different organizations that allowed them to work in that scope. We don't allow you-- we only work as EMT basics. Our fire trucks have four firefighters on them. And so we, because of the-- we have 15 truck companies and 38 engine companies. And so we could usually get there prior to an ambulance. And so we start that basic life support part, that component...
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...We have a new tool that we're using called SharePoint which is-- it's basically a tool that-- it's a computer-based program where we can kick training out to anybody on the department. I could give it to you. If I'm your supervisor, I could say, "Hey, I need you to complete this training." I could put in dates and times. I could put information in there that I want you to stay focused on. And we can actually do it organizationally. So we could say, "Hey, everybody needs to take this driver recertification refresher class." And if we need it done, we'll put in dates that need to be

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								completed by a certain amount of time. And so we just started using that tool. I don't even think it's completely-- I mean, we're just at the part right now where everybody's starting to use it. But we don't have-- our true drop-dead day will be, I think, in October. So that's when everybody has to start using it...
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So anyone that's in a key position-- so every fire truck has its own cell phone. And that phone will be-- is designated to the fire truck, stays on the fire truck, gets charged in the fire truck. So all the chiefs have their own. So all of our-- we call them district chiefs or battalion chiefs, they have a phone. And then anyone that's in a command position, so all of our staff within the department, the chief, the deputy chief. We have shift commanders, the operations captain, we all have our own cell-- we have department-issued cell phones.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...The mayor's baby is this peak performance thing, which really is-- peak performance is something that he started, which brings city employees together to really empower them to make change at the lower levels. To see things that need to be changed and have a formalized process that says, "Here's what we're seeing. Here's how we'd like to implement these changes." So it really engages and empowers people at every level to say we need to make change. And it kind of forces the various levels of management to take a look at it because of the way it's set up to look at money, error, time, various inputs that say, "Oh wow, wow. I never really realized that if I did this, I could save time for a citizen who's a taxpayer. Instead of them coming down and taking eight hours to get a permit, it's only three hours. That saves them time with their business." So there's a lot of that that goes on...
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So I worked with a group called the Special Event Group which is a city-- basically, about four years ago the mayor realized that as the city was growing, we were getting more and more events in the city of [City]. And I think we were doing, just on public property, about 1,700 runs, races, walks, just various events. From things that are a couple hundred people to hundreds of thousands of people. And the city was lacking in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								standardized processes as well as interdepartment communication. So it made it really cumbersome on somebody coming in to want to host an event. Going through the permitting process, and how do I close roads down, and how do I get [bag needers?], and how do I put out community outreach to these businesses? And so how do I get my fire permits? What do I do to go to excise and licensing, and environmental health to get a food truck to be at the park?
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	And so the mayor said, "Hey, I want some key stakeholders. I want all the department heads to be present." So I was actually asked to-- so it was most of the 22 major departments in the city. And police and fire were me and the police commander. And we formed a group that's still in existence today. And during that time, one of the gaps that we identified was we did not have anything that allowed us to have any situational awareness in the city and what was going on externally to the city...
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Situational 360 program] If I have 18 fire trucks working here and a bunch of police cars because we had a Boston Marathon bombing, something like that, we still have all the other calls for service in the city. People are still having heart attacks. There are still fires. How do you service that, is through mutual aid and prearranged agreements that you have with these other jurisdictions. Well, if you're operating on an island, kind of hard to start communicating those things. So trying to increase that. Increase the common operational picture for all these agencies. And so this is a tool that we're trying to-- this is the first iteration. It just came out two weeks ago.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Situational 360 program] So, the events are inputted from-- there's an office. One of the things that we did was we actually created an office under the mayor called The Office of Special Events. So people from The Office of Special Events enter the event data in there. The public safety side of it is directly tied into the 911, 311 system. So there's really not-- everything is just live feed directly. However they did it, I have no idea. So it's direct feed into there. As a call comes in it's live fed into there. So you could see, "Hey, that fire truck just went in service. This fire truck is--" so,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								yeah. That's kind of how that--
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...So now with that, in addition to looking for that specific problem, one of the things that we did is on our software in a program that we were using called Firehouse, which now we're using a different program, we created a safety hazard box, which is-- essentially, if I go on a call and there is a safety hazard, I can click that box and write in what that safety hazard is. That safety hazard, when I click that, gets sent to the highest levels of the [City] Fire Department. The chief sees it, the deputy chief sees it. The division heads see it and some key other people. And that safety hazard will be immediately looked into.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: hazardous construction features] And so now, rather than it coming and going through kind of a bureaucratic-y kind of, "Well, maybe we'll get-- who's going to get to it? I don't know," there is, I'm a company officer. It's 2:00 in the morning. I went on a call. I found whatever the hazard is. I immediately click safety hazard. I write in what it is. And then that's going to be immediately, that very-- immediately, the next day, people will be assigned to flag the building, go out and look to see if it's meeting code, put it in the dispatch notes so all the key players who would be involved in communicating it and mitigating it are immediately involved.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So now instead of the company officer calling dispatch to call the ambulance which is essentially a different company, a different entity, the firefighter can call the ambulance.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: radio training] ...so the training is really-- we had formalized training, but then we do routine training in the firehouse. And it's nothing that we-- it's annual but sometimes we do it more often than that. Usually, it's with newer firefighters. So the older firefighters kind of jump in and will kind of help. Officially, we do annual training, but unofficially it's usually probably more like once a month or once a quarter.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Communication problems in our work? Number one, I would say, a lack of understanding of whatever that process might be, whether it's radio

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								or email or chain of command or whatever that specific process is for communicating that information. And a lack of information sharing. So, frequently, we get just-- frequently, we get people that will bypass the chain of command...
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: communication issues] ...Let's say it is something to do with a policy or a procedure, and now this lieutenant calls up our administrative captain and says, "Hey, I need this. There's a pay thing and I don't know why it's doing that." They didn't go through the captain or go through their chief to come through the administrative captain. They went through the administrative captain. And so now their captain and their chief miss out on that opportunity to learn on how they could have solved that problem. So frequently, I think, from a communication standpoint, we miss out on opportunities for people to learn and kind of just, I don't know, maybe-- I don't know.
Rules-Politics - Policies-Procedures	FF	U	Manager	46-55	11-20	Male	FF-U-021	Basically, under the umbrella of administration all of the administrator components of budgetary, HR, all of the department directives and guidelines fall under administration. We also oversee all of the recruitment efforts, all of the PIO efforts of the department, also internal investigations, external investigations, anything to do with on-duty or off-duty behavior. We deal with City of Attorneys Office on litigations and lawsuits come this way. Claims against the city from accidents so on and so forth. We get all the citizens complaints, and then also around arson. Some of the arson investigations everything from fires falls under the administration as well.
Rules-Politics - Policies-Procedures	FF	U	Manager	46-55	11-20	Male	FF-U-021	Recruitment, there's never a problem with recruitment. It's more really just trying to mirror the city and the citizens that we served. So obviously, just like most other major metropolitan departments, we have difficulty recruiting people of color and women. As far as being staffed, we just added another full-time recruiter last year, so we have two full-time recruiters. We are very fortunate in that aspect. And we got a chief who's very supportive of all the things that we're trying to accomplished. So we kind of looked at the past of what has worked and mostly what

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								has not, and we've kind of blown it up and we've shifted the paradigm...
Rules-Politics - Policies-Procedures	FF	U	Manager	46-55	11-20	Male	FF-U-021	...So what we do now, we only have with civil service-- I'll back up a little bit, they are in charge of the hiring process. It's completely separate from [City] Fire so it's civil service commission. It's a different entity or arm of the city government. And there is a limited number of spots...
Rules-Politics - Policies-Procedures	FF	U	Manager	46-55	11-20	Male	FF-U-021	We also do a lot of other different components. We have what's called a CAP, a career apprentice program where they get preference points. We do a lot of recruiting at different types of gyms. We really try to target CrossFit Gyms. It seems to be a great place to get female applicants, because not only they're physically fit, but mentally they're tough. And that's the type of workets we utilize daily at the fire academy...
Rules-Politics - Policies-Procedures	FF	U	Manager	46-55	11-20	Male	FF-U-021	...We've got good relationships now with athletic directors at all major universities in [State], so we recruit all of the sports teams through those. And obviously, your college isn't so on and so forth, the typical stuff, but we really try to branch out more. We work with [Name] a lot. We go to churches. We speak at churches, community events. We really try to be out in the community. We try to turn people into recruiters for us. So when we realize we don't have two recruiters, we try to get by from people not only in our job but also in the community and say, "Help us to help you to represent our city," and we try to brand it that way. So it's definitely been more successful than in the past....
Rules-Politics - Policies-Procedures	FF	U	Manager	46-55	11-20	Male	FF-U-021	...We've doubled the number of women applicants and applicants of people of color in the past four years, and it's going in a good direction. So we're not perfect, but we keep looking back at what's good and what's bad and trying to better ourselves each and every day. to brand it that way.
Rules-Politics - Policies-Procedures	FF	U	Manager	46-55	11-20	Male	FF-U-021	[RE: listening in on LE channels] I wouldn't say new, it's definitely improved and we definitely have a better process of what to say and when to say it so we're not stepping over each other and making sure we're communicating on the correct channels. But it's something that's been in place for quite a while.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Well, daily routines are set. So I'm not talking to them about everything they do. But cell phone, email, we have a desk phone, but we were issued portable laptops, so we don't-- the other [Job title] chief and I - we have one that's vacant right now - we spend a lot of time on our laptop away from our office. So the desk phone rings and rings and rings, and we would like to get rid of it, actually. But mostly it's the cell phone. It's the radio during calls.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	The officers, so battalion chiefs and up get issued a phone, and then each fire engine has a phone so that the duty crew can use that. Now, members do have their own cell phones. We really don't have a lot of policy on that. That's up to the individual officer how they manage or allow their fire fighters to manage that during the shifts.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[City] has a resident program. So [City] is all career, and then they have student residents. They live in the station for free, they get their own room, their own kitchen. They pay for their schooling, and in return-- and now, they get an hourly rate of-- some sort of hourly rate. And then, in return, they work at that lower rate for the fire department. I went through the same program in [City] 20 years ago, and it was-- they paid for my schooling and that was it. They didn't pay us. We had to go get jobs, and then we would work two days a week, but it's gotten a little bit better than that. I thought they were going to get rid of it, but it's just too much potential savings on paper for the town council. They just can't ignore it, even though it's-- anyway, we got rid of it.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: comms with other disciplines] We do. If dispatchers and if everybody sticks to protocol, it's not so difficult for us to get on the same radio channel, but it doesn't always happen. So EMS and fire are pretty much on the same channel. Law is on their own set of channels. Dispatchers will tell them to move over to our channel if it's a big, long, drawn-out call. Otherwise, if not, then we got to tell dispatch to tell law enforcement. Law enforcement has to give-- tell dispatch the answer. Then they have to tell us.
Rules-Politics -	FF	R	Supervising	36-45	21-30	Male	FF-R-024	...And then what we, as [City], and by policy we, our operations-- so by

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Policies-Procedures			Field Responder					operations, I mean when we are working on a scene, we take all of our traffic to a non-repeated channel by policy. It's not recorded, but we have decided we don't care if it's recorded or not. We just don't want any-- when somebody keys up the mic, we want them to be heard. For example, [City], on the other hand, is the opposite. All of their operations are on the repeated channel because they want everything to be recorded. And you get far more distance out of that because it's on the repeated system. You get almost a mile on the non-repeated. That's plenty. Unless it's a massive hazmat, we are not operating over more than a few hundred square feet. So that is one thing that we have done to improve is we just don't use the technology.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...So if Motorola decides to change their portable radio, it doesn't mean we have to change, but if we have to replace any with the newer model because they don't make this model, that's when we will make the change. So they're pretty good about giving 7 to 10 years before they make changes. This one has been pretty good. I don't know if they'll do that even at 10 years. Bu anyway, so we have an equipment replacement fund where we will take that amount that we paid for all these radios, we add a 10%, and then we divided it up into 10 years. And then every year, we have a budget, a line item for that, and we apply funds to that so that when we get to the 10-year mark we can just pay cash and we don't have to fund it.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	For us, our number one call is automatic fire alarm, so we have over a billion dollars in real estate value. And every square inch is protected by some sort of automatic fire alarm system. Sprinklers, they're required by code, so they're sensitive. So somebody comes in takes a hot shower, it's going to set off the smoke detector if the steam gets in there. Cooking popcorn, popcorn's the number one smoke maker in a building. The [Name] Medical Center years ago outlawed it with their employees, no more popcorn in the building, can't do it.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field	36-45	21-30	Male	FF-R-024	We have a system for callback, but we don't require it and it's rare. We might get one or two. But now, with five-staff stations, we have a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					minimum staffing of four, which is [Organization]. The chief, we spend hundreds of thousands of dollars in overtime to make sure that these engines have four. So we can do a lot more now than we could 10, 12 years ago. 10, 12 years ago, we were doing callbacks for a lot of things, but it's rare now.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: dispatchers] They generally are four on, and I think from 3:00 AM till 5:00 AM, there's a two or three-hour gap there where they're down to three. And that's improved. That's gotten better. There were two people on at night in the past. One fire at 2:00 in the morning and nothing else-- I don't know how they keep up.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: department-issued cell phones] ...not even just officers. Really is based on need. So every apparatus will have one... But depending on what people do for the department. Division heads will have their own device. There's a lot of people that are just whether they do a lot of logistics type of work for the department. So it's not really everybody above this rank gets one. It's more based on need. What are you doing for the department... I mean, for a department this big, the fire chief wouldn't-- I mean, it'd be the decision level, several levels below that, but yes.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: radios] On every on-duty person. So fire is a little different than law enforcement, traditionally. Fire departments at least in the Western United States, and I think most of the United States, usually there's one radio assigned for a position. Because fire departments will have a minimum staffing--
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: communication with other jurisdictions] So if all that other stuff fails, we have, like I said, a pretty good satellite-backed call so that we can at least talk from command centers to each other, in that regard. The technology that I see most of the guys and gals using every day is like the text messaging and stuff. So that seems to be the biggest one.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	Right. From the communication side, on the radios, we actually have radios and licensing and whatnot in the 800 megahertz spectrum, the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								UHF spectrum, the VHF spectrum. So... it's kind of, again that plan A, plan B, plan C, plan B. Keeping all that contingency planning going.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So in [City], we try to process all of our incoming 911 calls within 60 seconds. It's NFPA Standard 1221, which regulates those. And I think we are at, I want to say like 94% compliance, or something like that. And then NFPA 1710 regulates the actual response. And so with 1710, and I'd have to look those numbers up, we try to be at all emergencies within four minutes. So from the moment you start dialing 911 to when somebody pulls up in front of your house or your car, we try to keep that less than five minutes. And we are--
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So we require annual training on our apparatus to drive them, and move around, and whatnot. We require annual training on everything that's on there: the hoses, the ladders, all of that. We require all manner of specialty training, as far as, "Oh, Ebola hits the coast, and here's what you do. Here's how you prepare and everything like that." The one device that-- I mean there are stations around the country that may not go anywhere during a given day just from slow call volume or something like that, but even they will be listening to the radio and making decisions whether, "Am I listening to the right stuff? Do I need to change the channel?" or something like that.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	We could do a lot better on training. Training is probably one of the single biggest costs that public safety has, just because the citizens pay us to be able to respond. And so they'll put companies out of service for mandatory training and whatnot, to all drive to central points to get a message, or whatever, or to drive to a central point to do some kind of manipulative stuff. If there's a lot more of that that could be done, either in an online environment, or some kind of interactive environment through technology, that would save lots of time and money on that regard...
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	It's either the sports, or adrenaline, or whatever the case you want to call it. But it's the challenge. It's a challenge. And I guess you would say through a public's eye that it's not normal to actually want to go into

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								fires. But once you get educated and have some of those fears reduced through education, it then becomes understandable of how you can actually do that because there is a process. There is a tactical process. There's a way to do it. So what may seem to be an insane activity to laypeople? or others is kind of normal for us because you kind of learn the parameters of your dangers and what you can and can't do. You learn your limitations. And so knowing all those things and putting them together and being able to size up the situation and look at and minimize your tactics, or what they do is they look at things, and you're able to size up a building and measure, through education, some of your dangers...
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...I think the tablets may have its benefits as long as they're durable. That's big. That's big. And when you get to talking about us, if I have a radio that's expensive and something happens, I lose the radio or it gets stolen, the officer gets time. So it comes out of his pocket or he gets time with suspension. So that's a big concern, is that, say I'm an officer in engine, we get these new tablets that are easy to break. I'm not going to be happy about it because then now, that's something else I got to worry about. And when you're slinging tools around and your big concern is getting off this rig, putting your stuff on, and getting in there, you're less worried about delicate things. We're not delicate. We're just not delicate people. So when you put something on there that is a level of technology that is where we are today but is not durable, that's a concern for us as firemen.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...now it's getting better with them letting us know that these are dangerous buildings. So that's kind of changed where if it comes in through dispatch that there's a fire in this building and an address, now our main office has addresses that are built into the computer saying that these are dangerous buildings, or abandoned buildings, and those kind of things - Those are good to know - or what may some of the contents in the building be. That's good to know. I think for me, as far as my experiences go, is it's good to know that. But at the same time,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								what's imperative for us to know are, is it unoccupied or an occupied? Are there occupants in the building? That changes our game plan. It changes our risks versus benefit, which I've talked about before...
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: overwhelmed] That can potentially happen, for sure, especially in larger size incidences where it's involving a major commercial building. Or one thing that can be overwhelming would be-- they would call them mayday situations. So where a fireman's trapped or injured or there's an incident and a mayday is called. So when a mayday's called, then there's a lot of-- there's a lot of things that go through your mind. What's happening? What's wrong with the situation? Why was there a mayday? And so for a brief moment, the situation gets chaotic and very uncertain. Those are situations that they can pose those stressful uncertainties. And then other ones would be emergency evacuations. So when you're inside and you're fighting the fire, you're doing what you need to do, and then they tell everybody to get out of the building, they start blowing horns outside to let you know you need to get out, there are times where we're not real sure why they're pulling us out...
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...our past experiences where the stairwell doors would shut and lock, so you'd have somebody that go out in your stairwell and the doors would lock and they would start going down and they were overcome by smoke and they can't go any further, and they can't get out of the stairwell, so now it's a problem. So now stairwells don't lock anymore. They'll shut but they won't lock...
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	Subways are huge. A lot of issues with subway radio communications. I would say there have been a lot of issues with high rises just because of all the interference, frequency interference in downtown, for sure. And I would say that's probably the biggest communication issue, especially when you're on fire ground. Sometimes our fire ground frequency only goes so far. It's not a very strong signal. And so if you're 25 floors up or 40 floors up and you're trying to talk to someone on the ground floor, it may not go through as well. So there's times where even other departments, they'll put almost repeaters that are on different floors that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								transmit and repeat their message. Or there's repeaters built in the high rise. So there's all different kind of things to think about with that. But then we set up our command staff, which is one of the reasons why we do that, a few floors below the fire floor so that that radio communication doesn't have to go all the way down. So it would go to him, and then it would go down.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	if I'm going to a fire scene, there's a whole different thing where if they show me camera feed, there's nothing showing on that fire. As opposed to every window's full of fire, and there's jumpers hanging all over, it's going to change my tactics immediately, especially on the way there. I mean, I'm thinking already on the way there of-- one of the things that would be nice, even if they didn't even show the live feed, just a picture of the building just to jog my memory so I can adjust my tactic, orders. There's a huge difference between a one-story ranch or a 100 by 200 courtyard building. That changes our tactics immediately. In some places, you don't remember that building. So it'd be nice to even have an idea of what I'm coming into.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	[RE: SCBA with built-in HUD] It would be a potential but then you go into cost. You can only buy what is allotted to you. And you got to address what your needs are, not what your wants are. There's a little money extra at the end. But in today's economical environment, there is no money... unless that technology becomes a mandate.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	[RE: portable radios] I've never noticed an issue with that as far as you're looking at weight or user-friendliness. You never give it a thought. There was no problems. There's nothing to draw from is that I have a problem. I haven't had no problems with these. There could be a problem with the portable radio if left outside of your protective equipment due to thermal insult or a thermal exposure to it. Yeah. You'll melt the thing and it becomes useless, then you've got to rely on yelling, or if you're lucky enough, escape a pre-flashover. So if worn right, worn correctly, and following the procedures or guidelines of the fire department, it won't fail you. Most of those things that occur in the fire service, a lot of it is then

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								human error and miscommunication. Communication is a big factor.
Rules-Politics - Policies-Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	...And so a radio helps us do that, that is, it doesn't have to be encrypted, it can be open. It's not a big deal.
Rules-Politics - Policies-Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Right. That's right. So we do it on-- we feel like we could predesignate, but instead, we ask all seven to be able to do basically all seven so when they show up they say, "I'm taking task one"
Rules-Politics - Policies-Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	...And so we have a certain staffing level. And when we have a fire, we also put a dispatcher on it, meaning they're listening to that channel with the people inside. And they are dedicated to listening to what's going on.
Rules-Politics - Policies-Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Yes. Right. But it's locked down. I can't use it as Google, I can't do other administrative functions because our CTM group
Rules-Politics - Policies-Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	So there's this balance of public safety versus network security. And we've moved forward a little bit. Now we have iPads that are cellularly connected. Just like this iPhone.
Rules-Politics - Policies-Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	So our preplan used to be just paper. So people would do a couple of things in their territory, they'd make copies and put them in a big book. We had a period of time when that kind of faded away, and now we are moving into an electronic. So on the MDC or T, we have a template of preplan information that a committee put together.
Rules-Politics - Policies-Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	--upset, captured, whatever, and they can't get out on the primary, I'd rather you tell me on channel one because everybody is listening on channel one. "This is firefighter one. I am inside, I had a partial collapse."
Rules-Politics - Policies-Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	So [City] was when we had a collapse, two years ago. I think it was 2015. And the units that arrived, they didn't follow our playbook.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	You need to translate for it. You know, any new communication doctrine will tell you that we speak in plain text, ever since-- the presidential directives, NIMS, all that kind of stuff, we're supposed to speak in plain

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								text. There are still organizations that do not, and why they don't, you'll have to ask them.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	...There's more rules regarding how much you should say, how much you should not say. We strive to keep our communications short and to the point. And there's lots of different tactical benchmarks and things that you're expected to say depending on the call that you go to. So that's something that's changed in the last few years, that becoming more structured and rigid and paying more attention to what you're saying on the radio.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	Sure. You show up and let's say you paint a beautiful picture of this house on fire and you take 45 seconds doing it, versus, now, when you show up, they want you to say who you are, what channel you're on, what your assignment is, and a brief description of what you have.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	No. What we do for the way our high-rises are structured, we go to the fire control room. In the fire control room, they are required to have five different key rings that are all identical.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	Usually, through the department policies, they want you to check your email and everything right after shift change. So shift change out here is at noon. So, usually, what most of us will do, we'll get here, we'll relieve somebody, check out the rig real quick, then we run upstairs. We have to actually log all of our air packs on the website.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	...A lot of times, too, we'll get there-- and this is part of our not communicating well with law enforcement-- they'll park to block people out, but then they'll have a fire apparatus needing to get down there and you don't know who's car it is or where they are, so just trying to get people there. But this communicating better with law enforcement thing is our big issue and it's probably just more of a policy issue than it is a technology issue.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	And then of course, oversight for human capital issues, leadership, discipline, hiring, firing, and all that. Policy development is one.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...There are now 28 task forces and all the task forces are sponsored either by local jurisdiction or a state depending on the particulars of the situation. Here in [County], [County] is the sponsoring organization. Now, if you go up to [State], it's the state of [State] that's the sponsoring organization. So when a bad thing happens like Hurricane Irma or Hurricane Harvey, two very recent events, what happens if FEMA calls those organizations, there's a whole rotation with everybody and all that, and they look at who's closest and who's up in the rotation and they start going down through that list and activating resources
Rules-Politics - Policies-Procedures	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	This particular station is 100% career. [County] is a combination system. So it's actually one of the largest combination career and volunteer systems in the country. We have about 1,100-ish, I want to say, career firefighters. And then there's about 2,000, 2,500 people who participate to varying degrees in the volunteer side of things. A lot of the volunteers aren't necessarily what we consider the operational volunteers, meaning they get on fire trucks and EMS units and go out and directly deliver services. Sometimes they help with administrative stuff and other stuff. So of that 2,000-ish volunteers, I think about 6 or 800, something like that, were actually qualified to ride fire trucks and provide what we consider to be minimum staffing. So they've met the training and experience requirements to count as staffing on a unit because each unit has a specific staffing level that we have to meet for it to be considered fully staffed and you've got to have certain qualifications to be able to meet the staffing positions on a unit.
Rules-Politics - Policies-Procedures	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	Once we're on duty, we have to be with our apparatus and available to respond.
Rules-Politics - Policies-Procedures	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...Every quarter, there's a training activity for the whole county to go through. So this quarter is a water supply evolution that takes about six or eight units to be all in the same place at the same time. So those units get put on a detail. They go to the training academy. They spend a few hours participating in that activity where they're not available for emergency responses and then they go back in service.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	Now, one of the things we did back in 2003 was we recognized we were going to have these problems going forward, and to try to attenuate them some, we put in a code requirement that says if you're coming into [County] and putting up a new building that meets certain criteria, one of your responsibilities is not only to do all the other stuff you have to do like having stairwells and exit signs and a fire alarm system and all that other stuff, and probably a sprinkler system, but you also have to ensure that there's radio coverage in your building.
Rules-Politics - Policies-Procedures	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	Yeah, they have to put-- well, they have to ensure that there's coverage. If they put their building up and there's coverage, they've met the requirement. If they put their building up and there's not coverage in their building, then they have to provide a coverage solution. So newer construction in the county frequently ends up with at least partial in-building coverage solutions...So where new buildings are going up in [City], [City], [City], they have this code requirement that says you have to meet this.
Rules-Politics - Policies-Procedures	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	--amongst ourselves. So within that structure, we've come up with regional templates for programming our radios. So that, one, I can take my radio and turn it to any other jurisdiction around me and make it essentially a [County]radio, or W
Rules-Politics - Policies-Procedures	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	So if [County] was having a catastrophic kind of day and we need to send [County] units down to [County], we would go operate on 5 Charlie or whatever they told us to operate on, and we could operate-- one, every unit in [County] would know how to get to that channel, with no confusion, because it's a very simple pattern that everybody can understand. And we would be operating directly on their radio system just as we were a native [County] radio user. So that plan has been implemented throughout the COG region and works very well and helps to coordinate our communications within the fire rescue community.
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	To the point that-- now, we have a policy, and it's still a policy today. It hasn't been rescinded, and it came out over a decade ago. It's been a long-time policy that says that you're required to read your emails at

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								least once a day when you come to work.
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	Yeah. I have a department-issued because I'm a battalion chief. I have my personal one. [talking about a phone]
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	I mean, I don't know how many citizens we carry. I know that it is a lot of space and a lot of time. And if I am on one area of my battalion and the response of the call is on the other area, it takes me a long time to get there, but it is okay because there are at least two command officers that get dispatched. So the neighboring jurisdiction, the neighboring battalion will go ahead and move up and possibly get there before me and hopefully at quick time.
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	And you can't. Not everybody has an important message. Not everybody needs to talk, right? Again, so it's controlling the communication, the amount of communication, and also what's said. We have a policy that says, "The battalion chief is going to ask. Are the utilities controlled?" And until I ask, don't tell me because I might have something more important to say. So it's controlling the flow of communication that occurs. Or the Battalion Chief will ask, "Have you done the search? And is the search negative?" and, "Don't tell me yet. Let me ask you for it."
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	Okay. Every person that is on the unit has a radio. There are four radios on the unit, okay? The people other than the unit officer should never be talking to me. They should talk to the unit officer, and then the unit officer should talk to me. Kind of like the same thing for rank structure on emails and stuff like that.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	Well, a lot of that stuff is actually-- the rules are set by the gentleman sitting right next to us over there. We just follow those and follow those procedures and are the point of communications for, I guess, the White House and the Naval Observatory.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	There's four people who staff that position. We get in at five o'clock in the morning, usually a little bit earlier as a courtesy, and the first thing we do is just kind of, hey, what do you got for me and we'll go through

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the landings with the person, we'll go through what units are in and out of service, any sort of major incidents, anything funny [laughter], anything bad that happened, anything that basically needs to be passed along. We do basically a pass along report. Not anything official. It's not even called that. And then after that, in terms of the actual work routine, I'll go around, I'll introduce myself to the watch commanders because we have to do that now. The watch commanders are the supervisors at OUC, even though we all know each other, we're still required to go reintroduce ourselves every day. Kind of talk, shoot the shit with the dispatchers. I'll go through all the different emails from the previous days. I'll go through the journal to see what notes are-- basically what pass-along notes have been put in there. And then I'll look at the CAD, kind of just-- even though they're telling me what units are in and out, I'll still do a double check just so I see it myself, see who's in or out of service, what incidents are going on. It's more so going into the evening shift to the night shift that it matters. In the morning shift, it's usually pretty calm. There's usually not too many incidents going on right around 5 o'clock. And that's why in the firehouses we usually relieve at 4:30 to 5:00 because that's-- generally, the 3:30 to 5:30 gap is when the city actually is quiet. So you can actually get relieved at some of the busier companies where you might not see the firehouse for 24 hours.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	...I wait for the emails to come from the deputies because the deputies will send me a list of-- well, they'll send everybody but including me, the list of all the units that are going to go out for training, all the activities of the day, special events, anything that we need to look out for, conference call.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	In terms of personnel management. I have authority to completely modify what they do which they don't like because I'm not their supervisor, but at the same time I don't have any ability then too if they don't follow through on that...The majority of the dispatchers are police dispatchers versus fire, so it's-- all their dispatchers speak fluent English with no accents, whereas the fire side we get all the dispatchers that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have very strong or very difficult to understand accents.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	And we don't have any repercussions as a department. We don't have any way because it's not our own agency. [talking about the fire side is kind of the redheaded stepchild and not as important as the police]
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	Just to give you a difference of how it's broken down. We haven't been a volunteer department since 1872 whereas [county]'s still combination, so it's still based on the foundations of the volunteer departments. It's much more, I want to say like paramilitary. It really almost is. It's more disciplined, more focused in terms of actual policies, procedures, and there's less of a gray area because you don't have competing interests. Whereas out in [County] you've got competing interests. You've got the volunteer companies and their priorities, which are not the same as the county and career service.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	Nope. We don't even have the email on it. Because I tried to install it and it won't do it and there's really no point because we have it at the desk. So I just haven't made a point to call because it must be blocked or something, some sort of setting.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	Well, OCTO is our, I guess, technology group for [City] government in general. And OCTO rules affect us too. Our computer at my desk for our email locks out on the OCTO set interval.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	Yeah. We're not logged in so we don't know. And he basically says, "No, it's [City] government rule." [talking about not knowing that the Secret Service contacted them by email and not by phone]
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	The procedure with Octo-- nope. Nope. The computer has to lock at that interval. And that's a set interval across the [City] government. So even though we're in a secured facility and a facility where everything's being recorded--
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	We know where they are. Yeah, we don't need to verify the location. Because technically you're supposed to verify the incident location with the dispatchers.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	--as an officer, I'm expected to maintain a cell phone if I'm on apparatus, a radio, then I also have this tablet. It's almost just too much.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	Yeah. And it's just because over the service life, that's all that's left in there. And they don't understand that. So they're just like, "Well, that stinks. I'm done." So we're trying to work on something to say that once they reach 1,600 milliamps as their max charging capacity, it's time to call the radio shop, get them to replace them. And then they'll bring you fresh ones which should last you, again, eight hours. But it's not what you were getting before.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	--the radio shop or OUC, Office of Unified Communications, right? Then again, there's always MOUs, and the radio system. We have our priority levels based upon-- public safety gets top priority. So when you have an inauguration, and the guy from DDOT's tr
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	I don't know. I guess, if this is all related towards the technology side, is how much control the government has to force people to follow processes so that we make sure that we're not falling behind the technology curve, or that we're doing the right thing.
Rules-Politics - Policies-Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	They want us to log in every 24 hours. So restart the computer and put in our credentials so they'll know it's me, as opposed to the guy before me.
Rules-Politics - Policies-Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Usually the company officer. So we follow a chain of command. So I have five company officers that reply to me. And I've given them directive that I don't read email.
Rules-Politics - Policies-Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	I'd like a better phone. So I've I actually got an upgrade. I got an iPhone. And I think she got fired for giving me an iPhone [laughter]. But everybody else has-- we had BlackBerries. Then we went to Windows phones. And I think now we're going another month where everybody's going to go to iPhones.
Rules-Politics - Policies-Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	...For a long time there-- so we were in a period where we had a deputy fire chief in charge of IT, and I thought he did a really, really good job of bringing us into the future for a lot of this stuff. And they eliminated that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								position - I don't know how many years now - four, five years ago. Maybe more than that by now. I feel like we desperately need that and from little stuff-- there's no policy on how a file name should look.
Rules-Politics - Policies-Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	So where's the gas? Where's shutoff? Where's the water shutoff? Who is the emergency contact? All that stuff like I had for tunnels should be on our tablet for-- and you see how the construction going on. Now is the time to get in there and get all that, and identify what type of construction each type of building is. Yet there's no leadership here on the policy side from our agency to say, "This is what we need to do."
Rules-Politics - Policies-Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Hmm. So everything's got to go through-- anything you buy, you have to go through procurement unless you're buying if off a credit card. And obviously, nothing can get onto our network without blessing and approval. So anything that's going on is outside of that, other than my little thing here. I don't know there's a lot stuff out there.
Rules-Politics - Policies-Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Well, it's funny. There's no real policy to always have 16 on. But I think just from practice, most of us always-- because we have lots of radios, always keep the one in my door on 16. And every once in a while you hear somebody talking. And I think, "What did they say?"
Rules-Politics - Policies-Procedures	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	We do. Yes, we do have a social media policy. You're not supposed to, essentially that's what it says [laughter]. People still do.
Rules-Politics - Policies-Procedures	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	... So it's a condition of employment now to keep your EMT license if you're a new recruit. I want to say the cut off was maybe 1995. If you were hired before then, you can be a firefighter without being an EMT, but we're kind of slowly phasing that out, where you're always going to at least be an EMT.
Rules-Politics - Policies-Procedures	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Yeah. There is that going on because-- and again, sometimes it's a slippery slope because if I'm in charge of these four individuals and we're on the same piece of apparatus, nobody should be using a cell phone according to our orders.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	I would say it definitely is not. It's not a hindrance. From the department stand point, it's something that they're keeping a watchful eye on, because like anything else, cell phone use is being abused in the firehouse itself with Facebook and social media. Embarrassing things are going out there, and I don't blame them for addressing those issues, because it does. When people abuse them, they can make the department look bad. But are they a hindrance to our job? in general, I would say no, not yet. Not yet. There's no real reason for anybody but a company officer to really need one when they leave the firehouse, but it hasn't been enforced yet where somebody has been disciplined for actually just carrying one when they're not supposed to. I think we're close though. I feel like we're close.
Rules-Politics - Policies-Procedures	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	... I was trying to get him to appeal to the city to come up with an ordinance that every address had to be made out of reflective numbers, first of all, and it all had to be in the same position. In other words, on every residential building,
Rules-Politics - Policies-Procedures	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	... at 8:05 every morning, there's a conference call with the battalion chief. The battalion chief is the shift supervisor for all nine stations. That conference call will go over what's on the schedule for the day, what issues there are, what training is going on, what companies are out of service for training or maintenance or whatever.
Rules-Politics - Policies-Procedures	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	.. For someone to try and communicate with [City] police, unless there's handed down knowledge of, I'll go to this channel and you can talk to the dispatch center in [City], just fine. You wouldn't know that trying to communicate with agencies outside of our dispatch center... so if I wanted to talk to the [City] Police Department dispatch center, separate, just down the street, I would have to talk to my [City] communications specialist. And then they would have to contact [City] police and we relay that information in three-way communication versus just getting on the radio, turning the knob and contacting the dispatch center myself.
Rules-Politics - Policies-Procedures	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Just always talk to Norcom would be the-- and let them patch you through to whatever agency they have. So that brings up another

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								problem is trying to communicate with agencies in [County]. So if you wanted to communicate with the [City] Fire Department we would have to contact NORCOM. They would contact Valley Com. Valley Com would request a unit through NORCOM and then we would get dispatched.
Rules-Politics - Policies-Procedures	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Okay. So all of our engines and ladder trucks have thermal imager cameras on board. And it is required-- I don't want to say required-- the protocols and the standard operating guidelines that we have, dictate that the company officer will have the thermal imager when they enter an IDLH atmosphere.
Rules-Politics - Policies-Procedures	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	.. And whether there's an expectation for you to read it off duty or not. And the other thing, I think the cause of some of that challenge that most of the administrative staff is on a 9:00 to 5:00, Monday through Friday work cycle, and we are on those 24-hour.
Rules-Politics - Policies-Procedures	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	..And we try to create protocols and procedures to help deal with those challenges to try to keep our radio traffic short, very formalized way, to try to communicate to one point of contact so that everyone can kind of hear, as opposed to a lot of different side conversations going on.
Rules-Politics - Policies-Procedures	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Right. So whether you had your IT staff or whether there was a way to better facilitate with third-party vendors, who have the capacity to build and are familiar with taking that pathway, from, "Here's our need. Here's the technologies we know that can solve it. Here's how we can pilot this and facilitate creation of something." And the other thing that is significant about that model is that then what you build can be disseminated to the industry of the fire service as a whole, versus just building something that works just on the servers of the [City] Fire Department.
Rules-Politics - Policies-Procedures	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Well, exactly. And so standardized patient care records, standardize some ability to a common footprint, blueprint, means to access information about buildings. But the thing is that we're not going to get it from-- I don't believe we're going to get it from the third-party system out there that's building it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Yes. Yes. Calls take priority. So when a call comes in, everything gets dropped and we go running the call. And everything else fills in the rest of our free time if we have any [laughter].
Rules-Politics - Policies-Procedures	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Yeah. And it's assigned to the position. We don't get call-- we don't get paged when anybody gets a call. It's only paged when our unit gets a call. So yeah. And so that just tells you, "Hey, here's the type of call. Here's the address. Here's the radio channel to respond on." So that's very limited information, so.
Rules-Politics - Policies-Procedures	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Correct. Yeah, so. Well, they can take it with them. But when you start your shift, if I was going to relieve you, if you were going off duty and I was coming on duty, then you would hand me your radio and the pager, and then I would take them. So if you were the firefighter on engine One, that's the firefighter engine One's pager, that's their radio. And it just stays there, so. Yeah. And that's also how dispatch can keep track of who we are. So if we key up our radio they know, "Oh, that's the firefighter on engine One talking right now."
Rules-Politics - Policies-Procedures	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Depends on the call. Currently, all of our medical reports are hand written on a triplicate type sheet. And so if we see a patient and they're going to stay at home, or they're going to go drive themselves into the hospital, or if they're going to go drive them self to their personal doctor, we don't have to fill the paperwork out on site. We can. But we don't have to stay there and leave a copy with anyone. So we can take that back to the station and we can fill it out on our desk when we get back. If they're going to get transported by a medic unit, or an ambulance, or an aid car to a hospital then we need to stay on scene and fill that paperwork out so that we can give a copy to the ambulance, or the aid car, or the medic unit to stay with the patient as they go to the hospital. And then, when they get to the hospital then they'll transfer that paperwork to the nurse at the hospital who will transfer it to the-- transfer it to the doctor so that it becomes part of that patient's record. Yeah, that's how our forms work for medical.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Yes. Yes. So that comes back to what we do on a daily basis. That comes back to our pre-fire planning. So when we go out and we make our footprint of even a high-rise, we'll plan out, "Okay, here's where the hydrant is for the high-rise. Here are the connections to the building. So we have to plug our hoses into those connections."... Our first three engines, typically, are going to be right around the base of the high-rise.... And then all of the subsequent responding engines, they're going to park out at least 200 feet away. And then, they are going to walk in. And so then those will be the support engines. And then that location is established by-- for our policy anyway. It's established by the fourth arriving engine company. So the fourth arriving engine knows that they're responsible to set up base, tell everyone else where it is. And then, everybody else that comes has to go to that location, so.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Q: Each apparatus has one, and you're required to use it? SME: Yes.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	I mean, [inaudible] kind of understand, you drop your phone and lose it. You don't want it opened. And I understand the city's concern, liability-wise, at having somebody to also have access, so it logs out within minutes of-- I think the max we're allowed to delay is five minutes. It's the way it's programmed.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	The tablets are locked out to only use the one [inaudible] ESO, which is the one program that we're using. And I think a lot of that's just to prevent the opportunity for people to use the tablets, other than for work purposes. As far as the phone goes, no. I wouldn't say-- I can't think of, really, a whole bunch of circumstances where the apps really come into play during a work day.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	And my understanding too, is part of it is because they did a certain program, that AMR - American Medical Response did - and then [County] EMS is what decided the program that we're currently using. So it wasn't something that [City] decided. It was a county decision. I don't know where we were involved in that process, being that we're obviously going to be probably the biggest user of it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Well, within dispatch, when you take a call and I'm interrogating the caller. The first thing I ask is, "This is Fire Medic One, what's the address you're calling from?" We'll get that out of the way, so I know where it's going. I confirm that. So that I make sure that my resources are going to the right spot. And then it's like, "What's the problem today?" And if it's fire-related, then I go down a certain kind of path of asking questions versus EMS. Specific to our EMS, we have a protocol system. So I have a screen that I pull up that look kind of like an Excel. It's a database that has all these tabs. It's like chest pain versus abdominal pain versus seizure. Click on that, pulls up another screen the first question I start asking. And it starts with, if you answer yes to the first one, the top ones are all medic responses versus [inaudible] responses, ALS versus BLS. So with that-- where I'm going with this is after the dispatcher has that interrogation, then when they send, they have a little notation that pops up on our MDC that indicates 45-year-old male chest pain. History of, or suicidal, scene not secure. So we get a level of a very brief one two-cent synopsis of what is going on as we're going out the door and I look at my screen, and then that and as well as shock. So the dispatcher actually verbalizing that. But if we're going and things get updated, sometimes if it's vital, if we're going and all of a sudden the scene becomes not secure - it was initially, but it's not - they're going to verbalize something that's going to help me to not enter an unsafe environment. A lot of times, things can update as I'm going. Somebody's adding a note that maybe isn't verbalized. So we have access to do that.
Rules-Politics - Policies-Procedures	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] Yes. Yes. It doesn't restrict the use of cell phones. There's definitely some rules about personal use of cellphones, both personal use of personal phones while at work and then personal use of department cell phones. It is allowed. But there's no expectation of privacy or exemption. And then once again, if you're conducting business with a personal cell phone, it is subject to disclosure as well, so.
Rules-Politics - Policies-Procedures	FF	S	Supervising Field	Not specified	Not specified	Male	FF-S-036	[S2] The administrative staff all have cell phones. The battalion chiefs rotate a cell phone. So whoever's on duty, let's say Battalion 16, they

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					share a phone. And all the captains share a phone. So all the way down to somebody at every station has a department cell phone. They don't take-- those cell phones don't go home as ours do. But every engine, every unit out there every day has a cell phone.
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] I mean, you can't say, "Don't." It used to be don't carry. We know for a fact everyone is carrying a personal cell phone. We ask common sense. They shouldn't be answering on the middle of a call.
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] Everybody is carrying them. They're highly discouraged to not use them for work because if they are using them for work, they are discoverable. Everything on that phone becomes discoverable. So we can't say, "We don't have a policy that you will not carry your cell phone." We have a policy that says, "Proper use. No taking pictures. No posting to your--" and we've had to correct that, where we've seen Facebook posts pop up and had to say, "Hey, you be careful, because that incident that we had recently on a fire. Somebody who used their personal video camera to videotape a fire." Which you have to kind of remind them that that instantly is no longer personal. If somebody requests it, it's no longer a personal item, so. They're carrying them, but I think overall, most of our people understand that we won't-- they're there for their emergency, but they're not to use them for their personal business on our time.
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] So anywhere that goes in now and known problems, they're required to put BDAs in. And we're pretty strict about that.
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] Like a translate thing. They have the HazMat guide on it. There's some medical ones. Dosing ones. I know the medics unit has different things. So we were slow in letting what apps come on because the department of 300 people if we just say, "Hey, add any app you want," we're going to have too much. So we are adding apps as we speak, but we kind of have a little process. We don't just download something and then end up infecting us all, so--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] Which brings up a good point that I think a lot of agencies run in to. They tried it here, and we told them, "We're not doing that." Is the IT people want to put very tight controls on, for instance, on My MDC. Okay? It has an Internet connection, and it goes to dispatch through a master computer, then goes out to the Internet. And they wanted to shut off all Internet, "And if you guys need a website, let us know, and we'll add the website in as you need them." And we, as a fire agency, we said, "Sorry, no. You're not going to tell us what we're going to get to or not. You leave it wide open, and if you see a problem, one of our people doing something inappropriate, you'll let us know, and we'll deal with it. But we're going to use these tools and not have you guys restrict us down where it becomes unusable for us."
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] Probably one of the most useful things is if it's a dangerous scene. So if we're told to stage and wait for police, which is very critical, and we know that. Which brings up a good point. Remember I said we do everything electronic? When we have a dangerous situation, the dispatcher will actually come on the radio and tell us to stage to make sure the crew got that message.
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] So without going through all the history, we have two dispatch centers in [County] county, okay? Snowcom and Snowpak. And the dividing line is-- you're probably sitting on it, or very close, okay? So half the fire district goes up to the dispatch center north, the other half goes to the dispatch center south, and the sheriff's office - which is the police agency for the unincorporated area - is at Snowpak, and we get dispatched by Snowcom. So we're covering this area with two different dispatch systems, one for police, one for fire. Now, it's better because we're all New World One computer system now. So it is better, but still, if one of our people have to voice something to the sheriff, it goes from our guy, to the dispatcher here, a phone call up to Snowpack, then they have to call the deputy on their radio. So you can see the back and forth.
Rules-Politics - Policies-Procedures	FF	S	Supervising Field	Not specified	Not specified	Male	FF-S-036	[S2] So you always have that final handshake, and that has improved things a lot. Where that miscommunication on the radio now is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					repeating it back and saying affirmative, is really clearing that up because you can hear quite a few times now when we're at fires, somebody we'll repeat something back and the [instructor?] will say, "No, that's not what I said." And we'll restate what he said. So that's helped a lot.
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3].... We unify command posts now. We try to get so we can relay that once we get to the scene, instead of relaying this-- put a sheriff right next to me. So we're talking to each other and we can both relay without cutting out the middle man. So we're good that way, but it's taken time to get there.
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] I hate it. We have to change passwords every 90 days.
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] Now what we do on our rigs - the dispatch centers and the [trainees?] don't like it much because it's not HIPAA compliant or CJIS compliant- but we use generic passwords. So engine 11, the login is E11. The password is E11. And the unit ID is E11. S if you float from station to station, you can get into that computer immediately.
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] Yeah, everybody knows every unit is set up that way. But it doesn't provide the accountability sometimes, that the IT people want that they know the individual that's using it.
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	Q: Okay. And are there particular issues related to wildland fire stuff that demands different communication needs or have different communication needs? [S] SME: The interagency regulates, yeah.
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	Every response vehicle has a department cell phone. So if you're the company officer on the engine here at the trade out in the morning, the officer going off, "Okay, here's your phone." And then he takes it and it'll come through this phone. Now, a lot of employees have opted to add it to their personal phone because everybody carries one now. There's a cost. I think it's \$12 a year that the department does not reimburse for. They've just chosen to, for sake of convenience, to have it in their

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								pocket. They've gotten it. And I would say not all the employees, but I would say probably 30 to 40 percent of the employees have opted to get it on their personal phone.
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	Not for work related communications. If the battalion chief needs to call and talk to the crew up here, he would call not the personal cell phone but the company phone. So it's not expected that employees need to use their personal phones at work.
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	They will get the information. The MDC does have the buttons responding at scene, those type of things, that when it's working they will utilize those buttons for that to cut down on some of the radio traffic, which is the direction we're going and we've gotten from Firecom ourselves on 911 dispatch. They would like us to use the MDCs as much as we can to eliminate some of the radio talk time.
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	Well, as I mentioned, anything right now that there's caution or potential problems dispatch has been directed through their group to verbalize that to responding crews, just to make sure that they know that that engine got this information and they respond back, "Received." So their mind, they know that they got it. But as far as how crews would like to receive it, I think on just your typical call they're okay with just seeing it on an MDC that, "Okay
Rules-Politics - Policies-Procedures	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	... The expectation is for the crews, or the company officers and medics, is you complete the report before you go home in the morning because the report is basically an extension of a call. Well, as calls get stacked up in the middle of the night, they're not able to get them done. So we have an incomplete report list that gets published once every couple of months. I'm always amazed at how many outstanding reports there are on this list. And sometimes they won't be the whole report. The field report will be done, but it's the one where you come back and sit at the computer, the follow-up one that you got to fill in the blanks for the reporting, the state requirements.
Rules-Politics -	FF	U	Field	36-45	11-20	Male	FF-U-010	We start at 8 o'clock in the morning, and we have a roll call that usually

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Policies-Procedures			Responder					lasts until 8:30, talking about orders that have come out, or any updates to medical protocols or things like that.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	It depends. A lot of people own a driver's position. So if you own a driver's position, you're probably going to be driving most of the time. I'm an EMT, but the driver on my shift is-- they [laughter] seem to always be hurt or off for some reason, so I'm always driving, yeah. So it kind of goes by seniority in that case, in the absence of a actual driver that owns that spot.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Yeah, I wouldn't say that we have a formal pre-plan for every building. I think some of the major buildings have them. But it's more of an informal pre-plan.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	But there is some protocols for switching channels. If there's a RIC operation in progress, they'll ask to switch everyone over to a different channel to keep the people involved in RIC on the channel that they were on and just clear traffic away from that. But that's usually up to the division chief. It used to be automatic, but I think they changed it after an incident to prompt the division chief and see if they want to do that.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Yes, every firefighter, every officer, everybody there's supposed to have a radio.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Sometimes we'll get a tiny bit of crossover like they'll use a police code for a deceased person, they'll say like an 801 or an 802 or something like that. Not everybody knows what that means but the dispatchers all know because I think they usually work both sides.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Just the classification the city gives us as far as ranks, it's the lowest rank. As you promote there's H10, 20, and so forth.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	There's a chart and the officers, their job in the morning is to delegate those tasks. So we all take turns, so there's a watch chart and people are assigned.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Oh, training. Okay. So one aspect that I love about Station [Name] is, you never lose out on your skills here, because you have each type of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								apparatus. So we're allowed to trade shifts with other people. So one day you could be on the engine, one day you could be on the truck, one day you could be on the squad. So you're always keeping up with your skills. So if you're at a, say a single engine it takes-- that's why they have battalion drills, so you're involving other apparatuses.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Ours are satellite. They used to be part of the fire station, but now there's in surrounding satellite areas. And then so within those 15 if, say we tax those resources, there's other private ambulances that can be brought in. But they're not part of the fire.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Yeah. So then, outside the rig, everyone else has a radio that can communicate on whatever tactical channel's on. So you can, within the crew on that incident, or to radio. Because I think at radio, someone's assigned to listen to each channel.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	We designated to that. We have specifically five engines that are not part of our cache here in the city. They're just designated for wild and fire and so they're always available. And [City] knows that we have them, so we're usually the first they call because we have the personnel and the rigs ready to go.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Definitely. I would still pursue college. Our job is so-- it's like winning the lottery. For [City], there's usually-- they hire every other year only for like 150 to 200 positions, if that. And we get it close to 14,000 people applying... It's tough to get. It took me 6 years. It took my brother 12.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	Yep. Yep. And you check the roster and see if you're there that day. Sometimes you get moved based on qualifications. People are hazardous-material specialists, rescue specialists, drivers, officers, and there may be another station that needs them somewhere else.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	So that one person assigned to cook, goes and makes a list, comes up with the recipes, uses old recipes, goes with the old standby, whatever it is. And then you go shopping for the day's food for lunch and dinner.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	Then in the afternoon, a lot of times, that gets split. Whatever didn't get done in the morning, things like hydrant checks, fire prevention

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								inspections of different apartment buildings and houses will get completed. If probationary drills didn't get done or they have extra drills, like they have a book they have to complete, you'll go and drill the probie and do more training to accomplish in the afternoon. You'll also do any station projects. Certain stations have certain responsibilities. So we have, for example, the light rescue vehicle that's assigned to this station.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	No. Well, compared to a hydrant, yeah. There for 15 minutes. Nothing too crazy. Those are just kind of preliminary inspections. Anything that comes up negative on a fire inspection from the company level, it's deferred to our fire prevention bureau. And so the fire prevention bureau, they have to do all the follow up. Yeah, yeah, yeah, they're the professionals.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	Triannual, that means every four months. The division chief, which is stationed here, right? There's two in the [inaudible] with the city. They go and inspect each station. They split them up over the course of the year. But three times a year, this station will get inspected by it's local battalion chief, the division chief, and the rescue captains in charge of EMS responses. And they'll come and check the cleanliness of the station, the care and maintenance of the tools and the apparatus, all that kind of stuff. Member's uniforms. Their personal protective gear. All that stuff needs to be labeled, marked, clean, serviceable, all that stuff.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	There's code one, two, and three. So code one is like, today. Can you get here today? But we never use it. Code two is abide by all traffic rules. Do not turn your lights on. Just drive at the miles per hour. Code three is this is an emergency, life threatening, or potentially--
Rules-Politics - Policies-Procedures	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	That, and the applications need to be vetted. And I know that they're trying to set up an application store, if you will, that vets public safety applications and not just throw them out there in the Apple iTunes store, or whatever the Android version is, and trial by error.
Rules-Politics - Policies-Procedures	FF	U	Supervising Field	46-55	21-30	Male	FF-U-016	So I have to buy my own laptop computer. So that's very important, especially when I travel that I have my own computer. The department

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					doesn't give me one. But I have noticed that some things are easier on the iPhone platform than on the Droid platform. If I'm dealing with documents, I need to forward something really quick, it's easier on the iPhone than it is on my Droid.
Rules-Politics - Policies-Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	No phones. The department does not issues phones to firefighters. Firefighters carrying phones on their person in fires, if they want to risk their own phone, it's probably going to get destroyed. So I would never-- even as a ladder truck officer, I would never carry my phone into the fire with me because I don't want to destroy my personal phone because it's very wet, it's very humid, you bang things, it gets crushed, it's in the way.
Rules-Politics - Policies-Procedures	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	Yes. So that's the kind of capability we need. It costs money to change over systems. Any time we touch the CAD computer it's always an issue for the-- we can't mess up CAD. We can't have an outside application touch CAD and screw up CAD. That cannot fail. So they're very touchy about what touches that, and I understand that. But we need to be able to pull addresses now from CAD because there are systems and programs out there that will give us the building information that pull off that address from CAD. So we got to be careful about what systems we use to do that. We currently aren't capable of doing that at this time, except for the battalion chiefs do have the iPads and the division chiefs. But realistically, the only ones really working on the iPads are the division chiefs because our battalion chiefs in [City] go inside buildings. So you can't be on an iPad while you're inside looking through smoke trying to look at your iPad.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	We don't work for the [city] except I still have to answer to the commissioners just like I do the ambulance district commissioners and the mayor and the city council.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	And we have cell phones on all three ambulances and on the first out engine and then the duty officer's cell phone that the captain of the day will carry and both the assistant chief and I use our own personal phones rather than carry a second phone.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	So all of our full time staff have a radio as well as which I had to make sure that all of our EMT's carry a radio as well and then after that the rest of the (INAUDIBLE 00:08:09) members carry pagers.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	And it's actually that way county wide. This year we finally got a signed document from everybody that if there's a call and you're close by anywhere in the county and you hear it you can go to the scene.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	The problem is when the mayor does a great job and gets some money and the technician orders it all and then leaves so and I could go install it but I'm not allowed to do that anymore. It's not my job description.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	They might have a written protocol but they don't have the CAD based unlike EMT.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	There are five things we are required. Let's see if I can remember them. It's the address, cross street, what kind of incident it is. What are the others? Common building name or subdivision that's very helpful for us so sometimes we get dispatcher a street address and then get there and it's a huge building with a bunch of units and have to ask again. I don't remember the fifth one but anyway.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	I would agree totally. You know we didn't send anybody out this year because we ran into some paperwork snafus and staffing issues are big for us.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	We have protocols that within at least the first year we try to get you into some type of a fire training you know. You're on probation 6 months. We've had a lot beyond for a week or a month and then just leave town and so once they have their training, driving, training and stuff like that and some of that is slacked because of time a lot of it though is I guess me knowing the people and common sense.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	I think right now I have I'm going to lie to you I should know off the top of my head but being I've lost some and gained some I think I have seventeen all in the department at the time. I can have up to 25 that the town will pay for but anything over that as far as their dues because we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have to pay yearly dues on each fireman then I mean that's the max that they will pay for is twenty five.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	It's a great community. Very small, very tight but they have really, really supported this fire department. I mean amazingly because it was just last October I believe we finally got the sales tax approved they voted it in..
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	...I guess the state or the government or the state they give us (00:15:35) used to be I think about \$5,000 a year and that's got to be all itemized so you can only buy gear or flashlights and every penny has to be written down.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	I think they took out a loan and everything else. I guess since I've been chief I've always remembered that and actually probably been a little too tight with money but I'd rather have it there than not you know and this sales tax I thought was going to be a great deal and it is don't get me wrong but it is a pain in the rear as far as being able to use it because I had it in my head that you know between those seven departments actually there's eight because [name] is part of [county] now because they changed the lines but they only get a like a 16th or an 8th of what we get but they divide all that money equally between those seven departments and I thought they were going to hand us a check and say here put this in your bank account well it's not that way. You have to go to the chief's meeting and if you want if it's over x amount of money you have to get three bids, you have to get approval by all the other chiefs by everybody in that meeting, you have to then have your own money, pay for it and then get the receipt and then it'll be not until the end of the next month before you get reimbursed for that. So it's kind of a pain to be able to use it.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	... And now you know these days by NFPA standards your gear even if it's brand new, never been worn if it's ten years old you got to throw it away and replace it. Well it's to rig out one fireman is almost eight grand completely that's boots, hats, bunk gear everything.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	I doubt it because being we're just a first responder agency the state only allows us to do this much. You know even though I've got EMT's and paramedics on my department. As far as I know you know I can't legally carry stuff that they are able to use on my truck because of the fear that a first responder is going to use that when the paramedic's not there you know or something like that so I imagine there's a I don't know how much more a guy could do as far as that besides jumping up to a different agency you know as far as certification wise as a department.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	It needs to be a lot less as a paid. There's way too much whoever state or government trying to get us to be like a paid department. It's not going to happen or work with a volunteer fire department. By our ISO guy if I heard him correctly we're supposed to have every new recruit that I put on or member is supposed to have 240 some hours of driving before I actually let them drive a truck of training.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	Q: So the standards that you're being held to are the same as standards for any kind of paid department? SME: I would say 95% of them yes. There maybe a few that aren't but for the most part yes.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	Yeah. I mean like I said we have protocols that it's mandatory that you take so much training but just for safety reasons you know. You can learn a lot from the training but you know they want us to have you know continued education and continued and continued to keep up on things and the medical side I can see you know because a lot of things are changing there but I mean there's [Organization] training that they want us to take everybody has to have that and it's just a onetime thing thank goodness as far as some of them but there's a lot of other training you know that just I mean firefighter 1, firefighter 2 if you go to [Name] and do it I think it's a 2 week program.
Rules-Politics - Policies-Procedures	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	[S2] Yes ma'am. There is additional training. Our EMR is mostly done through the area vo-tech which is paid for by the department and I think we had two guys just do that and I think it was I think \$350 if I'm not mistaken that we just had two new guys just finish the course.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	[S2] Okay from the government standpoint that makes our regulations understand we're doing this on our spare time. This is not you know we're not paid, we're not sitting here at our fire department going okay we got to have a call any time you know we're at home, we're at our jobs, we're at our kid's basketball game, t-ball games, we're at our kid's birthday parties, we're at our family Thanksgiving's and when our phone goes off we leave those you know and so and then when we have training you know it's like I've been on three calls already this month you know I've taken enough time off. It's hard to get guys yes, we need the training but you know whenever the state's going you guys don't have enough training.
Rules-Politics - Policies-Procedures	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	[S2] There's a lot of them. Which it's good that we have them. It's good that we have them because that way you know we can't say we've got to have this done and it keeps us in check. It keeps us up to date knowledge wise, training wise because I mean if we don't know what we're doing on the scene we just will not show up but it comes to a point that what's realistic. What's realistic for us. You know we're not going to be put in situations like a big city would you know we don't have anything high rise here you know we're dealing with elevators and multiple, multiple stories you know.
Rules-Politics - Policies-Procedures	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	Initially your base job responsibility is fire suppression, preservational life and property and our motto and our code of ethics what we take our oath for is to preservational life and property. To elaborate on that we do a lot of fire preventive safety measures.
Rules-Politics - Policies-Procedures	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	If we see some stuff that you know if the [Job title] were to come in right behind us they may put these people in a little bit of a pickle we try to point that out and say hey you know let's get that knocked out. We have a duty to make note of it but we don't really necessarily have a duty to report it immediately unless it's a life safety violation so we have some days where we're assigned a fire safety education which means anything from going out to a school to talk to kids, going to community centers to talk to community groups, going to retirement centers to talk

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to elderly people so we have routines but it just depends on what day you work per say and what comes down the pipe.
Rules-Politics - Policies-Procedures	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	...Whether you're a volunteer or you're a professional when you're on a call the same level of accountability is necessary and I think that's what they're going towards making sure people are trained, training records are kept. People volunteers in the state are allowed to be in the state fire pension.
Rules-Politics - Policies-Procedures	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	...My wife is fixing to complete her firefighter one as just a volunteer. I have given her specific instructions on what she can and can't do when I'm not here, who she can and can't go on a fire with because there's some people out here who are very trained and I would fight fire with them but there's some people unfortunately out here that I wouldn't give them a garden hose to put out a trash can.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] What do you think? If you can't find it but if they know how MDT, MDT does have a map on it. You can pull a location up on there. It's not directly like your phone will give you turn by turn but it will give you a good view of where you're going.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	Q: So is there do you have policies around the use of cell phones? [speaker 2] SME: No I don't think we have a real... Unwritten more so for the drivers since we do have drivers that are not really specified to have any type of cell phones but besides that there's no really true policy out there like that.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] Yes, yes. So if you go to most cities the fire department is either contract [city] is different the fire department runs it but they'll have their own police service where [city] Police Department is the main security element at [airport]. We are the primary fire and EMS provider at the airport so in terms of EMS the downtown operations we do not transport patients. Out of the airport we have our own ambulances so [city ] Fire will transport patients to area hospitals.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] Only from the airport. Correct.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	Q: I find this interesting as well because you've also got a couple of different universities within the downtown area or within the city limits which have their own jurisdictions in some ways at least for law enforcement but fire covers that all as well? [speaker 3] SME: Yes
Rules-Politics - Policies-Procedures	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] The same way we have their code blue so where we can turn up their frequencies if need be because certain stations we're kind of right on that borderline where we will share our territory a little bit.
Rules-Politics - Policies-Procedures	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] I'd have to say on an incident in a response phase of it we're not talking I mean because police is on their frequency we're on our frequency however once we get on scene or even for a planned event we'll reach out to Sergeant [name] and they'll designate channels so we are not an entity that can provide all of the services needed to manage an event. As of this weekend SCC championship you'll have multiply jurisdictions come in to assist so you'll have state, federal and local agencies mainly law enforcement with the [City] Fire coming in to make sure that you as a visitor of this city get the right service that you need so they'll designate channels so instead of all these agencies being on one channel being on their different channels we have mutual aid channels and they'll designate what channel will operate off of for that particular event and the rest of the city goes on as normal daily operations so we don't compete on any daily services.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	We switched to the 700 system pretty much last year because we have a 150 megahertz system. And in the terrain we're in it works pretty good. Portable to portable. We've got multiple tower sites and repeaters and Vodor systems and it's kind of complicated but it works until lightening hits it and just fries a bunch of it. And the last time it took out most of it. And we're still trying to put it back together. That's our main dispatch where we get our tones from. But we switched to the 700 system that the state takes care of. And other than some dead spots particularly in certain buildings it does okay other than its alerting feature, we have... we have 11 stations. Each of those stations are supposed to have a different dispatch tone so that you don't wake up the whole [County]

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								because one of them has to go to a first aid call.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	I can't talk to the guy in [City] very easy. Okay? And a lot of that's programming but the radio only does so many things. I've got a bazillion channels for my fire department because that's how many is in the band but I don't necessarily need all of those because I--but I can't get outside of my band in one of the A, B, or C zones. I've got to go start changing, it's got 9 zones to it I think outside of A, B, and C and they're separated and creating things and some of them aren't even used. But I've got [County] over there that we ran a call, we run a fire with them occasionally, I can't talk to them. The [County] next to us, they--I can't go just get into their fire response.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Now let me tell you this. We have... other than the 2 radio systems that we're dispatched across 'cause we're dispatched still across 2 different ones because that's a rating thing, for rating purposes. But we also use other technology that we don't get credit for but a lot of people get their messages this way. We have a tech service that we use that comes out of here that AT&T does. It's through the AT&T system and then we pay for what's called Active 911 and that system sends a message to our phones. And those 2 things seems to go down more than--frequently. And it's not--usually it's just some little glitch and once they figure out it's down, the biggest thing is figuring out it's down. Once you know it's down, you tell them and they figure out how to fix it most if the time.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	If they don't have one, they don't get that service. But other than that, no. I mean none of us complain about the fact that we're using our own. You know? It's a nice feature for 2 reasons. One) I don't have to carry the radio. Let's say I want to go to dinner which I carry mine if I'm in the [County] but if I'm close by, I can leave, you know, I can leave the radio outside. It'll--there is a delay in it though. The text messages, some of them come before the tones do because as soon as they're generating the call it'll generate the text message. So we'll--a lot of time and I've got a couple of people, we call it across the concrete divide or the road between the two, as soon as they get a text message they want to start

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								calling on the radio do we have a call?
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	You've got to do 3 hours of training per day on shift outside your regular duties. Volunteers have to do a minimum of 60 hours a year but they're supposed to do up to 240 hours a year. So if you're going to stay in the department you have to meet at least the 60 for us. But we have very few that miss the 60. You have a nuclear plant out here. If their shift falls wrong we may not see them, they have to make theirs up a different way. But, yeah, we do tons of training.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	We're focused on task oriented things at that--that have to be done right now. We don't always get the same information that they sheriff's office gets sometimes. And it's simply because one person is taking it and another person is doling it out. Well the person doling it out... and part of that's our own fault. This radio has a response coord--coordination channel so instead of us moving to it which we've discussed and we try to do, we failed at it and it's an administrative issue on our side, on the sheriff's office side, on the EMS side. We should be switching to a response frequency where everybody hears the same thing and then when we get to a scene if we need to do something outside of that we need to just move that part of--we'll still hear it, it scans.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	That this dispatch system feeds some of the information in, it just doesn't track our times as well. And it's because, again, number of people.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Training-wise, again, I'm going to talk to [Name] when I leave here about getting their people to prompt them to go to respond coord. And it's going to have to be that they tell everybody on particular calls and if they have more than one call they're going to have to move them to something else which we all have. We have a response--every one of us have response channels on these radios. And you can segregate your two calls and only they would hear the two of them. A lot of it, I say that the fire service is 250-something years of history unencumbered by progress. And what it is is it's just hard to get the people to change when something better is out there because it's easy to do what you know. It's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								hard to go learn something that's new that you'll really like.
Rules-Politics - Policies-Procedures	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	And so you've got those levels of things. And they should be communicating amongst themselves and only certain ones, as you move up, should be talking to the next level. That's training. That's frequency. Allocation. That is, you know to make sure you have enough of them that's the ability to talk to other agencies when you bring them in like we do Auto Aid with the two of [city] but we're on the same radio system. We do aid with the [cities]. I can't just talk to them. It's--you know [name] is not in my radio but [name] comes here and [name] goes there and we go there to do things. I can't talk to them. I have to get on a response channel instead of being able to say--tell my dispatch I'm going to be on [name] frequency.
Rules-Politics - Policies-Procedures	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	So we go around throughout the [County]. Land owners who have significant sized ponds, we'll have an agreement with them to where we can use their pond for a draft site and so it's all stuff like a little written up contract and everything. And then we go out and put signs at those places for other people to know that, hey, this is a draft site, if you have a fire in this area somewhere and you need water this is where you go come get your water from.
Rules-Politics - Policies-Procedures	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	... The worst thing about that I guess is the price tag that's on them when they first, you know, hit the market. And of course may be like most anything else, being a government agency, you usually have to go with low bid I understand but I don't agree with. But it is what it is. I can't--I'm not the person to change that. Not singlehandedly.
Rules-Politics - Policies-Procedures	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	I guess if the prices of the gadgets weren't so expensive and/or if we as government entities did not always have to go with low bid type stuff maybe more people could have, you know, the better technology... and that technology may make the difference between whether somebody comes home one day or somebody shows up at their house to tell their spouse and their children that they're not coming back so.
Rules-Politics -	FF	R	Field	Not	Not	Male	FF-R-053	[S4] ... In certain areas of the county we are required to test pressures

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Policies-Procedures			Responder	specified	specified			and flush them, some utility districts won't let us touch them but we still have to identify where they are and so we do that once a year and what else we do, we call it pre-incident planning. We visit all the commercial structures in our first response area and we plan for a fire to happen; we get contact information, we know where the utility shutoffs, are we know where all the exits are - if we have to go inside, we know how to get out.
Rules-Politics - Policies-Procedures	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] If it is a fire whether they can apply safety rescue, water supply; who is going to do what, when, where and how. A medical call, if it is chest pain I am going through my head all the chest pain protocols that I have to follow, what kind of meds I am going to give, what kind of blood pressure I am going to expect, what am I going to see on the monitor, I could kind of pre-plan as I am going to the scene and if I don't get that accurate information from my dispatchers, it makes it tough on our jobs.
Rules-Politics - Policies-Procedures	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S2] If you work you are required to come because you know what I am saying.
Rules-Politics - Policies-Procedures	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S2] Well no, we have so many radios on each truck.
Rules-Politics - Policies-Procedures	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S2] Well they do issue us pagers but not everybody; like I don't know how it works.
Rules-Politics - Policies-Procedures	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S3] We take the pagers home too. We have all got pagers.
Rules-Politics - Policies-Procedures	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S3] [indiscernible] they keep the percentage down and once you go on like I went on 25%, some goes on more percent it depends on who is here the most.
Rules-Politics - Policies-Procedures	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S3] We got two zones, we got a zone here and we got a zone down there. I live in this zone up here, so if we got something that happens down that zone down there then I am supposed to just come here. Same thing with people down in zone 2, if we got in the zone 1, they are supposed to come here.
Rules-Politics -	FF	R	Field	Not	Not	Male	FF-R-054	[S2] Like you have this, we have to I mean if no one has got a truck yet

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Policies-Procedures			Responder	specified	specified			and obviously go by and go get a truck but the truck has already responded to drive to the scene.
Rules-Politics - Policies-Procedures	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: And you tag in before you go out and fought the fire. S1: Okay. S2: And then make sure that everyone had a part which is personal accountability report? Personal accountability report. S1: Okay S2: Like you had to be spot on where he is going, this is like pretty much a natural disaster.
Rules-Politics - Policies-Procedures	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S2] They can't let everybody go because they have to have somebody to stay here.
Rules-Politics - Policies-Procedures	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S2] Even the dam, we preplan the dam.
Rules-Politics - Policies-Procedures	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S2] [indiscernible] two biggest places around here, other than your schools I mean we also have to preplan the schools too.
Rules-Politics - Policies-Procedures	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S3] Really we have got all the big ones preplanned in our district.
Rules-Politics - Policies-Procedures	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	No. I go straight to the scene. If it is down here, I go straight to the scene. Now if it is up in the [town], we've got a big mutual aid or big fire, the [Job title] of radio dispatch over all our pagers way to, you know, the station, which is [Name] is our station name. Wait for [Name] for, you know, we will call you if we need you. Get the trucks. If we need trucks, we will get the trucks ready and we will start getting ready if they dispatch us again. And, if it is big enough, they will say we need a second lot, and then they will page us again, and that means by that time they are calling other departments for mutual aid to assist us on the call.
Rules-Politics - Policies-Procedures	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	... Because, I'd hope not -- because that is our plan, if schools - active shooter, all the fire departments are supposed to start converging for mass casualties and all that stuff. But we have handhelds, walkie talkies and they are hardest thing to hear when you are in a fire, I mean, there is no way of changing that.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	Right. Unless we get our Captain on the scene or one of the lieutenants and then they are on command until, if he comes, sometimes he doesn't -- he will call and say, I'm at the station. If you need something, let me know. And then we are like okay, we got this handled, like if it is a wreck and if it is not real bad. He'll say -- alright, I am standing by the station, let me know. But most of the time we got one or two lieutenants on the scene that are -- you know they have been doing it a while so they know how to take care of it. We got a couple of real active firemen and their lieutenants and they know pretty much what the chief knows.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: department issued iphones] ...We just got our patrol but everybody at the Sheriff's office has an iPhone. Text messages between co-workers and bosses about things you can need. And sometimes it's as simple as, during the workday, "Hey." I'm interviewing somebody in the jail, "Can you bring me a form?" Cool. Or it can be 10 o'clock at night, "Come find me in the morning," or, "I need to do this in the morning." And some of that bothers me, some of it doesn't. That's why I try not to go through the emails. But some of them are-- there's a lot of junk mail. And being me, I get my Cabela's emails sent to my phone. So that way I just-- but on weekends, I'll spend 10 minutes at a time just waiting through it. I haven't gone on. And I've just waited through...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: department-issued iphones] So the detectives got them and command staff got them before everybody else. Patrol just got them the last year and a half or two years. And I want to say I've had one for-- well, since the five came out, so probably three to five years. They don't buy some nice ones. I mean, the one I got now is a 5C. C stands for crap [laughter]. But we get the ones that-- they're not upgraded if I break it. I might break some stuff. I'm kind of clumsy like that. Because they'll give you the new Penny phone, the new Penny iPhone. I'm like, "I cracked the screen on one of them. I'll just go get it fixed. I'll pay you the 20 bucks." ... No, just give you a new. And everything is backed up through our cloud. So it takes half an hour to swap everything over, so is what it is.
Rules-Politics -	LE	R	Field	36-45	11-20	Male	LE-R-017	[RE: authentication] ...Actually, this one does... Maybe it's an S because

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Policies-Procedures			Responder					the C, they discontinued. But I've got a biometrics on this. I don't know if we have a departmental policy that you have to. I don't know. I do just because... I'm minor anal about this. So yeah. I've got a four digit pass code. I don't have the one where you need to type the Declaration of Independence to get into it because that's just annoying. But then I got biometric and then the pass. And then for our county email, it's all through Gmail. I'm not a fan of because I don't like the fact that Google keeps everything. I'm sure Apple does too. And I'd be naive to say they didn't. But then through that, then we have two step verification. So I can access my Google drive, I guess, every 30 days. And it's always at the most inopportune damn time... I've got to go into the Authenticator app and get my six digit number or whatever it is, and then go back and type it in.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: apps] So I've got Facebook, Google, Voice, and Messenger. But they're all linked up to not my real Facebook. So they're all hooked up to UC accounts, undercover accounts. So I got Snapchat because dopers put all their shit online. So you can get Snapchat video. I got my Dunkin' Donuts app because I need to know where I can go to get a good cup of coffee [laughter]. Chive, like I said, for boring meetings so I can entertain myself and not be loud. Reddit. We're just starting to get into dark web and some stuff like that. And there's a lot of shenanigans of food on Reddit. So I have the app but don't really know much about it. I've got [State] Road Conditions. Being up here and being-- it can come in handy especially when your only connection to somewhat really outside is [Street]. It's your main one. And it closes down for hours at a time so-- and it's always when you need to go to Denver. Let's see. Pandora, Spotify. I've got one called Scannable. So when I get sent somewhere, we have to keep a copy of receipts. This takes pictures of them, and then you can email it to yourself in a PDF form. WhatsApp, another one, you talk to the fine citizens that I deal with. Google Maps...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	I am very blessed that my office is here. We're off site. I'm not at the main office... So most of our guys are based out of our sheriff's office.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								But then we have a couple that just lived in different spots. We have a couple substations. That serves the community better. But I get fuck all done when I'm in Eagle at the sheriff's office. There's too many distractions. Like I said, I can handle homicides to hanging Christmas lights.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...And being detectives, it's a spot we all have to attest for, and everybody gets picked because of that drive to do the right thing and get stuff done. But it gets very frustrating that the boss is always coming in and derailing your train of thought.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...I guess nationalized reporting database, or so maybe not reporting but name database. When I first started here, there were, I think, five or six agencies in the county. And we each had our own report writing system. In that report writing system, you each had your own name section of names, the addresses, and everything. Well, then we all joined up, and we got on one common one for the country, so all agencies because you'd have the same person entered six times in each of these things. Now, we're all just entered once, one big name database...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Well, I am. I mean, I got a car. I got a 4Runner, but I hate it. I had [inaudible] Ford I liked too much better. But patrol cars, there's just so much crap in there that it's tough for me to fit. And there were the different styles of cages. And if I went back to patrol, I'd-- I'm at a point where I could spec out my car within in the sense of, "Don't put this here. Put it on the other side. Or put this piece of equipment somewhere else." So I got that little bit of stroke. But I'm very blessed by that.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	For our agency, we're not supposed to, but we're down enough people that we have a one to one-- or just about one to one so everybody has their car, which I think is great because you know how that car operates. And naturally, guys that have their own cars treat them better because if it's a pool car, everybody drives it like they stole it. It's kind of like a rental car.
Rules-Politics -	LE	U	Manager	46-55	31-40	Male	LE-U-020	Sure. We have Motorola as our CAD vendor. And we were moving from

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Policies-Procedures								version 3.1 to 3.3. It's a large step. There were steps in between that we didn't take. So we're moving up to that. And in addition to, not only our communication centers that I'm directly responsible for, but our MDCs, our mobile computers with the troopers. And that's been more of a challenge, test-related. We do have a section that's just in charge of the MDCs and mobile. So I'm less hands-on with that, but still overall seeing on the project, so.
Rules-Politics - Policies-Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: CAD-RMS auto-populate feature] Yeah. That's kind of one of the important pieces that we've been working on, so... And that kind of fueled the upgrade. For us to do that, we needed to get to that level for it to be able to do that, so.
Rules-Politics - Policies-Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	Not really. Apps are very limited. We don't issue our officers phones... We do for supervision, but not the individual officers. Obviously, everybody has one. And nowadays minutes are unlimited. You know it's not like the old day. Texts are unlimited. Data is the only thing they charge for basically now so.
Rules-Politics - Policies-Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	...when our CAD went down, we went back to manual. And we used to be on a card system, and writing things down on cards and the frustration level of our dispatchers was through the roof because they're not used to it, writing things down. There's very few people left in this business, you don't stay in this for 30 years. So they had no concept of what writing things down were and then the ability, when it came back up, they had to go back in. The frustration of back-filling information. And so it's gone from a-- when I started, we-- the radio system, we shared channels. It was VHF. So we still had multiple-- we actually had more dispatch centers. We had 17, now we have 6. So, we did consolidate
Rules-Politics - Policies-Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: consolidating 17 dispatch centers into 6] Part of it was we were mandated by the legislature to do it. So it was a mandate, but it was one that was a money saving, instead of having to keep up 17 individual dispatch centers we can consolidate. So, you don't have 17 recorders, you don't have 17 copy machines, in the equipment end of it. But people, mostly all of them, we kept the majority of what we had. So it wasn't an

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								FTE savings, it was more of an equipment savings. And an efficiency savings with one of the biggest pieces-- most of those were one-man centers. So, if you got into a situation, you were it.
Rules-Politics - Policies-Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	One of the things we have, it's called the Safe2Tell program, which is it's for kids to call anonymously to report incidents involving in schools, whether it's bullying, suicide attempts, all those type of things. It gives them a unique perspective to be able to call into-- when it started to-- it was a toll-free number, totally anonymous. And when we started this back, maybe 10 plus years-- and it was good, it was busy, it was those type of things, but a year and a half ago, they implemented the app and it went through the roof.
Rules-Politics - Policies-Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	...When DTR came in, when Digital Truck Radio system came in, the ability for responders to be on the same talk group, same thing, share information, is there. We still have agencies who, for one reason or another, did not adopt DTR. They're on a different system, or they're on a DTR system, let's say silo, because they want to control off of states. We do have silos of communication, so we do have interoperability channels with all the different agencies. So there are some that we can still talk direct to even interoperability to multiple systems. But there are some that have to go through dispatch to dispatch. So we have a little bit of everything. A lot of our centers that we dispatch police, fire, EMS, we're dispatching it all, so that's a one-stop shop. So we have the ability to go from-- we do everything to-- we have the interoperability and then some we don't have much of anything other than dispatch to dispatch.
Rules-Politics - Policies-Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	They all know how to dispatch all of them, but they do rotate through different areas. I mean, so some will do law, and then tomorrow you come in and you're going to be responsible for the EMS, or fire, or those type of things. And they do rotate through each and every one of them because you can never predict on who's going to call in sick.
Rules-Politics - Policies-Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	So that's the ability for us to-- and that's required of all of our centers. We have our busy radios with the multiple troopers, and everybody has to have their ability to work that radio. And we get kick-backed

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								sometimes and says, "No, we want our dispatch. We want this dispatcher." And I'm saying, "Yeah, but I've got to make sure this other dispatcher that may not be as fast, and may not be as fast, has functionality in you because your favorite dispatcher may not be here someday. And if the other one has never been there, it's going to be a lot worse."
Rules-Politics - Policies-Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	And we've gone a way to-- another trend that we got a way with, there use to be a-- we build the patrol car and then we put in all the other stuff. You know, the light bars, the radio, and everything, so a lot of stuff, push bumpers. Now we're ordering a lot of that on the car. So where we use to switch out type things, for a budgetary person, it was probably a really good thing, that you can-- but the down time of the cars and the ability that you've got four-year old light bar on your car that you're going to run for another four years is probably not the best thing. So we order these things and then they come in one package. The only thing is when they're done, they belong to our fleet management. Then everything involved, we take the specialty stuff off of it, but like the push bumpers and type of things, they go to sale at a fleet so-- it's a good thing that we have the ability to tap into it because we know those cost and we don't have to retro fit-- And our build outs are a lot quicker.
Rules-Politics - Policies-Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: patrol car build outs] Well, it's a connectivity issue. We get the cars, and then they have to put in the radios. They have to install the radios, have to install the connections for the sirens, the light bars, those type of things, the cages. The cages they put into them, as well as their equipment. And then they have a box that they put their stuff in so--
Rules-Politics - Policies-Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	And one of the things we have in [State], we set up a-- it's Star CSP line which we use for road rage, and impaired drivers. And those calls are directed to State Patrol dispatch centers whether they're in a metro area or not, because we're not taking away from true 911, it's not a 911 call. But they did direct it to us and we typically are responsible for the highways. Those calls obviously go through the roof as well. One of the huge numbers that we have. So, again, it's a technology that we saw an

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								issue and said, "If there's a way we can get some of these calls direct to us, we'd get better information." So we worked with the carriers, all the major carriers, we met with them and set it up. And initially, when we did that, time on phones was an issue, people didn't want-- so we got it to be a toll-free call.
Rules-Politics - Policies-Procedures	LE	U	Manager	46-55	31-40	Male	LE-U-020	...In law enforcement, it's different because typically your sheriffs are elected, so they're going to do things to keep themselves in a job. PD, depending on the area, could be there for a long time or it could be very volatile. You're at the whim of the city council or whatever that they'll hire and fire or do whatever they want if you don't do what the mayor tells you to focus on...
Rules-Politics - Policies-Procedures	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	So overall, officers go through training, and then they're issued a body camera. And they wear them on a daily basis throughout their patrol shift. At the ends of their shift, they're required to have it on when they're dealing with a citizen. And then at the end of their shift, they dock the camera, the video, automatically offloads. We're one of the few departments in the country who have integrated with our computer-aided dispatch systems. So it'll automatically tag the video as belonging to Officer [Name] and Officer [Name] who's on a burglary call, so that's what this video corresponds to. That eliminates the officers having to manually enter metadata into the video. So that's kind of just overall how the system works...
Rules-Politics - Policies-Procedures	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	Just a few months. Yeah, in fact our policy is still awaiting signatures, so we're trying to refine going through ICP's best practices, that kind of thing, to establish our program... we have three individuals who have attained their FAA certification to be able to fly them. It's kind of in its infancy stage as we're trying to take things slowly to do it right basically.
Rules-Politics - Policies-Procedures	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: LPRs] And we required training for most of it for being able to use that. And it requires that the officer be able to want to use it and be able to have the time for it to do it.
Rules-Politics -	LE	S	IT	Not	Not	Male	LE-S-015	[RE: training] Or somebody's coming out of a special assignment, non-

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Policies-Procedures			Specialist	specified	specified			patrol assignment. Somebody's coming out of narcotics, the most common one where we'll spin them up on the cameras. Get their cameras [in tune?], spin them up on the license plate reader stuff, sit down, do a refresher with them on the report-writing program, and the dispatch program, and MDCs because they enter reports differently, like a detective would, as a vice or as patrol officer, where you do it from the programs on the MDC. Then, it's got to go through an approval process, so how they do it is different. So, yes, so [name]'s spinning someone up on something in training them.
Rules-Politics - Policies-Procedures	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	Not very many people like our computer-aided dispatch system that we have right now. We have one very different company before that everybody liked a lot. We switched away from it. Now, they don't like this one because there's some issues with it. So that contract comes up every 5, 10 years, so we'll get out of that sooner or later.
Rules-Politics - Policies-Procedures	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	It depends on your assignment, but for the most part, the officer on the road working a patrol assignment doesn't get a cell phone. There are officers who are on call or something like that, then they get a stipend for their cell phone.
Rules-Politics - Policies-Procedures	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	Some officers are given a choice of a stipend for their cell phone or a department-issued cell phone. There are other officers working in covert units that are going to need to use their cell phone for that type of operation. So those are city cell phones that they're given to the officer.
Rules-Politics - Policies-Procedures	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: responding to incidents] SME S3: And I'm not nearly so greedy, I don't [laughter] currently go out and work the road, although we are allowed to go out and work the road, and actually encouraged to go out and work the road. Yeah, but I am 2 years removed from working the road after 35 years of being on the road, so.
Rules-Politics - Policies-Procedures	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...we just went to a form for putting our property in, booking in property and evidence. That is getting rid of the paper form. So in a sense, it's easier. You're not lugging around- you don't have a briefcase, you taking in the car that weighs 20 pounds because it's full of stacks of papers

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and forms that you need. But now there's additional steps you have to do on the computer to print out your barcode to slap on your property before you turn it in, and those extra steps, people are like, "Easier, my foot. This is a pain in the butt." When it is kind of-- actually, it's a lot simpler in the long run.
Rules-Politics - Policies-Procedures	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	It's another new thing they just did was a got to [inaudible] dispatching. I hope you are familiar, but that scripted thing that the call-taker do when they get a call. It affects how the call prints out, or how it displays in the car, and it affects how it's aired, and when it's aired. And so there's been some growing pains with that. But everybody is getting more, and more used to that too. I think they, for the most part, they do pretty well. There's been some problems, some complaints, and one of the solutions that they just went to is to bring dispatch back under the police department umbrella rather than having it as a separate entity that it was before, so that means they can do rest here.
Rules-Politics - Policies-Procedures	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	So internal communication, there isn't a lot except at the chief's level, I'm sure there is. But there isn't a lot of, I guess, communication interaction between the agencies. Now from a radio standpoint, or a radio system, we have the capability to talk across police, fire, that kind of thing. So that's pretty seamless. I mean, we all have the same radio system. Everybody in the city has the same radio system. We have it set up so that if a street worker is in trouble and needs help, they can get on the radio and call dispatch and get a police response.
Rules-Politics - Policies-Procedures	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	We've got a lot of posting restrictions on these social media.
Rules-Politics - Policies-Procedures	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: mobile fingerprint readers] ...People like them. They've been very helpful when they've used them. Overall, unless there's something wrong at a state level where the system's down, they work super fast. And actually a few times we've used them, two or three times in the last 12 months to identify cadavers. Dead people, no ID on them, they've done that, and once the coroner gets there, you get the coroner blessing. They check the fingerprints. They'd be able to get reads off of a bodies before,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								so.
Rules-Politics - Policies-Procedures	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: mobile fingerprint readers] we got a lot of positive feedback about it. It's a very, very useful tool, and we have a policy that is in place where there are rules about when you can use them, how you can use them and everything, but it's been a very successful technology implementation.
Rules-Politics - Policies-Procedures	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: mobile fingerprint readers] it's voluntary. They don't have to submit, but if they don't, you then have a decision to make and then you proceed from there.
Rules-Politics - Policies-Procedures	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: new technology] ...by policy, everything has to flow through our section, and then [Name] who was here-- he's my liaison with IT, so [Name] and I then coordinate, research, and determine whether or not it's even worth looking at. And then our next question is, okay, where's the funding source? Because we're not going to do a whole bunch of research and everything if okay, we do all this and then there's no money for it. So that's kind of how that workflow goes that somebody comes up with an idea. They contact me. We make a determination whether or not it's worth looking at, or maybe, we've already looked at it, so that's kind of how that works....
Rules-Politics - Policies-Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	We use cell phones quite a bit too. We try not to use them too much when we're on scenes because it's not recorded. But a lot of times, once the scene's stable, we'll be using our cell phones back and forth to get the stuff we need instead of using up the air time because we're limited. Only one person can talk at a time, and some stuff is more important, some stuff isn't, so there's a lot more cell phone usage...
Rules-Politics - Policies-Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	When I get here, I get in my assigned car, just log myself onto the CAD system using our computer. And then get a go-out, or usually, it's catch up on the other stuff I do. And then once I go out on the street, I start doing traffic enforcement. Even though I have access to-- I can directly input into CAD from my car, put myself on calls and stuff like that, our agency does not do that. So everything we do is over the radio. So every

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								traffic stop I call out is done over the radio. Every call we get dispatched to is done over the radio. It also comes through the computer as well, but in some ways, we're still antiquated and require that somebody has to hear it...
Rules-Politics - Policies-Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: transition to a regional comm center] ...They say they're going to try and keep people the same from this agency because our comm center--they essentially lose their jobs here, and they're offered a job at [regional comm center]. And so, very few are actually going to go. We've been losing dispatchers over time since they made that announcement. But I think, in reality, we're going to have a dispatcher on the radio today, that may have never worked with [city] at all. And tomorrow they're working for [county] or [city] ...
Rules-Politics - Policies-Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...so back on car traffic stops, do all that. I can do the computer dispatching a little bit if I'm not-- I can assign a case number or if I'm going on something where there's not going to be any public contact. So if I'm vehicle maintenance or if I'm going on a follow up or a meeting, meetings contact, then I can do it on the computer that way. Now, our animal control people, they can put themselves on dispatch calls. They're going to the same houses and their not armed, so a little confusing as to why they don't have to do it on the radio either, but it's how that works.
Rules-Politics - Policies-Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Well, the computer has the ability that I can see every call that's on the screen. I can click on it, and I can technically hit the button to assign me that call, and I would pop up, and it would be assigned to me. But patrol's not allowed to use that. Our animal control officers, they can look at it, and they can hit the button and self-dispatch. So again, I think it's just stuck in the-- the biggest fighters we had about going to self-dispatching, which we tried a dozen years ago, was we had a few old time sergeants who wanted to hear absolutely everything that happened. And they told their people not to engage in the testing, so then it went downhill. And without support from the supervisors, it didn't progress. So then we're back to the radio, and most of those supervisors

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								are gone now. And most of the supervisors we have now, frankly, started way after I did [laughter]. And I think technology is moving that we can move more in that direction now. Just a slow process.
Rules-Politics - Policies-Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Everybody is getting to body-worn cameras and stuff. We don't. We don't have cameras on our cars. We don't have body-worn cameras as a department. We are allowed to wear them on our own under certain guide lines, and I do that, but it'd be nice to have one device where, if I wanted to, I could hit the button and hit record, and record all that stuff...
Rules-Politics - Policies-Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: paper, but want electronically] Yeah, things like tow sheets. We're still doing them on paper, even though technically I can build an app into our eticketing where we could do that. We have a lot of forms from the state. Like drivers, if they get a DUI, then those revocations, they won't allow us to do an electronic version. We try to come up with an electronic version and, "Oh no. You can't do that." I don't know why not. I can print out three copies. But they don't like that. Other things, like DUI field notes and stuff like that that I've already generated as a PDF, we're still not using electronically. We have access in our RMS system to do affidavits which then keeps it as part of the permanent record in there. But, again, at the command level, we haven't forced the officers to use that, so some still use Word and type it up. And then we're scanning and attaching, all to six different systems, and I think that's the big challenge...
Rules-Politics - Policies-Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: body worn cameras] We've made that decision, we're not. Data storage is extremely expensive... they want 250,000 a year for our department to do that. We're actually spending 250 a year...
Rules-Politics - Policies-Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...True, primarily we're secretaries. We take reports. The emergency responses are limited here, but everything has to be documented, so you do that. So our officers were in here all the time, so now we're going back, and we're now going back to another dictation system. And that's an app, it'll be on our phone that I can record, and it'll send it to them, and they'll type it up for us. So hopefully our reports will get better and faster, as far as that type of stuff goes...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: drones] Policy's written, we just haven't made the purchase yet. In fact, two of us are going to [City] on Sunday to the training to get our pilot's license. Because we're the government, so you have to go through extra hoops [laughter]. Yeah, I could buy one on my own and fly it over my house today. But because I'm the government, I have to get a license and all kinds of other approval. So yeah, it's coming. Strictly for the purpose of [inaudible] crime scenes, search and rescue, tactical situations, and that type of stuff. It's not for the spying. So we've had to--everybody gets concerned, so we have to put all these special caveats in our policy that this is what it's for. Again, [Name] can do it, but we have to be careful.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	It's been kind of a point of contention in our agency, specifically, that we are prohibited from using the cameras on our iPhones to take pictures of stuff because we have body-worn cameras that take video and take pictures, and we are issued digital cameras and that sort of thing...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	... But our agency gives people the option of if you want to pay, I think it's 10 bucks a month, you can use your work-issued phone as your personal phone. So there's a lot of people that do that and don't have the separation of, all my personal stuff's on this phone, and all my work stuff's on that phone. So then you have the issue of if I take pictures of a crime scene, and I have pictures of my kids on here, not getting those all mixed up and in the wrong place.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	So specifically for medical calls, there's something called the National Academy of Emergency Dispatchers, and they will certify people to be [Job title], which is doing the CPR over the phone, giving those instructions, or giving instructions for childbirth. But they have a specific set protocol for 30 to 40 different medical emergency classifications that pretty much every medical call will fall into...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: dispatch question protocols] I believe they have that for fire and law as well. I don't know that we do that up here, but, at least back when I was there, there was a procedure manual, and when you're going through training, you'd go through it call type by call type. If this sort of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								thing, this is what you're going to ask. A lot of those are very similar. If it's a law call, whether it's an assault, a shoplifting, this, that, or the other, you want to know what the suspect's wearing, if they're still there, if they're armed, which way did they go, for pretty much everything.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: body worn cameras] I don't know what kind of storage it has. And our policy isn't to have it on 24/7, so it's just when you're making a contact, this, that, and the other... So we'll turn it off. So I'd say the amount of actual time it's recording is probably maybe a third of the time that we're on a shift.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: recording via body worn cameras] If it's anything more than "Hi. How are you doing?", pretty much. We have a very-- we have a very good relationship with our public up here. And, for example, an open container of alcohol is against town ordinance. 9 times out of 10, if I'm on patrol, I can walk up to someone and say, "Hey, that's against the rules. Can you go throw that out please?" And they'll say, "Okay."
Rules-Politics - Policies-Procedures	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: in-car cameras] That sort of thing, as informal as it is, is still an enforcement action, so that we would still want to record.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: policy for manual operation of in-car cameras] I'm certain we do. I don't know what it is [laughter]. Because usually, turn the overhead lights on, that fixes it. But, yeah, obviously there's occasions where that, for whatever reason, if you don't have all the overhead lights on, if you just have the back lights on, that doesn't trip it. So that sort of thing.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	When I first started, there was a bag phone in the car, but don't you dare use it because it was so darn expensive...So that was only for a true emergency that you can take it, and you had to unplug it from the wall and then plug it back into your car. So you didn't really have the cellphones. And then as it progressed, then I started supporting more of the in-car computers as those systems started getting more robust and they could do more things...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...We've had a big challenge lately with the increase in surveillance systems that private businesses have and which formats or what types

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								of files do we want to bring in to our evidential storage system, and which files and formats we're saying, "We can't really say these are secure." I can't testify that the video's authentic because I didn't take it anyway. So do we treat it the same as a witness statement? Because whoever owns the system is going to have to come testify. So what's our procedure for making copies of that to get to discovery? So more and more of these things keep coming up...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...the frontier and the work always has to keep going as new things are always popping up, such as you've got a box of thumb drives that we're issuing to everyone because we realize people started using their own private thumb drives. When they go to the gas station, the guys say, "Well, I've got this video I can give you." Well, how do you transfer that stuff?
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	We don't have body-worn cameras yet... most of the agencies in a county do. So I usually talk with them about it, just kind of the pitfalls that they've gone through. And then read their policies and there's bigger discussions on the privacy issues. When to record, not record. So we sort of stood back and watched that from the edge. The current under sheriff and I used to joke about, "The day my word's not good enough in court and they will demand to see a video, it's time to get out of this line of work."
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: body-worn cameras] And the data storage, cloud-based, and then how do you get that file to the defense for discovery purposes. Sometimes we don't get to have the final say. Most often, we don't get to have the final say. It's going to come back and the attorneys and the courts that are going to make us change our practices, whether it's in evidence storage...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...We've gotten state-wide a new electronic discovery process. Just adds that much more time to our records folks to do what they used to do. And, okay, now stop and now go into another system and make sure everything gets transferred over from our system and uploaded. More stuff keeps getting added in. I'd like to look at it holistically and say, as a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								system, we're saving time and there's efficiencies. You, as an individual person in this position, it may not help you.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	So the state passed a law where it charged the [Job title] Offices, state-wide, with creating a system so that every law enforcement agency in the state submits records to them electronically. And they engaged a vendor who did that, and that vendor wrote the interfaces with whatever records management systems we have. But it's a separate system you log on to. It's a manual data transfer now, where you go pull the case and it populates the fields. And then they have to go through and do the attachments and you can label what each of the attachments are. The additional step that all the records folks have is they have to print out the narrative. So the report that I wrote, they print it out, create an electronic copy of it, and reattach it...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: electronic evidence discovery process] And that's always an interesting one. When I first brought that up, the person in records was literally printing it out, rescanning it, and attaching them as a PDF. A said, "No, no, no, I meant just print it to PDF and attach-- it's all electronic. You don't have to physically use paper for anything." Then there's a whole discussion on, do you still keep paper files? ... Do you just keep electronic files? I think it's mixed within the county. At the sheriff's office, we still keep paper files. So everything is replicated into a case file that's stored somewhere. The salt mines. I don't know. Oklahoma, Illinois. I don't know where they are. So, yeah, we have all of the physical copies of everything.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: evidence discovery process] certainly the CEJA standards start coming into play with that, who can see stuff, and how secure everything is, and is it encrypted, and the FIPS standards start to come in where you're talking about the in-car stuff. So all these new layers keep coming in that you have to incorporate in as well.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: evidence system] it's not a lookup system. You're logging on to upload your data that you've already logged on and looked at and used. So it doesn't have the highest level of security. I don't know how it is on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the district attorney's side. But only a few people within the department need to get into that. So there's not very many people that even have access to it. But it doesn't give me any ability to go look at another agency's records. So as we talk about those levels of security and if it's really a low-level program, how much security? Do you have to have two-factor and change a password? Sometimes yes. I think it needs to be looked at on a program-by-program and what's it really doing and what's the exposure risk.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	I think it comes to the question on, as they're going through this process... even on the National Broadband for Public Safety when they're defining who's a primary user or secondary user and dispatch wasn't included. I think when you look at the people who actually physically respond, and not to say when a dispatcher answers the phone that's not a response, but to me that's a very controlled environment, and if they had to step away for some reason, someone else could fill in, there's not that immediate sense of peril and they're talking on the phone, and that they're doing a lot more stuff on the computer screens and looking at stuff, but they're not out there where the sights, the sound, the smells. To say taste comes in, but on a heavy wet foggy day, you get those tastes sometimes in your mouth...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I guess that's where I see the differentiation on who's a first responder, someone responding to a scene or in the field versus all the other people who are certainly part of the public safety system and may be on the front lines but don't get that full sense of engagement. To really have those impacts you've-- I've never heard about dispatchers getting tunnel vision or auditory exclusion or all the other things that we're regularly trained on and discussed to recognize in ourselves and in others because it creates a safety situation that can affect others. I think there is a line there and I think it's continuing to be defined... By FirstNet saying we've got to draw a line somewhere, and where is that line, and what could you objectively and scientifically measure and say, "Here's why there's a line." When I thought about it last night, I think that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								engagement of all five senses and the potential impact it can have to you, in the sense of immediacy and threat and security to you is what kind of creates that.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	I do have a department-- this is my personal one from doing the contract work so a lot of people just know I carry that one. I have my department issued cellphone for when I'm doing patrol shifts because if I call people back I'm not going to use my own cellphone. So it's kind of a mix of which one I use. And I usually carry them both now but my department issued one's not on as much unless I'm doing more patrol work where dispatch is transferring calls to me. Yeah. Then it's to get in and check the emails and respond to a few of those. It's for the more formal, written stuff. And then, occasionally, I actually get to have meetings with people.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...there's lots of apps that I use regularly in my day mainly for communication, and organization, making sure life keeps moving and doesn't get too hectic. Our department hasn't gone into work-specific apps. Certainly, they are out there. The response apps. I know some of the other agencies in the county have the information apps that are tied into dispatch because they carry their phone. So as soon as the event is created they get a notification on whatever device that your agency has a call coming through. And that's going to be dictated by their workflow and the type of device they have. The mix in law enforcement versus fire...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	a lot of people have that app on there to go through and log in and do stuff. And that's the area that there's so many out there. I wouldn't possibly know what everyone in the department has put on their phones. They're not really restricted. A guy who's on the SWAT team may have an app dealing with windages and that because that's of interest to him.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: app for situational awareness] ...But it was kind of a new concept at the time since, as I mentioned, the department wasn't using cellphones yet, or the smartphone, so the concept of having apps that did all this stuff wasn't there. The chat was more encrypted than I think if we just

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								think of the standard messaging apps that are within the phone. Sometimes that comes into play, sometimes it doesn't. Sometimes the tracking of those messages can come in if we're all using one app. And so we go through a server and we tell everyone, "Hey, guys, all this stuff is cataloged. Just be aware it's discoverable." That's always the issue guys want to know. A lot of time guys will use apps that aren't official apps because no one knows they are using them, so it could never be discovered, just like a phone conversation... Everyone knows everything on the radio is recorded, but if you call me on the phone we can talk about whatever we want.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: LE paired up] So from a security standpoint, I could stare at the device and not worry because I know another guy was with me doing situational awareness if something were to happen. And so we recognize that in that environment. I think we also came out of that environment recognizing that's a potential pitfall. You can't give people more stuff [crosstalk]- on my radio, I can talk on my radio and watch and see everything that's going on. We all practice and train for that. Now, you give me something I have to hold and I have to data input. You can't maintain both of those. So that was one of the things that came out of is recognizing you're deploying more and more of these devices that give you the security and personnel. And if it's truly a tough environment, you need to pair people up just for that purpose. Kind of go back to have one person who's running all the devices in communications and someone else who's making sure you're safe.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	that's kind of my work office where I have all of the computers that I can work on. And all of the issue of I still need to get rid of all those old computers that are no longer functioning and sort of make sure they are disposed of properly and sign-off the degust four times or drill through, whatever the standards are, to make sure of that. I can't just get rid of them.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: technology in new vehicles] And I didn't realize all of those were in there until I just had a little more time in the car. So if a patrol guy jumps

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								in a car, are we telling them all these things are there? Are they just discovering it for themselves? Should we, as an agency, take responsibility in saying, "Here's the things that should be turned on"? You can't turn off your backup sensors because we don't want you backing into poles. You can turn off the lines turning left and right when you're backing up... More things I don't think anyone was aware of is there when we get these cars.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: assigned vehicles] For the most part, they are, but things break. Cars get hit. It's never an always. For the most part, yes, they're assigned and people customize them. I'm amazed how many cars I get in to do work on and there's a satellite radio receiver. I mean, these guys live in their cars and I understand that...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...It was a challenge when the MHz stuff first came out because, on the VHF world, that air-to-ground communication was pretty clear and they could just dial in whatever frequency they wanted. With the 800 stuff coming out, for a while the standards didn't allow a direct air-to-ground channel. They're worried about, on a repeated system, the helicopters getting up too high, lighting up too many repeaters, and tying up resources...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...So for a while, we sort of lost communication if the helicopter was up in the air and that created some frustrations as a new technology came out and people realized, you get up in the air, kind of like, "Why are you not supposed to use your cellphone on airplanes," because you'll see so many towers. Not that that's going to bring down the airplane. We would hope that airplanes are made better than that. But there's other reasons and they don't always get explained properly as to why they make these rules that say "No." The helicopters there and flying around regularly. As you saw yesterday, it's probably not a common sight to look up and see three or four military helicopters just flying around, doing different things.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: helicopters from military training site] So there is a more formal process, the chain of command to make a request for a resource. And

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								then they approve it, or don't approve it, and then it comes down to logo base to say, "Yes, you can use the resource," whether it was a budgetary standpoint. Fortunately, we didn't have a bad situation that necessitated this. No one got hurt and was told, "You weren't even approved to be up flying." So that's a good thing. But I think they wanted to tighten things up and know when the resources were being used and why they were being used...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...The other thing we have here is because we have federal wilderness area. So if we have a lost hiker and we need to put a helicopter up in the air, we have to notify the forest service because we're using motorized equipment within the wilderness area. We have those protocols sort of pre-established on the sense of urgency that's needed and is it just a notification because we're going to be going in there, especially if you found somebody, we're going to go get them out. If some of the forest services can't answer the phone right now, we're not waiting for permission to go on and do it. Other times, we are. We're just doing a search. It's a very broad area. We don't have an actual victim. We need wait for permission before we can use a motorized whatever within the wilderness areas.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... So if you see something and it's questionable, we had to come up with a time or say how long do you see an event and you think it looks good and juicy, and the dispatcher knows the location's wrong because the caller had wrong information and it's really not in your county. So don't start turning on your lights and siren and running somewhere because that's just where they live but they're calling about their friend who lives somewhere else. So we've cautioned about self-launching...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... What came in as the structure fire is the reflection of the sun at night. But it gets billed as a structure fire because that's what the caller said. And you see it on your computer, and if the tones go off at the station the guys are ready to run out, so we've got a structure fire and then they never hear the radio come on and do the formal process of dispatching. So from a liability standpoint, I'd say, look, that is your formal dispatch. If

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you choose to go out on your own, we're not saying you can't. You're all adults here, make decisions, but just be cautious because that event may never turn into what you thought it was and what the dispatcher thought it was. So we are talking about the technology dependencies on how one part can really affect the other part and just understand they're related. The speed of the information flowing is not always great...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	When I started, we were on VHF single system, the dispatcher would change which tower they were broadcasting from. So you regularly get half the conversation because you can hear the tower but not the person talking who may be on the other side of the county. Within our county, we were split. East end of the county was on one radio system, west end was on another radio system. At the sheriff's office, we carried a pack set that had the east end system because, obviously, we drive through their town, and if we needed help, they had to come out of their town to help. Just staffing level being what they were. We still have that today. It's going to be mitigated in one part of our county where they're still on different radio technology than we were. So the cars assigned over there get those radios in the cars. So they have our 800 MHz system and they still have a VHF system in the cars. That part of the county is now switching over to 800 so it will be easier to communicate. In the late '90s, when one dispatch center left the county, we consolidated...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... The biggest thing we used to joke about is the law enforcement officer does not need to tell the dispatcher that the fire truck is on the scene. The fire trucks knows they're on scene [crosstalk]. This goes both ways. We have lots of tapes of the fire truck telling the dispatcher that the law enforcement is on scene. So that was the training years ago. They know they're on scene. You don't have to tell anybody that. Resource utilization, talk time. So we finally said, "Okay. Look, if the tow truck gets on scene, we don't track the tow trucks. You can tell them the tow truck's on the scene, if it makes you feel better." But again, just something we would sit there and laugh about, going, "They know they're on scene. Really?" But it made them feel better, I guess, to somebody was on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								scene.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... As we tell people, if there's a big event going on, and the example we use was years ago, the [incident] on the front range of [state] and the guy was saying [incident], while we had just set up recently, this state-wide radio system. Well, people up here realized they could tune in and listen to what was going on on the front range. Well, the state deactivated those radios. They realized that the entire system was getting tied up by people who were not in the area of operations, listening to what was going on. And they were able to go through and deactivate those radios. So that was a big eye-opening experience to people of-- there are repercussions when you do things we tell you that you're not supposed to be doing. Which is a good thing because then it freed up the radio systems, they could do what they needed to do at the time. But yeah, most people remember that situation. They've been around for awhile.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...So how do we take advantage of decreasing the radio time by using the computer and what's an acceptable amount of use of just the computer versus here's a hard stop and here's the minimum traffic you have to do. So if we said, "You could build--" we don't want you building traffic stops. That's usually a high risk situation. But if the radio's so busy that you can't get out, we'd rather you build on the MDT, and then everyone can at least know you're a traffic stop, and the location's there.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: decrease radio time by using computer] "And then when you get on query, you say--" and let them know you already did it on the computer. So it's MDT traffic stop. Then everyone who doesn't have a computer knows you built a traffic stop somewhere. So that was a process of working through. I'll say it was a little letting go of control from the dispatchers. They disagreed with a lot of this. I think, as a field user, we said, "We don't care. This isn't your decision. We love you guys. We appreciate what you do. The person most responsible for my safety is me. And so if I need to build it on the computer, don't try and give me a policy that says you shall not. It's not going to work. Highly discourage.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Make it as strong a language as you want. It's going to happen."
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	So then, in response, a lot of agencies have gotten to encrypting their radio talk groups. And then the press is like, "Well, wait a minute. What are you hiding? Why can't we hear what's going on?" Kind of a whole nother discussion on privacy and just the way our system works. So we have been able to change our protocols on how vague can you be. You're on foot patrol and give the town. And if I want to know, I can go look on the computer and see exactly what business complex you're at. But we expect people are listening. A lot of our guys have the scanner app on their phone because they like when they go on vacation to listen sometimes. I don't know why.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	And so we know how ubiquitous that is, and everyone's out there doing it. So rather than trying to hide all our radio traffic, let's take the steps to safeguard ourselves or our procedures to still get our job done but not let anyone think we're trying to trick them, or hide anything, or be the big, bad government that a lot of people suspect we are.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I know a lot of studies have come out. I went to a thing on the [local mass] shooting and that was a big thing of if a guy in your department doesn't have an earpiece, tell me they need to wear an earpiece. Because you go into a true situation, you can't hear a radio on your hip...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: earpieces] ...I haven't tried to use the radio with my life jacket on... But that would introduce the same thing. But even telling some of the guys, going, "You really should have an earpiece in. I know you don't want to, and you never had before, and it hasn't been an issue, but it's going to be at some point." ...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: battery consumption] Do we expect the frontline guys to pay for that electricity out of their own household budgets? Because you're going to take it home and charge it? Because it's issued out? Do you have big bank chargers at the office and you say, "Okay. You get an extra five minutes each day just to get all you devices set-up and running and going." That's going to decrease the amount of time you're on the street.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								I think these are all considerations as they keep adding the stuff and I keep trying to tell my administration, "At some point, you will have to add more support staff." You can't keep adding more and more stuff in without adding someone dedicated to understand how it works and supporting the guys when they have questions about it. Or it's going to get thrown in the back of the car and forgotten and just told, "It's another project that didn't work," because the support wasn't there. And then that support level is going to have to maintain because we know there's going to be more stuff coming down that we're not aware of yet. And so someone's got to figure that out.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...We all joke about the guy driving down the road, talking on his cellphone, typing on his MDT. We've seen it. Certainly, MDT blocks some of what you can see. I think we're getting closer to being overwhelmed. From a liability standpoint, there's too many things that we're telling the guys you have to do, that if they forget to do one of them, forget to use one piece of technology, and it comes back on them in a negative aspect. I guess that's my concern, of keeping it efficient enough and reasonable enough.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: difficult to read driver's license format] ...they're trying to use more security in their driver licenses. The REAL ID Act necessitated that, so responding to the federal stuff. I know some states have now the actual enhanced driver's license. I think there's two or three of them. We're not one of those yet but that may come along, so there's going to be more and more stuff going into the driver's license to get a chip. Yeah, so things to think about if somebody actually has to read this still while talking on the radio and watching ahead of them and that eye focusing thing. I mean, I want to look down at my license to read it but I'm still keeping an eye on the car I got pulled over, so now as I know my eyes are taking a little longer to focus from close to far away, how do I change my work practices?
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...If you don't have Bluetooth in your car, going back to technologies, the sheriff doesn't want us driving and talking on a cellphone. Public

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								perception, it looks bad. Okay. Cars can pair up with only so many devices. So if it's a pool car, someone's got to go through and clear out that list and unpair everything so the next guy that uses it could pair his phone to the car... And some people are going to get in but who's going to do it for me? If you come in and say, "I don't know how to do it." What are you going to say? You told me I can't hold it up to my ear. I don't know how to pair it to my car. I got a cheap old car and I don't do that in my own life. That's legitimate. As supervisors, you can roll your eyes and complain the guy's a fool, but that's a legitimate concern.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...You can't always pull over... Sometimes you actually are responding to a scene and getting information. I mean, that's what we tell guys. Have dispatch tell a person to hold on, you'll call them back. Pull over to a safe place and then take the call... There may not be shoulder you can pull up...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	I think some of the towns and ski resorts have banned drones... They're on federal land, so it's pretty easy to say, on federal land, you can't use a drone. In the town of [City], they may have banned them. Surely in the wilderness area, that's a motorized-- [inaudible]. You can't use a drone.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: use of drones] So maybe that's more where technology comes in of how far away, the FAA's regulations on line of sight and height. But if it's a commercial one. And so do you get them licensed as a commercial drone? So you have different rules that apply to you. Because we see within our search and rescue group, they're going to use that 20 times a year. So that does become a good return on investment. Because if we can find one or two people sooner because of that. It was a big deal when people could call in and we could get a GPS thing from their phone and know where they were and kind of plan the search that way. So as that continues to evolve with more and more information. So I don't see it now. I see it certainly on the real estate stuff. So I'm sure they're using a drone to get those camera shots.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	A few drones may have gotten shot out of the air. Well, they were a threat at that point. So I understand within the FAA stuff, that's allowed.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Just like anything else that-- if they're hurtling a bottle at me, I don't have to just stand there and let it hit me... That was not something I had thought about until the guy showed me the video. And we haven't had protests here for a long time, but we've had them... there was no drones in existence at that time.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	So there's been a proposal to incorporate those into the in-car computers, and then we talked about what's the good and the bad. Now you take my computer and ask you to sign the ticket, I can't just do everything at the car on the side of the road that maybe is a safer location that you could stand there with just your device. So we sit there and talk about the pros and cons of here's this technology of an electronic ticket writing system...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...So I guess that's my expectation as these devices are coming forward and these procedures are going through, that it truly becomes not just I can go to New York and my phone's going to work, but if I go to New York in an official capacity and I'm there to be integrated into an event, I don't need a radio cache to give me the communication stuff. Whatever I'm using here should be able to work there with maybe minor disruption or a little tweaking, but that would be my expectation as a national thing is getting rolled out and a data network, beyond all the apps and voice over LT and the other things, but just as a community coming together, that if I gave you my identifier and you plugged it in, you know I'm a law enforcement officer, what my qualifications are, any certifications, as we're all about you need to be certified to do what. If I was a SWAT operator or commander or a high-angle rescue person, all those credentials and everything should be there so if I need this resource, I just look at who's checked in on scene, and I've never met you but here's what your profile says, and so I need you know. That's, I guess, my expectation...
Rules-Politics - Policies-Procedures	LE	S	Other Public Safety	26-35	6-10	Male	LE-S-021	So we're required by our policies to take our taser off and test fire it every day before our shift. So we test fire it to make sure it works. And then if we actually do deploy it, whether we use the cartridges or

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					whether we just press it on someone, then you are required to take it to a taser instructor. They plug it into the computer and then upload it. So we use evidence.com and it stores it through that for our taser.
Rules-Politics - Policies-Procedures	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: bank robbery incident] ...there's the relay to the dispatch and then our dispatch has to relay to us while they're trying to maintain the channels and then also provide the information that we're giving to them to other people. So then they have to run a third channel, [urban city channel], so they're relaying out all of our information to the rest of the metro area. So our channels are encrypted so no one can listen to our channels. But they take it to [urban city channel] and now they're telling all the information, so now everybody else is-- if you're scanning the [urban city channel] ... you're hearing that we're tracking someone. So if the suspect is listening to that, they now know to get rid of the pack, which they did. Okay? So if we can-- I don't know how it can happen because you have to share encryption across everybody. So I don't know if it's a monopoly then if everybody has to have the same system or same-- plus, then, if the encryption code gets out, then now you have to deal with all of those issues. But if there's a way--
Rules-Politics - Policies-Procedures	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... We've had just a couple of officers that use body cameras and then submit their video, and it's gigabytes and gigabytes of data that just... and that's just like one or two calls from like an hour or two. And then the question is, do you go lower quality in order to get more, less storage. But I disagree with that. I think it should be the highest quality you can and-- I don't know. And then retention, it comes down to retention of how long do you have to keep things?
Rules-Politics - Policies-Procedures	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: input sought when purchasing new equipment] So sometimes, they generate a committee of select members from the agency. So they just pick a few people. And sometimes those are the best people, and sometimes, they're not. But they could do a little better job with that.
Rules-Politics - Policies-Procedures	LE	S	Other Public Safety	26-35	6-10	Male	LE-S-021	No. So it's if you are on patrol, you have a shared pool of cars. So each substation, so we have three substations right now, we have the main station here, and then two other substations that they just recently built.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					They're building a third substation way out west. So each of those stations has a pool of cars that they keep there for the patrol. So sometimes, we have enough, depending on manpower. We're trying to get full staffing, and when we have full staffing, generally, the grave shift, when they come on, the day shift will come on and say, "Hey, meet me in the lower lot with your car. It's already warmed up, it's good to go," and then they just swap off cars and then we take it. So then the car gets run over and over again without a break. If we have enough people, sometimes we load up our cars and then we have a full team of cars. That's for patrol.
Rules-Politics - Policies-Procedures	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	For investigations, they have-- so unmarked cars, but generally, there is, I want to say, 10, maybe 10 total for all of investigations. And they're just basically keys hung on a board and, hey, there are known cars of these are these people's cars... It's known like that. But at the same time, we don't have enough for everyone. We used to have enough, and then if a person is on call, they can take one home with them every night. So we're on call, generally, from week to week, so 7 days at a time, 24 hours. So they can take that car home with them and then they can switch off.
Rules-Politics - Policies-Procedures	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: take-home vehicles] ...So as far as CSIs, we don't have one, but we're on call 24/7. So that's why we're trying to get a new one. So we just got a grant that allows us to do that.
Rules-Politics - Policies-Procedures	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: surveillance video] ... So where it comes to the size too, we're starting to go to a online paperless system through the courts. So [county] has had this for a while, where they can do online submissions and they would upload-- they scan all the documents and then send them electronically, but then they would still send a disc of all the photos or surveillance or whatever else. Well, now they're able to upload that electronically, but it's got a limit of two gigs... it's not helpful at all. So for example, for one of our cases that we had at the beginning of this year, we took 3,800 photos. I'm trying to think. How much was that? Oh, I can't

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								even remember how much surveillance, I mean, but it's-- man, if I could remember the gigs. It's astronomical... a single officer taking an average amount of photographs on a domestic is going to be close to a gig and a half at least, but for this case, I mean, it was-- it took, I think, like seven DVDs in order to get all of the photos onto there...
Rules-Politics - Policies-Procedures	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: data sharing between LE and DA office] ... So we create what's called a web share which is actually giving them not just the raw data, but the raw data that's been turned into the product so they can view the product up there. When it goes to the public defender's and they get the raw data, they have to create the product themselves. But it comes into constraints of, "How do we get this up there?" [County] is soon going to a paperless system. And we've been learning through [County]'s problem that if they don't make the pipe bigger, we're not going to be able to get it up there. And at this point, there's no solution for it. It's just flash drive after flash drive. And so every photo disc request that we send to the DAs office, we have to send three copies through. So three discs of the same photos up to them, so that one goes to the courts, one goes to the prosecution, and one goes to the defense. And that's per defendant. So then if you have multiple defendants, you're having to do it multiple. But if it exceeds the capabilities of the DVD, you either make multiple DVDs or if it's a phone dump, then you have to do flash drives. So at this point, they're willing to accept one thumb drive to accept it, but then they will have to make their own copies, but if they're trying to get away from the paperless system, it's not going to work unless we figure out something else.
Rules-Politics - Policies-Procedures	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... So we're getting a drone too, maybe, at some point, but it's not been approved yet, but we've been looking into all the issues, positive and negative, with it. And we've seen that Ford is actually implementing a new cruiser that actually comes with a docking station in the back of it for a drone... So that you could just open up the hatch and the drone can fly out. And it's tethered to the car so you don't lose it. Yeah. We just heard about this...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: drones] ... There's a time and a place for it and only so much of it. But there's a lot of regulations that you don't realize go into it. Because we're having to take the piloting test for it and we found out that there's all these air spaces that we didn't know about. But the technology from that is going to be amazing...
Rules-Politics - Policies-Procedures	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: using 10-codes] Just 10-4 [laughter]. No, we really don't. We use a specific one for when an officer is in danger, or captive, but otherwise, no, it's plain speak. We use phonetic alphabets but it's a police alphabet versus military alphabet. So that's a little confusing.
Rules-Politics - Policies-Procedures	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: police departments in general] Yeah, half of them use military, half use police. Half use 10 codes, half don't use 10 codes... and they all don't use the same 10 codes... and military has their own set of 10 codes. So it varies from branch to branch, it varies from agency to agency. So, yeah, if we went to a place like [city], I believe they use 10 codes, we would have no idea what they were saying. Even if we did just toggle over to their channel, we wouldn't have any idea what's going on. Whereas ours is plain speak, but maybe it does take a little bit longer to get things out...
Rules-Politics - Policies-Procedures	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: radio channels] ...But our dispatchers should only monitor one, two, and three of those, but they monitor four, which is fine because then they pick up on what we're talking about. But it's hard because we're shorthanded on dispatch too, so then we're trying to do the communication with that, so--
Rules-Politics - Policies-Procedures	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: user testing] do it for a while before you jump in and fully implement it. I think some of the agencies, ours included, they find something and they think it's fantastic, so they buy it for every one of the cars. Sometimes, they say, "Oh, we're just going to start it with a couple of cars," but they don't give a long enough test period... And then the second that you implement it in all the cars, you realize it's a problem and then you have to do it all over again... you're stuck with it.
Rules-Politics -	LE	S	Other	26-35	6-10	Male	LE-S-021	So building for small people versus big people is a problem and I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Policies-Procedures			Public Safety Personnel					understand that but I didn't realize, number one, how much expense goes into all the electronics, which it really does. And then the smaller they get, the more expensive they get...
Rules-Politics - Policies-Procedures	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	So within in [city], we have three different-- well, four different sectors with three different areas that have a specific building, I guess. So here in Baker, one in Charlie, and one in Adam. And we all kind of teleconference, similar to this. And so here in Baker, we'll have whichever officer's listening to Charlie's commander or sergeants or Adam's commanders and sergeants on whatever issues they have to present, so.
Rules-Politics - Policies-Procedures	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	And I'm in investigations right now, but when I switch this next week, I'll go up to [County], which is way out west. But when I was assigned to [County], typically that's the area that I will generally stay within unless we're short or if it's a high profile situation or something like that.
Rules-Politics - Policies-Procedures	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	Yeah, so at the beginning of shift you have to log in to your computer so that it's assigned to you specifically based on the vehicle, your ID, your password, so they can monitor who's using what, where they're at, and then within that you have to log into-- certain officers pull up different programs. It just depends on what you want to do because we can run stuff through dispatch if we want to, but I like to run people if I can just on my own so I don't have to call dispatch, wait for them to do it and then call me back, as opposed to me just typing it in and it coming directly back to me. But you have to log in to those, so they're different programs...
Rules-Politics - Policies-Procedures	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: different technology systems] Usually you have the same user name for all of them. But then the password is whatever you want. But some of them change every 90 days or so, and some of them don't... It's pretty irritating.
Rules-Politics - Policies-Procedures	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	... Today was ridiculous. They had all kinds of high profile calls, so I was kind of [crosstalk]. Yeah, so and that kind of drains our resources, patrol-wise because you have people coming from all different sectors and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								responding to that. And we had two tone calls-- so we had a robbery and a domestic at the same time, so we had two Baker-- our two Baker units at one location, and then within the Baker sector, that robbery came out, so two Adam units had to come from up north to respond to the unit, or to this call, and then the Charlie units came down. And we had our traffic units respond and sergeants and investigations and stuff. So.
Rules-Politics - Policies-Procedures	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	So here in [City], we're supposed to be assigned cars. So we have a list downstairs that has your name on it with the car that was supposed to be assigned to you. But it doesn't always work out that way. In the substations, in [Name] and [Name], it's kind of more specific because they have fewer vehicles out there. This is the main department building or whatever. And so it's easier to kind of monitor who's using what vehicles in those areas. So kind of it's supposed to be, but not necessarily.
Rules-Politics - Policies-Procedures	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	... that's something they harp on pretty emphatically is know your geography. Don't rely on your computer because if something like that were to happen, you have to be able to get to where you're going without the assistance of technology.
Rules-Politics - Policies-Procedures	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: code 3 run] Those are essentially if human life is in danger. So one of the most common ones that we have is an unknown injury traffic accident. So say, just over here on [inaudible], we get dispatched, unknown injury traffic accident. It's been reported, and we know at least two cars or whatever have been involved, but we don't know if that person's laying on the ground bleeding out or something, so we have to respond as quickly as possible but still being safe and regarding traffic laws and stuff like that, but. So we're going lights and sirens, and that's when traffic is supposed to get out of the way, and we're able to kind of-- not blow red lights, but kind of not adhering to those, necessarily.
Rules-Politics - Policies-Procedures	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	So a Code 0 would be the situation or-- there's a robbery, or anything like that. So when they call out on it, there's a tone, so all units be ready for a tone, or however they word it, and it's just a siren over the radio, so that means that channel 1 is specifically dedicated to whoever is being

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								dispatched to that call or any other units that are associated with that call. Nobody else can talk on that channel. All other traffic goes to 2 or whatever else...
Rules-Politics - Policies-Procedures	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	... So there's Code 0, Code 3, Code 7's our lunch break. Code 9's if you can't hear somebody. Code 6 is if we have-- if somebody has a warrant or something like that. So a lot of departments have different ways of communicating. We use plain speak, I think is what it's called, so we talk very directly. We don't have a lot of Code 10-4, 10-20, 10-82, stuff like that. So it just kind of depends.
Rules-Politics - Policies-Procedures	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	We can access [state criminal database] and NCIC, which are the [state] criminal database and the national. So if somebody has a warrant, if there's a stolen vehicle with stolen tags, we can run gun clearances, things like that, just from our vehicle. So I mean, that's very important. I think that's definitely way more important than anything else.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	For me, usually I come in to see who has court, check the sheets to see who's working, then we'll do roll call or we'll address the troops. A lot of times we'll get the information from our SDSC room that anything that happened or from the previous lieutenant that was working just to let officers who we're looking for, if there's been a crime pattern or something that has recently occurred. Afterwards, when I review arrest reports and then anything that the desk sergeant can't do, I've got to take care of. But in most part, the desk sergeant kind of runs the station and their assistant is the next level. And then if there's any use of force, we have to review and approve the TR-- they're called TRRs, Technical Response Supports. So if officer is using a type of force to document it, we have to make sure it was proper, and necessary, and reasonable.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: issues using personal cell phones] If I'm saying, "Hey, where are you?" Like we're trying to meet up, it's pretty acceptable. They're trying to turn us away from being on phones at crime scenes or there's always the Gem of the Year where you'll see some agency where somebody took a picture of something they shouldn't have. And obviously the department does not want that.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	They've had officers when they had a police shooting, they were using their personal cell phones and they subpoenaed to get copies of the entire cell phone. So there's kind of the whole privacy thing, which is why I think the department's moving to-- here's the department phone. Do not use yours, otherwise anything you have on their, personal, private, it can be shared.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: personal cell phone use] we do try and tell people not to take pictures of crime scenes and whatnot because it leads to problems.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	In the district, yeah, we're assigned one mostly due to the fact that we have one of the SDSC rooms and the apps that come with that are on the department phone... HunchLab app and ShotSpotter.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	The phones have the ability to pretty much do what you can do on the PCAD. I mean, if you want to pull up people's names, it's just-- the difficult part is you're staring at the phone like this trying to type information and there's multitude of lines, and you have to put your PC password each time you do the search. So it's kind of redundant in a way that it takes a lot of time. Even in the station, if I'm trying to run reports, if I run somebody's name and I've decided I'm looking at a different name, I have to again put in my PC password and fill in all the boxes. Some of them stay constant, but your password, you always have to enter.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: comms with other LE jurisdictions] Occasionally. Say, I recover a vehicle from a suburb, usually you reach out to the agency just to let them know that you found it. I think I was very briefly an officer in the burbs. And I think that we could do better with it, especially with something like [city]. With state police running in the city and we don't have their emergency network to know when they need help, I think is a little-- I mean, I don't know how we would integrate it...
Rules-Politics - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	Two sides of our districts are bordered by expressways. So it-- there's a police shooting on the-- not a police shooting, but there's a shooting on the [street] ramp and trying to coordinate between the dispatcher talking

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to the state police dispatcher then to us, and getting all the information back, there's a lot of confusion going on. I mean, we had people chasing people. Nobody knew who the offender was. Until you get there and somebody can actually put it out that this is what happened, there's-- it's confusing sometimes.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I came from a department and we had different technology on the computer. And we were a smaller department so it wasn't we didn't really need to worry about walking on each other, but if he got a call and I wanted to go on his call, I could put it in the computer-- we used 10 codes there. I would just put like 76 to blah-blah-blah's call. So I never had to go over the air to dispatch or [inaudible]. At least it was on the computer, which I think some people may be a little old school or worried about, "What if I get in a crash. I never said I was on the way to the 10-1, then I'm gonna be in trouble."
Rules-Politics - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I think technology-wise, because you could really only say you're en route or on the scene, to call that the dispatcher has to physically put you on. I don't know if that's control they don't wanna give us or we can just go to any call on the board and say yeah, we're going, or we're not going. Or we're there or we're not there.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I could look up the whole district but I can only say I'm going to or on scene for the call that I'm personally assigned to. If I want to jump onto a call, I have to go on the air and say, "I'm going to the call with this person." It's not something I could do on the computer.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: 10 codes and plain language] I think it's a little bit of the radio like how we talked about radio discipline. I think it's a little bit of the problem. But it's not encouraged here. It's keep it short and sweet. Now I've noticed that I've gotten that way a little bit, too. Now that I'm working here, I will get on the soap box and maybe hold the air for too long where it would have been totally inappropriate at the last department, and there's a 10 code for inappropriate use of radio. So if somebody was on the radio too long, somebody would come over and say 10-39, like you shouldn't have done that. So you got called out on it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: 10 codes] I mean, there's 100 and I would say 20 of them are useful.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	Even, like you said, [state criminal database] which not every officer has access to for [city] but you could get driver's license photos. So, if someone's playing the name game and says that their brother-- well, of course, you know your brother's birthday and his address, so you can easily say, "Yeah, I'm him," and we would never know the difference.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	The vigilance system, I mean, the city has it, but there's limited access to it, and they wanted to give it to certain districts, but they haven't done that yet, and that to me would be fantastic to have, like if a private company has a hit, it should automatically somehow get transferred to dispatch, like say, "Hey, there's a stolen car here," not 10 hours later when somebody at headquarters, runs it and finds out where it's at and then sends it to us, and then by the time we send a car there, it might not be there...
Rules-Politics - Policies-Procedures	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: patrol same areas daily] Sometimes. I've been in several different districts. So depending what district I'm in, depending what I was doing. And I don't like to stay in the same place for too long. I like to go to different places. But when I was on the watch, when I was in the [district] on 3rd watch I was the same beat every day. I knew everybody that was there. When I was in [district], sometimes I had the same beat. When I was in the [district], I was the same car every day. I worked the same beat unless they didn't have enough people on the watch. And then I would work on the watch to cover all the beat cars.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: same car daily] No. We used to and that was nice. We no longer do that... It's very random. You can have a nice car this day. And you can have one that's-- like your brakes are maybe not so good. It changes every day.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: personal cell phone use] Sometimes they will. We try to get them to use the department cell phone. All the phone numbers are in there.
Rules-Politics -	LE	U	Field	36-45	11-20	Female	LE-U-026	We actually went, in my office, on my watch, went and wrote down every

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Policies-Procedures			Responder					vacant lot that was in the [district] that was owned by the [city] and sent that out to all of the officers so that they would know that that was a city lot. It took many days, many lots. That is information that they wanted, that they needed, but we only did it for the vacant lots that the city owns.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: cordless microphone] I think things are designed well. With the cameras, you can buy your own attachment for your vest. So if what the department gave you isn't working out, you can go get your own.
Rules-Politics - Policies-Procedures	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Well I think I personally don't use it but our patrol guys have mobile data terminals in their vehicles. [Name] might be able to speak more to how they function or work because I don't really know to be honest but I think yeah in our county we've had some issues with inoperability which I don't know if you're going to touch on but it's something that you know we have our law enforcement partners here in the [County] are on board with our getting a grant when a national grant when we switched over from UHF to 700 and some of our fire departments chose not to make that switch and so I think when I hear from a radio communication standpoint a lot is the inoperability issue...
Rules-Politics - Policies-Procedures	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	And I think that's a fairly timely topic too just because I know the state legislature is currently reaching out to law enforcement agencies through the [state] Sheriff's Association and the Chief of Police Association on what should be a standard retention policy and what's reasonable and I think right now it's my impression that the state is asking for more and a lot of agencies are struggling with being able to comply with what they're asking...
Rules-Politics - Policies-Procedures	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	You know, it's probably not super bad. There are people that oversee us, [CJIS?] oversees us, and says "you can do this, you can't do that, you can do this, you can't do that." And so with every piece of technology that we get, there's a requirement that goes with it. And so, to make sure that we meet the requirements, sometimes it's easier to just maintain what you have right now if it works effectively.
Rules-Politics -	LE	U	Field	36-45	11-20	Male	LE-U-003	So, for instance, I can't-- it may have changed since I was on patrol. But

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Policies-Procedures			Responder					when I was on patrol, I couldn't pull up Facebook on the computer. The few websites we were able to access were very controlled. I mean, it was just the [City] Police Department website, a couple of others, and that was it. But I couldn't just do a search for something like in Google or Yahoo.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	We are single officer units, so one per car typically. There's instances whether there's-- we have days where there's a lot of shifts working just by how the schedules fall. There might not be enough cars, so they might double up, but we almost always dispatch two officers.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	I started in 2007. When I got out on the street, I was not allowed to use my computer for the first month. I was not allowed really to use technology other than my handheld radio. And--
Rules-Politics - Policies-Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	Yes. So, I do. It's not required by our department. Our department does not pay for our phones. So the officer themselves take it upon themselves to use that.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	...But ultimately, the decisions made by my chain of command. And of course, with body cameras, our mayor ran on the platform that the police are going to have body cameras. And of course, my chief's going to make that happen. And we're making it happen. So there's definitely a top-down. Sometimes we have a vision, sometimes we see something, and then it's our job to make the case. And then, the chain of command will decide whether we have the budget. We also will help with trying to find grants and things, of course. But ultimately, they're going to be the ones making the decisions. All the way up to the chief.
Rules-Politics - Policies-Procedures	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	...But when you show up on scene and you give a briefing, there are some basic things that are-- you can release because it's a Public Information Act.
Rules-Politics - Policies-Procedures	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	Ours are our personal equipment that we have. It stays with us and stays in our cruiser.
Rules-Politics - Policies-Procedures	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	--on where they are. So when you log in, when you go in-service like we talked about before, using that computer, you assign yourself a car

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								number. And your car number is assigned by-- your supervisor tells you what car number you're designed to be. So yo
Rules-Politics - Policies-Procedures	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	Well, many agencies have policies and directives when they will communicate, but I think you're correct. I think common sense prevails and it determines the amount of common sense, whatever that dispatcher has
Rules-Politics - Policies-Procedures	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	... You just have to make certain that at administration level, departments put in good policy so administrators can't go on a "fishing expedition" to try and find an officer saying something inappropriate or doing something inappropriate. So the officers see it as a big brother program and the admin sees it as a liability-clearing ordeal, when both of those can equally coexist if the appropriate policy is set in place, an adequate policy set in place protecting the officer himself.
Rules-Politics - Policies-Procedures	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	...So in one of the richest counties in one of the richest states on the East Coast, we were using outdated equipment and outdated report writing and information sharing capabilities while other folks had been using these programs for years and years and years. Now, I don't think that has anything to do with dollars and cents. That's bad policies and that's bad politics. That's administrators not being able to do things and all that other sort of stuff
Rules-Politics - Policies-Procedures	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	...The computers are somewhat restricted in terms of putting stuff on. Obviously, they don't want to give everyone access to putting things on their mobile computer and that sort of stuff
Rules-Politics - Policies-Procedures	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	Okay. Well, as a police officer, we make sure all the rules and laws are followed that are made up from the state, local, and federal government.
Rules-Politics - Policies-Procedures	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	Surveillance cameras. Yes. Yes. And when we do that, an official lieutenant or above will be there because we don't actively monitor those. We only bring them up when there is a specific event and a lieutenant or above has to be-- a sworn member has to be present and overseeing.
Rules-Politics -	LE	U	IT	46-55	11-20	Male	LE-U-035	But we only retain data for 10 days. So after 10 days if there's no request

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Policies-Procedures			Specialist					for that video because there's no issue or incident associated with it, it just gets written over.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	...But if you have a computer, now, we don't have to do that at the beginning of our shift anymore. Through the tablet, I put in my call sign, I put in if I have a partner, I put in specialized training, and I hit submit. And then it logs me on automatically. And so they came out with an order probably six, seven months ago, maybe a year even that said you no longer have to come in service over the radio if you can on the computer.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah, everyone who's not in patrol, everyone here at headquarters, from lieutenant and below, goes back on the street every six weeks for one week at a time. So I just did my week. I got back today.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	...It's basically private conversations so that you're not tying up the-- because you're not supposed to be really talking to other people on the main channel. You're supposed to be talking to the dispatcher, and the dispatcher is the main person. And so some people--
Rules-Politics - Policies-Procedures	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Depending upon the policy, but then also-- oh, the statute of limitations. So the statute of limitations on a homicide is 65 years. And so that's why this video is saved for 65 years. But if I click something like BWC testing, it's going to save it for 90 days and then delete it because there's no reason to save. Because at the beginning of a shift, we're supposed to test it, make a quick video, just like I just did, to make sure it works. And that one's going to save for 90 days and then delete it. So that's how it works.
Rules-Politics - Policies-Procedures	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	...The sergeants assign our areas of focus, or if a dog is needed and there isn't one, we go, countywide
Rules-Politics - Policies-Procedures	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	...Depending on what we're planning, if we're planning a special event, a street festival or a rally, march, whatever, obviously, coming together as a group, the in-person planning, conference calls, there's a lot of email communications back and forth, especially when you're working with organizers. They need to be developing site plans or maps, things like

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that. So a lot of them at developing and sending it back, recommendations based on the law, and no, you have to have a 20-foot fire lane down the street. You can't have vendors here...You have to have tow trucks because if you come and have your events-- so they help work people through how to have a successful event to ensure it's safe, compliant with the law, and everything they need to do to have a good event.
Rules-Politics - Policies-Procedures	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	...So if you're the [State] State Police and you got 200 officers, we put an NPD and lieutenant with you so if we need-- you have your assignment, but if you need to communicate with us, the lieutenants with you. He knows our procedures. He knows the city. He knows what's supposed to happen and he's with you, so if we need to communicate, we're using you as a-- I'm in a unit of 200. Okay, we need to put these folks over here. We go to him. We don't have 200 troopers that use 10 codes. I mean, I know you've been doing this for a while, so you probably see this
Rules-Politics - Policies-Procedures	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	...The secretary signs an order declaring a National Special Security Event and then when that happens, the Federal Government becomes in charge. The Secret Service becomes the lead playing aspect. So they develop, there's about 27, 28 planning sub-committees that are developed out of that.
Rules-Politics - Policies-Procedures	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	...But when they get out of the metro, they got to get from the metro to wherever, and they're going to walk on our jurisdiction. And we have jurisdiction everywhere. So we have jurisdiction in the mall. We have jurisdiction in the metro. So they kind of have their focused areas. But, at the end of the day, we'd be like the state police for the city.
Rules-Politics - Policies-Procedures	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	...So the FBI may be in charge and maybe in 15 hours they will be in charge, but initially, they're probably going to have maybe 10 people. Whoever they have here right in this area to respond out. Where we're going to have 3,800 people. So, I mean, whoever kind of controls the resources, but at the same token, you know at some point the FBI's going to be taking it over, so making sure that we're all working together. Making sure that they knew what's going on, and there's resources that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they can start pulling in, and the appropriate resources to help out, because, yeah, maybe we can put a rush of resources in there...
Rules-Politics - Policies-Procedures	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] ...So two zones will have three PCTs working on it. So one is always on break. Then there's also three zones that have five people working. They do even better with the breaks, such as citywide. So now there's five people working covering three zones. So even though you're assigned to a zone you're not going to work that one zone all day because it's going to be two zones between three people. So you may work just, say, zone 15 for two hours then you move to zone 16 after your break. So you'd go on break and then you'd come back and it's like a rotation.
Rules-Politics - Policies-Procedures	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...we have a special procedure where we put a dispatcher on what are called our NYMAC interoperability channels and we assign one of those channels for that purpose. And so if there's a fire it needs to tune to that, or at a command level, interoperability, they can turn to those dedicated channels and communicate so that all those procedures are put in place.
Rules-Politics - Policies-Procedures	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] I mean, 48-hour backup battery capabilities that we have for redundancy, resiliency. I mean, there's a lot of requirements that we have. We use conventional analog radio, for example. We have encryption capabilities, but the way our officers communicate is fast, it's quick, and it needs to be instantaneous. There are trunking technologies and some other technologies that may offer some features.
Rules-Politics - Policies-Procedures	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] ...Well, we even mandate it when the new academies come through. So we do it for several months. They all come in while they're still in grey shirts, which means they're still not police officers yet. And they sit down with the dispatchers and they sit down with the call takers. And I think every single one of them is amazed, especially by the dispatching, how much multi-tasking. Every class that comes through, they're just-- so we're always trying to encourage it, to make it-- we're all one team.
Rules-Politics -	LE	U	Not	46-55	Not	Male	LE-U-041	[S4] ...So I was one of the founding members. We founded it after 9/11,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Policies-Procedures			specified		specified			as I said, and it deals with interoperability challenges and issues. And we've really documented all the procedures that are required amongst various responders.... We do that in a controlled manner under certain SOPs. In every radio, we put the UTAC, the national interoperability channels in, in the event that they are required. So that capability is there. However, in a certain command level radio and above, so captains and above, and our emergency services, they actually get additional radio interoperability channels such as our NYMAC channels that would be used for interagency communications. So, on a day-to-day basis it's sort of a tiered type of requirement.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	--And it keeps the communication discipline within check based on its limitations, And only one person being able to communicate at a time. Interdepartmental communications.
Rules-Politics - Policies-Procedures	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Yes. It's a patrol vehicle. It's one of the older, but it's only mine. Everyone else pretty much shares a vehicle with somebody. It's usually two to a car. Mine is one of the older Tahoes, which is still our newer Tahoe, but that one is just mine.
Rules-Politics - Policies-Procedures	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	. If you're on patrol, you need to be logged in all the time, so when you're in and out of that car, you can see the calls, you know what's going on. I mean, I log in sometimes, but half the time when I'm driving, it's to go to a meeting and go and come back. I don't always need to log in with my position. Here, though, I need it. I'm always logged in because I use it here. If it's just in the car-- I'm not in the car very much.
Rules-Politics - Policies-Procedures	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	. So usually, four trainings, and that one of those includes the qualification. Every year, at the beginning of the year, we have to shoot and qualify. And that's always a standard at the beginning of the year. So those are all mandatory...We have our own Taser instructors that are separate from that. So they deal with the Taser as well. Every two years, we have a recertification as well. So every two years, we have to do Taser. So every other year, pretty much. We have to do a recert on Taser, OC spray, baton, and less lethal shotgun. So that's coming up in two months, so every other year. That's a certification through well, our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								department's accreditation.
Rules-Politics - Policies-Procedures	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	First responders. So now, what it is-- so what people would do is they would just have it on speaker phone, and they would just hold it like this. That was okay while driving. It's been that way for a long time. Or they'd be on Bluetooth, hands-free, whatever. Now, you cannot have it in your hand. All you can do, as the law says, you pretty much like a swipe to answer, but the phone has to be hands-free 100% of the time.
Rules-Politics - Policies-Procedures	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Yeah. So if we're responding to something and for some reason we need to be on our phone, we can be on our phone.
Rules-Politics - Policies-Procedures	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Yeah. So depending on what kind of cell phone you're trying to get the data off of, one of the devices is a-- one of them just plugs into the computer, but it's actually a physical device that you plug the cell phone into. You have to have-- there's a lot of legal requirements before you can do that.
Rules-Politics - Policies-Procedures	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Everything's got pros and cons and certainly I don't-- I don't know. I don't know that I've established any true viewpoint on it. I mean, if it's something that the department wants to use, then great. I'll put it on. If it's not issued to me, then we have state laws indicate that or at least police department policies that indicate that you can't go out and buy your own and start wearing it around because of the data retention that's required.
Rules-Politics - Policies-Procedures	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	No, no, so. And we keep our work phones and our personal phones separate. You don't want to use your personal phone to do any work. And so there's probably only the command staff, the detective division, and our resource officers all have cell phones, but outside of that most of our cell phones are just in cars, so. And then outside of that not every cell phone in the car is a smartphone.
Rules-Politics - Policies-Procedures	LE	S	Supervising Field	36-45	21-30	Male	LE-S-028	That monitor the infractions that are written. There are governing policies and laws that state who can actually look at video feed that's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					not related to the actual infractions themselves. But yeah, I think we have three officers that have ability to log into the system and evaluate the violations of the speed camera.
Rules-Politics - Policies-Procedures	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	... And I don't know that we'll ever find true technology that will be helpful there because those agencies are all balancing privacy with criminal activity. And Twitter, or Facebook, Instagram, Snapchat, they're all trying to be helpful for law enforcement but also respect the user's privacy. So I don't know where we'll see that go over the years, but for what we can use, I think we've covered that pretty closely, so.
Rules-Politics - Policies-Procedures	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	... We have what are called the micro community policing plans that are actually broken down by neighborhoods, so we have policing plans-- it's kind of a national trendsetter the department was. In that, you actually have identified neighborhoods, there's about 56 of them I think, something like that. And we have community councils in each of those neighborhood groups
Rules-Politics - Policies-Procedures	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	We've kind of trended away from two officer cars to one officer cars. It wasn't a move that I particularly liked.
Rules-Politics - Policies-Procedures	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	But the goal for this year and next year is that all the new people that are coming out translate into two officer cars.
Rules-Politics - Policies-Procedures	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	... And just being able to come up with almost a priority of way of communicating of, "Listen, if it's an emergency, you reach me on the air. If it's important but not an emergency, you call me on my cellphone. If it's just a routine thing, send me a text." And getting people disciplined to something like that so that I know I've got to answer the radio because that's the emergency.
Rules-Politics - Policies-Procedures	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	... So if it's just a humdrum not important, I'm going to send a text. And I'll look at my texts when I get a chance. If it's more important but not an emergency, I'll make a phone call. And if it's an emergency, I'll put it out on the air. But just institutionalizing that so that everybody does it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	And so what I'm trying to do within my bureau is, "Look, listen, I'm going to send you an email. If you're in the to line, send me a response back. There's actions you have to do. If you're in the CC line, read it, it's for your information--
Rules-Politics - Policies-Procedures	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	--but zip it." I just want you to be aware of this, but you don't need to take action. I just want you aware of it. But if you're in the to line, there's something you have to do.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	I have a department issued cell phone because technically, I'm supposed to be at my captain's beck and call. So when I'm acting captain, my captain is out of town so I'm in charge of the precinct, well, my assistant chief wants to be able to get in touch with me whenever he thinks it's necessary. So it's really cool the department gave me this almost newest generation smart phone that I can do all kinds of wonderful stuff, but when I'm acting captain, I can't go anywhere without that phone because I'm supposed to be [24/7].
Rules-Politics - Policies-Procedures	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	And so we're not obligated to carry them, but the day's not too far in the future where all of us-- and so operations lieutenant is a little bit goofy because I don't think that I will be obligated to wear a body-worn camera because I don't have patrol responsibilities. So when I was a watch commander, I had in-car video system and I was obligated to wear the microphone all the time and activate the system when required by policy to do so. So if I rolled up on a scene to assist officers and sergeants and I was obligated to activate my in-car video system and make sure that it was recording. If I get called to a scene as an operations lieutenant because the watch commander is not available for whatever reason, I'm under no obligation because I don't have a camera in my car.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	... Conserve radio time is a big thing. Don't eat up radio time. And so you try to convey messages in as succinctly and - what's the word - just as shortly as you possibly can.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Well, roll call, for me, is on the hour at 11:00. I'm required to be in 15 minutes before roll call to prepare for that. It doesn't take me long.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	...If I came in at 10:30, I don't get paid. I don't get paid until 10:45, so-- I actually come in early because I don't want to have to rush. But I have 15 minutes to do that and that's plenty of time, usually, to do that. So then we go into roll call, give the information. After roll call, the officers that go to cars, they go to their cars. The bicycle officers, they go out and they get their equipment together...
Rules-Politics - Policies-Procedures	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Yeah. And as a matter of fact, it's funny. When they signed up with this new Xerox machine-- because the city is trying to save money, they don't want us to print willy-nilly in color. When I go to print, I'd have to choose. It automatically defaulted to black and white.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	... Usually, the primary officer is the one that's going to-- to be honest with you, has seen the most, is probably going to testify in court, because they can pull the case together. The department doesn't want to send five people to court on overtime. They want to send just one, maybe two. So we find the one who's got the most information. He's the primary. He will do the major incident report--
Rules-Politics - Policies-Procedures	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	But they're getting on radio and they have to tell radio that, "Oh, my ICV isn't working," or "I wasn't able to log on." And we have to get this on radio, which is another stupid thing, so the officers don't get in trouble.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Right. To kind of add to that, most departments require officers to wear their seat belts, and most officers do wear their seat belts. But most officers do not wear their seat belts going into a call. They will dump that seat belt a block away. So now you're still traveling there, I've taken the seat belt off--
Rules-Politics - Policies-Procedures	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Well, I've been here long enough where it used to be really bad. It's much better now. To be honest with you, I think our current policy is, if you're in a building where you're not getting good reception, you're supposed to let our radio know, not 911, but the people that set up the whole radio system, and they'll try to make improvements with that.
Rules-Politics - Policies-Procedures	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3]... We've got certain things that are set in stone every week, every other week, once a month, and you do those things. And then

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								sometimes you don't make those meetings or those commitments because of the other dynamic stuff that happens.
Rules-Politics - Policies-Procedures	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Yeah. There have been a few initiatives in the recent past of outfitting every officer with smartphones. And of course, there's cost and then the operating and maintenance going forward that kind of hung that up.
Rules-Politics - Policies-Procedures	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] It's PR. I mean, it's bad. I mean, they warn you, "Do not use your personal phone for anything work-related because it opens your phone up to public disclosure." So.
Rules-Politics - Policies-Procedures	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] I think so. And I think that you get, at least down here, we get certain people or groups of people that think they want to take us in this direction, and another group wants to take us in this direction technology-wise, or this type of technology, and I think that that gets in the way too.
Rules-Politics - Policies-Procedures	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] Well, and then just the whole movement of transparency and data sharing. I mean, so we're all, the whole nation-- I'll just speak for-- we're coming out of years and years and years of siloed work. Don't share. Don't share your data; don't share verbally; don't share. Don't even share internally, right? And so decoupling all that, we're right in the middle of that. And however long that's going to take us to come out of that, where there isn't all that segregation. Yeah.
Rules-Politics - Policies-Procedures	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Yeah, and actually that's a really good point. So we've got security standards which you guys are very familiar with, and we have some of our own that sort of add to those. So the [State] security standard is out there floating around somewhere. We had to walk the fine line at least in the 911 center of using a pool or shared password or username. If we didn't do that, operationally, we're talking about a minute to two minutes of time switching people in and out of seats which happens all day every day all day long to the point where, yeah, two or three minutes doesn't sound like [inaudible] minutes.
Rules-Politics -	LE	U	IT	Not	Not	Not	LE-U-032	[S3] You run into fiefdoms, and then there's a whole lot of political will

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Policies-Procedures			Specialist	specified	specified	specified		that needs to be involved to making a lot of these big things happen just here and there [crosstalk].
Rules-Politics - Policies-Procedures	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] It is, yeah. Yeah, because then it-- and there's also a movement going on in the dispatch world or in the public-safety communications world where dispatchers, we're trying to re-class them from clerical to public-safety first responders, and I think that's a huge step because that's the perfect example of you're there now dealing with the emergency almost face to face.
Rules-Politics - Policies-Procedures	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Sure, and if you look at protocols like emergency medical dispatch or emergency police dispatch they are the first responder. They're providing medical instructions in that situation.
Rules-Politics - Policies-Procedures	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] Isn't that still the standard? And I'm thinking, "Oh my gosh. We've added so much more complexity to just taking a phone call and we still are expecting people to be under the same answering standards."
Rules-Politics - Policies-Procedures	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] They don't even think of it. I mean, that's the problem. I mean, I see it every day that I'm working. I may be old, but I still can think about processes and think of the whole picture, and I feel like they don't really think-- they don't understand the decision they have to make. So that's a big one.
Rules-Politics - Policies-Procedures	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] Yep. Lack of business-policy procedure adherence. That's a big one.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] .... We have an inbox, we have a stack of reports to read, like he's doing right now, and then as we come in we make little corrections and then tell the officer, "Okay, it's good," and then he can go home or he goes back on service. Most of the time they write the report as fast as they can and then they run back out on the street.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] So every patrol officer in the city has a department phone. Okay. And then we'll have them carry their own personal phones too. But yeah, they have department phones now and you can get your emails, you can get everything [you have on it?].

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] Well yeah, if you lose it you have to write a memo and then you could get brought up in charges why you did this--
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] No. You can't have it on all the time. It's physically impossible, because I would be filming you, and there's a lot of information that has to be downloaded and stuff. So when you-- we have policies in place-- and it's still-- they change policies all the time because they rushed the cameras out really fast. So there was a lot of kinks in it. But you turn it on when you make contact with somebody.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] ... So they'll go, "Hey, Sarge, we just arrested this guy, this is a charge. We're going to go to the hospital with him because he has an altered mental status. But he has a warrant for his arrest." "Oh, yeah, no problem," because they need permission to go out there and do that, because now I have two cops going to be at the hospital with a prisoner, who was high on drugs, but he has a warrant for his arrest. For me, to book him at the county jail, those drugs have to be out of his system. So what do I do? I have to sit out there until those drugs come out. That could be up to 24 hours.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2]... I grabbed all eight suspects. They have to come in here. They all have to be separated. Sometimes we just don't have the room in here to separate them. Because if I put them together, they're all going to talk, right, so you have to separate them, everybody. "Oh, so you're a juvenile. You have to be separated from the adult." So as a supervisor, that's something that we have to try to manage, but we also have a senior officer here that's in charge of the station. He gets all the reports, make sure we have paper. He makes sure the prisoners [are breeding?]. He has to go through all of that. He's kind of like the charge of the station. He's just an officer. But yeah. And so if I'm out in the field and something happens in here, he's in charge. It's usually [the one with the most timing?].
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] So now the advocates are telling us that, "Well, you should be CIT trained, crisis intervention training," which we are. So, basically, I gotta talk cuckoo to this guy who's already cuckoo. But there's no cop that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								wants to get hurt. So we've already been doing this. It's just that right now, because the videos and what's been going on nationwide about these shootings, we had no reason to shoot them. For [City], I [haven't had?] an option right now. That's why we keep on lobbying for tasers. We need the tasers. We need the tasers.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] Politics. [talking about needing tasers – lobbying for tasers]
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] Right? So what do I do when the ICE agent or the Feds call for backup? They're an officer. What do I do? Do I not respond? Or do I do respond? I have to ask those questions, "What do you need the backup for?" or, "What are you doing?" "Oh, we're doing immigration law." "Oh! Oh-ho-ho-ho-ho-ho-ho [laughter]!" Right? And I got to backup right away? Oh, no, no, no, no, no. Right? He's calling for help. What do I do? Right? So they stop people all the time. Just like anything else. Hey there's a guy over, have a knife then it kinda goes through their dispatcher, it goes through our dispatcher, and I come flying down there, you know, 'cause I'm thinking there's a cop in blue calling for help. Their politics are different from our politics.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] You can walk down the street butt-naked in [City] and nothing would happen to you here. You got to [County], and you'd be arrested. However, if you go butt-naked and you sit down on a bench, and you don't put a piece of paper down to cover your stuff, I'm supposed to cite that person [laughter].
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2]... So I got the backup in the police car, which is that little van, which the new cops are going to go, "What? How?" So we have to relay on dispatch to say, "Turn on the low-band radio, not the other radio that's in the car. Turn on the low-band radio and revert to this channel on low-band radio one, two, three, or four." And then the officers will be able to communicate with that. And then phone lines are going to be down. Cell phones, you're not going to be able to communicate. What do I have? Call box key. And every cop has a call box key.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] Yeah, yeah. "Here's a contract in your blood. Here's your blood," just you know. But and then our cars. The biggest thing is our cars. We have cars that have 160,000 miles on them and they're just barely getting through. They keep on putting Band-Aids on them. It's not the department's issue; it's a City Hall issue. You ask for five cars, and they say, "Okay, well, we'll give you two." And then what happens we go through so many chiefs, that when the chief [inaudible] by the time he goes through all the paperwork and a new chief comes in, they have to start the whole thing all over again.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] We were never proactive. We're always reactive to different things and that's just the history of the police department. A smaller city is a little bit more proactive, because that's what they demand from their city council and things like that. A big city like this, we're just catching up. We're constantly catching up.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] And then they do the mold and then the wiring stuff. Because these new radios that the cops had to buy themselves. But they just wrote it off. It was like 100 bucks.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] So that's the most frustrating with the people that are calling 911. They have a script. "What's it look like?" [inaudible]. "No, what's it look like?" Right? Because they have a scripter going [inaudible] even with the fire side. I need an ambulance here. "Why?" Because they have to figure out what type of-- are they bringing firetruck also? Are they bringing police who might be closer with the [AD?]. What's going on? "He's going nuts, I need a--" well, if he's going nuts, they're not going to bring the fire or the ambulance crew by themselves. They're going to bring in the police car also, right? And then it's because they're going by their script. "He's having a seizure." Once he has the seizure, it's already done.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] So in the police cars, we have the CHP radio if-- and that's not a requirement that they listen to the CHP channel. I do, and I'm able to multitask because I've been doing this a long time. That new cop was trying to listen to the radio in his ear and just trying to get the day-by-day, and listen to the radio, so. They call it radio ear. You have to try to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								develop that radio ear. And so a lot of times--
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Dispatchers want to get the runs dispatched. There are the mandates with A priority, B priorities, and then the C priorities in time frames that don't necessarily equate with quality of service, which is a newer concept.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Yes. They were issued with a stern warning that if anyone were to use them for non-police work, there would be hell to pay. So everyone took the receipt of their phone and threw it in their bag. I'm not going to carry two phones. If I can't use that to call someone, or have a regular conversation, or receive a regular conversation--
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Now we have to because they have the body-worn cameras and though I've never owned or had to use or function with a camera, I'm told that the cell phone is important for kind of that wire--[talking about having to use the cell phones that were never taken out of the box]
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Yeah, yeah. The wink and the nudge, I know. So now, they have to use them. But prior to the body-worn cameras, yeah, people would use them or wish they had them on occasion. But for your average officer, I think he was more than willing to donate a few of his many bits of data or phone calls to the company. It wasn't going to break the bank.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Dental was a new thing we didn't have. I mean, we just started getting overtime 22, 23 years ago, 25 years ago. But yeah, the one protocol pension, they'll give you anything, but something you can actually feed yourself with.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	And they don't have to now. They have to now. But we could've if they were presented. Like most corporations when they give you the phone, here's the phone policy. If you violate it, there will be repercussions.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Genius. Most of the big agencies got away for that thing about 10 years ago. Somehow, they saved them all for us. So you have to have a fob. You can get a day off for losing the fob. You can get threatened with a day off. You might get a day off held in a band if you lose the fob. Back to trust.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Yeah. Until I retire or it breaks. This is mine. And if you want it, you can take it. You can demand that I unlock it for you. But that way, I am not doing, where's my company phone? Here's my phone that when I break on the job, it's on me, and I assume that. We all do. And back when these things were like a million dollars, we all took that risk. We all lost one. We all have a story about breaking it, dropping it when you're running, losing it, trying to write a memo, trying to get your boss to believe that you lost your phone or it happened when you were fighting. But still, that's how important the whole thing is.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	Let's see. When you arrive at the station, you go to lineup. When you're in lineup, the lieutenant or sergeant explains to you what's happening that day. Just in case you have any critical incidents or things that were happening prior to you coming onto shift, because there's different shifts that you work. And then depending on either your seniority, if you have a sector vehicle, or if you're walking a foot beat, you'll get in your car and you'll start doing your patrol, your patrol functions. You have your gun. You have all your equipment that's issued to you. Now they have cell phones. Now they have body cameras. So everything is turned on. So when you leave the station to start your shift, you're ready to go. You tell dispatch you're in service, and if there's a call within the area that you're supposed to patrol, they will let you know.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	So it's a learning process. Certain people have different aptitudes than the others. So I'm not going to make up like a judgment, say they all use them. But some may use them. Some may not use them. It just depends on their comfort level. But the features and functions are there to help them, and they are trained at the police academy on how to utilize the phones. So it's not like we just give you a phone, and then you'd have to figure it out. No. They're trained at the academy on how to use the phone itself. And then if something happens to the phone, whether it's damaged, then they come see our division, the technology telecommunication division. And then we help them either replace the phone that was damaged and to scope of what they were doing. Or if

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they lose it, etc. Any software updates that happens, it has to be updated in the phones itself. Everything comes through us. Yeah. So we'll get that pushed out to the phones.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	There are applications which are on the phone, and they're police department applications owned by the police department, our department itself. Not shared and there's no other outside apps. You cannot download anything else on the phone. It's restricted and the phone is locked down.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	If you have an incident that happens where you have to go cross jurisdiction, like crossing the bridge, we're going from [City] to [City], or you're going [City] over to [County] in a chase, then you would notify dispatch to alert CHP that you're following or in pursuit of this vehicle that's wanted for whatever violation or charges that tries to justify you even going outside of your jurisdiction. Normally, you don't. Normally, you stay within [City]. But if you have some type of exigent circumstances that you have to follow, then you will alert your communications, and communications dispatch will alert the county that you're entering into.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	They have that on certain vehicles. Certain vehicles, not all of our police vehicles have that. Yeah.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	Yes. So a nice little advent for the department is every officer is assigned a cell phone now. That was a good addition because it really helped. Because we have the cell phone that's engaged now, we have the body worn cameras. They're linked together now. So you're going to have one with the other to be able to utilize them. And officers have them and they're required to have them with them at each event. That is a good backup.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	The social concerns with the street population that we have whether it's homeless, whether it's mentally ill, whether it's lifestyle by choice, or alcohol and drug-dependent individuals, I mean, they all kind of get lumped into this homeless umbrella. But that's something that the PD is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								consistently working with the mayor's office and all these different agencies to address. But often, the community is concerned that this voice to us is that issue up front. So how we respond to them not to pacify them, but to at least include them in the conversation or let them know that they're not being ignored or not heard in their observations or complaints. So that's something that's universal all across the district.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	...Their new radios have connections with Bart and [County] and some of these interagencies that we didn't have before, as far as the new Mutual Aid channels. I haven't utilized it so I don't know how effective they are. The radios that we have are nice because they're also to be able to be configured for specialized units and be encrypted. So they have many levels of benefits with them, and now that we're all getting standardized, it's much like our guns.
Rules-Politics - Policies-Procedures	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	... Like emergency managers do a lot of planning and then you know when disaster does occur then they finally go out there and coordinate if need be. But hopefully you planned well enough that you don't need to do much. So it's more you train as an emergency manager you're trying to do much of it beforehand.
Rules-Politics - Policies-Procedures	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Yes. Yeah it's mostly email. You know occasionally phone calls but they'll it's nice of the emails because it's a written document and you can always go back to that. It's like it's a way of keeping track if you've done it or not right because you can just delete it when you're done with it. And if it's not deleted then you still need to do it. At least that's the way that's my unfortunate work plan.
Rules-Politics - Policies-Procedures	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Yeah legally it doesn't matter. They're going to get your personal phone if they want it.
Rules-Politics - Policies-Procedures	LE	R	Other Public Safety	36-45	6-10	Male	LE-R-043	Right. I mean I guess so I used to be the [Job title] also. I recently relinquished that role to somebody else so I mean I don't know you just need to know what needs to be updated right so you need to know

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					what's not working and what needs to be changed, you need to know what people are requesting so yeah I mean communicating their needs and desires and that's what I get from when people call, email or whatever and just say I need this fixed, I need this done, I need this plan and then you make that plan, make that change, make that edit and off you go.
Rules-Politics - Policies-Procedures	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	... We all don't wear the same clothes, we don't wear the same shoes, why are we all going to use the same radio but at the same time the shoes you're wearing doesn't affect your ability to walk next to somebody but your ability to have a radio does the type of radio you have will affect your ability to talk to the person next to you so people just kind of need to get over that. I don't know and as much so as I don't know it's hard right we will in capitalistic society so we all want to we don't want the monopoly of the radio. You
Rules-Politics - Policies-Procedures	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Well I'm doing it poorly so I probably won't give you the right answers and I know there's no right answers but anyways you know I'm talking mostly amongst the first responders here, the county commissioners and the State of [State] and so I'm more of a liaison between the State of [State] and the local responders as we go through this. My work with the local responders would be more the you know the emergency operation plan, the EOP they call it in developing that, developing your all hazard mitigation plan. There's a plan I just learned about that we don't have called The [plan] or [plan abbreviation] yeah however you want to say it [plan abbreviation] or [plan abbreviation] or whatever which yeah I guess I've never seen one here so something new I can develop. So yeah that's kind of you know and it comes back to why I think I'd be great for this job because I don't get caught into the politics and the intermingling of this person is a bad person, this person is a bad person, that person is a bad person or a good person you know stick with that person type thing.
Rules-Politics - Policies-Procedures	LE	R	Other Public Safety	36-45	6-10	Male	LE-R-043	No because we've never the plans have been done by consultants in the past. So it's usually and again I haven't gone through the process myself other than being a member of the committee that would you know get

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					together you talk about it. What usually happens is like you know you give people their thing and say okay update your plan, you're part of the plan and then you just put it in a big folder and say there's the plan right?...
Rules-Politics - Policies-Procedures	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	So the way that we work is we have groups of people assigned to vehicles so I'm not the only person that uses it but I'm assigned to the vehicle and I lose custody of it when I'm done so I turn it back in when I'm done and therefore when I start the shift I have to go through everything such as checking the backseat to see if anybody that was arrested left any dope or anything behind in the vehicle so I kind of have to re-I don't want to say certify but I have to go through it in my own mind each time and make sure that it's good to go. Some of our guys are assigned the same vehicle and they don't go through that procedure every time as far as the extensive internal check because it's there vehicle and they're the only ones in and out of it.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	So really radios and our dispatching consoles everything else we have you know I mean even in the office you know basic computers that do and don't work, basic printers a lot of our stuff is still handwritten forms so we have a lot of paper forms we fill out. We are kind of starting to standardize. All of our reports get typed but then we there's no electronic admission process so we type the report and then we print out copies, copies, copies, copies. One goes to the prosecutor and one goes to the detective, one goes here so we eat up a lot of paper. From a technology standpoint we use it's called Impact which is our which is the state's crash reporting form. That's an electronic submission and that's the only thing but that's not our doing that's because that's how the state requires it and they support it so they say here's the software you have to use, we'll support it, if you have problems call us.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	No. We don't use our personal cell phones. We don't even though it's a web based we don't log in from our cell phones. When or if we were to do that they now become a subpoenaable device and so our prosecutor has been very clear with us that you know using it to communicate a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								phone conversation is fine, text messages to send images, taking pictures of crashing with your phone that all makes your personal phone subjectable to a subpoena at that point so we don't use any of that.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	Yeah so when we check on scene every 10 minutes they'll be prompted to security check us is what we call it and then if it's a critical incident so if it's something that it's based on the nature of the call the system (INAUDIBLE 00:31:45) who doesn't for them. Based on the nature of the call like on a hot domestic it'll be every five minutes. We don't use EMR buttons. If we get in trouble we have to key our minds and say help and get somebody coming.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	The large agencies around here they have no pursuit policies. They will not chase you. People know that. They come to our county and they run from us and we chase them. People are going to get hurt and we don't know why they're running and we don't know what you know so we use a lot of discretion and common sense. We don't always chase them. If they're doing ten over yeah I'm not going to get in a pursuit over that but a way to shut down that vehicle something I don't know you know that's kind of a pie in the sky thing for me.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	For just a period of time right? Just a week what happened? Because it's a cultural structure. It's around guidelines and boundaries and so it's tough but when we start talking about you know technology allows us to do our job better and our mind that allows us to focus our time and energy and resources on what really matters to me which is kind of informing and educating the public around why that is important and not so much time on a traffic stop and not so much time on some of the other administrative tasks around it.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] ... They pretty much based on policy we have to wire them on our heads. Comfort is a bad thing because it's a one size fits none type headset. I got a big head.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] ... It would cost the department not just more money in server space and server upkeep they would have to hire probably one or two more IT

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								guys just to man that. Plus the equipment upkeep, the contracts and stuff like that that they would have to have with [company] and with [company] or [company] whoever they decided to go to and it just comes down to money really.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] Because they issue one but you're only allowed to have it for the first year. They give you one just until you can get your own. You buy back up guns and stuff like that you have to buy on our own.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] We have trouble keeping applicants it's just the hiring process is quite extensive. I applied and well I signed up for my initial PT test at our department. You have to pass the initial PT test before they even give you the application. So you have to sign up once the job opening is there you sign up for it on the [City] website, you go and do your PT test. I signed up for mine. I did my PT test excuse me I did my PT test in June. My first day starting was [Date]. It took that long and throughout that process there was background checks and then PI tests, a psychological test, physical test, lie detector, polygraph and that was about it but to get all those appointments set up and stuff like that and do the background checks and everything it takes quite a bit of time. It would've taken me longer but our captain was like we're going to lose him if you don't get him going so give him a hire date so that's why I was hired a month before the
Rules-Politics - Policies-Procedures	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] We get a lot of applicants but we have to through that whole screening process we lose a lot as well because for the most part I mean our department we don't want to hire any of these bad cops you're going to see on the news in two or three years. We don't want to see them fighting with their subjects just because they talk bad about them and stuff like that acting like the ones that we're out there trying to prevail.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] ...Well I laughed at that because for the last 2 ½ years that's all I've been know as you know and that's what I know myself as. When I'm in my car they don't say our names they say our badge number so I can be on a cell phone talking to my wife, talking to him doing whatever not

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								really even listening a whole lot to the radio but I here my number and this side closes out and this side opens
Rules-Politics - Policies-Procedures	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	...There there's a bit more control and required proof of being a student in order to reside in those apartment complexes...
Rules-Politics - Policies-Procedures	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	Sergeants and above are issued phones. Police officers are typically not issued cell phones until the advent of the utility body worn camera system. That body worn camera system utilizes a smartphone which is held in a receiver, a holster centered in the officer's chest.
Rules-Politics - Policies-Procedures	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	Very little and that's pushed down from upper management from executive leadership down. We don't want the officers here. They should not be spending time here with the exception of a lunch break, bathroom break or coming into file for an electronic warrant or use of the intoxilizer. There really isn't much need for an officer to be here. If they spend an hour and an hour and a half out of a shift here that would be generous in the amount of time they spend here. A bulk of their time should be spent out in the field. They have all the capabilities to be able to complete their reports, to be able to do everything they need to do out there and out there is where we need them. We don't need them here in the department.
Rules-Politics - Policies-Procedures	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	Largely it's done in their vehicles. They're expected to be complete it on their MDT's. Now there's an exception to that and that would be our public safety officers who are not police officers. We have unarmed public safety officers who are again police staff.
Rules-Politics - Policies-Procedures	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	So other communication is huge. Yes, there could always be there have been in the past you know cross radio traffic or walking on someone not getting them the memo that we have switched from our primary channel to a secondary channel for special events but again that can either be self-rectifying when their finding that nobody's talking back to them or someone else will say hey, you need to be on secondary or special

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								event. 9/11 was a primary case of east coast experience I think the worst loss of cell phone usage and overwhelmed telecommunications infrastructure. Now largely that led to The Sarbanes Oxley Act which led to the requirement for there to be redundancy to build into that critical infrastructure. I think that we have come a long way since then. I pray to God we never experience another 9/11 that we would have to test it but first step I think is a result a long awaited result of that.
Rules-Politics - Policies-Procedures	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	We are too densely populated. We are so heavily treed we have such a thick tree canopy that the potential for a drone to strike an off school and fall on someone is just too great right now. I don't trust that the technology the off school avoidance and the redundancy and the lift and mechanisms are to a point where it's safe to operate above people. It's not legal to operate above people right now. The FAA hasn't authorized it so we're not there yet.
Rules-Politics - Policies-Procedures	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] Or if we're doing an investigation like you saw we had drama up here earlier. Say we were going to do a narcotics investigation we may spend two hours in here prepping for everything. Here's the intel we got, here's what's on the social media, here's a map of where everybody's going to be if we're going to pick off or something on a drug house we would just methodically put the whole plan together and just rally up and then take off so we may be here all day or maybe here a couple of hours.
Rules-Politics - Policies-Procedures	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S3] I think the only thing that would cause problems is the unnecessary people being on the communication level. You know what I'm saying? There's certain people that you want putting information out because they know what is the pertinent information. Sometimes you got too many people putting out unnecessary details that don't necessarily involve other people. I don't know. What else guys? I think if you necessarily don't have a restriction on who is putting information out that's when it kind of gets all cloudy you know what I mean?
Rules-Politics - Policies-Procedures	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S3] And if you think about it it's just like anything if you have too much of it then you get complacent with it. You're not really paying attention to it you know your phone's going off I'm not looking at it because you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								know that's [Name] goofing off sending out unnecessary stuff. Doesn't necessarily involve us. If you restrict it to the amount of information being put out as important necessary information then everybody's going to look at it when the phone goes off.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	...If people are going outside the department for training my job's to schedule them for that, pay for it, it's maintaining all of our posts, police officers and standards, records, making sure that people get credit for the hours, making sure people have met their [name] standards. Every year you have to have 20 hours of training and there are certain mandates of what that training has to be so and then also I'm involved in background and recruiting.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	We were analog before that it was like an 800 megahertz trunk system that system was ours. We owned it, we owned the FCC rights. I believed what happened was we sold our channels to [county] on the understanding that we could piggyback off their network so now we have our dedicated channels still a number of them.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	It's a mix. Officers do not have issued cell phones, Sergeants do. I do now that I'm in this position, detectives do, the community relations officers do. I think is the only people that don't have an issued cell phone are the patrol officers.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	I don't believe so. I think if you chose to just say I'm not using my phone for personal business you could. You could use we have a talk around channel. You could find a means of communicating if people choose to. We're not expecting people we provide every car has a digital camera so we're not asking officers to document in fact that's a big no no here. If you're going to take photos of something you're going to take it with the departmental camera, burn it to a disc or upload it to the records management system so if you're using the phone if you need to take a report over the phone they can transfer it to your cell if you want some officers ask to do that through a recorded line or you can come back to the station and take the report.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Policies-Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	No the way the law is written is jurisdictionally we have authority on any property we own or occupy and then we have it's a weird old law from the 60's and the 70's that said I think it really only applied to 2 counties at the time [county] and [county] and it said if you are so state schools and institutions have authority on the property they own and five hundred yards any direction. Private institutions and counties with a population greater than 400,000 have that authority so when we're working in [county] and when we're working here our officers have jurisdiction within 500 yards just like they do and then we have ticket books and citation books and all that sort of stuff and we write tickets and take people to jail and all that sort of stuff.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	...Now the sheriff has been willing to do that. We're not going to look to do (00:30:56) part time jobs anywhere just to allow us sort of an added level of authority and protection and that's great.bNow some people in [name] interpret that deputization means you have authority in any county in the state but our agreement with the sheriff is wer'e not going to...
Rules-Politics - Policies-Procedures	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	...Because I was a student employee here a long time ago almost 15 years ago so I've known part of the department peripherally for a long time and so we had two Sergeants who were both really good Sergeants and our now doing other jobs that were running dispatch and I don't know how well equipped they were for it then they finally said okay we're going to hire somebody so they hired someone who had run a large 911 call center and she's done a much better job of dealing with the personalities of bringing the standards of training up of knowing what to send people to so I think it was you know we had some people that were kind of deficient.But we also didn't have clear guidance and clear direction of how we were going to run our dispatch and then we got someone who came in with all the skills and she's really helped bring that and they've identified they now have shift supervisors which they didn't have.
Rules-Politics -	LE	R	Field	46-55	21-30	Male	LE-R-052	... So that's the only concern we have because we're told to use it as a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Policies-Procedures			Responder					personal phone, it's unlimited data, unlimited messages, hours and minutes, so people are going to get accustomed to using it, and they start using it like their own. But in the back of my mind, I don't like using it for personal because it's their phone, it's not mine. If they want it, they can have it back.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	... If you are not a shift lieutenant, you're not allowed inside this facility unless you're called here or given permission as far as this communication section. But we never, we never see our dispatchers. Your north deputies may never see their central deputies because it's just that long of a [County]. On a busy day, unless there's transporting a prisoner, because what happens if a south deputy makes an arrest, they bring them to the south substation. They're booked in, they're processed there. But if their bond is too high and they can't bond out, or it's a major crime, they have to be brought to [City], where they bring a prisoner to central unit. Central unit picks that person up and brings them to the north unit. So it, that is normally the only time we interchange--our deputies interchange change out with... to see another deputy.
Rules-Politics - Policies-Procedures	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	No, not really because now we don't allow officers to take picture at crime scenes or investigations or anything like that with their cell phones. We have department issue cameras that where they can be placed into evidence, but we don't allow they get like sensitive information on their phones. Only text messages about incidence of details that come up available.
Rules-Politics - Policies-Procedures	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	I do believe it is. I do believe especially across jurisdictional lines. National incident management says that we all should be doing the plain talk version. Some agencies still are doing the 10 code so if I'm trying to communicate with somebody from a different agency; they're not necessarily inclined to what was going on here.
Rules-Politics - Policies-Procedures	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Yes. Yes, we have all of our patrol officers are issues body cameras. The body cameras it's in policy that every time they go on a complaint and they talk to somebody, they activate the body camera. And then we have a system when they come into the police station, they dock the body

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								camera into a docking station and it uploads to the system. So yes, we do have body cameras. All of our officers in the department are issued regular digital cameras that we use for different day to day activities and when we get something major, then we call out our investigative units and they come in with specialized cameras and digital cameras and we can video
Rules-Politics - Policies-Procedures	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	We do have... you know we're part of the region and correct me if I'm wrong at some point, but I think we're Region I, the communication district here and so there's protocols set in place that should we have a spontaneous event, responding agencies are going go to certain radio channels and use those to coordinate and kind of take the place of inter-ops that we were using.
Rules-Politics - Policies-Procedures	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	There is, there's been directives to the detectives that they will carry their department cellphones with them at all times. But there is no, there is no police department policy on it.
Rules-Politics - Policies-Procedures	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	... towards the afternoon we start looking at any type of, you know, we review our policies very, very often, so that is something that I generally try to do towards the afternoon even it is just five or ten minutes, taking a look at one of our policies and seeing if there is anything that we need to readjust or look towards, you know, revamping. Following the afternoon policy review, it could be some of those personnel related issues or maybe, you know, something that as far as looking at new technologies or something that we may implement.
Rules-Politics - Policies-Procedures	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	But you know, certainly we have processes that we follow and that being, you know, generally the guys will come in and they will brief amongst themselves as far as information that the previous shift dealt with again, you know, what type of incidents they dealt with the night before. They will brief the oncoming shift so they are aware of anything that may carry over into that oncoming shift.
Rules-Politics - Policies-Procedures	LE	R	Supervising Field	46-55	21-30	Male	LE-R-059	We do. It depends on what it is you are looking to be addressed within that policy. We have some restrictions for the use of personal cell

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					phones as far as photographs of scenes and stuff like that; you know, we don't want our officers to expose themselves by taking photographs of scenes and at some time later down the road, that information being foible, so we strongly suggest that, within our policy, that they not utilize their phones for those types of situations. We try to restrict the use of their personal phones while on duty in a patrol car that is in movement, you know, if they have to take a phone call, we request that they pull to the side of the road to do so; those type of things are covered in policy.
Rules-Politics - Policies-Procedures	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Potentially. We haven't had any, you know, but when you talk about, you know, the capabilities of the phone, you can take pictures and so forth and you know, although the department discourages using your own cell phone for, you know, evidence pictures and so forth, you know it sometimes just becomes a necessity.
Rules-Politics - Policies-Procedures	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Our cell phone use policy is basically nothing within the public view, - obviously not on the phone while you are driving, anything like that, but for the most part, a policy like that isn't possible to enforce; I mean, unless I got a citizen coming up showing me that he is on his phone, you know, in a parking lot for an hour, we have no way of knowing that, so, yeah, that's definitely a negative impact as far as technology.
Rules-Politics - Policies-Procedures	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Basically, I mean, that is, you know, if there are any weapons involved, they wanna know. Sometimes somebody calls and says, so and so has got a gun, that is obviously going to change your - we approach things cautiously anyways, but you it really stuffs it up, you know; somebody's neighbor calls and says, hey, he is out in the yard with a sniper rifle, well, you know, we are not gonna pull up in front of the house. So.
Rules-Politics - Policies-Procedures	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	We - I know some departments have it but we do not have internet in our cars, so if we need to look some information up, we usually use our personal phones. It's only the detectives that are issued city phones, so; look at our numbers or addresses or other resources like that, calling on people's behalf. I have an app that I use for calling people on the road that I can call them with a local number that is not mine so, stuff like

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that as far as - the phone is the big one. Our MDTs are - we have a digital camera for taking evidence photos. We have radar in lighter units for traffic enforcement [unintelligible]
Rules-Politics - Policies-Procedures	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Sure it would be, I mean, anything that you do that generates any documents or anything for government is all -- you know, right.
Rules-Politics - Policies-Procedures	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	We do have MOUs signed but, you know, [city] and stuff, we have an aviation unit that supplies air support for them if they ever need it. We have [Organization] within the [state] Sheriffs Association. You know, if anybody around us in this region needs us, we are always there even if we don't have an MOU signed, you know, we are always there to help.
Rules-Politics - Policies-Procedures	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yes we have. Every two and a half years is the contract we wrote and get the lightest and greatest updates every two and a half years at no cost to our taxpayers. So, it is a five-year contract with a five-year extension. Two five-year extensions that are in and they've increased our storage and everything so we are really -- we are pleased. I mean, it is Axon, the same people that made our -- the taser weapon system and we are happy what we got so far.
Rules-Politics - Policies-Procedures	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	So, you know, and then we were hiring people to take care of that that can really hold you hostage because they talk in a language that is foreign to me and I don't want to have programmers and people working -- we are law enforcement, so let those folks take care of that. Let us do -- I don't need to be hiring those people working in Sheriff's Office. I need that to be a service that we hire.
Rules-Politics - Policies-Procedures	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	No. No, we have done more with less than at any other time in history. [Inaudible] you know, the toughest economic down time in modern day history. We have done more with less. We've had things shoved upon us though we have had now in position since 1998 law enforcement. We've double bunked two pods out of the [inaudible] facility without hiring a soul. So --
Rules-Politics -	LE	R	Supervising	46-55	21-30	Male	LE-R-058	But now, we are very, very stretched, very stretched. Closing [town], we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Policies-Procedures			Field Responder					take all of the mentally ill that are up for evaluation to [inaudible] in [City] now, did that on our own.
Rules-Politics - Policies-Procedures	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yeah, incredible. And we do it all with, you know, we used our reserve unit, that are people that volunteer for our agency to work for free and to do the mental transports. We lost 21 reserves this year. I think a lot of it was -- some of it was attrition, some of it was, you know, I've done this long enough, I want to do something else and but I think some of it, you know, this isn't what I signed up for. You know, I am not Uber for, you know, the mentally ill, you know, and they are spending their volunteer time doing that instead of doing other things they could be doing. So, I think that was a big part of losing some of our reserves, but just can't continue to -- we were just talking in here already. We have not had any -- although our budget has increased but it is we picked up juvenile or because we picked up, you know, animal control or other things have been handed to us to do and it comes with that budget increase but as far as us getting law enforcement positions because we have more people, we need more policeman on the street, we haven't. We just went from five shifts to four shifts so we could put more officers on the street. These guys are working 12 hours a day now and we got to stop that.
Rules-Politics - Policies-Procedures	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	There are some two in a car if they are being trained. We have a field training officer program. After you graduate the Police Academy, you go into a field training officer program where you are paired with somebody and you get that basic education of the Police Academy, then you get the real op experience with a trained officer for three to four months Performa, so --
Rules-Politics - Policies-Procedures	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	We've got young guys. We've had a big turnover with retirements that we have had. We have a pension that's in place that's allowed people to retire with a defined benefit, you know, a percentage of their income. So, a lot of guys have taken advantage of that and that gave us an opportunity to be younger and younger agents. And when you get out of here and you are doing that work, I'm 53 okay. Some of my years were

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								dog years, so I have lived 7 and 1 a few, but I am telling you, that's a young man's forte there. When you are out there in that patrol car and you are chasing bad guys, you ain't chasing a 53-year-old man.
Rules-Politics - Policies-Procedures	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	And I remember a guy in 2013 at the [state] Sheriffs Association -- [Name] was the Sheriff from [county] and was the President of Association and we were at the Maxwell House in [city]. And this guy is set up there for 45 minutes with a PowerPoint presentation telling us how we need to audio and video every custodial arrest and any time we come in contact with the public we need to audio and video and he went on how it would be and how great it would be and he opened up for questions and the first thing [name] said as President [state] Sheriffs Association and he said -- you take that Teddy-Kennedy bullshit back up to Massachusetts. He said, it ain't go work down here. And you know what? That's exactly what we are doing today. Exactly what we are doing today and it is as good as he said it would be. 2003, I thought -- man, can you do that? They will never talk to you. People will never talk to you. The criminals we deal with are pretty stiff. Did they tell that? They were like, we're glad. We're glad.
Rules-Politics - Policies-Procedures	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	A few -- common as our population grows but we have English or we have Spanish-speaking people and we have one on every shift and then, you know, there is interpreter in court.
Rules-Politics - Priority-Influence	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	...As you got towards the 2000s, you started to see some of the failures of the systems because they weren't maintained properly or they started to not spend money on them. And then you had this window in the early 2000s where broadband was becoming big and people were saying, "Well, you know what? You don't need these super costly Motorola systems to buy something that you can communicate with." So you had people that were trying to use bridge-gap solutions, or that's when you have the KENWOOD's or the Yaesu's or the other companies that come out-- Vertex Standard, that come out with these radios that are a lot cheaper and they say, "Oh, they work great."
Rules-Politics -	LE	S	Not	Not	Not	Male	PS-S-002	No. Unfortunately, even with the FirstNet proposed plan, I mean, the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Priority-Influence			specified	specified	specified			rates are about the same as what we pay so it's still going to be the same issue. But if we can show better reliability or better functionality or capability, maybe we can make the use case. I think that's becoming less and less of an issue. I mean, as everything else is going up in cost, those things are staying pretty static.
Rules-Politics - Priority-Influence	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	So I mean it's really getting down to where that kind of cost for the accessibility, even the leadership in these organizations is starting to recognize that it's worth it because you're more effective with your work time.
Rules-Politics - Priority-Influence	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	Correct. So this is issued to me. And when I key up on it, in dispatch they get two things. They get a number off of it. Here, that's an IT number and my name. So if for some reason they go, "Well, [Name], he retired," and they get this number, then they can go by this number and figure out who I am.
Rules-Politics - Priority-Influence	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	So the mobile data computers, we're going out for a bid right now. So we replace those every five years. So we have a-- part our budget, we have a replacement project every five years. So the radio stuff, that's all budgeted. The minute we buy something, we budget for the 20 years.
Rules-Politics - Priority-Influence	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	So if they say-- yeah. If they say we're getting laptops and it's going to cost us \$200,000 for laptops, and we say we can use them for five years, every five years there's \$200,000 in our budget--
Rules-Politics - Priority-Influence	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	--to replace them. So that way when we go in five years, the typical CIP that agencies do, we don't have to fight with. It's already there. We don't have to go ask council for special consideration or a budget modification or anything like that it's in the budget. And if we don't spend it, it just rolls over.
Rules-Politics - Priority-Influence	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] And in the town that we live in it's challenging. We're using anything from you're using anything and that's what I wasn't trying like even in that meeting to say we all need to be on the 700. I know it came out that way but I know that it takes every single type of radio or cell phone or phone or smoke signal to I mean out here you could be in the middle of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								nowhere, you could be in wilderness land and you can't take anything in there so you got to get the authorization and that's timely and you know so it can be difficult so you have to figure out what works and you have to be flexible enough to recognize that and support it.
Rules-Politics - Priority-Influence	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] And they do. They have to trust the CAD. They're trained to trust the CAD but the CAD has to stay accurate and so when they run into those problems typically they will continue to trust the CAD and then just be corrected and then send it off but the CAD system you know what goes in is what's going to go out and so that's a top priority for me is making sure that on the mapping side or on the data entry side that what's going on is accurate or being taking out so that the information that they're getting all the time is up to date or as up to date as we can determine.
Rules-Politics - Priority-Influence	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] You know the first 911 event that caused that movement needs to be supported in a higher level. I think the responders should be able to communicate and I think there should be grant funding for that not just now I know it was out there in the beginning but it kind of just went away. With our state they now the [state] Public Safety Communications Commission now oversees the radios as part of the umbrella of not only 911 but also the radios and my goal this year is to make sure that funding those system is made a top priority because the repeater sites cost money, the radios cost money, the consoles or the base stations or whatever they all cost money and that's where some of the argument comes from. You know where 911 is trying to prepare for the next generation and there's many agencies that are still using funds for radios or whatever because there is no funding for that and so 911 ends up kind of behind the eight ball just because of the funding aspect alone so funding for the next generation 911 also has to be those are going to be the top stuff that will be happening in the state of [State] I know this year so it's always having to do with funding I guess. You can't tell people to do things and then not fund it it's kind of hard.
Rules-Politics - Priority-Influence	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S3] Another technology initiative that we saw fail in this valley was the fire several fire agencies were trying to get mobiles in their vehicles and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								right now there's very limited capabilities for fire to see the important information in their mobiles that law enforcement sees and again it comes down to just lack of funding and ability for them to tie into these calling systems and so I think that interop just isn't radios there's more to it with these officers, these first responders need to have certain information, they don't need to see arrest records and things like that but there's a lot of information that they crave from dispatch and they just don't have any way to get to it because they can't have the tools that are funded by the law enforcement side.
Rules-Politics - Priority-Influence	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Last year we did a complete remodel. Actually this year in May of our comm center. So we took everything out of it. Moved it into a different room for a couple of weeks and we stripped it down to zero and put new furniture, new computers, new everything pretty much
Rules-Politics - Priority-Influence	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Yeah, we did almost \$400,000 this year. So pretty cool. [upgrades]
Rules-Politics - Priority-Influence	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	... And the fire departments can't all afford it either because some of them are volunteer and some of them are this, and some of them are that. And the way that it works is it's hooked up through dispatch, so they have to have this equipment in order for us to dispatch for them. They don't want me to-- I can't pay for it because if I pay for it, I have to go ask them for the money anyway, and they just don't have it. So if want to give my people a raise, I have to go ask them for money, they're getting tax.
Rules-Politics - Priority-Influence	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	If you might want to look into that, they seem to be on the ball with it. They're pretty much the only place I know where you kind of have an overseeing government that provides funding, which I understand that there's probably some bitter pills they have to swallow to get the money to. But it just makes sense that the government would take care of 911, and emergency dispatch, and emergency public safety. That's kind of where I'm at.
Rules-Politics -	COMMS	S	Comms	36-45	11-20	Male	COMMS-	... We have a lot of resources that other people don't. We have our own

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Priority-Influence			Personnel				S-003	paid psychiatric doctor that's just for the fire department full time. We have our full-time medical staff. We have our own doctors and nurses and everything, in our own medical facility, just for us. So we have a lot of resources, we have our own health and wellness division that specifically caters to the family well-being, the spousal support, the child support, the financial education for retirement, everything like that. And then the stresses. If you need time off, if you need life adjustments, if you're addicted to anything they kind of help you with coping mechanisms for all of those things.
Rules-Politics - Priority-Influence	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	Honestly, we should have had more but we did not, I don't know why. That's up on the technology chain that I'm out of, but we did not have sufficient training.
Rules-Politics - Priority-Influence	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Usually, yeah, all the command staff, they have a cell phone. So we have a duty operations chief; he has an issued one. Each battalion chief has one; the ECC supervisor has one; the EMS duty officers, they have one; the PIO, of course, has one.
Rules-Politics - Priority-Influence	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	So demographically speaking the [county] is an extremely wealthy county. It's one of the I believe it has one of the highest median income household incomes in the whole country. Very, very privilege people live here. With that they also kind have grown accustomed to a higher standard of living and they also expect that in their public safety so a lot of the things that we deal with are usually maybe other agencies would not respond to but there's kind of something that's referred to as the [city] Way and that's just kind of used within the government here to kind of refer to the kind of extra customer service that we provide that maybe other agencies do not. We respond to a lot of calls that other agencies would not respond to. We are a lot more patient than other agencies would be and so I think that it helps us in a lot of ways but it can also be kind of negative. It helps us in one way because I do feel like there is a higher professional standard so we're very good at our jobs, we're very professional and courteous to the public but then on the other hand sometimes they can tax our resources because we're responding and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								dealing with these incidents that maybe you shouldn't really be receiving a public safety response.
Rules-Politics - Priority-Influence	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Usually so for a perfect example would be one that I took a couple days ago in which a person kind of expressed that they didn't like the look of a vehicle and there was nothing that they could express about why they found the vehicle to be concerning.
Rules-Politics - Priority-Influence	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	There was no suspicious activity, they didn't find anybody that they found suspicious around the vehicle that sort of stuff. We respond to a lot of civil matters that because they want the police to respond we will respond even if it is a civil dispute and there's nothing for the police to do. If they say they want the police to respond we respond. So that's more of a and that's a policy that a lot of us kind of share the opinion that that's a policy that kind of is bread of this [city] Way.
Rules-Politics - Priority-Influence	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	And again it's good you know sometimes it's nice if you're an [city] citizen and you request the police you'll get the police but then on the other hand we also don't have as many resources as other agencies that are surrounding us. Like for example [city] has many, many officers from many different agencies that can respond to a variety of incidents however we don't have as many resources as they do and yet we're also expected to respond to more incidents in that sense you know not the volume but necessarily the type.
Rules-Politics - Priority-Influence	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	And a lot of that comes back to like the investment in personnel. So I was very privileged to have an extremely good trainer and then also a lot of time dedicated to me. My shift happens to use have training as a priority you know so we focus on that and we try to make our people good dispatchers. So we try to make it as you know this stuff off the top of your head because---
Rules-Politics - Priority-Influence	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	...I know how I want to get a description of a person and we're trained on that and then I've added my own flair to it you know and so once you learn that stuff it becomes a lot easier to process a call even if it is a high stress environment and then also that being said we also work you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								up to that you know we start you off on phones. You take really basic calls and then you take the non-emergency line and in the non-emergency line you are going to need to use some of those skills you know in a trespassing person or a disorderly subject or something like that. You still need to get a person description but you don't need to get it as high as important as you might need for like a hot call or something like that's really active.
Rules-Politics - Priority-Influence	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Mmhmm so I would say there's a lot of emphasis in this job in all of public safety on my ability excuse me so I would say we're constantly reminded of liability and we I mean there's the obvious stuff which is your life can go from zero to sixty in like 10 seconds. You know you never know what's going to be on the other end of the phone you know I was having a really slow day one day and like nothing was happening and then I took a double stabbing in the parking lot outside. So it can just go and you'll be taking calls all day and you'll think they're kind of you know kind of silly you know like parking complaint after parking complaint after you know this guy just doesn't look right you know that type of stuff.
Rules-Politics - Priority-Influence	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	You'd be talking to them you stress for them and then on the other hand you're also stressed for the officers because or the paramedics or whoever's responding you know because we're all kind of one family and we all care about each other and your job and this is how we think of ourselves our job is to keep them safe and make sure they get the resources they need. Make sure that they are prioritized you know and we're sending them into these crazy situations and we want to make sure that they're going to be okay. So there's a lot of stress about just again the unpredictability just don't know what's going to happen and then in addition to that the liability that if anything that goes wrong you are responsible.
Rules-Politics - Priority-Influence	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	There's a lot of emphasis on that and it could be for anything. Could be something simple like teletype where you're entering a warrant and then you put in the wrong information and then that person gets let go

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								because you didn't put in the right information right? So or you could put in the wrong information and the wrong person could get arrested right?
Rules-Politics - Priority-Influence	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Because of the how up how Z our jurisdiction is. So it's finding the funding for that, finding making sure that the carriers meet their goals and I believe that there's a 15 year goal---
Rules-Politics - Priority-Influence	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Even if it's a very non-emergency they expect a certain level of response. So it's hard for us to keep up with some of those expectations. Some of them are very disappointed that we don't have certain applications that are out at the moment. One of those being smart 911 and the reason that we chose not to purchase smart 911 it is free to the citizens but it costs the county an annual amount.
Rules-Politics - Priority-Influence	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	...A lot of jurisdictions their dispatchers work 12 hours a day and they work 4 to 5 days a week and so when you're having someone here from 7 p.m. to 7 a.m. and you are constantly giving them the worst of the worst now you're wanting them to view the worst of the worst but we're not getting the support and the resources that we necessarily need to deal with those kind of things and because you're here for 12 hours somedays when we have only 5 employees on shift we can't give you a break.
Rules-Politics - Priority-Influence	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] ...And then people don't like to carry big bulky radios anymore. They'd rather have it on their phone. Now you spend a bunch of money to give all these people radios and now they're just going to use their phone. So it's cultural but it's also cost. And grant funding has been the primary stream for all that. Most if it didn't come out of budget. Once this starts to need to come out of budget because grant funding isn't available or needs to be for other things, then that becomes kind of a challenge. A tug-of-war over what gets priority.
Rules-Politics - Priority-Influence	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] [crosstalk] Yeah, the font size is different. So that's a little bit of a factor. One that I don't think our technology folks probably focus enough on. And I think the reason why is, going into the profession you have really high standards for health and all that kind of stuff. But you do

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have an aging population, right, and as soon as they start the job they're starting to age, so there's some consideration that needs to be given to that. But there's only so many options out there.
Rules-Politics - Priority-Influence	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	Everything is up to date and in good shape. We try to stay on top of that, make sure we have, as I said before, the latest and greatest so that way when we have equipment that works and is working for us, you have a happy dispatcher, and you have a shift that runs smoothly.
Rules-Politics - Priority-Influence	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	It is 4 years old. We actually went active in here in October of 2014. The good part is I was involved in the design and the construction and the buying and finding of everything in here. We made sure that we had furniture that would accommodate them to work 12-hour shifts because at a minimum you're in here for 12 hours. If an emergency situation as in lovely hurricanes, living on the Gulf, comes in, you may be here longer than 12 hours at a time. But we made sure that, you know... they could be as comfortable as possible at their station. Their stations go up and down whether they want to stand up, sit down. They each have fans. They each have a heater. They have dimmable lighting.
Rules-Politics - Priority-Influence	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	And it seems a little excessive but when you're sitting there for 12 hours and you just need to get a little bit of heat but the person 2 desks down from you is cold or is hot and wants the fans on them, it makes a big difference because just in their work you are letting them get comfortable at their station as far as, you know, environmentally-wise they can heat up or warm up or cool off and they can--I find that it helps them perform better because if you're sitting there freezing, I mean you're not exactly going to do anything at that moment in time. So. But we've been here 4 years and it's still a work in progress I think. It's still, you know a year after we were here is when we had the video wall installed up with the--but we're constantly getting technology and adding stuff to it so.
Rules-Politics - Priority-Influence	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Fortunately we work for a sheriff that is very big on technology. So we normally... normally getting in on the very front of some new technology. Our sheriff's office is CLEA [phonetic] certified and he's a commissioner

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and all that other stuff. So we get in on the very front of that. He was president of the National Sheriff's Association so he get a lot of people that come to him to try this or try that. So I feel like we have a lot of technology here that some departments may not have or may not have the access to.
Rules-Politics - Priority-Influence	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So we have to, we do more work with less people than government does. So if you go in and look you will have people sitting around on that side, that's government, not doing anything, now [indiscernible] you can see on our side too, the phones are ringing, go off, but they're usually doing some training or something going on. So we do more with less and we have to because if we don't make a profit, I can't buy new radio systems, I can't do all that stuff, so we have to be frugal with our money.
Rules-Politics - Priority-Influence	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	At least that's my personal look on it and it's got to be cost effective so for me to go to a board and sell, which I just did, so ATCO, if you are familiar with that.
Rules-Politics - Priority-Influence	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	The reason for that is politics. So the people that ran rural metro helped create some of the bankruptcy issues. They all quit, walked out the door one day to go start a new ambulance service and part of that they knew what was going on, so they entered into this contract that we're in now, some things to make it difficult for us to remain here, but we're smarter than they are; we're doing financially well and they're suffering so, but it's politics, so they got in and they agreed, 'we will do this for free, we will pay those fines if we can't do it', so it's a mutual agreement from our side of the company, those people don't work here anymore, so that's how you end up in a thing like that, but if you look at a lot of -- we've gone full circle so, we used to get at one point if I can remember \$90,000 or \$100,000 a year to pay for the indigent people in [city] who couldn't ambulance, to offset those possibilities. And then negotiated a way and it went down to \$ 30,000 and then it totally went away. So we get no money for anything, for indigent.
Rules-Politics - Priority-Influence	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	I will still have three because the VHF, UHF and 800. The goal is for all of us to get to 800... There's just some barriers of political things in the way

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								of getting there.
Rules-Politics - Priority-Influence	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Right, for us it's uncommon. [state]? They do it all the time. They do it all the time, so they're set up with a lot of grants and funding and all that. We tried to take those lessons, but how do I sell to somebody that we need to buy a half a million dollars' worth of radios that we are going to use twice before they have to be replaced because of upgrades. That's just hard to do.
Rules-Politics - Priority-Influence	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	That part of technology, we've had some issues. There may be a little bit even going on with this new radio system, we have egos. Depending on who is in that position, there's egos, there's politics, so we're able to get through all of that because of the relationships. I'm a big relationships guy. I mean if you have a relationship with somebody that they like you and they somewhat trust you, or do trust you, it's much easier to conduct business than 'oh crap, here comes that guy again.' So I'm really big on that, so I take time to meet with [City]PD leadership outside of here, same with the communications liaison for [City]PD, he and I talk all the time. If an issue come up, I shoot him an email, 'go ahead and check into this', because I'm not first blush and there's personalities in there. It could be a personality conflict. But I look at everything as so we do adjust culture within EMR which is how I've always done business. I don't headshot people or go yell at everybody when we have an issue.
Rules-Politics - Priority-Influence	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	It is much easier to fix it with less social media repercussions. Now you're going to have some social media that will tell one truth and trying to get attention [indiscernible] I don't address it, I don't touch them. But the mayor does. They've got some stuff on the social media and I've gotten a call from the mayor over the [inaudible] 'hey you need to look in to this' and I go "already looked at it and its not true and here it is" and he'd be like "okay". But they, the politicians pay attention to social media. They do.
Rules-Politics - Priority-Influence	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	I would like to see technology to continue to move forward to true total interoperability between every agency. I've heard that my whole career. For 30 years, we've been talking about interoperability and politics

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								always gets in the way of interoperability. More than money; egos, politics. I'm in charge. There is no "in charge" and there is less of that here than I see in other places but, you know, over the years the police and the fire get about -- [State] code states that if a fire department on the scene of a fire then the highest ranking fire official is in charge of that scene. The police hate that.
Rules-Politics - Priority-Influence	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So we have to -- I want to be on the front end to learn more about it and understand how we can make it help us and not do it because we have to and it'll hurt us and I don't know that that's...because everybody's got an agenda. AT&T right now has an agenda about selling up this new system. If the State buys into it, which they did, now they have an agenda to make that work, because it's a politician thing.
Rules-Politics - Priority-Influence	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Oh, I knew it would. But we've got to have voices of people that use it that are non-ego voices and that's where we struggle sometimes because politics falls into, "oh I want so and so because he believes like I do" and then somebody else says "no I want to put that in the board because they believe in that and they lined that up and now what should be a true user group is now another political group and I see that happen a lot of times.
Rules-Politics - Priority-Influence	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Honestly, what it comes down to, we all got to go to it, so we got to find the funding so that we can get there and it'll be and it'll work, because there's going to be some small counties in this State that can't afford to do this, and that funding's got to be there for them.
Rules-Politics - Priority-Influence	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	He's a great guy, but he doesn't do much with the 911 because he has got it running and it runs great. But I guarantee you, he's more up on Ambulance, financing budget, ten care, Medicare, those types of things than he is on next gen 911, because his primary job is EMS and that's another responsibility he's got.
Rules-Politics - Priority-Influence	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So there's all kinds of things that we need to work on, but when you get to the political its like "we can't afford lawsuits; you've just got to treat it." I mean were endangering people when we are in emergency traffic calls

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that we should not be running around [indiscernible]
Rules-Politics - Priority-Influence	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	And you're coming from the slow end and this sort of seasonally busy end, and that never end transfers and their end transfers, and had a way higher property value, and that was managing themselves okay financially. But because of financial downturn, and because a lot of our money is based on property taxes, and because it takes two years for the property taxes to actually trend one way or another, even if they're going down, it still takes two years. They were in trouble financially. So it was to their advantage to merge with us. And their person that was in charge of them, saw all of that. And I think it also makes us stronger overall as an agency, to be together with five different fire departments. Fire departments sometimes like to take over EMS agencies, and if you have one through out the county with five different fire departments, it's a lot harder for one fire department to say, "I'm going to take your whole thing over when they only cover a certain part of the district."
Rules-Politics - Priority-Influence	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: change in communication] I'm not really sure they've gotten all that much better, from paper to what we are now. I mean, I understand why we're forced into using technology. I mean, it's volume, basically. We just couldn't do what we do any more on paper, it just takes too much time, and it's, shuffling the papers around. But, like I say, the time wasted on technology is enormous. I don't think anybody admits what it really costs. Yeah.
Rules-Politics - Priority-Influence	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	But technology, fire prevention hasn't obsoleted us, because there's still the possibility of-- I mean, look at that thing in London. That kind of thing. That's why fire departments stay around. Because people see that on the news and they go, "Oh, no. Can't get rid of the fire department." But it's taken away a lot of our sort of innate sense of what you use this for.
Rules-Politics - Priority-Influence	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Yeah. It's difficult. That's probably one of the most difficult parts of my job, is adequate staffing so that they're not getting just beaten to a pulp in a busy season, and there's not a bunch of people standing around getting paid for nothing in the off-season. That's what taxpayers

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								demand, but it's-- you got to have a happy medium. I mean, I'm usually a little understaffed in the winter and a little overstaffed in the summer, and I try and smooth out those curves a little bit, but it's-- everyone complains when the ambulance doesn't show up for 10 minutes or something. It's like, "Where were you guys [laughter]?"
Rules-Politics - Priority-Influence	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	So we just message each other, so standard commercial messaging systems. Again, at an enterprise level, for sharing files around, we have our own intranet with shared central drive systems. That gets heavily used. We asked for something more mobile-friendly, and we got access to the box.com platform which is very nice...
