Rules-Politics - Priority-Influence	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: pre-plans] ...every once in a while, something really weird will happen. President [Name] decided he wanted to address a crowd. I don't remember what it was but at a local high school. So the man can draw a crowd [laughter]. Basically, on four or five days' notice, we had 20,000 people showing up to hear the president speak on what was essentially just a high school football field. So it's not really geared for that kind of crowd or anything and you just wing it. Those are the ones that are a little more interesting in terms of getting that information together and then out to everybody, especially because those change up until the last moment when you get-- he, the president, whether it's [Name] or not, they're just notorious for-- I mean, the president, if they change their mind, everybody else changes around them, not them. But other events do it to a lesser extent, where you're adjusting on the fly and you need to get all that information out to everybody.
Rules-Politics - Priority-Influence	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] ...There's various procedures and things that need to be followed to change anything, and that can be very technical. And there's a whole lot of people who are in charge of this part, and then a whole lot of people that are in this part and getting everyone to meet on the same page. That can take years. And culture is a hard thing to change. Some of it is just a cost. I mean, our Lifepak monitors when we got them, we got a deal, but they retail for over \$40,000. Our Toughbooks are 6 or 7 thousand dollars new. The new tablets are certainly not cheap. That's an

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								enormous cost when you have 35 ambulances that you need to put at \$50,000 monitor in [laughter]. And so some of its budgetary constraints.
Rules-Politics - Priority-Influence	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	Well, for traumatic, not traumatic-- for violent incidents that we respond to, I want to know who's also responding. Are the police responding? Why do I have to call the office to find out if the police are coming in? That should be an automatic, "Oh, yeah, by the way, the police are going there." But that has a lot of political implications. For example, some priorities differ from what my priorities would be where we need the police. "Is this a domestic?" So.
Rules-Politics - Priority-Influence	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	... Funding is an issue everywhere I would say. You have to prioritize where you're going to put the money that's you know set aside for you. You have to have somebody that's going to keep the interest of the personnel as well as the county taxpayers in mind when they're buying stuff for the year, when they're budgeting out their year. For example, the [devices] were real expensive for us down here but it was a necessity because we're taking people 45 minutes so that was a necessity over maybe something that we could have had that was nicer like the automatic stretchers or the power load so you just have to prioritize these things.
Rules-Politics - Priority-Influence	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	You going to crawl till you get service somewhere? I mean so it's the communication technology is pretty primitive and nobody seems to want to pay the money to fix it because it's not a big deal to the commissioners. You know they can't just spend the money on it so I fear it'll take somebody getting hurt or a lawsuit of some kind because the crew couldn't get somebody out ended up passing away or having long term effects from a stroke or something like that, the crew was trying to get on the radio, couldn't get out, the family sues. I think you're going to see something like that that's going to change this before pleading with the administration to change it.
Rules-Politics - Priority-Influence	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Absolutely yeah. Out here it's all reactive. That's the way it's done. They don't have enough money to proactively do much of anything so you know there's no tax space out here relatively speaking. [city], [county]

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								huge tax spaces. Out here you don't have it so it's all reactive and it's right, wrong or indifferent it's the way they got to do it. They got to run a whole county here. You know they got a road department, they got a police department, they got people that they need to pay for.
Rules-Politics - Priority-Influence	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Not until the county builds a plan and lots of money for it. I mean there's nothing you can do other than make it work which is a lot of what emergency services does that nobody understands. You know everybody thinks oh man they got the BRT's, the big red trucks and they got everything they need in that thing. I don't know what they got but they got everything. Normally you know in a lot of these places the stuff is held together by what the guys do in the station. They're not going to pay for a new light bar because a tree fell and hit the light bar and broke it so now you're running with a broken light bar but if you fix it in the station nobody's going to say anything you know so you fix that stuff, you get it going.
Rules-Politics - Priority-Influence	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	Yeah. And I think, probably this department, they're big on innovation and trying to get better equipment and do better things. So they'll get a lot of new ideas, they'll try them right away, and see if they'll work for them. We'll try new hoods, which isn't really a technology thing, but it's just a piece of our equipment. But we'll try it, and if it doesn't work, we'll just give it back
Rules-Politics - Priority-Influence	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	Right now, it's me and a lieutenant. And I think we're way understaffed.
Rules-Politics - Priority-Influence	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	I mean, there was a group that was doing it prior to us, and it was a lieutenant and like five sergeants. So they all could kind of take little areas and share-- right now, what we have to do is-- the program we came up with, we have to find people to do the training. So we came up with the program. Now we have to find people to do the training. And they'll come in on overtime and kind of be adjuncts for us and work for us as adjuncts.
Rules-Politics -	FF	S	Field	18-25	5 or less	Male	FF-S-039	But there is definitely a push for people to follow their SOPs, their

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Priority-Influence			Responder					standard operating procedures more. And to communicate less of the stuff that should be assumed. Like, I know if we were in a fire right now, our job is to do a search. That's our primary job. That's our primary job. Our secondary is to is to control utilities. No one needs to tell us to do that. So if we're really adhering to this policy of less radio traffic, no one should have to tell us to do that. When we're done with those things we'll say, "Rescue squad 741 to command, we've completed the primary search and it's negative. The utilities are gas and electric and they're both controlled." That transmission right there took 20 seconds, and that should be the only transmission...
Rules-Politics - Priority-Influence	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	Yes, one is the department one, and one is personal. So being in government, everything is subject to Freedom of Information Act requests. And we have had in our state people that have been very specific. They don't like the idea that they can't get the information, so they have done many blanket requests where they want every single text to every single employee of agency XYZ or whatever have had-- they've made request for every single email for every single state employee for the last year. So some of these, they may know full well that, I mean, the state can't fulfil those because we're dealing with millions of hours and [laughter] dollars. But knowing that those requests are out there, yes, anything on this phone, I understand and acknowledge is work-related and always subject to that. And then anything on this phone is for the wife and kids and [laughter].
Rules-Politics - Priority-Influence	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So the fire stations are spread pretty evenly throughout the city. Yeah. And there's all kinds of sociopolitical reasons for why fire stations get put wherever they do.
Rules-Politics - Priority-Influence	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...When Sprint/Nextel for example were looking at adopting the iPhone platform, they had to figure out are we able to move a million of these devices a quarter? Or I think the numbers might have been even more inflated, like a million and a half a quarter or something, a month. If you total up all of public safety in the United States, every cop, firefighter, volunteer, numbers estimate, you may have three and a half million of us

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								total here in the entire United States and we're certainly not replacing our radios every two years like average customer is with their cellphone.
Rules-Politics - Priority-Influence	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	And so the whole idea to have public-safety technology, public-safety equipment that is free with a three-year signup [or?] lease, whatnot, has been a real interesting paradigm to try to address with public safety as far as technology: how we have it, what we do, what do we need. But it's for no lack of needs. Public safety definitely has technology needs, but it's always been kind of this push pull as far as, "Well, here's what's available," or, "Here, how can we make this work for us?" versus just saying, "Industry thou shalt do it for us because--" I mean, we just won't buy enough of them, they think, so.
Rules-Politics - Priority-Influence	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: communication with LE] That they don't. What we have found since September 11th, is that after September 11th, public safety put out the word that, "Hey, we need a lot of help with this." And in short order, we got a lot of technological support. So there are the little black boxes or apps or software. You can pretty much make anybody talk to anybody. So that was part of it...
Rules-Politics - Priority-Influence	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	My daily routine is very hectic because as the training division we're required to manage training curriculums, provide evaluation processes for probationary firefighters, to disseminate and deliver required training by the [State] Administrative Code, the National Fire Protection Association, as well as manage budgets and funding so we can provide those training with all our personnel.
Rules-Politics - Priority-Influence	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Yes. So I have a department issued phone in the training division but each company officer, lieutenant or captain or battalion chief, will have a department issued phone. And that's their means of communicating just for that crew and that shift.
Rules-Politics - Priority-Influence	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Okay. So all of our engines and ladder trucks have thermal imager cameras on board. And it is required-- I don't want to say required-- the protocols and the standard operating guidelines that we have, dictate that the company officer will have the thermal imager when they enter

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								an IDLH atmosphere.
Rules-Politics - Priority-Influence	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	I guess it would be stable funding of the fire service. And I don't mean just more money, what I mean is stable funding so we're not reliant on levy's and votes. And we have adequate staffing, so we're not-- let me just close this door. So that we're not trying to get by with the very minimums.
Rules-Politics - Priority-Influence	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	...That technology is out there but for a third-party company to build it on their own, there's a ton of motivation because the end-user group is not gigantic. So it's not something that you can, "Why do I want to build a system for the fire service when I can go build Instagram and try to make billions of dollars, right?" So there's that element that's at play.
Rules-Politics - Priority-Influence	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	And how to breach into that access of those skill sets and the funding that's necessary to create those systems, because right now they seem lackluster for sure.
Rules-Politics - Priority-Influence	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	...I would just think more probably where we could really, really jump forward, but it's all money, right? Because it's-- that you want to talk about being leading edge, that's where I think it would be advantageous, is the fire scene.
Rules-Politics - Priority-Influence	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4]... So now we're sort of on the leading edge of a lot of the technologies for communication, patient care, patient transfer information, things like that. And one of the leaders here just because number one, we've lagged long so far behind. We've got a very progressive, particularly on the medical side, EMS program that uses data very heavily, relies upon data studies and things like that very heavily for care. And we're willing to invest the time and energy, and these guys are very capable in terms of it. They didn't embrace it at first. I think the curve into which they have embraced the technology and been willing to work with it has been pretty amazing.
Rules-Politics - Priority-Influence	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] And one of the difficult things, I think, is you're developing standards, but sometimes standards come out, and we don't have the funding to meet some of the standards. That's one of the challenges we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have when standards are created. As the federal government and the state government, there's a lot of unfunded mandates, and it's very difficult to do sometimes.
Rules-Politics - Priority-Influence	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] And a lot of spares to go with them. So that worth, maybe on a small scale. Maybe \$2,000 doesn't seem like a lot with that technology, but when times 400 of them, that's a big hit, so.
Rules-Politics - Priority-Influence	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: equipment checks] I mean, it works fine for us. I think there probably be a more efficient way to do it with technology that's available, whether that be on an iPad which we tried for a little bit... And I don't know really what happened with that. It sort of-- we had them, and then didn't have them anymore. It just sort of went away.
Rules-Politics - Priority-Influence	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	And in doing so, we actually-- the other captain and I are going to be working with that commission to kind of spearhead drones in public safety for [State].
Rules-Politics - Priority-Influence	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	With that said, we're right on the outskirts of the high-rise district, so a lot of business. What we've seen recently, honestly, is we've always had a fairly large population of homeless but it's exponentially increased over the last few years because of the marijuana legalization. So every 16-year-old that's angry at Mommy and Daddy because they don't let them smoke marijuana decides to leave home and come out here. So if you look out right where they're going, right over here is a high-density area for homeless people and drug usage. So it becomes, for us, we've seen that increase dramatically and with the homelessness comes-- and the marijuana, it just takes-- it goes from the marijuana and then they come out here, the next thing you know, it's some type of cocaine, heroin, just whatever. So we're trying to-- and there's not a lot of places to put them, so the mayor's priority is really trying to get people into some type of housing so that they're not out there just-- and programs that really help the people that are out there coming in and just getting addicted to stuff, so. But this firehouse really has just a wide-- if you just head just a little bit that way, it's low-income. If you head a little bit that way, upper-end business... So this area kind of hits it off... This area just

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								totally sees it all.
Rules-Politics - Priority-Influence	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...I'm trained to put water on a fire. I'm trained to cut a hole in a roof. I'm not trained to come in and say, "What do I need to--?" ... Or even, what is data? I don't even know where to begin to look at saying, "Hey, I would like more fire trucks." Great. And usually, as firefighters, we're very passionate people because we want to help. And so when a government comes in, they can understand a passionate argument significantly. They come in and they say, "Man, I totally agree with you, but I don't have \$1.8 million to buy a new fire truck. I have all these other priorities."...
Rules-Politics - Priority-Influence	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...so being able to come in without my emotional argument and bring in a logical argument and say, "Here's how this \$1.8 million could benefit you," is what these data analytics people could do, right? They're the ones that could come in and say, "I'm going to take your emotional argument, and I will show you how you can collect data, whether it's through response times, through call volume increases, through number of citizens that you're serving every time, how many touch points do you have. We can come in and actually utilize that data to justify a fire truck or additional staffing." Chief [Name] is a master at that...
Rules-Politics - Priority-Influence	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Internally, I think we're just getting to a point now where we have-- we hired, a few years ago, a community outreach director who's-- now, she's a civilian. She worked in government for quite a while, but she's now our-- I don't want to say political affairs, but she has a really strong foundation in that world. So even though that's not her primary function, because she has a strong background there, she assists a lot of our commanders, our division staff, which is the highest level of our department. So it'd be the chief, the deputy chief, and then we have six division chiefs. She kind of comes in and, "Hey, you might want to think about this," or "Here, I could put you in touch with this person." ... Where I don't specifically know what stuff we're tracking, I do know that she's really helped the division heads and the chief of the department start looking at how we can utilize data to advance some of the priorities that we have.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Priority-Influence	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Our dispatch is kind of unique, where we still have [City] firefighters work in our communications and our dispatch. We don't have call takers and dispatchers. Our union has fought very hard to keep firefighters and we have a group of people that-- we still rotate some people through there because not everybody wants to go to work in dispatch. But usually some of the older firefighters, or people who might have been injured, or people who just don't want to work in a firehouse anymore, they'll go up and they'll work up there and they'll stay there for however long. And so they can become quite proficient...
Rules-Politics - Priority-Influence	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...sometimes CAD will come in and say, "Engine one, respond to this call." Well, it's not taking into account that this road is closed, and so engine 11 may actually be closer because right now there's a protest going on, and so this road is closed. And so it just automatically assigned engine one... So, us having firefighters up there who actually understand firefighting... They understand, "Hey, you know what? I got this road closed." And usually, they're not quite as-- I don't want to say fearful of making a decision as maybe a civilian who's hired to be a dispatcher. "CAD told me to do this so that's what I'm going to do." I have firefighters who are like, "No, this is the best reason why I would do this." Or, "Hey, Chief. Do you want me to start you a second company on that? It looks like you're running a little low on truck companies. I'll start you another one." So having those firefighters up there is kind of a-- every time we come to collective bargaining every three years in the city we always fight to keep our dispatchers up there.
Rules-Politics - Priority-Influence	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	He's very interested in advancing the department. A lot of times we don't have firefighters that stay in key critical positions for a long time because we love to get back out and do the firefighting thing. And so those key positions that keep the organizations moving forward, in the fire service in general, we get huge amounts of turnover. I'm a brand new captain. A brand new chief. I'll do my 18 months in hell. Go work in an office and then I want to leave. But anything, if you want to advance the organization, if you want something... If you want to increase your

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								budget, get a new piece of technology, those things aren't just like--
Rules-Politics - Priority-Influence	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	I'm a firefighter out on the street and, all of a sudden, I come into a position in here. Just figuring your schedule out, let alone what you do for your job, takes you a year. Well, then you only have six months left. And you know as well as I do that a lot of times, it's who you know that can make-- I can call up somebody at technical services and say, "Hey, I have this problem with this. What do you think?" "Oh, there's this dashboard program that you could use that could really help you track your people and help you create some efficiencies in your time." "There is?" "Yeah." But if you're only spending 18 months, number one, do I really care? And number two, I don't even know where to start to do that kind of stuff...
Rules-Politics - Priority-Influence	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Yeah. And I think especially when you're looking at a lot of city projects, everybody's competing for funding. So even with a very well-laid-out, high-priority project, the timing on it may be--the city could have other really-- in two years from now, this project could get pushed right through. But right now, there's three other projects that are super important. So it could just be killed. So, by Chief [Name] being where he is, he understands what's going on in the city and going, "That's a great idea. We need to push it. We're not pushing it right now." ... Because the timing is bad... And so he understands that. And he's a master at that.
Rules-Politics - Priority-Influence	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Yes. We have an IT. So we had a battalion chief who sent us down this road and then left to go work somewhere else. So now one of our engineers, our drivers, is trying to keep it afloat, which is great. I'm glad he stepped up, but it's too much. In my opinion, it's too much responsibility to put on someone who drives the engine and is paid a certain amount and is already busy doing a whole bunch of other things. So we will see how it pans out.
Rules-Politics - Priority-Influence	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	So for that point there, every week all of the agencies from [County], which is one county east-- from [County] to the [State] border, conference call every week. So I didn't know this until last week when the chief said he couldn't be there so I had to call in. And so not

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								everybody makes it every week, but at that point, there were 46 people on the line. And so what happens is the [Organization] kind of goes down the list of agencies or counties and they just chat about current fire conditions. How are you feeling about it? When it's rainy, there probably isn't much to talk about. When it's dry, a lot of them-- there's a lot of chat about what they've had. We've had some incidents here and there, whatnot. The particular phone call I was part of was, "Let's go to stage one fire conditions," or-- yeah, stage one. So basically stage one is just you can still have campfires but the have to be in an approved camping ring. You can't just light them with rocks on your own, if you will. And so it's that phone call where the decisions are made, and then every agency has a PIO up here, everywhere.
Rules-Politics - Priority-Influence	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: wildland fires] ...[City] had a big one a couple of weeks ago, and because of the status of the town of [City], and it's a resort, they had nine planes on it within a few hours, which is unprecedented. They were not going to let that town burn down. But it was 80 acres in the forest right in the ski slope. So if it's situated in an area that's going to go and burn down neighborhoods, we're going to get a lot of help pretty quick. And then we will. And so the way it works is it's our fire for the first, say, 24 hours' operational period, and then if it extends into the Forest Service or if the sheriff declares that it's a certain-- if we can't take care of it on our own, then we can go to the federal level and then they can send in a type three team or a type two team or whatever and we can get resources. Those are rare. I have not ever had anything like that in 20 years. [County] has gotten lucky, very lucky.
Rules-Politics - Priority-Influence	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: station alerting] ...So each bedroom, for instance, will, when there's a call, the sound will come over, the light will come out-- will also come up. The red light's important because it preserves your night vision so that you're not turning on the light and then going right back out into the dark. There's a lot of components. They add a lot of bells and whistles to entice people to buy it, but I just want us to get away from this high-low thing. In the '80s and '70s it was a bell, like a bell, a buzzer, so we've

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								come a long way. But we're just stuck here because with station alerting-- because it's an all or nothing thing. Everybody has to have it or nobody gets it. And so then you go out west to [City] and [City], where they don't have a lot of money so they can't really invest in it. [City] doesn't even have people in the station every night, so what use it for them? ...
Rules-Politics - Priority-Influence	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	We have a system for callback, but we don't require it and it's rare. We might get one or two. But now, with five-staff stations, we have a minimum staffing of four, which is [Organization]. The chief, we spend hundreds of thousands of dollars in overtime to make sure that these engines have four. So we can do a lot more now than we could 10, 12 years ago. 10, 12 years ago, we were doing callbacks for a lot of things, but it's rare now.
Rules-Politics - Priority-Influence	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Well, I mean, I think, I guess, for me is if we're going to explore technology, let's explore and keep it and quit jumping around or trying to solve this with that. I mean, technology evolves so quickly that I don't know how anybody keeps up, but we're not going to slow the private sector down. They're going to keep evolving and keep creating all of these incredible, awesome things, and we're just going to keep shelling out the money for it. Yeah [laughter]. We can't keep up so.
Rules-Politics - Priority-Influence	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: cell phone use in FF] It's not going to be used as much. The chiefs do it. They'll use cell phones to communicate probably to our main dispatch center when they can, just because they have the capabilities. They have the time to do it. They're set back from the scene. They're not actually in the trenches, so for us to use a cell phone in fire situations are less likely, but other incidences like maybe if it's a situation where we're able to step back and not get so involved, we may be able to use a cell phone. But when cell phones are used, it's mainly an incident-command type of situation, not actual-- the companies are actually mitigating a situation. We don't really get into cell phone use at this point, so.
Rules-Politics -	FF	U	Field	46-55	21-30	Male	FF-U-028	I can either want to do and too much-- remember picturing yourself in a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Priority-Influence			Responder					conversation with five people talking to you, or you had to-- or being overwhelmed or being overloaded with stuff? If there's a way to just funnel one aspect, if you're receiving from one, maybe two, you might be able to handle. I think that's all you're able to handle as your brain is going to process. It's the biggest technology. Your computer is your brain that you're using. Funnel or filter or triage messages. What's important, what's crucial, what is information that we can actually hold off on for right now, what is crucial for the incident, what can we hold off and funnel it, keeping it simple. I keep going today. Keeping things on a simple basis...
Rules-Politics - Priority-Influence	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...Gaining complexity is the real killer of simplicity from my perspective. And how to improve that? A lot of face-to-face communication, maybe having one guy operate the radio. Giving messages instead of everyone having radios, and all this talk and garble. I have to be responsible for listening to all this, because it may apply to me. So funnel. So you take your five people in a room. You tell them all be quiet, one speaks. So that would be just a suggestion for that, just not being in a position where you're going to be overloaded with, where this technology has become rather burdensome in your decision making or thought processes right now.
Rules-Politics - Priority-Influence	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	[RE: communication issues] Failure to communicate is one of them, yeah. But as far as communication from a technical aspect - buildings, dead zones, again, metal buildings, being encased in concrete - you're just not getting that signal out. What is causing communication is possibly the-- in fact is that we have possibly too many radios operating on one fire realm. It can be cumbersome, and lost messages will occur. Some of those are crucial, or non-crucial... Sort of triaging your messages, yeah. What needs to be known, readily known right now? What can wait? If you've got some guy at an active fire that says, "Yeah, I've got a water cooler out on the rig for you guys." You don't need to say that. It's hogging up air time, we'll address it later. I think those are the two communication problems. Those would be the two that I've

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								experienced. I'm sure there's more, but from what I've experienced, those seem to be the two problem issues.
Rules-Politics - Priority-Influence	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	In this department not much. If we had more money we would have other things. Thermal imaging camera would be awesome to have for structure fires but I mean that's a lot of money for one of them you know. And now you know these days by NFPA standards your gear even if it's brand new, never been worn if it's ten years old you got to throw it away and replace it. Well it's to rig out one fireman is almost eight grand completely that's boots, hats, bunk gear everything. So I mean you know our little department didn't have that you know. We're getting money now because of the tax but we need to use it in other places.
Rules-Politics - Priority-Influence	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	And just a county. I think it's geographically a little over 300 square miles, give or take. There's 1,100 sworn police officers. So I guess by agency size, that's about midsize. I mean it's not like a Chicago or a New York, but that's still a lot of police officers, but realistically, it's less than what we should to serve a million people. We should have almost twice that to adequately serve the community
Rules-Politics - Priority-Influence	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	...I mean, typically, they're not, but quite frequently, we run into it getting pulled off your uniform shirt, or stretched, or gets caught on something where a Bluetooth-affixed microphone would be really nice or even a better headset system. And they make some nice stuff, but it's really expensive, and they're not going to buy that for 1,100 officers.
Rules-Politics - Priority-Influence	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Yeah, a diagram. Yeah. So I certainly would like to see that kind of technology for us. Unfortunately, those are very expensive and we don't have enough incidents I think to really bring up the need for that-- the need for that.
Rules-Politics - Priority-Influence	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	But the goal for this year and next year is that all the new people that are coming out translate into two officer cars.
Rules-Politics - Priority-Influence	LE	U	Supervising Field	46-55	31-40	Male	LE-U-029	...And then for me, it's just going to be finding the money to get the technology to the officers - of tablets, of cell phones, things like that. Our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					department's trying to get larger. We've actually gotten the authorization to hire up to 200 more officers.
Rules-Politics - Priority-Influence	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	I have the cell phone. I just don't have the program because they ran out of the licenses. And so I can't run names.
Rules-Politics - Priority-Influence	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] I think so. And I think that you get, at least down here, we get certain people or groups of people that think they want to take us in this direction, and another group wants to take us in this direction technology-wise, or this type of technology, and I think that that gets in the way too.
Rules-Politics - Priority-Influence	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] --if we need to expand our coverage, it takes funding and we have to expand our infrastructure. We can do that. And that's done and we're doing it now. We're expanding coverage into the airports. Those are sort of the special grants that we apply for. We get them and then we solve issues that come up.
Rules-Politics - Priority-Influence	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] Well, the body cameras, you could google all about the body camera. You got that. I mean, I can't speak to that. That's up to our commissioner/
Rules-Politics - Priority-Influence	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...well, we have an RFP out on the street. We have an RFP out on the street. So it's that program is initiated, I do it. But, again, it's going to be a program that's going to help us be able to eliminate some of the boundaries and challenges we have. Maybe those cross-geographic boundary issues and the way calls are presented to [City]PD, and also alarm companies and the hearing impaired, and being able to handle those types of requirements, and in a platform that is all integrated. It's all IP-based, end to end.
Rules-Politics - Priority-Influence	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: running a person's information during a traffic stop] ...we have a few people who will not use the computer, use only the radio, which then takes up bandwidth for everybody else, but they won't change, and they're our trainers. So when you have trainers who are teaching people to constantly do that, it's like, yeah I can teach them how to, but you don't need to do it all the time. So it just, there's a lot of things that we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								can do with technology that our people are preventing. Whether that's dispatching, whether that's running inquiries and stuff like that on computer, because we just get a mindset of, "Well, this is how we've always done it."
Rules-Politics - Priority-Influence	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: evidence system] it's not a lookup system. You're logging on to upload your data that you've already logged on and looked at and used. So it doesn't have the highest level of security. I don't know how it is on the district attorney's side. But only a few people within the department need to get into that. So there's not very many people that even have access to it. But it doesn't give me any ability to go look at another agency's records. So as we talk about those levels of security and if it's really a low-level program, how much security? Do you have to have two-factor and change a password? Sometimes yes. I think it needs to be looked at on a program-by-program and what's it really doing and what's the exposure risk.
Rules-Politics - Priority-Influence	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: evidence system] ...At the DA's office, they may log on and see every agency who feeds them information. And if I'm only blocked down to my agency, maybe it's less exposure for me because I have the same data in another database. They're just kind of thoughts and considerations and all these new programs and devices get rolled out.
Rules-Politics - Priority-Influence	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	I think it comes to the question on, as they're going through this process... even on the National Broadband for Public Safety when they're defining who's a primary user or secondary user and dispatch wasn't included. I think when you look at the people who actually physically respond, and not to say when a dispatcher answers the phone that's not a response, but to me that's a very controlled environment, and if they had to step away for some reason, someone else could fill in, there's not that immediate sense of peril and they're talking on the phone, and that they're doing a lot more stuff on the computer screens and looking at stuff, but they're not out there where the sights, the sound, the smells. To say taste comes in, but on a heavy wet foggy day, you get those tastes sometimes in your mouth...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Priority-Influence	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I guess that's where I see the differentiation on who's a first responder, someone responding to a scene or in the field versus all the other people who are certainly part of the public safety system and may be on the front lines but don't get that full sense of engagement. To really have those impacts you've-- I've never heard about dispatchers getting tunnel vision or auditory exclusion or all the other things that we're regularly trained on and discussed to recognize in ourselves and in others because it creates a safety situation that can affect others. I think there is a line there and I think it's continuing to be defined... By FirstNet saying we've got to draw a line somewhere, and where is that line, and what could you objectively and scientifically measure and say, "Here's why there's a line." When I thought about it last night, I think that engagement of all five senses and the potential impact it can have to you, in the sense of immediacy and threat and security to you is what kind of creates that.
Rules-Politics - Priority-Influence	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... we stood up an 800 MHz system within our county. So we all had each other's talk groups but everyone was still afraid to change the channel on the radio or talk in somebody else's talk group because they just didn't do that before. So that took a while to convince people that we have new response protocols. And if multiple agencies are responding to a scene, we're going to move off the various dispatch talk groups and go to one response talk group. It took law enforcement a long time, and they're still not really there, that they're going to go off their channel to go to that response channel because their thought is they're always waiting for the bigger and better deal to come along and go do something that is more fun than directing traffic on an accident scene. So they always listen to their talk group. So we try and do that from a resource utilization standpoint, from an information sharing standpoint. If we're all driving up and down the interstate and no one's found the accident, it's nice to know that...
Rules-Politics - Priority-Influence	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: decrease radio time by using computer] "And then when you get on query, you say--" and let them know you already did it on the computer.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								So it's MDT traffic stop. Then everyone who doesn't have a computer knows you built a traffic stop somewhere. So that was a process of working through. I'll say it was a little letting go of control from the dispatchers. They disagreed with a lot of this. I think, as a field user, we said, "We don't care. This isn't your decision. We love you guys. We appreciate what you do. The person most responsible for my safety is me. And so if I need to build it on the computer, don't try and give me a policy that says you shall not. It's not going to work. Highly discourage. Make it as strong a language as you want. It's going to happen."
Rules-Politics - Priority-Influence	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	So a Code 0 would be the situation or-- there's a robbery, or anything like that. So when they call out on it, there's a tone, so all units be ready for a tone, or however they word it, and it's just a siren over the radio, so that means that channel 1 is specifically dedicated to whoever is being dispatched to that call or any other units that are associated with that call. Nobody else can talk on that channel. All other traffic goes to 2 or whatever else...
Rules-Politics - Priority-Influence	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] They don't even have the unit here. I just looked at what other cities do. "Oh, that's cool." [Name] is probably the closest one, it's probably the longest one we have had there. He's been there two years now.
Rules-Politics - Priority-Influence	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	We are in the midst of a three-year \$72 million project to replace our whole radio system, portables, mobiles, desktops, tower infrastructure, transmitters, repeaters, everything. This contract was just signed about 9, 10 months ago, so we're just getting geared up, working on permits and other issues to try to get everything ready for the subcontract. Motorola won the contract. Now, we're working with Motorola and their contractors to make sure it's done on time.
Rules-Politics - Priority-Influence	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Actually, it's done around plan E [laughter]. So just recently, I was asked how we create more room in the trunk of the car. Because now I'm told they want to put a printer in the trunk. Yeah. Granted, they can't give us the laptop that will function inside the car, but somehow they think a printer with thousands of moving parts is going to hold up in the trunk.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Priority-Influence	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	So for about two years, we were paying for 1,800 phones, and then they audited the system, and I got a call when I was out on patrol that I'm needed-- and this was the dictate from the Puzzle Palace, that I immediately go to my 6:00 AM lineup and order everyone to retrieve their company phones, turn them on, and call the station. Use them.
Rules-Politics - Priority-Influence	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Absolutely. And then they're back prior to one particular administration like 15 years ago, the city was always willing to pay for cars, pay for gun, pay for anything, just don't ask who's for dental. I mean, this current situation is going around and around between the battle between Affordable Care Act and whatever the new one is, but we saw that the new people don't understand it. Dental was a new thing we didn't have. I mean, we just started getting overtime 22, 23 years ago, 25 years ago. But yeah, the one protocol pension, they'll give you anything, but something you can actually feed yourself with.
Rules-Politics - Priority-Influence	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	We had a \$3 million grant that we left on the table about 12 years ago for dash cams, but one of the bosses didn't want them, the troops didn't want them, so they left the \$3 million grant on the table for dash cams because they were bad. Because there is no trust.
Rules-Politics - Priority-Influence	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	I mean, if I-- you get told what you're getting for Christmas. Don't ask me what you want for-- I'm not going to ask you what you want for Christmas. This is what you're getting. It's like, "I don't want that." So it's every year, it's like, "Oh, God. What's in my stockings today [laughter]?"
Rules-Politics - Priority-Influence	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	But these events, depending on what the event is, don't raise to the level where we're going to open up a huge DOC, where we're going to have representatives from all these other agencies and be in there for a huge instant command kind of thing. We're dealing with this command on-site for this event in there.
Rules-Politics - Priority-Influence	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[To the?] aspect like the radio communications that there's something going on. "Shots fired." Like, "We have an officer shot." Everybody tries to get on the radio at the same time. Sometimes the dispatcher just-- they have a hard time controlling the entire situation. The officers have a hard

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								time not cutting each other out. So, like we had one officer that was shot while the other officer didn't know she was shot because they work in a pair. He took off chasing the guys. So, she's trying to come over the air saying she's shot while he's coming over the air saying he's chasing this person. Then people would step in, that, "I'm going. I'm going." Where then that person doesn't need to-- you just go. So some way of better controlling the airways when there is a critical incident.
Rules-Politics - Priority-Influence	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I think technology-wise, because you could really only say you're en route or on the scene, to call that the dispatcher has to physically put you on. I don't know if that's control they don't wanna give us or we can just go to any call on the board and say yeah, we're going, or we're not going. Or we're there or we're not there.
Rules-Politics - Priority-Influence	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] ... Fire dispatch gets on and helps the fire when we said it. Life on the other hand there's been times on injury accidents where because usually in town we usually only have one or two ambulances running at times and there's times where they work three counties. They don't show up for half an hour and we need them there within 5 minutes.
Rules-Politics - Priority-Influence	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	They had no battery backups so it would take 10 to 15 minutes for radios to come back up. If anything happened during that time it was just tough. No it didn't work and so I actually went and bought battery backups for everything so now when the power goes out or if the generator kicks on you operate through it because you know when you have severe weather and stuff that's not time you need the radio going out so we fixed that issue. A lot of the cars have 45 watt radios and for something this size and especially the topography of [county] 45 watt radios just don't get it. I actually just bought two weeks ago I bought 14-110 watt radios for the cars and I got them off [store name]. I got seven of them for \$129 a piece without a speaker. I got four of them for \$139 a piece with a speaker and the guy called me back here. He's from out west and see we're still using the old VHF MO you know and so he called me back and said listen I got we bought 300 of these radios for someone to change up to a digital system I've only got three left. It's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								saturated out here I can't sell them to anybody else.
Rules-Politics - Priority-Influence	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	So we're looking at a solution for that is putting up some smaller towers with a microwave link that would transmit back to the main tower and offset the delay time and everything and have repeaters setup to rebroadcast portables back so actually it would help cover the area.
Rules-Politics - Priority-Influence	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	What we found on the tag reader it was \$16,000 yeah it worked, it was great. You run somebody's tag it would run them, it would run the owner to see if they had warrants. We got probably more warrants off of tag readers than anything else but we have so much it's like we don't have a lack of things to do. I went out here this weekend and on Sunday I wrote 19 tickets just on Sunday. I wrote 12 tickets of those 19 were over 80 miles an hour. Speed kills people so it's not like I need a tag reader to give me something else to do. I have plenty to do you know an expired tag is not going to kill somebody. Somebody doing 85 or 90 miles an hour will.
Rules-Politics - Priority-Influence	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	Is it money well spent that's the question.
Rules-Politics - Priority-Influence	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	... If you got unlimited resources you can make phenomenal technology and I can come out here and put up digital towers, put high towers up in this county and have crazy good you know I can make it so that you know we can connect computers to it and everything else. I ain't got that money so the question is how good can you have for what you can afford? You know you try to make the most of what you have and I don't mind buying used stuff. I don't see value in used stuff. If it's good you use serviceable equipment. You save a ton of money and get more for your money and come out ahead on that you know.
Rules-Politics - Priority-Influence	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Probably the burdens placed on, whether it be, you know, just the saddle burdens. You know there is a lot more scrutiny, which can be a good thing, but now it's almost to the point where in law enforcement, you know, traditionally we have been kind of separated from the politics, but

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								not so much anymore. So any time politics drives a service, you know, there is room for abuse.
Rules-Politics - Priority-Influence	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	And they have. And much more than, you know, it's always been politics that drives policy to a degree, but you know, we always used to be able to tune it - it doesn't matter if its law enforcement or fire, we always used to be able to defend kind of what we did because of, you know, rational, legal, objectifiable, you know, data. And now it doesn't matter.
Rules-Politics - Priority-Influence	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Emotion. With people making decisions based on emotion outside of whether it is factually based or not.
Rules-Politics - Priority-Influence	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Probably unwritten. I don't think there is a written policy on using your cell phone. I know there has been discussion openly that using your cell phone to take pictures and so forth is discouraged just because, you know, [unintelligible] your phone, but it sort of an officer's decision whether, you know, they feel like they want to give their phone up if need be.
Rules-Politics - Priority-Influence	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	I don't know that it really - I mean, that is really all I have ever known. I worked a couple of different places and there generally wasn't any but they expect a higher level of customer service than what some of the other areas might.
Rules-Politics - Priority-Influence	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	And pretty much in the county I dont see that. There is also a level of - you know, most of your career fire departments have a better working relationship with the career law enforcement than some of the volunteer departments and I think that boils down to professionalism and you know, the professional police, because we dont have volunteer police for the most part. You know, they look at the career fire fighter generally is more professional and more resourced and so the volunteer agencies dont exhibit the same level of professionalism because their standards are a little bit lower as far as accountability and so forth, so, and there is a little bit but you know, as far as not helping or - you won't find that kind of division. Not in a lot of way anyways.
Rules-Politics -	LE	R	Field	46-55	21-30	Male	LE-R-060	Probably I think as it relates to any potential safety concerns we might

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Priority-Influence			Responder					have when we get there. So is this person known to be combative? What is the nature of the call? So it is, somebody stole something from the store or is it something very emotional where, you know, emotions are high, people aren't thinking rationally and becomes an issue. So anything safety-wise, their anatomy and everything else is just secondary.
Rules-Politics - Priority-Influence	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Basically, we are not competitive with surrounding departments. We are about \$10,000 to \$ 15,000 under everybody else. We got our pay rate up a little more, we were able to keep some more people but I can't even get anybody to apply for the department - and everybody is having people having problems getting people to apply but on average I will send out 100 emails from the testing agency and I will get 10 people to come in and actually interview and out of those 10 people that I interviewed last time, I only hired two.
Rules-Politics - Priority-Influence	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	It's a budget issue, it is a political issue, it all comes down to [cities] coming to an agreement to put it into place; no one knows what's going on at this point.
Rules-Politics - Priority-Influence	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	No, it wouldn't be that type of merger because we would keep the police department here; it wouldn't be like a merger with - like our fire department became [city] fire department. We would still be [town] police, but we would just be using their computer system that they will be dispatching for us, so everybody is going to have to learn a new - learn how to use the new software.
Rules-Politics - Priority-Influence	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	One of the biggest things for us I think was our body-worn camera initiative. So, we started that prior to [city]. Prior to the --
Rules-Politics - Priority-Influence	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yeah, we were kind of cutting edge around here on that. We were knocking on their door. They weren't knocking on ours. Or actually, let me reverse it. They were knocking on our door because after [City], everybody went to them. And in that interval we were already implementing our program. And we did that and I talked to our community a little bit, it wasn't because we had bad officers that we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								wanted to watch. It was, we really wanted our community to see what our officers were doing for them. What they were putting up with. The mentally ill that we had to deal with and the closing of [City] and what it means to us as a Sheriff's Office and what we had to deal with that comes from our community. And that was the biggest reason. We wanted people to see what we do and it has paid dividends for us.
Rules-Politics - Priority-Influence	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	And don't -- let me -- don't get me wrong, we have some knuckleheads. You know, we have human beings, right. I am not somewhat immune to it but we have not -- never had that rash of it being cultural in our agency you know or failure to train on a certain area or training bad in areas, use of force and stuff. We've not had that issue, but it still brings a level of accountability to the officers when they put that body camera on and they instinctively know then. You know, so it has dropped assaults on the officers, it has dropped our complaints. The most complaint you get is he's ride too, right.
Rules-Politics - Priority-Influence	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	I mean, it's dropped that. Officer's assaults on citizens where we have to lay hands on people, it has dropped. So, you know, we are seeing those things pay dividends for us and that's good for our community because everywhere you go and if you are doing something, somebody is right there, you know? So, you might as well have one on you and this camera gives you that perspective from what the officer sees. Not that, you know, 10 feet away.
Rules-Politics - Priority-Influence	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	No. No, we have done more with less than at any other time in history. [Inaudible] you know, the toughest economic down time in modern day history. We have done more with less. We've had things shoved upon us though we have had now in position since 1998 law enforcement. We've double bunked two pods out of the [inaudible] facility without hiring a soul. So --
Rules-Politics - Priority-Influence	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yeah, incredible. And we do it all with, you know, we used our reserve unit, that are people that volunteer for our agency to work for free and to do the mental transports. We lost 21 reserves this year. I think a lot of it was -- some of it was attrition, some of it was, you know, I've done this

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>long enough, I want to do something else and but I think some of it, you know, this isn't what I signed up for. You know, I am not Uber for, you know, the mentally ill, you know, and they are spending their volunteer time doing that instead of doing other things they could be doing. So, I think that was a big part of losing some of our reserves, but just can't continue to -- we were just talking in here already. We have not had any -- although our budget has increased but it is we picked up juvenile or because we picked up, you know, animal control or other things have been handed to us to do and it comes with that budget increase but as far as us getting law enforcement positions because we have more people, we need more policeman on the street, we haven't. We just went from five shifts to four shifts so we could put more officers on the street. These guys are working 12 hours a day now and we got to stop that.</p>
Rules-Politics - Priority-Influence	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	<p>We've got young guys. We've had a big turnover with retirements that we have had. We have a pension that's in place that's allowed people to retire with a defined benefit, you know, a percentage of their income. So, a lot of guys have taken advantage of that and that gave us an opportunity to be younger and younger agents. And when you get out of here and you are doing that work, I'm 53 okay. Some of my years were dog years, so I have lived 7 and 1 a few, but I am telling you, that's a young man's forte there. When you are out there in that patrol car and you are chasing bad guys, you ain't chasing a 53-year-old man.</p>
Rules-Politics - Unspoken_Rules	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	<p>...And so I kind of pressed the issue a little bit and he came back in and he didn't have my yellow pad with him. And I said, "So if you want your laptop you can go get the yellow pad and you can come back and get the laptop." And so he did. And I said, "And just so you know, I pulled up the Internet history on the laptop while it was sitting on my desk here." And I said, "You like this laptop because you get to go and surf the web and do all the things you want to do." I say, "Guess what? We pay for this laptop. You're going to do some of the things we want you to do with the privilege of being able to do the things you want to do." And then I told</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								him also that, "You need to go back to your briefing and tell all those guys that this thing is actually a decent piece of equipment."
Rules-Politics - Unspoken_Rules	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	Well, it was interesting because my husband and I ended up in a similar situation. He was working in OSTP, Office of Science and Technology Policy, and that's considered in the president's office. This was X years ago. And so they had a call for all emails that included some piece of information. And [Name] and I were both like, "We talk between this phone all the time. They're not going to search every one of our emails. But, again, if they want to that's fine." I mean, it's doctor's appointments, it's the boys are doing blah, blah, blah, and whatever. But yeah, you feel like, "Wait a minute [laughter]."
Rules-Politics - Unspoken_Rules	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	And they will make them. So a lot of people, "I don't know if I need fire or police." So you have to ask them. And even medical, "Well, I don't know. Can you just tell me over the phone if I--?" "I'm not a doctor. I can't give you medical advice over the phone. What I can give you is an ambulance and the ambulance will come to your house, they'll take your vital signs, they'll ask you a whole bunch of questions, and then you can ask them if, between the two of you, you can go to the hospital." Some people think if they call 911 and an ambulance shows up, you have to go to the hospital. You're a hostage. No. We can give you a free check to see if you need to. We'll give you our best-educated guess at the basic level. If we have any questions, of course, we'll turf it to the hospital and say, "We think you should go to the hospital." But in the end, its still-- we have a specific form that's called a patient refusal, they have to sign it, we sign it, we give them a copy, and then we're out of there, in case something happens. We've had cases where people have refused and then later on we've responded back to their house emergency and they've either died or they're close to death, because they ignored the signs of either a heart attack or something that we had advised them to go to the hospital, and they ignored it.
Rules-Politics - Unspoken_Rules	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	...But it's really not a requirement that everyone listen to every single channel. I think the bare minimum would be the dispatch channel, ops

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								channel, and the mutual aid channel. And then if we get a fire call or a big major incident, that will go on a separate talk group, and I'll listen to that as well.
Rules-Politics - Unspoken_Rules	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	With this system, we have one but it doesn't work half the time. But going back to the dispatch times, we have a station alerting program called PURVIS. And when we dispatch a call, the station alerting in the station, it starts out real low. So a tone will go off and it's low, and then there will be a voice which says, "Ambulance respond to this address." Then it will do it again at a higher decibel. That takes time. So they tell us not to dispatch calls on top of one another. So if we have three calls and are pending queue to dispatch, we could be dispatching the one call and we just sit there for a minute waiting for the station alerting to cycle through. Then dispatch the call. Then go back and dispatch the next call. Well, by the time you get to the third one, it's been in there for over two minutes. That is stressful.
Rules-Politics - Unspoken_Rules	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	It makes it hard because we don't want to set the expectation that you can tweet out emergencies but we want to say if there is an emergency and you can't reach 911 don't tweet but if you do happen to tweet we're going to be looking for it. So it was kind of this fine line that we had to play. We didn't want to set an expectation that you could start tweeting emergencies but we didn't want people to be tweeting non-emergencies and emergencies then to not be answered for someone not to be there.
Rules-Politics - Unspoken_Rules	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Well I think most of us do live in the county. I can't imagine anybody who doesn't but I don't know that it's required really so no I don't think it's required. Most of us know it because we're here because we live here because we know the area but I don't know that it's not like we take a test or anything about it but it's hard to dispatch a car if you don't know where you're sending it so I think that we do work hard. We've got maps here and different things that can help us too.
Rules-Politics - Unspoken_Rules	COMMS	S	Other Public Safety	36-45	11-20	Male	COMMS-S-001	[S3] Yeah, you've got to follow chain-of-command. Some things have to be formal, some things can be informal, but you just need to inherently know that. And so I think culture really is our biggest inhibitor to having

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					better communications. One of the things that on the incident side right, out there, cost of technology is a significant inhibitor to-- not everybody can have a radio. Right? Even though they really need it for their job. To spend \$7,000, 8,000 on a portable radio is just, it's wrong.
Rules-Politics - Unspoken_Rules	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Right. No. You probably get another 1%, maybe [laughter]. But at least they're doing their part to give you another tool to train. And so patrol has it. Anybody that's in the sergeant position above will have an issued phone as well, but everybody still brings their own phone, right? That's just the way it is.
Rules-Politics - Unspoken_Rules	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] So exactly, right? So people end up carrying two phones everywhere they go. And not everybody's issued laptops or computers either. They might have a shared one or whatever. So if they could do all of their jobs from one device that would just make everything easier, more seamless.
Rules-Politics - Unspoken_Rules	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	We are able to have our cellphones in the dispatch center. We do know in the event when the phone rings or you have radio traffic, it's put aside.
Rules-Politics - Unspoken_Rules	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	It's understood that we try to minimize.
Rules-Politics - Unspoken_Rules	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	... Everybody knows that we meet back here at 2:00 every day until the event's finished. But going back to the technology, I think we've always stayed at that cutting edge, right ahead of the curve. Not far in front of it, but just ahead enough, far ahead of the curve to make sure that we weren't left in the dust.
Rules-Politics - Unspoken_Rules	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	...So it's imperative that they pay attention to what's going on with the fire departments. So sometimes we'll page them out. That'll be our main task.
Rules-Politics - Unspoken_Rules	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	So the relationship is really a positive relationship. Yeah, dispatchers are generally thought of as that... that entry level... position but I don't think of them that way and I don't think our sheriff does. I think he looks at them as someone who is not only a very important link from the public to the public safety resource, they are the link. But they are a very important link. And he tells them this in all of our staff meetings that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								dispatch, the dispatch radio room, whatever you want to call it, communications, is the voice of his agency. And so whenever he says, and he really means that, that he wants these people whenever they answer the phone, he wants them to be the most professional people because they are his voice to the public on a day to day basis.
Rules-Politics - Unspoken_Rules	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	We're not supposed to switch. But 21 is more of a, just the lingo we say. We kept a few of them. We don't give most of the codes. We just plain talk it mostly.
Rules-Politics - Unspoken_Rules	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	Not people listening. Language barriers could be. But I've really learned to just be like I understand you're kind of new here too. I get that. We're new to each other; we need to listen. But that can still be stressful. You have people that are rude. I don't deal with rudeness well at all.
Rules-Politics - Unspoken_Rules	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: You know, I used to tell them if you are out and you are going to a store, look around, see where you are at. Look at road signs and you know and it helps. Of course, I did that to my kids and I will tell you, if you call me and say I don't know where I am at, you know --
Rules-Politics - Unspoken_Rules	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...Our boss allows us two hours of PT time, so I normally do some kind of physical training. After that I normally go around the county. I drive around in a Dodge Ram pickup truck in which I am available to respond on whatever calls I would like. My boss gives me a lot of leeways to what calls I want to run. But there are certain expectations that if there's a pretty significant call like if it's a stabbing or shooting or cardiac arrest, they kind of expect us to be on those kind of calls. And we can run at them at any time.
Rules-Politics - Unspoken_Rules	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So my daily routine, when I'm at work, is that I work a 24, 48-hour schedule. So I work 24 hours on, and then two days off. It works out to be 9 days a month is my schedule. Typically, I report to my duty assignment, whatever station that may be by at least 6:00 AM. Our report time is at 7:00. So that gives me an hour ahead of time to just kind of help with a last minute call or whatever needs to be done. Makes smooth transition... A little bit of an overlap. That way you're not just

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								walking right in at 7:00. And if the bells go off or something's happening that you're walking into that, so it kind of eases the stress coming into it.
Rules-Politics - Unspoken_Rules	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	What I mean to say may be different from what you mean to say. So it can stem all the way down to basic cultural differences and diversity to department policies and procedures of if I work tomorrow, the captain may have a completely different way of operating and may call me on the phone rather than delivering a message on the radio, something I'm not used to. I may not have my phone with me and he's been trying to get a hold of me, well I'm not used to that. I'm used to my officers talking on the radio or so.
Rules-Politics - Unspoken_Rules	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So me personally, my time, my experience. If it's a message that I don't know, I repeat it back to them. And that's just educational knowing of communications and repeating messages back. Confirming what they mean to make sure that I understand. And I think that's done very tactfully saying if I don't understand something and it's you want me to go to the second floor, that may indicate to that individual, "Yes, I need you to go to the second floor and do a particular task. I may need you to." If you're repeating back to them and they hear it, like, "Oh, yeah, I didn't give as much information."
Rules-Politics - Unspoken_Rules	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	[RE: drug reference app] Yeah. I mean, and then there's a number of them out there. So I mean, I've got Mobile Physicians Desk Reference on my phone. And there's these several other like Nurse's Drug Handbook stuff and there's a number of apps that people probably use. I don't think there's any that the department has officially said, "Hey, look. This one we'd like you to use," so everybody pretty much uses whatever they want as far as that goes.
Rules-Politics - Unspoken_Rules	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	So, yeah. [inaudible] the app for free instead of paying the \$10. A lot of people were paying the \$10 before the department did that so [laughter] [inaudible] feel like It's a one-time \$10 fee. It's not that much so a lot of people went ahead and did that, but then the department, they-- [inaudible] [how much and how that works out?]. That's something between the agency and the developer. I mean, the developer, there's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								two [inaudible] versions of the app. There's Paramedic Protocol Provider and there's Paramedic Protocol Provider Agency, which is the one that we can [inaudible] and d and use for free. So, again, the specifics of things, I don't know how that works out, but.
Rules-Politics - Unspoken_Rules	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	[RE: patient responsibility] It's a bit of a gray area, and I don't know for sure how exactly that works out. I would say, it's at the very least, a gray area. From what I've heard, there are some statutes and that are in place that basically say once a patient arrives at the hospital's doors it's their problem So if we're sitting there waiting to be triaged and whatever, and something happens to the patient, they would say, "Hey, it's the hospital's fault. It happened inside their facility." On the other hand, since we haven't actually-- until we actually give a report to the hospital and tell them what's going on, it's still somewhat our patient. So again, it's a little bit of a gray area, I think, at the very least.
Rules-Politics - Unspoken_Rules	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...we also have extra things besides just the daily duties that are actually even bigger in the summer which are special events. So there's rodeos. There's concerts. There's bike events. There's white water stuff with kayaking. There's weddings. There's visiting dignitaries. There's just all stuff that just comes with the summer. And then there's busy weekends like 4th of July weekend or holiday weekends, or there's a big concert in town, so suddenly we have 30,000 extra people in town. [the scheduler] likes to look ahead. He knows these events and probably how big they're going to draw. So he might add an ambulance or two, or 12-hour ambulance, or 1 24-hour ambulance, and it's all kind of up to him...
Rules-Politics - Unspoken_Rules	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...you used to have-- in [City], you used to be able to call the hospital on the radio. It didn't happen that often. But you'd do it 5 to 10 times a year. That hasn't happened in years. They still have the channel, but nobody ever uses it. So that's gone away. So some things have changed like that.
Rules-Politics - Unspoken_Rules	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: trip reporting] So in both places, they're removable. So you can take it in the station, plug it in, or they have a battery that'll last, if it's fully charged and working right, it should last for six hours. And some of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								them you can lock it into the ambulance but most people'll just leave it on their lap...
Rules-Politics - Unspoken_Rules	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...So many of us on calls, if we have a unique situation, sometimes we will take a picture with our own personal phone and send it to our chief's personal phone so he can look at it, because the department doesn't issue the rigs smart phones. Only a flip phone, and then a separate digital camera. So we can't make it all work. So having an updated tablet or an updated cell phone for the unit would be very helpful.
Rules-Politics - Unspoken_Rules	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	I actually don't do it very often. In fact, I don't think I've ever done it with my own phone. But the people that do-- I think we tried to send it to another person's private phone so that they can make decisions. I think for the-- and the not knowing, not with intent, they're trying not to, and we can't because we don't have the smart phones back and forth, but try not to mix our business phone and pleasure phone. You know what I mean?
Rules-Politics - Unspoken_Rules	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Honestly, I like to call notes idea, because I think I'm a traditionalist or purist in the fact of I don't think we need to be talking on the radio a whole bunch just because, especially in a system that's busy. So send us to where we're going and how you want us to get there, and then just put it in the notes, and we can read the notes as we draw down the road. Because there's obviously somebody driving the apparatus and that's their primary responsibility, and then whoever is sitting in the passenger seat, who's usually the paramedic in our system, can read the notes and you're making an informed decision as we're going to the call.
Rules-Politics - Unspoken_Rules	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	The tone that just alerts us that we're going to a call, but when we're en route, they'll usually tell us the severity... But usually when they tell us what the call is, we have an idea how we're going to respond. So we'll go ahead and turn our lights and sirens on, or just go without lights and sirens. And it's like he was saying, there's somebody that's talking with the patient and then there's somebody else dispatching, so they may be long winded and not getting the information that they need right away. So it may take a little bit longer and it's no fault of theirs or ours. So it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								just what it is.
Rules-Politics - Unspoken_Rules	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...We're currently just finished up doing an RFP for a new LMR radio system, so I was involved in that. If anything breaks, I get involved in making sure the right people are coordinating to fix it. And then just the everyday stuff, too. I just listen to the radio, I make sure ambulances are behaving themselves on the radio, dispatchers are behaving themselves on the radio. When mistakes are made, I send a lieutenant out to investigate, and then I take the results of those activities and would go ahead and take whatever action's appropriate there, so.
Rules-Politics - Unspoken_Rules	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: box.com] ...But again, they put enough security limitations on the use of it that there's typically a lot of ghost networks built off of free Google accounts that offer a little more flexibility. So you'll see a lot of those in use on a day-to-day basis. People moving files around via Google Drive or whatever commercial service they can get a hand on. You just have to be real careful you don't put any PHI, anything that's HIPAA-protected... PHI is personal healthcare information... Or is it private healthcare information? I forget. So it's the stuff that's HIPAA-protected that gets you into big trouble with the feds, both as an institution and personally, if it leaks out. So we don't play around with that stuff or take chances with that stuff. But operational information, which is less secure, we rely heavily on commercial networks as well.
Rules-Politics - Unspoken_Rules	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	Well, currently each member has their own radio, their own portable radio. And then they have their MDC. Their mobile data terminal, or MDT. However you want to call it. Which was where they get their runs. They also have an MDC inside the firehouse where if they're in quarters they get their runs that way, and they have to-- basically it's a touchscreen where they have acknowledge their runs when they get them. Sometimes the firemen do it for them. They also have a mobile recording unit which is basically a laptop where they do all the patient care reports.
Rules-Politics - Unspoken_Rules	EMS	U	Supervising Field	46-55	21-30	Male	EMS-U-010	[RE: personal phone use] I can tell you that they do. Sometimes it's easier because we do supply cell phones to the paramedics. Sometimes

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					it's more of a burden and it's easier for them to just take out their phone. They already had their hospital listed on there. You just hit a button and you can communicate them and give them report over there, right, so.
Rules-Politics - Unspoken_Rules	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: comms with PD] We don't. We don't communicate with [local PD] in our frequency. And our frequency is only just EMS. I am able to communicate on the fire side frequency. That's not a problem. Let me backtrack. We can communicate with PD on the frequency, only a few people know how to do that, and I know how to do that because I learned it. I wanted to learn it. But there is no really set memo, or order, or documentation where they tell us, "If you need to communicate with police, do it." There isn't. I just know how to work my radio really well that if I need to get a hold of the police I could switch to the frequency and do it that way. A lot of people don't know how to do it and a lot of paramedics don't know how to do it. I'm teaching my partner how to do it. He's liking it...
Rules-Politics - Unspoken_Rules	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: apps] I Google maps and then the regular yellow page maps, I use. But the thing is, in downtown, it bounces. That's the word they use, it bounces off. We do have a GPS in the ambulance. We don't use it because it bounces off too. We've tried it. We'll put in an address from my firehouse, [address] to-- get me to the [high rise]... It bounces off walls or recalculating. So maybe the model's old. I think we got those GPSs, I want to say, probably about six years ago, [inaudible].
Rules-Politics - Unspoken_Rules	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: using MDT to communicate with dispatch] ...that's something where I think everybody should be trained on too. You need to look at your computer. If I know that it's really busy on it, there's a lot of communication over the radio, and it's something simple where I'm going to have to tell dispatch, "I'm on the scene." and there's a lot of other important stuff going on, I'm going to hit on the scene in my MDT. If it says the alarm office acknowledged my on the scene, I'm not going to tell them I'm on the scene, because they have other important things. If it's quiet I'm going to say, "Okay. [company]'s on the scene." "Okay, [company]. You're on the scene." But if it's really busy out and okay,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								"Take it to the gunshot. Take it to this. Take it to the fire." I'll hit on the scene from my stubbed toe and I want to make sure the alarm office has acknowledged me. Okay, they acknowledged me. They know I'm here. I'm not even going to bother because they got other important issues relaying over the radio.
Rules-Politics - Unspoken_Rules	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: using radio to communicate with dispatch] We're supposed to use it all the time. There's a memo out there, there's an order out there that we've got to tell them. We have to tell them we're on the scene. We're facing northbound, [company]'s on the scene. I think it's a personal thing. It's my personal thing. I do follow the orders if it's nothing really busy going on. I will say, "[company] northbound. We're on the scene." and I want to make sure they acknowledge. But if it's so busy out there, that's my personal thing. I'm going to make sure I'm going to hit that button. Did they acknowledge? Okay, they acknowledged me. If I'm in the call, whatever, radio traffic has subsided, "Hey. We're on the scene." "Okay. I got you on the scene." Cool. It's a safety thing too, because they're monitoring us. They want to make sure that we're safe. That we're on the scene. And also too, they want to make sure that we've made it to our patient. So they want us to say over the radio. Tell us we're on the scene. But there's only one channel. There's only one EMS channel.
Rules-Politics - Unspoken_Rules	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	...The FAA continues to change their laws. Sometimes they're advantageous and makes things a little bit more streamlined, sometimes they're not. And so, it's bureaucracy at it's best, and so we are slowly moving in that direction.
Rules-Politics - Unspoken_Rules	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	...We were providing everybody a pager which would get away from the argument of utilizing, calling on your personal cell phone. But then, as anything else, people were ignoring them or not utilizing them or they were tired of having them, and so the compromise was, "Okay, we'll take your pager back but you will provide a contact number so we can get ahold of you 24/7/365."
Rules-Politics -	EMS	R	Field	26-35	5 or less	Male	EMS-	...But I am expected to say things that could help the incoming crews. I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Unspoken_Rules			Responder				R-002	got to give them a task, and I got to give them an update on the patients, or where they're going, or what we're dealing with. I mean, I don't have to give this-- paint this beautiful picture, but I need to start painting the picture.
Rules-Politics - Unspoken_Rules	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] It really doesn't differ that much because we all work on the same ambulance, and we're all subject to the same communications codes, and the police have what's called a 10-code system that we use as well. The expectation is that all employees on the ambulance have an equivalent level of training for the operations. The medicine differs, of course.
Rules-Politics - Unspoken_Rules	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...radio communications are a big part of the job too. And every single day we hear something on the radio that we're like, "Come on. Why did he say it like that?" or, "That's not what you're supposed to do," or, "Don't say anything at all," or stuff like that. But around here, for the most part, especially the more senior people are fairly good with the radio communications. You keep it concise. You use the right terminology, that type of thing.
Rules-Politics - Unspoken_Rules	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	SME: They can't say, "Engine [Name] to [City]. We have people trapped and the house is on fire." They can't get that message across. So a lot of times you'll hear people like the Command Officer on scene try to order radio silence. Which is like, "Just shut up. I don't care if you're responding or if you're on scene. I have an important message to get across. Let it happen." ... He just says, "Radio Silence." Or, "Emergency communications only." Or, "Priority traffic only." Something like that. Q: How long's the silence supposed to be [laughter]? SME: As long as people adhere to it [laughter].
Rules-Politics - Unspoken_Rules	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: exposure tracker] You're not required to, but it's for your own safety. It's your lungs. It's your body. They said we have an individual that we didn't have a history on him, and he lost his hearing a long time ago and had no recourse.
Rules-Politics -	FF	S	Not	Not	Not	Male	FF-S-022	SME S3: ...We had a car fire a week ago. Well, we went fast, but we didn't

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Unspoken_Rules			specified	specified	specified			go lights and sirens, because it's not next to a building. It's in the middle of the street. It's a hazard for that person, and a hazard for that car, but it's not a hazard... SME S2: for the surroundings and everything else. And so there's not really a reason to put all the people in danger from point A to point B, because it was a non-issue. The car's already on fire... SME S3: It's already ruined. It's not a big deal. So you show up and you do that...
Rules-Politics - Unspoken_Rules	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: communication with LE] So they'll request entry. We can communicate on this. So we recently had a SWAT activation for a guy who had some hostages. So we had an in-sync commander who will do unified command post. And then, we'll listen to whatever PD channel they're on. And then, we'll operate on our own fire channels with our fire person. We usually only have the in-sync commander go to the PD channel because they really don't want us talking on their channels if we can help it. But we have access to all their channels. And within the last year, they've added our channels onto their supervisors radio. So they can come up on our channels now to-- up until a year ago, they didn't have that access. They didn't want it. All of the sudden, something happened where they couldn't get a hold of us and they realized they really wanted it and they've got to add it on to their radios.
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: radio training] ...so the training is really-- we had formalized training, but then we do routine training in the firehouse. And it's nothing that we-- it's annual but sometimes we do it more often than that. Usually, it's with newer firefighters. So the older firefighters kind of jump in and will kind of help. Officially, we do annual training, but unofficially it's usually probably more like once a month or once a quarter.
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So within the respective stations, either it will work or it won't. And if it won't, usually people will on their own transfer to another station or another crew, or something like that. So there's a real cohesiveness and camaraderie that develops very quickly between people working at a given station, on a given shift.
Rules-Politics -	FF	U	Field	46-55	21-30	Male	FF-U-030	...the expectation in the fire service is that you have to learn your first-in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Unspoken_Rules			Responder					distract. And then you have to learn major arterials and everything throughout the whole city. So the map's kind of a convenience thing. But sometimes it doesn't always work. So, for example, our apparatus or part in the stations, they can't see the GPS. So--
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: state of communication technology] I think it's good. I think at first, there was a lot of overtalk. There was a lot of-- everybody had a radio, so everybody felt like they should use it at first. So there's been kind of a transition of learning with that and more listening versus talking. So when you have a radio, a lot of times, it's really to listen to what's happening. Listening to the progression of the fire attack. Listen to what maybe could be dangerous about the building. Are there holes in the floor on the third floor? Are they getting the fire under control below you? Those kind of things, is the more listening when it comes to communications...
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...So through time, we've learned that when you have somebody outside telling you to get out of the building, just get out. Get out and ask questions later versus being in there getting on the radio, "What's going on? We got it." There's been a number of situations where, I myself included, are guilty of that, slowed getting out because we thought we had it knocked. And we thought we had it under control. "We got this. We got this." I mean, that kind of thought. And then you finally back out slowly and then you turn around and look and you notice that the roof's getting ready to come in or the building's getting ready to-- and it didn't seem like that inside. So those things are situations where communication-- and not even that it's poor communication; it's just there's a period of time where there's an unknown, so.
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: solution to communication challenges for large incidents] I think, certainly, education, but I think the only thing that really helps those situations is-- it just happens. It's just expected. It's really hard to minimize those, just because there's so many things that need to get done immediately, but we just don't know where to start. The only way to really help that is to be more focused on listening rather than talking, so

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								is to minimize your transmission, especially when we know that a lot of decisions need to be made. So I think that's really one way to really help that. So.
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	[RE: change in technology] I think it's definitely a good thing to move up. The only thing with having more radios, we have to have better radio discipline. There's a lot of things that don't need to be on the channels. A lot of people like just hearing themselves on the radios rather than-- clogging up the airways when pertinent information needs to get through. I mean, you'll see. If you listen to our radio channels, there'll be a big fire, one with a lot of messages. Then some other company - it's not even close - and all will be like, "Yeah, we're on the scene for an ambulance assist," instead of just hitting the button to let them know they're on the scene, right in the middle of an incident going down.
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	[RE: cause of communication issues] It's probably two-fold. First, a lot of it is operator error. Like I said, radio discipline - being able to use your equipment and also being able to make the correct communications at the appropriate times. And I'm sure there's also a technological aspect where you have to make sure it works. If anything, there's a tendency that things may break, need to be replaced. As a whole, our department, we don't embrace change very well. So we have a lot of people that-- I mean, I don't think it's as much now, but I know that whenever I get a radio, in the beginning, some people are like, "I'm never going to use it." Just like the computers, "I'm never using that." 150 years tradition unimpeded by progress. We're just getting to the part where we don't file forms with carbon paper anymore.
Rules-Politics - Unspoken_Rules	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	If they don't have one, they don't get that service. But other than that, no. I mean none of us complain about the fact that we're using our own. You know? It's a nice feature for 2 reasons. One) I don't have to carry the radio. Let's say I want to go to dinner which I carry mine if I'm in the [County] but if I'm close by, I can leave, you know, I can leave the radio outside. It'll--there is a delay in it though. The text messages, some of them come before the tones do because as soon as they're generating

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the call it'll generate the text message. So we'll--a lot of time and I've got a couple of people, we call it across the concrete divide or the road between the two, as soon as they get a text message they want to start calling on the radio do we have a call?
Rules-Politics - Unspoken_Rules	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] Sure absolutely, we do a shift change in the morning with the previous crew. We get total information about the truck or about equipment, any changes that needed to be taking place and anything that needs to be repaired or replaced from the previous shift, any cool calls that came about and we will talk about those and we do talk about those as in a debrief type of atmosphere is routine. You know the crew ran a two-car crash at an intersection, there was a patient trapped, they flew one out, and you know we talk about that kind of a call, not breaking any HIPAA laws.
Rules-Politics - Unspoken_Rules	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] And that's one at the time of the bidding process things that we look is we try to work close to where we live so we don't have to travel all the way across town.
Rules-Politics - Unspoken_Rules	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	S1: They do? Are they really - I mean like you know we got a new car couple years ago and I haven't bought a car in like you said 10-15 years and all the electronic stuff on it just blew me away is it same things with these things I mean? S3: Yeah I mean it is just like we got one right over here this tanker truck over here. You start that thing start out it might go or it may not go because it has got all its computer stuff on it, if they don't go you got to cut everything on and off and start all over.
Rules-Politics - Unspoken_Rules	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Think before you speak thing especially in small communities that everybody's listening to the radio traffic so as a chief of an organization you're definitely you're listening and you're just hoping that it goes well just because it's one of those things that it reflects on you and so yeah just kind of taking the time to think that extra couple of seconds before is so key to making a clear decision on the radio.
Rules-Politics - Unspoken_Rules	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	Initially your base job responsibility is fire suppression, preservational life and property and our motto and our code of ethics what we take our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								oath for is to preservational life and property. To elaborate on that we do a lot of fire preventive safety measures. It's not that we want things to burn down as firefighters we just want to be there when they do to help people but a big part of our job now does lie in fire prevention. That's the first line of defense to save lives and property.
Rules-Politics - Unspoken_Rules	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	If we see some stuff that you know if the [Job title] were to come in right behind us they may put these people in a little bit of a pickle we try to point that out and say hey you know let's get that knocked out. We have a duty to make note of it but we don't really necessarily have a duty to report it immediately unless it's a life safety violation so we have some days where we're assigned a fire safety education which means anything from going out to a school to talk to kids, going to community centers to talk to community groups, going to retirement centers to talk to elderly people so we have routines but it just depends on what day you work per say and what comes down the pipe.
Rules-Politics - Unspoken_Rules	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	...Whether you're a volunteer or you're a professional when you're on a call the same level of accountability is necessary and I think that's what they're going towards making sure people are trained, training records are kept. People volunteers in the state are allowed to be in the state fire pension. I go to work every third day to get my pension.
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] You stay in your territory for the most part but station territory can be big, could be small all depends on where you're at but usually everybody kind of like stays in the territory just in case we may get a fire call, may get a call you don't want to be too far from the territory.
Rules-Politics - Unspoken_Rules	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Yes. So the idea is that when you show up at the call, you have already logged onto your tablet, and as you're doing interaction with the patient, you're giving that information, documenting that. And when you enter it, it automatically is sent to the hospital destination that you're going to
Rules-Politics - Unspoken_Rules	FF	S	Supervising Field	Not specified	Not specified	Male	FF-S-036	[S3] I mean, you can't say, "Don't." It used to be don't carry. We know for a fact everyone is carrying a personal cell phone. We ask common sense.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					They shouldn't be answering on the middle of a call.
Rules-Politics - Unspoken_Rules	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] Everybody is carrying them. They're highly discouraged to not use them for work because if they are using them for work, they are discoverable. Everything on that phone becomes discoverable
Rules-Politics - Unspoken_Rules	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] Every time we're on a call somebodies video taping us. That's why you have to tell everybody, "Keep in mind, you are on tape at all times."
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Yeah. It's a balancing act, I think. If they're going to transmit three minutes worth of information over the radio when somebody else needs access to the radio also. A lot of times they'll send that in the text of the MBT. An officer will read that on the way.
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	I would say, for the most part, it's the accidental transmits and then it's people getting too excited and not trans--or not communicating effectively over the radio and not knowing how to speak into a microphone and have that come out clearly on the other side. A lot of people get up too close and you hear over-modulation [laughter].
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Yeah, it's just professional speaking. We don't send a whole lot of personal messages over the radio [laughter].
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	So we are expected to be here at 8 o'clock in the morning but most guys come in earlier, around 7:00 so they can relieve the people that are here. You can imagine if you've been here 24 hours, you're dying to get out of here. Some of us. So we show up at 8:00 and then our day really doesn't start until 8:30.
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Well, in a fire-- you might have to do a face-to-face with the incident commander, the chief that's planning the call. Because there's so many people talking on the radio that if it's important enough, instead of waiting, I'll just go outside and do a face-to-face.
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	My pet peeve is that there's no specific class on radio ethic, and so you want to be short concise and some people just love to hear their voice and if they're always talking. And in an emergency situation, it should be

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								just what's needed to be said, not--
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Because you imagine, if it's a fifth alarm, there are so many people. And people are just stepping on each other when they're talking.
Rules-Politics - Unspoken_Rules	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	No. No, there's some days that we do 10, 12, 14 times. Some days 2 or 3. But yeah. Somebody phones up and says that their house is on fire, then we send a lot of people, yeah, which means a lot of radios. Which means people have to have discipline on the radio to not be talking very much.
Rules-Politics - Unspoken_Rules	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	So I mean, the people problems are just a matter of-- I tell people, "I need you to talk to me in words, not sentences, or sentences, not paragraphs," and so limiting what they say and how they say it. One of the things then is-- one of the number one things that I encourage as a drill very often is the ability to communicate when you are on air. And [inaudible] wrr-wrr-wrr because that's what it sounds like, and they have to practice that and learn to talk to each other when they are not on air. Because if they don't know how to talk to each other when they're on air now, when they get a fire, it's going to be the same thing.
Rules-Politics - Unspoken_Rules	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Only one at a time can talk on the air. And so we talk about radio discipline, we talk about what's important. "
Rules-Politics - Unspoken_Rules	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	..Hey, I want you on another channel, and you're going to take care of these other tasks that aren't necessarily--" the people inside are the ones in harm's way and so I want to give them, say, channel one. And then the ancillary stuff, if it gets bigger, they're gonna get, say, channel two and not to talk on top of these. Because when they talk, I want to be able to hear it.
Rules-Politics - Unspoken_Rules	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	To do other tasks, like bringing air bottles, bringing batteries. "Hey, the water supply, they're having to work on it a little bit more. I want y'all to talk off grid on that."
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	...There's more rules regarding how much you should say, how much you should not say. We strive to keep our communications short and to the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								point. And there's lots of different tactical benchmarks and things that you're expected to say depending on the call that you go to. So that's something that's changed in the last few years, that becoming more structured and rigid and paying more attention to what you're saying on the radio.
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	You show up and let's say you paint a beautiful picture of this house on fire and you take 45 seconds doing it, versus, now, when you show up, they want you to say who you are, what channel you're on, what your assignment is, and a brief description of what you have. Say it in like one to two sentences.
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	Somebody that likes to talk and they say stuff. And sometimes people will say things before they get on scene. They're three blocks away and, "Chief, we're almost there. What you got for me?" So wait until you get here. The people that are on scene are trying to talk. Let them do that.
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	...Sometimes it's helpful but not really. For the most part, dispatch should be the only ones communicating en route. Because they're taking direct caller information that they can give to us and we don't know anything. We're just going.
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	You have to say more to get more, to paint that picture. There's a fine balance you have to strike. You want to get the information out that you need to and you don't want to just say we're out and it's on fire. But you don't want to spend 45 seconds saying everything, describing the paint colors of the house.
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	...The best thing you can do is when you are overwhelmed-- everybody's going to be overwhelmed in a big two-story apartment fire at 3 o'clock in the morning where people are still in there. But the best thing that person can do is not let that show over the radio. Just staying calm, going down your radio script on what you're supposed to say as you're first in. If you can say that in a calm manner, then that's going to help set the rest of the incident in a good way.
Rules-Politics -	FF	U	Field	36-45	11-20	Male	FF-U-005	...And then if there's something I feel that everybody else needs to know,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Unspoken_Rules			Responder					if they tell me face-to-face, I'll transmit it out. But a lot of that stuff, I'm just making sure that they're completing stuff as they're supposed to without any difficulties.
Rules-Politics - Unspoken_Rules	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	Some of it's tradition. I mean it a legal, binding document. Some of it's just a backup, but a lot of it is also just tradition. And it's just something that they're always going to do. [talking about the journal that the firehouse maintains]
Rules-Politics - Unspoken_Rules	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Yeah. Obviously, anything with a battery. The temperature can affect the battery. But even in the cold, I notice-- and we have ways of checking them, so. All the chiefs out there, they carry extra batteries with them. The firehouses are loaded with battery chargers and extra batteries [laughter], and there's no excuse for that either.
Rules-Politics - Unspoken_Rules	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	For our agency, we're not supposed to, but we're down enough people that we have a one to one-- or just about one to one so everybody has their car, which I think is great because you know how that car operates. And naturally, guys that have their own cars treat them better because if it's a pool car, everybody drives it like they stole it. It's kind of like a rental car.
Rules-Politics - Unspoken_Rules	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	overall, I'm just about the newest-- by a month, I'm almost the newest guy to the unit last year. And I still work the road a lot because I'm workaholic. And I think overall, the computers were pretty reliable
Rules-Politics - Unspoken_Rules	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...Our department's pretty good about being responsive to technology needs, and hopefully, I'm not just being biased because I work in the unit, but there were some officers right before we got body cameras that were going out with personally purchased cameras and wearing them. But the department did a good job of responding to that, got the body cameras...
Rules-Politics - Unspoken_Rules	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	We use cell phones quite a bit too. We try not to use them too much when we're on scenes because it's not recorded. But a lot of times, once the scene's stable, we'll be using our cell phones back and forth to get the stuff we need instead of using up the air time because we're limited.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Only one person can talk at a time, and some stuff is more important, some stuff isn't, so there's a lot more cell phone usage...
Rules-Politics - Unspoken_Rules	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: running a person's information during a traffic stop] ...we have a few people who will not use the computer, use only the radio, which then takes up bandwidth for everybody else, but they won't change, and they're our trainers. So when you have trainers who are teaching people to constantly do that, it's like, yeah I can teach them how to, but you don't need to do it all the time. So it just, there's a lot of things that we can do with technology that our people are preventing. Whether that's dispatching, whether that's running inquiries and stuff like that on computer, because we just get a mindset of, "Well, this is how we've always done it."
Rules-Politics - Unspoken_Rules	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: paper, but want electronically] Yeah, things like tow sheets. We're still doing them on paper, even though technically I can build an app into our eticketing where we could do that. We have a lot of forms from the state. Like drivers, if they get a DUI, then those revocations, they won't allow us to do an electronic version. We try to come up with an electronic version and, "Oh no. You can't do that." I don't know why not. I can print out three copies. But they don't like that. Other things, like DUI field notes and stuff like that that I've already generated as a PDF, we're still not using electronically. We have access in our RMS system to do affidavits which then keeps it as part of the permanent record in there. But, again, at the command level, we haven't forced the officers to use that, so some still use Word and type it up. And then we're scanning and attaching, all to six different systems, and I think that's the big challenge...
Rules-Politics - Unspoken_Rules	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: recording via body worn cameras] If it's anything more than "Hi. How are you doing?", pretty much. We have a very-- we have a very good relationship with our public up here. And, for example, an open container of alcohol is against town ordinance. 9 times out of 10, if I'm on patrol, I can walk up to someone and say, "Hey, that's against the rules. Can you go throw that out please?" And they'll say, "Okay."

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Unspoken_Rules	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	I do have a department-- this is my personal one from doing the contract work so a lot of people just know I carry that one. I have my department issued cellphone for when I'm doing patrol shifts because if I call people back I'm not going to use my own cellphone. So it's kind of a mix of which one I use. And I usually carry them both now but my department issued one's not on as much unless I'm doing more patrol work where dispatch is transferring calls to me. Yeah. Then it's to get in and check the emails and respond to a few of those. It's for the more formal, written stuff. And then, occasionally, I actually get to have meetings with people.
Rules-Politics - Unspoken_Rules	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: app for situational awareness] ...But it was kind of a new concept at the time since, as I mentioned, the department wasn't using cellphones yet, or the smartphone, so the concept of having apps that did all this stuff wasn't there. The chat was more encrypted than I think if we just think of the standard messaging apps that are within the phone. Sometimes that comes into play, sometimes it doesn't. Sometimes the tracking of those messages can come in if we're all using one app. And so we go through a server and we tell everyone, "Hey, guys, all this stuff is cataloged. Just be aware it's discoverable." That's always the issue guys want to know. A lot of time guys will use apps that aren't official apps because no one knows they are using them, so it could never be discovered, just like a phone conversation... Everyone knows everything on the radio is recorded, but if you call me on the phone we can talk about whatever we want.
Rules-Politics - Unspoken_Rules	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	We all know who likes to ramble on the radio. As we said, if you have to say break when giving notes about a call, you probably should have typed it to your computer by yourself. That's just a little much for the dispatcher to be hearing and typing and doing everything...
Rules-Politics - Unspoken_Rules	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	... So every officer that I know, ever work with, doesn't arrive on scene and think, "Oh, this is what it is. I'm just going to walk up and be like whatever." We arrive and assume that potentially it's the worst situation that you're going to arrive on, and you need to deal with it in that manner,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								or else you're not doing your job properly.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	Cell phone-- the radio would be the initial call getting put out. Maybe you need an update or you need dispatch to call that person back because we don't have access to their phone number after they call. So that's all on their end. So any information like that is going to be on the radio. If it's for cell phone really, unless something's happening and you don't necessarily want to put it on the radio is when I would typically use a phone call. And then if it's just something like looking up a database, for the most part, it works on most of the computers and if they're nearly updated by now.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: technology use] I would say it's pretty much computer and phone-based. Other than that, it's all through-- word of mouth is really still going to be powerful with police work. Because people want to talk, but they don't want to talk. We can't exactly always talk to somebody on the phone or say, "Hey, come into the station." People still want that type of business to be handled privately. So even though we have all this wonderful technology, there are still people that are shy to get into-- some people don't even want their names put in reports, let alone phone numbers and all that kind of stuff. But I would say the bulk of what I'm doing is computer-based.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[To the?] aspect like the radio communications that there's something going on. "Shots fired." Like, "We have an officer shot." Everybody tries to get on the radio at the same time. Sometimes the dispatcher just-- they have a hard time controlling the entire situation. The officers have a hard time not cutting each other out. So, like we had one officer that was shot while the other officer didn't know she was shot because they work in a pair. He took off chasing the guys. So, she's trying to come over the air saying she's shot while he's coming over the air saying he's chasing this person. Then people would step in, that, "I'm going. I'm going." Where then that person doesn't need to-- you just go. So some way of better controlling the airways when there is a critical incident.
Rules-Politics -	LE	U	Field	Not	Not	Not	LE-U-024	I came from a department and we had different technology on the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Unspoken_Rules			Responder	specified	specified	specified		computer. And we were a smaller department so it wasn't we didn't really need to worry about walking on each other, but if he got a call and I wanted to go on his call, I could put it in the computer-- we used 10 codes there. I would just put like 76 to blah-blah-blah's call. So I never had to go over the air to dispatch or [inaudible]. At least it was on the computer, which I think some people may be a little old school or worried about, "What if I get in a crash. I never said I was on the way to the 10-1, then I'm gonna be in trouble."
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: 10 codes and plain language] I think it's a little bit of the radio like how we talked about radio discipline. I think it's a little bit of the problem. But it's not encouraged here. It's keep it short and sweet. Now I've noticed that I've gotten that way a little bit, too. Now that I'm working here, I will get on the soap box and maybe hold the air for too long where it would have been totally inappropriate at the last department, and there's a 10 code for inappropriate use of radio. So if somebody was on the radio too long, somebody would come over and say 10-39, like you shouldn't have done that. So you got called out on it.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: 10 codes] I mean, there's 100 and I would say 20 of them are useful.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: communication issues] ...on the radio, a lot of people try and get out at the same time, and then were walking over each other.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: personal cell phone use] Sometimes they will. We try to get them to use the department cell phone. All the phone numbers are in there.
Rules-Politics - Unspoken_Rules	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	... We should only be sending information out. We should be informing the public of what they need to know, in other words we shouldn't be commenting on other people's posts. We shouldn't be allowing people to comment on our posts... We should only be sending out valuable information about road closures or anything to update the public.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	The end of the day is shift change, I'm expected to be--I get back here to the office a little earlier than most--than we expect our officers to be, start compiling anything I need to pass on to the next shift.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	...We all came in at a different hour, so we're just expected to go to [inaudible] on the radio and get to work.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	... That's almost day to day, it's just a custom, remind them, hey, try to keep the messages as short as possible. Before I went to Motors, I got this job, we used to have laptops and a couple cars, and we could send messages via that to each other. Which they do now, I believe, they all--pretty much every officer here has been issued a laptop.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	... It was a lot closer with everybody, I think, and some officers want their dispatchers calling to them in a certain way, may have not been great for the uniformity of the department, but most of the shift, because it was the same dispatcher every time, had a good idea of what they wanted, what they needed to ask, things like that, or at least the pace of which they were going to get something.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	It can, certainly. I had several situations where, when I first got here and it was like that, I worked the same hours every day, which was 11:00 at night to 7:00 in the morning, and we also used--we have a car-to-car on our base radios that a lot of us would use at night. It was just the culture then, that we liked to use the car-to-car for those conversations that we may not want our main dispatch, just because it will take up too much time.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	... We encourage--or at least I encourage my guys to do it, and I enjoy it, as just get out and do foot patrols, and go out and communicate with people that way, that way you have a physical--someone is actually out there, a physical presence out there, as opposed to a car just driving by, because once you're in the car and you're going somewhere, you have almost--except for having to stop for people at crosswalks or the other traffic, you really don't have any real interaction with anybody.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	All of my guys have department cellphones. If they're using personal, we don't advocate it. We use our departmental cellphones for everything.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	There is, there's been directives to the detectives that they will carry their department cellphones with them at all times. But there is no, there is no

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								police department policy on it.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	A lot of text messaging too, yeah. But I don't, we don't typically text message with our victims or suspects or anything that we're looking for. I guess if there's no other way to get in touch with them, they may send a text to meet up with them. We try to avoid that. But we will text amongst each other, me and the detectives, say hey look, I need you over here to help me collect some evidence, where are you at? And they would respond that they're doing this instead of picking up the phone and talking. A quick text or something like that.
Rules-Politics - Unspoken_Rules	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	... You know, we work in a - basically if it is going to be more than a five or ten-minute report, I want them back in the office.
Rules-Politics - Unspoken_Rules	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	You know, we tend to stay away from the conversations on the MDT and again, unless they are of critical nature or very - not critical nature but sensitive nature I guess is the best way to put that, we generally don't have those chats back and forth on the MDTs, again, unless it is something that is officer safety related, you know, maybe embarrassing to whatever the complainant may be, something along those lines, you know. We don't put that information out via the radio.
Rules-Politics - Unspoken_Rules	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Okay; yeah, I mean, pretty much. We come in and usually get a briefing from the night crew and pretty head out on the road right away and a lot of the time its monitoring morning work traffic, work flows and obviously if there are calls for service in between, then we take care of those. Then the end of the day is kind of the same, you know. We will hit the hot spots for traffic and speed enforcement and kids and help them, you know, cross roads and so forth, you know. It ends up the same by giving a brief to the next shift.
Rules-Politics - Unspoken_Rules	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Umm, I mean not really; I mean, usually for communicating with like school staff or something that don't have the radio capabilities that we have. We try to - actually there is a culture here - we try to limit our radio traffic - we are not gonna give, you know, a two-minute narrative on the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								radio when I can just call them and tell them.
Rules-Politics - Unspoken_Rules	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	S1: Okay. And what are the potential issues there? S2: What is foilable and who would have access to that phone if it...
Rules-Politics - Unspoken_Rules	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Probably unwritten. I dont think there is a written policy on using your cell phone. I know there has been discussion openly that using your cell phone to take pictures and so forth is discouraged just because, you know, [unintelligible] your phone, but it sort of an officer's decision whether, you know, they feel like they want to give their phone up if need be.
Rules-Politics - Unspoken_Rules	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	It's almost nonexistent. We do have the frequency but it is a county frequency so, you know, if I wanna talk to [Town] Fire, I can do so, but a majority of that cross-discipline radio traffic is unheard of generally.
Rules-Politics - Unspoken_Rules	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	You know, because the big push is to stay off - we really only have the main frequencies in all - I shouldn't say all, like we have our own frequency, [town name] police have their own and the sheriff's department those are pretty much the three. But every fire department has the main, so everybody tries to stay off the main because you don't want to tie it up, so they go to their second channel, and not everybody has those. Fire does, to a degree. At least the frequencies are variable, available for them if they want to put them in their radios, but nobody else has them.
Rules-Politics - Unspoken_Rules	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	... Every downriver community has their own separate channel. There is a plus and a negative with that, the plus being you can be a little bit more informal on the radio on your own channel
Rules-Politics - Unspoken_Rules	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yes, well I mean, you know, you want to try to keep as much as you can separate, but with today, it's just -- it's just very difficult, you know, and years ago when cellphones were more expensive, you really try to keep [inaudible] when it was 25 cents a minute, you know, you really try to [inaudible], but you are really trying to keep that down to a minimal personal use or use your personal cellphone. But today, the way the plans are today, it is not as important as it was.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Unspoken_Rules	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Sure, you do. Yeah, you do. I mean, you know a lot of people will have their personal cellphone but they will have it forwarded to their county phone, you see. I mean, we are using one device your phone and --
Rules-Politics - Unspoken_Rules	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Yes. Yeah it's mostly email. You know occasionally phone calls but they'll it's nice of the emails because it's a written document and you can always go back to that. It's like it's a way of keeping track if you've done it or not right because you can just delete it when you're done with it. And if it's not deleted then you still need to do it. At least that's the way that's my unfortunate work plan.
Rules-Politics - Unspoken_Rules	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	I don't have a pager. I have a radio but I use it for monitoring mostly. I try not to communicate over the radio because since I'm not a responder.
Rules-Politics - Unspoken_Rules	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Times where they send us to a call and I'll call someone whenever he was working with me or we were just doing our own thing I'd call him and say hey, you know let's go check this out, let's go sit over here and watch this. We won't touch our radio until we go and make contact with whoever we're out with. Outside of that we keep it on the down low. We try and keep off the radio as much as possible because in [City] we have a lot of people that we like to call standard land so we have a lot of people that listen to what we say so there's a lot of times we get sent to a party call they'll have a scanner pulled up on their phone.
Rules-Politics - Unspoken_Rules	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Used to hearing that number because that's the bar right from now on it's never going to be said anything on that radio other than that number so if you don't listen to your number and you get sent somewhere and another officer goes and you don't show up and he gets hurt that's on him. That's on that other officer so listening it's bad. They're hiring a lot younger guys which I can't say a whole lot I'm probably only older than two people on our PD so my first day was my 21st birthday so 21 my first day of work I went out that night with my parents I had one drink went home went to bed and had to wake up again at 6 a.m. and come back.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Unspoken_Rules	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	Q: The ability to subpoena your phone? SME: Yes. People look at that and they're very careful about what they do.
Rules-Politics - Unspoken_Rules	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	... We'll let them bring beer and wine. Can't have it in bottles or cans. Have to have cups so if anybody takes pictures but anybody needs a ride home you ride home.
Rules-Politics - Unspoken_Rules	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	We almost always have 2 dispatchers. They're not divided unless they between themselves informally agree upon some way of dividing any of our four zones between themselves. Typically it's a first come first serve. If a call comes in first operator to take the call while the other is continuing to respond to officer's radio traffic they'll hand off calls. It's really somewhat informal as far as that functionality.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	No we don't certainly we don't want people in the office all day but there's no hard and fast rule you can't be in the office. There's no hard and fast rule when you get in your car you have to be gone. We understand the constraints of working in a you know it's a fairly restricted geographical area.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	I don't believe so. I think if you chose to just say I'm not using my phone for personal business you could. You could use we have a talk around channel. You could find a means of communicating if people choose to. We're not expecting people we provide every car has a digital camera so we're not asking officers to document in fact that's a big no no here. If you're going to take photos of something you're going to take it with the departmental camera, burn it to a disc or upload it to the records management system so if you're using the phone if you need to take a report over the phone they can transfer it to your cell if you want some officers ask to do that through a recorded line or you can come back to the station and take the report.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	Q: And it sounds like though you've developed some policies around that ie, you don't use it for evidentiary right? SME: Yeah that would be certainly I'm sure it's codified somewhere but also it's just it's a practice.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	Well you can both our trunk and car radios can be what most officers do and this isn't dictated they're supposed to carry a county radio or if they're in [City] they're supposed to carry the [City] radio. We understand that carrying multiple radios can be problematic so what most officers do is grab one and keep it in the car. If they go on a call they might need a CAD they take it with them and most officers keep their portable tuned to our channel and may change their car radio to the county channel so they can hear what's going on but your portable should be on the channel you need to be on so with regard to you know communicating with [name] and CAD you can just hop on the radio and say and we use the same codes and signals as [name].
Rules-Politics - Unspoken_Rules	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Just in the last month. I had another one. It was just an older phone. So I had a few different apps on there that I changed, but I used- I pretty much use the mail. I use Outlook on here and the phone. And that's it. I rarely text on here just because it's a work phone. It's not as professional [laughter].
Rules-Politics - Unspoken_Rules	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	No, no, so. And we keep our work phones and our personal phones separate. You don't want to use your personal phone to do any work.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	...There's a procedure protocol for communications down there that we don't grow and practice enough, and some of the dispatchers have very short memories, and so they don't say, "Hey, this is what you need to do. This is what we're doing. Move to Channel C8. We'll patch it to your A2 channel. When you're on the platform but as soon as you start coming up out of the ground, you got to switch back.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Yes. They were issued with a stern warning that if anyone were to use them for non-police work, there would be hell to pay. So everyone took the receipt of their phone and threw it in their bag. I'm not going to carry two phones. If I can't use that to call someone, or have a regular conversation, or receive a regular conversation--
Rules-Politics -	LE	U	Field	46-55	21-30	Male	LE-U-011	--it's a problem. If you are using the phone to film your partner, problem.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Unspoken_Rules			Responder					If you do anything incredibly stupid with the phone and then another incident occurs where I'm going to want your phone and all that stuff is there, don't be surprised when all of
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	And they don't have to now. They have to now. But we could've if they were presented. Like most corporations when they give you the phone, here's the phone policy. If you violate it, there will be repercussions.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Genius. Most of the big agencies got away for that thing about 10 years ago. Somehow, they saved them all for us. So you have to have a fob. You can get a day off for losing the fob. You can get threatened with a day off. You might get a day off held in a band if you lose the fob. Back to trust.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Most of it's through the radio. A little bit is through-- I was always taught, if you don't need to be on the radio, do it through the computer in the car. Send a message to dispatch and let them know through the car or something very minor, "Hey, can you send us that run?" or, "What is this call concerning?" If you can do it on the MDT, do it on the computer in the car. Don't tie up the air. That's what I was taught.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	And we have certain parameters for our description. This, this, this, this, this. This, this, this, this, this. And some of the newer officers don't even know that, how to give it properly.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	So being consistent, people know what they're going to get when they get there, so that the consistency is what people, I think, thrive off of or look for their own stability from where they can go forward in a conversation. If they know what the baseline is, they know where they can go from there, what the rules are kind of going in, so being consistent with that as opposed to-- depending on what your own particular mood is in a day, letting that influence you regardless. There is some sort of that regardless, but being aware that being consistent on how you respond to everybody regardless of the situation, I think, is important.
Rules-Politics -	LE	R	Supervising	26-35	11-20	Male	LE-R-001	You know, it's probably not super bad. There are people that oversee us,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Unspoken_Rules			Field Responder					[CJIS?] oversees us, and says "you can do this, you can't do that, you can do this, you can't do that." And so with every piece of technology that we get, there's a requirement that goes with it.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	...But when I was on patrol, I couldn't pull up Facebook on the computer. The few websites we were able to access were very controlled. I mean, it was just the [City] Police Department website, a couple of others, and that was it. But I couldn't just do a search for something like in Google or Yahoo.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	...Now, with city-owned cell phones, that kind of alleviates that part of it. But then it brings in it's a city-owned property, and then an officer decides to download something they're not supposed to. So that already comes into an idea of control over the device, which is very manageable as well. So there's some issues with having a cell phone, but they can be managed.
Rules-Politics - Unspoken_Rules	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	...So if there's an affidavit that came out for the media and the detective isn't available or it's just something providing safety tips like a particular media outlet wants to talk about running on the trail at Lady Bird Lake, what you should do, what you shouldn't do. Or we had a sexual assault suspect that was a serial rapist going around, and so we would go and give public safety talks and those types of things.
Rules-Politics - Unspoken_Rules	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	...But as a police officer unless you're in a specialized unit that deals with that you may not be as familiar with the Public Information Act. So what we run into sometimes, even with detectives or supervisors, because of course, it's their case, they don't want to release anything. But we also know what legally we can't release that's not going to jeopardize the case. So sometimes we have a little push and pull there because you as a PIO don't want to get up there and say nothing because you'd look silly giving a briefing on nothing.
Rules-Politics - Unspoken_Rules	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	So I won't key up on the radio though to talk to people before I get on scene because they have their other radio chatter. I don't want to interfere with whatever it is that they're doing.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Rules-Politics - Unspoken_Rules	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	...It's like [inaudible] the last version was at its end of life by the time we implement it into the department. So that would be nice if we-- and I understand the purchasing process when you work in a police department is that there's a lot of rules, restrictions, and it's a long process.
Rules-Politics - Unspoken_Rules	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	We did when I started. And then now we're told to not use 10 codes. Which, some people still do. Because it's like they taught you another language and then they tell you-- yeah so I think, probably the newer officers may not as much. Because I don't even think they're getting taught it anymore.
Rules-Politics - Unspoken_Rules	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	...We try and limit that because when you're on those types of calls, there's a lot of people on them, and there's a lot of people trying to talk on the radio. And some people are very undisciplined when it comes to radio conversation
Rules-Politics - Unspoken_Rules	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	It could be something personal. It could be, I guess-- I mean there's a lot of, I guess, VIP-type people live in [County], so sometimes they don't put that over the radio. If there's a hazard on a person's house, like this house or this address has been an issue in the past, it may not be that they're not going to put it over the radio for any reason, it's just that there's so much to read. So they don't want to take up all the radio time. So they'll say, "Check your MDT for the CAD hazard." Computer-- you know what CAD stands-- C-A-D. You know what it stands for. So let's say look at the hazard for that location, and you just read it to yourself. So it's going to be for personal reasons or it could be not to tie up the radio.
Rules-Politics - Unspoken_Rules	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] Okay. The call takers start their shifts. They are eight-hour shifts. It's important that they be on time.
Rules-Politics - Unspoken_Rules	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	When I was out on patrol, I gave my number out, my personal number, out to people. But what I had done is I had created a Google Voice Account, and my number was [Phone_Number] [laughter], and I would give that out. I had it on a business card, and I'd give that out. And it would ring on my phone, but it was a pseudo number. It didn't come

Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	So the back channels, I mean, that's all just various talk groups on the LMR system. And ICALL is just a capability to set up what's essentially a two-radio talk group. So it's a point-to-point, radio-to-radio communication, set up a private channel just for those two. So yeah, those are not separate systems. They're just oddball uses of the current system.
Technology	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	Commercial push-to-talk broadband devices; programs that allow you to tie phone traffic, radio traffic, pager traffic, SMS traffic, all into these kind of central hubs

Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	...we're also very heavy on social media. We have quite extensive use of Twitter, Facebook, some of the other platforms.
Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	...there's a lot of web-based like WebEOC, the Intermedix group that does WebEOC and patient tracking and all of that
Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	So yeah, we still use our pagers. Really it's just for the critical notifications. So most of our medics aren't carrying alpha pagers anymore off duty, but on duty, every ambulance has two alpha pagers and all of our critical people, like PIOs and command staff, have alpha pagers.
Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	We do have cell phones on the ambulances. They don't have data. They're just flip phones. So we can do phone calls.
Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	And then we use mobile data, computers in the trucks. Those are connected to the CAD system. They have GPS and all the CAD call information that's coming in gets automatically pushed out to them...So we have a modem that's just for the MDCs that does it, and it's very secure. And pretty much nothing can get on that network except an MDC because it ties right back into CAD, which is also on a very secure network. We don't go out to the internet. Some places will allow their CADs-- you can go click a button and go to Google and pull up information...So now we're just using Sierra Wireless truck-mount

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								modems. We've got GX450s or 480s, I don't know-- these modems that are LTE. Everybody at EMS is all using AT&T. So we use the private carriers for all of our mobile data. The second modem connects to the ePCR so they can send information out from here to the ePCR, and it also connects to our monitors, so our heart monitors
Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	...So they've used GroupMe. They'll use a platform like GroupMe... We do believe that probably the vast majority of personnel in our department use their cell phones for a variety of reasons, work related, I'm sure. I know that the higher up in this organization you go, the more you're going to use your cell phone, and it'll be work related, whether it be-- I know my deputy PIOs, they use that to just look at something like our [visanet?] or the CAD system because as a PIO we need to function mobily.
Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	Yeah. As an emergency service provider, if we have an emergency staffing issue because we have a large-scale incident, a mass casualty incident, then we have a responsibility regardless of whether we're calling you on your cell phone, because the other option was everybody was being issued pagers.
Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	Another thing and actually what got me pushed over to a smart phone was we have one extreme to the other that people are very involved and want as much [inaudible] overtime hours.
Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	I mean, for us too, we have the radios, but we may be separated on the scene or something like that.
Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	The other thing I think people use their personal devices for is we're pretty limited in what they can get to, both on the ePCR tablet and the MDC is locked down
Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	...Because you can go on a call downtown and they want their 15 minutes of fame, right. But, on the other hand, for PIO, I can Facebook live, I can do this, I can do everything, I can create a whole movie from this thing. So, it's great but it's dangerous
Technology	EMS	U	Not	Not	21-30	Male	EMS-	--get it out to the responders so they can see it. All of the TeleMedics

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			specified	specified			U-001	stuff that's happening, with the cars, and OnStar, where they're able to get G-forces and see which airbags deployed and how hard was the impact, we're seeing that now, as we can get
Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	That would be their only option because we don't a Polaroid anymore. And the phones that we issue are a dumb flip phone.
Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	...In fact, we're going to use it as a platform to allow them to contribute from the public information side, because we're waiting to launch our Instagram account based on the imaging policy
Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	..We've got some equipment that we can take with us, satellites and things. But the interoperability, what would be great is to have a combination of like LTE, public safety LTE that's on top of the public LTE, and to be able to integrate radio communications into that.
Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	Yeah. So when we had our [inaudible] when we hired in, we were using UHF radios. We had [FSol?], we also had the big bag cell phones, but we didn't really have cell phones--
Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	Yeah, with the cockroaches, they'll be there forever. We had mobile data computers, but they were on a [MFR?] layer that was really slow and junky and kind of up and down, and they were mobile data terminals.
Technology	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	Mobile data was just really getting started where it was usable for things other than an MDT terminal that popped up a couple of numbers and very limited. So that grew into mobile data and radio. And then we decided with mobile data and radio, we probably need to look at where we're going to keep all this stuff, the infrastructure behind it. That turned into our communications center concept. So it all kind of grew out of we need a better radio system, and then we need mobile, and then we need a new CAD, and we need some place to keep it.
Technology	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	Okay, our radios, our chief's really cool about that. He buys the best radio stuff. So we were having an issue with our microphones.
Technology	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	So I came from a department that didn't have one. So you would literally use your phone as your routing device.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	So we carry our COGs on our phone
Technology	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	So I've got the Epocrates app and I've got my standard-- my SOPs on there. I think that's everything. I just got done with EMS class so I had-- I would quiz myself a lot on stuff like that.
Technology	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	It has a search thing for like-- yeah, Pill. It's called Pill ID.
Technology	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	...I have a search on my phone, I can just search it and I can look at it and go, "Okay."
Technology	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	MDTs, yeah. Those are what we use, so.
Technology	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	We have a 800 megahertz digital system and so we can communicate pretty reliably.
Technology	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	So we use Panasonic Toughbooks with Motorola PremierOne CAD system, CAD dispatch. We use another Panasonic Toughbook with an ImageTrend, patient care reporting module. So that's how we do all of our patient care reports, is electronically.
Technology	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	That's for patient care. So those are the primary computer tools we use. We don't carry any-- aside from personal cell phones for some people.
Technology	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	I carry my personal cell phone. I use it to look up-- it's very easy to get to the website that shows us hospital statuses.
Technology	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	Yes. There's actually a system-- there's a resource for us, it's EMRC, the Emergency Medical Resource Center.
Technology	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	So as [City], [State] suming that we've made patient contact, we carry an AED in to all of our calls and we carry a green bag that has an oxygen tank and airway equipment.
Technology	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	badge swipe, portable radio

Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	...And so a radio helps us do that, that is, it doesn't have to be encrypted, it can be open. It's not a big deal. We also send out our orders about, "I have these stations, these people, this movement." And we've created a system on Outlook which is a meeting notice that every station saves, this recurring notice, it's a blank template, and then we go in. And I think every BC does this now where it's, "Here's who's coming to work, who shows off, and here's any special--" like today I've got some people training. Somebody's training at 2:00, somebody's training at 3:00, somebody's training in the morning, and so my whole team reads that daily order email or meeting notice, and then they have their marching orders... So we have the radio that we all get on one channel, say channel one, and we're all listening to that channel. So when the first person gets there, they tell us what they have. "It's a fire. Here's how big it is. Here's what I'm doing."
Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	... So when we show up to let's say a typical house fire, we have thermal-- you read the building and determine many things at once, and we call them "size-up factors".
Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	...So technology with radios, technology with calling on the phone, taking pictures, using thermal imaging cameras. Computers help us in staffing and doing reports and just, the more administrative stuff. Right now I find, kind of, a roadblock on the network part of it. So we're linked into a network, but as soon as I leave my desk, now I've lost my ability to operate administratively as a battalion chief.
Technology	FF	U	Supervising Field	46-55	21-30	Male	FF-U-001	... Now we have iPads that are cellularly connected. Just like this iPhone.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					
Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	And so, right now every incident commander has a helmet cam.
Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	... So seeing where they are at, I know that our new air packs have the ability but the software isn't there yet. So to send out how much air they have, that's a really big deal because as people get close to low on air, it doesn't tell me where they are in the building, but it tells me how much work time they have left.
Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	...So the Phase 1 air packs that have the software that reads it, but that was a blah, blah, blah bit system, and now they said, "Hey, this bit is more up-to-date," but the software, they haven't built that bit system integration yet
Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	...I know where it's at if I could-- and we have printers in the back of our car to help us, although I will tell you it's anything that's meant for a sterile environment. Computers are ready, printers are glitchy, mine probably works maybe 40% of the time, I'm saying.
Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	So every department probably does business a little bit, different but for the most part when you go to a fire scene, you have a primary channel. And then we've decided that we want a secondary channel for like the ancillary logistics things. But we also have a third channel, so there is one, two, and three and that's the emergency channel.
Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	...Because if we have a notion of, "Hey, this is explosive, it's a gas call," we're going to use the sense set which detects gas and figures out what the hazard zone is so we can make sure nobody gets in, and then go and solve the problem. Because we don't have the ability to do with our eyes or nose, we have to use monitors.
Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	As I'm sure you've already figured out, we just got new radios last week.
Technology	FF	U	Field	46-55	21-30	Male	FF-U-002	...And oftentimes, the way our industry works, we rely on these radios to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					talk to each other on incident scenes and in training. And with the advent of cell phones, we quickly fall back on cell phones in a lot of those cases, even on emergency scenes, because the cell phones always work. And the cell phones have different functionalities that are beneficial to us, especially on those greenbelt, those wilderness rescues, where I can use GPS location, and use longitude and latitude and things like that to help my team, that becomes important.
Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	...I care about three things in an emergency situation: I care about this orange button, which was on my last radio. I care about this button, the push-to-talk button, which was on my last radio. And I care about being able to change radio channels, which it's very similar to my last radio.
Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	I see, okay. Cool. So besides your radio and computer or MDC, what other kinds of technology do you think would be the most useful when responding to calls?
Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Sure. But my point is, you would think, if that's the reason, I'm going to buy the iPhone 7, because I can find my phone when I lose it.
Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Everybody does. I mean some people have department-issued phones, but nobody goes-- I mean, we live in an age now where no one does anything without their phone. And everything is done on an app, or done on a-- what have you.
Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	So, we use a lot-- as an example, in hazardous materials. We use our cell phones to look up lots of databases that store information on chemicals and what to do about it. And so when we go to those types of calls, which is part of my responsibility, everybody in the back is on their cell phone--
Technology	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	...Some of them are color coded, so all those things are good. We talked a little bit about whether it's on the radio, or on my air pack, or my SCBA or something, but the ability to track me from the outside. For the chief, to be able to look at a computer screen, outside, and watch where I am in the building.
Technology	FF	U	Field	36-45	11-20	Male	FF-U-003	If I go into a basement of a high-rise, I have zero-- I might as well pull my

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					cell phone out and call-- and call [crosstalk]--
Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	...Today we walk in, our radios balk and they give you out of range signal.
Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	So I just say I was a little disappointed when I was like, well not that great. As opposed to the iPhone 10--
Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	Everybody has a radio.
Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	In special operations, we use GPS to drop grid coordinates. When power's out, when we go on boat calls and stuff, that's very useful, so we use GPS....The cops have sonar for finding bodies in water. So that could be helpful. People are talking about the drones stuff.
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	I'm the guy that makes the walkie-talkies work
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	So we were using the XTS 5000 radios, and that's a Motorola product. We work within a-- the Gator system is a Motorola trunked radio system. That's what we use for our radio communications...So we switched over to one of the newest radio, that APX 8000, so that's why we're doing it. We didn't necessarily have issues with the 5000s other than they're just old now. So, yeah, we're a little over half way. We ordered 624 radios, so we're about halfway. Every week I get about 70 to 100 radios from the radio shop.
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	...We had just a conventional radio. We didn't have computers in the fire truck. In fact, I never saw a computer in a fire truck till six years ago when I came to work here.
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	All the departments I worked for before here, we never had a computer in a fire truck. So the MBCs, I was like, "Wow. That's cool. We got an MBC now
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	So when the fire trucks are in the fire station, they're connected to a WAP. When they leave that fire station, they have cellular network cards built in, so they continue to get the information.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	-- if I'm an available station or if I'm responding to a call, you could hit the button on the radio and stuff like that and more of a device it would-- our MBCs are mounted in the trucks or locked in the trucks, but we're looking at going towards tablets
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	Well, I think we're looking at going with a brand for our MBCs possibly and with that [inaudible] if we're going to switch out all of our hardware, even our current provider, I think they have a tablet option but we're already invested in what we got.
Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	We're fortunate in that we have, on each of our rigs, we have at least one radio per person. There's a mobile radio and we have a pretty robust radio system around town.
Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	As far as responding, not really. I can get it on our MDC but I like everybody to be able to hear it in the truck.
Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	I'm the passenger in the front seat. That's where the officer sits and that's where our MDC is. That's correct.
Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	I can't really think of any off the top of my head. We got good radio communication. All the battalion chiefs carry cell phones on them. We have iPads on the units-- or at least, I think there's an iPad assigned to every station. And when we're going to do hydrant maintenance, we get on our little iPads and pull up a map when we can check them that way versus writing down on a piece of paper. That's a good piece of technology that we've seen in the past couple of years. The ability to do smartphones and for HAZMAT stuff, I can look up on my smartphone.
Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	I don't know, some kind of a-- I don't know if it's like a GoPro or if it's like FaceTime, some kind of FaceTime application or something that as I'm walking down the hall, the chief sees us and is seeing what I'm seeing exactly and at the command post on a screen or something like that
Technology	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	We just recently got new radios.
Technology	FF	U	Field	26-35	6-10	Male	FF-U-006	We have TICs, thermal imaging cameras. This actually kind of goes back

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					to the radio thing. On the ladder, the TICs are actually a lot larger than they are on the engines, which, we're already carrying a lot of equipment...I guess our air packs. We also recently just got new air pack assemblies that once the department gets the software for they can actually track how much air is still in our bottle, where you are on the fire scene, what position that air pack was in in the unit
Technology	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	...we actually have a little remote control rescue boat. So that is also equipped with infrared cameras or a camera. It's battery powered.
Technology	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	...I mean, we already have the Opticoms on the rigs for changing all the lights or at least canceling all the lights to turn them red. Like I said, we've got the MDC. So that also has a mapping feature if we're going way outside of our territory, we don't know where we're going. It's GPS for the fire engine.
Technology	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	Some of the officers do use their phones a lot as far as taking reports
Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	When I first started, we were assigned two portable radios per unit
Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	Our data terminals on it are really [inaudible]. Our MDCs just kind of slow to operate and kind of-- you got to kind of dig for information. It's not just you whip out your iPhone and you have a map and you can move it around, do what you want to.
Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	Yeah. We're all wearing headsets
Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	... We just got a new set of radios, and I missed it when our handhelds came in.
Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	...I can't really put in a feature like I could on a map. Like on Google Images, satellite images, you can see very well where things are and it's just a square here and a square there.
Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	...All the features that we have now, the FDC, the fire phone, all the fire protection stuff we can look at. And on this table that we have, we can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								look at, somebody's on engine one.
Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	-- as far as phones, notification devices, and then just exhaust fans, stairwell preservation fans, seems like every time I walk into a new high-rise, there's something even cooler, fire-protection-wise,
Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	...So that pressure, a lot of times it's on our MDCs already
Technology	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	...some of the functions of our new air packs-- like accountability stuff, and air supply. I think that's all going to eventually be monitored technologies there.
Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	... so we operate on the same radio groups and we have the same capabilities, MDCs , mobile data computers, and then the portable radios and the stational learning and all that is all integrated from one place.
Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	...So that's a department cell phone, but one of the things that our guys do is they get Active911 pushed to their personal cell phones.
Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	So we have GPS in the vehicles.
Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	...So when we go out and we do searches for homes or clearing a street or what have you, we carry tablets. And we use a system-- and I forget the name of it. [State] Task Force 1 owns this system, and then [State] Task Force 2 uses the system. But what it does is it shows me an overlay, like using Google maps, and then I can hit that address, and it logs the actual location GPS.
Technology	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	...So the guy that grabs the hydrant bag had a radio, but you didn't have one assigned to your person
Technology	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	So we need to look at that before you're on calls. So that helps a lot on the phones. With our radios, I mean, that helps us obviously, talk to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								dispatch, let us know what's going on, if we need to upgrade something...That's something I should probably be aware of because we have a thermal imaging camera. We had that melt on us before.
Technology	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	Stuff like that. Other than that, I mean, communication-wise, that's pretty much all our radios are used for. The CAD system, I mean, that's the main thing it's used for.
Technology	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	...Let me see, Chief keeps in contact with us through, I guess, we use the phone for email too a lot because that's how he'll normally keep in contact with us
Technology	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	Yeah, so radios I've had, it's been the same type of radio the whole time. We haven't done anything different with that. What else would they have? I mean, all the emails and they didn't have a CAD system over there because it was a small area, they just worked for the port. So everything was off of radio.
Technology	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	...So we were here and it started raining just terribly. And we usually have 10 calls on our CAD at one time, but that's for everybody, for every department.
Technology	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	He's big on his drones, so he does have a drone or two. And he's done a lot of neat stuff, but that won't work [inaudible] train.
Technology	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	Yeah. We use, I guess it's all iMac stuff over here maybe. I don't know what the hell we use.
Technology	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	--Microsoft Word and Windows and all that, and then you go to this, it's a totally new system.
Technology	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	...But also, the heads-up display, it's got a monitor on your air pack. And then on your actual face piece, so it'd show you colors.
Technology	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	..So even though it shows up on your-- because they'll shows up on your CAD system
Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	So here in [County], we operate on a 800 megahertz digital trunked radio system.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	Now, both of their battalion buggies have VRs in them, the vehicular repeater systems.
Technology	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	The particular SCBA that we use here in the [City] region is Scott Aviation SCBA, and the regulator is right here on your face piece. That regulator has what's called a vibralert in it.
Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	Yeah. I have a department-issued because I'm a battalion chief. I have my personal one. [Department issued phone]
Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	It's also used. There's several things on this, different apps and forms that we use. We have our schedule. We have our lineups that people fill out. There is the weather because it'll alert us when there's flooding going to come within the area as well as when the heat's too high, and we have to cancel training when the heat gets too high. Also, there's maps so we can use it as a backup to get to places. In addition, our county has a M-Sent, an internal notification
Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	Yeah. For us, it's a MDC, mobile data computer.
Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	...But in my vehicle that you're going to see, I have four mobiles. I have our dispatch. I have, what I call, our basic channel, that unit switch over. I have the tactical channel for complex incidents. And then I have our talk around channel. And then I have a police portable.
Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	Yes, four—[radios]
Technology	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	Okay. Every person that is on the unit has a radio. There are four radios on the unit, okay?
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	Yeah, sort of. Yeah, alerting system, Everbridge pages, the old manual phone calls for all the upper echelon for major incidents, callbacks, stuff

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								like that.
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	That's pretty much it. Two portable radios, the dispatcher radio module, and the CAD, and then a computer for email and sending out alerts, and a cell phone that we also have.
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	Actually, that's almost the anti-technology unit. Just the mandatory tablet, and portable radio, and a lot of meters. I mean, the technology we were using is more actual--
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	We're the other half of the hazmat team so if there's a hazmat incident, the hazmat unit will be the primary and then we're their backup. So we have not everything they have but we have almost all of the same meters they have for the average run, minus some of the ones that cost a hundred grand a pop.
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	All of the radiation meters, all of the different chem-bio papers. And that's our main, I guess, technology core.
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	--or the racing industry. Our thermal image cameras, they were developed by the navy. So a lot of the technology we use was actually developed by other--
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	--over the radios. I can't wear a headset. I use portable radios and the speaker. In fact, I don't think any of the four of us wear headsets.
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	--personal because they don't give us a work cell phone. So not that I really want one, because I want to do everything on the same cell phone, to be honest with you. But I use it-- so I'm also assisting with driver's training down there.
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	Sort of. Yeah. End result's going to be our responsibility. We have TargetSolutions, which is currently our Internet-based learning solutions. It seems like it has problems. It might be a IT thing on our side
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	So it's each individual, yes. So when you come in to work, you're assigned a position that day. There's a portable radio for that position. You take that portable radio. Most guys don't even look. They just pull the battery out, go to the charger, grab a fresh one, stick it in there, and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								then it's like, "At least I started with a fresh battery."
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	Each charger has six banks on it, so they're going average it out. You're either going to get two chargers, three maybe. A place like this should have at least three chargers probably. And then, if we have reserve pieces, there should be capacity to handle those as well. All of our vehicles - all of our engines and trucks - are specced with a single bank or single slot charger. Again, it's a personnel thing. It's a MOU thing. When we first switched over to our newer batteries, a lot of our vehicles had the older style. So we went from these XTSSs, which were long, skinny, stand-up batteries, to Apexes, which are short, stubby ones.
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	So we've got all these vehicles that have these XTS chargers in them, and we get brand new Apex radios, and not a single one of them is capable of charging one of those batteries
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	I think we are-- I want to say we're in like the 2,000 range for portables just in the fire department. The police department's somewhere in the neighborhood of 5,000 portables.
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	So Motorola and WAVE. [cell phone apps]
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	So WAVE is a VoIP solution, right, that's tied to our radio system.
Technology	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	Again, I think a lot of it is our management of the technology. We have these Getac tablets that we use. They're our MDTs. They work relatively good. There's been a lot of stuff going back and forth. First generation, we were doing Panasonic Toughbooks. Every Panasonic Toughbook had a cell card in it, so it was great. Your tablet or your computer had its own cell card. In an effort, my understanding, to make things cheaper, we decided we were going to buy routers, put a cell card in the router, tie two laptops or two tablets to a router
Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	A Surface Pro.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	There's a tablet in every fire truck, and every unit has the tablet.
Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	What else do we have, other technology? Obviously, meters, HAZMAT meters for detecting air.
Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Air samples, thermal imaging cameras, radios.
Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	I'd like a better phone. So I've I actually got an upgrade [Name]?. I got an iPhone. And I think she got fired for giving me an iPhone [laughter]. But everybody else has-- we had BlackBerries. Then we went to Windows phones. And I think now we're going another month where everybody's going to go to iPhones.
Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	So we have an official tactical worksheet which is create [crosstalk]-- no, so, engines are usually red. Trucks are green. Just their patches are usually that color, and squads are blue, and so then, it's green because it's usually a truck company. Why there is a red I'm not really sure.
Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	So Firefox works a little better with PDFs, but-- and I may still end up going back to my Mac. But for now, this is what I've got. So you're asking how long. So once I bought it, I probably had the tac sheet loaded up in the first day, my first tac sheet. And then I was playing with it. I was on Drawboard, and that didn't really work. You can go back to Drawboard.
Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Well, a couple of different options. We have the repeater system, a digital vehicle repeater system.
Technology	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	So I'd work with the doctors and we had Centricity, which is the electronic medical records program.
Technology	FF	U	Supervising	46-55	21-30	Male	FF-U-044	We just switched to a new personal protective equipment pack and part

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					of the reasons why we did that is the stuff that we were wearing was based on a 10-year spec.
Technology	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	...We all have department issued phones.
Technology	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	Obviously, the computer, laptop. I have my personal laptop where my entire work life is on it, essentially.
Technology	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	Yes and no. I try not to. It's hard because-- if this was an iPhone, I would use this everyday [laughter]. But yes. So that's what I'm used to because that's what my personal phone is, so a lot of times it's just easier for me to pick up my phone and call so and so because I already have them in my phone, or send an email from my iPhone.
Technology	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	Waze [laughter]. So there's a couple hazards materials apps. There's I think it's called WISER, I believe. The department has an app which is good if the public asked you a question, you have an answer, "Who's the contact person for this?" or something like that.
Technology	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	So all of our phones come preloaded with the department app. We don't have it but I'm sure you're familiar with it and there's an app called PulsePoint, I believe?
Technology	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	We use Google Earth a lot. We have hydrant mapping in Google Earth and places like water supply.
Technology	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	Radio, marine radio
Technology	FF	U	Field	56-65	31-40	Male	FF-U-026	snorkel which is an aerial platform

Technology	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	eCites, which is the electronic tickets on the street.
Technology	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	We currently have an ink pad that we use (to capture prints)
Technology	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	eStop
Technology	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	Well, we use the MDTs in the cars for our traffic enforcement side, and like I said, there's a messenger
Technology	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	VHF and a P25 trunking system. That's what we're on right now. We're on a VHF full-time, and then we changed to P25 trunking system two, three years ago, and then we had Kenwood radios and they weren't as functional as Motorola, so we transitioned to Motorola radios for portables.
Technology	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	Some of the supervisors and the criminal investigation division have issued cell phones and the patrol officers don't.
Technology	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	...That's kind of when we started putting the jetpacks in the cars and the internet in the cars
Technology	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	Yeah, they can do their reports [crosstalk] in the CAD dispatch.
Technology	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	Good. We like them. We've had them for three years. [talking about body cameras]

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	...And in my opinion it's dated, and it's not very convenient for the officer, and same thing with the radios. Obviously we're rural, so the radio communication isn't the best
Technology	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	Or sometimes if you're in the situation where you can walk back to your car radio because your car radio always works.
Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	...If we're on the dividing line, like on this side is my sector and that side's another sector, I won't know what's going on over there unless I actually flip to their radio.
Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Okay. It's not as neat as Google Maps. So it's kind of like a slimmed down version of Google Maps where you see the map of [City] and then all the little patrol cars, but it's filtered by your area.
Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	...Our current system is, like I said, it's kind of a very like slimmed down version of Google Maps. More like MapQuest, like 1990 style where [laughter] it doesn't give you a whole lot of info other than the streets. When I was on patrol, I usually-- if I was going somewhere new or if I was having to go across town, I would just pull up Google Maps.
Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Just my phone. My cell phone.
Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	There's not a budget for it in our department. If you're, I believe, a second lieutenant and above, they get cell phones. Everyone else just has to use their personal cell phone. They're strongly encouraged to use a personal cell.
Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	...Now we can take it out with us, but it's a Toughbook, so it's kind of bulky.
Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	...So I don't. I have a laptop. It's not a Toughbook, but it is a laptop.
Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	It's a radio [laughter]. I mean, it's a thing. It's the Motorola. I think it's the XT 5000.
Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Yeah. Well, even as a recruiter, the stuff I have to work-- I mean, we're using Excel and stuff for our database and whatnot

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	...Different ways of communicating, like cell phones, made a big part of that. We can communicate both with officers and with the public through our cell phones, sometime. With runaways and stuff, I'm going to try communicating through Facebook, because I saw they're not answering their phone
Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	The only benefit I think to having the Toughbook that I've seen is that they're a little more water resistant
Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Well, the newer radios, they also want you to use this massive-- I think it's like a 10-inch long antenna.
Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Well, we have pagers, too
Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Yeah. We have our own. We call it the HALO camera system, I guess. Downtown, we have a whole bunch of cameras.
Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Yeah. We also have those up. So we have in-car cameras
Technology	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	...I think it's called Blue Check or whatever. It's some fingerprinting device.
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	...anywhere from your normal stuff that you hear, the radio, communicating with dispatch, communicating between officers. Then you have your messaging on our computer-aided dispatch, on our CAD systems.
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	I have mine sent to my phone. I mean, I'm checking email probably 80% more than I was when I was on patrol.
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	--I get by my phone. Obviously, computer is probably the more norm, either desktop or on our Toughbooks in the cars.
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	I would say, speaking for the norm, like the patrol officers, they're not checking their emails until they're at work. So they're using department-owned computers, either the desktops or their in-car computers. I still think it's my phone as my personal phone. It's not department-owned.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	For that day. Essentially, you go to work and you get assigned a vehicle. And then there's a Toughbook inside the vehicle
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	It's mobile report entry is the broad term of just entering reports in our digital database, essentially, so yeah.
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	And they'll go into our-- it's kind of the same thing with our mobile report entry. It's all the same program, Versadex, that has subjects' information in it. If they're arrested, they have--
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	I'd say the most important tool that we have is the radio. And describing that, I mean, it's a radio that goes--
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	There's your computer
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	Third-most form of communication would be probably the cell phone. Whether
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	This is my personal cell phone.
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	...But the possibilities are essentially endless with having a city-owned cell phone. You have a camera that you have on you all the time, obviously web search, all your basic stuff that a cell phone can do. But then you can add applications like having CAD right on your phone
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	...A lot of the guys bring a camera, a city-issued camera.
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	Semi-old, stuck in their ways kind of thing. Just most recently, just body cameras.
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	The computer has become very indispensable between CAD being right there, all the involvement, all the just people searches you can do, location searches you can do, report writing.
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	...A couple of that, we got a CAD. Which CAD, I'm sure you've heard, has lots of issues in itself, needs constant updates. All these things all have individual passwords. They all have individual updates and then coupled

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								with that are Windows. I think we're using Windows 7. We finally moved off from XP. Well, we're using Windows 7
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	And I don't want to get off on a tangent, but one of the big issues that I brought up last week with these guys is, this is going to be compounded 5 to 10 fold once we go to body cams.
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	Okay. So if I need directions, if I'm working a call at a sector sometimes I'll have my GPS up and it'll give me audio directions.
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	Our toughbooks have a GPS and then CAT has an integration for voice-over, so it tells us how to get to places. It's not as effective as say Google Maps because it's more rudimentary but it's still pretty.
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	...I am a fan of a GPS transmitter on an officer.
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	...So there's no way of something working for both. I know that there's jawbone technology that's just supposed to be really amazing and we've never seen that.
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	Well, I guess we'll start with the DMAV?, which is our in-car video camera system.
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	Again, me personally, I handle our CAD, mobile CAD that's inside of the car. That's one of my bigger projects. Currently I'm assisting with the rolling out of body cameras.
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	Okay. We use 4G LTE in our cars. We have our own [ATMs?], our own private network on Verizon. That's what our department uses. It goes back to our-- we call it CTech. It's basically our combined dispatch center with fire and EMS, but it goes to our portion of that. We have the ability to query our RMS. We have the ability to look up histories in our CAD calls.
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	...So we have, again, the electronic ticketing. We have the mobile fingerprinting. We have our Panasonic Toughbook. We have pagers. We have radios. The list grows as we get more technology.
Technology	LE	U	Field	26-35	6-10	Male	LE-U-006	...But right now, we're really consumed with body cameras, getting that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					rolled out.
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	...Those fingerprint devices, they're not-- I won't call them dummy devices, but they are. All they do is they take the fingerprint and they transmit it back to our Toughbook.
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	...Same with our CAD system, believe it or not.
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	...We have looked at the phone factor, we looked at tablets, two-in-ones, to replace that Toughbook. And then, instead of it being hard-mounted in the car, maybe it would be something that is assigned to each officer.
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	So that is something we struggle with. We like the form factor of the tablet or the two-in-one because, to some extent, it actually can be forced into a smaller form factor like a phone
Technology	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	...We had talked about rolling out an iPod or a phone with our cameras. We're going to have a Windows device, mobile device, that could be a phone. It is a phone. You could just turn it off. And a phone for our camera, and again, we're talking extra logins, more stuff to charge when we get home. You have officers have to run these banks of charging bays so they can charge everything every night
Technology	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	And we try to show all the positive things that law enforcement does via Twitter, social media. We have one girl in our office who does nothing but look at Facebook stuff all day and respond to citizens and that kind of thing. And we also utilize Nextdoor.
Technology	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	Before I get there I need to know who's out there. So I need to know what type of call that it is. And what we do is we have what's called a Real-Time Crime Center. You guys have probably heard of our HALO cameras that are downtown
Technology	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	...I'll log into our CAD system
Technology	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	Yeah. It's through Outlook. So we just get the email notifications.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	...And we don't have phones in the department issued to us as patrol officers. So you use your personal phone a lot.
Technology	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	I mean I think you could on a cell phone when you push in.
Technology	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	Which is sometimes-- because like our CAD system, for example, they would charge ridiculous amounts of money for us to have an interface with other companies for whatever reason, so.
Technology	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	Not really. I mean, everybody utilizes the radio pretty much and your personal cell phone. Like to log in now, we send a text message to the dispatcher.
Technology	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	I would think the big thing would probably be just work cell phones that were just multifaceted and functional. Even if we didn't have all of the same companies and everything wasn't able to auto-populate. Just if we had something kind of available at our fingertips if we needed to without lugging that Toughbook everywhere.
Technology	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	--that sort of stuff? So we show up at work. We log into the computer using the automated computer that we have. You're able to assign yourself--
Technology	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	...So you would have a car number and that car number is associated with that geographical beat. And then, when a call comes up in that geographical beat the dispatcher doesn't have to look and see who's available. The computer knows, hey, this person is supposed to run a call in that geographical region.
Technology	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	...And the new system that we were using, that they just switched to which is, I believe, a Motorola system, is a premier one. I believe that's what it's called. That--
Technology	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	Personally, I use the laptop in the car, the mobile radio. I use a audio-video recording system in my cruiser. I, personally, have a FLIR, so a night-vision unit. K9 officers use a very high-dollar piece of equipment using that. Other than that, I mean, I'm using my cell phone on a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								consistent basis.
Technology	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	Yeah. Communicating with other officers, and that sort of stuff. But other than the audio-video recording system and that sort of stuff, I believe that's probably it.
Technology	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	Yes. It'll record the front and it usually records the prisoner transport area. It doesn't shoot out the back window, it just goes-- if you had a prisoner in your car-- [talking about the dashcam]
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	County-issued cell phone.
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	It just depends. I can get it on my cell phone. I can get it on my computer.
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	We have a way of doing it ourselves. It's called a Web Board. So everything that's happened each day is listed on that Web Board that is of significance.
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	Yeah. It's just a computer-- yeah. It's a computer program. And basically, everything of importance that happened that day, you'll see a list of things, and you can click on it, and that'll give you the information about what happened.
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	So I have my cell phone. I have my computer in my car, my MDT. That's powered by a-- we call them [pox?], but they're a 4G wireless device, whatever, camera, mobile hotspot. I use a desktop every now and then, not often, and the radio.
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	No. I don't have my own desktop. But in our office, we have I'd say maybe six computers that we can use.
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	Well, we switched to a new CAD system, and it's--
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	Yes. It will just show up on his computer, and we can go back and forth. Now, it's a little more difficult. It's almost like an email. So then you have to wait till the email gets sent, and then they read it, and then-- it's a little more difficult. Also, with that is-- and in K9, what we use a lot, it was-- on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the old system, it was called the Announce Screen.
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	When we're training, we use an app called MotionX. It's just a GPS app, so it'll leave a track of which way you went and how far, how fast you went. So we use it in K9 when we're training, so we'll know exactly which way somebody went, the person that's laying the track and then when it's time for the handler and the dog to go, they'll go and you can put the track on top of each other and see how close you were to being on top of the track or if you were way off.
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	I'll look at the app. I'll tell you the apps if I use. Sometimes I use the Map app for the same reason, just to look up a call, just an address to see. I think that's it. Yup. Well, and this is another piece of technology I forgot about, but we have the cameras.
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	There's an app for the body-worn cameras that you can download the-- so when you're on an event and you record the event, you have to put the case number with it. So once you're finished with the call, you just type in the case number.
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	No. Then to get it saved onto the server, there's a docking system at each station, and you set it in there. And it's also a charger.
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	Yeah, I'll have it hooked up to my belt, and then there's a microphone that goes up with it. [talking about the radio]
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	Yeah. I don't know. Well, I'll say that we have camera systems for our dog. When I'm with the SWAT team, we have a camera system.
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	Yeah. It sits on the dog. It's like a periscope almost, it looks like. And we have a wristband that you can wear that has a little, tiny monitor so you can see where you're searching.
Technology	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	Yeah. So they're like 20 60-inch screens, and it makes a complete video wall.
Technology	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	Yes, it's computer-based. No, those are computer-based. Yeah, those are computer-based. And their apps, they're probably accessible from your cell phone, logging in to the application through the cell phone. Most of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the times, we utilize it on tablets...You have to have a situational alert application running because that's basically a running resume of everything that's happening during that day and your plan of action, where your offices are in relation to the event, the support that you have, how much manpower do you have, do you need more manpower
Technology	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	Yes. All our cameras are recording. Every time.
Technology	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	Yes. Amount of data. Well, I'm very familiar with that. I'm very familiar with that issue because it all comes down to one place. Video is video. And video takes up space, so it's a huge space hogger
Technology	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	It's actually video, yes. So those cameras that are coming in, it's coming out-- so our network is made up of-- we have a mesh network. Our network is made-- and I'm talking about the cameras, not the body-worn cameras
Technology	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	Very expensive, yes. But their plans, they are looking at a fiber network now. So I understand that [October's?] looking at doing something like that, so. But that's not the plan. That's not what we have right now. Now as far as body-worn cameras, that camera also is-- each person who has a body-worn camera, that camera is uploaded when they get off of their shift.
Technology	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	...We may have on that one seven screens. And this guy at the computer desk, one, two, three, four, five, six-- six computer desks on it. And now the same things that we see in a JOCC in our command center, we can see out there. The same camera views that we bring here, we can see there. Because a lot of those camera views that we have are URLs.
Technology	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	No. No. We use department-billed? [talking about cell phones]
Technology	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	Yes. Yeah, but we're looking at a couple of systems right now. A couple of our situation learner awareness applications, it already does it.
Technology	LE	U	IT	46-55	11-20	Male	LE-U-035	To their cell phones as well. Yes. Same thing. But it can already bring it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Specialist					to the cell phones right now.
Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah. So inside, it's a regular car, obviously, and then there's the control panel for the sirens and the lights, and that's usually-- it's a rectangle box, and that controls the lights, and sirens, the emergency equipment. And then there is-- now, we have tablets in them. We have Getac tablets inside. And then also, there's a keyboard attached to the tablet.
Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	...And then there is-- now, we have tablets in them. We have Getac tablets inside. And then also, there's a keyboard attached to the tablet. [in the patrol cars]
Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	And then the keyboards are pretty good and they're a touch screen. So that's primarily where we get the program that has all the runs in it and how we can run tag numbers. And then so there's that, that, and then there's the radio for communication. And then some cars have a LoJack in them, and then other cars have license plate reader systems in them.
Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	There's only a few license plate cars. I mean there's probably-- so there's seven police districts in [State], and there's probably about three or four LPR cars per district. So there's probably about 30 license plate reader cards, more or less.
Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	...Now, the only cameras we have are our body cameras. And before body cameras, there was no cameras in our cars or on our person.
Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	No. I mean, now, everyone has a body camera, but what did you get them, three years, four years ago?
Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah. So the way we primarily do the communication, you can either do it through the tablet, through the mobile data terminal, or you can do it through the radio.
Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Sort of. Yeah, because you actually log in to your account. Because before, the Toughbooks we had, you use a general login.
Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah. Before, we had Toughbooks in the cruisers, and those always worked great.
Technology	LE	U	Field	26-35	5 or less	Male	LE-U-036	Yeah. But it's still on when the car is off. But because of all the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					technology in the car, the tablets, the emergency equipment, the Wi-Fi, the battery, and the electronics, and sometimes the car is there, the batteries don't last.
Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	...And then there's an application, Mobile for Public Safety, MPS, and that's the application that the dispatcher sees at our office of unified communications. And those are all where we can see all the 911 calls that come in.
Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah, the tablet, for the most part, for most patrol officers, a tablet, you can do most things through it. So that's the one way of doing things, and the other way is strictly through the radio.
Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah, so we have our mobile radio, and then we also have our car radio.
Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	So this is my body camera. This is how it mounts to my shirt.
Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah. So this is a Axon 2 body camera made by TASER.
Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah. It's in the Axon view app. And then you have-- it shows you what the battery life is.
Technology	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Starting to move over more to the tablet and being able to do more stuff autonomously on the tablet. But I mean, still the radio is definitely the main way to communicate still.
Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Yes, both for the reporting system and the dispatching system is all on our laptop computers in the cars.
Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Well, the only other technology that we use on calls for service is we will use some night vision. And recently, I think in the last-- it's been two years, I guess. We have gotten through-- one of our sergeants was able to get a grant somehow. I don't know how all that worked, but we have four or six handheld thermal imagers.
Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Well, yeah. Like we wouldn't use the thermal imager typically for a building search. So that's strictly pretty much tracking or for looking for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a missing subject or those types of calls.
Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Right. Yeah, and the thermal imager isn't very useful in the day because you need the contrast.
Technology	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	We'll even use some of the Uber apps and stuff if we're looking for a suspect who may be jumping in an Uber or something. If you're watching those, then you can help try and stop them and just check the passengers. There's a couple of them that will show you-- that help you set up a perimeter, a radius. They'll just give you a quick radius over a real-time map, which is a little helpful. As that type of stuff develops, it'll be faster and easier to do all those things.
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	So we use the radios and we use the phones to communicate.
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	Generally, no. If there's a time crunch with something, they'll call me on the radio or they'll call my phone. Or they'll ask the dispatcher to ask for my phone number or ask to give me their phone number so I can call them.
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	Work cell phone.
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	All the K9 handlers and anybody on the squad team, they are issued a phone.
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	So there's radio. There's the phone, computer. I have a GPS that I use.
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	...The actual MDT has a GPS system that we can't use with the new software that we're using. But like I said, I didn't use it too much before I got in K9 school, so I'm not sure exactly how that works. So I just use my own GPS.
Technology	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	..I have multiple radios for different assignments, whether for SWAT or for K9. We use a camera for a-- on my dog. We put a camera on him and send them into building
Technology	LE	U	Supervising	36-45	11-20	Male	LE-U-039	The dispatcher can come over the radio and say, "Hey, 3051, there's a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					theft at the store XYZ," and they'll send the call to you on your tablet...So if you needed to communicate with a dispatcher, you had one option and that was use your radio. Or if you had a cell phone, you could call them on a cell phone. But we didn't really issue cell phones. Now, our officers have cell phones that are associated with their body cameras.
Technology	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	So yeah. So we use a tablet system. So our computerated dispatching-- [inaudible] I think we use MobileCOP...There's some other crime scene apps that we could use, like to take pictures, we go to SecureCloud. The body cameras go to an app so that way you can tag and sort the information on the video.
Technology	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	We've had tablets for about, I'd say, two-and-a-half years. SO when we had-- there's the old MDT, which was kind of the old chunky-- we had those years ago and then we went to laptops. So your tough book laptop that we'd be taking it in and out of the car. And I'd say about two, two-and-a-half years, we went to tablet-based, which is very similar with the keyboard, the wireless keyboard, and a tablet that you can take out, that's connected to the [inaudible]. The cars have the wireless modems in there, so if you have more devices, in the future, you can go to the router. So you can do all that kind of stuff. And the body cameras are Bluetooth to the cell phones and you can do that. And the body cameras, they upload when you dock them. Or you can also [inaudible] the cell phone, you can upload it. It just takes forever to do that. But, yeah, you can [inaudible].
Technology	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	Honestly, it was kind of seamless because we had the tablets already. So officers were already going-- we were already doing everything on the tablets-- already doing it on the laptops in the cars, so switching it over to the tablet, basically, was not much. And now, most people have a cell-- they have an iPhone or a Galaxy or an Android phone.
Technology	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	We had a few MDTs in the car, but then when Chief [inaudible] took over as the Chief, there was really a push to embrace technology and push it out there

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	But I'd say patrol versus different areas-- so I would say within patrol, when we push out things like computers, and tablets, and things like that, it's pretty much-- we may start in a district, may push it out, but we go pretty full live.
Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	Then it is reviewing the chief's correspondence to see what important documents we load through the cloud to his iPad, so he has them handy... We have what's called an IQ system, where it's from citizens, or questions, or anything that we can direct to our many bureaus.
Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	Yeah. It's called an IQ system. And what it is, it's mainly just a tracking system.
Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	We use an Adobe--
Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	If you're in a patrol district, no matter which patrol district it is, you are radio-driven. You are radio run-driven.
Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	I'm not very familiar with the eTicket.
Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	. I mean, it's independent of our iPad system. Because in some ways you don't want those connected. Because you don't want that ability, if somebody gets into our iPads to try and find a manual for what are our plans for a large-scale march or demonstration, then you don't want them to be able to access all of our camera footage.
Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	No. Not for our department other than our evidence.com, which is our body camera.
Technology	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	..and I loved a Toughbook. But they're really phasing out the Toughbooks and going to the iPads and stuff like that. But you need something that your technology will be safe and stable, and you can get it knocked around or it can be in a crash and it will survive. But the ability for everybody to have the access to the information they need very quickly. And the MDTs are great for that because you can read our notes as somebody's typing in our dispatch,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...We essentially have 36 radio zones plus multiple citywide zones plus transit radio channels as well plus interoperability radio channels that we utilize as required to communicate with the fire department, if needed.
Technology	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...What's in the MDT is the same applications that are used on your smartphone. So it's, essentially, all the 911 jobs that come over dispatch are viewable on tablets as well as the smartphones
Technology	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] I should explain. Every single police officer in the [State]PD is issued a department cellphone.
Technology	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...Again, the smartphone communication is greater situational awareness. Like we said, we don't use it for digital dispatch at this time. Maybe sometime in the future, that would be an option, and we're looking at that.
Technology	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...There are ways to putting this tactical interoperability channel in all our radios, all their radios. So there are some things that we've done to optimize our interoperability. So ESU, our Emergency Services Unit never had an iMac. Now they have an iMac. So you make changes along the way, and you make it better. I mean, that's what we do.

Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	So you can look it up later. It's C-L-E-T-S, right? And so that database system-- let's say an officer runs somebody-- say you get pulled over and they run your license, right? And you're going to get a ticket. Well, they will check all the different systems. And that's one piece of law enforcement that's very critical.
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	But, within the [City] area, as part of the EBRCS system, we have kind of migrated to a digital platform. And I don't know a whole lot about whether or not it's IP based. That's a [Name] question. But really, that system has taken us into the 21st century in my mind.
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	And it was awesome. And it was great. Right? It works. It's loud. It's clear. There's no delay in transmission or receiving. But, again, it's kind of keeping up with technology.
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	... let's talk SCBAs. So SCBAs, we are the secondary thought. The mining industry really is the bucks, and so we kind of get underneath that. When you're not servicing a clientele with real big pockets, you kind of have to make things generic. So I think they do a fairly good job of making things simple, but I see it all the time. They had a countdown timer feature in one of our [cabs?].
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	--the FBI-looking thing? And then we'll still use the lapel mic, but it plugs right into that. That lapel mic is noise canceling and so we get a fairly good audio signature when you transmit, which is very cool, but we don't have an issue with these newer
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	Okay. Whereas, where we use an in-mask communication, we didn't have a lot of that. And so, on patrol, you don't have that circular feedback because everybody's speaker is in your ear so you don't hear it.
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	Whereas, I've had really good in-mask communications, of which, you're like whoa. I mean, it's just like I'm talking to you, and it's great. That's it. We went to that system because it was kind of a global project, of which, we have a huge benefit but, again, our manufacturer is still kind

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								of somewhat behind on providing a solution. I'm being told, recently, that they developed 50% of the solution. Because there's an earpiece, and a microphone, and then there's a talkbox. They fixed the talkbox, which would be the lapel mic, but then the earpiece plugs in. All they had to do was just wrap the stuff in shielding. Okay?
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	I think when you have either a system lockup or-- right now, we use-- I think we use a Dell laptop. It's really rugged. I mean, it's touchscreen. It's great.
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	.... I've never had my iPhone die [laughter]. Imagine. Imagine that. But I pay a premium for that service. I use a Verizon carrier. And I'm telling you, it's the most expensive phone, it's the most expensive carrier, but I've never not had cell phone service in the entire continental US. Sierra Nevada mountains, I can still talk. So I'm a true believer, you get what you pay for sometimes.
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	So our iPads [on our rigs?] are kind of-- even though they're our EMS Portal-- those are all paid for with other funding from our local dollars that are not [City] specific. So our local EMS agency kicked down some money for iPads for-- and we use ImageTrend ePCR, so ImageTrend's a provider like Tiburon. Okay. And they have a really awesome, in my mind, patient care reporting system. And it starts like incident number and time, and, okay, I'm on scene, and it's all touch-friendly. But with that iPad, it really has brought us more tools, and so on those-- oh, sorry. I left my phone out here. So on those iPads, I mean, we have a ton of stuff, so we have like the ERG.
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	Nope. Not for me. But that doesn't mean-- so we get 911, so that's our EMS [inaudible]. But technology, at least in this world, whether it's iPad or our phones, it's helpful. But it's only helpful if I can slow things down. Even on some of the extrication stuff, we just don't have a lot of time to mess around with, "Okay, I'm going to dig through lots of material." No, I need to make some decisions quickly. So these apps really do a good job of getting me that information. Okay, yeah, we got a Tesla, the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								battery's on the floor, and the high energy's here, here, here. Let's avoid those areas and go to the other side. But in terms of the hazmat response, I have a little bit more time, generally speaking, to manage events unless I have some sort of rescue component or some sort of immediate need like with emergency decon procedures on somebody that's been exposed to something. But with those things, I have time.
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	... But now, we have systems that I log in as a Lexipol user. Oh, yeah, hey, look, one, two, three, four, five new policies. Okay, they got a due date that I've got to read them by. I click on. I say, "Yep, I've acknowledged the policy." So tech is all around us. I mean, even though the buildings look old and aged, we have a lot of technology, which is very cool.
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	... So, maybe, okay, I know I can look it up in Lexipol [inaudible] field because I have web access. But things like that. I mean, it's amazing. You mentioned technology and what does it do for us. Is it crippling? Is it not? No, it makes our lives easier.
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	I've seen [laughter] some of the most incredible VR stuff up in some of the labs that are around us. It's amazing. Technology is amazing. It looks really neat.
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	Yeah, absolutely. So, yeah, there's lots of examples like that through the course of history in the last 10 years, 15 years. But, yeah, technology, it's a wonderful thing. Amazing, right? I grew up with a Casio watch.
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	And I'm telling you right now, this watch on my wrist, I'm absolutely amazed it does what it does. And what's cool is it's designed right here, so.
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	The other good use for it is kind of the law enforcement side. It's a tactical tool, right? Let's say we have a bad guy pinned down with weapons and other things, having the ability to put eyes up in the sky and really look down [at an event?] is huge. My gut tells me because of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								where we live and some of the high-end brands around us-- I mean, you have technologies that they want to deliver your toothpaste via drone to your door. So I imagine that we will see progression into that, where maybe 10, 20 years from now, we'll see-- from the PSAP, we would see a drone launch when we have a fire or we have some sort of tactical event involving weapons or bad guys, and we would see a point-to-point coverage of where somebody [inbound of the event?] could look over at their CAD and they could see live--
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	Absolutely. But, yeah, I think what you'll see is you'll see embracement of that technology over time, as long as people are professional in the dispatch of it and really are transparent about, "Well, why are you using that?" "Well, we're using it because it's a huge tool and a training tool post-event for not only training, but also the investigation. Is this arson? is it not?"
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	So this is retrofit too, okay, which is huge, right? It saves a lot of people. And I've been on several legitimate CO-- cracked heater block, it's leaking natural gas. You got CO and you got natural gas in the air. And, fortunately, nobody died. So these alarms are actually really good. The problem is, 1 out of 1,000 are legitimate. 999 calls are fake--
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	...So the other day, we were demoing a really simple \$100 CO monitor, like single usage. It's got a 24-month life span that we throw away at the end. They're 100 bucks. They're cheap. So that technology actually may be a good thing because we'll buy 12 of those, put them on all the rigs, and then we'll reduce the wear and tear on this rig and this team, and then we'll just have the single companies around the city run their own. So technology, when it gets cheaper, it's actually better
Technology - Positives_about-with	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	And then you have the Motorolas of the world showing you how technology can work on my iPhone that can help me communicate over the radio. People think it's neat stuff...Now Motorola has the dual purpose. They have the broadband through a portable. I think the biggest thing we still see with broadband is the, I guess-- whatever. And since we haven't seen FirstNet in full swing-- but from a broadband

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								perspective or Verizon, or AT&T, or any of them, you run into those traffic issues. Whereas we don't know what FirstNet's going to provide.
Technology - Positives_about-with	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	...So I mean it's really getting down to where that kind of cost for the accessibility, even the leadership in these organizations is starting to recognize that it's worth it because you're more effective with your work time.
Technology - Positives_about-with	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	It depends on how you look at it. With electronic report writing, you won't find an officer out there that says, "It's easier for me to do that than write it on a piece of paper."... Dispatch would call down to records, somebody from records would go find that folder, open up that folder, tell what happened to dispatch, dispatch would then relay that to you over there.
Technology - Positives_about-with	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	Or they'll have you know obviously we have redundancies of one of their fiber might have an issue but you're on the other fibers so they just move it over. I think that's how they maybe twice but it's not an impact.
Technology - Positives_about-with	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	Yeah CAD and RMS it does have to go that's for sure but I'm probably being pretty nice to my CAD but it's not the worst out there I know that but it's got it's problems for sure.
Technology - Positives_about-with	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	And that's like one of the other CAD members were looking at. They do the same thing and then they also collect analytics along the way too along with pictures and everything else in that app that we were just showing a little while ago.
Technology - Positives_about-with	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	You don't have to rely on user information to figure out where they are sending that long back to the system automatically just relying on geo location or triangulation is it? It's relying on the GPS and the phone information from the phone yeah. Yeah.
Technology - Positives_about-with	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	True. Well, each one of our consoles has four computers. There's a what we call a console computer, which is your basic. We have our remote desktop for the town of [City] with email. You get your calendar, all that kind of stuff, Outlook stuff. And then that computer also controls the CCIC and NCIC.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	So when we enter something into the supplementals like an officer runs a plate, we put that in, and it automatically runs that through [Organization] and NCIC on that computer.
Technology - Positives_about-with	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Radio is on the screen. And that one does recording. Of course, we have an instant recorder that comes with the radio and comes with the phone. So if you want to just go back and listen to what you just said, you go back, and you just hit-- they're just on a list.
Technology - Positives_about-with	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Yes. This one has been-- the remodel has been fantastic. These consoles-- if you look, they're linear. Our last console furniture was when I was in training. And they put in for the old CRT monitors, the big heavy ones-- that's got all that space back there that's just wasted because all we have is this flat panel computers, and we were able to put eight consoles in where we had six before we had more room and in the room.
Technology - Positives_about-with	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	We can turn them off and down a little bit volume-wise but no.
Technology - Positives_about-with	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Usually, yeah. But we have a good system in it. It's easy. It's pretty simple. And I pump some of those out too, but whoever it happens to be on duty as a supervisor, they come into our email and from the District Attorneys. Maybe if they just need a phone call, it might take 10 minutes to do that.
Technology - Positives_about-with	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	We've had it for a couple of years. We use gen-911. It's a third-party provider. It's just a web-based deal. Works great for most things.
Technology - Positives_about-with	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	...So we have a cell phone in the center that we sometimes use to text out and try to initiate contact with people. Once we've got contact then we're good.
Technology - Positives_about-with	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	So now, we're going to do this through a website so if you change a road name, or you change a street number, or a center line, or anything like that this is the form. You go online. You go to [website], and you fill out this form. And then, [website] just automatically shoots that out to everybody that cares. Just email. Right there. So hopefully, we can get

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that organized. If we get it organized, I mean, then it'll work, I think.
Technology - Positives_about-with	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	... The [name of app]. Because you have systems like [name of app] that send back and they're based on a map, locator map. So you have the database that they have is from the phone company, based on landlines. And if you have, say, a forest fire coming into a neighborhood, you can go in and draw a parallel gram around that neighborhood, shoot your message out to them, and it gets all those phones. Well, there's sometimes now, where we'll go into a neighborhood and just because we can do a census and just draw a fence around it and see how many phones are in there. And sometimes there's none. There might be 40 or 50 houses, 40, 50 families, and none of them have a phone. So we had to go get-- we had a different program. We have [app]. And [app] allows people to sign their cell phone up and associate it with an address. So that they can get that [app]. But if they haven't signed up for it, they're not going to get anything.
Technology - Positives_about-with	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	... because we found another company called [company]. And they make a voice recorder that is very similar to [company]. It runs on a server. It's web browser-based and never sunsets.
Technology - Positives_about-with	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	... And then if we get a large assignment, like a hazardous materials call, a house fire, a water rescue, a trench rescue, or a large mass casualty, we'll defer that to one of our tactical channels. And we have up to five different tactical channels.
Technology - Positives_about-with	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	A perfect call would be they called from their landline phone because when the information comes over we have their address, we have their phone number. So we only have to verify it once. Protocol says if it comes over on the landline phone and we have it, that's one source of verification.
Technology - Positives_about-with	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	... As far as the dispatching goes, the dispatching in some ways is much faster, much better because have more variables with the [name] software system. We can drag and drop fire trucks, we can just click on the fire engine that's in the station, just drag them over and drop them on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a call if we want. When we bring up a response plan, like if we have a diabetic emergency within a specific neighborhood, then instead of going off of what the closest fire station is, the new AVL says which is the closest transport, the closest manpower piece, and the closest ALS provider.
Technology - Positives_about-with	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	So it's redundant, but the computer shows you the times so you have to balance between who's the closest and what's the appropriate response for that specific call, and that's a big variable. So that's where if you're a paramedic in the field, you can ride a fire truck or a fire engine or a medic unit, and your resource-- you yourself are a paramedic, you can do the same thing.
Technology - Positives_about-with	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	See, helpful for us as a dispatch side, yes, from a field perspective, it'll vary. Because sometimes when an ambulance, for example, goes transporting we can see them on the map move.
Technology - Positives_about-with	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	...Nowadays there's a lot of machines that do a lot of that. And then so that was that... So over the evolution of radio technology, now we have laptops, we can talk and the laptops inside all the fire trucks and the ambulances, we can talk to each other, there's AVL. They can see all the calls other people are running. They can talk to the police, they can talk to the sheriff. They can talk to us. And it gives them a yellow brick road. As soon as we give them a call, they click, en route, they look on their mapping system and it shows them the fastest direction, according to traffic and speed bumps and miles per hour. And it shows them the fastest route to the emergency. So that's a major advancement change. The first trucks are bigger. They have more power. They have more water. They have better quality equipment, so we can do our job better. The medical equipment is much better nowadays.
Technology - Positives_about-with	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	Then also for one of those tactical channels, like for a river rescue, that would be awesome. Send a drone up in the air, search it out ahead of time, so then that drone can pinpoint according to our GPS, coordinates right to the person. We can have video, audio, tell the people, "We're here, we're overhead, help is on the way." Immediately, we can tell the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								people to pinpoint instead of us searching miles of stuff. Then if we have visual on them, we can see them, we can what the clothing they're wearing, male and female, what their injuries are. We can ask them questions and we can-- all of what stuff can already be ahead of, before someone even goes face to face.
Technology - Positives_about-with	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	So the text to 911 is a great advancement.
Technology - Positives_about-with	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Oh, yeah, so for the most part, the CAD will recommend a response package for the call type.
Technology - Positives_about-with	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	--yeah, CAD will recommend more than what you need because CAD recommends transport units and manpower, manpower units, and ALS resources...Plus, the CAD also now recommends times, travel times for each unit.
Technology - Positives_about-with	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	So then the call taker will process the call and then once they get a call type, the call automatically goes to our dispatch pending screen, so the dispatcher-- and it makes a beep, and that lets us know that there's a call for us to dispatch. So the dispatcher opens it up and the supervisor, the dispatch supervisor opens it up, looks at it and makes sure it's the right call type, the remarks match the call type. And then the dispatcher will dispatch it.
Technology - Positives_about-with	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	It may help us. It may help us get calls out quicker, calls dispatched faster that way because we're not asking five questions, six questions before we send a call to the pending-- to dispatch.
Technology - Positives_about-with	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	So we call it next gen capable because we will be we will have the ability to get multimedia however the cell phone carriers are the ones who have to upgrade their systems in order for that multimedia to be sent to us.
Technology - Positives_about-with	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Right now we have the ability to custom redirect. Because our 911 trunks come from two different tandems so we have them for diversity of our different trunk lines. We can send those trunks to another jurisdiction if we need to but all the calls are going to be mixed.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Exactly yes and with the new technology that is coming out we will have more capability of being able to grab command center laptops and go to somewhere and set it up and answer phones.
Technology - Positives_about-with	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Basically what it is it's an application that you can open up and you can put whatever information you want, your medical information, your husband or wife's information, your kid's information, your pet's information, where you work, what kind of cars you drive, medications you're on anything and everything that you want, you can put your home address, you can put your work address, you can put your typical route that you drive. It has a text back feature so we can initiate a text to a citizen that has called 911 and maybe has hung up or abandoned or we need to try and get in contact with them in another way. It also has a new feature that they're coming out with for panic alarms.
Technology - Positives_about-with	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	It is yes. So I do have a department issued phone and that is because I am I'm not paid to be on call 24/7 but I'm on call 24/7 for telephony phone issues. So if something is deemed an emergency we have been lucky enough that our [name of system] system has since we implemented it has never shut down on us.
Technology - Positives_about-with	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	So what they're doing yeah it's so it's the same company that worked with [County] during the [Event] and what they did is they had like a beeper like size device that the police officers wore on their belt and they could track where the officers were within the Super Bowl location. So they want to use that but for us they want to integrate that with some of the infrastructure that we have built in this area and try to see how they can use that to give us in building location for firefighters.
Technology - Positives_about-with	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	So this would be really helpful in trying to locate firefighters that are injured in buildings.
Technology - Positives_about-with	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	... So the [name of system] is integrated into our dispatch center and they not only watch local media but also international media, they monitor cameras not only in [county] but in the region through the [name of organization] dashboard. They also have a social media dashboard in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								which we can not only look for specific hashtags but we can geo code certain areas and pull up tweets or [social media] things that are coming out because as we know everybody will tweet an emergency before they call 911.
Technology - Positives_about-with	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	There is a shooter on this floor, there's injured on this floor, there's injured in this room, I see one shooter has a long gun located at this spot wearing this that's the kind of stuff we were looking for. We were looking for hashtags, we were looking for geo code, who was sending tweets or [social media] messages in that area and for us we feel like that would really be useful hopefully not you know God forbid but if we had an active shooter in [county] we could geo code you know especially if it happens in a school or somewhere where there's a lot of kids with cell phones they're going to text or they're going to tweet and we can then pull those tweets and use them.
Technology - Positives_about-with	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Yeah so for us when I first started getting trained on the radios we had a system and it was older it was [name of system] but everything that I needed to do I could just type on a keyboard and I didn't have to move my hand to a mouse.
Technology - Positives_about-with	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	It's a lot and so having something that integrates all of those and you can work seamlessly through all of them I think is really where we're lacking in this world. The technology is there, the technology is great, it's going places but there's a divide where the operations folks know operations and the technology folks know technology.
Technology - Positives_about-with	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	People that had been here for 15 years, people that had been here for two years, every aspect of the spectrum so that I could get as much information as possible so we could purchase the right product for them which actually is just the upgraded version of what we have which works perfect because it is one of the top of the line products. We've never had it shut down so we know it's reliable.
Technology - Positives_about-with	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Yes and some of the companies are now buying phone companies and they are radio companies, they're buying phone companies and they're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								developing their own CAD or they're buying CAD companies or they're CAD companies and they're buying phone companies so they're phone and vice versa and they're integrating all of their stuff. So their phones are integrated into their CAD or integrated into their radios and everything is one system which sounds really nice but it's brand new.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	... However, we have a CAD system, which is computer-aided dispatch, so I've had people call here and say, "I'm walking down the street. I see smoke coming out of a house." I don't tell them to hang up and call 9-1-1. I just take all the information. I enter it into the computer. It's already on the screen for central, and then I'll just call over there and say, "I just put one in, on such-and-such street. I've got a medical; They need an ambulance," or, "I've got a fire, they need the fire department." Or even, if I get called calls outside the city for traffic, accidents, any of that stuff, I just put it in, and then I call over and say, "Hey, I just put one in for you." Just because it's just as easy, we all look at the same screen, and it's, to me, it's not right to make people repeat all their information, or it someone is in a panic mode, to say, "Hang up and call the sheriff's department," or, "Call 9-1-1." You just get their information and put it in there. And then it's done.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	... But once you get to know all the boundaries and the streets, then you know which department needs to be contacted. We handle all of the-- what's called the lean work. So if I run a file or a criminal history, warrants, all that stuff we do [name] and [name]. So I talk to those guys everyday, because I might be entering a car, entering a warrant, putting a conditional bond in, a no-contact order.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	And then the other nice thing, we have come up, a little bit, in technology with the CAD, is I can see where all the other agencies are in the county if somebody's on. And then I can pull up the calls, see what kind of call it is.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	..., I was taking a phone call and talking on the radio, so I got them in one ear and I'm writing stuff down in the other, just so I don't miss anything. We also have this complaint book which is old school, but if the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								computer goes down I can still go back-- if somebody comes in and wants an accident report I can still go back and say, "Oh, that was last week at [name]." And then I can run and get the report, so even if my computer's down I can still pull the report and make a copy so they don't have to come back.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	I have caller ID, which is nice, but when the sheriff's department takes a 9-1-1 call and we get all the information. We've got their address, we've got their name, we've got their phone number, so we can call them back. And that, that's awesome. And with the technology of the in-house computer, we can know if we've been there before, we can put alerts in there if it's a residence where they have a lot of guns, or they're violent, or they're anti-police, we can put stuff in there. So I mean, technology has come a long way and the same thing with the cell phones when people call and like caller ID being able to get that phone number, especially if somebody doesn't want to give you their name or their number or the phone goes dead.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	I think it makes it easier. [talking about technology]
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	... But most of the stuff that when we get something, in the long run, it's better and easier to use and probably gives us more information.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	...When you watch all the presentations on what they'll be able to do technology-wise, it's fascinating. When you think how far we've come in the last 30 years.
Technology - Positives_about-with	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	They're fine. They're not that old. I think we've got okay equipment. Again we do have those coverage issues. Sometimes with the radios where you know they can be out in a remote location and they just are not getting a signal and so they need to move somewhere or get in their car and come closer in something like that but generally I think the radios work really pretty well and they're what we're all used to and so that's been a good thing.
Technology -	COMMS	R	Comms	36-45	11-20	Female	COMMS-	I can't no not really. No. Just that using the radios seems to work fine. I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Personnel				R-009	do sometimes I do use a cell phone to call people if they aren't responding on their radio because it usually means that they're sometimes out of the area where the radio is going to work and sometimes a cell phone will work in those cases.
Technology - Positives_about-with	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	No those are people's personal cell phones yes and but sometimes it's just easier or sometimes it's better I'll say to use that because we actually get them and sometimes we can't on the radio.
Technology - Positives_about-with	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	... One of the things we're priding ourselves on is not making it too complex because if it's too complex, you require too much information, then people are going to be hesitant to actually use the tool. But we've been really successful and just about everybody says it's been an amazing implementation.
Technology - Positives_about-with	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	So on a basic level, it's all manual entry. We can pre-supply a lot of information. If we know that these 20 different places are likely to be where we're going to open up a certain kind of shelter, we can pre-populate that and then just say, "Yes, this is the place," when it's go time. But it's all manual entry for the most part. A lot of things will get drop down options to make selections to make it easier. But yeah, somebody will go in and actually enter that information.
Technology - Positives_about-with	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	Yeah, it's really slick. And then the State offers a version called [application] that they're rolling out right now. And then obviously, there's [application]. And the majority of our functions and interactions [application] is for high fidelity mapping, as opposed to kind of a situation where there's like, "Here's a pen, here's a pen". If we needed detailed mapping like, for example, we have a large landslide that took out a road in our county. Cut off a community. We needed high fidelity mapping to say, "Okay, this is where the pipelines are, this is where the utilities are, poles, and all that kind of stuff". To look at it from a detailed perspective how we are going to fix this problem. So it's a right size-- you pick the tool based on the scenario [crosstalk] and who has access to it.
Technology -	COMMS	S	Other	36-45	11-20	Male	COMMS-	Exactly. The whole team has access to it, right? Makes it work well. And

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Public Safety Personnel				S-001	it interfaces with Google Maps and those kinds of apps [crosstalk]. So, yeah, it's really nice from that perspective.
Technology - Positives_about-with	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	Well, it's changed dramatically. Particularly since we've-- from a law-enforcement perspective, we left the analog radio world and we went to the digital world. That's been a significant change for us. Capacity has increased significantly. We've been able to divide up our communication paths by function and just made it so much more simple. Access to applications and application development, and being able to develop things on our own has made really a significant positive change for the organization.
Technology - Positives_about-with	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	There are some people that don't understand that concept, right? That those problems were there all along, you just didn't know about them [laughter]. And now you're getting it out, right? And so I think we're working our way through that phase right now. And I think things are improving and then we'll just get to a much better place where hey, yeah, it's not that difficult for a fire guy to call a law guy and a law guy to call a fire guy. And we're all the better off for it.
Technology - Positives_about-with	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	... Here are the 30 things I do and condense it in from a code perspective and a UI perspective even more so a UX perspective, into something that is succinct. What people don't understand is that simplicity is--
Technology - Positives_about-with	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	Right. Right. Yeah. We actually just used the drone. Well, we used the drone at our county fair for situational awareness, large crowd gatherings, to monitor that. What's going on in the middle of the crowd. And then perimeter stuff, so. We had a local police department that pulled a car over. The guy actually got out and ran. Ran through the perimeter of the parking lot of the fairgrounds and those kinds of things drones are really good for because you don't have to break somebody off a security spot. The better off you are if you can just go check it out. "Hey, is he coming in, or is he just running through?" Those kinds of things. And then we had a large fire in [town] a couple weeks ago, and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they used a drone there to map out how much was actually involved in the fire, and whether or not structures were involved. That kind of stuff. [company] transmission line, it was in the fire area. So those kinds of things. Checking that stuff out. So they can be really useful.
Technology - Positives_about-with	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	Yeah. That's not cool. We just got rid of our MDC's and went to tablets. So part of the reason for that is so you can pull your tablet out of the car and utilize it. We also dropped hard-wired modems in the cars and exchanged for a modem built into the tablet so that if you do pull it out you can actually still get connectivity. So those kinds of things. I mean, they're small but they make a big difference for some, in some cases to have that accessibility.
Technology - Positives_about-with	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	Yeah-- well, yes. We've gotten good feedback. The screen size on the tablets are a little bit smaller, so that can be a little bit of a challenge. I know there's an accessibility factor that doesn't always weigh in. You get the older people who have been there for 20 years and they're like, "That's really kind of hard to read." Because the screen is a little bit smaller than what was previously--
Technology - Positives_about-with	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	So I mean, they did buy the tablets with the biggest screens possible. Those kinds of things.
Technology - Positives_about-with	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	Yeah. So it's pretty sophisticated. I can also opt in and just say, "Hey, anything in this city I want to be aware of," right? And then I'll just say for my zip code or city or whatever and they'll automatically get the notification.
Technology - Positives_about-with	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	But Internet of Things, I think it's a good option. Pushing video over LTE, I think it's going to be a good option just because the back-hall bandwidth will be so much bigger. I am concerned about the plans that people have to use the [system] for things like-- we have [application] here, the [state] Law Enforcement Telecommunication System. I'm thinking about pushing [application] data over that system and just all those kinds of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								things, make you think twice. Just based on the way the project is being run. So that's it. My two cents.
Technology - Positives_about-with	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	...Right now we're running on our Zuercher. I'm not sure if you're familiar with that system. It's a reporting system. And that's what our deputies use, and we also went to it. It's very user-friendly. So it helps us out with tracking the units and making sure that we know what location they're in. As long as you get their information and put it in correctly, it helps. The system helps you. So it's very user-friendly.
Technology - Positives_about-with	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	...We have the Code Red system, which is another alert system for mostly our elderly, where it'll send a call out, and they can receive it by an automated system that'll give them that information that we just typed in. We also have our state radio system, our main radio system, which is the 800 and 700 channels. We have our, on our state system, the PSL [phonetic] Reserve, which is the Coast Guard, that if we have anything on a river, in event we have anything on a river, we can contact [City] [phonetic], and they'll go out. They'll contact the Coast Guard and let them know hey, we have this at mile marker whatever on the river. It's a spill. We have our Hazmat Farms [phonetic], which is a system that they came up with to keep track of anything happened at any of the industry plants that we have. We have our Weather Bug, which is good for our rain, heavy rain that we had last night and everything, which keeps track of that.
Technology - Positives_about-with	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	... So it's 50/50 with the headsets. You use it. It's is very, very user-friendly, and it's very handy 'cause it frees up your hand. You have that free space where you can give the call out and type in at the same time, so that I mean myself, I use a headset. And very seldom I'll go without my headset.
Technology - Positives_about-with	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	... I can say the programs that we use, they come in handy so, so much. It's like a lifesaver. It's way more that you can save rather than putting everything on a paper and filing everything. You can save it on your computer, and you go back at any time and get that information.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	Hmm. I'm very pleased with the technology status. Okay, I'm very pleased with the technology system that we have in place right now. So I don't think I would change it. I wouldn't change it unless there's something more.
Technology - Positives_about-with	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	... And there were a couple of applications through a GIS provider that we implemented after that, so we could do damage assessment. We can show, we can take a picture of an address and not have to worry about buying hypothetically a \$3,000 camera that gives you lat and long of the picture. And we can put it up on these big screens that we have inside [inaudible] and show exactly where, of course keeping confidentiality, where confidentiality needs to go, but being able to show what parts of the [County] are damaged... So it was pretty much something that we already paid for through our GIS department that we didn't know we were paying for. So it's a pretty neat application.
Technology - Positives_about-with	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	I hate to say the Internet. But not so much on the law enforcement side. I think just as a generalized statement, that if ABC trucking company's got a truck on the side of the road on fire and can't find the driver, that we could Google ABC trucking company and at least try to find a name and number. But I think we're too, as a whole, today's culture is too much at the Jetsons, if we remember the old cartoon.
Technology - Positives_about-with	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	... However, they know that if they don't catch me at my desk with my desk phone, they know they can try my cellphone, and 99% of the time they'll get in touch with me. But then again, you go to the Jetson and the Flintstone era and try to figure out how exactly do you communicate, which is hard.
Technology - Positives_about-with	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Yes, I think so. Majority of us all have iPhones. Some do have some of the Droid operating systems. But majority of my staff all have laptops with docking stations here that they can take their laptops with them if we do have to go to another location, or if we have to relocate to a different facility. Because we don't operate like normal EOCs operate, to where if there's an incident at a facility, a [inaudible] facility, we go to that facility.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Dependent on text notification. Before when we had the old pagers, not even the two-way pagers, did that person receive that text, I mean I'm sorry, receive that page? To where now you can see on your phone if somebody's received that message right away. My staff knows if they need me right away, to text me. Same thing with dispatch center, they need to get in touch with me right away, they know to text me because I look at my texts before I look at my email, for the simple fact that if it's emergent enough, I mean think how about how much spam email we get these days, how many please buy our product emails you get versus, it's not that I discount every email. But if it comes across my phone as a text from somebody, something must be wrong.
Technology - Positives_about-with	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	To its own demise. It's its own worst enemy. Lots of things that we, let's take social media. I hate it, especially in emergent situations. [Name], a chemical plant [inaudible] neighboring [County] had pictures on Facebook of contractors running away from the fire before the phone call was even made to the local jurisdiction as far as an event was going on. And technology is good because I can keep up with my friends and family that's across the country.
Technology - Positives_about-with	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	It helps us because as long as you have a Facebook account or you have a Twitter account or you have this account or that account. But being rural, we still have to go back to the paper press release or making sure that family takes care of family, friends take care of friends.
Technology - Positives_about-with	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Yes, because it shows the proactivity of a lot of departments and facets of the [County] that people, according to some people, all I do is walk around the office with a two-way radio and a cellphone. I had a family member the other day, I was at a family gathering, and it was right around, right before Thanksgiving. Man, you don't have too much going on right now, huh? What you mean? What, no hurricanes this year, nothing else going on, huh?
Technology - Positives_about-with	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	There's technology that can help other disciplines. But who is going to monitor that? And when I say that, right now there's a big push by one of the radio manufacturers for body cameras. And it's good after the fact,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								but a lot of, a lot of the people that make the rules don't think about the long term. And yeah, it's good for the heat of the moment, but at the same time, the emperors think that someone needs to watch that at the same time.
Technology - Positives_about-with	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	... And the computers are much up to date, so they move a lot faster, and we don't have to worry about officers being in danger 'cause our computer is frozen, we forgot where they were, or having to go to paper and then back, back and forth from the computer to paper.
Technology - Positives_about-with	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Interposing] The radio, sometimes, the radio sometimes does call taking, but we prefer to keep the radio's focus on the deputies.
Technology - Positives_about-with	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	We enter it into the Zuercher database, and it shows up, which it shows the same on everybody's screen. But it'll show up on the radio, so he can dispatch at the same time as we're taking information. So he can give the information as soon as we hit enter and put it on the screen.
Technology - Positives_about-with	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	... And then our computers, we have are our Zuercher, which like I described before, it keeps records of everything. Like if you have anything to do with this [County] and we've ever dealt with you, we have we have it on file. We have what kind of car you've driven before, what kind of car you have now. If we pulled you over in your brand new car, we now have the demographics for that car. We can pull up protective orders, jail cards, or like inmates that were, if you were ever once in this [County] and you were in our jail we have your mugshot. So that's a really good program. And now the surrounding agencies have also adapted the same program. And once they're fully, I guess fully integrated with it, we're going to be able to view theirs. So which that's really neat because that's something that's typically not really heard of. You're not able usually access another agency's information like that. I f we're looking for this guy, he lives in [City], we're pulling up his phone number and everything through their program, or through their records because it's all on the same level. So that's always, that's really neat because it levels the playing field, so to speak. And it makes everybody's job easier.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	...So if we see somebody in the middle of the night walking around the parking lot that shouldn't be there, we can send somebody to, hey what are you doing? Because we do have a lot of, like we have our body shop here. We have a lot of property here that would not need to be damaged. We also have a license plate reader, which is, that's actually my favorite thing, that there's about 15 to 20 cameras in the [County]. And what they do is they keep an electronic record of any and every vehicle that passes by with a license plate. So if we're looking for a stolen vehicle, we type in the license plate, and it shows every camera that that vehicle's ever hit since 2016. So obviously we're going to [inaudible] the last camera. But if the guy's been running around [inaudible] in the vehicle for a couple of weeks, we can kind of observe his patterns, where he's staying, what two cameras he stay in between.
Technology - Positives_about-with	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	... The recorder which I can use, I tend to use 'cause I play back calls, if I hear a dispatcher raise her voice a little bit or say something that I don't think maybe should have been said that way, I'll replay the call, make sure that that call went the way it was supposed to, not inappropriately to where I don't have to pull somebody aside and have a conversation with them. But we have our map for our deputies, so I can view where every deputy is that has a unit.
Technology - Positives_about-with	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	... You can take pictures with it and add it to cases right from there. Like you just take it off, and you don't [inaudible] your computer. You just add all your, do audio recordings. I'm like I never even thought you could put all of that on one thing.
Technology - Positives_about-with	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	I definitely think the program we use is extremely useful. Like I stated before, it makes a level playing field. It gives us access to information that before when you were on paper writing, you're not going to someone's phone number from five years ago unless you're digging through filing cabinets, and it's time-consuming. And now it's kind of at the tip of your fingers.
Technology - Positives_about-with	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	It hasn't really, like in here really, we went from, I started working in an outdated building. So when we switched, it was a big difference. We

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								went from slow computers to faster computers. That's essentially, that's all about the difference.
Technology - Positives_about-with	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Yeah, I use a couple of apps. I used to use a GPS map. But my car has a fancy little thing on there, so I just type in the address, and I'm good to go. [Inaudible] about technology in my car. It's way different [laughter].
Technology - Positives_about-with	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	...Our record management system is actually where our CAD is at which I am involved in greatly and I love that fact. We do probably updates every 3 to 4 months on it. And it's constantly evolving and growing. We're developing a hurricane module right now so it's going to track everything we need for the hurricane including whatever FEMA needs at the end of if which will make it super easy to do. We have a records management system that we can run a report on anything that we want however we want that report to look which is... hugely different than a basic CAD when I started here
Technology - Positives_about-with	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	... We have several license plate readers throughout the [County] that scans every plate coming through whether it be stolen vehicles and such. So they're monitoring that. They are monitoring fleet tracking which is another program which tells them where our officers are at, how fast they're going, whether they've got a seatbelt on, whether their lights are running.
Technology - Positives_about-with	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	It has saved one lady, elderly lady who fell doing something and she fell into like a Rubbermaid container and really fragile, older lady and she couldn't get out. Unfortunately she was there for about a day. She made it though. But because of the Are You Okay--she had answered the call and was doing this after and the next day the call went through and couldn't get in touch with her and they sent them and fortunately we were able to because otherwise I don't think she had any family very close to here. They had all kind of moved away and no one would have checked on her.
Technology - Positives_about-with	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	... And instead of in our regular day to day calls for service section or records management we would go to what we call this hurricane or

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								emergency weather section and document everything we need for that event, everything that FEMA may need from us, from you know flooding to wind damage to power poles to trees and everything in between that we don't document on a day to day basis until that situation happens.
Technology - Positives_about-with	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	... But from their phones they can read a call for service and what's going on. They can take a picture of a scene and it automatically downloads to their case. And they can take a video as well. It doesn't allow them to do signatures just yet and a couple of other things that we would prefer if we're going to go for it and buy into the cost of that technology at the moment for the amount of employees we have for it to be truly worth it just yet.
Technology - Positives_about-with	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	... Their lines are actually defaulted if their center goes down no matter what agency it should have went to, it's going to default to come to us and we turn into 911 for the [County]. And when that happens they send 2 or 3 of their 911 operators to come here and help answer telephones.
Technology - Positives_about-with	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	We are constantly using technology to help us in using cellphones to locate people that a missing or lost or sometimes unfortunately wanted for a really bad thing. But... not only that our records management system, we had a bank robbery and we had a description of the guy and a description of his vehicle. I immediately went into our record management system which tracks any vehicle we've ever deal with and searched for an older model Chevy Blazer. Came up with 3 or 4 names in the vicinity of the bank that it happened at 'cause we knew it was an amateur, not a professional [Laughing] and anyway. And within 5 minutes we knew who robbed the bank because I pulled up a driver's license pictures and sent it to the detective and said is this him?
Technology - Positives_about-with	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	That is that hindrance. But I believe it helps a whole lot more than that, than hurting. [technology]
Technology - Positives_about-with	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	We love the capabilities that it gives [talking about NG 911] to us, the different phases that you can find for when your GPS locations on cellphones and such because everyone has--so many people has went

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to cellphones and don't even have home phones. So you get a 911 call and you can't get an address out of them because they're scared or screaming or fighting for their lives sometimes but you're able to get that close of a location for the most part that normally where we see it at is where an officer goes immediately to and finds them.
Technology - Positives_about-with	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	... But I was able to find a company that has them that it automatically--you configure your monitors when you're installing the software but it automatically can tell by the movement of your mouse which screen it's on and what system you're operating at that point. So you're not sitting here with--because people come in and they want you to run this or our radio runs off a separate computer than our network computer.
Technology - Positives_about-with	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	So we're looking at that right now because that in itself will help us do our job more efficiently and easier than switching stuff. I really don't know what I'd want. That is the biggest one right now in our communication center. All of my people, you know, want it, they asked me when are we getting it.
Technology - Positives_about-with	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Q: And so you think then that that--the improved technology makes communication better is what- SME: It does.
Technology - Positives_about-with	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Q: Okay. Is the technology that you use today user friendly? SME: It is. It's kind of self-explanatory.
Technology - Positives_about-with	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	There are times when we've had calls where people were in domestic situations and they couldn't really tell us everything so that would help a lot.
Technology - Positives_about-with	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	... So like we rarely talk to you so we'll know that you got it but think about how long it takes to sit there and call 10 different people when you can send 10 people a text, well it's a paging system, but you can send basically send 10 people a text message in a second and keep doing whatever you're doing instead of having to stop and say let me call him and let, you know, it's just tedious to do that.
Technology -	COMMS	R	Comms	26-35	5 or less	Female	COMMS-	And they each have a different radio. We do have it now where we can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Personnel				R-015	multi-select them so we can select EMS, fire, and road patrol if we need to all the same time. So that has been really, really helpful because before we didn't have that. Like about I'd say maybe 3 or 4 years ago we didn't have that. So that's awesome now. And we can patch them into each other like if they want to say something like we can put them almost like they're on the same... radio channel I guess, like they can talk to each other directly.
Technology - Positives_about-with	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Hmm, no foot pedals. We have it, well I think they took it out maybe like within the last couple of months but nobody used it anymore 'cause we have a little button on our headset and it's kind of easier to just press the button 'cause you can walk--I mean if you're walking around and stuff then you can just hit the button, you don't have to rush back to a foot pedal.
Technology - Positives_about-with	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	And I really like our CAD system. Ad we just got a new phone system that we're still learning [Laughing].
Technology - Positives_about-with	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	... But for me I like the technology of it. I like not having to sit there and call everybody, 1 person by 1, not having to sit there and write down every little thing that's going on. I can just type it in and keep going. So I really like the technological aspect of it because it helps a lot. And we don't have to--like it saves time basically is what it does.
Technology - Positives_about-with	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Q: Okay. And have there been times when technology has been particularly helpful? SME: Yes. All the time [Laughing].
Technology - Positives_about-with	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Hmm. I don't know, it just makes everything easier. Like it makes it... the radios, I mean that's part of technology that makes it easier for us to talk to you by radio. And then if we talk to you by radio that means that everybody heard it. So somebody is closer to something than you are, they can say, hey, I'm right here, you know I can go--it's just--it's easier talk to a whole bunch of people at one time.
Technology - Positives_about-with	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Well like I said we have our multi-select button now which I love 'cause we can talk to all of the different departments at the same time. We

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have the... I forgot what it's called. Oh [Laughing] I forgot what it's called... the pairing thing where they can talk to each other if we just click the button, they can talk to each other. Our CAD is has been updated to where it's not just like you type everything in there or whatever, like we can send the pages now to the officers. Like if they didn't get an address or they didn't copy it because we were talking over the radio we can send them a text and the address will come through their phone directly. So I like that part of it. Our computer screens are bigger [Laughing].
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	Headsets. They use wireless, we do use wireless headsets to give them some mobility as they move around to do their job, copy machines, fax machine stuff, moving back and forth, going to another console or whatever to get some supervisory help.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	...But with our CAD comes so many other modules of that CAD such as our warrant control system, what we call out-interface which is the stolen articles and people and missing people and things along with our NCIC... the telephones. The telephones are a computer now. It's not an old pushbutton set anymore. It is a full-blown computer, integrated computer that when someone calls 911 it gives the location based off the cell tower, based off of the handset that it's calling from if it's wireless and maps to their location on the screen in front of them. They can use that to find a history of what's going on at that particular location
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	It just... just the ability to... look at history and look at the response capabilities. We have AVL which is the automatic vehicle location of all of our units now. And that's another resource that they can use but it's also one of those liabilities and responsibilities that they have to look at and go, ooo, that guy's closer but he's on a call, do I pull him from that call to go to another?
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	In here I think we're very good on the technology. We are as up to date as I really want to be because I think there's some things out there that just have not been tested enough. And they may not fit our application

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								yet. But I think that there are some technologies that are coming that are going to be good. But then there's some technologies that are out there that I don't want to have anything to do with.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	But then there's some technologies that are coming that we're in the process of implementing. Texting to 911. I think it's going to be extremely important for our deaf community.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	... And I think that's a huge thing for victims who maybe needing to contact 911 from a school shooting to a burglary, a home invasion that they can make that text to 911. I think it's going to be an awesome tool. I don't think and I hope that the public will not use that as a way to communicate regularly with 911. I don't think they will because I think most people are going to go, you know, this is an emergency let me speak to someone. And I hope that our public education efforts will center around you only text 911 if you can't talk.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	I think it's going to be good because I think knowing the architecture of 911 and the bulky, how long it takes to route those calls, I think that that's going to help us with that. It's going to speed those calls up. They're probably going to be clearer and easier for us to understand these calls. I think they'll be routed much more appropriately in many cases. But I'm hoping that the texting feature and the apps that we're using on smartphones and other devices that they don't take away that human communications during an emergency because 90% of all communication is nonverbal in nature. And hearing that voice, hearing the background noise of a particular call gives us so much more information than just the words that that caller is saying.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	So I think it's going to change things for the better in most cases but I'm really leery that it's going to change how we communicate. I mean we already see it in our society now with our social media. I mean anybody can say anything they want to about anybody on the phone that you would never have said to someone to their face. And... just not... not real... real sure.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	Q: It does sound though like there have been times when technology has been particularly helpful. SME: Absolutely.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	Absolutely. There are, oh, I mean being able to find someone who is suicidal. They don't want to be found because they are feeling lonely or they are really intentionally trying to harm themselves. Using the technology that we have, data mining through some of the applications that we use, absolutely.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	... Technology helps us so much. Just being able to ping a cellphone for the appropriate reasons, with the appropriate authorization from a judge, and that's the other thing of being able to get to these people, sign a document, a warrant or a search warrant to be able to do that, getting that back to us really quickly. Used to, we had to bring it to them, sign it and bring it back. Now electronic signatures, ship it to you and you've got it over, over the applications, faxing applications or email. I mean technology has really helped us there being able to share data about certain events.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	...I mean how quickly do we learn about events that may happen in our area. I mean traffic cameras. Just look right out there and the dispatchers can pull up traffic cameras. I watched them earlier. Had a traffic camera, good view of a stalled vehicle, 18-wheeler in a center lane and they're able to contact the Department of Transportation, get a wrecker out there, a heavy duty wrecker to get it out there quickly and clear that interstate before they had 3 or 5 accidents behind them. They're using technology so much more.
Technology - Positives_about-with	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	...After Virginia Tech, some people developed this one where it can do police, fire, and ambulance. I wish I had my cellphone so I'd show you. It's pretty cool. But students can enter on that, and it comes up to our, I guess it's like a paging Internet service. So we're logged into the Internet website. And if it comes through on the phone, it shows us their name and where they are, if they've logged all their information in. Most of the time they have. We get, most of those are 911 hang-ups, on accident,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								'cause they're learning to use them. But it's still great. They have their height, their weight, did they take any medication, all this other kind of stuff. Most of the time they'll answer. So that's one that we use. So phones, that one. We have a playing computer that we're only allowed to just play on. The rest of it we're not allowed to play on. I would say, so I have my Internet screen, my CAD screen, my NCIC screen. So NCIC, I can run people from here and [country], I believe. And I can, even license plates, I can do that. I can get criminal history from all over the United States and maybe [country]. I get, we have [inaudible] pull over, or they pull over a terrorist, I have their information. And if it's a hit, it's a wanted person, they could be from [city], and they're in [city], and lo and behold here they are, and they want to extradite. They will come get them. So I can do that. That's about as basic, I would say, as you get.
Technology - Positives_about-with	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	It's basic. It's not, the ones that I've seen over, I guess you could say at the bigger location, which I don't know if you've been there yet, they've got some amazing stuff. It's basic compared to what I've seen. For example, I like the idea of the patrol car showing up on a map, on campus. I love that a lot. That way if we don't hear from them, I see where they are. I love the idea of our Motorola radio system, how it can go to different agencies, how I can just key up, and there's [County]. Or there's state police. And say [University] headquarters to all available surrounding areas, we have an active shooter on [University] campus, stand by for further. That way LSP is listening; everybody's listening. They can get here. I don't have time to just call every single one of them. I love that. That is probably one of the best tools you could have. It's severely underrated, but I think it's an amazing system.
Technology - Positives_about-with	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	They do. I've rarely had a problem with them, knock on wood as well. [radios]
Technology - Positives_about-with	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	Oh yeah. The whole mapping situation, when my officers, say if my officers were running code, having a radio that's just, it's blowing out all that, there's not a lot of white noise in the background. Radios have come a long way, a long, long way. I think that, along with them getting

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the earpieces, I love the earpieces on them 'cause I can be like this person has four warrants, this person's known for aggravated battery, this person is known for 108, or attack on a police officer. So they're like okay, they know. I like that. That's very useful.
Technology - Positives_about-with	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	I do. I know that some cities are wanting to use it. But the thing is if they are using that through their app, their phone can be tracked. So even if they're playing on it, [inaudible] one way or another. You can't shut that off. So you might have to have a detective call that agency, and they show the pinging. But the pings are getting better too. I had a really interesting situation with a phone call where the guy, I want to say he was, he had shot his wife and killed her. And he was from a surrounding area. They were looking for him. Well he turned out, they thought he was over here at the [building] engineering building. He was not; he was up on the levee, further down, off our jurisdiction. Shot himself sitting up there in his car. But his phone was pinging around this area. So that can be a problem as far as that. But your phone either way can still kind of give you a general area where you are. We've had students go missing, or they're not answering their phone call, and their phone pings where they are. And we go and find them. Or one kid, he left it in his dorm room when he went down to [celebration]. Don't know how you do that, but he did. But he was fine. So that does help, I think.
Technology - Positives_about-with	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	... We also have a program called TLO, and we're able to find people through that. Usually, if you have a name, there's a 99 percent chance you're going to find them, and mostly, the detectives ask for stuff like that. You can get addresses, names, numbers. Anything you need, you can get it through there. We also have NCIC, say that we want a driver's license and vehicles, vehicles [inaudible]. We also enter stolen articles, like if somebody is missing a phone, we have [inaudible] we enter, and it goes through the database, and so any agency that runs that person, if they're out with them, let's say they pull them over in a traffic stop, if they're out looking, it'll ping to us and let us know that that officer is out with them, whatever agency is out, and then we let them know that, yes,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we want the subject detained, or no, it's just local, or stuff like that. We also have a program called Mainframe that we use, and it's for students that are on campus that are enrolled in [University], and we could find out where they live, their telephone number in case we need to contact them for any information, we have all that information in there, so we use that. We also do--usually, you can see these folders up here, we do bike registrations, we do--anything like that, Lieutenant XXXX does the bike registration, we get the information from them, give it to her, and she does that, and they need a record, like if they were involved in a traffic crash, they come in, they fill out the information, we send it over to Records, and then they get what they came in to get. Yeah, I mean, we have a lot of tasks in here, and it's definitely never a dull moment. We always have something going on.
Technology - Positives_about-with	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	Right, by building. They have it by number, so we have it in CAD, to where we can just put in [name of stadium] Stadium, and it's going to come up [street], [city], and we have them in-route, and that's it. We tell them, and if our officer gets out there, and they say it's a false alarm, to cancel the fire, we'll call them, let them know that it's a false alarm, and then they cancel them. Now, if it's a medical emergency, it's the same way.
Technology - Positives_about-with	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	Well, it'll go to their case number, so like, once they pull a case number for it, and they go to write their report, all that information is in there, and they know, the time--everything is timestamped and all that.
Technology - Positives_about-with	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	Radios are good.
Technology - Positives_about-with	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	Yes, ma'am. I mean, we can--we send officers, like if they need a DL picture or something like that, we can text it to them, it's faster to get to them, but yeah, we definitely do use that. We use all forms of technology for sure.
Technology - Positives_about-with	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S4] I guess, the main thing with me would be to make sure -- get them to understand that the radios are the lifeline to Fire, Police, EMS, public safety, you know, basic -- you know push-to-talk, whether to listen if they

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								need help, that it has to work, that it has to work, make sure that the towers and all the equipment are up to where they need to be, you know, so -- so there's no lack in communications for -- to send help out to people.
Technology - Positives_about-with	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3] Helpful if common places -- we have a ton of common places in our CAD and like for instance there is a building two blocks up-street which is called the [name] Buildings, that because it was overseer building, 30/40 years ago know, but I mean you if you guys are here you would know to say but anybody here you say the [name] Building, they know exactly what you are talking about, so you know.
Technology - Positives_about-with	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5] Our phone system, we are using Intrado or West Viper system. And like [name] said, it automatically answers for them and shares the call load and that takes a little while to get used to and you walk in there now and if a phone rings and you are like "listen to what?" because we don't hear phones ringing.
Technology - Positives_about-with	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2] If you want to get deeper into what we have is -- we have Intrado Viper for 911 controller. We also have a redundant NEC digital phone system that is sitting co-located with it that is attached. And that is connected to all of our 10 digit lines and it is on the county network that connects all the buildings. So, we have 5-digit dialling to all the other buildings in town that is also attached. So, that what that allows us to do is if we have something happened to the Viper or fall over, [unintelligible] next to us so we don't have to evacuate because of that.
Technology - Positives_about-with	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: Well, and they are set up pretty much individually with the exception of one screen at each console. They are set up individually. So, if I want my map in a certain place, I can put that but if [Name] comes in and sits down behind me, when she logs on, her map may be down here because that's where she prefers it.
Technology - Positives_about-with	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2] It is -- well, it is accurate about 90% of the time, 95% of the time within 100 yards and we get GPS coordinates.
Technology -	COMMS	R	Not	Not	Not	Not	COMMS-	[S5] Even as, you know, of course there is multiple companies out there

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			specified	specified	specified	specified	R-019	like Rapid SOS and things like that but I actually have a locator on my son's phone and I can locate him, they laugh at me because I --
Technology - Positives_about-with	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S4] And that way like that would help us if we are having trouble locating -- I don't know where I am at. Okay, well -- let me see where you are at.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So, even though I know you're recording, but between us, so Motorola is going ...they went to a new Motorola radio system. I looked at that because I'm upgrading my radio system. I want to be able to hopefully talk and have those 800 channels, because if the fire department goes through, I have to dispatch them, so I got to have them. Right now, I am full; I cannot add any more frequencies to what I have. I have old technology, it's been great technology, and we've been using it since the 90s.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	There's one more. It's a smaller brand. We tried out three, because those were the three most popular in [city]. Verizon was the only one that had least amount of coverage problems. AT&T was terrible, and because we pushed mobile data, we pushed the call, the screen that comes up in there goes into the terminal in the ambulance, they get to see the call, they see the notes when it pops up. So that's important that they have that connectivity and it's also a Wi-Fi hotspot on each ambulance through that data too. We can also send 12-lead EKGs through that system to the hospitals. So there's a huge...
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	The family's [indiscernible] so he's taking care of you, he's frantic, he calls one of your kids, your kid calls us, I don't know, they don't know the answer to the question. So anytime we have anything that's a flag like that, an emergency to the hospital, we look at every one of those calls; two reasons, one is the medic new and should've been an emergency to the hospital, did we code it correctly, so anything that we could learn from any of those calls we do. So we don't have those much anymore, rarely have those types of calls and then we really, we went from the cards to the software on the screen, so it pops up because the cards are hard, you got to know where the card is...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So it's a lot quicker and easier. I can do one card instead of having to do all the cards. So I do like the new technology. But on the back of that, so APCO and [indiscernible] County have had a falling out.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	The good thing is we're going to go with APCO who we've been working with the last 18 months, and when this comes out it's pretty much going to be set up exactly the way we want because we're the only one's been giving them feedbacks; and hey, can you change this; can you make this fluid, this is difficult for our dispatcher; these questions pop up and they shouldn't pop up, can we fix that? I love software.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	It's so much easier, if you have the right support.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Yes. So the great thing is we worked on that with EMA and through the [state] we now have -- so it's kind of we now have this TBRS system, which is the State system. So we have what's called Tac. We have a U-tac, a V-tac and an 8-tac. So if I - I don't know if I will find it here - I don't know which band it's in because I don't use this that much. [state], I don't want [state] - fire department. They have a bunch of fire department mutual aids, but there will be a - and we have EMS mutual aids. But we have a V-tac, a V-tac, and an 8-tac, so if I am on a UHF and I go to U-tac, and you're on an 800 radio and you off to 8-tac, and a VHF radio goes to V-tac, they're tied together in the building and we are on the same channel even though we're all on three different frequencies.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	And we're also have more of that capability of patching with this new system. So if you're on VHF and I'm on 800 and I send you on a call together, I can patch those two channels. Anything said on this channel will be heard in the 800, anything said to the 800 will be heard on here.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	You know if there's something going on and it's a video of a house fire and they turn around and we can see that there's flames shooting out the windows, advantage.
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	But an ambulance call? Maybe, maybe not. If they're bleeding and we can see it's an artery or a vein, maybe it's an advantage. I don't -- I mean

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								video feeds of the scenes to help get the right resources a lot quicker I'm all for; videos for make a 911 call, not too keen on that. That makes sense?
Technology - Positives_about-with	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Mine's antiquated, that's why we're replacing them. So another good thing about going to the new systems is we're replacing very old antiquated systems. A trunked 800 works a lot better than our portable or our mobile repeater system, it's either you do or you don't, there's not multiple a lot of places to go, so the new technology is safer for the crews, it's more apt to work -- you know all the stuff is great, it works, but some of the stuff is 10, 15 years old and so we're - and its ageing.
Technology - Positives_about-with	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	It can be. We have mutual aid agreements. We all have very similar SOPs, whether it's fire and EMS, but once again, talking to some of these jurisdictions can be difficult. It's gotten much better. Years ago we could not talk to each other. Had different radio frequencies. We also used to have separate radios. So if you worked in a border station, like down in [City] or [City], you had separate portables to be able to grab when you want to call into their area, but now we're able to utilize our radios, and go to their channels.
Technology - Positives_about-with	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...For the most part the technology/equipment that we use is pretty good.
Technology - Positives_about-with	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	right now, I would say the state of our technology is really good in [County] County Fire Rescue.
Technology - Positives_about-with	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	The computers would turn off just going down the road. A lot of the communication from those computers to a cell tower would be horrific. But over the years we have invested a lot of time and money into improving our technology so that the computers don't shut off. So that we are getting the most up-to-date information. So it's kind of trial and error as we get something. It's better than what we had, but there's a lot of hindrances as well to it because the technology had not caught up to what we were operating under
Technology -	EMS	S	Field	36-45	11-20	Male	EMS-	... I remember the days of mobile data computers going in and we could

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Responder				S-014	be going on the road. I'm looking at a dispatch on a computer, and all of a sudden, the computer just completely shuts off on me. Or I'm trying to respond on a call and the computer communications is too slow. But I know we've had to change things up... It seems like with each generation of technology, we are improving our service.
Technology - Positives_about-with	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	there's a wide range of applications that we can use straight from my phones... We can access it through the MDC... But a lot of times, if I'm operating inside of someone's house, I can take my phone off and go, "Okay, well, Holy Cross Hospital is very busy right now. How about you consider going to Washington Adventist?" or something like that. It just helps the patient out so that they're not going to a hospital and wait six, seven, eight hours...
Technology - Positives_about-with	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Means of radio communication of we can talk from one person down to the other. There are slight hiccups every once in a while if you're in certain basements or buildings or large box stores, so if you go into a grocery store to the back towards the deli or far corner of a store, that you may lose means of communication. But we work around that with different policies or adapting. Or on the river, we may not have complete radio communication but we still have cellular communication should we need to make a phone call...
Technology - Positives_about-with	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...It may be a little bit of a delay if you have to leave, and the wording that I would use is mutual aid. So if we have to respond mutual aid to an outside county or, for us, it could be another state is, how are we going to talk to them? Mostly, that would be done by radio communications. We have the ability to do radio plugs or communicate to a free channel, but that's above us in the sense of that's communications or dispatchers to assign us to a mutually acceptable channel that interface. Since we went to the 800 megahertz system, where it's a lot easier to do that. Easier for us, but if not every agency that we respond with has 800 megahertz, that could be a challenge...
Technology - Positives_about-with	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...I mean, I think we have a really good for [State], as far as the medic aspect of it, for me to be able to talk to any hospital at any time and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								deliver an EKG system...
Technology - Positives_about-with	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	I mean, I guess it's the day and age radios have changed a lot and I think we're just talking about more or less the interview was communications in general. But if you could take a smartphone and put it on a radio, it would be ideal. So I could have five to six dependable apps that I use on my radio, I can utilize it as a phone if I needed to or wanted to, as well as to a radio communication and delivering messages. So the radio does not make noise if there's a tornado coming. My own phone does [laughter]. I'm not required to have a cell phone. I'm not required to have it activated, but I do so because the two together make me successful.
Technology - Positives_about-with	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	The one up front for the CAD stays on the unit. The other one can be taken out. And it depends on what type of unit you're on. The fire trucks take it out more frequently than the ambulances because they'll take the tablet in with them when they go in somebody's house or something. So if they need to get-- the person decides not to go in, and he can sign a release or something. They can get it. Plus, they can record the information that they're getting when they first arrive, and then when the ambulance gets in, they can transfer it over to their tablet. So they usually keep theirs with them. The ambulances, a lot of times, will keep it on the unit because they'll just fill it out at the hospital or on the way to the hospital. So they don't bother taking theirs in with them when they get on the scene most of the time.
Technology - Positives_about-with	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Majority of our information comes in over the tablet. Often, it's connected to the CAD. We get dispatch on there. We change our status on there. We let communication know that we're responding. If needed, we let them know that we're on the scene. Usually, that's connected to the GPS. Usually, it'll pick us up when we arrive on the scene or when we get close to the scene. It'll automatically put us on scene when we get close. But if we need to, we'll do that on that tablet...
Technology - Positives_about-with	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...if we need to, we can status manually that we're arrived at the hospital, and at the hospital it's mainly just regular communications with the supervisor or communication. We let them know when we've actually

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								transferred care of the patient to the hospital staff, and then if there's any delays at the hospital we let him know over the radio. And then, when we're ready to go back in service-- well, actually, back in service, we usually use the CAD tablet up front for status on there.
Technology - Positives_about-with	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	We usually interact with them frequently and well, usually if we need to talk to other first responders, police officers, or whatever, usually it's face-to-face on the scene. We don't have radio communications with them. Our radio systems aren't connected to theirs. So if we need to relay information to them before they get there or something like that, then we have to do it through our communications. Our CAD systems are connected, though...
Technology - Positives_about-with	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	[RE: comms with LE] ...So the CAD tablet in the front of the unit will have remarks for the call. And any remarks that [City]PD's dispatcher puts in there, we can see this because they're documented on the same call. So we can see any remarks that their dispatcher puts in, but we can't hear directly what they're saying on the radio.
Technology - Positives_about-with	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Yeah. So it attaches and again, with upgrades in the software and everything else, things have changed a little bit. It used to be that it would attach it as a attachment to your report and you had to actually open it up separately in a separate application to actually view the EKG that's provided by the monitor manufacturer. Now, with the latest software we're using now, it'll automatically put the EKG in your report. If I go log into the server right now and pull up reports that I've done in the past where I did an EKG and transferred it over, right on my report will be a picture of the [inaudible] that I did. So it's almost become part of the report. Now, it's even more so-- I guess, I would say it's easier now because instead of having to open up the EKG in a separate application, it's right there on the report.
Technology - Positives_about-with	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...There are some that I personally will use. Children's Hospital has a pediatrics app that I will use for pediatrics. It pretty much has the-- it lines up pretty much with our pediatric protocols anyway because our pediatric protocols were written by Children's Hospital. So it's pretty

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								much the same information, but it can be a little quicker to find the information than digging through the protocols to find it in the protocols. And there's a drug reference app that I'll use for medications occasionally.
Technology - Positives_about-with	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	There's a number of patients that we run over and over. And the other thing is, the database maintains a fairly significant history. And again, I don't know how it's currently configured, but last time I knew for sure, the database actually maintained at least three years of data in the active database. Then it would archive it off into an archive...
Technology - Positives_about-with	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...The way that the current system's working, I'm not sure how far it goes back. But basically, because it maintains that large currently-used data set, that active data set of like three years. If we've transported somebody anytime in the last three years, it'll pull up at least...
Technology - Positives_about-with	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	So now, of course, we're all on the same radio, have the same radio on the same radio frequencies, the same radios. So we can talk to them. And that was several years ago. That was probably back in 2000, 2002, somewhere between there that they actually-- we would be able to [serve?] with the same radios that the fire department was using...
Technology - Positives_about-with	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...And then we went to the tablets that have the whole CAD system on there, so. And the move to the tablets has probably been, as far as I'm concerned, the biggest benefit as far as the first responders and actually responding to calls because of the fact that it actually has the CAD information on there so while we're going to the call, I can look through the remarks, and notes, and see exactly what the dispatchers have put in there. And instead of just having the dispatcher say, "Oh, yeah, it's an asthmatic, probably." Usually, we had basic information before. Now, I can actually look through and see and get a little bit more detailed information on exactly what may or may not be going on.
Technology - Positives_about-with	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: apps] ...we have one for paging. So I can page from the phone. So we have Everbridge for that. And I don't usually use this. I usually just do it from the desktop. But I can sign in from this and send a page from this

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and pick who I want to send it to. And it comes through as a text message no matter where I send it from and it comes through also in an email for them when you send it. And it's actually fine. It works pretty fast. It's pretty easy. All you have to do is remember password...
Technology - Positives_about-with	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: Active 911 app] ...But it's my understanding that-- two things I don't like about it is you can't click on it and map to it. Oh, yeah you can. Okay. I was wrong about that. You can't look at the details of the call...
Technology - Positives_about-with	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	And then we use the Map, just the Google Maps. I use Google Maps and the Apple maps. And there are addresses that do not exist in there, in both... And we have map books for old technology. When the dispatch tells us where we're going, it gives us a cross street and a map page. So technically, we should be able to find it. It's just that sort of new, younger generation of people just saying, "I'm not going with a paper thing when I can just ask Siri where I'm going, or ask Google," You can start it finding where you're going while you're walking down the stairs rather than walking down the stairs, stopping, not even turning on the vehicle, opening the book to the page, trying to find the cross streets. You could have already been driving. So it's just faster. So we don't use the map books nearly as often as even six years ago.
Technology - Positives_about-with	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...the radios have gotten smaller and lighter throughout the time that I've been doing this. I mean, they used to be like-- you could them as a weapon if you had to [laughter]. And now they're as big as old cell phones. It's happened so slowly that-- I can't really think-- I hated the chirp-chirp thing because I'd like to know what other people are doing, and where they are, and that kind of thing. That was the biggest reason why I hated it. And I also thought it was just-- they only did it for financial reasons. I mean, it was cheap, so that's why they did it.
Technology - Positives_about-with	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...These radios have improved, technology-wise, since I've started here as far as they've gone from I believe it was analog, although, I'm not sure, but they've gone to digital. And during the transitional phase, it was kind of bad. It sounded really digital, like you'd hear a weird thing, or it didn't work as well in [City]. It didn't work as well in places with more

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								canyons, with higher mountains, with more obstacles, physical obstacles. But they've added enough I guess repeaters and antennas, stuff like that. So it works a lot better than it used to work...
Technology - Positives_about-with	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...And same in [City]. It used to be fine, and then they kind of went for this transition, and there were lots of problems. It wouldn't work in elevators, wouldn't work in garages, wouldn't work in concrete buildings that you're in, parking garages. Wouldn't work in certain parts of the city. You could park 10 feet away and it would work, but right here, it was like, it wouldn't work. But that's gotten better also.
Technology - Positives_about-with	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	But I think we've gone way more towards phones. Everybody has a phone, everybody texts. So a lot of that. And then pagers are gone for the most part. I mean, some services use-- the volunteers, use pagers, or very rural places use pagers because they can reach places that phones might not reach, or radios might not reach. But the pagers cost money for services, so [City] got rid of pagers. So now, you can get a pager but I would say 5% of the crews use an actual pager. And they almost all get texts. So they can just get a text instead. And you get all your information on a text and or on the radio...
Technology - Positives_about-with	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: trip reporting] ...some of them, they can drop-- the dispatch can drop the patient information into their call... They can drop the address into the call. They can drop the times into the call. They can drop the miles into the call. They can drop the hospital address where you take them into the call. And those are good, and we like that... And this place is just slowly moving to that...
Technology - Positives_about-with	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	Yeah. It's been in [City]-- here, it's working pretty well. There's some little blips but it keeps getting better. But yeah, just adding those extra things is-- when you don't have to do it, it's way better...
Technology - Positives_about-with	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...several of them have mapping. You can put the address in and it will map for you within the trip reporting system. Some of them have ways to do scanning, like bar codes things because a lot of patients become like a number when they get to the hospital and they get a little

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								wristband. Some of them can scan that barcode. Some of them have the ability to do video...
Technology - Positives_about-with	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: trip reporting system] you have to log in every time. But it's not as hard as you think. So the computer program's already there. The laptop's already up and running, and then you say, "I want to create a report," and it's like, "Okay, log in." So you just put a login and a password and then you say, "I want to make a report," and it says, "You're creating a report by [Name]. Is this correct?" And you're like, "yes." And now you're in. It's not like a-- the computer doesn't have to boot up each time you do that or anything like that. But yes, you have to kind of sign in as that primary person.
Technology - Positives_about-with	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	There are. I mean, I can pull out my cellphone-- well, why don't I do that? So [because I'm old?], I got a big one because I can see it better [laughter]. Each of our ambulances have a dedicated cellphone. And they're all connected to iCloud so that, say, we have a phone list, a common phone list, for a lot of [inaudible] in [City] that we transport to. We can push out updates of phone numbers and addresses and [dura codes?], and things like that on iCloud and it'll update all our phones. So we do a lot of stuff through the iPhones just because they have a good technology and many people are familiar with it already because they have one. That's a big deal, familiarity and usability because people aren't going to use stuff they're not comfortable with or if it's hard to learn or something like that.
Technology - Positives_about-with	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: apps] So I got a fleet program on here that has all my vehicles. When I [inaudible] I put in the mileage and gallons in my fleet program and it tracks how much fuel my vehicle uses, and when it needs service, and it sends me reminders, and things like that. Those are very useful things that aren't difficult to learn and are [easily to interact?]
Technology - Positives_about-with	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: ambulances] I mean, in the last five years, we've gone completely over to LED warning lights because they draw so much less power than the old incandescent ones. That's been a great thing. But we've made up for it by hanging all this other [laughter] stuff, this other new technology.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	So the basic Tough-- we use Panasonic Toughbooks for our patient care reporting system. So that Toughbook can communicate by Bluetooth or over cell with, for example, the cardiac monitor. So you hit a button and it pulls the data from the cardiac monitor into the patient report so you don't have to print it and put it in the copier and then scan it and send it over... That kind of stuff, it's nice when it works.
Technology - Positives_about-with	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I mean, we just signed on to a new billing add-on to our technology and basically, it's just an aggregator. It takes information from multiple different places, that their billers have to open, one screen for this and another screen for that, go to a different program for that. It brings all of that into two screens. So that you don't have to keep changing screens, looking back and forth, going to different websites, to get this bill ready to be sent out... So it has great promise, like all technology. It's affordable, we think we can support it because it's written by the vendor we already use. So we're going to try it.
Technology - Positives_about-with	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I mean, I can't make any of my employees do anything. Okay. They're here 24 hours a day. I've done their job. It's not easy. If you throw all kinds of harder stuff to make their job harder on top of it, it's not going to work. I mean, I can put all of the sanctions and rules and everything I want on it, but I have to motivate people to want to use this technology and show them the advantage of using it. We get paid faster. We can post statistics that show us what we're really doing, how it's useful. But if it's not to them, what's in it for them [laughter]?
Technology - Positives_about-with	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: rig flip phone] It has numbers that I don't want on my phone. I don't want me-- or if my kids are playing with my phone, I don't want them to accidentally call the mobile stroke unit, you know [laughter]?
Technology - Positives_about-with	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	So using that flip-- having that flip phone with those sensitive numbers in there, that's really helpful. And I've used our phone plenty of times to call the hospital or whatever. But the ambulance company has smart phones, and a lot of times they do take pictures. And they have all that capability.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: technological advancements] So EMS-wise, I like it quite a bit. For instance, the hospitals that we respond to-- now, the one big hospital up north [Name], that one, they have every doctor on site. So we don't need to do it...
Technology - Positives_about-with	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...when we go to [Name] Hospital, that has-- I call it HAL. Did you ever watch 2001: A Space Odyssey? ... They have a machine that they just wheel in and the neuroscientist or neurosurgeon can look at and talk to that patient right there to decide if we need to go to surgery for a stroke alert. It's amazing...
Technology - Positives_about-with	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...We have the mobile stroke unit that drives around. It's got a CAT scanner right inside of that thing, which is pretty awesome. So EMS-wise, I think it's great that we can basically eliminate a lot of unnecessary things, but at the same time, we can catch a lot of things quicker, too, by having a mobile stroke unit and being able to just go right to somebody's house. And then they can deliver the medicine quicker. I think that stuff is pretty remarkable and I think the technology should be used. Firefighting side of it is different, you know?
Technology - Positives_about-with	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	So for us, we don't have dead spots, which is generally pretty good.
Technology - Positives_about-with	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: dead spots] We had one. I think they fixed it. For the most part, we can get information out. Unless we're inside of a concrete building which everybody has that problem. We can't fix that yet. But we have pretty good radio communication outside...
Technology - Positives_about-with	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: dispatch] And so, what's nice about this system is if grandma falls out of bed and she's uninjured, she's just too weak to pick herself up, you'll get just an ambulance non-emergent with no need to go lights and sirens. If there's a cardiac arrest and you need more caregivers than are on-scene, they'll send the engine company and the ambulance emergent to the scene to quickly get there and mitigate whatever's going on. So the dispatchers play a vital role in our system and are very useful to the end-user crews. But we do use TriTech CAD, so it's got the CAD which

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								gives us directions if we need them and call notes in there and all kinds of stuff.
Technology - Positives_about-with	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: portable radios] SME S3: I think it's top of the line... It's the best that is out there. SME S2: I've worked for some other systems that were garbage, so this is amazing from what I'm used to.
Technology - Positives_about-with	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: MDT] ...as far as the CAD itself, it gives us a map of the city. It gives us a function to see where other units are at, what their status is, which is nice if we're out and about we can see which units are out of service or if we need to move to different parts of the district to cover for out-of-service units...
Technology - Positives_about-with	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: MDT CAD] ...I mean, the mapping is nice. And it's nice because the pre-plans have the ability to be in there as well, so if we go to a fire or an incident at a commercial building that we're not familiar with, it can give us vital information to the building itself as to where different systems are, or hookups, or keys, or access to the buildings. So I think the software is good, the CAD is great, in my opinion. I think it's very useful. And again, I came from a system that didn't have a CAD, so it was a dispatch county-based notification system and they told you an address and that's as much as you got... So you need to know the district because you don't get a map. So I think the system we use is very good.
Technology - Positives_about-with	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	...I think our MDT is spot on and user-friendly in my opinion.
Technology - Positives_about-with	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	So thankfully, our fire and EMS system is one entity, which is great in my opinion. Everything's in house. The employees, the communication system, all that. We have very little to no communication with our police agency. We are able to scan their channel, but I don't think they want us on their channel, and they don't come onto our channel. And that's been identified as a huge problem in some of these large-scale incidents around the country of, for instance, the [City] shooting. There was no communication between the police and the fire on one scene. So I think

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that needs to get bridged. I think that's done through policy and procedure. I think the technology is there. I just don't think we utilize it efficiently.
Technology - Positives_about-with	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I think all the technology on the job far surpasses what I use at home [laughter].
Technology - Positives_about-with	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	So we just message each other, so standard commercial messaging systems. Again, at an enterprise level, for sharing files around, we have our own intranet with shared central drive systems. That gets heavily used. We asked for something more mobile-friendly, and we got access to the box.com platform which is very nice...
Technology - Positives_about-with	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...we have a very robust communication system. We're lucky that way. [State]'s got the best radio system in the state... it's very well maintained. It's super reliable. We have a ton of talk paths. We get denial tones on the 800 megahertz trunk system. System-wide, we get denial tones at a rate of one a month, maybe?
Technology - Positives_about-with	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	So on an 800 megahertz trunk system, when you press the button, you don't actually start transmitting. You're basically requesting from the computer that it open up a channel on your talk group. And so you wait for what's called a grant tone which is a little-- it goes beep which tells you it's okay to talk. Takes about half a second in normal operations. A denial tone, also colloquially known as a bonk, it sounds like mah. And it's the computer telling you, "I don't have a channel to give you right now. You need to wait." We never get them. If you talk to the guys up in [County] County, they will generate them at a rate of 150 a month because they just have a much less robust backend system...
Technology - Positives_about-with	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...On an 800 megahertz trunk system where you run into trouble, it's not with the amount of talk groups you can have. It's the amount of talk paths that you have, the actual frequencies, and the actual [backhaul?] capability from place to place. And [City]'s is very good and very robust so we don't typically get problems there. So our radio system, if we are in [City], is excellent. It's very reliable. It has very few dead spots. When

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we do get a dead spot-- for example, we had, oh, down at [Street] and [Street] Streets downtown - this was probably 12 or 15 years ago - Verizon put up a cell site and we just lost the whole intersection to interference from the cell phones. And you couldn't talk within about a half-block radius of that. But it got reported. Our [City]'s radio engineers went and talked to Verizon's engineers. And it took them about six months to get everything sorted out so that both people could use the site. But it got fixed. We had a temporary hole. So a lot of our holes are like that. Either you're really deep inside some building where no system's every going to reach or it's something like that where you're getting interference or something. It's a very robust system in terms of its technical capabilities...
Technology - Positives_about-with	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: interoperability] It actually works pretty well. It's had a lot of work put into it. It was not good initially. So, like many things in EMS, a lot of this work came after big system failures. Probably the first of them was the [Name] did a [Event] here back in the early '90s and they had a volunteer medical system that essentially collapsed. They had the not such a great idea to have all the kids do a day of fasting and then walk from Downtown [City], the 20 miles, to where the [Name] was going to address them. And It was in August, so it was a very hot day, and the obvious mass dehydration occurred and it overwhelmed them. And so we sort of cobbled together a system that nobody had talked to anybody else...
Technology - Positives_about-with	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	I'm actually reasonably happy with what we have now because the thing that I really like about it is it is super reliable. It just works every time. So I would definitely like to be able to have more robust data communications in terms of getting the details of the call...
Technology - Positives_about-with	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...Now communication with the firemen, that was easier because we did have a channel that we could go to communicate with them if there was some distance between us. Otherwise, we would be we knew all the companies that were around us, and we constantly had runs with them. And so they knew what to expect from us and I knew what to expect

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								from them. But otherwise, communications via radio was simple because we would just turn the switch over to that channel and communicate with them. And now that everyone has radios, I would assume that it's much easier.
Technology - Positives_about-with	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: personal phone use] I can tell you that they do. Sometimes it's easier because we do supply cell phones to the paramedics. Sometimes it's more of a burden and it's easier for them to just take out their phone. They already had their hospital listed on there. You just hit a button and you can communicate them and give them report over there, right, so.
Technology - Positives_about-with	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	I can tell you way back when I was in the field, I did do research because I would say-- someone would say, "Oh, you know what? I'm taking this medication," and I'm like, "I never heard of that medication." So I'd turn on my phone, look it up, "Oh, yeah, okay, so that's what that medication does." So now I would know, "Okay, this is a medication that may be affecting or is a result of why you're feeling this way." Not that I'm going to tell him that, but at least I have some information on my end saying, "Okay, this may be causing this type of-- your illness."
Technology - Positives_about-with	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: GPS] I can tell you that I use it myself sometimes where I don't know every street [inaudible]. If we get a run somewhere down in the Southeast, looking it up. Oh, okay, what major street is it next to? Okay, now I know how to get to it. So yes, absolutely. GPS units, we use the GPS map on there. I forgot to mention that we also do have GPS units on the ambulances.
Technology - Positives_about-with	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: standing medical orders app] Yeah, as a matter of fact, one of our paramedics is the one that generated it. He communicated with the hospitals. He put our standing medical orders, our policies and procedures are on there. And so it's much easier to look them up if you have a question regarding any type of run that you might get.
Technology - Positives_about-with	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: changes in technology] Absolutely, they have been for the better. It has made our job a lot easier. It's very difficult for us to change but it has improved. It's easier for us to do our reports. Whereas before we used to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have to write everything out, check boxes, remember what a 1B means on a report but now we don't have to do that, so yeah, it's much easier. As a matter fact, now I prefer to type versus write. So it has improved our ability to do things easier, I think. At least from my point of view.
Technology - Positives_about-with	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...As far as radio communications, it's better now than the past. We're able to listen to a lot more channels, police channels. We're able to communicate with officers, [suppression?] unit to an ambulance unit. But it doesn't always happen. They forget. Or either [question ID?], don't know how to use the radio, or it's on our side. And then how to set your radio, like I said, some people come in and they want to know everything about the radio. Other people, they're just like, "Give me what I have to know so that I can do my job. I don't want to know anything else [laughter]."
Technology - Positives_about-with	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	[RE: technology in ambulances] The systems work very well, actually. The 4G connection of Verizon is very reliable. The drive itself is a [solid-state?] drive so we've had virtually no data loss. And then we can control, like I said, the components of what's required. We can easily push out an update. If, for example, our medical directors, who kind of oversee what we do medically in the ambulance, decide in a couple of weeks we're going to get rid of one drug and then introduce a new one, I can go online, remove that one drug, introduce the new one, push a wireless update, and then they can just accept that update... We can push that wirelessly and make changes so there's very little confusion about what fields are required, if one require or not require a field. We don't have to touch the computers. It's all pushed out wirelessly. So they're very reliable.
Technology - Positives_about-with	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	[RE: CAD] I mean, for what we need, I think it works well. It's reliable. It pushes out the run and the times. It is linked to the Toughbook, so if I press the CAD time in the ambulance, it'll bounce back and actually bounce to my computer. So I don't have to do that twice, which is nice...
Technology - Positives_about-with	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Very important to communicate. When I'm in a high-rise, on the 30th floor of the [building] and I'm treating a patient and the patient doesn't

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								want to go to the hospital, it's a refusal of EMS. Instead of coming all the way down and going on the telemetry radio-- we have a telemetry radio now that's hooked up to our hospital, the [hospital]. We have to call the doctor and get a refusal. So instead of coming all the way down, we have our handheld. So then we have to switch channels.
Technology - Positives_about-with	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: handlehd radio] It's not heavy. I kind of like it. It's not heavy, it's not light. I can maneuver it in different positions. I could put it in my waist, lock it. I could put it in my jacket and seal it. We're not supposed to take it out of the holster, but if I need to in an emergency, take it out of my holster and use it. So I like it, it's convenient. It's really easy to use.
Technology - Positives_about-with	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: handheld radio] ...Under the subway station, there's no communication except for one channel and it's [local transportation authority] metro channel. But I'm not 100% sure if the alarm office has a channel to listen to us. But when I do get a call for the subway, I do let them know, "Main [dispatch], I will be switching to new metro [local transportation authority]." So at least they know that I'm--
Technology - Positives_about-with	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	So, what I do, when I get dispatched a call on my MDT, I looked at the time, the location, the incident. I'll look at if it's male, female, conscious and breathing. I look at most important information and that information will be there. The alarm office will have remarks on there depending on the caller. They also put on there, which is great, I'm glad they do that, it's called the [local PD} hashtag number. I know how to retrieve that number through my MDT. Down at the bottom, you're able to type in to send information. I'll type in that [local PD] number out to the alarm office and somehow, some way, it comes back to me with what the first 911 call was. What the call is from the call taker...
Technology - Positives_about-with	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Our cardiac monitors. We have Bluetooth modems, where we're able to communicate to the doctor at the hospital if we want him to see real time of our patient's cardiac rhythm. Say, "Hey doctor, can you look at this second-degree heart block? I'm going to send this out to you right now." So in my cardiac modem, I'll put in buttons, and I'll go scroll to the hospital, and I'll hit send, and that picture of the EKG gets to the doctor.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								It's pretty cool. I think that's cool. And it's real time. He'll get it right then in a matter of seconds. I think that's great.
Technology - Positives_about-with	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	So we do use pagers. Technically, they're our backup for call notification. They work pretty much when nothing else does, so that's why we've kept them. When the cellular networks are overrun-
Technology - Positives_about-with	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	And then we use mobile data, computers in the trucks. Those are connected to the CAD system. They have GPS and all the CAD call information that's coming in gets automatically pushed out to them. So as our comm medics are putting, "The patient is walking southbound on blah, blah, blah," they're seeing that real time come up on their screen. It has GPS, so not only can we see where they're at as they're out driving around, we can do live routing so it will actually route them through the street network to get to the call, but they can also see each other. They can see other agencies now, so that when they get assigned a call with the fire department and police department, they actually see all of those units on the screen.
Technology - Positives_about-with	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	...So we have a modem that's just for the MDCs that does it, and it's very secure. And pretty much nothing can get on that network except an MDC because it ties right back into CAD, which is also on a very secure network. We don't go out to the internet.
Technology - Positives_about-with	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	...But yes, from our data warehouse that information then spills over to the ePCR tablets. So they get address, phone number, call type, all of the times for when they get dispatched to go on scene. When everything is working the way it should and their ePCR is connected, they don't have to manually go in and put in an incident a number of times. Those all spill over and it stays. I think the interface stays active. I don't remember how long. There's a period of time that even after they've closed the call, if we go back and say they're on scene time isn't right, they should have been on scene at 2:00 and they didn't get put on scene until 3:00, we can go change that and they'll actually go adjust it. Note it that it was adjusted, but adjust it on their tablet, if we change a disposition or change an incident number.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	We look up medications, side effects, stuff like that. So, [crosstalk] some of the-- or even pill identification. There's a yellow oval pill with a square mark on that side and a 137 on the other. So, you can have that answer.
Technology - Positives_about-with	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	--our operating guidelines, our medical operating-- we call them our C-O-Gs or COGs. So our clinical operating guidelines, we actually have a platform where they're actually on our--
Technology - Positives_about-with	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	But on the flip side, the reason why I use the word technology is evil is because it's moving so fast. And that's good, because we want to be technologically advanced. And then we spoke to this earlier that our agency is very on the forefront of using the technology, and trying to see how we can make it more effective and efficient for the way we conduct our business and provide our services in our delivery model.
Technology - Positives_about-with	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	--multimedia stuff into the 911 center. There's some use for us, being able to look at a patient and do a visual assessment of someone. We could have some benefit there. But the real obvious benefit is law enforcement, and even fire, being able to-- if so
Technology - Positives_about-with	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	So if they experience a certain g-force downward or rotational or whatever, the light will start flashing and it's an indication. And they automatically-- once again, patient may say, "I'm fine." But if you've suffered x-number of g-force, then you need to be checked out, so.
Technology - Positives_about-with	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	...I mean, we've seen it through the years. I mean [crosstalk] the cardiac monitors that we have now. I mean they do all kinds-- the end title, the pulse ox, the EKG, the defibrillation, the cardioversion, the pacing.
Technology - Positives_about-with	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	...I think everything that's going on with Next Gen 911 is great. Some of it's going to be really useful. Some of it's probably not. For us, for what we're doing, I don't need pictures most of the time, but I can see where that's helpful. Yeah, I think interoperability, data sharing, just the healthcare network for us. Being able to track a patient from the time they call 911 until the time the first responder gets there with their patient tracking, until the time the ambulance gets there, we take them to the ER, they call a helicopter to fly them to another hospital, and to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have all of that be one seamless patient record.
Technology - Positives_about-with	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	But if you have the ability for-- take me to this medical facility and both of those skilled medical professionals can be in the back managing that patient.
Technology - Positives_about-with	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	So I came from a department that didn't have one. So you would literally use your phone as your routing device. So coming here to that-- and it updates every day. So if there's a new road, if there's constructions like that, it's all automatic. It's really cool because it also routes you now. It's another route. You've got a different way and you may know like, "Okay. Well, I can go this way. I know it's faster [laughter]." But it's really nice too because when you're zooming to a call, I can see when I'm on the way to the call how close my next unit is.
Technology - Positives_about-with	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	...And I love it because it's got a computer screen in it and I can literally diagnose the truck, what's going on from that computer screen. So it's super important like it tells you everything. I can control all my lights from there, everything. So it minimizes my movements in the truck, which saves time overall in a call. I don't have to hop out, start a generator on top of the truck, get back down. I can just hit on my truck, and I know, I see it come on, and I can go help my team.
Technology - Positives_about-with	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	The MDCs gotten better. A lot better. The updates come more often so you're not driving off in the middle of a field because it updates every day. So if there's new road put in, it reflects that.
Technology - Positives_about-with	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	So if I ever need anything-- I also have apps on my phone for medications, if someone doesn't know what they took, they have the pill, I can look it up and tell you what kind of pill they took.
Technology - Positives_about-with	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	You have to search it, but what it does is it'll explain to you the pill size, shape, color, or the marking on it, and it'll tell you. And it also breaks it down and tells you what it can do, what are your contraindications for it, what you may see, it's awesome. Awesome.
Technology - Positives_about-with	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	Exactly. Emergencies are time-sensitive. They're always time-sensitive, so that's huge. What other thing? I mean, I think the apps on the phone is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								huge. Like I said, the radios are huge. I mean, you can go down to technological advances like the queue on a truck used to be a windup queue, and now it's an electronic queue. So it doesn't get stuck. You know it's going to come on, it's not going to malfunction. So just stuff like that--
Technology - Positives_about-with	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	No. So it's actually attached to the buckle on there, and when I have my thing tight, I can't look at it right, so I have to keep one side a little loose. I thought that having both your hands-free was super beneficial because you know two hands are better than one [laughter]. So that was big. I know it wasn't big enough, but you would be able to see things and be like, "What is that?" And you'd be able to move over to it. You wouldn't be able to, "Oh, that's a body right there, but oh, it's something." So I thought that was awesome. I wish that they would kind of-- that would be bigger. Like I said, I think time is precious so the faster you can search-- we used to use the mentality of how long can you hold your breath for, because that's what we're dealing with. So taking that into account, you need to be fast. I think that's the only thing that I love-- so for me, I love physical activity. So I love being physical, forcing doors, stuff like that. So I would never want a tool to take that away.
Technology - Positives_about-with	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	Day by day, fire to fire, or EMS to fire, fire to EMS, EMS to EMS, those are relatively easy. We have a 800 megahertz digital system and so we can communicate pretty reliably... We can monitor each others' channels, so we can listen to police, which we do for calls.
Technology - Positives_about-with	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	We are lucky in this region that all of our counterparts in the kind of core of the national [inaudible] region have shared radio systems.
Technology - Positives_about-with	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	It can be detached by IT folks or the chiefs, but the providers, we can't. The one in the back, though, is much more lightweight, and it's actually a partial tablet. It unlocks, we take it into the scene, we document everything on it.
Technology - Positives_about-with	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	I carry my personal cell phone. I use it to look up-- it's very easy to get to the website that shows us hospital statuses. So I can look at it on my

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								phone very quickly on the way to a call, and I'm not driving to the call so I'm sitting next door.
Technology - Positives_about-with	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	Okay. Yeah, if we encounter a space we can't reach a repeater, it basically turns the radio into just like a \$20, off the shelf, walkie-talkie. And so it'll ping-- it'll transmit, based on its battery power, out to the radios that are nearby.
Technology - Positives_about-with	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	Applications, I would say, probably not. There is one application that downloads data from the cardiac monitor into-- if it's a cardiac arrest, it will download data from the LIFEPAK, which is a Physio Control product, into Physio Control software, and then convert it to a report about how well we did, doing compressions, medications, ventilations, all that stuff.
Technology - Positives_about-with	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	For EMS, they just need to decide, is this an advanced life support or a basic life support. And once they figure that out, the computer does it. It's also much easier to update us on the way than it is to rejigger an entire fire assignment.
Technology - Positives_about-with	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	They determine, yeah, and it falls into five or six categories of severity. They have, I think, 30-something different types of medical calls, and then they have some appendix-- can put determinates at the end that basically say, "It's abdominal pain, and we think it's abdominal aortic aneurysm." So those kinds of things they figure out through the computer.
Technology - Positives_about-with	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	It's the same model. My understanding is that they increased the temperature rating for the inside. So that it can-- [talking about a new radio]
Technology - Positives_about-with	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	--function. It's a little more heat resistant. But, yeah, the radios themselves just look cleaner. They're not any structurally different.
Technology - Positives_about-with	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	...If we're driving up [Street], which is normally not our response area, but there's a call for trouble breathing in a house two blocks away, we'll get it. Because the GPS system knows we're closer than the unit that is stationed up the road.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	...The system used to say, "Unknown rescue." But now it's figured out what the call type is and it's able to announce it. There have been the-- so the station alerting is a softer ramp up, to wake us up from sleep, but our old one was so bad for our hearts that it would wake everyone up and we would just be wired and ready to go. The new one wakes us up gradually and some people have been sleeping through it
Technology - Positives_about-with	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	That's part of the new system. During the day, it's not a big deal, we can hear the alerts. They're actually much nicer. But at night, we were used to just complete silence to really loud noise. Now, we're used to 25%, 50%, 100%.
Technology - Positives_about-with	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] And I worked for another service where they would give a tone out before they dispatched a call so that you didn't really have to pay attention to every single word that's being said on the radio because they're talking almost every minute of every day.
Technology - Positives_about-with	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] ... If we need a partner I was saying earlier, if we need police coverage, police assistance, if a person is getting very combative or whatever reason we would need, in an emergent sense, we would get on the police channel directly for the police district that we're in and ask for help that way. It just eliminates a couple of steps, and we call our dispatch who then has to transfer the call, and then it would be assigned people. Everybody that's listening to that district channel at that time hears us talk on it. So things happen much quicker.
Technology - Positives_about-with	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] Yeah. So we got new cardiac monitors. And now we're using, I guess, it's Bluetooth or Wi-Fi to upload our cardiac monitor scripts to what they describe as an equivalent of the cloud. And then command attaches those written scripts to our reports, our medical documents that we write for the patient. That's one change that I've seen in it. Then for health, that also happened at my last service when we moved to the life pack 15s there.
Technology - Positives_about-with	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] As far as the technology goes, apparently, the software is supposed to be a lot easier on the back end for billing and for pulling out specifics

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								in data. Of course, they always try to pitch it that it's going to be easier for us and user friendly. That's usually never the case. And then they're saying that the actual hardware itself is supposed to be more durable. Basically, everyone that I know, including my experience with tablets, has always been bad [laughter]. So I'm not thrilled about this change.
Technology - Positives_about-with	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] --are phenomenal. We beat the cred out of them. And generally speaking, they hold up pretty well. [talking about Toughbooks]
Technology - Positives_about-with	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] They are a remarkable, extremely expensive machine. They do what they're intended to pretty well. We're not doing crazy heavy web surfing. We're only writing scripts on them, and they do that pretty well. It's a fairly resilient software for what it is.
Technology - Positives_about-with	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] I love the fact that my keyboard is attached to my computer because it's a laptop. I worked on a tablet system before where the keyboard was separate. That was a nightmare. We broke keyboards like you wouldn't believe. Most of the times, the connection wouldn't work, and we had to manually tap, tap, tap, each letter on a tablet. And then they got rid of them and they went to the Toughbooks, which was wonderful, and I was so happy when I came to the service, and we also had them, so.
Technology - Positives_about-with	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] Some systems have a mapping software that's integrated with their CAD, their computer dispatch, and they will get a call, and it will pop up on their screen, and you can hit a couple places on the screen, and it's a GPS, and it will show you right how to get there. And that stuff works when it does.
Technology - Positives_about-with	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3]... Now I had a smartphone that I can use for that type of things. Certain things, I mean, I guess I would say my computer at home is faster than the computer I have at work. It's also less durable. I like amateur radio. I have a very, very good radio that I use when I'm out in the woods with my friends that would be useful potentially in the city, but it's just different. It's not quite the same construction as the radios that we use. We use a government commercial grade radio that's built to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								be durable and can handle the abuse of that type of work. I guess certain technologies, hard to really pick one or the other.
Technology - Positives_about-with	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] The system that I used to use, we could hit a button that put us at post. So dispatch knew when we arrived at our post. If we decided to go outside of post, we could hit a button that said, "In the area of post." And dispatch knew I was not at the exact intersection, but I was within that six-block radius. If I'm trying to go on scene, this happens all the time where the patient can see me pull up and the fire department can see me pull up, or maybe there's a bystander trying to flag me in because it's their emergency, and so they're the ones freaking out.
Technology - Positives_about-with	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] I can pull up my call notes in real time if the call taker is still on the phone with the reporting party during my entire response to the scene, sometimes new developments happen that are important that I would like to know. Well, dispatch and the call taker are two different people. So dispatch is not necessarily going to be reading all the call notes for the 15 calls that he has people responding to right now. So, if something interesting pops up, he doesn't know, so it doesn't get relayed to me.
Technology - Positives_about-with	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] It's plugged into a power cable to keep the battery charged, but the nice thing about it is that it's really portable.
Technology - Positives_about-with	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] Take it into the hospital with me. If I'm doing a refusal inside a patient's house, I can bring it in, have them sign directly on there instead of doing the paper. I can put it in the back of the ambulance. When I'm transporting to the hospital, I can work on my paperwork. And when I'm done with the call, I can bring it up front and continue working on it while I'm sitting up front.
Technology - Positives_about-with	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] Cops have those really nifty fingerprint scanner things [laughter], which are really cool. They were super excited when those rolled out about a year ago.
Technology - Positives_about-with	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] Right? I did like having a closed camera system from the front of the ambulance to the back, so I could watch my partner while I was driving in front. And that way, if anything got squirrely where he couldn't

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								communicate to me that he needed my help, I could just see it on the screen and pull over and go help him. It came in handy a couple times. It wasn't downloaded to any system.
Technology - Positives_about-with	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] There was an intercom system that once you hit it, you could just free talk between you and you could turn it off. And then there was a camera where you could watch what was going on in the back.
Technology - Positives_about-with	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	... But the Toughbook, it's a great system. It works. I mean, no issues.
Technology - Positives_about-with	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	It's very easy. Everything you need is on there. It's a drop-down box. You can click a button when you're done, and it'll actually let you know what you did not enter. It's great. It's foolproof, really.
Technology - Positives_about-with	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	No. I always think that-- I love the mind-set that change is always good. So truly the Toughbook alone, I was only using that other system for a little while and then we went to Toughbooks. I'd been in the-- working with the Toughbook for years now. So that hasn't changed much. It's improved. They've made add-ons to the system. They've made it better. The LifePad 15, it's a newer model for us. It's a better monitor.
Technology - Positives_about-with	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Right so our 2-way radios are fine right here in [name] but if you get I mean this county is huge and we're sort of right in the middle of it so at any given time like the call I went on earlier it's 15.5 miles to get there so you go 15.5 miles you're not reaching back and forth unless you're on the truck radio which is evidently a bigger radio I don't know much about them but it's more powerful, has a better antenna.
Technology - Positives_about-with	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	In most places yeah. There's a few places that that doesn't work but yeah it seems to work fine.
Technology - Positives_about-with	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Yeah that's coming through the radio but it's a based station radio here at the station so you're always going to hear it and it like I said we're so close to dispatch that it comes through on our portables here but not

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								way out.
Technology - Positives_about-with	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	On your portable radio. While you're in the truck you're going to hear most everything as long as you if you get in an outline area it gets harder.
Technology - Positives_about-with	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	It depends on what software you got on there. Some software's are real difficult to use. They're not at all user friendly. Some of them are very user friendly and but it's all you know a private enterprise deal where whoever's the cheapest price and whoever's direct their license the most that's what they do.
Technology - Positives_about-with	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	It was yes it was very user friendly. It was probably the easiest report to do. I mean I just want to tell you what's wrong with the patient. You know I don't want to have to go through and search things. I don't have time to do that so I just want to go through yes, yes, no, no narrative you know. If I can get my point across as simple as I can it's better for everybody because we can catch another call in five minutes and now we're two reports behind so then you run that report thinking oh man, what was that other guy, what was I going to say about him? I can't remember you know and now your report is down.
Technology - Positives_about-with	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	... Computer does take longer because you have to wait for the thing to load, you got to wait for it to fax but it does a lot I can do a lot more fairly easily than before where somebody else would have to look at my report, fax it, put it in for billing and now I can with a push of a couple of buttons I can do all that so it saves that person other job basically.
Technology - Positives_about-with	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	It communicates with our computers on the trucks, tells us the times, it's easy. Just press one button everything syncs. It gets more interesting out here when you have to you don't have any computers on the trucks you just have you know it's just your normal driving. Also on the other side of that you got when your computer doesn't work.
Technology - Positives_about-with	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	Yes. Because it's the same they keep records of every patient you come in contact with so once they're entered into the system they're going to be there for however long and even if you go to that same patient and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								let's say they're unresponsive I may have never seen that patient before but someone else here may have went to them several times before and they've entered in all of their medical history, what they're allergic to so if I can get a name first and last name and enter it into the system and then it pulls up everything and then I can go in and read oh wow, they're allergic to this so I can't give it because I don't have a patient to talk to me or a family member to talk to me so it's lots of benefits
Technology - Positives_about-with	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: navigation via Active 911] Paper map book. Yeah. I could just pull out my phone. It pops up right here. I can just click on it. Click on the address, and I said, "Hey. Take the next left." ... So that was definitely a perk. I use that all the time.
Technology - Positives_about-with	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	It stands for Automatic Vehicle Location? Right [laughter]. Yeah, okay. So we'll go with that. That sounds right [laughter]. Yeah. I think you're right. So yeah, the AVL is pretty good. It's fairly reliable and the objective with that is to get the help there as soon as possible. So if we're out getting lunch in an hour, and we're getting lunch up the street, we're two miles north of here...
Technology - Positives_about-with	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: AVL] ...So a perfect example is we went to a house or a building fire with entrapment two Fridays ago in, I guess it was [City], where we know for a fact that [City]'s rescue squad is due there before us. But we were on the air. And so that one minute advantage got us there. And we were there pretty quickly. And I think the computer was right that we would have beat [City] there. But six months ago, they wouldn't have put us on that call.
Technology - Positives_about-with	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: AVL] And they might have taken an additional minute to get there. So that's not a kink. That's actually an example of how it worked out. Because that's pretty concrete where we were definitely not supposed to be there. But we went and it actually made sense.
Technology - Positives_about-with	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: info via MDC] You have to click on the incident information...tablet or tab on it. But it's pretty user-friendly. So...as long as you know that that feature exists, you can find it pretty easily... you can get additional

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								information that maybe the dispatcher missed.
Technology - Positives_about-with	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	There is an app that already exists that our county doesn't use where you can actually listen to the radio on the app... so if I'm sitting right here, and I see that they put out a vehicle overturned 10 miles from here, I can just swipe on it and pull it up. And I can listen to the communication on my phone. The thing that the county has done that's pretty good is that now they also changed, with that new dispatch system, they changed what we listen to in quarters.
Technology - Positives_about-with	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So I guess not in this room, but in most of the rooms, there's a scanner too. So you would hear any relevant transmissions over that scanner as well. So that's a new thing. In the past, it was just Alpha, which is the main dispatch channel. You didn't have any of the operations channels. But now you do. So that's actually a really good feature that they just put in too. So I think they put a lot of work into this whole new thing, and it's definitely addressed a lot of the problems or wishlist items. But I do like that, that PulsePoint app is what it's called, where you can hear these things going out and listen to the call.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So we have a technology, it's called LifeSize... And what that allows us to do is, you have a TV screen, and every station, basically, is on camera. And we'll go through each of the stations. They can tell us what they're doing for the day, any trainings. If they're going to be in service, out of service. And then we also use that for critiques. Where before, we'd meet at one central location, and we'd talk about an incident, whether it's fire, a large incident, EMS, mass casualty. So now what that has allowed us to do is stay in our primary area. So if we get a call, our response time is a lot less...
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	he works on a really neat program that actually lays out where our call volumes happen, what time that they happen... He can actually show you a density map that shows the densities of our calls. He can show you the unit hour utilization. So that's the time that we actually spend on a call. So from dispatch until checked back in service, they track the times that we're busy and the times that we're not. And then that helps

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								position fire apparatus, helps position ambulances, so that we can be at the right place at the right time by statistical data. And then, also, where to put our next firehouses and things like that, so... It helps for funding, and it helps for grant money.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...So you can get these hot and cold zones. You can get the hours that are more busier than others. And then you can even-- in Colorado, we can break it out into season because we can see that-- during colder months, we get more CO calls. We get more things of that nature. During the summer is when we get the outside broken arms, broken legs... all that adventure rafting and stuff. So it's interesting when you really start to look at the data. The things that we knew in the past just by experience and rumor, now we can actually see a true example of what's going on.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Gmail's an interesting thing, because at a firehouse you can move, and you can go to different places. And so when everything lived in Gmail, it lived in the cloud, which was really nice because you could go to the firehouse, and you've got access anywhere. Outlook and Microsoft products are a 50/50 split between the cloud and a desktop. And so if you're not on the particular desktop that it worked really, really great at, they have a really terrible user interface for their web version of anything. And so we made the transition for, I think, the wrong reasons, but it's been a hard lesson here in the fire department.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: in-house IT department] ...And then just one of our programmers-- or, not our programmers. One of our latest IT guys does a lot of building forms and sheets for us now, which is kind of a new technology that's started to come out. And we're using that more as a patch to fill the need to track some of our data in a very simple form because when you build a form, it just dumps it into a spreadsheet. And so it gives us at least something, but it's not a great something because you still have a lot of back-end work with the spread sheets. You have to stop the form every year and start it on a new spreadsheet, or you end up with this giant data set... And then how do you break up the original sheet into

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								useable data? And then it's just a sheet, so it doesn't talk with all the other sheets, so.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	It's a computer. We call her Susie. And the computer will come out and say, "Medic 51, respond," and whatever situation. Gives you the address. Right? And then our dispatch comes on, and it'll tell us what the call is. So it'd be a 17 Alpha 1 or whatever. And then you check in. So that and the screen - it's all touch screen in the front of the fire truck - it basically shows you a map of where you're going, shows you your hydrant locations. It'll show you all of the rest of the department, if they're on any calls so you know if you need to specialize in, maybe our heavy rescue, and they're on a call [if they're not?] available, so.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So it's definitely evolving. The technology's gotten better. But between the computers, the radios, they're constantly changing. We still have, with the radios, we have dead spots. It's a big concern. So [when you?] get inside of a building, you have no communication. We don't carry our cell phones in fires, obviously. Now, we have is a voice amp. So when you have a mask over your face and it's muzzled, now you can actually communicate, and you're a little bit more clear and precise. And we can hear each other. The problem with that is you're going to be getting some feedback on your radio, based on how loud you have your radio up. So there are definitely pros and cons...
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...With our masks now, you can-- we call it what? A heads-up display. Tells us where our air level is and how much air we have left and when need to get out. Then we have vibe alerts, where basically it starts to tell us, depending on where our air level is, they need to start going out. So technology's definitely changing in our advantage...
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We have-- we call it TIC camera, thermal imaging camera... Where before, we'd tear this whole wall out, and now we can pretty much isolate certain areas and move it a little bit more beyond that...
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	We have our radios, which, like [Name] was talking about, we've gone from a VHF, when we were in the low frequency. We've gone into a UHF,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								which started some of our communication problems because we used to have a longer range. And it was actually a longer-- it was a lower lower frequency which got out of buildings better. But when they've gone to a completely digital system now, it's clear, but it's also a shorter length that it can transmit. And it's also susceptible to more interference.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	And so when they first did the system, we had a lot of interference because of cellular, because we're moving closer to cellular bandwidth. We had a lot of bleed-over from a cell tower. And they brought out a company that did monitoring around the entire city for about a year and try to find all the cellular bleed-over. And it was actually a digital system that was between two points. And I don't know the exact information. [Name] may be able to tell you. But it basically sounded like it was sending a Morse code between two points. And depending on the weather and other things like that that affect radio signals, we would get the beeping of the Morse code, the dee-dee-dee-dee-dee-dee through our system. Or it would either just be this low-tone static through our system that was just bleeding over because the bandwidth has become so used. Or not the bandwidth, but the radio waves had become so used that it's just saturated. But it's gotten really cool, because when we were in the other radios, we couldn't talk to anybody. Now we have the ability that every one of our radios has FERN on it. Everyone of our radios has-- that's the Fire Radio Network.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yep. And then we also have green channels now, which are EMS channels. And then we have blue channels, which are police. And silver, which are the feds. And so all of our radios now have that. And all of our radios can connect to these networks, which is really cool when you're starting to work with other places. But you get one thing, and you're starting to lose something else. And the other thing that we lost was just the distance and how well the other radio used to work. And so they're doing things now to fix it. In the city, there's a new push to do an amplifier into large buildings. And so it's just a based repeater that they

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								actually would have to install in new construction. But that doesn't--
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: [Name] that's MIL-SPEC] so we've only ordered one truck like that. It is something that I think is a neat concept, but if they could tailor it more towards the fire service or just be more upfront that... probably have to do this... Then it would be adapted a little bit better, I think.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. Everybody has a smart phone, for the most part. And then, that's what's funny is when we show up, a lot of guys use their cell phones for particular things. On the hazmat, we use our smartphones to access the Internet. There's a lot of apps that we're building.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Google translate works pretty well for language translation...
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: AskRail app] AskRail is actually run through the railroad companies. So you can actually type in the UN number of the railcar, and it'll tell you what's in there. Now, they've added another update. It'll show you the whole train consist. And so we can know what's five cars before it or five cars after it.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...Having the Internet so available for hazmat calls and stuff like that is actually really great. Because on our hazmat truck, we do the research side of things. That's what our primary goal is on hazmat [forward?]. And we had a whole bank of books, and that's where we did all of our research. So from the ERG, the emergency response guide that comes from DOT, to the CHRIS manual, which comes from the navy, I think... It comes from one of the armed services. And then we had just chemical dictionaries, things like that. Now you can just type it in and everything gets queried for you...
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...And we've actually just got a new program from the county, which is kind of an-- it's an interesting concept. They pay a ton of money to a company and they gather all of this free data and put it into one piece of software. And so you type in ammonia, and it brings up the ERG. It brings up the NIOSH Pocket Guide book. It brings up all of these free pieces of information but it's all together. It's called PEAC Software.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								PEAC-WMD made by AristaTek. That's out of Gillette, Wyoming. So it's really cool, but it's unfortunate that it's that expensive. So it is kind of cost prohibitive for other places to probably purchase...
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...But to have all that information in one piece of software that once you click on Ammonia, it just gives you a bunch of tabs. And you just click on every one of the tabs, and you can get all the information, so. That used to take half an hour to pull up all of these books to find that one particular product... And now, it's all there in one place, so.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Another good thing with that PEAC software is you can type in an address, it'll tell you the chemical. Not everybody participates. Again, back to certain jurisdictions...
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. Like [Name] said, the one thing I think is neat about it is there's Tier II reporting, which is mandatory reporting. PEAC is a little bit behind, but they'll take our Tier II reports, which should be digital, but aren't always, and if they're in a digital format, they'll actually load it into the software, and then flag the address.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. And then that's one of the other technologies that's kind of neat is our Tier II reporting used to all be paper. And it used to actually sit in a box underneath the captain's desk, and that's where it lived. And now, the Tier II reporting is in PEAC. So things are getting there. Things are getting a lot better in forms of communication, access to the technologies, access to the data. But it's moving slower than the world, I think. It's the politics and the... how fast government works to make the change...
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	I know we do-- we use the red channels a lot... Because of the hazmat and because of the rescue. So we go to a lot of other jurisdictions because of that. And then [City] decided to split their-- or [State] split the state into four quadrants... So we have red northwest, red northeast, and then so on and so forth. And then they actually used I-25 and I-70 as their kind of boundary because it actually works as a perfect square through the state. And so that's been pretty neat around here. And then

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the fact that, up until we went to the digital radio, we couldn't talk to our neighbors. And so that's helped a lot... And now you can just switch the channel and get there.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: prams/automated stretchers] I think that's huge. I mean, just the amount of injuries that that prevents. It's worth it... . I mean, you could lift up an 80-pound person and just lift her on and hurt your back. But it's just that there's a cost affiliated with that. And we're gradually getting there...
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We had an RMS from ZOLL, which was neat because it integrated with our monitor. So they could actually download all the information that was in the monitor instead of-- in the past, when we had the LifePaks, you would turn it off or do a summary, and then all the information was gone. And all you had was the printout of the summary. Now you can actually hit Download, and it downloads anytime that there's a change or event that happens, they're recorded on the monitor, which is really cool...
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	We're moving to a new RMS on [Date]. It's not made by ZOLL. So the interface is there, and it works pretty well. We've seen it now in training twice. But the idea now is, is this new RMS will actually integrate with the hospitals. So the hospitals can see all of our data now, and we can also see the outcome of the patient. And so that's really cool.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...the thing that is here, at least in the metro areas - and this is from the manufacturer of the new RMS - that it just so happens that the [City] metro area has the largest integration into this one particular program. So where we're at, out at the hospitals-- what'd they say? Six of the eight? Six of the eight hospitals that we commonly transport to are going to this new RMS program... And we're in that RMS program. So it just happens that it's working out now... That wasn't planned... That's a happy coincidence...
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	That's a happy coincidence. So that's some of the neat things that are happening with EMS. I know all the monitors now have the ability to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								send the EKG to a hospital. But it's just the receiving hospital has to have the right technology to receive it... And somebody looking at it. We're getting there. One of the hospitals we go to, they're only a trauma... so they don't have a doctor on staff for strokes at night. But they do have this little robot that drives around. And then it's got the camera, and it has a screen. And the doctor can actually drive it around, move up, move down.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: sending EKG strip] ...it will be neat if you could attach all of that, and then somehow send it. And they can just say, "Okay, received. And go to room five when you get here." Now when you show up there's a big, giant TV on the side of the entry door in the EMS lounge and it says [City] Fire, kind of a little brief description of what the nurse or the receiving nurse reported, and then the room that you're supposed to go to...
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	--so you don't have to put one of us in harm's way. I'd work on the meters and stuff like that, as well, and so. That's one of the things that's come out is we have the meters work over radio frequencies now... So we can actually take a monitor-- we have to physically take it. But we take a monitor, and you can actually leave it inside of a structure. You can leave it around a facility, and then we can actually monitor that remotely... So it's one of the things-- it's cool, but that's on another piece of software that doesn't talk with anything else. But it is cool. It's neat. It's neat where technology's going.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: NG 911] So it's neat. I think it's giving a lot of-- there's a lot of ways to get information to a dispatcher to be able to get people en route to a call. Some of the texting and some of that, when you're getting away from the phone call, it's difficult to be able to gather the needed information to get the right truck to the right call, which is one of the biggest problems. It's being able to ask the right questions, being able to get the right answers. You're dealing with people that are... really distraught. They're really worked up. And you're trying to have them come up with a good answer, I guess, is the best way-- I don't know. You're trying to get them to think and to say the right things. You're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								trying not to be leading, because once you start being leading, then you start getting misinformation. So the text thing I think is neat, but it doesn't give you that rapid communication where you can get all the information. But at least it's another means to get people there...
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	The CAD that they have now, now that we're doing closest dispatch-- so the CAD monitors via GPS, which apparatus is where. It's actually creating shorter response times, because we're getting apparatus that are driving between the station and another firehouse, or the station and a store. So they're at a position, but they're still in better position for the call, which I think it's a lot better for everybody. So that's neat...
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...we're going to a regional dispatch center next June or July. So that'll help in halving the transfers. You'll just be transferred in house by primary dispatcher to maybe somebody that specializes in fire EMS, because they can ask the particular questions. Because we do EMD. We also do the EMD for fire. So they have all the cards, and they'll ask the particular questions to be able to get the information that they need. And it's helped. It's helped a lot on the streets...
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...When I first started and we were just on the streets, you would just get an address, very generic information. Now we actually get pretty specific information. So age, gender, hopefully a good idea of what kind of ailment they have or how big the fire is. The dispatchers now have a very regiment set of questions to ask, which it was just more of kind of conversationalist and trying to get what you could out of them. But when you start to ask those questions, you can then determine whether the apparatus needs to go emergent or non-emergent. And that puts a lot less strain on the system. It puts a lot less strain on the citizens because you're not going lights and siren and tearing through a city when it's just a car fire...
Technology - Positives_about-with	FF	S	Manager	46-55	21-30	Male	FF-S-023	So we have to use-- currently we have, just on an incident we have three systems that capture data for us. That's our dispatch system, our CAD, computer-aided dispatch. We have an infer system. Which is just as the in-first reports. And we have a PCR System, a patient contact report

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								system. In our current system, none of them talk. Well, that's not quite true. Times get pushed out from the CAD to all these other systems. But to analyze that data I have to download those three data sets and have to figure out some commonality between them because they don't have the same common numbering system. So I have to download it from an off-site server, which is our CAD, and two SQL databases...
Technology - Positives_about-with	FF	S	Manager	46-55	21-30	Male	FF-S-023	So when I first started we had UHF and VHF radio. So the 100 and 400 frequency radios. The 100 stuff we still use for aviation and I think wildland is still 100. So it's the VHF stuff. Those radios were pretty much radios. They were crystals. You'd tune it in and you had only a select number of channels you could get to. They were highly reliable and they had good penetration out of buildings. You didn't have to have as much infrastructure. You didn't have to have as many radios on repeaters and all that stuff in the area because they had a little bit more power, UHF is slower wave. One of the reasons wildland hasn't gone to any of the 800 or anything like that is because you don't have repeaters and you don't have-- and that 100 level radio that we have is actually much longer distance. It's still line of sight but it goes a little bit over the horizon I kind of thing.
Technology - Positives_about-with	FF	S	Manager	46-55	21-30	Male	FF-S-023	[RE: 100 frequency radios] ...We carry those on our apparatus... The 100. Initially, we got them just as a backup in case our systems all failed or if we got a mutual aid out of the district for a wildland event. But they're there. They rarely get used if ever get used because we haven't had any failures.
Technology - Positives_about-with	FF	S	Manager	46-55	21-30	Male	FF-S-023	Yes. So, over the last several years, we've gone through a couple generations of these radios. We're now on the most recent generation, and we've added some towers. We've added some computer capacity and some communication between computers and stuff. So it's pretty reliable, but we still have a lot of weird dead spaces. Valleys where [City]'s radio can out broadcast our radios, and all of a sudden we can't talk. However, the interoperability of those radios is remarkable. I can put 15, 20 banks and have a bunch of different talk groups in each bank.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								In the past, we'd have to pick a couple of fire agencies that we wanted to talk to, and then we would tune that in to our 400s. Right now, I have [City] PD, [City] PD; I can talk to the state PD. I can talk to [City], [City]. Anybody in the area, I can talk to on their channels or we can code to a common channel...
Technology - Positives_about-with	FF	S	Manager	46-55	21-30	Male	FF-S-023	[RE: radio systems] ...So the interoperability of that information, or getting that stuff, theoretically, is awesome. It requires a lot of programming and a lot of coordination, and that fails, occasionally. So there's pretty much the state system. [City] has a system. [City] has a system. A couple of the counties have a different system, and if those don't coordinate how that technology talks - even though in theory it would work really well - when I change the channel, or change my tuner, or whatever, and I try to talk to them, it's not working, because it can't recognize that computer. It can't recognize that thing. So in our state system, since we're all our own individual communities, it takes a lot of coordination, a lot of people talking at a lot of levels. There's a good part of that. That means we're all talking. There's a bad part of that, a lot of errors.
Technology - Positives_about-with	FF	S	Manager	46-55	21-30	Male	FF-S-023	...at that time-- now this has changed, but at that time what happened is two more fire fighters went into the exposure building that was catching on fire, did a quick search but while they were upstairs it blow up on them. A lot of fire came down to the floor. Our more senior fire fighter says, "We got to go," ran outside. Well, he's fine at that point. Turns back and his partner wasn't with him. So he goes back in. Tries to call for a mayday, but his radio melted through. So he grabs his partner who was getting melted to the floor which is part of this too, so he grabs his partner bodily and it's kind of humorous because [Name], who's the hero here, he's only about yay high. He's a very small troll-looking dude, very, very strong. So he pitches out this guy that's taller than I am out the door. During that when his radio melted through, one of their two radios did an emergency broadcast and set off alarms. Well, [City]PD at the time just silenced those alarms and didn't tell anybody. So that was

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								information that you might have helped [laughter]. Now, we fixed this, but there are other agencies that are of dealing with that I'm positive...
Technology - Positives_about-with	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	SME S2: It's better. So we recently, is it the last two years, we switched radio systems? We went to a new... So about a year ago. So our communications prior to this switch to Motorola, we had a freestanding MACOM system. We could talk on a Mutual Aid, kind of regional-- are they the first net, the Reds? SME S3: No, no, no, just we are in the state's DTR system. They have designated specific interoperability talk-groups that all systems are programmed with. SME S2: So we'd go to this interoperable talk-group, [Name], a regional channel. And we would use that for all Mutual Aid calls. Sometimes it works, sometimes it doesn't. It really wasn't meant for us to run large-scale operations on, and we were, and sometimes you could have multiple events going on. Our radio system, because it was freestanding, didn't really interact with anybody else's and the range on it wasn't very good, once you got outside our four antennas really. So then, last year, we switched up radio systems, so now I have banks over the state channels. Is that correct?
Technology - Positives_about-with	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So we have the state channels now and on my banks of state channels, I have the ability, when we run with [City] Fire, I can go to their channels, their operating channels. When I operate with [City] Metro, I can go to their channels. When I head out east, I can patch together. I can have our channels patched to their channels and we can talk. Our biggest problem right now is we're waiting for one of the departments to absorb the other department. And when they do, then we will go-- right now, we're still using Red [City]. We're not using each other's channels because of these multiple comm centers that are involved. Once [City] Metro takes [City] and absorbs them in, they'll be one comm center. And we will then start going to a policy that states whoever dispatches the call, as a Mutual Aid or a dual jurisdiction call, will have oversight and we'll use that channel and we'll be able to switch over and start using each other's channels and talk on their talk groups. That'll make our lives way easier.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	I think really good. We work very closely with a similar size or smaller departments. We have a good working relationship with [City] Fire, but they're big city fire department, with a lot of big city calls, a lot of issues going on. We have some border calls that we work together. We don't do a lot of aid back and forth to each other. But I would say, otherwise, and especially now that we've improved the radio systems, that's made it even better. I think as our technology opportunities change, if we get to a point where our CADs are talking to each other, we could look at some-- we have some areas where dual responses, coordinated responses would work out really well for us. But it takes some time for us to have the comm center, notify a comm center, and then they process it. A call gets shipped out, and there seems to be some delay. Whether it's a training issue or a technology issue, not super sure yet because we haven't pushed that far into saying, "Yes, we're going to run dual responses together." But I think there's some opportunities in the future as money gets tighter, and that you just can't build fire houses wherever you want anymore. You have to figure out how can we work together to cover areas on the fringes of your protection area. So I think there's some opportunities in the future. It's just, okay, how do we work through that?
Technology - Positives_about-with	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	That beeping you heard is probably one of them texting me. So there is a tremendous amount of texting communication throughout the day. If it justifies more than texting, then we move to phone call. And if it's more than a phone call, then we move to a face to face meeting. A lot of texting back and forth all the time. So we do a lot of communication by cell phone, a lot of emails go out. I try to do when there's a lot via email or I'll just a cluster, push it out just because it's effective and I can show, yes, I did send you an email and here it is and it went out. So those are really my main ways of communicating with them.
Technology - Positives_about-with	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...a lot of times our chiefs only look at the internal resources and I'm lucky, after I left Arson, I went to training. I built a lot of relationships with the neighbors. I know what resources they have so I know how to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								use those chess pieces too. Some of the chiefs have that awareness and some are just-- all of them are very well aware of what's going on in our city, it's just what else can you do? The move up module is going to be huge for us, so.
Technology - Positives_about-with	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: communication with LE] So they'll request entry. We can communicate on this. So we recently had a SWAT activation for a guy who had some hostages. So we had an in-sync commander who will do unified command post. And then, we'll listen to whatever PD channel they're on. And then, we'll operate on our own fire channels with our fire person. We usually only have the in-sync commander go to the PD channel because they really don't want us talking on their channels if we can help it. But we have access to all their channels. And within the last year, they've added our channels onto their supervisors radio. So they can come up on our channels now to-- up until a year ago, they didn't have that access. They didn't want it. All of the sudden, something happened where they couldn't get a hold of us and they realized they really wanted it and they've got to add it on to their radios.
Technology - Positives_about-with	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	The new radios where we have the ability to have our radio system and the state system-- so most of the, I think-- I'd love to give you an accurate number. There's probably 10 free-standing agencies that have their own radio systems. And everybody else is on the state system. For us to have access to the state system makes it nice because we occasionally will go out as a strike team. So five departments with five-like resources will go to an area as a strike team. And to now have radios where we can communicate or we can go to state interoperability channel and operate is fantastic. We didn't have that ability before. So it's really cool. The new radios are really nice.
Technology - Positives_about-with	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...So now having it where we can move to somebody else's tactical or fire ground channels, just makes it so much easier. Now we can communicate. I had no way to communicate other than red north east with the departments up north. And now I have multiple state channels that I can go to the top right on. So it just makes my life easier as an

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								incident commander.
Technology - Positives_about-with	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...Cell phones have made life better and life worse because I get text messages 24/7, whether I'm at work or not. And the belief is they know you're going to see it so they expect that you're going to answer it...
Technology - Positives_about-with	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: using smart phones] Specifically for us with the HAZMAT stuff, a lot of that stuff you can download apps now. So it eliminates us using the computers in the truck because we can just do it on our cell phones.
Technology - Positives_about-with	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: PulsePoint app] And we can listen to other departments if we wanted to.
Technology - Positives_about-with	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: MDT] But I think it's been pretty bulletproof, I think. It's rare. We still have a paper map book in back. I bet it's been over a year since I've had to look anything up just because it's-- yeah.
Technology - Positives_about-with	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So we do have voice amplifiers on the side of our mask, so face to face communication is a lot better.
Technology - Positives_about-with	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...But so far, it's pretty descent. I mean, there are challenges, of course, talking with the Forest Service, totally different radio system. We have totally different [units?]. And honestly, our radio system is far superior than the Forest Service's, so it's like when you go back a couple of decades in quality. It's sometimes hard to talk to them and hear them. So that's a challenge, talking to these [inaudible] in the states...
Technology - Positives_about-with	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	There's more mechanism, but then there's that challenge. Right now, you have so much communication, and it's branched out that there's no consistency that now you're almost overcommunicating with people, and there's that app problem. We have so many different things that now you can't-- which one are you carrying? I can only carry so much stuff. I can only answer so much stuff. So now there's this distraction.
Technology - Positives_about-with	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	50-50 thing. Is it a tool or a weapon? But at the same time, that cop receiving a picture-- here is the suspect of the active shooter that just went to your school. How valuable would that be to every cop that was on duty that day?

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: radio] I think this thing is an awesome tool... 50% bad, 50% good...
Technology - Positives_about-with	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...Recently, the police department and the fire department and the sheriff's department took our radios and we made them all the same so that we can-- where police has their main channels and we have ours, fire can now access police channels and police can access fire. So incident commanders can actually-- we can actually talk significantly easier now because of the way our radio channels and our trunk [inaudible] is set up.
Technology - Positives_about-with	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Tablet Command program] And so it's very intuitive. It's live, and it records everything just like all of our communications to dispatch. And the other piece is that you're getting this kind of Google Earth, top-down view of an incident, which is kind of nice. So not only do I get to see what my different-- my various resources, what they're doing and how they're doing it, but I can kind of have this overview map of exactly what my incident looks like from a bird's eye view. We're going to try to tie that in with a real-time feed instead of using Google Earth to utilize our drone to actually--
Technology - Positives_about-with	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Yeah. So that's kind of what the goal is, is to have Tablet Command interface with the drone. So let's say I show up, and I have the drone, and I'm flying the drone. The incident commander will be able to see... This is actually what you're seeing, and I could use-- it was yesterday or the day before, we had a pretty good working fire with a multifamily building that had a fire up in the attic. Well, now I could take the thermal imager, and I could actually show the chief, "Hey, here's where all your fire is. Direct the crews to go over there and cut a hole right there." So that has a lot of application... Yeah. The drones that we'll be using, they'll have the TIC mounted to the drone.
Technology - Positives_about-with	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So what we did was we were able to get our technology services division within the city who are our tech people. They dedicated a couple of people and about a year and a half of time to develop what we call a-- what is it called? It's not WebEOC. It's Situational 360 or something like

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that. I'm not quite sure what it's called. And this tool allows you to see everything that's going on in the city. So every event is put in there. You can click on a map and it'll show you, "Hey, the [Name] are playing a baseball game today. Here's a point of contact. Here's where the event is." Is there alcohol being-- one of the things we thought was important, is alcohol being served there? ...
Technology - Positives_about-with	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Really, I mean, just from a basic level, when I first came on, only the chief and the company officers would have a radio. Now, everybody has a radio. Everybody also has a voice amplifier that's hooked up to the face piece that allows us to communicate face-to-face easier. While I'm talking like this [laughter] I now have the voice amplifier which makes communicating face-to-face easier in a-- what we call an IDLH environment. So--
Technology - Positives_about-with	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So now instead of the company officer calling dispatch to call the ambulance which is essentially a different company, a different entity, the firefighter can call the ambulance.
Technology - Positives_about-with	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...we currently use iPads for inspections, which has really significantly increased our ability to-- like any technology tool, we've had some glitches with it, but I think, overall, it's helped us.
Technology - Positives_about-with	FF	U	Manager	46-55	11-20	Male	FF-U-021	...At any significant incident, any type of fire, we get paged on 24 hours a day 7 days a week as well. So that's some of the technology we use as far as the pagers. And then obviously, face-to-face communication, phone communication, email communication, texts. And that's really about it as far as that type of communications are concerned. Probably the most utilized, I'd have to say, would be email. Probably, roughly 75 to 125 emails a day, back and forth. It's quick, it's effective. Text, very quick and effective as well. Less and less phone conversation.
Technology - Positives_about-with	FF	U	Manager	46-55	11-20	Male	FF-U-021	I've got an iPad that I can link in from home. So I can just log on to my computer from home see if I need to look at any files or folders on my computer things of that nature. So it's good and bad, it's good because it's convenient, but it's bad that you never get away from work.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	FF	U	Manager	46-55	11-20	Male	FF-U-021	[RE: TICs] Those are, to me, they're paramount for not only fire scenes but for propane leaks, a lot of different things so it really picks up good heat signatures. So it helps if you have something involving a grill car with chemicals, ammonias, anything like that. So those are very helpful. Obviously they make a big difference when searching in hazardous conditions, trying to locate victims and get them out...
Technology - Positives_about-with	FF	U	Manager	46-55	11-20	Male	FF-U-021	[RE: communications technology] Yeah, so things are getting better. I mean, there's a lot of stuff out there.
Technology - Positives_about-with	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Yes, Evenza Maps is pretty awesome. You can go in, and basically individuals will create maps. And then they can then make them available, so some of them cost money. Some of them are free. [Organization] has all of their maps on there. So you go in and pick a region. You download the maps you want. The other cool thing about Evenza Maps is for crews that are deployed to, say, a wildfire anywhere in the country, the incident command team can send those maps to the people's phones of the area they're working, and so they can interact with those maps. It's pretty awesome.
Technology - Positives_about-with	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Well it's finally robust enough that other repeaters will take over for that. But there are probably some spots in East [City] that were not covered. The [Name] Pass is tough. Highway [Highway] is really tough going to [City]. So it's gotten better, but that's one of the tough ones. And we had to switch to MAC channels so that we can talk to state patrol. They're not even on the same system as us.
Technology - Positives_about-with	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Oh, yes. I mean, yeah. We've got TICs. Our equipment is very well taken care of, very new. We're on replacement schedules now.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: specialized apps] Yeah, there are apps out there that will do that. You may or may not have to have them tied in to some meta database or information pertinent to your area. But, yeah, this is the cool thing about technology, right? You create this capability and then some firefighter or police officer somewhere is like, "You know what? This would be nice

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								information to have," and create the app and stuff.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: communication with LE] That they don't. What we have found since September 11th, is that after September 11th, public safety put out the word that, "Hey, we need a lot of help with this." And in short order, we got a lot of technological support. So there are the little black boxes or apps or software. You can pretty much make anybody talk to anybody. So that was part of it...
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: communication with other jurisdictions] So it really depends. Our first choice throughout the whole region, and again, pretty big region, is using the radio systems. The reason we like the radio systems, excuse me, is because we built those and the reliability is incredibly high. And they'll work when a lot of these other systems don't. Day to day, there's the cellular device where I can just call them. Or even the wired, the landline stuff. We have a pretty robust satellite network in this area.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: communication with other jurisdictions] So if all that other stuff fails, we have, like I said, a pretty good satellite-backed call so that we can at least talk from command centers to each other, in that regard. The technology that I see most of the guys and gals using every day is like the text messaging and stuff. So that seems to be the biggest one.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...The radio system, the current radio system is, I'm not going to say bomb proof, but pretty darn near. Very robust system. They've got a lot of the bugs worked out of that. And so it's very convenient system to use for a lot of our communications, disaster or otherwise. The cellular stuff that we have is good. And again, that's what most people use most of the time because of its convenience. But here in this region, we've experienced where saturation has caused problems even talking to our own devices. So we have the personal cells, but every apparatus has a modem in there. We have mobile computing platforms.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: NG 911] I see a lot of pros and cons with that. There's the potential that you might get good stuff or that you can communicate that stuff, as far as showing a receiving emergency room doctor a picture of the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								crash, or the 911 center getting a picture of the crash, then you can gauge the level of response that would be appropriate to send to that...
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: psychological effects of NG 911] I think it'll only help. I think that'll only help... maybe it's because they're uniform dispatchers and they've seen some of this stuff. But I think the big problem that they have right now is not being able to see or not be able to know and gauge what the level of response is or anything like that.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So, I mean, we all studied the whole communications model in undergrad, right, as far as sender, receiver, feedback, message, content, and all of that. Those are where the breakdowns are, right? I mean the technology's there. Again, after September 11th, you literally get almost any device to talk to any other device. But coming back to our communications model as far as the people, if you're not willing to receive a message for whatever bias, or if the feedback loop is not there, you may send the message to me and either-- so our city has-- when we put out voters' pamphlets or something like that, I think they publish them in 32 different languages. So the message may be coming, but [laughter] if it's in a language that I-- I can't even recognize what language it is, let alone pick out some of the important words or something like that, that's a breakdown in communications, right? Again, an important one...
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	Well, communication for us has been a major player when things go wrong. That's normally one of the-- probably the main, I would say, most common denominator of anything that's gone wrong in the fire service is the communication breakdown. So we use radios. The radios that we use are fairly good. Where it comes into issues with communication is when you're actually interior and you're actively doing something, and being able to communicate what's happening or what you're doing may not be as easy as it may seem. So plus talking through a face piece and into a radio mic, the clarity isn't the greatest.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	Well, a few things have changed with communication is that everyone has a radio now versus when I first came on, there was minimal radios,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								so not everyone had a radio. So a lot of things were based on face-to-face communication or they were based on an officer-directed communication. He would get information from the outside and then relay that to the members inside who didn't have radios. So there was a lot of face-to-face, but now everybody has radios. So that's one change with communication, which has certainly helped tremendously...
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...I think maybe different improvements in radio function or capabilities have changed. Radios we used to have years ago just didn't have the transmittable capabilities, didn't have as many channel selections. And they weren't really high-tech radios. They were very basic, which is okay too. But I think the level of high frequency versus very high frequency and those kind of things, the capabilities of radios have changed. But I think that our biggest change, just in fire ground operations, is that now everybody has a radio, and I think that has really changed a lot.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...what's really advanced, too, or helped us, too, is that having everybody have a radio, now everybody has the capabilities of transmitting things that are dangerous, whereas, let's say, you and I were upstairs and we didn't have a radio, we may run across something that should be good for everybody on the fire ground to know, and there's no way of transmitting that. So that's really improved. So I think that's improved the safety of fire ground, and it's helped us really stay aware of our environment and the progress.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: using tablets] Well, I think it'd be great. A lot of things that hit the fire ground or the fire service in general, especially with this new technology, we're worried about losing it. We're worried about it breaking. And then, at the same time, now you have to train firemen that are 25, 30 years on the job who-- they didn't grow up with technology, so now they've got to learn something. So those aren't easy tasks, especially if the technology they are using is a little more high tech than they're used to. A lot of different steps. A lot of different pushing this and pushing that. A lot of different frames that they have to go through to get where they want to go. The less is better. So in the more simple form and format is better

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								because anything that requires less steps are going to be better for us...
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	I think it's time. I mean, it's time to progress to those more sophisticated areas of communication. And one thing that we have seen happen in the fire service with interior tech is the thermal imaging cameras in which, if you wanted to go back to that one question, that technology is something that could be hindering to someone who doesn't understand it and doesn't understand what they're looking at, what color forms they're looking at, what does that mean. And that's improved. The ability to get a better picture's improved with the technology on the cameras...
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...I think with getting back to the tablet and some more of the more recent and up-to-date technologies, I think there's room for it as long as it's durable and it's user-friendly. That's huge. Because when we need the technology, we need it to be simple. We don't need it to be complex because we don't have the time to work through complexities in anything technology because our decisions are instant, and some things that we need to do need to be made. The decisions need to be made now and not in 10 minutes. We're not sitting in an office and trying to sort through different programs and analysis. We need to make a decision now. And so technology is great, but if it's complex, it kind of is counterproductive, so.
Technology - Positives_about-with	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	[RE: radios] They work better. I mean, there's times where they don't work as well, especially in high rises. You may not get out as much, but apparently, they're always working on that. Subway incidents are another hard thing to use radios at. They have phones in there for us to use. And now they've put repeaters down there, hopefully making in better. But it's definitely much better than it used to be.
Technology - Positives_about-with	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	[RE: change in technology] I think it's definitely a good thing to move up. The only thing with having more radios, we have to have better radio discipline. There's a lot of things that don't need to be on the channels. A lot of people like just hearing themselves on the radios rather than-- clogging up the airways when pertinent information needs to get through. I mean, you'll see. If you listen to our radio channels, there'll be

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a big fire, one with a lot of messages. Then some other company - it's not even close - and all will be like, "Yeah, we're on the scene for an ambulance assist," instead of just hitting the button to let them know they're on the scene, right in the middle of an incident going down.
Technology - Positives_about-with	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	[RE: everyone having a radio] I definitely think it's a good thing. The rewards outweigh the downfalls, I guess, because if you ever do need help, it's only a click away.
Technology - Positives_about-with	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	It seems like we're definitely moving in the right direction. I know they're going to roll out-- for the medicals, I think we're going to get iPads soon where you can do all the information, capture patient information via the iPad, and then have them fill out their paperwork instead of being on paper like we still are.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	I haven't had any issues. I think our equipment is pretty much up to date. When we compare ourselves, you have to have a comparison to other people. Other big departments are pretty much on the same wavelength as us and we're vice versa with them. So I think our technology has finally caught up. I can't really think of any issues that could pose a problem, but we could be operating portable radios, for instance, in dead zones, high rise, metal, concrete buildings where you might not be able to get that transmission out. That's what's important because their transmission may be very important. It's important that everyone hears it.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Excellent means of communication and then I think that one is still in its infancy, still developing. Because you can also relay a very critical building components from preplans. For example, fire department connections, where are they at and where is the gas shut off. Where's the water shut off? How was this building made? Is it a light-weight construction? Is it a truss roof? It's giving you the information that would help use any sort of commander or the first officer arriving, help base your decisions, what your actions you're going to take. They send a lot of this information, has come about. Without that, it was all either guess work or you had to go and investigate how buildings was made, where

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the sprinkler connection was, which side of the building we shot the gas off. Hit it just the-- what a great concept and I think, yeah, it's starting to evolve. We can put so much information on these computers for us today.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Well, things have changed. When I first came on we had the - what was that - dual band radio or [megahertz?] working at 154 whatever X amount of megahertz, now we're at 800 or digital trunked systems in there. I think that's a very big step, again, in keeping up with other huge metropolitan departments. And I think it suits us. It suits as well with the communication system that we have now. Again, it's not something that is not problematic. If things were problematic, you can sit here for quite some time and explain it at length. But if you're not having the problems, you only have subject of discussion.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Well, with that, the technology from the military, it spilled over to the fire service. It was a great example of technology. Thermal imaging cameras, those are used quite often. It has its benefit on the fire ground, and able to see things that we cannot see with the human eye. And also in elements of complete darkness which enhances our ability to find victims, or to find or locate where hidden heat signatures are, or indicating a possible fire somewhere that we just cannot see. It's a great improvement of technology...
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...on the EMS aspect, our cardiac monitors that we use for monitoring someone's heart rate. That has come a long way as well, as we're able to do more cardiac procedures from pacing people to having real-time information when people are innovative of how much O2 are they getting. What is their expelling of CO2? Diagnostic tools that help us in the field, again, the ability to save lives or identify a problem and correct it, and from any EMS standpoint. In the great technology that has come along in regards to EMS, 12 lead EKGs. We're doing these into the field where we're early identifying if there is a STEMI, or in layman's terms if there's an acute myocardial infarction aka the heart attack. We're being able to diagnose that and find that in the field, where they would have to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								be transported to a hospital, have them do their work, and their workups. It saves him time. It buys him time and it gets him enough time to get to a cath lab, or however their cardiologist is going to treat the underlying problem...
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...Advances in just information in itself for many of us, perspective of CPR, the enhancements of CPR, involves in getting that word out to the schools and into public agencies and also the private sector to actually go and do-- have the skill, and again that's done through technologies. If we think of it, it's better coming out of that through YouTube videos. YouTube is very big speaking of technology with that. But just getting it out in the masses to the people for them to learn, which I think kudos for them. More lives are being saved today from cardiac arrest just for bystander CPR. Getting that word out. How did it happen? Technology.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Perhaps, we may have locators on our bodies through technology to find out where is Lieutenant such and such or five-- here to see where they are in actual real time on the fire ground, what floor, and in what room? ... for accountability purposes. What companies you have, who's in there and where? And also, it's evolving with our breathing component system too, with built-in heat temperatures, to know what environment you're in. What is the heat of the ceiling? Thermal imaging for victims. Air pressure in your tank. CO levels. It's all in your heads up display. Wow. Is that something? That's technology.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Cell phones, I think they're-- yeah, again, very useful. We all have one. We all carry one. If you look at the cell phone usage, job-related for use at an incident - at an incident where you have time obviously - where you're not googling or looking up things. It's a great mechanism if you had learn to-- "Oh, I forgot how to tie this knot." Go on YouTube. Various fire departments and well-known fire instructors also put out information in series or in format so you can use it as a drill, or call it up and doing searches on single family dwellings. So then we can use the technology as a form or basis of your training for the day...
Technology -	FF	U	Field	46-55	21-30	Male	FF-U-028	[RE: cell phone use] ...Hazardous material. Again, if you've got time, you'd

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Responder					sit back, "Hey, you know what, I got my phone here. Let me look up this product. Let me find some of the physical properties, characteristics of the spill or leak or whatever. How is this stuff going to harm us? And what do we do to rectify it?" Your ERGs can be pulled up, emergency response guides for hazardous material. Pull it up. I think arming you with more than enough information to handle an incident, and successfully to do so. But again, it weighs on time. So yeah, the cell phone is a great tool to use if you have time. If you're in haste, you cannot. So their technology would not benefit you. So calling and looking at my phone going into a fire will not happen. You don't need it. You don't have the time.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Going to an apartment building fire, for example, the only technology piece that I would find useful is the thermal-imaging camera and obviously the portable radios that communicate messages back and forth among people. Not overwhelming with messages, but enough to get the gist. It's what is putting the fire out, is using your hose line. It's not the computer. It's not the technology that's doing this stuff. We're still going into time-proven ways of doing things without the presence of technology. From that aspect, as a line officer, I look at that...
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...Later, down the line, you can use the technology to look at some things that again you may have forgotten. Things that are going to enhance your ability at, perhaps, another incident, learning new techniques, new practices that they have done. Try this cultivation of change, of technology. Using that in a positive manner for you and your fire department. But I've seen it from a different perspective, because during emergencies it's really not quite useful. But those are the technologies that you take for granted. The portable radio and the tech camera have benefit.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	[RE: portable radios] In the fire ground, they work well... They're pretty complex. Not during the fire scene. When you're back at the firehouse and then trying to get familiar with the radio changing zones and channels and programming this, highly complicated. But at a fire scene,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								very user-friendly because we're sticking on one channel. While you're figuring that, fumbling through channels. You're operating on one fire channel. So to switch into two, "Hey, lieutenant. Contact me on fire ground five." And then you're like, "What the heck does he want?" One channel, keep it simple, no complexity. They work well during fire conditions.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	[RE: portable radios] I've never noticed an issue with that as far as you're looking at weight or user-friendliness. You never give it a thought. There was no problems. There's nothing to draw from is that I have a problem. I haven't had no problems with these. There could be a problem with the portable radio if left outside of your protective equipment due to thermal insult or a thermal exposure to it. Yeah. You'll melt the thing and it becomes useless, then you've got to rely on yelling, or if you're lucky enough, escape a pre-flashover. So if worn right, worn correctly, and following the procedures or guidelines of the fire department, it won't fail you. Most of those things that occur in the fire service, a lot of it is then human error and miscommunication. Communication is a big factor.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	...But in terms of being able to phone a friend when I run across something that's difficult, Google is my best friend when it comes to making emergency calls. "[Name], I don't remember hydrogen sulfide's chemical properties." And so I can just Google hydrogen sulfide, and it'll give me the SDS, which is the way that everybody has to-- any hazmat, any hazardous material, it's a government regulation that you have to have, basically, a sheet on it that tells about the chemical properties, how it's going to harm people. And so I can look it up now on my cell phone. Before, we carried books. And we'd have to look it up and try to keep them current. But now, Google is my best friend. Or I can take a picture now with my cell phone and send it, and I say, "I don't know anything about propane tanks," but I know somebody who does. Take a picture of the problem, send it to them, call them and then say, "Hey, look at this and help me understand what I need to worry about, other than what I just-- is there some other--?" So that has really been a huge step

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								forward.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	So that's really helpful as we move into-- and also when we have not necessarily our incident scenes, we can watch videos from others.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Which that's still fine because my MDC or MDT now is that we can actually remove it from inside and go. Because the command post, we can set up in a different location in the truck but most of time our trucks at the back of them are the command post.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Certain areas. But I'd say our repeaters probably are 95% good.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Uh-huh. So when they walk in they can see the fire conditions, the heat, how hot it is. Not just, "Hey, there's--" and then people, too. So it helps them search and know conditions. Although, I know that you can feel it but that's extra info. [talking about the TIC – thermal imaging camera]
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Right. Okay, so I'll tell you, when we were doing the RIT Pak training, the old style that allowed you to see their air, and there was also a device called a Pak-Tracker. So on our SCBA, currently, if I push a button, it will make a big loud noise. And we know that somebody could be hurt and then it's going to help us find them. So that's called a PASS alarm. The new technology, when you hit that, it actually transmits a signal to the command post. And it will show up and that person, if there's 40 people in this queued list, it will send them to the top and it will write, "Turn it red." So now I know.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	...we had a boat call where they said, "Hey," and it was a river, a big turn, and they said, "Hey, we're stranded, water's rising." And the boat was headed that way. Well the drone, he happened to be on that. He had the drone and it was flying out ahead of him. I guess it can go up to four miles. So it was actually-- because they were really having to do a lot of turns and stuff, and it only goes so fast.
Technology -	FF	U	Supervising	46-55	21-30	Male	FF-U-001	...So as we get more sophisticated with the monitors-- and they were

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Field Responder					created for our use, because they're usually, "What is the monitor used for?" It's in a scientific environment, not being bounced around by a firefighter in a fire truck. They are making them more ruggedized, they give us more information
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	...And with the advent of cell phones, we quickly fall back on cell phones in a lot of those cases, even on emergency scenes, because the cell phones always work. And the cell phones have different functionalities that are beneficial to us, especially on those greenbelt, those wilderness rescues, where I can use GPS location, and use longitude and latitude and things like that to help my team, that becomes important.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Yeah. We just went through a new class with them about all these things that these radios can do. To us, at the end of the day, there's really not that big of a difference between the radios we were using that are 15 years old.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	They're much lighter. But we're talking a pound, I mean we're not talking, it's not
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	So, one of the single best things we've done in my career in 23 years is we gave everybody a radio. That's a great thing because as I mentioned when we started this, our entire discipline depends on talking on these things. Whether I'm inside, outside, in the wilderness, in a big tall building, my success to bringing that instant under control depends on me being able to communicate down on the radio. So now that everybody has them, that's a great thing
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	So giving everyone that fourth radio. The number of channels has great-- when I first came on the job, there were two channels. Right? One for people north of the river and one for people south of the river [laughter], and now it's now we have just hundreds of channels depending on where you are in the city or county or region or what have you. So that is very beneficial that I can get very specific by my region and probably the most important thing, especially since 9/11, is now I have the ability to talk to other public safety resources.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Sure. But my point is, you would think, if that's the reason, I'm going to buy the iPhone 7, because I can find my phone when I lose it. Why can't I find my-- how much does this radio cost? You know?
Technology - Positives_about-with	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	It's not really been my job, but now that I'm riding up it seems to be pretty user-friendly and our com does a good job of updating them. And it seems great because you could pull up, if you forget a policy or how to handle the situation, you can reference even policy in it which is nice, so.
Technology - Positives_about-with	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	It's funny. We've had the same radios in [City] since I came in until about a month ago we went to these new radios. And looking at the new radio, they put some bells and whistles so like the microphone drains and things like that, but.
Technology - Positives_about-with	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	I have always worked in the same territory, so I know every street in that territory. And I think there's still a lot of-- technology's great. If I put that in my phone, it's going to give me the route that they pick. But I know I might know that I can take this alleyway, I can do this, I can do that, and be there a minute faster.
Technology - Positives_about-with	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	Well, I think that there's definitely a lot of benefit to them, especially with the radio system. I understand that the conventional systems just can't handle the amount of traffic that a trunked system can. And so with the increasing population and growing number of call volume we have, we need the trunked system because we don't enough frequencies available for everybody to have their own frequency.
Technology - Positives_about-with	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	...They do have the ability to search help topics on the CAD workstations. But for the most part, if they can't remember how to do something, there's at least six of them around so they'll ask and usually, someone knows, or they call the staff people and ask them.
Technology - Positives_about-with	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	Let's see. I think it probably-- it obviously it's beneficial because we're hopefully sending the closest unit so our response times have been reduced. I would think, without having seen the numbers, I'm pretty sure had a reduction in response times.
Technology -	FF	U	Field	26-35	11-20	Male	FF-U-004	...And now it would almost be impossible to manage that without this

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Responder					system. You can't know where everyone's at. But then guys also kind of get maybe lazy. They don't know. Until the computer tells them to go somewhere, they wouldn't know, right?
Technology - Positives_about-with	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	...our MBCs are mounted in the trucks or locked in the trucks, but we're looking at going towards tablets, so once you leave the fire truck you could take that with you. So more mobility, portability.
Technology - Positives_about-with	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	...because we run First Response for all EMS calls. So if I, as the officer, can take my tablet with me, go into the call as my guys are getting vital signs, I can start documenting that stuff live as it is, so
Technology - Positives_about-with	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	We're fortunate in that we have, on each of our rigs, we have at least one radio per person. There's a mobile radio and we have a pretty robust radio system around town. There's multiple agencies using multiple different frequencies and we're able to communicate with each other on a pretty easy basis.
Technology - Positives_about-with	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	Well, because I can get on the radio and talk to someone and it's more than likely going to be acknowledged very quickly. The communication is going to be clear even in times of very high call volume or very bad weather, there's usually no service interruption. I can recall throughout the years, where there's never been a time where radios were dead and we couldn't talk to somebody. There are a few unique circumstances where communication goes in and out but for the most part, it's a good system.
Technology - Positives_about-with	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	I can't really think of any off the top of my head. We got good radio communication. All the battalion chiefs carry cell phones on them. We have iPads on the units-- or at least, I think there's an iPad assigned to every station. And when we're going to do hydrant maintenance, we get on our little iPads and pull up a map when we can check them that way versus writing down on a piece of paper. That's a good piece of technology that we've seen in the past couple of years. The ability to do smartphones and for HAZMAT stuff, I can look up on my smartphone. Or on my tablet, I can look up chemical information. So that's been nice

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								as well.
Technology - Positives_about-with	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	Hydrants, I think there are plans in place to get those iPads to be able to be used for things like building inspections. The safety chiefs use them for IOJ reports. It used to you have to print off a packet of papers this thick and write everything in for IOJ. But now they've got a form-- an electronic form on their iPads.
Technology - Positives_about-with	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	We just recently got new radios. This is actually our second shift with our new radios. So there's a little bit of a learning curve with them. But some of the features on them are definitely more user-friendly. I don't know how familiar you are with the radios that we have, but there's an emergency ID thing where it changes channels and, basically, it's for if a firefighter goes down in a fire or there's a mayday situation. There's an activation button which they made a lot larger, so it's more user-friendly when you have gloves.
Technology - Positives_about-with	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	As of right now, we haven't really had an issue where it's gotten in the way with it being in our gear, whereas the flexible ones, they'll just move if you kind of bump into them. But, I mean, that's really all I can say about the new radios. But there are a lot of features on there that-- they ran us through a class and talked about it, and it's making it a lot easier on us, as that way we can program a whole bank of channels and we know exactly where each channel is, and we don't even have to open it all up to change through different zones to find whatever we need.
Technology - Positives_about-with	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	I mean, the radios, they're very similar to our old radios but they just have extra features. The primary zones and channels, it's all the same. It's just the radio looks different. But the new radio they added on a couple extra programmable features, which I know all the fire stuff and a couple of where the police channels are in case we need to switch over to that, but this new radio it's got us, it's got police, it's got the county, it's got public works, it's all kinds of stuff. So, I mean, aside from the channels, they kind of changed the size. The knobs are a lot of bigger to help out with the gloved hand kind of thing. Yeah. That's really about it as far as extra features. Like I told you earlier, the emergency activation

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								button's a lot of larger which may lead to a few more... Accidental. Yeah. That's the term I was looking for. Accidental activations. But I'd rather have it easier to get to when you need to get to it than trying to fight around with little small buttons.
Technology - Positives_about-with	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	...We also recently just got new air pack assemblies that once the department gets the software for they can actually track how much air is still in our bottle, where you are on the fire scene, what position that air pack was in in the unit. So it kind of gives you a little bit more of a better idea of who activated this alarm or a PASS alarm if there is an emergency. So, basically, it's got GPS on us now, but I guess the software hasn't really rolled out for that yet. Let's see.
Technology - Positives_about-with	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	But you can send it out there and up to five people can actually hang onto this little boat. It'll keep them floating, but you can't drag people in with the boat. So what we did to kind of counteract that was we have a long, I think it's a 400-foot reel of rope that clips on the back of it. And then you send it out, people grab onto it, we haul them back in. So it's actually keeping firefighters out of the water now. The only problem is that it needs to be a conscious victim, that way they can actually hold on. If they're unconscious, you're just running the boat out there to mark them essentially because they're not going to be able to grab onto it.
Technology - Positives_about-with	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	Some of the officers do use their phones a lot as far as taking reports. It just makes it easier than having to carry around a pad of paper and a pen since it seems like nowadays everybody has their phone on them all the time. So it's pretty hard to lose it. I can't think of anything really on calls that would make our lives any easier.
Technology - Positives_about-with	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	...The newer radios that we do have, the volume actually is a lot louder and it has built-in features where fire TAC channels that are actually-- even if you have the volume turned all the way down, they will always broadcast at least at a 30% volume. So that is a nice safety feature because if you go any lower than that, you're turning the radio off.
Technology -	FF	U	Field	36-45	11-20	Male	FF-U-007	...But like you're limited to how low your volume can go when you're on a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Responder					tactical channel, so you can't accidentally or purposefully turn it down too low. You can mute that kind of nuisance radio traffic that you're scanning. You can kind of select to unscan it for a while. Yeah.
Technology - Positives_about-with	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	...Like on Google Images, satellite images, you can see very well where things are and it's just a square here and a square there. So it's just not as, I guess accurate as you would see on a-- at the bigwigs like at Google and such as.
Technology - Positives_about-with	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	Well, I guess automatically the computer feeds us the units, but we'll say, "Hey, we need this amount of resources--" well, we'll need a high-rise alarm if that didn't come initially. And so then, they put the high-rise alarm button, and it just picks all the folks sitting-- or high-rise second alarm or third alarm. And then it just automatically chooses the folks that are coming. So if we do have a high-rise-- working high-rise fire, smoke's showing, then we'll give a size-up, and then, just like any other size-up, you talk to people about-- but we give one from the outside. And then the first 10 units, their job is to get there-- and that's always, I think, 2 drivers-- they're all dressed already, and if we're going inside, as the first 10 at a high-rise, we're all going inside, I'm not staying at the truck.
Technology - Positives_about-with	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	No. I have a hard time imagining people being much further ahead than [City] is right now, in technology. At least I don't run into people that have more up-to-date stuff. I think we even-- some of the functions of our new air packs-- like accountability stuff, and air supply.
Technology - Positives_about-with	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	...But what it does is it shows me an overlay, like using Google maps, and then I can hit that address, and it logs the actual location GPS. And I can say that we've searched this house, or we've found this victim or whatever. Well, that all feeds-- and I can take pictures. That all feeds to the data center in the state for the state operation center so they can see what we're seeing. Using that on a more local or regional level would be really a force multiplier for the emergency operations.
Technology - Positives_about-with	FF	R	Supervising Field	46-55	21-30	Male	FF-R-008	Of course, GPS in the radios is a feature, but there's no real good use for the [inaudible] a commander or to track people. And it's good for me

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					telling you where I'm at, but usually that's not an issue for us. It might be in Colorado where you're going to send a five person team out for a day to go look for somebody. But for us, and even in a rural environment, we have a pretty good idea where we are.
Technology - Positives_about-with	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	But overall, I think we're-- we have better communication than we did back then. [22 years ago or more - 19:51]
Technology - Positives_about-with	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	...But I can take a million dollar aerial apparatus and stick in the air, or I could go and do \$1,000 drone and get that situational awareness. And then the ability to transfer that information to other people would be a key piece.
Technology - Positives_about-with	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	...So when you call them 911, and you say what is your emergency, "I've got chest pain," EMS call. Well, the computer system here in [City] [County] is set up where they hit a button, chest pain, the computer automatically, it doesn't require human intervention, says, "Okay. Well, this is the closest unit. We're going to send them," boom.
Technology - Positives_about-with	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	Yeah. It'll give you turn-by-turn directions. I think it'll tell you the quickest route per mileage. I don't think it tells you quickest route per miles per hour or anything like that because sometimes it'll send you on some back roads. It keeps track of everything, pretty much. So if it tells you to take one road, and you're like, "I know a faster road," and you take the faster road, it's going to mark in the computer system you deviated from where we told you to go
Technology - Positives_about-with	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	...It automatically updates if a patient's talking to dispatch. So they can be talking to them. They can say, "It's chest pain." Dispatch can tell them, "You need to take some aspirin." So they can tell us, "Patient already took three aspirin by mouth." So we know not to give them aspirin again.
Technology - Positives_about-with	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	He's big on his drones, so he does have a drone or two. And he's done a lot of neat stuff, but that won't work [inaudible] train. He'll fly it real high. We won't see it, and then it'll give us a different perspective of--
Technology -	FF	S	Field	Not	31-40	Male	FF-S-040	...Now, when we do those responses, the USAR program, we have our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Responder	specified				own internal organic communications capability. We come with radios, and satellite phones, and cellphones, and all that kind of stuff. So within the task force environment, we have the ability to communicate amongst ourselves over reasonably large geographic areas.
Technology - Positives_about-with	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...It actually ended up being 94.6% countywide coverage, but that still exceeded their coverage commitment to us so we were pretty happy with that. And it was a huge improvement over the coverage we had on the legacy VHF system that we were replacing because the VHF system, as with many radio systems of that generation, had never really been an engineered solution. It was an evolved solution.
Technology - Positives_about-with	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...So we significantly increased the amount of signal they had to provide in that area to try and account for the urbanization that we're seeing. And then outside of that, we have an 18 dB area, we still have 12 dB area, then we still have a 6 dB area.
Technology - Positives_about-with	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...So shortly after we went on to the new radio system, we provided spot coverage solutions, vehicular repeater systems. Here in [County], we predominantly carry them on our battalion chiefs vehicles.
Technology - Positives_about-with	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	Well, the VRSs actually have enough smarts built into them now...But the technology has gotten to the point now where the VRSs are smart enough that when they hear a signal, when they receive a signal, before they transmit, they first listen for a second to make sure another VRS isn't already transmitting. And if they hear another VRS already transmitting then they mute out and don't cause that contention--
Technology - Positives_about-with	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	So it actually works very well. It's pretty slick system. So we use the VRSs to help mitigate our coverage problems. And that's really great as long as the battalion chief's there but it doesn't help a lot if you're on a call that the battalion chief's never going to show up on because if you're just running an EMS call in [City], and the battalion chief doesn't want every EMS call in [City] because if the battalion chief did, he would do nothing but run EMS calls in [City].
Technology -	FF	S	Field	Not	31-40	Male	FF-S-040	...I'm wearing my self-contained breathing apparatus, I can't see

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Responder	specified				anything. If my radio goes out of range of my trunked radio system and I can't communicate, I can just take my mode knob and rotate all the way until it stops, all the way to the right, and now I'm on a simplex channel.
Technology - Positives_about-with	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...But you don't even need to worry about that. You just turn it until it stops, you know you're on the simplex talk around channel. And then all of the other radios-- all of the radios on our apparatus are programmed to scan the simplex talk around channel.
Technology - Positives_about-with	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...If I'm there with a whole box alarm worth of fire trucks, the battalion chief has turned on the VRS or I can even remotely turn on the VRS. If the battalion chief doesn't turn it on, I can turn it on. I can go to the VRS channel on my radio and hit the emergency button. And in that case, that will automatically enable the VRS.
Technology - Positives_about-with	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	Right. The other thing that happens, that generally, once again, is a good thing, is our SCBA has alarms that tell us when we're getting low on air.
Technology - Positives_about-with	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	The particular SCBA that we use here in the [City] region is Scott Aviation SCBA, and the regulator is right here on your face piece. That regulator has what's called a vibralert in it. So that when you get below a certain air level, not only do you get an audible alarm and a visual alarm, but your regulator starts vibrating. So you physically feel it. And that's a really good thing in general because it used to be that all of our SCBA just have alarm bells on them.
Technology - Positives_about-with	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	In the SCBA, just when you stop moving. The not moving alarm. And changed where the emitters are on that. So now they're more on the back. And that's helped a little bit. Now, the radio folks have come up with noise cancelling technology that's very efficient at cancelling out a lot of this noise, even the vibralert that got-- because that's set to specific frequency. They've gotten pretty good at cancelling that out, particularly the Motorola products...If I don't move for 90 seconds or so, 60 seconds, whatever it is these days, they keep changing it, it's going to automatically activate. But if I'm in distress, I can push a button and just say, "Hey, come help me," by pushing the button.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...Like I say, the technology and the radios itself has improved a lot. It used to be it was completely unintelligible. The vocoder in particular on the digital radios was terrible at isolating these background sounds, particularly when there is such a foreground sound, if my vibralert's right next to my microphone that I'm talking on. But they've gotten much better at being able to isolate that.
Technology - Positives_about-with	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	There is the weather because it'll alert us when there's flooding going to come within the area as well as when the heat's too high, and we have to cancel training when the heat gets too high. Also, there's maps so we can use it as a backup to get to places. In addition, our county has a M-Sent, an internal notification. When a call goes out on our computer vehicle that says, "Hey, Battalion Five, you have to respond to this call." I'll also get a text that says, "Hey, Battalion Five, you have to respond to this call." Just in case I'm in the men's room, just in case I'm at the Giant, on the supermarket, and I don't hear it on my portable.
Technology - Positives_about-with	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	...So Motorola has these, I guess, standard-issue batteries. And then they have extended-life batteries. Well, the extended-life batteries are great. I mean, they'll last you almost 24 hours depending upon how much you use them.
Technology - Positives_about-with	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	So all of those buggies have-- or all those vehicles have vehicle repeater systems on them, right? So with doing that, you then switch over to your vehicle repeater channel, [which] for [3?], it'd be [4?]. You go in as far as you can go from there. And then, potentially, you could run out of site of that. So it tends to cover out and up pretty good, but not so much down. So with a lot of car fires, parking garage, things like that, you hit the P2, P3 level and--
Technology - Positives_about-with	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	--I know exactly who's keying up. If they push the emergency button, I know exactly-- we get all those features still. Whereas, if we're doing line-of-site relay or talk around, you have none of that.
Technology - Positives_about-with	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	So WAVE is a VoIP solution, right, that's tied to our radio system. The advantage is I can tie into the radio system anywhere I got cell phone.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	So our portable radios now carry almost everybody in the immediate region in them and then some
Technology - Positives_about-with	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	Again, I think a lot of it is our management of the technology. We have these Getac tablets that we use. They're our MDTs. They work relatively good. There's been a lot of stuff going back and forth. First generation, we were doing Panasonic Toughbooks. Every Panasonic Toughbook had a cell card in it, so it was great. Your tablet or your computer had its own cell card.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	So the tablet is the biggest complaint. It's clunky. It's slow. I mean, if I can pull up my iPhone and get a map of the scene quicker than I can on there, then what's the point?
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Yeah, and actually the other night, we had a call. I was using the federal railroad one, and the map changed from street view to satellite view, which made it harder for me to get perspective on exactly where I was, and I couldn't figure out how to get it back. On my phone, on this one, it's very easy, but for some reason on our tablet, websites always look a little different.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Yes, we call [City] police or [City]. That's part of it. So you can click on the railroad. When you click on the icon, each crossing has a little dot, so you click that dot. It will pop up and tell you who runs the railroad. And you know who to call.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Yeah, so OneNote's been working pretty well.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Yeah. I can show you. It's typically who's on scene, what their assignment is, and events that happened. If somebody shuts off the utilities, we'll say, "Okay, utilities are off," and we'll check box. I think the camera-- I love that. You can see [who I am?] usually, working up to my PIN.
Technology - Positives_about-with	FF	U	Supervising Field	46-55	21-30	Male	FF-U-044	That's what I like about the whole zoom feature. I can zoom in because that way I don't need to go over here. I don't have to go click, click, click

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					to different things.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Different ones, so I have a whole different one [inaudible] charge this whole rescue team. For each tunnel has an address, so if we're going to [Street], I can just click on Division Z. It tells me who the person-- where's the contact person? Safety manager is [Name]. So I'll call [Name], "Hey [Name]. It's Chief [Name]." I just like having all my information readily available.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	So I've got maps, so yeah. That's what I really like about OneNote. That's why I like this better than the Drawboard. And first, it was definitely a work in progress. I knew what I wanted. I knew I wanted a tablet like this I could draw on and then hit Save and--
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Right. And what's nice is on the tablet, it shows you the calling party's cell phone number. That's how I was able to call him. So--
Technology - Positives_about-with	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	--because it's not iPhone and I happen to be an iPhone person. But it's a Windows Phone so it does anything. You can browse the net, get email, we do what's called-- all the command officers around-- what's called the group 1 page.
Technology - Positives_about-with	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	...So I just went to Twitter and Twitter had like everything right away. It was transformer had caught fire so it was not a significant incident, but that was almost instantaneous. And I joked with the HSEMA people are saying that at that point in time, it was the most effective form of communication because there's 40,000 people at this baseball stadium and they were like, "Hey, there's a big boom. What's going on?" And everyone is twitting about it and everything else. I'm just wondering if that's one of the actual form of communication.
Technology - Positives_about-with	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	Basically, it does real-time call dispatching. So I live in [State] and most of the counties in [State] have it. So I have it for where I live just to know what's going on. [talking about an app called PulsePoint]
Technology -	FF	U	Other	26-35	11-20	Male	FF-U-045	We use Google Earth a lot. We have hydrant mapping in Google Earth

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Public Safety Personnel					and places like water supply. And places you could draft like if there was a reservoir or something like that. So we have that. We can tell the size of the hydrant, the amount of water you can get out of the water main.
Technology - Positives_about-with	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	No. It's on our network. It's a Google Earth platform. So the map is an actual Google Earth map. And then the hydrants and all that information is overlaid on top of it.
Technology - Positives_about-with	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	They've definitely gotten better. Yeah. Definitely gotten better. They're more varied. Like we said, you have more than one means. Before it used to be just a portable radio, now you have a cellphone, or you have another options. So you definitely gotten better. I think they're clearer. I think the elimination of 10 codes or I don't know what they did here before but the fact that everybody just speaks plain straight language, I think eliminates a lot of issues.
Technology - Positives_about-with	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	Yeah. Right. Why isn't this working that day [laughter]. No. We'll put a liaison officer with them, so they'll be able-- one of our people will up in the front of the ambulance or firetruck just like a navigator, so to speak. So that does works out. And all of the radios, like I said before, are interchangeable. So we can talk to them, they can talk to us.
Technology - Positives_about-with	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	I would have to use one first. And if it's a pain in the ass, then it wouldn't be-- I mean, our first TIC cameras are like this big. The batteries lasted like maybe half hour. Now, they've progressed where you could use the battery for an hour. And they're smaller and they're not-- I mean, I got one that hangs right here. It's just small. The problem with that is the screen's smaller. But it's color coded. The hotter it is, the redder it is. I mean, it's fantastic technology
Technology - Positives_about-with	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	... But I know we're about to speak on technology, but technology's helping in that regard, in my opinion, because you have tutorials and things for people that aren't so computer savvy, like myself, that help you walk through certain facets of it. And our department was a little slow on the uptake of having a shared drive where we can all access the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								same things, but in the last couple years they've really stepped it up a notch. So it's getting better as far as accessibility to video or PowerPoints that people may have wanted to attend but couldn't, things like that. So we're starting to go in the right direction.
Technology - Positives_about-with	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Good. But there's always room for improvement. We're much better at radio communications, the equipment itself has gotten a lot better. Our frequency availability, at least from the chief officer's standpoint, I can direct companies. Say we had multiple fires in a close proximity, that could be an issue because we would get bleed over communication from a fire. And you wouldn't know if, "Am I hearing a guy that's in trouble at my fire or at the fire that's three blocks from here?" So we have the ability to-- we can offset that now by changing frequencies.... For instance, we go down into the subway and we've had some problems down there because of the amount of concrete and the distance from grade-level to below. And so we have different options now to use frequency-wise on our radios, as well, for that. So from a safety standpoint, we've come a long way, I think.
Technology - Positives_about-with	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Yeah. I mean, just way better now than it was 28 years ago. 28 years ago it was very simple. It worked, and I'm sure in its day, it was great.
Technology - Positives_about-with	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	They're pretty good. They hold up. At least these models, they hold up well to heat. They hold up well to moisture, from my experience, and cold, as well.
Technology - Positives_about-with	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Oh. Well, okay, so in my mind, I wasn't thinking of that in terms of communication. But I mean, we've been using them for years and they have helped an awful lot. And I'm sure they've helped many people be saved. They're a great piece of equipment. Well, in theory, they do help with communication because what I see, as long as I transmit to the rest of the guys on fire ground or at an incident. Sure. It helps. It helps big time.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Yes, that's for EMS. Yeah. And of course, all of our engines and our aid units have mobile data terminals. So, anything the dispatcher is inputting, we'll get on the screen immediately as that information is coming. So there's that type of information flowing... layers of- okay, this is the first-generation iPad. This is the second-generation iPad. And then, now we're transferring to Surface tablets because there's more stability in the platforms.
Technology - Positives_about-with	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	So we have that benefit of sort of condensing that technology and that user interface.
Technology - Positives_about-with	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	And then there was a vendor change, and a program change, and the stability became much more unified. And so now, it's very, very rare that your mobile data terminal in most cases will not function properly.
Technology - Positives_about-with	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Well, there's applications for hazardous materials, called the WISER App. And that's basically the same as the emergency response guide that gives information on known chemicals, what their characteristics are, what their evacuation distances are. There's applications for technical rescue, where it's basically just a review sheet of systems and tolerances and strengths of when you set up dynamic systems and rope or confined space, things like that. There's all sorts of applications for wild land interface and fire behavior and watch out standards. But the other big one is our pre-fire planning, so when we go out and do inspections, we'll look at a building, and we'll look at where the doors are, what the size the building is, and we'll enter that information into our pre-planning, and our fire inspections, as well. So if you're the occupant of this building, we do the inspection, you electronically sign, we email you the receipt that it's been done, and we'll see you again next year.
Technology - Positives_about-with	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Yes. So the idea is that when you show up at the call, you have already logged onto your tablet, and as you're doing interaction with the patient, you're giving that information, documenting that. And when you enter it, it automatically is sent to the hospital destination that you're going to. And so they will have that information downloaded while you're still at the scene, and the information is being sent and updated. So when you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								arrive, they have the patient's name, birth date, information, and they can sort of start there documentation process. And everything would be closed out or is to be closed out when you leave the hospital. So there's no more coming back and writing reports. It's all done--
Technology - Positives_about-with	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	I think it's great. I mean, I think it's a very proactive approach for assisting in a search and rescue. I haven't personally used one in a fire and discovered a victim, but they've been very beneficial on other applications at car accidents to locate victims that have been ejected from vehicles, or looking at heat signatures on seats in vehicles that have been involved in accidents. If there's someone that should be in that vehicle that's not.
Technology - Positives_about-with	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	...If you wanted to reach somebody, we can see in our staffing, daily staffing, kind of software where everybody's at.
Technology - Positives_about-with	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	...We have department-issue cell phones issued to the apparatus themselves, so that we have, basically, as a tool to use on a response to take a photo or to get information from the pre-fire system.
Technology - Positives_about-with	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	...The technology in our mobile data terminal is pretty old. It's very reliable but the features are very, very basic. So we've looked to outside sources to download apps from third-party vendors to help us better navigate and route to the calls that we're going to get information. You can get a satellite image. You can get a 3D model in our city about basically anywhere in the coverage area.
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	... But they also have a call dispatching software on them. So if we're not in our rig but we have the iPhone or the iPad with us, it will also let us know a call has come in. And we can look at the call, see the address. It has a little mapping function which is very handy. So we have, basically, three forms of notification assigned to each rig. And then, also each firefighter and officer is assigned a pager.
Technology - Positives_about-with	FF	S	Other Public Safety	36-45	11-20	Male	FF-S-033	Yes. The Active911 app is the most commonly used program that we use on the phones and the tablets. And that's the one that will pop up, let us know we have a call, lets us know some of the basic information.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					That one does address, and it does some mapping and tells us what tactical channel we're responding on.
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	We also use the iPad and the iPhone for our camera. We used to all carry digital cameras around. So now it'll double as our camera, so. The iPhones obviously are the most compact. They're the easiest to carry around with you in your pocket.
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	... Since most people now operate computer, [literate?], and they can type faster than they can write. AutoCorrect's for spelling errors. It's going to look neater. It's going to look more professional. I think it's going to have more detail involved in them.
Technology - Positives_about-with	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Yeah. And drones can also be effective in telling you what's not going on. So if we get a full response to a fire in a commercial occupancy, we're sending 8, 9, 10 units. All responding emergency.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	... But then it's nice to have access because I can store phone numbers for different agencies, rather than having something written down or having to go through dispatch. For example, if we go to a white powder run and there's some threat associated with it based upon the location and/or the letter, and I want to make notifications to-- two of our standard are the bomb squad and our local FBI coordinator, WMD coordinator. I've got their phone number directly in my phone. It makes it really easy. So probably easier than not.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	...There are certain apps that we have on specific to HAZMAT, that I could look up stuff if I needed to as far as the Emergency Response Guidebook. And if I've got a UN number on the back of a trailer, I could use it to look it up. So there's definite advantages to it.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	...But they seem to kind of be getting, to some degree, smaller than what I first started with. We call them bricks because they were probably about that big. About that tall. Huge. They're manageable. They don't have that much weight and stuff, and obviously they're fire-- what's the word I'm thinking of? As far as, they're not an explosion hazard. [talking

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								about a radio]
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Yep. And the phone, everybody's got one. So for the most part, everybody's pretty familiar with that. The mobile computers have advanced over time and have more options than they used to, and so there's a little learning curve with that. But I don't think that was too difficult, really.
Technology - Positives_about-with	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Wherever I am, they can know that Lieutenant [Name] is right there. If I fall through a floor, next thing they know is that I'm on floor 22. The ability to maybe be able to track people with individual GPSs in our backpacks, in our radios, something like that. So at any given point that the command post, like you see in the movies with everyone standing around the big 3D, 3-dimensional, and you could see where all your units are, all your people
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S5] So with mine, I utilize both of mine a lot but the-- my work cell phone. So someone that's on deployment, he will text me pictures of what's going on there and a little bit of info, and then, in turn, I have it in that phone already, those pictures to where I can put it on Facebook or Twitter or whatever I need to do to have that information out. So utilizing it that way, texting again, whether it's texting because with the media or texting with the inner department. There's a lot of different uses with the cell phone.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] I actually use both my personal and my work cell phone. I use my personal cell phone for incoming calls and use my work cell phone for outgoing calls, sometimes. Texting on my work cell phone and then getting my email, a lot of times, at work you have orders that you don't-- that's a specific situation that's that dynamic. Most of the time using my cell phone for emails, back and forth. But it allows me to work pretty remotely or still conduct business if I'm in a meeting or even just do a lot more multitasking, which I'm not sure is a good thing but it's just sort of necessary.
Technology -	FF	S	Not	Not	Not	Not	FF-S-035	[S6] Now, one of the nice things that we can do with that is we can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			specified	specified	specified	specified		transfer data to somebody else. So as the EMT, if we call for the paramedics to come and then they're going to take over patient care, we can transfer all the data we already collected, vital signs, their name, just their medical history, things like that, we can transfer it to their tablets so they have that for their report.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S5] And the nice thing with that tablet is if you have people that you frequently see, you can also reference and get their past history. So if you put in their name and their birthdate, then you can do a search within that. So that's nice that way you don't have to rewrite it down. As long as it's-- you can ask them, is this current? Maybe you'll have to rewrite down their whole bed list, and all of their other past history, so that's helpful, as well.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] One of the biggest things about that tablet too that's really beneficial is that it time stamps a lot of things. So it time stamps when we're on scene, it time stamps when we say over the radio we're at patient side or patient contact. It time stamps when we do our vitals. It time stamps when the medics come back and they have to provide the drugs. They need time stamps of all that.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] It's evolving. I think, I never thought I would be texting in a relatively dynamic environment. I mean, I'm not in a life and death or emergency situation where there's a lot of information going back and forth. I never thought texting would be a good tool for that.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] And that's our lifeline in the hospital too. So when we transport a patient to the hospital, you're calling the ER to tell them, "I'm bringing you this, here's how far away I am, here's their symptoms and their vitals." That's all done by cell phone. It also provides connectivity to our tablets if we're away from the rig where the modem sits that gives you the interconnectivity to that tablet. You get so far away from that, you've lost your connectivity so you walk back close to it. So therefore you can't transfer data to the medic that's standing beside you with the patient. You would have to remove those devices and go back out to a rig. So we've recently got cell phones with the updated technology to get a wifi

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								hotspot. So if it's in your pocket, or right here on his gear, that's his work cell phone that has connectivity needed for that tablet to not have to go back out to that rig to establish connectivity any longer. Now you have it right in front of you.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S5] ...So another mode of communication is with our defibrillators, with the monitor defibrillator, they can do a 12 lead and fax that over right away to the doc. So from the call right there, they just can fax it. And they can take a peek at it and see what they see prior to getting to the hospital after. And with cardiac arrest, we can send that information. So there are routes other than just the communication that we're talking, more verbal. But to get that down to the docs is really helpful.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] Yes, there is. Active911. That's hands-down my favorite, I guess, part of the technology we use at work. It's just an app that pops up with the call. It's got the map, you can get directions to where you're going. It's got everything you need. And it's pretty spot on. I've had very, very few errors with it. That's massive.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] So definitely a lot of people will lean towards some of those commercial applications because they are a lot more user-friendly, a lot more dynamic, and pretty much as reliable.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] So RAADAR. Thank you. Geez. RAADAR. Like I said, I use that nonstop. So I'm on it all day. So I have it always pulled up at my desk. So I'm seeing everything that goes out. And then at night, I have it on often, too. But again, so that when the media calls, that's my first thing I go to so I can see the full description.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] We have the ability to have our EMS book, just our little EMS blue book that our policies and procedures as far as that goes. There's an app for that as well. It's very rare that you go on a drowning or whatever it is, and for some reason you haven't at time to review that recently. You can just open your phone and oh yeah. Okay. If this happens, this happens. Good. That's an option.
Technology -	FF	S	Not	Not	Not	Not	FF-S-035	[S4] But it doesn't do one-one thousandth of what technology could

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			specified	specified	specified	specified		provide us. [talking about the legal pad as compared to technology]
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] Just the radio cord for an extended mic. Otherwise, the radio's down here, you can always just pick it up and talk into it. The microphone up here is an added bonus because then the radio can be protected in the pocket somewhere, right? The cord, it connects the two, and it's caught on everything.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] There's quite a few things that help a lot. One of them not everybody takes advantage of is kind of like the FaceTime on the phone. We've come across that a couple of times and it doesn't always pop into your head that if you send a couple guys into somewhere and everyone else is outside, you can call on the phone and explain all you want. But if they have the same thing as you do, then you can just turn it on and point it at whatever you're looking at and say, "This is what I see in here." And now they're seeing the same thing. It's not verbal anymore, now it's visual and verbal.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] Yeah, I mean, if he doesn't have an iPhone and I do, then, of course, we're not going to communicate. But if he has a certain app that will communicate with my FaceTime, then we can effectively communicate the same way. But turning that camera on and sending that video feed outside while you're in some sort of environment that not everybody can be in is pretty crucial.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] Our technology support is improving so that we are able to come up with good solutions that make it more user-friendly. So i think that's kind of a big boost lately.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S2] We were talking about mapping as well earlier where that can be really helpful when usually when the lieutenant that's in charge is looking us up, but they can see on the maps that we have where exactly hydrants are located. So that helps a driver know where to put the rig as far as getting a water supply for some things. And you're not having to search for that when you get on the scene in the middle of the night. You have a good estimate of where it should be at. So that's something that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								gets put in everywhere.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] It's definitely huge to be able to look at that and know coming in, "Okay we've got a hydrant right here. Oh, something else we did not mention is pre-fire plans. Certain structures we can pull up on the computer and on our way in understand the layout of the structure. That's massive for us because you show up to an environment where you can't really see much because of smoke and whatever else. Well, we have a pretty good idea if it's anything like the pre-fire plan says, where we're going and what we're walking into, so.
Technology - Positives_about-with	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] Yeah. The TIC is extremely helpful in those very smoky environments, because you can find the seat of the fire, or you can see, "Hey, there's an individual right there that we've got to get out. There's a victim here. We've got to get them out."
Technology - Positives_about-with	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] All the way over to them in the report, they still have to enter narrative and explain what they did, but all their-- when they are responding, time they were dispatched, time they arrived, time that they had the patient. All that will be documented already in the report automatically.
Technology - Positives_about-with	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] Cell phones. Well, we use our computers extensively. I mean, all the record keeping. Nothings done in pen and paper anymore except bills that auditors require a signature on. And what's interesting is I think people have really gotten away from, even though there are administrative assistants, I really don't use one very much. Once you get on the computer, I can type my own stuff fast just as fast as I can dictate or anything else. We have all sorts of software to do different things. We have report writing, of course, the whole Microsoft package. We use Excel extensively. And doing that all-citizen of responses and all that type of stuff
Technology - Positives_about-with	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] So our coverage is excellent. It's not 100%, but nobody can afford 100% [crosstalk].

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] .... And so, you can take-- if I invited you, let's say, your cell phone would become, as long as you have coverage, would become a portable radio where you could talk to other people's radio, and it's just-- we'd have to invite you. But if we invited you and accept, you would tie in.
Technology - Positives_about-with	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] [inaudible] with the new iPhone though, and the iPads that are out there, we're starting to download different apps onto those. There's a language app that I know the BCs put on their iPad that can even... Like a translate thing. They have the HazMat guide on it. There's some medical ones. Dosing ones. I know the medics unit has different things. So we were slow in letting what apps come on because the department of 300 people if we just say, "Hey, add any app you want," we're going to have too much...
Technology - Positives_about-with	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] Yes. And Google Earth and whatever they need to go to. If they need to look medications up that they don't have in their apps, they can just get on and look up a medication. And again, there is software running in the background, so if there is something inappropriate, they'll let us know.
Technology - Positives_about-with	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] ...I'd say we have a great communication system. I think this department is pretty proactive on if we see something, we're not afraid to try it. That's for one. We're not afraid to try things. I think as a whole, things are developing. Whether it's the MutualLink, we've got different departments that are doing drones now. And we've got-- we're looking at it. We have a group that's researching it now, but I think it will continue to get better how we get our information. I know that we just test it for a chief and there was a San Jose chief that are testing a dispatch drone right now. And when it dispatches, when the call comes in to go to a call, this drone automatically goes ahead of time and starts linking back the picture above it. That's where we're going to be in-- five years from now, I don't know. But there are so much more out there that's coming that's going to help us, that communicates. The guys driving can see what they're driving there. You got something floating over the building. They know what they're coming to while they're still two miles out. So it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								going to get better. But I'd say I don't think we're missing too much right now. I think we're pretty good.
Technology - Positives_about-with	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[RE: changes in communication and technology] Oh God, yeah. A lot better... Just we get the information, communication. Every firefighter death comes down to-- somewhere in that death report is a miscommunication that was done, so... The best we can do, the more we can communicate, the more information we can get out there, the better stronger radios. They're tracking guys now. The communication-- how your cell phone has the tracker in it. Well, they have those now so you can see where your guys are at all times on a large scene. So that kind of stuff is incredible to even--
Technology - Positives_about-with	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] Some of our ipads have the majority of it on. Some, not all the units, but some RVC ones have to where now-- in the future, the current system we're under if we get dispatched to a building that has a pre-fire on it, that fire captain's riding next to that MDT can push on the building. That pre-fire will pop up. We have started inputting, but we're a ways from fully integrating... But I think it'll make it easier for us to start getting those pre-fires and data. It already maps us to the building. It already automatically shows our route. That kind of stuff, how to get there. And again, the technology's there, and some of our iPads have already. Certain buildings you can just click on it--
Technology - Positives_about-with	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] What we haven't done yet, and one of the next steps is, so it maps us. It figures out drive time and the best way to get. But it's not tied into the traffic cameras yet. So we use [inaudible] as the base map for all our mapping, but if you could get Google Maps traffic to tie into it, based on the most up to date traffic, sometimes it will send us down the freeway when the freeway is stopped. So we still need to get to that level where it's real time.
Technology - Positives_about-with	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] ...Just recently was on an east side fire over with our incident management team and that one drone was able to save us an hour hike, basically, by putting it-- normally the crew would have had to hike up to go over there, put the drone up, flew it over it, was able to get a quick

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								look and determine that we didn't need to waste our time going up there, that we were good. It was able to help somebody the crew thought he was lost. It kind of got turned around. It was able to go up above and say, "Hey, all right. I can see you. Turn right, go to the end of the creek bed, come back across. Thanks."
Technology - Positives_about-with	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] Yeah, and then what the San Jose guy said is, "Yeah, just the fact that this drone just takes off and goes over this building that you're going to, send back more information you have prior to getting there-- what you're seeing, it's great."
Technology - Positives_about-with	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	Yeah. So we use a-- there's this program called Metrics Toolkit, which is-- basically, all of our data is dumped into these Excel spreadsheets, and we can create pivot tables and do all of that sort of stuff using Excel.
Technology - Positives_about-with	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	Some things will auto-fill for them, but some things like whatever the incident happened to be when they got there-- because it's often different from what it is at dispatch. We're dispatched to one thing and we get there and it's like, "Hmm, that's not exactly what we were dispatched too," and so they'll click the right box of what actually it was when they got there. So, I mean, I think they do a pretty good job of that overall.
Technology - Positives_about-with	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	Well, there's Active911, which is a way to know what calls are coming in, so our firefighters use that quite a bit. There's one that [County] created called-- I think it's FirstToSee, and that is supposed to be something that can be utilized in a major emergency or major incident. And that's where community members can upload photos, so you can see what's happening in the community.
Technology - Positives_about-with	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	.... So we moved to Streamline, which is an app-based product. So that everything is stored in this app, and so you upload it when you get back to the office. You don't have to-- you can do everything in an app-based-- so you're not waiting for the Internet.
Technology - Positives_about-with	FF	S	Supervising Field	36-45	21-30	Female	FF-S-037	I believe so. Like I said, [Name] would probably be able to tell you more of those details on how the-- but just from the prevention folks, it was

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					very much a struggle, and so we went away from the Internet-based program and went to the app-based program so they could enter things. And then when they get back to the station, it uploads, which is great.
Technology - Positives_about-with	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	... We're going to pilot a program that's being used in Gig Harbor that kind of brings all the data to one place. We're not using it currently, but it's something that is on the horizon for us to try and see how it works. And if it works, then we'll move forward with actually doing that. But this program, the plan is that it will bring information from the [County] assessor's office, from the inspection program, and from Google Earth. So they get all of these different views of what the possible hazards might be in this particular building, which is going to be great [laughter].
Technology - Positives_about-with	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	Think the good is ease of access. I think you can be a lot more efficient using your Microsoft Word versus your typewriter. I can make corrections pretty easily [laughter] if I make a spelling error or something like that.
Technology - Positives_about-with	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	So I think user-friendly is an interesting term because I think it depends on the user [laughter]. I think that they're user-friendly for me. I don't know that they would be user-friendly for everybody.
Technology - Positives_about-with	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	I'll just use Excel and the pivot tables for an example. I mean, unless you know how to work with pivot tables, you don't know what-- I mean, it's user-friendly to me because I know how to do it. If somebody didn't know how to do it, and you just gave them a pivot table and said, "Go for it," it's not intuitive. You have to have some background knowledge in order to utilize it.
Technology - Positives_about-with	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	Well, they have the radio, they have the cell phones, and then they have what I call an MDC. Some people call it-- there's another term, MPS, something like that, but mobile data computer. So we have those in all the vehicles currently, and what that does is when Firecom dispatches the call, it pushes information out to that computer. So basically, they can see the address, they can see the secondary information on the call. Pretty much everything that the dispatcher's seeing, they can see on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								their screen. There's some mapping features in there that assist with that if they need it. I will say right now sometimes I think the technology's moving faster than the equipment we have on the rigs because it's not completely reliable right now.
Technology - Positives_about-with	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	...the Active911 map. It has a mapping feature in there. You click on the address on the app and it will map out where you want to go. There's also some pre-plans built into Active911 that, if you're going to an apartment complex, per se, you can enlarge it and hit it and it will kind of give you a view of it, not only a block plan, but I believe that it's a bird's eye view of the way Google Map would take a picture of it. So you can actually get a look at the surroundings of the building.
Technology - Positives_about-with	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	Well, I would say that with the radio technology that has certainly made it better, I mean, exponentially just so much better because like I was telling you, not being able to communicate within our own district is a problem and now we could be in a whole other city and people are talking here as clear as you and I are speaking today. So that has been a huge benefit and it's a safety piece that was needed for so long. And with that new technology, we've kind of changed the way we do business on fires or bigger incidents. We keep our battalion chief in the vehicle, our incident commander stays in his vehicle back. Prior, he would get out without with his portable and run around and point fingers. Now they command from their vehicle. They have headsets they put on that's attached to the radio. So they don't miss-- we used to miss some radio traffic that was important because of the old system. And even the new system, I mean, you can miss radio traffic if you're not paying attention or if you're being distracted as an incidence commander. So now we've kind of focused on that that you have to pay attention to the radio because we have a great system.
Technology - Positives_about-with	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	We also have the ability to put premise notes in on certain addresses. So say we know that-- and we do that for EMS and caution. So say we know we have an elderly woman who can't get to her door, and she's hidden a key outside in a lock box and it's at this location. We can add a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								premise note to this address that if the cruiser going, "Yep. We're going to this address. Here's a premise note. There's got a key to the front door in this lock box under the rock by the front door." Or if it's a known problem house that the police have identified as say a drug house of some sort, that can be added as a premise note. So maybe our guys are just going to an aid call to this address, "Oh, look at that. Here's a premise note. This is a known drug house to the law enforcement. We need to use extra caution because of that or stage out and wait for police to get there before we do." So there's a lot of different things we can get through that.
Technology - Positives_about-with	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	So on the squad, our systems are so dated. So Google Maps doesn't really work and they're not precise, so we rely a lot on our phones.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	We have the MDTs. I actually have an iPad, so that's how I track people on the fire ground which is awesome because I can now, as well as move-- the program that we have is Tablet Command
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	So I can keep track of people on that. It's got great mapping, because we're responsible for half the city. There's no way I'm going to know where every street is. So that's nice. And then the greatest things is, I can track people and take pictures and video all at the same time. So we can get good things especially because if it's an arson investigation, arson doesn't get there usually until after the fact, so then I can have some pictures before they get there. Sometimes help things like that. So it's been great.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	So other departments are using this for everything. They're using it as their MDT, their whole thing. And so it's really cool--
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	Yeah. So it's nice because you can do both while you're just sitting there in front of the building.
Technology - Positives_about-with	FF	U	Supervising Field	46-55	21-30	Female	FF-U-013	Yeah. And then there's other ways to look at things. They give you the map so you can figure out where you are. You can change the map so

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					it's like a Google Map. This is just a running log of it. And then you can also move your vehicles in here so you can map the people onto-- this one doesn't really have anybody on it so you can take--I think is that how you? Yeah, so you can move them where they are in front of the building. And me doing this doesn't mess up their event at all.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	Yeah. And if somebody else has an iPad, they can do it and they can map it their own way.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	Like the Google Maps or even the Apple maps on this is good. It's just because it gives you options, so then you can pick.
Technology - Positives_about-with	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	...So for every call we go on, you get a command channel and you get a tactical channel. And we can always add more to them to an incident if it's getting too big. And now the radios that we have right now, virtually hundreds of channels that are in different zones, and [they're?] like having your computer in your hand. B
Technology - Positives_about-with	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Yeah. And what's cool about that - and she probably showed you - is that every move that you make is electronically captured. So at the end of an incident, we just email the activity record and it gives us an electronic accounting of every move that was made.
Technology - Positives_about-with	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	In the suburban area, now that we went to the new P25 radio system, it has increased and enhanced their communications greatly because we are not limited just to one or two channels like we were in our old conventional system. Now we have talk groups so we can spread that out over the trunking system.
Technology - Positives_about-with	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	And then part of the newer technology we're rolling out is an Accountability software component. So we can do accountability of our firefighters and first responders on scene and to be able to see where they are, what section they're assigned to, who's assigned to what engine, and have level one and two accountability.
Technology -	FF	S	Field	46-55	31-40	Male	FF-S-015	... We have the capability in our radios to do the Bluetooth integration to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Responder					the air packs, the health and wellness, that type of stuff.
Technology - Positives_about-with	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	.... So we're not having to a buy \$5,000, \$6,000 radio for every administrative person. They can have a smartphone or assigned one for every agency anyhow. They just have an application to where they can go, and monitor, and listen, and have an occasional push-to-talk through a smartphone. And it's already a device that's been given to them. So you leverage your rate of return, your capital investments.
Technology - Positives_about-with	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	... Pagers. I still carry a pager because it's not attached to any cellular network, and it's not impacted by civilians. So having that mode to be able to communicate or at least get information out that's not impacted by the event is huge.
Technology - Positives_about-with	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	When I go out to the big fires, that's what I bring back is trying to educate my leadership on what it takes to really pay attention and have contingency plans in your back pocket to be able to say, "Hey, this technology isn't working. Let's shift to this technology. This one is loading up, let's shift half of it over here to this technology," And do that load-bearing across the technologies that we do have that is functional, and do an assessment what's working, what's not working? And be able to leverage that. FirstNet's going to help with that, but it'll be some time to get people to understand how to do that.
Technology - Positives_about-with	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	And technology is allowing that to happen. [referring to 25:53 - And EMS. We're all striving for the same thing, but we have different ways to get there because of our background in our lane in which we do most of our business. Our day-to-day stuff is different in all three lanes of those disciplines. But we're getting better at bringing those together and going, "Okay. Let's meet up here." Now we need to make decisions in a unified command perspective. So I think it's coming. It's just slow type, and it's coming.]
Technology - Positives_about-with	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	From a data perspective, we're using the mobile data terminal. We're using the accountability software application. Bluetooth functionality from the radio to an earpiece. We're looking at Bluetooth

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								communications to the air masks to the radio so they don't have to put the radio up to their mask to talk. They can just do a push talk from a big button or their speaker mic. And it's audible through their mask. Health and wellness vests inside their turnout jackets.
Technology - Positives_about-with	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	Q: So technology might get in the way, but it also provides a safety net in some ways. SME: Correct. It gives us the ability to have information.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	So I have to buy my own laptop computer. So that's very important, especially when I travel that I have my own computer. The department doesn't give me one. But I have noticed that some things are easier on the iPhone platform than on the Droid platform. If I'm dealing with documents, I need to forward something really quick, it's easier on the iPhone than it is on my Droid.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	They're 800 megahertz trunk systems. They have [inaudible] repeater to talk on it. And what we're going to get at really quickly is what's nice about that. Our tactical channels and our dispatch channels are all repeating. So that means anybody in the city, anywhere, can hear the tactical channel, what's happening on the fire ground, which is beneficial.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	I think in the past. I think right now, technology has really boomed in the last five years, and I think technology is worthy and an impedance here too, to technology. I mean, it's not technology anymore. I think the apps are there. We can almost do whatever we put our minds to. Technology is not holding us back, it's our budgets and our thinking is what's holding us back, our culture.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	... So the applications here of drones in a earthquake are huge because imagine if I can send a drone and it does a windshield survey for me through the air. Software that can detect if buildings have collapsed or it'll do a base survey, give you a baseline. It knows the position of every building. And then when the other earthquake happens, you send the drone out again. It'll pick up what buildings have collapsed because it'll notice what's different in the software. That technology is just about

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there for that. And that could save me a lot of time, but I don't have anybody to operate the drones in emergency.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	So I wanna see a full-time drone unit. I think it would be very beneficial to the fire department. Probably three people with a van at a station that could respond 24/7. We can save lives. It's not just to view fires. That's nice. We're still going to go to it and they're still going to go out, so the video at a fire is nice. That's all. And we get to learn from it. It's a very good learning tool, after the fact. It could be good for the Incident Commander to see where fire progression's going and imminent building collapse and so forth. But where we could really make a difference is out at [City] where we have a lot of cliff rescues and surf rescues and we can send the drone over, locate the actual victim. Because we spend a lot of time searching for the victim because it's very difficult to get an exact location on a cliff where you can't see the bottom...So there's great benefits out there to save life with a drone, but we don't have the staff. I mean, can you imagine going to the mayor, "I'm going to hire three more people and pay the drone unit."
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	So you can put a camera on every rig and you create a mesh network, and I can see the arrival video of it, every fire, of every rig here. We don't have the money or the will to change. There's already our existing radio system and it's too big of an animal to try and change a \$80 million radio-upgrade project with Motorola, then to switch over to a different radio system called Wave Relay. And there's a benefit for Wave Relay, they can penetrate the ground, so they can do the camera aspect and I can instantly see the arrival video in the operations center, where at home on my iPad. These are great things that technology can do, but how do you change an existing system such as a emergency radio communications and go, "Oh, we're going to switch to this new system and invest all this money." And the Wave Relay technology probably isn't there commercially yet. They probably can't deploy it on a commercial level but it's amazing what Wave Relay can do.
Technology -	FF	U	Supervising	46-55	21-30	Male	FF-U-016	Yeah. That's doing a windshield survey very quickly. Faster than a drone.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Field Responder					It makes drone obsolete if I can do it by satellite.
Technology - Positives_about-with	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	Yep. If the satellite can do it for me and I can do it by district, it knows what my districts are, I can preload the districts in there and it'll tell me, "Tie-in seven is no-collapse building, but Tie-in six has 10 collapsed buildings." That's helpful.
Technology - Positives_about-with	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Well for [name of jurisdiction] we have the fire code official he has a department issued one and then we have a duty phone that basically if someone calls the station then it will link through their cell phone if they're out in the field they're doing something so yeah.
Technology - Positives_about-with	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Yeah it's been a great program as far as cost effective for us and it's working out really well.
Technology - Positives_about-with	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	...It's a it's like a cell hot spot but it's public safety grade with an external antenna so I have a WiFi signal constantly out of my car that's good for 50 to 75 feet from my car.
Technology - Positives_about-with	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	The satellite dish a portable satellite dish that's our backup for here if we lose our fiber but in the field you can hook whatever you need to because we have a voice override telephone in the case with a satellite dish. We have that technology in the field when we don't have a cell signal which in the mountains here is soon as you get north of town 5 miles you start losing signal.
Technology - Positives_about-with	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	So anyways you go through all these cards these are the phones in the racks so I can dial a number a secret number and then listen to the prompts and change these without looking at a computer screen by pushing buttons...
Technology - Positives_about-with	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Yeah so we can talk to them without having to have a 700 radio which is really expensive and the user fee is ridiculous.
Technology -	FF	R	Supervising	Not	Not	Male	FF-R-046	So we have a volunteer communications guide who has a computer and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Field Responder	specified	specified			can change it wherever he is. My MDC in my car, my tablet this computer has kind of a game computer other than the one that is on the graph itself and then this one and but you have to have the software on the computer and passwords and stuff.
Technology - Positives_about-with	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	... So the iPads have cell service on them and are connected to active 911 which has mapping and we've uploaded all of our hydrants on there as well onto the maps so it's actually pretty accurate with those locations so we can have a better we can kind of look at the closest water supply when we're coming into it a house or whatever and that kind of thing.
Technology - Positives_about-with	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	...there's so many additional hazards that the responders face out there added on top of it so what we've been using between the radios, hand radio we've also started using [name] units which are similar to the spot units for tracking of our members and our teams. The nice part of the [name] units is that we can actively track where they are out in the field where it will send a location and it also has freeform text messaging so they can either say if they've lost all other communications to the satellite they can then request a helicopter there to their location which will then give us the coordinates and everything and we use this summer actually on a rescue where they were I think 30 miles out a canyon where we didn't have radio communications and I was actually at home and received a message on my phone that they were just letting us know that they were okay. And I was able to relay that to Chief [name] as well and then they uploaded it or they brought it up so that they could see where the teams were in the field. So that's been a pretty good tool for us just for peace of mind especially from an incident commander's perspective knowing where your people are and it gives them another way where we can kind of ping them and see. Also our dispatch center has access to it so Chief [name] has brought it up at the moment but they can then see on their computers down there where they are or ask questions just to check in.
Technology -	FF	R	Supervising	Not	Not	Male	FF-R-046	So we have that loaded [ERG] on there and the nice part about it is with

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Field Responder	specified	specified			the search features it's actually quicker than kind of thumb through the book. You can type in whatever it is the number and pulls it up really quickly so yeah active 911 has been good for us.
Technology - Positives_about-with	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	So yeah it depends on kind of what kind of searcher or rescue that we're going out on to how frequently we'll have them you can change the points but each one of those points that you can see that's highlighted there if you click on it, it'll tell you the lat long altitude all sorts of different information about it and then you can also change the mapping to show kind of a more aerial image and the maps that are loaded on that are actually pretty clear where you can zoom in and tell the different terrains.
Technology - Positives_about-with	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Well the neat part of the [Name] units is that you can pair it with either a tablet or your phone and then it goes through the satellite so that you actually have access to it while out in the field and so you can actually pull up these maps if you don't have any other communications and see kind of plan your route if needed.
Technology - Positives_about-with	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Well when I started here in [Year] we had a limited number of brick portable radios and mobile radios on all of the fire trucks and we had huge pagers. What was interesting back then those big brick radios worked really well. A lot better than today's radios and narrow bandit for this terrain.
Technology - Positives_about-with	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Better by far. We never used to be able to talk on the other side of [name]. You can be in a certain place with a hundred watt mobile radio and talk but now it's you can hear almost the whole valley over you.
Technology - Positives_about-with	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	And through [system] with a link in another Sheriff's office in [county] I can turn my phone on and listen to [name] ambulance's traffic when they call us for a rendezvous or whatever so that's really nice.
Technology - Positives_about-with	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	No but the [name] thing is another tool that for me like back at the fire academy if I hear a call or see a call come in on the phone I can then turn on the radio and monitor the traffic back at the fire academy and see if it's anything that I can help with from back there and we have we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								can communicate directly with each other and it basically just gives us more tools when one goes down that we can then access another one to kind of communicate with each other.
Technology - Positives_about-with	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	... other times I'll have the CAD status on and with this this is exactly how the CAD system works that they have like if I want to know here's a wildlife call. If I open it and it comes up up there and then I can read the comments and I can do this in my car. I try not to do it while I'm driving you know so it's a cow, moose she's been around forever with the leg that she doesn't walk on anymore.
Technology - Positives_about-with	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	And they're pretty good about that so we get medical pre-alerts so they get us notified really quick and that comes up on active 911 so we know where we're going and you can look at it on the map on your phone which is very helpful and you can see who else is responding if they remember to push a button...Any way you can see who else is responding, who is coming to the station if you want extra staff if you're going over to [name of location] for something really bad you may want to take an extra person or two with you so that works really well.
Technology - Positives_about-with	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Each of our stations has a big screen that has active 911 on it so you can look at it and see who is coming.
Technology - Positives_about-with	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	When it comes to technology I definitely have a few ideas that I think that will be kind of in effect here soon. I think drones are going to be one of those things that are going to affect emergency services in general and we've got a drone for search and rescue with infrared. We just approved a camera, an infrared camera for that drone, it's our local emergency planning committee and that'll be great for searching for lost people but also for wild land fires, seeing hot spots that kind of thing and then major incidents where if we need to scan a big area where big car accident where people have been thrown from a vehicle that's an option as well. The other thing is using drones for mobile repeaters I think will be something in the future. So a lot of these canyons where we get restricted being down in them we can launch a drone that would

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								then relay that radio signal out for us and so I do think that that will be a possibility here in the not too distance future.
Technology - Positives_about-with	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	... Overall I mean technology has made our jobs better and improved the safety for the citizens and that kind of thing.
Technology - Positives_about-with	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Technology's a good thing as long as it's reliable... You know we've been using this for 10 years now and you know on [name of application/system] you can share video and you know photos just like [name of system] is supposed to be able to do and you can use it on any phone. You don't have to have an [name of system] phone which is going to be a huge issue so yeah technology is good if it all works together and is stable. That's great.
Technology - Positives_about-with	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	...then just recently we got a new app it's called [application] and of course we have to pay for that as all departments do but it'll page you out as a voice it'll come up even if I got my phone on silent it'll come up right now and you'll hear the dispatcher tell you where the call is and all that. You can map it now, you can it'll give you a text, it'll give you an email, it tells you it's got three different options where it says hall, standing down or scene and my fireman can look at their phone and hit one of those and that'll let me know that okay I've got two going to the scene because they're closer, I've got four coming to the hall and I've got five standing down so I know as soon as they hit that phone who is coming and who is not.
Technology - Positives_about-with	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	...before that we just had pagers but the only mapping system we have as far as like on our phones now is that new [application] app. It actually you can map I can map every hydrant that we have in town if I took the time and did it you know.
Technology - Positives_about-with	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	...So it helps with a lot of confusion. Let's see we've only been on this app for 2 or 3 months maybe 4 months no about 4 months so it's still relatively new. Prior to that we were using what was called [application] another app and then we still have the text messages and a phone call

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that would come through but through that we just see the deal and look at it and go and we didn't know who was responding so what we were doing is we were on the phone and calling are you coming? Or calling the chief saying hey, I'm at least showing up you know and then or if what I would normally do is I would call the dispatch and say I am in route to the station.
Technology - Positives_about-with	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	They're getting better. They're getting better. We do have pretty good service out here. We have a cooperative cellular company that does pretty good in our immediate area and there are some outside services that do pretty good too so it's usually not a problem. I mean we do have our dead areas that I mean we get down along the river and not much is going to work down in there.
Technology - Positives_about-with	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	I have maps and stuff on my phone. It's not through the department but if I ever needed to I could pull it up. The [application] app does have a mapping part on it to where they can with the E911 systems that we have in place now that dispatch can pinpoint that call for us and then if we need to we can map it out. I personally have not got to use that on the app yet but I think that is a very helpful thing because a lot of times even though we are on a a 911 you know addresses out here you know and all of our roads are marked...
Technology - Positives_about-with	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	...On another department that I am on [City] they have one rig that does have a headset that is very beneficial because the guy on the back can say hey you know we need to go over here where if the guy driving can't see it but then the guy driving is the one communicating and can listen inside. So that can be a problem you know if we're out and just not being able to hear our devices.
Technology - Positives_about-with	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	... Our radios at my metro job we have very good traffic within a structure fire commercial buildings and residential buildings. We have the capability of sounding an alarm device on our radios if we're in distress.
Technology - Positives_about-with	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	That's right, that's right and technology fails. I don't think it'll ever happen. There are things out there that technology has helped us stay

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								safe with thermal imaging cameras.
Technology - Positives_about-with	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	... A lot of people just thought TIC's, thermal imaging cameras worked to find fires no. You can use that when you're looking for an elderly person out here in a rural area that's ran off, an ejection from a vehicle. I found a person out here that was ejected from a vehicle out on a dark country road. You know I will say you know technology has helped saved lives and keep us safer.
Technology - Positives_about-with	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] ... If you can't find it but if they know how MDT, MDT does have a map on it. You can pull a location up on there. It's not directly like your phone will give you turn by turn but it will give you a good view of where you're going.
Technology - Positives_about-with	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] With our radios we kind of everybody's the good thing we're all kind of as one in sense of working together so we do have everybody radio channel in there so we can switch over to [name], we can switch over to their radios if need be.
Technology - Positives_about-with	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] The same way we have their code blue so where we can turn up their frequencies if need be because certain stations we're kind of right on that borderline where we will share our territory a little bit.
Technology - Positives_about-with	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] ... We just got new radios in the last two years so we've been issuing them out to everybody and these radios have bigger buttons on them and a lot of the issues. You wearing gloves, you're in full gear really turn it and fix the buttons and everything but now with these we haven't had too
Technology - Positives_about-with	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Yeah for the most part we don't have any radio issues to my knowledge of they know how to use them.
Technology - Positives_about-with	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	We switched to the 700 system pretty much last year because we have a 150 megahertz system. And in the terrain we're in it works pretty good. Portable to portable. We've got multiple tower sites and repeaters and Vodor systems and it's kind of complicated but it works until lightening hits it and just fries a bunch of it. And the last time it took out most of it. And we're still trying to put it back together. That's our main dispatch

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								where we get our tones from. But we switched to the 700 system that the state takes care of. And other than some dead spots particularly in certain buildings it does okay other than its alerting feature, we have... we have 11 stations. Each of those stations are supposed to have a different dispatch tone so that you don't wake up the whole [County] because one of them has to go to a first aid call.
Technology - Positives_about-with	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	If they don't have one, they don't get that service. But other than that, no. I mean none of us complain about the fact that we're using our own. You know? It's a nice feature for 2 reasons. One) I don't have to carry the radio. Let's say I want to go to dinner which I carry mine if I'm in the [County] but if I'm close by, I can leave, you know, I can leave the radio outside. It'll--there is a delay in it though. The text messages, some of them come before the tones do because as soon as they're generating the call it'll generate the text message. So we'll--a lot of time and I've got a couple of people, we call it across the concrete divide or the road between the two, as soon as they get a text message they want to start calling on the radio do we have a call?
Technology - Positives_about-with	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Not understanding they're still building the call. You know if you get the text message and you're that worried, go get in the truck and wait for them, you know to tell you to go. But... used to the Active 911 would hit first. We'd get an Active 911, it tells you what it is, where it's at, same thing the text message shows but Active 911 actually builds you a map to where--from where you're at to it. It's helpful. You know all of those technologies, they're--one's extreme, you know one does a whole lot more for you, one does a little less. I can, on Active 911 I can hit a button and then I'm going.
Technology - Positives_about-with	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Well I own my own and I have the latest version of the iPad Pro. I think the others probably have Airs or Air 2's. So I mean they're functional. We're not having any issues with those. Over there you can find everything from the latest Samsung and you know they all have something. They all know how to make it work for what we do. But it's not the primary communication, you know, on a scene. If we got out on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								something that's long term, we have Wi-Fi hotspots, we have computers that we could bring out. But in terms of it showing up on the truck or you driving down the road, getting the information you need, it's not happening for most of the people.
Technology - Positives_about-with	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	... There's also, speaking of technology, there's different apps that are out there. We happen to use one called Active 911. They put the information in or when it's entered into their CAD because it's an integrated CAD, then it automatically sends it out to a list of us that are, you know, that are on this list. I guess it's either volunteer or we work here full time or work here part time and it gives us some of the pertinent information like what type of call it is. I give us, of course, the date and time that we receive it. The address, gives us our cross streets. We tap on the address itself, it'll pull up either Google or Apple maps whichever you have it set to.
Technology - Positives_about-with	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	And typically it will show where you're at and the quickest route to get to that location that we're being dispatched to.
Technology - Positives_about-with	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	... Speaking of technology when the CAD dumps the information in the system or whatever we have what we call Firehouse software, it's just our software reporting system, software that we use, but it also is integrated with something to do with the CAD or whatever and so we get our calls, I don't have to call over here when I get back and say, okay, what address was that and what were my times and for all the different trucks 'cause, shoot, there's 9 different substations in this [County] and we're all one.
Technology - Positives_about-with	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	Up here it seems to be fairly easy. I would consider fairly easy because our radios all have everybody's channels programmed into them and we can just go to their channel if we're not already scanning it and communicate with officers if we're going to a wreck or something like that or if it's, you know, we need to get in touch with them because we may get--they may be, you know, somewhere else in the [County] or they may have left with patients from the [County]...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	I mean we have things that--like thermal cameras that help us see. It's kind of like a video camera. They--but it's not like looking through a video camera. They detect differences in heat so like sitting here I could look at you through it and I could make out like your silhouette or whatever because your body temperature is different from the chair you're sitting in or the floor you're standing on or whatever. That's a technical, a technology that we use to help us to do our job. Of course communications... just about anything, wirelessly, I mean there's technology in air packs now that... can tell me, like if I'm the incident commander or whatever, I could have a tablet or some kind of electronic device that could tell me who is at what location by their GPS.
Technology - Positives_about-with	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	I could see how much air pressure they have left in their bottle. I would know whether they're like, you know, in distress or something if they set off an alarm or whatever. And so there's a whole lot of technology. The worst thing about that I guess is the price tag that's on them when they first, you know, hit the market. And of course may be like most anything else, being a government agency, you usually have to go with low bid I understand but I don't agree with. But it is what it is. I can't--I'm not the person to change that. Not singlehandedly. But... anyway. So.
Technology - Positives_about-with	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	Yes, Ma'am, there's several. We use the Active 911 app that is the one that I was talking about a while ago that gives us mapping and tells us about the call, where we've got to go. It usually gives us the shortest route. We can do some pre-fire plans and inspections on tablets if we have them.
Technology - Positives_about-with	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	I know at the fire department I work at full time, we do that through an app on the tablet in an iPad, go in and do inspections and we can even, you know, if we find some kind of life safety code, we're not the enforcing agency, we just doing like a courtesy inspection, say the exit sign is not working, whereas if the [Job title] comes in and finds it they're going to say all right you've got so many days to fix that. And then they're going to send somebody back in so many days and it had better be fixed, if not then they may fine you or whatever. Whereas when we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								find it all we say is, hey, this is an issue, you need to take care of it.
Technology - Positives_about-with	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	But we could take a picture of it with our iPad. I can attach the picture to my inspection that I did and show that it's not working and I can email it all to them from right there on my tablet. I don't have to get back on the fire truck. I don't have to get back to the fire station. I can do it standing in their business basically.
Technology - Positives_about-with	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] Kind of thing yeah, which is kind of crazy. So as far as that goes then, we have what we call hand held units or walkie-talkies so to speak with portables. They have same capabilities usually but now it is away from the truck and we have it in our pocket or on our hips or on a chest strap of some sort that we carry with us so we can stay in constant communication. And then obviously we have our cell phones and i-Pads and laptops, things where we do write reports on and medical reports on that kind of stuff and it is all monitored through a lot of company especially this stuff when we do a medical report you know the big leagues and the CEOs of our company can monitor and watch it, they do what they do quality assurance and things like that to make sure they are done right and are following protocol.
Technology - Positives_about-with	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] I mean I can click on this app and I can look at all the incidences around the county that had gone out. If there is a particular incident that's close to me or how I have it set up in the app, I will see it come up and say this station is running a fire call and I can respond with it.
Technology - Positives_about-with	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] And once I am on the scene and they see my face and they take a head count for accountability, then that's how we get our payroll. But I can use that app to respond to that call.
Technology - Positives_about-with	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] We just now started using that app where we can check our trucks off by this app and now all our tank chiefs and our fire chief can see us doing our work and we can make notes on it for repairs or a light bulbs need change or something needs service or whatever, they all see that now we are all on the same page instead of having to email it and email it to the chief and it goes to another chief and it goes through a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								mechanical job, we dont have do the round robin with email anymore.
Technology - Positives_about-with	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] Everybody sees that follow up at one time.
Technology - Positives_about-with	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] Yeah, yeah, with the just ridges themselves and get down in the valley sometimes it is difficult to get out but usually now we can at least if we're on our hand held unit, we can go to our truck and still be able to get out.
Technology - Positives_about-with	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S1: So you get the information here in the station? Or can you get it as on the road too? S4: Well, both. If we are here at the station they send a certain tone out through their system and activate some alert system here and they give us a preliminary dispatch, an EMS call for a seizure, okay so we get in the truck, we go respond to and then we do a secondary dispatch that tells us it is a seizure with somebody who has history, somebody with epilepsy or it is a febrile seizure for a child or something of that nature, give us a little bit more on the secondary. But the initial dispatch is to get us to the truck and get us on the road and then kind of build this thing.
Technology - Positives_about-with	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] Yes, it has a small tablet about this size may be little bigger and it has a lot of the dispatch information on the screen for us that we can review as we are going as well and it has a button to push for maps that brings up the map network.
Technology - Positives_about-with	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] We now we are doing that, with rural metro. I was at the interstate and a call came out in the county that was just maybe across the river, we might be a little bit closer than another responding truck even though it is their area, they would send that because we are close. Now our system is doing that for our truck at this time.
Technology - Positives_about-with	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S1] Pretty much and of course you know, our handhelds still work for a non-repeated channel, we can still communicate within a certain distance. So if a command center relayed to all the liaisons of every agency that is there, this is what we are going to do, this is where you are going to be, this is where you are going to be, then those guys would

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								radio to their particular entities and their agencies and then they would disseminate the information and then would just go to work.
Technology - Positives_about-with	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	And you will charge it and -- but that's what I'm doing. We are hoping -- I am hoping it happens, because it will be easier to communicate. It will be easier to find out what truck is going on scene, how many guys are going, how many Active 911, you can look at that and it shows you the people that is going but you cant do that driving down the road, not when you are going 50 miles/70 miles an hour and you are looking at that and going I cant tell who is there, you know, but in this here, the numbers going off and what trucks are going, that is better -- yeah.
Technology - Positives_about-with	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	It is pretty accurate. It has been pretty good. Its done the fire hydrants, I mean, it has done a lot. It has improved our response time.
Technology - Positives_about-with	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	We use iPads at the station. At the station, we use iPads for training, use it for cataloging the trucks. So, usually the one guys that they are checking it off, the other guy is checking it on the catalogue and make sure it is on the truck. If there is something wrong, we put it on the iPad and we will send it to the computer and then we sit down and, you know, we need to fix that or whatever. We do have Motorola station, base stations and on every truck, every mobile unit has got a Motorola which is a good radio. Trying to think -- that is pretty much all that we have as far as, you know, talking and communication.
Technology - Positives_about-with	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	I like the Active 911 app. I'm sold on that one. I mean, it is really -- it's helped us a lot as far as like they have added a new thing on it where you can hit and it shows the fire hydrants. If there is fire hydrants here, it will be over here and this is rural area and it pops up even here and you are like -- oh my gosh, you know, it's like -- ooh.
Technology - Positives_about-with	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	They are supposed to be. [Organization], the air tank company, they come out and personally fit and give you a test to make sure you had your breathing. That's how ours is. Because that's your most important piece of equipment right there besides the water and the hose. [laughs] So, this -- it's a lot different. I mean you've got a lot of people that -- oh,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you are just a volunteer, you know, you get all the time and you are like -- okay, let's see you get up 24x7 hours a day, you leave the dinner table when you are eating dinner, or if you are wet, tired and you have had no sleep for three or four days and people don't understand that. A lot of people are like -- I want to be in this. I want to do that. It's like, I tell some of these new guys, you got to pay your dues. And they are like -- why you get to do that? And I'm like -- because I've done it for a while [laughs].
Technology - Positives_about-with	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Text messages all day long. We all have iPhones for better, for worse.
Technology - Positives_about-with	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: apps] There is a DUI app, where it-- I've got it, but I use it more in a teaching scenario. And I tell people about it. But what it'll do is you go through it and you go through all the steps in a DUI process, and it will prompt you [inaudible]. Okay. Did you see it? Yes or no. And then it'll email you everything so you have a lot of stuff already filled up for your report. I like certain aspects of it, but I don't like using it on the street because I think you're too busy. You get dug into your phone and safety issues. One called Units. And that just helps convert times, distance, weights.
Technology - Positives_about-with	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: using Word for reports] It's not trying to be everything else. So I'm a horrible speller. It catches the majority of my spelling errors and all that kind of stuff.
Technology - Positives_about-with	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...the e-ticketer, it's a brick. E-ticketing system is electronic. So you just type stuff in. It prints it out. And on one side, it's fantastic. It's got your statutes in there, all your court dates. So no more of, excuse me, pulling out a piece of paper and going, "Oh, shit. What's the next court date?" My list ran out. All that stuff is uploaded. And then all the ticket information that you do on a shift, including photographs of the people. So you write Johnny a ticket. You take his picture so that, that way, he can't deny it was him. All that's fantastic. The data part, where you can do from a desktop or a laptop, fantastic. You can go in, and you can edit something if you need to, whatever you got to do...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...the data that's available, information gathering. And I think it's a skill the newer guys have lost, or they don't have is go out and talk to somebody. That's like, "Oh, no, no, no. I can't do that." "Yeah. Go talk to them." And a lot of guys want to solve stuff from behind the keyboard. And you have to go out and talk to people. So there's good and bad. But just the technology, you have computers in the car. You've got the video systems in your car. You've got tasers. There's all kinds of stuff. And I think most of it it's for the better.
Technology - Positives_about-with	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	I think for the most part. I can't think of any technological advancement that is bad. Some of them aren't great but going from handwritten reports to dictated reports, to a crappy DOS-based report system, to now, where you can have a word processor, that's easy and the information sharing is great because through the various systems, we can communicate all over the world. If I need to email copy [Name] on something, he's going to get that email within 30 seconds of me hitting send. You can't just bounce jurisdiction to jurisdiction, state to state and get away with the same crimes.
Technology - Positives_about-with	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...I guess I haven't given a lot of thought of the technology stuff. I mean, I like the stuff that I have at work now, that I don't need to have two different HDMI cords to plug into a damn PowerPoint.
Technology - Positives_about-with	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Stuff like that would be awesome. They could monitor heat or heart rate or any of those kind of things. We all have wearable technology. And I've got it. It watches my steps, and sleep habits or lack thereof, and all those. And I think those are fantastic. And it's the more miniaturization that we can do. And there are certain things that just could be better...
Technology - Positives_about-with	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: CAD] ...We very rarely have gone down.
Technology - Positives_about-with	LE	U	Manager	46-55	31-40	Male	LE-U-020	One of the things we have, it's called the Safe2Tell program, which is it's for kids to call anonymously to report incidents involving in schools, whether it's bullying, suicide attempts, all those type of things. It gives them a unique perspective to be able to call into-- when it started to-- it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								was a toll-free number, totally anonymous. And when we started this back, maybe 10 plus years-- and it was good, it was busy, it was those type of things, but a year and a half ago, they implemented the app and it went through the roof.
Technology - Positives_about-with	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: text-to-911 Safe2Tell program] So we found their sweet spot. Unfortunately, we don't have a lot of extra personnel to handle those now, but it's amazing the number we do have, but that's just the technology leap. And that from a text-to-911, it's-- and that's why I went with the correlation that they just haven't grasped it yet. And we went to text because we went to text before the app. We did see a little bleep but not anything else. But when it went to a full blown app, it's gone crazy because you hit their sweet spot and that's how they're going to use it.
Technology - Positives_about-with	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: text-to-911 Safe2Tell program] And, I mean, the number of suicide attempts that we've actually stopped in the middle of happening, that if the program wasn't available-- I mean, we've had situations where we're either talking with the person or the friend and their last thing is goodbye. We send in law enforcement. They knock on the door and the parent says, "Oh, he's in his room." And they go to his room and he's hanging in his room... So without that type of intervention, that kid obviously has problems but there was-- we saved a life that day.
Technology - Positives_about-with	LE	U	Manager	46-55	31-40	Male	LE-U-020	And one of the things we have in [State], we set up a-- it's Star CSP line which we use for road rage, and impaired drivers. And those calls are directed to State Patrol dispatch centers whether they're in a metro area or not, because we're not taking away from true 911, it's not a 911 call. But they did direct it to us and we typically are responsible for the highways. Those calls obviously go through the roof as well. One of the huge numbers that we have. So, again, it's a technology that we saw an issue and said, "If there's a way we can get some of these calls direct to us, we'd get better information." So we worked with the carriers, all the major carriers, we met with them and set it up. And initially, when we did that, time on phones was an issue, people didn't want-- so we got it to be a toll-free call.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	LE	U	Manager	46-55	31-40	Male	LE-U-020	So there was never a-- so you call Star CSP, *277, those type of things, where it was a free call, so we got people involved. But as technology changes and-- just for an example we-- Star CSP, we tell you to call Star CSP. But, typically, and on a lot of phones the alphabetical piece is tiny or non-existent. So that's--Although it's a good-- it ties us to State Patrol, CSP marketing tool, *277 and people go, "Uh, how do I do that?" So--
Technology - Positives_about-with	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	So overall, officers go through training, and then they're issued a body camera. And they wear them on a daily basis throughout their patrol shift. At the ends of their shift, they're required to have it on when they're dealing with a citizen. And then at the end of their shift, they dock the camera, the video, automatically offloads. We're one of the few departments in the country who have integrated with our computer-aided dispatch systems. So it'll automatically tag the video as belonging to Officer [Name] and Officer [Name] who's on a burglary call, so that's what this video corresponds to. That eliminates the officers having to manually enter metadata into the video. So that's kind of just overall how the system works...
Technology - Positives_about-with	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...The body cams, that video is transmitted just simply by-- it's not a live feed, so the officer gets done with their shift, they dock it, and then it uploads to the cloud... they don't have to manually transmit anything.
Technology - Positives_about-with	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: MDCs] overall, I'm just about the newest-- by a month, I'm almost the newest guy to the unit last year. And I still work the road a lot because I'm workaholic. And I think overall, the computers were pretty reliable... So they don't go to the shops a lot for issues unless a key's broken or there's major damage on the screen or something.
Technology - Positives_about-with	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: MDCs] Obviously, some of the software programs work better than others, but for the most part, everything works pretty right.
Technology - Positives_about-with	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: CAD] Especially going out even a block outside the city, I'll pull out my phone, look at it, see where I'm going because it's quicker and easier.
Technology - Positives_about-with	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...this department has always been kind of on the forefront in our wireless mesh system and surveillance camera system, everything is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								really state-of-the-art.
Technology - Positives_about-with	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...we just went to a form for putting our property in, booking in property and evidence. That is getting rid of the paper form. So in a sense, it's easier. You're not lugging around-- you don't have a briefcase, you taking in the car that weighs 20 pounds because it's full of stacks of papers and forms that you need. But now there's additional steps you have to do on the computer to print out your barcode to slap on your property before you turn it in, and those extra steps, people are like, "Easier, my foot. This is a pain in the butt." When it is kind of-- actually, it's a lot simpler in the long run.
Technology - Positives_about-with	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: change in technology] And part of this is they don't see the backend results, and just using the property thing as an example, by an officer in the field electronically entering evidence into the system and then printing out an evidence tag, when they get into the head quarters, where they push a button that prints out the tag, they can put it into evidence, that then saves a property technician behind the scenes from having to get a paper form, and then enter it into the system, but the officer on the street doesn't see that, that backend. It's the same with the e-citation stuff. Electronically printing a citation into the system allows that data to be electronically transferred to the courts, electronically transferred to a records management system. The officer on the street doesn't see that there isn't the records technician or the court technician now who asks to take that paper taken and transcribe it, so.
Technology - Positives_about-with	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: switch from laptops to tablets] Really not doing anything new. I mean, it's not going to be a huge change for us. They're so used to using the machines now that the computers that being able to take the screen off and walk into the house with it, it's just going to make it lighter and a little more mobile. Because they can do that with the whole laptop now.
Technology - Positives_about-with	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: mobility of laptops] ...I used to when I was on patrol. If I had a burglary, I know it's going to be in there for a while, put in a bunch of the information, you have to [inaudible] safe. Get the computer, come back in, "Can we sit down?" Okay, give me all the information. SO yeah. And

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								hopefully more and more if we make that change to more of a tablet style. Hopefully, that will help.
Technology - Positives_about-with	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	So internal communication, there isn't a lot except at the chief's level, I'm sure there is. But there isn't a lot of, I guess, communication interaction between the agencies. Now from a radio standpoint, or a radio system, we have the capability to talk across police, fire, that kind of thing. So that's pretty seamless. I mean, we all have the same radio system. Everybody in the city has the same radio system. We have it set up so that if a street worker is in trouble and needs help, they can get on the radio and call dispatch and get a police response.
Technology - Positives_about-with	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	I was talking more on the PIOs Monday night actually. And he was carrying around his iPad with him in his hardened case with they attached the Bluetooth keyboard. And he goes, "I have--" he goes, "It's got a list of things on here in case I need to call somebody more than the first two people." And then, he goes, "I can do everything on my phone." He goes, "I have this. But I really use it." He carries it as a resource. He doesn't carry it to post Twitter feeds, and update Instagram, or do anything else. He uses this phone for everything. So I found that interesting. I would tend to use more of the tablet, I think. Yeah. He's more comfortable using just the phone for all.
Technology - Positives_about-with	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: mobile fingerprint readers] ...People like them. They've been very helpful when they've used them. Overall, unless there's something wrong at a state level where the system's down, they work super fast. And actually a few times we've used them, two or three times in the last 12 months to identify cadavers. Dead people, no ID on them, they've done that, and once the coroner gets there, you get the coroner blessing. They check the fingerprints. They'd be able to get reads off of a bodies before, so.
Technology - Positives_about-with	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: mobile fingerprint readers] we got a lot of positive feedback about it. It's a very, very useful tool, and we have a policy that is in place where there are rules about when you can use them, how you can use them and everything, but it's been a very successful technology

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								implementation.
Technology - Positives_about-with	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: mobile fingerprint readers] It definitely helps. You have to understand it's not just, "Oh, you don't have ID. I want your fingerprints." We look at what's going on. How's the person acting? Or you say you're [Joe Blow?]. [Joe Blow?] doesn't exist. Or you say you're [Name]. Well, [Name] doesn't exist. Are they nervous? So you look at everything before you go, "Yeah. Okay. Come on. Step out of the car. Let's talk." And you call for the fingerprint reader and tell you what, "Let's clear this up." They do the prints. They read and go from there. So they're definitely beneficial.
Technology - Positives_about-with	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: body cameras] it's probably about third of the length of your recorder right there and probably add about an extra third of width, so it's not huge. Different brands, different sizes. Ours isn't that big. It's pretty unobtrusive I think.
Technology - Positives_about-with	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: cell phones] The GPS in it. Because we have access to the city jurisdiction maps, so we can see if we're in the city or out of the city. When traffic crashes, it can be a big deal sometimes as to who handles it. So that's a good resource. We use it for other things. We can actually access our CAD system through it.
Technology - Positives_about-with	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	All of our patrol cars have MBCs. We do have a few unmarked, I guess, pool cars or command vehicles that we use, that do not have computers. Our detective vehicles don't have computers. And our motorcycles at the moment do not, but probably by first of the year, they'll all have tablets on them as well. And then, all of our newer cars are actually WiFi hotspots with the tablets that they can be removed, and we have about a 400 foot range around each car.
Technology - Positives_about-with	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...In my house, our radio works just fine. I can call back and forth, no problem at all. I get down here to [street] and [street], half a mile from here, and the radio's drop because we have dead spots. We have interference from-- we have interference from the high-rises in [city] that it's ricocheting back off and it's blocking the signal so it's dropping. So

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we're building extra towers and stuff like that, but we have areas of our city out west that we don't have coverage. They're building now towers, but that takes time, so.
Technology - Positives_about-with	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...While I like my eticker, it's fantastic for what it does, and technically I can use it as a phone. It's got a place I can put a SIM card in it. It's a little too big for my phone. It's just a little bigger than this. It's this Panasonic N1, so it's not much bigger than this. And technically I can run that application on my phone, but the camera doesn't work as well as the scanner. So in the handheld, for ticketing, it's got a built in scanner that scans drivers licenses, scans VIN numbers, and imports all that data in there. The camera doesn't work as well. It'll still do it, but it takes longer than to do that. So combining that type of thing-- if I could carry one device that I could use with my phone, was smaller, and then I can do that stuff from, that would be great. If I could have all that on one thing and essentially kind of as a radio as well, that would be great.
Technology - Positives_about-with	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...There's a lot of things that-- there's really almost nothing that we have to do on paper anymore, I don't think, but we do. Even our eticketing, it imports directly into the court. They have it the next morning. They still print out paper copies. Our records department, it could import directly into our RMS system, but because they had to click three times to merge the records, they print them out, and they hand type them in. There's job security there [laughter]. So it's there, but... we still have stacks and stacks. "Paper and printer is expensive." Then stop doing it [laughter]. But we keep doing it, even though we have other places to store all that stuff.
Technology - Positives_about-with	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	... being a detective, we're on call usually every other week. But instead of having to sit by my phone at the house, or call and say, "Hey, I'm going to this restaurant if you need me," or "I'm going this movie theater," I can just have my cell phone. And I can kind of go, and be, and do as I please as long as I've got cell service. So that makes that a little easier.
Technology - Positives_about-with	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: dispatch CAD system] ...based on those questions, it will code what response it thinks the ambulance needs to go to, whether it needs to run

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								lights and sirens, or if it's just a pretty benign sort of thing. So once you get through the coding, then it will pass it off to the dispatcher who's actually going to tone the fire department to send them out. And they'll say this is-- like our system right now, it's Alpha through Echo. So Alpha is, I have a paper cut and I need a Band-Aid. Echo is not breathing, not conscious. So on that sliding scale. Then, once we know exactly what the issue is, it's been coded. This is how you're going to respond. Then, it kind of forays into, this is what we're going to do about it. Whether it's instructions for CPR, instructions for choking, instructions to try and ward off shock, this, that, or the other. And having that on the computer is very helpful because you don't have to, under stress, flip through, find the card, code it yourself like we used to have, and then do all that stuff...
Technology - Positives_about-with	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: using Word for report writing] That's exactly what it's made for. It's easier to use, it's easier to read, and I can save everything that I've done. So from the time that I started being a patrol officer, my first call that I ever went to, I have all those reports saved on my file. Which is nice because when the report-writing software goes down, as it has before court, I can just go back and print the Word document out.
Technology - Positives_about-with	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	... Interpersonally, email is a blessing and a curse in that it allows everyone to talk to everyone. But you kind of miss the non-verbal cues. You don't know if it's necessarily directed specifically at you if there's an email to the whole department, that sort of thing. So I know communication interpersonally is something gets brought up at pretty much every department meeting that we need to improve on, so.
Technology - Positives_about-with	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: body-worn cameras] They are big and blocky and hang off my shirt like this. They're not quite as high quality as GoPros, but they're two or three times bigger... Obviously, there's different versions. So something smaller, lighter-weight, less conspicuous would be nice. That said, I absolutely, absolutely love having video in the cars and body-worn cameras.
Technology - Positives_about-with	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: body worn cameras] So it's held locally on the camera until it's put in the dock to charge and download at the office, the system that we have.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								I know [City] PD just down the road has a different manufacturer, and they can pull up the-- they have an app on their phone. They can pull it up, tag it, do whatever they need to do, and it's done. So they can sit in the car and do that, or be wherever and do that. We have to physically go back to the office, put it in the cradle, and wait for it to download and cycle and all that stuff.
Technology - Positives_about-with	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: MDTs] So that's only in the patrol cars, so I don't have one in my car. But like I said, we've got the now busted tablet [laughter] that we can take with us wherever. Yeah. But all the patrol cars have one, and it's very handy.
Technology - Positives_about-with	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	one of the other things that is our responsibility is if let's say, there's a DUI crash and there's injuries, so we have to write a search warrant to get blood draws. I don't necessarily need to drive 30 or 40 minutes into the office to write that if I have the tablet, and I can just type it up on that just as if I'm at my office. So taking that home while I'm on call, it's a huge time saver. It saves me an hour, at least, of drive time. It saves the department an hour of paying me drive time. And I don't have to leave. I can do that in my pajamas [laughter]... That's a huge, huge piece that we just got this year, probably within the last eight months.
Technology - Positives_about-with	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	...I love having the cameras. I've got almost exactly the same voice recorder from before we had the body-worn cameras, and it's very handy. The e-ticketing machine is a good idea, but the implementation is just not quite there. I think there's way better ways to do it. So I would consider that one getting in the way because it still takes me longer to do that than hand-write something... And probably, in all fairness, if I was on patrol and I used it on a daily basis, I would be much better at it than I am.
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: electronic evidence discovery] We certainly from the district attorney's office, probably their efficiencies have gone up huge. And from the defense attorney's side, being able to provide that discovery is big. It does provide electronic tracking. So as soon as we send it, it's stamped and they get it. So there's no questions on, "Ready for trial?"

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								"Well, you never provided this photo to us." "Oh, yes, we did."
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: app for situational awareness] It did work pretty well. In the command center, I could see it. I was able to take pictures. We were able to monitor crowd size. So from the field, I would take pictures within the app and then it would tie it into the app. It would show up in the command center. Then they would relay it to the public relations people. So I'd watch how long it would take when I'd say, "Stands are half full." And then that would go to the command center, they would pass it on to the PIO group who was putting out, on the public side, the notifications. And it's usually about a minute or two and then it would come through, "Stands are half full." And then the people in command could actually see the pictures, so if something did come up they could have gone back to those pictures at the time that I took them...
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	And everyone knows that in a lot of wilderness areas, you're not going to have radio communications because you can't put a radio tower in there. And generally, wilderness areas are high and mountainous, which means there's valleys and radio signals don't get into valleys. So you know what valleys you're not going to have system coverage, you'll have direct coverage. But that just involves the pre-planning and training guys on the radio on the concept of a radio system and a repeated talk group versus a line of sight and direct talk group. And when do you change and what are the limitations. So their expectations aren't unrealistic versus what your technology can do. So you don't hear after actions the whole time that the radio system just stinks [laughter]. Well, it doesn't stink. Let's work to resolve it so the next time you know what to expect.
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... As we tell people, if there's a big event going on, and the example we use was years ago, the [incident] on the front range of [State] and the guy was saying [Incident], while we had just set up recently, this state-wide radio system. Well, people up here realized they could tune in and listen to what was going on on the front range. Well, the state deactivated those radios. They realized that the entire system was getting tied up by people who were not in the area of operations,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								listening to what was going on. And they were able to go through and deactivate those radios. So that was a big eye-opening experience to people of-- there are repercussions when you do things we tell you that you're not supposed to be doing. Which is a good thing because then it freed up the radio systems, they could do what they needed to do at the time. But yeah, most people remember that situation. They've been around for awhile.
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: radios] ...I can scan and I can have talk groups for more areas. And when I transition, and I can go to mac channels. And yeah, I can do a little bit of paging over my radio. And maybe it's a good thing that the basic function of missing critical application of what the radio systems do hasn't changed is good. And that's still our fallback and even looking for with the next few years. I think we all say, "That's going to be your mission critical communication piece." We've even incorporated that into our radio training now...
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...the lithium ions are better. People were sort of excited when we switched to lithium ion batteries because now the radio was lighter. So just the feel on your hip is a little better. It was a little thing but people actually noticed it.
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...I've actually been deemed an expert twice in the use of FARO that we've been able to in crime scene reconstruction. We've gotten FARO into court and actually used it as a diagram, actually walking through a scene on the stand. We've done that twice. In both of my cases, one was a shooting where somebody just fired a round at someone else. And then the other one was actually a child death. So it was more of documenting where things were in the scene. So it helped us to understand the layout out of the unit. Both of those cases are the first ones in [state] that we know of to be able to actually get it into court.
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So the best thing that we can have is technology sharing, information sharing. So we had this service called [information sharing database] that a company ran and it's a online database that agencies can belong to and you can get your own personal log-in. You log in and there's data

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								from every arrest that happens within every jurisdiction. It's not even an arrest. It's every contact.
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...[information sharing software] is actually, basically, a storage of data. So it's a new version of [information sharing database] and it's a better one. It has analytics so that our analysts here at the department can pull up stats and keep track of things and try to figure out trends...
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... what they really needed to do with that system is provide you with the information of here's where the crimes are occurring and then let you make your decision based off of that. So [information sharing software] allows you to do that. They've come up with actually different search engines that are available on our phones. So we can just log in to Lumen and you can stay in for 12 hours at a time, so you can just log in at the beginning of your shift.
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So [information sharing software] does do it by account. So they charge by the account. [city] has a beta testing agreement with [information sharing software] so everyone at the agency that wants one has a [information sharing software] login. Other agencies have to pay per login so some other agencies have one login for the whole department. I think it's unbelievably invaluable.
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: information sharing software] ...So brings you up mugshots. So that's one of the problems is it depends upon the agencies that are connected with this whether we get their booking photos. So our own local jail is actually not connected to this yet... But our photos, if we booked them here in this building, they go in there. So, yeah, so that's good, but we are waiting for a huge dump because it's going to be [County], [City] PD, [City], [City], they're all coming into [information sharing software]...
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: information sharing software] ... it gives me nicknames, heights, weights, tattoos, these are all tattoos and scars, personal data. And then if you keep scrolling down, it will give you associates, it will give you vehicles, addresses, any of that stuff, so it's extremely helpful. And it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								great that I can get it right on my phone...
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: person of interest information lookup via information sharing software] ... this has sped that up tremendously. Because now, if I don't know who you are and I suspect you're lying to me, now I can prove it within seconds. So I just log in at the beginning of my shift, I stay logged in all day, and then it's very helpful...
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: information sharing software] ...they've created CJIS. And what this is is an online archiving service and it archives all of our digital media and it does it in a cloud and it also does it in a server. I think the server's down in Texas, somewhere like that. So it's backed up three different times. We went through the creation with them and they came in and they have had people available by the phone so that we could work out all our kinks, so it's CJIS-compliant, so that it's, yeah, so we don't have any issues with that whatsoever.
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... So anyone that has a [information sharing software] login, they can now view our photos from our crime scenes, from our booking photos, anything else, surveillance videos from bank robberies, anything like that. We don't have to now try to find an encrypted way of sending it, they can just log in and view it. We're the only agency that stores it like that so nobody else has that capability. But if you go to the desktop versions, you will now also be able to read any agency's reports from any of their systems. So while you don't get the media, you still get the reports, so it's all great sharing.
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: bank robbery incident] Well, technology was great because we had a tracking device that the bank teller had given the suspect. So we're trying to track through that but here's your problem, is you have the Feds that are doing their Safe Street program for the bank robberies, they have the tracking device. We also have a tracking device here or a tracking system here, [county] has one, I don't know if [city] does or not, but all of them are looking at their systems. They're then all calling up to our dispatch, so our dispatchers who are already handling two channels are now handling three different people calling into them to give them

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								information instead of that source coming straight to the officers on patrol. So if they could just air up with us and then give us the information straight, that would be great...
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... I use a small earbud because I want to be able to hear not only this, but whoever's over here. There are specialized ones that you can get that are form-fit to your ear. They make it to where you can hear really well on the radio, but I can't hear anything on this side of my head. So I want to make sure that I can still hear so it can't completely shut off. It can't be like earmuffs are...
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	I've seen some amazing cell phone photos of you walk onto an accident scene and immediately start taking pictures with your cell phone before you can grab a big camera because everything on the scene is going to change. We've had situations where people just get scooped up and put in an ambulance, or run away before you can grab a camera. Or today's, the bank robber. Somebody at the bank pulled out their cell phone and took a picture immediately.
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So in the cars, too, I'd say, is one of the biggest problems. They did it, a revamp of the way that they put all of the computer systems in the car. So in the back, it's now on a folding tray. So it used to be, before, in the Crown Victorias, they used to take up basically the whole trunk. And then we had a storage box that had blankets and flares and stuff like that. But it still took up a whole lot of space back there. You had an extra computer in the back, a extra computer in the front, and then all of your boards and everything else are in the back supplementing it. So it takes up a lot of space. So they were actually, somehow, able to reduce a lot of that and then put it on a folding tray, so now we have the SUV crossover Ford Explorers. And so you open up the back hatch and we've utilized the space that's beneath where the spare tire was. And you open that up and you have some storage down there too. But then they also have a folding tray that folds up against the back seat. So they just pull a pin, fold it back down, slide it out, and they can work on the system, and it doesn't take up a whole lot of space. Now I still have room for full-size

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								cones and flares and all that sort of stuff.
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So if we could just-- so one great thing that we've done here is our fire department has the same channels that we do now. So when they go to an incident to help us out, they pull up on scene or they get dispatched to it, they flip to our channel, they answer up on our radio, and we know that they're hearing us and all we have to say is, "You're good to come in," and they can come in. Whereas before, we call our radio, our dispatch, they call their dispatch, they send them, and actually, we're sitting next to each other-- So that's been beneficial, but if we could expand it to include other agencies, which, I know, again, it brings in a can of worms.
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: surveillance video] ...one of the capabilities that we have with the CJIS, which is great, is we can restrict access. So like I told you, people have access if they have a login. We can restrict it. So we can say, "This is CAC case, only CAC's detectives can view this or only specific people." But that's one of the things, we don't want to put it into [information sharing software] if we don't have to, plus its size...
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: radio systems] ...I think they did a great job of upgrading and then adding a tower, so it ended up increasing in a lot of areas...
Technology - Positives_about-with	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: e-ticketers] our motors can engage in a traffic stop, be done with it, and get a ticket issued like that. They're just nonstop with that stuff, so it's definitely more efficient. I obviously don't write as many tickets as they do, so it's not necessarily something that I see. You do have to set it up, and you have to put your ID in and all that nonsense and I just don't have any interest in that ,but some of the newer officers-- well, I'm pretty new, but newer than me I guess, they like to utilize it as a tool that kind of benefits them, so.
Technology - Positives_about-with	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	Yeah, so at the beginning of shift you have to log in to your computer so that it's assigned to you specifically based on the vehicle, your ID, your

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								password, so they can monitor who's using what, where they're at, and then within that you have to log into-- certain officers pull up different programs. It just depends on what you want to do because we can run stuff through dispatch if we want to, but I like to run people if I can just on my own so I don't have to call dispatch, wait for them to do it and then call me back, as opposed to me just typing it in and it coming directly back to me. But you have to log in to those, so they're different programs...
Technology - Positives_about-with	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	I think one of the most important apps that I have on my phone... this app that basically determines our jurisdiction. So if we have a car crash on I-70 and I don't know, let's say or I-76 or something where we kind of are butting up against other jurisdictions, [County]or CPS, or anything else like that, you can pull that app up, and it is a GPS locator with our jurisdiction and directly where you are, and it'll tell you whether or not you're in the boundaries of your own jurisdiction. Because we have to have them respond or take the reports or stuff if it's their jurisdiction. And that's why I kind of reference that with our vehicles. Our vehicles are kind of accurate as to where we're located, but we can't establish jurisdiction based on what our vehicle reports, we have to do it on that phone or with a map or something, a physical map...I like that app quite a bit. Saves a lot of aggravation with other departments...
Technology - Positives_about-with	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	...Some of the translator stuff is very beneficial. We have a lot of Russian-speaking individuals in our city. I mean, it's kind of a subpopulation, but we handle a lot of calls where it's hard to communicate. We have certain officers that can speak Spanish and stuff, but nobody that can speak Russian, to my knowledge, anyways. So having Translation, which is just basic communication with different languages, is very helpful...
Technology - Positives_about-with	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: various traffic fines] ...I'm sure those traffic guys probably know those by heart, but I don't ever want to take the time to learn that stuff. So it's nice to just be able to reference something and have it at your-- available to you, but not something that you have to dedicate a lot of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								time to memorize...
Technology - Positives_about-with	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: apps] ... It's nice to be able to have your email. It's not too dissimilar, I think, from what civilians would use their phones for.
Technology - Positives_about-with	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	so our cheat sheets, if they're on our phones, it's because somebody took the time to scan theirs and then email it around. That's how I got mine, as well. Another officer took the binding off and actually sent it through the scanner... But our municipal code, you can search for stuff, which is pretty convenient. Because otherwise, [statutes], the revised statute, state law, we have to go through this gigantic book to find stuff, and it's not always the most convenient thing to-- or time efficient thing to just sit there and peruse... I mean, it's fairly user-friendly for the most part.
Technology - Positives_about-with	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	... we are able to use Google Docs, which a lot of officers kind of utilize when they're driving from one area to another or something to just kind of get the general outline of their reports, so just time management, to be efficient. So it's nice to have the phone for those types of things if you're able to utilize it for that.
Technology - Positives_about-with	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	We can access [state criminal database] and NCIC, which are the [state] criminal database and the national. So if somebody has a warrant, if there's a stolen vehicle with stolen tags, we can run gun clearances, things like that, just from our vehicle. So I mean, that's very important. I think that's definitely way more important than anything else.
Technology - Positives_about-with	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: picture of person/vehicle of interest] It is because you get to see who-- what kind of a car it is or if there's any distinguishing marks. It's a lot easier to-- I think, give the picture description as opposed to just describing the person by words. Because, gray sweater, blue jeans might mean dark gray to me and acid-washed jeans, whereas opposed the other person-- everybody takes the description differently. So I think that the picture is probably the best thing, especially when there's people that are wanted now with everyone having-- a lot of them have video in their houses and stuff. So I mean, if they have a picture of the actual person

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that did burglary or that tried to break in, it's better to shoot that out because then you can see who you're looking for and you can reference back to it...
Technology - Positives_about-with	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: Shotspotter app] I like it. We just got to work out some kinks. As long as we get to the point where they said that they could for sure be accurate. I think it was 80%. If we get there, I think it'll be a great tool.
Technology - Positives_about-with	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	Obviously, the body cameras are very new. I think most of the in-car camera systems are the same. That seems to work for the most part. Unless something is messed up, it works [inaudible]. There's not a lot of bugs in that system. We recently got a lot of our computers updated, but prior to that, buggy or broken [laughter]. I think the computers are probably the most dated, but they're probably the most expensive to fix as well.
Technology - Positives_about-with	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: body cameras] I think they're not-- I'm newer to the district. Did they get them last year? So I've had it since about March. I think it's more of a-- it's not too conscious yet to say, "Okay, now I got to turn this on." Because you're used to hit the lights, "Okay, where am I going? What hundred block is that?" And sometimes you're figuring out your route and you're doing a lot of other things in your head and you get to the call and you're like, "Oh, I forgot." So I think it's still-- it'll eventually be in most officers just your natural thing to, "Oh, I'm going to a call, I turned it on." But it still has to be-- it has to get to that point. Time will fix that, but it's you push a button, it's really not that hard to use.
Technology - Positives_about-with	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	To me, it seems easier to communicate because everyone has multiple ways that they can reach out to each other, whether it's through their own phone, through the department phone or the PDT. We can push out information quicker, but I don't think the process is smooth yet. It'd be nice to integrate everything into the computer, like with ShotSpotter or with HunchLab where you have the screen, at least you can see where you're supposed to be or where it's going off, as opposed to if you hear it go off, you unclip it and you have to open the phone, put in your password and then go to the app to see where it's at. It would be nice if

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that information, even with the dispatcher got it, they just shot it with the screenshot like, "Here. You're going to go here." It's there. There's not-- I know that technology's getting there, where they're going to push video and what else to the cars, but--
Technology - Positives_about-with	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I'm more of an audio learner. So, even when I do read-- if I'm going to a call and something's on the PCAD, I tend to read it out loud to myself. Or if I do have a partner, somebody does read it out loud. Usually, the person not driving [laughter]... But I would say audio works better for me and of course, it's nice to reference though, "Were those pants black?" And you can look and of course, it's easy to look at the PCAD and read it.
Technology - Positives_about-with	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I came from a department and we had different technology on the computer. And we were a smaller department so it wasn't we didn't really need to worry about walking on each other, but if he got a call and I wanted to go on his call, I could put it in the computer-- we used 10 codes there. I would just put like 76 to blah-blah-blah's call. So I never had to go over the air to dispatch or [inaudible]. At least it was on the computer, which I think some people may be a little old school or worried about, "What if I get in a crash. I never said I was on the way to the 10-1, then I'm gonna be in trouble."
Technology - Positives_about-with	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	the computer where it's at, it's not really comfortable. I mean, I would hate to have to write a report in the car. My back would be killing me because you have to turn, and lean, and type, and it's not-- it'd be nice-- it's supposed to be a portable data terminal but it's not. It's fixed in the car... You could take it out but if you're in the driver's seat [laughter], your steering wheel is in the way. So if you're in the passenger seat, you can put it on your lap and work. But if you're-- we're days so if you're by yourself, it's-- you're working like this.
Technology - Positives_about-with	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: CAD] I mean, the Troopers do take their Toughbooks out if they were to come into the station and process an arrest. We just leave it in there and would function off of a computer in the station.
Technology -	LE	U	Field	Not	Not	Not	LE-U-024	...At my old department, it was all one-handed use. I could say, "Okay, I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Responder	specified	specified	specified		want to run a plate, I want to run a person," and it was just-- it was an underlying letter, and it went to that page. And then we had an overall command line that we could run everything, everything but templates from. Whereas in the city, you're like, "Okay, I'm going from running this person to running them." And sometimes if you have a truck plate, you got to put in the truck code, whereas in however the previous system I used was designed, it knew it was a truck, it knew it was a firefighter plate and so on. So it was a lot easier to be on the move...
Technology - Positives_about-with	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: drones] With the fire department, it would be fantastic, too. We have a house fire. Well, the drone goes over it. Yeah. It's fully engulfed. You notice on multiple trucks right away, better control things.
Technology - Positives_about-with	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	... So, for example, if I'm driving, I may get a hit on a suspended plate. Well, I can't do anything on that car if it's parked. I can pull it over if it's moving, but I can't do anything on it. So then I have to sit there and acknowledge that, yes, this was a positive read or a misread, and it's a little cumbersome to actively be on the plate reader all day... But, at the same time, it's nice. I think now we're starting to learn how to use it a little bit more.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: dispatch via radio and PDT] Well, we need both. It comes over the air, so then if another unit is nearby they can go and assist you. Other units listen to the radio. But it's nice to see it in case there's a lot of radio traffic. I can read what the dispatcher said, so you don't have to ask them to repeat it. Another unit is calling for help or they're chasing somebody, it's on your PDT so you can read the information.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: patrol officers] Lots of information comes through the PDT. They can look up criminal history. They can read the daily bulletin. They can read stuff on the wire. They can inventory things from the car.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: patrol officers] They can write their report in their car. Everything that's on the computer in the district is on that computer if they have a new computer. If they have an older one, they don't.
Technology -	LE	U	Field	36-45	11-20	Female	LE-U-026	[RE: patrol officers in the field] If they have a working computer, then it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Responder					great. If they don't have a working computer, not so great.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: cordless microphone] I think things are designed well. With the cameras, you can buy your own attachment for your vest. So if what the department gave you isn't working out, you can go get your own.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: work cell phones] I don't think they've made a whole lot of difference. I mean, they have HunchLab on them so that makes it easier for the officers. If we could get that on the PDT, they wouldn't need one more thing to take out. ShotSpotter is on the PDT. So I think it would depend if you had a PDT in your car or not. Because if you have the cell phone, event numbers, stuff shows up on there. It would work very well for, let's say-- some things work well for bike officers. Like if you could get the phone to run a name on there, if you had access to leads on the phone, that would be great for people who are on the bicycle. Because they don't have a PDT, they have to run everything over the air. So some things could be used for-- they're a great technology, but if you have a PDT some of it is the same technology.
Technology - Positives_about-with	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I think all in all the communication is a good system for us here. We do have some geographical challenges. We have parts of our county where we have no radio coverage at all and it's been that way for many, many years. We have started trying to work towards installing a repeater in the north end of the county. We're actually just in the process of that right now. We've met with the forest service, we've met with the radio tower owner and I think our goal is in the spring once the snow melts and we can get up there is to have it all installed and up and running by early summer.
Technology - Positives_about-with	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	We can on a limited basis. I think as part of the grant the fire departments were provided with a couple of 700 radios for their command vehicles and maybe some portables. I don't quite remember. We do have a dedicated fire launch channel. I don't see it get used that often because I think it's primarily like the command vehicles will have the channel that the actual like EMS and fire don't have it so technically yes we can talk to them but I don't see it getting used very often. I hear a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								lot of gripes about interoperability but I don't always see the users use the interoperability that we do have.
Technology - Positives_about-with	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Well we have a body worn camera and we have an in car camera system so the in car system is mounted in the vehicle permanently when the officers so they do have to activate their body cameras. I think the in car cameras can be operated manually or when they turn on their lights they'll automatically come on and I think there's a Wi-Fi type network so when they do pull back into the office they'll automatically download onto the server or to the storage device. I think they can also manually upload or download the information to the server but so far it's been very positive. It's something that we saw it as a trend nationally. In order to protect the citizens and our deputies I think it's a very positive thing...
Technology - Positives_about-with	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: body cameras] ...I think for the most part I think it's been very valuable as a way to capture evidence in criminal cases and I think we've had one or two instances where you know a citizen made a complaint against an officer and we were able to review the video and either show that it didn't happen or show that it did and address the issue that needed to be addressed and so all in all I have not heard anything negative about it other than sometimes the at first the functionality of it and getting it up and running was I think fairly difficult for us to do and some of our staff really pulled their hair out over getting it to work properly but it was really on the manufacturer's side not on our side or our IT department side. It was more the instillation of the product and the lack of support from the vendor that sold us the product.
Technology - Positives_about-with	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	They are. Yeah they're tightly integrated so when an officer calls in and needs something to tag that to call for service that number is generated within records management system and so that number that CFS will follow that incident throughout the life of it whether it ends up at Supreme Court or not. It's all tied directly into and starts with the records management system so when the dispatcher issues that it comes out of records management and creates that and starts it once it comes back into the office and they login to RMS it's there and they can start adding

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								notes, entering evidence and do whatever they need to do.
Technology - Positives_about-with	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: CAD and RMS integration] Sure and there's challenges there. Both of those systems are standalone systems are extremely expensive and so to replace one you're either going to have to build an EPI it'll seamlessly allow that to happen. The CAD also ties in with our mobiles and so officers can see notes that are being communicated via dispatch notes that they're taking those will pop like to a certain degree within the mobiles as well.
Technology - Positives_about-with	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Aside from email? I have a Lexopoll app which is part of our Sheriff's policy manual. I have a code red app which gives out community alerts. I'm trying to think what else I have. That's probably about it really from a work related standpoint. That's about it. Our CAD system has a function where it will send out a text alert on certain calls and I think we have the ability to customize a list of what types of calls so that's very handy I don't think that's necessarily an app.
Technology - Positives_about-with	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I was going to say after listening to [name] talk about all the systems earlier it made me think like you know our computers and our technology work 99.99% of the time and that's a testament to [name] and his team because there's from my perspective and probably most of our employees here when they turn on their computer they expect it to work and like I said it normally the vast majority of the time does and our systems work and it's probably something I mean I'm sure our employees have no idea what you guys do to make things keep working and so that's a testament to [name] and his team.
Technology - Positives_about-with	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...I remember when I started my career in law enforcement we didn't have cell phones. I remember email kind of becoming big. I think it existed I mean I started in '95. I don't know when email started. I'm sure it was before that but I don't remember email being a significant player in communications then. I know over time it certainly became that. I think the radio systems are better, more reliable. Like when I started we were UHF radios and we had several repeater sites throughout the county and now I think that technology is vastly improved although we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								still have challenges.
Technology - Positives_about-with	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Certainly and in this valley originally there was a 19-2 modem system with a repeater just right up here on this mountaintop for county because we have such a wide or big geographic area. The cities we use 4.9 broadband modems and so we have several different technologies that we utilize in the vehicles to communicate back to the Sheriff's department and so now that they're all on 700's and cell based communications for the in mobiles I think it's a lot more reliable, the coverage is vastly better, the ability to interact not just with local agencies but across the state and federally has come a long ways to BHS, DHS the different organizations that have come in and helped make these more robust and so just the radio systems alone have vastly improved.
Technology - Positives_about-with	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: cause of communication problems] Humans primarily. I think our technology works well. I think the failures and communication often are human caused. Some of our partners communicate better than others.
Technology - Positives_about-with	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	-- in their car and that's how they connect to the internet. And then from there, they can connect to our vendor for the drivers' license checks and things like that.
Technology - Positives_about-with	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	-- it's not super sporadic. It's just in certain areas of town you just lose coverage. From the most part, I bet you probably 95% of town is covered, 96%. But there's a few areas that are still spotty.
Technology - Positives_about-with	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	Our systems today are obviously much better than they were 5 years ago, 10 years ago, and so the processes have gotten tremendously better.
Technology - Positives_about-with	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	[RE: body worn cameras] Good. We like them. We've had them for three years.
Technology - Positives_about-with	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	Yeah. It's got a better antenna, I guess, but it's more reliable so if you can walk back to your car and use the radio to say, "Hey, I need help," or something then that's great.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	It's a program on our computer. It's a cab system, I guess, in a sense. It shows our location to other officers. We, this department, use it to write traffic tickets and warnings. It has the ability where you can write reports on it and have information bulletins sent out to other agencies and stuff. But we use it for the bare minimum. We use it to see each other's location, and to write tickets, and run driver's licenses, and license plates.
Technology - Positives_about-with	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	...Where I came from in [County], you can look at your computer and see that there was a call holding. And you might be close to it, and you can pick it, and assign yourself and put yourself on the scene, and all those things. And I think that being-- it helps them in dispatch, especially, when there's only two of them up in that dispatch. And on a Friday night or something, they're busy.
Technology - Positives_about-with	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	...So if it wasn't for cell phones and the crappy radio service, sometimes it would be that we couldn't get hold of somebody that's two blocks away from us.
Technology - Positives_about-with	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	Well, we already have them but absolutely cameras in this day and age. We have body cameras and we have mounted cameras on our cars and those are a lifesaver. I can't believe that there are still some agencies out there that don't use cameras because that's crazy [laughter].
Technology - Positives_about-with	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	The mic? Yeah, I like the mics up here.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	They're built to last, but very expensive.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	...Well, there's more ways of communication. So when I first started as a police officer, I didn't have a cell phone. No one really used cell phones for the most-- I mean, we had them, cell phones were around, but they weren't as prevalent as they were today. The computers were running DOS. It was all just DOS prompt, that stuff. With the new computer, the new laptops had definitely made the job easier. Better radios. We can communicate further out. So we used to go into a house or whatever,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the signal would start breaking up. Now we have better radios, better antennas, different frequencies, I guess. So it strengthened the signal.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	The only benefit I think to having the Toughbook that I've seen is that they're a little more water resistant.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	...They're mainly for if for whatever reason you're doing law enforcement stuff out of state or whatever, then I guess you can add some new channels with that.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	I can do everything from my cell phone, everything I need to do from my cell phone. And then I used to have a GoToMyPC account, and with that, I could seriously do everything from my cell phone because I was able to pull up my computer here at the office from my cell phone, print off files if I needed to print them off, or do whatever I needed to do. So yeah, the piece of technology I cannot live without or I can't do my job well with is my cell phone.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Well, used properly, I think it can be a huge benefit to what we do. Things are getting lighter, smaller, faster, more powerful. With the modern cell phone, you can do so much with it. I mean, you can do pretty much anything. You can do with a cell phone what you can do with your normal computer.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	...We have electronic tickets now. So that makes their lives easier as opposed to writing everything out. Our camera systems are incredibly helpful with accountability and kind of having their backs.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	...And on our CAD, on that call screen, there's a cautions button. It's like a tab. You just click on it. It'll list, "This house is a drug house. This house houses a deaf person. This person has anxiety. There's bedbugs at this place."
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	Sure. Easy to use. Push a button [laughter], and talk, and let go of the button. Light? It's getting lighter. We have new radios that are much lighter, much smaller than they used to be.
Technology -	LE	U	Field	26-35	6-10	Male	LE-U-004	...I think, yeah, specifically the body cameras, I think it's going to be

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Responder					great. One more thing to help us be accountable, and to help citizens be accountable, and--
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	I mean, it all depends on what we put on it. But the possibilities are essentially endless with having a city-owned cell phone. You have a camera that you have on you all the time, obviously web search, all your basic stuff that a cell phone can do. But then you can add applications like having CAD right on your phone, having a report-writing system right on your phone, having documents like the paper family violence document I was talking about. Having that right on your phone so you can say, "Here you go, victim. Fill it out right here." And then it gets sent digitally right away.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	You can write tickets on your phone. And then, the possibilities are completely endless, so it's just a matter of getting them. And, yeah, I think it would be a huge benefit.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	--personally, I like new shiny things. I work with a lot of our camera systems. There's a lot of cool technology out there for that. The body camera stuff has its issues, but for the most part, it's going to be great. I think it's-- as far as technology,
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	The computer has become very indispensable between CAD being right there, all the involvement, all the just people searches you can do, location searches you can do, report writing. If it weren't for the computer, it's either write it with hand or go back to the substation every time and write it there. And that's a time killer. That's a resource killer. And so that is incredibly important. I mean, there's a lot of tools that we have that we can't get rid of, mostly on our build. But as far as communication goes, yeah, the radio and the computer.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	...I am a fan of a GPS transmitter on an officer
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	We could use them-- before I worked here I worked in the unit that did street-level gangs, prostitution, drugs, those types of things, and we would get assigned a specific target, and that target would be

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								somebody who has multiple felony convictions, is currently a burglar, is currently wanted for specific crime, and we would track them via social media. I mean, that was a great tool that we used all the time, because they always hold up guns and they're a convicted felon, obviously they can't have a gun. So that makes it really easy to us to work a case for them.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	On the Toughbooks, you have the ability to use Citrix to log in to a virtual desktop, which I believe you can,
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	...The cars themselves, our light bars are light years ahead of where they used to be. They're very bright, very visible. Same with our sirens. They're pretty decent. So as far as communicating to people to get out of the way, that's just people's heads up their butts, we can't do anything about that.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	It was helpful and officers liked it because it saved them a trip to Central Records to physically ID someone, which is a lot of-- that's a lot of time off the street. But the problem became, if it's only local, you're only dealing with someone that we already know.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	...We have looked at the phone factor, we looked at tablets, two-in-ones, to replace that Toughbook. And then, instead of it being hard-mounted in the car, maybe it would be something that is assigned to each officer. And they would just dock it in the car they're working in that night.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	...We had this camera and it was amazing. From a technology perspective, it was awesome. No matter how the camera was oriented, it always looked like you were standing straight up and down. It could see in a dark room. It could be almost completely black and you could see everything in there. That's awesome.
Technology - Positives_about-with	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	Yes, that would be help-- even with the new implementation of body cameras. To have everyone to have a cell phone, because you have to go find a dock I guess now. I mean, I don't know the whole spiel about it. I've heard bits and pieces. But you have to find a dock, upload the video, and then where if you had it on your cell phone, you can classify the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								video right on your phone and be done with it.
Technology - Positives_about-with	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	...I did see our radios change which was good. We upgraded the firmware in there. It's not department-wide yet. There's only some officers that have them and some that don't. But they're lighter. They're better. The range is better. When I started we had VHS tapes so, so happy to move to digital.
Technology - Positives_about-with	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	No. It can be multiple officers. So you would have-- for example, let's say you had the Robert 1 sector, the geographical sector would be designated as R. And obviously, we would call it Robert. And then you would have a Robert 1 car, a Robert 2 car, a Robert 3 car. So the computer would designate Robert 1 for the calls. And then, if he was busy they would designate Robert 2 and the computer's intelligent enough to know who's available. And if nobody's available, then it somehow decides-- I know' know what the systematic process is to decide who's next in line or whatever. But it finds somebody else.
Technology - Positives_about-with	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	No. It turns on when your lights turn on. It's generated by speed if you go too fast. It's generated by, I guess, the gyroscopic effect-- or no, not the gyroscopic-- I guess enough of a--
Technology - Positives_about-with	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	There's enough kinetic energy forcing it one way or another. There's things that-- well, there's triggers that turn it on, the lights. So every time you would initiate a traffic stop. You can manually turn it on and off whenever you'd like, but there's several triggers that turn the thing on automatically.
Technology - Positives_about-with	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	For example, the EJustice system that we use today, you can write reports on it. And while I'm writing a report and finish my report, you could then, on your computer, you could search under [Name] and you could see all of the archives immediately, electronically, in front of you and see what [Name] has taken place in that system. We did not have that ability with PacketWriter.
Technology - Positives_about-with	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	Yeah. Yeah. I mean, because the reality is your camera and that sort of stuff, it's all tied-- so your camera is tied into your computer and you can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								see everything and it tells you if it's on and all that sort of stuff. So obviously, you need to know if your radio is working and all that sort of stuff. If your microphone isn't working, the computer tells you if your microphone's not working. So I mean, the systems are intelligent enough where you can see whether it is operational or not without having to do a bunch of troubleshooting.
Technology - Positives_about-with	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	Yeah. But most of that can be done in the car computer. I mean, you can do them on your desktop, but since we're usually-- even though our office is centralized, if you're in [City], it doesn't make sense to drive all the way back to [City] to write the report where you can stay in [City] and write the report in your car.
Technology - Positives_about-with	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	...However, in K9 we use it-- so we'll type in K9, and when we can type messages into the computer so everyone in K9 can see what we're writing. So if I want to tell everybody, "Hey, I'm doing training here," I don't have to tell everybody individually. I can just send a group message, and they'll go, "Oh, okay. We'll meet you there," or "Hey, there's a burglary here. I need more people to help me."
Technology - Positives_about-with	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	When we're training, we use an app called MotionX. It's just a GPS app, so it'll leave a track of which way you went and how far, how fast you went. So we use it in K9 when we're training, so we'll know exactly which way somebody went, the person that's laying the track and then when it's time for the handler and the dog to go, they'll go and you can put the track on top of each other and see how close you were to being on top of the track or if you were way off.
Technology - Positives_about-with	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	It's a computer dispatch number. So you just look it up, and then you can either type it up on your cell phone and just send it in through that way, or you can do it on the computer.
Technology - Positives_about-with	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	--record-- well, there's a record button, so you can-- so if there's something that you want to talk to somebody about or if there's an undercover officer that you don't want to record the conversation, you can--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	Yeah. It sits on the dog. It's like a periscope almost, it looks like. And we have a wristband that you can wear that has a little, tiny monitor so you can see where you're searching. The only problem with it is, one, the antennas usually go bad.
Technology - Positives_about-with	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	You have to have a situational alert application running because that's basically a running resume of everything that's happening during that day and your plan of action, where your offices are in relation to the event, the support that you have, how much manpower do you have, do you need more manpower. That's all being run by that application.
Technology - Positives_about-with	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	It has satellite backup. So the primary is set up a VPN going over 4G, and then it has a failover for satellite. If the 4G goes down, it fails over to the satellite.
Technology - Positives_about-with	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	Yes. So we'll be able to push video or clips right to them, where there's clips, or even stream it to their cars. And they bring it up on the MDTs what they're looking at as they're going into the scene. So that they can focus on one driving and focus on where they're going to, but we could have a screen shot when it is pushed on, "This is what you're going to be seeing coming in. This is what we have access-- the cameras that we have access to right now. This is what you're going to be seeing."
Technology - Positives_about-with	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	Yes. FirstNet, yes. I've talked with a couple of guys. One guy used to be-- he's a big commander here and he's taught me a lot, but I know he's involved with that now. I think it's a great thing. I think it needs to happen sooner than later.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	So the trunks of the car have-- so every car has their own secure Wi-Fi, and that's how they're connected. But other people's tablets have air cards in them, and you can take them out and use them anywhere, and you don't need Wi-Fi. It's basically like an iPad Air. It connects to whatever wireless network there is.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	And then the keyboards are pretty good and they're a touch screen. So that's primarily where we get the program that has all the runs in it and how we can run tag numbers.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah, so the tablet, it's-- I mean it's a tablet that connects to the Internet. You can either go to the internal police department page, where you can access your WALES, which is the [State] Area Law Enforcement System. That's how we run tags and run people's name to see if they have warrants. And then we can also access court systems through that, through our internal page. So anything you can access in the computer here at headquarters, you can access in the tablet. Because once you log in, you see your profile. I'm sure you have a similar internal page. And it runs off the same network. So if I have files saved on my folder here, I can pull them up on the tablet.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah. Before, we had Toughbooks in the cruisers, and those always worked great.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	The Toughbooks were great.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	That's on the tablet. Yeah. And it's an application. So you open it up, and then it shows bang, bang, bang, bang, bang, how many calls are in your area. And you can see all the calls in the district, but it's too much so it filters by your specific area.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah. It's GPS. As soon as you log in to the MPS program, the dispatcher can see where you're at. And actually, I can pull up a map and see where all the cars are at in the entire city as long as you have a computer in the car, and it's logged in.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	...On the tablet, you can clear it as no report, send, and then it clears you, and you're available, and theoretically, you don't have to go over the radio and say that you're clear. Because if the dispatcher's busy - she's doing a whole bunch of things - you might not get the chance to do that. And so you click clear, and then it clears you, and then she sees that you're available. And then if there's another call that's not too high a priority, you can assign yourself to that call through the tablet itself. So in that respect, you can limit your radio traffic to the important stuff that needs to be over the radio. Because recently, whenever you came in service at

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the beginning of the shift, you would say who you are, what your ID is over the radio.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	...And they just came out with applications on the department phones where you start, I think, sort of like tablet, where the officers on bikes and on foot can pull up the runs on their phone. And I think that's where technology is going, because before, if I'm on foot in a busy area,
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah, brand new, that the officers on foot, as soon as they log in, theoretically the dispatcher can see where their location is, and she can see that they're close to there, and she can kind of dispatch them accordingly. So I that's where it's going because it's hard for people on foot to know what's going on in the district.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	...We have to react the same. So whether it's the KKK protesting or Black Lives Matter movement protesting, we have to protect both of them equally. So we have to treat everyone the same. So I mean, it's difficult, but at the same time, I think the body cameras have helped too. Because before, I could treat someone the same way I usually do, and they could still complain.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	And theoretically, the dispatcher can track me via this radio. And if I hit the orange button, it's emergency tone, and then she'll say, "Officer Blank, do you have an emergency?" Because it pops up whose radio it is.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah. And what that does-- it gives officers the chance to record something if they don't have a chance to do it. So someone comes up on you and starts fighting or all of a sudden someone pulls a gun, you're not going to remember, "Oh, I've got to turn my body camera on." You're going to start dealing with whatever you have to deal with. And so that gives a minute buffer for you to turn your body camera on to capture whatever's happened. It used to be 30 seconds, and now it's a minute. And I think they're going to increase it to two minutes or it might be a minute and a half now. I don't know. But then we have to tag it, so that later, they can go in and review it. So this would be the report number if we had one. And then you can go into the system and type in the report

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								number, and everyone's body camera that was on that scene that put that in, we'll you'll be able to watch it.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah. And also, whether you record or not, say, if the battery life is the same because it's always on anyway. It's just whether it's saving the video. Because it's always, constant looping the video.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	And then at the end of your shift, you plug it into a dock, and through this port right here, it charges it, and also, it uploads all the videos to evidence.com, which is TASER/Axons website where we store all of our videos and evidence. And the category is depending on how long it's going to save it.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	So if I hit murder/manslaughter, it's going to save it for 65 years because that's the-- oh, I forgot what the word is.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Oh, yeah. The body camera is great.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah. Yeah. But it's great. I mean, I think it's good for prosecution too, because it's-- especially for DUIs. The judge can physically see the person drunk swaying, slurring their words.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Exactly. And before, it was if the officer is good at testifying in court, then you're good. But if the officer is not as articulate and can't explain why he thought the person was drunk, he might be right and the person was drunk, but if he can't explain it in court, it doesn't matter. But now, you barely have to-- you have to explain it still, but you can say, "Oh, they just play the video in court," and the judge can see the bloodshot eyes, the swaying. You can see falling asleep, slurring the words. You can see him stumbling. And so it's so much-- it's a lot better.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	I can take a photo of something and then upload it as evidence. So you're no longer needing crime scene people to come and just take photos. You can do that yourself on your phone.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	We just got tasers two months ago, and only sergeants have them now. They're slowly giving them out, but it's made by the same company,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Axon because TASER changed its name to Axon. So if my body camera is on and anyone turns on a taser or does an arc test or activates it at all, my body camera starts recording.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah. And it goes through Bluetooth. So it's connected to my phone through Bluetooth and Wi-Fi. So the streaming is through Wi-Fi, but when you tag it to say what it is, it's through-- like this stuff is through Bluetooth but watching it is through Wi-Fi. So if someone activates their taser, and I don't know whatever the limit of Bluetooth is, 20, 40 feet, it will automatically start recording.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah. And that would be helpful because also the cameras are looking to the-- if you're having someone in the back, if you were transporting a prisoner, I think it'd be helpful. But I don't know. We never got them.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah. For example, we just got an app. I don't have it on my phone, but we just got an app to scan driver's licenses so that we could write tickets to people from our phone. And so all you do is scan it, say what they did wrong, and it prints out on a Bluetooth printer in the car, and you give them the ticket. And we just started using that about a month ago. And so now, eventually, there's a body camera on here. Hopefully, you can look at the 911 calls, and also, you can issue traffic tickets through your phone, and then it prints out on a little Bluetooth printer.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	And so we did this inauguration as we put everything on the tablet. And so basically, I turned the-- we turned the manual into a PDF because that's the format, from Word to PDF. And then it was just on-- and then we put it on the tablet itself. And so we issued out about 150 of these, and so everybody was able to view the manual on the tablet.
Technology - Positives_about-with	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	So that's what we did. We put it on Adobe. I mean, we just did it a little different because we have this technology now that allows us to do this. And so we put it on the tablet. And you can search on here. You can type notes, and so it's just-- I don't know. We're trying to get a little more high tech.
Technology -	LE	U	Field	26-35	5 or less	Male	LE-U-036	No, it's not as easy as Google Maps.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Responder					
Technology - Positives_about-with	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	...Now, a lot of that can all be done electronically through emails and different things on our report system database. So we really don't have a ton of need to go to the office, which is always a beautiful thing, in our opinion, just because our cars are really our office.
Technology - Positives_about-with	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	We have a control head that tells the temperature of our car, interior temperature of our car, and it's got sensors on the left-side and right-side of the vehicle, and it will give an average. So if the car gets too hot, an alarm goes off, and it will call our cell phones and stuff to tell us that the dog is in trouble. It also rolls down the windows in the back, because there's cages over them, and we have fans set up in the car. So if the car gets too hot, the windows go down and the fans turn on to help circulate air through to cool the dog off so the dog doesn't die.
Technology - Positives_about-with	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Yes. Yeah, the system we have calls our cell phone and says, "Hey, your--" it's a pre-recorded message, but it says this car number has a AceK9 - that's the company that makes it - a AceK9 heat warning alarm. And then, you know your dog is in trouble.
Technology - Positives_about-with	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Well, we have two systems as technology has quickly changed. The system I have only calls my cell phone. The new system that the newer cars in the last two years essentially, they now have an app on their cell phone that they can actually live monitor the temperature in their car.
Technology - Positives_about-with	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Which is really nice. It will still call them if it goes into heat alarm, but you can pull out your phone and say, "Okay, it's 75 degrees in my dog's car. Oh, it's 85. We're starting to get high."
Technology - Positives_about-with	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Yes, we do use cell phones in training for tracking. We have a tracking app that we use so we can-- the person who puts the training track out will use the app and put a track out and end it. And then, when we start with the dog, we'll start it and we'll run the track, and then when we get to the end, we'll end it. So you can overlay and see how accurate the track was.
Technology -	LE	S	Field	36-45	21-30	Male	LE-S-037	Well, the only other technology that we use on calls for service is we will

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Responder					use some night vision. And recently, I think in the last-- it's been two years, I guess. We have gotten through-- one of our sergeants was able to get a grant somehow. I don't know how all that worked, but we have four or six handheld thermal imagers. And they are phenomenal.
Technology - Positives_about-with	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	No. I mean some of the apps that help us, we already use the general stuff. We'll even use some of the Uber apps and stuff if we're looking for a suspect who may be jumping in an Uber or something. If you're watching those, then you can help try and stop them and just check the passengers. There's a couple of them that will show you-- that help you set up a perimeter, a radius. They'll just give you a quick radius over a real-time map, which is a little helpful. As that type of stuff develops, it'll be faster and easier to do all those things.
Technology - Positives_about-with	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	...And also we have the capability of sending messages through the MDT so that-- it's a new system now. I've used it a little bit before I started K9 school, so I'm not too familiar with it. But I know that we can-- just like in the old system, we can still send messages back and forth. So if someone's looking for a K9 handler, they'll see my radio number on the computer, send me a message and ask for my assistance, or ask for me to give them a call, or ask me to meet them somewhere at a certain time.
Technology - Positives_about-with	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	Yeah. It'll say on the screen itself, the MDT screen, it says, messages and it'll say one. And also beep to let you know that there's a message there. So if I'm not in my car, obviously I don't hear the beep. I can get in there and it will say messages one of one, two of two.
Technology - Positives_about-with	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	Or the phone. Right. Let's see, what else. I have multiple radios for different assignments, whether for SWAT or for K9. We use a camera for a-- on my dog. We put a camera on him and send them into building. So we can all watch, see what he's doing without us going in there.
Technology - Positives_about-with	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	We all have monitors, wrist monitors. So when he goes in we can all watch what he's doing through the wrist monitor. It's about a five-inch widescreen. I guess I think that's it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	I think it's good. I think as technology moves forward, we should move forward. Instead of staying behind the times because there are so many different things that have come out that would make our job easier, like GPS on the phone, the computer telling us where to go, how to get there. So I think as technology progresses, we should progress with it.
Technology - Positives_about-with	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	Well, I mean, in the past 10 years, the methods of communication, the whole social media platform, things like that-- I mean, it used to be, in law enforcement years ago, we had call boxes. And then, finally, it got towards radios and handheld radios. And we still use handheld radios as we call it. But really, they're more computers than they are truly radios. I mean, there's integration, some-- [inaudible] radio is what they really are, some walkie-talkies as they call it. There's integration through apps, through cell phones. So you can use apps and you can talk on your radio through the apps. There's a lot of things that technology has allowed us to do where, years ago, even radios, they were very limited. So a radio of the size that we used, you couldn't transmit anywhere. You had to go through a repeater system and things like that. Where now you don't have to have in-car repeaters and the technology is so much more advanced. The battery life is so much longer. If you need to upgrade the radio, you don't necessarily have to get rid of the radio. You can plug in the computer, upgrade the software, as opposed to having to replace the entire hardware. So I mean, the life longness of the object itself or the hardware, this can last for a longer period of time because it might not be outdated. You can upgrade the software, kind of like your cell phone. You're updating your operating system. You can get more features and things like that until, eventually, the device is kind of past its usefulness. But it extends longer and longer and allows for the integration. It allows for integration through a lot of platforms. I mean, we use-- in the cars, we have the tablets that we use and that's integrated through the CAD, the computer-aided dispatching.
Technology - Positives_about-with	LE	U	Supervising Field	36-45	11-20	Male	LE-U-039	So me, as a patrol officer, I'm in the car. Maybe there's a theft at a store. The dispatcher can come over the radio and say, "Hey, 3051, there's a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					theft at the store XYZ," and they'll send the call to you on your tablet. And you can see, boom, you have all the information that the call-taker at the office [inaudible] communication has put in there. You can read everything. If you need to run people's names and tag numbers, and all that kind of stuff, you can do all that. You have the integration right there. And then if you need to take a report you can take it on a tablet as well.
Technology - Positives_about-with	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	The BOLOs, one individuals we push out. So every day there may be new warrants issued. We can push those BOLOs out electronically. In the old days, with the roll call, and they'd have to photocopy them and say, "Okay. [Name] is wanted." And everyone had to look at it or go to the copy machine, try to make copies. Now, electronically, you can push those out, a whole roll of them. So you don't have to print out 30 pages for each officer. You can go in there, you can use your smartphone, and you can look at-- you know what, I think it-- that looks like that guy they were talking about. Pull up your phone. Yeah, that's the guy. Just the availability to communicate and to do it right then instead of having to print out all these things. I mean, there's a lot of things that makes your work a lot more efficient than it used to be.
Technology - Positives_about-with	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	So yeah. So we use a tablet system. So our computerated dispatching-- [inaudible] I think we use MobileCOP. But it's basically, you call 911, there's a call taker that works for the Office of Unified Communications. They're a separate agency. They type in whatever you say is going on. Is there someone injured? Do you need the police? Do you need the fire department? They type in a summary of whatever they have. The officers can go right in and they can read everything through that information. A reporting system, it's online too, so if you need to take a police report, you can go right there from the car, tablet. You can type up the report right there. And then you go back to the desktop, the information's there. There's some other crime scene apps that we could use, like to take pictures, we go to SecureCloud. The body cameras go to an app so that way you can tag and sort the information on the video.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	Honestly, it was kind of seamless because we had the tablets already. So officers were already going-- we were already doing everything on the tablets-- already doing it on the laptops in the cars, so switching it over to the tablet, basically, was not much. And now, most people have a cell-- they have an iPhone or a Galaxy or an Android phone. So they're very familiar with how things work. So the system that we use, the reporting system that we use now, it's very similar to anything you-- you could do Facebook or any of that stuff, it's very-- scrolling, it's very simple. So the training time, it's very user-friendly.
Technology - Positives_about-with	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	99% of it is email, and that is something that has scaled down. But it also makes it easier to track. If a citizen is able to email us a question, then we have their email address. And it's so much easier to be able to email back a response. Then we have a trackable version that can be attached to the actual IQ request saying, "This person was contacted. We can close this out. This has been handled." So it helps us track. We do 99% of those.
Technology - Positives_about-with	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	And we have issued members of the department that would need them, iPads. That they're controlled in a manner of you can send an email out, you can scrub it if it's lost, but it pretty much contains the specific information for that day. We scrub it per event. And then you can upload it. But a lot of the command staff have iPads that they have continuously, and they utilize them on a daily basis. And so we've established files in the Cloud where, say, we get a morning intelligence report, we get one every morning.
Technology - Positives_about-with	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	Yeah. Communications-wise, it is the ability to have the mobile data terminals. The ability to have the iPads. The ability to have-- I have a phone now instead of a text pager.... Body cameras, our body cameras don't have to be docked to get the evidence, we can do it off our cellphones, things like that. So as the technology for the world increases, it increases for us.
Technology - Positives_about-with	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	...The ability to give out iPads and put out your plan manual so we're not carrying this 100-page manual... So, instead of a ticket book, we now

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have the mobile ticket writers. We can print out the ticket right there. We have an eTicket Program, which is a whole new version of the electronic ticket writing, red light cameras, speed cameras.
Technology - Positives_about-with	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	Most of it is, because we do have a single sign on system for a lot of our administrative portions. But when you get outside of the administrative-- if I need to know where somebody's assigned, if I need to look at my paycheck in our PeopleSoft report, then it's a single sign on system for administrative functions.
Technology - Positives_about-with	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	But you could use it to look up anything. You use the Internet. Somebody could ask me, "When are the Nationals playing at home again?" Or something like that. And it makes it a lot easier nowadays than having to get on the radio and ask a question. These people, you will be on, when you're on details, even when you're on regular patrol, people will ask you a question. I'm like, "I don't know, but let me find out."
Technology - Positives_about-with	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	...But the ability for everybody to have the access to the information they need very quickly. And the MDTs are great for that because you can read our notes as somebody's typing in our dispatch, rather than having to wait for you to file it, so. And they trust us with a radio and a gun, so they might as well trust us with [laughter]
Technology - Positives_about-with	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...However, there's a lot of special requirements that we have that make mission-critical voice unique. For us is that if our infrastructure is in use and a police officer is speaking to a dispatcher, in a lot of ways there are other people that contend. Voice traffic can get busy and other people can contend for traffic, or the dispatcher is communicating out. So we have various features that allow everyone else to hear a second unit transmitting in even though somebody is communicating. So it doesn't kind of lock them out. And so the dispatcher as well as all the other police officers can hear this kind of side talk, we call it. But a special feature that allows another unit trying to get in with a priority message to be heard because they may need help or assistance, so it's obviously heard by everybody, and including the dispatcher. So whether the dispatcher's communicating or the primary unit's communicating we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have abilities for second or third people to get into and be heard by other field units.
Technology - Positives_about-with	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] So what's in the vehicles are-- and you could google it yourself and look at [City]PD Domain Awareness System. It's a big initiative. What's in the MDT is the same applications that are used on your smartphone. So it's, essentially, all the 911 jobs that come over dispatch are viewable on tablets as well as the smartphones. And so everything that's available to-- as the call takers are taking the calls
Technology - Positives_about-with	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] You could take a look at all the information that came over on the 911 job right on your phone. And then it will also do an advanced search on the location. It will tell you if there's individuals with warrants, if there's individuals with EDP, mental histories in that building, whether there were threats to police officers, whatever information. How many times that individual called 911. Very detailed information on the Domain Awareness System.
Technology - Positives_about-with	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] No, it's one. You just open up Domain Awareness and everything's right there. But the police officers have to sign into it. So I'm not saying every single police officer uses it to its full capability. I wish they did, but they do have the option to.
Technology - Positives_about-with	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] --and then also all the vehicles are equipped with tablets. And so everything that-- as we said, they can pull up a map for their sector and see all of the active 911 jobs in that area, and they can view that information. If, let's say, they need an address validation, they may not have to necessarily go over the radio. Now they can check the phone for address validation, name validation. Maybe the zones used to call in for checks more often over the radio. Maybe a decrease in airtime, because they can run checks and searches directly from their phones.
Technology - Positives_about-with	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...The capabilities and requirements that we have on our radio infrastructure are very much more robust than commercial entities.
Technology - Positives_about-with	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...And so, by solving the technical problems below ground, they're UHF, so essentially all the police officer radios can tune to the transit

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								channel in their particular borough and they could go down for assist. They could assist transit police. Emergency services unit could go down and switch to their channels. And so it's a big challenge that we've overcome in the last couple of years.
Technology - Positives_about-with	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...So based upon test equipment that's uniquely developed just for, plus downloading the actual subway maps and platform maps, we can actually via the actual position of the person walking and doing radio checks, we have constant signal going and we can actually see red, yellow, green along the subway. We know throughout the entire subway system what works and what doesn't. And we can actively now participate in fixing any deficiencies or gaps in communication. And for years those tools weren't available. We have the tools now and, actually, we're fixing many of those particular areas
Technology - Positives_about-with	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] And then they'll realize-- at some point it's going to come to the realization that this is not-- "Oh, where are you calling from? Are you calling from [County]? Are you calling--?" And then they'll transfer it just on the screen. And when we bring you upstairs, we can show you that it's just a click. But that's a complication, especially somebody in a life-threatening position.
Technology - Positives_about-with	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] We actually figured out a way to handle that with Verizon. NextGen's going to solve a lot of those types of issues. But right now, for [County], for example, if we get a call, we're actually going to get their location. We'll get their phone number and everything. So when we actually transfer it to [County]-- same thing as if a call goes to [County].
Technology - Positives_about-with	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] And now we're in the world on conversion and-- whereas everything once it's digital, digitized and IP-based, we'll be able to kind of get the information that's accurate, more timely, and less delays and more accurate.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	I use it on my phone. Since a third-party app is not a department-owned app, I can just log in through a portal and just use it, which is great. Many times we do on the scene. Right there, you have a serial number. I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								don't want to waste time, so I put it in right away.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	It is one of the issues we've heard about. Also, the ability to subpoena your phone if you've got anything work-related on there.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	... Now, everyone hears us, so everyone's kind of in on our conversation. Like, "Hey, [Name], I'm in the front. You're in the back, right? Okay, you're good, right?" And people would hear that. So that's just kind of nice because it raises everyone's awareness, who's around that we're kind of doing something.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	... People are starting to pop into their heads as they roam little more and say, "Did you see this in the camera?" And the reason for that is because-- that's kind of why commander brought me in, because he knows I'm proactive. I have a good attitude. I want to do this. So he figured, "Hey, this kid will run with this and try make something out of it." And I have. And we've been able to get top-10 targets taken down fast. There's top-10 targets that drive violence, principal drivers of violence, in the district. And we've been finding them and locking them up. And we've been doing it with technology, plate reader.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	There are some vehicles that are fixed with plate readers. And plate reader cameras are affixed to Department of Revenue vehicles. They're also affixed to some private agencies like repossessioners and stuff, who repossess cars. And that is all being funneled into a database which we call NVLS, National Vehicle Locating Service. It's funded by the insurance agencies, and it's a phenomenal software, phenomenal. It's reached its maturation. I mean, it's great. It doesn't have any bugs, any kinks. It's got every functionality that you would need. And what it does is every single time-- I mean, it records every single plate. Whether it's wanted or not, it records every single plate. And then, I can search at any date or time where that plate may have passed one of these cameras. It's awesome Because man, when we're on a manhunt, when we're looking for a person who's on the run, that's the number one tool. And it puts you in the right area, and then you can start using the blocks and start figuring stuff out.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	You're so much more effective when you have that intelligence. So yeah, I love the plate readers.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	--property for so many people. We figured out who the offenders are so many times, backtracking it that way. Back in the day, you had to go to a pawn shop and go through books, thousands of pages at a pawn shop. It's impossible. You couldn't even do it. I
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	No, I don't find that problem on the radio. The radio, through the limitations of technology, it actually serves as-- it has its own discipline mechanism built into it [laughter], into its limitations, yeah. So it's good. One person speaking and everyone's listening, and that's the nice thing about it.
Technology - Positives_about-with	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	Well, ours is pretty basic. That's the other thing. PCAT terminal which you use for the dispatchers is pretty straightforward... That's the same thing with the computer. You can look up an IR number. You can look up pictures, tattoos, and that's very helpful. Like you said, it's kind of-- I think we're at a phase in the police department where you got the technology come in but you still got the old school people. It's nice to have more information at your fingerprints but you have to really kind of dig at it right now to try to get that information.
Technology - Positives_about-with	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	Radios are work. Radios are good.
Technology - Positives_about-with	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	Radios are work. Radios are good.... But I think the PDT is that the information now is coming real fast compared to maybe two years ago. I can't remember when they had the last upgrade. I want to say about three years, maybe three years ago or four, that you'd run a license plate and it'd take maybe a minute to get that information back. And there was a serious lag between the responses coming. I don't know if you've ever seen a PDT hit on a license plate but when the first one come back, clear, whatever, and the next one, it will tell you it was stolen. The next one will come back to the registered owner. Well, now as soon as I send that information, you're getting it like three seconds later. So I think

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that's really, really helpful.
Technology - Positives_about-with	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	... The FTOs on the other hand, they have a little tablet. That's a mini computer. I've seen them, the district, and seen them apprehend. Those seem a lot easier to use as a backup computer whereas trying to get information from the-- there, they could log in and you can run a license plate on that tablet and get all the information you can. That's a nice system.
Technology - Positives_about-with	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	I think so. I think if could replace this phone with the tablet that's able to make calls, I think that's a win-win situation.
Technology - Positives_about-with	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	Yeah, they're mobile. They could take them out. That's nice about them, that you could take them out. If you're in a crime scene, you got to be close to a door. You can always take it out and start typing away and stuff. Back in the day, you weren't able to save it, but now you're able to. As long as you're close to the car, you can save that report and you won't lose it.
Technology - Positives_about-with	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	That's whether or not they give them. Like I said, they gave them to all FTOs. And I was honestly thinking about being an FTO but I didn't go through with it. But I think, yeah, the technology is getting better. I think, for the average officer, making it more simpler to use.
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Yup. So pretty much, you just log in. You're logged in. It shows the calls that are active right now, who's on those. It shows you who's in service, and then also, it's our RMS system or our records management system, so all involved there. So it's pretty easy. So you can just put yesterday's date and [Name], and it will show all the calls from yesterday or you can pinpoint. So it's pretty nice.
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Okay. So Sector is what [State] State Patrol put into place a long time ago to do traffic [app?] accidents. And then also, it's our ticket manager, so all criminal citations and tickets are done on the computer, and then they get printed into your car.... So with that, all you do is you stop somebody or whoever, you get their driver's registration, and that's where you scan their driver's license, scan their registration. It

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								automatically populates into the computer. And then you just hit print, and it prints out an exchange of information or the accident report. Everything is done on the computer, so for me, I've seen-- that was kind of the beginning of my career.
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Yeah. It's all with them. It's not even us. So they sign up, and they have to confirm they live in that neighborhood. And then they can send out any information. They can send pictures there, and it goes to only their big group, which is in their neighborhood. And so we now, as a police department, I'm on Nextdoor. I cannot see their activity, but what I can do is I can post to the whole directory, everyone out there. I can post things. So crime prevention tips like, "Hey, watch out for-- there's been some prowls in this neighborhood." I can put notice, pictures. I can do all that, and I can direct it to everyone that's on Nextdoor in the city. So it's kind of cool.
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Then finding the ones that actually go in, and then also-- so pro with that is you can sit there and have a conversation with a suspect, and you can listen to radio traffic and you make sure that they can't hear, which is a pro.
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	The radio batteries. So we change them. That, I think. Every once in a while, some locations, there's some blind spots where the radios don't work very well. There's not a lot of them, though. And the city has done a pretty good job of making sure that-- because we need to be able to-- in our car, the car radios have bigger antennas. They usually don't have a problem.
Technology - Positives_about-with	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	That's why I try to go up, so it saves-- I turn it off when I'm in a chair, but-- so, definitely important. I mean, the radio is extremely important. It is our lifeline. When we need it, it doesn't always work. It works most of the time. I mean, a high percentage.
Technology - Positives_about-with	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	--so we obviously use cell phone communication when necessary. And we have the ability to type short notes to each other through our computer-aided dispatch system, so it has an instant messenger

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								program in it where you can--
Technology - Positives_about-with	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	--so I can send a message. If I'm out on patrol squad, I can set a group, so all of them are grouped together, and I can send it to the whole squad, that type of thing, so.
Technology - Positives_about-with	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	... And then you look at as technology increased-- because I came from such a small agency, we didn't keep up quite as quickly with it. But I mean, there was a period of time when we were on call so-- back in the day when everybody had a pager, we all had pagers we had to wear. And then obviously cell phone technology started to increase and wiped all that out.
Technology - Positives_about-with	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	... So literally the first 10 years of my career I didn't have a computer in my car, but I'd be lost without it. So it allows us to do so much more to investigate, so much more to be more responsive, to be more efficient... So I feel as the technology inside our dispatch center changes, our job becomes easier, and we become more efficient at it as well because their job becomes easier, so.
Technology - Positives_about-with	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	...As an investigator, we have a Cellebrite device, which is a piece of technology that will pull information off of a cell phone. For investigative purposes, we'll download information off of a cell phone. So that's something that we use not as frequently as I thought we were going to use it when we first got into that program, but a couple times a year.
Technology - Positives_about-with	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Yeah. So depending on what kind of cell phone you're trying to get the data off of, one of the devices is a-- one of them just plugs into the computer, but it's actually a physical device that you plug the cell phone into. You have to have-- there's a lot of legal requirements before you can do that. But it will then pull all the data. That includes, at times, deleted data. Yeah, so that's one of the other pieces of technologies that we use that's not necessarily really common across police departments.
Technology - Positives_about-with	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Yeah. I'm sure the technology-- that was quite a few years ago. I'm sure that technology has increased now, but we had that for a while. Just having it read it back to you was nice because then you could drive

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								around, and you wouldn't have to take your eyes off the road to actually look at it or pull over or whatnot.
Technology - Positives_about-with	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Yeah, it'd be much easier to do it on the cell phone. I've never had the chance to use it, but I have it because I thought it would be useful if I ever needed it.
Technology - Positives_about-with	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Right. So you end up monitoring two. Now, if they do it, they can tie our home frequency into the shared channel, and then everything comes across through our home frequency.
Technology - Positives_about-with	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Yeah. So you can talk through the computer system to each other and then through the radio system if you're standing out on something.
Technology - Positives_about-with	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	...I mean, there are a lot of agencies right now using drones to do a lot of that work, and I'm sure as that technology becomes less expensive, those are programs that we'll get into it some point in time. I forgot when we mentioned what technology we use, we actually have a speed camera in town, as well, so.
Technology - Positives_about-with	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	...you remember the old canister would come out. You'd have to take it down to the photo lab, and then you get the strip of negatives or whatever. We would just put the canister into evidence, and then if it went to court we would develop the pictures. Yeah, to save money on developing photos. And now you look at where we are with digital technology.
Technology - Positives_about-with	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	that you can actually pull up locations, you can pull up overheads of locations, you can touch screen. So like if I respond and someone's barricaded inside their house, I can pull up the location on Blueforce. I can touch screen and go, "[Name] i
Technology - Positives_about-with	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Yeah. Because the one thing that I've learned-- I've done protests and things for a very, very long number of years. And so I was in the SWAT unit for about five years, so I did a lot of tactical stuff there. You never have enough airtime, so being able to chip away at some of that stuff-- I don't need to ask officer [Name] where he is. That frees the air up for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								more important tasks.
Technology - Positives_about-with	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	... But we do have the ability with our new radio system with [inaudible]. I could probably tell you about that. We have the ability to patch frequencies and we have common frequencies with local law enforcement as well as the fire department, so we can get on the same channel if we need to.
Technology - Positives_about-with	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	...From a technology standpoint, do we actually-- our new cars have an option it's called surveillance. The surveillance option, where it can actually turn on the side sensors, the backing sensors, and the rear camera, so people can kind of see what's going on. But just things that allow them to be more heads up.
Technology - Positives_about-with	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Okay, so there's a system called IdleRight that it's an on/off switch in the car. But if you're going to get out of your car for any length of time, you activate the IdleRight system. And then you can turn the car off, lock it up, and walk away. The IdleRight system will monitor the power level in the car and the battery. And if it drops below a certain point, the car will automatically start itself.
Technology - Positives_about-with	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	And it will keep the battery charged. We always get the question, well, what if somebody tries to steal your car when you're right there?" It's built into the system that as soon as you step on the brake of the car, which you have to do to shift gears or whatever, the car will shut itself off entirely, and you won't be able to start it.
Technology - Positives_about-with	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	--is engaged. I mean technically, you don't have to have the system operational when you're driving around because the car is out, but a lot of times, officers just forget to turn the system off, and so the light's on all the time. And it's a little disco
Technology - Positives_about-with	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	And so I mean-- and if I had to pick one or the other, I would say retain the technology because the technology itself, I think, overall has improved our ability to do police work, but I rue the loss of those interpersonal human interaction skills that sometimes, I think, get sacrificed for technology.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Exactly. So I mean, again, that's both the curse and blessing of technology is that I have instant access to anybody in the precinct because I'm the acting captain, and I have all their numbers into my phone,
Technology - Positives_about-with	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	The easiest thing to do is get on and say, "I'd like to talk to Sergeant [Name]. Here's my cell phone number." Right? If you're at a big scene, a lot of thing's going on. There's relatively little talk going on, on the radio. Everybody is on their cell phones, which is helpful because then you can talk to an individual and get information from that individual, but not everybody's getting that information.
Technology - Positives_about-with	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Or is it information, a question, whatever that's designed for one other person. So sometimes, it's much easier to conduct business by cell phone as opposed to the radio. But if it's information that everybody needs, then cell phone is an ineffective way of doing it.
Technology - Positives_about-with	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	I changed uniform shirts today, so I haven't put the earpiece in, which makes it even better because it's more covert and it's easier for me to listen inside my ear than have this thing on my shoulder. But like I said, the technology in the radios we have now is light-years ahead of what we had when I first came on. The radios have gotten smaller, lighter, and, I think, clearer. But there still are issues of being inside buildings or being in those little dead pockets that occur throughout the city.
Technology - Positives_about-with	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	I suppose you could have a cellphone-sized radio, easier to carry in a pocket as opposed to having this, we call them, bricks but-- as opposed to having this brick hanging off your belt. But I suppose as technology advances, we might get around to the point where something the size of this smartphone is now my police radio, and it has all the capabilities of the larger more cumbersome units.
Technology - Positives_about-with	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	--easily twice as long and two or three times as big around, and yet this puts out more light than that one ever would. And so I mean, technology has brought me this little wonder as opposed to that three-pound flashlight I used to carry around. So I don'

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	The technological advances from when I started to now are phenomenal, and it seems like most of the accelerated growth in that has been over the last 5 to 8 years maybe, 10 years at the most. I'll probably stick around the department another 2 or 3 years, and I'll be fascinated to see what technology is-- so when I first started in a patrol car, you had your police radio, and that's all you had. And now when you sit in the driver's seat of one of the modern police cars, you're just absolutely surrounded by technology, not only the technological improvements of the vehicles themselves, but all this other computer technology stuff is stacked up, and it's a completely different environment.
Technology - Positives_about-with	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	There's a City of [City] app called Find It, Fix It which is-- actually it's designed for citizens or community members. If they see a street light out or illegal garbage, they can go to the Find It, Fix It app that finds your longitude and latitude. So it gives you a location, you snap a picture and you send it to the city for an illegal dumping.
Technology - Positives_about-with	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	... But we have cameras in all of our holding cells, as well as the little common area. And I can sit at my desk and pull up all of those cameras.
Technology - Positives_about-with	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	So in a patrol car, I can look at everybody's call, I know where everybody is-- oh, wait, this is interesting. So one of the problems that we're having is-- so in a patrol car, the current CAD system that we have is, let's say they dispatch us to a certain address. The CAD will show that, oh, we've been to that address before. And you can click on that underlying thing, and you can look at these other calls--
Technology - Positives_about-with	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Yeah. You can see that, "Oh, yeah, just last night, there was three officers there and there was some kind of scuffle," or whatever. Because now [inaudible] they can look at the prior history, but they could technically go right into the report and read the details.
Technology - Positives_about-with	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Yeah. And even if there wasn't a report-- of course, then you're subject to whatever the clearing officer wrote in their CAD for the end of it. So when you're in a car, you have all that information. You've still got to use

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								radio and you've still got to go out with radio, and-- I haven't even talked about cameras.
Technology - Positives_about-with	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	... The map, I have used it a few times. It's kind of nice to know you can see on the map where the call is, where you are, and as a sergeant, I can see the-- I think all units can. I can see the other units, I can see where they're at.
Technology - Positives_about-with	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	I think we've gotten much better at that. When we went to an electronic, excuse me, report system in 2008 that really changed that.
Technology - Positives_about-with	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Okay. So we have a proprietary system called Versadex or Versaterm, I don't remember. And I think there's three components to it. There's the CAD. There's the Report Management System. And then that uploads to Versadex which is-- so after a call is finished and the officer writes the report and it goes to data and it gets translated and it gets in the system, then I can go to this program and look up everything.
Technology - Positives_about-with	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Yeah. But that's another way that I would use that system. If I wanted to see how many arrests my officers had made, I'd go in here and do that. So that's a very valuable system to me.
Technology - Positives_about-with	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Yeah. And when I say sufficient, it is definitely sufficient, and there's definitely some nuances of progressive technology in the things we use. But you just made me think of something, like relationship trees in a records management system where so-and-so was pulled over with this person in a car, and how does that relate to all the other things. Nowadays, data analytics and software in general can present that in such a way that's really nice and we don't have access to those tools.
Technology - Positives_about-with	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Well, a good example is our tweets by beats. So we have an automated process that puts out calls that happened in certain beat sectors of the city, and you just subscribe to that Twitter feed if you live in that area, or don't if you just want to know what's going on. But there's a delay involved. There's address blurring. There's all of these things incorporated into that to walk that fine line of transparent but not in the immediate sense to where it could hurt somebody or impact an

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								operation. And then also the privacy part with the address blurring and things of that nature.
Technology - Positives_about-with	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] .... So it's using location services on smartphones and getting much more accurate that way. So that's difficult to communicate with callers. We have language barriers, but we do utilize a pretty great language service so we can get translators online fairly quickly.
Technology - Positives_about-with	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Okay. That's probably the best tool going right now for law enforcement nationwide. [talking about license plate readers]
Technology - Positives_about-with	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	--technology that copies down the license plate. But you can do a partial plate, which is nice about this, put a partial plate in. Say a lady was robbed, and say hey it was a BMW and I know it ended in one, two, three, four. And you can put in one, two, t
Technology - Positives_about-with	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Yeah. It's a great tool. It's expensive. It's a great tool, and besides that, we get the stolen cars out of it. So for the month of June, we just got back 29 stolen cars. Just in the [City].
Technology - Positives_about-with	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	We have portable radio that will work probably anywhere in the country, and we very rarely need-- or the necessity very rarely present itself that we go up to primary channels and so you don't.
Technology - Positives_about-with	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Now we have to because they have the body-worn cameras and though I've never owned or had to use or function with a camera, I'm told that the cell phone is important for kind of that wire--
Technology - Positives_about-with	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Cell phone technology. The communications aspect of a device in the field, priceless. And I mean, cell phone technology making my-- not an MDT, which is pretty much a rock with a glass screen. But maybe a functional laptop that can communicate just like your laptop at home would.
Technology - Positives_about-with	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	...I can do Google pics. I mean, it labels everything in my-- I mean, I don't do it, but every so often somehow, it figures out who everyone is in the photo, and boom, okay.
Technology -	LE	U	Field	36-45	11-20	Male	LE-U-013	Q: Okay. But when you're not with two people in the car, is the MDT as--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Responder					SME: It's vital. It's vital. I know what I'm going in to. It's hard to drive, and listen to the radio, and look at the computer screen, and watch traffic and the bicycling. It's hard to everything. So at least with the computer, I can read kind of what's going on.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	[talking about having access to information where we can identify suspects in the field now through our phones] That helps a lot because you're having to drag the person all the way back to the station to ID him. You just do it on your cell phone.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	What it does it takes the form, it digitizes it, and then the pertinent information - the case number or the report number - you do it on your phone, and then I forward it to the victim, so they have it digitally on their phone. And [inaudible] was when you call your insurance company, and you've been in-- someone's broken in your car. You're distressed. You don't remember what I've given you, so now you have everything on your phone. And you're on the phone with your insurance company, and go, "Hold on one second," and you forward them all the information the officer forwarded you. So it saves time.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Yes. It did your name. So before you even got to use the app, you had to put in information: your name, your start number, ID number, your station, and the station's phone number. So it'll auto-populate the form--
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	It pre-filled in a lot of the forms that we need to fill out--
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Yes. It saves time, and you're not-- so if I want to tow your car, I need a tow slip and a permission form from some other person. Most officers don't carry all the forms. So I had to call for a unit to bring me a form; that takes 20 minutes. Now, I have to fill out the form. But imagine, if I'm just doing it on my phone within a minute.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	And then, sometimes you need a form in a specific language, Spanish or Chinese. You pick the language you want it to translate the forms into. So it did it instantaneous.
Technology -	LE	U	Field	36-45	11-20	Male	LE-U-013	And now, our department is-- they want us to be more like this with the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Responder					community, interactive with the community. And I was using technology to kind of build that bridge of helping us become more friendly with the community.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	A cell phone is perfect, but like what I said, there are draws to a cell phone.
Technology - Positives_about-with	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	Yes. So a nice little advent for the department is every officer is assigned a cell phone now. That was a good addition because it really helped. Because we have the cell phone that's engaged now, we have the body worn cameras. They're linked together now. So you're going to have one with the other to be able to utilize them.
Technology - Positives_about-with	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	...So they don't want to catch too many reports and have that sitting towards the end of the day. So you may see a unit come in periodically through the day to knock out a report just to be done with it because they don't have that ability in the field. They have it on their phone, the technology for the report-writing system.
Technology - Positives_about-with	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	So you got your department radio. The new department radio is nice. I haven't utilized all the benefits of it. If I'm looking left or right, I'm just kind of racking my brain to spin to this side. Their new radios have connections with [County] and [County] and some of these inter-agencies that we didn't have before, as far as the new Mutual Aid channels.. So they have many levels of benefits with them, and now that we're all getting standardized, it's much like our guns. If there's an issue we can always use SWATbot or radio a lot faster and easier doing it that way, as opposed to carrying multiple radios and trying to coordinate how we're going to communicate on different channels where we have only one equipped radio or one that's not.
Technology - Positives_about-with	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	So each officer's radio can be programmed in a particular way, depending on what the scope, or their responsibilities, or job is. So the new radios we got, we think it's a huge resource, and we haven't had an opportunity to have to use those other channels yet... We can run the mug shot system from our cell phones and actually look those up.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								CalPhoto from the phones, we can actually look and see and try to get a little bit more information from somebody.
Technology - Positives_about-with	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	A lot of times, we may run into somebody who doesn't have any ID, but they may have a driver's license or they have been arrested. There's a record that exists someplace. Now having that cell phone and those applications available to utilize, the officer doesn't have to leave the street and go back to the station and try to figure out somebody on who they are. It's a lot more effective on the street.
Technology - Positives_about-with	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	The other technology, we have the license plate readers for the vehicle plates. That's huge. A lot of it's for investigations so the LPR will either-- if we're doing an investigation or we're trying to locate a particular vehicle, that's a huge resource, and that's just a wealth of information for the city and for other surrounding agencies so that's huge. The ShotSpotter systems that currently doesn't push out to our phones as an alert that I'm aware of, that would be good having that pushed out. Because right now, you have it on the desktop and if there's an alert, then it will come up and it'll tell you-- the dispatch will let us know often if there's a ShotSpotter activation.
Technology - Positives_about-with	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	We've got the body cams now. I think that's a huge resource because it kind of cuts through a lot of the chitter-chatter where people will create their own narrative. But when they see a body camera, now we're both on the same narrative. So it's helpful. It's a good resource for officers and the public. I don't think it's everything the public wanted because I mean, it is limited in its ability itself. I mean, I think there's a perception that maybe this is a 360 view of everything else that's going on, including the intents of everybody else involved. But it's a huge resource compared to what you had before was nothing. So now, you have the conversations. Now, you have some perspective of the view of the scene, which is good depending on who the officer is as far as height, stature, angle of the cameras kind of thing, and clothing or what happened during a particular contact. What you have now is something as opposed to nothing before.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	So they're talking about the eStop system and how that's now much more readily available for inquiries whether there is a perception of bias policing or even just activities from particular officers from particular districts, so you can actually have data you can actually look at now and kind of figure out what each district, what they're engaged in more, or what kind of patterns you would see. And again, it's limited to the eStop, to the detentions
Technology - Positives_about-with	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	When you have that CAD being able to have that link with other systems, I think having that active board, having that ability. Because the touch screen is there. I know it's there to marry in the systems even that. So when you've got a suspect that is named in a particular incident, you can pull that up. When you've got a location that's named in a particular incident, you can hit that location. So you're at an event and you've got people hanging out in front of a particular bar or whatever. You can pull that up and when you hit the bar it comes up, and it's got your point of contacts for the owner, for the manager, or whoever. And all of that stuff is populated in. And that kind of cuts through the chase of trying to figure that out, calling the station and having them go through the paper index to do that. I think that's huge. I mean, outside the box, kind of pie in the sky kind of thing. I think that would be great.
Technology - Positives_about-with	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	...But the thing is if that was available, that would be, I think, a huge resource. In addition to that, when you're trying to locate officers that are non-responsive at a scene but you're able to see them on the board, you can have a coordinated response to go to that particular location and actually see if there's a reason they're not coming up or responding. You can actually do that. You can click on that board, send them a direct message to either their MDT or to their phone because you now have that ability on the board or on the board under your screen on the computer whoever it is that you can actually go to that and everything is just interlinked.
Technology - Positives_about-with	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	The population, I mean like [Name] was kind of pioneering there with the be auto-populating a lot of the documents for people from being able to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								actually send in the necessary documents in a timely fashion, being able to follow up-- and people that have the ability to follow up with their forms, that automated form. So your phone is connected to CAD. So when you go back and you have your CAD on your phone, you can actually click on it and then select a particular form that you want to transmit to somebody that you can select that form. Open it up. It populates with the date and the time and the case number, and then you just fill in whatever's relevant that needs to be transmitted to the victim or the witnesses. A lot of times, your victims will be going somewhere and you're not able to transmit that information with them, but you can transmit that to the hospital. You can transmit to somebody else that actually-- information can make it around. I think creating that kind of platform or that ability would be huge, not only for that, but then that's also a resource for any of the inspectors. Because then, any of the inspectors courting that case number would also be able to what forms were transmitted, what was written on those forms, what the contact information was on those forms. So it's another record that's available.
Technology - Positives_about-with	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	--gave them a follow-up form or gave them whatever. With the forms that we have, there's the citizen's arrest forms. They're both signed, and that form may go back or whatever. But if we have that associated to a particular person-- and now it's populated
Technology - Positives_about-with	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	So again, those would be hurdles to address with discovery and whatever else, whether that video is recorded, and the confidentiality, and the accuracy. I mean, that's somebody else's playground to hammer out obviously, but outside the box, I mean that they can-- that would streamline it because we get a lot of counter reports where victims will come to the counter at Southern Station or any other station to make a report. And there is a language barrier. And victims don't like having to-- or it's traumatic to the victims to have to keep repeating things and reliving the scenario. So if they're able to do it first-hand, not telling it one person and wait for that person to tell the other guy, that delay when a lot of people like to just kind of brain dump what happened. And I think

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								having that Skype ability or something of that translations works because it also captures the video. It captures the expressions. It preserves that evidence at the same time. Because when an officer's writing a report-- and I spoke to the victim. The victim was crying. Okay, that's what it says on paper. But when you're looking at the video and you can see the victim is traumatized and they're crying and all that, I think that carries more for the victim when you're trying to present that case to the DA and kind of paint a picture.
Technology - Positives_about-with	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	...But if you have the digital scan of a print to use, not only is it a huge resource for the tickets, but if you end up with a John Doe victim later when you can't identify, and that's the only print in the system. That's huge because you've now identified somebody. So we've had those scenarios where it's a John Doe, and then we do a print. It's no longer John Doe. It's Dave. So that kind of thing would be great.
Technology - Positives_about-with	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	... Yeah it's becoming more affordable and more accessible so more people have access to it and so we're seeing it a little bit more and other people using it so there's that growth.
Technology - Positives_about-with	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	I think so yeah they loved it. Of course who doesn't love templates right? I mean why be creative when you can just put something basic in there and it spits out all those beautiful stuff. 3D printing what great stuff like why do I have to like chisel away at wood when I can just type a few numbers and say make that. There's a loss of creativity in technology.
Technology - Positives_about-with	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	... You know we have I don't want to say it's unfiltered but we have access to the internet from our PC's and so I mean we Google stuff all the time whether it's updates on tagging you know gang information, drug information all that kind of stuff we look up so that's kind of the most critical (00:14:05) the biggest update that we've had and then from there you know our radios so we use unfortunately a UHF repeater system.
Technology -	LE	R	Field	26-35	6-10	Male	LE-R-044	...They just added where we can now see photos, booking photos so we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Responder					can actually look and see like hey, here's that guy whatever so we're just now starting to see some of that come through, we can't type reports from a vehicle which would be really nice because [application] is where we type all of our reports.
Technology - Positives_about-with	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	... We do have code books in the car. I find and a lot of guys find that it's faster to use the website than it is to thumb through the code book because it's searchable. You can just type in keywords and it'll pull up. If you don't remember the exact code or whatever and so we use that a lot.
Technology - Positives_about-with	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	There's a huge disconnect between society and people's perception in law enforcement and what actually happens. A way to bridge that gap is something that I think the industry law enforcement industry needs to work on and should be identifying and figuring out how to change that perception and body cameras have done amazing things for us on a lot of different levels and I think that technology is continuing to evolve because people can easily see what's been going on but it's not the full picture.
Technology - Positives_about-with	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	... It's around guidelines and boundaries and so it's tough but when we start talking about you know technology allows us to do our job better and our mind that allows us to focus our time and energy and resources on what really matters to me which is kind of informing and educating the public around why that is important and not so much time on a traffic stop and not so much time on some of the other administrative tasks around it.
Technology - Positives_about-with	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	I personally like my body cam. It works very well. It keeps me out of trouble.
Technology - Positives_about-with	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] ...It's one of those that they go based on I mean with the out of face with the body cameras which have been a very big help to us as far as keeping us clear of charges because before that it was all here se... It's just one of those that's without that video people automatically assume that we're abusing our power.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Don't get me wrong there are some videos that you can watch out there that is the full thing. Usually it comes from us with the body cams.
Technology - Positives_about-with	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] ... They've actually made it a lot easier. Like I said our IT guy tries to find new ways to make things easier for us so he made it to where all we had to do was hold the button on our microphone just hold it for a second or two it'll switch over click it one more time and it switches right back to channel one automatically.
Technology - Positives_about-with	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] And we have access to certain things that can actually keep us one step ahead and get us there a little bit quicker because from the time the call comes in to the dispatcher deciphering exactly what's going on to the time that they actually dispatch us quite some time can go on and they're also looking for available officers whether or not they have to utilize our county (INAUDIBLE 00:25:55) like that so we have a website that we use which is our dispatch monitor and they made it a mobile app not an app but a website that we can access to be able to get to it... So we can go in here and you know for the people that don't have the mobile data like we don't we can go in here and it shows all of our calls you know who is all on duty, the blues people that are actually on a call right now... All these people are Sergeants and animal control people but this does help us because there are times where sometimes you may not hear a call ride or miss you a sort of number. You just pull this up on your phone real quick to look at it and be okay that's why they're tying up the radio again and happen to get everything else going.
Technology - Positives_about-with	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] The only issues I've well aside from the data issue that would probably be the only thing. ITI has never gone down for us. OLET that one goes down quite a bit and that's a very important program that we have.
Technology - Positives_about-with	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2]... I just showed you but it's got (INAUDIBLE 00:29:01) do have MDT's there's GPS that runs off our terminals and we can see where everybody's at and you can send messages back and forth with each other and you know if they are doing something on the radio we can send a message to our dispatch saying hey this guy have warrants or

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								whatever it may be and they're actually starting toward we can send ourselves to calls and dispatch doesn't have to say it.
Technology - Positives_about-with	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] With the radios is not really essential. It's a basic tool. I mean these Kenwood's they're really easy. It literally takes maybe 5 to 10 minutes to overlook and say okay I just need to be able to turn this on and then addition just to be able to go up to analog if you want to talk to a county deputy or the jail other than that there's really no recurring training that you need to do.
Technology - Positives_about-with	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] ...You'll see all the ones that have their body cams when they turn them on before their shift is done they've already had to timestamp their body cam out of service so battery issue (00:46:25) is a big thing. The video quality is usually really good.
Technology - Positives_about-with	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] With Taser I never had a problem with it
Technology - Positives_about-with	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	Q:So really early on in the interview you mentioned how the body cams were such a great tool for you. [S3] They are. QFR code (on back of licenses)
Technology - Positives_about-with	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] ... There's another one I use called US Comp. You can it gives you how to write certain narratives for certain things that you can go on and you get and it helps you on DUI's and drugs. You can put your shift schedule in here, write notes in here. it's got a corner in here that you can use I mean there's (INAUDIBLE 00:51:33) that we can use that helps.
Technology - Positives_about-with	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] ...It's a walkie talkie essentially and I can talk we have we can talk to pretty much anybody in the country no matter where they are because it goes based off of our cell satellites. It uses that up but it is 100% clear.
Technology - Positives_about-with	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Well I mean if you want to look at the public aspect of it I can probably say that social media has caused the ones that try and work outside of their badge it has caused them to smarten up. Yeah with body cams like I said it keeps us protected in certain situations. We're upstanding officers we don't work outside our badge, we don't abuse our authority or abuse our power in any way. We do our job, we have

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								families. There are officers that do abuse that power. If you put a body cam on them the chances are they're going to be forced to do their job and nothing more which is a good thing.
Technology - Positives_about-with	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	...I mean we do have a co-op up here, a telephone co-op and that's been so much better now but it's not perfect either and so we've got some areas too where it's a little more difficult even with a cell signal.
Technology - Positives_about-with	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	Well they're fine ma'am. They're just fine. They're not the newest or the greatest probably but they work just fine for us other than where we don't get you know coverage where they just don't work but I imagine that's everything right it's we've got a lot of remote locations up here so but otherwise yeah I think they work just fine. [talking about their radios]
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	We had analog in [name], we had a truck and repeater then we went to digital and the 800 megahertz and then we went to digital and our radio quality is pretty good here if we could just get the antennas in a good place and get the coverage that we need you know and then the second issue of course is being able to talk back on portables and stuff.
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	Part of the issue is here we have a DSL connection which is 14, 15 megabytes a second. I have contracted out to get a 100 megabyte connection. That was supposed to be in August however that did not happen so now it should be in first of December so once that 100 megabyte connection goes in it's going to help speed things up. I actually have a very good signal here from [name]. We have a 65 to 70 megabyte a second Verizon connection here and what I was trying to do is I was trying to hook our network up to the Verizon connection at 65 to 70 megabytes a second and with the unlimited connector I've got with the I forgot what it's called I can show it to you.
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	...With the E-tickets it removes human error entering tickets and our secretaries and stuff don't have to do that so it automatically downloads it.
Technology - Positives_about-with	LE	R	Supervising Field	36-45	21-30	Male	LE-R-048	When you're driving, especially at speed, you need to be focused on the road and not diverting your attention somewhere else. So I don't really

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					want that system because it causes other issues and you don't really get a benefit out of it to be honest with you. They can print out a CAD printout and give a summary of everything that happened.
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	I have a very good platform to get information out to the county. Now the people who are friends with me only live here. I'm not friends with somebody in Texas. I'm only friends with people here in the immediate area and I designed it that so that I had a platform to get information out to the community in which we live. So a lot of times I use that to our advantage as all of us where if I put something out I put something out and say hey, come by and get this. The Yellow Dot Program is a really good program. Put a yellow dot on your tag on the back of your car and have an envelope in your dash. If you come on a car crash or something or have somebody in the car you know you have a yellow dot EMS knows to look in the dash, get their information and see what medications they take, who the doctor is and all that kind of stuff. Really low tech nothing fancy but something that we're going to roll out here soon and we're going to do it together you know proactively do it. I will go with them to the retirement center and help with that but also talk to the doctor's offices and stuff and put stuff there and let folks know how to do the program. My wife is a Type 1 diabetic.
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	It [body camera] does give you a far superior evidentiary video as far as what you saw when you saw it.
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	...I don't remember back in the day if you had a big wall size map of a community oh man you're hot take man we got this map and now it's like every day. It's not a big deal but back then it was but see now you got all this information through the reporting system that you have in your car. You can look up people's phone numbers, you can look up people's addresses, you can look up photos, you can look up you know arrest history and it makes a huge difference and now you got to go through somebody else to get all that information if it was taken away [name] the system went down a couple of times people didn't know

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								what to do.
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	...I think it makes it better but I think part of that is it's all according to how you use it. There's always a cost that goes along with it. [talking about the changes in terms of technology]
Technology - Positives_about-with	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	... A con operating picture platform which is an open source map based geographical plotting capability so that we can visualize the location of all of our assets, calls for service, cameras, vehicle locations. We hope to implement officer location as we have just implemented body worn cameras that have the capability of GPS location for the officer itself or for herself so that in the event that the officer leaves the patrol car while we can still see the position of the patrol car with our existing augmented vehicle location system we will now be able to track the officer on foot in the event that they get into a foot pursuit something along those lines.
Technology - Positives_about-with	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	...The program or application that they chose is known as Live Safe. The Live Safe app allows for safe walk where you can share your location with a friend, a trusted associate (00:19:31) or with the police department. It provides one touch calling of the police department. You can text us, you can send us pictures, you can send us live video streams so that gets used in addition to a typical 911 telephone system. So we have calls for service coming in via text, via chat, via phone call through the Live Safe app or via 911 dialed from any campus phone, transfers of 911 cell calls which may have been routed to [City]PD or cell phone calls that are coming into the department through
Technology - Positives_about-with	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	... The GPS in the phone is what serves as the location device or GPS for the officer. It can also receive texts, video, pictures for bolo's so it does in fact serve as a smart device.
Technology - Positives_about-with	LE	U	Other Public Safety	46-55	11-20	Male	LE-U-049	... We have a simulator that they experience, a no shoot situation in a very safe controlled environment. They're able to see hands on what our criminal investigations division is capable of with their vehicles, the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					mobile crime scene vehicles that they have as well as some of the other tools that are available to them.
Technology - Positives_about-with	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	... We began to see the advances in computer technology that has led to everything from mobile alcohol detection to mobile fingerprint and identification, speed enforcement and the advances that have been made there from radar to laser, video surveillance...
Technology - Positives_about-with	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	Our radios now and it wasn't always like this but our current radio capabilities allow us multiple channels for our own department's use and then access to [Name] Police Department's zone one, zone five which are the bordering beats or zones for [City]PD as well as mutual aid channels that are used anytime that we have a large scale incident. Incident could be a special event or an actual response.
Technology - Positives_about-with	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	It is a device that is worn by the dog that allows the dog to speak to the handler quite literally by the dog triggering being trained to trigger any number of sensors on the vest that it wears now an explosive detection dog can tell the handler not just by its actions sitting identify an explosive but now the dog can be trained to based upon the explosive that the dog detects it can tell the handler this is TATP or this plastic based or this is gun powder based.
Technology - Positives_about-with	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	...The company [application] has been excellent to work with in that their developers have assisted us in creating sort of that not backdoor app but an application that's solely for our use where we can now do our vehicle inspections using [application] app so by logging into that portal our officers have access to different checklists, bolo's things along those lines all through the [application] app.
Technology - Positives_about-with	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	I think they've only made things better. They allow us capabilities that we didn't have before. They allow us to reduce our response times. They've allowed us to increase our situational awareness and many times they're allowing all of this simultaneously so you really see some force multiplication through the use of these technologies where previously all you needed was the gumption to get out there and fight

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								crime and tackle the bad guy and it was probably largely force on force or it was who could out smart who. Now with the capabilities that we have for analysis, predictive analysis that's another capability that I forgot to mention is our crime analyst who spends all of his time.
Technology - Positives_about-with	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	The COP platform comes in where was his car last? We can identify where the car was. Now that we know where the car was we can start to tap into the cameras in that area and we can review recorded footage in order to see okay here's where he pulled on the scene, here's where he got out of his car, this is the direction he went to allow me to start looking at other cameras to find him.
Technology - Positives_about-with	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	The app has 185 officers on here and how many jurisdictions? Probably 20 and like this car hit the license plate reader. They put it out instantly 185 officers know about it rather than it taking time to go through dispatch or whatever. We would never get that information. It's real time.
Technology - Positives_about-with	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	That's become a big thing because these offenders loved to flash their stolen cars, money so we use that to A, see what cars they have and it just leads us to new suspects. I mean our crime analyst is always looking at videos on social media of people on Instagram they can video themselves it's enormous.
Technology - Positives_about-with	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	We'll look on the videos like we've seen them livestreaming on say Instagram and look in the background and see something that we know and we blast that over the text hey this stolen car is in this area and we've caught them that way because of their social media or like the other day one of them posted had some guns one of them is a convicted felon we were able to geotype the picture, we know where the house was the house was in our jurisdiction so we did a search and arrest warrant for him and the gun at the house.
Technology - Positives_about-with	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	Along with that app like people have gotten on the app before and said hey, does anybody have a contact in [County] and right away you know somebody that you know has automatically given you a contact you know so it's a lot easier than calling the main number somewhere and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								saying hey can I speak to the supervisor of detectives.
Technology - Positives_about-with	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	On a larger scale the AFC Championship is this weekend in [City]. In [City] their whole team is going to be tied up there so they have nobody to respond to any SWAT calls if one comes up in the city. It takes one message they send a message hey can ya'll cover us between this time and this time? Yes. The problem got solved in 2 seconds.
Technology - Positives_about-with	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	I can't get it pulled up here this internet's not working for some reason that we're able to share information, bolo's different kind of stuff like that. We put all of our businesses that we check daily on there, offenders for specific crimes, other pictures of if we're out and somebody sees somebody hey I think I know him you can actually pull up the picture and compare.
Technology - Positives_about-with	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	And NC4 also has the map feature that populates so if you're having a known problem in a certain area it populates with known offenders in that certain area and what type in burglary suspects you know it pops up and whether they're currently jailed or not jailed at the time.
Technology - Positives_about-with	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	Q: And how are the radios and other pieces of technology that you're using. How would you describe their current state? [SME-S4 ] It's gotten better I think since we went digital.
Technology - Positives_about-with	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S3] I'm thinking of the helper thing the downlink yeah. We UASI purchased a downlink system for all the metro helicopters. Basically it's a live feed from a camera system and it can broadcast through repeaters all throughout the metro area. [County] has a repeater on top of their jail so if their [County] helicopter is flying around it's broadcasting that repeater which broadcasts it all the way to [County] we can watch it in our command vehicle or on the handheld devices what their helicopter is looking at so it doesn't have to be line of sight. Now if our helicopter is out here we can work off a line of sight and then if [County]'s helicopter has to come over here the same thing we can work off the line of sight. It doesn't necessarily have to go through the repeater but transmit of information is pretty good.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S2] Yeah Carfax we use. It's a new app we have. To look up VIN numbers if we have a partial license plate or something we can find the vehicle using the app but it's pretty good.
Technology - Positives_about-with	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] But the benefit completely outweighs the irritating part of it that keeps going off because it's just live feed because I mean we don't have direct contact with [City] per the radio but on here we do and it's not a bunch of chatter, nobody's talking over one another, we don't have to worry about a dispatcher breaking in. It's worked out really especially say like if a chase come out right now. One person it doesn't matter what jurisdiction if they're listening to the radio they can just sit there and just enter the chase in and somebody on our end can say hey he could be sitting in the office and go and they're turning right on [Street], they're turning west on [Street] he can just call it out. We visually all we got to do now is drive. We don't have to look at a map, we don't have to look at anything we can go straight to the area.
Technology - Positives_about-with	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] We would go out and only had was the radios you handled calls and you look for stuff and you handled whatever was in what you know but now because of technology that lattice problem is our problem and the only reason we know that is through technology so we're able to work together and handle a problem like say there was a lookout on a specific vehicle. If I didn't get it at roll call I may not get it until the next day at roll call and say I stopped for a wreck that day on the way into work I may not get it until the next day or I had two days so it may be five days and that car may have been say recovered in that time so something happened and I never knew about it.
Technology - Positives_about-with	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S3] Like just like he said unless it came out of roll call look out for a certain vehicle and we've like he said when we determine that these cars are committing multiple crimes in multiple jurisdictions so all these jurisdictions have been putting out a list of stolen cars okay. It used to be you'd go to roll call you get a look out hey there was a red truck that committed a burglary last week so everybody would look for a red truck now you're getting lists like this daily from other jurisdictions along with

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								our list of stolen cars so you go down the list of 15 different cars you know what I'm saying it's an overwhelming amount of information you know so you're not just looking for that one red truck now you're looking for 15 from [City], 10 from [County].
Technology - Positives_about-with	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S2] Which I know nowadays some cars are coming out with that you know OnStar and all that but---
Technology - Positives_about-with	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S3] Well and that's even some of the used cars that these used car lots these buy here pay here lots they have a separate tracking system installed on their vehicles in case they got to repo it so and we've dealt with that before. A guy called his dealership he got car jacked a guy called his dealership they had a tracking device on it to repo it if necessary and we were able to track it down so I mean it's not necessarily even the big companies Onstar and all that stuff but if there is tracking capabilities like you said on every car that would be you know I know---
Technology - Positives_about-with	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] How many more vacation no. I think the guys that just my opinion I think the guys that really love their job and you know enjoy their job are the ones that are using the communication the most or these forms of technology because you got the guy who is in the job who just wants to come to work at a paycheck. He's not going to utilize the forms of communication I mean because all of this stuff that we've talked about like the apps and stuff like that this is all voluntary, this helps us you know I mean the more you get on this stuff the more I think it helps aid in completing your job and you know there's some people that don't choose not to use it. So they use their police radio and their cell phone to call people but I mean there are some people that don't even use their email you know.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	... I mean we have in our records management system so our records management system and our CAD are unified it's one system. I came from an agency prior that didn't do that and it was a pain. So it's convenient because you know you can just tab from your CAD screen to your report screen and there is a messaging system in it that I think has

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								never really been fully utilized because at one point there weren't computers in the car and we had the system for years and people weren't using it. It is there but I think for purposes of like offline communication people are going to use their cell phones and we use our radio system quite a bit.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	... You need a password to get into your post records, you need a password we've just implemented another technology power [name] which is a document management system so it's where you put it's basically instead of when you do policy updates or training updates having people sign for them. You put them in there, they login and they electronically sign for them and so that is a new username and a new password and it's a great step forward for us because it's a much better way to maintain your policy manual and stuff and for us it's sort of a technological leap forward...
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	... actually there's one thing we do use on our phones and an officer set this up a few years ago and it's super helpful and it's not an app but it is phone based so he set up a [name] account specifically for the shift we were on and he linked it. We were all able to get the password and the username and we could link our house to our phones and what we would put in there is alarm codes for buildings, pass codes to get into certain places so like we don't have standardized alarms so we're talking dozens of different alarm systems and numbers and people used to just scribble them down on the back of their notebook or on a piece of paper they carried and this guy is sort of a technology geek and this is a really bad way of doing this so he created it so when you opened up your contacts it would be like you know your name and my friend's name and then it would say like business school and you would open it up and it would just have the codes and so that was a really, really, really good way and other shifts still weren't doing that maybe they should but it's up to them how they want to do it.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	...This shows you the most recent call so I can just scroll through and see all the calls and then I can tab over here to our case management.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								This is the face sheet, this is the narrative it hasn't been written yet the officer weren't working on it so it's a pretty it's actually a decent system. I like it but you have to know how to use this to work here it's just that simple and everybody does.
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	... But on our computer system, through LED [phonetic], through the Xirgo Technologies, there's a bulletin section in there where when you come to work, it will show you how many new bulletins are on. You can open it up and then you can go through each bulletin and read if it's a... BOLO, be on the lookout for a murder suspect or someone who's requesting X patrol in a certain neighborhood or residents due to crime. It's all listed there, so we don't have to keep passing that information on. They can read it for themselves as soon as they come to work.
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	Right. Yeah, we have, in our system though, in the LED system, we take audio statements now. We don't take handwritten statements. So we have issued out hand or recorders plus cameras, so they can take a voice recording, digital recording and put it into their complaint through the system, and take the pictures and it's automatically dumped into their complaint as evidence. So that's the great part and nobody's using their cell phones or using their phones to take a recording. So that aspect is taken care of. It's just, sometimes it's , some of them do it because it's just easier, they got their phone, taking pictures, and put it to the report.
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	... So those are all the other agencies within our [County], they're hearing exactly what's going on in our end, we hear what's going on in their end. Also with the LED system we see it on our laptops what's going on in those areas. We don't dispatch for [City] PD but we can see what they--in our laptops what's going on. Their screens are our screens, we all share--the Xirgo technology is done by the sheriff's offices at our central hub and they all tie into us, therefore we see--they can see us, we can see them. So there are no surprise complaints popping up.
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	... Some days I may spend all day on the phone, I may get 50 phone calls. Other days I'm actually doing my reports and approving reports on the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								computer, and other days we spend most of the time depending on what the call is, on the radio. So to say which one is the most priority, to me they're all three are unique and they work together. Without them, because if one fails you've got a second there.
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	It's gotten a lot better, because they're new--as you get more customers on the phones, they put up more towers so we have Verizon as our agency phone, and I find their coverage is here is very well. It covers everything that we want, however, there are places once you get into it, your signal drops to one bar, you have no Wi-Fi, you have no four light, you're back to the stone age.
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	For me, being an old dinosaur as they call it, I am impressed of like just using our computers, seeing our computers following the deputies on GPS because I can see all this, just on a simple look up at my screen I can see where every deputy in the [County] is... It gives them what you call AVL, automatic vehicle locator that is allowing us to see where they're at. When the computer drops or they have a service go down temporarily, or they're doing an update and you have to sign out for at least, sometimes an hour, you're in panic mode.
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	... And he's convinced the deputies again that is there to help them, because as a supervisor, I may get a complaint saying well, Deputy [Name] talked pretty harsh to me and we didn't like the way he talked to us. But then you rewind the tape, watch the video, well sir you were cursing at him. He just asked you nicely to be quiet. Like he may have used a stern voice, but that's required in our profession. And you can't curse at a deputy and not expect him not to actually shut up, and so it saves us. And to get them to understand that part. So as far as that, that's our biggest--I enjoy the video cameras. Again as a supervisor, it helps me protect them in the long run.
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	...There's an app we use on our shift, it's just our shift it's called GroupMe. And it allows us, it's like a large chat program, and we basically we'll send a message out, hey look, instead of coming out tomorrow early, take a short shift, or hey, somebody's having a birthday

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								party this week. It's more of a talk, we call it talk around channel where we can just talk and without people controlling it, they can't say let me see it because it's a private app, and it's just something...
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	Definitely we got to deal with somebody or location, a lot of times we will pull it up on their internet. If we need to find out who's a service provider for that phone number, we'll call communications and they can look it up and provide that information for us.
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	To me I think they make it a lot better [i.e., technology changes]. Again it goes back to the GPS, the cars are now communicating automatically with our dispatchers. Our dispatchers instead of having to see where people are, or call and ask them where they're at on the radio, they can see. So if they're the closest unit to the complaint, it's easier to send them right to it. Or if they know this is a canine officer, they don't have to call and see where the canine officer is, they can see he's here. Hey look, you're the closest canine officer I need you to go to this location. So that is the greatest asset.
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	I believe ours are because it's visually there. You don't have to open anything up; it's there on the screen. Right next to their radio number, is their location. So we know where everybody's at.
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	I think technology is on the right path. For a supervisor, for like I'm like again I'm in the tactical world, being a [Job title], and also being certain years in the canine, to be able to visually see what is around me at that immediate moment. Because it's--in my mind, I know what it looks like in my head, but is it really what I'm looking at out in the street, so it's me like with the technology of the drones, I know we have them but immediate life feed to the people on the team. Not just me, but the other team leaders, and to be able to alter it or highlight it, put an edit into it, show them where I want them or where they need to be or where something is located. I think to me in my aspect that would be something that we would look, that would be awesome, outstanding technology. I'm not sure within the near future that's probably all going to be possible if it's not already, we're just not down in our end yet

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								because I know like when I was in the military we had technology that I-- people hadn't even heard of at that moment, sending stuff, the GPS. We started GPS and even GPS was decades before local cops or even on the phone.
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	... But our GPSs are in our car. As soon as they turn the car on, it begins. Actually it's always tracking them because it's programmed into the computer of the car. The internal car computer. So it tells us if they're wearing a seat belt, if they hit the brakes too hard, if they accelerate too hard it's sends out all these notifications.
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	I just, for me I think technology is just going to help progress our career and our profession because the more we can get at our fingertips fast will help us do our job. Especially when you're responding to a, again a hot call, or a domestic. A simple thing such as a domestic call which is not simple, however, if I'm on my way there and I can immediately know this guy has a history of violence, he has a history of beating his wife, that we know she's reluctant not to file charges, then we--it gives us not the ability just to be safe when we get there, but we can also serve her better. Because we know she's not going to file charges, but the [State] can step in and file a charge or something on her behalf. And other hot calls, a murder scene, we can on our way we can start setting up the perimeters before we even get there. I can see where my deputies are, so I think I just like technology is going to continue to progress our career. That it's not going to be--some may see it as a hindrance, I see it as a progresser.
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Correct. We have both. We have a 700 radio system which we use where the dispatchers dispatch everything over. And then all of our uniformed patrol officers that are out there on the streets, they have mobile capabilities. They have computers in their cars with the ability to communicate through dispatch, back and forth receive live information. Now, uniformed patrol officers are the only people that have that in their units. All of administration, and detectives, we don't have, they don't have that capabilities in their unit, so that's why it's continuously

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								dispatched over the radio waves.
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	... And then as the dispatcher's typing it in, as soon as they open up a call for service on the screen, the officer in his car is seeing that. He's seeing that live time. So what they're typing he's actually seeing. In other words if a burglar alarm activation comes in when the dispatcher's at the computer, and she pulls the dropdown box to pull up a 62-8 which is a burglar alarm, and she types in the location, the officer is seeing that on his screen. If I'm sitting at my desk, I'm seeing it live too. I'm seeing it live at my screen. In the meantime, the dispatcher is also dispatching the units by radio to the burglar alarm as well.
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Absolutely. It's just a scroll of a button, like you scroll in your phone.
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	I mean we have big offshore tankers that pump in large amounts, 23% of the nation's oil passes through [County], so that was really able to help us get that grant in [City], and that really helped out our [County]. I mean I could be sitting right here and there's a big fire or big incident down the bayou, by turning the switch, I can hear what's going on. And our [County] is 92 miles long.
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	... I mean we have big offshore tankers that pump in large amounts, 23% of the nation's oil passes through [County], so that was really able to help us get that grant in Washington, and that really helped out our [County]. I mean I could be sitting right here and there's a big fire or big incident down the bayou, by turning the switch, I can hear what's going on. And our [County] is 92 miles long...Like in other words if we have a school shooting, and we're bringing multiple, resources, the dispatcher is sitting at her computer can drag that radio station into a box and all them, they all broadcast on the same, on one channel. Even though they stay on their radio, but this computer based through the system and then whenever we're ready to get rid of the incident or determine that the incident is over, we can just release everybody and they go back to their own channel

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	No, when the [Job title] does it from the console, she puts them in a box, and it does it automatically. Like for [Event] here we do that. Like we have agencies that come from all over the state to come to help us work [Event]. And we have their channel in our console like say [City] Police Department, and we just drag [City] PD and put them into that bank with us, and whatever they say on their radio, we hear them here.
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Well we have computers in the units. We have GPS systems in the units which I find really work really well. It gives the dispatchers capable of being able to see where the unites are and I mean because you know, sometimes in general wherever you go, there's always going to be lazy officers, so if the dispatchers are able to see them on the screen and they give out an accident, they can call for that unit and say, yeah, look you're two blocks away, they're going to call you out on the radio to make you go. And it's also a good tool if an officer is in need of assistance, you don't have to ask for his location, you can see him on the screen, and then at any point in time supervisors can walk in there and actually see where the officers are on the screen, so we do have that capability. We have like I said, we have computers in the cars, the radio communications has really worked well for us. So I mean communication for us, I wouldn't say that we are really on the forefront of technology, but we are ahead of some people in the curve.
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Yes. Yes, we have all of our patrol officers are issues body cameras. The body cameras it's in policy that every time they go on a complaint and they talk to somebody, they activate the body camera. And then we have a system when they come into the police station, they dock the body camera into a docking station and it uploads to the system. So yes, we do have body cameras. All of our officers in the department are issued regular digital cameras that we use for different day to day activities and when we get something major, then we call out our investigative units and they come in with specialized cameras and digital cameras and we can video. We have the capabilities of video recording crime scenes so yes, we have a variety of different cameras that we can use to audio,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								video, capture different incidents.
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Now is traffic, is traffic cameras the answer? I don't believe so. I believe that that's just a money-making tool for them, but if we could use the camera to capture data that would be able to be beneficial for crime prevention and crime deterrence, because you know that police officers, marked police officers just passing through an area is a deterrent. So if we know if the area increases, if we can watch it live time, and just send a marked unit in that area, it would deter things from happening. So yes, I do believe that there is some places that we can go in technology that would really benefit not only the police department, but it would benefit the good people in the community. It would deter crime from happening. You know, take for instance if we had--in fact [City] just did it. They have [Job title] that are sitting in front of screens, that they've put up strategically throughout the community, that are just watching. Maybe it's just a suspicious male walking down the street that he could radio in, hey look, on this dark street right now, we see a suspicious male. We can send a unit over there to check him out before he does something, because obviously if you're walking down the road at 2:00 or 3:00 in the morning, in dark clothes, with gloves and a hood on, you're up to something. If this [Job title] can see it on the screen or he can alert him on the screen, where we could send an officer to check him out, we've deterred that crime from occurring.
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	...On the fire side, on the fire department side we do have the app called Active911 which is a paging system that the dispatchers put into the computer and when they send out the page that comes over your radio frequency, it sends out an alert on your phone. And that alert on your phone also it give it as like say a house on fire at this specific address, and then in that address box is attached to Google maps. So when you click on that, it actually shows you on a map where it's at, so you don't have to ask dispatch for a time. But that's another type of paging system that our fire department-- we pay so much per prescriber to be on that system. It's called Active911, and I find it's really good because like I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								could look at my phone, I could look at my phone and see how many people are coming to the call. Because as soon as they see it and it comes up on his phone, they can click in route and it shows you, it shows you how many people you have. That way, if we got a house on fire, and I see that we got 10 people coming, I know, hey, look we need to notify the neighboring fire department to get us some more personnel in route to help us out.
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Social media on both hands whether it's the fire service or the police service, it's a great tool. But it can be a tool that can hurt you. I believe especially, especially an emergency, emergency work, police work and fire department work, that social media as far as us is public service should be a one-way direction.
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Absolutely. Absolutely. That's a great tool for us. In fact, we have two or three officers at the police department that have fake social media accounts where they can get into that criminal world and criminal element and find out things on social media. And I mean look, we recently solve the murder by social media. He's... we knew he was at this party where he shot somebody. He completely denied ever being at the party, this, that and the other. Well we pulled up his Facebook page and he got pictures from the party. He got pictures from the party. He had videos on there from the party. So once again, I mean it's a great tool for us to be able to use because especially in the criminal, in the criminal element, they think it's funny to be able to post all of this stuff on Facebook. They, that's kind of a.... that's kind of the social means that they use to celebrate their lifestyle. They post a lot of stuff on social media so it's a great tool for us
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	I can remember walking down the street as a detective, canvassing and talking. Now they're on their phones, on their computers in there, searching somebody's bank records, searching their phone records, they're going through all of--it puts them in a bubble. It puts the police office in a bubble where no longer does he have to get out there and interact with the community.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	But I mean at some point in time you have to weigh what benefit it's given us compared to what's the negative portion of it I believe that if gar outweighs the negative. I mean the capabilities that you have with modernized computerized programs in the car and researching is far out--going to outweigh the negative portion of it. But it's still--it's a small problem, and I mean I guess maybe there are some technology things that we could do that, we could do to remedy that. We can take that screen off of the--from here, and maybe put it up on the dashboard where the officer's not moving here.
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	And we don't have in the fire department here; we don't have too much technology. We don't have the computers in the units. We, I mean the Active911 coming to our phone was like a big step for us man. That was a great enhancement for us, especially the mapping portion of it because I mean in our district we have a lot of lanes, small lanes off a big highways and it's hard for you to remember all of them lanes. And the mapping software really helped us out tremendously. But I mean I would love to have computers in all of the fire units that we--I mean we still generate handwritten fire reports. When an officer goes to the scene, he generates a handwritten fire report, brings it back and turns it into the station and we put it into the computer system.
Technology - Positives_about-with	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	It needs to be more for the last couple of years we've had Panasonic notebooks and they--we had a lot of trouble with them just recently we went with Dell Toughbooks and they seem to be working really well out in the field. They are much more rugged, they're more durable. The processors work a whole lot faster.
Technology - Positives_about-with	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	Now it would. I think you have the mutual aid net and all of that, all the matrix where you can dial in and link up to different agencies, and put everyone on different talk groups and that type of thing.
Technology - Positives_about-with	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	... we felt like we were better protected personally with the cameras, and all our actions were more--you know, we could justify a lot of our actions, because they were live on film, and the shortfall of that was, at the time, the cameras they bought only had, like, I think a 2 meg storage card on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it, which would do four hours' worth of data and that was it.
Technology - Positives_about-with	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	... I think we have better accountability as far as what information we collect on calls, how we track the data, how we track all the information and the people and those types of things, so it has expanded, the data and the resources that we have, and the ability to get back to it, whereas before, with paper files, you put them in a box somewhere and who knows where they end up, so--
Technology - Positives_about-with	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	Retrieving data, and more useful data.
Technology - Positives_about-with	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	Yeah, it's a lot of the pre-packaged stuff, but I also found that the software salesman, I refer to him as the snake oil salesman of the 21st century, but I think it's useful. I learned how to program, I don't know, keypunch, and before that, it was on a tape, a punch tape, so I was writing Fortran, so yeah, it has gotten more user-friendly for sure, to me, anyway.
Technology - Positives_about-with	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	I think, from what I understand from Firstnet [phonetic], and I've kept up with it since its inception, I think one device that you can do a lot of things on, like the Smartphone, where you can use it for your communications, you can use it for your text messages, your photographs, those types of things, and also, it's understood, you may have the capability that if somebody's camera system is on the Wi-Fi net, they can give you access into it, and you can see live what's going on inside a bank building or a school or whatever. I think the rock solid of where the--I think the rural broadband initiative is bringing a lot more internet access in, and not having to deal with the radio here, radio there, and this and everything else, camera and so forth, so yeah, I think eventually, the technology will get there.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	... But the calls are pushed through CAD, through their, you know, through their MDTs. They're able to run license plates and enter their own paperwork and stuff like that. But you know a lot of our calls take you away from the car so you're still doing a lot of the information through

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the radio and having communications enter it and then come back and complete your reports.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	... And you know I think probably as we sit today we're in a much better place than we were 5 years ago on that interoperability piece as agencies are coming in.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	Coverage we're good. We actually have a--we're on the state system, ELWIN [phonetic]. There's a tower right across the street on [Team] Stadium and the simulcast system is actually on top of one of our dorm rooms. So we have very good radio coverage here.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	Yeah. Well I--when you look at sporting events and the ability to push text messages amongst commanders, radio traffic and, yeah, I think on a daily basis technology is a win for us. I can't think of specific incident where it was like, whoo, thank God we had email but, you know, I think we use it so much that you take a lot of it for granted on what you're doing and the abilities that you have to use technology that most people wouldn't think about.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	... But I think you're seeing... the MDTs have been around for a while but they still seem to be a vital piece of what everybody's doing in their agency because you've got real time information in front of you instead of, you know, when I got the call of a suspicious person I had to remember what it was, drive, get there, and try to locate and so now you get on the MDT and you see, oh, it was a white male with a grey shirt.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	And so you have that information right there. So I think those are--that's a piece that I don't see changing. Now maybe it gets better, maybe the way it works changes but I think that piece is constant. And you know the technology with radios has grown leaps and bounds. I can't even remember what type of radio we had when I first got here but it weighed about 50 pounds and you could have 2 channels on it and so the features that are on these radios now are just absolutely incredible.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	Yeah, I think so. I think you have more readily available information at your fingertips that you used to. And I think it's, you know, for us when

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we're looking at... response to major incidents or planning for major events instead of having to make 5 phone calls you can send 1 email and cover the same thing. And you know I think it's easier, you know, as... as not being a shift supervisor anymore but being responsible for those who are, it's easier for me to disseminate that information through an email than trying to a roll call at each shift and pass that along. You know when we have Help Identify flyers for, you know, maybe we're trying to get public assistance from a case we're working on, a burglary and we have identified a suspect and we have that picture and now you can send that out and broadcast the email and 42,000 people get it.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	And so now your eyes that are looking for him have multiplied dramatically and so, yeah, I think it's--I think communicating has been very helpful in progressing our mission.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	... I was here for Katrina and we had some issues then with cellphones and radios and you know I think they did a lot of things to improve the state system since then. And you know we haven't had any issues through ice storms, a couple of hurricane reactions since then. You know I think the state operation system has really beefed up since then.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	... You know we've never had cellphones go down, even on game days, we're able to communicate for the most part. Radio, we don't have any issues with. So.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	Wasn't a problem on the bike, because I had a whole--integrated into it, so I could either press it down here or reach up with my other hand, it was all coming through my helmet loud enough for me to hear while I was going down the road with all that. That's about it for me...
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	... I've used apps--though they're a bit--though they're out of date now, so I need to find some new ones, they went out of date this year, and they stopped upgrading, that were just a law search, I had one for criminal and one was for traffic laws in [State], so I could search up and find a statute number if I couldn't actually remember that number, or many more specifics in there, just seeing somewhere I need to look up

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								specifically what I was looking up there.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	No, no, [inaudible] into it. Some people don't like these, some people like to look at the smaller ones, and they'll run it through their jacket. I did that--I did that myself, I would cut, and I would get tailored little holes inside of my uniform, I could run the earpiece through, whereas the actual handset running through it, a lot of the handsets now, the earpiece attaches to the mic, so they can just run it through their shirt, the front, or around through the neck part.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	...Do I leave it running continuously, do I mute it in that time period if they're not talking to me or anything like that? We've--I've watched videos, an officer will turn it on, but they'll get back in their car and it'll be an additional 30 minutes or so, or--it'll chime if you've left it on too long, or it'll chime every so many minutes that it's on... So, you'll have that much time of just extra video, that I'm trying to listen to the radio or trying to drive, you'll get lunch before that tone goes off again and realize their camera is back on, but I haven't seen anything--it seems to work, it's all internet, it's real easy to access, I like them.
Technology - Positives_about-with	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	.... We call them Blue Force Strikers in the Marines, it was usually all in the computer, on the vehicle computer, so you'd open it up, it would show where everybody was at, and you could communicate through that.
Technology - Positives_about-with	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	All of my guys have department cellphones. If they're using personal, we don't advocate it. We use our departmental cellphones for everything.
Technology - Positives_about-with	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	You know, I am not quite sure. I think everybody is individual as far as, you know what different applications they are utilizing. I know there are a couple of specific law-enforcement apps out there specific to [state], that several of the officers have on their phone, and what I am saying there is instead of having a large book, you know, that you have to carry around with all your penal codes and more vehicle codes and such as that, there are apps out there specific to the [state] that several of the officers have on their phones so they can, you know, very quickly, very

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								easily, have that information at the touch of a finger, so.
Technology - Positives_about-with	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	Yeah. Our report management system is CLEMIS, which originated in [county] in [state] and has kind of spread across, you know, certainly south-east [State], now starting to get even farther out here. It's a very robust report management system where we have access to a lot of different data; you know, anybody that is part of the CLEMIS report management system shares that data, so if somebody, say in [county] is encountered by law enforcement we have access to that information all the way out here. We may not have access to the narrative report but we certainly have access to see, yeah, on such and such date, this particular person that we are dealing with was dealt with by [counties], so, you know, that footprint for CLEMIS is getting larger in southeast [state], so it really is probably one of the more robust report management systems in the state of [State] anyway as far as data sharing.
Technology - Positives_about-with	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	Yeah. Well, and again it depends on what different applications you are talking about and utilizing. Now, at one point, we had the same vendor for jail software, dispatch software and the officer's report management software, so basically if we took somebody over to the county jail and they booked him in at the county jail, by the time we get back here to type our report, we would not only have all the information from Dispatch that we were originally sent to the call on; times, names, whatever it may be, we would have the information from the jail of whoever we took over there by the time the officers got back here to type the report; all they had to do was enter the name and all that information would carry over. Now, because we went to a different report management system, we have lost some of that capability - not all that capability but some of it. We anticipate our dispatch center going to the CLEMIS module of dispatch of CAD soon, so we will regain some of that. I am not sure that the jail will ever transition from the vendor that they currently have because they are very happy with it, but that, again, that is something that is universal and really of major

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								problem nationwide with law enforcement is, you know, all these different applications and things that we do, not talking or having interfaces with each other; now understand the interfaces are probably available but not at a cheap cost, and that is really one of the major issues that we have, not only with data sharing but, you know, I am sure we are going to talk about communications at some point. The technology is there. It is the cost of interfacing that technology together that is prohibitive - excuse me [coughs].
Technology - Positives_about-with	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	We have the ability to do it in the patrol cars. Again, you have to weight that with officer safety. Do you really want an officer with his head down in a computer for 10 or 15 minutes while he is writing a report, not being cognizant of his surroundings, or would you prefer that officer to come back into a secure location where they are comfortable and can do that? So you really have to weigh that - excuse me [coughs]. You know, we work in a - basically if it is going to be more than a five or ten-minute report, I want them back in the office. There are advantages to them being out there and being seen, but again, you have to really weigh the officer safety factor there - do I want them, you know, not paying attention to what is going on for that time, or would I rather have them in here? I would rather have them in and off the road where they are comfortable; they can do what they need to do and then get back outside.
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Potentially. We haven't had any, you know, but when you talk about, you know, the capabilities of the phone, you can take pictures and so forth and you know, although the department discourages using your own cell phone for, you know, evidence pictures and so forth, you know it sometimes just becomes a necessity.
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	I mean outside of them having performance issues, no, not really. I mean, I prefer the enhanced technology.
Technology - Positives_about-with	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Both. Again when the technology is working, it makes things easier but when it is not working, whereas when you used to write everything, nothing is going to break that you can't fix. So now if the reporting

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								software goes down, we can't utilize it until it gets fixed. So we are not doing reports in a timely fashion which dictate when it gets to the court and so forth. But when it is working nice, I enjoy it. Some people are a little technology averse here but.
Technology - Positives_about-with	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	... The computer system, personally I think it is a lot - I dont like it, I think the CLEMIS system in comparison to what we got now is not user friendly, the computer system that we got now is phenomenal but CLEMIS is not user friendly, it's going to take a lot of work to get these guys used to it because these guys have been using it for 15 years, and then overall, it's a complete different structure for the department because now these guys are gonna be all on the road.
Technology - Positives_about-with	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Yeah. He has got his laptop with everything he needs, to mean report writing, everything like that. I mean, for the most part, you are basically a self-contained machine in there. I mean, everything you really do need is accessible on your laptop.
Technology - Positives_about-with	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Yup. We got body cameras. I think they are phenomenal. I would like to have some better ones. They dont have any night vision capability and that is a big damper. I have noticed definitely the way officers talked to citizens as my complaints have gone substantially down. So that is definitely a positive impact.
Technology - Positives_about-with	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	There is actually an email that I am sending out today to all the officers, encouraging - I was given a flyer on an app called [state] Officer. I downloaded it last night and I played with it and it's got some good stuff on it with regards to looking up laws. It links directly to our ordinances and stuff like that, so actually I am sending out an email today to encourage them to download on their phones, but outside of the apps, I dont see the guys using anything, only the apps.
Technology - Positives_about-with	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	I think they are all very helpful. I mean, I have always had a computer in my car, you know, even when I first started, you know the old solid MDTs were the best things ever; they were indestructible. So I have always had a computer in my car, so I would say just improving the touch screens

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and stuff like that, making it easier but overall I think it has been pretty steady.
Technology - Positives_about-with	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Yeah. I mean, our current computer system [unintelligible] is phenomenal and user friendly and I have had limited use of CLEMIS just getting ready for training but I think it the system that we are going to is going to be a disaster. I think the guys are going to really be complaining.
Technology - Positives_about-with	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Night vision, technology like that. God. I mean, I would like to get some less than lethal equipment. I would love to get like pepperball guns and stuff like that. They are phenomenal tools that save lives and officer safety. Again, we can't afford it. So it all comes down to money but yeah, anything less lethal, anything to help the guys see at night, I mean, I would love to get one of the flare systems just so that the people out there know that we have them and maybe they won't come here.
Technology - Positives_about-with	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	...There is a GPS tracker on it and it shows where every car is, so if somebody is calling out for help, you can look at the map and say, oh, because, you know, if you dont know exactly where something is in another city, when you go and back them up for help, you can see, oh, he is right over here.
Technology - Positives_about-with	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Positives, it keeps things simple; it keeps the airwave chatter down a bit. This is very direct and, you know, this location for domestic. And then they will put notes in the call logs, you can read the notes for anything pertinent to know. If there is something very serious obviously, [unintelligible] over the radio, known to be firearms in the house or something of that nature. The downside is that every once in a while, if you are sending it with the MDT, sometimes these things will crash, you got to restart the computer, this and that, so you may be dispatched on a call and if somebody is sending over the airwaves or they forgot or too busy whatever, it may be 2 or 3 minutes by the time your computer is back up and running and then instead of being at that call, you are parked halfway across town and just realized you are supposed to be over there with everybody else. So, sometimes when the technology

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								goes down, we have issues.
Technology - Positives_about-with	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	For the most part. I think most of our - I mean, you print something; it's almost always instantly printing. There is one car for some reason we can't figure it out but you know, we will print something and it will be 20 or 30 seconds before it actually starts to print before I can take it, but everything else is immediate.
Technology - Positives_about-with	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Well, the computer system we are on, as I mentioned earlier, we are on the same system as like [6 cities], and that's nice because if there is an emergency, that's our backup. We communicate very well with them. We can see where they are on the computer. We can instant message them if we need backup, [unintelligible] you know, especially on shared borders.
Technology - Positives_about-with	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	I have one app on there for decoding VIN numbers, so a lot of times somebody has zero paperwork and you gotta write him a ticket and you can't figure out what year the car is. A lot of times somebody just got it so it's not registered just yet and you can't run it, you don't know what year it is, so I have that app on there. The [State] just came out with an app I downloaded last Thursday before I was on my weekend and it's an app where you can pull [State] laws and stuff and traffic codes, so that is new. I haven't really played much with it yet; I just put that on the phone.
Technology - Positives_about-with	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	The radios are very good. I do actually want to upgrade mine. They sell a shorter antenna - these antennas are long and they get caught on stuff; I mean, everything from door frames to seat belts to you know, on uniform, and they sell a shorter antenna, it's about half the size and it's about \$20 and some of the guys have invested and bought one and I think I am going to do that for my radio. This radio has a very poorly designed "on" switch. A lot of times you get in the car and it turns on and off on you, sometimes it will turn on accidentally when you are getting into a seat and all of a sudden you get this blasting in your ear [sound of radio traffic].
Technology -	LE	S	Field	26-35	6-10	Male	LE-S-062	Yeah, we get that. These are not the radios I had when we started here.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Positives_about-with			Responder					Those were actually better and less problematic as far as design goes, but then the batteries all wore out and they didn't have quite the signal strength. These are very good radios, they just, I dont know if the switch moves too easy or what, but [unintelligible] a little bit, everyone here has got their complaint about them and as well as every other department who uses them.
Technology - Positives_about-with	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	We got printers in there which are fantastic because, you know, by the time you hand write a ticket and try and get it through 5 copies of paperwork, you give the person their copy, they can't read anything other than the [unintelligible] court in 10 days, whereas the printers in the car make an extremely neat - takes for me a small fraction of the time to print one out as it would to hand write it.
Technology - Positives_about-with	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Our computers are. Our printers are. Like I said earlier, we have a lot of problems with the modems themselves, not as bad as it used to be but it is still problematic. Our radios, these are 800 MHz, they are pretty top of the line; we just got those a couple of years ago.
Technology - Positives_about-with	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Yeah, that's a pet peeve. I mean, when I started here, we had a very different 911 phone system. We had these big black boxes with red lights and stuff on them from like the 1980s. They were dead reliable, they had no problems, they were high quality, they were well laid out, nobody had any problems with them, they were just fantastic. Then we upgraded to like the \$75,000 touch screen 911 system and all that, and for all that money, you know, they give you the receiver, they don't give you a place to hang it, you just set it on the counter and I can't tell you how many cords we have been through, how many receiver hands have been dropped and damaged and for all this money, they couldn't spend you know, 10 cents to make some plastic mold to hang it on but and there is a big learning curve for me to figure that out and sometimes the glitches - it just freezes up and then, you know, everyone is in panic mode, how do we fix this, because, you know, with the old stuff, if something goes wrong, you hang up, you pick it up, everything is fine and we have a phone that we use to dial out on, you know if you gotta

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								call somebody to ask, you know, whatever, or even call for a lunch pickup order, I mean, just anything. It's just an auxiliary line but the phone that we have there is still like a 1980s like foreign phone from the 80s, no one wants to get rid of it because it works flawlessly and things back then were made of a lot higher quality than now, so I [unintelligible] retired.
Technology - Positives_about-with	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	S1: Interesting. So would you say then, that as you are thinking about the technology you are using on a daily basis, things work pretty well? S2: Pretty well, yeah.
Technology - Positives_about-with	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Well, as I mentioned, a couple of years ago we upgraded our radios. I think for the most part we still work good. We got a couple of good computers and most of the ones in the car we just upgrade the software and keep the actual computer itself because those are very expensive, very heavy duty computers, like \$5000 a piece for a laptop, but they hold up to, I mean, spills, banging around, all kinds of weather conditions, but we upgraded the actual software and technology here and there. We did get new printers, they are not the same ones we started with and they are much better, much faster and I would say a little more reliable too. Now and again they jam up or have problems but for the most part they are pretty good.
Technology - Positives_about-with	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Because that way it will show up on your computer along with any notes or miscellaneous information, or they can tell you [unintelligible] because like let us say you call 911 for a car accident. They can dispatch me the car accident immediately, [unintelligible] Drive, 2-car injury accident. I am already en route. It might be another minute and a half before he types everything up and puts it on the computer, so once I get there usually that sort of thing, report number, whatever else from there and go from there but you know, not looking for a vague description you know, 2-car accident between a semi truck and a passenger vehicle, stuff like that you wanna know but you know, you dont wanna the -it's a red Ford Contour with scratches, 82,000 miles, you know, we dont..

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	...A lot of times in the morning they barely got their eyes open, wants to get the heck outta here, not linger around and talk, but at the same time, I mean, we have, on our computer system, we can go there and read all the recent reports; we can see what happened last night. I generally try and read the reports every morning; if there is a problem, I will answer. If I think we are going to [unintelligible] some more I will know
Technology - Positives_about-with	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	I have only got 2 log-ins; one operates all of our computer software systems, MDT in the car, everything; another one is for the [unintelligible] terminal. So, I don't think [unintelligible] most people just have 2 passwords.
Technology - Positives_about-with	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	We - I know some departments have it but we do not have internet in our cars, so if we need to look some information up, we usually use our personal phones. It's only the detectives that are issued city phones, so; look at our numbers or addresses or other resources like that, calling on people's behalf. I have an app that I use for calling people on the road that I can call them with a local number that is not mine so, stuff like that as far as - the phone is the big one. Our MDTs are - we have a digital camera for taking evidence photos. We have radar in lighter units for traffic enforcement [unintelligible]
Technology - Positives_about-with	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	Because, I mean, I have gone on to like [county] jail or something like that and I can still pick up the transmissions from here, or [town] or something like that so generally, I mean, the -like [unintelligible] you have to kind of acclimate to when you get a new piece of equipment but - and kind of feel out its limitations and all that, but I like the functionality that we have with these as far as the ability to listen to other departments so I can - so that is from Ecorse and I can show it's says, you know, who is talking, what is [unintelligible]
Technology - Positives_about-with	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	These newer ones are based off the cell towers, so they usually have no issues.
Technology - Positives_about-with	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	I have used Google maps before to find the location fast; I wasn't 100% sure where it was.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Positives_about-with	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Sure, yeah every day. I mean, social media, people putting out wrong information on social media that may be close to a situation. It hampers your investigation sometimes but yeah every day -- it is as much hindrance as it is a help, you know, it's a double-edged sword. But you know, I said that it is probably better than it is bad. You know for all the bad that is in it, you know it is probably better than it is bad. Communication -- when you can communicate with people effectively no matter how they get it you know. I think we are all better off.
Technology - Positives_about-with	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	And don't -- let me -- don't get me wrong, we have some knuckleheads. You know, we have human beings, right. I am not somewhat immune to it but we have not -- never had that rash of it being cultural in our agency you know or failure to train on a certain area or training bad in areas, use of force and stuff. We've not had that issue, but it still brings a level of accountability to the officers when they put that body camera on and they instinctively know then. You know, so it has dropped assaults on the officers, it has dropped our complaints. The most complaint you get is he's ride too, right.
Technology - Positives_about-with	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	I mean, it's dropped that. Officer's assaults on citizens where we have to lay hands on people, it has dropped. So, you know, we are seeing those things pay dividends for us and that's good for our community because everywhere you go and if you are doing something, somebody is right there, you know? So, you might as well have one on you and this camera gives you that perspective from what the officer sees. Not that, you know, 10 feet away.
Technology - Positives_about-with	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yeah. We still have a server. We still have to maintain some things you know here. But, on our chain-based evidence from patrol, you know we will be looking soon to outfit and interrogation room, our interrogation room is downstairs so we can upload that to the cloud on our evidence.com platform so when a DA goes to look at a case, they can sit at their computer and pull every video, every officer that was there, any interrogations that were done of suspects, they can look at all that right there from that, they don't have to get CD here and a CD here and a type

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								of copy of this tape and it's all at their fingertips.
Technology - Positives_about-with	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	They do. At this point they do. Blue technology is already there. We will be getting that with our next NN CAD systems -- they are kind of a CAD systems now that would be able to 911 would be able to initiate turning on your camera because you know technology is growing so fast.
Technology - Positives_about-with	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	We've got drones, yes. We've got drones and have cameras on them and we have an aviation unit with, you know, flyable helicopters, we've got a Huawei and some OH-58 Jet Rangers, but these drones I think are the future for aviation. I mean, for us, you know, it's a very expensive proposition to own, maintain a fleet of helicopters. Our helicopters were free. We got them on a government program. It was, you know, surplus military equipment but the way the drones are growing in technology, it is just -- man. If I call for the aviation unit, if they weren't flying, you know it would take them an hour, you know, I mean, once they got somebody to hangar, pulled the bird out, warmed it up, and got up and got to you -- I mean, really. But a drone, you can off from your car. So, if you needed to do some surveillance, if you wanted to know what was behind the house, that you are fixing to hit, you know if it drone, and you can get it on your phone, you know. They've got iPads that you can operate a drone from. [Name], my techie guy, he first in the [Organization] -- they first got one a couple of years ago I guess. And it was -- and then they got another one last year that was \$ 2400. It was so much far advanced than the first one they had bought. That had the camera that had the ability to lock on to something but the battery lap on those things are the biggest drawback right now. I think it can fly for 20 or 30 minutes but -- but look, if you've got a couple of them, you know, you got three or four batteries, then you can be up for a while.
Technology - Positives_about-with	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yeah, and pretty cool. Yeah, I think that's gonna take over and help you so much, keep you safe, keep our guys safe.
Technology - Positives_about-with	LE	R	Supervising Field	46-55	21-30	Male	LE-R-058	You know, [inaudible] [crosstalk] that I wouldn't know. Those radios they are using today for us are pretty advanced and, you know, we can talk to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					different agencies without -- you know seamlessly. And that is going to help if you ever have, you know, a major incident, you know, but I don't know about the timeframe.
Technology - Reliance	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	I'm finding more and more that we have more mandates and more unfunded mandates, right, that are being pushed, of which, we are using technology in a training mode or some administrative capacity to check the box. And I can honestly say I don't know if that's good or bad. I think it's more on the bad side because we're losing a focus of this job is all skill-based, is all perishable skill. And the more time I'm behind a computer is the less I'm good at something that's hands-on.
Technology - Reliance	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	... All of our computers can go down. The phones can go down and then that creates, in my opinion, especially when the computers go down-- I mean you can't run anybody. You can't run a license plate. You can't run a vehicle.
Technology - Reliance	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	... You can have technology to a certain degree, but you still have to revert back to those smaller issues that a lot a lot of people, think about it. Let's unplug your computer, take your iPhone away for a 24-hour period, and see how hair-pulling it [inaudible].
Technology - Reliance	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Dependent on text notification. Before when we had the old pagers, not even the two-way pagers, did that person receive that text, I mean I'm sorry, receive that page? To where now you can see on your phone if somebody's received that message right away.
Technology - Reliance	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	No, we try to train them to not use paper, which they all [inaudible] where they will. But by the time you get to the [inaudible] updates, you're a pro at taking calls. It definitely makes it easier to train somebody.
Technology - Reliance	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Just in the hour, every 3 or 4 months that our system goes down for updates and we go down to paper it's--we don't like it. So much has changed in that 15 years. It's kind of scary to think about it.
Technology - Reliance	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	I don't think I could do my job without the technology. [when asked about technology and how it helps you do your job]

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Reliance	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	I think we would rely on our cellphones a lot more in those instances, yeah.
Technology - Reliance	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	We really don't rely on the technology.
Technology - Reliance	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	... And they're using their mind, their brain to figure out problems. They're not relying on the technology to solve the problems. They're using their human brain power to find the solutions to those problems and it's just a portable radio and a portable on the other end with a deputy or a fireman in a boat going, okay, I've got 6 people out of this house, where do I go next. And they look at the next piece of paper and say go here. And so that's kind of what I think that we're looking so often to say technology is going to help us in these big events when you know you'd better prepare for that big event to take that technology.
Technology - Reliance	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	No. I think it's--I really think that it's human willpower and brain power that's going to make the difference. Can technology? Yes, it can. But we'd better be prepared to live without it because it--just as in the flood what we had was we had AT&T's entire wire center go down. So they had no service on cellphones for AT&T in this area for a week. So we'd better be prepared because it's not just the technology that we have here on the third floor because that technology has to interface with somewhere else.
Technology - Reliance	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	I'm sure there probably are. I think that sometimes we do overthink things and we rely on our technology...
Technology - Reliance	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	So we sent the [City] Police and medical and fire to the call. Well when we get there the police officer, I don't know how to--I really don't know how to talk to this person, I don't know sign language. I said well let's use the TTY to communicate with them. And so he would ask me the question over the radio that he wanted to ask the caller and then I would type it back on the TTY. And my trainee person who had only been there two or three nights she taps me on the shoulder and she said [Name], why don't he just write it down on a piece of paper? And I went, uh, that's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a pretty good idea. And sometimes I think we rely on technology instead of relying on the human communication.
Technology - Reliance	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	Because we want to use it, we want to make it useful but sometimes we use it when, you know you should have just--I believe that--with this little device right here, the cellphone, my child will not call me but she'll text me.
Technology - Reliance	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Oh yeah we have to practice... I probably have a few new ones in here that are in training that we have knocked down cards with that have a meltdown that they have to go to, but on the whole, we do and its part of our CAD [indiscernible]. I'm trying to get our comps on our accredited. The part of accreditation is that you have redundancies, you have those things, you practice for when your systems go down, and to be able to keep that accreditation, we have to be able to prove every year that we've done those things.
Technology - Reliance	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	So I'm very reticent about-- I mean, I am, in spirit, an early adopter. I mean, my first computer had an 8088 processor on it and two floppy-disks that I traded back and forth, and I did all kinds of stuff on that and I think that's great. And it's fine for me to play around on, but if I'm-- my service is going to depend on a technology. I want to be damn sure that, number one, they're going to stay in business; number two, it works the way they say it's going to; number three, I can afford it; number four, I can support it. All those things, they don't say those things in the ads. The salesman just doesn't bring that stuff up for some reason.
Technology - Reliance	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I mean, reliability is absolutely key if you're going to rely on any technology. I mean, it's got to work the way you say it is.
Technology - Reliance	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I think that's the thing. I don't think it's an age thing. I don't think it's a generation thing. I don't think anybody is against the advancement of technology to become more efficient within your job or your job description or whatever. But we are so enthralled with technology, and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we use it so much to become more efficient that when plan A isn't working, we are so deficient in our job responsibilities because everything was tied into plan A. So if plan A is down, we get so backed up with reporting or trying to get back in service or whatever, which is frustrating to the end user. And obviously, the bosses do a good job of trying to understand that, but their company line is still just figure it out and move on. But when plan A fails and plan B is so negligent in trying to bridge that gap, I think it's tough and frustrating. I think that's where people get frustrated the most.
Technology - Reliance	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I think everything is so attached to technology that if an internet server is down or the connectivity is not there or whatever, and we can't complete trips and get back in service and get information from the hospital that they need, we just start getting backed up quickly. And our system is, I mean, not overly busy. But it's busy enough that it has an impact crew after crew after crew. So that's my opinion.
Technology - Reliance	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] And I worked for another service where they would give a tone out before they dispatched a call so that you didn't really have to pay attention to every single word that's being said on the radio because they're talking almost every minute of every day.
Technology - Reliance	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] ... If we need a partner I was saying earlier, if we need police coverage, police assistance, if a person is getting very combative or whatever reason we would need, in an emergent sense, we would get on the police channel directly for the police district that we're in and ask for help that way. It just eliminates a couple of steps, and we call our dispatch who then has to transfer the call, and then it would be assigned people. Everybody that's listening to that district channel at that time hears us talk on it. So things happen much quicker.
Technology - Reliance	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] Yeah. So we got new cardiac monitors. And now we're using, I guess, it's Bluetooth or Wi-Fi to upload our cardiac monitor scripts to what they describe as an equivalent of the cloud. And then command attaches those written scripts to our reports, our medical documents that we write for the patient. That's one change that I've seen in it. Then

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								for health, that also happened at my last service when we moved to the life pack 15s there.
Technology - Reliance	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] As far as the technology goes, apparently, the software is supposed to be a lot easier on the back end for billing and for pulling out specifics in data. Of course, they always try to pitch it that it's going to be easier for us and user friendly. That's usually never the case. And then they're saying that the actual hardware itself is supposed to be more durable. Basically, everyone that I know, including my experience with tablets, has always been bad [laughter]. So I'm not thrilled about this change.
Technology - Reliance	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] --are phenomenal. We beat the cred out of them. And generally speaking, they hold up pretty well. [talking about Toughbooks]
Technology - Reliance	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[RE: toughbooks] [S3] They are a remarkable, extremely expensive machine. They do what they're intended to pretty well. We're not doing crazy heavy web surfing. We're only writing scripts on them, and they do that pretty well. It's a fairly resilient software for what it is.
Technology - Reliance	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] I love the fact that my keyboard is attached to my computer because it's a laptop. I worked on a tablet system before where the keyboard was separate. That was a nightmare. We broke keyboards like you wouldn't believe. Most of the times, the connection wouldn't work, and we had to manually tap, tap, tap, each letter on a tablet. And then they got rid of them and they went to the Toughbooks, which was wonderful, and I was so happy when I came to the service, and we also had them, so.
Technology - Reliance	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] Some systems have a mapping software that's integrated with their CAD, their computer dispatch, and they will get a call, and it will pop up on their screen, and you can hit a couple places on the screen, and it's a GPS, and it will show you right how to get there. And that stuff works when it does.
Technology - Reliance	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3]... Now I had a smartphone that I can use for that type of things. Certain things, I mean, I guess I would say my computer at home is faster than the computer I have at work. It's also less durable. I like

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								amateur radio. I have a very, very good radio that I use when I'm out in the woods with my friends that would be useful potentially in the city, but it's just different. It's not quite the same construction as the radios that we use. We use a government commercial grade radio that's built to be durable and can handle the abuse of that type of work. I guess certain technologies, hard to really pick one or the other.
Technology - Reliance	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] The system that I used to use, we could hit a button that put us at post. So dispatch knew when we arrived at our post. If we decided to go outside of post, we could hit a button that said, "In the area of post." And dispatch knew I was not at the exact intersection, but I was within that six-block radius. If I'm trying to go on scene, this happens all the time where the patient can see me pull up and the fire department can see me pull up, or maybe there's a bystander trying to flag me in because it's their emergency, and so they're the ones freaking out.
Technology - Reliance	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] I can pull up my call notes in real time if the call taker is still on the phone with the reporting party during my entire response to the scene, sometimes new developments happen that are important that I would like to know. Well, dispatch and the call taker are two different people. So dispatch is not necessarily going to be reading all the call notes for the 15 calls that he has people responding to right now. So, if something interesting pops up, he doesn't know, so it doesn't get relayed to me.
Technology - Reliance	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] It's plugged into a power cable to keep the battery charged, but the nice thing about it is that it's really portable.
Technology - Reliance	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] Take it into the hospital with me. If I'm doing a refusal inside a patient's house, I can bring it in, have them sign directly on there instead of doing the paper. I can put it in the back of the ambulance. When I'm transporting to the hospital, I can work on my paperwork. And when I'm done with the call, I can bring it up front and continue working on it while I'm sitting up front.
Technology - Reliance	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] Cops have those really nifty fingerprint scanner things [laughter], which are really cool. They were super excited when those rolled out

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								about a year ago.
Technology - Reliance	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] Right? I did like having a closed camera system from the front of the ambulance to the back, so I could watch my partner while I was driving in front. And that way, if anything got squirrely where he couldn't communicate to me that he needed my help, I could just see it on the screen and pull over and go help him. It came in handy a couple times. It wasn't downloaded to any system.
Technology - Reliance	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] There was an intercom system that once you hit it, you could just free talk between you and you could turn it off. And then there was a camera where you could watch what was going on in the back.
Technology - Reliance	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	...[County] they've got it now. They've been using the same computer program forever. It's simple, it's all in the computer. I don't do anything. It communicates with our computers on the trucks, tells us the times, it's easy. Just press one button everything syncs. It gets more interesting out here when you have to you don't have any computers on the trucks you just have you know it's just your normal driving. Also on the other side of that you got when your computer doesn't work. I mean your computer shuts down so you're so used to hitting route okay now I know how to get there you know well if you hit route in [County] we get in we hit responding we do everything off our Toughbook. You press responding, route, figure out where you're going, figure out what you're going for, read about it, go. Here you don't have any of that so everything is radio best but if that tablet in [County] goes down your radio traffic goes through the roof and you know it's hard then to figure out where you're going, what cross street you're going to, where it's at because you're so used to using it. So that's a detriment I guess.
Technology - Reliance	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	You know if we're going through a phase right now where you're doing CPR on somebody and you don't think immediately hey, let's put the LUCAS on and let it do its CPR but I see a day where you show up and before anybody does a compression you're strapping LUCAS to them and it runs out of battery and you're like oh what do I do now you know so yeah I think you get dependent on all of it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Reliance	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	[RE: usingMapQuest a lot] Because it's so rural even though I've been here full time for about a year but it's such a large county that people have been here a lot longer than I have and still don't know the whole county. We have old map books in our truck which aren't the best to be honest and we don't have a GPS system in our truck so I rely on my cell phone if I have reception at least to get me in the general area of where the call is.
Technology - Reliance	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	[RE: trial of iPad reporting system] It took 2 to 3 times as long to do your report which when you have a day where you only have 2 calls it's not that big of a deal because you have plenty of down time to get that report done but when you're running back to back calls and you're on a second call and you haven't even gotten to finish your first report it's very frustrating and they shut down a lot especially when these things depend on internet and we are so you get out here somewhere and then the information the things that you need won't load so then you just kind of got to wait until you head toward [City] and pick something up and go from there.
Technology - Reliance	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Yes. Last week. Brand new radios. And so, we've used the-- we used to use the 5000 Motorola series. Now we use the 8000 Motorola series. We had some comments on the way down here for this. So our communication, in our world, is meant to almost exclusively happen over these radios.
Technology - Reliance	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	...we rely on these radios to talk to each other on incident scenes and in training. And with the advent of cell phones, we quickly fall back on cell phones in a lot of those cases, even on emergency scenes, because the cell phones always work.
Technology - Reliance	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	...Whether I'm inside, outside, in the wilderness, in a big tall building, my success to bringing that instant under control depends on me being able to communicate down on the radio. So now that everybody has them, that's a great thing but the flip side of that is now everybody has a radio and everybody can talk, so--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Reliance	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	...And so it's a communication failure, and it's technology failure, that complicates-- when we rely so heavily in our job for this to work. When it fails - which is rare - how do I communicate?
Technology - Reliance	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Everybody does. I mean some people have department-issued phones, but nobody goes-- I mean, we live in an age now where no one does anything without their phone. And everything is done on an app, or done on a-- what have you.
Technology - Reliance	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	They might be working on that but it's our worst, it's a call that we need the radios. We have crews that operate all over the building.
Technology - Reliance	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	Not using our common sense and brains. Relying on technology.
Technology - Reliance	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	...and if you rely on, if there's a storm and the computer's down and the mapping's down, now you really don't know where you're going. Like I said though, I don't know the whole city but I have a general knowledge of the city. But the rescue runs a big portion of the city but my first-due area that's--
Technology - Reliance	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	...So I see that as a plus, but with technology comes sometimes some problems. And to me, the biggest problem is there comes a reliance on technology. For instance, those MBCs, they're great. It limits the amount of radio traffic [inaudible], because all the information you're getting for the call, you're seeing real time as the dispatcher's typing it, you're seeing it on your MBC, you're reading it, you've got a map right there, so you don't even have to know your territory anymore because you can hit the map button and woop.
Technology - Reliance	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	...Our computer's broken, we're out of service." And so I see that as the negative side of-- I feel like we've kind of have almost had an over-reliance on technology. And especially as our department-- some of the older generations, a lot of them are retiring and we're becoming a younger department again.
Technology - Reliance	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	...Sometimes we have to take systems down to do maintenance, which is an opportunity for us because then it forces people to go without that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								technology.
Technology - Reliance	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	...You didn't depend on the computer to know where everyone was. When the other station was going to go out and be somewhere new, we kind of had-- we would talk to each other and we'd know like, "Hey, we're going to go do training. We're going to be on the north side, so if a call comes in in our territory, y'all need to cover." Okay. And now it would almost be impossible to manage that without this system. You can't know where everyone's at.
Technology - Reliance	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	And it wears down a lot faster than just the regular squad one. So we try to keep it housed. Especially because if it's at a house on a medical call that the squad can run, then you get a building on fire that you need the ladder truck, you don't have it. So you got to wait for the city of [City] to give you theirs. So it could take a while. I think that's about it. Cell phones, protocols, and directions, probably the best thing.
Technology - Reliance	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	Yeah. Our drivers memorize the area. And even as a [inaudible] fireman, you're expected to memorize the area because you're going to have to fill in as a driver. And I don't want to see us lose that because we rely on the tablets. What's better than-- that's a good backup, it's a good support document but a lot of these other jurisdictions, [County], places like that, those people don't have a clue where they're going because they don't put any emphasis on it because they rely too much on technology.
Technology - Reliance	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	The computer on the fire truck is a three-year-old computer and now the new computers are faster so they have to be replaced. And it's always that catch-up with what technologies are coming out. And all we want to do is go on the call and make sure when we type the information in or log on or turn it on, that it works.
Technology - Reliance	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Yeah. I suppose in the-- just like we were chatting before about when a technology doesn't work and you're really dependent upon, it to get that information you need in such a time critical fashion, then I guess you could say that it got in the way. You're trying to respond somewhere and you utilize a mapping application and it sends you to the wrong address

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and then now you're in the wrong spot because of technology. I guess that's an example of how maybe it got in the way.
Technology - Reliance	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Personally, no. I think it's way beyond this. But you just look at kids today and society, and everybody's so wrapped up in their phone and their texting and the computer, that there's a lot less interpersonal communication that I don't think is a good thing.
Technology - Reliance	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3]...Sometimes we get pushed back, but when we added this new world MDT system, I mean it was no way, "Jeez, I just need a radio." This is crazy now if that computer system goes down for 30 seconds. Here's your microphone, "[inaudible]". They don't know how to act without it now. So.
Technology - Reliance	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] They get by, and they go back. But it's funny how at first it was, "We don't want this, we don't want this." Now that they don't have it, they're crying that they don't have it.
Technology - Reliance	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] What I've seen more than that is, and I can just-- he was there, thinking we're both part of an intimate management team too that goes on that deals-- and our younger people that are on our team will sit there during important times texting. And they are so tied to that phone and all the information that they get all the time - Facebook and all that kind of stuff - it's very difficult for them to put that down for any length of time.
Technology - Reliance	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	Just, I think, the reliance on computers just to function in your day-to-day life. I mean, I started here in 1994, and the Internet was kind of just getting going, right
Technology - Reliance	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	Yeah. I know. So just the massive shift towards-- we use technology for everything now. There's not a function in my life, I don't think, that I don't use some-- even brushing my teeth, I use technology [laughter] [inaudible]. Yeah. I feel like you can't get away from it. So--
Technology - Reliance	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: switch from Gmail to Outlook] And then there's just the compatibility issue. So some of our admin is pretty old, and they would do something in Excel and then send it out for the membership to look at or to use.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								And then that creates a compatibility issue of having to upgrade it or change it. And then, when they would get something back, they would get it back from Google Sheets, not in Excel format. And they didn't understand how to change it back. And so, finally, they just said, "Okay, we're going to buy Excel for everybody." But then you could buy one for every desktop and then still continue a cloud-based service, which is now buying two programs. Or they just buy Microsoft 365, which gives you the web version, but then also gives you five free licenses, or desktop, or whatever. Then, that creates a whole nother problem for our IT department because there's-- and I don't know what your background is in computers... But you have to support them, and you have to load it on the computer. And then access and all of that, so.
Technology - Reliance	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	It does. With the transition to the technology, there's been a lot of-- [!?] do say that-- we've started to depend on it a lot. There's a lot of dependence on it because we got away from the Rip-N-Run. If the MDT doesn't work, or if the cell phone module in the truck dies, everything goes bad because we went to an IP-based alert system in the stations. We had Comcast. Their line got cut one day. And we had no alert system in the firehouse, so nobody could go to bed. You had to stay up and stay with the radio...
Technology - Reliance	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...When the radios go down, so, say, the cell tower that goes into its backup, then we have to move from-- we have a cell-- we have a radio tower in [City], so we're lucky. We have pretty good radio. But then, when it goes to the neighboring radio tower, we have really spotty issues. And so when it goes bad, it sucks bad. That's probably the biggest common thing, if the CAD goes down. Then they're running off of their old run cards, which are 3x5 flip cards in a big book. And everything goes really, really bad. And so I don't know how, other than just redundant systems, how you could fix that. But we've become very dependent on it...
Technology - Reliance	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We moved to a-- we moved to a closest apparatus dispatch system. So they don't listen to the radio as much, because the CAD's supposed to be working in the background and picking who's going to go. Yeah. Just a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								lot of that. That's probably the biggest failure is, when it doesn't work, it really doesn't work.
Technology - Reliance	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...The computer says this and they do it. If the computer says this is the run card, they send it and we have dispatchers who go from telecommunicators, to learning how to be PD dispatchers, to them learning how to be fire dispatchers. But they really do what the computer says to do. And I think the biggest glaring example of that was the day that everything crashed. And our comm center vapor locked and I completely understand why. All of a sudden you're going, "I have no CAD recommendations. I don't know what the run cards are. I don't know who should be going to those areas. I don't necessarily know what resources should go." ...
Technology - Reliance	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...So we were lucky it happened during a weekday. We had a couple of chiefs move into a room and go, "Okay, the call is on this area in the map. This engine, this engine, this truck," and that's what I'm saying. So we were able to do that. You guys were able to get them back up and running, and then everything was good. But they're so reliant, whether it's because of training or policy, on their computers, that they're not given that opportunity to free-think...
Technology - Reliance	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	So on the squad, our systems are so dated. So Google Maps doesn't really work and they're not precise, so we rely a lot on our phones. So a lot of firefighters-- if I'm driving the squad I'll have the person behind me go, "Can you map this out and tell me directions over the headsets?"
Technology - Reliance	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	I think we're starting to see the trend for immediate gratification, or immediate need of information to make decisions. And having that immediate access to that information is a good thing, but as soon as we don't have access to that information instantly, there's that "Oh no" type feeling in these people that haven't grown up with maps and need to relearn how to look at a map and read a map to get them to a location. Just pre-plans
Technology -	FF	S	Field	46-55	31-40	Male	FF-S-015	Contingency. And that's why I have T-Cards to not only do radio

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Reliance			Responder					communication stuff, but resources, engines when they move around, and we lose our card system, or we lose connectivity to the mother ship. How do we track our resources, and how do we maintain that situational awareness? So it's things like that that-- I think technology is good, but you can't drop what we've learned over the years that have worked.
Technology - Reliance	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	... So having that mode to be able to communicate or at least get information out that's not impacted by the event is huge. All of my engines, all of my command staff and leadership all still have pagers just for that reason. And then I get the newer kids saying, "Oh, that's old technology. That's ancient. Why do we still carry a pager?" Well, they haven't experienced an earthquake or a big event where everything comes down. Katrina. I responded to Katrina. Same thing. Everything was gone. How do you communicate with that? Cell phones, land mobile radio, everything was gone.
Technology - Reliance	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	... So it's just not one technology. But you go back to the demographics. It's ever changing, but you're slowly seeing that the millenniums and the younger generation come in, and they want instant communication. They want that instant access. But I don't think they understand what's going to happen when-- they may have it, but it's not talking to anybody on the other side. What's going to happen? How are we going to make decisions? What's the contingency plans to be able to do that?
Technology - Reliance	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	...in every after action review, communications is in the top three items that need to be reviewed and improved upon. And so, I mean, I don't know if I can answer the question if it's helped or hindered. We're still in the top three of items that always seem to be an issue in any major event. I'm sure it enhances it to some point, but we may rely on the technology to share that information where verbal communications could have, should have been directly involved. And I mean, that could have been walking up and talking to somebody, versus trying to send them a message through an MDT, and the system being down or congested, and it never made it there to where-- it's dependent on the situation and what's happened.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Reliance	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Whoever said face to face, that's the best method of communication. Receiver and sender and sender and receiver. You got me and I got you, and we understand our messages from face to face. Relying on technology so, "Oh I hope he got that message." Or, "I hope I got this message to achieve that might be three blocks down the road on a large scale inset." The assurance of knowing that you got your messages across and especially critical messages. There should be no doubt or wondering if this is going to fail us, this system. Did he get the message or-- again, nothing beat face-to-face communication. I say, "Well, I'll write him a letter."
Technology - Reliance	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	There are certain benchmarks that must be set and made on the fire ground to be successful and to know what area or what part of the fire you are just by simple benchmarks through the progression of the fire. So heavy reliance and the portable radio is of utmost priority. This is our lifeline to an incident commander out there, but also for other companies in where they're going to be filling in the gaps, and where they're needed, and where they're needed right now.
Technology - Reliance	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	[RE: portable radios] I've never noticed an issue with that as far as you're looking at weight or user-friendliness. You never give it a thought. There was no problems. There's nothing to draw from is that I have a problem. I haven't had no problems with these. There could be a problem with the portable radio if left outside of your protective equipment due to thermal insult or a thermal exposure to it. Yeah. You'll melt the thing and it becomes useless, then you've got to rely on yelling, or if you're lucky enough, escape a pre-flashover. So if worn right, worn correctly, and following the procedures or guidelines of the fire department, it won't fail you. Most of those things that occur in the fire service, a lot of it is then human error and miscommunication. Communication is a big factor.
Technology - Reliance	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	I think part of the one problem with technology will be people's reliance on it to not be able to react unless they have certain forms and so people's brains kind of shut down if something happens and it doesn't work when it comes to that they go well I can't do anything when it could

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								be solved in different ways. Overall I mean technology has made our jobs better and improved the safety for the citizens and that kind of thing.
Technology - Reliance	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	They could but I tell you what I think we'd be lost without them honestly.
Technology - Reliance	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	Not really. Navigation wise you rely on your phone or your GPS in your personal vehicle and that's you know---
Technology - Reliance	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] I think it can also be a crutch mainly for the younger generation. We got some new recruits out there now. I guarantee if I handed them a map book they couldn't read it so if the technology was to go down can you read this arrow Atlas to get to where you need to go?
Technology - Reliance	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	Q: Let me Google car 64 so but that's interesting because we hadn't talked about that yet right but in addition to the technology that firefighters are using the trucks have technology right? Does that become a crutch? [speaker 2] SME: It can if something goes wrong.
Technology - Reliance	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Or your communication, the technology. Yeah. I mean, your supervisors usually call you on your cell and ask what's going on and whatnot. If you don't want talk over the radio, so you kind of need to have it otherwise, it's kind of hard for them to get a hold of you.
Technology - Reliance	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Sometimes, if am looking-- if it's a missing person's call or if a runaway, I'll typically use my phone, and I'll pull up the person's social media account to see if they've twitted something or posted something recently, trying to get an idea of what's going on with them.
Technology - Reliance	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	The computer has become very indispensable between CAD being right there, all the involvement, all the just people searches you can do, location searches you can do, report writing. If it weren't for the computer, it's either write it with hand or go back to the substation every time and write it there.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Reliance	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	Absolutely. We don't have city cell phones. You can check one out, there's maybe two that are available, and they never get checked out. Everyone uses their personal cell phones.
Technology - Reliance	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	I would say everyone on my shift uses one and I would be-- I think you maybe find-- everyone uses one as far as I know. I can't imagine anybody that doesn't use one except for [Name] or like the Chief or something where they're not--
Technology - Reliance	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	--that was viewed as a way to teach me how to be a cop without being reliant on technology. So at that time, when our CAD went down due to maintenance or an unplanned outage-- what's a fancy way of saying crashed? It was like I could still do my job and it didn't-- I don't want to say it didn't affect me, but I was comfortable and it was just Tuesday
Technology - Reliance	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	So I would say now, given to my opinion, is that we're much more reliant on technology. Again, my view has changed even further now that I'm in police technology and I answer officers calls for help... So my view has changed to now it is so intertwined with our daily life that it would be very difficult if we ever had to take calls without CAD. I do believe we would-- I mean, we would get through it, but the thought is now, these are mission-critical.
Technology - Reliance	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	...I mean, if an officer can't scan a driver's license, we're going to get that call. And they are going to probably be at a work stoppage until we get them a resolution, whether it's go get a new ticket device. Bring it to us and I'll look at it. I'm trying to think. I mean, obviously the radios are a big deal. You've got to be able to communicate. But all of the software in there. We write reports in the field, but if that ever went down, they could go into a substation and do it at one of those computers. But they're not. If it doesn't work right, they're going to want that address at that moment.
Technology - Reliance	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	...And so again, it's becoming now irreplaceable. If it were to go down, we're starting to rely on it more, but it's still brand new so-- we have one guy that got hit by a semi-truck and we had to get it fixed within a week

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								or something, but until then it was a struggle.
Technology - Reliance	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	...We have policy around it, make sure it's approved, but at a jail-- if I'm in [County], I don't have access there to my network. But I can get there from my phone through our virtual machines and I can do business that way. And again, it makes my life easier instead of having to make a trip back into [City]. So officers do that as the course of business.
Technology - Reliance	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	I think if you-- if you start doing too much with technology and relying on it too much when it goes down, you won't know how to-- or a person wouldn't know how to respond if you relied too heavily on technology. I think it's good for us to move forward with it, but I don't think we should put too much weight into it because then, like I said, if it goes down-- like when a computer goes down at work, and you're scrambling to find a notepad so you can write down addresses and things of that nature. So I think it's good to have. I think it's a great tool. I think it's a tool we all should use. But I don't think it's something we should all rely heavily on in case it does go down, which has happened before, so.
Technology - Reliance	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Well, I mean, technology, in and of itself, is always a blessing and a curse because you're expected to be able to do more, and more, and more, and more things, and more things more efficiently with technology, so. But I think if you look back at me the police officer 24 years ago and me the police officer now, if you put me in a car without a computer in it, I probably wouldn't know what to do now. So literally the first 10 years of my career I didn't have a computer in my car, but I'd be lost without it.
Technology - Reliance	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	...so. But I think our over reliance on it, and sometimes you have to just go out and do good, old-fashioned police work, and you're not going to find the person on Facebook, or you're not going to find-- you're going to have to go knock on doors, and you're just not going to be able to do it through the computer, and so we rely sometimes too heavily on it, and I think the community's belief that we have some technology that's simply either we don't have, or just doesn't exist. It only exists in fantasy land.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Reliance	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	I think there is a tendency to rely on the technology more than your own human instinct or your own human gifts and skills. So much of police work is just being able to talk to people, and I think that those among us who rely too much on the technology lose those interpersonal skills or never develop those interpersonal skills. And so I mean, it always kind of makes me chuckle a little bit when I see police officers driving around. And if they're in a two-officer car, the driver officer is doing what they're doing. They're driving, and the passenger officer is over there on their cell phone doing whatever. So I just think there is a tremendous reliance upon the technology and less of a reliance on their own internal skills and abilities.
Technology - Reliance	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	He wears the ballistic shield in it. But he's young, so. So in a car, you're really dependent on that computer quite a bit for what you need.
Technology - Reliance	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: city-issued cell phones] There was some resistance from some of the officers when it got to the point where you just couldn't do your job without a cell phone or some of the older officers were resisting doing that unless they got some sort of compensation. But I think any more, everybody's just so used to using their cell phones that they do it and don't think twice about it.
Technology - Reliance	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...we live and die on our MDCs. There's been times we've had [CAD allergies?] in dispatch, and the programs go down, and you got to jot stuff on pen and paper again as to where you're going, what the call is, to catch it up later and people just-- [they pull on getting?] more. They don't know anything different.
Technology - Reliance	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...back when I started, I could listen to the radio and on a Friday night, where we have 25 guys working, I could tell you exactly where everybody was in the city. As we've become more and more dependent on computers, I can't do that anymore. Which I'm doubting that anybody here can do that anymore, which kind of makes it hard for me to understand why we don't use more the technology, instead of using the radios...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Technology - Reliance	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... What came in as the structure fire is the reflection of the sun at night. But it gets billed as a structure fire because that's what the caller said. And you see it on your computer, and if the tones go off at the station the guys are ready to run out, so we've got a structure fire and then they never hear the radio come on and do the formal process of dispatching. So from a liability standpoint, I'd say, look, that is your formal dispatch. If you choose to go out on your own, we're not saying you can't. You're all adults here, make decisions, but just be cautious because that event may never turn into what you thought it was and what the dispatcher thought it was. So we are talking about the technology dependencies on how one part can really affect the other part and just understand they're related. The speed of the information flowing is not always great...
Technology - Reliance	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I think we're able, through training and introducing parts of it in stages, like when trainees first come out, they don't get to use the computer. They need to develop that radio ear and taking notes because when computers go down, the old pen and paper still works, and if you need to write down an address, and we see that, when the computers are down, our guy's like, "Oh, man. All of the sudden I've got to start writing down the address again." I didn't think I was relying on that... but I was. Because I wouldn't pay attention when the dispatcher would send us the call because I knew when I got in the truck, there's my address. So not overwhelmed, just they start to operate differently and then recognize when it's not there.
Technology - Reliance	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...I've seen the technology of glasses where you get the camera inside and you get the earpiece and all of that. That's fine and dandy. I'm not against body cameras by any sense. I think there's a time and a place for it. I think it helps out cops big time. But at the same time, then when they malfunction, "Oh, you must have done something wrong." And then it comes with batteries and all that sort of stuff...
Technology - Reliance	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: communication issues] I mean, the technology aspect is hard. I don't know how you would solve it. I've heard other people discuss, we need better radios and stuff like that. I don't know any different, so I use

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								what I have and that's about all I can-- and you hear the older guys, "Oh, back in the day we didn't have anything." And a few months ago, the line got cut to Xcel, so we didn't have any Internet connection to our vehicles, and so it was like reverting back to 1950. And so you kind of get a perspective. It was like, all right, well, you do have a lot to work with, and these tools are very valuable, so complaining about them isn't making anything better. It's just utilizing what you have and making the most of it...
Technology - Reliance	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	... that's something they harp on pretty emphatically is know your geography. Don't rely on your computer because if something like that were to happen, you have to be able to get to where you're going without the assistance of technology.
Technology - Reliance	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	Sometimes we put too much emphasis on what the technology says versus we know what's going on and human intelligence. Human intelligence is probably a little bit more than the computer.
Technology - Reliance	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	I think with anything when technology breaks, you rely on technology to work so much and when it breaks down, it fails, that's when that feels like you know "Really? Now of all the times?"
Technology - Reliance	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	That's how they-- so they have to revert to that. But the problem is, how do you tell a person that all they know-- yeah. I mean that's another issue is texting. You can't talk to anybody anymore. That's our biggest problem right now and that's why we're in the issue nationwide because nobody knows how to talk to anybody anymore.
Technology - Reliance	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	There's public transportation. There's skateboarding. There's bikes. And all of a sudden they're given this \$70,000 police car and say, "Drive fast [laughter]." And so there is a lot of technology does get in the way, when it comes to that kind of stuff. We rely on it too much, instead of going back to the old gut feeling. Say, "You know what, that guy's not right."
Technology - Reliance	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	You better say that-- what, something happens, what do we do? Cops will run into places, everybody's running out. So it's a very good-- say you're a firefighter, that building's on fire, well you run in. Put it out and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								run out. You go get the bad guy, who has the gun and is shooting everybody, and we run out. That's just weird. Now you get technology in the way, and then people are like, "Oh, but." They're hesitant. They don't know how to talk.
Technology - Reliance	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	...They try to make it easier with the phones, but a lot of us are getting assassinated sitting on our cars, on our cell phones, not paying attention to our surroundings. So that's another thing where, if you're too dependent on technology, it takes you away from paying attention to your surroundings.
Technology - Reliance	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	I say yes. But the newer generation, they live on their phones. And I get mad at the newer officers because they do that. They're on their phone. And I'm like, "You know we're on a traffic stop. We don't know who that guy is. We don't know," and they're on their phone. And I tell them, "Please get off your phone until we finish this traffic stop." But it's the younger generation. They live on their phones.
Technology - Reliance	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	...You know I mean the internet of things right? You know that growth into the internet of things is growing you know. When I first started it was just smartTV and now it's a smart lightbulb so I mean yeah it's more accessible, more people are using it, more people are getting comfortable with it which I don't know I guess it depends on how you feel about that (00:12:41) if it's a good thing or a bad thing so yeah I don't know.
Technology - Reliance	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	... I like to be able to give the video however are we going to a society that if it's not on video it didn't happen. So our testimony in court is in my opinion is devalued if we don't have video so if we're in front of a jury and they say Mr. your agency issued a body cam? Yes that's true. Was your body cam activated at the time of the stop? No it's not. Well why is that? Are you trying to lie? Were you trying to cover up? You know they capitalize on that so we have to be careful that we're not so reliant on them that we're sabotaging ourselves on the back end.
Technology -	LE	R	Field	Not	5 or less	Male	LE-R-045	[S3] It really hampers us to have that program go down because that's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Reliance			Responder	specified				what we use when we're running our running tags and stuff like that and driver's license and all that stuff. Without that website or program that we use we have nothing to go by. It's pretty much we stop them and say hey, how are you doing. I don't know if you have a warrant I'm just going to give you a ticket I guess.
Technology - Reliance	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	...You can look up people's phone numbers, you can look up people's addresses, you can look up photos, you can look up you know arrest history and it makes a huge difference and now you got to go through somebody else to get all that information if it was taken away [name] the system went down a couple of times people didn't know what to do. It's like man we used to do this all the time without this technology. What's the issue now. You got used to it that's the issue.
Technology - Reliance	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	Q: So do people get dependent? SME: Yes I think so.
Technology - Reliance	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	Q: And does that pose problems? SME: It can when it fails.
Technology - Reliance	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	... everyone out there knew the number and they'd call the cell phone and say we need this and we need that and that's how they operated and out there they really were not happy when that cell phone went away and that was only a transition we've gone through in the last year or two but here in midtown we've always been on a dispatched radio system where people call in and there's no we're not slaves to the cell phone.
Technology - Reliance	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	... I think sometimes people are looking for obstacles like oh we don't have this and it's like well you don't you wouldn't use it but we should have it you know we can't run things in the cars well so what you can run things over the radio. Find another way.
Technology - Reliance	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	Our portables, and then our phone. It's hard to prioritize which ones we use the most, because depending on the day it is. Some days I may spend all day on the phone, I may get 50 phone calls. Other days I'm

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								actually doing my reports and approving reports on the computer, and other days we spend most of the time depending on what the call is, on the radio. So to say which one is the most priority, to me they're all three are unique and they work together. Without them, because if one fails you've got a second there.
Technology - Reliance	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	... But now, as a supervisor aspect, I couldn't see doing this job without the technology. Without the ability to see where everybody is at.
Technology - Reliance	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	... Training wise, and technology, I think that the officers are becoming more, more reliable on less lethal means, because of different, the trends on social media, and even more dependent upon the computers and the radios, rather than being able to get out there and just the old police way and talk to somebody.
Technology - Reliance	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	...--but you know when I was first starting, cellphones obviously existed and everybody had them but they were not--they were not as much a part of everyday life as they are now. You know, if I lost my iPhone my whole schedule would crash and I don't know what I would do without reminders and calendars.
Technology - Reliance	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	... And I think maybe we rely a little bit too much on email. But it's the trend.
Technology - Reliance	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	Well, yes, certainly. What you have to understand in law enforcement is we are - historically the profession is getting older, so you still have some people in law enforcement that reject technology, they are not comfortable with technology, so certainly we still have some of the old guard, if you will, that refuses, or does not want to, embrace some of the new things that are coming out. As far as anything else, it really - you know, when a system goes down, it's incredibly frustrating because, inevitably, as in anything, you know, you are going to have systems that go down and if you don't have redundancy built in your system, or have a fallback, you are done. You are essentially ineffective.
Technology - Reliance	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	...when you talk about, you know, the capabilities of the phone, you can take pictures and so forth and you know, although the department

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								discourages using your own cell phone for, you know, evidence pictures and so forth, you know it sometimes just becomes a necessity.
Technology - Reliance	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Oh, for sure. When it doesn't work, it always becomes a problem because we are so reliant upon it that - you know, if [unintelligible] goes down because they are doing an update or whatever, can't run bad guys... So we may let somebody go. I mean, you are stuck in the dark because you dont know who they are.
Technology - Reliance	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Yeah. You know, I think the biggest reason for the downside is if they fail, what do we do? And you know, they are from the old school of thought where if I don't have the technology, it can't fail. So I can always do my job. You know, now it's at the point where we rely on technology so much that if it fails, we can't do our job anymore or it is impeded quite a bit.
Technology - Reliance	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Oh, potentially. For sure. You know, we usually are pretty good at adapting and deal with it, but you know, it definitely could become a problem. You know, for instance, you have a mass casualty or something and cell phones aren't available; I mean, if you rely on your cell phone a lot, then, you know, it's going to be an issue.
Technology - Reliance	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	You know, for instance, if I get called to do an accident investigation, I might get an initial phone call from Dispatch saying can you come in and do this accident? Then once I get en route, I will, on the radio, I get into a car that has MDT, usually I will use my cell phone on the way to kind of figure out, you know, what's going on and by calling the other accident investigators, figure out how close they are, do I need any equipment, so that stuff. Traditionally, I don't know how they would have passed that on, you know, before cell phones and stuff; I guess you could go through Dispatch but if they have already left their house and you don't have cell phones, so I think it is kind of streamlined, some stuff, but again, if it doesn't work..
Technology - Reliance	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	They are personal cell phones. I am a little old school. I don't like the way these guys talk to each other - well, I shouldn't say the way they talk

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to each other. They are too attached to their cell phones.
Technology - Reliance	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Well, also like we discussed, with the body cameras, being more personable; no, I think I mean technology is a huge aspect of the jobs, I mean. Sometimes when our technology goes down, these guys are - what I am going to do? I was like - get it, you can be a cop without a computer, you know. It is like, so I think if anything, they rely too much.
Technology - Reliance	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Well, it is fun and exciting. It could also be long, paperwork intensive, nowadays technology dependent. There are times it is extremely slow and there are times it is so fast paced and what I will do is a 12-hour shift and dont eat any lunch because there is no time to even think about lunch. It's a lot of variety.
Training	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	So, typically, on our rigs, you'll see, oh, there's only two people on your engine. Where's the third person? Well, my third person is pushing a patrol car right now in a beach somewhere that's assigned close. So we get a lot of leverage out of those people. It's very challenging because you have to keep training people all the time. I mean, I tell people this and they don't believe me, but one of our fire stations that was just built has a gun range in it because we have to--
Training	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	--qualify and because we're truly public safety. So there's a lot of cross-training that happens. The EMS requirements are heavy, even at the basic EMT level. So each year we have to do that. So there's a lot of challenges.
Training	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	It's across the board. All of our guys-- I mean, we utilize our online trainings and stuff. And we would have to sit in a classroom with a proctor doing the same thing. So it's more efficient, but it's more of a checkbox, like, "Okay, yeah. You went to the DMV. You submitted your paperwork. Check," versus-- yeah, we do some of the best training I've ever seen at this station and out back. And you would have just-- a few days ago, you would have been, I think, impressed with-- you walk out back, and you go, "Whoa."
Training	FF	S	Other	36-45	11-20	Male	PS-S-001	I mean, there's four or five cars are on their sides. We're doing auto

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel					extrication. I mean, the next day we're doing truck operations. So I get it that there's a bigger picture, but on occasion, technology gets in the way of that because I think we think, "Oh, it's just a mandate. Just push the memo through the electronic system. Guys will check the box, and we're covered."
Training	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	Whereas, well, is that real training? Is it valuable? Is it meaningful? Is it going to-- is it realistic? And I think part of it is, okay, we're just trying to check the mandate box and move on. And I'm sure you'll hear that from other agencies that you interview, not that that's bad or good. It's just I've noticed over the years, we are way more heavy of, "Okay, you got to go to this policy update thing, training or webinar." And I'm like, "Well, that's not the same." It's not the same. Talking about interior firefighting or talking about a tactical stop, it's not the same as actually getting out and doing it.
Training	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	But our POST standards, we have annual refreshers and annual minimums that we need to meet. So, for example, everybody across divisions, all three, need to do firearms maintenance. So they need to go shoot twice a year. They need to drive a patrol car, whether it's in a simulator or whether it's live. Yeah. I'll give you an example of how that gets in the way. We need to do defensive tactics. We need to do a whole bunch of different things, right? So on the EMS side, we've got to do perishable skills, so we've got to redo CPR AED [application?]. We've got to go through 12 hours of online training with-- it's just a variety of different topics. On fire, same thing. The National Wildfire Coordinating Group does this thing called RT-130 every year. So they push this national curriculum of if you're going to fight a federal wildfire, you got to have some refresher in terms of how to pull a hose, and deploy a shelter, and cut [hand lines?], and all of this. And that's just wild land. And so then we do training on top of that, which is mandated. So we do hazmat training. So hazmat, you've got to do your [inaudible] refresher every year. For the specialists, we have to have at least 16 hours. I mean, there's just tons and tons of mandates.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Training	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	So back to like-- so some of the mandates are techno-based. So the county, through a grant through [City] Regional Public Safety Consortium, which is kind of our POST academy for the region, they have this mobile trailer. And I'm sure it cost a bunch of money, right? You got all of these mobile simulators in your car. And I kid you not, like 75% of people, when they go in there, they get car sick.
Training	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	We had training the other day that our training officer, [[Name]?], set up on a building that was going to come down. We trained on July 4th. No, I'm sorry. On July 2nd and 3rd. Hey. And got us this old building they were going to bulldoze the next day. Some of the best training we've had all year long.
Training	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	They contain more heat, but we're definitely more protected. There's also more awareness, I think, at this level, the company level, of, "Hey, look, just the smoke itself is bad." And it's fuel, right? And so a lot of that has come out of good trainings from the other lab, like pushing that. But really, some of the training that is done not only nationally, but at the local level, really pushes the need for rehab and the need for your respiratory protection and just managing that and being very, very careful about what we're around.
Training	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	We are now with CIT training, crisis intervention training, that we're all getting. But still, it's a huge demand.
Training	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	Let me see. Wednesday. So, Wednesday we have a little bit of a fiasco with training. Let's see how Thursday looks. Thursday looks much more open. Let me see. So I have a--
Training	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] ...But in the future that's you know just pretty much with a push of a button, you'll get the recordings, you know people will be able to submit pictures, videos you know whatever the case may be so it will change the dispatcher's job dramatically. Right now they are trained to draw pictures in their head of you know envision what they build the picture of what is happening so they can accurately reflect that to the responder and the next generation they'll actually be seeing--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Training	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] We have a six-month training program and part of that program is geography so they are tested fairly rigorously on it. We have tried to do some fun things with it. Created kind of a geo cash you know where you go out and find things so we just thought okay if we're going to make people drive around we might as well make them go look for some stuff and landmark areas and that sort of thing. They'll also do ride a-longs with the officers or fire personnel to get a good idea of one, their call types and what they're dealing with and then two, just getting a better idea of the area so I have certain ones who excel in more areas than others.
Training	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Well, for instance, we have a radio users guide. It's a handbook that everybody that has a radio in [county] gets this guide and they have to abide by its rules. That's made up of all the different organizations; the fire departments, police departments, the mountain rescue all have people on that committee that write that manual. And then once they produce that they give it to the Public Safety Council I guess, overlooks that and then they do the training and everything.
Training	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	You're ahead of me, and it doesn't make any sense to me at all, but it's part of the packet that we buy for testing. And if they pass through that, all of those tests, they get it, I interview them. And then we start their background, if we like them to come to work for us, then we start their background and our detectives do that. And they go through that, sometimes three to four weeks of that and then they have to interview with chief. And then the last thing they do is a polygraph and psych because of ETA rules. We have to-- medical has to be the last thing. So that can take a couple of months to get through all that and then we get a start date. We have two people there who are going to be done with training this week, and they've been in training for eight months.
Training	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	They started July, January 3rd, which is way too long and the reasons are varied why their particular training took so long. But we added some stuff in, and we're going to take some stuff out, and we'd like to see-- I'd like to see it in about five months, four, five months.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Training	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	We've lost one in two years out of training. Our normal training isn't that long. So it's kind of scheduled for five months.
Training	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	... But she's not that sold on the idea that it's going to be worse for dispatchers because call-takers are trained to insert themselves into situations that they can't see.
Training	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	...So that's been a problem up here because of that, but there's been a lot of training and the good thing is the longer that some of these firefighters have been up here from the field, that's one of their transitional things they have to learn about, is understanding these people that work up here that are now on call takers aren't EMTs. They don't respond out in the field. They don't know what it's like to be in your shoes, as much as you don't know what it's like to be in their shoes.
Training	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	So exactly, there's a huge difference. So we need to kind of investigate that. Some other people will say, "I'm not feeling well, I have a fever, and I don't know what to do." Then we know automatically, sick person card. We have 33 different cards. Yes, 33 different cards and each card has a specific set of questions.
Training	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	Honestly, we should have had more but we did not, I don't know why. That's up on the technology chain that I'm out of, but we did not have sufficient training.
Training	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	... It was like we were trained 6 months ago and then nothing, and then we're going to go live. There wasn't any continuous, it was very difficult and they changed some of the components afterward. So like our phone system, it changed three times from what we were used to, to a temporary one, to a new one, and we felt like the old phone system was good.
Training	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	..." We used to be able to look at where it pinged on the map, click on it, see a hundred block of [Street], or a hundred block of [Street], somewhere out in [inaudible] and type in done. Now there's no hundred blocks, there's no nothing, we have to zoom in and-- and we've also had zero training on the map.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Training	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	So based upon the old commands that are gone and we haven't been given any new training, we're very deficient with that. So our quality of 911 in pinpointing people have actually gone down in the past six months, than in the past 60 years
Training	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	... So now for a firefighter, it's kind of hard to say these questions because we're trained at a medical level. This EMD program, this set program is trained for a non-medical person, who can just come off the street and start asking questions. They have no medical background at all. So for someone who has a medical background, it kind of hinders you a little bit.
Training	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Generally, it's eight weeks in the classroom where they take an emergency telecommunicators course, it's called ETC. That kind of lays the foundation of how to be a call taker. And then there's EMD class.
Training	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Yep. Here, here [laughter]. Yep, and once they're done with that, they will be assigned to a shift and a preceptor, and then they'll begin their on the job floor training.
Training	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	It's something that we do in training.[referring to --writing addresses down on cards, and keeping track of all our calls on cards]
Training	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	... So a lot of time even though it sometimes has a lot to do with money it is also to help out other shifts so that they can get breaks and stuff because if you don't have the appropriate staffing you're not going to get an hour break. You know you're not even going to get a half hour break and also the people that need to get trained are not going to get trained because we do all basically one on one training here.
Training	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yeah so I am personally I'm trained on phones. I'm really strong on phones and I'm also trained on we have like two radio I'll say two we really have three but I'll say two radio positions on the police side so I'm released on one of those and then I'm training on our primary channel right now and then I'm also close to the end of my training on teletype phones I don't know how familiar you are okay so teletype is basically a nationwide network that allows different law enforcement agencies to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								communicate with each other securely and also enter things like warrants or stolen vehicles, stolen articles stuff like that into a system and that's NCIC and then the [state] version [application]. I don't know if you're familiar with that.
Training	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	...Just like housekeeping stuff and then after that I will go into the room depending on we're assigned something different every day you know based off of what your qualifications are then they try to fit in training.
Training	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Because there's again a lot of factors contribute to that. One is you know do we have the staffing available to get someone trained because like I said we do one on one training for the most part for these positions which is great because you get really good training but on the other hand it can't be a challenge because you are basically taking two people off of the floor to kind of go and do this training you know and that can detract from your numbers so it reduces the amount of people that can answer calls and then that can be bad you know because we're just not answering the calls.
Training	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	So thankfully when you get onto a later stage of training it becomes a little easier to do that but you know it just depends. So there's that and the other part of it is too you are it also depends very much on the individual.
Training	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Exactly. And so right now our training model uses hours and then kind of as subjective evaluation from the trainer as to see if you're where you need to be. It's not the most robust training model and it's something that I think we're looking at reevaluating. I think what would be a better model to look for is like a core competency model and then if you happen to meet this core competency within 2 hours of being on training then you should be released you know but that's something that I know that's in the works and above my pay grade but I know it's something that they're discussing and looking at so in answer to your question it's complicated.
Training	COMMS	U	Comms	18-25	5 or less	Male	COMMS-	The thing that I think that we tell recruits when they come in is eighteen

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel				U-006	months but again--
Training	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	And I personally am moving quite quickly through the training phase and I don't think that it's going to be 18 months. I think it's going to be shorter so yeah it just depends you know but there are some people that have been here for 3 years and they're still not fully trained. And again that ties back to a variety of things. Training like are they able to meet the standards? Is it that they are struggling in an area? Is it that we don't have the staffing? Some people's training gets suspended you know and it's nice because on the one hand we train everybody in everything and you know that's great because I think it makes us very skilled especially even as call takers. I mean my call taking has changed and approved since I became a police dispatcher you know because I'm looking at things in a different way. Exactly. And then on the other hand you know answering questions about you know warrants or teletype or something like that dealing with the officers is very different now that I've been basically trained in teletype so you know it's nice to have that but then at the same time it takes a while to train everybody in everything and we are spending a lot of time and investing a lot in each individual which other agencies don't do. [state] they train in call taking and then--
Training	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Right. [city] will train you in three of the four competencies. They train everyone as a call taker and then you get to pick which two you want to do.
Training	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yeah we do do geo-training and we do make an effort to become familiar with the county but it's 26 square miles you know so it's very and especially when you're not out there everyday. We're here right so it can be challenging to know you know and I definitely overtime become familiar with our hotspots where we get most of our calls.
Training	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Right so and again and the reason is that because I had really good training and the other stuff will come with time but those core competencies and that's why I was saying moving to a core competency model is I think where we should go but like being able to get I think of it like blocks yeah so I think of it as having like little blocks...I know how I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								want to get a description of a person and we're trained on that and then I've added my own flair to it you know and so once you learn that stuff it becomes a lot easier to process a call even if it is a high stress environment and then also that being said we also work you up to that you know we start you off on phones
Training	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	...so you have to start with [abbreviation] and then its visitor center. Okay? So everytime you enter the information when someone says I'm at the visitor center at the cemetery we say okay [abbreviation]-visitor and then it pops up and you can select it. Okay but if I type in visitor it's not going to come up. You have to type in [abbreviation] and I think you even have to type-- I have to go back and check but I think it's like [abbreviation]-visitor center because that's just the way that it's in there. So there's a lot of locations like that right, and some places like-- So, and again because it's all based off of how you put it in the system. It's verbatim how you put it in the system so we have a lot of giant food stores right so some places are put in as giant-[location] right? giant-[location]. Some others are some other places are giant-[location], giant-[location] so it's very much so it's basically like searching an excel spreadsheet right? It's very specific to what you're looking for and not only do you have to you basically have to learn how the common place is put in for that specific location if you want to use that.
Training	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	And they may not want to view those things so we're working really hard on making sure that they don't have to view them. Do we need to have additional bodies hired that are paid and they know and they're trained how to deal with what they're going to view? It's one thing to hear it on the phone it's another thing to view it and hear it on the phone.
Training	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah, so last year we rolled it out entirely. We have a little more than-- almost 700 users on the platform up and trained. That means they've been through the training classes and gotten their credentials and all that kind of stuff to use the application. So yeah.
Training	COMMS	S	Other Public	36-45	11-20	Male	COMMS-S-001	[S3] So we're doing a three phase training for our users. Basically, the first training is just a familiarization and to make sure they can log in. So

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					they will get their credentials, then they come in and then we basically say, "This is what the application is, here's what it does, here's why we're doing it. Let's practice logging on. Here's the 20 different things on how to navigate through the application." The next set is basically walking them through like a mini-scenario, so that they can start to say, "Okay, this is how I perform my job function while using the tool." And then the third phase of training is to basically do it in an exercise format.
Training	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] And so it's those kinds of communication challenges that I wanted to tackle. And if I could put a layer in between, have a communications group or unit where I'm coming in to help you communicate, and they're thinking to themselves, "What do I need to communicate about?", now it's an education opportunity. I can start educating you. These are the things that they're going to use now and these are things that they're going to want to tell you and those kinds of things.
Training	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	Well I monitor the schedules for the four dispatchers that we have on our 911, in our 911 COMMS center. It's both sheriff and EOC, which is . And it's manned by the both of us. We are cross-trained, so either one of us can run whichever console that we're on. It's just a different pay by different entity. Besides the scheduling, I fill in when we're short. I monitor any training updates that they have to do, so I keep track of all trainings, training schedules, any new training that's out there I look to so we can be updated and with the latest and greatest. Make sure everyone has their technology skills up to par.
Training	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	We do a common knowledge test on the [County]. And basic skills, math, reading, comprehension, just so you can, we can see if you can comprehend most of the information that you're going to be receiving. Living in the [County], you don't have to. [Inaudible] [County], you really don't have to, because we teach you. We will provide that training, so we can divide it up. We have the north end, and we have the south end, east and west bank.
Training	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	Yes. When our systems fail or they go down, that causes a headache, because then we have to resort back to paper and pencil. So we never

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								forget about paper and pencil. We use that as our training. You learn it this way. Then you will never have any trouble because if the computer fail, you know where to go at and get the, jot it down, and then you can't enter it into the system later.
Training	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	...I went through a training a while back at a rail facility in Colorado. And one of the things they were pushing was Facetiming the railroad reps because they could see live, in real time, what the train wreck looked like. They gave us the basics of what a rail car, the parts and pieces of a rail car, and actually [inaudible] distances, that type of thing.
Training	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	No, we try to train them to not use paper, which they all [inaudible] where they will. But by the time you get to the [inaudible] updates, you're a pro at taking calls. It definitely makes it easier to train somebody.
Training	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	If you are a full-time employee in the dispatch center you actually attend what is called the 360 post academy, just like a regular police officer. We have a night academy and a day academy hosted at our agency. Our communications officers attend the night academy from 5:00 p.m. to 10:00 p.m. Monday through Friday after shift. They get paid and compensated for that. And at the end of it you are a post certified deputy just like a police officer on the road.
Training	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	No. We actually have part of the training as a dispatcher, we actually take you around the [County] and show you the main points of what we call landmarks throughout the [County] or the main streets and subdivisions that we know are going to pop up that are the normal areas we go to unfortunately. And we actually go through that in their training. They also actually ride along with a patrol deputy during their training to see what that patrol deputy does and what he goes through on the other end of that radio.
Training	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	We also will be implementing soon, dispatchers will go to a fire department training.
Training	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	And see what they do whether it be an extrication class or whatever else. We've actually had one fire department and I'm waiting on a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								second one to make arrangements that one of their monthly trainings was here. They came here. They sat down. They watched a pager test go out. They watched how they took calls, how they dispatched deputies. So they knew what they were doing in here when they were talking on the radio and saying what they were saying which from what I gathered with the one department that we've done it with so far opened their eyes up extremely to what we deal with, huh. So.
Training	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Yes, it's on the job training and that's it.
Training	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Some do and some don't. And I--personally I feel like within the first couple of days of training you'll know whether or not that--if this job is for you.
Training	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	It's not very high. Like I say we're small. We don't see as much... as many calls as other agencies do. We actually did some training, where they took us to a larger facility [city] and we saw their call volume compared to ours, oh my God [Laughing], oh my God. Yeah, so we maybe get, on a slow day we'll get anywhere from 2 to 3 calls. And on a busy day it could be anywhere from 10 to 15 calls.
Training	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	--I mean it's supposed--it should be like we have--we're trained that it should be, you know but [Laughing] everybody's different. So you just never know how a call can go.
Training	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Well. Most people when they first come on, they do what we call ride-alongs with--and we're about to starting those back with going out with the officers and going into like the different areas so you can see where you're sending them.
Training	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	So I think our public education efforts through NINA and APCO and our local public information officers are going to probably do that really well. But I hope to implement it here in the next few weeks.
Training	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	Oh, yes, ma'am. We actually--whenever we start here, we do, like, a little mock-up test, and usually our training officers will give us a mock-up test as to the street names, and basically how to get around campus,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								what are our main streets, what are the side streets, all that, so we do do a test to make sure--keep our knowledge up to date for that.
Training	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	Right, you have the names, and yeah, so we have to learn the names, the streets, where they're located at, you know, so--
Training	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]...You got to kind of have it in your blood. So, unless we make sure that we get good people in class but once we get them there, basically, the first thing I tell them on the first day is the way are set up we answer all emergency calls in the county. We answer 911; we also answer emergency calls for Police, Sheriff and Fire. Basically, the bottom line of what I have tried to drive home to them on the first day in class is that public has nobody but you to call. They don't have an option of calling you or somebody else.
Training	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: It helps; not that you have to, but it helps. During our training we try and take the whole group out as a group and show them major points.
Training	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: And we cross train. So, if you work Police Department one day, you may be at Fire Department the next day depending on what the shortage or need is.
Training	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: We kind of prepare them for that in that -- I mean, literally in the first day in class, is everybody can't do this job and there is nothing wrong with it if you can't. We would just like to know before we spend several weeks and that's why we play a lot tapes and audio in the class to see if you are going to be able to handle because we play the worst ones and -- but we tell you that, you know, if you can't do this, if you don't feel doing it, there is nothing wrong with it [inaudible]. So, we try to prepare them for that.
Training	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S1]: So we teach all that with 5 weeks of classroom training and then by but we do have a call handling guy. If it's -- you determine when you answer if it is a police call, then you refer to their call-handling guy. They have a set amount of questions they want -- if we can get them to the best of our ability, we will get all these questions answered. Very rare that we get everything answered.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Training	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	... You come to work on time, you wear this uniform, and then I have a procedural manual about this is how the CAD works, this is how we put in a call, this is how we dispatch calls, this is how EMD is, and then when it comes to your volunteer fire department say [city], it's your policies and procedures on how you want us to dispatch it because it's your department.
Training	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	And it's more a stressor probably for our new people than it is for our old people. What I mean by that is when I said earlier, so one of them went through the whole training program got a child CPR call, had to give the mom direct instructions on how to give CPR to a 2-year-old, went through all that, that was it, she quit, can't do it.
Training	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	S2: But people know how to use the cards still? I mean, do you train? S1: Oh yeah we have to practice, S2: Practice and train.
Training	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	I probably have a few new ones in here that are in training that we have knocked down cards with that have a meltdown that they have to go to, but on the whole, we do and its part of our CAD [indiscernible]. I'm trying to get our comps on our [0:55:01] accredited. The part of accreditation is that you have redundancies, you have those things, you practice for when your systems go down, and to be able to keep that accreditation, we have to be able to prove every year that we've done those things.
Training	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	... So I look at it as a system issue, is it a training issue? Is it a personnel issue? And I look through that. I end up at personnel last so by the time I get to the person I pretty much know the answers before I ask the questions and if it's a personnel issue I'll deal with the person. But a lot of the times you find out that 80% of things gone wrong, you find out it's a communication training issue. We taught it and it didn't stick, we taught it and it didn't hear right, we didn't teach it at all, or we taught it wrong, or we changed some things and missed that one, we didn't update them on the training.`
Training	EMS	S	Field	36-45	11-20	Male	EMS-	...Our boss allows us two hours of PT time, so I normally do some kind

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				S-014	of physical training. After that I normally go around the county. I drive around in a Dodge Ram pickup truck in which I am available to respond on whatever calls I would like. My boss gives me a lot of leeways to what calls I want to run. But there are certain expectations that if there's a pretty significant call like if it's a stabbing or shooting or cardiac arrest, they kind of expect us to be on those kind of calls. And we can run at them at any time.
Training	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	In [County] Fire Rescue, we are all EMTs and firefighters.. Some of us are paramedic trained as well. It's just a little bit additional EMT trained. We can give medicines and stuff like that..
Training	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So my first and primary function is that of a firefighter that has been cross-trained. So fire suppression, putting out fires, responding to 911 emergencies. And then I took it upon myself to further my knowledge and my education to be able to provide advanced life support or ALS treatments to individuals in the same community in which I serve. And that includes pharmaceuticals, medications, drugs and electrical therapy for cardiac patients in order to provide appropriate care and treatment pre-hospital. And then get to them to the most appropriate treatment center.
Training	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...from there generally move into some form of physical fitness or activity to maintain personal readiness... Uninterrupted again on a normal day that's, I would say, about a half hour or 40 minutes on a good day. And it may be individual-based, it may be as a collection as a shift doing that. And from there, change, put on the uniform of the day, whatever is required. And then start our day.
Training	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...from I'd say on an average about 1:30, we start an afternoon drill or an afternoon exercise. They can be anywhere from 15 minutes to 4 o'clock that we participate as a whole station...
Training	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Generally do dinner, we clean up. And then after that, it's more or less our time to follow-up on school work, if we have personal matters that we need to address. Everybody has their own slight agenda or things

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that they're working on. Station duties, collateral duties, helping train other individuals. And that pretty much runs up till about 9 o'clock. And then for myself, 9 o'clock is generally my bedtime. And then hopefully for a restful sleep, uninterrupted with calls, till about the same start time between 6:00 and 7:00 the next morning.
Training	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Back to the communication, so we have that form. And then we do more of the verbal communication, sitting together. Everybody face-to-face, talking. There's some documentations or policies that are read every morning. We may share a quick YouTube video if need be of an incident before, lessons learned type thing. And then after that, most of it is all just one-to-one or individual verbal communication throughout the day...
Training	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	Certainly emails, hundreds of emails go out throughout the course of a month with significant means of information to communicate to everybody. YouTube training videos that we put up so that we can understand what the direction of the department's going...
Training	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So it's not, it's just frustrating and then we-- I just don't listen to the call, what's going on. And it's just being, I guess, situational awareness. I'll even use the word just nosy. To just hear what firefighters are doing and the types of calls. We all try to see what other agencies are doing during their calls, from a tactical standpoint to evaluating it. Self-critique. If I was in their shoes, what would I do? So you try to listen what's going on to hear the calls, and sometimes you can't. And if they switch to another channel that we don't have in our radio bank, then you're done.
Training	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	[RE: AVL] I would say I don't know enough about it to truly make-- I mean, every day I learn something new about it. It's definitely like any form of technology, the more you use it, the more you understand it, the more you can utilize it. As it is right now, it's a computer screen with a map on it that can do hundreds of different things. It takes the user to have to apply themselves to be able to use it.
Training	EMS	U	Field	36-45	11-20	Male	EMS-	Well now it's a-- I say the majority of the personnel are cross-trained to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				U-017	do both. There are some like me - there's still a few - who were EMS only. And again, that goes back to when it was separate. The EMS had put their hire just for EMS. The firefighters have been cross-trained to do EMS since '87, I think... at a basic level...
Training	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	At a basic level, yeah. And then, I guess, was around 2000 or 2002, somewhere in-between there, they actually started working on putting paramedics on the engine companies. And the first way with that was actually taking paramedics who were already paramedics in the EMS division or the EMS side of it and having them run on a couple of the engine companies as a pilot program. But since then, they've started actually hiring firefighter paramedics. And when they initially started putting medics on the engines, those medics were still just single-role medics. They weren't trained for firefighting at all. They were just riding on the engine to say they had a medic on the engine, that they could possibly get to the scene faster than a actual ALS transport unit with a medic on it. But as I say, since then, it's become a lot more. [As I said?], almost everybody the fire department hires now is cross-trained...
Training	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	In a lot of places, they work in a fire station. They're a part of the fire department. They're either cross-trained as firefighter paramedics, and then they work in a fire station and they do that. And then what we have is a county-based, tax-supported system that is separate. It's a separate tax district. So it's a special tax district, a health services district, and it's a-- I don't know if that's only a [State] thing, or if it happens all across the country. But they had to go and create this thing 30 years ago. We used to be part of the hospital. The hospital thought we weren't revenue-generating enough, and they didn't realize [laughter] the potential. And so they dropped us and then they created a special tax district...
Training	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	The thing is, you have to find people that you can get along with. It's almost like we can train you to do the job. But if we can't get along with you, there's no point in having you work with us. So it's just like any other living situation where you have to compromise with people. And that's it. I don't know...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Training	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	In a couple weeks, I'm taking a three-day computer class to learn [laughter] some new technology again that has to do with our patient care reporting and statistical gathering, things like that.
Training	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	it's just through one of our vendors who we get our software from, and it's actually online, but it's a-- I don't know if you're familiar with Crystal Reports. It's a database and analysis program, but there's tons of proprietary stuff out that's not Microsoft Office [laughter]. And each one has to be learned, and you have to learn all of the little intricacies of them. And lots of times, that's not a big user base because we're not that big an industry, and so it's very sort of-- what do I want to say? It's very specific. You have to learn very specific things to run a certain vendor's safe software platform.
Training	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Well there's 1-800-HELP-ME [laughter]. And a lot of the training we do is find the help files and learn them. It's on you. My experience in most software companies, if it's a big install, they'll come out and they might spend a half a day or a day with you and they're like, "Here you go, good luck [laughter]--"
Training	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: patient care reporting] So, again, the technology has driven us in that respect. So electronic reporting is mandated by lots of government agencies now, so everybody has to learn that system. You have to deploy it on portable equipment, which is out of your control a lot of times. It's out on an ambulance somewhere. If somebody's having a problem, a technology problem in the ambulance, they're paramedics, they don't go to IT school, they go to paramedic school, okay? Now you would think that most young kids coming out of college would be computer literate, and you would be wrong [laughter]. I don't find that in my population. Some obviously are, some aren't. So it's a struggle teaching these--
Training	EMS	R	Other Public Safety	56-65	31-40	Male	EMS-R-008	Like a lot of things in this county, it's a cooperative effort. There is a mountain rescue group. But they're sort of an arm of us unofficially. I mean, we paid for their building and a lot of our members are cross-

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					trained. We work with the [Organization] out of the [Name] Airport. They have the high elevation training center.
Training	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Yeah, it's pretty interesting. But we have search and rescue people, paramedics, who are cross-trained to do what they do and are checked off to be in the helicopter and do all that kind of stuff. We cross-train with the ski patrol. We have paramedics on the ski mountain during the winter. A lot of river activity in this county. [Name] River runs right through the county in one of the [inaudible] parts of the county, of course. So if somebody dumps their raft and is drowning or something, we have to go an hour drive up to the river and figure out how to fix that situation. So lots of long response. Lot of expenditure of resources for one patient, for [smaller?] patients, for those kinds of things...
Training	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...After that, try to get outside and work out if we can, try to work out as a crew. If we have specific training that our lieutenant or one of us wants to do, we'll do that together as much as we can. That usually ends up getting done around 3 o'clock or so. We usually eat supper late, so we'll start cooking around 5:00, usually. Hopefully, we eat around 6:00, 6:30.
Training	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...the evening is kind of ours. We always say we want to watch a movie, but we never can. So we're not too often that we spend much time sitting down watching actual movies or something we got to get involved in. And if we have computer-based training for our fire department, or if I have ACLS as a paramedic, CPR, if we have to do that, I tend to do that in the evening more, and that seems to be a trend with my particular shift. Then 10:00, 11 o'clock, go to sleep. And then, of course, we run calls throughout that. So my station is an engine house with a rescue company, and that station has-- I would say it averages 15 to 20 calls a day, so. And then for us, a call lasts about 40 minutes depending on if we ride into the hospital or not, so.
Training	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	Oh. So as a firefighter-- I've been a fireman for 15 years. Well, that's not true. I've been licensed to be a firefighter. I was a paramedic right out of school and I did paramedic for a while before I got on full-time as a-- fire department. So I'm pushing 12 years as a full-time firefighter. Well, I was,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the first couple of years, trying to find a job. So I'm the senior firefighter, senior paramedic. So because we're on a busier engine, I'm also a field instructor, so I tend to have new paramedics on the rig with me. Either they're new in general or new to the department, one or the other. So we do a lot of talking, just discussing. When it comes to our equipment, like when to use our equipment, what's it really for, what's the reality behind it, like a thermal imaging camera, you got to know its limitations as well. So we discuss a lot of that reality...
Training	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...I suppose my personal approach with reality is the actual time it takes to-- how much time does it take to get the ladder down because we have a hydraulic lift for our ladder rack. It actually takes 10 seconds for it to get down to where we can take it off. So if you got a family that's yelling at you, "Hurry up! Hurry up!" and you're just holding the button, waiting, it's kind of nerve-racking. So I'm big on that. So when we look at equipment, how can we set it up to make it quicker and go? ...
Training	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...And then just a lot of conversation with everybody, really, and, first of all, how I can help the officer. And then how can I help the newer member fit in with that role and understand that my job is to kind of know what the officer is thinking so that we can make decisions really quick? Even on an EMS call, if the environment gets hostile, just being aware when to stand up and step away, or when to ask your officer for help. When do we need more help? Things of that nature. Do a lot of-- that's probably my biggest role in the backseat is just bringing reality back to situations because we tend to always win in our trainings. We always come out successful and it's just not the real world, so.
Training	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	The headsets are wired into the fire engine. On our portable radios, it's just a lapel mic. So it's just an open thing. Some people have been given an earpiece. So they can hear everything right in their ear. Nothing will come out of this. But those people are easily distracted then. Every time they hear a noise, they're like-- they got to train themselves to--
Training	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	We work 48-hour shifts. First thing we do, we come on in the morning, and we put our gear on the engine or whatever unit we're on. Go in. We

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have a pass-off with our crew that is going off that day. And then, we have a meeting on our life-size unit, which is a like a closed-circuit TV. So the battalion chief and all the different stations, including dispatch and here in this building administration. And if there's any training or anything like that, they'll make anybody aware of what's going on. If there's any changes, we talk about it, discuss it...
Training	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	...Then, day usually starts out. Truck checks, which we haven't had a chance to do yet since we've been running calls. First day, we usually get groceries for the tour. We have to exercise every day and do some sort of training each day, as well as our daily clean ups that we do at the station. And the second day, hopefully, we get most of the cleanings done the first day, and we can just focus more on our training. Or if we're studying for an upcoming test, we usually get that done too.
Training	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: departments without CAD] You better learn where you're going. Lots of studying... Lots of studying of street districts and the street rotations and just get out in the neighborhood and figure out what's going on where.
Training	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: interoperability channels] ...There's the whole federal inoperability system behind that, so your national MAC channels, your fire channels, your HEAR channels. And we have those in our radios. And if we ever need to use those, which the last time we needed to use any of those was when the [City] front range was having all those floods about five years ago. We sent ambulances far up north that they couldn't use our Harris system anymore and they had to jump onto those channels. Probably 80% of our guys couldn't find them; they use them so rarely. So we sent a lieutenant out before we shipped the ambulances out of the city, like, "These channels here on your radio, this is what you're going to be using." So the commanders know where they are. Our medics typically don't know where those stuff for ground-air operations and things like that. We have them, but we have to put some special effort into using those if we ever need them. But that's going to be your bigger-- your straight up disaster is when those are going to come into

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								use, when we're getting out-of-state ambulances or we're sending ambulances out of state or to other parts of the state where this becomes more relevant.
Training	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	So as long as you have those good people behind you, the firemen, your partner, it was good for me. I can't speak for anyone else. But for me, it was great because I would come in. I enjoyed my job. I go and inventory my ambulance. As a matter of fact, I had people who had 15 or 20 years on the job prior to me going to them. And they actually taught me how to deal with the mean streets of [City], how to take care of my ambulance, how to-- you talk to certain people in a certain way. And then you talk to other people in a different way because not everyone's the same...
Training	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	So I would come in early in the morning, and as a matter of fact something that I teach the candidates, first thing I would do is open every door in my ambulance, open up each door. Make sure I have the equipment that I needed, in case I got to run that second, was there because sometimes, since you're working 24 hours, you go on certain runs. And the medics that you were relieving may have forgotten to get the stretcher, or the stair chair, or the quick response band; the QRB is what we call it. So I would open every door, make sure that the equipment that was essential that I needed to respond to any kind of medical call or trauma call was there. Then I would go and-- if the person that I was relieving was not up, I'd go in, wake them up and say, "Hey, you're relieved." I'd go get a cup of coffee, bring it back. And then I'd start doing my detailed inventory of the ambulance.
Training	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	people have taught me that you start cleaning the ambulance from top to bottom. So I'd get my bucket and my soap and water, and my disinfectant, and just bring it out there, bring the stretcher out, start cleaning it from top to bottom. Sometimes, you find things from the night before because they were busy that you-- blood, or needles, or whatever, clothing. And you would have to turn it in or discard it appropriately. But that was the start of my day. Then I would communicate with the officer, or my officer, and tell them, "Okay. We're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								deficient on this. So we need this, we need fuel, we need oxygen, etc." And then, we start our day that way and just wait for a response or for us to get a call. We'd get into the club, meaning that we pay for lunch and dinner and that's always the best part. Sometimes we didn't always make it because we were out constantly running.
Training	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: posting pictures of patients and accidents on social media] ...when it comes down to communications in that form, a lot of people forget or they don't take that into consideration when they're posting things. Even in our personal-- I'm sorry, in our city emails, I can tell you that there are other people who are reading our emails, whether we like it or not because it's a city email, they're allowed to do that, And so I tell people, "Be careful what you write, how you write it on here because obviously an email can be taken out of context. There's no personality in an email." And so yeah, we've encountered a couple of issues with that sort of communication.
Training	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...As far as communications with your partners. Because of our different characters, different backgrounds, sometimes people-- I don't think it's as bad as it used to be. Where I'm saying bad is, there were people who were on for 20, 30 years and when you have that amount of time in a certain company, you're set in your ways and whatnot. Versus today we have a lot of younger officers, a lot of younger people coming onto of the job, candidates out there now. Just in the last 4, 5 years we've had over 300 new candidates. So we have a lot of new people on. And again, they come from different backgrounds, different areas. And sometimes, communication is lacking where there's a three or five-year officer who is still learning the job, trying to communicate with a candidate who has a month in the job and trying to teach them what they know to survive the streets of [City]. So yeah, there are some challenges out there.
Training	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...I guess technology is constantly getting upgraded. As a matter of fact, we're in the process of upgrading our mobile computers, our patient care computers to newer versions, so they have to relearn it. Even if you've known the system for a while, even though we've kept the same

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								company, it's still a new program. You're going to have to relearn the whole thing. So that may frustrate some people...
Training	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	[RE: using technology in the field] we do a class for everybody. So what I handle on this part is the CAD part of it and then the SafetyPAD program itself. We're lucky that our software company seems to be very user-friendly. We've had other people come in and we've looked at other programs that, I, personally thought were sort of confusing. But I think by just having the one class and then over time by using it, they use it pretty well. At least, the component I handle at the reporting part of it.
Training	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	...if you take a promotion, depending on what they can charge, were your job would be more doing the paperwork than driving, we give them a full day class or a refresher on how to document on this particular program. And then we have support all the time, so I'm here 40 hours and then we have somebody available 24 hours. If there's any kind of questions about a run, you can't get it to close out, you can't get a field to pop up, something going on with the program, we have people available 24 hours for that.
Training	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	We do a lot of education with other companies, with the fire companies, with the BLS, with the basic life support. With me, when I'm coming in, once I do my checkout with the truck, [truck] and [engine], I always want to make sure who my EMT is because if we catch a run with an ALS company us, [company], and the truck, I want to know who my EMT is because if I need his hands-- not all firemen are EMTs. They're just firemen. So if we're on the scene I want to look up, I want to see who my EMT is because I'm going to grab him and he's going to help me. So in the mornings, I'll talk with that EMT and say, "Hey, do you need anything? Supplies? Are you okay with treatments? What do you want to learn-- is there anything you want to learn on something that could help us in the field, could help the community out if there's a critical call? I may need you, you may need me on certain situations." So I always want to make sure that they're ready, too.
Training	EMS	U	Field	36-45	6-10	Male	EMS-	So if we are unfamiliar with the area and we're not on a call, we will go

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				U-012	up in-service, through the alarm office, called area familiarization. So we will go around the community and just look around to see what's new, new roads, especially in the [city] area, they're building and subdivisions... [City], they're building a whole new community in that area. New roads are being built. So, the summertime, me and my partner will drive around and see what's new, road closures, there's always road closures, there's always construction. So if it's not a busy day, which every day is busy, but if it's not busy, Sundays, maybe we'll go drive around, see what's new and get to know the area a little bit better.
Training	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: comms with PD] We don't. We don't communicate with [local PD] in our frequency. And our frequency is only just EMS. I am able to communicate on the fire side frequency. That's not a problem. Let me backtrack. We can communicate with PD on the frequency, only a few people know how to do that, and I know how to do that because I learned it. I wanted to learn it. But there is no really set memo, or order, or documentation where they tell us, "If you need to communicate with police, do it." There isn't. I just know how to work my radio really well that if I need to get a hold of the police I could switch to the frequency and do it that way. A lot of people don't know how to do it and a lot of paramedics don't know how to do it. I'm teaching my partner how to do it. He's liking it...
Training	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: problem using dedicated hospital frequency] Not if you're trained and you do it a lot. If it's something new to a paramedic in charge who's becoming a new officer, it's going to be a headache for them for a little while. They have to learn it. They have to learn it, it is. I remember when I first started, I was like, "Oh my God." Shuffling, "What channel is this? What channel is this?" It's a little headache but you got to work it, you got to learn it.
Training	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: technology] Has gotten in the way? The only thing I want to say about that is maybe if there is a lot of incidences going on at once in a small area, two fires, maybe a real bad casualty of a bus flipped. We've had EMS Plan 1s where we need multiple ambulances, and then there's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a fire call. There's just a lot of communication. But when that happens, we're trained to switch it to another channel. We're trained to switch it to another channel. Yeah. We have to switch it to another channel if there's too much stuff going on in the district.
Training	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: radio training] Huge. Even now, I think that I wish I could be trained a little bit more. I think I've got a good grasp on my radio. But I think I could buffer it up a little bit more if we have a class on all my channels or just practice a little bit more.
Training	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: too many radio channels] It doesn't bother me. Someone like me, I'm going to learn the channel because if I can't communicate one way, I'm going to communicate another way. So if I can't communicate with EMS channel and I can't communicate to the fire channel, I know how to get to the police channel. The life guard channel, we have a life guard channel. If I can't communicate through the alarm office and the alarm office can't communicate to the life guard who someone is drowning in [lake], I know how to go into the life guard channel. A lot of people don't know how to do that. But I've trained myself or I've asked around people how to do that. How do you get to the life guard channel?
Training	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: radios] I mean, at first when they gave this to me I'm like, "Oh, I don't think that's user-friendly." But I play with it, like everything else. It's a learning thing. You have to learn, you have to learn this radio.
Training	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: retrieving call taker info] I mean it's a learning thing. I learned that in the field. I learned that in the field. It's all just asking questions, like "How do you do this? How do you do that?" So, and then it tells me everything. The person's complaining of this, and this, and this, and that. Or the offender's still on the scene. It has much more information on there. And I already know that, already going into the scene.
Training	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: using MDT to communicate with dispatch] ...that's something where I think everybody should be trained on too. You need to look at your computer. If I know that it's really busy on it, there's a lot of communication over the radio, and it's something simple where I'm

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								going to have to tell dispatch, "I'm on the scene." and there's a lot of other important stuff going on, I'm going to hit on the scene in my MDT. If it says the alarm office acknowledged my on the scene, I'm not going to tell them I'm on the scene, because they have other important things. If it's quiet I'm going to say, "Okay. [company]'s on the scene." "Okay, [company]. You're on the scene." But if it's really busy out and okay, "Take it to the gunshot. Take it to this. Take it to the fire." I'll hit on the scene from my stubbed toe and I want to make sure the alarm office has acknowledged me. Okay, they acknowledged me. They know I'm here. I'm not even going to bother because they got other important issues relaying over the radio.
Training	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	I'm pretty quick with my typing. I'm good. And after I double check everything, I think I could knock a good run report out with my computer in-- I could do it in three minutes. And I could do it in-- if it's a really bad trauma, cardiac arrest, I could do it in 30 minutes, if that. If I want to make sure all my Ts are crossed, Is are dotted, I didn't miss anything, I make sure that all my EKGs attached to the report, within 30 minutes. But then, I mean, I've been doing this for a while. So you've still got those first-- they're going to need a whole hour to get to know the system, which is fine.
Training	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	So we do monthly trainings as far as our-- for EMS, we pick a subject, and someone teaches it to our whole shift.
Training	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	Thankfully, honestly, at my department, we practice so much on size-ups and what to say on the radio;
Training	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	...So the way that works out is the first 15 minutes, we do what is called a lineup. So whoever is in charge of the shift in-- on the nights that I'm in charge, I have a little briefing that we go over, whether hospital statuses, pertinent information like that. And then everyone goes and does housework or chores. They inventory everything on the units to make sure that everything is there that we're going to need for the shift. And then we have dinner and then after dinner, we do training until 11:00 PM. And then at 11:00, everyone pretty much goes to sleep.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Training	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	On the EMS side, we are typically doing training for up-and-coming providers. So those are people who are currently taking their EMT class, which is the Emergency Medical Technician class. So that's 165 hours of classroom time. And then we like to run them through some mock scenarios so that when they get into the field, they'll have experience integrating everything they learned in class with some of the system work that goes on, to be part of a larger fire rescue service.
Training	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	...The training communication is, we allow the providers that are in training to basically run a call, communicate as they think they should. We don't get involved until the end when we do a de-brief. That's more us providing feedback to them. All in person, but those tend to be one way in each direction during that time. And then as people call or walk into the station, it's a little bit random what we do.
Training	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3]... [City] is not exclusively dual paramedic. Most of the ambulances are two paramedics. There's a few ambulances that have an EMT more that's like a paramedic in training type of a rule. The training continues so that it's a little bit easier, ultimately, to become a paramedic, which is the end goal.
Training	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] I think my trainee is going to have a much different response than I will. Someone new to EMS versus someone that's been an EMS for over a decade. So for me, the transition from academy to the street was generally seamless because the service here in [City] is so similar to the one that I worked for in [City].
Training	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S4] So the academy that she was talking about is our New Hire Academy. It's a two-week, I would say, an intensive of sorts, kind of synopsis about everything that's going on at the [City] Health Paramedic Division. And I guess the tools of the trade, if you would. They go through everything from MCI situations, all the way down to how you're supposed to actually clock in, the check in, how she was telling you earlier.
Training	EMS	U	Field	26-35	Not	Not	EMS-	[S3] ... You have to pay attention and take notes, and that kind of thing.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder		specified	specified	U-004	Nothing can really prepare you truly for the field. That's why it's field-training. The first couple of shifts in first week or two are generally a little on the rougher side. It's not a perfect transition for most people, usually nothing bad, a little style points. It's a lot of style points. This is our system. We do things the way that we do. And it can take a little while to get your feet under you and figure it out, and you just move along and go through the various stages of the training.
Training	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] But things like that, it's a mix of simple English and the codes. They teach us the codes like what the code is for going on scene, clearing the hospital, how you're transporting, that type of thing. So that it's all-- that part is seamless, at least anybody listening to you will understand what you're trying to say.
Training	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S4] Now they do require you to be able to at least learn some of them because our field training programmer requires testing to be able to get into the next part of it. So for instance, the first part of EMC training, field training is the driving phase, and so you show that you can be able to drive an emergency vehicle safely and also properly.
Training	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] A rural system that gets one or two of those cardiac arrests a year would potentially benefit from a screen. We have enough practice to be current in that skill because we do it multiple times a year. Some of it does it once every three years. It would probably like a little extra help. Also, those rural agencies, as is the case with the CPR machine, the less people you have available, the more equipment you need to take up the slack. [City], we have so many ambulances, so many fire stations [laughter], so many cops. There's generally all these extra bodies to help you lift this, pull that, push on that. So for better or for worse, it works for our system to not have some of that equipment. Certain things we get is body armor. As the world has gotten more dangerous, we now have rifle vests. We have ballistic helmets. We have gas masks now, and that's a new technology, and we have, they're called, Skeds. It's basically just a plastic sheet that you can put people on in rapid extrication from a tactical scenario, and we had some training in that a couple years ago.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								We have all this new equipment, all these new protocols [laughter] and how to use it. And some of it's really cool and really good. Some of it's a little bit complex. It is what it is. It's part of the job, I guess.
Training	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	... They take an entry test. Once they pass everything they have to come through the academy. So what I am responsible for is educating them and teaching them while they are in this academy. The paramedics come in as licensed paramedics so we teach them how to work on the [City] Fire Department and the rules and regulations and procedures. And a lot of times I find that because there's so many different backgrounds, where these paramedics are coming from and time and experience as paramedics, that I have to put them all at the same level and teach them all to come up together. I have some that have a lot of experience and some that have very little experience as paramedics. So it's my job to kind of get everybody on the same page. So it takes a lot of work.
Training	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	.... I have a class of 42 paramedics in here right now. They're millennials. I cannot tell you how hard it is to educate them. Because they come in here, they've been on some sort of iPad or gaming device for their later part of their life, they're in their 20s.
Training	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	No, we don't. All rigs do have GPS, like the little portable ones, but not on the computer, not on MBT or anything like that, so. But they do a real good streets class here at the academy that we learn all that stuff.
Training	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	Yeah, I mean, we go through a basic course talking on the radio. I mean, that-- communication like that part is pretty good, it's just a lot of rigs [laughter].
Training	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	I am career now. I used to be, I used to volunteer here and when I got I kept going with that but I was responding from [County] so it was I was spending a lot of my own money trying to get here so when I went to EMT school and got hired here I quit volunteering because it let me focus on my actual job where instead of in the volunteer field you may go, you may not go really you know you're not responsible for anything. I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								now have responsibilities so I needed to focus on that rather than dealing with the drama and you know things that go with volunteering.
Training	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	When in fact everybody at the ambulance station is far more trained in extrication than Joe Schmoe so you have to learn how to deescalate situations like that. You have to learn to say alright man, let's do it together. We'll work your way in but we'll also do my way and we will share this and we're going to make it happen but this is the way it's going to have to happen because I'm in charge of the patient and it's got to happen this way so we'll cut this door off but we're also going to cut this door off and we're going to do both this at the same time right now you know so you're dealing with people like I said that don't have to be out here so work with them.
Training	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	Here it's pretty laid back. We're all you know a close group and we just try to kind of get through the day and take care of anything that needs to be done here. We watch TV, pass the hours, read up for further training things like that.
Training	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	...You know us being human. Dispatch will misinterpret what a patient said and relay incorrect information to us. We may they may relay the right information but we don't hear it right whether it's because we've got the sirens going or we may not be paying attention whatever it may be so human error of course plays a big role picking up and then I think sometimes again that human error just not asking for enough information as well. So part of it is our own fault and what we do and don't do but the better radio system and I think that I think that in general dispatch people that work in EMS all of us as a group could be trained better as far as how to use the things that we do have like the radios.
Training	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	You know it's funny you don't because I spent a year in EMT school and then I spent 15 months in paramedic school and the only thing I really learned about a radio through those 2 ½ years was things that I don't remember now like is it what frequency and things like that. They really don't teach you correct communication, what needs to be said, what

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								doesn't need to be said, how these things really work, like a class on you gain experience by getting on the truck and I think of most people when you first go in to EMS, fire whatever it is that's probably one of the biggest fears as silly as it sounds is talking on the radio because we have no experience and we have no idea.
Training	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	I mean I definitely think it's needed even ten codes there's some counties that are trying to do away with those and just speak plain English but again it's not something that you're really taught or go over. I'm sure they concentrate in school about you know patient care and how to take care of the patient but this is your lifeline whether it's a portable or if it's one in our truck so I think it's pretty important to know that and some people you don't even know what channel to switch to. I think it should be taught in school as well as when you come to a new service that they should do some classes with it as well.
Training	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	I think once you've got it you got it unless that technology changes you know these are pretty old in comparison to other radios but if we were to upgrade then you know the bones I guess push the button to communicate and turn the knob to turn channels very basic but I think that any time a new technology is introduced whether it's a radio, computer what have you then there should definitely be some training provided to make sure that everybody is proficient not just that they can turn it on and they can talk on it but to be proficient at it.
Training	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So a rescue squad is different than an engine or a truck in that our duties on a fire ground or an accident scene or another kind of rescue is a little bit specialized. So on a fire, we specialize in search and rescue of victims. We don't carry water to put the fire out we just do a search and pull out the people. On an auto accident, we are the ones with the hydraulic tools and the specialized tools to get people out of the cars. So we specialize in extrication, and we're all technician level trained, per the NFPA standard, in vehicle and machinery exhortation. In addition to that, if we run a technical rescue, which would be something like a window washer who falls and is hanging from a thread, or somebody

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								who drives their car down an embankment and we have to use ropes to get them out, we're all trained in rope rescue as well. And we have various specialized tools...
Training	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: driving the heavy rescue vehicle] I'm working on my qualification for that now...It's more classes. It's more in-house training. We have a training standard for all of our qualifications that's actually above the minimum for the county. So even once you've taken the class, you have to go through a rigorous in-house training process on the AMKUS Rescue Systems that we have for our hydraulics tools, on various different types of rescues, and the role that you'll have to perform as the technician or the squad driver.
Training	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	If we have an observer, I'll orient them. Make sure that they know where they're riding, what they need to do. Any inexperienced people, try to walk them through any processes that they need to do in the first half hour. Then that's about a half hour of housework and management things.
Training	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So sometimes, we're not eating dinner until 11:00 PM, or sometimes we'll eat dinner at 7:00 and certain things change, right? But then once we get done with dinner, we'll usually start to do training. So the EMS drills are usually done in the training room or somewhere else in the station. The rescue squad drills are usually done either out back - we have various training props for firefighting technical rescue and auto extrication - or inside with firefighting drags or searches or rapid intervention or stuff like that. So then we usually drill until 11:00.
Training	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...The people who ride the rescue squad usually don't stop training right at 11:00. A lot of times we'll go till midnight or 1:00. Once we get in the zone on a drill, we don't want to stop, so we'll just keep going until we're done.
Training	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	It varies because people ride a different amount, and people are in different stages of their training processes. But right now, we have, let's see, one, two, three, four, four-ish people who are in the midst of their

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								squad qualification process, meaning that they can go into fires. They've taken the classes, and they've done the minimum - we call it the fourth man - qualification, so they're probationary firefighters. They can go in with the supervision of a lieutenant, or a captain, or a chief, but they can't be independent. They won't be able to operate as a two person team with somebody less qualified. So we have four people in that process, so any night, we usually have one or two of them in.
Training	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...And then also training. We do an in-house communications training where we explain what the radios are, how they work, and the language that we use, and the points that we're trying to get across. There's also a county technology class that we take on the radios. And that's usually pretty good about at least the basics of how it functions, but not necessarily what to say. So that's also dependent on who taught you that, when it was taught to you, how frequently you use it...
Training	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: comms with other disciplines] It can be challenging, especially since we don't train together all that much, especially people outside of this station. And we don't train together. We don't run as many calls with people outside of the station, and we don't cook together, hang out together either, so... Anybody that's EMS, fire, or police that's not in this station...
Training	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...I think that's mostly a training thing. When we train our new people, I always try to say or at least get them experienced somehow in running to the district so that we say, "Hey. These are some of the differences. Be aware of that." And if people know those differences, it's not a problem, so we try to mitigate any of those potential issues by just training people differently, but it's still possible that someone might forget or they might not know. And in that case, it's a little different...
Training	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: Active 911] It's an app. Yeah. So I use that every day. When I'm at my day job, I like to be able to say, "Oh hey. This incident popped up on my phone." And then I'll look at it. I'll say, "Okay. [Street] and [Street]. Okay. I know exactly how to get there." And I think in my head, it's a left on [Street]. Let's see. Straight. Right on [Street]. Right on [Street]. I think

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								about the running route in my head just as training.
Training	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...The other interesting thing that I don't think it's always been there, but I just recently learned about it with the new roll out and the training we had to do for that, is that they have pretty good information about the address, the incident address. So if this person calls 911 every week about something minor, it's in there.
Training	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Everybody's required to be EMT... Well, on line we're required to be EMTs or higher.
Training	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So we work 48-hour shifts... So two on, four off. It starts off, in the morning, we'll do a pass-off with the off-coming crew. So this morning, we came off with A shift. And they'll tell us, basically, pertinent information in terms of calls. They'll tell us how many calls they ran, how many our ambulance ran, any training they did, any issues with the truck or equipment, or issues with the station. So that's that. And then at 7:15 in the morning, we'll do what we call pass-off with the rest of the stations.
Training	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	throughout the day we'll a training. We run, like [Name] said, a heavy rescue and a hazmat. So we do quarterly trainings. So depending on the time and where that training is at that time, we'll go out of service. And then we train for that day. And that's just not- the hazmat and heavy rescue are SET and TRT. But we'll do in-house training, as well. So it doesn't necessarily mean we do multi-company. But every department requires, at least our department requires, that we train in the 24-hour period some type of training. And then we do physical fitness training. That's mandatory. Two hours a day...
Training	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So I was on the fitness committee. And, basically, we run a test every year. And there's really no thing that says, based on you being a firefighter, you should have to do 20 sit-ups.
Training	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Then it even goes deeper than that, in terms of certifications. So based on what my certifications are, may be different than [Name] certifications. So when do those expire? How many CE hours do you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have to [inaudible] that certification? And then you have injuries. You can throw injuries on top of that. So here's this individual. Here's all the injuries to date. Here's what happened. Here's the surgeries. There's so many different aspects of it that's not tracked. A lot of it's paper-tracked, like [Name] said, but it's never really data input. And you can actually look back at a history...
Training	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: radio mic placement training] Absolutely. I mean, we do it all the time. But still, you can get in a unique situation, just like we do in TRT and SET. And you get in that one space, and you can't actually be spread out like that. So now you're communicating like this, where maybe [this?] your choice. And they've tried this. [Name] said they actually have headsets built into the masks. And there's a cost affiliated with them. And I'm not sure how those work. We haven't had them. I think we tried them and messed around with him, but didn't really come out.
Training	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So for training, we've done the go into the loud building, have to hold the mic in different positions. And they rate you on how well they can hear you, or how well they can't hear you. And so you actually start to learn how your voice projects through the voice amp, or whether it's better to hold it to your throat, or to your head, or whatever.
Training	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...So we're constantly training. Every day, yeah, you should be training in something, whether it's EMS or fire related. We have a tractor at our firehouse right now. We're talking about doing some raising and lifting on the tractor. Not every day we have that opportunity. So we take advantage of that. I mean, what are the chances that you'll have something like that? You never know.
Training	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. There's always some level of education. We have to keep up with everything else. Keep up with the new cars, keep up with the new construction, keep up with new industry moving in, keep up with everything.
Training	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Well, we need to understand the danger of what they're doing. And so if there's a leak, and-- but the firehouse is neat. It's fun. It's never the same.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								You're doing something else every day. Some new company's moving in and you're being exposed to a new idea, a new concept, a new hazard. And now we're learning about the trains because commuter rail's moving into [City]. So we have to learn about how to de-energize it, how to lift it, how to work around something as heavy as a commuter rail train.
Training	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	I mean, you look at 9/11. I mean, it was chaos. I'd like to think, with talking about the radios, if something like that happened, we can all communicate. But we do active shooter with [City] PD. And I'll tell you, if it went like it did the other day, we're in trouble. We really are, because you sit there, and you train that way, and you think that's how it's going to be. Well, then all of a sudden, you have a situation. It's chaotic...
Training	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	We're moving to a new RMS on [Date]. It's not made by ZOLL. So the interface is there, and it works pretty well. We've seen it now in training twice. But the idea now is, is this new RMS will actually integrate with the hospitals. So the hospitals can see all of our data now, and we can also see the outcome of the patient. And so that's really cool.
Training	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: cause of communication issues] I think lack of training, maybe. Adrenaline... I mean, I can honestly tell you it doesn't happen here. We may get off of track a little bit, in terms of an individual or two, but for the most part, we get toned. Our chief gets on scene, he takes command over instantly, based on if it's a fire. Not every time. It's his discretionary, based on what he's hearing en route. He may say, "Yeah. My officer's got it under control. I'll let him have it." But it's still in-- you still have somebody in command, right? He basically is there to support you, but not like I just come in on [Name] seat and take it over, unless he tells me or I ask him to. So I think that part, here, is really dialed in...
Training	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: cause of communication issues] ...But in terms of when we get with multi-agencies, that's when it's kind of a measuring contest. We should all work together, but it doesn't always work that way. Like I said, we are on a north area team that we do a trench rescue on. And we've had a couple calls. [Yeah?], it gone smoothly. It got the job done, and outcome

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								probably came out the same. But it's just too many people. Everybody wants to be a chief. Too many chiefs, not enough Indians [laughter]. So [inaudible] [that is?], but how do you fix that? We train on it. But I just think, again, you have your certain guys that you work with, and all of a sudden you're off on vacation, and I'm not working with you. So were not on the same page. And I'm working with some guy from A shift, and he does it totally different than the guy I used to work with.
Training	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	It all works out. Well, like I said, we get the job done. It's just doesn't work as [smoothly?] as it should sometimes. And it could be maybe that's our disadvantage. I mean, we tried to do a training with a palm nailer a couple of weeks ago. The guy's like, "We never do that this way." Well, it's in the book. That's how you can do it. So not right or wrong, just different opinion.
Training	FF	S	Manager	46-55	21-30	Male	FF-S-023	...And then there's the training side of that. So we are on one system here. All of our repeaters work this one system. If I move away from this system and these repeaters here, I can go to a different bank. I can go to a different system, but I have to physically change my radio to go to that different system to pick up those repeaters. So our firefighters don't often remember that or know which system they're in, so as they're going on a mutual aid, especially our hazmat team goes out a lot and they'll go way east. As they get out there, all of a sudden they can't talk. Well, that's because there's not enough power to get to our system. If they would change their system, they could still talk and it would be fine. So a lot of training with that and a lot of our firefighters are firefighters and problem solvers and they do this stuff. They don't necessarily want to know, "That I've got to do all this changing on my radio and programming and stuff," so would be kind of cool if it would automatically switch, but.
Training	FF	S	Manager	46-55	21-30	Male	FF-S-023	...So radio information in headsets, in the masks, mic and when they are on air, if there's some kind of an integration of the mask radio. It's hard enough to talk through the mask anyway even though there's these speaker holes and stuff. And we practice, and we try to figure out where

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the best place is to talk. If it was integrated into their systems somehow...
Training	FF	S	Manager	46-55	21-30	Male	FF-S-023	So the unit hour utilizations came from the ambulance community. And what they try to do is if they can get there-- what it is is how many hours you are on calls over available hours. It's just a percentage. So in the private ambulance industry, they try to get that as high as they can because that's profit and that's them getting things done. In the public sector, if you look at an engine or anybody else who's located at a specific geographic area, and we're at this 90th percentile, is how we rate everything, anything approaching 10% means that they're giving into that 90th percentile. They're going to be ineffective. Medic units, we try to look at that because there's more than just responding: you've got to recover, we required to work out, we're required to do training. We require all this stuff--
Training	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So some of the projects I'm working on now is working with the training bureau and the engineer that has oversight of our fleet. And we're purchasing new hose. So, inch and three quarter and two and a half inch hose. Purchasing new nozzles. We're looking at the way we do water supply. So we are looking to changing and adding gate valves on to our hydrants so we can get more water out of our hydrants than just using the five-inch supply line. So working on those projects to do the R and D. And there's crossover between training and operations, so working with them to kind of make-- right?
Training	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So we work on projects like that. Those are kind of more of the significant ones. The operational ones. A little R and D, a little planning for it, so we're building incredibly large hotel out by the airport. And it is very distant from most of our core resources. Not only for us but PD, and streets, and parks, and water, and everybody. And we're trying to work together to figure out, okay, how are we going to provide services? Well, it's so far out, that now it's building relationships with north side fire departments that we've never worked with. But they're actually our closest backup. But it's so distant from the core of the city and we've

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								never had any development out in that area that all of sudden now we've got almost a three million square foot hotel, convention center complex going in. And there's going to be one fire truck, for now, assigned out there when it first opens. We'll add resources as it grows, but figuring out, okay, if we have an incident, how do we cover that, and then building out the relationships with our neighbors to the north, and introduce ourselves, and do some tours, and some joint training, and kind of get that. So those are some of the projects that I have the opportunity to work on.
Training	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So we went to a interoperability channel. They would get the call, MatCom would process it and call us on an interoperability channel. My BC would take it. We'd write it on the board. Another chief would pick our-- go, "This is the run card. This is who I'm sending." Somebody else was tracking it on the board, and another person was tracking it on a computer screen and pulling up maps just in case we had to-- because we lost our mapping, everything. So just in case we had to route somebody in then we could route them in. So it just happened to be at the end of a meeting when everybody was upstairs. So we just pushed everybody into the room and everybody's like, "Why didn't dispatch do something?" I go, "What did you want them to do?" It's not what they're trained to do. So, yeah, it was fun. It was really fun.
Training	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So, here in [City], primary dispatch channel, and then we have TAC channels two through six. TAC two is almost always medical. TAC four is almost always fire. If there's a lot of medical, so six or more are going on simultaneously, they can open TAC three. If there are two simultaneous fires going on, house fires, then they'll open four and five. The biggest issue is the comm center has to have certified or trained people to function on those channels. And a lot of times, we can't get extra channels open. They just don't have the staffing to-- either the people trained or the people period to open extra channels for us, and that's where it becomes difficult. And you can hear-- they'll open it, but you can hear a dispatcher working multiple channels and trying to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								handle the call volume that's going on...
Training	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	But a lot of people have the radio holder. Some people stick them in their pockets. We're trying them with the new microphones that have a higher fire rating, heat rating, trying to make sure that we have them in a place where you can get at them. They're not comprising the seal of your gear but we don't want the cords to burn through. We've seen some of the NIS studies and the line of duty deaths from that. So just trying to address all those through training too.
Training	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Yeah, after that, typically we'll do a training each day. We have station duties, like cleanups to do, and that's in between, obviously, emergency response.
Training	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	We have another training this afternoon that's a department-wide training.
Training	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Yeah. And that last set, we're doing all the same stuff, different trainings and stuff that we're required to do. We do in-house training also that's kind of what we decide we want to train on versus what is dictated through the training calendar and then training division. Meals and, yeah.
Training	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	We have an ambulance company with us, as well. So they're in and out. They try to do as much as they can with us, and we try to integrate them into what we're doing training-wise, and working out, and eating, and things like that. They're typically busier than we are, so they're in and out of the station quite a bit more than we are.
Training	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	And as far as talking with our SCBAs, we train where to put the mike where you can hear it the best. I know in the past, we've been trying to get in-mask communications that will clip in there. And I don't think that technology has ever surfaced that it has been worth it, so.
Training	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: mic placement] SME S2: Well, it depends. That's why we train on it. It's individual. SME S3: It actually varies quite a bit from person to person. SME S2: Some people on the throat, some on the non-voice amp side and some people on the voice amp side...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Training	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	I mean, we do a lot of training with surrounding departments. For us and our station five, we're part of what's called [City] Technical Rescue, so that's eight departments. They're all kind of north and next to us. There's a really good relationship there. The department to our southwest, Metro, good relationship there, really, from the top down...
Training	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	And we attend a lot of their specialized trainings, technical rescue and stuff like that. And we offer a vehicle extrication class, and they come to that, too. Along with the [City] TRT, we also have the [County] HAZMAT Authority, which is three counties wide. And it's a bunch of departments together. So we go to quarterly trainings for both of those teams. And on our level, it's great. It's just like working with any other firefighters.
Training	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	So my typical day looks like just coming in, checking with the crew, seeing what their needs are for the day, what their training objectives are for the day, and making sure that that fits within the mold of our policy and of what they need to get done, making sure-- I do scheduling, so I make sure the schedule for the week is complete and track the changes daily as they go through their-- we talked about the certifications expire at different benchmarks. I have to review those and make sure that we're not going to expire on something...
Training	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...My daily task is reviewing the call reports and training documents that have been submitted, and making sure they're accurate and complete, and making sure people are getting proper credit for what they did do, making sure that there isn't anything on there that they didn't do that they're trying to get credit for, which doesn't happen often...
Training	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	My long-range planning is really what I spend a lot of time on because it's hard to determine, again, with our transient volunteers, again, through no fault of their own, what are their needs going to be. How do we need to make them successful in our organization? What classes are going to be available and at what cost? Classes are getting more and more expensive. We were just talking this morning. There is a class-- we're getting our last guy through it, which as we've gotten everybody else through, was 100 bucks just to-- the tuition to get into class. That

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								doesn't include the supplies, and hotel, and everything to get through it. But that class is now 500 bucks.
Training	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	So, I mean, everything is getting more and more expensive. There are classes out there that are 1,000 bucks for a week. There are classes out there that are 3,000 bucks for the week. And so the more active the volunteer, the more we're going to be able to throw at them for training, but anticipating those needs is really long-range...
Training	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...And then, after coming up with a plan, I have to be able to relay that to the fire board, the fire chief, and either defend and make it happen or come up with a different game plan based on what they need. The State of [State] has a pension plan for volunteers, and that takes a fair amount of time administering that on the background. There's minimum requirements from the volunteer to achieve that, but tracking that and making sure that people are getting appropriate credit or not getting credit or whatever, that takes a tremendous amount of time. And then, when the chief's not here, I help take care of whatever administrative issues come up, so.
Training	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	The comment around the county, and this is solely attributed to [Name] being here in our organization, is that [City] fire uses the radio the best because our training is top-notch, and it's all [Name]. It has nothing to do me. But I think, in general, as we go up and down the valley, yeah, there's issues here and there. People get various training from various people, and you can definitely tell who's been trained and who hasn't. So I think we're fortunately selfish here that we have a resource that manages that for us.
Training	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	We had a town event, our annual [City] [Event] celebration here, and I probably spent four hours helping the town people get on the right channel or helping this organization get on the right channel or this group do this thing with their radio. So most of my time was doing what [Name] should have been doing - well, he was on vacation - which is interfacing with the public to make sure that they were where they needed to be on that confusing template. And I get it. At first glance,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that's not easy to interpret.
Training	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	So a lot of it's customer service. We also have a PowerPoint. And I think he said-- so we created a PowerPoint, and we do it here in our department. You're supposed to do it in every department. There's that group, tech ops, built the PowerPoint. All the agencies are supposed to do it but they don't. But here, we actually stick to it, and it's about an hour and a half training. Every volunteer that comes in, it's part of their task book. They sit with me for at least an hour and a half, and we talk radios...
Training	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: new volunteers] ...they learn how the systems work, how the radio works, how we communicate, procedures, best practices, all the stuff. And then we test them on it. We don't just give them the information and go away. Okay. Now, they test out a bit. And like anything, it's like a license to learn. Once you learn it, you're not expected to be an expert. But now you're not afraid of it, and you're going to use it. And one of my pet peeves is that for law enforcement, all these other people, we train all these people. Law enforcement has to train twice a year. They have to prove they know how to use their gun. But they never once get trained or have to prove that they know how to use a radio, which in reality, what's going to save them the most, the radio.
Training	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: 800 Megahertz radio manual] And of course, it's here. I mean, you just saw, he pulled it off the wall. Anybody who walks in this building can look at it and review the policy. We don't, at least, hide it up on a shelf.
Training	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	So obviously, we're a volunteer fire department. We have to take an individual, such as yourself that's never done fire, and we have to make a fireman out of him. And in order to do that, we're going to have to-- we also have standards to meet. And the NFPA 1001 dictates the minimum amount of training that's required. Now, we don't follow all of that. We take the best of that and the best of our internal needs, and we take the best of the county needs, and we put those baby steps into a book. And that's the task book. You have to go through that book and learn the book...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Training	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: volunteer task book] ...for example, the very first step is how do you put on your boots, and how do you put on your hood, and your jacket, and your pants? Can you do that safely, quickly, and efficiently? And then, after you've learned how to do that, and you've practiced it a couple of times, then you have to test. So at the completion of that book, you're a asset to this organization, not a liability.
Training	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	SME S3: Right. So in addition, do all the certifications that are available. The bare minimum is that you have to complete the task book before you run on calls. SME S2: We have a task book for every level. SME S3: For every rank. SME S2: So to be a probationary firefighter, to actually be a full firefighter, an engineer, lieutenant, we have different task books.
Training	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...We have a new tool that we're using called SharePoint which is-- it's basically a tool that-- it's a computer-based program where we can kick training out to anybody on the department. I could give it to you. If I'm your supervisor, I could say, "Hey, I need you to complete this training." I could put in dates and times. I could put information in there that I want you to stay focused on. And we can actually do it organizationally. So we could say, "Hey, everybody needs to take this driver recertification refresher class." And if we need it done, we'll put in dates that need to be completed by a certain amount of time. And so we just started using that tool. I don't even think it's completely-- I mean, we're just at the part right now where everybody's starting to use it. But we don't have-- our true drop-dead day will be, I think, in October. So that's when everybody has to start using it...
Training	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: radio training] Absolutely. Everything from downed firefighters at a command level. If I'm an incident commander and I'm working a structure fire, and I have a firefighter and/or a fire crew that has an issue, how do I-- we'll go through training on how exactly that looks like from an incident commander perspective.
Training	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: radio training] Because there's various radio channels that you have to go to. You still have to mitigate the emergency and now deal with this other challenge that you have going on. In addition to that, we'll take that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								down kind of at the base level and we'll train firefighters on, "If you are the firefighter who is trapped or missing or lost, here's how you do that." When we switched over to our new-- the way our radio channels are all set up, we conducted training on exactly how to utilize all those radio channels. Because there's quite a few but it's actually set up significantly better than it used to be.
Training	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: radio training] ...so the training is really-- we had formalized training, but then we do routine training in the firehouse. And it's nothing that we-- it's annual but sometimes we do it more often than that. Usually, it's with newer firefighters. So the older firefighters kind of jump in and will kind of help. Officially, we do annual training, but unofficially it's usually probably more like once a month or once a quarter.
Training	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So the other stuff from a technology standpoint, for our department, because our chief is so-- I think he just got TVs in every firehouse so that we could use this training program so we could live feed training to a firehouse. They could pause it, go on a call and come back, hit play again and the training is up on the TV. He can talk to every firehouse if he wanted to and give a, "Hey, I'm the chief. Here's the mission of the fire department. Here's the direction we're going in." And if they went on a call, they could just pause it and hit play again when they come back, they could finish watching him. I think it's even interactive. I think they can even ask questions back to-- that piece I'm not sure. That stuff, that's not in where I work.
Training	FF	U	Manager	46-55	11-20	Male	FF-U-021	You don't know. And also there's a lot of things where you have to immobilize the 12-volt batteries because that's what mobilizes the high voltage. So there's a lot of things that's paramount that you have to cut the low voltage to a hybrid because if you don't, it's still charged with a high voltage. So just things that you need to recognize and this is more through training now that everything is not as it appears. You can't look at a car and just say, "Oh, that's this type of car." Well, they make that type of car in a hybrid as well. So there's a lot more things to think about.
Training	FF	U	Manager	46-55	11-20	Male	FF-U-021	Not as much as I would like us to. That's something we teach now to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								new hires in the academy but just like communication technology, automotive technology is no different. I mean, you had a car with two airbags two years ago. Now you have a car with 20 airbags. So is it a one stage? Is it a two stage? There's capacitors involved, how long do they hold electrical charge? So there's a lot of things that can hurt us as firefighters, and it's something we need to be more diligent about...
Training	FF	U	Manager	46-55	11-20	Male	FF-U-021	...You need to stay in shape, so you don't have a heart attack. You need to train people on the importance of recognizing the aspects of cancer and what we're facing. At the same time, you have to drill to make sure you can operate functionally as an engine person or a truck person. You need to know a little about a lot. But it's something that we need to take a step back and, at least, maybe twice a year put people through classes.
Training	FF	U	Manager	46-55	11-20	Male	FF-U-021	Yeah. Back to the technology, what I found when I was in the firehouse it was more, I think it's training, and what we would try to do is try to communicate differently, holding the microphone because they say you're supposed to hold it on the opposite of your voice amp. Does it make a difference? So we would try different ways. Hold it on the [doorstep?]-
Training	FF	U	Manager	46-55	11-20	Male	FF-U-021	[RE: microphone] So we would actually test because I thought it was important because if you're going to run into a situation, that, to me, is the most important thing that you can train your people on, is how to ask for help and what works best. And it's getting that muscle memory. So I remember when we were training, it's more effective if I hold it here versus here, or holding my breath for a second, calming down before I speak. Really make a concerted effort to speak slower, really enunciate my words. So just that practice...
Training	FF	U	Manager	46-55	11-20	Male	FF-U-021	...So to me when it comes to that type of communication it's important to practice it and then let them know what's working and what is not and try to find ways. And put people in stressful situations under a conditioned environment that's controlled, that way when it's uncontrolled, again, hopefully that practice and that muscle memory

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								kicks in.
Training	FF	U	Manager	46-55	11-20	Male	FF-U-021	...But you know the fire house there's just a lot of training especially in the special operations because there is a lot of different disciplines. From knowing how things are put together, so when they come down what dangers are there. So when you're talking about collapse how do I assure not only, how do I assure, but what type of way I'm I trying to show and what's the best way to do that. Heavy lifting, trying to compute tonnages versus concrete, versus steel, versus these things you need to think about. Welding, cutting metal to get things out of the way you can find space obviously. Then you need to worry about air monitoring certain gases and what's there and what's not there that's needed and then obviously training on different types of diving over the ice, under the ice with water rescue.
Training	FF	U	Manager	46-55	11-20	Male	FF-U-021	Yes. [inaudible] rescue, repelling off of a high rise building to a window washers that are stuck on the 30th floor. There's communications involved in that, so there's a lot of stuff that you need to be very good at. Rope rescue, high lines, just rigging the system. If you're thinking about weights and thinking about redundancy and how are we going to-- it's easier to get them down there, how are we going to get them back up here. So there's a lot of training when it comes to that because those are things that aren't very frequent and those are the things that are going to get you hurt. So they're very infrequent types of calls so you need to train on then frequently, so then when you do get that incident you're ready.
Training	FF	U	Manager	46-55	11-20	Male	FF-U-021	Yes. But at the same time, you also need to be a fire fighter. So you also need to train on extrication and forcible entry and ventilation, how to get in, how to get out, rescuing people, rescuing down fire fighters, knowing your equipment inside and outside. There's always something to learn.
Training	FF	U	Manager	46-55	11-20	Male	FF-U-021	...And that's just a good officer showing the new person, "Hey, you got in here, did you catch how we're going to get out of here?" So let's say the front door is blocked, what's our second means of egress? Were there bars on the windows? Is there propane stored here? A lot of things.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								What can hurt us here? And hopefully that sticks so that way when you're there or maybe you're there with someone else that has never been there, you can, "Hey, by the way, the second floor that's not very stable, we were in there." We have hoarders, so a lot of things that can really hurt you, so that's just important that you pay attention to all the small little things because the small things can add up to make a big difference.
Training	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	We try to do it regularly. We don't-- right now, our training chief is in transition. So generally though, in my position, we will train with the individual companies. Or I'll bring two companies together and we'll do some evolutions or whatever.
Training	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: laptops] So the battalion chiefs and upper issued them. It allows us to work remotely. We can bring them to meetings. I can do work at home. I try not to. I don't get overtime. We're exempt. But really, it's a way to kind of free us from the desk so we can work at the table. We can take it to the stations and use it for training if we want or whatever.
Training	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[City] has a resident program. So [City] is all career, and then they have student residents. They live in the station for free, they get their own room, their own kitchen. They pay for their schooling, and in return-- and now, they get an hourly rate of-- some sort of hourly rate. And then, in return, they work at that lower rate for the fire department. I went through the same program in [City] 20 years ago, and it was-- they paid for my schooling and that was it. They didn't pay us. We had to go get jobs, and then we would work two days a week, but it's gotten a little bit better than that. I thought they were going to get rid of it, but it's just too much potential savings on paper for the town council. They just can't ignore it, even though it's-- anyway, we got rid of it.
Training	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: EMS] They transport, and we don't transport to the hospital. Every agency is trained up to EMT basic... And then the paramedic system-- they're all paramedics, very highly trained. They're CAS certified. Yeah, and we work pretty well together.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Training	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...So the routine includes maintenance issues, housecleaning, and whatnot. There'll be training stuff. There will be inspections. So there's stuff that interfaces with the community: inspections, trainings, school visits, site visits, all that sort of stuff. There's stuff that pertains to us here in the station. So training, maintenance, health issues, health tracking, fitness, all of that.
Training	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...so myself and my other officer counterparts and actually a lot of the crew members and stuff, it's go, go, go, working from usually 7:30 in the morning, getting ready to transition on shift till probably 1 or 2 o'clock in the morning as far as just paperwork and maintenance and tracking things and training and learning about our job and stuff. And then from that point on, usually it's personal time. So if there aren't any calls, people will sleep. If there are calls, then you always go on the calls. You're always doing the emergency response. But people will do hobbies or read, or sleep or whatever...
Training	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: paramedics] they don't ride the engines and they only do ALS. And what we found is that that really helps reduce the amount of burnout or frustration, because they're doing the critical life-safety stuff that they've been trained for, not the, oh, I-need-a-Band-Aid-type calls and stuff. And so... everybody is cross-trained to ride either on the truck or the engine or to do the basic EMS-level stuff.
Training	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: communication with LE] It's gotten a lot better, and I would say that it is incredibly regional as to how good or bad it is. This area of the country, this greater metro area, has been working on it for a long time. 15 years or more. And so, in this area, I would say that it is really good. If we're weak in any one part, maybe, in some of the training. At technology level, every responder in the region has the ability to talk to every responder in the region, but sometimes, people aren't using it a lot. They may not remember or they may not know where do I turn in my radio or whatnot. It's a perishable skill. Use it or lose it. But this area of the country's worked really well. I know from a lot of my national stuff that there are areas of the country where it is not very good at all.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Training	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	Yeah. So public safety is horrible, collectively speaking, at ongoing communications training. Most police and fire folks will get initial training in whatever academies they're going to. But then anything ongoing, so often it's just taken for granted that, "Oh, here's your radio, and you turn this knob to turn it on, and you turn this knob for wherever they tell you to go." The real rub about that or the irony is that other than the station uniform itself, I can't think of anymore equipment in the fire service that gets used more than the radio.
Training	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So we require annual training on our apparatus to drive them, and move around, and whatnot. We require annual training on everything that's on there: the hoses, the ladders, all of that. We require all manner of specialty training, as far as, "Oh, Ebola hits the coast, and here's what you do. Here's how you prepare and everything like that." The one device that-- I mean there are stations around the country that may not go anywhere during a given day just from slow call volume or something like that, but even they will be listening to the radio and making decisions whether, "Am I listening to the right stuff? Do I need to change the channel?" or something like that.
Training	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: radio communication] ... I think that training piece is huge as far as why we are where we are and what may need to change to make things better.
Training	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	We could do a lot better on training. Training is probably one of the single biggest costs that public safety has, just because the citizens pay us to be able to respond. And so they'll put companies out of service for mandatory training and whatnot, to all drive to central points to get a message, or whatever, or to drive to a central point to do some kind of manipulative stuff. If there's a lot more of that that could be done, either in an online environment, or some kind of interactive environment through technology, that would save lots of time and money on that regard...
Training	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	It's either the sports, or adrenaline, or whatever the case you want to call it. But it's the challenge. It's a challenge. And I guess you would say

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								through a public's eye that it's not normal to actually want to go into fires. But once you get educated and have some of those fears reduced through education, it then becomes understandable of how you can actually do that because there is a process. There is a tactical process. There's a way to do it. So what may seem to be an insane activity to laypeople? or others is kind of normal for us because you kind of learn the parameters of your dangers and what you can and can't do. You learn your limitations. And so knowing all those things and putting them together and being able to size up the situation and look at and minimize your tactics, or what they do is they look at things, and you're able to size up a building and measure, through education, some of your dangers...
Training	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: state of communication technology] I think it's good. I think at first, there was a lot of overtalk. There was a lot of-- everybody had a radio, so everybody felt like they should use it at first. So there's been kind of a transition of learning with that and more listening versus talking. So when you have a radio, a lot of times, it's really to listen to what's happening. Listening to the progression of the fire attack. Listen to what maybe could be dangerous about the building. Are there holes in the floor on the third floor? Are they getting the fire under control below you? Those kind of things, is the more listening when it comes to communications...
Training	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: using tablets] Well, I think it'd be great. A lot of things that hit the fire ground or the fire service in general, especially with this new technology, we're worried about losing it. We're worried about it breaking. And then, at the same time, now you have to train firemen that are 25, 30 years on the job who-- they didn't grow up with technology, so now they've got to learn something. So those aren't easy tasks, especially if the technology they are using is a little more high tech than they're used to. A lot of different steps. A lot of different pushing this and pushing that. A lot of different frames that they have to go through to get where they want to go. The less is better. So in the more simple form and format is better

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								because anything that requires less steps are going to be better for us...
Training	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: solution to communication challenges for large incidents] I think, certainly, education, but I think the only thing that really helps those situations is-- it just happens. It's just expected. It's really hard to minimize those, just because there's so many things that need to get done immediately, but we just don't know where to start. The only way to really help that is to be more focused on listening rather than talking, so is to minimize your transmission, especially when we know that a lot of decisions need to be made. So I think that's really one way to really help that. So.
Training	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...I would say technology for us, engines, pump panel, and engines, whether it's you got a digital readout versus dials. Sometimes when you first come on this job, you're used to reading just gauges, right? And you're focused on reading gauges and understanding those gauges. But when everything became computerized, touchscreen, and digital, that was a little complicating. So I think what it is is that you've just got to kind of evolve and learn, and there's a lot of resistance to learn or to accept new changes...
Training	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Cell phones, I think they're-- yeah, again, very useful. We all have one. We all carry one. If you look at the cell phone usage, job-related for use at an incident - at an incident where you have time obviously - where you're not googling or looking up things. It's a great mechanism if you had learn to-- "Oh, I forgot how to tie this knot." Go on YouTube. Various fire departments and well-known fire instructors also put out information in series or in format so you can use it as a drill, or call it up and doing searches on single family dwellings. So then we can use the technology as a form or basis of your training for the day...
Training	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	[RE: technology most useful during downtime] Going after an incident too and use your phone, even use it as a learning tool after an incident. Look up, "Yeah, I could have done this," or "Wow, I've learned something about this," as well. And again, it's a great refresher of things. We have to again have so many skill sets in our possession, and technology allows

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								us to go back through-- I don't know if they mention our SharePoint system here that the city uses. Go back on some drills or again, "I forgot how to do this discipline or this maneuver." You can always use it to benefit yourself and the others in the fire department. You can use the technology available at hand.
Training	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...Later, down the line, you can use the technology to look at some things that again you may have forgotten. Things that are going to enhance your ability at, perhaps, another incident, learning new techniques, new practices that they have done. Try this cultivation of change, of technology. Using that in a positive manner for you and your fire department. But I've seen it from a different perspective, because during emergencies it's really not quite useful. But those are the technologies that you take for granted. The portable radio and the tech camera have benefit.
Training	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	..And so we do that at the beginning of our shift, contact all those folks, see what training is scheduled. So for example, today I had three groups that were going to go train. One was going to slide rope, a couple of others are going to go do training in a building, and I just make sure they're staggered.
Training	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	So we have people who show up to and help film the scene, they're like our training officers, so that we can go back and revisit the fire. Because when I go to a fire scene I get a really good rep in, right? It's experience for me, we solve a problem.
Training	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	And so, right now every incident commander has a helmet cam. But they're only going to have, say, kind of a limited view from the exterior. Not necessarily an inside view. One of my guys is going right now to do training. Okay.
Training	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	So that's really helpful as we move into-- and also when we have not necessarily our incident scenes, we can watch videos from others. And then basically, I say pretend but just say, "Okay. You're on scene, go. What are you going to do?" And then hear them talk out, "Here's what I'm

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								going to do. I'm going to send command. Pull this kind of line. I'm going to park here." We'll have them draw it on the chalkboard. And show where you would park. "Okay, you're next. What are you going to do?" To run through those plays. Those positions.
Training	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	What causes communication problems? So many things cause communications problems. So one is the training issue, where people are in a place in their career where they don't recognize the right thing to say or say nothing at all. There is the radio discipline where you're not the most important thing to say [laughter]. And so you actually walk or step on.
Training	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	...Situational awareness training talks about, that in life as humans, based on your experience of life and what's in front of you. So if you're emotionally connected to what's in front of you or it's just too much, that will shut you down too. It's like we're a cup, and once that cup is full, anything new just bounces out. You don't hear it or see it even with your eyes open and your ears open. Y
Training	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Right. Okay, so I'll tell you, when we were doing the RIT Pak training, the old style that allowed you to see their air, and there was also a device called a Pak-Tracker. So on our SCBA, currently, if I push a button, it will make a big loud noise.... Cool, cooler, cooler. Well, if you're down right here, and I come into this room and let's say you're two stories up, or whatever, we have certain techniques and strategies to try to find you by listening, going in that direction. It was a training issue, we gave them the Pak-Tracker to just see how it would work. They went in and tried to find and ran-- because it still points to you even if there's a wall in between us. And they got caught up in, I know the direction, but if they hadn't used it at all, they would've used just basically a rope, done a right-hand search pattern, and they would've kept going. They wouldn't have just been so focused on it.
Training	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	So, new technology, you got to train. Even today, I have on, from my second shift, a Bluetooth earpiece instead of being connected to this. Which isn't that big of a deal, but many times the wires and stuff, when

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								I'm getting out, cause me 10 seconds to get unpacked a little bit, through my seatbelt and stuff.
Training	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Daily basis. Every time we come to work, we have some kind of training component based on whatever we're doing. I mean as soon as I'm done with you, we're going to a building to train. So that happens on a daily basis. Specific to communication, it's cyclical. Well, we usually practice our emergency procedures, because those are the things that we don't use often.
Training	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	And depending on what you have, it can be very overwhelming. That just goes down to just being there and doing it, getting the experience, and practicing. The best thing you can do is when you are overwhelmed.... It takes practice, especially when you've got a lot of stuff or people on the scene yelling at you, "Do this, do that, and why aren't you doing anything?" You got to remain calm but many incidents can be very overwhelming, initially.
Training	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	But he'll give us daily goals, pretty much daily training, what you're going to do all shift. And then if you have down time, you can do this, or what to expect for the weather. He'll give us all that stuff just so we know if the humidity is dropping, be aware for grass fires and stuff like that.
Training	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	We have to force doors. You can force one door in like 30 seconds. He wants to know if we train two hours on this, can you still force a door in 30 seconds? And a year later, if you don't train, do you lose that skill? Do you still have that skill? So we don't have to worry about training on that one 50 hours over the year. We can train on something else like swift water or something that does deteriorate with time like knots. Ropes and knots, it just doesn't click with me.
Training	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	Yeah. So I can tie them all, and I can put them to work and use, but if I don't train on knots at least an hour every two weeks, I'll forget one or two things. And you never know when you're going to need it.
Training	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	...I like where this department's going with their vision right now. Training everybody and keeping track of them. You know where you're at. So I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								think this department's probably different than a lot of them in that perspective.
Training	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	...Over, for example, [Organization], like they annex that from us. So if we're going to be like, "You're doing terrible patient care. We have video of it." But that's not what it's for. So what Chief is using it for is a learning thing just for us. So if we ever-- so for instance if I run a good CHF call for congestive heart failure, not many people get those calls.
Training	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	Same thing, sick or not sick. As soon as you walk in he can probably put up 10 pictures of sick people, 10 of not sick and you can go and pick which ones you think actually need help, which ones don't. So it's pretty much just for training purposes, but that came through probably eight months ago, and he is still getting the kinks out of it kind of.
Training	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	... So it really doesn't cost [County], or whoever the sponsoring agency is, anything in that moment to sponsor the team. Now, there's other associated costs that the sponsoring organizations do bear to some extent but they also get other the benefits because they get access to training and equipment and resources that otherwise would probably be beyond the means of most organizations to be able to house organically because they're really expensive assets to own and maintain for the very infrequent time you would ever use them in your own home jurisdiction.
Training	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	So of that 2,000-ish volunteers, I think about 6 or 800, something like that, were actually qualified to ride fire trucks and provide what we consider to be minimum staffing. So they've met the training and experience requirements to count as staffing on a unit because each unit has a specific staffing level that we have to meet for it to be considered fully staffed and you've got to have certain qualifications to be able to meet the staffing positions on a unit. So sometimes we have people that are riding a unit but don't actually count towards what we consider to be the minimum staffing. So you could have five people on a unit but only three of them really count.
Training	FF	S	Field	Not	31-40	Male	FF-S-040	...We also have training that we need to do. On our shift, we have a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder	specified				rookie that came out of the academy a few months ago so he's got a whole package of specific things that he has to get completed in his probationary period to get him fully qualified to ride and perform all the functions that he needs to perform as a entry-level fire fighter so--
Training	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	... He's got to get his driver's status on an EMS unit, so he's working on that. In addition to training needs for him, we also just have general training needs for the station. We're constantly having to keep people progressing in their training to become apparatus drivers because people move on in their careers. The drivers that I've got now, over time, they get promoted and they go to become unit officers. Well, then we need somebody to be in their position as a driver. So there's all those training needs. There's also needs just to stay familiar with our area.
Training	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	..., for some structure training activities, we actually put the units, what we call is being on a detail, where the unit, while it's staffed and we're still with the unit, the unit's not available for emergency response. It's dedicated to the activity that we're involved in. And normally, that's for sort of higher level training activities. The training activities I was talking about were station level activities where we're training the rookies, where we're training drivers, stuff like that. But then there's also these higher level training activities, what we call quarterly training. Every quarter, there's a training activity for the whole county to go through. So this quarter is a water supply evolution that takes about six or eight units to be all in the same place at the same time. So those units get put on a detail. They go to the training academy. They spend a few hours participating in that activity where they're not available for emergency responses and then they go back in service...." So we do those types of training activities too. And, of course, during all this stuff, there is emergencies.
Training	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	... And I make sure that the apparatus that moves on a detail for county medical for in-service at the training academy for a public demo for any other items, they put them on a detail, I make sure that there is a first responder within the station to make sure that at least something within

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the area that it covers it so that there's not a lag in time.
Training	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	... There is the weather because it'll alert us when there's flooding going to come within the area as well as when the heat's too high, and we have to cancel training when the heat gets too high.
Training	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	...I need to go to our fleet maintenance and get it switched out. I have to run in-service training at the academy. I'll have to go on a detail. There are certain things that stop the sequence of events of the day. It's very dynamic. In the middle of that, amongst everything, our job is to run calls, so I run calls in between running, driving around different stations and stuff. Yeah. So I try to come back, and I try to work on the schedule for next shift and polish it up and write it down on the apparatus movement calendar. And then beyond that, I have my own personal things that I try to get done. I try to schedule training. So I'll go ahead and maybe create training for different stations, and decide which stations to do the training in, and then eat dinner, and probably eat dinner around 6:00. And then after that, I have to wash my vehicle. I have to fuel my vehicle and then basically get a bit of down time before going to sleep.
Training	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	And we kind of instill that in the training, that the information that you tell me, make sure it's purposeful and not just information that I don't-- it doesn't help our mission, so I hope that explains--
Training	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	...I wait for the emails to come from the deputies because the deputies will send me a list of-- well, they'll send everybody but including me, the list of all the units that are going to go out for training, all the activities of the day, special events, anything that we need to look out for, conference call.
Training	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	I mean, I don't really know too many workarounds. I know even working at the company I used to work for, I was more like a project manager and do a lot of training and facilitating. Anytime I needed to do a demo, it seemed like the system didn't work properly.
Training	FF	U	Field	26-35	11-20	Male	FF-U-042	...They don't even know-- a lot of dispatchers don't even know, truly know

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					where the firehouses are, what apparatus. It's a huge training issue we have because it's an outside agency and that was the big political thing to do and a lot of places like to go to that and want their unified communication. But it's not good for these organizations because these people don't actually know what they're-- they don't actually know what these things are.
Training	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	I am currently assigned to in-service training office at the training academy. I'm a sergeant, so lowest-level officer.
Training	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	I work on developing programs for people that are already in operations in order to brush up their skills, so on the technology side of things. Might be a radio training or something.
Training	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	--personal because they don't give us a work cell phone. So not that I really want one, because I want to do everything on the same cell phone, to be honest with you. But I use it-- so I'm also assisting with driver's training down there. So everybody wan
Training	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	I mean, there was a group that was doing it prior to us, and it was a lieutenant and like five sergeants. So they all could kind of take little areas and share-- right now, what we have to do is-- the program we came up with, we have to find people to do the training. So we came up with the program. Now we have to find people to do the training. And they'll come in on overtime and kind of be adjuncts for us and work for us as adjuncts. And--
Training	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	...Right now, our way of building that out isn't very good. We have to kind of give them a certificate under this program. But then, just because I certify you, it doesn't tell us what you actually did. And yeah. So I think some of it's just-- there's never been a training program on how to use this. Its just like, "Hey, here's this software.
Training	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	They just pull the battery out, go to the charger, grab a fresh one, stick it in there, and then it's like, "At least I started with a fresh battery." So, again, it is a training thing because, me, when I look at the charger, I look at the charger, and then in the bottom of the charger it tells you what the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								milliamp capacity was of each batte
Training	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	Yeah. But that's one of-- we just had a training the other day, not too long ago. And one of the guys was talking about it and said, "Yeah, it's great, but I can't use the WiFi in the district." If you're going to come up with this, again, potentially mission-critical thing that I can't use WiFi that might work when the cell phone's down, you just blew the technology out of the water,
Training	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	...The Incident Safety Officer, there's only one for the city, so he or she goes, responds through the entire city, so your day could vary-- you could be in upper northwest on a house fire, and then go to a technical rescue down by the training academy or [City]. So it definitely varies. In my time here, I think I've been assigned just about everywhere in the city
Training	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	.... I think the alarm office people, better training. If I respond to a hazmat run, and some people, they start on page one to figure out what's going on. Well, if the incident's already on page seven, I disregard the first six because-- well, I've been around for a long time so I kind of figure out what's important and what's not important. Yeah. I don't know. I mean, we work with the collapsed rig. We work with the confined space rig. So all my guys have to go through all their classes. Right now I'm teaching confined space class here. Regular firemen are taking the class, and they're around 40 hours right now. So they're down there for five days.
Training	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Your standard firefighter leaves the fire academy and-- our career is kind of strange where it's hard to get good at it unless you actually do something, so we try to fill in the gaps with training. But that, like any other kind of training, that's only half the battle, I feel, until you can actually have the environment of a little bit of chaos and a little bit of the normal civilian verbiage that's in our ears as we're working and people trying to get our attention to something else when we're trying to focus on an individual task. So training fills that gap somewhat, but not in every capacity. So it's hard to get good at our job without the years passing you by, in a nutshell, is how I would say it. I know that's the case for most careers, but in this one specifically, a hands-on type of job.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Training	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Yeah. Yeah. And so we try to instill an older guy or girl showing the younger guy or girls how it's done, sort of thing. In my opinion, we started to lose focus on that a little bit recently, but we're trying to regain it. So there's always a passing down of information.
Training	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	...So the problem that we have is-- and this could probably be made better through training, but we train so much on other things, we run out of time to train. The way that people talk on the radio.
Training	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	... Even though they've had classes that there isn't any chief out there that hasn't been schooled on how to use it. But I don't know what it is, [laughter] there's a lot of them that just don't know how. So there is a process, too, just operator error, and that can be detrimental, depending on what you're doing or what you're responding to.
Training	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	My daily routine is very hectic because as the training division we're required to manage training curriculums, provide evaluation processes for probationary firefighters, to disseminate and deliver required training by the [State] Administrative Code, the National Fire Protection Association, as well as manage budgets and funding so we can provide those training with all our personnel.
Training	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Sure. Daily training is basically whatever the company officer, or the lieutenant or the captain decides they want to do that day, whether it's pulling hose or doing CPR training or anything having to do with what potentially could be our response. The weekly and the monthly training is more appropriate in terms of there are certain types of hose evolutions, in other words, stretching a hose line off a fire truck or using a ladder truck to get to the top of a building. So those are required training monthly. And then quarterly training would be something like [utter?] defibrillation. When we do CPR, we do [utter?] defibrillation, and that's a requirement every quarter. We have to have four quarters of that to maintain that certification standard.
Training	FF	S	Field	46-55	21-30	Male	FF-S-031	.... After that, it sort of getting on the computer and doing your required

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					online training. We have quite a lot of online training we do. It's cost effective and we can deliver a large amount of training at a computer. It's not the greatest way to do it but for things like HIPPA and other types of courses that you don't need to have an instructor in front of you, that's how we deliver that type of training.
Training	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	... So we have to have a lot of training and a lot of experience in a variety of different types of responses, atypical from a truly urban major city like [City]. Which doesn't see some type of responses that we would see and vice versa. We don't have many high-rise buildings but we have buildings that are being constructed that would fall under a high-rise type of building even if its only 12 stories.
Training	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	--drive an aid car. An engineer to the fire engine requires extra training. And then the fire engine has, in addition, the need to do the pumping for the-- if there was a fire and you need to get water for the hoses--
Training	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Yeah. Again, most of the training that we get is focused on how to keep our traffic short and succinct, on how to use it. And which makes sense because that is the most likely scenario for us to need that training on. And then we do receive training in a much smaller capacity about how to communicate with those outside agencies, just because it happens very infrequently.
Training	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	... And it seems to just be, I think, experience, training, and just some just personal ability, I think, are the things that allow some people to filter that and make the right decision and some people to become just completely overwhelmed by it, so.
Training	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Yeah, it varies from day to day. I have meetings that they schedule out. Monthly meetings, bi-weekly meetings. I have meetings on my calendar. So I look and see what those are. And then, whatever the current training agenda for the area is. If it's a quarterly training plan that I'm working on, I work on making that plan. Right now, I'm currently working on a six-month test for our recruit firefighters. I'm also in the middle of working on a current promotional exam for our engineers. So as the monthly

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								training comes up, or as the annual training comes up, I kind of focus on those tasks and I get them done. And then I work and move on towards the next thing that has to get done.
Training	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	So the daily routine for a line officer - so that's when you're working shift work - is there are 24-hour shifts here in [City]. and the mornings always start off with roll call. So we make sure that everybody's there, everybody has what they need, they're in their proper uniform. We go right into checking our apparatus to make sure they're ready to respond, the inventories are all up to date and current. And so we go through the daily rig checks. Following that there's typically a different assignment for every day of the week. So on Mondays, we'll check portable equipment. On Tuesdays, we'll check ladders. On Wednesdays, you know. So we have different things. So depending what day it is, then we'll go into that. And then, we try to take care of one training drill every shift. And so that could be either in the morning or the afternoon as time allows. We also have medical EMT classes assigned to us. We have fire training drills assigned to us that we have to get done. So as time allows we do those trainings, and then we also respond on calls. Whenever a call comes in, everything gets dropped. We run out. We go on the call. And then, we try to pick up where we left off if the time allows. And sometimes things have to get rescheduled and shuffled around from day to day, so. Yeah.
Training	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Probably. I mean, I know that the academy, they run drills and use radio. So they are getting a level of it there, but I don't know how much. If they get a class on it, or whether it's just kind of taught through kind of like on-the-job training.
Training	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	... like I said earlier - is just radio discipline. It's just learning how to communicate better. And being able to sometimes-- I mean, something as simple as-- my dad [inaudible] with 30 years, and one of the things he always taught me is like think about what you're going to say before you key the mic. So when you key the mic, you say it. A lot of times, people will key the mic as they're trying to figure out what they're going to say.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Well, that's just taking up airtime. Right? And then you stumble and/or don't get it out right. So a lot of it is just learning, and discipline, and repetitive training.
Training	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] For us as far as our FTs, we've got to stay up on different protocols, better ways to attack different situations and problems. So we have continuous competency-based training, and we just try to stay on top of that. So pretty much monthly, there's stuff that we need to get sharper on or new ways of going about things that we need to know.
Training	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	Daily routine is pretty simple. It starts with a morning meeting, morning briefing, morning recap and what's going to go on. They then go from there to checking all apparatus, all equipment, every piece, making sure that it's in working order. Usually, they'll go from that into physical training. Usually an hour to and hour and a half of some sort of PT. Clean up from that, usually by 10 into a drill, some sort of training. Sometimes it's individual-led, sometimes its department-led, big groups small groups. Some of our departments then we have inspections. Some of our stations have to do building inspections. The others are doing building walkthroughs and area familiarization. Most shifts have a project kind of assigned that they will work on their down time.
Training	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	It's relatively new. When I say new, within the last few years. But what we're finding is, through some of our joint training with law enforcement and other agencies, if we all know where we're supposed to be, we're able to communicate.
Training	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Q: [S3] Oh, good term. So do you guys do a lot of radio training, however [crosstalk]? SME: We do it occasionally, I wouldn't say we do a lot. We could probably stand to do some more.
Training	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	...And then in the evening, there's a night watch and it's the same. You're answering phones, and hearing a radio, and just dealing day-to-day tasks. And then from 10:30 on, everyone is helping out in the kitchen, running various drills, any meetings or sometimes they have battalion drills, which involves the outline companies and we're just doing drills

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								just to practice
Training	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	And whichever Battallion Chief is running the drill, he'll give us the scenario. So there's a fire on the fourth floor or there's people need to be rescued, and we have dummies that we work with. So it's never the same drill, just to keep you on your toes, they change it.
Training	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	They're all props so. And it's just on a-- to keep our skills up. The fire doesn't decide what type of building so sometime it'll be on a peaked roof, sometime it'll be on a flat roof. So these props are just to keep us aware of what's out there.
Training	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Everyone out of the training tower is EMT qualified.
Training	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	No. Well, if there were a catastrophic event, then you might get a call or wildland, some of us are cross-trained in wildland fire. So if you put your name in, available to work for that, then you might get a call to go out. And in fact, we have a strike team that went out two nights ago.
Training	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Q: Is there any training on radio [inaudible]? SME: There are. But it's not as frequent.
Training	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	...You'll also conduct a drill of some kind, depending on what the needs are. If there's a probationary member, maybe they have something in their book that needs to be signed off. Or if it's something you haven't done in a while, they'll have you going, "Hey, I haven't raised this 50-foot ladder and all. Okay, let's go get the 50. Raise the 50. Hey, I haven't used this saw in a while. Okay, let's go get the saw, and talk about how we'd use the saw."
Training	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	--"Okay." So I figured out some of the basics, I'm like, "This is useless. Pencil and paper is so much faster, I can do this." And then they finally had a class, probably after we had had it for, I don't know, six or eight months. And then I went, "Oh, th
Training	FF	U	Supervising Field	46-55	21-30	Female	FF-U-013	So it does. I mean and even if they had just given us a cheat sheet. Cliff notes guide with pictures and words, and this is what we do, it would

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					have been great. Yeah. I mean, I love having-- well, if you look around at most of the firehouses that I've ever worked at, some of my notes are still up on the board because I don't remember everything. I need reference points. So yeah. So definitely training is huge.
Training	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	So there's two parts of it. There's the administrative part of what I do, which is to deliver the latest training to the battalions that work for me, which there are five battalion chiefs.
Training	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	...I know the technology is there in our radios, but it's the fact that we don't practice it very often. And so I'm just trying to find it so, at 3 o'clock in the morning when your mind isn't working as sharp as it should be, that it's easy to get to that place.
Training	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Yeah. I mean, that's a huge training issue. Yeah, you can have it here, and if you let go of it, it's still attached to you. And if it's here-- I think that's great technology if it works, but like I said, that all comes down to the training factor.
Training	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Well, there's technical problems, and then there are training people problems.
Training	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Q: Do you guys do a lot of-- we saw the training stuff that's out here and it sounds like you actually do quite a bit of training at this station. Do you train specifically on talking like you were just describing? SME: It's in emphasis quite often, and it happens during drills. But you put a little bit of pressure on people and they fall back to their old habits, so it's a reminder every so often.
Training	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	...But one of the things that many departments are doing - and we're not there yet for a number of different reasons - is you need to build your own fires and have a training program that is set up to where you're actually experiencing smoke movement, energy that's being released, in a safe environment. And what firefighters are doing is they're using old cargo ship containers, Conex boxes, and you build them, and you stack them in a certain way, and you're able to build a fire in there and control

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the fire. And I think that's one way of experiencing things. But I think the other way is through VR stuff, of practicing your search techniques and being put into a situation where you're experiencing something.
Training	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Yeah. I mean, it's a unique profession because, in order to experience it under pressure, or as I like to say, that you're training under fire, the only way to get that is to get the incidents. And then to recreate that and put it into a training environment-- like in this city here, we can't burn in a box because of the production of stuff. And so there are some departments that we can send people off to and get some of the training.
Training	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	Yes. There's definitely a daily routine in the suppression side, running on an engine, being responsible for your car on that engine. And understanding your communications, understanding how it works, and testing it. And making sure that it's functional. And then you have a whole training component that we barely get to train on because there's so many other aspects of their job that are as mission-critical as communications. So there is a routine that we need to follow, and we do in terms of changing the batteries and making sure that the physical equipment's working. But from a training perspective, I think we need to do more training on how they work, how you do interoperability and just the technology that you're using on a daily basis between a cell phone, between a radio, between your mobile data terminal which is using cellular right now.
Training	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	... We've tried to set up learning centers so we could just all do a video conference in the one training center so we didn't have to drop-travel clear across the county to come to training. We could set it up and have like a GoToMeeting or a webinar on certain training topics. It's taking some time to get there, to get the fireware installed, to have the bandwidth to be able to do that, but we're there.
Training	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	They have very much a daily routine. It's not centered around technology so much, except for an internal website which they're responsible to check every day they work because there's general orders that they have to be accounted for that they've read. There's internal training that is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								done online that they have to do. So they have to interface with it on that level.
Training	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	Yeah. Some of it is just pure logistics of training 1,500 people. To do a training module in our fire department, for example, we really can't train outside of three hours. I mean, we have a training module from 9:00 to 12:00 and then again from 1:00 to 4:00. And we get five companies go out of service to the training division. They do that because we can't pull everybody out of service at the same time. So they train in the morning, a different set of people come in the afternoon. Running that model for 35 days gets us to 92% of the people in the department training. So that limits what you can train on in a year, the time you can train on something.
Training	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	I think for the most part. I think there's still internal training personnel issues that people don't realize if you get bonked, what that means. Just to key the radio, give it a second and talk. So we have those kind of internal user error things.
Training	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	We've had a couple of exercises with them over the years and a big [Event] at the airport one year which what did we do for that one? When we did when they brought all their toys up so it was a plane crash with lots of patients and hazardous material issue and it was a massive exercise.
Training	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Well what happens to me is you know I'm supposed to be in charge of the incident so if I'm tied up setting up the communication links and stuff it takes away from events so we're trying to get more people trained, more people interested and trained up on it is really important and it's not one of those things where you can do it twice a year to be proficient you have to do it a lot.
Training	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	Yes and no. I mean like these newer people I'm not going to put them into a structure until they have had the right training so you know I guess that's where I just use my judgment on call of whether or not you know if they don't have their gear right now that's fine because they're not going

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to go in there anyways so...
Training	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	I'd take all the new technology they got out there for fire or EMS or anything like that I mean you know we've got well even training (00:37:38) stuff. You know they make the smoke deals with the smokeless room and of course it wouldn't hurt anything but it would be like you're in real structure house on fire you know just things like that that would be neat to have or nice to have for training purposes.
Training	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	... On the training side pardon me I help organize the training when it becomes available and try to get our crew to take training and stay up to the date on training which can be difficult at times.
Training	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Yes ma'am. There is additional training. Our EMR is mostly done through the area vo-tech which is paid for by the department and I think we had two guys just do that and I think it was I think \$350 if I'm not mistaken that we just had two new guys just finish the course.
Training	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	More training apps. Just you know apps that I could say guys go to this app and you know let's just review some stuff here you know just basic stuff like that because maybe they can do it on their personal time at home. I think that would be kind of interesting to really see that way especially from a volunteer perspective they don't have to come here and then you know but it keeps it fresh on their minds you know at home you know and I think that would be that would be a good app I would believe.
Training	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	... when our phone goes off we leave those you know and so and then when we have training you know it's like I've been on three calls already this month you know I've taken enough time off. It's hard to get guys yes, we need the training but you know whenever the state's going you guys don't have enough training.
Training	FF	R	Other Public Safety	26-35	6-10	Male	FF-R-048	There's a lot of them. Which it's good that we have them. It's good that we have them because that way you know we can't say we've got to have this done and it keeps us in check. It keeps us up to date

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					knowledge wise, training wise because I mean if we don't know what we're doing on the scene we just will not show up but it comes to a point that what's realistic. What's realistic for us. You know we're not going to be put in situations like a big city would you know we don't have anything high rise here you know we're dealing with elevators and multiple, multiple stories you know.
Training	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	Yes ma'am. It is due to the training and dedication. You know you can train all you want, you can train all you want but if you're not training and education are different. Training is honing skills that you already have, education is learning a new skill so it's it can feel like a burden out here sometimes because I'm so used to having it good at my real job...
Training	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] ... Even when I was in the training session at my old department when I came up to being an instructor we learned how to put all of our presentations on transparencies. Now we got PowerPoint you know which makes things a whole lot easier and I forget what the new thing out is supposed to be better than PowerPoint. I've used it once or twice I can't think of the name of it.
Training	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Yes, yes there is. Is it trained in the right way? To me no but there is training on it. We were just talking about that not too long ago. We were talking about problems with the MDT and I was asking them has there ever been a fooled laid out class of how to fully work it? How to troubleshoot it? How to fix it if it goes down? Because usually we get a call or they'll say they missed the run time or something because it went down when it could be a simple restart and brought it right back up so that's my knowledge, that's my thoughts to have more sort of troubleshooting class how to fix certain problems.
Training	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Partly. We have the river out there so we've had to do things related to the river over the years. We've, you know, we did the bread and butter house and grass and vehicle fires and all of that but over the years we've gone and taken people off of radio antennas or towers that have had issues. We've dealt with trench rescue. You know we do a lot of vehicle extrication. But we train for high angle, we train for collapse, we train for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								all kind of other things. We have members on [Organization] [phonetic] teams.
Training	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Other than that. We train. We get along. Every once in a while they squabble. When they squabble I wind up having to fix that. So.
Training	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	You've got to do 3 hours of training per day on shift outside your regular duties. Volunteers have to do a minimum of 60 hours a year but they're supposed to do up to 240 hours a year. So if you're going to stay in the department you have to meet at least the 60 for us. But we have very few that miss the 60. You have a nuclear plant out here. If their shift falls wrong we may not see them, they have to make theirs up a different way. But, yeah, we do tons of training.
Training	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Training-wise, again, I'm going to talk to [name] when I leave here about getting their people to prompt them to go to respond coord. And it's going to have to be that they tell everybody on particular calls and if they have more than one call they're going to have to move them to something else which we all have. We have a response--every one of us have response channels on these radios. And you can segregate your two calls and only they would hear the two of them. A lot of it, I say that the fire service is 250-something years of history unencumbered by progress. And what it is is it's just hard to get the people to change when something better is out there because it's easy to do what you know. It's hard to go learn something that's new that you'll really like.
Training	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	Only because I went through a [Name] [Job title] class to authorize me to be able to fix our air packs so that could be serviced by an authorized person or whatever if something breaks on them.
Training	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: I mean we are not first responders, you know the first responders you got with the ambulances, we are like lift assists, cardiac arrests and stuff like that and involves like CPR and all that, which we are all here pretty much all are certified in CPR so.
Training	FF	R	Field	Not	Not	Male	FF-R-054	S1: Yeah, right, right okay so. Training, is that part of anything? S4: Oh

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder	specified	specified			yeah. I mean we don't stop training.
Training	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S3: We are having it right now twice a week at least, sometimes three times a week.
Training	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: Non-stop because you don't want to lose your skills you know.
Training	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: I mean they practice like they teach you, like we train on how to do communication better. We used to not tell what we have when we were on calls, like what do you have you know, like say we had a wreck, it tells what you got and that way we can prepare [indiscernible]. We got to do that plenty of times, no one has actually told us what you know was going on.
Training	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	You have to show up, our department -- yes, you have to show up for so many meetings and so many calls, percentage-wise. Now the state requires you to show up for so many calls percentage-wise and you have to have so much training, so we have to have and it is getting further and further up to the state that 240 hours is not becoming enough man hours. They want us to have the same as paid fire fighters and that is 300 and something hours.
Training	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	So, it's getting up there and now we have to take a course on wild land fire fighting because of the [City] fires which I was in. We have to take a course -- a 16-hour course for wild land fire-fighting now, that is required by [State] to go on any calls that is wild land.
Training	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	That helps. It helps in teaching a lot of us, because paid departments, they are constantly training, constantly doing stuff and I am trying to get along with [town] right now which is a paid department but I want to be part time because I want more training.
Training	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	But we are -- we do a lot of training and hours too, on the weekends when everybody can make it. The hardest part is everybody has got to work.
Training	FF	R	Field	46-55	5 or less	Male	FF-R-055	I mean, you try to get 35 guys together and it is like -- ah, but he can't be

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					here, he is at work. Okay, well he -- and that's my problem. A lot of times I do the training during the week at night and I will text my [Job title] and I'll say -- ah, I ain't going to make that, you know that. He goes -- I know, we will get you a Saturday and I would be like, okay. That's fine.
Training	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	... So, it is orchestrated but it looks like mass chaos to some people but you know what is going on. I know what is going on but we have got probably 10 new guys we are training right now that are coming up that will be volunteers full time that will be what we call -- Black Helmets. In our department, yellow helmets are training, the orange helmets are cadets, the reds are the officers and the whites are the chiefs.
Training	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: apps] There is a DUI app, where it-- I've got it, but I use it more in a teaching scenario. And I tell people about it. But what it'll do is you go through it and you go through all the steps in a DUI process, and it will prompt you [inaudible]. Okay. Did you see it? Yes or no. And then it'll email you everything so you have a lot of stuff already filled up for your report. I like certain aspects of it, but I don't like using it on the street because I think you're too busy. You get dug into your phone and safety issues. One called Units. And that just helps convert times, distance, weights.
Training	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: apps] Once called the US Cop. It's basically the only one I would tell people to actually buy when I teach in the academy. And I'm like, "It's five bucks. Buy it. It's worth it." ... It's got all kinds of stuff on it. It's got drugs, schedules, news feeds, traffic laws, law enforcement contacts... It's got some Spanish stuff. It's got a little bit of everything. So if you have traffic laws, traffic questions, you got something about tire size, speed difference. I mean, this is a big one here, front license plate states, and it'll give you a list of-- I mean, we could have the measured power of Google and just do it that way too, ... And then compact and non-compact states. Compact is states that have gotten together and signed. So if I get a speeding ticket in California, or-- no. Let's say Florida. Florida. It affects my [State] driver's license. But what I love about being from [State] is it's a non-compact state. So as long as I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								didn't get a speeding ticket in [State] it didn't affect my [State] stuff.
Training	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: report writing] Yeah. Yeah. I have to. And I'm old schooled, and I've OCD and everything. So I need my desk. I need my computer. And I kind of have like a flow of how I need to lay out my papers and-- I take notes, and as I put it in the report, I cross it out but in a different color pen because that way I know I did it. But yeah. Our reporting is desktop-based. You can access certain parts of it in the cars, on the MDT. But you're twisting yourself up into a nod. And then, the word processor in our report system stinks always. Just garbage. And we've taught everybody. And I was one of the original instructors. And I almost think that I was told this by the company. "Just type at Word, copy and paste."
Training	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...I'm a different level than the patrol guys. It's not that I'm better than them by any means. I have to answer some questions, how to do stuff. If I end up pulling a patrol chief, I'm lost. But as far as the detail in the type of reports. When you're typing a homicide report, and it's your initial report, you're typing 30-plus pages, where on patrol, I don't think I had anything more than 3. Maybe an ugly domestic is 4 pages. But you're craving in so much more detail. And you can't just put in. The old days, they're doing a DUI [inaudible] arrested same, they're gone. You got to spell it out. My DUI report as compared to somebody else's is twice as long. But it's because I've got the extra training, experience so I'm able to learn how to articulate it, so.
Training	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	It's the greatest show on earth... It's fantastic. I love teaching. I love being able to give back. My ego isn't of that that I've got to be better than everybody. I want the people I teach, and I want the people I teach at the academy, especially, to be better than me. I will give them everything I can so that they can hopefully learn from the things I've done good, the places that I've screwed up, and the times that I got in trouble. I lay it all out for them because I want them to know what it's like in the real world. I try to keep it real. And I love doing that. I love teaching.
Training	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Oh, no. I talk. I'm not bashful. My mouth gets me in trouble more than anything. I love teasing firefighters. I mean, I call them American heroes

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and Band-Aid throwers [laughter]. I don't care. I love having fun with them. And there's a former [Job title] now - he's retired - he and I would just start going at it. And it was all out of fun. But if you didn't know that, and the way we were going at each other, you'd think we hated each other. But it's breaking balls. We're out here doing-- they're different jobs, but they're extremely dangerous, and they're extremely important to society. I've been through training, the narc stuff, where you have to wear the respirators and the air packs and go crawling through smoke-filled buildings and-- no. Shoot at me. I'll take that. I ain't going in no fire...
Training	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...it also shows a bit of laziness. And when I see it's report writing, I tell our rookies, "Don't ever let me catch you doing this." And thankfully, they've stopped for the most part. But they'll type what would be a five-page email about why they didn't pull an IR, an insert report number, any type the report. They have all the same information in there. But they're just telling you why they worked harder to get out of work than just doing the damn report...
Training	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: manual cards CAD backup] No, actually, we don't. But we haven't. And it's not necessarily manual, we have more of an Excel workbook where they're still typing it into the computer, it's on a screen... It's similar to their CAD screen, but it's still-- it's not direct interconnected if a call taker and then it still has to be sent to the radio, those type of things so.
Training	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: nature of the job] Yeah. And you can't predict what it is. I mean, you can't train everybody for every situation so--
Training	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: text-to-911 Safe2Tell program] They do a lot of school-- I mean, they go out to the schools. They do a lot of education and training through the school districts and when they launched the app, they did kind of a marketing and in everybody's wildest dreams nobody even anticipated that type of increase.
Training	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	I'm also an officer. I work in the same section, deal with the body cameras, mobile fingerprint readers. I think if I am, like he said, anything else, we're all Jack-of-all-trades. And we master a few of them, or we try

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to. I think if I had to describe my job to a child, I would say that I teach and train people how to use different technologies. And then we also test technologies, and we try and break things to make sure if they're going to hold up okay and figure out if they did break, can we still use it, and put it back together, and still apply it to what we do?
Training	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	we've put the little fires out, and we find them as they pop up throughout the day. Sometimes we'll get requests from people for information that they have access to, maybe they don't know how to get to it. So we'll also do ad hoc, get on the phone with somebody and walk them through a process and do some last-minute training on something. So that we try to do everything we can to make sure everybody can be self-reliant with the use of what we have. So they're not always-- because if we took care of every electronic need or every need for a video or something, we wouldn't get nothing done at all.
Training	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	So overall, officers go through training, and then they're issued a body camera. And they wear them on a daily basis throughout their patrol shift. At the ends of their shift, they're required to have it on when they're dealing with a citizen. And then at the end of their shift, they dock the camera, the video, automatically offloads. We're one of the few departments in the country who have integrated with our computer-aided dispatch systems. So it'll automatically tag the video as belonging to Officer [Name] and Officer [Name] who's on a burglary call, so that's what this video corresponds to. That eliminates the officers having to manually enter metadata into the video. So that's kind of just overall how the system works...
Training	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...we're just now getting into drone deployment, and I'm sure that's going to escalate and be a big deal in the future. We haven't done too much of that yet... Right now we only have three pilots who are-- can do this, and we've been doing a little bit of training. We have one drone for the department. Hopefully we'll get a budget for a little bit of more stuff, but we are able to do some crime-scene mapping. We haven't done that yet. On certain types of SWAT calls, we're allowed to go out and assist on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that part around the outside of whatever the target area is, and we have on one instance deployed a small drone inside of a residence to try and get an idea where the target person was.
Training	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: LPRs] And we required training for most of it for being able to use that. And it requires that the officer be able to want to use it and be able to have the time for it to do it.
Training	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	It's part of our responsibility is training on technology systems. So we provide training while they're in the academy to the new recruits. And then we also provide ongoing training throughout the year if there's a need, for example, if a watch commander in a certain district calls me and says, "Hey, I've got some officers who are not trained on the license plate reader system. They want to use it." Then we'll arrange to come out and give them training on site.
Training	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: training] Or somebody's coming out of a special assignment, non-patrol assignment. Somebody's coming out of narcotics, the most common one where we'll spin them up on the cameras. Get their cameras [in tune?], spin them up on the license plate reader stuff, sit down, do a refresher with them on the report-writing program, and the dispatch program, and MDCs because they enter reports differently, like a detective would, as a vice or as patrol officer, where you do it from the programs on the MDC. Then, it's got to go through an approval process, so how they do it is different. So, yes, so [name]'s spinning someone up on something in training them.
Training	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	I was the first one to start writing reports in the car on our computers as the guinea pig, and I started teaching at the academy when everybody started doing it, teaching how to do that, and I have ever since taught out there as to how to do that, and the difference in officers from when we first started doing that as far as how adapted to technology they are and now, it's just night and day. It's completely different. So everybody is much more computer savvy now.
Training	LE	S	Field	36-45	21-30	Male	LE-S-016	Whenever we get something I get it, and I get to play with it. Either

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					through the radio in [name] or a IT person. Like my car, it's got the newest computer. It's got the newest keyboard. It's got all this new stuff to test and see if I can make it work. Then I can teach somebody else how to do it, but I'm kind of the guinea pig when it comes to most of our technology stuff.
Training	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: running a person's information during a traffic stop] ...we have a few people who will not use the computer, use only the radio, which then takes up bandwidth for everybody else, but they won't change, and they're our trainers. So when you have trainers who are teaching people to constantly do that, it's like, yeah I can teach them how to, but you don't need to do it all the time. So it just, there's a lot of things that we can do with technology that our people are preventing. Whether that's dispatching, whether that's running inquiries and stuff like that on computer, because we just get a mindset of, "Well, this is how we've always done it."
Training	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...We have an app for PowerDMS, which is our online training stuff...
Training	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: drones] Policy's written, we just haven't made the purchase yet. In fact, two of us are going to [City] on Sunday to the training to get our pilot's license. Because we're the government, so you have to go through extra hoops [laughter]. Yeah, I could buy one on my own and fly it over my house today. But because I'm the government, I have to get a license and all kinds of other approval. So yeah, it's coming. Strictly for the purpose of [inaudible] crime scenes, search and rescue, tactical situations, and that type of stuff. It's not for the spying. So we've had to--everybody gets concerned, so we have to put all these special caveats in our policy that this is what it's for. Again, [Name] can do it, but we have to be careful.
Training	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: dispatch question protocols] I believe they have that for fire and law as well. I don't know that we do that up here, but, at least back when I was there, there was a procedure manual, and when you're going through training, you'd go through it call type by call type. If this sort of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								thing, this is what you're going to ask. A lot of those are very similar. If it's a law call, whether it's an assault, a shoplifting, this, that, or the other, you want to know what the suspect's wearing, if they're still there, if they're armed, which way did they go, for pretty much everything.
Training	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	I started off as everyone else, the traditional out there in uniform, responding to calls. Did that for about three or four years, and then I transitioned into the training section of the office, who was in charge of all of our new hire training. From there, I realized being in charge of the training that we had some tools, particularly the computer system, that nobody knew how to use. So I figured out how to use the computer system, which then went back to rewriting the training manuals for more efficient work flow and using the database and other tools. And these computers were pretty new. And at that time, it was a DOS-based system. I remember when we got our first PC, which everyone thought was kind of funny. So seeing the evolution and staying involved in that, which transitioned into more technical stuff and true computer work...
Training	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...So as I tell people, everyone starts off getting into law enforcement and you're the street cop out there answering calls, but then there are other career opportunities. And that kind of moved into the tech world. I started going down that path and decided I didn't want to support computers my whole life so I pulled back and stayed more on the training and application side, dealing with the new stuff that came through for law enforcement. And then the mobile data computers started coming in so I got put into that...
Training	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: smart phones] ...Of course, it costs a little more. The cost of the device. The cost of the service. That has to get absorbed into the budget. Then I start hearing from people who are upset going "Well, they give me a gun and all this other stuff. We have to do all this training and now I get this handheld computer and I'm just expected to know how all the parts work." Some of it was in jest, some of it was legitimate from people who weren't that tech savvy.
Training	LE	R	Field	46-55	21-30	Male	LE-R-019	[RE: formal training] For the computers, we do. For the records

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					management system. For the in-car computers, we have formal training. For the phones, we didn't have formal training. We probably still don't for all of it. When I was talking about the video from all the other companies that come in, I'm creating a formal training, both a written procedure and then taking the actual phone that guys carry and making a video with that phone to then catalog so they can go back and watch the whole downloading procedure, and I can tell them this was made with your phone. So if you take a video with your phone, you would go through this exact same process. So trying to recognize that there might be people out there who don't understand how that works...
Training	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: training] ...some like the videos and some like to read it. Different learning styles. I'm kind of going back to my days of being in charge of the training program and the adult learning classes I went to. As we sit around and think about how are all the different ways we can hit this, some people still need you to sit down with them and walk them through it.
Training	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: LE paired up] So from a security standpoint, I could stare at the device and not worry because I know another guy was with me doing situational awareness if something were to happen. And so we recognize that in that environment. I think we also came out of that environment recognizing that's a potential pitfall. You can't give people more stuff [crosstalk]-- on my radio, I can talk on my radio and watch and see everything that's going on. We all practice and train for that. Now, you give me something I have to hold and I have to data input. You can't maintain both of those. So that was one of the things that came out of is recognizing you're deploying more and more of these devices that give you the security and personnel. And if it's truly a tough environment, you need to pair people up just for that purpose. Kind of go back to have one person who's running all the devices in communications and someone else who's making sure you're safe.
Training	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: technology in new vehicles] And I didn't realize all of those were in there until I just had a little more time in the car. So if a patrol guy jumps

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								in a car, are we telling them all these things are there? Are they just discovering it for themselves? Should we, as an agency, take responsibility in saying, "Here's the things that should be turned on"? You can't turn off your backup sensors because we don't want you backing into poles. You can turn off the lines turning left and right when you're backing up... More things I don't think anyone was aware of is there when we get these cars.
Training	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	And everyone knows that in a lot of wilderness areas, you're not going to have radio communications because you can't put a radio tower in there. And generally, wilderness areas are high and mountainous, which means there's valleys and radio signals don't get into valleys. So you know what valleys you're not going to have system coverage, you'll have direct coverage. But that just involves the pre-planning and training guys on the radio on the concept of a radio system and a repeated talk group versus a line of sight and direct talk group. And when do you change and what are the limitations. So their expectations aren't unrealistic versus what your technology can do. So you don't hear after actions the whole time that the radio system just stinks [laughter]. Well, it doesn't stink. Let's work to resolve it so the next time you know what to expect.
Training	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: wilderness area radio training] That is a formal training we've done. We've done it two times last year. When we did it, we actually videoed it. People could then call in and live chat and ask questions. But then we were able to publish the video out to all the users who didn't get to call in and ask their question. And we rolled it in with the radio training and then all the new technologies...
Training	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... So then in our training, we told people, yes, we recognize as we introduce more technology, information comes out faster. Don't forget the human factor. As a call taker receives a call and is typing notes and it pops up on your computer, the dispatcher is probably reading as fast as you are. Don't start asking them questions about what you're reading when they may not have done all their reading because maybe they sneezed and they're two seconds behind you. So sometimes everything

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								just comes so fast but you need to slow down and wait just a minute and let the dispatcher do their job and actually come over the radio because not everything may have been in the notes...
Training	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: video of wilderness radio training] ...Those are kind of the examples that we use in this training that we're then able to publish out to everyone and we are able to say, within our county, everyone needs to watch this. Within my agency, I was able to do a sign off sheet people had to do they say they have watched it to understand it. We were recognizing that's probably going to be a yearly process with a different focus, whether it is a state-wide radio system and why when you go to [city] you can't stay in the same talk group and drag talk groups and use all the resources all the way down to [city] to hear what's going on back home. Those things tend to come up...
Training	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... The biggest thing we used to joke about is the law enforcement officer does not need to tell the dispatcher that the fire truck is on the scene. The fire trucks knows they're on scene [crosstalk]. This goes both ways. We have lots of tapes of the fire truck telling the dispatcher that the law enforcement is on scene. So that was the training years ago. They know they're on scene. You don't have to tell anybody that. Resource utilization, talk time. So we finally said, "Okay. Look, if the tow truck gets on scene, we don't track the tow trucks. You can tell them the tow truck's on the scene, if it makes you feel better." But again, just something we would sit there and laugh about, going, "They know they're on scene. Really?" But it made them feel better, I guess, to somebody was on scene.
Training	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: radio signal repeaters] ...We review our busy reports quarterly to see if we need to do an update at a site or if you need to do a training to work with people on how to use their system better, to not use those resources. And just more things to be aware of.
Training	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: body armor] ...So then we started looking at the shoulder mics and everything else, and because it's fairly new and we've only had a few trainings wearing all this, people are realizing you're going to have to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								rearrange stuff to maintain those communications. And then even putting these helmets that are not very comfortable. Just learning to work with all the new equipment that's out.
Training	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I think we're able, through training and introducing parts of it in stages, like when trainees first come out, they don't get to use the computer. They need to develop that radio ear and taking notes because when computers go down, the old pen and paper still works, and if you need to write down an address, and we see that, when the computers are down, our guy's like, "Oh, man. All of the sudden I've got to start writing down the address again." I didn't think I was relying on that... but I was. Because I wouldn't pay attention when the dispatcher would send us the call because I knew when I got in the truck, there's my address. So not overwhelmed, just they start to operate differently and then recognize when it's not there...
Training	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	I talk about when I used to deal with runaways, and people were telling me to counsel them and their kid. And I'm going, "I don't have kids. How is this my job? It was never a part of my training to bring all these things in." And so I don't mean it in a negative way when people talk to me about it. I said we need to understand what is being expected, and just because the law enforcement guys are there, and they're getting all these calls, it's a lot. And if you screw up any of them, then you're not doing your job and it's going to come back and impact you. Not that people don't screw up their jobs intentionally or in ways they should have known better. There just seems to be so much more coming in, and then the backlash within the country these days...
Training	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...If you don't have Bluetooth in your car, going back to technologies, the sheriff doesn't want us driving and talking on a cellphone. Public perception, it looks bad. Okay. Cars can pair up with only so many devices. So if it's a pool car, someone's got to go through and clear out that list and unpair everything so the next guy that uses it could pair his phone to the car... And some people are going to get in but who's going to do it for me? If you come in and say, "I don't know how to do it." What

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								are you going to say? You told me I can't hold it up to my ear. I don't know how to pair it to my car. I got a cheap old car and I don't do that in my own life. That's legitimate. As supervisors, you can roll your eyes and complain the guy's a fool, but that's a legitimate concern.
Training	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	The noise reducing microphones that are coming in and the good and bad with those. Up here, we always have to tell people about consider of wind and that you actually turn into the wind. Because the microphone's here and then the wind's behind you. If you go this way, the wind's hitting the same microphone your voice is trying to hit. Seems counter-intuitive.
Training	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	But it goes into the training of-- if the dispatch tells you it's windy, that was a big discussion. If when the new system came in, if you're digital, do you want dispatch to tell you you're digital? Do you want them to tell you why your transmission didn't go through based on their point because it was too windy and they couldn't hear it, because your microphone was too far away and they couldn't hear it, because it was digital? Or do you just want to be asked to repeat? Big topic at discussions, guys like, "I can't do anything about being digital. What good does it tell me you're digital? Just tell me to repeat." But if it was windy, you should be told, "A lot of wind noise. Please move." Little annoyance things. I try and count. Some guys are, "I'm glad this is the biggest annoyance you have today, and we can resolve this."
Training	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	For some reason, having to dial 911 because we've trained everyone to dial 911. It was supposed to be for emergencies only, but we've done a good job of training them. So everyone dials 911 for everything. And I hear stories in big cities of people getting yelled at, "This is not an emergency. You need to dial the administrative line." "Well, can you tell me that number?" Because we've trained everyone, dial 911...
Training	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: generation gap] there have been some people that we've been able to teach so many different things with technology. Just because you sit them down and you say, "Look, it's really not that hard. We can simplify this for you to benefit you and personalize it." I think personalization is huge because it's-- we still need to maintain a structured system where

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you do things a certain way. But if you can personalize it to that person's needs of, "Hey, I need to know my MDC stuff," or "Hey, I need to be able to look at photos on my-- for my cases," that sort of stuff, if you can do that, it's great. This is too much.
Training	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So when we're in training, we have a trainer and a trainee in the same car. Well, if one's using an earpiece and the other one is not, chances are somebody's going to squelch at some point. So I don't know if there's a way around squelching, if there's just not, but earpieces, I think, would be a huge fix to that. But everybody has to accept the fact of, "I'm going to use an earpiece." A lot of people don't use it because they don't want to go deaf and you can easily go deaf...
Training	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: e-ticketers] Yeah, we do have those. They're typically used by our motor units, our traffic officers, so those are pretty convenient. I am technically trained on them, but I'm kind of lazy in regards to technology, so I'd rather just fill out paper tickets than enter it into a little [crosstalk] computer--
Training	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	... When you go through the academy, there's just certain things you can't replicate until you're actually on the streets and working. So you have to really focus on a million things at once. And if you're not good at communicating and you're not listening to what other people are doing, then you're going to be lost...
Training	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	It's real as opposed to sitting in a classroom and talking about stuff. There's real danger. They're not blue guns, there's no time frames or whistles or anything to stop stuff, so you're either going to take care of the situation or you're not. There's no do-overs. And it makes it more exciting, it makes it more fun, it makes the job enjoyable. And they do a good job trying to prep you in the academy, but there's literally no way to replicate any of that stuff or just-- they have the scenarios and stuff, but it's not anything even close to real.
Training	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	... that's something they harp on pretty emphatically is know your geography. Don't rely on your computer because if something like that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								were to happen, you have to be able to get to where you're going without the assistance of technology.
Training	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: learning geography] So that starts prior to-- I mean, it should start if you're anticipating working in a general area, then you should do it on your own. But in the academy, [City] had geography assignments, and we would get overtime pay for them, so there's two hours a week, which is pretty significant, just to go drive around or do whatever they want you to do, find locations. Within the academy it's hard because it's combined regional academy, so you have different departments like [City], [City], [City], [County], who don't all patrol in the same area. So I don't need to know the stuff that [City] knows. And I actually got in trouble for that, for not knowing [City]'s geography, which is ridiculous to me... But yeah, if you're not taking the time to learn it on your own, it's not going to happen.
Training	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: learning geography] So I have my duty bag, and I keep my-- so we have, they're laminated and they're yea big or so. And so each side is a sector, so you've got Baker one side, Adam on another, then Charlie and Delta. So if in situations like that, if you absolutely needed to pull out your map, then you just-- and that's what they do with a lot of the recruits or people in training is they'll have them pull over, identify where it is, and go.
Training	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	They've had officers when they had a police shooting, they were using their personal cell phones and they subpoenaed to get copies of the entire cell phone. So there's kind of the whole privacy thing, which is why I think the department's moving to-- here's the department phone. Do not use yours, otherwise anything you have on their, personal, private, it can be shared.
Training	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: personal cell phone use] we do try and tell people not to take pictures of crime scenes and whatnot because it leads to problems.
Training	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I think, partially my generation, but definitely, the generation that's coming after me, we're more apt to text than make phone calls. And so I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								think we're not as good of communicators because of that. We're used to being able to plan out what we're saying before we send it and stuff like that. So that phone calls, sometimes you-- when I first came to the department, we had to start making notifications. I'm like, "Oh my God, I hate talking on the phone this much." It was just, it was something to even get used to, to be on the phone regularly.
Training	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I'd kind of like more sharing between all the databases. I know we have [state criminal database]. If you're certified in that, you can pull up pictures of people. But I think that all of those databases should just be rolled. The states should be able to communicate.
Training	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	... So, for example, if I'm driving, I may get a hit on a suspended plate. Well, I can't do anything on that car if it's parked. I can pull it over if it's moving, but I can't do anything on it. So then I have to sit there and acknowledge that, yes, this was a positive read or a misread, and it's a little cumbersome to actively be on the plate reader all day... But, at the same time, it's nice. I think now we're starting to learn how to use it a little bit more.
Training	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...I arrest people who break the law. I enforce traffic violations. I help officers learn their job, learn exactly what it is they're supposed to do. I am like a teacher. I proofread reports. Proofread lots of reports, make sure that in the reports, that there is enough information-- that the information in the report is the same with the UCR code, which is the uniform crime report, to make sure everything matches. I make sure their arrests have probable cause to go with the arrest. I make sure the case report and the arrest report all tell the same story. So we're also like storytellers.
Training	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...We will do [surveillance camera] missions. So we will watch the [surveillance camera] Devices. And if we have any arrests I have to create missions for all of this. We do at least two a day. And I'll assist the officers with the arrest if they've never done a [surveillance camera] arrest before. And pretty much if anybody has any information then they will come in...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Training	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: patrol officers] In roll call, there is a large monitor and in it, that PowerPoint that gets pushed out through the phone and in their email is playing on a loop. So they see wanted individuals every day. They see what's going on. They see the officer safety alerts. It's all on there... And it's just continually going on a loop the whole time they're in roll call, so they may see somebody on the street and say, "I remember that face. Where did I remember him from?"
Training	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	we have two people in a car so the way we're trained is pretty much the passenger is using the PDT while the driver is driving. So that works out... in [city] most of the time we are 10-4.
Training	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	--that was viewed as a way to teach me how to be a cop without being reliant on technology. So at that time, when our CAD went down due to maintenance or an unplanned outage-- what's a fancy way of saying crashed? It was like I could still do my job and i
Training	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	...The reality is, we have the technology but it's as if we're using iPhone 4s and there are iPhone 7s. And because of government contracts and because of training and implementation, we constantly stay so far behind the technological curve that I don't know that we'll ever get to that pie in the sky because the T&E, the safety development, the safety committees, all that sort of stuff that has to take place, puts you two years constantly behind the curve.
Training	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	Well, I can do everything a regular patrol officer does. So I can enforce traffic laws if I wish. I also use time to exercise my dog or do training. I can answer any call that I will not go to, but sometimes, there's calls that patrol officers specifically ask for a dog to come help them.
Training	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	Well, we're responsible for patrolling the entire county. Usually, you will get a district or two districts to patrol specifically every two weeks, but with leave and people training all the time, it's hard. Usually, things are different every day, but the plan is to do a district every two weeks.
Training	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	It's fairly new, but I've been training a dog, so I haven't been on the road to really use it. I've signed on once, so I really don't have much more

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								experience with it.
Training	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	When we're training, we use an app called MotionX. It's just a GPS app, so it'll leave a track of which way you went and how far, how fast you went. So we use it in K9 when we're training, so we'll know exactly which way somebody went, the person that's laying the track and then when it's time for the handler and the dog to go, they'll go and you can put the track on top of each other and see how close you were to being on top of the track or if you were way off.
Training	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	I haven't had to wear it yet. I got the training, so—[talking about body-worn camera training]
Training	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	We've had them for about a year, but it's been about a year since I was working the road. I was trained, I think, in January. They're slowly getting everybody up to speed with it, so I haven't had to wear it yet. So I don't really have an opinion about it or not.
Training	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	Well, I guess, it all depends. I mean, I don't have a specific incident because I've been training, but sometimes our dispatchers, the ones that give us the call, for one reason or another, may omit something maybe by accident or something that where they may not think it's significant as they're reading the call to you. And if you don't read the call on your computer, you'll miss it too, so.
Training	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	So the roll call usually takes 10 minutes, depending. Sometimes if there's in-service training that goes on, it goes a bit longer. And then if there aren't that many people there, it may go shorter. Depends on the person doing roll call too. Some people do it longer than others, so.
Training	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah. If you have any specialized training - let's say you have a patrol rifle; you're certified in field sobriety testing - you would say that stuff at the beginning. And she'd say, "Okay, I got you in there." But if you have a computer, now, we don't have to do that at the beginning of our shift anymore. Through the tablet, I put in my call sign, I put in if I have a partner, I put in specialized training, and I hit submit. And then it logs me on automatically. And so they came out with an order probably six,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								seven months ago, maybe a year even that said you no longer have to come in service over the radio if you can on the computer.
Training	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Yes. We have a central office. We're considered what is considered a central unit, meaning we have a central location, and we run the entire county from there. So we're not at a district station, and it's-- so that's where our office is. That's where our sergeants' offices and all the K9 handlers' office are there. So that's where we-- all our equipment is for training and that kind of stuff.
Training	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Yes, we do use cell phones in training for tracking. We have a tracking app that we use so we can-- the person who puts the training track out will use the app and put a track out and end it. And then, when we start with the dog, we'll start it and we'll run the track, and then when we get to the end, we'll end it. So you can overlay and see how accurate the track was.
Training	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	About the only other things, I guess, that we use-- well, we use electronic training collars and we use IR lights, infrared lights, most particularly if we're working with the SWAT team for anything, and there's only a few dogs that do that. Or if the helicopter comes out, we'll use them.
Training	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	I guess that it really consists of preparing my dog for the day, getting-- whether I'm training a new dog or my current work dog.
Training	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	Domestic Security Operations, which are the ones that handle the civil disturbance training, when you see the platoons and the public safety platoons out there.
Training	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] You take proactive measures. For example, there are times when you bring ESU into a training class, which is an actual operational division under Special Operations Division, SOD. That's a radio name, SOD. So bringing the ESU, Emergency Services Unit, in to meet the dispatchers, right?
Training	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] Everybody. And we do that for-- it goes on for a couple of months to get the whole police academy, depending on-- say there's 1,000 police officers. We bring every new police officer while they're still in the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								academy. They actually come in this room, and they sit at this-- all these chairs. And we bring in-- I'll speak with them, the captains will speak with them. Then we give them a tour, and we have them sit down. And sometimes, we bring them down after so we can answer their questions, but we feel that that's made a big difference because I don't think it-- and I'm not saying it because I'm the commanding officer of the 911 center, but I don't think any police officer doesn't have a newfound appreciation of what the dispatchers do, because you'll see-- especially a busy day. We do it on day tours and the 4-to-12s. The 4-to-12s, it's 1,500 by 23. We call it 4-to-12s. It's just our language in the day tour. But the 4-to-12s is very busy. And the dispatching is just-- you'll see when you go upstairs if you have time for that, if that's part of it. But you'll just see how busy it is.
Training	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	... But sometimes you just can't-- sometimes you need to teach that recruit how to operate without a PDT. But I think that PDTs have come a long way, that the police department is really doing a good job trying to outfit almost every unit with a PDT.
Training	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	For me, no, but I see other officers having issues. There was an officer that just came back to the patrol. He was in, I don't know if it was gangs or whatever, for years, and he was back. He just got back a couple of weeks ago, and I had to kind of give him a tutorial in how the system works. He was never formally trained, but he'll be accountable for it. And I'm trying to give him my advice. A couple of the old timers will go, "Here goes cooking the general orders," about me
Training	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	So we have mandatory-- so it's defensive tactics. And then there's firearms. They're our two main trainings. So I'm in charge of the defensive tactics program as well, so like I said, I have 12 hats.
Training	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	I have a lot of hats. Yeah. So I'm the master defensive tactics instructor. So I teach or I'm in charge of the whole program that we do teach all the officers. On a normal year, when it's not busy, we have four trainings a year. So it's not a lot, but it's pretty normal across this state at least. So

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								three to four trainings a year. And those usually consist of three hours for that training, for that session. So it's only 12 hours a year. So not a ton. We always want more, but it's hard. It's hard to get that. And then firearms is about the same. So usually, four trainings, and that one of those includes the qualification. Every year, at the beginning of the year, we have to shoot and qualify. And that's always a standard at the beginning of the year. So those are all mandatory. If people can't make it on certain days, we do make up sessions and do that. But it's important. So those are the two. And then we have, besides those two-- so I teach everything hands on, all fighting, handcuffing, baton, striking, pepper sprays, mine. And then Tasers are separate. We have our own Taser instructors that are separate from that. So they deal with the Taser as well. Every two years, we have a recertification as well. So every two years, we have to do Taser. So every other year, pretty much. We have to do a recert on Taser, OC spray, baton, and less lethal shotgun. So that's coming up in two months, so every other year. That's a certification through well, our department's accreditation. So that's part of that as well, so.
Training	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Yes, so you pass on the briefing from the other squads. At that point in time, there may be training that needs to be done, in a briefing. So right now we're issuing Narcan which is the drug that brings you-- when you hear about people who overdose on opioids, and they use a drug called Narcan to bring those people out of the overdose. So all of our patrol staff is being issued that right now, so we might have a briefing training that says-- so we'll pass this information along. There might be a short training environment, and then everybody kind of goes out and goes on to patrol. A
Training	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	... Or on the radio, especially in-- because I mean we're trained to use as few words as possible on the radio, right? Conserve radio time is a big thing. Don't eat up radio time. And so you try to convey messages in as succinctly and - what's the word - just as shortly as you possibly can.
Training	LE	U	Field	56-65	31-40	Female	LE-U-031	Yeah. Exactly. Yeah. So I don't have a camera yet on bikes. They're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					coming. I haven't been trained on it so I really can't-- I mean--
Training	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	During scenarios you might have a critical incident on the border somewhere. Say the airport, because that's technically [City], [we need a command van down there?] and you send a bunch of cops down there, and [inaudible] because say if I send two cops to each station, when he comes back, that information filters out to the other cops when they're in the locker room and stuff. Or when something does happen those two cops get on the radio, "Hey, guys, go to this channel." We don't practice that. And unfortunately until something happens, then they make changes. And that's been the history of every police department. Until something happens then they make changes.
Training	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	As a trained officer, I tell cops I want-- I suggest that they wear them. When you go to protests and it's so loud, you can't hear what's going on.
Training	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	They want to be really cool and put it out here, but then what happens, we try to tell them that this wiring gets frail after a while. And [if you?] lean against it. But it's a training thing, so, sometimes I let it get frail. Like, "Hey, that oven is hot, don't grab that cookie."
Training	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	I work at the discrepancies between dispatchers, dispatch management, and the patrol officers. They are supporting on the field. I try to initiate training on both sides, so they're operating on the same page.
Training	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	...We don't train." Comms is the last-- if there was ever any shortcoming in our day to day, it's communications training.
Training	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Yeah, it's like hey, what is that? We don't train it. We don't practice it. Fire lives and dies by it. So once again, when we talk about unified command-- fires, we run in, guns blazing. We get it done. Fuck the fire department. Just do it. Jesus Christ, all they're doing is tying up the streets with their trucks and their hoses [laughter]. So I've been trying to develop a thought towards a formalized unified command training.
Training	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Well, I think it's better when everyone-- if it was presented and sold to the troops instead of us reading about it in the paper, it would be probably-- if like when they rolled out the body worn cameras, IT would have taken

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								ownership of the training instead it rolled up the cameras, and said, "You guys figure out how to train everyone how to use it." So we have train the trainer.
Training	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	We don't train any of our officers to be comm L trained. We don't take the comms part of it seriously. We just take it for granted that it will work, and then someone else's makes sure that the towers are up, and that everything is up, and turn it on, and it works. But we don't train individuals at all the stations on what to do if all sudden, you can't talk to dispatch, there is a problem.
Training	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	So it's a learning process. Certain people have different aptitudes than the others. So I'm not going to make up like a judgment, say they all use them. But some may use them. Some may not use them. It just depends on their comfort level. But the features and functions are there to help them, and they are trained at the police academy on how to utilize the phones. So it's not like we just give you a phone, and then you'd have to figure it out. No. They're trained at the academy on how to use the phone itself. And then if something happens to the phone, whether it's damaged, then they come see our division, the technology telecommunication division. And then we help them either replace the phone that was damaged and to scope of what they were doing. Or if they lose it, etc. Any software updates that happens, it has to be updated in the phones itself. Everything comes through us. Yeah. So we'll get that pushed out to the phones.
Training	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	When I came in, you were taught you should be making good arrests. You should be making a difference in the community. The criminals should go to jail if they commit a crime. That's what we were taught. We were taught to do proactive police work.
Training	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	...So training people to kind of be a little bit more with their radio discipline is important. So I think that's an area to explore, but right now, what we're trying to do is keep a body close to the command post so that our personnel is able to push out that information.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Training	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	... So it's more you train as an emergency manager you're trying to do much of it beforehand.
Training	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	How's that? Because you know some days it's a lot, somedays it's all meetings, someday like you know you're off doing training for whatever especially since I just started the position I've been doing a lot of training with the emergency management side or even you know webinars for the GIS for the technology you know for that stuff so software updates and things so yeah I don't know. Webinars, updating data, updating plans, going to meetings, eating lunch.
Training	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] Only when you first get it really. You have to have your initial training in order to get your to be able to use it.
Training	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Radis not so much. We showed up day one they gave us a radio and they said here you go. I mean it's pretty much basic training. You press this button to get out, this button to switch, this is the volume. That's your emergency button. Don't touch it unless you need it.
Training	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] And they've also given us additional we've both been to and are certified in [Job title]. It was a one day class that we took with enhanced lifesaving just basically just knowing how to work a tourniquet, knowing how to do trauma care and stuff like that, we're also trained in how to use an arcan if we have to if it comes to an opiate overdose and stuff like that, how to identify it. So they do train us in order we are first responders as well. That was one of the things that we had multiple hours of training on and continuing education on is how to deal with any kind of an injury or trauma to begin with. Of course they're going to dispatch EMT's and EMS while they're there but we're the ones that drive fast. We'll get there first and so we have to be prepared for that situation.
Training	LE	R	Supervising Field	36-45	21-30	Male	LE-R-048	You are the special unit you know when we got here we had two radar units and one laser. A lot of folks weren't certified to run it, didn't have

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					the training, they didn't have basic training to do DUI detection, they didn't have basic training to do speed detection, they've never been in training for investigations for anything like that, a crime scene process and the previous administration basically gave them 20 hours of training which is the bare minimum by state standards... In my semation there's three things that cause issues with law enforcement officers that's education, execution and ethics. Education's on me realize what your needs are, what your short comings are and give you the education you need and training you need to do your job. Execution's on me. Once I train you I got to make you're doing it right. If you're out here and you're not applying your knowledge correctly I need to figure that out and make sure I correct that and ethics is on you. I can't teach you how to be a good person. You know right from wrong. If you know the right thing to do you choose the wrong thing you're not going to work here you know and that's kind of the way I look at it and that's why I tell my deputies.
Training	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	..In my summation there's three things that cause issues with law enforcement officers that's education, execution and ethics. Education's on me realize what your needs are, what your short comings are and give you the education you need and training you need to do your job. Execution's on me. Once I train you I got to make you're doing it right. If you're out here and you're not applying your knowledge correctly I need to figure that out and make sure I correct that and ethics is on you. I can't teach you how to be a good person. You know right from wrong. Training	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	They go through the first week they get their GCIC done. We certify through GCIC security integrity and all that stuff. They have 6 months to get listed to go to a one week dispatcher class. Really and truly by the time they go to class they already know what they're doing. They've already been trained on the job and what they'll do is actually go through and watch and learn how to first thing to do is learn how to take notes,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								learn how to get the information.
Training	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	All of the dispatchers are also trained in the same capabilities and operation of the video surveillance system as our video analysts so in the absence of a video analyst a dispatcher can operate the cameras in addition to monitoring [location] call for service, monitoring our own calls for service, typical ongoing monitoring of local and national news feeds.
Training	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	It's all continual training. As new applications are implemented new technologies are implemented and adapted by the department. We have two mobile surveillance trailers for example that now didn't use to now are running the same video management system that we have for all of our fixed camera assets on campus.
Training	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	So these are notifications that are coming in to dispatch and popping up so they have to be able to be trained, keep up on the changing technologies or the advancements in existing technologies and then of course as new tools are implemented they're trained on those so for a dispatcher it can be somewhat overwhelming.
Training	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	We train the most explosive detection canines of any other agency in the state so that speaks to the knowledge and the capabilities of our officers as trainers that we are looked to as that first in class agency when it comes to explosive detection canines. We have a number of firearms trainers that are just top notch and as part of the citizen's academy they go to the ranch, they experience what it's like to go through firearms training. We have a simulator that they experience, a no shoot situation in a very safe controlled environment.
Training	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	They are getting out there ahead of this engaging these students in different programs, providing presentations so that they can begin to train them as the students begin to age here on campus and they progress to sophomore, junior year and whatnot they too through their experiences and through the education that we provide begin to become

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								more seasoned and can assist us in helping to bring up the new students so yes it is a bit of a disadvantage in that there are new victims potentially coming on to campus every year but it allows us knowing that it allows us to get ahead of it, train them immediately, establish those relationships very early on, take the preventative measures and look for new ways that we can do things.
Training	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	The student newspaper does a weekly crime meet so I'm the person that contacts them or they contact me and I tell them what's happened and give them the information they did for their reports and then on the training side of things my job is to schedule departmental training. If people are going outside the department for training my job's to schedule them for that, pay for it, it's maintaining all of our posts, police officers and standards, records, making sure that people get credit for the hours, making sure people have met their [name] standards. Every year you have to have 20 hours of training and there are certain mandates of what that training has to be so and then also I'm involved in background and recruiting.
Training	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	I'm out with a you have to really train your officers to start using the right sort of terminology.
Training	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	Because I was a student employee here a long time ago almost 15 years ago so I've known part of the department peripherally for a long time and so we had two Sergeants who were both really good Sergeants and our now doing other jobs that were running dispatch and I don't know how well equipped they were for it then they finally said okay we're going to hire somebody so they hired someone who had run a large 911 call center and she's done a much better job of dealing with the personalities (00:54:36) of bringing the standards of training up of knowing what to send people to so I think it was you know we had some people that were kind of deficient... They identified good long time people and put them in those positions and so I think training, incentivizing because it used to be not a dead end but you got into that job there was nowhere to go now there's people making you know the equivalent of a Sergeant's position

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								in dispatch but better hiring process, better management, better training all the things you would think would make something better.
Training	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Pretty much, yeah. I mean I get up early every day; I'm at work for 7:00. I mean in the afternoons, usually every afternoon I usually stop off at the fire station, make sure I didn't get no mail or if we had any calls during that daytime, see what, see exactly what went on. If I need to sign any paperwork, any phone calls I need to return there. I mean at the police department I kind of have two secretaries and a staff that work under me, so throughout the day they're constantly taking messages and calling me so that's pretty much taken care of on that end. But the fire service side is all volunteers, so you just you've got to pick up the information when it comes in or we all come together and when there's a call or when there's a meeting or training, other than that you don't keep in contact throughout the day on the fire service side.
Training	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	... When you're trying to start patching all them people together, you've got, I mean you've just got multiple agencies, and then you got your like, people like the [Organization] that's coming and they're handing out radios to them which they don't, they're not radio etiquette, they're not properly trained, they're hollering things out on the radio, so yes, I do think it causes a significant issue. They're not properly trained on how to work the radios. So yes, I do believe that somewhere along the line there needs to be some more training and education involving the radios and the communications.
Training	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	...Look, if a person is trapped on a roof, and they've been there for a day, another four or five hours is not going to hurt them to stay there where we can get there and do it safely and then get them back in one piece. The law enforcement fire department, ambulance, we have the resources and the training to be able to do that.
Training	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Well, I think communications amongst the span of whether it's law enforcement or police department, like I said earlier, I think everybody kind of needs to be trained the same so there can be some kind of radio etiquette that we can talk across jurisdictional lines, that way everybody

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								understand what everybody else is doing. That's a definite. That's a definite.
Training	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	... So we are having to skip two or three years in between and once again, who are we hurting? We're hurting our citizens because you get the best training there is in America there, and then they come back and they teach us. So once again, it's limited on the amount of funding that you have.
Training	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Yes, yes, definitely. Definitely. Where you could hire some people to be able to pick up the pieces during the day time or do some of the paperwork or look, I talk about this all the time at training. Going to a fire or going to an auto extrication is only a small portion of your job. The hardest thing that you've got to do is go clean up all of that equipment and get it ready for the next call after that fire is over.
Training	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	We actually did a drill 5 years ago maybe in our library involving mass casualty, active shooter, and we had [City]PD, [City] Police, [City] Sheriff's Office assisting, State Police, they all participated. We dispatched them. We brought them in in as much real time as we could and I think we found a few bugs in the interoperability at that point. And I think they've been addressed since then.
Training	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	... It was great for training, we were able to watch and evaluate each officer, we used it for the active shooter training we recently did, you were able to watch it from that officer's perspective, and able to tell how much they're communicating and what not.
Training	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	I like some of the stuff we have, I just wish we could have more access to it, and even though I'm back to Patrol, I've got to go through two different people to get--to ask to be approved to get issued a laptop. Really, I think it boils more down to training everybody.
Training	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	... You were taking a car, then you put a police package in that car, it was never designed to have all these things integrated into it from the beginning, and it probably won't be, because it would be too expensive. A lot of training, I find most technology errors are interrelated, so--and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								people just calling things out of order. It's from raising 10-4, people love to say 10-4, it's like, oh, 10-4, what 10-4 means is something very specific, you're not supposed to say 10-4 before you start your conversation.
Training	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	Training, certainly. The--training is the only thing that could solve the human errors. There's nothing that can suddenly prevent them from putting too much information on the net or keying up too much
Training	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	... So you have to have a little bit of work, self-drive, that you want to do well and these done. I think you have to be aware of your surroundings. I think you have to want to have a want to learn also, 'cause there's always investigative types, and leads are changing. So you're going to want to go to classes and pick up on these things and kind of be on the cutting edge of what is going on as far as investigations. That way you can push it down to the officers, or you can be informed also.
Training	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Yeah, we have a very good skills training program when you are new so when you are new you get trained on all of our software and equipment and if you are already here, the upgrade stuff, usually they are pretty good about making sure everybody knows how to use it, and things of that nature. Most of it is not that big of a deal, things around here change gradually, you know. This radio does the same thing the last radio did, but you know, this knob is over here and this is different and has a better signal and the battery lasts a lot longer, so.
Training	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	No, it wouldn't be that type of merger because we would keep the police department here; it wouldn't be like a merger with - like our fire department became [city] fire department. We would still be [town] police, but we would just be using their computer system that they will be dispatching for us, so everybody is going to have to learn a new - learn how to use the new software.
Training	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	And don't -- let me -- don't get me wrong, we have some knuckleheads. You know, we have human beings, right. I am not somewhat immune to it but we have not -- never had that rash of it being cultural in our agency

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you know or failure to train on a certain area or training bad in areas, use of force and stuff. We've not had that issue, but it still brings a level of accountability to the officers when they put that body camera on and they instinctively know then. You know, so it has dropped assaults on the officers, it has dropped our complaints. The most complaint you get is he's ride too, right.
Training	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	S2: There are some two in a car if they are being trained. We have a [Job title] program. After you graduate the Police Academy, you go into a [Job title] program where you are paired with somebody and you get that basic education of the Police Academy, then you get the real op experience with a trained officer for three to four months Performa, so --
Training	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	... He came in and talked to our training staff two weeks ago on millennials -- on how to deal with young people. Why? What their thought process is? And he talked to -- he has been coaching for fours years. He had to talk to our people about how he had to change his mindset on how to deal with people because when I was growing up, you know, a football coach could beat you. [Crosstalk] it didn't matter.
User_characteristics	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	But it's frustrating, right, especially when you're working with kind of the Type-A personalities that gravitate toward law enforcement or firefighting. When you have good training, everybody's rocked, right? They're like, "Wow, that was awesome. I mean, that was excellent
User_characteristics	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	And so sometimes you don't have adoption by everybody because they don't want to use it. I think, again, that's becoming far and few between because of the age of people that we're hiring. But I mean, we had a guy up until a few years ago who didn't even have a cell phone. And when he finally got a cell phone-- and I'm talking like three years ago didn't have a cellphone, and when he got a cellphone, he has a flip phone that has 10 buttons on it.
User_characteristics	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	.... So I'm always available, ready and available. And it's time-consuming. A lot of time-consuming, sometimes I have to break away from okay, I have to break away from work so I can have at least some home time

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								with my kids.
User_characteristics	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	Dedication. You have to be very dedicated to not only, not the job, but if it's a dedicated person that wants to make sure that that person, that family, their officers, their firefighters go home to their families just as you're going home to your family, you'll be perfect for the job.
User_characteristics	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	...And so a lot of people call me ADD. I don't think I am, because I think it just helps to keep my sanity, because I'm able to switch from one to the other. So I think that's another good part of my job, also.
User_characteristics	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Open-minded, someone who look at both sides of the spectrum, not just one. Thinking about long-term goals, long-term effects, especially emergency situations that if I make a decision now, what is going to be the repercussions in an hour, in 12 hours, in 24, 48, or down the line? And it's one thing that we really have to, we, my department, really have to think about and really have to keep in the back of our minds is what's going to be the repercussions later on down the line.
User_characteristics	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Dedication. You have to want to do this job. It's not a job that just anyone can just jump into. They have to realize that they're going to get screamed at, hollered at, fussed at, in an individual or individuals' worst time answering a 911 call. So cannot come in with the mindset of, also being the same job, the same day, every day, 'cause it's not. Heavens knows what's going to, what's coming down the pike.
User_characteristics	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	... So lots of time, it is very, very, very stressful that people are not trying to help themselves. And I didn't grew up in a culture like that. And it's, granted, times change.
User_characteristics	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	And have to remember that we still have to rely back to the Flintstones every now and again. My previous life I was a paramedic on an ambulance. And it was always basic care before advanced life support. And I think that that's the same analogy, if you will, today is that you still have to have paper and pencil. You can have technology to a certain degree, but you still have to revert back to those smaller issues that a lot a lot of people, think about it. Let's unplug your computer, take your

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								iPhone away for a 24-hour period, and see how hair-pulling it [inaudible].
User_characteristics	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Yes, because it shows the proactivity of a lot of departments and facets of the [County] that people, according to some people, all I do is walk around the office with a two-way radio and a cellphone. I had a family member the other day, I was at a family gathering, and it was right around, right before Thanksgiving.
User_characteristics	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Someone that has good listening skills, that's able to I guess sympathize with the caller, because you're not always speaking to somebody that's calm. Sometimes you're speaking to somebody that's upset. Sometimes you get callers that don't even listen to you when you're talking to them [laughter].
User_characteristics	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	... You have to get used to working with different people and people you haven't worked with before for 12 hours straight. Versus working with them maybe 30 minutes, you're working with them 12 hours straight now, so now you have to get used to how they're working. And that's the challenge for me as a supervisor 'cause I have to get used to how they operate, 'cause not everybody operates the same.
User_characteristics	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	For the most part they're good. I've spoken to dispatchers and upper administration. I'll still, I'll tell the same jokes. I don't like to treat people differently or special because I wouldn't want to be treated special just because I have a rank, so when I speak to upper staff or upper, I guess would be upper management, I'll tell the same joke, or I'll pick on them too.
User_characteristics	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	No, it's not a problem. You just have some that you never hear them, and then others that that's all you hear. So it's not a problem but...
User_characteristics	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	You can definitely tell they like to, they like to hear themselves talk [laughter].
User_characteristics	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Some use phones; some use headsets. I personally prefer to use a phone 'cause I'm a klutz, and I'll end up with the cord for the headset wrapped around me by the end of the day. It's not a good idea.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	And you have some that that's how they operate is with a headset. They don't walk in the room without their headset.
User_characteristics	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Yeah, it stays the same. You're just trying to pick up more calls. I mean you do try to work more efficiently. But you definitely make sure that you answer all the questions you're supposed to answer. You're supposed to get all the information that your deputies, you know your deputies are going to ask.
User_characteristics	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Like if you have, you have some employees that will get, not disgruntled, but like just aggravated, 'cause you're sitting in the same office with the same people for 12 hours. So you tend to get, I wouldn't find a single dispatcher that wouldn't get irritated. So like you got that. Like me, I come in at 6:00 in the morning, I'm happy. I don't need coffee. I don't need, I am a morning person to the T. Like no matter what time I wake up, 3:00, 4:00, I'm awake. I'm probably the only one in this building that does that though.
User_characteristics	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	So I come in, and I'm happy. You got the same people you're working with, and they're all like I cannot deal with you right now, I am not awake enough, I need coffee. I'm ready, I'm ready to have conversations. I'm ready to talk. How are you? How was your weekend? And they're just like leave me alone. But they don't want to say that. They just end up getting snappy, you know. So it does tend to, I think that causes a problem is people failing say to hey, can you just give me my space, we'll talk in a little while.
User_characteristics	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Q: So it sounds like a dispatcher also needs some patience. SME: Mm-hmm. Q: And maybe to be thick-skinned. SME: Yes.
User_characteristics	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Sometimes it is, because it's volunteer. So they have their jobs that they do during the day. So it's 30, 40% at a time you might not get a response. You may not get someone to answer.
User_characteristics	COMMS	R	Comms	36-45	11-20	Female	COMMS-	In this day, it is very difficult. It's hard to find, what's the word I'm looking

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel				R-013	for, dedicated, it's very hard to find those, I can say [inaudible], most of the people that we've interviewed, it's more about, it's more of a job, instead of taking it to that next level and saying okay, it's way more than a job. I'm sorry, but it's way more than a job. If you look at it as just a job, you're going to do the bare minimum, and maybe 90% of your calls are going to go well, I did transfer them, or I did, and you won't care. You have to have some kind of compassion. You've got to know when to turn it on and off. But you have to have that compassion. You have to have that understanding.
User_characteristics	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Q: So we also talked about the fact that as dispatchers you're deputized here. SME: Yes.
User_characteristics	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	If you are a full-time employee in the dispatch center you actually attend what is called the 360 post academy, just like a regular police officer. We have a night academy and a day academy hosted at our agency. Our communications officers attend the night academy from 5:00 p.m. to 10:00 p.m. Monday through Friday after shift. They get paid and compensated for that. And at the end of it you are a post certified deputy just like a police officer on the road.
User_characteristics	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	The willingness to learn, multitasking, and wanting to do this position, not wanting to have a job. Wanting to be a dispatcher.
User_characteristics	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	It takes a certain person to work in a dispatch center. You know you have those people that get that call and they want to go out there and do it. It takes a certain person to sit behind a desk during that call and manage all that chaos that's going on with it and be able to sit there and hold it all together and do your job.
User_characteristics	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	It takes someone that is very calm under pressure. And able to multitask all of those things that take place. But it also takes someone who really is part of the team because at the end of it all it takes whoever's in this, in communications, together to get through whatever's going on.
User_characteristics	COMMS	R	Comms	36-45	11-20	Female	COMMS-	I think sometimes the hours in itself gets to you. You know some people

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel				R-013	aren't cut out to do a 12-hour--it can get mundane at time even though you're not knowing what you're picking up on the next telephone call it can still be mundane in a way. And I think sometimes being cooped up in a building for 12 hours is enough, with 2, 3 or however many people you have on shift at the time and you just need to walk away from them. It's kind of like family every now and then you need a little break. Sometimes that's what needed.
User_characteristics	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	But the fire department, you have to do that before each and every call. All of our fire departments are volunteers. So you're calling them out of their house or their vehicle or their job. Some of them actually are able to leave and go. So it's a little different. The deputies you're telling them to go there. And this is where you need to go. It's not exactly an option, huh. Whereas the fire department sometimes you--they don't go en route fast enough or what you feel would be fast enough so you're setting a second tone off trying to figure out where they're at. And you have to remind yourself that they volunteer. They don't get paid. You know they do this out of them wanting to help their community. So. It's different.
User_characteristics	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	No. I mean it just takes a certain person, just as it takes a certain person to be a police officer on the road, it takes a certain person to be a police--to be a dispatcher and be behind the radio and handing everything that's going on.
User_characteristics	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Someone who has patience. Someone who can listen, can multitask. Kind of a people person. And... yeah.
User_characteristics	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	[Sighs]. I don't think so. Not with me. I mean 'cause I kind of just let stuff just slide off my back so... not with me, no, I wouldn't say there are.
User_characteristics	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	So you just try to, you know, talk to the person, you call it through and just stay with them until help arrives and then after they get help and you disconnect you know you just take a minute to just kind of bring yourself back down and calm yourself down.
User_characteristics	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Actually I haven't. I've been lucky. A couple of hurricanes we've had I've been off work sick and off with a newborn baby at one time so I didn't

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								experience that.
User_characteristics	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	I say with our older callers sometimes they're hard of hearing and it's hard to communicate with them. They can communicate with you and you know it's hard for them to kind of understand what you're saying sometimes and we also have some people who live here who have heavy accents that's kind of hard. And sometimes you just have irate callers who just don't want to communication they just, you know? Want to say what they want to say and that'd be it. So you just have to learn to deal with it. Make the best out of it.
User_characteristics	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	It's--sometimes it can be difficult but you just have to stick with it and try to be as patient as you can, try to be as understanding as you can, and as calm as you can be. And try to keep your emotions down to, you know, so you can get the information that you need.
User_characteristics	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	I just do. I wanted to be a 911 dispatcher since I can remember. Yeah. I actually applied here when I was 18 years old. But I wasn't quite ready then [Laughing].
User_characteristics	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	But I got the job years later and I just--I love it. I do. I love helping people. I love talking to people so [chuckling].
User_characteristics	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Hmm. I'd say somebody that's caring. Someone that is... I wouldn't like say OCD but somebody that's particular and somebody that can do a whole bunch of different things at different--at one time. Somebody that can multitask. And just somebody that generally like you, you have to care about what you're doing, like you can't be a 911 operator or dispatcher and just be like, oh, okay, you know? You can't just have like an attitude like nonchalant about stuff. Like you really have to kind of put yourself in everything. And put yourself in the person's shoes like all the time.
User_characteristics	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Because you could be on the phone, the radio could be going, nobody cares that you're, you know, your radio is on, nobody cares that you're on the phone. EMS could be talking while police officers are talking, the fire department, 3 of them could be talking at one time so it's just like you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have to kind of listen to a whole bunch of different stuff going on. But if you have like a lot of kids that's a good way [Laughing] so you could be a great dispatcher because if you can hear all of them that's kind of like how they are, like when they're on the road, it's almost like well these are our kids, we got to take care of them. You have to answer them. So it's like even if the phone is on or whatever like you kind of just got to grab stuff from different places.
User_characteristics	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	... we just take calls from people and... try to not be... I guess mean or have an attitude, things like that. Basically talking to the public is what we do all day. Then we'll talk to the officers and get them where they need to go.
User_characteristics	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	...I mean they want what they want and that's fine, so you have to kind of put yourself in their shoes like it could seem like this is just the stupidest thing [Laughing] what you're calling about but if it's up there on your list an do you felt the need to call then let's work it out. The public is the public [Laughing]. But the other officers, for the most part, it's good working with them. Sometimes they get like, I guess 'cause it's predominantly male and we're females, they get like these little macho attitudes or whatever but if you just brush them off and don't entertain them they normally just calm down.
User_characteristics	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	But it's almost like I can tell you something and then I bet you before you get there you're going to ask me the same thing again like I just told you that. But if I say I just told you that then I would be wrong 'cause that's not my job to be, you know, rude and just have attitude.
User_characteristics	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	I just like to help people. I like people. Like I like to talk to them, I like to help them, I like to just kind of be--it's good to feel needed [chuckling], like I guess, like I'm a mom so I always want somebody to need me or whatever [Laughing], to my kids, let me fix your problem for you [Laughing]. But that's how I feel like...
User_characteristics	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	It doesn't make somebody a bad person if they can't do it but it makes them--it's multitasking, like I said 5 computer screens. I think today I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								would have a challenge [Laughing] going out there and doing it and I was telling the sheriff that earlier this week. I would have a challenging, going, sitting down. I don't know that I have the multitasking capability. And I see that with our older employees, too. That they're having a much harder time, and I'm one of those, we're having a much harder time adapting to this new technology where the younger people, they came out of the womb [Laughing] using technology.
User_characteristics	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	I think they have to be even tempered. They have to have a customer services attitude. But then they have to be willing to and able to learn and adapt, overcome the challenges whether it's one event or whether it's a new piece of equipment. They have to overcome the challenges that each one present and they have to be able to change because policies change with everything in here.
User_characteristics	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	So the relationship is really a positive relationship. Yeah, dispatchers are generally thought of as that... that entry level... position but I don't think of them that way and I don't think our sheriff does. I think he looks at them as someone who is not only a very important link from the public to the public safety resource, they are the link. But they are a very important link. And he tells them this in all of our staff meetings that dispatch, the dispatch radio room, whatever you want to call it, communications, is the voice of his agency. And so whenever he says, and he really means that, that he wants these people whenever they answer the phone, he wants them to be the most professional people because they are his voice to the public on a day to day basis.
User_characteristics	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	Yes, they do. They make a decision whether that is pertinent information for the event and whether it needs to be passed along. Some do that better than others just honestly. Some make a better decision on that than others. But I think they do a pretty good job of passing along the important information.
User_characteristics	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	It can be because... we are... some of them they don't use as often. Some of them require them to change their password every 30 days or 90 days. And that can definitely be a challenge. It is for me.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	I'm a public official. So I want people to call me. I have my public--my sheriff's office cellphone on my Facebook site. But if you don't know how to get to it, it doesn't help you. So... those are things that we look for.
User_characteristics	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	... Yeah, I don't like violent video games and I think that's a problem. That's a societal problem. If it's not a problem for my son because I was a parent who said you're not going to have those in my home. And if you go to somebody else's home who has it, don't bring it back here.
User_characteristics	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	Well I'm one of these that believes in our civil liberties. So I think we're bumping up against some of those civil liberties now. And I'm not really big on that. I think that there needs to be a lot of personal responsibility rather than additional rules and regulations made for us. So I don't think that--I think that being able to mine the data that we already have access to that's public in nature to help people is probably one of the good things that I'm seeing. I'm just really leery of that because of the civil liberties.
User_characteristics	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	... So I guess you could say that's the stressful part. I like dealing with just police stuff. I don't really like dealing with, I wouldn't say the public, not face to face. I can deal with them over the phone; I don't really like face-to-face contact with the public. So that's kind of stressful. Having to do office stuff in there, that's kind of stressful, 'cause I'm more call-oriented. I'm more, I like that kind of stress, not office stress.
User_characteristics	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	Listening. It's the main one because you never know, if you already assume that this person calling, based on how they sound, based on how they can't get their information across, you're going to ruin that call. You're going to mess up something in that. It's not going to go as perfect as it should. If you listen, you can, oh well, you need more than just police. I think you need EMS, or you're trapped in an elevator. I know exactly where you are. I can kind of hear things around you. I've had situations where this campus has had over 200,000 people on it for football games. And we've had to find somebody. They had no idea where they were. I had to basically say on the phone for them for probably 20 or 30 minutes trying to get them to look at a landmark. Be

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								like what do you see? Well I see RVs. That could be here, there, there. Then you have to be able to prioritize that. Prioritizing is the second one, I think. Safety is not even going to be in that because that's an obvious, but listening is definitely the first one.
User_characteristics	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	I like that. In a lot of agencies you'll find, especially in [city], they will not come to the station. They're stationed, and then COMMS, I want to say, I forget what they call that, the big EBRSO/EMS, and all them, they are their own station. They do not interact with, I don't like that as much. I like to get to know mine. They get to know me. They feel more comfortable when they know you, I think. And I think that that's good.
User_characteristics	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	I do. I come in, and I get my Clorox wipes, that counts, and I wipe up everything. Kind of OCD. I take ADHD medication that I've taken since I was 25. I'm now 30. I take that. I eat my breakfast. We do whatever we need 'til about 12:00. We do not get to take breaks, really. We do leave and go stuff. Like I have to go get lunch later. Then say at 12:00 sharp, I usually have my lunch.
User_characteristics	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	...Not people listening. Language barriers could be. But I've really learned to just be like I understand you're kind of new here too. I get that. We're new to each other; we need to listen. But that can still be stressful. You have people that are rude. I don't deal with rudeness well at all. You have people who might be a little mentally off that I have to deal with. And I've recently taken courses to help deal with that. Not all of us have taken them, but I have. That has helped a lot, to really understand like the mental side of that, of this field, which there's a lot more of that coming on, you see. And so that's a stressor, because I don't know how they're going to act. And I guess those kind of things.
User_characteristics	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	... We had a situation where I had to make, we have new sorority houses, and they change every year because people get kicked off or come back on. I made the whole new map up, like a just a brand new map. Just like [inaudible]. So sometimes I take things upon myself to make things better.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	...And honestly, we all want everyone to succeed in this office. So if I just kind of, forgive the expression, half-ass things, I'm not really getting the job done. Same with them. I feel that in order for me to be successful, for them to be successful, I have to be successful and at least try. And if I don't try, then we're not really getting anywhere.
User_characteristics	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	I think what makes a good one is having--knowing your technology, knowing what you need to do, definitely have a listening ear for officers that are calling in, different things, to be respectful of people calling in, to get all the help they need, to get all the pertinent information that you need to get an officer out there, and make sure that the officer is safe once they get out there, make sure the--if they're out with a subject that was maybe violent, make sure they don't have any weapons [inaudible], let the officers know, basically just to keep the officers safe.
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S6]: Actually I am the baby. I am [Job title] and I have a combined of 10 years.
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]... No matter what number they call, they are going to get you and I think it drives it home to them of how important it is because they are the -- they are basically the lifeline between the public and them.
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: Multi-tasker. [when asks what characteristics are you looking for]
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: Type A. That's probably the best; it's like the type A personality makes the best dispatcher because there are the go getter. They want, they will research everything to make sure that like it's done and done correctly and they would go above and beyond mostly.
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: It's in your blood to -- you got to, you learn to love it, you don't necessarily do it for money, if you know what I am saying, and I could say it because [Name] used to a dispatcher, you know. He started out and came up through the ranks [Crosstalk]
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: So it takes a special type of person to do this. It really does. Because there has been people -- I mean, over my span. You know I have trained people and there are some people that are just, they are good

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								but they can't do the dispatch part of it.
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: I would too. They found out -- we just hired a girl that spent her whole career in Texas and she had two friends, had nothing relationship-wise going on other than they shared rent and they were quiet about it, although they found out and they both lost their jobs.
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: And it's worked great nevertheless -- oh man from 8 to 12 hours? That's hard. They wouldn't give it up now for any amount --
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: I didn't think it would -- I didn't think the people would like it, you know, I said they are not going to like it. They went to it and after a while we found out they love it. Now they wouldn't swap it at all.
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S4]: Like, I prefer -- like you know people in there they prefer to socialize with them. When I was there, I wanted to keep work "work" and officers were officers and I didn't want to be friends with them outside of work.
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: So, a lot of people -- some people are like that. Some people will just want to socialize, you know, and then they take it, I mean, it helps them.
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: Well, you know, some people have a bad day every day and when they are on the radio, then the dispatchers don't like it.
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: That's the first in a while somebody out as far as coming out of the training coming into the centre, you know, that could be on there, some people just don't want to have to deal with, you know, " my baby is not breathing" and dealing with a screaming mother or something like that. When we are going to lose the first one, that's where we lose them.
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: We kind of prepare them for that in that -- I mean, literally in the first day in class, is everybody can't do this job and there is nothing wrong with it if you can't. We would just like to know before we spend several weeks and that's why we play a lot tapes and audio in the class to see if you are going to be able to handle because we play the worst ones and -- but we tell you that, you know, if you can't do this, if you don't feel doing it, there is nothing wrong with it [inaudible]. So, we try to prepare them

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								for that.
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: Well, they shouldn't be -- in my opinion they shouldn't be now, but --
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: I'm old. I want to listen to that because -- but God, let me tell you why because I'm -- in probably 18 months I won't really care a whole lot about, I will [Everyone laughs]. But I really would like to see that FirstNet can deliver what we see in the movies.
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: Can't do or who know how to answer calls and are good at what they do but are not going to understand this. Yeah.
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: So do we want to look at consoles that can only -- or that can -- you know put a 20-year-old at these three consoles and they are going to receive all the text calls.
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: I can't tell you what half of those codes are.
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S4]: Oh, if it's just not LOL, I don't know what you are talking about. [Everyone laughs].
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S4]: I type everything out; like, I don't abbreviate anything. Nothing. You get a text from me, and it's a book because I won't abbreviate anything. [Laughs]
User_characteristics	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: So, you've got 10 new radio channels but you've got one dispatcher. Are you expecting that one person to handle 10 channels? So, what is the limit? I mean, what is the cut-off in that -- right? Because there is no specific -- I can handle seven conversations at once but if you give me above seven, it gets iffy. But, some people can. And a lot cant. What is the -- and there is no defined number, you should be responsible for your primary channel and two side channels or three side channels.
User_characteristics	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Part of it is our fault because our dispatchers quit using it because it doesn't work 100% right, so they quit and we had a meeting yesterday by phone, I said, I gotta know what's wrong or I can't fix it, you got to use it, and by buying this CAD we spent just as much money for our small

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								corner as they did. We spent over three million dollars in buying the new CAD and OPTIMA and First Watch.
User_characteristics	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	And not the brand new GM of Ambulances that's had the job for three weeks. So it depends. We work as a team; I was the GM over at Ambulances after I transferred from Fire. So I went from Fire to ambulances for two years and I went, 'I really want my life back, I can't do this' I could but I really enjoyed riding my motorcycle [crosstalk]
User_characteristics	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Because I found something that is Motorola capable, that's just as capable, I can tap into that system and I've always been one that goes do we care who we use? I am like, I want it to work. I don't care what name is on it. I want good customer support. We run 24/7, internet is important to me, phone system working is important to me, radio system working; those are my top three priorities. Fourth is that my employees and their needs to make sure they can do a good low stressful job because without those first three they have no job. So those are my priorities and how I take care of things. So yeah so, for a lot less than \$110,000 for one console, I'm doing nine.
User_characteristics	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So the same as what motivates people will also have the differences in what triggers people, or what's going on in their life you know. They could be going through a divorce, their mom and dad could be going through a divorce, they had a sibling die, they had or grand...you know you just never know what those stressors are outside of here.
User_characteristics	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	The good thing is we're going to go with APCO who we've been working with the last 18 months, and when this comes out it's pretty much going to be set up exactly the way we want because we're the only one's been giving them feedbacks; and hey, can you change this; can you make this fluid, this is difficult for our dispatcher; these questions pop up and they shouldn't pop up, can we fix that? I love software.
User_characteristics	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	No. Internally it's a huge problem for us because you know a lot of mistruths, hurt feelings and all that about stuff and then everybody feels into that can't happen to me, so yeah that's going on, so it creates a 'the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>dispatcher is picking on me, the dispatcher is showing favoritism.' I take all that out, we I go back and review. I can see every keystroke is recorded, every phone call is recorded, every movement is recorded. I want this to be the most transparent place in America. I have nothing to hide. If you called me and said we have a complaint - and I've had to make these calls, I have called family members and said "I appreciate you calling me, we made a mistake and here's why, and here's what we're doing to fix it. If you hadn't called me I wouldn't have known to fix that issue," and just making that phone call to a lot of people, just calling people back? Huge call. I really think that they might call me back and I want to fix it, we have nothing to hide. I will tell you that we made a mistake, and that is all I am going to tell you because I won't tell you what our procedures are for -- and they would be like "we don't want to get anybody fired" well it's not your concern. I'm not going to tell you that I am or I'm not going to fire them, but I appreciate you calling because we do want to fix it. And people don't - I guess they're not used to hearing that, but I am the most upfront, honest and transparent. My boss is crazy sometimes when I say stuff, because they wanted to get the politically grey answer and I'm like nope we screwed up and they're like 'okay' and I'm like 'here's what caused it; here's what we're doing to fix it; here's the training we're implementing and we totally missed that, it's our screw up.' And they're like "Okay. Cool." So now when I go to a meeting with these people, and it's really funny, so I go to meet certain people, the higher ups in other agencies and the hospitals and things [indiscernible] [1:09:26] I am, my boss will say something and they'll turn and look at me and I'm like "y'all got to quit doing that" and they'll be like "we can tell by looking at you if he's telling the truth or not." [Laughter] And I'm like "Stop. You got to quit doing that."</p>
User_characteristics	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	It will get me in trouble with him. But I truly believe that if you operate, then you have nothing to hide, and you own up to your mistakes.
User_characteristics	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] I'll say Windows 10 has gotten in my way. I do not like Windows 10 and I know other people love it but I hate it and that's another special--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	... And so I met with them, and spent a few hours with them. I've got a fella that works for us who's a real go-getter, and he's Hispanic. He speaks fluent Spanish, and he has a goal to outreach to the community, the Hispanic community here. It's about close to 50% of our people.
User_characteristics	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Just to get new things. Everybody likes new--
User_characteristics	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	They are. And these are-- our dispatchers are-- our centers' pretty fit, pretty active bunch, young kids and these grow up-- we've got a guy that's 6'5, he can stand, and it comes up high enough for him. And then some little ladies like to sit on the floor like cross-legged, and so we got some cushions, and these will usually go down far enough to take up and sit.
User_characteristics	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	And I didn't apply for this job, so I was lucky. Got picked for it. So it's worked out.
User_characteristics	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	When I was a dispatcher and when I was a supervisor, I've kind of had a reputation for being open and honest with people. I don't really think we have a huge communication problem that way. I talk to people still. And I want to know what's going on and they know that, most everybody there that works there, which is kind of ironic because the people that I didn't hire-- the people that I've hired since I started as director don't really know me that well. The people that I worked with before know me.
User_characteristics	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	That's probably my biggest push for me, personally, in workplace and our workforce. And one of my goals is to-- it's all part of retention, I think. So I just want to make it a good place to work. Kind of my goal.
User_characteristics	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	...For us, we get complacent because every phone call is an emergency, and we deal with four to five hundred calls every day, and so for us, it's just another phone call, another phone call.
User_characteristics	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	... then the firefighter, insensitive bastards that we are at times, with our unique humor [laughter], they say, "Oh, that's nothing, you don't see it, you don't deal with it, you're not there. You don't see the blood and guts, that's just nothing. Come one, do your job, it's only on the phone." So

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								certain keywords like that don't help. And they're not being empathetic, they're not being understanding, and it causes coworker divides and some bad times for supervisors, because it divides and then people argue and then you have internal affairs involved.
User_characteristics	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	And coping mechanisms change from person to person.
User_characteristics	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Oh, I don't. When I was younger, I could run two, three calls in the middle of the night and get up the next day and be able to function. I just can't do that now.
User_characteristics	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Back on autopilot. So yeah, I think letting your subordinates make decisions, I think that goes a long way. So that's basically my supervisory style.
User_characteristics	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	... We have civilian personnel as well.
User_characteristics	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	... My philosophy on that is I don't care. It's not my emergency. If you're not willing to give me the information that I need, address and phone number, and tell me what's going on, then you're going to wait.
User_characteristics	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	So there's a lot of factors that contribute to that to why people work overtime but yeah so for example I don't work a lot of overtime. I work maybe a medium amount I would say compared to my other co-workers but there are some people who max out every week and so they're working 68 hours a week every week and so yeah.
User_characteristics	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	I know how I want to get a description of a person and we're trained on that and then I've added my own flair to it you know and so once you learn that stuff it becomes a lot easier to process a call even if it is a high stress environment and then also that being said we also work you up to that you know we start you off on phones. You take really basic calls and then you take the non-emergency line and in the non-emergency line you are going to need to use some of those skills you know in a trespassing person or a disorderly subject or something like that. You still need to get a person description but you don't need to get

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it as high as important as you might need for like a hot call or something like that's really active.
User_characteristics	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Yes it's kind of a demographic for dispatch where it is much more lean towards female but it is male. So in our center we have employed I believe it's fifty two employees with the capability for more. We've lost a few and out of that on the actual dispatch floor I believe that we have maybe five male dispatchers and in the back office the administrative side of it we have another five so out of 52 there's 10 males.
User_characteristics	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	And the rest are all females so it is much more skewed towards the female demographic.
User_characteristics	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Because we do have a high rate of suicide actually in this industry because there's a lot of mental health and there's a lot of physical health issues that aren't necessarily recognized because we're looked at as secretaries but we have high obesity rates, we have sleep deprivation at high rates, we have suicide at high rates. A lot of jurisdictions their dispatchers work 12 hours a day and they work 4 to 5 days a week and so when you're having someone here from 7 p.m. to 7 a.m. and you are constantly giving them the worst of the worst now you're wanting them to view the worst of the worst but we're not getting (00:38:57) the support and the resources that we necessarily need to deal with those kind of things and because you're here for 12 hours someday when we have only 5 employees on shift we can't give you a break.
User_characteristics	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	You might be able to go and go to the bathroom or go grab food but you are sitting in your position for 12 hours a day and that's all you're doing so we're unfortunately that leads you to buy carry out food that's not necessarily healthy so we have high obesity rates, we have high cholesterol rates, we have heart condition issues like I said suicide all this kind of stuff because we're not viewed in the same light as someone who physically goes out and does the job where they're putting their body in harm's way but it can be just as detrimental mentally to be giving someone CPR and then the medics arrive and that's the last you hear.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Under stressful conditions so it makes so you're short staffed, no one can get breaks, people are getting hungry, we're not getting caffeine, we're here for 12 hours, you don't like this person, you don't like that person, an officer or a firefighter is doing something that you know upsets you on the radio then you've got a structure fire, you've got someone who is being stabbed, it's just the culmination of a day or a shift or a night isn't just the calls that come in.
User_characteristics	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	For here you have to be I would say, patient, somewhat tough or thick-skinned, just for what you deal with. You have to be willing to work with the public because you're dealing them on phone and in person. And you're dealing with-- I mean, for example, the sex offenders or the probationaries. I mean, sometimes those people are the utmost wonderful people of society, but you have to-- at least in my book, you still treat them with professionalism and kindness. I always treat other people as I would want to be treated no matter what the circumstances are. You have to be compassionate. You have people calling who may have just lost a loved one, or could have a loved one that it's not doing well and is on their way to the hospital and maybe not expecting to make it, or someone's calling in to say that their child's been raped. I mean you could get a lot of different things that you have to be able to deal with. So you've got to have not so much a thick skin that you're not-- hold on.
User_characteristics	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	Right. I've been told that I'm the odd man out because after 27 years, I still have compassion. I mean I don't take things home, but I feel for people's pain. When they have a death or something tragic in their life, I try and comfort them. And when the sex offenders come to the window, I'm always nice to them. A lot of them come in here and say that they come here just because I'm kind to them. Same thing with the probationers. Even the chief has said it to me before, " I don't know how you do it after 27 years," because I haven't hardened yet. But it's a job not everybody can do. You have to be able to multitask and do several things at once.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	Because some of the officers here just don't like change. They just want it-- they want it to be easy-peasy and go do it and take care of it. But sometimes when you-- like, for example, with [name], when other agencies have access and you're trying to find somebody, all that's information's in there.
User_characteristics	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	Q: Okay. And are there characteristics of the folks who you think are less willing to adopt and adapt to change, or--? SME: I just think that's how they are [laughter].
User_characteristics	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	I do. I work afternoons and so that's by choice and I've been here long enough I can you know I kind of get the shift that I want. We do have trouble getting dispatchers and keeping dispatchers so sometimes you know we might have to cover an evening shift or we might have to cover a weekend shift or you know somebody might ask you to take a shift for them but generally yes we're doing the same shifts all the time and that usually means we're communicating with the same deputies out there because they also they rotate maybe a little bit more than we do but not a lot and so we know each other.
User_characteristics	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	No mostly the phone. I've got a headset so I mostly use that. Sometimes I take that off because it just bothers my ear but yeah mostly we're using a headset and the phone and the radio. That's how we're communicating dispatching out so calls come in on the phone, we dispatch out through the radio. I do have a computer here but we don't use it with the cars it's really just in the office here to look stuff up if we need something or you know we're processing paperwork or doing something like that but otherwise that's about it.
User_characteristics	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] So exactly, right? So people end up carrying two phones everywhere they go. And not everybody's issued laptops or computers either. They might have a shared one or whatever. So if they could do all of their jobs from one device that would just make everything easier, more seamless.
User_characteristics	COMMS	S	Other Public	36-45	11-20	Male	COMMS-S-001	[S3] I don't know if I have them all on the top of my head. But yeah I'm kind of a visionary from that perspective. [talking about the list of 50

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					apps]
User_characteristics	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] --really, really siloed, and I have a lot of function in a lot of different areas. I've also made it my mission to work on communications across all the different organizations in the county, which I think that's also unique because there just wasn't a lot of support for that when I got here. I wrote a strategic plan on how this was going to work. Why it's worth our time and effort, all that good stuff, to do it. So those are some of the unique things about me and the jobs that I'm currently working.
User_characteristics	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	I mean, I guess to elaborate a little bit more, we operate with phones, radios, computer, email, face-to-face. So I tend to, if I can, I try to operate face-to-face... I do better that way. It makes it more personable. If I can help somebody out, I'll try to go to their location and be able to talk to them...
User_characteristics	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: apps] ...we have one for paging. So I can page from the phone. So we have Everbridge for that. And I don't usually use this. I usually just do it from the desktop. But I can sign in from this and send a page from this and pick who I want to send it to. And it comes through as a text message no matter where I send it from and it comes through also in an email for them when you send it. And it's actually fine. It works pretty fast. It's pretty easy. All you have to do is remember password...
User_characteristics	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: apps] ...Then there's ES Chat which we very rarely use, but it's some sort of way to text multiple crews at once. It was pre-built. [Name] could tell you way more about this than I. I've used it a few times. It's supposed to be one of those things where if there's was a major event and all the cell phones started not working very well or the radios got jammed, that this would be able to get through. Without making a phone call you could kind of drop yourself in or out of the conversation, that type of thing. I find group chat, I mean, group texting to be as reliable as this. So I don't use this as much. It looks like you could also talk on it sort of in a-- what was that old where you would click and chirp, chirp, and you would talk? I don't remember what that technology was, but I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								think it does that sort of like that radio talk. You have to push and hold and talk.
User_characteristics	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: trip reporting] So in both places, they're removable. So you can take it in the station, plug it in, or they have a battery that'll last, if it's fully charged and working right, it should last for six hours. And some of them you can lock it into the ambulance but most people'll just leave it on their lap...
User_characteristics	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	Yeah sure. So here, I cover more calls than I'm primarily running. So I'll give [City] examples, plus I run more calls in [City]. So in [City] I work part-time, but I work on the ambulance. It's 10 hours a day. I work with another partner. And we listen to the police channel often...
User_characteristics	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	There are. I mean, I can pull out my cellphone-- well, why don't I do that? So [because I'm old?], I got a big one because I can see it better [laughter]. Each of our ambulances have a dedicated cellphone. And they're all connected to iCloud so that, say, we have a phone list, a common phone list, for a lot of [inaudible] in [City] that we transport to. We can push out updates of phone numbers and addresses and [dura codes?], and things like that on iCloud and it'll update all our phones. So we do a lot of stuff through the iPhones just because they have a good technology and many people are familiar with it already because they have one. That's a big deal, familiarity and usability because people aren't going to use stuff they're not comfortable with or if it's hard to learn or something like that.
User_characteristics	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	So I'm very reticent about-- I mean, I am, in spirit, an early adopter. I mean, my first computer had an 8088 processor on it and two floppy-disks that I traded back and forth, and I did all kinds of stuff on that and I think that's great. And it's fine for me to play around on, but if I'm-- my service is going to depend on a technology. I want to be damn sure that, number one, they're going to stay in business; number two, it works the way they say it's going to; number three, I can afford it; number four, I can support it. All those things, they don't say those things in the ads. The salesman just doesn't bring that stuff up for some reason.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: smart homes] I don't have any of that stuff because I don't want somebody hacking my house and turning my heat down in the winter or opening my garage door so they can rob me or any of that stuff. It's just too unreliable. I mean, my health insurance company is [Anthem?]. Their database was hacked, so my information's out on the Internet somewhere.
User_characteristics	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I'm in the [Organization] database because over the years we've done a lot of high security visits, presidents, vice presidents, things like that, special events. So my name is all over the [Organization] database. Well, it got hacked a few years ago. I started getting phone calls, crank phone calls [inaudible]... So I don't trust anybody [laughter].
User_characteristics	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: using unreliable technology] They won't do it. I mean, I can't make any of my employees do anything. Okay. They're here 24 hours a day. I've done their job. It's not easy. If you throw all kinds of harder stuff to make their job harder on top of it, it's not going to work. I mean, I can put all of the sanctions and rules and everything I want on it, but I have to motivate people to want to use this technology and show them the advantage of using it. We get paid faster. We can post statistics that show us what we're really doing, how it's useful. But if it's not to them, what's in it for them [laughter]?
User_characteristics	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I mean, it's a big old billboard we're driving around, so we always have to be on our best behaviors [laughter].
User_characteristics	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	The hospitals have snacks and stuff, but for the most part, our fire department is pretty healthy. So not a lot of people just mow down the snacks and the vending machine. So I mean, worse case scenario, sometimes we'll just stop real quick and get some food and keep going about it and eat it in the truck, but we're trying at least to sneak in some food because we've got to maintain our health in order to help other people.
User_characteristics	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Honestly, I like to call notes idea, because I think I'm a traditionalist or purist in the fact of I don't think we need to be talking on the radio a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								whole bunch just because, especially in a system that's busy. So send us to where we're going and how you want us to get there, and then just put it in the notes, and we can read the notes as we draw down the road. Because there's obviously somebody driving the apparatus and that's their primary responsibility, and then whoever is sitting in the passenger seat, who's usually the paramedic in our system, can read the notes and you're making an informed decision as we're going to the call.
User_characteristics	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I think that's the thing. I don't think it's an age thing. I don't think it's a generation thing. I don't think anybody is against the advancement of technology to become more efficient within your job or your job description or whatever. But we are so enthralled with technology, and we use it so much to become more efficient that when plan A isn't working, we are so deficient in our job responsibilities because everything was tied into plan A. So if plan A is down, we get so backed up with reporting or trying to get back in service or whatever, which is frustrating to the end user. And obviously, the bosses do a good job of trying to understand that, but their company line is still just figure it out and move on. But when plan A fails and plan B is so negligent in trying to bridge that gap, I think it's tough and frustrating. I think that's where people get frustrated the most.
User_characteristics	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] There's a little bit of shame there that you missed your responsibility.
User_characteristics	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3]... There was all this really neat stuff, and we were all wide-eyed like a kid in a candy store.
User_characteristics	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] But anything that's a movable piece, a paramedic can break. So that attachment point is, I believe, challenge accepted by paramedics. We will find a way to break it and break it often.
User_characteristics	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: Paramedics] And then also to be able to debrief. In other words, they do seem a lot of trauma. As a matter of fact, I went out to the field just last week and within an hour, I saw how much trauma our young paramedics witness right now. So you have to be able to take that in and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								either talk about it and/or just keep going. So in order to be a paramedic in a fire department, you have to have a strong character because not everyone's going to approach you in a nice way.
User_characteristics	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...I haven't been out in the field for about over 10 years on an ambulance.
User_characteristics	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	I would also try to get a workout in there. Don't ask me how. But I was young and I always tried to keep myself physically fit or keep myself physically fit so. It wasn't long but I learned after that you couldn't train very hard because you would be done for the rest of the night.
User_characteristics	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: changes in technology] Absolutely, they have been for the better. It has made our job a lot easier. It's very difficult for us to change but it has improved. It's easier for us to do our reports. Whereas before we used to have to write everything out, check boxes, remember what a 1B means on a report but now we don't have to do that, so yeah, it's much easier. As a matter fact, now I prefer to type versus write. So it has improved our ability to do things easier, I think. At least from my point of view.
User_characteristics	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: paramedics' personalities] There are many personalities out there. Yeah, yeah they do have their own personality. I guess that they have to be of strong character. Otherwise, you believe everything you're told and it's not always the way you're told.
User_characteristics	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...As far as radio communications, it's better now than the past. We're able to listen to a lot more channels, police channels. We're able to communicate with officers, [suppression?] unit to an ambulance unit. But it doesn't always happen. They forget. Or either [question ID?], don't know how to use the radio, or it's on our side. And then how to set your radio, like I said, some people come in and they want to know everything about the radio. Other people, they're just like, "Give me what I have to know so that I can do my job. I don't want to know anything else [laughter]."
User_characteristics	EMS	U	Field	36-45	6-10	Male	EMS-	[RE: too many radio channels] It doesn't bother me. Someone like me, I'm

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				U-012	going to learn the channel because if I can't communicate one way, I'm going to communicate another way. So if I can't communicate with EMS channel and I can't communicate to the fire channel, I know how to get to the police channel. The life guard channel, we have a life guard channel. If I can't communicate through the alarm office and the alarm office can't communicate to the life guard who someone is drowning in [lake], I know how to go into the life guard channel. A lot of people don't know how to do that. But I've trained myself or I've asked around people how to do that. How do you get to the life guard channel?
User_characteristics	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: preferred mode for getting detailed dispatch info] MDT's good. That's efficient enough for me. There's another way too. If we're at the firehouse, and we're waiting for the call, there's the alarm terminal, another computer, and it alerts us by a bell. And the computer system, a female voice will come on, "[company], we have a call, person down." It tells us the address, and that's pretty much about it. At the terminal, at the area where the computer is at, it's called the-- brain fart. It's a printed ticket. A paper copy comes out. It'll tell us the company, the time, basic information, the address. That's pretty much about it. And I always take that ticket with me.
User_characteristics	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: using radio to communicate with dispatch] We're supposed to use it all the time. There's a memo out there, there's an order out there that we've got to tell them. We have to tell them we're on the scene. We're facing northbound, [company]'s on the scene. I think it's a personal thing. It's my personal thing. I do follow the orders if it's nothing really busy going on. I will say, "[company] northbound. We're on the scene." and I want to make sure they acknowledge. But if it's so busy out there, that's my personal thing. I'm going to make sure I'm going to hit that button. Did they acknowledge? Okay, they acknowledged me. If I'm in the call, whatever, radio traffic has subsided, "Hey. We're on the scene." "Okay. I got you on the scene." Cool. It's a safety thing too, because they're monitoring us. They want to make sure that we're safe. That we're on the scene. And also too, they want to make sure that we've

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								made it to our patient. So they want us to say over the radio. Tell us we're on the scene. But there's only one channel. There's only one EMS channel.
User_characteristics	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	More or less a problem solver. Somebody calls us when they don't know what to do both on the fire and EMS side. It may be an actual you know emergency/medical problem but more often than not it's something else. I mean somebody needs help because their [application] not working and they need you out there to discuss it with you. You're the one that can get something done. You're the one that has answers even if you don't have an answer you are the one with answers so you better make it seem like you know the answers.
User_characteristics	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Yeah. I have a daily routine wherever I'm at.
User_characteristics	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	This county I didn't grow up here but I did start my [Job title] career volunteering out here. It's large and sparsely populated...I'm sort of an outsider because I didn't grow up here but everybody in there pretty much grew up together.
User_characteristics	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	I am career now. I used to be, I used to volunteer here...
User_characteristics	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	This is public. The company I work for in [City] in private and then my full time job is public. So this is a county service, [County] is a county service and then it's a private service that works the [Organization] for [City], [County], [County], [County] and [County].
User_characteristics	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Same with people will put their own tools, people go buy their own organization for the maintenance. They'll take their own box that they pay 10 bucks for at [store] and they'll bring it in and put everything in there you know so it's organized and easy to get to help everybody out. You see us just working with it you know making it work... No we pay for like we pay out of our own pockets for a lot of this stuff so you know that's just something that we do. If we need it we'll pull money together and we'll do it you know.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	We're always here. We're always ready to go you know. If it takes us a couple of extra minutes it's not because we're moving slow I mean it could be that we're just busy you know coming from somewhere else. We're not always sitting at the station doing nothing. We're always doing something so we're always there.
User_characteristics	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	I don't mind using my personal cell phone. It hasn't come into play yet but I would assume that there is always that possibility with using my personal cell phone to communicate with dispatch that maybe it could be taken if anything should go to court. It could be confiscated and then I lose my phone and all the information in it.
User_characteristics	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	I definitely would prefer to have a system where we do our patient PCR's. Here especially there's times where we have a 40 minute transport and then you've got to drive from [City] back where which is at least 20 to 25 minutes. In reality you could have your whole report done before you even get back to the station because your partner drives and whoever took care of the patient they're in the passenger seat so it would be nice to be able to have that plus you can keep track of we have a lot of patients that call us pretty frequently.
User_characteristics	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...I check out my wrap intervention kit, is what it's called, a RIT pack. And just to make sure that that's organized the way that I want it so if I need to deploy it I can do so quickly and smoothly. I put my gear on the squad and check out my SCBA cylinder to make sure that's all secure. I check my radio battery, make sure that's good. Make sure that the radio's oriented in its strap the way that I like it, actually [laughter]. Everybody has their own preference about that. So some people wear it under their coat. Some wear it over their coat. Some put it in the pocket. So I wear it under my coat.
User_characteristics	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So some people are very good at communications around here. Some people are not very good, and I'm a fairly good communicator, I'd say. I find that the people who are not as good, get very frustrated. Not about communications, but in other aspects...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So someone who's naturally a very good communicator, they won't have as many issues as someone who isn't. Similarly, the more experienced people are usually better, but not always. We have some people who've been here for 30 years who say, "I can't even touch the radio. I'm so bad at it." And then we have other people who have been here for a year, and they totally get it. So experience isn't everything, but for the most part, I'd say on average, the more experienced people are better with it...
User_characteristics	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: Active 911] It's an app. Yeah. So I use that every day. When I'm at my day job, I like to be able to say, "Oh hey. This incident popped up on my phone." And then I'll look at it. I'll say, "Okay. [Street] and [Street]. Okay. I know exactly how to get there." And I think in my head, it's a left on [Street]. Let's see. Straight. Right on [Street]. Right on [Street]. I think about the running route in my head just as training.
User_characteristics	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Yes. Yes. So I'm still an operational responder. In other words, I could work an overtime shift on my off days on a firetruck or an aid unit or a lighter truck. So I'm not just a daytime person. I'm a 24-hour responder.
User_characteristics	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	It's very common for someone to come into the fire department and stay for 30 years. There's not a lot of fluctuation in that. So it does take a little extra effort, I suppose, to convince people to utilize new technologies. I think the other thing that is on that topic of the challenges is that because of the nature of what we do, it's very important that we have something that's reliable that we can count on
User_characteristics	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Right. So yeah. So because of the challenge of pushing change onto a workforce that maybe is a little reticent to it, or is not familiar with technology, paired with the capacity to need something to work very well all of the time and to do-- and to also be very simple.
User_characteristics	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	It's a very stressful environment oftentimes, and so your capacity to think through complicated things diminishes. So I think that with those two things kind of side by side, that's part of the reason that adoption of some of the technologies - even though they're out there and they're very powerful - has been lower.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Yes, it's unfortunately not just experience and time. It's not something that's always just able to be improved upon just because you've been here longer. Sometimes it takes a different type of focus from individuals, or again, I think they're just-- it may, in some cases, it appears, at least, that there's just some innate capacity in some individuals to process and filter, or to be more overwhelmed, so.
User_characteristics	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Yeah. Yeah. I mean, obviously, there's all different types of personalities. And sometimes, some don't always mesh well with others. But for the most part, we are family. So not just because we're together 24 hours a day at a given time. But due to the job we have and the level of danger and risk associated with it, you kind of get to a point where there's a level of, "I've got to know you have my back," and vice versa.
User_characteristics	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	... It's honestly one of those things where I think technology is so great that it has been a huge, in my opinion, a huge step-back from us here. And again, I'm an old-timer, per se. But I like technology, it's not like I don't want it. I just don't think this is the answer for our environment.
User_characteristics	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	... It's like a lot of people will just-- they need something, they turn around and they just key their mic. Rather than take a half a second, make sure nobody's communicating. That you're not catching somebody right in the middle of it, and then going ahead and doing your request. A lot of people just talk all the time, and they don't recognize the fact that I just arrived at a fire scene.
User_characteristics	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	I would say just one specific example, is they call them [bandoleros?]. I don't know if you've seen some people, the leather that they carry, and it's like nobody ever had those. And now all of a sudden, it's like the new generation came in and like everybody-- all the young ones and some of the older have gravitated to it.
User_characteristics	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] Yeah. The idea is that this is a very competitive job to get into. These guys get hired, they're one in 1000 or so. And what we do is we try to hire the best and brightest of a very competitive field that comes through. And we try to hire them not just on the skills that they have but

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								also on their capabilities or potential skills, and it's a wide range. This organization, in particular, we're not certain looking for a certain mold of what our individuals. We're looking for puzzle pieces because the puzzle-- different pieces make a pretty strong team.
User_characteristics	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] And they start out in a written test phase and they come to us for a broad range of interview techniques and skill sets and then out of the decision then an offer's made depending on what is found and uncovered or whatever you want to say in those things.
User_characteristics	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] I'd say, as far as culturally, their cultural diversity, I wouldn't say challenges as much as it is an opportunity for us to use other skills and use other approaches, right? Some people's cultural backgrounds, they prefer that, if it's a female being assessed, that they have a female EMT, and that's an opportunity for us to learn that, respect that, and use the tools that we have or use the individuals that we have on shift to abide by what their wishes are.
User_characteristics	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] I try to live by-- try to be worthy of the respect that I get from the people - that's my goal - and not take that for granted. And I think that is something throughout our organization is pretty much out there that we go out there, we appreciate it. We appreciate the support we get from the community. We try to pay that back, pay that respect back.
User_characteristics	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] ...There is that culture of humility in our department. That's the part that makes it a little-- when people come up and gush, in my head, I'm like, "I'm just coming to work. I'm just doing whatever it is I'm supposed to do." And I can remember thinking everyday, "I'm just a student. I'm still learning. I'm still learning. I'm still trying to get better. I'm still trying to get better." So there isn't any of that, "Oh, we're heroes," type of thing anywhere in our department. There isn't any of that. We're good at what we do. We know that we're good at what we do, but we continuously strive to be better and provide better service, and so I think that keeps any sense of ego-- it doesn't exist.
User_characteristics	FF	S	Not	Not	Not	Not	FF-S-035	[S3] Yes. Mm-hmm. He's empowered to small decisions and empowered

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			specified	specified	specified	specified		to make small mistakes. He and I get to make the big mistakes. But he's never going to know how to make the decisions I make unless he has that experience of making a lot of smaller decisions and progressively harder and more important decisions and making a few mistakes along the way.
User_characteristics	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] We don't need to crack their heads because they're going to be harder on themselves than I ever will be.
User_characteristics	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6]... But it's a matter of ensuring that everyone is up to speed with technology, having their personal phones and having that app on their phones, before we can think of doing away with this.
User_characteristics	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] and our younger people that are on our team will sit there during important times texting. And they are so tied to that phone and all the information that they get all the time - Facebook and all that kind of stuff - it's very difficult for them to put that down for any length of time.
User_characteristics	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	I got into the work-- I had two brothers who have retired from the fire service and they're older brothers. And so as I was moving up through my life and figuring out what I wanted to do, I looked into that and determined that was a path I wanted to take and that's what I pursued right out of high school.
User_characteristics	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	...And most everyone enjoys doing that, because they know that we're getting out in the public, they're seeing that we're there for them. Grocery shopping, they go get their dinner goods if they didn't bring them in, coffee break, Starbucks. So they get around and they do what needs to get done, and they also allow time for those types of things to happen as well.
User_characteristics	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	They've adapted, yeah, I mean, basically because they have to. I mean, because it's what we're using, and you've got to figure it out because it's not going away, and that's just where we're at.
User_characteristics	FF	S	Manager	46-55	21-30	Male	FF-S-023	[RE: department-issued cell phone] Well, it should be... It's my cell phone that I've got out, and all the calls I get are department related... Someday, I should just change it so the department owns it, but I just keep

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								forgetting [laughter]. It's an option open to me and I just keep forgetting to do that...
User_characteristics	FF	S	Manager	46-55	21-30	Male	FF-S-023	...It would be great to know what the building looks like, or what the streets look like, at the time of the incident. If we had access to cameras on the apparatus, or even our dispatch center, they could say, "Hey, look. What I'm seeing from this location is no smoke or I see a fully-involved structure," changes the tone of a lot of stuff. And 2 o'clock in the morning, if you get woken up, it takes a couple of minutes to get all cylinders firing; some of us takes longer. I don't know which side I am [laughter]. You get down there, and you listen to the information. And if it sounds like a good call, there's a lot of adrenaline. There's a lot of-- your heart's pounding, and it's a big deal...
User_characteristics	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...We're going to new microphones that have five port-- five, I guess, speakers because we're having issues with people. We don't like to wear our radio belts. So we all talk like this. While the microphones are on the front, and we all talk at the top of our radio. And now the new ones have a microphone on the top so they have five microphones. Back, front, top. Hopefully, that'll improve some of our communications too, as we switch to those. Because you're supposed to take them and turn them and talk at them. And we don't because we're all wearing these. We all talk into the top of our-- in analog it, would pick up fine. In digital it does not.
User_characteristics	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	But a lot of people have the radio holder. Some people stick them in their pockets. We're trying them with the new microphones that have a higher fire rating, heat rating, trying to make sure that we have them in a place where you can get at them. They're not comprising the seal of your gear but we don't want the cords to burn through. We've seen some of the NIS studies and the line of duty deaths from that. So just trying to address all those through training too.
User_characteristics	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	I'm excited about the future. I don't know how we change some radio stuff. But I'm excited about the opportunity, I think, tablet-wise to improve the way we do business. So I think there are some cool

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								opportunities...
User_characteristics	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: mic placement] SME S2: Well, it depends. That's why we train on it. It's individual. SME S3: It actually varies quite a bit from person to person. SME S2: Some people on the throat, some on the non-voice amp side and some people on the voice amp side...
User_characteristics	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	This month alone, we have lost three individuals for various reasons. That doesn't make them bad people by any way-- stretch, I mean. But life has changed for them, and they are no longer able to be a part of our team. And that sucks. And we put a lot of time and effort into them. Again, they're not bad people, and this is isn't an animosity thing, but they need to move on with the next chapter of their life.
User_characteristics	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	You're no longer pulling your volunteers from your community because of the change of society. It's those who want to. So they might live in [City]. They might live in other towns. So you have very few of our volunteers live in town. They have to commute here for the full shift.
User_characteristics	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...so being able to come in without my emotional argument and bring in a logical argument and say, "Here's how this \$1.8 million could benefit you," is what these data analytics people could do, right? They're the ones that could come in and say, "I'm going to take your emotional argument, and I will show you how you can collect data, whether it's through response times, through call volume increases, through number of citizens that you're serving every time, how many touch points do you have. We can come in and actually utilize that data to justify a fire truck or additional staffing." Chief [Name] is a master at that...
User_characteristics	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Fire Chief] ...He is phenomenal. Best chief we've ever had. Bar none. Hands down. He's amazing because, number one, he's a techie guy, so he loves anything technology. So he's always like, "What's the latest and greatest? How can we use stuff?" But he also understands that there's people out there that are-- that's their job to do that, and so he utilizes them really well.
User_characteristics	FF	U	Manager	46-55	11-20	Male	FF-U-021	I don't know. This one is personal, this one's department. So I tend to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								forward my department to my personal. Probably not the smartest in the world, legally wise. But to me, it's just easier... I don't like carrying two phones and it's just--
User_characteristics	FF	U	Manager	46-55	11-20	Male	FF-U-021	...As far as, I think, some type of a portable, something similar to an iPad but more of a-- that's obviously a little more durable because we're really good at breaking things. But that way we can utilize, automatically you get on scene, you can pull an address and automatically have a Google map of this is the roof, we have skylights here. This is what the Charley side or the back of the building looks like. These are where the utility shutoffs are. I mean, I know it's out there, so you should-- I mean I'd love to have technology going to a call where you can pull it up on your computer and look at a map, look at aerial views and have a general idea of the makeup...
User_characteristics	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Well, I mean, I can't keep up. One of the complaints I get is that we're trying to use technology to fix all of our problems. And there's some truth to that and I don't like it. I can't remember the name of it. Oh, [Organization]. We're trying to bring something called [Organization] on, and it's been a nightmare. It's been 30-some thousand dollars and they've been trying to help develop it to our needs and I'm still not sure exactly what it's going to do. And we haven't even implemented it yet. So it might be something that we need. But purposely, I just don't get on those committees. I don't. I just don't.
User_characteristics	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Yeah, I mean for me, I'm a less is more person. But our chief is fantastic and he likes to stay on top of things. If there's technology that can supplement our brains then he wants for us to investigate it, so.
User_characteristics	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	I am actually, well I had to change names, I'm an Incident Support Specialist also the Chiefs' Operator also Chiefs' Aid. So I drive the division chief and assist him or her on the fire ground scene and then do a bunch of administrative stuff too.
User_characteristics	FF	U	Supervising Field	46-55	21-30	Female	FF-U-013	So it does. I mean and even if they had just given us a cheat sheet. Cliff notes guide with pictures and words, and this is what we do, it would

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					have been great. Yeah. I mean, I love having-- well, if you look around at most of the firehouses that I've ever worked at, some of my notes are still up on the board because I don't remember everything. I need reference points.
User_characteristics	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Yes. But the other part of the job is I'm incident commander at any event that I'm dispatched to, supervise up to five alarms worth of companies, develop strategies, make sure people are carrying out objectives, keep everybody safe and account for them.
User_characteristics	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	...My thing is, especially the early stages of an incident, that I want to be able to see, and listen to, and smell, and kind of observe things breaking. And if you're in a closed vehicle and you're not hearing that stuff, and you're not actually visualizing changes in conditions rapidly, and you're relying on other people to tell you that stuff, I think you're going to miss things.
User_characteristics	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Exactly. And it's something to be said where you look somebody in the eyes and they either repeat it back to you, and they acknowledge what they're doing.
User_characteristics	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	No, I know. Right. And there's something to be said with that, looking in somebody's eyes to make sure that they got exactly what I was telling them to do.
User_characteristics	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	Q: If you were using some adjectives to describe your work, what would they be? SME: Challenging, fun, and interesting.
User_characteristics	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	Well, several. Disappointing. Frustrating. A dollar late and a day late. We're always behind the curve. There's great business intelligence solutions out there but we don't have the budget, we don't have the thinking, we don't have the proactive thinking to want to be proactive and change, and be on the forefront of technology. Very frustrating being in the heart of technology in [State] and we are very slow to change. And we're not able to take advantage of all these great tech companies here.
User_characteristics	FF	U	Supervising	46-55	21-30	Male	FF-U-016	... And I think even cell phone technology, but we can't get everyone to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					carry a cell phone. We're not going to issue cell phones to every single firefighter. They don't need it, so
User_characteristics	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	I use my cell phone for a lot. I use it to call the office, like our dispatch center. Especially for stuff I don't want on the radio. Or we use it a lot for EMS runs. Each company also has a cell phone for the EMS with-- so when you're calling medical control to talk to a doctor, rather than just use the radio, you can use a cell phone. So I use it to communicate to the chief. Maybe the chief's out, and you have a question about a drill we're doing, or where you want us to be, I can call him on his cell phone too.
User_characteristics	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Technology does not remain static. It's always dynamic. All right? It's always changing and evolving. So one day you may be at state of the art. A year or two later, that stuff that you had was state of the art is not state of the art anymore. So trying to just even keep up with pace and that's pretty prevalent in everything, even with computers and these phones that we use. They're always continuing to get better in each model. So the one that you have would be obsolete back then. People make fun that I still have the iPhone 3 or whatever. They say, "That's outdated." But it served its purpose in that time period or that time frame. But technology will continue to advance with that. As far as I think with technology advances, I think there's a form of complicity that comes with it. I'm speaking for myself, too.
User_characteristics	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	I grew up in a household that in the '70s you didn't have computers and stuff. Grade schools didn't have computers. It wasn't until I started to take college courses that I had my first exposure to a computer. So I think in the younger generation they're going to find it more user-friendly for them to operate it with ease, where myself would have relative difficulty because I did not have the exposure. I think as we talked about kids, remember exposure at an early age, they become better and better to that. It's almost like their brain is learning in such a manner that it accepts these technology and able to grasp concepts or be able to grasp new features, etc., with relative ease and I would have to muck

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								through it. That's being honest with you.
User_characteristics	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	[RE: chalkboards] that was in my year of growing up, as we discussed it, that generational. As technology improved, of course, they were exposing children in grade school to this at a young age. And like I said, my parents, your parents, myself, we never had that opportunity. If I did, the whole conversation could be different. This is, "Oh I love technology." And what is it? "It's really easy." But for myself, it isn't easy.
User_characteristics	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Dispatch has been working with us really good all these years. They want to do the best and every one of them has their heart and soul into doing the right thing but you know 90% of what they do is law. They're really good at law enforcement calls and you throw some weird call in there you know like structure fires are far and few between so they don't get practiced on those so they do have an EMD system, Emergency Medical Dispatch. They don't have the fire side of that though so questions are based on who the dispatcher is on how much experience they have.
User_characteristics	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	Well yeah it's I mean we don't really I guess to an extent I have I've went out in town and found younger guys you know people that you know at least have their driver's license and become of age to where they can get on the department and get their retirement started and all that... one guy I just put on he's a local farmer him and his dad so they're here through the day and that's what I need is people through the day because everybody else has got jobs outside of this town where lot of times that job won't allow them to leave in the middle of work to come and make a call so there is some recruiting but I mean most of it is just I mean I guess out of the goodness of their heart wanting to help their community you know of getting on.
User_characteristics	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	It's just my deal is is getting I guess when I became chief I was pretty young. I still had a lot of older folks on, most of them were okay but I got the feeling of you know being there was an age difference they didn't want to listen to a younger guy but most of them had left and I mean everybody knows everybody here but it's a struggle to keep the training

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								up and get people to training let alone meetings when they have children and basketball games, stock shows and you know regular lives, jobs and you really got to have a heart to volunteer and want you know to strive to make the meetings and make calls.
User_characteristics	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	We in the past have presented the option of paying x amount of money per call that they make just to as an incentive to get them to come but everybody said no we're volunteers so you know why would you pay us?
User_characteristics	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	We do have two we now have we got one paramedic I just put on and we have 2 EMT's that are on the department and then there's five or six of us that are used to be called first responders but they changed it to EMR's, a little more technical there but and then everybody well not everybody but if they want to be as a fireman most of them are I think there's a couple that I don't have they just wanted to stay strictly EMR medical side...
User_characteristics	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	Training in pay. I mean if and that's not putting anything on [County] or the department I'm sure that's just the average pay that they pay them but you know as well as I do the more you get paid probably the better you're going to do your job or the more willing you are to take training or learn.
User_characteristics	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	Or a retired guy that you know still had a lot of life, a lot of heart left in him that like I said could just take care of all the government stuff maybe was good at writing grants doing stuff like that you know run the meetings just keep all the training up you know that we need to do annually or every two years and all that you know and possibly you know like I said kind of IC the fire situations.
User_characteristics	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	And I ain't saying training is bad but there's a difference between volunteer and paid people you know. I mean they may have old age set over there and track we don't. We're at work all day and then we have to go and take our training at night 2 to 3 times a week you know from 6 to 10 at night and then come back to your families or whatever I mean it don't go over very well for some you know.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Yes we all have our handheld radios. Whether or not the guys carry them you know I mean that's the thing. We all have our handheld radios that way we can carry, we can be toned out through well we are excuse me toned out through here so if I have it on the app will go off on my phone and I will get a message through this.
User_characteristics	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Yeah well we had a [Event] just west of town here and I was first on the scene in my personal pickup because it was between my house and the station. I knew we had guys in route I didn't know how long. I had a guy I'm not trying to be graphic here but he was basically it chopped the cab off the semi-truck. We're talking an oil field tanker truck and the truck was on its side and his legs were pinned underneath the dash and he was literally dangling, screaming. I'm there helping there was 2 bystanders that had called it in and that's a helpless feeling.
User_characteristics	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	As of right now I'm a sergeant with the Metro [State] Fire Department.
User_characteristics	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	I'm a volunteer out here and it is a totally different beast as opposed to where I work as a professional firefighter. Out here our resources are limited...On top of that it's a volunteer department. Some people may be having to go to work in the morning I just can't go to that call and you really never know it's like a box of chocolates you don't know what you're going to get out here when an emergency goes out as far as fire...
User_characteristics	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	We're limiting are suppression capabilities to fulfill the fire service admission which is to preserve life and property. Out here you have to become a very good fundraiser... We have to take a lot more time cooking barbeques, selling raffle tickets and things like that and you know that takes time away from our daily lives with our family as well so there's more to being a volunteer than just going to the call in the middle of the night.
User_characteristics	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	It could be argued that oh you know I'm using my money to pay my phone bill and this stuff and that could be the case depending on the carrier. I do know that as a volunteer I do believe with most carriers you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								can get some sort of a discount on your phone being a professional public safety but I do believe you can as well for that but I'm an advocate for safety all things safety and I wouldn't expect the county or my entity out here to issue me a cell phone but a good shareable radio system would be great and it would be.
User_characteristics	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	...We've got some people who are great at showing up to calls and terrible to showing up to meetings which you have to take that with the good with the bad. You got some people who are great at showing up at meetings but hard to get them to a call.
User_characteristics	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	Whether you're a volunteer or you're a professional when you're on a call the same level of accountability is necessary and I think that's what they're going towards making sure people are trained, training records are kept. People volunteers in the state are allowed to be in the state fire pension. I go to work every third day to get my pension. I have no problem with volunteers getting the pension but I want them to put in a little bit of work and dedication to earn it. You know just being on it and having someone forge a document for you to me that's taking away from more money I could possibly get.
User_characteristics	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	Within the fire service period you have old school and new school and you got those guys in between. I'm kind of in the between. I'm very big on tradition but I'm not big on ignoring progress.
User_characteristics	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	It's not a job it's a career that you choose and it's a lifestyle that comes with that career. It's a calling and you have to be passionate about it and again like I said the day you don't have that need for education, don't feel that passion, don't feel called to do it and there's days you don't want to come to work but that's different from that's different from not being willing to give a 100% to those arenas you know those are the days you have to be real with yourself and say is this what I want to keep doing?
User_characteristics	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] I'm the Lieutenant over Homeland Security so I interface with the law enforcement at the local, state and federal levels as well as emergency management to include other agencies and private sector.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Mainly I fix all computers, tablets, laptops and really, I take care of all of our servers and databases for right now.
User_characteristics	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] You got to be able to adapt with anything literally like one call in the morning could be a baby with SIDS, the next call could be waking up with somebody grandma fell. You got to be able to mentally handle it all.
User_characteristics	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] That is more mental than physical really.
User_characteristics	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2]...Even when I was in the training session at my old department when I came up to being an instructor we learned how to put all of our presentations on transparencies.
User_characteristics	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] So you have some challenges with certain clientele, I dont want to stereotype anyone, and the community is great, they all seem really to look after each other, you know not necessarily a neighborhood watch but they do call the neighbors, hey do you see so and so or did you see this happen or any other, they are a pretty close community. Everybody helps everybody so to speak, there is a lot of history in this community with certain names, so it is a unique community in my book.
User_characteristics	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] Overdoses, we stage now where we get close to the scene and we park and we wait for law enforcement to clear the scene before we ever go on an overdose because of their medicines and the drugs that are out there, patients can be so violent you know; we don't carry guns but law enforcement guys do so.
User_characteristics	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S1] Well it should be. That's another thing about the public and the emergency services; when something big and bad happens everybody wants to help.
User_characteristics	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S2] Most of us live quite close. We got sleeping quarters upstairs, three bed, three room; not three room but three bed in one room sorry.
User_characteristics	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S2] Yes a lot of people have them, [indiscernible] and stuff like that, like the active people.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	It's physical, it is a lot of mental -- it's a lot of mental especially when being a volunteer, when you go home. I help my kids a lot and I play with them a lot. They are older, they are teenagers, but I still nag them. It shows a caring side. I mean, sometimes you got to pick up a little kid or take care of them, caring, loving, I hope that is --
User_characteristics	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	I think mentally, if you are strong mentally, not necessary the physical. Physical is part of the job but if you've got a strong mindset on what's going on, not so much put it in the back of your mind; you have to talk about it, but if you have a heart and a mind, that kind of think the same on that person is having a bad day or that person is hurt or you've got to find in yourself, in your inner self to how to take care of it, how to approach that person on a different level.
User_characteristics	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	Because some people are screaming hysterically, some are calm and then the scene is over, they go ballistic and they come after you or they just want to fight and you know and that's part of it, but I think a big part of it is you have to have a lot of heart. I think if you have the heart for doing and seeing people -- my biggest thing is they are on their worst part of their day, what can I do to make them at least relieve the pain or relieve the situation and I mean, just two weeks ago we had a house fire and we saved a cat and a dog, where they dog died but we got the cat and another cat and the people were poor. I mean, you can just tell, but they lost everything and it was like I was right over here in [town].
User_characteristics	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	But I think a lot of it has to do with heart, and you have got to have a strong wife too.
User_characteristics	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	Yeah because sometimes at 2 o' clock in the morning, sometimes she is at work and I will call her and go, I'm in [City] or I'm off at another fire, like the [Event]. She couldn't contact me for like three days because we had no way of talking, because the cell lines were so jumbled up -- there was no way to -- every time you called they would say some line is jumbled up for whatever reason. So, you couldn't -- we were trapped over for probably three hours trying to tell everybody we were up there. And the only people who knew we were up there was the other fire

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								departments.
User_characteristics	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	They will sing, yeah -- this is a so and so. We laugh at him. He is a paid fire fighter from [city] too and he is like, he gets on your nerves but he is a good guy with his heart, but he is like -- Oh my gosh, just give us the information.
User_characteristics	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	... Because we got a couple of training officers who said no, no, no. We need to fix that. He can't be out there doing that. But a lot of times I am one of the senior guys. So, when I get there, they are like -- put your pack on and get ready, you're going in. So, I'm usually the one of the ones that goes in with another guy and then we got what we call Red Team, which they help if a fire fighter has gone down, they go in. So, it is orchestrated but it looks like mass chaos to some people but you know what is going on. I know what is going on but we have got probably 10 new guys we are training right now that are coming up that will be volunteers full time that will be what we call -- Black Helmets. In our department, yellow helmets are training, the orange helmets are cadets, the reds are the officers and the whites are the chiefs.
User_characteristics	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	So, the black helmets -- every time you see a black helmet in our department. In a lot of departments, black helmet is a fire fighter.
User_characteristics	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	And I like it personally. I like playing on Facebook. I like goofing off on there. I think it is funny. Most of it is stupid but it is fun but a lot of it destroying lives or people or just stupid stuff I think, the communication wise.
User_characteristics	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Well I own my own and I have the latest version of the iPad Pro. I think the others probably have Airs or Air 2's. So I mean they're functional.
User_characteristics	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	But and some of it is just... some of it is just, you know, more stubbornness than anything I guess. You know they... well why do we want to do it that way, this works? Well it works but it is efficient, it is good? You know?
User_characteristics	FF	R	Field	36-45	21-30	Male	FF-R-052	I am a volunteer--well I work contract up here which is part-time. I work

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					full time for another career fire department.
User_characteristics	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	...Some people get both. Some people don't get any, it just is a preference I think whether people want it or not. It's there available if we want it. Some people think that their text messages goes off too many times in the day and they don't want to be, you know, bothered with it but.
User_characteristics	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	... Of course no matter where you go there's going to be one or two people that get under your skin or, you know, that... there's just a personality trait that you may disagree with or not care so much for but... especially in our line of business at the end of the day I'm my brother's keeper whether I want to sit down and have a meal with you, might be one thing, but when it comes to your life or my life I will be there regardless of my personal feelings.
User_characteristics	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	And I'd like to think that for the most part the majority of us have that same opinion because of the type of work we do.
User_characteristics	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	I'm not actually from here however I did attend high school here my last 2 years of high school. I've had family that's lived in the [County] I guess most of their life. So it's not like I was a stranger coming into a brand new place.
User_characteristics	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	I don't really know what would be a good way to describe it. I mean I just I personally like to be out in the public and talk to people and just do things like that.
User_characteristics	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	So for me, I mean, it's great but I'm pretty personable. I get along with everyone. I don't have a problem with anyone, so I enjoy it because my desk is right over here.
User_characteristics	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Even though we rely on this stuff, it's really important, I would rather shoot a quick email and then run over across the town and go talk to someone in face, just to-- it's more personable.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Right. Now you have so much coming into the 911 system, that they can't-- nobody wants to make a phone call anymore, and I'm one of those people. I don't like talking on the phone.
User_characteristics	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	No. Like I said, for me, I'm not a very technologically savvy person. Never have been.
User_characteristics	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	"A lot of times we," we, I mean, police officer, "have to rely on our six senses, or five senses," whatever. But the younger generation seems to kind of gradually forget about that or not trained, or like you said, didn't develop that kind of senses. But then those police officers told us that when it's the critical time, that's the most things you can rely on, is your own five senses.
User_characteristics	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	So here's another thing to think about, too. Since for the last 15 years, I can't read this. I can't see that until I put those on. But I don't need those to see here or on the roads.
User_characteristics	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] You can go anywhere in this department and find older employees embracing technology, being evangelists for the technology, so I don't think that's the issue. Could be stubbornness.
User_characteristics	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Yeah. Yeah. I would say tough and resilient are the first two things that come to my mind, just because of a lot of things they deal with. Not only the day-to-day stress of answering people's phone calls who are more than likely having the worst day of their lives, and we do over a thousand calls a day, anywhere from 1200 to 1500 sometimes during the summer. So that's a level of stress in its own regard. My point for that though is that when things were tough, when staff is short, which is almost always, and people are being called in on their days off to come in to work overtime or to fill gaps, they get the job done.
User_characteristics	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: daily routing] Yeah. No. I'm structured in a weird way like a rock band... They do their own thing, but they are on the same page. So my wife laughs at me. I'm up at 3:50. I'm at the gym by 4:30. I'm done with that. I go to CrossFit, then I go to-- on three days a week, I will swim for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								an hour. And then I go home and walk my stupid dog. And then I'll get breakfast, play with my-- I got a 6-month old and a 13-year old, so... --I'll talk trash with them, play with my son, watch Sesame Street in Spanish with the youngest one, whatever I need to do...
User_characteristics	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: authentication] ...Actually, this one does... Maybe it's an S because the C, they discontinued. But I've got a biometrics on this. I don't know if we have a departmental policy that you have to. I don't know. I do just because... I'm minor anal about this. So yeah. I've got a four digit pass code. I don't have the one where you need to type the Declaration of Independence to get into it because that's just annoying. But then I got biometric and then the pass. And then for our county email, it's all through Gmail. I'm not a fan of because I don't like the fact that Google keeps everything. I'm sure Apple does too. And I'd be naive to say they didn't. But then through that, then we have two step verification. So I can access my Google drive, I guess, every 30 days. And it's always at the most inopportune damn time... I've got to go into the Authenticator app and get my six digit number or whatever it is, and then go back and type it in.
User_characteristics	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	The pain in the ass is the thing is clunky. It's got an old BlackBerry-style keyboard... I got big fingers, I got bad eyes, so little screen, and it's not user-friendly from the physical aspect of trying to look. And you're in a car. It's 2 o'clock in the morning. It's a well-known fact. People don't like cops, especially at 2:00 in the morning when you've pulled them over, and they've probably had a few pops in them. So you've got video in the car. You've got your radio. You've got your computer system, whatever the hell you want to call it. Hopefully, you've remembered to just turn your XM, or whatever the hell you got, Pandora down. You turn that down. But you got to do all of this. You got all that going on in the car. You've got to keep track on your suspect, who's in his car, who knows he's going to county and may or may not want to fight you, and he may have something hidden under his seat. And you're trying to type an e-ticket...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	I mean, on my personal life phone, I run the beta version of the newest iOS. I'm always out there like, "What's next. Give me more. Give me more. Give me more." And that's why I tend to be test-- for the county computers, I'm in test groups and all that stuff.
User_characteristics	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	That's what my job is, and that's what they want me to do. No. I'm always about what's new. What can you give me to make my job easier? I'm intrinsically lazy. What can you make-- how can you make it easier for me? And I know that some of the-- like Dodge is coming out with kind of like the Tesla. They've got the iPad built into the dash. So all your computer, short of your keyboard, like controls and everything is going to be built right into your dash.
User_characteristics	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: Tesla] And I want to get one of those cars because I want to play with it. I mean, I was the kid that was into Star Trek and Star Wars for like the cool stories but also what kind of technology they had, the touch screens and everything. And I can tell you now, if we've got the touch screen in the cars, and I get into somebody's cars, and there was a bunch of fingerprints that look like the dogs been licking on it, I'm going to lose my mind because that's an OCD. It drives me crazy. I've got cleaning [clothes?] [laughter] all day long. But yeah. Technology to me is fascinating. I'm a dork. I look at CNet online just to see online just to see what's coming.
User_characteristics	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	Not very many people like our computer-aided dispatch system that we have right now. We have one very different company before that everybody liked a lot. We switched away from it. Now, they don't like this one because there's some issues with it. So that contract comes up every 5, 10 years, so we'll get out of that sooner or later.
User_characteristics	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: city-issued cell phones] There was some resistance from some of the officers when it got to the point where you just couldn't do your job without a cell phone or some of the older officers were resisting doing that unless they got some sort of compensation. But I think any more, everybody's just so used to using their cell phones that they do it and don't think twice about it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: cell phone use] I'm stubborn. I fought it for a long time [laughter]. I'll be the first to admit. I needed to call somebody back, I would go to the station and make the phone call from there. Since then, I've blocked my number. I understand there's electronic means to counter a blocked number, I just do that any more. Any more, that's just a part of life.
User_characteristics	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...Our department's pretty good about being responsive to technology needs, and hopefully, I'm not just being biased because I work in the unit, but there were some officers right before we got body cameras that were going out with personally purchased cameras and wearing them. But the department did a good job of responding to that, got the body cameras...
User_characteristics	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	I was the first one to start writing reports in the car on our computers as the guinea pig, and I started teaching at the academy when everybody started doing it, teaching how to do that, and I have ever since taught out there as to how to do that, and the difference in officers from when we first started doing that as far as how adapted to technology they are and now, it's just night and day. It's completely different. So everybody is much more computer savvy now.
User_characteristics	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: technology] They're just don't like the change.
User_characteristics	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: technology] Yeah, change. I think this biggest thing we fight, and cops are the worst, I think about that, about changing and--
User_characteristics	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...I think it's kind of like any group. You have some people that would just plot along, and some people who won't do anything, and some people are going to say, "Okay. How can I do this differently?"
User_characteristics	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	I was talking more on the PIOs Monday night actually. And he was carrying around his iPad with him in his hardened case with they attached the Bluetooth keyboard. And he goes, "I have--" he goes, "It's got a list of things on here in case I need to call somebody more than the first two people." And then, he goes, "I can do everything on my phone." He goes, "I have this. But I really use it." He carries it as a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								resource. He doesn't carry it to post Twitter feeds, and update Instagram, or do anything else. He uses this phone for everything. So I found that interesting. I would tend to use more of the tablet, I think. Yeah. He's more comfortable using just the phone for all.
User_characteristics	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Whenever we get something I get it, and I get to play with it. Either through the radio in [name] or a IT person. Like my car, it's got the newest computer. It's got the newest keyboard. It's got all this new stuff to test and see if I can make it work. Then I can teach somebody else how to do it, but I'm kind of the guinea pig when it comes to most of our technology stuff.
User_characteristics	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: relationship with dispatch] I think it's pretty good. I think we have-- again, we have people who think that dispatchers should be doing more than I think dispatchers should be doing. Where we have officers asking for so much stuff that I can do myself. And that's just me, I guess. If I can do it myself, I'm going to do it myself. I'm not going to use somebody else to do what I can do... And I think that's, again, a mindset that, if I can do it myself then I'm going to do it myself. If I'm in the building, I'm going to do it on the computers compared to keying up the radio. From the back of the holding cell, I'm not going to call dispatch on my radio to get them to run a query for me. If I can't do it myself, I might call them on the phone, just the landline phone back there. But I'm not going to use the radio up to do that.
User_characteristics	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	... we'll have the officer who will spend all this time on the radio, okay, asking dispatch, "Okay, can you go and can you check this other database and see if you can find this person, find a phone number?" and all this stuff. He's got a computer in his car. He could do it himself. But now he's having the dispatchers do it, who are then also still answering phones and dispatching calls. And so then they get upset when I don't get my responses back real quick. It's like well, that's not their job, they're communications and dispatch. They are not to do your follow up for you...
User_characteristics	LE	S	Field	36-45	21-30	Male	LE-S-016	...I also like to be uncorded. I would prefer some Bluetooth microphone

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					and that type of stuff as compared to cords and everything that get stretched all over the place...
User_characteristics	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Everybody is getting to body-worn cameras and stuff. We don't. We don't have cameras on our cars. We don't have body-worn cameras as a department. We are allowed to wear them on our own under certain guide lines, and I do that, but it'd be nice to have one device where, if I wanted to, I could hit the button and hit record, and record all that stuff...
User_characteristics	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...we carry a lot of crap. And I think technology is fantastic, but finding one thing that does everything, I don't see that ever happening. You have some things that do something very well. And when you try to combine that stuff together, then you have one thing that does everything kind of half-assed. So I don't ever like that. We'd had a deputy chief here for a while that he didn't like the one-trick pony. He didn't like our etickers because that's all it did. But our taser, that's all it does. And so I think if you try to combine everything, you're not going to get the best use of anything. So the more things I can put together, that actually are the same thing, I think you're better off. But trying to combine a lot of stuff that doesn't naturally go there, isn't going to work.
User_characteristics	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...I have a app on there for drug recognition, as far as when we find pills. It's like, what kind of pill is it, and if it's scheduled. And for our traffic guys, we have a Google Drive where we're keeping all the resources and copies of all of our forms and stuff. So if they get to a hospital and they don't have a-- and they forgot a form, they can pull it up in their Google Drive, email it to the desk clerk, and have a copy printed out. If we can do it electronically, I'm going to do it electronically. I hate the paper idea anymore. I think that's the main ones. And then so we've got the email, using that all the time, and then I've got the little app on there where I can scan licenses and photographs, and it converts it to a PDF, and then uploads to my Google Drive.
User_characteristics	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	And there's only one thing cops hate more than change, staying the same [laughter]. So it's a constant battle, "Why are we changing this?" and "Why aren't we changing this?" You're stuck.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Crap comes through on Facebook and Twitter and stuff like that that we end up following up on. We can do the text 911. They get that. Yeah, I don't mess with that at all.
User_characteristics	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	... But our agency gives people the option of if you want to pay, I think it's 10 bucks a month, you can use your work-issued phone as your personal phone. So there's a lot of people that do that and don't have the separation of, all my personal stuff's on this phone, and all my work stuff's on that phone. So then you have the issue of if I take pictures of a crime scene, and I have pictures of my kids on here, not getting those all mixed up and in the wrong place.
User_characteristics	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: using Word for report writing] That's exactly what it's made for. It's easier to use, it's easier to read, and I can save everything that I've done. So from the time that I started being a patrol officer, my first call that I ever went to, I have all those reports saved on my file. Which is nice because when the report-writing software goes down, as it has before court, I can just go back and print the Word document out.
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...So as I tell people, everyone starts off getting into law enforcement and you're the street cop out there answering calls, but then there are other career opportunities. And that kind of moved into the tech world. I started going down that path and decided I didn't want to support computers my whole life so I pulled back and stayed more on the training and application side, dealing with the new stuff that came through for law enforcement. And then the mobile data computers started coming in so I got put into that...
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	So yeah. Did I drive fast, and have a gun, and go out and shoot stuff, and that's what I did growing up, and studied in college? Absolutely. But has it gone a whole different direction? Yeah, I think so... And as I say, what I'm doing now didn't exist growing up or when I was even in college... Because technologies change, and products have changed. And that's a hard one to get through to people of-- what you know now is not what you're going to know later so make sure your mind stays open because it's going to change.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...For a while, I was in a contract position so I went full-time, was fortunate enough when my children at the age that it was important to be there. And as I say, the impressionable, age I was able to pull back and go part-time and then maintain things on a contract basis. And as they got older, I was able to step my work back up, do some contract work, and then roll it back into a full-time position with putting together a couple of contract positions.
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	I do have a department-- this is my personal one from doing the contract work so a lot of people just know I carry that one. I have my department issued cellphone for when I'm doing patrol shifts because if I call people back I'm not going to use my own cellphone. So it's kind of a mix of which one I use. And I usually carry them both now but my department issued one's not on as much unless I'm doing more patrol work where dispatch is transferring calls to me. Yeah. Then it's to get in and check the emails and respond to a few of those. It's for the more formal, written stuff. And then, occasionally, I actually get to have meetings with people.
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	I think most everyone carries two cellphones because everyone has their work phone to keep that stuff separate and then they got to stay communicated with their personal phones. Because that's how everyone talks to the family and friends and everything else these days.
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...there's probably more apps to come. There are wildly creative people out there who can come up with all sorts of interesting things that we didn't know we ever needed... and that becomes such a part of life from then on and people don't give it a second thought.
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: technology adoption] If I had laid out a matrix ahead of time and checked off who would embrace it and who wouldn't, I was probably 95% accurate... Just knowing the people within the department and who likes to play with stuff and who doesn't like to play with stuff, and which guys just took it and threw it in their bag [laughter] and said, "I don't have time to figure this out."

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: technology adoption] Guys like, "Oh, look, I figured this out." Okay. That's why you were given a device to figure things out and come up with what worked and what didn't work. And it wasn't always an age thing or a specific demographic. It's just a personality type, I think, more than anything else.
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: comms devices impact on situational awareness] Or you're not going to use them because I don't have time to do that. And you're going to go back to what you know, which is the radio that just kind of engages your ear and maybe your thumb and finger for talking... So you've still got the visual.
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: assigned vehicles] For the most part, they are, but things break. Cars get hit. It's never an always. For the most part, yes, they're assigned and people customize them. I'm amazed how many cars I get in to do work on and there's a satellite radio receiver. I mean, these guys live in their cars and I understand that...
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	We all know who likes to ramble on the radio. As we said, if you have to say break when giving notes about a call, you probably should have typed it to your computer by yourself. That's just a little much for the dispatcher to be hearing and typing and doing everything...
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: body armor] ...So then we started looking at the shoulder mics and everything else, and because it's fairly new and we've only had a few trainings wearing all this, people are realizing you're going to have to rearrange stuff to maintain those communications. And then even putting these helmets that are not very comfortable. Just learning to work with all the new equipment that's out.
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: earpieces] ...I haven't tried to use the radio with my life jacket on... But that would introduce the same thing. But even telling some of the guys, going, "You really should have an earpiece in. I know you don't want to, and you never had before, and it hasn't been an issue, but it's going to be at some point." ...
User_characteristics	LE	R	Field	46-55	21-30	Male	LE-R-019	And I think, even now, as I mentioned, when my word is not good enough

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					in court, and I have to have a video, if everyone knows if you choose to go in a certain line of work, and this is what's going to be involved, and privacy's a huge issue for you, you're going to say, "You know what? It's not for me. I'm not willing to give this up to go do that. I would love to go do that but there too much involved and I'm not willing to." Now, that maybe going too far with it--
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: hiring issues] Whether it's rural-- we don't have a big population base. Whether it's law enforcement right now, I think is not looked at as a great career choice. If people asked me, I'd say, "Go be a fireman." Just the climate in the country right now. The expectations that are being put on law enforcement...
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: problem with turnover] Yeah, and that's always been that way. The guys get here, they put in four or five, they get some training and experience, and then they decide it's time to start looking somewhere else. Some of them recognizing, as they mature, they gain knowledge and wisdom. As an adult, and actually start thinking about retirement, and where they're wanting to be, and whether it's a pension, or a 401(k), and then the work situation and overtime, and how much they can make. That they're young enough, that the time is now to make that decision to go somewhere else. So that happens. Yeah, sort of outside the basic life events that cause people to move, divorces and whatnot, or they get in our area, it then does lend itself to be able to come when they're here a few years to get the experience, and then recognize it's time to go somewhere else.
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: hearing loss] I've not had an issue with it... But I haven't worn an earpiece for 20 years like some of the guys. I've been doing a little more office admin work. I've got my [pack sys?]. It's not blaring directly in my ear. The one issue that has come up because of the use of cellphones is if you have one ear that's better than the other one, do you put your earpiece from your radio in there, or do you put it in your bad ear because your cellphone is going to go in your good ear?
User_characteristics	LE	R	Field	46-55	21-30	Male	LE-R-019	So I've got one ear that's better than the other one. I had to kind of make

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					that decision. It's kind of an annoyance. It's an annoyance, absolutely. And if the earpiece isn't, in, then the cellphone goes back to the good ear, but I'd rather have my radio ear in there. But that's a muscle memory thing because now I'm holding it with the other one...
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...Personally, my handwriting is horrible. The office people would love if I did electronic ticketing. I wouldn't have had tickets dismissed that I'm sure were dismissed because the judge couldn't-- because someone probably couldn't read what I wrote. I accept that. So I can see benefits of that, but do I do it on a little hand held device? Do I do it on a bigger computer? How do we take this concept, and then through technology actually implement it?
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: e-ticketers] Some people may like the little ones. Some people may want it on the computer. Some people like to take the plate that's already been run by dispatch and then they can copy and paste all the registered owner information into their electronic citation versus having to scan it or get the VIN and scan the VIN or having a registration. So it comes back to a workflow thing again and what each person is comfortable with. But then keeping in mind, well, how distracting, if you're worried about scanning this and not watching the driver. As we all know, if somebody wants to hurt you, they're going to hurt you, so we have to try and minimize their opportunities to hurt us. So that always has to stay in mind as you're going through these things.
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...it's probably never taken well if you come in and say, "Well, we are the federal government, and we've done this research and decided this." ...
User_characteristics	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: information sharing software] So what it does is it-- you log in and then after you log in, it asks you for verification, so previous indicators that I've put in here, so I gave them an email address and I gave them a phone number. It will then text me a pincode. I put that pincode in here and then I can log in. So most users have [information sharing software] desktop which is just a desktop version, easier to see on a big screen, or [information sharing software] Mobile. I have CJIS. We'll go into that in a minute but that's a little bit more-- but this is something that they just

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								came out with which is an even easier template search engine. So they have it by person, vehicle, or location. You can go in person. You can just type in their names.
User_characteristics	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... One of the issues right now with our new radio system is volumes, is certain people and-- it all depends, everybody's different. They're going to hold it a little bit different, and that's one of the things with these, is you have to talk right into it. You have to be within three inches away, and some people talk like this or they talk like this. And some people, like my voice is-- it's just naturally loud and I'm talking just normal like this, but I transmit loud on the radio. It's echoey. And there are other people that talk very, very loud and it comes across as a whisper. So it's the balancing of all of that and then between terminals too.
User_characteristics	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	we're constantly, all day, just twisting our knob back and forth. So dispatch is loud, MCs are loud, everybody else is quiet, so you're just back and forth, back and forth, until you can get a balance. Then with the earpieces again, so you turn it up and then your earpiece goes dead... you clean it out, and now you're deaf. You're deaf because you can't hear...
User_characteristics	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... I use a small earbud because I want to be able to hear not only this, but whoever's over here. There are specialized ones that you can get that are form-fit to your ear. They make it to where you can hear really well on the radio, but I can't hear anything on this side of my head. So I want to make sure that I can still hear so it can't completely shut off. It can't be like earmuffs are...
User_characteristics	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...I've seen the technology of glasses where you get the camera inside and you get the earpiece and all of that. That's fine and dandy. I'm not against body cameras by any sense. I think there's a time and a place for it. I think it helps out cops big time. But at the same time, then when they malfunction, "Oh, you must have done something wrong." And then it comes with batteries and all that sort of stuff...
User_characteristics	LE	S	Other	26-35	6-10	Male	LE-S-021	So we've had some upgrades in our cars where... they have tablets

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel					installed into the dash so that you can now manipulate it. They have the secondary tablet that's on a docking station right in front so you can take that out and do your reports. But it's literally like this big so if you have giant hands, it doesn't work so well. But they tried to do that to make it easier for officers to come and go, and do their reports in their cars. But with the advances of technology, you put the tablet in the dash, now you're staring down like this instead of looking up like this at your computer. So some of our cars still have the old-fashioned, big MDC toughbooks. And we actually prefer that for the most part, I think.
User_characteristics	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... personally, I don't think enough people use earpieces because of the conflict of the noise volume going up and down and the deficiencies in the tubes. So if we had something that was wireless or Bluetooth or something that was less cumbersome-- because everybody has a cell phone...
User_characteristics	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	If you get a chance to go in our cars and jump in there, jump in both versions. Don't just jump in the one that has the tablet. Jump in the other one that has the big monster machine, which we actually prefer, and I don't know why you would think that we would, but we do because of the fact that you can manipulate it and move it around. If it could be smaller, that'd be fantastic, but at the same time, the screen needs to be that size. You can't get a screen smaller but the keyboard and everything else-- and even the keyboard, I would say no. A standard size keyboard because we have big hands.
User_characteristics	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... I don't know. If everybody could have a drone, that'd be great. But I don't want everybody to but, at the same time-- I don't know [laughter]. I'm just [lazy?].
User_characteristics	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... So some people use two radio systems. I use my car radio when I'm in the car. I use my portable when I'm outside. Well, when you shut it off, now you have a delay when you're waiting for your portable to boot up. Or you get back in the car, you shut that off, you turn on your mobile, and you have to wait for that to boot up. Because it's not instantaneous, it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								takes probably about five, six, seven seconds... So I personally leave both of them on and that way if, like I said before, where you're standing next to someone and a radio will pick up on this person and not on me, if I'm in my car, either my mobile will catch it, or this one, so I'm not missing it. One of the two will catch it...
User_characteristics	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: using earpiece] So I just recently just started doing this again because I can't stand listening to it just blaring out through the mic here. But when I was on patrol, I would say I could probably make one last three weeks and then I have to buy a new one. It's usually, generally, not the earplug itself, it's generally the tube. But I mean, there's a variety of selections, like I said, of these. This one I cut down because there's all sorts of different flaps and stuff that they come with...
User_characteristics	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: e-ticketers] Yeah, we do have those. They're typically used by our motor units, our traffic officers, so those are pretty convenient. I am technically trained on them, but I'm kind of lazy in regards to technology, so I'd rather just fill out paper tickets than enter it into a little [crosstalk] computer--
User_characteristics	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: e-ticketers] our motors can engage in a traffic stop, be done with it, and get a ticket issued like that. They're just nonstop with that stuff, so it's definitely more efficient. I obviously don't write as many tickets as they do, so it's not necessarily something that I see. You do have to set it up, and you have to put your ID in and all that nonsense and I just don't have any interest in that ,but some of the newer officers-- well, I'm pretty new, but newer than me I guess, they like to utilize it as a tool that kind of benefits them, so.
User_characteristics	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	Yeah, so at the beginning of shift you have to log in to your computer so that it's assigned to you specifically based on the vehicle, your ID, your password, so they can monitor who's using what, where they're at, and then within that you have to log into-- certain officers pull up different programs. It just depends on what you want to do because we can run stuff through dispatch if we want to, but I like to run people if I can just on my own so I don't have to call dispatch, wait for them to do it and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								then call me back, as opposed to me just typing it in and it coming directly back to me. But you have to log in to those, so they're different programs...
User_characteristics	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: apps] ... we also have our cheat sheets and stuff... A lot of traffic stuff. So when you write a ticket for-- whatever speed over the speed limit, it's a different fine, or CC, or-- so things like that that which I don't want to ever memorize because it's just ridiculous.
User_characteristics	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	... I think, within the car itself, I really don't have-- and I don't have a lot to base my comparisons on, so I'm probably not the best to ask about that. But I don't have any issues with the stuff that we use. It doesn't bother me. I know a lot of people do have issues with them, and I've listened to them. But being fairly new and still trying to learn the intricacies of the job, that's the least of my concerns. "I need better technology, or else I can't do my job properly." And I'm like, "No. Just... do your job."
User_characteristics	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	it's kind of in the way that I compare to my daughter. She'll get upset if her mom's phone is out of battery and she can't watch a video or something. I'm like, "Well when I was your age, we didn't have TVs in the car." It just didn't exist, unless it was one that you plugged into the thing. It's all perspective, I think, to a certain degree. If they could do the job in the '50s without all this stuff, why can't we-- I mean, running people and finding warrants in databases and stuff like that, that's definitely something that we need as law enforcement, but whistles and gizmos and stuff like that are not necessarily things that I find particularly necessary.
User_characteristics	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	It's horrible. That's why it's great you have bikes. Get up and down with the bikes real quick. I go and handle calls for service, just like [inaudible] there's times, and I'm sure you guys work for people who they worked in position, they kind of went up the chain, but they forget where they came from. I try really hard not to forget that. Just like these guys, I'm out there humping. If I'm out there humping as a sergeant, I expect them to do the same thing. I'm not going to do anything that I won't do and telling them to do it, so.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	They want to be really cool and put it out here, but then what happens, we try to tell them that this wiring gets frail after a while. And [if you?] lean against it. But it's a training thing, so, sometimes I let it get frail. Like, "Hey, that oven is hot, don't grab that cookie."
User_characteristics	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	And it has the person who called 911 in there, too. So they go-- we get a lot of calls of six guys in a corner, all wearing black clothing, one has a gun. So what do you do, as an officer? I had a group of people with me from the DOJ, conservative and non-conservative, both in the car. And I purposefully want to go to this call. So I told dispatch, "Send me to that call." Because I wanted to see--
User_characteristics	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	No. "Oh, no we believe in timeout. No. We'll give him a timeout. [We'll give him a long nap.?] We do this together." We have a huge generation gap. I got these. We got the new cops from [City]. And worked at Starbucks all their life, and never-- I got an [ebop?] instructor here. I got people who never had their license until a week before the police department, the academy because they never had to because there's Uber.
User_characteristics	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	... So I got people who are great with computers and stuff like that, so they'll do the police work for about three years and then somehow work their way downtown and start, and they're inside. And they're doing technology stuff. Or you people that are not really street cops anymore, but they like to do investigations. Because they liked it on CSI or TV and try to figure out where all the bullet holes go. So you get people with knack for CSI stuff. After about you get your eighth year in the police department, you usually go one way or the other. You'll be out standing at traffic accidents. Some guys can knock them out real quick, meaning draw them, love the investigation, find out how the car, the front wheel pressure, and they're really great at that. Some guys are great with dope arrests. They can get there and write a search warrant in two seconds. They love all the aspects of it. They go to all the training. They recognize this person's under the influence. Some guys do regular stuff. And I got kind of thrown into it and picked it up. Tracking, bank robbery stuff, car

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								chases, this 2-11 vehicle. I'm great with stolen cars. That's my thing; I profile cars.
User_characteristics	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	--and try to save it and save everything, they want to save pictures. Don't do that. It's insured now. So you contain it, so encircle it and shove a bunch of water on it and insurance company pays out for the house. So they totally-- and they get to work out, they eat well and stuff like-- I love firefighters. I get along with them great. We have basketball leagues and all that stuff, but the incentive right now is who wants to become a cop? They always give you the standard, "I want to become a cop because I want to protect," they have that--
User_characteristics	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Depending. I mean we heard the other thing was a lot of folks who are hiring never lived in the city.
User_characteristics	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Lonely, it's a lonely job. A lot of law enforcement, you deal with so many other problems. It's tolling, mentally and physically, tiring, long. It's a long career, hard, happy, sad. What I've noticed is, whenever you ask an officer how they're doing, it depends on their day. It's always in ebbs and flows. Some days are really good, and you have some days that are really bad. But with us, is we get them in succession. And a lot of times, we get a lot of bad days--
User_characteristics	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	They're lighter than the older ones, but I have a problem with my-- I'm left-handed. So my radio is on my right side.
User_characteristics	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	No. It's over-complicated. I call it 'dumbifying.' They should 'dumbify' a lot of-- just make it simple. Cops are smart, but we're smart in a different way, but adult learning is different. When you're older, you don't want to learn new things. You don't want to learn how to utilize this iPad for work. You don't want to learn how to utilize this new MVT system because it's-- now, when you would get in the car, you only needed like one password to get onto the computer.
User_characteristics	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Just do the job. And one of my old partners said that, "We are people." We're people. We have good days, and we have bad days. If you talk to us on a good day, we're good people. You talk to us on a bad day, we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								don't want to talk.
User_characteristics	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	I'd say impartial, empathetic, firm, compassionate, aggressive, consistent. I think those would be priority up.
User_characteristics	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	Well, I think consistency is probably one of the most important out of those because if you know what you got going in, you're not going to be surprised by an answer
User_characteristics	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	So being consistent, people know what they're going to get when they get there, so that the consistency is what people, I think, thrive off of or look for their own stability from where they can go forward in a conversation. If they know what the baseline is, they know where they can go from there, what the rules are kind of going in, so being consistent with that as opposed to-- depending on what your own particular mood is in a day, letting that influence you regardless.
User_characteristics	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: passwords] ...it's not difficult, but I'm getting older and I never thought I would admit it, but I have to write my stuff down. I put it in my notes on my phone. I'm sitting there. And before, I used to have a [base?] phone numbers. If you ask now, "What's the number?" "I don't know. Let me look at my phone."
User_characteristics	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	It's decreasing. I came on the-- the cell phones weren't really that big until I was in high school. And even then, it wasn't something that everybody had. And I think by the end of high school, I didn't know anybody's phone number anymore because my parents' phone number was the house phone. And it was about where it all ended.
User_characteristics	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I'm worried about people knowing how to write or read cursive... I've had someone that says, "I can't read cursive." I'm looking at them like-- this is a teacher. She's 22, 23 years old. And somebody wrote her a hand-written letter, note. And she couldn't read it because she was a [talk?] person. And to me, that just-- that baffles my mind. What do you mean?
User_characteristics	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I think, partially my generation, but definitely, the generation that's coming after me, we're more apt to text than make phone calls. And so I think we're not as good of communicators because of that. We're used

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to being able to plan out what we're saying before we send it and stuff like that. So that phone calls, sometimes you-- when I first came to the department, we had to start making notifications. I'm like, "Oh my God, I hate talking on the phone this much." It was just, it was something to even get used to, to be on the phone regularly.
User_characteristics	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I'm more of an audio learner. So, even when I do read-- if I'm going to a call and something's on the PCAD, I tend to read it out loud to myself. Or if I do have a partner, somebody does read it out loud. Usually, the person not driving [laughter]... But I would say audio works better for me and of course, it's nice to reference though, "Were those pants black?" And you can look and of course, it's easy to look at the PCAD and read it.
User_characteristics	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	On the street, I preferred the radio as opposed to PDT just because you can hear it and you're still paying attention. If you're trying to read it off the screen, you're distracted, you're whatnot and-- if you have a partner, then you have no problem. But when you're alone, it'd be nice if the-- if you got a job and you could hit a button and it-- have the computer read whatever to you, like talk to text almost where it would just say, "Hey." That, I think, would be ideal for some officers especially-- even when you get older, it's harder to take the glasses off sometimes.
User_characteristics	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	the computer where it's at, it's not really comfortable. I mean, I would hate to have to write a report in the car. My back would be killing me because you have to turn, and lean, and type, and it's not-- it'd be nice-- it's supposed to be a portable data terminal but it's not. It's fixed in the car... You could take it out but if you're in the driver's seat [laughter], your steering wheel is in the way. So if you're in the passenger seat, you can put it on your lap and work. But if you're-- we're days so if you're by yourself, it's-- you're working like this.
User_characteristics	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	We can on a limited basis. I think as part of the grant the fire departments were provided with a couple of 700 radios for their command vehicles and maybe some portables. I don't quite remember. We do have a dedicated fire launch channel. I don't see it get used that often because I think it's primarily like the command vehicles will have

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the channel that the actual like EMS and fire don't have it so technically yes we can talk to them but I don't see it getting used very often. I hear a lot of gripes about interoperability but I don't always see the users use the interoperability that we do have.
User_characteristics	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I was going to say after listening to [Name] talk about all the systems earlier it made me think like you know our computers and our technology work 99.99% of the time and that's a testament to [Name] and his team because there's from my perspective and probably most of our employees here when they turn on their computer they expect it to work and like I said it normally the vast majority of the time does and our systems work and it's probably something I mean I'm sure our employees have no idea what you guys do to make things keep working and so that's a testament to [Name] and his team.
User_characteristics	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	We certainly didn't I think I remember we had maybe one video camera and it was like a camcorder and you lashed it to your dashboard and you pushed the button. It was a handheld type of thing and I think I remember people didn't like it. Officers didn't like it because it recorded them doing stuff they shouldn't be doing or saying things they shouldn't be saying and so I think that's just a sign of the times but I mean yeah I don't want to sound like my grandpa or anything but it has changed a lot since we all started I'm sure.
User_characteristics	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...I think the newer users have more of a desire to see you know some awesome asphalt calculating utility or how many tons of paper come out of our recycle center in a day. Those different things aren't as important to me as the underline technology and infrastructure that supports it. I want to be able to take whatever app [name] thinks is the coolest thing and his staff need and pop it in there and turn it on and his staff can access it and it's secure. Nobody's going to get into it that shouldn't be and it does whatever they need it to do and so I'm more of a big picture guy. There's lots of things I could use most of them already exist.
User_characteristics	LE	R	Other	36-45	6-10	Male	LE-R-043	My current job title is [Job title] and [Job title]

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel					
User_characteristics	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Never tried it yeah exactly. No I just yeah I mean you know I feel the radio is more of a response tool than it is for planning tool but yeah.
User_characteristics	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	I have a departmental one that I use. They did like a reimbursement here but I'm one of those paranoid dudes that's like I want my personal phone to be my work phone. I know that's probably stupid.
User_characteristics	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	So it's just more work right? So I guess I don't miss it because now I have less work to do but I got more work actually yeah right. I gave up that in exchange for being the [Job title] and of course then we had all these disasters and other things so I created myself a lot of more work. Yeah it was a lot easier being just the [Job title] as far as the level of work but I also got bored let's face it so this has been a lot more interesting.
User_characteristics	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	No I'm a number geeky guy. I'm a [Job title] not a [Job ttle].
User_characteristics	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	I don't know. I'm not that person. I'm not a person that keeps a ledger and keeps track of all these things that broke.
User_characteristics	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Yeah, yeah there's no reason to get caught you know dwelling on the past of what occurred and what didn't work you know. Yeah at some point my GIS software crashed. I had no idea why it just did and of course I didn't save the work I was doing so I lost all my work right that sucked. Other times my radio wouldn't properly get tuned to the right

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								channel for whatever reason. I turned it off, turned it back on all of a sudden it worked right? Maybe there was a knob that was loose or who knows
User_characteristics	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Wow. I don't know that's such a loaded question to me. Only because like I embrace technology but I'm also very cautious of technology right?
User_characteristics	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	... it's one of those things where even if you get technology the next part is teaching people how to use the technology and so you can have pie in the sky technology dreams but then you got to teach people got to be willing to learn it and be willing to you know they don't.
User_characteristics	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	... You know people have their concerns and they talk about for the most part. Obviously as with anything else in life everybody has certain things they're not comfortable talking about, things fester and come to a head at some point or otherwise you go past them and off you move on so yeah.
User_characteristics	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Well I'm doing it poorly so I probably won't give you the right answers and I know there's no right answers but anyways you know I'm talking mostly amongst the first responders here, the county commissioners and the [state] and so I'm more of a liaison between the [state] and the local responders as we go through this.
User_characteristics	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	I am a [Job title].
User_characteristics	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	It works. I don't know that my opinion is that it could work better but it serves the purpose so I think when and this is just my own personal opinion. When we talk about how our agency is going to respond there's a lot of I think naturally in law enforcement there's a lot of reactive thought processes and I feel like and one of things I have connected with [Name] so well is I feel like we can proactively address some of these things and make the job easier, safer and more efficient but we're not in a business that generates revenue based on efficiency. So there's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that disconnect there between you know are we is that really the role and I might be on a different page there than a lot of people.
User_characteristics	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	From dispatches perspective they still got to get EMS in route, they could have a crash going on, they have a call in the city, they could have several things going on in our county at once and so they just kind of get us in route and we go and we get back to kind of one ranger kind of mentality of that we are our own resource. If we need more we got to do it because what the county is able to provide us is limited and so that type of information to me is very valuable and I use it a lot. Other guys don't they're just like whatever it'll be fine nothing's ever happened. So it's different mindsets around that. For me it's really easy to pick up the phone and make that phone call.
User_characteristics	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	Okay well I don't want that Facepage thing so I think the communication really in my mind is not limited part of it is limited from funding and we don't have we don't ever get to show the cool gizmos and gadgets to try to sell anything but I think part of it is personal style.
User_characteristics	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	It's a visual indicator but it's not the sense, it's not the smell, it's not the gut feeling, it's not those other things that you have it's a step in the right direction but we're not there yet with changing our perception of law enforcement.
User_characteristics	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	I'm not going to sit on the side of the way and statistically that's where I'm going to die on the side of the roadway is where I'm going to die. I'm going to be hit by a drunk driver, I'm going to be sideswiped by a vehicle or something like that for what? For a speeding ticket? I do care because I know that that event speeding kills people and that's what I want to try and do is prevent that and I care because of that because I want to help, I want to prevent that but it will wear on you over time around making \$28 to \$35,000 a year to go stand on the side of the roadway to try to help somebody that doesn't care about that doesn't show any respect or care about what you do or why you're doing that for them and I think it's part of that focus is on education and why you don't speed you know so it's complexed because it's you get these different

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								emotions.
User_characteristics	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] We have to go to every call with non-prejudice, non-biased opinions and try to make a justified in a justified perception of what exactly we're dealing with because people lie to us all the time so it really you have to be able to maintain a clear head with every call you go to. It could be something from a disturbance could actually turn into a domestic by strangulation you just never know what you're walking into which is where the excitement comes in as well.
User_characteristics	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Well it has as far as the video on our side having being equipped with body cameras more and more. I used to wear one until I became more of a plain clothes this is my usual uniform to where I can't really have a body cam without having wires everywhere. I usually use an earpiece with my radio but there's no way to put an earpiece into my radio without having the actual handheld walkie talkie so I'm without it and I'm having to kind of wing out but as far as civilians with cell phones they had them for a while. I mean when I came on they already had them so it's nothing that I really had to adapt to.
User_characteristics	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] It's a complacency trend. Years and years of doing the same thing and they just grow accustomed to what they're used to and when something different springs up they're still in that old pattern. I don't know it happens with a lot of people.
User_characteristics	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Like he said there's a lot of options here that's been here you know for 15 to 20 years so they're accustomed to doing what they do. You know there are officers here that tell us stories about when there's a call there used to be a light on [name] Tower that would flash red that's how you would know there was a call. You would go to a phone and pick it up go to dispatch they would tell you where to go so you know it's definitely advanced since then.
User_characteristics	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] And the unfortunate side to that because I mean [town] is a heavy drug area. I mean we have quite a bit of drug usage usually it's going to be more or less [State]'s going to be a prescription pill problem for the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								most part but we have a lot of meth here, we have a lot of marijuana here, more meth than anything but my main zero tolerance especially is when it comes to you have yeah you might have an addiction but you also have two kids. You don't want to think about them in that way I'm sorry I don't know how to help you. I'm going to help them. I'll get [department] involved and I'll do whatever I have to do to make sure they don't have to grow up in this and actually have three meals a day because you don't want to spend that \$20 on them. You'd rather put it in your arm. I have no tolerance.
User_characteristics	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] On the other end of that spectrum if I see somebody that has a car full of groceries and they have (INAUDIBLE 00:38:59) into their car and they don't have a license I'm not going to be mean get home. Just don't drive again.
User_characteristics	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] We have a lot of discretion. We have discretion when it comes to what needs to be done. There's a few things the word shout is undebatable but there are times where it's just like I see your problem, I see but it's not a major one the vehicle's got insurance stuff like that it's one of those that I can see past.
User_characteristics	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] ... Comfort is a bad thing because it's a one size fits none type headset. I got a big head. I don't my Taser one was uncomfortable and it wasn't adjustable at all but as far as the quality goes when it worked awesome. The battery life was really short for the most part...I go through screen protectors almost monthly.
User_characteristics	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] ... Yeah with body cams like I said it keeps us protected in certain situations. We're upstanding officers we don't work outside our badge, we don't abuse our authority or abuse our power in any way. We do our job, we have families.
User_characteristics	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	I think it's going to be fun eventually. It's rewarding. I think you have a very intrinsic reward system where you see things. It's like I'm into numbers I like numbers. I think numbers tells the story and you look at historical data and you look at current data and you take actions and I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								use a scientific method to address criminal behavior and driving behaviors and things like that. Some of the stuff we did was we were the top third last year for fatality accidents per capita... I'll go out and write tickets. This last weekend I wrote 29 tickets this weekend myself personally as [Job title] and all my guys work you know if you have a badge and a gun you ain't no better than anybody else everybody can work but the other thing is how you do it and we'll use patrols to really raise awareness and put something on Facebook saying hey you know we had one place it was next to an elderly community and people were having trouble getting out in the road because people were speeding.
User_characteristics	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	... the reason we do that is if you're not happy at home you're not going to be happy at work. If you're not happy at work you're not going to be happy at home.
User_characteristics	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	A lot of that has to do with pay. And I'm picky about people. If you put somebody in a badge and put them near a community as to the wrong person it really hurts your department so I really work short then work wrong and one thing we had is when I came into office here we were paying \$12 an hour for deputies.
User_characteristics	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	...In my summation there's three things that cause issues with law enforcement officers that's education, execution and ethics. Education's on me realize what your needs are, what your short comings are and give you the education you need and training you need to do your job. Execution's on me. Once I train you I got to make you're doing it right. If you're out here and you're not applying your knowledge correctly I need to figure that out and make sure I correct that and ethics is on you. I can't teach you how to be a good person. You know right from wrong. If you know the right thing to do you choose the wrong thing you're not going to work here you know and that's kind of the way I look at it and that's why I tell my deputies.
User_characteristics	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	... Some of the biggest issues I've seen is law enforcement people trying to make this perfect deputy, this perfect officer.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	... I'm not a wait and see kind of guy.
User_characteristics	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	... If you got a call you had to go to the call you had to come back here, sit down and write the report so you're having a lot of transition time driving which made it very difficult so we changed that somewhat so that's getting a lot better. Next year we should be in a lot better shape technology wise. One of the things they have is they have the ability with the Eagle Mobile to track the deputies, GPS and track their speeds and all that kind of stuff. I don't like that and I'll tell you why.
User_characteristics	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	A lot of times I don't pry in their personal life but it goes a long ways to say hey, how are you doing today? I could look at somebody and see them and call them in my office man, what's going on with ya? Man, you know my wife is this, this and this. I said okay you need to take a day off you know. When I call and check at work and if you and if your mind isn't here. If you need to go home and spend some time with your wife... My philosophy is it's just a job. This is just what you do. This is not who you are. You come to my house I don't have any police related stuff in my house. You know if you look through my house you'd never guess I was a sheriff.... My philosophy is it's just a job. This is just what you do. This is not who you are. You come to my house I don't have any police related stuff in my house. You know if you look through my house you'd never guess I was a sheriff.
User_characteristics	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	...They're responding emotionally not logically. When you see a good police shoot they're responding very logically not emotionally. That makes a huge difference in keeping your emotion in check. That's why you don't want emotional people working for you.
User_characteristics	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	... man I don't want this system blah, blah, blah but see for us as law enforcement our job is problem solving. That's what we do and it's a resource because now I have all this extra data and information.
User_characteristics	LE	R	Supervising	36-45	21-30	Male	LE-R-048	...You are supporting their efforts. You support the fire department, you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					support EMS, you support the police, you know you need to understand where you stand in this relationship and once you get that and they stop being smart butts about stuff and humble themselves and embrace their role it goes a long ways.
User_characteristics	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	... They actually went over there and sat with them for two weeks and see how they did their business, came back and I brought my thing is you see somebody being successful emulate success. There's a reason why they're good at what they do.
User_characteristics	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	So these are notifications that are coming in to dispatch and popping up so they have to be able to be trained, keep up on the changing technologies or the advancements in existing technologies and then of course as new tools are implemented they're trained on those so for a dispatcher it can be somewhat overwhelming. Those individuals it takes a special breed.
User_characteristics	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	It's a mixed bag. It depends largely on probably the officer's comfort level with technology. We have a wide range of police officers with both experience and age. We have some young officer's right out of the academy. I think largely just given their generation they are more adept at technology and so they'll climb on the MDT in the car they'll run all their own registration queries, they'll run their own wants and warrants queries and will rely very little on dispatch with the exception of sending them on call and even then a call can be pushed through the MDT and there doesn't have to be any radio traffic. Some of the older officers tend to be much more comfortable running all of their queries through the radio and less comfortable on the MDT.
User_characteristics	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	Because of that we don't have the time to spend with bleeding edge technology. It has its place and we may look at it in very, very select cases we might try to do some trials or tests but as far as adapting or adopting that technology we won't until it's at least been tested by others and we've got some confidence in the capabilities of the technology. So we're comfortable on the cutting edge, we shy away from bleeding edge and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								of course there's a lot of technology that's just broadly accepted in the industry that we'll evaluate to see which one best fits our needs.
User_characteristics	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	I don't know if it's the technology that has gotten in the way or if it's the speed with which we're able to get people trained to use the technology or the individual's capability of and comfort in using the technology.
User_characteristics	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S2] We have a crime analyst who works in our office and that's her job is to find trends using social media finding offenders based on social media accounts and then we do that too. I mean she does that but we that's kind we're kind of all in work intelligence nowadays you know.
User_characteristics	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] No they're quite dumb. [talking about convicted felons]
User_characteristics	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	...Some are stronger than others and we're getting more people that have come from for a long time a lot of the people that dispatched here only dispatched here and I certainly don't hold that against somebody. That's this is where you got a job and this is where you learned but the learning curve and the expectations are a little different.
User_characteristics	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	Absolutely. I think every time we get closer to kind of industry standard it makes us better and the people we're trying to recruit and the people we're trying to retain are happier. I think sometimes people are looking for obstacles like oh we don't have this and it's like well you don't you wouldn't use it but we should have it you know we can't run things in the cars well so what you can run things over the radio. Find another way.
User_characteristics	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	Stress, lack of training ability and then some people can just be difficult. Sometimes we've got officers that give attitude over any of us. It's like why are you getting an attitude? Sometimes we get dispatchers that get an attitude on officers. People are having a bad day but it can really impact our ability to communicate but I think when the situation gets stressful or it's a high you have officers messing up, you can have dispatchers messing up and I think when if people just don't have the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								intellectual capacity to do the job or are not properly trained you run into problems. They don't know what to ask, they don't know how to ask it, they don't know how to relay that information.
User_characteristics	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	Because I was a student employee here a long time ago almost 15 years ago so I've known part of the department peripherally for a long time and so we had two Sergeants who were both really good Sergeants and our now doing other jobs that were running dispatch and I don't know how well equipped they were for it then they finally said okay we're going to hire somebody so they hired someone who had run a large 911 call center and she's done a much better job of dealing with the personalities of bringing the standards of training up of knowing what to send people to so I think it was you know we had some people that were kind of deficient.
User_characteristics	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	I just - you know, I am sure there are; I just, you know, without having an intimate knowledge of all the workings of how everything pieces together and fit's together, I don't think I would be qualified in answering anything like that.
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	S1: Okay. And in your role as fire-fighter in EMS, volunteer or career? S2: Volunteer. S1: Okay. S2: I was career and then I switched over.
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Right. And for the most part, I mean, I will take phone calls, work-related phone calls all the time on my phone but as far as pictures and so forth, I carry my own camera now, so.
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	I don't - I like it because I am more personable, so you know, I might get out and give a little kid a sticker [unintelligible] whatever.
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	I mean, I have a password keeper, the thing that backs up all my passwords for different websites or whatever.
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	On occasion, I use the GPS on my phone.
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	I mean outside of them having performance issues, no, not really. I mean, I prefer the enhanced technology.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Both. Again when the technology is working, it makes things easier but when it is not working, whereas when you used to write everything, nothing is going to break that you can't fix. So now if the reporting software goes down, we can't utilize it until it gets fixed. So we are not doing reports in a timely fashion which dictate when it gets to the court and so forth. But when it is working nice, I enjoy it. Some people are a little technology averse here but.
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Lack of exposure in their personal lives, so they get - so we get a technology upgrade here, you know, and they are just used to a flip phone and we are using an I-Phone here, you know.
User_characteristics	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	It's very challenging because of the limited amount of experience we have in our department because it's younger. We have to constantly guide and change officers' behavior by how they do things because again with the FTO program, I have such a young department that now I have got guys who have got 2 to 3 years on - these guys are my FTOs, and before when I started, they wouldn't even look at you until you started having 15 years on to start training people.
User_characteristics	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Retirement. You know, I have been - God - I will say it is still rewarding because I do enjoy making sure everything is done for the department to help the citizens out. Darn; adjectives for my job; I don't know, honestly.
User_characteristics	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	We have two Hispanic and we do have an Arab officer. We have two female officers now who have only been here for almost 5 years but before then, I mean, they never had any female officers. We definitely try to be as diverse as we can but by no means get. My applicant pool is not diverse.
User_characteristics	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	I'll be honest that in my 5 years of interviewing people for jobs, I can honestly tell you I only had one black person apply for [Town].
User_characteristics	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	... Honestly, I don't think - oh, I know for a fact it's not done much because I think the whole perception with the whole police thing people are just -officers, they get blinders and they don't wanna deal with people unless they have to a lot of times; I really, really do see that; they just -

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you could go up on a just a normal meet and greet just to talk to people and it always, you knowing, the interest turns negative or they want to complain about something, you know, citizens have a habit of really complaining about every single thing that goes on in this city, whether it my neighbor is cutting their grass and it's on my sidewalk to they want to complain about the mayor.
User_characteristics	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	They [unintelligible] in there is very quick. They have been - it's always contacting us and working with us in any kind of community problem that goes on. So, it is difficult? No, it really isnt but again, officers, they just dont - I think they dont want to deal with people any more being so negative.
User_characteristics	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	I noticed that because I was always a big one on the road that, you know, you talk to somebody like you would talk to your dad or something and you can calm situations down or resolve stuff with like - everybody is semi-happy and no charges are being pressed and everybody goes their separate ways but now it's like they dont wanna say, you know, if someone says I wanna press charges, you know, we were like listen, do you really wanna to press charges on your husband or do you just wanna just - everybody go their separate ways, calm down for a little but now it is click, you are going to jail. So I think it's a little bit on that aspect.
User_characteristics	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Yeah, I think they get spoiled with the whole I-am-able-to-run-everybody-instantly-with-my-car and stuff like that and then you know, God forbid they have to get on the radio and call in and, you know, talk, but I mean, overall, without the technology they would be able to do it.
User_characteristics	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Because one, it's a change and anybody, especially cops they dont like change so I foresee a lot of complaints.
User_characteristics	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Like a secretary or somebody that could help me with the paperwork but, you know, I can't complain.
User_characteristics	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	And everybody here is a Type A personality, everybody has got their opinions, they are right, and not everybody is always, and you know; I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								imagine that is probably for every police and fire department. I got a lot of buddies in other departments and I hear the same kind of drama, as we call it.
User_characteristics	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Me? All the time here. I am [unintelligible] all the time to it. I don't have a landline at home or anything but yeah, here I use it all the time. I do a lot of traffic detail and a lot of it involves like counterfeit insurance, fraudulent insurance, things of that nature, no insurance, and I place a lot of calls to insurance companies; and I would endeavor to say upwards of 50 times a month I call insurance companies to verify paperwork. Local sector [unintelligible] not very often because they just put you on hold and it is just as bad as going in person. But I use it to call the guys for -and that most of it is work related but then you know, even if you are going to lunch, like hey, what are you doing for lunch, stuff like that.
User_characteristics	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Most of us use our personal phones. Certain jobs here get a city phone. Our Chief has a city phone; the detectives have city phones if they want one. A lot of people don't take it, they don't want it.
User_characteristics	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	They are really - Chief does not do much homework before - you know, I personally review everything before I buy it and I think we did no reviews, we just bought it and other departments that use the same ones dont care for them either from what I have heard and are switching. We would be a lot better off if we had a better brand of body camera. That makes it pretty current here. We upgraded our computers I think about a year and a half to two years ago, we got new computers in here. We kept the old monitors which were small. I wish we would have spent a little extra money to upgrade those, too, but -
User_characteristics	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Well, the cost, obviously. Those are very expensive to buy, get the server to host a video, stuff like that, but no, not in my opinion; I like having them.
User_characteristics	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	...A lot of times in the morning they barely got their eyes open, wants to get the heck outta here, not linger around and talk, but at the same time,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								I mean, we have, on our computer system, we can go there and read all the recent reports; we can see what happened last night.
User_characteristics	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	And like here, I mean, I can do anything on pretty much anything on our stuff but I mean, if I try to go play like a modern video game system, I wouldn't even know where to start. This isn't [unintelligible] Nintendo I had when I was a kid, you know, and, you know it is - that was good technology that used to be but I am not an idiot either, I can figure stuff out when I have to or you know, use it [unintelligible] second nature.
User_characteristics	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Well, lack of use. I used to speak pretty good Spanish in high school; now I can hardly say anything because there is no one to talk to, so. Same thing with technology, you know. You use it or don't use that specific thing and it just kind of falls by the wayside.
User_characteristics	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	Well, I am human, I have emotions and I have my own opinions on things and I am not like a robot and I can't just make - a lot of the time, it's not just a clear-cut yes or no, there are mitigating factors, so you are going to have to take that human scale and weigh that up as well, as far as what you have and what your options are and you try to resolve the situation in the best you are able to, with the information that you have and try and have a peaceable solution.
User_characteristics	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	S1: Okay. And if you were to kind of describe that with adjectives; fun, exciting, boring, whatever - what words would you apply there? S2: About 75% boredom and about 25% actual excitement. So -.
User_characteristics	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	When I say exciting, I am not saying like exciting like - fun; I am just saying it is action oriented, I guess, if you will.
User_characteristics	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yeah, incredible. And we do it all with, you know, we used our reserve unit, that are people that volunteer for our agency to work for free and to do the mental transports. We lost 21 reserves this year. I think a lot of it was - some of it was attrition, some of it was, you know, I've done this long enough, I want to do something else and but I think some of it, you know, this isn't what I signed up for. You know, I am not Uber for, you know, the mentally ill, you know, and they are spending their volunteer

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								time doing that instead of doing other things they could be doing.
User_characteristics	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	We've got young guys. We've had a big turnover with retirements that we have had. We have a pension that's in place that's allowed people to retire with a defined benefit, you know, a percentage of their income. So, a lot of guys have taken advantage of that and that gave us an opportunity to be younger and younger agents. And when you get out of here and you are doing that work, I'm 53 okay. Some of my years were dog years, so I have lived 7 and 1 a few, but I am telling you, that's a young man's forte there. When you are out there in that patrol car and you are chasing bad guys, you ain't chasing a 53-year-old man.
User_characteristics	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	...And [Name], he wanted to take the cameras and dump them off the [Street] Bridge and [inaudible] because he said a policeman's word doesn't mean nothing anymore. And it is sad you know you can't go up there unless you have got it on video, it doesn't matter. The policeman's word doesn't mean anything. That's crazy. But it is true but you are not going to regress, you know, so we got to embrace this. And my chief of operations [Inaudible] was -- no, they have got enough on their belt. You can't put no more on them. You can't do that to them. You cant -- They have already got in car cameras, you know, we are just going from the car to wherever else we are going, you know.
User_characteristics	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	S1: Okay. But most of them wear them -- which one is the most popular? S2: I think S1: And then their radio is --? S2: On the other side. Yeah, S1: Hangs off that big chord? S2: Most of them have a shoulder mike and the chord runs up there and they just turn and talk like here.
User_characteristics	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Some, not much. It gets cumbersome and you know, it bothers them at times.
User_characteristics	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	I just take my gun on my backpack gear and I've got the handcuffs off the emergency brake, you know, I mean, I don't know -- not much anymore. I mean, it was fun and don't get me wrong -- I enjoyed it.
User_characteristics	LE	R	Supervising	46-55	21-30	Male	LE-R-058	It really is. I love working at Sheriff's Office, I do and I enjoy my job. I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					don't mind getting out of bed, you know, last couple of years have been -- I've have had to do some soul searching because I thought about leaving in 18 this year when [name] did. So, I was looking at other jobs. Me and my wife were talking and I'm, you know, I'm [inaudible], but you know, I ask for guidance and decisions, you know, always I have. It's just a foundation of faith I was raised in and so -- so, I remember I had this pad and me and my wife were setting that up in our kitchen and I had a legal pad like that and I had down the middle I had pros and cons and I had jobs, I had been talking to some people about, you know, going in to do, you know, what am I going to do in a couple of years when I am going to leave when does and what am I going to do and I can't sit at home and only fish and golf some -- ah, you know.
User_characteristics	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Thank you for that. I mean, we have dog years -- but, I talked to some guys in commercial real estate development and residential real estate. I had spent some time in wholesale food business. I ran a produce company for three and a half years -- six years really. Worked there for six years but three and a half years fulltime and was very successful at that. But did I want to go back in that produce business 7 days a week, you know?
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	That's the uniqueness of our position at the sheriff's office. We do a wide variety of calls where most sheriffs' offices won't even answer those calls. Even our sister [County] is right next door us, like we still unlock vehicles. Any--we respond to any case or any call that comes into the radio room.
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	.... For me, being an old dinosaur as they call it, I am impressed of like just using our computers, seeing our computers following the deputies on GPS because I can see all this, just on a simple look up at my screen I can see where every deputy in the [County] is.
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	I think technology is on the right path. For a supervisor, for like I'm like again I'm in the tactical world, being a SWAT commander, and also being certain years in the canine, to be able to visually see what is around me at that immediate moment.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	... I don't know how to play with it and break it, I like the new tech, like in our answer center when something new comes out, oh yeah, it's cool and I want to, you know. I'm a freak, a geek when it comes to that, I want to be able to turn it on and see what it does and check out the cool updates and new features. But I'm not sure if the back story of why they didn't get turned on and stuff like that.
User_characteristics	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	.... I mean that was a never stop job, so I just kind of, I did that for a couple of years and I got kind of burned out on that. And I asked the chief for a transfer and I went over to Special Operations because it's that--that job is really more of what I like.
User_characteristics	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Blink of an eye, yeah, right. And as far as the fire service, that's, a lot of people have extracurricular activity like they like to fish and they like to hunting and I like the fire service, I enjoy the fire service. I kind of do that as my pastime. It's like on Saturday some people would go play golf, I kind of go work at the fire station and it's kind of my relaxation. I mean it's sad, it's sad to say this but other people's emergencies is my getaway, I like going to help people, I enjoy that, I mean I guess just born into being a public servant and that's kind of what my life is. I mean I do have a family and children, but my life is just dedicated to serving the public.
User_characteristics	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	... Like a lot of times, a lot of times you go to a real horrific scene and you see the officers on the side and they're laughing and joking and it's really not good for the public to see that, but what they don't understand is that's the way that we deal with them problems. We laugh and joke about it because when you see that every day, it's not that you become kind of demoralized by it but it's a way to relieve the stress.
User_characteristics	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Absolutely. And especially here, especially here, you see a lot of police officers that are volunteer firemen. They can relate to what's going on. They understand the need to serve the community and kind of work in that type of environment.
User_characteristics	LE	R	Supervising	36-45	21-30	Male	LE-R-053	... As first responders, we should be more professional than argue with

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					people on social media and put things about our personal lives on social media. We shouldn't be doing that.
User_characteristics	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Yeah, I do believe so. I do believe so. I believe that... yeah. Training wise, and technology, I think that the officers are becoming more, more reliable on less lethal means, because of different, the trends on social media, and even more dependent upon the computers and the radios, rather than being able to get out there and just the old police way and talk to somebody.
User_characteristics	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	They're good. Of course, you've got your different personalities, I sometimes refer to it as an adult day care, but--and again, policemen, when they get bored, they tend to get bored, so--
User_characteristics	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	Again, I think, like on my questionnaire, I would rather buy a proven technology than the leading edge technology.
User_characteristics	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	No, but I'm getting too old to do it [laughter].
User_characteristics	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	I think it's kind of, in my view, it may be I'm a little more removed than maybe some of the other people that you'll talk to. Most of my interaction now is through email or text. I'm very little on the radio unless there's a major incident or we're working some large event.
User_characteristics	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	...But you know if an officer's been using a 10 code for the last 20 years it's hard to get that out of their head. We still do call numbers.
User_characteristics	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	... And so it takes a really unique officer to be able to thrive here and figure out the nuances and, you know I think if you talk to officers who are working with us now who came from municipal departments it's just a completely different kind of police work.
User_characteristics	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	I'm going to warn you--I'm not the guy for this. I'm not a great outside the box thinker but, oh...I feel like I have all the pieces I need to be able to do my job so I can't really think of anything... I think... you know my technology piece would probably be more from the analyst side and being able to monitor real time information on the internet and pull that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								stuff out and be able to analyze it, use it, and push it out.
User_characteristics	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	... This places it--I prefer to wear it towards my chest, where I can get to it with both hands to hear it. I just need it up closer to my ear, which is--I'm putting it in kind of an odd place.
User_characteristics	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	No, no, [inaudible] into it. Some people don't like these, some people like to look at the smaller ones, and they'll run it through their jacket. I did that--I did that myself, I would cut, and I would get tailored little holes inside of my uniform, I could run the earpiece through, whereas the actual handset running through it, a lot of the handsets now, the earpiece attaches to the mic, so they can just run it through their shirt, the front, or around through the neck part.
User_characteristics	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	... We have some people here with departmental cell phones, I wish we had more of those, especially for when--it can be convenient, I'm one of them, but a lot of people just don't want to call a suspect or a witness or anybody that's not someone they work with personally on their personal cell phone. We have--hey, I don't necessarily want people to have my personal number, so we don't pass it out.
User_characteristics	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	I think so. Yeah, I would say so. I still would prefer a camera, camera for taking pictures of evidence, taking pictures of a crash.
User_characteristics	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	...I would personally prefer to have, like, an outer vest that I could run suspenders from the belt and keep that weight way up on my shoulders from running around my hip. That outer vest can usually attach to your belt as well. Some can, I don't know if usually is the right word, so it takes every officer, finds a place that they want, it doesn't work well for everybody else. This holder keeps it real close and tight, [inaudible] I have--I'll be back, just a second.
User_characteristics	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	I like my radio here, because I like to be able to get to pretty much a lot of things, and it's on my left, whereas my firearm is on my right. I like to keep my right hand free for my primary tools, so my cuffs are over here, my spray is over here, my firearm is over here. None of those things are going to be stuff that I use while the other is out. If I need to handcuff

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								someone, I need to put my firearm up. Same with my spray, [inaudible] handcuff. The only thing that's in a different place is my baton, because it's easier to cross-draw it, so it's on my left. Most everything else, if it's on the side, it's something I use with my support hand and my left hand, and my baton and my old PR, depending on what holder I'm wearing for it, likes to press buttons on my radio.
User_characteristics	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	I think you have to have some self-drive. You need to take pride in your work. 'Cause a lot of times there's somebody, patrol officers on a regular shift that you see, the police officers that normally take your calls, they have typically a large rate structure. There's sergeants, there's lieutenants, they have senior officers who are there to guide them. Somebody's checking those reports at the end of shift, making sure they're getting in. Detectives, you're kind of on your own a little bit more. You work at your own flow. Obviously we have deadlines that you have to have reports in by. But there's nobody there holding your hand through everything.
User_characteristics	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	Oh, I think it's very similar to anywhere else. A lot of times we are in plain clothes, so maybe people don't realize we're the police officers until we have identified ourselves. But I would imagine it's pretty much the same as everywhere. I mean some places we're received well; some places we're not received as well.
User_characteristics - Generation_gap	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	Yeah. So it's one of those things where I think that's ending. I think that era is ending. I don't think we're hiring anybody that doesn't have a smartphone. He's retired since but I think everybody here has a smartphone. I think we have one guy without a smartphone and he just refuses.
User_characteristics - Generation_gap	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	...I'm a little scared about when some of the old timers start going, and it's all people that are new. Then I think that might be more of an issue but right now, no. I don't really think we have a communication issue between me and my staff, anyway. And we're trying to iron it out
User_characteristics	COMMS	S	Other	36-45	11-20	Male	COMMS-	[S3] ... I know there's an accessibility factor that doesn't always weigh in.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- Generation_gap			Public Safety Personnel				S-001	You get the older people who have been there for 20 years and they're like, "That's really kind of hard to read." Because the screen is a little bit smaller than what was previously--
User_characteristics - Generation_gap	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah, the font size is different. So that's a little bit of a factor. One that I don't think our technology folks probably focus enough on. And I think the reason why is, going into the profession you have really high standards for health and all that kind of stuff. But you do have an aging population, right, and as soon as they start the job they're starting to age, so there's some consideration that needs to be given to that. But there's only so many options out there.
User_characteristics - Generation_gap	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	These older ones, like me, that we didn't grow up using it. It's more of a challenge and the more that we pile on them, the harder it is for them to do their job.
User_characteristics - Generation_gap	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	These younger ones are--they can use an iPhone and iPad and a computer all at the same time.
User_characteristics - Generation_gap	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	S2: You know this is not a magic trick, but it's a thought that goes along with the I don't know what -- I mean, I can't pin it down in one word, but thing -- thing we all know from being in this business is public safety is trying very hard to be able to do what the 14-year-olds have been doing for a long time; you know exactly what I am saying. And this is not age discrimination by any means but we know that we hire 20-year-olds and put them in this class, I mean it is not teaching; they've been doing this it for so long. We are just teaching them the, you know the procedures and so forth. You know, you take a text mail or -- or for that how I can say this. Your texting might be older, and you will say okay we are going to teach you how to text, and also send the videos with it and you may have to convert this over and then you are going to send it out. You will say like, oh my gosh, and the kids are going -- huh, big deal. You know, okay so it is Snapchat and Facebook combined right, is that all of this and I -- in one of the class I had a little girl that I was concerned about because I would go down and they had her in class and I was sitting back here and I even mentioned to [Name], I said, I don't think she is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								paying attention, you know, it bothers me because it doesn't appear to me that she is paying attention and then [Name] explained to me and [Name] confirmed it; she is bored. She's got this. She is fine. You know, she is like, I mean move on. You know, move on to the next slide. She already knows it. And what heavens, she made straight 100s on her test. You ask her a question, she will answer it. In less than a year, she has already moved up to Dispatch and one of our better dispatchers. So, you know, I mean, there's something that I would say -- whatever word, whatever adjective they [crosstalk]
User_characteristics - Generation_gap	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: Yeah. And so, that really does tie us for emergencies. My fear, and I don't know whether it can be fixed. I've got 62-year-old women and men both in their -- how are they going to handle a text call from a 14-year-old girl with TBT and just all the abbreviations and all that. Yeah, I think it is going to create a lot of in a bad way -- actually I think it is going to put a toll and take a toll and run off a lot of people because they can't.
User_characteristics - Generation_gap	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: I've got another too. We had an elderly lady who worked here years and years and years and years ago and she would not abbreviate anything and it then it was like, you know, she was slow because she was having to type everything out. So, then we said we need to abbreviate a little. Oh man, this made her go -- what in the world? [Everyone laughs]. [Crosstalk]
User_characteristics - Generation_gap	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	I'm 52 years old and I really don't want to keep doing what I was doing when I was 20. So this position came open and I migrated to here because I was really the only one that knew the CAD, knew the communications center and all that stuff, so we hired a new so I help him. The fire department, the fire chiefs, once I came from there [indiscernible] we need policies on how you want this truck dispatched on calls, how many trucks do you want dispatched on this type of call, this type of call, we built all those policies, and then it's easy for me training my dispatchers. If you're within policy, I got your back 100%. You violate policy; you're on your own. APCO; you APCO a call correctly and we find out the APCO codes need to be updated, you're covered. You

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								don't use them, or don't do them, you're on your own, I can't protect you.
User_characteristics - Generation_gap	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Amount of data going through that mobile that's on the ambulance. It's got two sides: we have the GPS side and we have the internet side. They get mad at me all the time because if the internet side goes down, I don't care, as long as I can see that truck. My MDT don't work well, go talk to IT, I don't care. Is your ambulance not working? Yeah, you gotta this call. They are like, no we got to have this, I am, look we've operated for years without an MDT you are fine.
User_characteristics - Generation_gap	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	And it's more a stressor probably for our new people than it is for our old people. What I mean by that is when I said earlier, so one of them went through the whole training program got a child CPR call, had to give the mom direct instructions on how to give CPR to a 2-year-old, went through all that, that was it, she quit, can't do it. So if you're a parent and you have a 7-year-old and you have the 7-year-old call that day, it's close to home, it's a huge stressor. It's the same when I was on the fire truck and the ambulance, you know there are many times I've walked up and seen the back of a kids' head in a car wreck and it looks just like your kid and it triggers that in your mind. The longer you do this, the more callous you get to those things, the more cold you become, which can also be a stressor for other things at work, so it is, and its different triggers for everybody, just like people are motivated differently. And employees that - money, I'll cut your overtime off and I'll get your attention quickly, but the other guy could care less and never works any overtime, so I can't use that to motivate him.
User_characteristics - Generation_gap	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	I don't know. I honestly -- because we haven't done it, I have speculation, but I really don't know how's that going to impact and if that's going to take too much time. I don't know if it's going to slow things down or quicken it, I don't know. I know it's a technology that the millennials love and it's easy for them, but it may not be necessarily easy for us. I don't understand how a video would be better than a text or a call.
User_characteristics - Generation_gap	EMS	R	Supervising Field	46-55	11-20	Male	EMS-R-007	So we hire people seasonally. They get full-time benefits, full-time schedule in the ski season. And then there's a few people that, because

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					we're busy enough and big enough, we have them full-time, part-time. So it's like they get benefits, they get schedule, that type of thing. But they're still not a real full-time employee, but they get it for-- and it gets extended and extended and extended and extended. And those are generally younger people, and they generally have a more flexible schedule. They generally have less home responsibilities. They're generally more eager to work on trying to get a full-time job...
User_characteristics - Generation_gap	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: full-time, part-time responders] Anyway, we use a lot of them to fill the schedule, either the winter time or when there's just holes in the schedule. You have to have at least one paramedic on the ambulance, so you can't just put two EMTs on the ambulance together. So there's that kind of thing to take into consideration too...
User_characteristics - Generation_gap	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	And then we use the Map, just the Google Maps. I use Google Maps and the Apple maps. And there are addresses that do not exist in there, in both... And we have map books for old technology. When the dispatch tells us where we're going, it gives us a cross street and a map page. So technically, we should be able to find it. It's just that sort of new, younger generation of people just saying, "I'm not going with a paper thing when I can just ask Siri where I'm going, or ask Google," You can start it finding where you're going while you're walking down the stairs rather than walking down the stairs, stopping, not even turning on the vehicle, opening the book to the page, trying to find the cross streets. You could have already been driving. So it's just faster. So we don't use the map books nearly as often as even six years ago.
User_characteristics - Generation_gap	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: patient care reporting] So, again, the technology has driven us in that respect. So electronic reporting is mandated by lots of government agencies now, so everybody has to learn that system. You have to deploy it on portable equipment, which is out of your control a lot of times. It's out on an ambulance somewhere. If somebody's having a problem, a technology problem in the ambulance, they're paramedics, they don't go to IT school, they go to paramedic school, okay? Now you would think that most young kids coming out of college would be

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								computer literate, and you would be wrong [laughter]. I don't find that in my population. Some obviously are, some aren't. So it's a struggle teaching these--
User_characteristics - Generation_gap	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: app logins] Oh, all of them do... I mean, again, the whole HIPAA thing. It's a pretty high security deal. So, I mean, certainly, you access programs that say, "Okay, you have to change your password. It's the end of the month" or something. It's like, "Great. How am I going to remember this one?" Write it on my hand or use something stupid that everybody can figure out. I mean, I use a password manager, and we encourage our employees to, and we help them learn how they work, and stuff like that. They're not foolproof either. And it's just like, if you make it hard enough, people won't use it. And I'm dealing with mostly college-educated people who are smart enough to be paramedics. But... --even they reach their level of frustration. I mean, they're millennials. They'll go so far and [laughter] it's, "Screw it. I'm not using this."
User_characteristics - Generation_gap	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I think that's the thing. I don't think it's an age thing. I don't think it's a generation thing. I don't think anybody is against the advancement of technology to become more efficient within your job or your job description or whatever. But we are so enthralled with technology, and we use it so much to become more efficient that when plan A isn't working, we are so deficient in our job responsibilities because everything was tied into plan A. So if plan A is down, we get so backed up with reporting or trying to get back in service or whatever, which is frustrating to the end user. And obviously, the bosses do a good job of trying to understand that, but their company line is still just figure it out and move on. But when plan A fails and plan B is so negligent in trying to bridge that gap, I think it's tough and frustrating. I think that's where people get frustrated the most.
User_characteristics - Generation_gap	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...As far as communications with your partners. Because of our different characters, different backgrounds, sometimes people-- I don't think it's as bad as it used to be. Where I'm saying bad is, there were people who were on for 20, 30 years and when you have that amount of time in a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								certain company, you're set in your ways and whatnot. Versus today we have a lot of younger officers, a lot of younger people coming onto of the job, candidates out there now. Just in the last 4, 5 years we've had over 300 new candidates. So we have a lot of new people on. And again, they come from different backgrounds, different areas. And sometimes, communication is lacking where there's a three or five-year officer who is still learning the job, trying to communicate with a candidate who has a month in the job and trying to teach them what they know to survive the streets of [City]. So yeah, there are some challenges out there.
User_characteristics - Generation_gap	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	Yeah there are people that definitely don't want it as far as our paperwork goes. You know especially some of the medics and EMT's that have been here and been in the service for 15 years they like the old way, they don't want to learn new technology because to them it's kind of cumbersome and a little bit harder for them to pick up and learn so they would much rather do what we're doing now but and it's difficult to learn new programs.
User_characteristics - Generation_gap	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	It's advanced far beyond us. Especially us older people where you see sometimes jokes on the Internet like, "Thank God I didn't have cell phones when I was younger." All the stupid stuff that we used to do as kids. But I find that to be very sad. And millennials again. I have a class of 42 paramedics in here right now. They're millennials. I cannot tell you how hard it is to educate them. Because they come in here, they've been on some sort of iPad or gaming device for their later part of their life, they're in their 20s. So for the last 10 years, they've been gaming, they've been on the computer, they're on their phone, they're not disciplined. When you get in their face to discipline them, they shrivel up. They're freaking out because they don't do that. I mean, there's no-- my last candidate class, I asked a girl, I said, "Have you ever been yelled at?" She said, "Never." Never in her whole life.
User_characteristics - Generation_gap	EMS	U	Other Public Safety	46-55	21-30	Female	EMS-U-009	Now here, we're paramilitary. You either do it our way or there's a problem. So it's very difficult to convey that message to these guys. They don't get it. Everything is instant gratification. Right? You play a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					game, you either get that point, or you don't get that point, and then you move on. They don't know how to learn. It's very challenging, so.
User_characteristics - Generation_gap	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	I definitely think that-- their use of it on the job is helpful, I would say, to the older guys on the job. They might need help logging on their computer in the station, but you know what they are? They're socially inept. They don't go into the fire house and socialize like kids from years ago. You know why? Because they don't have to. They go in, they check out their rig, and then they stare at their phone for 24 hours. They don't interact, they don't do anything, yeah. So our last class, there's a no-phone rule in this building. They don't bring their cell phones in. We had forced communications, we had forced where they had to learn about each other, and do this and do that. And I tell you what, I get compliments on this class that just graduated. They started March 1st, they graduated in the middle of May. And I get compliments on them all the time. About how outgoing and friendly they are. And they're young, they're much younger than this class. But they figured it out. After I [inaudible] on them for 10 weeks, we literally-- the one guy, when he graduated he said, "Commander, what I just wanted to--" He goes, "This is going to sound really strange, but I just want to really thank you for helping me grow into a man." He goes, "Because I know I'm older, but I never really felt like a man." He goes, "I do now. And I'm very proud of my position on this job." And I was like, "That's great." He goes, "It's incredible how much you realize what you don't know." He goes, "I feel like I've missed out on a lot by having my head down on my phone, or in a game or--" Yeah, it's really unbelievable.
User_characteristics - Generation_gap	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	Yes. And when I told the-- like I told this class, I said, "You're very independent of each other. You are all head-down all the time. You're not engaging. You're not interacting." And I said, "What concerns me about that is that you are rendering patient care to people soon. You're going to be out in the field. How are you supposed to figure what's going on with them if you can't communicate with them? You must communicate with them. So every morning at roll call, I'll go up and down the line. I'll

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								check the licenses and any documentation they have. And I'll address and I'll say, "Good morning candidate so-and-so. How are you?" And they used to be like, "I'm fine, ma'am." And they wouldn't say anything. And then I'd ask them questions about themselves. Now, they're waiting for me to come now because they started June 19. So they are waiting for us all to engage them and talk to them. And now they want that, but they were so closed off when they got here.
User_characteristics - Generation_gap	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	... But these kids now-- so they work for two years on an ambulance where they're just doing transporting patients all day long. You're not learning anything. You have no critical thinking skills. You're working with somebody who's of the same age and mind-set as you. You both have had your heads in your phones all day. It's a sad state [laughter] of affairs really, so.
User_characteristics - Generation_gap	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	... So I like it. I like the fact that it can do all that stuff, but I know that people who are maybe 10 years older than me, they don't like it. They don't like the change in technology. I was younger, so I can go with that. Now, the older they are, firemen included, they do not like technology.
User_characteristics - Generation_gap	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	They do resist it. Yes. Are you kidding? I can't get these old firemen-- I'm saying old firemen, and they may be 55, to answer city email. "Now, you know I don't log on that city email stuff." "It's just an email, it's not like it's--" I don't know. Yeah.
User_characteristics - Generation_gap	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	There absolutely is. These new guys coming on now, they can run circles. The two generations would be perfect together. You can have the young generation show the older generation how to work the system, the computer and everything else, if you can have the older generation come in and actually lend them some of their social skills. It would be a perfect mix.
User_characteristics - Generation_gap	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...the tone is really hard to understand in these emails. So sometimes it causes a little bit of conflict when somebody-- especially if someone questions your idea, or offers up a suggestion that you don't agree with. And the tone of the email, it might be somebody older or younger, and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they don't interact with email the same way. So when I read an email from an older person telling me something, even if somebody younger wanted to say that exact same message, they might say it differently. And I might get a different end result from that...
User_characteristics - Generation_gap	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...radio communications are a big part of the job too. And every single day we hear something on the radio that we're like, "Come on. Why did he say it like that?" or, "That's not what you're supposed to do," or, "Don't say anything at all," or stuff like that. But around here, for the most part, especially the more senior people are fairly good with the radio communications. You keep it concise. You use the right terminology, that type of thing.
User_characteristics - Generation_gap	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: switch from Gmail to Outlook] The reasons were financial, because we're also in a weird-- I mean, I'm sure you know that, doing interviews about technology, there's a weird transition right now between gen X and gen Y, who are very technologically savvy, and the boomers, who are on their way out into retirement. And so I think that that older generation is still stuck on Microsoft Word, Microsoft Excel, those types of programs, because that's all that they were exposed to for 15 to 20 years. And Google and the cloud-based softwares don't work exactly like the software that they were used to. And so they have this big affinity to going back to what they know and not learning something new. And even though Google Sheets worked as well as Excel, it's just things are in different places. You don't have the ribbon on the top or whatever. You can do everything you need it to. It's just different.
User_characteristics - Generation_gap	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: switch from Gmail to Outlook] And then there's just the compatibility issue. So some of our admin is pretty old, and they would do something in Excel and then send it out for the membership to look at or to use. And then that creates a compatibility issue of having to upgrade it or change it. And then, when they would get something back, they would get it back from Google Sheets, not in Excel format. And they didn't understand how to change it back. And so, finally, they just said, "Okay, we're going to buy Excel for everybody." But then you could buy one for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								every desktop and then still continue a cloud-based service, which is now buying two programs. Or they just buy Microsoft 365, which gives you the web version, but then also gives you five free licenses, or desktop, or whatever. Then, that creates a whole nother problem for our IT department because there's-- and I don't know what your background is in computers... But you have to support them, and you have to load it on the computer. And then access and all of that, so.
User_characteristics - Generation_gap	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	The mic in the fire service has become kind of a big issue. We're pretty early adapters at [City]. We tried a Bluetooth system. And the problem with a Bluetooth system is it has to pair every time you turn it on. And it doesn't always pair. And then you're trying to smash the button to make it pair. And so we got rid of it [laughter]. We also tried to do a Bluetooth system in the cab of the truck. So as the engineer, my position, we tried to buy one so the engineer could jump out and still have his headset on. And he could listen to the radio and then be able to operate the truck, not be exposed to the noise of the truck and all of that. And same thing. So you'd have to pair it, and then the battery died. We ended up with a [Name] that's MIL-SPEC that works really, really well for the military. Because they get in in the morning, the HUMvee, or whatever it is, put in a new battery, pair it up, and they can go about their day. But it wasn't built for the fire service. So it's not built for the truck that gets backed in, gets turned off. Then, you get a call, start the truck up, it still needs to be paired or connected.
User_characteristics - Generation_gap	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We've lost a lot of the older dispatchers that were really good at the run cards. I've done it for a while. So you start losing some of that once you get the-- when I started, we had two monitors [laughter]... I think ours has eight. So there's the EMD card, then there's the map page, and then there's 911. Now that we're moving into the new Annie Alley system and the level three 911, it's really cool because we used to just get an address. But that was really neat because everybody had a landline. Now everybody has a cell phone.
User_characteristics	FF	S	Not	Not	Not	Male	FF-S-022	The technology that [Name] was talking about, [Name]. We use a multi-

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- Generation_gap			specified	specified	specified			channel dispatch concept, which I'm sure you've heard of a lot. You have your primary dispatch channel, and then you go to another channel to check in. So [Name] is just an automated voice that announces what the call is, the call type, and all of that. And then we dispatch on channel three-- or channel two. I'm sorry. Either one. So we dispatch on channel one. [Name] happens on channel two. And in a typical system, you would change to a TAC channel. We don't do that. We don't do that because our admin is older, and they don't like the switching back and forth between channels, which I think is a big thing for us. It's caused a lot of radio communication on one channel. It muddies everything. Personally, if I could do anything, I would like to see us move to a more dedicated TAC channel type of environment. I think if you could have a perfect world, it would be neat if I could dispatch, and push a button, and make all the radios on that truck go to that TAC channel.
User_characteristics - Generation_gap	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	when you're new, your level of excitement and anxiety is-- it skyrockets. When the tones go off for a fire, your heart rate is 180, and your blood pressure goes up a little bit. Your anxiety level goes up a little bit. And your excitement level's there. But at the same time, when you start having a lot of experience and you start having a lot of time on the job and you start to age and you're starting to go through these transitions, someone who has two years on the job, excitement level is different than someone who has 20 years on the job. Their excitement level meaning that they still enjoy going to fires are the same. But you have an excitement level with a heart rate of 80 and you have an excitement level with a heart rate of 80-- or 180, and then you have an excitement level of 80. So how someone with a lot of experience modulates their excitement level is just speak through experience. "Okay. Yeah, let's go to this fire. Let's have a quick push-out." They still remain at a normal heart rate level versus the new guys who were getting dressed fast, they have quick push-out, but their heart rate is so fast. You know what I mean? So the desire to go to fires sometimes are the same. It's just where you're at metabolically and heart rate. Those are different.

User_characteristics - Generation_gap	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: using tablets] Well, I think it'd be great. A lot of things that hit the fire ground or the fire service in general, especially with this new technology, we're worried about losing it. We're worried about it breaking. And then, at the same time, now you have to train firemen that are 25, 30 years on the job who-- they didn't grow up with technology, so now they've got to learn something. So those aren't easy tasks, especially if the technology they are using is a little more high tech than they're used to. A lot of different steps. A lot of different pushing this and pushing that. A lot of different frames that they have to go through to get where they want to go. The less is better. So in the more simple form and format is better because anything that requires less steps are going to be better for us...
User_characteristics - Generation_gap	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	I grew up in a household that in the '70s you didn't have computers and stuff. Grade schools didn't have computers. It wasn't until I started to take college courses that I had my first exposure to a computer. So I think in the younger generation they're going to find it more user-friendly for them to operate it with ease, where myself would have relative difficulty because I did not have the exposure. I think as we talked about kids, remember exposure at an early age, they become better and better to that. It's almost like their brain is learning in such a manner that it accepts these technology and able to grasp concepts or be able to grasp new features, etc., with relative ease and I would have to muck through it. That's being honest with you.
User_characteristics - Generation_gap	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	[RE: age] It's a huge factor. Because my mom still doesn't, to this day, know how to answer a cell phone when she does the flip and what button do I press. Now that's another generational gap. But again, with today is, growing up in the millennium era. Whatever that, the new millennials, they're very sharp at this stuff. I give them credit for it. But that's how they grew up. That was the era. They didn't have a choice to go to a book or a spiral notebook. You use this to communicate, your pen. Not a computer keyboard or an email.
User_characteristics - Generation_gap	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	[RE: chalkboards] that was in my year of growing up, as we discussed it, that generational. As technology improved, of course, they were

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								exposing children in grade school to this at a young age. And like I said, my parents, your parents, myself, we never had that opportunity. If I did, the whole conversation could be different. This is, "Oh I love technology." And what is it? "It's really easy." But for myself, it isn't easy.
User_characteristics - Generation_gap	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	So I have to ask my son how to do things or open up this or can you send this via email, but you take a picture of it, then you've got to put it in God only knows. He knows how to do all this stuff. And the purpose is good, but I just did not have that growing up... Well, it's like that. I give you a toolbox and it goes, "Hey, can you go fix my car?" or something, or "Go and build this for me." You never had the exposure to it. Once you did, you could do anything. I can do this stuff, but I just never did, and I think it was the learning gaps...
User_characteristics - Generation_gap	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	It's just my deal is is getting I guess when I became chief I was pretty young. I still had a lot of older folks on, most of them were okay but I got the feeling of you know being there was an age difference they didn't want to listen to a younger guy but most of them had left and I mean everybody knows everybody here but it's a struggle to keep the training up and get people to training let alone meetings when they have children and basketball games, stock shows and you know regular lives, jobs and you really got to have a heart to volunteer and want you know to strive to make the meetings and make calls.
User_characteristics - Generation_gap	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	They pay us but we provide a service for them so as you know public safety is tax based and you know customer service is number one that's something that can fall short sometimes as new generations come about but the core and tradition of the fire service is the customer is number one so that's why when it comes time to risk our lives and put other people number one you know that's where the customer service really comes in on that level.
User_characteristics - Generation_gap	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] I think it can also be a crutch mainly for the younger generation. We got some new recruits out there now. I guarantee if I handed them a map book they couldn't read it so if the technology was to go down can you read this arrow Atlas to get to where you need to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								go?
User_characteristics - Generation_gap	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] And that is a way to look at it because you have two different generations so we look at it two different ways but once you say that that is pretty much true. I don't think I've ever read a map but I know I can pull addresses from phones.
User_characteristics - Generation_gap	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] That is a huge problem right there. There is a lot of personal know how of a lot of problems that they may think is a problem but really isn't a problem but if you look at it there is no younger guys really in charge right now so you will always have a generational gap right there.
User_characteristics - Generation_gap	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] It's evolving. I think, I never thought I would be texting in a relatively dynamic environment. I mean, I'm not in a life and death or emergency situation where there's a lot of information going back and forth. I never thought texting would be a good tool for that. I'm guessing that, we've hired like 25% of our workforce right now has probably got less than five years of experience. That's just a guess, but pretty close to that. And so their ability to work within different mediums is going to be continuing to evolve whereas guys like me, 30 plus years, that's the idea of sitting on an incident working off of a tablet is going to be a lot harder to adapt to. No matter how much easier it is.
User_characteristics - Generation_gap	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] So I think we're bridging that gap and working very cohesively and managing the new technology. It's good to have those more senior minds to pass on what they've learned and then us coming in as these things are coming out. "Hey there's this new phone," and we're all excited about it, spending money on Apple Watches and whatnot. And then some of the other guys were like, "How does that work? Why's that?" And we show them, and next thing you know, so and so's got an Apple watch and it makes his day easier.
User_characteristics - Generation_gap	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] It was ahead of its time. Now it's with face time, and video chats, and all that stuff it's the norm. I think some of our younger people are like, "I don't want to do that." We tried it, and they revolted, but I think we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								tried it too early.
User_characteristics - Generation_gap	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	I wouldn't say it's everybody. I do know that it seems like the younger firefighters that were getting on the job have a lot more patience with it, and I think that is part of-- like I was telling you, I called my daughter to get directions. They just understand more because they've never dialed a rotary phone like we have. That's all they know. So not so much with the younger group but the group that's my age and maybe a little younger than me, I see more frustration with that because it feels like they're being forced to do this and this is the way it's going to be and it's not the way they're used to being. And they don't like to see compromise in the field either. They have their way of dealing with the patients and doing their business and taking care of things and now you feel this element and it's kind of slowing them down a little bit [crosstalk]--
User_characteristics - Generation_gap	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	They are. Within our county, [County], that's how we communicate with the hospitals. When we're doing patient transports, it's all done over cell phone verbal communications. I'm not sure that they understand when we have an event and what happens to those cell phones. So again, this is that learning curve and, "Oh, that's old technology." Pagers. I still carry a pager because it's not attached to any cellular network, and it's not impacted by civilians. So having that mode to be able to communicate or at least get information out that's not impacted by the event is huge. All of my engines, all of my command staff and leadership all still have pagers just for that reason. And then I get the newer kids saying, "Oh, that's old technology. That's ancient. Why do we still carry a pager?" Well, they haven't experienced an earthquake or a big event where everything comes down. Katrina. I responded to Katrina. Same thing. Everything was gone. How do you communicate with that? Cell phones, land mobile radio, everything was gone.
User_characteristics - Generation_gap	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	.... So we're always developing new technologies, and I think we're seeing it quicker than most just because we live here, and people are trying to get their technologies out and can be seen. So from that perspective, you have the older generation that haven't been exposed to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								all the technologies, and it's just mind-blowing to them the technology that's available to them. And even over 20 years, I mean, it's changed. So they're going, "Wow, you can do that?" Video conferencing is becoming a norm. GoToMeeting conferencing, that type of stuff. There's no more just conference call where you're talking to a phone. It's all webinar and GoToMeeting type stuff. And that's the type of technology that I think we're starting to get expectations from a public safety perspective when we do our mobile command vehicles to have those conferences. And not only talking to people here within my county, but all the way back up to [City] to the capital. And depending on what region we're in, maybe back to a regional joint information center. So it's just not one technology. But you go back to the demographics. It's ever changing, but you're slowly seeing that the millennials and the younger generation come in, and they want instant communication. They want that instant access. But I don't think they understand what's going to happen when they may have it, but it's not talking to anybody on the other side. What's going to happen? How are we going to make decisions? What's the contingency plans to be able to do that?
User_characteristics - Generation_gap	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	Oh, yes. Yes. Because it seems like they're all being born with a cell phone in their hand.
User_characteristics - Generation_gap	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	...But in a big city it gets more difficult to be progressive. It's a bigger animal to change something. It's harder to train 1,700 people on one of your changes, so you can get the word out to everybody... So that limits what you can train on in a year, the time you can train on something. Some things are online and some things can't be done online, you need to be in person, so that's a limitation. Some of it is, like I said, is culture, willingness to change. Some of it is generational. The new kids are really good with electronics. I grew up, have 23, 24 years in the emergency services. I grew up as an adult without technology and had to learn it as an adult.
User_characteristics - Generation_gap	FF	U	Supervising Field	46-55	21-30	Male	FF-U-044	But I think the future generation, the young guys, I think they're all going to be over this. I think this is more—[talking about technology]

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					
User_characteristics - Generation_gap	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Physically challenging, at times. The modern-day fire service calls for a little bit more education, so those that are a little bit more from the dinosaur era have to force themselves a little bit to get back into books. But I know we're about to speak on technology, but technology's helping in that regard, in my opinion, because you have tutorials and things for people that aren't so computer savvy, like myself, that help you walk through certain facets of it.
User_characteristics - Generation_gap	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Yeah. Yeah. And so we try to instill an older guy or girl showing the younger guy or girls how it's done, sort of thing. In my opinion, we started to lose focus on that a little bit recently, but we're trying to regain it. So there's always a passing down of information. But you had this new generation of recruit entering the firehouses as of late and they're more book smart, and technology smart, or they want their phone in their hand, or their iPad, or whatever. And then you have the 30-year firefighter who knows nothing about that, knows nothing about YouTube, Facebook, and doesn't understand why that young person doesn't want to just take every piece of information from them that they could pass down.
User_characteristics - Generation_gap	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Both. But I try to use my desk phone more because I'm inside. And maybe it's because I'm in my 40s. So it's just as easy for me to pick up a desk phone. Plus I got the big foamy things so I can rest [inaudible].. Also hands-free. So I'm like this, and I can still type. But yeah, both desk and cell. And I've got a car that's got Bluetooth. So I've got my phones wired through that so I can talk as I'm driving down the road. And that happens quite often. I got police radios. I got one in my office. I got one in the car. And everybody, if I don't answer my work cell phone, they have my personal cell phone. So they'll call me in there. Thankfully, that tends to be more trash-talking. And that I thoroughly enjoy. I should cut down on my trash-talking. But at this point, I'm enjoying that.
User_characteristics - Generation_gap	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE; report writing] Yeah. Yeah. I have to. And I'm old schooled, and I've OCD and everything. So I need my desk. I need my computer. And I kind

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								of have like a flow of how I need to lay out my papers and-- I take notes, and as I put it in the report, I cross it out but in a different color pen because that way I know I did it. But yeah. Our reporting is desktop-based. You can access certain parts of it in the cars, on the MDT. But you're twisting yourself up into a nod. And then, the word processor in our report system stinks always. Just garbage. And we've taught everybody. And I was one of the original instructors. And I almost think that I was told this by the company. "Just type at Word, copy and paste."
User_characteristics - Generation_gap	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...the data that's available, information gathering. And I think it's a skill the newer guys have lost, or they don't have is go out and talk to somebody. That's like, "Oh, no, no, no. I can't do that." "Yeah. Go talk to them." And a lot of guys want to solve stuff from behind the keyboard. And you have to go out and talk to people. So there's good and bad. But just the technology, you have computers in the car. You've got the video systems in your car. You've got tasers. There's all kinds of stuff. And I think most of it it's for the better.
User_characteristics - Generation_gap	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	But people don't like to talk and-- I say kids. Like I said, I've been in this 18 years now. People just getting new on the job don't have that ability to talk to people. They don't have the ability to sit down and be [inaudible] and sit down and wrap with people. Some do but others in the majority, they think there's going to be an app that's going to save their life, where they can send an emoji or a meme that's going to get them through a situation. There's not. Sometimes you just got to figure out how to talk to people...
User_characteristics - Generation_gap	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	It can be, and it's tough. And they'll bring me something, "Hey, what about this one?" "Did you ask them that?" "Well, no." "Go ask them [laughter]." "I don't know how." And there's times where it reminds me of when my 13-year-old-- when I first got into a relationship with my wife, he was 10, where he's like, "Will you ask [inaudible] so we have a video game?" "Sure I'll ask." And we'd walk up there and ask them. I'd make him do that because you got to learn it somehow, somehow how to talk to people. And even today, he doesn't want to order his own McDonald's.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								He's going to get a 20 piece nugget and a coke with fries, and he always wants it the biggest size possible, but I always tell him no. He must be reasonable. I know what he's going to get. I could order for him. But I make him do it because he's got to learn how to talk to people. And you see adults that come in just like that. Go ask them that, "Oh, I can't [laughter]."
User_characteristics - Generation_gap	LE	U	Manager	46-55	31-40	Male	LE-U-020	...And I think the next step when we move into the FirstNet broadband, I think that's going to be the next significant step because once it gets done-- I mean it's not eminent, but once it gets done it's going to be very good in the next step. I see that that's where it's headed. So things we're doing now, again, will be kind of archaic, like writing things down, like it was in the past...
User_characteristics - Generation_gap	LE	U	Manager	46-55	31-40	Male	LE-U-020	It's one of those things where it's two-fold. It's one, that when I hire somebody I offer him nights, weekends, holidays 24/7, okay, so right off the bat, they're-- it's not a great scenario, to be at it for a long time. You miss family things, you miss family events, and those type of things. And the addition too, with the younger generation that we're hiring, they don't like that. So they're always looking to better themselves. And then we do an exit interview on anyone and I have always told these people, I've never been mad at anybody, they got something to better themselves. You're a good employee for us, we wish you were staying, but I congratulate you for moving on. But, yeah, it ebbs and flows, but we're at about a 10% vacancy rate statewide.
User_characteristics - Generation_gap	LE	U	Manager	46-55	31-40	Male	LE-U-020	I'd say average, we're averaging 30s early... We get a lot of young people. And then we've got some people that are in their 40s and 50s that have been here. They're old-school people that are still bringing the average, but it's more of a younger generation that we're hiring right now. And typically, it's a younger person's job. It's all computerized. It's all typing. It's all those type of things. And the younger generation does better with that. I mean, I'm saying we do get people in their fifties that apply for us, and they have education, and they have the skill. They have a lot of things, but when it comes to actual multitasking and those type of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								things, it's not as good. And I said, "I wouldn't want to sit down at an advanced age either because it's not an easy job."
User_characteristics - Generation_gap	LE	U	Manager	46-55	31-40	Male	LE-U-020	Yeah, and every day is going to be different, and that's what I liked about the job. When I initially came on, I liked it when it went bad. I was a shit magnet, so [laughter]-- but that's okay. I liked those type of things, but you have to have the temperament and the abilities on that. So it is a younger, I would say, workforce. But a couple years back, when the economy went to crap, we had a lot of middle-aged, 30s, where people were applying because their line of work was not available anymore. So we got a lot of good people out of that...
User_characteristics - Generation_gap	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: text-to-911 Safe2Tell program] Because you have to look at the generations you're dealing with, and yeah, we went from just total talking to people, and kids don't talk to people. My kids don't like to talk to people, those type of things, so it was marginally-- it was effective but marginally effective but we've seen two consecutive years over 70% increase in use.
User_characteristics - Generation_gap	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: text-to-911 Safe2Tell program] So we found their sweet spot. Unfortunately, we don't have a lot of extra personnel to handle those now, but it's amazing the number we do have, but that's just the technology leap. And that from a text-to-911, it's-- and that's why I went with the correlation that they just haven't grasped it yet. And we went to text because we went to text before the app. We did see a little bleep but not anything else. But when it went to a full blown app, it's gone crazy because you hit their sweet spot and that's how they're going to use it.
User_characteristics - Generation_gap	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: city-issued cell phones] There was some resistance from some of the officers when it got to the point where you just couldn't do your job without a cell phone or some of the older officers were resisting doing that unless they got some sort of compensation. But I think any more, everybody's just so used to using their cell phones that they do it and don't think twice about it.
User_characteristics	LE	S	IT	Not	Not	Male	LE-S-015	from my perspective what's happened over the last probably five years is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- Generation_gap			Specialist	specified	specified			that there've been so many advances in technology that's related to law enforcement that it's, I guess, I don't know if overwhelmed is the proper term, but it's overwhelmed some officers that worked for years with really the only real technology they had was the laptop in the car, the MDC, but really nothing else, and now with the advent of the body cams, the surveillance cameras, the license plate readers, we have our motorcycle enforcement team has hand-held e-citation devices. Or exploring now, putting printers in all of the patrol cars, so we can do more electronically and print in the cars...
User_characteristics - Generation_gap	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...So I think particularly a lot of the younger officers that don't have that history of doing a lot of the paper, it's probably not affecting them as much as the officers who have been around for at least 10 years, and they're getting hit from all sides of okay this is all being changed now, and we're making things-- this technology is going to make things easier for you, and really, it's not. From their perspective, it's, "Gosh now I've got to make sure all my video from all day long is tagged correctly."
User_characteristics - Generation_gap	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: technology] everybody's grown up with it. Newer officers today coming in in their 20s have grown up with that. My daughter doesn't know what it's like not to have a cell phone. Or to be anchored to a phone with a cord in the house. She's just much more adaptive with that, and we're seeing that with the younger officers coming in today as well...
User_characteristics - Generation_gap	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: using technology] SME S2: Juniors are more acceptable. They at least accept this. SME S4: Yeah. More accepting and more understanding of it.
User_characteristics - Generation_gap	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Well, the computer has the ability that I can see every call that's on the screen. I can click on it, and I can technically hit the button to assign me that call, and I would pop up, and it would be assigned to me. But patrol's not allowed to use that. Our animal control officers, they can look at it, and they can hit the button and self-dispatch. So again, I think it's just stuck in the-- the biggest fighters we had about going to self-dispatching, which we tried a dozen years ago, was we had a few old time sergeants who wanted to hear absolutely everything that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								happened. And they told their people not to engage in the testing, so then it went downhill. And without support from the supervisors, it didn't progress. So then we're back to the radio, and most of those supervisors are gone now. And most of the supervisors we have now, frankly, started way after I did [laughter]. And I think technology is moving that we can move more in that direction now. Just a slow process.
User_characteristics - Generation_gap	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: doing reports on tablets] The technology's there. If you could drop the tablet into a keyboard quickly, you could. Touch screening it on that tablet doesn't work very well. And then, officer safety issues. Some people are really old-school. "I can't do anything else. I write on a piece of paper." I don't do that. I mean, I'll do my ticketing with my handheld, and I walk up, and I'll have it in my hand the whole time, and I'll walk right there at the door and have the ticket done. But there's a mentality there that I think is going to prevent a shift in that direction for actually using the tablets like they are designed.
User_characteristics - Generation_gap	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: running a person's information during a traffic stop] ...we have a few people who will not use the computer, use only the radio, which then takes up bandwidth for everybody else, but they won't change, and they're our trainers. So when you have trainers who are teaching people to constantly do that, it's like, yeah I can teach them how to, but you don't need to do it all the time. So it just, there's a lot of things that we can do with technology that our people are preventing. Whether that's dispatching, whether that's running inquiries and stuff like that on computer, because we just get a mindset of, "Well, this is how we've always done it."
User_characteristics - Generation_gap	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Well, it's really weird. You would think that our younger officers would now be more technologically inclined since they've had cell phones since they were born and that type of stuff. But we still have some that come in, "I don't know how to use a computer." You have a four-year degree. I'm pretty sure you had to type something for a class sometime. But then you have others that are just permanently attached to their fingers. So it's kind of unusual there, even though they are the same age

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there is that difference. I think eventually, as time progresses down, we'll get rid of the dinosaurs and we'll get more into that type of stuff.
User_characteristics - Generation_gap	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I remember when we first got digital cameras, and those got tossed to me, and I had to figure out that protocol. I mean, for a while, people in the state would call me-- I don't know if we were one of the first people to buy them. That was from an interesting process and even being able to show kids, take a picture, as they did tours, and then print out their picture for them. So seeing a lot of those technologies come through that people starting off today just-- I don't say they take for granted, but they've just always been there, so they never knew life without them.
User_characteristics - Generation_gap	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	So it's weird. So sometimes I would be doing just the computer work one day I'm at the dispatch center and not even going to the sheriff's office. Sometimes it'll be all the sheriff's office stuff and something pops up. Last month, we had an issue at the high school with the threat that was made. So I was at the high school a whole week in uniform doing patrols there and walking around... Just general threats of-- the shoot up the school, don't come to school this day. And so going back to that basic level of being a cop and restoring the sense of security and trying to find the bad guys... So being able to revert back to that.
User_characteristics - Generation_gap	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: technology adoption] Guys like, "Oh, look, I figured this out." Okay. That's why you were given a device to figure things out and come up with what worked and what didn't work. And it wasn't always an age thing or a specific demographic. It's just a personality type, I think, more than anything else.
User_characteristics - Generation_gap	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... I know we have a lot of old salty dogs around here that they don't even know how to turn on a computer. And they're like, "If it takes more than three steps, I'm not going to do it." So it's simplified. With everything across the board, if you don't make it simple, they're not going to do it. They're just going to move on to the-- or stay where they are, in the past.
User_characteristics - Generation_gap	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: e-ticketers] our motors can engage in a traffic stop, be done with it, and get a ticket issued like that. They're just nonstop with that stuff, so

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it's definitely more efficient. I obviously don't write as many tickets as they do, so it's not necessarily something that I see. You do have to set it up, and you have to put your ID in and all that nonsense and I just don't have any interest in that ,but some of the newer officers- well, I'm pretty new, but newer than me I guess, they like to utilize it as a tool that kind of benefits them, so.
User_characteristics - Generation_gap	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: communication issues] I mean, the technology aspect is hard. I don't know how you would solve it. I've heard other people discuss, we need better radios and stuff like that. I don't know any different, so I use what I have and that's about all I can- and you hear the older guys, "Oh, back in the day we didn't have anything." And a few months ago, the line got cut to Xcel, so we didn't have any Internet connection to our vehicles, and so it was like reverting back to 1950. And so you kind of get a perspective. It was like, all right, well, you do have a lot to work with, and these tools are very valuable, so complaining about them isn't making anything better. It's just utilizing what you have and making the most of it...
User_characteristics - Generation_gap	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	It's decreasing. I came on the-- the cell phones weren't really that big until I was in high school. And even then, it wasn't something that everybody had. And I think by the end of high school, I didn't know anybody's phone number anymore because my parents' phone number was the house phone. And it was about where it all ended.
User_characteristics - Generation_gap	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I'm worried about people knowing how to write or read cursive... I've had someone that says, "I can't read cursive." I'm looking at them like-- this is a teacher. She's 22, 23 years old. And somebody wrote her a hand-written letter, note. And she couldn't read it because she was a [talk?] person. And to me, that just-- that baffles my mind. What do you mean?
User_characteristics - Generation_gap	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: phone and computer use] You're distracted no matter what. You're not paying attention to your surroundings. I mean, back when I started, we didn't have computers [laughter]. Or we got these fantastical green screens that all you could do it type in a plate. But now, with all the different functions, it makes actually seeing what's going on in the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								neighborhood harder. And somebody's looking at this box to tell them what's going on as opposed to actually looking at the surroundings and figuring out what's going on.
User_characteristics - Generation_gap	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I think, partially my generation, but definitely, the generation that's coming after me, we're more apt to text than make phone calls. And so I think we're not as good of communicators because of that. We're used to being able to plan out what we're saying before we send it and stuff like that. So that phone calls, sometimes you-- when I first came to the department, we had to start making notifications. I'm like, "Oh my God, I hate talking on the phone this much." It was just, it was something to even get used to, to be on the phone regularly.
User_characteristics - Generation_gap	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I came from a department and we had different technology on the computer. And we were a smaller department so it wasn't we didn't really need to worry about walking on each other, but if he got a call and I wanted to go on his call, I could put it in the computer-- we used 10 codes there. I would just put like 76 to blah-blah-blah's call. So I never had to go over the air to dispatch or [inaudible]. At least it was on the computer, which I think some people may be a little old school or worried about, "What if I get in a crash. I never said I was on the way to the 10-1, then I'm gonna be in trouble."
User_characteristics - Generation_gap	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	On the street, I preferred the radio as opposed to PDT just because you can hear it and you're still paying attention. If you're trying to read it off the screen, you're distracted, you're whatnot and-- if you have a partner, then you have no problem. But when you're alone, it'd be nice if the-- if you got a job and you could hit a button and it-- have the computer read whatever to you, like talk to text almost where it would just say, "Hey." That, I think, would be ideal for some officers especially-- even when you get older, it's harder to take the glasses off sometimes.
User_characteristics - Generation_gap	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I just think I would want the computers to be designed better in terms of the programs on them. After seeing different ways-- from state to how suburban department's PCADs function, ours is very poor. And I tend to think of technology now is, can I hand this to somebody who is from an

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								older generation and they can just figure it out? And I would say our PCAD don't work like that. Even just for the ease ability of use. And I've kind of found a few shortcuts, but this is just me playing around, nobody told me...
User_characteristics - Generation_gap	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: checking email frequently] A lot of the newer people do. Our schedules in the [district] are disseminated through their phones-- well, through their email. So they check it if they would like to know what they're working. They don't have to call anybody. They don't have to ask. They can see the schedule. So I would like to say in the [district], the majority of them check their email regularly.
User_characteristics - Generation_gap	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: SSO] That they think they're-- well, we're being GPSd all the time anyway so I don't know what they're scared of. It's just new. Change is hard for policemen. They've been used to doing things their way. Sometimes they're just not willing to adapt as easily as, let's say, newer officers who just grew up with all of this technology. Because there are some older people, probably most who have retired, they wouldn't log on to their PDT. They did not like them.
User_characteristics - Generation_gap	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...Another thing that we see within our department as a challenge is the constant change. My daughter is kind of a social media junkie so it's hard to keep up with the platform that she's currently using. Am I looking at her blog? No dad we don't use that anymore. That's a fake account. I don't even use that...
User_characteristics - Generation_gap	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: rapid changes in technology] ...That's ever-changing. I just told the other day that Facebook is for old people.
User_characteristics - Generation_gap	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	Not many. I can't think of any apps they're using on their phones now. I can't think of many. I think maybe they're using the mapping, some of the newer guys.
User_characteristics - Generation_gap	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	Google Maps and things like that, some of the newer guys that don't know the [County] that well, I think they use that to some extent.
User_characteristics - Generation_gap	LE	R	Supervising Field	46-55	21-30	Male	LE-R-059	Well, yes, certainly. What you have to understand in law enforcement is we are - historically the profession is getting older, so you still have

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					some people in law enforcement that reject technology, they are not comfortable with technology, so certainly we still have some of the old guard, if you will, that refuses, or does not want to, embrace some of the new things that are coming out.
User_characteristics - Generation_gap	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Yeah. You know, I think the biggest reason for the downside is if they fail, what do we do? And you know, they are from the old school of thought where if I don't have the technology, it can't fail. So I can always do my job. You know, now it's at the point where we rely on technology so much that if it fails, we can't do our job anymore or it is impeded quite a bit.
User_characteristics - Generation_gap	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	It's a change of - it's a generational thing. To me, it is a - they spend too much time worrying about Facebook. They spend too much time talking and texting back and forth to their friends. I don't like that and it's a pet peeve of mine because I don't pay you to come in here and play on Facebook all day because you have to be updated with your social media all the time, but it's a never-ending battle because these kids, they have to be talking to somebody all the time. It's like, I don't understand it but it's me, but that technology part I think is actually a negative impact on the work place overall.
User_characteristics - Generation_gap	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	... And you know what? That's exactly what we are doing today. Exactly what we are doing today and it is as good as he said it would be. 2003, I thought -- man, can you do that? They will never talk to you. People will never talk to you. The criminals we deal with are pretty stiff. Did they tell that? They were like, we're glad. We're glad.
User_characteristics - Generation_gap	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	You know, these kids today -- they all play video games and that's about what it is. It is just a little joystick, I mean, it's a video game. Because you are looking at an iPad and you are looking to what the drone is doing on the iPad -- you are looking --
User_characteristics - Generation_gap	LE	R	Other Public Safety	36-45	6-10	Male	LE-R-043	How doomsday is that right? Just you know the generational thing where people are like millennials wouldn't know how to hang if they didn't have their smartphone they'd be like lost forever. That's not true

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					but it would be interested to see what would happen you know.
User_characteristics - Generation_gap	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	...So it's I have experience with them but a lot of guys didn't and our demographics of our agency are how do I put this politically older and so there's been a lot of resistance to change in technology even if it means increased deficiency and some of the younger guys like myself that are there are kind of really pushing this you know...
User_characteristics - Generation_gap	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	I think that the individual's understanding of technology is probably the largest thing. We still have guys with flip phones. I didn't know you can still buy a flip phone. You can apparently. They're expensive. So we have one guy in particular love him to death he doesn't text, doesn't do text messaging right he also has a flip phone so I think and then you got myself and some younger guys that are like you know we're watching our dopers on Facebook. You know we're kind of monitoring it and he's like what the hell is Facepage you know? And we're like it's not Facepage it's Facebook.
User_characteristics - Generation_gap	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] It's come a long way. There's a lot of things there's a lot of people that don't use their computers they have access to them. There's a lot of people that have the chance to use the technology they just choose not to because they don't want to learn something new.
User_characteristics - Generation_gap	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Used to hearing that number because that's the bar right from now on it's never going to be said anything on that radio other than that number so if you don't listen to your number and you get sent somewhere and another officer goes and you don't show up and he gets hurt that's on him. That's on that other officer so listening it's bad. They're hiring a lot younger guys which I can't say a whole lot I'm probably only older than two people on our PD so my first day was my 21st birthday so 21 my first day of work I went out that night with my parents I had one drink went home went to bed and had to wake up again at 6 a.m. and come back.
User_characteristics - Generation_gap	LE	U	Other Public	46-55	11-20	Male	LE-U-049	Not necessarily a call in because of the fact and this to our technology question because of the demographic that we deal with here on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					campus. The younger generation 18 to 20 something's the trend for that demographic is that they prefer to text and the use of smartphone technology so the student government in conjunction with other students on campus actually did a study of their own and wrote a white paper evaluating several different emergency communication type tools that are available on smartphones.
User_characteristics - Generation_gap	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S2] I think sometimes it can be detrimental in terms of traditional policing methods you know like you know some of the newer officers aren't as good as say maybe him you know just being on the street and knowing what to look for because there's such an overwhelming amount of information that directs you now. You almost don't even need the old methods anymore you know. Too much technology.
User_characteristics - Generation_gap	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S2] Maybe the younger people embrace it. Some of the people that are older have no it's not technologically sound you know they don't want to even bother with it. They're not good with technology but yeah all the new people I mean.
User_characteristics - Generation_gap	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] Well it's second nature to them. I mean that's what they grew up with. We got people here---
User_characteristics - Generation_gap	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] In early 20's you know and cell phones have been around for as long as they've been alive. When we first started and we were handwriting reports. We didn't even have access to a computer when we first started.
User_characteristics - Generation_gap	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Well, I always make kind of a joking comment, but you can tell the rookies from the veterans because the veterans carry their bare minimum. They carry their gun and the bullets that they're required to carry and maybe a set of handcuffs. And the younger officers have every toy [laughter] that they possibly can carry attached to these tactical vests. And they might be a very relatively slim and very fit individual, but they're walking around. I don't know. They look almost obese because they have so much equipment attached to them. I just go and I ask them, "What are you going to do with all that stuff?" And they're more

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								than happy to explain to me what everything is and how everything works. I just go, "Oh, those kids [laughter]."
User_characteristics - Generation_gap	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	I didn't look at the screen. A lot of young officers are comfortable driving and looking at the screen. And I could get there, too, but I just don't have the need to get some place like they do. So I would usually pull over and look at it, in that regard.
User_characteristics - Generation_gap	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] And it's not really-- I don't feel that you get as much resistance to change as in the old days. I really don't, because I think we're dealing with a younger work force, and they're used to things being dynamic and changing all the time. On the other hand, you do need things somewhat stable, right? And that just doesn't always happen.
User_characteristics - Generation_gap	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Well, it's like everyone knows there's Android and OS systems and even some of the smartest guys I know who have an iPhone personal who are Apple kids have yet to master the Android. They find the whole thing a pain in the ass. I was going to buy my next phone as an Android just to see and I think that--
User_characteristics - Generation_gap	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	No. It's over-complicated. I call it 'dumbifying.' They should 'dumbify' a lot of-- just make it simple. Cops are smart, but we're smart in a different way, but adult learning is different. When you're older, you don't want to learn new things. You don't want to learn how to utilize this iPad for work. You don't want to learn how to utilize this new MVT system because it's-- now, when you would get in the car, you only needed like one password to get onto the computer. Now, you need like 5. And they have to be all different, and it has to have a hashtag. It has to have this, a number. It has to have-- so me, I put them all on my phone, because I forget. I'm only almost 40, but I'm already forgetting things. But you have to know nine passwords to get on your technology. Make it simple, face recognition. You get in the car. A little camera scans your face. They know it's you. Or a fingerprint in the car. You just put your fingerprint, and then it uploads all the information.
User_characteristics	LE	R	Field	18-25	5 or less	Female	LE-R-002	Well, I think a lot of the officers here are older, so they have problems.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- Generation_gap			Responder					There's a lot to remember whenever it comes to standardizing everything and stuff like that. So I see them get overwhelmed a lot, but I guess I'm kind of blessed because I'm young and I grew up with all that type of stuff.
User_characteristics - Generation_gap	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	Yeah. So it's not user-friendly. I mean, there's a lot of folks that just don't use it. A lot of the old-timers, so to speak, that are not technologically savvy, they are not interested in even attempting to figure it out.
User_characteristics - Generation_gap	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	Well, I mean, I've been on the department for 20 years and definitely seen technology getting bigger, bigger, and bigger. It might be the newer generation. I think they're too latched on to trying to do technology where sometimes just regular police work will get the job done. So there's a little bit of loss of that. I think speaking to people that are younger, it's harder to speak to them because they're used to speaking texting.
User_characteristics - Generation_gap	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Computers in the car has been extremely helpful. And it's like anything else, technology is great when it works. When it doesn't, you got to fall back to pen and paper. And if you've been using-- there's my generation or my group of officers, anybody who's been on pre-computer understands, yeah, well, sometimes you've got to write it all down. But the generation that has ever learned anything except the mobile computer, it's harder when it goes down [laughter].
User_characteristics - Generation_gap	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	...So being able to push out forward things out there-- and then a lot of times the media will grasp on, "Hey, this is a really good story," and then they kind of re-tweet it. They push it out. Maybe they'll make their own story that goes to a larger audience-- or more traditional audience, I guess, is kind of what you say. But young people today, they embrace it. And as those young people get older more and more of the population is using social media, using these electronic platforms and less so much of newspapers and things like that, so.
User_characteristics - Generation_gap	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	Yeah. Communications-wise, it is the ability to have the mobile data terminals. The ability to have the iPads. The ability to have-- I have a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								phone now instead of a text pager. I personally didn't even have a pager until I went into the academy, and I didn't have a cellphone. That's my generation. I didn't get an iPhone until I had my kid, which was like four years ago because I wanted to take a lot of pictures. So the department changes as technology changes.
User_characteristics - Generation_gap	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	Okay. A lot of guys won't even log on, because it's just-- to them, it's not important. So it's like you still have that, the old people. I don't want to call them old, but the more senior officers that, "I don't need a phone to tell me what's happening."
User_characteristics - Generation_gap	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	For me, no, but I see other officers having issues. There was an officer that just came back to the patrol. He was in, I don't know if it was gangs or whatever, for years, and he was back. He just got back a couple of weeks ago, and I had to kind of give him a tutorial in how the system works. He was never formally trained, but he'll be accountable for it. And I'm trying to give him my advice. A couple of the old timers will go, "Here goes cooking the general orders," about me. "But dude, I'm not really cooking the general orders. I'm doing things that I'm supposed to do so I don't get in trouble."
User_characteristics - Generation_gap	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	Whether or not you want to do it, that's on you. But like I said, those are the older guys. When it comes to technology, they really don't care. But to me, why am I going to get in trouble because I was too lazy to log in the system? Why am I going to I get in trouble for having a faulty list? Because the day that something happens and they're looking for that, how are you going to justify it? I don't want to take that chance. I mean, like I said, we've got a lot of stuff out there but it's just the time to access it and the ease of accessing it.
User_characteristics - Generation_gap	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	Yeah. I think they would-- because, like I said, this year I was worried about do I have it on me? Because I've dropped this so many times. I think it's slowly-- just like society, you see how basically the mobile phones have changed in the past 10 years, how much faster, how much bigger they are, and what you can do on them. It's like personal computer now. I don't even use it at home anymore. I do all my online

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								banking with my phone and everything else. But I think as time goes by, and I'm going to be the dinosaur because I'm not going to be up-to-date on these newer features. But I think that's the biggest struggle is, the older guys, the technology.
User_characteristics - Generation_gap	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	... My one friend, he's got an Apple and he's an older guy on the job. 20-something years on the job. "Well, how do you turn it on?" He doesn't know how because he's not familiar with this system. And the guy today that was helping, he's like, "Here's the back button." The basic. And he's like, "Where?" And I go, "It's right there." He's like, "Where?" because he's not used to the different system. But I think if we were able to get-- the PDT, if we could have that and access the HunchLab, have that access ShotSpotter where it's just touching. I think the more or less you've got to type stuff and everything in, the more or less coppers aren't going to use it.
User_characteristics - Generation_gap	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	That's whether or not they give them. Like I said, they gave them to all FTOs. And I was honestly thinking about being an FTO but I didn't go through with it. But I think, yeah, the technology is getting better. I think, for the average officer, making it more simpler to use. You see these IT guys who have years of-- it's dying, that's what that means. Years of experience doing this. I think sometimes they might become naive to the fact that a lot of these guys don't know how to use these systems. Make it easy to use or you're just maybe touching.
User_characteristics - Job_c-s	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	I mentioned [name] is kind of a resource. [name] might be a good guy to either communicate with over the phone with questions about the system itself. I mean, he could tell you all the intricacies behind the screen. But those radios allow you to kind of plug those gaps when you're on an [instant?]. They say, "Okay, go to the command post. Go to the radio tent. Plug in your radio, clone it." Okay. You've got your five channels that are specific to that area. Some of them may have a tone to unlock or a repeater and some may not. They just may be direct channels, but it's-- I mean, this stuff is really fascinating. I value your time coming down as a researcher.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - Job_c-s	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	Yeah. Yeah. Primarily. Yeah. Unless I need to, in the field somewhere, refer to some minor-- for example, our hazmat policy, okay, who at the Department of Toxicology-- what is it? DTSC, so Department of Toxic Substances Control. They're in [City]. Okay [laughter]. But I don't have their phone number. So, maybe, okay, I know I can look it up in Lexipol [inaudible] field because I have web access. But things like that. I mean, it's amazing. You mentioned technology and what does it do for us. Is it crippling? Is it not? No, it makes our lives easier. I've found over the years that-- especially as a supervisor, because I'm about my 10th year as a supe, I'm finding that I'm spending way more time behind a computer than actually prepping skills. Does that make sense? Whereas, 10 years ago, I found that we were much more hands-on and, "Hey, let's grab that piece of equipment. Let's go out here and train with it."
User_characteristics - Job_c-s	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Well, we're lucky, and I think that-- my boss is that way as well. Very open, very honest, and he's empowering for people. And I'm a good example of that. I mean, who would-- I didn't interview for the job. I didn't apply for it. I didn't know that I wanted it when they sought me out to come and be the director. I thought that was crazy.
User_characteristics - Job_c-s	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	No. Our oldest is our CAT administrator and she's-- I'm the oldest. But she's been there for 27 years. And she promised me eight more because that's how many I have. And then we're going to
User_characteristics - Job_c-s	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	...In 911 of the CAD administrator lady, [name], has been there for 27 years. You don't want to sit there and watch her do what she does because it just makes me crazy.
User_characteristics - Job_c-s	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	Q: Okay. And you were saying before we kind of got started that you've been down here at the dispatch center for how long? SME: Eight years.
User_characteristics - Job_c-s	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	So there's been quite a bit of technology change in the past 17 years.
User_characteristics - Job_c-s	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	I've been here eight years.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - Job_c-s	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	I do, I do. I don't miss getting up in the middle of the night. [talking about being a firefighter in the field]
User_characteristics - Job_c-s	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	I've been here, I guess, four years now?
User_characteristics - Job_c-s	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Four years as a captain, but I was here as a lieutenant for almost two years. Then I got promoted to captain. I went back out to the field and then came back. So I've been back, I guess, four years.
User_characteristics - Job_c-s	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	And we just don't have it. We just don't have it. Fortunately, no one-- we haven't killed anyone. At least in my 27 years, no one has--
User_characteristics - Job_c-s	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Can be very exciting, it can also be very boring depending on the time. I would say the number one thing is diversity. Diversity of experience which is one of the things that attracts me to the job.
User_characteristics - Job_c-s	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	I would say it can be very stressful and I would say that it can be very emotionally taxing and I would also say that it's incredibly rewarding and very fulfilling.
User_characteristics - Job_c-s	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	And a lot of that comes back to like the investment in personnel. So I was very privileged to have an extremely good trainer and then also a lot of time dedicated to me. My shift happens to use have training as a priority you know so we focus on that and we try to make our people good dispatchers. So we try to make it as you know this stuff off the top of your head because--
User_characteristics - Job_c-s	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	...You take those calls all day and then right in the middle of your day you can just have I just saw this lady stab this lady and now she's stabbing someone else while I'm seeing it in front of me. Can you get somebody out here right away blah, blah, blah you know screaming on the other end of the phone you know and then you could go from that and then the next thing is help my wife is having a baby and I don't know what to do. You know it just it could it's that unpredictability that makes it fun but it is also very stressful.
User_characteristics	COMMS	U	Manager	26-35	6-10	Female	COMMS-	... People that had been here for 15 years, people that had been here for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- Job_c-s							U-007	two years, every aspect of the spectrum so that I could get as much information as possible so we could purchase the right product for them which actually is just the upgraded version of what we have which works perfect because it is one of the top of the line products.
User_characteristics - Job_c-s	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	I mean for me it's a little more exciting because you have your hand in more of it than you normally would.
User_characteristics - Job_c-s	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	Right. I've been told that I'm the odd man out because after 27 years, I still have compassion.
User_characteristics - Job_c-s	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	Our community is small, so it's not the big city. You get to know a lot of the people. And since I've been here 17 years, I know a lot of the business owners and a lot of citizens.
User_characteristics - Job_c-s	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	Yes. Generally, Monday through Friday, 8:00 to 4:00. If somebody can't work, I'll come in and work overtime. Last weekend I worked a double because all the dispatchers were unavailable. And then one of our other dispatchers just called. Excuse me. And she is having some personal problems in her life. And she had a little meltdown. And she said, "I don't know what to do about Sunday." And I said, "I'll work it if you need me to." So we kind of try and help each other out if someone has a family emergency or something comes up: a sickness, or a child, or a spouse, where you need some help.
User_characteristics - Job_c-s	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	Probably because it's smaller, and the officers work 12 hours, and then I work 8. Over the summer, we were really short, so there a lot of days I was staying 12 hours. I would come in and either work 8:00 to 8:00 or I might just stay till 6:00.
User_characteristics - Job_c-s	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	...I consider myself to go above and beyond for anybody who walks through the door.
User_characteristics - Job_c-s	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Well I would say that it's can be boring I think sometimes. I think too that you know it's good work. It's important work. I would say that we take calls and we send calls so we're taking calls from the public and sending those out to the deputies that need them. I would say that I don't know what else I would say that we take calls, we deal with the public, we try

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to help people with their problems.
User_characteristics - Job_c-s	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Oh our responsibility is about getting the information from the person and communicating that to the right people so they can go and help with that situation. That's our responsibility. Sometimes our responsibility I won't say it's really our job responsibility but I think maybe we feel a sense of responsibility to stay on the phone with people and keep them calm and keep them focused. You know if there's been an accident sometimes the person who is calling is the person who is not hurt and they're seeing their loved one in pain and they're then in pain too so part of it is for you to stay calm as a dispatcher in those situations and stay on the phone with those people so we can kind of be the anchor we're the anchor then for those people.
User_characteristics - Job_c-s	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	I don't think so. I think that's about it. It's a good job but we do have trouble getting people. It's not like it's a lot of money or a glamorous job but it's a good job that helps your community and I hope we can get more people here to do this work because we do need help, we do need help.
User_characteristics - Job_c-s	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	Sometimes challenging, very challenging, 'cause it's bit much when I took on a task as a supervisor and knew I would be monitoring and watching over or helping out more. But sometimes it's a bit much. If we're short, and I have nobody else, it falls on me. So I'm always available, ready and available. And it's time-consuming. A lot of time-consuming, sometimes I have to break away from okay, I have to break away from work so I can have at least some home time with my kids.
User_characteristics - Job_c-s	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	Dedication. You have to be very dedicated to not only, not the job, but if it's a dedicated person that wants to make sure that that person, that family, their officers, their firefighters go home to their families just as you're going home to your family, you'll be perfect for the job.
User_characteristics - Job_c-s	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	Well our dispatch center isn't real big. It has grown since before I started. I'm ten years into it right now, so the size that it is, this is what I walked into when I walked in ten years ago. It was smaller than that, just

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								from what Frances [phonetic] was telling me. And sometimes it can be a little cramped up when you get certain calls, and you're, it's a busy time. You get cramped up; you need to take a walk. We're very secured, so we can walk around the building and not worry about anything because you have to key in. You have to key in. And at any time the police, sheriff office is right up front. So it's secure.
User_characteristics - Job_c-s	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	Sometimes it is, because it's volunteer. So they have their jobs that they do during the day. So it's 30, 40% at a time you might not get a response. You may not get someone to answer. So you have to go to the different departments in the [County], because we try to stay in [County] as much as we can.
User_characteristics - Job_c-s	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	In this day, it is very difficult. It's hard to find, what's the word I'm looking for, dedicated, it's very hard to find those, I can say [inaudible], most of the people that we've interviewed, it's more about, it's more of a job, instead of taking it to that next level and saying okay, it's way more than a job. I'm sorry, but it's way more than a job. If you look at it as just a job, you're going to do the bare minimum, and maybe 90% of your calls are going to go well, I did transfer them, or I did, and you won't care. You have to have some kind of compassion. You've got to know when to turn it on and off. But you have to have that compassion. You have to have that understanding.
User_characteristics - Job_c-s	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	... And so a lot of people call me ADD. I don't think I am, because I think it just helps to keep my sanity, because I'm able to switch from one to the other. So I think that's another good part of my job, also.
User_characteristics - Job_c-s	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Dedication. You have to want to do this job. It's not a job that just anyone can just jump into. They have to realize that they're going to get screamed at, hollered at, fussed at, in an individual or individuals' worst time answering a 911 call. So cannot come in with the mindset of, also being the same job, the same day, every day, 'cause it's not.
User_characteristics - Job_c-s	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	That's an animal of a different color. It's real hard because volunteerism across the country is going down, not just in rural areas, in majority of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								rural areas or volunteer fire departments. I think an unknown fact is that there's more volunteer fire departments than paid departments that a lot of people don't realize. I'm a fire department buff, 30-year volunteer fireman, lifetime member. And I think that one of the little-known facts is that Benjamin Franklin was a volunteer fireman in Philadelphia. And some of the history behind that is just, if somebody wants something to read, it's real interesting.
User_characteristics - Job_c-s	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	...In [inaudible] big events, I'll go back, and I'll run those, or I'll get [Name] [phonetic] my supervisor to run those numbers and see how many calls we had in a certain amount of time and show it as positive reinforcement and lessons learned to the dispatchers of okay look, we know this happened. Good job you still did. You all answered as many calls as you all could with as many personnel as you had on the floor at the time. But then also I can go to a [County] president, I can go to the sheriff and say look, these how many calls we had coming in, in this certain amount of timeframe, and this is how dispatch has handed it, and they did a very good job. We're going to [inaudible] QC a lot of them. But at the same time, I think we did a good job for as many calls coming in, or this is where we need to brush up on.
User_characteristics - Job_c-s	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	More than the eye. More than meets the eye rather. I think a lot of folks don't realize how much we actually have. It'd be nice if we had just 911. It'd be nice if we had just radio. It'd be nice if we just had emergency management. But unfortunately, we have to wear so many different hats. It's good because we get to meet more people. And I never thought, granted I have 12 years into the job, but I never thought I'd know as many people as I know from, not just across the state, but across the country.
User_characteristics - Job_c-s	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Depends on what day, I guess it depends on what day, 'cause some days it's aggravating. Some days it's easygoing. It's a roll of the dice. You never know what to expect. So I think that's probably the reason why I'm still here after so many years. It's ever-changing, so I never expect the same thing every day.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - Job_c-s	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Busy. Unpredictable [Laughing]. You don't know what you're going to pick up and what's going to happen at that moment in time. But to me I enjoy it. It's very satisfying to know you can help somebody.
User_characteristics - Job_c-s	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	15 years ago. And then inputting it into another system after that. I never understood that part but.
User_characteristics - Job_c-s	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	I would have never thought 15 years ago we'd be doing the things we're doing on a computer. But being involved with our record management system, as I am, I constantly see day by day where we can improve and get further and do more and more into the system. So technology to me is what it is today but tomorrow it could always improve. It can always get better.
User_characteristics - Job_c-s	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	No. Not to me it's not. After you've been doing it so long it's like second nature.
User_characteristics - Job_c-s	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	... and you're trying to relay the information from the person that's telling you to the officers to make sure that they have all the calls, I mean, that's kind of stressful when you're trying to get information, and you know, they may not know everything that we need to know, but other than that, I mean, it's not--it's not bad. It's definitely not as bad as other agencies, so I definitely enjoy it here.
User_characteristics - Job_c-s	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: I am [name] I am [Job title], Manager for years and years, been here about as long as everybody else, 30 -- over 30 years and that's what we do.
User_characteristics - Job_c-s	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: [Job title], 29 -- well, October will be 30 years.
User_characteristics - Job_c-s	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S4]: Services Manager -- [Job title], I guess -- 32 years
User_characteristics - Job_c-s	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S4]: In the 32nd. [years in service]
User_characteristics - Job_c-s	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: [Job title]; and I am on my 23rd year. I am the baby.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - Job_c-s	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S6]: Actually I am the baby. I am [Job title] and I have a combined of 10 years.
User_characteristics - Job_c-s	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: [name] started there about 30 years.
User_characteristics - Job_c-s	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S4]: 30 years later.
User_characteristics - Job_c-s	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: This is kind of what our longevity chart looks like. And it's supposed to be like a 45 degree angle and its pretty much you got -- you can tell we have got many people here that's been here -- that's just this 30 years, right here. So, you don't have a lot of turnout.
User_characteristics - Job_c-s	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S4]: Almost 19 years. I just remember that because we went to it just right after I had [inaudible].
User_characteristics - Job_c-s	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So my daily routine, when I'm at work, is that I work a 24, 48-hour schedule. So I work 24 hours on, and then two days off. It works out to be 9 days a month is my schedule. Typically, I report to my duty assignment, whatever station that may be by at least 6:00 AM. Our report time is at 7:00. So that gives me an hour ahead of time to just kind of help with a last minute call or whatever needs to be done. Makes smooth transition... A little bit of an overlap. That way you're not just walking right in at 7:00. And if the bells go off or something's happening that you're walking into that, so it kind of eases the stress coming into it.
User_characteristics - Job_c-s	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	[RE: AVL / call volume] Has increased. So it doesn't upset me one way or the other, of that. The call types are different, in the sense of, I used to question it why they were sending a particular unit because I felt that I was closer and they didn't, and that's not my job to question that. Ultimately, there was a reason why that unit went. Now that we're getting sent on more calls, it makes more sense to that previous thought of, "Oh, I knew we were closer. Now we just justified that we're closer." And ultimately it's the end user, it's the community or the citizen that's benefiting from it. So regardless if we're running more calls or less calls it's--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - Job_c-s	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I mean, I can't make any of my employees do anything. Okay. They're here 24 hours a day. I've done their job. It's not easy. If you throw all kinds of harder stuff to make their job harder on top of it, it's not going to work. I mean, I can put all of the sanctions and rules and everything I want on it, but I have to motivate people to want to use this technology and show them the advantage of using it. We get paid faster. We can post statistics that show us what we're really doing, how it's useful. But if it's not to them, what's in it for them [laughter]?
User_characteristics - Job_c-s	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	Coming to work, we usually try to get there about half hour, 45 minutes, before our actual shift starts so we can catch the offgoing crew, so we don't catch a late call. And the guys' got kids that they have to take care of. Whatever. Morning starts out usually rig checks. I work on a fire engine so we go through all the equipment, make sure that everything is there. If the crew before us didn't have anything, that's a really fast check. If the crew before us had some significant EMS calls or a fire, then we'll check that equipment a little bit more specifically...
User_characteristics - Job_c-s	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	Oh, okay. So we work in a what I suppose politically would be called an underserved area. I like it. I take the bus to work. I take the [Name] to the bus. And in the mornings, I don't have any problem, but definitely in the afternoons, I would be more aware if I did that based on what we see. A lot of homeless population there. There's a clinic for homeless people that's right across the street from our station just down the road, and they tend to congregate there. And then there's a liquor store on the other side, so they get their liquor and they hang out in that parking lot there. But they're always cool to us for the most part. I would say I like running calls there because people like us, you know?
User_characteristics - Job_c-s	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: homeless population] And a lot of times, that demographic just doesn't know. And it's kind of fun to help them because there's also a significant amount of Somali, Burmese, Nepali, and Swahili. So many of them don't-- if they do speak English, it's just a small amount. And they don't understand services and stuff like that. They just know what they were told, so. Yeah. It's kind of a nice environment towards the-- as the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								sun goes down, the calls tend to get a little bit more-- we got to be more aware. But during the day, it's really pretty low-stress environment. It's fun. I like it. It's a good place.
User_characteristics - Job_c-s	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I'm on our wildland team, so I think the communication is pretty good with the state and federal resources for a lot of wildfire incidents. I think the county is doing a good job overall of county and state resources for the fire districts. So I think you just have to have strong leadership to assert those channels early and the communications plan early. But all the technology is there to use. Again, it's just whether or not the leadership chooses to use it the way it's intended to, because the county actually has a communications plan for inter-agency operations for the wildfire side of things. So it's all drawn out. Every season, all the channels get cloned on the radios, and it's just a matter of people utilize it the way it's intended to be used.
User_characteristics - Job_c-s	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...I started out at a good house. By good house, I mean it was a busy house. We were constantly busy. I wanted to see everything both trauma, both medical, both dealing with people. So I started out at a good house, which means that we had good firemen. I had a good partner or partners because I had more than one. And I had a good chief, a good boss who looked out after us. And your question was how was it--?
User_characteristics - Job_c-s	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	So as long as you have those good people behind you, the firemen, your partner, it was good for me. I can't speak for anyone else. But for me, it was great because I would come in. I enjoyed my job. I go and inventory my ambulance. As a matter of fact, I had people who had 15 or 20 years on the job prior to me going to them. And they actually taught me how to deal with the mean streets of [City], how to take care of my ambulance, how to-- you talk to certain people in a certain way. And then you talk to other people in a different way because not everyone's the same...
User_characteristics - Job_c-s	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...so from my experience, as long as I had people backing me up and showing me the way, I had a good time being a paramedic in the ambulance. I loved it. As a matter of fact, I love driving. I love starting

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the idea. I was a hands-on person. You have to be a hands-on person because you're constantly touching people. You're constantly starting IVs. You're constantly taking care of their wounds, their injuries. So you have to be hands-on. The other thing that I used was, I don't want to say joking with people, but also using humor too. Because sometimes we're responding to people's worst days. And I used to love using humor because most of the time, they would take their mind off of it, so.
User_characteristics - Job_c-s	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	We do a lot of education with other companies, with the fire companies, with the BLS, with the basic life support. With me, when I'm coming in, once I do my checkout with the truck, [truck] and [engine], I always want to make sure who my EMT is because if we catch a run with an ALS company us, [company], and the truck, I want to know who my EMT is because if I need his hands-- not all firemen are EMTs. They're just firemen. So if we're on the scene I want to look up, I want to see who my EMT is because I'm going to grab him and he's going to help me. So in the mornings, I'll talk with that EMT and say, "Hey, do you need anything? Supplies? Are you okay with treatments? What do you want to learn-- is there anything you want to learn on something that could help us in the field, could help the community out if there's a critical call? I may need you, you may need me on certain situations." So I always want to make sure that they're ready, too.
User_characteristics - Job_c-s	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	...We do get calls a lot even for people that are sleeping on the bench. People are concerned, which is fine. We don't have a problem going out and making sure that they're okay, the homeless people. We get a lot of calls for that downtown. We get a lot of calls for the homeless, especially in the wintertime, which is fine. I want to make sure they're warm, so it's okay with us.
User_characteristics - Job_c-s	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: community visibility] No, no, and that's sad because we don't have enough manpower to do that, at least on our end... I would love to go out when it's not really busy and drive around and talk to the community and see what they think of us or what do they want from us. I do notice our sirens are really, really loud, and it's for a reason. And they tend to put

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								their hands over their ears, and we do get a lot of bad civilians that are very unhappy about that, but we need it because the cars don't pull over.
User_characteristics - Job_c-s	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: listening to PD frequency] if I'm already hearing it on the PD side, I'm hearing it at PD-- someone's calling 911. I believe someone fell and they injured themselves. But I can't. But I have to wait until EMS dispatch tells us to go. Which is fine. Something critical like that and I'm hearing it, at least I'm ready. I'm always in a ready position, "Okay, hey, guys there's a fire. There might be a fire coming out. We'll be ready. We're going to go."
User_characteristics - Job_c-s	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: too many radio channels] It doesn't bother me. Someone like me, I'm going to learn the channel because if I can't communicate one way, I'm going to communicate another way. So if I can't communicate with EMS channel and I can't communicate to the fire channel, I know how to get to the police channel. The life guard channel, we have a life guard channel. If I can't communicate through the alarm office and the alarm office can't communicate to the life guard who someone is drowning in [lake], I know how to go into the life guard channel. A lot of people don't know how to do that. But I've trained myself or I've asked around people how to do that. How do you get to the life guard channel?
User_characteristics - Job_c-s	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	...So, say if I'm calling 911, call taker comes on, "What is your emergency?" They're typing this in already. Me, as a paramedic, through the [local PD] number, I'm looking that information up. So I'll send that code number to the alarm office and that call taker information that they printed will come back to me on my MDT and it tells you everything that person on that 911 has stated. Not everybody knows how to do that.
User_characteristics - Job_c-s	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	You know you can go from sitting around like we're doing now to doing something that actually matters you know you can sit at a desk and I've done that and I've not felt like I'm actually doing a job that matters. Every day when I leave here whether we ran one call or 25 calls I feel like I've helped somebody in some way and I've never felt like that before with any other job.
User_characteristics	EMS	R	Field	36-45	5 or less	Female	EMS-	Rewarding, exciting, stressful, frustrating that's about it. That's all I got

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- Job_c-s			Responder				R-019	at the moment.
User_characteristics - Job_c-s	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	They are. I love my job. It's very rewarding. It's great to help people when they're in need. When they're having the worst day of their life but it can be stressful because not every day, not every shift ends well and there are times when you just can't help someone as best you want to you can't.
User_characteristics - Job_c-s	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	...Sometimes, the ways we work around that are, I could see the cellphone number, so I'll call the provider, and we have backdoor numbers into their network operations centers to say, "I need billing information for this cellphone." I know they're calling from an apartment on [Street]. I know it's probably this apartment complex, but I have no way of finding them. I can get billing information. Sometimes it's just the name. And then I can call the apartment company. They'll give us the address but it's like the address is in Oklahoma.
User_characteristics - Job_c-s	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	I've actually seen it a few times and you don't really know what you're getting into. It actually binds it, so it's kind of like over time you learn like, "Hey, there is something behind this." And a lot of new cars are building these-- they're [A?] post are actually like pieces of folded metal and layers. And he actually has a couple over there and he can show you.
User_characteristics - Job_c-s	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	So I've got the Epocrates app and I've got my standard-- my SOPs on there. I think that's everything. I just got done with EMS class so I had-- I would quiz myself a lot on stuff like that. I think that's all I have for that on my phone, because I try to keep it limited and the reason it would be is sometimes too much information, kind of-- so I use these apps very often so I'm very efficient at using them and I'll-- we use them at the station sometimes.
User_characteristics - Job_c-s	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	Now if it was faster, absolutely. But I do believe there is something huge to say when someone has mastered their trade-craft, yeah, craft - I'm sorry - and being able to be efficient at it and a master at what they're trying to do. I think for me, it was being the guy to teach a forceful entry class, so I force doors a lot and I have to teach it. So it's pretty neat to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								pass that on.
User_characteristics - Job_c-s	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] I think my trainee is going to have a much different response than I will. Someone new to EMS versus someone that's been an EMS for over a decade. So for me, the transition from academy to the street was generally seamless because the service here in [City] is so similar to the one that I worked for in [City].
User_characteristics - Job_c-s	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] ... But anything that's a movable piece, a paramedic can break. So that attachment point is, I believe, challenge accepted by paramedics. We will find a way to break it and break it often.
User_characteristics - Job_c-s	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...it's very exciting to be able to think about what you have to do and really use your mind in a slightly different capacity than you do on other units. Not to say that an engine or truck isn't intellectual as well. But we have to do a little bit different type of problem-solving which I find fascinating.
User_characteristics - Job_c-s	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...So I like being able to work on both sides of the field there where I'm interacting directly with the patients, and I'm either driving them directly to the hospital or I'm working on them in the back of the ambulance, but then also in the actual rescue aspect.
User_characteristics - Job_c-s	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: apparatus check] It usually takes between 30 minutes and an hour. So ideally, if I get here at 6:00-- if I can get off work a little early, then I'll try to start that at 6:00 and go until 7:00. And then the shift actually starts at 7:00... But worst case scenario, I show up at 6:30... I want to be ready to go when the buzzer gets [laughter]..
User_characteristics - Job_c-s	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...The people who ride the rescue squad usually don't stop training right at 11:00. A lot of times we'll go till midnight or 1:00. Once we get in the zone on a drill, we don't want to stop, so we'll just keep going until we're done.
User_characteristics - Job_c-s	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	Not every night. Our requirement is 36 hours a week and 24 of those have to be overnight. So that would be three nights a week minimum. And then you have to get your other 12 hours through either weekdays, weekend days, or extra nights. So I'm an exception where I'm here six

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								nights a week and then the whole weekend, right? But there are people who are here three nights a week and then they ride during the day once or twice a week too. But either way, you end up spending a good amount of time with these people.
User_characteristics - Job_c-s	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: PulsePoint app] It's an app where, basically, it'll tell you-- you can notify, say, just on structure fires. So it sends you an alert. So you get it before the radio does... Auto accidents, you can set it up for hazmat. So it's just an app and it'll tell you where-- the whole principle was, is the next closest unit, whether it's a chief on a bus-- so if you're having a heart attack, and I'm right next door, it notifies me. And even if I'm on or off duty, I can go over there and help you. That was the whole principle of it. And then just kind of tracking. You can see what the guys are doing. So if you're at home, you can say, "Oh, yeah. They went over here, and over there, and--"
User_characteristics - Job_c-s	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. There's always some level of education. We have to keep up with everything else. Keep up with the new cars, keep up with the new construction, keep up with new industry moving in, keep up with everything.
User_characteristics - Job_c-s	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Well, we need to understand the danger of what they're doing. And so if there's a leak, and-- but the firehouse is neat. It's fun. It's never the same. You're doing something else every day. Some new company's moving in and you're being exposed to a new idea, a new concept, a new hazard. And now we're learning about the trains because commuter rail's moving into [City]. So we have to learn about how to de-energize it, how to lift it, how to work around something as heavy as a commuter rail train.
User_characteristics - Job_c-s	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Well, I think the thing is, is firemen and policemen and all people that work in these industries, they're really good at just adapting and overcoming. And I think that's what we've always done for years and years. So there's even from the command structure, there's even from communication things. Like I told you about the call that we had that the city showed up with an iPad app that showed all the water. At the end of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the day, we always get everything done. So we always cut the car. We get the water shut off. We get the officer that's been shot to the hospital. Things can always be done faster and better...
User_characteristics - Job_c-s	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Right. And it depends on their level of involvement. I mean, if you lose-- we lost one very big team player, one big driver who always comes through in the clutch of-- the world's coming apart, he's always there. And we won't have that anymore, so that sucks. And it's like water. Somebody always fills the hole, but at what time and what cost that'll happen is unknown, and we can't control it.
User_characteristics - Job_c-s	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...We have a guy who drives here from [City], and it costs him more to come here, be a volunteer two days a week than we give him back. He doesn't even cover fuel, much less the phones, and the food, and whatever else.
User_characteristics - Job_c-s	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...I'm trained to put water on a fire. I'm trained to cut a hole in a roof. I'm not trained to come in and say, "What do I need to--?" ... Or even, what is data? I don't even know where to begin to look at saying, "Hey, I would like more fire trucks." Great. And usually, as firefighters, we're very passionate people because we want to help. And so when a government comes in, they can understand a passionate argument significantly. They come in and they say, "Man, I totally agree with you, but I don't have \$1.8 million to buy a new fire truck. I have all these other priorities."...
User_characteristics - Job_c-s	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	He's very interested in advancing the department. A lot of times we don't have firefighters that stay in key critical positions for a long time because we love to get back out and do the firefighting thing. And so those key positions that keep the organizations moving forward, in the fire service in general, we get huge amounts of turnover. I'm a brand new captain. A brand new chief. I'll do my 18 months in hell. Go work in an office and then I want to leave. But anything, if you want to advance the organization, if you want something... If you want to increase your budget, get a new piece of technology, those things aren't just like--
User_characteristics	FF	U	Field	46-55	11-20	Male	FF-U-020	...So Chief [Name] has really bridged that gap well by putting key people

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- Job_c-s			Responder					in positions that have a strong desire to see the department succeed and put the organization above their personal needs of wanting to go back to the firehouse. So I think that's one of the key reasons why we've advanced as far as we have.
User_characteristics - Job_c-s	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Interesting, because you're creating your own position. So there's a lot of-- my position goes-- it'll swing from doing very task-oriented stuff like engine 22 lost a fire hydrant wrench. You need to order a new fire hydrant wrench. "Hey, Captain [Name], we lost a fire hydrant wrench," and the letter that goes along with that, to trying to plan a multijurisdictional, multiagency event or coming up with how we're going to do this new unified command system at Coors Field. And so I bounce back and forth between very base task level kind of-- and I'm not going to say meaningless, but very low level kind of, "Order this tool," to all the way up to this, these things that are bigger than sometimes most of our chiefs even are involved in. So that piece is a bit challenging. So, yeah, but it's fun. I like it.
User_characteristics - Job_c-s	FF	U	Manager	46-55	11-20	Male	FF-U-021	It's all fun enough here. It's just that it's a team environment, so you're working with not only friends, but your family and you spend 9-24 hour days to 10-24 hour days with the men and women so you really get close with them.
User_characteristics - Job_c-s	FF	U	Manager	46-55	11-20	Male	FF-U-021	We work 24-hour shifts and the general starts at 7:30 like today and we'll get off tomorrow at 7:30. So you're off two days and you do it all over again, so you get very, very close with the people you work with...
User_characteristics - Job_c-s	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So this particular station is bordered right on two different districts. We have our international district and that whole community, and then we have what they call the [Name] community. It's kind of the south end of the downtown core or the south end of the downtown business. I've worked downtown here for at least eight, nine years. And really, two really fun communities. Very different, but very fun communities to interface with, and work with, and stuff as far as identifying key members and just different celebrations in schools and all the fun stuff that goes with it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - Job_c-s	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	No. So, it's our Chinatown, but it's not just Chinese immigrants. I mean it's all of Asian-- and it's fun. I mean it's kind of separated into different sections, but, yeah, there's a placard just down the street for what used to be Japantown and then Chinatown but there's the Korean, the Vietnamese, the whole... That's our international district here.
User_characteristics - Job_c-s	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	it's really fun, too, as far as we are not at all ashamed to steal somebody else's great idea... So if this department has found a solution, or if they're doing something that works really well, bring it back, and we'll see what we can do.
User_characteristics - Job_c-s	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	the big thing that we don't really focus on, and I've been in this line of work for 28 years, when you're out in the field and you're putting the gear on, the tones go off, and you go, you're in what I would consider a-- you're in a soldier mode. You don't want to get rid of that soldier mentality because that's what helps us do the job. We don't want to have in our front set of thoughts, dangers of the job, in particular, to cancer causing ailments and all that kind of stuff or particulates because it would be immobilizing. If we focused on things that can happen once we leave this fire house, then we really kind of run into issues of slowing us down in getting our job done...
User_characteristics - Job_c-s	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	Yeah, a fireman? As far as stepping away from what I'm doing now currently, just going back to being in the field. I think it's a rewarding job for sure, and it's certainly a stressful job. It's rewarding, but at the same time, it starts off as a sport. When you're younger, it's a sport. We have all the players in a sport. We have our coaches. We have our referees, your chiefs. We have the players, and we have all our positions, so it's a sport. Just like baseball or football, you got your quarterbacks, your linebackers. In baseball, you got your offense and defense. It's very much a sport. And so that kind of is the driving force for the excitement of what we do...
User_characteristics - Job_c-s	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...It's very adrenaline-packed, for sure, and it's no different than someone who is a sports fanatic and who is always sitting in the bench, or in the dugout, or whatever. They have that anticipation and that drive to want

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to get out there and play. It's the same thing. So if you're sitting in a firehouse and you haven't been to a fire in a few days or a few weeks, it starts to build on you because that's what we want to do. We're here to play the sport. And it's very satisfying for us. And, as you age, that sport still kind of follows you but it starts turning into a job. And how it was explained to me years ago was it's a young man's sport and an old man's job.
User_characteristics - Job_c-s	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	when you're new, your level of excitement and anxiety is-- it skyrockets. When the tones go off for a fire, your heart rate is 180, and your blood pressure goes up a little bit. Your anxiety level goes up a little bit. And your excitement level's there. But at the same time, when you start having a lot of experience and you start having a lot of time on the job and you start to age and you're starting to go through these transitions, someone who has two years on the job, excitement level is different than someone who has 20 years on the job. Their excitement level meaning that they still enjoy going to fires are the same. But you have an excitement level with a heart rate of 80 and you have an excitement level with a heart rate of 80-- or 180, and then you have an excitement level of 80. So how someone with a lot of experience modulates their excitement level is just speak through experience. "Okay. Yeah, let's go to this fire. Let's have a quick push-out." They still remain at a normal heart rate level versus the new guys who were getting dressed fast, they have quick push-out, but their heart rate is so fast. You know what I mean? So the desire to go to fires sometimes are the same. It's just where you're at metabolically and heart rate. Those are different.
User_characteristics - Job_c-s	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	It's either the sports, or adrenaline, or whatever the case you want to call it. But it's the challenge. It's a challenge. And I guess you would say through a public's eye that it's not normal to actually want to go into fires. But once you get educated and have some of those fears reduced through education, it then becomes understandable of how you can actually do that because there is a process. There is a tactical process. There's a way to do it. So what may seem to be an insane activity to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								laypeople? or others is kind of normal for us because you kind of learn the parameters of your dangers and what you can and can't do. You learn your limitations. And so knowing all those things and putting them together and being able to size up the situation and look at and minimize your tactics, or what they do is they look at things, and you're able to size up a building and measure, through education, some of your dangers...
User_characteristics - Job_c-s	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...you make a decision based on what are your-- I'm trying to put it in words. What are your risks versus your benefits? So you minimize and reduce your risks if there's truly no benefit, but if there are people trapped in the building, especially when we get on the radio that there's children in the building, everything just goes up and everything's added up and your risks are laid on the line. I mean, that's kind of what we're here for. So yeah, I mean, that plays a big part of it, big part of it.
User_characteristics - Job_c-s	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...So through time, we've learned that when you have somebody outside telling you to get out of the building, just get out. Get out and ask questions later versus being in there getting on the radio, "What's going on? We got it." There's been a number of situations where, I myself included, are guilty of that, slowed getting out because we thought we had it knocked. And we thought we had it under control. "We got this. We got this." I mean, that kind of thought. And then you finally back out slowly and then you turn around and look and you notice that the roof's getting ready to come in or the building's getting ready to-- and it didn't seem like that inside. So those things are situations where communication-- and not even that it's poor communication; it's just there's a period of time where there's an unknown, so.
User_characteristics - Job_c-s	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	It can be quite a few of them. Sometimes it's fulfilling and sometimes it's aggravating. Because of where we are... you... you have to be a jack of all trades. So we do fire, we do EMS, we investigate, we have an investigations division and inspections division that do those tasks. So it can be... when you wear a lot of hats it can be somewhat frustrating trying to get them all done and sometimes the needs in one place od not

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								necessarily satisfy the needs in others in terms of what you have to do it with you're the manpower you have to do it with.
User_characteristics - Job_c-s	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	No. I'm not. Not full time. I have been with the department for 30 years. And sometimes I've take, you know, worked some of the part-time stuff but basically I volunteer my time.
User_characteristics - Job_c-s	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	All right. It's a good place. I mean it's--any time you work around a group of people that are willing to do what we do, I mean it's camaraderie, you know there's, excuse my language, there's always some kind of BS to go along with them 'cause I tell people that if you really want to see something interesting you put, you know, a bunch of grown me with a bunch of time on their hands... they can find the best practical jokes to do and nonsense stuff to amuse themselves so. But.
User_characteristics - Job_c-s	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S2: No ma'am. I agree with what he says, I mean, he has been doing this for a lot longer than I have. S1: Well I have noticed he's been here 20 something years so yeah and do you have any questions for me?
User_characteristics - Job_c-s	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S3] I would say it is a lot of hard work and it takes a lot to run a fire department. Like more than just you know running out on calls and fighting fire; you got to - like in the volunteer department we have to have a lot of fund raisers and everything to make our ends meet.
User_characteristics - Job_c-s	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S2] I mean you got 100% dedication.
User_characteristics - Job_c-s	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	S1: Yeah, right. Because you work and this is volunteer, so do you spend time in the station? You do? Oh. S2: I go down there when I am not working or I go to the other stations; we have two stations.
User_characteristics - Job_c-s	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	I'll tell you what, if you want to schedule something on a Saturday, you are like ah I got training this weekend honey, we are going to have to --
User_characteristics - Job_c-s	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	So, a lot of times we will do the computer work at home, a lot of people where you can go by the station and nobody is there and you can do it there and you usually they will say, alright Saturday we will do a hands on, and everybody shows up Saturday and do hands-on or Thursday and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								then the guys that missed Thursday night or Tuesday night will come Saturday night and hands-on.
User_characteristics - Job_c-s	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	And then get ready for work, come to work, meet with my [Job title] and then come to the office and find out how the day is going to go from everybody that I interact with in the city and then usually work till about 5 and then if I can I try to get out of here by 5 but very seldom does that work. This week I have stuff 3 nights I have to work so it'll be a long week.
User_characteristics - Job_c-s	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Well when I started here in [Date] we had a limited number of brick portable radios and mobile radios on all of the fire trucks and we had huge pagers. What was interesting back then those big brick radios worked really well.
User_characteristics - Job_c-s	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	One appeal and a positive impact from being able to send resources out is the experience that people get and then bring it back to our community being where our communities have situated in the wild land of an interface.
User_characteristics - Job_c-s	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	Well most of the multi well I mean we may have a few multi-day when here you know but the last one I can think of was just out here east of town. It got in the trees I mean you know a tree is going to burn forever unless you bring in a dozer and knock it down and be able to foam it or something and it just got into a place where we couldn't get our trucks and our hoses weren't long enough to get in there. The next day I went back you know or a couple of us did and you know tried to hit some more hot spots. It probably wasn't going to go anywhere but it just made me feel safer.
User_characteristics - Job_c-s	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	Well I've been at one job for five years and I just now I have 2 weeks vacation so I mean I'd have to use up all my vacation just to take that training. So we just do a like a volunteer firefighter practices and have somebody try to come here local and give us the training.
User_characteristics - Job_c-s	FF	R	Other Public	26-35	6-10	Male	FF-R-048	Yes. We all have our own jobs that pay you know and everything we do all the fire department either it takes away our personal time, it takes

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					away our family time and quite often it takes away our job time you know and most employers are pretty lenient. Thankfully I'm self-employed but as with me being self-employed in the middle of harvest time or planting time when time is critical and mother nature is your boss I mean my job quits you know so I have nobody to fill in you know. Or take over while I'm gone so yes it's difficult because I mean you know we're glad when we have guys that are available to show up not necessarily to a call but then you know we have to do training and it's like okay I have something planned you know and it's tough I mean because we are all volunteer you know I mean it's not because of our job and we're not getting paid but we do it because we volunteer.
User_characteristics - Job_c-s	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	They pay us but we provide a service for them so as you know public safety is tax based and you know customer service is number one that's something that can fall short sometimes as new generations come about but the core and tradition of the fire service is the customer is number one so that's why when it comes time to risk our lives and put other people number one you know that's where the customer service really comes in on that level.
User_characteristics - Job_c-s	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	Sometimes it just depends on your level of dedication. We've got some people who are great at showing up to calls and terrible to showing up to meetings which you have to take that with the good with the bad. You got some people who are great at showing up at meetings but hard to get them to a call. S
User_characteristics - Job_c-s	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	Considering I'm pretty sure the fire towers are condemned for climbing but we got it done. It had to be done.
User_characteristics - Job_c-s	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	... So you ask people to go out raise money for barbeques, respond to calls in the middle of the night and then you say oh you need to go take some classes too. I mean there are some people in this county that I don't know why they don't do it professionally because they take it very seriously.
User_characteristics	FF	R	Field	36-45	21-30	Male	FF-R-049	I try to stay quiet and lay low out here because as a professional I can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- Job_c-s			Responder					get looked at as the paid guy who thinks he knows everything but and it's not that I do it's that I do know a lot and fire burns the same here outside of the Metro [name] area as it does up where I work professionally and you know I hear people tell me all the time well you're used to doing this and I'm like it can do this here too.
User_characteristics - Job_c-s	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	It's very common for someone to come into the fire department and stay for 30 years. There's not a lot of fluctuation in that.
User_characteristics - Job_c-s	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Yeah. I started off as a firefighter. I was a volunteer for four years. And then I was a firefighter here with [City] for about six years. And then I promoted to engineer. And I was a driver for three years. And then I promoted to lieutenant about three and a half years ago. And so I've been an officer for three years. And I've only been on my current position as the training lieutenant for two months.
User_characteristics - Job_c-s	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Okay. It can be very rewarding. Absolutely... So there are times where it can be very rewarding, because our job is to help people ultimately.... You can't beat our schedule, and especially the people that I get to work with are fabulous. And so it does create a level of camaraderie, and I would say coming to work and working with [inaudible] will make it fun. Some of our runs that we go on, aren't as fun anymore.
User_characteristics - Job_c-s	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	... Having been part of that, I think it definitely gives you an advantage in the alarm center to as you're interrogating a caller, to kind of be picturing or have an idea of what you're going to send and why you're going to send it. And maybe some questions you may ask that maybe aren't in the code of calls, but yet because of your experience, it might be something that maybe of value. I think that's huge. So, yeah, I think it's a huge benefit.
User_characteristics - Job_c-s	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] It's the best job in the world.
User_characteristics - Job_c-s	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] Yes. If you have something going on, someone here knows how to deal with it. And the best way I always describe it to people is that a lot of people when they're heading to work they say, "I have to work today." I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								would say, "I get to work today." And today it hasn't changed. It's awesome.
User_characteristics - Job_c-s	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] They call us when they don't know what to do no matter what it is. I mean, all the way from changing a battery in a smoke detector to major, widespread catastrophic disaster or a traumatic family event. And their capability is that they are trained and able to not only respond to that, but they can do something and make that situation better. So they have incredible capabilities and that network of that team with lots of experience. You have people from 30 plus years of experience all the way down to 1 year of experience. So there's a lot of information sharing that goes around.
User_characteristics - Job_c-s	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] And everybody thinks their community's unique or the best or whatever and we're no different. We all think that. But the community here is pretty fantastic.
User_characteristics - Job_c-s	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	I don't think so at this point. I think the thing that technology does today that we didn't have to worry about when I started this job 20 years ago, is that today the expectation is that information gets out immediately.
User_characteristics - Job_c-s	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	So the actual work itself, how does a person feel about it? Okay. Yes, it's very challenging work and rewarding, and sometimes it's very demanding at times. I mean, our crews work 24-hour shifts. So depending on how things go, it can become physically and mentally demanding on the person, individual folks. And it's exciting. I mean, people get into this business because of-- they want to serve and it's the kind of job that you come into work in the morning, you don't know what's going to come of it. You don't know what you're going to get and there's that bit of piece that people like about the job as well, the unknowns.
User_characteristics - Job_c-s	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	What is it like in a station? Well, having spent many years in the station-- I was 25 years on the line. So that was from a firefighter to a company officer to battalion chief, so I got to experience it on all levels. And it is very close-knit groups that work on the shifts. I will say we're very

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								fortunate here. I hear a lot of different stories in other departments, but knock on wood, we're fortunate here that we got groups that really get along and enjoy working with each other, and I think that's just part of the culture that we've created through the years of how we do business. But you've heard this, I'm sure. They're like a family. They come in together, they have breakfast together, they work out together, they eat dinner together, and they talk about each other's personal lives with each other. A lot of them are friends off duty, and they go camping, and vacationing, and-- so yeah. It's a pretty good atmosphere. Obviously, some station are busier than others. So you have that dynamic, but that doesn't really change the personal side of it. It's just they're busier, and they're a little more sleepy in the morning when they're getting off duty. So yeah.
User_characteristics - Job_c-s	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	I go to work smiling. It's the most rewarding job that I've ever had. Every day is different and every call that we go on I'm smiling ear to ear.
User_characteristics - Job_c-s	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Well, I have a finance and banking degree and I made the jump. As a kid, I always wanted to be a firefighter. And so it was either-- as I graduated and I worked in the field and number crunching and sitting in an office wasn't for me. This is what I wanted to do and I haven't looked back since.
User_characteristics - Job_c-s	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	So we are expected to be here at 8 o'clock in the morning but most guys come in earlier, around 7:00 so they can relieve the people that are here. You can imagine if you've been here 24 hours, you're dying to get out of here. Some of us. So we show up at 8:00 and then our day really doesn't start until 8:30.
User_characteristics - Job_c-s	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Yeah, so occasionally, we'll have school visits. And so those are fun. So yeah, dealing with the public on that aspect. It's really rewarding, you get to see children and their expressions.
User_characteristics - Job_c-s	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	So at shift change, it's the busiest time. So you have 15 people going off and 15 people coming on. Guys are noisy. It's your second family. I can't wait to get to work, I don't know. Something's always happening, it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								exciting. In
User_characteristics - Job_c-s	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	So traditionally we'd come in-- if you're a good employee you come in an hour early. If you're a bad one you come in 15 minutes early. And if you're a really bad one you come in 1 minute before your shift change. And you come in here. Sign in on the board.
User_characteristics - Job_c-s	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	Challenging, fun, and interesting. [adjectives to describe your work]
User_characteristics - Job_c-s	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	I mean, when I started 30 some years ago, we had rubber boots instead of turnout pants. And the PPE has changed just like technology. We had four channel radios. Now we have 2000 channel radios. It's just the mindset of how we respond and how we attack each situation.
User_characteristics - Job_c-s	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	... We've trained for 20 years to have a microphone in a certain spot, with radios on a certain side, microphones in a certain spot. So they know that repetitive training that they do is they can go and get it. And they know where to reach and it's there. In a smaller cell phone, it's not as big. It's not there that they can reach.
User_characteristics - Job_c-s	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	So my team, we're 24/7/365, and so when I'm on, there's no such thing as off. So even right now, I have my ear on the city. And so, it's not necessarily all BCs do that. Because if you take this table and cut it into eight pieces, I have one eighth of it, but my team is a little different in that most of the teams are in their geographical piece of pie, so there's a battalion chief, a coach, with his team. But I have a piece in almost every part.
User_characteristics - Job_c-s	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Right. So I'm listening at all times because if I have a unit in South [City] go out of service or do something on a call and something were to happen, I need to be able to call in resources from the rest of the city to go and help solve that.
User_characteristics - Job_c-s	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	So there's an A, a B, and a C. And so for 24 hours, I'm the only. And then as you move on now, I will tell you as people have come in and out of teams because you don't just stay in one battalion your entire career. You might start in this battalion over here, and then move to a new

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								station over here.
User_characteristics - Job_c-s	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	...Because if we have a notion of, "Hey, this is explosive, it's a gas call," we're going to use the sense set which detects gas and figures out what the hazard zone is so we can make sure nobody gets in, and then go and solve the problem...There is a lot of carbon monoxide here. "Okay. Well leave your mask on until that's zero." Because that makes sense, if it combines with your hemoglobin it could be bad news for you.
User_characteristics - Job_c-s	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Q: Right, right. Do you keep all this knowledge in your mind? SME: A little bit of both, some of it's in here. Some of it's-- we tend to make little cheat sheets. Laminated cheat sheets that we keep in the front of the fire truck.
User_characteristics - Job_c-s	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	I rode the back seat before and now I'll be driving. And I can ride up and be in charge also, of the engine. But I'll be driving all the time. But the backstep, we think about test level and then as you move up to the front seat you have to start thinking about the whole picture of how they-- the whole event. You know what I mean? Instead of just pulling hose, I'm calling for that tactic to happen and using the radio a lot more.
User_characteristics - Job_c-s	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	I think the first five years of a firefighter's career is the most critical five years. If they come out and they go to a good place and they work with good people, at the five-year mark, they're ready to start being that new leader. And I say five because the fire service is getting younger
User_characteristics - Job_c-s	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	I have always worked in the same territory, so I know every street in that territory. And I think there's still a lot of-- technology's great. If I put that in my phone, it's going to give me the route that they pick. But I know I might know that I can take this alleyway, I can do this, I can do that, and be there a minute faster.
User_characteristics - Job_c-s	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	I'm prepared. In our city, if we have fire through the roof of an apartment, it's automatic second alarm. When you said there was smoke coming from the eaves, that indicates to me that there's fire in the attic. And then once there's fire in the attic, we're going to need some help. We're going to need more hands. Three engines is going to get eaten up pretty

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								fast. And an apartment complex is high occupancy level, so that would be-- especially with the high winds, you're going to have extension. I'd have a driver, somebody go ahead and put up a water curtain or something to stop it from extending from one building to another.
User_characteristics - Job_c-s	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	So if in that case, it doesn't mean we're not going in. It just means we got to check the environment, so we would shoot water into the ceiling, and if water comes down, it's cool enough to push further in. If you pop water to the ceiling and it vaporizes because it's so hot up in the upper atmosphere, then you can't keep pushing forward. So what we would do at that point, is we would open up the nozzle, and cool it down until we start hearing water drop. And then we'd push forward and forward.
User_characteristics - Job_c-s	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	We're going to wait until we overcome the heat, and get that water to start dropping. But that's our barometer when we go into a fire is we'll shoot, any time we go in the front door we'll give it a quick shot to listen. And it's especially important in a commercial structure where you have all that plenum space. That air up there has nowhere to vent and so we cut a whole in the roof, so it's eight foot of huge area, that a lot of times the heat will be up there and it won't feel bad when you walk in, but you got a ton of heat above you. So we check our environment, that's what we do.
User_characteristics - Job_c-s	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	...When buildings are abandoned and they catch on fire-- if it's an abandoned building that's boarded up with no utilities going to it, those fires usually don't start by themselves. So that means someone's probably there.
User_characteristics - Job_c-s	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	I started off in high school as a high school cadet so I've had an opportunity in my career to do a bunch of stuff. I've responded to incidents nationally. Today is 9/11. I've spent two weeks in New York after 9/11.
User_characteristics - Job_c-s	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	I've spent 20 years putting a lot of effort into this stuff so I've come up with a lot of stuff to think about over that time.
User_characteristics	FF	U	Supervising	46-55	21-30	Male	FF-U-044	Yeah, so I'm in Engine 4 and so we sit at dinner. I sit here, [Name] sits

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- Job_c-s			Field Responder					here, and [Name] sits there, and we are all at rookie school together 26 years ago.
User_characteristics - Job_c-s	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...And being detectives, it's a spot we all have to attest for, and everybody gets picked because of that drive to do the right thing and get stuff done. But it gets very frustrating that the boss is always coming in and derailing your train of thought.
User_characteristics - Job_c-s	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	You're called anti-social. I've been called way worse. But all the [Job title], we all have desk or laptops. So we have that ability, but it never feels-- you need to be by a printer, or there's always-- if you go somewhere else to work there's always the price to pay, wherever it is. So I mean, I hate to admit that I do this - and my wife gets pissed at me - but I just sit at home in the kitchen table sometimes because I'm one of these people that's blessed with not needing sleep. So I just will sit and type because it's quiet. And the worst thing I got is a cat bothering me. So it's not that big a deal.
User_characteristics - Job_c-s	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	But the more fun you have, the more you got to type. I'll put it that way [laughter]. I'm just trying to think. So last week I interviewed two people for some drug stuff. And it was maybe two hours, two and a half hours interviews. It took me probably close to eight hours to type it all out... Six to eight hours because you type, type, type, and then just whatever happens, and proofreading. It took me almost a day and a half to get from point A to finished... A DUI will take me two hours to type.
User_characteristics - Job_c-s	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	It's the greatest show on earth... It's fantastic. I love teaching. I love being able to give back. My ego isn't of that that I've got to be better than everybody. I want the people I teach, and I want the people I teach at the academy, especially, to be better than me. I will give them everything I can so that they can hopefully learn from the things I've done good, the places that I've screwed up, and the times that I got in trouble. I lay it all out for them because I want them to know what it's like in the real world. I try to keep it real. And I love doing that. I love teaching.
User_characteristics	LE	R	Field	36-45	11-20	Male	LE-R-017	Oh, no. I talk. I'm not bashful. My mouth gets me in trouble more than

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- Job_c-s			Responder					anything. I love teasing firefighters. I mean, I call them American heroes and Band-Aid throwers [laughter]. I don't care. I love having fun with them. And there's a former [Job title] now - he's retired - he and I would just start going at it. And it was all out of fun. But if you didn't know that, and the way we were going at each other, you'd think we hated each other. But it's breaking balls. We're out here doing-- they're different jobs, but they're extremely dangerous, and they're extremely important to society. I've been through training, the narc stuff, where you have to wear the respirators and the air packs and go crawling through smoke-filled buildings and-- no. Shoot at me. I'll take that. I ain't going in no fire...
User_characteristics - Job_c-s	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: cell phone use] Yeah, emails. I have to keep up or else there's no way I can come in at 8 o'clock and just start from scratch.
User_characteristics - Job_c-s	LE	U	Manager	46-55	31-40	Male	LE-U-020	I'm 24/7 on call... Yeah. And that's why they said, "Well, when are you going to retire?" I said, "Well, I'm still young," He says, "But nobody wants my job [laughter]" I said, "There has to be at least two of me to do the stuff that I've done." But I've done it for a long time, so I can do it.
User_characteristics - Job_c-s	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: text-to-911 Safe2Tell program] And, I mean, the number of suicide attempts that we've actually stopped in the middle of happening, that if the program wasn't available-- I mean, we've had situations where we're either talking with the person or the friend and their last thing is goodbye. We send in law enforcement. They knock on the door and the parent says, "Oh, he's in his room." And they go to his room and he's hanging in his room... So without that type of intervention, that kid obviously has problems but there was-- we saved a life that day.
User_characteristics - Job_c-s	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...as far as our role in repair or diagnosing problems, typically, what happens is an officer will email-- we have email accounts set-up. It goes to all of us. Our team consists of seven people. It goes to all of us, and the officer will email us and say, "Hey, my camera fell or was knocked off in a fight and broke." Or, "My video isn't downloading," or whatever the problem is. And then we try to respond within a couple hours even on weekends and overnight if one of us sees the email. We'll respond, just tell them what they need to do until we can get the camera repaired. And

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								then typically, first thing in the morning, we replace or repair the camera. So that's kind of how, in a nutshell, how it works.
User_characteristics - Job_c-s	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	It's fun because we've got a small group, so we kind of all know each other. It's not like a huge agency where if I get a case, I don't have any idea who is writing it and what the circumstances are. So that helps to know everybody a little bit better and know what their strengths and weaknesses are to some extent. Especially with the newer people, when they're still learning and being able to guide them and stuff like that. And then, being able to work with the sergeants if there's issues or if there's disconnect somewhere like that because we've only got four patrol sergeants, I think, and four patrol teams. So it's pretty small.
User_characteristics - Job_c-s	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: ability to revert from desk to patrol] I think, in a lot of places where I talk to, yeah. I think, here in our community, it's out of necessity. I can't just say, "Okay. I'm now assigned to this tech unit and I'll never need to be called in to do anything else." ... I certainly see it as a strength and that flow of information. I feel quite fortunate. As I've told you, feel fortunate I'm able to do this. And at the same time, I think I've worked to get to that level. It wasn't just by luck. So just still try and balance some of those things.
User_characteristics - Job_c-s	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...Typical, there's probably nothing typical. It's going to change day to day. It's coming in and planning out your day and knowing what's coming up... And I think most people get into this line of work, that's part of what they like and expect.
User_characteristics - Job_c-s	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...We're fortunate that we've got the [military training site]. So they bring in helicopters, crews from all over the country, the world. I know we've had Israeli troops in here and they do the training. We benefit from that in our mountainous area with some of our search and rescue stuff. Back in the day, if you will, things were much looser and we could just call up the station and the commander would drive up there and say, "We've got a lost party in this area. Can you guys launch a bird and go look for them?" or "We need some support." ...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - Job_c-s	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Probably a unique thing more on the west coast. I don't know how many east coast areas have wilderness areas. And obviously, we know a lot of counties in [state] don't have them. We're fortunate to have a couple of them within our county that we work within.
User_characteristics - Job_c-s	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I tell people I feel very fortunate in the area we work and the level and the qualities of the guys I worked with. The stuff I hear about the bad cops. One or two guys French guys, but for the most part, I'm very comfortable with all the guys we work with...
User_characteristics - Job_c-s	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	So I work swings shift, which is from approximately-- starts at 2:30. That's when our briefing starts. So I arrive around 2:00 to get ready, just get dressed, get all my equipment together, get my car ready, stuff like that. Then we have briefing, which just discusses whatever is occurring in the city or any specific areas that we're supposed to focus on during our patrol. And then after briefing, we just hit the streets. If there's stuff pending, then we take those calls. Otherwise, we're trying to be proactive and make stops or whatever we can find. I mean, that's basically-- there's no typical day necessarily, so it's kind of hard to standardize in that manner. And then we're done around 12:30-ish. So within that time frame, a million different things could happen, so.
User_characteristics - Job_c-s	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	Yeah. So I'm in light duty or on light duty right now. I had a hand injury... So I'm recovered from it. I'm just waiting for the last little bit of paperwork, so I get to go back to patrol next week... [laughter]. Too much paperwork and stuff. I mean, it's been beneficial and enjoyable, but I like being out on the streets.
User_characteristics - Job_c-s	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	... So I think it's cool to just sit there because I'm here in light duty and I'm not able to get involved, but it's cool to hear other people communicate. And then the way that the commanders or sergeants or whoever's on-scene, how they delegate and kind of orchestrate this whole chaos into something that's manageable. So I mean, communication is huge. And if it's not there, then nothing functions properly.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - Job_c-s	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	It's real as opposed to sitting in a classroom and talking about stuff. There's real danger. They're not blue guns, there's no time frames or whistles or anything to stop stuff, so you're either going to take care of the situation or you're not. There's no do-overs. And it makes it more exciting, it makes it more fun, it makes the job enjoyable. And they do a good job trying to prep you in the academy, but there's literally no way to replicate any of that stuff or just- they have the scenarios and stuff, but it's not anything even close to real.
User_characteristics - Job_c-s	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Yeah that's what's interesting about it is yeah it's kind of different from day to day. There are a lot of tasks that you perform daily as well.
User_characteristics - Job_c-s	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: IT staff time at station] We're over here probably 25% of our time maybe 30% of our time spent between three staff but I would echo everything that [name] said I think that when we come into this building it's a family environment and we're also included in that fold and we're treated as team members and collaborators and so it's a great environment and staff are capable, experienced and always striving to do better.
User_characteristics - Job_c-s	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	Coming from the streets, I enjoy the street so I enjoy working and road. I started off in patrol; I went to narcotics for three years. From there I went to bike patrol section for three years, and then I worked the canine for 13 years, and just recently I've been on [Job title] now for three years.
User_characteristics - Job_c-s	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	Compared to when I first started, night and day. I started in '95, we weren't even issued portables.
User_characteristics - Job_c-s	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Alright, so for the past 22 years I've been employed with the City Police Department here in [city] and [state]. My current job title is I'm a [Job title] which includes all of our canine, our SWAT, I've got dispatchers under me, all the communications under me, and all of our fleet for the entire police department, the fleet works under my command. So that's kind of what I do now.
User_characteristics - Job_c-s	LE	R	Supervising Field	36-45	21-30	Male	LE-R-053	... But it's a very demanding job it keeps going, and one thing I can say is that my 23 year career has passed very quickly. I mean it's really rolling

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					by. It's really, it, you look back and it's gone.
User_characteristics - Job_c-s	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Well, as a patrol officer it's really not too bad, but when you get into the administration portion of it, you start to realize that fighting the criminals is only is the easy portion of your job. When you get into administration, fighting the politics and the bureaucracy that goes along with the administrative work is hard. I mean it's, sometimes you've got to pick the battles you want to fight, and other times you've got to let things go that really bother you when, I mean it's--sometimes I mean you're just speaking on deaf ears and you try to do the right things for the right reasons but I mean all in all over the span of my career it's been a good career. I mean I don't... I don't really have nothing I regret. I mean not too many people have been able to say they'll be able to retire at 47 years old and collect their full salary, so I mean is that the answer that you're looking for kind of?
User_characteristics - Job_c-s	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Correct. And also the data, I believe that the data shows you trends and patterns. If you can collect that data and develop patterns, I mean look for years seven years out of my career I spent working narcotics. I worked in the early, late 90s, early 2000s, I was working narcotics, and I can remember when I know narcotic intelligence was just things that we collected and put on a little pin board, pictures and locations where we were looking and back then the big trend was they were tying shoes together and throw them over the telephone poles, the wires, you ever heard of that where they drape tennis shoes over?
User_characteristics - Job_c-s	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	.... Listen, this, I've been a police officer for 23 years, we haven't changed what's going on in this community in years, and we're going to spend \$2.5 million to build a water park, a splash park in this community because one of the representatives that the council lady from that district is pushing for this.
User_characteristics - Job_c-s	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	Yes. I started off as a patrol officer, worked my way up the ranks through a couple of different divisions and was just recently promoted to major this last month so.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - Job_c-s	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	And, yeah. Yeah, it's small enough that everybody knows everybody and friendships develop and you know I mean the chief knows every officer's name from the 2 new people who are still in training to the guy that's been here 30 years.
User_characteristics - Job_c-s	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	--that a uniform garners. I rode motorcycles here for 12 years and so that was always a conversation piece. And... I think the faculty and staff and maybe some of your senior, upper classmen, there's more of a small community feel to it. You start recogn
User_characteristics - Job_c-s	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	Okay. That leads into the next question which was how, if at all, have things changed, in terms of communication since you became an officer.
User_characteristics - Job_c-s	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	You know, certainly we are little more with them. They are little more advanced. They deal with the body cameras, the in-car cameras, the mobile data computers in the cars, certainly cell phones for them, you know. If you look at a patrol car when I started 24 years ago compared to what a patrol car looks like nowadays, you would be somewhat frightened at what you see, and maybe a little intimidated by what you see, you know. They have got printers in the cars, they have got, like I said, it is a rolling office, quite honestly. So really they are dealing with everything that I deal with in my office, only, it is in their patrol car.
User_characteristics - Job_c-s	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	[town] is a probably good community to work in. They are typically very friendly with the law enforcement. It almost seems like the public thinks that, you know, maybe we are back in the 90s and stuff where you know, I don't have to lock my car; we live in a safe community. Generally, that only goes for a little while until their car is broken into or whatever but you know, no matter how much you try to educate them, they still think, you know, we are living in a small community, nothing happens here.
User_characteristics - Job_c-s	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Well, the lieutenant is a supervisory position that you work up to through the ranks. My job is - specifically I am in charge of patrol, any kind of supervision over the sergeants who handle patrol, and then I am assigned to the detective bureau as far investigative matters, and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								anything that we handle. We work as a team in the detective bureau, so I am one of two lieutenants in this department. And then I am assigned out to the Chief at the same time, and I am in charge of hiring and any kind of possible grant work and stuff that we need to work on, I assist him on that.
User_characteristics - Job_c-s	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	...Very challenging because -and relates to I don't have much assistance because the younger guys, they don't understand what it takes of all the behind-the-scenes stuff. So they don't know that I gotta do, you know, all the inventories and the grant work and everything and ordering stuff to keep the department running; they just are - so, police work, you get in a car and drive around. So that is challenging.
User_characteristics - Job_c-s	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Correct. We bid for shift every 4 months. I have enough seniority I stand days which is what I prefer, and I either have Friday/Saturday or Sunday/Monday off, so a pretty good weekend. For a while, for about 4-1/2 years I had Monday/Tuesday weekends and Tuesday/Wednesday weekends, so I have moved up the ladder a little bit.
User_characteristics - Job_c-s	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	Well, it can be wide; a wide range of exciting to boring to I guess kind of the whole spectrum of emotion between anger and sadness and joy and helping everybody out and I guess in my tenure as an officer, I have definitely had the whole gamut of experiences, so -
User_characteristics - Job_c-s	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	I think in our agency with the resources we and our technology, I believe we are doing very well. How, we are reaching -- and for us, not just the way we communicate internally but how we communicate externally to our citizens -- I think we do a really good job with the -- we have a crime mapping initiative that's an online initiative that's on our website that you can go in and see what's happening in your neighborhood or you can set a radius up around your address to see what has happened and you can see and it is updated. If I come to your house to a burglary report, it is updated as soon as it is approved in record. So, you know, we update hourly on that thing, so we try to let people know what's happened in their community because we believe that those people are a great force equalizer, you know, you can't be successful in this job, in law

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								enforcement unless your community trusts and supports you -- you can't. So, we have great trust within our community and great support. We really do. We are very fortunate to live and work what we do.
User_characteristics - Job_c-s	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yes we have. Every two and a half years is the contract we wrote and get the lightest and greatest updates every two and a half years at no cost to our taxpayers. So, it is a five-year contract with a five-year extension. Two five-year extensions that are in and they've increased our storage and everything so we are really -- we are pleased. I mean, it is Axon, the same people that made our -- the taser weapon system and we are happy what we got so far.
User_characteristics - Job_c-s	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yeah we have. We are very progressive that way. We try to be. In our agency, you know, you can get too close to the forest to see the trees. You really, you know, you think you got it so bad here right. I went FBI School last year, their [School] and there were 40 other sheriffs and chief and it had to be like-sized agencies and 6 international students in this class and really enjoyed it, but talking to those folks that are from agencies our size or -- you had to have 250,000 people in your community and you had to have at least 250 sworn officers. So, we've got 500 sworn and we've got almost half a million. So, it was all pretty close like-sized agencies and it was just incredible when you talk and you see what they deal with and how they have to fight with their community. And we don't, you know, we don't have that. It was how it really made you appreciate where you was at. It really did.
User_characteristics - Job_c-s	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	I just take my gun on my backpack gear and I've got the handcuffs off the emergency brake, you know, I mean, I don't know -- not much anymore. I mean, it was fun and don't get me wrong -- I enjoyed it.
User_characteristics - Job_c-s	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	S1: So, let me ask you one more question and then I'll see if you have any questions for me. If you had an adjective -- you could give me a list of that on adjective or list in adjectives just to describe the job or the -- S2: My job? It's satisfying.
User_characteristics	LE	R	Supervising	46-55	21-30	Male	LE-R-058	It really is. I love working at Sheriff's Office, I do and I enjoy my job. I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- Job_c-s			Field Responder					don't mind getting out of bed, you know, last couple of years have been -- I've have had to do some soul searching because I thought about leaving in 18 this year when [Name] did. So, I was looking at other jobs. Me and my wife were talking and I'm, you know, I'm [inaudible], but you know, I ask for guidance and decisions, you know, always I have. It's just a foundation of faith I was raised in and so -- so, I remember I had this pad and me and my wife were setting that up in our kitchen and I had a legal pad like that and I had down the middle I had pros and cons and I had jobs, I had been talking to some people about, you know, going in to do, you know, what am I going to do in a couple of years when I am going to leave when does and what am I going to do and I can't sit at home and only fish and golf some -- ah, you know.
User_characteristics - Job_c-s	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	It is. And while I successful at it, made good money -- but you know, what did I want to do? So, I am talking to people and ask -- how do you set your goals? What do you look for having to determine success? What do you -- I mean, you know, and me and my wife and said -- what are you marking this out? What do you love to do? And I said -- well, I am doing what I love. I said I love working at Sheriff's Office. And she said -- well, then you need to run for Sheriff.
User_characteristics - Job_c-s	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	You know I mean I've only been I mean I guess since like it's hard to say right because let's face it LTE technology, radio over IP, voiceover IP all that stuff's been out there since I've been you know in this job which is 7 years ago or 8 years ago I guess now so it's always been out there. Is it being utilized more? Yeah it's becoming more affordable and more accessible so more people have access to it and so we're seeing it a little bit more and other people using it so there's that growth.
User_characteristics - Job_c-s	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	And I've seen the industry change around I want to help people who want me to help them but if you're the guy that's saying screw the police and you call because your neighbors are harassing you I don't want to have to respond to you but I have to.
User_characteristics - Job_c-s	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	In [Name] it's probably 95% support so it's very high. We get which is why I went to work for a small agency so for me law enforcement is a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								passion not a career. Growing up around here you know I want to help, I want to make things better so in [Name] there's a very high which is why I went to work there.
User_characteristics - Job_c-s	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Like he said there's a lot of options here that's been here you know for 15 to 20 years so they're accustomed to doing what they do.
User_characteristics - Job_c-s	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	...I was a police officer there from 2008 until 2011. From 2011 to 2014 I was a detective there and I investigated theft and fraud and then I did robbery and then in 2014 I came back to [name] where I worked as a patrol officer from October of 2014 until January of 2017.
User_characteristics - Job_c-s	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	So that I think a lot of officers who come here get kind of dismayed by that because it's not new technology. I mean they've been doing it for 40 years but it has to do with licensing and kind of old attitudes, campus policing attitudes, we're not going to ride around running tags, we're not going to be running people but I think there's also just some technological issues that have to do with licensing because we exist in this world where we're under [name] what we find a lot is you know [name] is an amazing institution, it's a great place to work, we have access to anything we want but it's not municipal and it's not we are not you think about what municipalities put first and foremost?
User_characteristics - Job_c-s	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	Because I was a student employee here a long time ago almost 15 years ago so I've known part of the department peripherally for a long time and so we had two Sergeants who were both really good Sergeants and our now doing other jobs that were running dispatch and I don't know how well equipped they were for it then they finally said okay we're going to hire somebody so they hired someone who had run a large 911 call center and she's done a much better job of dealing with the personalities of bringing the standards of training up of knowing what to send people to so I think it was you know we had some people that were kind of deficient.
User_characteristics - Job_c-s	LE	S	Other Public	36-45	6-10	Male	LE-S-027	Yeah. It's a really nice community. We have, I think, 40 or so-thousand people here. So I think we're considered a smaller, middle-sized city,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					probably and definitely on this lower side of that middle size, but we're not very big
User_characteristics - Job_c-s	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	... So it's really different. I have a lot of hats, a lot and a lot of hats, so my position-- I do a lot of different things. So one day, I could have nothing to do with community resource officer and it could be just Salmon Days or whatever it is. So every day is a little different which is good too. It's kind of exciting, so.
User_characteristics - Job_c-s	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	... But I think if you look back at me the police officer 24 years ago and me the police officer now, if you put me in a car without a computer in it, I probably wouldn't know what to do now. So literally the first 10 years of my career I didn't have a computer in my car, but I'd be lost without it.
User_characteristics - Job_c-s	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Q: Right. Right. So you have 31 years and that's all with law enforcement? SME: Yup. Yup. All here with law enforcement.
User_characteristics - Job_c-s	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Q: Right. Right. And so I saw you have 33 years of experience for law enforcement. SME: Yes, ma'am. Yes, ma'am. All with [City].
User_characteristics - Job_c-s	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Yeah, I mean it was 1984 when I came on. And so I don't remember how many years, exactly what year we got the first computers in the cars. I know--
User_characteristics - Job_c-s	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	You can't. I'm obligated by my position. And nobody forced me into this position, right? I mean it's a job I pursued and that I accepted willingly. But when you accept the benefits of leadership, or command, or privilege, or whatever you want to call it, you have to accept the flip side of the coin as well. You have an obligation. And so I have that electronic tether all the time.
User_characteristics - Job_c-s	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	...The technological advances from when I started to now are phenomenal, and it seems like most of the accelerated growth in that has been over the last 5 to 8 years maybe, 10 years at the most. I'll probably stick around the department another 2 or 3 years,
User_characteristics	LE	U	Field	56-65	31-40	Female	LE-U-031	Well, I don't want to say that because I've been around long enough that,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- Job_c-s			Responder					if I look at what he sends me-- now, one of the things that my squad was asked to do early on was to work on robberies.
User_characteristics - Job_c-s	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Just wanted to be clear on that. Shoot, I guess I could start with a few adjectives. I think it's exciting. It's always exciting. It's dynamic. It's, what's the word I'm looking for? It's urgent in nature. I don't know a better descriptor for that, but it's-- we work with a lot of critical systems and life and safety and property issues, so there's that level of urgency. I think that's a good descriptor. Innovative, challenging, fun, yeah. I guess that's what comes to my head.
User_characteristics - Job_c-s	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	So officers can go through their department phones and go through the emails they have. And then they have access at home, so we have cops that will check their emails, department emails, from home. And they remember, "Oh, that guy was wanted in a robbery." And then they come to work and-- I've had cops that actually made arrests on the way to work. Because they go, "Hey, that's they guys with the--" and they'll call in, "Hey, so and so is here. Come on, we'll go grab him right now." It happens all the time.
User_characteristics - Job_c-s	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Yeah. I mean, I've been with the city with the police department in one form or fashion for 33 years. I've only been a police officer for 22 and change. I was a mechanic, auto service worker, mechanic, fleet manager. Then I became a police officer. Did that. I was an officer here in this community for about 10 years and promoted, worked different, then promoted again, and right back-- yeah.
User_characteristics - Job_c-s	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Or on the computer, or if I add their calls to my queue, then I'll be able to see it. But typically, most officers don't. They just focus on what's in their area.
User_characteristics - Job_c-s	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Sometimes, if am looking-- if it's a missing person's call or if a runaway, I'll typically use my phone, and I'll pull up the person's social media account to see if they've twitted something or posted something recently, trying to get an idea of what's going on with them.
User_characteristics	LE	U	Field	26-35	6-10	Male	LE-U-004	Well, I mean, I think most of them already have an understanding of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- Job_c-s			Responder					what resources are there for them, whether it's just having a computer that has a GPS in it.
User_characteristics - Job_c-s	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	For communication? Yes. It's not bad. I'm a little more tech-savvy than some of my guys, and I know that they get frustrated dealing with it. But they're all capable of dealing with it. They just whine about it a lot. So they're capable of dealing with they just don't really want to.
User_characteristics - Job_c-s	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	We also, again, in [City], we have already gone down the MGM route. We understand about sandboxes, so even if we were doing something that cached data, we know we're smart enough to put it in the sandbox that we can deliver without that officer having the physical phone. Here's the sandbox..... And then, they're not going to ask the questions that I want to ask, so I'm just going to take it upon myself and block my number and I'm going to call. I mean, everything is simple, e-mails and we have to sometimes e-mail files to ourselves. We have policy around it, make sure it's approved, but at a jail- if I'm in [County], I don't have access there to my network. But I can get there from my phone through our virtual machines and I can do business that way.
User_characteristics - Job_c-s	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	...We had this camera and it was amazing. From a technology perspective, it was awesome. No matter how the camera was oriented, it always looked like you were standing straight up and down. It could see in a dark room. It could be almost completely black and you could see everything in there. That's awesome. But from an officer's perspective, that's scary. Because if I walk into a dark room and someone knocks me over on my head, I don't want you seeing everything in the room better than I see. I don't want the room to appear straight up and down when I'm upside down, because I'm going to make decisions based on what I'm experiencing.
User_characteristics - Job_c-s	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	...So we have to utilize all the technology that we have here in the department. Which is why being in police technology actually really helped me for this position. Because I'm able to find our digital videos, download them, go through, and redact them, that kind of thing. So I was already familiar, luckily, when I got to this squad.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - Job_c-s	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	The tricky thing with that is it's kind of like if we get our work email on, we're basically granting our CTM access to all that is on a phone. And then also when I try to remind officers, because not all of them are aware, too, for open records requests, if you put work specific stuff on your phone and they ask for it and you haven't gotten rid of it, you have to provide it. So I always tell officers to be careful about texting things about work or taking pictures with your phone or that kind of stuff. Having things on your actual phone, you've got to be careful of. So that's a concern.
User_characteristics - Job_c-s	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	We did when I started. And then now we're told to not use 10 codes. Which, some people still do. Because it's like they taught you another language and then they tell you-- yeah so I think, probably the newer officers may not as much. Because I don't even think they're getting taught it anymore.
User_characteristics - Job_c-s	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	Well, I mean, I've been on the department for 20 years and definitely seen technology getting bigger, bigger, and bigger.
User_characteristics - Job_c-s	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	Question: Right. So I look at this demographic thing, you have been on this job for 16 years? SME: Yes
User_characteristics - Job_c-s	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	I have been in the K9 unit nine years.
User_characteristics - Job_c-s	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	A lot. And I started my law enforcement out west in Wyoming before coming out here. I've been here 17 years, and I did 7 years there.
User_characteristics - Job_c-s	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	Yeah. That's okay. Yeah. So I've been with the police department for the past 15 years. I was a [Job title] in the 3rd District for five years, I was a [Job title]. I was in the 1st District and then I was in the [Job title] for about two years. I was a [Job title] for about three-and-a-half or four years of the 3rd District in patrol. I was a [Job title] in the 6th District for about a year-and-a-half. I was a [Job title] in the Special Operations division for about a year-and-a-half, two years. I was a [Job title] of the 3rd District for about four months. I was the [Job title] of the Special Operations division for about a year-and-a-half, two years, and I've been

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the [Job title] of the Homeland Security Bureau since April, so.
User_characteristics - Job_c-s	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	As a member of Special Operations, you can be called out-- well, Homeland Security Bureau, Special Operations has been pretty much my career for 13 years so far, for that [risk?] patrol.
User_characteristics - Job_c-s	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	Well, I've been on the department for 22.
User_characteristics - Job_c-s	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] I like to call transit radio my baby. I mean, we pay a lot of attention to it. We have service level agreements with our partner Transit Authority, who maintains a lot of the system. We maintain the above-ground, they maintain below-ground. And we have a lot of-- we built up that partnership over the past couple of years and we think it's strong now.
User_characteristics - Job_c-s	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] ...And so we do have pretty good analytics just on that. And, as he said, they have the mayor's office of data analytics as well. But my stats unit-- and also precinct COs, that's the commanding officer of his precinct, he also has access to all these types of stats--
User_characteristics - Job_c-s	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	Fun, interesting, dynamic, challenging, rewarding, super rewarding, crazy [laughter].
User_characteristics - Job_c-s	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	Yeah. It's not, man. It's so easy. God, I love the job [laughter]. This job's awesome, yeah.
User_characteristics - Job_c-s	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	This job's awesome. It's my dream job, and 10 years later, it's still my dream job, yeah.
User_characteristics - Job_c-s	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	That's what I like about the job. I have had other jobs in the past and I sat in an office once, I didn't like. I like being out and about. I like not having the same thing to do day by day. So that's the thing with being a police officer. You never know really what to expect the day that you go to work. It can be a slow day with really nothing going on, or it can be a busy day where it's just out of control. That's what I like about it.
User_characteristics - KES	FF	S	Other Public	36-45	11-20	Male	PS-S-001	--qualify and because we're truly public safety. So there's a lot of cross-training that happens. The EMS requirements are heavy, even at the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					basic EMT level. So each year we have to do that.
User_characteristics - KES	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	Nope. Not for me. But that doesn't mean-- so we get 911, so that's our EMS [inaudible]. But technology, at least in this world, whether it's iPad or our phones, it's helpful. But it's only helpful if I can slow things down. Even on some of the extrication stuff, we just don't have a lot of time to mess around with, "Okay, I'm going to dig through lots of material." No, I need to make some decisions quickly. So these apps really do a good job of getting me that information. Okay, yeah, we got a Tesla, the battery's on the floor, and the high energy's here, here, here. Let's avoid those areas and go to the other side. But in terms of the hazmat response, I have a little bit more time, generally speaking, to manage events unless I have some sort of rescue component or some sort of immediate need like with emergency decon procedures on somebody that's been exposed to something
User_characteristics - KES	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	Whereas, well, is that real training? Is it valuable? Is it meaningful? Is it going to-- is it realistic? And I think part of it is, okay, we're just trying to check the mandate box and move on. And I'm sure you'll hear that from other agencies that you interview, not that that's bad or good. It's just I've noticed over the years, we are way more heavy of, "Okay, you got to go to this policy update thing, training or webinar." And I'm like, "Well, that's not the same." It's not the same. Talking about interior firefighting or talking about a tactical stop, it's not the same as actually getting out and doing it.
User_characteristics - KES	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	But part of it, it is funny. When I got into this in about the 2008 arena, I started trying to understand what LMR was. And when somebody said LMR in 2006, 2007, I didn't even know what that meant.
User_characteristics - KES	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	And when I started getting involved in our interoperable projects in the county and I started learning what it was, I started understanding, "Oh, okay. Well, that's our radio." So when I did that, I started going back and trying to understand how radio evolved. I didn't pay attention as I came up as a law enforcement officer. I just knew that I had something there.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>And I have been in an era for 21 years that I've always had a hand pack. I've always had a mobile radio in the car. And what I didn't understand was that in the '60s they only had a mobile radio. Prior to the '60s they had call boxes. So the hand pack was supposed to replace the mobile radio. So when they developed something that you can carry, when I started talking to people from those eras, "Oh yeah. We were getting this thing that we were going to carry and that was all we were going to carry. And they were going to stop putting them in the car because this was attached to us." Well, then they found that, well, the power of the mobile radio was more, so they got better distance, and there were areas that that didn't work. So as they continued to improve that through the '70s and the '80s, and the '80s kind of-- I don't want to say perfected it, but did a lot better than in the '90s. I would say land mobile radio really kind of perfected itself and became extremely reliable. There was very little fault, there were very little failure, things like that. As you got towards the 2000s, you started to see some of the failures of the systems because they weren't maintained properly or they started to not spend money on them. And then you had this window in the early 2000s where broadband was becoming big and people were saying, "Well, you know what? You don't need these super costly Motorola systems to buy something that you can communicate with." So you had people that were trying to use bridge-gap solutions, or that's when you have the KENWOOD's or the Yaesu's or the other companies that come out-- Vertex Standard, that come out with these radios that are a lot cheaper and they say, "Oh, they work great." Well, you drop one of them and then it stops working. Well, why did it stop working? I was reading some articles on this and, oh, well, the speaker on the radio, the case was hardened, but the speaker wasn't, so when it fell, the speaker broke. So, well, okay. I can throw that anywhere I want and it works.</p>
User_characteristics - KES	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	<p>[S2] The questioning comes from the EMD software. You're not supposed to vary from it only mildly but there is a lot of decision making processes that are happening outside of that related to the CAD because calls can change or escalate in seconds so you're listening to</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								what is happening in the background so you might have somebody that's just making little noises but then you can hear something else. So you have to be able to think outside of the box and kind of capable of building a bigger picture of what's actually happening if we're willing to but yeah decision making and decision making in short time frames.
User_characteristics - KES	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] And they do. They have to trust the CAD. They're trained to trust the CAD but the CAD has to stay accurate and so when they run into those problems typically they will continue to trust the CAD and then just be corrected and then send it off but the CAD system you know what goes in is what's going to go out and so that's a top priority for me is making sure that on the mapping side or on the data entry side that what's going on is accurate or being taking out so that the information that they're getting all the time is up to date or as up to date as we can determine.
User_characteristics - KES	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] Yeah it creates confidence issues and slows down call so they have to be able to just go how they have time frames and that they need to be meeting for dispatch.
User_characteristics - KES	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] ...They'll also do ride-alongs with the officers or fire personnel to get a good idea of one, their call types and what they're dealing with and then two, just getting a better idea of the area so I have certain ones who excel in more areas than others. You have the avid hikers or the avid hunters and they can pretty much tell you every rock, every crevice, every canyon you know they know all of them whereas others you know that's just not their thing so it's harder for them but you know that's part of the teamwork it's depending on the maps.
User_characteristics - KES	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	--actually, so they have the advanced skill set of the rope rescue and stuff. So whenever anyone gets hurt on [name] Mountain and they call for resources, they ask for our ropes and our rescue team to go assist them.
User_characteristics - KES	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	And if the staffing levels drop, we bring them back here to field the center. That's why it's important for them to maintain their physical fitness, their skill set, their activity levels, so they're familiar with their

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								field and with communications. That's why there's a bump in pay when we come here, because you're adding a skill set--
User_characteristics - KES	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	So, I was a wildland firefighter, smoke jumper and snowboard instructor out there. Coming here to a major metropolitan fire department overwhelmed me because I was just a small mountain guy coming here. Now coming up to the communication center, I have a much bigger perspective of the county, I know what happens across the whole county, instead of one little firetruck... don't mind doing several years here to get that perspective so that I can move up in the chain and go to lieutenant and captain, and then when I go back out in the field I'll have more experience and more confidence coming from here.
User_characteristics - KES	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	We get kind of numb to that and de-sensitized, so it's really important for me as a supervisor to understand where they're coming from. I understand what the field is going through so I really kind of want to keep check on my co-workers. And we have certain things in place with the critical incident stress management team that we can call, we have the health wellness, because again [County], we're very wealthy here.
User_characteristics - KES	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	...Then the first thing we ask is, "Okay, tell me exactly what happened." That's the first protocol question. Then based upon that we're trained, because someone can say, "I stubbed my toe because I fell down. I have chest pains, I am a diabetic, and I have a history of cancer." So then you're like, "I can do four different," so what's the highest priority? So we've been trained to go "Okay if somebody stubbed their toe and fell down, why did they fall? Is it because they had a heart attack?" That's more important, or did they just stub their toe and fall down? Then it's just a simple fall, or are they having trouble breathing because of something else? Or is their arm broken because they got hit by a car, or something else? So exactly, there's a huge difference. So we need to kind of investigate that.
User_characteristics - KES	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	[RE: call taker computer system] ...We have the online medical part that we just click on, but the numbers associate. So the number one is abdominal pain, number two is an allergic reaction, and it goes by

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								alphabetically.
User_characteristics - KES	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	[RE: call taker computer system] So, trouble breathing, B for breathing is the 6th card. Cardiac, injured person from a fall, fall is the 17th card. So after doing this for a while, you have all that memorized. It gets to the point where when the person talks to you, you already know what the end result kind of can be. You still have to ask all the questions, but at least you feel more comfortable because if the person is yelling and screaming and going crazy, you can ask the question and kind of guide that caller back to reality. Say, "I'm here with you, I want to help you, we're in this together, and I understand that this has happened." ...
User_characteristics - KES	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	...if it's a car accident, they can drive their car, they're not too hurt, but they don't know if they need to exchange information because all the states have different rules according to that. [State] is a no-fault state. [State] is not. So in Virginia, you have to have a police officer write a report, if you come into [State] the police officer is like, "No, I didn't witness it. I'm not writing a report. Go to your insurance company." Well, people travel back and forth all the time. There's always accidents. So people call in and say, "I need the police." "Why?" "Well, I got in an accident." "Okay, are you injured? Do you need to go to the hospital?" "No." "Is your car driveable?" "Yeah." "Okay, in [State] exchange your information and go about your day. The police will only respond if your vehicle needs a tow truck, or if the person won't give you the information."
User_characteristics - KES	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	No it's all a different division of people, and some of them had experience because they had been through the dispatching and that, and they've moved up in the chain, or moved up in wherever their current assignment is.
User_characteristics - KES	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	Yeah, it was several weeks and it was a major hinderment, it was a really big problem. Sometimes we have certain cell towers that go out of service because of storms or things. Or construction crews hit things when they're doing upgrades and we have to use our backup systems, and we're not as familiar with those. But that's an internal training thing.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Certain shifts are better at the what if scenarios than others. So certain people's personal work ethic and what they want to know and don't want to know, and if they want to be more prepared or not, all those variables come into play so that we do have a very good back up radio system that if the people are comfortable with it and comfortable with the transition, it really helps when we have a failure of system and we can immediately switch to something else.
User_characteristics - KES	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	... So for someone who has a medical background, it kind of hinders you a little bit. But it also, if you accept it and just go with it, it streamlines everything and there's no variables, so you're actually doing the best thing for the person who has an emergency because you're asking all the appropriate questions, without any of this, all right we'll send you whoever I feel like.
User_characteristics - KES	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	...it will translate to their language, so I see like a closed captioning exactly what they are saying, there's no communication breakdown, I can see what they're seeing so I could use my experience to plug in the holes of medical, traumatic, fire, whatever, and then I can tell them exactly what they need to know immediately and the communication is transparent, it's just there automatic, because of technology. Instead of having to delay and wait for all that.
User_characteristics - KES	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Generally, it's eight weeks in the classroom where they take an emergency telecommunicators course, it's called ETC. That kind of lays the foundation of how to be a call taker. And then there's EMD class.
User_characteristics - KES	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	No, we just do fire. So a trainee will take the ETC course, EMD, EFD, then they'll take a CAD class, which is taught by one of the uniform folks that work for us. And that's a week long, and then they'll go to a two-week simulations lab, lab simulations where we'll focus on call taking and dispatching in the training lab.
User_characteristics - KES	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	-yeah, CAD will recommend more than what you need because CAD recommends transport units and manpower, manpower units, and ALS resources. And so sometimes the dispatcher will get a little confused as

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to, "Okay, what do I send here? I know the response plan calls for this, this, this, and this, but this is-- I'm really confused." Plus, the CAD also now recommends times, travel times for each unit. So the supervisor has to step in sometimes, say, "You don't need that, you don't need that. So we deselect that, deselect that." And then dispatch it.
User_characteristics - KES	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Yeah, but once it happens, you just have to rely on your common sense and experience.
User_characteristics - KES	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Right, use my experience to make decisions, "Okay, you don't need that for this call." Send that unit to there. Send that unit to that call. But it usually happens during a thunderstorm or a big rain event, where we have a whole bunch of swift water calls and it just overwhelms our water resources. I go on condition red and that means I can send one boat to that call and one boat to that call because our water resources are limited to begin with. And I can't send two boats to that call, I can only send one. Just go and do your best. So that's called condition red.
User_characteristics - KES	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	You need to be able to listen and you need to be able to multitask. Multitask is probably the most important one. Attention to detail and the ability to remain calm and professional under stress.
User_characteristics - KES	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yeah so I am personally I'm trained on phones. I'm really strong on phones and I'm also trained on we have like two radio I'll say two we really have three but I'll say two radio positions on the police side so I'm released on one of those and then I'm training on our primary channel right now and then I'm also close to the end of my training on teletype phones I don't know how familiar you are okay so teletype is basically a nationwide network that allows different law enforcement agencies to communicate with each other securely and also enter things like warrants or stolen vehicles, stolen articles stuff like that into a system...
User_characteristics - KES	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	So for example today I came in and I'm working the police administrative channel which is something that I'm qualified on one of the two radio positions and then after that I'm going to do four hours of training in teletype and then I'm going to do four hours of training on my police

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								dispatch radio so but again like not every day is like that. People that are in training usually their days are a little bit more structured. That's traditionally the structure that I'll have for my days but that's just because I'm in training and that's kind of where they expect me to go to meet the training requirements.
User_characteristics - KES	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	And I personally am moving quite quickly through the training phase and I don't think that it's going to be 18 months. I think it's going to be shorter so yeah it just depends you know but there are some people that have been here for 3 years and they're still not fully trained. And again that ties back to a variety of things. Training like are they able to meet the standards? Is it that they are struggling in an area? Is it that we don't have the staffing? Some people's training gets suspended you know and it's nice because on the one hand we train everybody in everything and you know that's great because I think it makes us very skilled especially even as call takers. I mean my call taking has changed and approved since I became a police dispatcher you know because I'm looking at things in a different way. Exactly. And then on the other hand you know answering questions about you know warrants or teletype or something like that dealing with the officers is very different now that I've been basically trained in teletype so you know it's nice to have that but then at the same time it takes a while to train everybody in everything and we are spending a lot of time and investing a lot in each individual which other agencies don't do. [state] they train in call taking and then---
User_characteristics - KES	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	... If they don't have a street address or they don't know ask for the closest intersection and then if they don't know the intersection or they don't even know that I'll ask for like a hundred block or something like that just like what street are you on and then I'll ask them for landmarks for a last resort if they really don't know where they are. I don't like using landmarks because there are some areas of the county that I'm really familiar with and some areas that I really know and if you describe something to me I'll know what you're talking about but a lot of that is very subjective and it's based off of my own experience.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - KES	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yeah we do do geo-training and we do make an effort to become familiar with the county but it's 26 square miles you know so it's very and especially when you're not out there everyday. We're here right so it can be challenging to know you know and I definitely overtime become familiar with our hotspots where we get most of our calls.
User_characteristics - KES	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	But sometimes it can be challenging especially if someone uses a phrase or something that you're just not familiar with. You know I had somebody what was it someone used a phrase the other day or like last week where they referred to it as like [Street] or something like that and I said it wasn't me it was actually a different dispatcher somebody else said like [Street] and I had and no one had any idea what they were talking about and we called park police where [Street] was. They had no idea. We called state police they had no idea what it was. We called [City] they didn't know. Nobody knew what [Street] was.
User_characteristics - KES	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	And a lot of that comes back to like the investment in personnel. So I was very privileged to have an extremely good trainer and then also a lot of time dedicated to me. My shift happens to use have training as a priority you know so we focus on that and we try to make our people good dispatchers. So we try to make it as you know this stuff off the top of your head because---
User_characteristics - KES	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Right so and again and the reason is that because I had really good training and the other stuff will come with time but those core competencies and that's why I was saying moving to a core competency model is I think where we should go but like being able to get I think of it like blocks yeah so I think of it as having like little blocks. Being a call taker gets really easy once you learn like kind of your own scripted information and if it makes sense to you and you're able to take control of the call. Once you're able to take control of the call and you have certain questions that you're able to ask about certain topics the nervousness and everything goes away because you're just going to the questions and you know what you're dealing with. You know I ask the same questions that I ask every single time about people.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - KES	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	And so there's always this baseline level of tension that you never know what's going to happen and then the other part of it is too once you become more experienced in this job and you do start doing other things like police dispatch and stuff you know I'm starting to recognize the officer's voices and I know some of the officers you know now that I've worked here for a while because we do ride a long a lot, we work with them, we meet them in teletype and stuff like that and so I know them as people and if in addition to me being nervous for perhaps the person on the line because you do get invested in these people even though you don't know them you're still worried about them you care you know.
User_characteristics - KES	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yes we should get the call back number as soon as we can. The our (INAUDIBLE 00:38:02) will display the number they're calling from if we get it on a 911 line. If we get it on a trunk if we get it through a transfer that's usually one of my first questions. Is what call back number are you from? Especially if you get a transfer I always try to verify that you know because I have had that before where I've made a mistake where I didn't get that information straightaway and then I wasn't able to call them back but at least I had the location.
User_characteristics - KES	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	...so you have to start with [abbreviation] and then its visitor center. Okay? So everytime you enter the information when someone says I'm at the visitor center at the cemetery we say okay [abbreviation]-visitor and then it pops up and you can select it. Okay but if I type in visitor it's not going to come up. You have to type in [abbreviation] and I think you even have to type-- I have to go back and check but I think it's like [abbreviation]-visitor center because that's just the way that it's in there. So there's a lot of locations like that right, and some places like-- So, and again because it's all based off of how you put it in the system. It's verbatim how you put it in the system so we have a lot of giant food stores right so some places are put in as giant-[location] right? giant-[location]. Some others are some other places are giant-[location], giant-[location] so it's very much so it's basically like searching an excel

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								spreadsheet right? It's very specific to what you're looking for and not only do you have to you basically have to learn how the common place is put in for that specific location if you want to use that.
User_characteristics - KES	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	And the 2216 is the actual phone that sits under the desk. Some of the items that we have in our back room are as well no longer being made. We have to kind of just find that different P4 processors and things like that so my job entails a lot of stuff. It's a lot of mitigating issues, trying to do a little bit of research to see what I can fix on my own
User_characteristics - KES	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	We have lots of non-emergency calls stuff that during the day other county departments instead of knowing where to transfer them they're like we'll just transfer you to the non-emergency number and then we are then tasked with trying to figure out where this person who this person really needs to talk to.
User_characteristics - KES	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	So they had called me. At the time I was the lead EOC representative for ECC so I had written a proposal of why we should be integrated into the EOC as a bridge because I felt when the EOC started up one, they were missing all the information of what had already been completed so they were doubling back of stuff that we had already done or there was a miscommunication between what the EOC was doing and what the ECC needed to do so I had written a proposal after I sat in the EOC for one day assisting them and wrote a proposal that we should have a team that when the EOC is deployed one of us is sitting there so that we can not only bring everybody up to date on where we are but also be able to pass information back and forth and kind of be that bridge gap that liaison between the two.
User_characteristics - KES	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Things are very spread out so the old CAD I used to be able to just I knew all the commands, my hands could stay on the keyboard and I never had to lift my hands. I have a foot pedal that I can push to talk on the radio and my hands I would just type commands, I had it memorized how to type the line segments and it was great. We get a new system that is great on the technology side but it takes me 2 to 3 steps to what used to take me one.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - KES	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	They really need to be that marriage in between to make the best situation for dispatch because we do we have a lot of what CAD we choose effects the police department and the fire department.
User_characteristics - KES	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	... He sees over all of us so he that's his vision as well but he has been so far removed from operations that he needs that operations perspective but he also knows and understands he needs that operations perspective and the people that are being hired as the older administrative staff retires or leaves they are hiring those who want to merge those two and want to keep up kind of their skills on both sides so that they make sure that they really are everybody is getting what they really need.
User_characteristics - KES	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	But it's a job not everybody can do. You have to be able to multitask and do several things at once. I mean you could have the phone's ringing, somebody's out in the-- there is somebody back there screaming for, "I need some paperwork." And then you got a probationary that comes in and says, "I got to get to work. I need to do my PPT." Sex offender walks in and says, "Well, I'm on my lunch break. I need to register." So you're [hustling?] around doing 10 things at once. But it is unique in the sense. And that could be any dispatcher. You have to be able to deal with whatever's thrown at you which sometimes is crazy.
User_characteristics - KES	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	...." Because I could tell by the tone of her voice that something was wrong. So I guess that's just one of the things that you learn to pick up. But we all joke, and we'll crack jokes like, "Oh, today's crazy," or, "I'm glad it's my Friday," because I'm lucky in the sense that I generally have weekends off. When I worked at my other department, I worked every weekend and holiday for 10 years. I think the only time I ever had a weekend off was maybe if I was on vacation. And a lot of other agencies, you might alternate weekends, or if you decide to work a specific shift, or overtime, you might work every weekend. It just depends.
User_characteristics - KES	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	You need to know the area. I'd have to look up the policy. It used to be you had to live within an hour of the department, and I'm not sure if

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that's still a requirement because I heard there were some questions on that stipulation
User_characteristics - KES	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	Yes. You do need to know the area, and it's good to even know some of the surrounding areas.
User_characteristics - KES	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	I guess I just-- for me it's just part of life. I know when the officers have to sit here they don't like it. They say, as long as just one line's ringing at a time and they only have to do one thing they're okay. But if four lines light up, and then a [PB-teer?] comes in, and somebody comes to the window, they just want to get up and run. And they would tell you that they'd rather deal with a barricaded gunman than sit here and deal with all this nonsense. So like I said, I think it takes a unique individual to do the job because it is-- and I mean, I'm not going to say that men don't do it, but there's far more women that do it than men. Because I don't know if we just have the ability to do 18 things at one time and the guys are like, "Aaah!" But we have one male dispatcher here, and he is a former cop, and he does pretty good. And all of our officers, at least at this department, all of the officers have to know how to run the desk in the event that if I was sick, or if I had an emergency and couldn't come in, or if I got pulled away for something else. Everybody knows how to sit here and basically run the desk. Sometimes stuff gets messed up but--
User_characteristics - KES	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Well I think you have got to be patience. You have to be patience with people yeah with people and you've got to be patient with well like I said sometimes it's boring and so you've got to be kind of okay with being there and keeping yourself busy and doing other things. Sometimes that might be I don't know paperwork or whatever needs to be done and sometimes you know we do get the deputies will come in or the sheriff's there and we've got some banter and we got some chatting and that but I think you've also got to be a self-starter because again there's not always it's not like there's always something happening right and so then you got to figure out what you're going to do. You have to be a good communicator. That's the biggest thing really. You've got to be a really good communicator. You have to be good with people. We do have

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								people sometimes coming into our offices so you know you've got that one on one and you have to be able to deal with people. Sometimes they're not happy, sometimes it's just you know have a chat. We have a lot of older folk in our community and sometimes they just like to stop in have a good old chat and then go on their way and so got to be good with that. You have to be able to follow a protocol right because when people call we have to be able to get the right information to give that information to the deputies so they can go out and do their job and actually help those people so communication skills, communication skills, communication skills you've got to have those.
User_characteristics - KES	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Well I think most of us do live in the county. I can't imagine anybody who doesn't but I don't know that it's required really so no I don't think it's required. Most of us know it because we're here because we live here because we know the area but I don't know that it's not like we take a test or anything about it but it's hard to dispatch a car if you don't know where you're sending it so I think that we do work hard. We've got maps here and different things that can help us too.
User_characteristics - KES	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	No not really no but sometimes the Sheriff might give you a task. You know if we've got we go do fundraisers or we go help out in different communities or sometimes it's organizing something like that maybe so you might need to make some phone calls and again that's where you need those communication skills right because you're talking with all different kinds of people so sometimes though the Sheriff might have to ask for you but that's about it.
User_characteristics - KES	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Well sometimes but that's very, very rare here. Sometimes maybe but if we do if I'm on a call for example and I get another call you have to see what the nature of that call is. You do make a decision then about where you need to focus your energy first, you take care of that, you dispatch that then you go back to the other call so some of it is about prioritizing and understanding what needs to take priority in those kinds of situations and so it's about figuring out who needs help the most and sending people there.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - KES	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah, so last year we rolled it out entirely. We have a little more than-- almost 700 users on the platform up and trained. That means they've been through the training classes and gotten their credentials and all that kind of stuff to use the application. So yeah.
User_characteristics - KES	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Well, there's a team that goes with it. So if you requested an operator-- [S2] You're actually going to get an operator?
User_characteristics - KES	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] That's a good question. Well, I can tell you a little bit more about me. So I come from a technology background--
User_characteristics - KES	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	Yes, that's a big part of the challenge. Learning the ins and out and the different programs, the different systems that we use, the radio, reporting programs, and the different schedules of each shift, that's the easy part. The challenge is when you get a call, a certain call, or we call them hot calls. And you have to handle that accordingly to make sure that that person that's on the other end that dialed in, get the help that they need, but also that officer that's responding or the firefighters that's responding have the knowledge and know just what they're walking into, so they can give that person the assistance that they need.
User_characteristics - KES	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	Hmm. Some of them are lower class. Well most of them, lower class. We have mid-class, not too many upper class. But mid and lower. So the lower class is sometimes difficult to work with, because they're at a high demand. They want what they want, when they want it, and how they want it. And some people, you can't get them to understand I'm only the dispatcher. I take the message; I relay the message. Now when that officer or when that person that you need that help, that assistance from gets back to you, it's not my fault. So we take a lot of heat from the lower class.
User_characteristics	COMMS	R	Manager	36-45	6-10	Female	COMMS-	We do a common knowledge test on the [County]. And basic skills,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES							R-010	math, reading, comprehension, just so you can, we can see if you can comprehend most of the information that you're going to be receiving. Living in the [County], you don't have to. [Inaudible] [County], you really don't have to, because we teach you. We will provide that training, so we can divide it up. We have the north end, and we have the south end, east and west bank. So it's not something that, like [city], where we have to learn the different districts. It's not that hard. So learning it isn't, it doesn't take as much time as t would a bigger COMM center.
User_characteristics - KES	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Open-minded, someone who look at both sides of the spectrum, not just one. Thinking about long-term goals, long-term effects, especially emergency situations that if I make a decision now, what is going to be the repercussions in an hour, in 12 hours, in 24, 48, or down the line? And it's one thing that we really have to, we, my department, really have to think about and really have to keep in the back of our minds is what's going to be the repercussions later on down the line.
User_characteristics - KES	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	.... When I was in the fire service and very active in the fire service probably 25 years ago I guess, the deputy chief at the time came from industry. And he'd always tell me, says you do not want to make you friends at 2:00 in the morning. You want to make it at 8:00 in the morning over a cup of coffee. And that's one thing I've always preached to my staff here, and make sure that I try to extend that olive branch to everyone ahead of time.
User_characteristics - KES	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	... And I think that a lot of people just pick up a radio and start talking, but they understand the technology background, working parts on the back side of that. You have to make sure that everything's lined up, all your Is are crossed, all your Is are dotted and your Ts crossed as far as managing these days how different talk groups are brought either way. Just picking up a radio and keying up is not the, do I need really to talk? Or do I just key up and uh, uh, uh, or do I just keep chattering away because I don't know what's the correct, it's that type of thing that...
User_characteristics - KES	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Dependent on text notification. Before when we had the old pagers, not even the two-way pagers, did that person receive that text, I mean I'm

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								sorry, receive that page? To where now you can see on your phone if somebody's received that message right away. My staff knows if they need me right away, to text me. Same thing with dispatch center, they need to get in touch with me right away, they know to text me because I look at my texts before I look at my email, for the simple fact that if it's emergent enough, I mean think how about how much spam email we get these days, how many please buy our product emails you get versus, it's not that I discount every email. But if it comes across my phone as a text from somebody, something must be wrong.
User_characteristics - KES	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	You can. Yes, you could definitely imply that the person, sometimes you have individuals that are exaggerating, or they'll tell the same story, but they'll add more to it. And then you clarify. They say oh no, that's not what happened, or they'll, oh well I didn't say that, even though they just said it, and they'll add even more. So you can definitely deduce whether someone's making a bigger situation than what's really going on. And then sometimes you can infer that if they're not in the right mind state, you can sometimes tell depending on what they're stating to you.
User_characteristics - KES	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	[RE: current state of technology] It's for sure sufficient. I thought we were top of the line, and then I went to an APCO conference back in [City]. And I learned that no, we're not even close. 'Cause they had programs that I wouldn't even have thought of, which that was cool...
User_characteristics - KES	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	911 has been out, which their solution is basically to transfer to our regular phone lines. Because essentially we're going to handle it the same way, whether it comes from 911 or whether they call the sheriff's office.
User_characteristics - KES	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Sometimes with the sheriff's office, we have to get them to understand the way it is out in the field and on the streets. It's not the same as in dispatch. So you may be on a traffic stop or responding to a call, and you can just do what you need to do, give out that information, give that person's information. But you have to take into consideration your dispatcher is 90% on the phone. If we're not on the phone, there's two of us, if we're not on the phone, we may be [inaudible] on other calls. So we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								need you all to monitor your radios.
User_characteristics - KES	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	You definitely need to know the area.
User_characteristics - KES	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	No. Not to me it's not. After you've been doing it so long it's like second nature
User_characteristics - KES	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	I say with our older callers sometimes they're hard of hearing and it's hard to communicate with them. They can communicate with you and you know it's hard for them to kind of understand what you're saying sometimes and we also have some people who live here who have heavy accents that's kind of hard. And sometimes you just have irate callers who just don't want to communication they just, you know? Want to say what they want to say and that'd be it. So you just have to learn to deal with it. Make the best out of it.
User_characteristics - KES	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Cause some of our officers are not from here and they don't know the area as well as they should so they have trouble getting to where they need to go and I mean we're over the radio trying to guide them but if I could see and see my officers and I can tell them make a quick left, make a quick right, go straight, go you know?
User_characteristics - KES	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	You do need to know the area. And you need to know how to look at a map and determine, you know, where people are and a lot of times we get a lot of calls from people who will not know where they are. It's amazing how people don't know where they are [Laughing]. Like I get adults that don't even know their address. And so you do kind of have to know how to say, well, how are you from this place or do you remember passing this store or something like that. So yeah, it's important to at least halfway know your area.
User_characteristics - KES	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Well. Most people when they first come on, they do what we call ride-alongs with--and we're about to starting those back with going out with the officers and going into like the different areas so you can see where you're sending them. I don't really think it's 100% necessary because like I said most of the time even if you don't know the area like I'm from here

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								but I can go to [city] or [city] or somewhere else and dispatch. Like I would be able to say, well, this is where they say they are and kind of get a description of, well, what do you see around you or something like that and then let somebody know where they should go.
User_characteristics - KES	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	I think the--I think it's the in--an in house thing. I think it's like first responder type of thing. Like I think it's like either they think like we don't give them enough information or we didn't ask or something like that but it's like how could you not get enough information. Like I understand you're going but there's no way for us to sit there and tell you every little thing. All we can tell you is what we were told. And we have questions that we ask. We know the questions to ask.
User_characteristics - KES	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Well if it's a--I mean I don't ask that on every single call but if it's a call that's like a fight or a disturbance or something like that, I'll say, well, did they have any weapons or are any weapons involved or do they own any weapons, you know, something like that. I'll just say, well make sure all your weapons are away and let the officer know if you have weapons or are in possession of weapons. That's important.
User_characteristics - KES	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	Do they run that person, the victim, the call taker or the caller, the suspect, do they go ahead and run them if they have that information in through our warrant system to see if we have warrants out for them, what type of criminal history they have? That kind of thing so that those responders are prepared for what they are going to deal with.
User_characteristics - KES	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	It just... just the ability to... look at history and look at the response capabilities. We have AVL which is the automatic vehicle location of all of our units now. And that's another resource that they can use but it's also one of those liabilities and responsibilities that they have to look at and go, ooo, that guy's closer but he's on a call, do I pull him from that call to go to another? So they have to make good decisions on that. But if he's on a call taking a report they can't just pull him from that call because he's sitting talking to a victim. But if it's a major event then they may have to pull that deputy from that call. But knowing that they have additional resources that they may not know are there such as

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								detectives or civil units that may be in an area that is very close to a high priority call.
User_characteristics - KES	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	They can look at that AVL map and say, you know what, I've got a detective that's right around the corner, let me dispatch him to this armed robbery in progress or shooting or disturbance with weapons or whatever it is. We know it would be a high priority call. They could pull that detective that may not be listening to the radio because he's en route to go pick up evidence or out and about doing his normal day to day routine of being a detective but he's not listening to the radio so they can pick the cellphone up and say, hey, so and so, you're close.
User_characteristics - KES	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	I mean we're 1984, '85? At our best right now. And they're using notepads and writing down information. They're handing it to someone else and they're keeping notes of that. And I don't mean just a stack, a small pad, I mean stacks of paper. And they're using their mind, their brain to figure out problems. They're not relying on the technology to solve the problems. They're using their human brain power to find the solutions to those problems and it's just a portable radio and a portable on the other end with a deputy or a fireman in a boat going, okay, I've got 6 people out of this house, where do I go next. And they look at the next piece of paper and say go here. And so that's kind of what I think that we're looking so often to say technology is going to help us in these big events when you know you'd better prepare for that big event to take that technology.
User_characteristics - KES	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	Even the telephone. I was at [County] during [Event]. And we were on the western eyewall of the storm. And we lost our whole 911 system. No calls. But yet we still had people to rescue. So we had to go old school. You know? We don't have telephones. You start in an area and you start saying, okay, look in this area and start rescuing people. Start moving people. And whenever that shelter gets full, then move them to another place, move them to a safe place. Yeah, we saw it during [Event]. They moved them to the highest spot so they wouldn't drown and hopefully somebody would get them some water and some food until they could

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								evacuate them at the nearest bridge.
User_characteristics - KES	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	No. I think it's--I really think that it's human willpower and brain power that's going to make the difference. Can technology? Yes, it can. But we'd better be prepared to live without it because it--just as in the flood what we had was we had AT&T's entire wire center go down. So they had no service on cellphones for AT&T in this area for a week. So we'd better be prepared because it's not just the technology that we have here on the third floor because that technology has to interface with somewhere else. That technology has to interface with telephone lines or copper or wire or satellite and microwave, whatever it is. And a good strong can blow your microwave signal off. You don't have it. Take your satellite dish off of your building, you don't have satellite communications.
User_characteristics - KES	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	...If you listen, you can, oh well, you need more than just police. I think you need EMS, or you're trapped in an elevator. I know exactly where you are. I can kind of hear things around you. I've had situations where this campus has had over 200,000 people on it for football games.
User_characteristics - KES	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	Oh yeah, I definitely feel you get to know, for example, say we worked six months all day, six month all nights. We kind of would miss out, I think. You get a month here, say you get rotating in [inaudible] football. You would get the kind of day shift calls with the football games versus the night shift. You get a mix. You learn different times, when different events on campus happen. I know when a professor, if he gets rid of the pianos in the music school, he'll get those at the, or send them back in the first part of May and then get them back in August, and I always deal with him. He's like I remember you. So I get to know how certain things work. When certain events are going to take place, we have a home and garden show, we have livestock shows. 4H Clubs come on; we have football camps over the summer, all kinds of camps, lots of kids. Deal with lots of kids. So it kind of helps.
User_characteristics - KES	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	Not too much. Like I said, I listen. And if it's, I get their name, where they are. If it's not serious, I can hear it in their voice. I've never actually

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								received a bomb threat, but I'm waiting on the day. But I know, I can kind of hear it. And if so, I'll try to keep them on longer. Especially with a bomb threat, if it's a person calling it in, if they have one on the city, or it's not just [inaudible], they heard it, I will keep them on the line as long as possible. Those kind of situations. But other than that, no.
User_characteristics - KES	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	I kind of prefer that even though it's kind of, you're still kind of pushing off information, and they're pushing off what they're given. Sometimes city will not even give us information when you're dealing, 'cause they're dealing with so much. They may not give us all the information when transferring a call. It's not always possible to get that. So it kind of gets frustrating. But most of the time, you are going to get decent information. I have enough to work with. If not, I can kind of pull it. If they give me a name, and they're a student, I can kind of pull it. I can look at my database as in mainframe or TLO or something, the little mini-tricks and the tools of the trade that I can use. I can try to do something. I can do more than what is just handed to me sometimes.
User_characteristics - KES	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	So that was one thing that I learned here. When I moved here, they're [County] and not counties. It threw me off, a little bit different under [State] law.
User_characteristics - KES	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	So we have a CAD, computer-automated dispatch. It's kind of basic, F5, F6 and F8. F8 is a traffic stop. F5 is I want to say when they, the actual, like a random caller calls, and then like F6 is when the officer calls in something. So you have to memorize those. So I deal with that. I deal with the main phone. I deal with, 911 and that are on the same phone. It's not like other dispatch agencies where I've worked where 911 has its own phone, and it's hooked up to a map. We don't have that at all.
User_characteristics - KES	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	Computers failing. That is probably, I do know that every now and then, the few times that we have had the radios go down, we had to work off of portable, like the ones over there on his desk. I'll have to pull up the radio itself and key up like that. That's annoying, 'cause I need my hands free. So we do have a foot pedal you can use. I don't use that. It's kind of weird. So I use my hand, and I'm really fast just typing. But that's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								probably the worst part. Like right now I do not have a computer to do anything expect for dispatch. And I can't even do that. I can just answer phones. That annoys me so much. 'Cause that's what I like to do is dispatch. I don't like to answer phones as much.
User_characteristics - KES	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	I think what makes a good one is having--knowing your technology, knowing what you need to do, definitely have a listening ear for officers that are calling in, different things, to be respectful of people calling in, to get all the help they need, to get all the pertinent information that you need to get an officer out there, and make sure that the officer is safe once they get out there, make sure the--if they're out with a subject that was maybe violent, make sure they don't have any weapons [inaudible], let the officers know, basically just to keep the officers safe.
User_characteristics - KES	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: You know this is not a magic trick, but it's a thought that goes along with the I don't know what -- I mean, I can't pin it down in one word, but thing -- thing we all know from being in this business is public safety is trying very hard to be able to do what the 14-year-olds have been doing for a long time; you know exactly what I am saying. And this is not age discrimination by any means but we know that we hire 20-year-olds and put them in this class, I mean it is not teaching; they've been doing this it for so long. We are just teaching them the, you know the procedures and so forth. You know, you take a text mail or -- or for that how I can say this. Your texting might be older, and you will say okay we are going to teach you how to text, and also send the videos with it and you may have to convert this over and then you are going to send it out. You will say like, oh my gosh, and the kids are going -- huh, big deal. You know, okay so it is Snapchat and Facebook combined right, is that all of this and I -- in one of the class I had a little girl that I was concerned about because I would go down and they had her in class and I was sitting back here and I even mentioned to [Name], I said, I don't think she is paying attention, you know, it bothers me because it doesn't appear to me that she is paying attention and then [Name] explained to me and [Name] confirmed it; she is bored. She's got this. She is fine. You know,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								she is like, I mean move on. You know, move on to the next slide. She already knows it. And what heavens, she made straight 100s on her test. You ask her a question, she will answer it. In less than a year, she has already moved up to Dispatch and one of our better dispatchers. So, you know, I mean, there's something that I would say -- whatever word, whatever adjective they [crosstalk]
User_characteristics - KES	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: You have the basic knowledge, you know, if you are talking about the parts of town and if you say [County], they know it's this way, and so -- yeah there is a help here but --
User_characteristics - KES	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	S[unknown] A lot of times actually people that are not from here tend to learn that and try harder and learn the area more than somebody that has just grown up here, maybe that has grown up East and knows nothing about West or West that knows nothing about East.
User_characteristics - KES	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: I guess, the next biggest would be the bad calls. The ones nobody wants to hear. The ones you should never have to hear. Yeah. So those -- and then on the other side of dispatch, you know, when you get an officer shot and you are responsible for it, you know, that's -- that's high stress. Well, we teach them downstairs, you know, what to hear, what to listen for, (not what to hear but what to listen for), things like that. We don't see what the officers in the street are seeing. We just, we hear it and we maybe get a picture of it, you know, what we think it might be, but if we start getting video, I don't know how that will handle.
User_characteristics - KES	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: You know, we are able to do all of that, we are able to log into somebody's phone and track down and, you know.
User_characteristics - KES	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: Yeah. And so, that really does tie us for emergencies. My fear, and I don't know whether it can be fixed. I've got 62-year-old women and men both in their -- how are they going to handle a text call from a 14-year-old girl with TBT and just all the abbreviations and all that. Yeah, I think it is going to create a lot of in a bad way -- actually I think it is going to put a toll and take a toll and run off a lot of people because they can't.
User_characteristics	COMMS	R	Comms	46-55	31-40	Male	COMMS-	I'm 52 years old and I really don't want to keep doing what I was doing

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Personnel				R-020	when I was 20. So this position came open and I migrated to here because I was really the only one that knew the CAD, knew the communications center and all that stuff, so we hired a new so I help him. The fire department, the fire chiefs, once I came from there [indiscernible] we need policies on how you want this truck dispatched on calls, how many trucks do you want dispatched on this type of call, this type of call, we built all those policies, and then it's easy for me training my dispatchers. If you're within policy, I got your back 100%. You violate policy; you're on your own. APCO; you APCO a call correctly and we find out the APCO codes need to be updated, you're covered. You don't use them, or don't do them, you're on your own, I can't protect you.
User_characteristics - KES	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Amount of data going through that mobile that's on the ambulance. It's got two sides: we have the GPS side and we have the internet side. They get mad at me all the time because if the internet side goes down, I don't care, as long as I can see that truck. My MDT don't work well, go talk to IT, I don't care. Is your ambulance not working? Yeah, you gotta this call. They are like, no we got to have this, I am, look we've operated for years without an MDT you are fine.
User_characteristics - KES	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So they're in the process of trying to up and fix it. The great thing about new technology and me changing my phone system to a voice system which I'm still not keen about because I'm learning, so phones are my weakness. I don't know very well about them, I'm learning. I'm pretty good with radios,, but what I like is if we put everything on servers and pull up an internet protocol and I can leave this building and go somewhere and we can flip that switch and take that phone with us. Right now we have, my backup is seven cell phones.
User_characteristics - KES	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	I probably have a few new ones in here that are in training that we have knocked down cards with that have a meltdown that they have to go to, but on the whole, we do and its part of our CAD [indiscernible]. I'm trying to get our comps on our [0:55:01] accredited. The part of accreditation is that you have redundancies, you have those things, you practice for when your systems go down, and to be able to keep that accreditation,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we have to be able to prove every year that we've done those things.
User_characteristics - KES	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So we have to -- I want to be on the front end to learn more about it and understand how we can make it help us and not do it because we have to and it'll hurt us and I don't know that that's...because everybody's got an agenda. AT&T right now has an agenda about selling up this new system. If the State buys into it, which they did, now they have an agenda to make that work, because it's a politician thing.
User_characteristics - KES	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	...Sometimes, the ways we work around that are, I could see the cellphone number, so I'll call the provider, and we have backdoor numbers into their network operations centers to say, "I need billing information for this cellphone." I know they're calling from an apartment on [Street]. I know it's probably this apartment complex, but I have no way of finding them. I can get billing information. Sometimes it's just the name. And then I can call the apartment company. They'll give us the address but it's like the address is in Oklahoma.
User_characteristics - KES	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	I've actually seen it a few times and you don't really know what you're getting into. It actually binds it, so it's kind of like over time you learn like, "Hey, there is something behind this." And a lot of new cars are building these-- they're [A?] post are actually like pieces of folded metal and layers. And he actually has a couple over there and he can show you.
User_characteristics - KES	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	So I've got the Epocrates app and I've got my standard-- my SOPs on there. I think that's everything. I just got done with EMS class so I had-- I would quiz myself a lot on stuff like that. I think that's all I have for that on my phone, because I try to keep it limited and the reason it would be is sometimes too much information, kind of-- so I use these apps very often so I'm very efficient at using them and I'll-- we use them at the station sometimes.
User_characteristics - KES	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	Now if it was faster, absolutely. But I do believe there is something huge to say when someone has mastered their trade-craft, yeah, craft - I'm sorry - and being able to be efficient at it and a master at what they're trying to do. I think for me, it was being the guy to teach a forceful entry

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								class, so I force doors a lot and I have to teach it. So it's pretty neat to pass that on.
User_characteristics - KES	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	On the EMS side, we are typically doing training for up-and-coming providers. So those are people who are currently taking their EMT class, which is the Emergency Medical Technician class. So that's 165 hours of classroom time. And then we like to run them through some mock scenarios so that when they get into the field, they'll have experience integrating everything they learned in class with some of the system work that goes on, to be part of a larger fire rescue service.
User_characteristics - KES	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	...Everyone knows, all the officers know how to get telecommunication support if something breaks in the middle of the night. They're very good about replacing stuff. So I would say it's in a state of very good repair.
User_characteristics - KES	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	...I mean, after 10 years you can kind of see where calls are going, so I would not get in an elevator with someone who was even remotely questionable. But sometimes you don't know. I mean, they could just have a problem and don't like small spaces and you don't know until you get in there.
User_characteristics - KES	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	...So if I were in charge, I would direct my crew to begin performing CPR, move the patient on to the ground, go through our standard CPR protocol while I radioed back to ECC to say this is a working code. That terminology will allow them to dispatch two paramedic units and likely an EMS supervisor will jump on. So those units will be in route. We'll be waiting for them to arrive. Usually in this area, if this happened, we'd be lucky to have a medic on scene within four minutes during the day. So we would continue doing CPR. We'd probably be able to shock once or twice. If it was a shockable rhythm, we could put in an oral airway, get them started on high-flow oxygen by a bag valve mask. And probably have to rotate who's doing compressions once to make sure no one gets tired. That's probably what we would do for the first five minutes.
User_characteristics - KES	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	Oh, it's [crosstalk]. So, assuming the family is not-- if this death was not expected, then I would be transporting the patient to the hospital. When

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the death is expected or the patient is very old, families are okay with us terminating in the field, but if it's like someone's husband and they got two small kids, we're not going to leave the body. So we will transport, continue to perform our interventions, try to rendezvous with an ALS unit, again, coordinated by radio, as to which streets we're passing and all that. And then, as you said, 20 minutes to the hospital so we would then transfer care to the team there.
User_characteristics - KES	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	We need to know the channels, yep, and if you don't really operate in those channels too much, you pretty much don't know them, but we do have charts, and being able to tell us which ones they're on. A lot of the firefighters and EMTs tend to listen to police channels, because we do operate on the same calls, but I say, we very rarely can talk to them by radio.
User_characteristics - KES	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...I'm not much of a out of the box kind of guy. Normally, I'm, "Okay, what do you have?" You give me the tools and I'll figure out how to operate them.
User_characteristics - KES	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So my first and primary function is that of a firefighter that has been cross-trained. So fire suppression, putting out fires, responding to 911 emergencies. And then I took it upon myself to further my knowledge and my education to be able to provide advanced life support or ALS treatments to individuals in the same community in which I serve. And that includes pharmaceuticals, medications, drugs and electrical therapy for cardiac patients in order to provide appropriate care and treatment pre-hospital. And then get to them to the most appropriate treatment center.
User_characteristics - KES	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Knowing your area, knowing what's going on in the area. And not just my immediate response area but it could be the whole county because any one of us - excuse me - could get moved or relocated to a different station based on service needs for that day.
User_characteristics - KES	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...So I think communication's pretty easy in the sense of we're very fortunate in the county that we work in. Even neighboring counties that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we have, and I'll use the word interoperability, we have a good means of communicating both through a lot of training or unofficially that we know one another. We know who's working. We have a lot of background knowledge of different stations and what to plan for, and although our department's very large, it would not be difficult for me to call [County], which would be just shy of an hour drive, so it's a large county. An hour drive and talk to a fire station to an individual that I really don't know. May be able to pick him out of a photo album, but to be able to communicate with him or address an issue or concern, and get immediate feedback from them just by picking up a phone.
User_characteristics - KES	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	[RE: police] ...I think we've gotten better with some time, but I also don't know every officer that's in my area. I don't know their first names. I don't have their cell phone numbers. I don't know their radio identifiers. We don't have that relationship to communicate that personally, I guess.
User_characteristics - KES	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So I would just say, making sure that everybody knows-- so you know your job well and you know the area that you respond in well...
User_characteristics - KES	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	[RE: AVL] I would say I don't know enough about it to truly make-- I mean, every day I learn something new about it. It's definitely like any form of technology, the more you use it, the more you understand it, the more you can utilize it. As it is right now, it's a computer screen with a map on it that can do hundreds of different things. It takes the user to have to apply themselves to be able to use it.
User_characteristics - KES	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	Paper, hard copies. So we always have redundancy in everything that we do. Technology getting in the way of if I utilize my phone and one of the applications, FireApp, to use that to get directions to a call, if the address isn't an updated address, or the mapping software, Google, or apps, or whatever browser you're using doesn't know it, it defaults to a generalized location. So I'll be honest when I say that, embarrassed as I may be, that I didn't realize it and that the app was smarter than me and took me way out of the way... Rerouted me to another location, and that I need to be smarter than the software to know that was in a complete different station's area, and that there was no reason for me to be there.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								So it failed me. It made me look bad, and I've learned from that...
User_characteristics - KES	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So me personally, my time, my experience. If it's a message that I don't know, I repeat it back to them. And that's just educational knowing of communications and repeating messages back. Confirming what they mean to make sure that I understand. And I think that's done very tactfully saying if I don't understand something and it's you want me to go to the second floor, that may indicate to that individual, "Yes, I need you to go to the second floor and do a particular task. I may need you to." If you're repeating back to them and they hear it, like, "Oh, yeah, I didn't give as much information."
User_characteristics - KES	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	I would say, and I know there are some rules and legality as to what you can say on the radio so that consumers or civilians don't hear it, but urgent messages, even if it's-- and I'll use the example. If there is a issue at a college or a school, they have the means of delivering a text message to everybody. I wish we had means in the county as a whole to deliver that via radio and to our phones, but even isolated to just those that are ... involved in that incident.
User_characteristics - KES	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	There's a checklist. Although, for the most part, most people pretty much know. They just kind of look at the unit and make sure they have everything they need. There's a checklist that we can use if we need to go through and make sure everything's there.
User_characteristics - KES	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	[RE: familiarity with local hospitals] Yeah. Well, especially down here in the downtown area. Now, I work over east of the river on the east side. But, I guess, the most limited ones we have access to would be probably trauma and STEMI centers for heart attacks and stuff. Those PGs, one we go to all the time or we're here at the Hospital Center. Those are the two closest ones. Strokes-- just about every hospital in the city has a stroke center. So PG is not, however. So usually, if I have a stroke patient, I'll usually send him to [inaudible] Providence Hospital. For me where I'm at, Providence, and PG, and maybe Hospital Center are the probably the three that I go to most often.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - KES	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...some of us aren't that adept at using text messenger either [laughter]. So for me personally, I could probably do my report, at least the narrative portion of my report, probably in half the time with a hard-wired keyboard.
User_characteristics - KES	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: Whiteboard scheduling app] I like it fine. I usually go by memory... But that is not always right. So it just basically says where people are and what they're doing and what their phone numbers are. What MO's they're at. And then there are some day-to-day things to pass along...
User_characteristics - KES	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: Active 911 app] So yeah, somehow it's linked to dispatch. I don't know how it works. So they send the call. They dispatch out the call. The crew acknowledges the call. They start on the call. And this tends to have a little bit of a lag behind it, and then you'll see drop in it. It just drops in on your screen, and it goes away. It doesn't disappear until you specifically erase it...
User_characteristics - KES	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	I've worked in systems with radios mostly, and then I've worked in systems with pagers and radios. And I've worked in systems with that little phone that would chirp-chirp, where they would call you specifically, so nobody else would hear what you're doing, usually combined with a pager. And then, I started with pagers in [City], and radios, and a phone that was hardwired to the ambulance. And actually, before that, in Chicago, they would have a radio-- it was like a radio phone. So it was like a-- it would only call certain hospitals, and it would do it by radio. So you'd kind of have to hold and talk and then let go and listen...
User_characteristics - KES	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...So I think seeing-- there's a privacy thing now where, do I want to be on camera on every single call that I'm on? Probably not. Do I want to be on camera on any of the calls I'm on? Probably not. But do I run every call like somebody is filming me? Yes, I do, because they're everywhere...
User_characteristics - KES	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...so they keep trying to do these things, and I think they're trying to do it with safety in mind, but they're not really keeping what really your day-to-day job is in mind. So the safety hinders you from doing your job. So right now, let's say we have 15 ambulances. We might have a little more

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								or a little less. We might have closer to 20. So we have one ambulance that has this newer technology, and everybody hates it. And so it's set up differently. The chair you sit in is different. The place where equipment is is different. The idea is to be safe, and I appreciate that. But moving equipment around messes with your mind memory. So you're like, "Wait, where is the--"
User_characteristics - KES	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: new ambulance setup] Especially when you're trying to work on a sick patient, or trying to direct your partner who might be new or hasn't worked on the ambulance very much. You're trying to tell them where something is, and it's not in there. So that's stupid...
User_characteristics - KES	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: new ambulance setup] So I mean, I've spent my whole career literally standing up in the back of a-- well, moving around during the call in the back, and it's not like I'm running around, or there's drama, or whatever. It's just like, I got to grab this, then I got to grab this, then I got to grab this. And there's railings on the top. So you're kind of holding on the railing, grabbing this thing. You're looking at the traffic, and you know where you are. So you're like, "Is it going to be bumpy," or "There's going to be a stop." And your partner is also trying to tell you like, "I got to stop fast," or "There's train tracks coming," or "There's a bunch of traffic ahead," or whatever. So all those things are happening. And you're not trying to be like cavalier and be like, "Oh, I can swing from the bars," or anything. I need to be up...
User_characteristics - KES	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: new ambulance setup] ...It's not a challenge to be up as much as possible during the call, but when you're running 120,000 calls as a system a year, you need to kind of-- spending an extra 10 minutes on every call makes it that you're going to need more ambulances, and that costs you millions of dollars a year. And the more ambulances you have, the less calls you're on. That makes your paramedics not as good as the ones that are on more calls. And so it's not like-- they're trying to solve a problem, but I don't think they're doing it in the right way. And some company came, a couple years ago here, they were all excited about this thing that they had with, "Let me show you how we can do this," and it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								was the beginning of this. I saw it coming, and I was all like, "Oh, no. Here we go."
User_characteristics - KES	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Like a lot of things in this county, it's a cooperative effort. There is a mountain rescue group. But they're sort of an arm of us unofficially. I mean, we paid for their building and a lot of our members are cross-trained. We work with the [Organization] out of the [Name] Airport. They have the high elevation training center.
User_characteristics - KES	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Yeah, it's pretty interesting. But we have search and rescue people, paramedics, who are cross-trained to do what they do and are checked off to be in the helicopter and do all that kind of stuff. We cross-train with the ski patrol. We have paramedics on the ski mountain during the winter. A lot of river activity in this county. [Name] River runs right through the county in one of the [inaudible] parts of the county, of course. So if somebody dumps their raft and is drowning or something, we have to go an hour drive up to the river and figure out how to fix that situation. So lots of long response. Lot of expenditure of resources for one patient, for [smaller?] patients, for those kinds of things...
User_characteristics - KES	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	There are. I mean, I can pull out my cellphone-- well, why don't I do that? So [because I'm old?], I got a big one because I can see it better [laughter]. Each of our ambulances have a dedicated cellphone. And they're all connected to iCloud so that, say, we have a phone list, a common phone list, for a lot of [inaudible] in [City] that we transport to. We can push out updates of phone numbers and addresses and [dura codes?], and things like that on iCloud and it'll update all our phones. So we do a lot of stuff through the iPhones just because they have a good technology and many people are familiar with it already because they have one. That's a big deal, familiarity and usability because people aren't going to use stuff they're not comfortable with or if it's hard to learn or something like that.
User_characteristics - KES	EMS	R	Other Public Safety	56-65	31-40	Male	EMS-R-008	So, in big systems, you have your own dispatch and you have grid control over-- the dispatcher can collect the billing information and all that kind of stuff as they send out the call. Here, nobody is big enough to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					own their own dispatch. So we [are counting on?] dispatch for everything from the dog catcher, to the town buses, to the fire, EMS, police, all of the police agencies, the division of wildlife, the animal control. I mean, it's everything. And so they do a great job at that, but you don't get the level of detail that you would if you had your own dispatch. I mean, they're not trained medical people. They have a card they read off, like if you need to start CPR, okay, do this, do this, do this, do this. Medical priority dispatch, it's called. Most systems use it. You don't have to be medical to read directions to somebody.
User_characteristics - KES	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...and I started out here as EMT, 30 some years ago. Then I was a paramedic, then I was a supervisor, then then I was a [Job title], and now I'm the [Job title]...
User_characteristics - KES	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...doctors and paramedics and other people who take care of people used to-- people who had done it a long time had a finely developed sense of when somebody was sick. They could look at him and go, "There's something wrong there." They don't have that anymore. It's like firefighters, there's a whole generation of firefighters who is out there now who have never fought a big fire because there aren't any, other than wildfires. A lot of agencies don't have big structural fires, especially if you're not in a city with all the buildings. I mean, I can't even tell you when the last big fire we had was here. I mean, structure fire. It's dumpster fire or it's hazmat spill or brush fire...
User_characteristics - KES	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Our critical thinking skills. Everything's protocol-driven. It's like, "Oh, what do I do? [inaudible]. I do this and if that doesn't work, I do this," instead of having that sort of on your brain from seeing patient after patient after patient after patient, and knowing that, "Hey, I've heard that before. And I remember that patient. I had one just like this and he had this wrong with him." You don't develop that sort of sense of how to take care of people. It's like you call any customer service line, let's say your refrigerator is broken, what do you get? You get someone who's reading a script. They don't know anything about refrigerators. They're not a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								refrigerator repairman. They may not even have ever seen a refrigerator. They are reading in the script. It's like, "Okay. What was that keyword again? A refrigerator? Okay, let's type that in." It's just like, "Isn't there anybody I can talk to there who actually knows what a refrigerator is [laughter]?" Because nobody [fixes?] anything anymore.
User_characteristics - KES	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I'm in the [Organization] database because over the years we've done a lot of high security visits, presidents, vice presidents, things like that, special events. So my name is all over the [Organization] database. Well, it got hacked a few years ago. I started getting phone calls, crank phone calls [inaudible]... So I don't trust anybody [laughter].
User_characteristics - KES	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Yeah, I keep my call [log?] by day, for every year. I look at it for last ski season, and I can try and figure out how it's going to work this ski season. Because, we're affected a lot by the economy. Are you going to take a \$10,000 vacation in [City] this year? I don't know. How's the economy? What kind of job do you have? Do you have a job? Things like that. So if I guess wrong and understaff, and the economy is booming, and everybody wants to go to [City], skiing, I'm in trouble [laughter]. And I'm in just as much trouble if I guess wrong, and the economy tanks, and nobody shows up.
User_characteristics - KES	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	Oh. So as a firefighter-- I've been a fireman for 15 years. Well, that's not true. I've been licensed to be a firefighter. I was a paramedic right out of school and I did paramedic for a while before I got on full-time as a-- fire department. So I'm pushing 12 years as a full-time firefighter. Well, I was, the first couple of years, trying to find a job. So I'm the senior firefighter, senior paramedic. So because we're on a busier engine, I'm also a field instructor, so I tend to have new paramedics on the rig with me. Either they're new in general or new to the department, one or the other. So we do a lot of talking, just discussing. When it comes to our equipment, like when to use our equipment, what's it really for, what's the reality behind it, like a thermal imaging camera, you got to know its limitations as well. So we discuss a lot of that reality...
User_characteristics	EMS	S	Field	26-35	11-20	Male	EMS-	...And then just a lot of conversation with everybody, really, and, first of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Responder				S-005	all, how I can help the officer. And then how can I help the newer member fit in with that role and understand that my job is to kind of know what the officer is thinking so that we can make decisions really quick? Even on an EMS call, if the environment gets hostile, just being aware when to stand up and step away, or when to ask your officer for help. When do we need more help? Things of that nature. Do a lot of-- that's probably my biggest role in the backseat is just bringing reality back to situations because we tend to always win in our trainings. We always come out successful and it's just not the real world, so.
User_characteristics - KES	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...For me, in my perspective, like I said, I'm really based on reality, and been a paramedic for a while. I don't care. All I want to know is, what equipment do I have to wear? Do I need a black coat or EMS coat, or do I need my fire coat? That's really the only thing that matters to me. Now, I need to know if the scene is safe. That would be nice. If there's a hostile party, are we going to-- is it so bad that we're going to wait for police to get there first, even though the call is for a baby not breathing? We have that luxury here. Not everybody has that. Now, some people want to know more. They want to know if it's a adult or a child. Breathing, trauma, they want to know. For me, it doesn't matter because, so often, the information that dispatch is receiving from people is very much exaggerated. "Oh my God. There's blood everywhere." "Well, compared to what you're used to, yes, there is blood everywhere. But it's right here and it's right here. It's not that bad." So that stuff really does never-- I don't have a lot of value in that...
User_characteristics - KES	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	Well, I got my associates degree in firefighting. I graduated in 2001. I was in paramedic school in 2002 when 9/11 happened. So I think back to that time, I had a cell phone, but it was just a Nokia.
User_characteristics - KES	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	But from the EMS side, we do so many things where we talk and we experience, based on what we see. Whether your face is drooping or if I'm talking to you and you're not quite making sense. You are making sense, but I'm picking up on something that isn't quite right. So how do we portray that to the hospital sooner? EKG monitors. Our monitors

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								don't have WiFi or Bluetooth capability. They purchased them right before I got hired here, so I think they bought them in 2006 or 2007. And if you think back then, WiFi was still kind of limited. We can't send our 12-leads. We can't send our heart monitor pictures to the hospital. If I thought it was important, which I never do, I could lay out their EKG and take a picture of it and send it. But again, we don't have that capability with the department...
User_characteristics - KES	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: missing information from dispatch] I don't put a lot of validity into it just because the dispatchers are asking questions to a hysterical individual and they aren't thinking clearly or straight. So they don't really know right, wrong, or, indifferent. So we show up a lot of times and it's completely different from what was told to the dispatcher. So I think some people will get tunneled in on what the dispatch information is versus what the patient actually presents as. So I don't put a lot of stock in that information just because I think it pigeonholes you into going down one path without critical thinking. And information is only as good as what you get, so it's not the dispatcher's fault, it's not our fault. It's somewhere in the communication breakdown along the way of somebody's calling 911 for reasons, so they're probably stressed anyways.
User_characteristics - KES	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Honestly, I like to call notes idea, because I think I'm a traditionalist or purist in the fact of I don't think we need to be talking on the radio a whole bunch just because, especially in a system that's busy. So send us to where we're going and how you want us to get there, and then just put it in the notes, and we can read the notes as we draw down the road. Because there's obviously somebody driving the apparatus and that's their primary responsibility, and then whoever is sitting in the passenger seat, who's usually the paramedic in our system, can read the notes and you're making an informed decision as we're going to the call.
User_characteristics - KES	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	The tone that just alerts us that we're going to a call, but when we're en route, they'll usually tell us the severity... But usually when they tell us what the call is, we have an idea how we're going to respond. So we'll go

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								ahead and turn our lights and sirens on, or just go without lights and sirens. And it's like he was saying, there's somebody that's talking with the patient and then there's somebody else dispatching, so they may be long winded and not getting the information that they need right away. So it may take a little bit longer and it's no fault of theirs or ours. So it's just what it is.
User_characteristics - KES	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: departments without CAD] You better learn where you're going. Lots of studying... Lots of studying of street districts and the street rotations and just get out in the neighborhood and figure out what's going on where.
User_characteristics - KES	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I think the fire agencies do a much better job with mutual aid and communication with other agencies than the police agencies do, in my experience.
User_characteristics - KES	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I'm on our wildland team, so I think the communication is pretty good with the state and federal resources for a lot of wildfire incidents. I think the county is doing a good job overall of county and state resources for the fire districts. So I think you just have to have strong leadership to assert those channels early and the communications plan early. But all the technology is there to use. Again, it's just whether or not the leadership chooses to use it the way it's intended to, because the county actually has a communications plan for inter-agency operations for the wildfire side of things. So it's all drawn out. Every season, all the channels get cloned on the radios, and it's just a matter of people utilize it the way it's intended to be used.
User_characteristics - KES	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Our wildland team is a specialty team. It's a volunteer specialty team, so they come out. The wildland team has an email text list that says, "Hey, we're getting an order for this. Who's available?" And so, X amount of people respond, and then the coordinator will say based on hours of deployment, this person, this person, this person is going to go. Because you have to be available for 16 days. So there's a lot of parameters to work within to fill the titles on a fire truck and the availability of the workforce.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - KES	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	So I am one of the supervisors of the [City] Paramedic Division. So one of the guys that makes the ambulance system go from behind the scenes. Currently, I run the dispatch center... I've been up here for three years.
User_characteristics - KES	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...I spent the first 25 years of my career in the field, first as a paramedic on an ambulance until about 2006/2007, and then I promoted to lieutenant. I was a field lieutenant. And in the [City] Paramedics, the field lieutenant is the field supervisor. So you're in a truck, you're out in the field, you're going from call to call, checking in with people, seeing how they're doing. Anything that sounds like it's going to be big, more than one ambulance, you're trying to get over there. And if it needs two or three ambulances, then you take control of it, free up the medics to do the medic stuff, and you take over the command and control stuff...
User_characteristics - KES	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: LMR talk group usage] ICALL is very low. I would say it probably verges on zero at this point. A lot of the people, of the new hires, probably don't know it exists. It's so rare. The back channels and the car-to-car channels, that is something that you're going to mostly see officers using on a big event where they want to have a conversation that isn't-- and it's not even that they're trying to keep it secret. It's just that the primary event channels is something that just gets clogged. There's so much stuff that everybody needs to hear that if you have something that's only important to a couple of people, it's good to get it off of that channel, if you can. And so that's when you primarily see those being used, is by officers at large events to have a sidebar discussion about something that's important enough to go on over the radio but not so important as to chew up valuable main channel time.
User_characteristics - KES	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] Yeah. I mean, everything is labeled on the cabinets. So I look at a cabinet. If it says nasal cannula, then I know I have to have nasal cannulas in there. If I have one sealed bag plus one, then I know I'm good. If I have no sealed bag, then I need to grab a sealed bag. And I go into the supply area to do that.
User_characteristics	EMS	U	Field	26-35	Not	Not	EMS-	[S4] I am a EMT with the city and county of [City] through the local

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Responder		specified	specified	U-004	hospital authority, [City] Health. My role is somewhat like a paramedic, but I am not as highly qualified to be able to use the tools that are on the ambulance. So I do not take care of the cardiac calls or the shortness of breath calls, but the basic life support calls are the ones that I, I guess, specialize in.
User_characteristics - KES	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] It really doesn't differ that much because we all work on the same ambulance, and we're all subject to the same communications codes, and the police have what's called a 10-code system that we use as well. The expectation is that all employees on the ambulance have an equivalent level of training for the operations. The medicine differs, of course. There's various degrees of certifications, and expertise, and training in that. But operationally, the EMTs as well as the paramedics need to understand all the radios, the routes, and that type of thing, so we are all on the same page.
User_characteristics - KES	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] I think my trainee is going to have a much different response than I will. Someone new to EMS versus someone that's been an EMS for over a decade. So for me, the transition from academy to the street was generally seamless because the service here in [City] is so similar to the one that I worked for in New Orleans. There were a lot of things that I just already knew, that someone that's never worked in EMS before-- that I take for granted because I've done it for so long versus someone that hasn't ever worked in EMS, it's all new to them. So what they learned in academy is going to be very new to them, and then there's all this other new stuff actually working on the street. I think most of academy, as far as what I remember, was paperwork, and a lot of talking, and honestly a lot of not really paying attention or retaining, and then it was like, "Okay, this is the formality that I have to get through before I actually learn operations on the street."
User_characteristics - KES	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[RE: transition from the academy] [S2] So the medicine, for me, is the same. I mean, I'm going to intubate somebody the same way in [City] that I did in New Orleans. I'm still going to start and IV the same way, and my decision process for whether I'm going to do those things are

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								exactly the same. So the only thing coming to a new service that I had to learn were the operations. They talk on the radio a little bit differently, but that's not anything I'm going to learn in academy. That's just doing it out on the street. The rules for their post assignments, a little bit different. That's just something I learn on the street...
User_characteristics - KES	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	...In academy, we went through an MCI training, but MCI training is kind of standard across the country, at least it's trying to be, so that you can go anywhere and have agencies coming in from other states, and everyone's kind of on the same page... Trying to standardize that so when there's a big event. But at the same time, for me, I've done that so often, that was just refresher, but for my trainee, that might be his very first experience, so he's going to pay a lot more attention and might be more overwhelming.
User_characteristics - KES	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	Some agencies have machines that do CPR for you. There's a couple of different machines. One of them's a giant piston that pushes down on your chest. Another one is a strap that you wrap around, and it just squeezes you, and they do work. There's some evidence that they do work. It's at least consistent in the quality of CPR that it gives you. It's also very expensive, and they're rather clunky for extricating down stairways and that type of thing. So some of the technology-- but I work for a system that used them to really great effect in that system. I don't know if they would work as well here. Some of those technologies would. We, in the case of an abatement, are fortunate or unfortunate enough, depending how you look at it, to get a fairly large number of innovations per paramedic, so we are more trained to be able to do that skill. A rural system that gets one or two of those cardiac arrests a year would potentially benefit from a screen. We have enough practice to be current in that skill because we do it multiple times a year. Some of it does it once every three years. It would probably like a little extra help. Also, those rural agencies, as is the case with the CPR machine, the less people you have available, the more equipment you need to take up the slack. [City], we have so many ambulances, so many fire stations

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[laughter], so many cops. There's generally all these extra bodies to help you lift this, pull that, push on that. So for better or for worse, it works for our system to not have some of that equipment. Certain things we get is body armor. As the world has gotten more dangerous, we now have rifle vests. We have ballistic helmets. We have gas masks now, and that's a new technology, and we have, they're called, Skeds. It's basically just a plastic sheet that you can put people on in rapid extrication from a tactical scenario, and we had some training in that a couple years ago. We have all this new equipment, all these new protocols [laughter] and how to use it. And some of it's really cool and really good. Some of it's a little bit complex. It is what it is. It's part of the job, I guess.
User_characteristics - KES	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	Yeah, you have to be able to communicate well, obviously. There used to be two people to do my one job that I'm doing now. So other adjectives that I would use is you have to be able to speak to people directly, good communicator, be able to listen, a good listener. So those are the other two things I would-- other two adjectives I would use.
User_characteristics - KES	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	The job of a paramedic out there, on the [City] Fire Department there are two different-- multi-levels. You can have it be a paramedic in a hospital, a private ambulance, but for the [city] Fire Department you have to be very well prepared. Not only mentally, but physically. Be able to answer calls, physically be able to lift minimum of 25 pounds or more. And you have to take your responses in stride. What I mean by that is you can for everyday responses, are you going to be-- and we work very hard every day. We get about, I think, 1,000 calls a day or more. And so you have to be able to respond to medical, trauma, sometimes just talking to people in the system and their everyday issues. So not only do you have to be ready to answer the call, for an emergency call, but also be able to handle people and citizens in their everyday problems.
User_characteristics - KES	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	I could tell you that paramedics are better at the radios because they constantly have to use it on every run. We used to be able to communicate with the hospital through our mobiles, and we have to give reports over a clinical radio to the hospitals. So we were in tuned to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								using the radio then than a regular fireman because back then, not all of the firemen had their own radio. Only the officers did.
User_characteristics - KES	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: standing medical orders app] Yeah, as a matter of fact, one of our paramedics is the one that generated it. He communicated with the hospitals. He put our standing medical orders, our policies and procedures are on there. And so it's much easier to look them up if you have a question regarding any type of run that you might get.
User_characteristics - KES	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: medical technology] Well yeah, the life pack monitors? Yes, we do. The AEDs, they're bulky. They're heavy. You have to know how to use them. Every monitor is different. Sometimes that does get in the way where our paramedics are there for 24 hours and they go home for 3 hours. Obviously, we don't have it, the medicine in their head all the time so they go home and it takes them a while to remember, "Oh yeah, this is how you do it on this monitor." So technology is constantly getting upgraded so by the time you come back, it may be something new and the information on how to use that piece of technology may not have gotten to you.
User_characteristics - KES	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: paramedics] They need to be able to-- first of all, they need to know their SMOs, their policies and procedures, what they can and cannot do, what their scope is. And then, they need to know their equipment. It can't be the first time-- they need to know their equipment and where it's at. The first time you get on a run, and there's some type of emergency incident, it shouldn't be the first time that you're pulling out a piece of equipment that you're not familiar with, that you don't know where it's at. Somebody moved it, somebody on the last shift liked it in this area versus where it's normally kept [laughter]. So they need to know their equipment, where it's at, and that it's there.
User_characteristics - KES	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: paramedics] They need to know the streets. They need to know the cross streets, the hundreds. We're in a grid system, so they need to know where they're going. They need to have an idea of-- depending on what kind of emergency they're responding to, they need to know what their closest hospital is, what the trauma center is. And as a matter of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								fact, nowadays I think it's even a little bit more difficult for them because they need to know their cardiac centers, their stroke centers, their pediatric centers, their OB centers, their specialized OB centers. So there's a whole host of new things that they have to know. So that can be challenging for them. And then they have to know the people that they're delivering the patient to. Some nurses and doctors are nice and kind to them. Others don't give them the light of day, which is unfortunate. So they're not partners in that way. But I guess they're out there to do their jobs. And for the most part they do.
User_characteristics - KES	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	But sometimes if you're a paramedic and you know your district, and you worked that area for a long time, sometimes you personally know about a certain person in a certain building... [that] calls all the time.
User_characteristics - KES	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	From my experience, the work of a paramedic is very important and it's not often publicized because they're just doing their job, and I was in the military. In the military we used to take care of our medics. Sometimes that doesn't translate over to the fire side. Whether it's here, whether it's in New York, whether it's in Boston, whether it's in Los Angeles, a lot of the paramedics don't get the acceptance that they should get. Like I said in the military, first thing they do is take care of their medics because their medics are going to be taking care of them. So I think it's just important that we recognize our paramedics.
User_characteristics - KES	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	The one thing that seems to have been lacking on our ambulance for years is a built-in GPS. So we don't have the ability to open CAD computer and sort of GPS ourselves if we're confused of where we're going. They did buy everybody like the old, individual ones that kind of set up on the dashboard with the small screen. But I'd say if there's one thing lacking from our CAD that I've seen other systems have integrated is, everybody goes around now with their iPhone or whatever they have and UGPS and it tells you where to turn or where to go. But for [City], we still don't have that component in our ambulances. You're still relying on street-smarts and if you have your own second device to find your way around.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - KES	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	We do a lot of education with other companies, with the fire companies, with the BLS, with the basic life support. With me, when I'm coming in, once I do my checkout with the truck, [truck] and [engine], I always want to make sure who my EMT is because if we catch a run with an ALS company us, [company], and the truck, I want to know who my EMT is because if I need his hands-- not all firemen are EMTs. They're just firemen. So if we're on the scene I want to look up, I want to see who my EMT is because I'm going to grab him and he's going to help me. So in the mornings, I'll talk with that EMT and say, "Hey, do you need anything? Supplies? Are you okay with treatments? What do you want to learn-- is there anything you want to learn on something that could help us in the field, could help the community out if there's a critical call? I may need you, you may need me on certain situations." So I always want to make sure that they're ready, too.
User_characteristics - KES	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: comms with PD] We don't. We don't communicate with [local PD] in our frequency. And our frequency is only just EMS. I am able to communicate on the fire side frequency. That's not a problem. Let me backtrack. We can communicate with PD on the frequency, only a few people know how to do that, and I know how to do that because I learned it. I wanted to learn it. But there is no really set memo, or order, or documentation where they tell us, "If you need to communicate with police, do it." There isn't. I just know how to work my radio really well that if I need to get a hold of the police I could switch to the frequency and do it that way. A lot of people don't know how to do it and a lot of paramedics don't know how to do it. I'm teaching my partner how to do it. He's liking it...
User_characteristics - KES	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: comms with PD] ...Every day on my radio I listen to-- I'm defaulted to EMS and then I have a channel for the fire side and then I have a channel for my zone, my zone for the PD. So I'm able to listen to EMS, fire, and PD in my zone. I will listen to that. A lot of people don't do that but I do because I like to know what's going on in the neighborhoods.
User_characteristics	EMS	U	Field	36-45	6-10	Male	EMS-	[RE: listening to PD frequency] A lot of people don't like to do that. It's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Responder				U-012	too much information to them. It doesn't bother me. I like it. I like to keep a heads-up. When a call comes in under 911, it always comes into the PD side. So if we're at the hospital, I'm finished documentation and I hear the PD zone say, "Hey, we have an incident on [intersection]," a guy fall down or something, it comes into PD side. And then by the time it transfers up to the fire side, to EMS side, it takes about two to three minutes. I didn't time it but time, I just know it takes about two to three minutes to get to us because then they'll be calling us, "Okay [company], go to the person who fell." And I mean, okay, about two, three minutes. Now they're calling for us. So there's a delay there.
User_characteristics - KES	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: problem using dedicated hospital frequency] Not if you're trained and you do it a lot. If it's something new to a paramedic in charge who's becoming a new officer, it's going to be a headache for them for a little while. They have to learn it. They have to learn it, it is. I remember when I first started, I was like, "Oh my God." Shuffling, "What channel is this? What channel is this?" It's a little headache but you got to work it, you got to learn it.
User_characteristics - KES	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: handheld radio] ...Under the subway station, there's no communication except for one channel and it's [local transportation authority] metro channel. But I'm not 100% sure if the alarm office has a channel to listen to us. But when I do get a call for the subway, I do let them know, "Main [dispatch], I will be switching to new metro [local transportation authority]." So at least they know that I'm-
User_characteristics - KES	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: radio training] Huge. Even now, I think that I wish I could be trained a little bit more. I think I've got a good grasp on my radio. But I think I could buffer it up a little bit more if we have a class on all my channels or just practice a little bit more.
User_characteristics - KES	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: experience] Going on a little bit over nine years now. So of course, we get a lot of people that have been on the job for many, many years, even. And they'll tell us stories and I listen to it and I take it in. And to tell the truth, I think we've come a long way, [local FD]. My dad who's been on the job, he's retired now, he was on the job for 29 plus years and it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								come a long way. Growing, learning, technology, equipment, I think it's grown, so.
User_characteristics - KES	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: too many radio channels] It doesn't bother me. Someone like me, I'm going to learn the channel because if I can't communicate one way, I'm going to communicate another way. So if I can't communicate with EMS channel and I can't communicate to the fire channel, I know how to get to the police channel. The life guard channel, we have a life guard channel. If I can't communicate through the alarm office and the alarm office can't communicate to the life guard who someone is drowning in [lake], I know how to go into the life guard channel. A lot of people don't know how to do that. But I've trained myself or I've asked around people how to do that. How do you get to the life guard channel?
User_characteristics - KES	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: radios] I mean, at first when they gave this to me I'm like, "Oh, I don't think that's user-friendly." But I play with it, like everything else. It's a learning thing. You have to learn, you have to learn this radio.
User_characteristics - KES	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	...So, say if I'm calling 911, call taker comes on, "What is your emergency?" They're typing this in already. Me, as a paramedic, through the [local PD] number, I'm looking that information up. So I'll send that code number to the alarm office and that call taker information that they printed will come back to me on my MDT and it tells you everything that person on that 911 has stated. Not everybody knows how to do that.
User_characteristics - KES	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	I'm pretty quick with my typing. I'm good. And after I double check everything, I think I could knock a good run report out with my computer in-- I could do it in three minutes. And I could do it in-- if it's a really bad trauma, cardiac arrest, I could do it in 30 minutes, if that. If I want to make sure all my Ts are crossed, Is are dotted, I didn't miss anything, I make sure that all my EKGs attached to the report, within 30 minutes. But then, I mean, I've been doing this for a while. So you've still got those first-- they're going to need a whole hour to get to know the system, which is fine.
User_characteristics	EMS	U	Other	46-55	21-30	Female	EMS-	I definitely think that-- their use of it on the job is helpful, I would say, to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Public Safety Personnel				U-009	the older guys on the job. They might need help logging on their computer in the station, but you know what they are? They're socially inept. They don't go into the fire house and socialize like kids from years ago. You know why? Because they don't have to. They go in, they check out their rig, and then they stare at their phone for 24 hours. They don't interact, they don't do anything, yeah.
User_characteristics - KES	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	I don't think that-- so the requirements have not changed for the fire department, but what they really should do is say, "If you want to apply for the fire department you have to prove that you have been an active paramedic for a minimum of five years." I've got paramedics who came in through this academy that have only been a paramedic for two years. Two years. And in that two-year time frame, they got a job on a private ambulance which-- we all get our start on a private ambulance. I'm very grateful for the private ambulance company I used to work for. And it used to be called [Name] out in [City]. In [City], in [City]. But these kids now-- so they work for two years on an ambulance where they're just doing transporting patients all day long. You're not learning anything. You have no critical thinking skills. You're working with somebody who's of the same age and mind-set as you. You both have had your heads in your phones all day. It's a sad state [laughter] of affairs really, so.
User_characteristics - KES	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	I don't know. I think that your communication style is just part of you. Some people are very good at it and some are not at all. And if you are not good at communicating, you are not going to be good at communicating on the radio either. And you know people when you hear them on the radio trying to call a run or something happened and they're trying to convey it over the radio. You know that they-- those are the people-- if I know them I can tell their voice-- you know that they have terrible communication skills. They can't even convey on the radio what it is that they need. And then sometimes, yes, I believe that there are sometimes a little bit lost in translation. We have the dispatch center, the [dispatch center name]. They take the runs, they dispatch our runs. We sometimes will have to ask, we would like more information.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Sometimes they'll say, "Well, what do you need that for?" And then you try not to get smart and say, "Because I'm the one out in front of this house where there's a shooting victim and you're tucked away safe up at the Office of Emergency Management.
User_characteristics - KES	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	Emergency medicine [laughter]. Advanced life-saving skills.
User_characteristics - KES	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	More or less a problem solver. Somebody calls us when they don't know what to do both on the fire and EMS side. It may be an actual you know emergency/medical problem but more often than not it's something else. I mean somebody needs help because their [application] not working and they need you out there to discuss it with you. You're the one that can get something done. You're the one that has answers even if you don't have an answer you are the one with answers so you better make it seem like you know the answers.
User_characteristics - KES	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	A lot of the time you'll have to call but still you'll run into places out here where cell phones if you don't have any service either. For example, the place we just went had no cell phone service so you know being able to know where you're going it was an unmarked dirt road off of another dirt road and if you didn't grow up here you know been here for 30 years or you didn't have GPS you wouldn't have found that so cell phones are important but you run out of reception. I mean as soon as we got down the dirt road reception went off.
User_characteristics - KES	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	... If you show an interest in them they'll show an interest in you and just don't act mean to them. I mean a lot of people in this business will say you're a volunteer, get out of here but coming from a volunteer background they're necessary. I mean very necessary so you got to have them.
User_characteristics - KES	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	I am full time here in this county and I do I also gone here as a firefighter but I haven't been active in that in a little bit and this is my career choice. I love it. I've only been doing it three years but I wish I had started sooner.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - KES	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	Because it's so rural even though I've been here full time for about a year but it's such a large county that people have been here a lot longer than I have and still don't know the whole county. We have old map books in our truck which aren't the best to be honest and we don't have a GPS system in our truck so I rely on my cell phone if I have reception at least to get me in the general area of where the call is.
User_characteristics - KES	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	I think once you've got it you got it unless that technology changes you know these are pretty old in comparison to other radios but if we were to upgrade then you know the bones I guess push the button to communicate and turn the knob to turn channels very basic but I think that any time a new technology is introduced whether it's a radio, computer what have you then there should definitely be some training provided to make sure that everybody is proficient not just that they can turn it on and they can talk on it but to be proficient at it.
User_characteristics - KES	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	So there's an A, a B, and a C. And so for 24 hours, I'm the only. And then as you move on now, I will tell you as people have come in and out of teams because you don't just stay in one battalion your entire career. You might start in this battalion over here, and then move to a new station over here.
User_characteristics - KES	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	...Because if we have a notion of, "Hey, this is explosive, it's a gas call," we're going to use the sense set which detects gas and figures out what the hazard zone is so we can make sure nobody gets in, and then go and solve the problem...There is a lot of carbon monoxide here. "Okay. Well leave your mask on until that's zero." Because that makes sense, if it combines with your hemoglobin it could be bad news for you.
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Q: Right, right. Do you keep all this knowledge in your mind? SME: A little bit of both, some of it's in here. Some of it's-- we tend to make little cheat sheets. Laminated cheat sheets that we keep in the front of the fire truck.
User_characteristics - KES	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	I rode the back seat before and now I'll be driving. And I can ride up and be in charge also, of the engine. But I'll be driving all the time. But the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								backstep, we think about test level and then as you move up to the front seat you have to start thinking about the whole picture of how they-- the whole event. You know what I mean? Instead of just pulling hose, I'm calling for that tactic to happen and using the radio a lot more.
User_characteristics - KES	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	I think the first five years of a firefighter's career is the most critical five years. If they come out and they go to a good place and they work with good people, at the five-year mark, they're ready to start being that new leader. And I say five because the fire service is getting younger
User_characteristics - KES	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	I have always worked in the same territory, so I know every street in that territory. And I think there's still a lot of-- technology's great. If I put that in my phone, it's going to give me the route that they pick. But I know I might know that I can take this alleyway, I can do this, I can do that, and be there a minute faster.
User_characteristics - KES	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	I'm prepared. In our city, if we have fire through the roof of an apartment, it's automatic second alarm. When you said there was smoke coming from the eaves, that indicates to me that there's fire in the attic. And then once there's fire in the attic, we're going to need some help. We're going to need more hands. Three engines is going to get eaten up pretty fast. And an apartment complex is high occupancy level, so that would be-- especially with the high winds, you're going to have extension. I'd have a driver, somebody go ahead and put up a water curtain or something to stop it from extending from one building to another.
User_characteristics - KES	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	So if in that case, it doesn't mean we're not going in. It just means we got to check the environment, so we would shoot water into the ceiling, and if water comes down, it's cool enough to push further in. If you pop water to the ceiling and it vaporizes because it's so hot up in the upper atmosphere, then you can't keep pushing forward. So what we would do at that point, is we would open up the nozzle, and cool it down until we start hearing water drop. And then we'd push forward and forward.
User_characteristics - KES	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	We're going to wait until we overcome the heat, and get that water to start dropping. But that's our barometer when we go into a fire is we'll

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								shoot, any time we go in the front door we'll give it a quick shot to listen. And it's especially important in a commercial structure where you have all that plenum space. That air up there has nowhere to vent and so we cut a whole in the roof, so it's eight foot of huge area, that a lot of times the heat will be up there and it won't feel bad when you walk in, but you got a ton of heat above you. So we check our environment, that's what we do.
User_characteristics - KES	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	...When buildings are abandoned and they catch on fire-- if it's an abandoned building that's boarded up with no utilities going to it, those fires usually don't start by themselves. So that means someone's probably there.
User_characteristics - KES	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	Well, it's very dynamic. I never know exactly what I'm getting into when I come into work or when I go on any call. All of them have the potential for being much different than anything I've been on before. I've done lots of stuff in my career, not just working as a municipal fire fighter. I've also done disaster response and stuff like that. So even in my role just as a station officer, we often come upon situations that are very unusual and require a fair amount of thought to figure out how to best approach them. So that's the thing that I kind of enjoy about my job. Not only do I get to help people but it's often very challenging to try to figure out how to mitigate whatever the problem is with minimal risk to ourselves and to help the folks that we're there to help. So it's a very interesting career. I've been doing it for a long time. I started off in high school as a high school cadet so I've had an opportunity in my career to do a bunch of stuff. I've responded to incidents nationally. Today is 9/11. I've spent two weeks in [State] after 9/11.
User_characteristics - KES	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	I was in Oklahoma City after the Oklahoma City bombing. We've had hurricanes hitting the country. I've responded to multiple hurricanes in the country over the last few decades, although I don't-- no longer in the disaster response mode. I got out of that business a little while ago but I spent 20 years responding to disasters all over the country too.
User_characteristics	FF	S	Field	Not	31-40	Male	FF-S-040	...There's also needs just to stay familiar with our area. [City] is a very

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Responder	specified				dynamic area. It's growing very rapidly. The area is being developed, moved intensely right now in [County]. [City] a few years ago, 10 years ago, 15 years ago, the population of [City] was probably a few hundred or maybe a thousand people.
User_characteristics - KES	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	--taller, very urbanized areas. And that's certainly presenting us with some challenges. Didn't really get into sort of my whole background, but one of the things I've done is I'm sort of one of the communications guys for the county, and when--
User_characteristics - KES	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	So one of the things I do, too, is I do communication consulting and I help people implement radio systems and stuff like this. And I often talk to customers when they're sort of trying to figure out how to manage their radios and their communication stuff.
User_characteristics - KES	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	Nope. This is hand-typed into these different stations. So I don't rely 100% on this. It's not my accountability. It is a somewhat method because I don't have a lot of people go home. I don't have a lot of people get injured.
User_characteristics - KES	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	...So me having being a volunteer and having to take the classes that I took while I was in college just to ride the fire trucks, I understand the demand and the pressure.
User_characteristics - KES	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	Yeah. Our drivers memorize the area. And even as a [inaudible] fireman, you're expected to memorize the area because you're going to have to fill in as a driver. And I don't want to see us lose that because we rely on the tablets
User_characteristics - KES	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	I have a lot of ideas. Definitely have a lot of ideas about the way things should be and so--
User_characteristics - KES	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...it's very exciting to be able to think about what you have to do and really use your mind in a slightly different capacity than you do on other units. Not to say that an engine or truck isn't intellectual as well. But we have to do a little bit different type of problem-solving which I find fascinating.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - KES	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: driving the heavy rescue vehicle] I'm working on my qualification for that now...It's more classes. It's more in-house training. We have a training standard for all of our qualifications that's actually above the minimum for the county. So even once you've taken the class, you have to go through a rigorous in-house training process on the AMKUS Rescue Systems that we have for our hydraulics tools, on various different types of rescues, and the role that you'll have to perform as the technician or the squad driver.
User_characteristics - KES	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...So there are crews that-- tomorrow's Sunday. I know that the people I'm riding with tomorrow, if we have to cut a car, we might not have to say a word to each other... I can look at my technician or my officer right in the eyes, and I know what I need to do... But then there are other times where you need to say, "Okay, you need to pick up the spreader, and you need to do this. Put it right here, and do it like that. I'm going to be doing this." And so it depends on the person and the chemistry, but sometimes you don't have to say a word. You could be speaking a language that I don't understand, and we can still get the job done.
User_characteristics - KES	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So someone who's naturally a very good communicator, they won't have as many issues as someone who isn't. Similarly, the more experienced people are usually better, but not always. We have some people who've been here for 30 years who say, "I can't even touch the radio. I'm so bad at it." And then we have other people who have been here for a year, and they totally get it. So experience isn't everything, but for the most part, I'd say on average, the more experienced people are better with it...
User_characteristics - KES	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...And then also training. We do an in-house communications training where we explain what the radios are, how they work, and the language that we use, and the points that we're trying to get across. There's also a county technology class that we take on the radios. And that's usually pretty good about at least the basics of how it functions, but not necessarily what to say. So that's also dependent on who taught you that, when it was taught to you, how frequently you use it...
User_characteristics	FF	S	Field	18-25	5 or less	Male	FF-S-039	...So all of those things come into it, but you can tell somebody's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Responder					experience level usually by the way they act on the radio... But not always. I mean, there are always exceptions. And we see them everyday. But for the most part, you can tell if someone's new or not, based on that.
User_characteristics - KES	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...With police, I know that they have certain different-- I think they still use codes like--10 codes, yeah, in the police departments around here, which I don't know anything about those, really. I think 10-4 means okay, but [laughter] that's about all I know. So, I don't get into any of that. It would be easier if they used plain language, but I don't know what their plan is. I know that the FEMA Plan is to use plain language, so I trust that. It works for us pretty well to have the unified communications systems, but we also don't do that much with police...
User_characteristics - KES	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: Active 911] It's an app. Yeah. So I use that every day. When I'm at my day job, I like to be able to say, "Oh hey. This incident popped up on my phone." And then I'll look at it. I'll say, "Okay. [Street] and [Street]. Okay. I know exactly how to get there." And I think in my head, it's a left on [Street]. Let's see. Straight. Right on [Street]. Right on [Street]. I think about the running route in my head just as training.
User_characteristics - KES	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So we were responding to a fire this morning, and the driver didn't know the exact location how to get there, and we have maps and everything up front, and the MDCs have pretty good map, but our officer on the squad didn't know how to use the computer's map system. So he was looking through the map book.
User_characteristics - KES	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...that's a benefit that we have here because right now if we were in a fire, our chief of this department can run that with us. And if he's command, he knows that he doesn't need to tell us what to do. But the [County] Battalion Chief might not know us and might not know that he can trust us. We've never proven otherwise but maybe if a different rescue squad has, or a different engine company has. And then because he might not-- he might have experienced that lack of trust, he might just rely on that.
User_characteristics	FF	S	Field	18-25	5 or less	Male	FF-S-039	[RE: info via MDC] You have to click on the incident information...tablet

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Responder					or tab on it. But it's pretty user-friendly. So...as long as you know that that feature exists, you can find it pretty easily... you can get additional information that maybe the dispatcher missed.
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: communication with other jurisdictions] So it really depends. Our first choice throughout the whole region, and again, pretty big region, is using the radio systems. The reason we like the radio systems, excuse me, is because we built those and the reliability is incredibly high. And they'll work when a lot of these other systems don't. Day to day, there's the cellular device where I can just call them. Or even the wired, the landline stuff. We have a pretty robust satellite network in this area.
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...the expectation in the fire service is that you have to learn your first-in distract. And then you have to learn major arterials and everything throughout the whole city. So the map's kind of a convenience thing. But sometimes it doesn't always work. So, for example, our apparatus or part in the stations, they can't see the GPS. So--
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	I think we're at like the 90% compliance rate with those times. And we've done a lot and lot of advanced study on those times and why those times are so critical. I know that NIST, different divisions, but have done studies on the fire-growth, fire-burn time, and whatnot, as far as, yeah, that four-minute response number is still pretty important as far as the burning. We've done, in conjunction with our universities here-- we have probably one of the premier medic programs in the nation, and they have found that, ironically, almost identical to some of the NIST stuff on the fire growth, that on the medical side, you have about the same four-minute window for a lot of your cardiac events. So if the heart stops beating, you have about that same four-minute window to start getting oxygenated blood back to the brain before they become very, very sick.
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So our dispatch center is in a minority in the United States that we're a uniform dispatch center. So you have to be a firefighter with the department for at least, I think it's like five years before you can apply to that program. And it's a competitive program to get into... So that helps communications out in a big way because they've been here, they've

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								done this, they know this.
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: psychological effects of NG 911] I think it'll only help. I think that'll only help... maybe it's because they're uniform dispatchers and they've seen some of this stuff. But I think the big problem that they have right now is not being able to see or not be able to know and gauge what the level of response is or anything like that.
User_characteristics - KES	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	...so if I wanted to talk to the [City] Police Department dispatch center, separate, just down the street, I would have to talk to my [City] communications specialist. And then they would have to contact [City] police and we relay that information in three-way communication versus just getting on the radio, turning the knob and contacting the dispatch center myself.
User_characteristics - KES	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Right, because I've known that. Okay? The average new hire that we get has no knowledge of that.
User_characteristics - KES	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	And then you just have to make, again, that situational awareness call. "Well, we've showed up. There's no gun fire. There's no fire. There's no car accident, but we're investigating." And a lot of that has to do with trying to coordinate with law enforcement. They may be at the scene, and they may not be at the scene, and we just don't- we're not sure of that because the dispatch center can't give an estimated time of arrival.
User_characteristics - KES	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Active listening means that I'm going to focus directly on what you are asking me or telling me. And I'm not going to deviate to listen to what's going on in that radio right now. I want to know what the information is directly from you. And in many times, almost daily, you're constantly bombarded, especially as a first responder, from an email to a phone call to a radio dispatch to an overhead page. All of that information has to be processed. And some people can do it. Others struggle with it. And that's where that information chain breaks down. So small increments of miscommunication lead up to a catastrophic failure.
User_characteristics - KES	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Yeah, I mean, it requires some special skills in the fact that we need to train for it to some level. But it's not a skill that's so special that it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								requires above and beyond training. Everybody is trained to the level to do it.
User_characteristics - KES	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Yeah. I would say almost like any significant response that's not routine for you, everybody, to some degree, is overwhelmed whether they admit it, or whether they don't, or how they-- some people are much better at handling that than other people are. But, certainly, even if you didn't have any technology and you just showed up to a house that's on fire and you've got house that's burning, you might have some people inside. You've got five other apparatus coming that want to know how to be assigned. You've got neighbors screaming at you. You've got the news media, whatever. So there's certainly a lot of outside things on any significant call that can be coming at you. And it's part of our job to try to learn how to train to become effective in that environment, so that we can filter out what's not necessary and concentrate on what's important to do our job.... But yeah, there's lots of stuff moving very quickly and coming at people. And it seems to just be, I think, experience, training, and just some just personal ability, I think, are the things that allow some people to filter that and make the right decision and some people to become just completely overwhelmed by it, so.
User_characteristics - KES	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Yeah, again, it really kind of-- sometimes it's just years of experience, sometimes it's just your ability. You come in as a brand new person and you don't know how to filter that information and you get overwhelmed very quickly. So certainly, one or two years in, you may have an issue, but I don't-- that's one of the elements, but it's really also very much tied to an individual's capacity on their own. So to turn that example upside down, you certainly have people that are here for 30 years who are still not able, maybe, to process what's coming at them as well as maybe as somebody who's brand new, but just has an innate ability to kind of look at a scene and filter that. Maybe that's because of their background experience or maybe that's just the individual on their own. I mean, I'd say, overall, yeah, there's probably a trend with the ability to process and not get overwhelmed comes with more time and more training being in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								those situations where you are overwhelmed, you get better, but I don't think it's directly tied to that, or we don't see that it is, it doesn't seem. Some people are really good at it and some people aren't.
User_characteristics - KES	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Yeah. I started off as a firefighter. I was a volunteer for four years. And then I was a firefighter here with [City] for about six years. And then I promoted to engineer. And I was a driver for three years. And then I promoted to lieutenant about three and a half years ago. And so I've been an officer for three years. And I've only been on my current position as the training lieutenant for two months.
User_characteristics - KES	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	We need to know what to prepare for. Do we have to put-- are we going to a medical call, obviously? Or are we going to a fire call? Is it a car accident? Is it a confirmed fire or is it a--? Maybe somebody sees smoke. They're not sure. So all that information kind of plays into our strategies. So what are we responding to, first of all? Where is it? I need to know where it is. So when I pull out of the fire station, do I need to turn right or left? I mean, I need to make that decision immediately. And usually, by hearing the address, I should know which direction. And most engineers can get within a block or two radius of most addresses. But we are going to have to figure out where it is. And then, if it's a commercial building, I want to see the pre-fire. I want to see, specifically, the building layout and if there's anything I need to know about that.
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Absolutely. I mean, for the most part, that there's a big-- and you probably know, probably hearing stories and everything. I mean, between cops and fire-- and not that they're not [inaudible] jobs, but it's never the same thing usually twice. I mean, every day is different. To this day, I've seen a lot of stuff and still see stuff that amazes me. And so to have that level of, "I've been there, I've been on that apparatus, I understand how our system works," when you're going down, you're trying to get to location, and it's fire related versus EMS versus an unsafe scene. Having been part of that, I think it definitely gives you an advantage in the alarm center to as you're interrogating a caller, to kind of be picturing or have an idea of what you're going to send and why you're going to send it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								And maybe some questions you may ask that maybe aren't in the code of calls, but yet because of your experience, it might be something that maybe of value. I think that's huge. So, yeah, I think it's a huge benefit.
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	...I would say the other thing besides technology is - like I said earlier - is just radio discipline. It's just learning how to communicate better. And being able to sometimes-- I mean, something as simple as-- my dad [inaudible] with 30 years, and one of the things he always taught me is like think about what you're going to say before you key the mic. So when you key the mic, you say it. A lot of times, people will key the mic as they're trying to figure out what they're going to say. Well, that's just taking up airtime. Right? And then you stumble and/or don't get it out right. So a lot of it is just learning, and discipline, and repetitive training.
User_characteristics - KES	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] Incendiary reports, yeah, quality assurance of what people put down on electronic documents, things of that nature. And then I still have the ability to scoot back into the line and do my old general abilities, which is what these guys currently do. So I'm kind of playing a new role, but the majority of that is what I first stated, and that is more back up.
User_characteristics - KES	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] Even outside of calls, though, too, I mean, coming in as younger guys we essentially have a bunch of big brothers and big sisters that we can go, "Hey, I've got this project at home I don't know how to do," or, "Hey" whatever it is and you got six other people there that can shed some light over it, give you some form of education or knowledge that they've had and bestow it on you.
User_characteristics - KES	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	The idea is that this is a very competitive job to get into. These guys get hired, they're one in 1000 or so. And what we do is we try to hire the best and brightest of a very competitive field that comes through. And we try to hire them not just on the skills that they have but also on their capabilities or potential skills, and it's a wide range. This organization, in particular, we're not certain looking for a certain mold of what our individuals. We're looking for puzzle pieces because the puzzle-- different pieces make a pretty strong team. But one thing I always tell people is that one way to never have to go on a call is you think is what

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we call a BS call is I try not to judge other people's capabilities against mine, because he is one out of 1,000 extremely capable people that are called upon to do anything. They call us when they don't know what to do no matter what it is. I mean, all the way from changing a battery in a smoke detector to major, widespread catastrophic disaster or a traumatic family event. And their capability is that they are trained and able to not only respond to that, but they can do something and make that situation better. So they have incredible capabilities and that network of that team with lots of experience. You have people from 30 plus years of experience all the way down to 1 year of experience. So there's a lot of information sharing that goes around.
User_characteristics - KES	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S5] I think part of what goes into it too is that, as we've talked about already, our individual stations of the department as a whole, as cliched as it is to say is a big family. Right? So part of that requirement, I'm sure is finding individuals that are going to fit this family for the next, potentially, 25 years, right? You're hiring a roommate as well as a firefighter EMT, so.
User_characteristics - KES	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] ... Us as the under 500 coming in there's an immense amount of endless years of knowledge that, as far as the firefighting and the EMS side of things go, that we're gathering from the more senior fire fighters. And our give is we're taking all that from them is when they go, "I don't know how to turn this thing on." And they hand it to me and then I, and I don't just do it I show him. Just like they showed me, "Hey, this is how you do this appropriately." So I think we're bridging that gap and working very cohesively and managing the new technology. It's good to have those more senior minds to pass on what they've learned and then us coming in as these things are coming out. "Hey there's this new phone," and we're all excited about it, spending money on Apple Watches and whatnot. And then some of the other guys were like, "How does that work? Why's that?" And we show them, and next thing you know, so and so's got an Apple watch and it makes his day easier.
User_characteristics	FF	S	Supervising	36-45	21-30	Female	FF-S-037	Depends on the individual [laughter]. And, I mean, they sometimes have--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Field Responder					at least from what I hear, they sometimes have technical difficulties. Like maybe it's not connecting to the Internet, and so they have to wait and do it later, that kind of stuff. Or maybe if their MDC goes down, they have some difficulties doing stuff, so I know that happens quite frequently. So--
User_characteristics - KES	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	Right. Very awesome. And he's really good at what he does too, so that makes it even better [laughter].
User_characteristics - KES	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...in the airline industry, they have something that they call a squawk sheet... So where you would actually put just there's-- maybe it's squeaking, or it looks like a bearing's going out, or a bushing or something. To be able to notate it, but then have that annotation carry through from today to next week to next month. And then that way, at least you knew that there was an area of concern that you could keep an eye on. There isn't anything that-- when you make that notation in the database, once you start it over on the next day, it kicks it out because it doesn't retain that data set. So it's one of the things that we've looked at, but we haven't found anything that exists. And we're focused on what we do, and we don't have the time to build something that's that complex.
User_characteristics - KES	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Then it even goes deeper than that, in terms of certifications. So based on what my certifications are, may be different than [Name] certifications. So when do those expire? How many CE hours do you have to [inaudible] that certification? And then you have injuries. You can throw injuries on top of that. So here's this individual. Here's all the injuries to date. Here's what happened. Here's the surgeries. There's so many different aspects of it that's not tracked. A lot of it's paper-tracked, like [Name] said, but it's never really data input. And you can actually look back at a history...
User_characteristics - KES	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	And so when they first did the system, we had a lot of interference because of cellular, because we're moving closer to cellular bandwidth. We had a lot of bleed-over from a cell tower. And they brought out a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								company that did monitoring around the entire city for about a year and try to find all the cellular bleed-over. And it was actually a digital system that was between two points. And I don't know the exact information. [Name] may be able to tell you. But it basically sounded like it was sending a Morse code between two points. And depending on the weather and other things like that that affect radio signals, we would get the beeping of the Morse code, the dee-dee-dee-dee-dee through our system. Or it would either just be this low-tone static through our system that was just bleeding over because the bandwidth has become so used. Or not the bandwidth, but the radio waves had become so used that it's just saturated. But it's gotten really cool, because when we were in the other radios, we couldn't talk to anybody. Now we have the ability that every one of our radios has FERN on it. Everyone of our radios has-- that's the Fire Radio Network.
User_characteristics - KES	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: radio mic placement training] Absolutely. I mean, we do it all the time. But still, you can get in a unique situation, just like we do in TRT and SET. And you get in that one space, and you can't actually be spread out like that. So now you're communicating like this, where maybe [this?] your choice. And they've tried this. [Name] said they actually have headsets built into the masks. And there's a cost affiliated with them. And I'm not sure how those work. We haven't had them. I think we tried them and messed around with him, but didn't really come out.
User_characteristics - KES	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So for training, we've done the go into the loud building, have to hold the mic in different positions. And they rate you on how well they can hear you, or how well they can't hear you. And so you actually start to learn how your voice projects through the voice amp, or whether it's better to hold it to your throat, or to your head, or whatever.
User_characteristics - KES	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	But yeah, even volume. So if I have my radio up too loud and my officer's next to me, we get feedback. So you got to be careful of that. And it may not even be my officer, it may be the next firefighter next to me. So then if your radio is down too low, then [crosstalk].
User_characteristics	FF	S	Not	Not	Not	Male	FF-S-022	Yeah, it's a [Name]. But then, part of the other thing with the radio is how

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			specified	specified	specified			we wear it and what we do with it. Because I wear it in a radio strap; [Name] puts his either in his pocket or in his front vest. And so the noise-canceling microphone is on the back side of the radio, because it was manufactured to be held like this, hand held. And so you talk into here and it's got the microphone right here in the corner. This is the speaker. And then these two little notches in the back are the noise canceling. But when you put it into a radio strap that-- which a lot of firemen do, or you do something other than just stand there like the picture is [laughter]. And the features that were made with it, they don't work.
User_characteristics - KES	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. Everybody has a smart phone, for the most part. And then, that's what's funny is when we show up, a lot of guys use their cell phones for particular things. On the hazmat, we use our smartphones to access the Internet. There's a lot of apps that we're building.
User_characteristics - KES	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Exposure Tracker. We use Exposure Tracker because the CAD and-- the CAD sends us to calls, but the scheduling is what schedules you. And so there's no real direct tie-in between your name and the call that you ran. And so we use a web-based program, which has an app called Exposure Tracker. And it's just on your own. It's your own responsibility. And we track, so we're supposed to go in there and put calls that we run on. So something that you may be exposed to, a hazardous material, you may be exposed to a fire, something like that. So you can actually track your exposures, personally, and then have that information if you develop cancer, or have a problem, or have hearing loss. So there's vision loss, hearing loss, cancer, all these things that you would then want to show your doctor, or human resources, or whoever that these are all the things that you've been exposed to over your career.
User_characteristics - KES	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Well, I think the thing is, is firemen and policemen and all people that work in these industries, they're really good at just adapting and overcoming. And I think that's what we've always done for years and years. So there's even from the command structure, there's even from communication things. Like I told you about the call that we had that the city showed up with an iPad app that showed all the water. At the end of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the day, we always get everything done. So we always cut the car. We get the water shut off. We get the officer that's been shot to the hospital. Things can always be done faster and better...
User_characteristics - KES	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: cause of communication issues] I think lack of training, maybe. Adrenaline... I mean, I can honestly tell you it doesn't happen here. We may get off of track a little bit, in terms of an individual or two, but for the most part, we get toned. Our chief gets on scene, he takes command over instantly, based on if it's a fire. Not every time. It's his discretionary, based on what he's hearing en route. He may say, "Yeah. My officer's got it under control. I'll let him have it." But it's still in-- you still have somebody in command, right? He basically is there to support you, but not like I just come in on [Name] seat and take it over, unless he tells me or I ask him to. So I think that part, here, is really dialed in...
User_characteristics - KES	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	But it can start from our communications, too. You call an emergency, based on our dispatcher interprets that. They got flip cards. [name redacted] was a dispatcher. He knows more about it than I do. But based on how you relate the information to our dispatch, that basically determines who's going and what we're going on. So they may say, "Yeah, it's a small little fire on the corner." So they send one apparatus. Well, the whole building's on fire, right? ...
User_characteristics - KES	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We've lost a lot of the older dispatchers that were really good at the run cards. I've done it for a while. So you start losing some of that once you get the-- when I started, we had two monitors [laughter]... I think ours has eight. So there's the EMD card, then there's the map page, and then there's 911. Now that we're moving into the new Annie Alley system and the level three 911, it's really cool because we used to just get an address. But that was really neat because everybody had a landline. Now everybody has a cell phone.
User_characteristics - KES	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...When I first started and we were just on the streets, you would just get an address, very generic information. Now we actually get pretty specific information. So age, gender, hopefully a good idea of what kind of ailment they have or how big the fire is. The dispatchers now have a very

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								regiment set of questions to ask, which it was just more of kind of conversationalist and trying to get what you could out of them. But when you start to ask those questions, you can then determine whether the apparatus needs to go emergent or non-emergent. And that puts a lot less strain on the system. It puts a lot less strain on the citizens because you're not going lights and siren and tearing through a city when it's just a car fire...
User_characteristics - KES	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	SME S3: ...We had a car fire a week ago. Well, we went fast, but we didn't go lights and sirens, because it's not next to a building. It's in the middle of the street. It's a hazard for that person, and a hazard for that car, but it's not a hazard... SME S2: for the surroundings and everything else. And so there's not really a reason to put all the people in danger from point A to point B, because it was a non-issue. The car's already on fire... SME S3: It's already ruined. It's not a big deal. So you show up and you do that...
User_characteristics - KES	FF	S	Manager	46-55	21-30	Male	FF-S-023	...the data we're getting, like in-first data, is not very complete. It's very open to error, it's all subjective by the officer. We actually collect a lot of data that we don't touch. For instance, when they say things on the radio that stuff should be able to come to us somehow because they're right there at the moment, and they're saying something. So they're probably saying the right thing. Then they come back and do their report, they remember it the way they remember it, human nature.
User_characteristics - KES	FF	S	Manager	46-55	21-30	Male	FF-S-023	[RE: in-first data] It's not a big deal. It is what it is. So we know, for instance, they say that they went emergent, then they got slowed down, they kind of sped up, and they got slowed down. It's not really an emergent run because they didn't go as fast as they could the entire time. So we'd have to calculate that a different way but they may classify it one way. We have all that data. It's there, it's somewhere. So if I can reach that it would be awesome.
User_characteristics - KES	FF	S	Manager	46-55	21-30	Male	FF-S-023	...And then there's the training side of that. So we are on one system here. All of our repeaters work this one system. If I move away from this system and these repeaters here, I can go to a different bank. I can go to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a different system, but I have to physically change my radio to go to that different system to pick up those repeaters. So our firefighters don't often remember that or know which system they're in, so as they're going on a mutual aid, especially our hazmat team goes out a lot and they'll go way east. As they get out there, all of a sudden they can't talk. Well, that's because there's not enough power to get to our system. If they would change their system, they could still talk and it would be fine. So a lot of training with that and a lot of our firefighters are firefighters and problem solvers and they do this stuff. They don't necessarily want to know, "That I've got to do all this changing on my radio and programming and stuff," so would be kind of cool if it would automatically switch, but.
User_characteristics - KES	FF	S	Manager	46-55	21-30	Male	FF-S-023	...I will tell you that I always thought computer programmers were kind of nerds and stuff and I can say that because I have done that in my previous life before I got hired. Radio guys? Much more nerdy. Oh my gosh... They are so technical, and there are so many little pieces to this, it's amazing... And I can't understand about half the things they say. Of course, they all talk in acronyms as well so... What is a BG and BFM? I don't know-- and so, anyway. But they're very smart people and very technical. They're almost all engineers anymore, so.
User_characteristics - KES	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So normally I'll go out. There's two reasons I go to the street. One is to work with the battalion chiefs. So I'll either have group meetings. So we'll sit down. We'll do a little training. We'll have conversation about what's gone on at headquarters for the day or any issues that they have in their battalions that we can work through, the four of us. Sometimes I'll have one-on-one meetings. So like this morning I went out and had one-on-one meetings with the battalion one chiefs. I caught them at shift change, so I caught one before the other one came in, had a meeting. Then he changed and left. I sat down with the other one. And then yesterday I went out because all three chiefs were on calls, so that I went in service as the fourth chief. And then it's also my responsibility as that fourth chief to maneuver our resources around.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - KES	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: MDC] So I can pull up my mapping, I can see my rigs, I could pull up a list of calls. And then I'm fortunate I spent 10 years in Arson, so I get to learn the city really well. I know where my fire stations are, I know where my coverage holes are, so I can, based off of who's available, I know where I need to move them and I can make the move-ups, usually fairly accurately on my own. I am looking forward to having the move-up module look because I think it will look at it a little different and we have some chiefs who just don't think that way. And that's going to really help them to go, "Dispatch, I just want you to do--" whatever the module is saying, do it..
User_characteristics - KES	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...a lot of times our chiefs only look at the internal resources and I'm lucky, after I left Arson, I went to training. I built a lot of relationships with the neighbors. I know what resources they have so I know how to use those chess pieces too. Some of the chiefs have that awareness and some are just-- all of them are very well aware of what's going on in our city, it's just what else can you do? The move up module is going to be huge for us, so.
User_characteristics - KES	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...So now having it where we can move to somebody else's tactical or fire ground channels, just makes it so much easier. Now we can communicate. I had no way to communicate other than red north east with the departments up north. And now I have multiple state channels that I can go to the top right on. So it just makes my life easier as an incident commander.
User_characteristics - KES	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	Thinking outside of the box, not yet. I mean, it would be nice if at some point-- I don't know what else we'd use. I don't know. That's a great question. I don't know because I've done this for 27 years and we've always talked on a radio...
User_characteristics - KES	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: MDT] And a lot of the times, [Name], who's our driver, he knows where he's going. So we don't necessarily follow where it's telling us to go.
User_characteristics	FF	S	Field	26-35	11-20	Male	FF-S-018	...sometimes there's been information that's been lost in translation from

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Responder					people on the scene to the officer, to their dispatch, to our dispatch, to us, confusion about if somebody's inside or not which really changes what we do tactically. So we're doing something, thinking there's potential rescue when there's not. So you're really putting guys in quite a bit more risk...
User_characteristics - KES	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	We are all-hazards... So we have to maintain certifications for hazmat, swift water rescue, ice water rescue, EMTs, wildland. I mean, we do it all. If there's a certification out there that's required for a position, we have to do it.
User_characteristics - KES	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Back in the day, when I started, it was more of the community. You are a part of your community. It was a way to give then your community, and so it was that volunteer community fire department. Nowadays, because of all the challenges that we've discussed there, and that change in the society, the only volunteers we're getting are the young college-age level kids that want a fire job, and so they're using this as a gateway to get experience and get in. And then as soon as they have the opportunity, they're gone. So our average is about three to five years
User_characteristics - KES	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Yeah. So, obviously, I have a lot of [Job title] work because I am the [Job title]. I'm the [Job title]. I'm also our [Job title]. So I do all of that. I help with the county radio system because they do all the radio programming for the county. Just kind of being [Job title], all the mail that comes in, the emails-- I mean, just [a lot of?] communication stuff that as the liaison for the department, just keeping things going. I'm also still the [Job title]. So I have inspections that I'm doing.
User_characteristics - KES	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Our dispatch is kind of unique, where we still have [City] firefighters work in our communications and our dispatch. We don't have call takers and dispatchers. Our union has fought very hard to keep firefighters and we have a group of people that-- we still rotate some people through there because not everybody wants to go to work in dispatch. But usually some of the older firefighters, or people who might have been injured, or people who just don't want to work in a firehouse anymore, they'll go up and they'll work up there and they'll stay there for however long. And so

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they can become quite proficient...
User_characteristics - KES	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...sometimes CAD will come in and say, "Engine one, respond to this call." Well, it's not taking into account that this road is closed, and so engine 11 may actually be closer because right now there's a protest going on, and so this road is closed. And so it just automatically assigned engine one... So, us having firefighters up there who actually understand firefighting... They understand, "Hey, you know what? I got this road closed." And usually, they're not quite as-- I don't want to say fearful of making a decision as maybe a civilian who's hired to be a dispatcher. "CAD told me to do this so that's what I'm going to do." I have firefighters who are like, "No, this is the best reason why I would do this." Or, "Hey, Chief. Do you want me to start you a second company on that? It looks like you're running a little low on truck companies. I'll start you another one." So having those firefighters up there is kind of a-- every time we come to collective bargaining every three years in the city we always fight to keep our dispatchers up there.
User_characteristics - KES	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: firefighter dispatchers] ..."Are we really getting any value out of this? Are there technologies that we could use to bridge that gap a little bit?" I suspect that it's only a matter of time before we-- I mean, that's just the trend across the country. Very few departments have-- it's just not the norm. And it's something we have fought for. We give up things so that we can keep it because we see the value in it. With that said, there's been some recent activity that's kind of been like-- where we've had a lot of dispatchers that have done exactly what I just described as being a benefit, they have done the opposite. "Hey, I can't do that. CAD says I can-- CAD only says this." So at the upper levels, we're kind of like, "Hey, your only value is from being-- as a firefighter, is saying that you can take a look at a situation and make a human judgment to say, 'Yeah, I get that the computer is saying this. Makes complete sense, but I understand the total picture and I'm going to say this.'" So we're running into some of those issues.
User_characteristics	FF	U	Field	46-55	11-20	Male	FF-U-020	...everything we do is so visual. So when we show up, we process the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Responder					information visually. That's a seven-story building and there's smoke coming out of the fifth floor on the bravo side. So being able to just know what type of building it is or seeing what it is-- a lot of times, we know because we've worked in those areas...
User_characteristics - KES	FF	U	Manager	46-55	11-20	Male	FF-U-021	[RE: vehicle schematics] It's more just personal education, so there's apps out there. There's companies that have built these apps and they've gone to the manufacturers and they've gotten the schematics, and they've built these apps where you can just pull up the car--
User_characteristics - KES	FF	U	Manager	46-55	11-20	Male	FF-U-021	You don't know. And also there's a lot of things where you have to immobilize the 12-volt batteries because that's what mobilizes the high voltage. So there's a lot of things that's paramount that you have to cut the low voltage to a hybrid because if you don't, it's still charged with a high voltage. So just things that you need to recognize and this is more through training now that everything is not as it appears. You can't look at a car and just say, "Oh, that's this type of car." Well, they make that type of car in a hybrid as well. So there's a lot more things to think about.
User_characteristics - KES	FF	U	Manager	46-55	11-20	Male	FF-U-021	...You need to stay in shape, so you don't have a heart attack. You need to train people on the importance of recognizing the aspects of cancer and what we're facing. At the same time, you have to drill to make sure you can operate functionally as an engine person or a truck person. You need to know a little about a lot. But it's something that we need to take a step back and, at least, maybe twice a year put people through classes.
User_characteristics - KES	FF	U	Manager	46-55	11-20	Male	FF-U-021	[RE: microphone] So we would actually test because I thought it was important because if you're going to run into a situation, that, to me, is the most important thing that you can train your people on, is how to ask for help and what works best. And it's getting that muscle memory. So I remember when we were training, it's more effective if I hold it here versus here, or holding my breath for a second, calming down before I speak. Really make a concerted effort to speak slower, really enunciate my words. So just that practice...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - KES	FF	U	Manager	46-55	11-20	Male	FF-U-021	Yes. [inaudible] rescue, repelling off of a high rise building to a window washers that are stuck on the 30th floor. There's communications involved in that, so there's a lot of stuff that you need to be very good at. Rope rescue, high lines, just rigging the system. If you're thinking about weights and thinking about redundancy and how are we going to-- it's easier to get them down there, how are we going to get them back up here. So there's a lot of training when it comes to that because those are things that aren't very frequent and those are the things that are going to get you hurt. So they're very infrequent types of calls so you need to train on then frequently, so then when you do get that incident you're ready.
User_characteristics - KES	FF	U	Manager	46-55	11-20	Male	FF-U-021	...The better picture that the first rig on scene can paint, I think is paramount to the success of the overall operation because you have a better idea of what you're getting into. And that's incumbent upon the officers as well to know their districts because the address comes in, if you drive around, you know your districts and you know your totally hazards, and you know what to look for at certain things. You've been in those businesses when you're expecting, you then know what you're going to face at 3:00 in the morning when you're getting a call there.
User_characteristics - KES	FF	U	Manager	46-55	11-20	Male	FF-U-021	...So we have to learn probably 3 or 400 streets, sequentially, in the city. But as far as the district, I mean, you can put the streets there but you can't put the businesses there. There's certain just target houses where you just don't know. So until you go in there and you just need to pay attention...
User_characteristics - KES	FF	U	Manager	46-55	11-20	Male	FF-U-021	...And that's just a good officer showing the new person, "Hey, you got in here, did you catch how we're going to get out of here?" So let's say the front door is blocked, what's our second means of egress? Were there bars on the windows? Is there propane stored here? A lot of things. What can hurt us here? And hopefully that sticks so that way when you're there or maybe you're there with someone else that has never been there, you can, "Hey, by the way, the second floor that's not very stable, we were in there." We have hoarders, so a lot of things that can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								really hurt you, so that's just important that you pay attention to all the small little things because the small things can add up to make a big difference.
User_characteristics - KES	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: EMS] They transport, and we don't transport to the hospital. Every agency is trained up to EMT basic... And then the paramedic system-- they're all paramedics, very highly trained. They're CAS certified. Yeah, and we work pretty well together.
User_characteristics - KES	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	No. So that's going to be the chief and the rescue squad. And that is a report of smoke in the building at that address. And everything here is tied in. They use the old telegraph street boxes.
User_characteristics - KES	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Which is nice. So it's interesting, how it comes in, too. If it's white letters, that is usually a major call, like we call it a box. If it comes in in red letters, they call it a unit dispatch, so it's going to be like one or two units going to something--
User_characteristics - KES	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Yeah, very densely populated. It's a pretty busy area. And it's [Name] District. It's mostly a Hispanic population. And then, we have [Street]. It's kind of the big attraction in the area. It's where all the bars and eateries are and things like that.
User_characteristics - KES	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	I don't personally. I haven't heard of any of the other drivers or EMTs on the engines that do that. I've heard of the medical ones but I'm not a paramedic so I don't use those. I've heard of apps where they calculate friction loss in the hose, but everything we do is kind of already pre-laid out so you kind of know a starting point of what your pressure's going to be for any given situation and then it's usually just a matter of adding or subtracting 5, 20 pounds per floor or something like that. So our stuff is-- we keep it pretty simple.
User_characteristics - KES	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	If you select it, it'll stay on. So it's like if you don't like what's on there, you want to add or subtract a layer, you can do that in the morning, it'll stay that way.
User_characteristics - KES	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	That was-- I worked for the National Parks Service at [City]. Yeah, and then I worked for the Department of the Air Force as a civilian firefighter,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and then I was a active duty firefighter before that, so--
User_characteristics - KES	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	The only way it's a hindrance is if the person you're next to, usually it's your officer that's going to be talking on the radio, if they talk on the radio and you're right next to them, you're going to get feedback. So, some officers will address that in the morning by saying either, "Keep your volume down or keep your radio off until you need it." They'll say, "Set your channel that we're going to and just leave your radio off. Unless you're in trouble or something, you can just turn the volume on and you'll already be on the right channel."
User_characteristics - KES	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	I think that kind of covers the most stuff. For medical aides, most of the time I wouldn't say that-- unless it's a case of CPR or something like that where it changes the initial dispatch. Most of that information is-- I think we could get by with knowing, just a medical aide at this address.
User_characteristics - KES	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	I would say, for the most part, it's the accidental transmits and then it's people getting too excited and not trans--or not communicating effectively over the radio and not knowing how to speak into a microphone and have that come out clearly on the other side. A lot of people get up too close and you hear over-modulation [laughter].
User_characteristics - KES	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Oh, training. Okay. So one aspect that I love about Station [Name] is, you never lose out on your skills here, because you have each type of apparatus. So we're allowed to trade shifts with other people. So one day you could be on the engine, one day you could be on the truck, one day you could be on the squad. So you're always keeping up with your skills. So if you're at a, say a single engine it takes-- that's why they have battalion drills, so you're involving other apparatuses. So you don't forget your-- but here, you're always around these type of rigs.
User_characteristics - KES	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Everyone out of the training tower is EMT qualified.
User_characteristics - KES	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	So basic life support. And then our paramedics are cross-trained. They're both paramedic and firefighter.
User_characteristics	FF	U	Field	46-55	11-20	Male	FF-U-011	Yeah, as you're breathing, and that-- you can control your breathing, and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Responder					so you don't get too excited. The more excited you are, the more you're going to spend through your [air?].
User_characteristics - KES	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Yeah, and so that-- it's up to the driver to know if it's a Friday evening, if there's an event going on, if you've lived in the area, which routes get congested. So if we're going to a fire, you avoid the freeway on a certain time.
User_characteristics - KES	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	...I've been back at this station since January. I've driven and rode in every single vehicle out there, including driving the chief and being the chief's operator. And that's the normal job of a firefighter here in [City], is you could literally be in almost every seat in the city. So you have to be prepared to use all the different equipment, and do all the different jobs that the different rigs do.
User_characteristics - KES	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	If you get that blank stare, you go, "Repeat back to me what I just told you." And we're an evolving department. We're younger. I mean, we are hiring a lot of people right now, and so that trust factor has to be gained before I can just let somebody go on their merry way.
User_characteristics - KES	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Exactly, and it's just really-- and I'll say the word frustrating. Nobody that's in the fire service will dispute the fact that fires are burning hotter, and with more energy, and more explosive in the year 2017 than they were when I first started. I mean, these chairs didn't exist 30 years ago. This material didn't exist. And you put a bunch of this type of material into people's homes-- go into your home and compare it to what it looked like. What you have - your television, your couch, your chairs, your furnishings - are producing [a sum?] exponential number higher of energy than they were 20 years ago. Yet the fire service is still--- not still. We are so far behind the power curve of trying to keep up with what's burning to the point that the number of firefighters that are dying are still, even though fires are way down-- the number of fires are way down. The firefighters are still dying at about the same level. And so you go, "Well, how is that happening?" Well, because fires are more volatile. There's less experience in the fire service because we're not getting the fires. So you put those two together, you cross those up, and you go,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								"Yeah, you're not going to fires, so you don't have the experience. And so when you don't have the experience, you're not picking up on certain things. And now you're entering into a more volatile situation."
User_characteristics - KES	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Yeah. Early notification and all the things that go along with it, they're great, but the downside of that is-- I say if you're a baseball player, and you haven't faced major league pitching very much, and you think you're a good hitter. You step up to the plate. It's a 90-mile-an-hour fastball. It's not going to look very pretty. You can practice all you want, but the real deal is much different.
User_characteristics - KES	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Yeah. So I think if you're looking at the number one factor to wrap all of this up is, it's great that the number of incidents are down, but the experience is a huge gap that needs to be filled. And the fire service needs a way to figure out how to fill that gap because we're losing firefighters. They're dying. And you know what's even-- and it's not that it's interesting. An interesting fact is that most of the firefighters that are getting killed in the line of duty are the first-in companies. So it's not like, well, the bigger the fire is and we're bringing all these other people in and they're the ones getting hurt. It's the first engine or the first truck that's getting there that people are getting in trouble. So you say, "Well why is that?" I think it's because they're making decisions on situations that they haven't been in before, so they're inexperienced. Number two, that the opening and closing of doors - just opening a door, closing a door, opening a window - is changing the conditions within that building--
User_characteristics - KES	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Well, just if you look at that number, you have to put that together with, between 2007 and 2011, 2012 - probably that six- or seven-year period of time when there was a huge downturn in the economy - in [State], in particular, nobody was hiring anybody because shutting down fire houses-- yeah. A lot of fire houses that were shut down during that period of time - not in [City], but across the [City] - have not opened up again because of the economic downturn that happened. Fire departments didn't hire, and so they ran short firefighters and they used overtime to fill the gap. And then all of a sudden, we're hiring a third of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								our department in the last five years. And so we are probably the norm of what's happening in [State] and probably across this country. So you take those 400 people that have been hired in the last five years, I would venture to say that more than half of them have not been first in at a working fire. So they don't have that experience, right? So the first time they burst in at that working fire, they might do some things that-- and you can try and train them all you can, but--
User_characteristics - KES	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	Yes. There's definitely a daily routine in the suppression side, running on an engine, being responsible for your car on that engine. And understanding your communications, understanding how it works, and testing it. And making sure that it's functional. And then you have a whole training component that we barely get to train on because there's so many other aspects of their job that are as mission-critical as communications. So there is a routine that we need to follow, and we do in terms of changing the batteries and making sure that the physical equipment's working.
User_characteristics - KES	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	You have to wait. And I don't think they've experienced that because we haven't had any major events. But on the other hand, if we do have a major event and the system becomes real busy, we can fall back to our conventional backup system and be still the one on one conversations, but we're not competing with anybody else other than the fire resources.
User_characteristics - KES	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	... They don't like to really be told to take care of their equipment for some reason. It's a challenge for them to understand it needs to be treated just like their breathing SCBA or their breathing masks, or their life support system when they're in a fire. That is their tool to be able to call for help. So they need to understand they have to take care of that. And that's a challenge sometimes. They feel that if I break it, I can always go and get another piece. So it's understanding the validity of the equipment. Other than that, on major fires, they enjoy having us there to support them.
User_characteristics - KES	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	...I've been fortunate enough to have contacts from the Bay area and just work my way out throughout the state just because of what I do as a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[comulator?]. That's what I bring back to here. When I go out to the big fires, that's what I bring back is trying to educate my leadership on what it takes to really pay attention and have contingency plans in your back pocket to be able to say, "Hey, this technology isn't working. Let's shift to this technology. This one is loading up, let's shift half of it over here to this technology," And do that load-bearing across the technologies that we do have that is functional, and do an assessment what's working, what's not working? And be able to leverage that. FirstNet's going to help with that, but it'll be some time to get people to understand how to do that.
User_characteristics - KES	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	... As of 10 years ago, they couldn't spell ICS. Now through grant funding and kind of through Department of Homeland Security, it's becoming the norm of communications, clear text, and the structure of how we run incidents. It's using ICS. So it's becoming easier, but there's still that gap of having them come over to one of our inter-op talks to share information without going through the dispatch centers. I'm sure it's better in other parts of the country than it is other places, but--
User_characteristics - KES	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	It's not really access. It's awareness. It's understanding. Because we all have the same access to it, but some agencies don't understand it, and they rely on other agencies to help them through that process. And it's kind of like that leading them to where you want them to be. And that's part of my fire scope kind of arena is we meet quarterly to try to guide these agencies. We all have representation of part of the state of local government, county, city, urban area. It's broken out into 12 different areas that we represent. And we try to make sure that everybody's programmed up by May of that year with all the changes for the frequencies, the communication stuff. And most of them are line firefighters from captain to battalion chiefs that sit on this working group. So we get the word out state wide to help us with that coordination and that awareness.
User_characteristics - KES	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	It is because of the technology that we're using. Just like the trunk radio system. We come from a conventional VHF system that was line of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								sight. We had to see the repeater. Same technology that we're using in the trunking side, but it's a digital technology. It doesn't sound the same. And so the coverage is different. We have better coverage in buildings, but we don't have coverage in basements. And when we're talking through equipment that we can't see, we have to have that understanding.
User_characteristics - KES	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	It depends on who you talk to. It goes back to that training application. If you have a good training program and, people understand what you're training them on, and they don't get information overload, it's better. But we have 48 zones in radio that we've developed so we can guide them to a specific zone for a specific incident type. But 9 times out of 10, the most common user doesn't understand everything that's in his radio. We've set them up for success behind the scenes. Don't worry about zones 10 through 50. Those will be for special case. You just focus on the first 10 zones and that's where you're going to float depending on what you're doing day to day business geographically. And in the county, you can be in one zone. You'll be in another zone in another part of the county. You get the emergency button. You know where it goes. It comes back to here in any one of those zones. Those type of need to know assessments are common. But beyond that, we try to guide them to where we want them when it's stressful. When it's not out of the norm.
User_characteristics - KES	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	They've made tremendous strides. I think one of the great recent inventions is the ability to do noise canceling, with there because we have a lot of saw noise at a fire, so that can help. A lot of it is user error. [City] is a big city, we don't have to be as proficient with the radio as a suburban department that relies heavily on mutual aid. Where they have to interface with the radio a lot, switch zones, and talk routes because of other agencies. And then they can become more familiar and more proficient with the radio. Here we are very basic. Everything a firefighter does is on the 8 Meg, for the most part, and he just turns it on and go to A7. Okay. He goes to A7. That's all he knows about it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	the big thing that we don't really focus on, and I've been in this line of work for 28 years, when you're out in the field and you're putting the gear on, the tones go off, and you go, you're in what I would consider a-- you're in a soldier mode. You don't want to get rid of that soldier mentality because that's what helps us do the job. We don't want to have in our front set of thoughts, dangers of the job, in particular, to cancer causing ailments and all that kind of stuff or particulates because it would be immobilizing. If we focused on things that can happen once we leave this fire house, then we really kind of run into issues of slowing us down in getting our job done...
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	when you're new, your level of excitement and anxiety is-- it skyrockets. When the tones go off for a fire, your heart rate is 180, and your blood pressure goes up a little bit. Your anxiety level goes up a little bit. And your excitement level's there. But at the same time, when you start having a lot of experience and you start having a lot of time on the job and you start to age and you're starting to go through these transitions, someone who has two years on the job, excitement level is different than someone who has 20 years on the job. Their excitement level meaning that they still enjoy going to fires are the same. But you have an excitement level with a heart rate of 80 and you have an excitement level with a heart rate of 80-- or 180, and then you have an excitement level of 80. So how someone with a lot of experience modulates their excitement level is just speak through experience. "Okay. Yeah, let's go to this fire. Let's have a quick push-out." They still remain at a normal heart rate level versus the new guys who were getting dressed fast, they have quick push-out, but their heart rate is so fast. You know what I mean? So the desire to go to fires sometimes are the same. It's just where you're at metabolically and heart rate. Those are different.
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...you make a decision based on what are your-- I'm trying to put it in words. What are your risks versus your benefits? So you minimize and reduce your risks if there's truly no benefit, but if there are people trapped in the building, especially when we get on the radio that there's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								children in the building, everything just goes up and everything's added up and your risks are laid on the line. I mean, that's kind of what we're here for. So yeah, I mean, that plays a big part of it, big part of it.
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...I was a paramedic for years...
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...something that they're also looking at is, which they should have done years ago, are more of a GPS-type direction of travel, which is huge. City's big. And if you are moving around from one area to another, say, I was a relieving officer, so I would go this firehouse and to that firehouse and then that district. So there was a lot of areas where I wasn't real familiar with, so even going from point A to point B, I couldn't tell you. So it would be nice to have that immediate, boom, hit a button. It shows you the travel route, just like the GPS that we use to go anywhere else, should pop up immediately and give you the quickest route and the more-- so those kinds of things are coming, hopefully.
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...now it's getting better with them letting us know that these are dangerous buildings. So that's kind of changed where if it comes in through dispatch that there's a fire in this building and an address, now our main office has addresses that are built into the computer saying that these are dangerous buildings, or abandoned buildings, and those kind of things - Those are good to know - or what may some of the contents in the building be. That's good to know. I think for me, as far as my experiences go, is it's good to know that. But at the same time, what's imperative for us to know are, is it unoccupied or an occupied? Are there occupants in the building? That changes our game plan. It changes our risks versus benefit, which I've talked about before...
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: usefulness of computer] If our attention is directed to it, sometimes it's just one of those things you've got to develop habits. And you've got to break some of the old habits. So you've got to develop new ways of doing things. Now for me honestly, I never focus on the computer when I was going to work because I'd look to see what the address was. But then there was times where I was more focused on listening to the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								radio. I was more focused on making sure everybody was ready to go and then looking for the smoke. So I'm concentrated on outside. I'm looking for the smoke. I'm looking for the streets. I'm watching traffic. And then I'm looking for hydrants...
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...So there's a lot of things that come into play when you're setting up tactically to approach these situations that you've got to be concerned about rather than what's the computer telling you? So that's just a form of habit that needs to be developed. I rarely focus my attention on the computer. I was more on the environment and radio.
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...So through time, we've learned that when you have somebody outside telling you to get out of the building, just get out. Get out and ask questions later versus being in there getting on the radio, "What's going on? We got it." There's been a number of situations where, I myself included, are guilty of that, slowed getting out because we thought we had it knocked. And we thought we had it under control. "We got this. We got this." I mean, that kind of thought. And then you finally back out slowly and then you turn around and look and you notice that the roof's getting ready to come in or the building's getting ready to-- and it didn't seem like that inside. So those things are situations where communication-- and not even that it's poor communication; it's just there's a period of time where there's an unknown, so.
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: overwhelmed by technology] I would say, yeah, it can be with different hazmat or hazmat meters. Sometimes those are a little overwhelming. Sometimes those are short-term memory kind of a things, where you got to keep touching it and using it. So I would say multi-gas meters can be a little overwhelming for guys who may not understand even what that even means or what it's telling you. That can be an area of where it can be overwhelming. Sometimes even our radios, and I think the more features you add to something which is considered a tool, the more complicated it can get...
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...And firemen, sometimes you look at firemen as being a blue collar. They're just dragging around a club, and that's what they do. It's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								different, but we have a lot of people who are very well educated in this line of work. But when you look at something that is very complicated or if you hit the wrong button by accident and it completely changes the whole thing and you don't know how to go back and fix it, those are where issues begin. And even with some of the radios, you may grab the radio and pick it up and your thumb may hit a button by mistake. And it completely puts you in a different channel or a different zone and you don't know how to go back to it. Those are some situations where technology can be a problem.
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	I think it's time. I mean, it's time to progress to those more sophisticated areas of communication. And one thing that we have seen happen in the fire service with interior tech is the thermal imaging cameras in which, if you wanted to go back to that one question, that technology is something that could be hindering to someone who doesn't understand it and doesn't understand what they're looking at, what color forms they're looking at, what does that mean. And that's improved. The ability to get a better picture's improved with the technology on the cameras...
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	I don't have a lot of experience running those big situations, you know what I mean, like the Taste of [city] or the marathons, so that would probably have to come from someone that's in a supervisory position that probably has more experience on the major communication issues, but not really at my level...
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...I did a lot of dive jobs when I was in the squad. So we would go and we would take care of boats in distress, or drowning potentials, and stuff like that. And a lot of that does take place during the boat shows, and the air shows in the summer, and stuff like that. So where we would run into issues with that is crowd and being able to get to where we're going but being able to figure out where the actual location is because there's people all over the place, and if you're down here and you're just a visiting-- or a citizen, you don't really know the city for sure, and you may see somebody go into the water and not really know how to say where you're at.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - KES	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	[RE: call information] We get it on the print-outs and the mobile data terminal. Like I said, they have to be on something that you can digest quickly. It may be too much information to put on any one thing, or it may not be able to process it as quickly as you'd like. But some of it would be nice to have on the screen. You could scroll down. We do have it on some of those where-- how many floors, because I go to high rises all the time. I don't know how many floors are on there. I mean, so I've got hundreds of buildings in my [inaudible] district of high rises. I don't know each one how many-- what the floor is. Be nice to have that either on the printout or on the screen so you could access it.
User_characteristics - KES	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	if I'm going to a fire scene, there's a whole different thing where if they show me camera feed, there's nothing showing on that fire. As opposed to every window's full of fire, and there's jumpers hanging all over, it's going to change my tactics immediately, especially on the way there. I mean, I'm thinking already on the way there of-- one of the things that would be nice, even if they didn't even show the live feed, just a picture of the building just to jog my memory so I can adjust my tactic, orders. There's a huge difference between a one-story ranch or a 100 by 200 courtyard building. That changes our tactics immediately. In some places, you don't remember that building. So it'd be nice to even have an idea of what I'm coming into.
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	We have to be proficient or at least possess enough knowledge to mitigate any situation because people call the fire department first. They don't call the police or the public works or Jimmy John's or whatever it might be. They call us to solve their problems. Obviously, it's a whole array of problems. You have to be proficient in pretty much every area. Those aspects again are from structural firefighting to wildland firefighting, high-rise fires, fires in boats. It doesn't stop and then flip the coin...
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...a great majority of our runs are EMS related. And now some of us are paramedics, some of us are EMTs. Now we have to know about life-saving skills, what to do with a [neuro?] addict, get people to breathe,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								CPR, identify a medical component that's giving someone a big problem or an issue, and address it, and fix it for them. It's at the snap of the finger. How much time to go and get your medical book and say, "Ah, this might be happening to you." See the flow chart and how to treat it. And then, again, it can go off into another hauler of hazardous materials, water rescue. I mean, it's endless. Trench rescues. These guys are doing outside your confined space rescue, which is a discipline of rescue. So it's all-encompassing to have knowledge in every little aspect, to make you very proficient but very efficient on it and get the job done. That's the whole main goal, is to get the job done. And that's why they call us. You are the jack of all trades.
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Cell phones, I think they're-- yeah, again, very useful. We all have one. We all carry one. If you look at the cell phone usage, job-related for use at an incident - at an incident where you have time obviously - where you're not googling or looking up things. It's a great mechanism if you had learn to-- "Oh, I forgot how to tie this knot." Go on YouTube. Various fire departments and well-known fire instructors also put out information in series or in format so you can use it as a drill, or call it up and doing searches on single family dwellings. So then we can use the technology as a form or basis of your training for the day...
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Everything there's a fine line in every detail. Do we have time or do we not have time? Or when we process data, you don't have the time. When things that are happening real quick and real fast, it's hard to go through the technology to find things. I'm thinking of the other side of that spectrum is that when you have time. Because when you have time, you can look up every resource that you want using technology at hand and what we have available as a fire department. Yeah, flood yourself, get the upper hand. Knowing your enemy, knowing what you're getting yourself into through technology means, but again it's practical then not practical. And I think that's your dividing line. We have time to use technology, or we have no time to use it.
User_characteristics	FF	U	Field	46-55	21-30	Male	FF-U-028	[RE: technology most useful during downtime] Going after an incident

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Responder					too and use your phone, even use it as a learning tool after an incident. Look up, " Yeah, I could have done this," or "Wow, I've learned something about this," as well. And again, it's a great refresher of things. We have to again have so many skill sets in our possession, and technology allows us to go back through-- I don't know if they mention our SharePoint system here that the city uses. Go back on some drills or again, "I forgot how to do this discipline or this maneuver." You can always use it to benefit yourself and the others in the fire department. You can use the technology available at hand.
User_characteristics - KES	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	So I have to ask my son how to do things or open up this or can you send this via email, but you take a picture of it, then you've got to put it in God only knows. He knows how to do all this stuff. And the purpose is good, but I just did not have that growing up... Well, it's like that. I give you a toolbox and it goes, "Hey, can you go fix my car?" or something, or "Go and build this for me." You never had the exposure to it. Once you did, you could do anything. I can do this stuff, but I just never did, and I think it was the learning gaps...
User_characteristics - KES	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	We have to do everything. I mean, we do confined space, trench rescue. We do rope rescue. We do scuba diving. We do hazmat. I cover a third of the city with fires. And we have a-- and sometimes we are called upon like tasks that people have problems with, they call us. We'd get called to emergency rooms, and help out in emergency rooms sometimes.
User_characteristics - KES	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	No. No, I have to tell them and I more or less do it to say, "Okay. Open up here, we don't have to open up here," and then you can look at a building, you can look through smoke and see a body. But I know there's technology out there, certain cameras, but if-- every officer has a TIC camera, so I don't know-- they'd have to have a huge TV screen to see everybody's camera. So I don't think that's the answer. I mean, there's a lot of technology out there already and it's, I mean, improved tremendously, but I don't know. I think the alarm office people, better training. If I respond to a hazmat run, and some people, they start on page one to figure out what's going on. Well, if the incident's already on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								page seven, I disregard the first six because-- well, I've been around for a long time so I kind of figure out what's important and what's not important. Yeah. I don't know. I mean, we work with the collapsed rig. We work with the confined space rig. So all my guys have to go through all their classes. Right now I'm teaching confined space class here. Regular firemen are taking the class, and they're around 40 hours right now. So they're down there for five days. So I didn't come in for this. I was down teaching [laughter].
User_characteristics - KES	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	I mean, to a regular company in a regular little district, that wouldn't help them because they know their district backward and forward. But to a chief or to a company that-- or an area like a suburban area that does mutual aid, I think a map-- and a lot of them probably have it. It's just a city is-- the computers in a city, I don't think are as up-to-date as some of the newer ones because it would cost so much to change the-- but that would be tremendous.
User_characteristics - KES	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Right. So you have the physical aspect. I mean, as the years go on and you become more familiar with building construction and the normal pitfalls that we may find in a day-to-day fire, just normal safety issues that we should really be cognizant of like holes or missing walls or half staircases. I mean, there's so many things we encounter that when you start to see them often, you start to anticipate that they're there even though they're not, and that's what keeps you safe. You just assume that everything's bad, and then when it's not everything's fine.
User_characteristics - KES	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Now I'm going to get into an area where I'm not too wise on. But If I want to create a document forever, I'll just have it scanned and put into our Clear Site where it'll sit forever and be accessible. I mean, that's the way I understand [laughter] it anyway. You can probably speak on that more, better than I can.
User_characteristics - KES	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Yeah. I mean, and I'm not computer savvy by any means, I've been trying to get better over the years. But if I had a display that was very legible and easy to read on board, and obviously the way the apparatuses are - and they can be different from different firehouse to different firehouse -

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								because budgets don't allow us to buy the same thing throughout the city. The more people that could see it, the better. Any information I always had, I would always try to just verbally tell everybody because I didn't feel like I should be the only one that knows this.
User_characteristics - KES	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	...So I may be able to, at some place in the building that I knew it existed, I may be able to get all my information before entering the building. For instance, how many people are in this building right now? The building would know. And the building could tell me, "There's four occupants that are currently in the bedrooms on the third floor. I mean, that would be-- I mean, talk about affecting our job tremendously. That would be unbelievable
User_characteristics - KES	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	.... When we, being a deputy we go to the school for active shooter training. So the 3 arson investigators we go, too. And... we have to switch to a direct channel in the school because we cannot talk out. And I have that same problem in that fire in there. I've got to switch to--we've programmed the radios so it's just a click, you know? It's just a turn of the button. But we're still dealing with, you know, if you're--if they don't remember to do it, you know, going in, they're deaf.
User_characteristics - KES	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	Equipment failure or operator error could be a big deal. You know somebody's--whether they're new or not they may or may not necessarily know how to use a certain piece of equipment. They may not use it every day that they come to work.
User_characteristics - KES	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S4: For ISO we have to check hydrants in our first response area to know where they are. In certain areas of the county we are required to test pressures and flush them, some utility districts won't let us touch them but we still have to identify where they are and so we do that once a year and what else we do, we call it pre-incident planning. We visit all the commercial structures in our first response area and we plan for a fire to happen; we get contact information, we know where the utility shutoffs, are we know where all the exit's are - if we have to go inside, we know how to get out. We do that kind of pre-incident planning thing; we do that once a year as well, plus all other things that he said --.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - KES	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S4: Yes. So you know periodically we are to drive to our first response area and be familiar with the roads, any construction, any lane changes, new roads, new subdivisions, we are supposed to stay familiar with our area. Some areas are pretty big, so you know lot of times we will require some help from the I Am Responding; you can click on the map button and it brings up the map for us and it helps us guide us in there GPS wise.
User_characteristics - KES	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: We want to sort of know where we are going, like study the map and then work it.
User_characteristics - KES	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: Yeah, but some people in this department gets confused you know like they have never been on them roads so we got to pull it up. We obviously pull it up to make sure we get there first but -
User_characteristics - KES	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	S1: Yeah. So do you need to know the area? The roads and the stuff, like that? S2: Yes.
User_characteristics - KES	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	And there is about 20 of us that are always on the call because either they are working or we call them (I hate to talk bad about anybody) - we call them Hollywood fire fighters, they want the word out that they want to look cool but they don't know how to do it. They don't want to --
User_characteristics - KES	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	S2: Right. Unless we get our Captain on the scene or one of the lieutenants and then they are on command until, if he comes, sometimes he doesn't -- he will call and say, I'm at the station. If you need something, let me know. And then we are like okay, we got this handled, like if it is a wreck and if it is not real bad. He'll say -- alright, I am standing by the station, let me know. But most of the time we got one or two lieutenants on the scene that are -- you know they have been doing it a while so they know how to take care of it. We got a couple of real active firemen and their lieutenants and they know pretty much what the chief knows.
User_characteristics - KES	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	But is it is a burning building, a lot of times everybody just does their -- everybody knows what they have to do
User_characteristics	FF	R	Field	46-55	5 or less	Male	FF-R-055	And one of our guys that is in our department, he is a dispatcher too, so

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Responder					he got called to do that because he was good at it. So they were like, we want you to come up here and help us with this. And he is like -- are you sure? And they are like -- yeah. He comes up here and he is like -- I had not had a bath in three days -- are you sure? [laughs]
User_characteristics - KES	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	So anyways you go through all these cards these are the phones in the racks so I can dial a number a secret number and then listen to the prompts and change these without looking at a computer screen by pushing buttons...
User_characteristics - KES	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	The problem is when the mayor does a great job and gets some money and the technician orders it all and then leaves so and I could go install it but I'm not allowed to do that anymore.
User_characteristics - KES	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	One appeal and a positive impact from being able to send resources out is the experience that people get and then bring it back to our community being where our communities have situated in the wild land of an interface... you don't really get a full grasp with it until you go on the big type one incidents and then they see everything there and it's like oh I finally got I understand it so that's what's been good for also retaining new members too. Being able to send them out I mean we all want to use our skills. We want to be able to be up there and helping so having that ability to send those resources out keeps their motivation up and then also keeps them kind of locked in for the fire department.
User_characteristics - KES	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	And see how everything works so that when we have a fire here we can protect our own community and in both of the 2007 and 2013 fires we took people like that were nationally carded and just stuck them on the incident command team in that position for our own community because we knew the community, we knew where all the houses were, what the risks were and it was very helpful.
User_characteristics - KES	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	You've just got to have the personnel that knows how to do it all and is available when you need them.
User_characteristics	FF	R	Supervising	36-45	11-20	Male	FF-R-047	I mean like these newer people I'm not going to put them into a structure

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Field Responder					until they have had the right training so you know I guess that's where I just use my judgment on call of whether or not you know if they don't have their gear right now that's fine because they're not going to go in there anyways so but I mean if you looked at the newer gear that we got and some of it is already at the ten year max I don't see a thing wrong with it you know but it's the fireman wearing it that could come back on me then they could come back on the town board then they come back on the town and sue me and sue all of us because of their PPE was bad or something you know and it may not have been bad because if they got burnt and they assumed that it was out of date we probably wouldn't have a fire to work.
User_characteristics - KES	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	Well most of the multi well I mean we may have a few multi-day when here you know but the last one I can think of was just out here east of town. It got in the trees I mean you know a tree is going to burn forever unless you bring in a dozer and knock it down and be able to foam it or something and it just got into a place where we couldn't get our trucks and our hoses weren't long enough to get in there.
User_characteristics - KES	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	Right you know you're sitting here either waiting for people to come you know or I'm thinking about okay what am I going to do, how bad is it you know what all am I going to need? All those scenarios run through my brain.
User_characteristics - KES	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	There's a lot of them. Which it's good that we have them. It's good that we have them because that way you know we can't say we've got to have this done and it keeps us in check. It keeps us up to date knowledge wise, training wise because I mean if we don't know what we're doing on the scene we just will not show up but it comes to a point that what's realistic. What's realistic for us. You know we're not going to be put in situations like a big city would you know we don't have anything high rise here you know we're dealing with elevators and multiple, multiple stories you know.
User_characteristics - KES	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	No. You can say the word MDT to someone out here and they would have no idea what you're talking about.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - KES	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	...You know the paid entities out here they know how hard the volunteer works. As far as our EMS goes we have our EMR which are volunteer responders that help with medical issues. Those I'm not involved with that at this time but those personnel have really do make an impact you know. You get on scene of a cardiac arrest one thing that will save a life in that case is good CPR and we have some good, good chest pushers around here.
User_characteristics - KES	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	None that I can well no not really. There's all kinds of apps you can get. You can get extrication apps and things like that. If I'm on a scene of an extrication I don't really have time to pull up an app to tell me how to cut a car because I've been doing this long enough I know how to cut up a car.
User_characteristics - KES	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	...We'll just say a structure fire for example we need to be alerted which can be we use a tone out, we need to know who needs to go, we need to know what it's for, we need to know the involvement so that's units that need to be dispatched, what type of a call is it if it's a structure fire we need to know the involvement, is it fully engulfed as descriptive as possible, paint us a picture, paint us a picture, are there people entrapped things of that nature and it's gotten a lot better out here.
User_characteristics - KES	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	And it is like when I come home from my main job I sometimes it's not that I don't want to go out and do the work fight the fire you know work an extrication something job related it's the BS in politics that go with it. It scares me being out here as a first responder because we are so underfunded and limited in our resources from gear to technology.
User_characteristics - KES	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] And that is a way to look at it because you have two different generations so we look at it two different ways but once you say that that is pretty much true. I don't think I've ever read a map but I know I can pull addresses from phones.
User_characteristics - KES	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Or on the computer, or if I add their calls to my queue, then I'll be able to see it. But typically, most officers don't. They just focus on what's in their area.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - KES	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Sometimes, if am looking-- if it's a missing person's call or if a runaway, I'll typically use my phone, and I'll pull up the person's social media account to see if they've twitted something or posted something recently, trying to get an idea of what's going on with them.
User_characteristics - KES	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	Well, I mean, I think most of them already have an understanding of what resources are there for them, whether it's just having a computer that has a GPS in it.
User_characteristics - KES	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	For communication? Yes. It's not bad. I'm a little more tech-savvy than some of my guys, and I know that they get frustrated dealing with it. But they're all capable of dealing with it. They just whine about it a lot. So they're capable of dealing with they just don't really want to.
User_characteristics - KES	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	We also, again, in [City], we have already gone down the MGM route. We understand about sandboxes, so even if we were doing something that cached data, we know we're smart enough to put it in the sandbox that we can deliver without that officer having the physical phone. Here's the sandbox..... And then, they're not going to ask the questions that I want to ask, so I'm just going to take it upon myself and block my number and I'm going to call. I mean, everything is simple, e-mails and we have to sometimes e-mail files to ourselves. We have policy around it, make sure it's approved, but at a jail-- if I'm in [County], I don't have access there to my network. But I can get there from my phone through our virtual machines and I can do business that way.
User_characteristics - KES	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	...We had this camera and it was amazing. From a technology perspective, it was awesome. No matter how the camera was oriented, it always looked like you were standing straight up and down. It could see in a dark room. It could be almost completely black and you could see everything in there. That's awesome. But from an officer's perspective, that's scary. Because if I walk into a dark room and someone knocks me over on my head, I don't want you seeing everything in the room better than I see. I don't want the room to appear straight up and down when I'm upside down, because I'm going to make decisions based on what I'm experiencing.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - KES	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	...So we have to utilize all the technology that we have here in the department. Which is why being in police technology actually really helped me for this position. Because I'm able to find our digital videos, download them, go through, and redact them, that kind of thing. So I was already familiar, luckily, when I got to this squad.
User_characteristics - KES	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	The tricky thing with that is it's kind of like if we get our work email on, we're basically granting our CTM access to all that is on a phone. And then also when I try to remind officers, because not all of them are aware, too, for open records requests, if you put work specific stuff on your phone and they ask for it and you haven't gotten rid of it, you have to provide it. So I always tell officers to be careful about texting things about work or taking pictures with your phone or that kind of stuff. Having things on your actual phone, you've got to be careful of. So that's a concern.
User_characteristics - KES	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	We did when I started. And then now we're told to not use 10 codes. Which, some people still do. Because it's like they taught you another language and then they tell you-- yeah so I think, probably the newer officers may not as much. Because I don't even think they're getting taught it anymore.
User_characteristics - KES	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	...Be like, "Oh--" Because you also can't take things personal on this job. They don't hate me personally. As a 26-year-old kid from Chicago area. They don't hate me. They hate the uniform, and what it represents, and stuff like that. So I mean, you can't take things personal. During inauguration, we had those riots here. They were yelling at us, say all sorts of things, throwing bricks, whatever. And you still have to act the same.
User_characteristics - KES	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah. And I mean, it's a little ridiculous, but you also can't make it too complicated too. Because police officers are still very straightforward. They don't need anything too fancy. It just has to work right, and it has to work all the time.
User_characteristics	LE	S	Field	36-45	11-20	Male	LE-S-038	I think I pretty much have everything I would need. Outside of work, I'm

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Responder					not a big, I guess, technology type person. I have a laptop. I have a desktop and a phone. At work, I have those things too, so that's-- yeah. There's nothing.
User_characteristics - KES	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	Yeah. That's okay. Yeah. So I've been with the police department for the past 15 years. I was a [Job title] in the 3rd District for five years, I was a [Job title]. I was in the 1st District and then I was in the [Job title] for about two years. I was a [Job title] for about three-and-a-half or four years of the 3rd District in patrol. I was a [Job title] in the 6th District for about a year-and-a-half. I was a [Job title] in the Special Operations division for about a year-and-a-half, two years. I was a [Job title] of the 3rd District for about four months. I was the [Job title] of the Special Operations division for about a year-and-a-half, two years, and I've been the [Job title] of the Homeland Security Bureau since April, so.
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	...And so we'll send everything that might apply in some way, shape, or form just to Homeland Security Bureau. Anything coming in for the public that might apply is sent to us and we determine whether-- a lot of them, just because I've been with Special Operations so long I can answer myself and not [crack in?]. Can we carry a flare gun in our boat? Yes, you can, as long as you keep it on your boat. Once you take it off your boat, it's a weapon, blah, blah, blah. Simple things like that, there's a lot that, due to experience, I can answer myself. But then there's some that we need to dole out like other law enforcement agencies will send surveys
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	What comes up, goes back down the same way. So if we received it from the Special Operations Division Commander, it goes back to the Special Operations Division Commander. Because one reason is you want everybody to learn what we found by the time it got to us. Because if they're not looking for that, or there may be specific knowledge that we have that they didn't have at the time, or it may be something that it's-- people don't catch it. Like a word that is a real word but it doesn't belong where-- you know how auto correct doesn't catch everything. Like cans instead of can't, you'll miss it. So we want to make sure that people are

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								just very careful about it. Because there is nothing that should come out of this office that should need any correction whatsoever at this level. So we're just picky, picky, picky. Or institutional knowledge, an example is we get reports of everybody who has a cruiser that they get to take home, that could be called back in. We can [merit it?] to bomb squad, our SWAT team. Every month, we get their reports. Well, I remember that some new people came in and got permission to take their cars home but I didn't see it on the monthly report, and I remember because those went through our approvals.
User_characteristics - KES	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Yes. Because most videos, some of the programs out there and the DVRs and the camera systems, surveillance systems, some people are really good at working with them, and taking the pictures, and taking the video, and making it just from the point you need [laughter] and the point you don't need. And they do a really good job. They put it on the right files. But a lot of people don't know their system very well and the files, they're never right. Some of us can't even see them when we get copies of them here because they don't-- it's just how they put them, because computers can be tricky sometimes. So it's just the person too. The store or whatever, like Safeway - we have two Safeways here in the city - they have so many different people that use their surveillance systems, and they rarely do it right half the time [laughter]. So you always have to go back one more time. So for them trying to get it to us in the active call, it's not going to happen. I don't see them ever being able to physically do that in time. But could they send a picture? Maybe.
User_characteristics - KES	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Some people say too, "How do we do it?" Like we're heading to a high-risk violent call or something and we have our MDC with all this information popping up, we're trying to read it, and we're dealing with stop lights, and we're dealing with pedestrians, and we're trying to get there. I mean, we're running cold. How do we do all that? And people think we're crazy, and we're not safe. You learn to be safe. You learn to do it properly, and you multitask. We learn to multitask. I mean, we have to. But we don't want to add anymore crazy technology necessarily to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that scenario. But what we already have, if you can take and just deliver the right pieces to us at that time, I think is the key...
User_characteristics - KES	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Because my job involves a lot of supervision. I have to be up-- I have to be-- I have to understand investigative strategies, and I have to approve those reports. So I have to review them and ensure that things are done correctly. I also work as a detective when necessary. And historically, I've actually been our cell phone and Internet crimes detective, so I've dealt with a lot of technology in that realm.
User_characteristics - KES	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Yeah, I think it could. Yeah. And like I said, the officers now are much more technologically savvy than back when I was a young officer. The technology, I mean, really wasn't there. And especially the younger folks, they're very good with texting, calling. They are good researchers. They know how to use a lot of the criminal justice databases.
User_characteristics - KES	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Yeah. Because the one thing that I've learned-- I've done protests and things for a very, very long number of years. And so I was in the SWAT unit for about five years, so I did a lot of tactical stuff there. You never have enough airtime, so being able to chip away at some of that stuff-- I don't need to ask officer [Name] where he is. That frees the air up for more important tasks.
User_characteristics - KES	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Yeah. Everybody starts off in patrol. And then if you want to go into one of the follow-up units, one of the detective units, if there's an opening after-- the requirement sometimes fluctuate a little bit. But usually, after somewhere between three and five years in patrol, then you're eligible to apply for specialty units. And so there are all the various detective units, but there are also such as traffic, harbor, mounted patrol. I mean there are just such a variety of units, but everybody starts off in patrol. You can also decide to take the promotional examinations if you want to. So the next rank up from officer is sergeant. It's a competitive examination. And when you're a sergeant, most often, more often than not, you'll start out as a patrol sergeant. But again, there are sergeants and all of the follow-up and all the specialty units, and so you can apply to go to different units outside of patrol. And the next rank up would be a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								lieutenant and then a captain. And beyond captain, there are the assistant chief and deputy chief ranks, but those are appointed. The captain is the last rank you can attain on your own merits by taking the examinations.
User_characteristics - KES	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Obviously, there are people with all ranges of experience in the department, so there are some people that I've known for as long as I've been on the department. Most often in patrol, you have the younger officers, and so the bulk of the officers in the precinct came on well after I did, but when I was their watch commander, I tried to get to know as many of them as I possibly could.
User_characteristics - KES	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Yeah, in broad terms, I think it consists of keeping a clear vision of what you're trying to accomplish and then trying to filter out information that is not useful in obtaining that objective, right? But then you always run the risk of ignoring something that actually will help you, and so I think you have to develop the skill of assessing and analyzing what information truly is useful and what is just white noise, and I think if you could develop a way to teach that to people, you'd be a millionaire [laughter]. But because there is just so much information being pumped out, I mean if-- I can easily conceive of a scenario where you're trying to get information, reading the information on the screen on the in-car computer. You're listening to information coming over the radio, and you have a citizen or two or three telling you things all at the same time, and it is. It's sensory and informational overload, but you just have to, as best you can, not get overwhelmed and snowed under by that and just, again, keep a clear vision of what you're trying to accomplish and which pieces of all this information, which pieces that are coming your way are going to be of use to you and which are not? And I don't know. It's neither an art nor a science. It's just the reality of the situation that police officers find themselves in very chaotic situations, and you have to be able to bring some level of order to that chaos.
User_characteristics - KES	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	.... I mean, so I am in no position to offer any kind of worthy comment on why people can't talk to one another [laughter]. But personality comes

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								into play, interpersonal relationships, obviously, in high-stress situations, then people's reaction to stress would-- all the physiological reactions and emotional reactions, neurological reactions to stress, sometimes communication just breaks down. I mean you and I might have a very clear and--
User_characteristics - KES	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Well, I always make kind of a joking comment, but you can tell the rookies from the veterans because the veterans carry their bare minimum. They carry their gun and the bullets that they're required to carry and maybe a set of handcuffs. And the younger officers have every toy [laughter] that they possibly can carry attached to these tactical vests. And they might be a very relatively slim and very fit individual, but they're walking around. I don't know. They look almost obese because they have so much equipment attached to them.
User_characteristics - KES	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Long, hard, tiring. It sounds like I'm old, doesn't it [laughter]? It's just not easy. It's hard work, and you have to have an aptitude for it and hone your skills, and--
User_characteristics - KES	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Yeah, yeah. Of course. Yeah, yeah, yeah. Yeah. I don't need the map or anything like that. [inaudible] others do but I don't need it, yeah. Yeah. Yeah. Actually, that's a good point. The map, I have used it a few times. It's kind of nice to know you can see on the map where the call is, where you are, and as a sergeant, I can see the-- I think all units can. I can see the other units, I can see where they're at.
User_characteristics - KES	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Well, I don't want to say that because I've been around long enough that, if I look at what he sends me-- now, one of the things that my squad was asked to do early on was to work on robberies. So that information was very important to me. It came to me in a different way. Our crime analysis unit would send me a bulletin with dots on it, just specific to those street robberies, with some suspect information, and times of day, and vehicles used, and those kinds of things. That's more important to me than, there was 13 robberies in the precinct.
User_characteristics	LE	U	Field	56-65	31-40	Female	LE-U-031	Right. So for instance, the other day when I was preparing for roll call,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Responder					the officers on first watch made a burglary arrest of a suspect. I know that he is going to be in jail for a very short time. He's going to be back out, and I wanted to look at his picture. So I went into this system, took his name, ran his name, found him, found his picture, printed his picture, got up and walked over to the printer that was a mile away--
User_characteristics - KES	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	The talking over each other so the radio will bonk. So if I key the mic the same time another officer keys the mic, somebody gets bonked out but you don't always know it. You have to be seasoned, or - what's the word I want - have some experience to understand what's happening, because you'll hear it bonk and you're not sure if your transmission got out, or maybe, let's say you're in a fight and too many people try to talk at the same time, maybe they're at the same scene or-- if we're going to a really hot call, one of the things the officers will-- the first couple of cars need to get on the radio and say, we're going, but the rest, I don't them to take air up to say they're going. Just go. Because by the time they get on the air, maybe they're already there trying to transmit something, and you're saying, "Yeah. I'll be there from [[Name] and [Name]?]." And those three seconds could have been, "I need help."
User_characteristics - KES	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Okay. If I was to describe my work to a complete stranger-- I attempt to be a bridge between public safety operations and information technology, and I try to speak both those languages. And then as we all know, technology shows up. It surfaces more and more throughout public safety and throughout our jobs. It's more accepted. It's more used at places like the 911 center. And because of that there is a gap I think oftentimes between the vernacular and what means what-- what some of the operations mean as opposed to IT. And, again, I speak both those languages. So I think that's a plus side of my hire, but specifically I was hired in to usher next gen 911 technologies into the city and regionally for the county. And what that means, again, speaking to a stranger is giving equitable accessibility to all of our citizens who might use 911 to be able to do other things in voice calls. We're going to start with text messaging and eventually move into multi-media and things of that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								nature. But overall the whole system, 911 came about in, what, the late '60s or so? Not much has changed except for the advent of wireless calling. And now a lot of things are changing rapidly. And so that's what I attempt to do from day to day. The other side, I guess, of what I do is operational because I've worked on the street before as a firefighter and a medic and a police officer, so I know that world and I think that's important as well. And so even though I'm IT I do try to maybe to some people's be-grudgeness step in on the operational side of things to provide some of that insight.
User_characteristics - KES	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Yeah. Yeah. We put out a lot of fires metaphorically, and then the first responders that do it literally. We have a lot of that. And it comes from that high demand, I think. When things do change rapidly and dynamically, they look to people like [Name] and I for that immediate responsiveness and being able to provide the answers or be able to look in the right place for the right answers.
User_characteristics - KES	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] --of our duty is keeping the lights on whether we like it or not. And I think as time goes on we plan better and we get better at mitigating those fires and those emergencies that we face internally while our first responders can go deal with other emergencies out in their service area.
User_characteristics - KES	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] ...There's a whole lot of data being ingested, analyzed, spit back out in various different reports and things, but the technology from an operational point of view is sometimes kludgy still. It's got the old kind of Windows 98, 2000, XP feel still. In the world of public industry providing all of this stuff to everybody, the expectation's way high for the public when they interface with people like us at public safety and we don't necessarily reciprocate that with the technology we use. I say 10 years ago, like [Name] and I were wizards; we could make anything happen because it was still sort of new and developing. I feel like things have gotten a bit stagnant in the technology realm.
User_characteristics - KES	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] And I was just going to bring that very thing up. That's the other thing, is everything is going so fast, and you have different levels of understanding and knowledge of the technology, but you're trying to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have everybody do something uniformly, and not everybody's going to be able to achieve that, and that's why you end up having things that aren't used. But yeah, it's just the disparate knowledge. Technology's moving too fast. How can you possibly keep everybody at the same knowledge level, on the same platform,
User_characteristics - KES	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] That's a really good point. You've got all these options, and the decision makers may not be on the same page with those options, depending on their level of knowledge or comfortableness in that area.
User_characteristics - KES	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] That made me think of something too. I might be interfacing for example with somebody in the dispatch center, and they could have just had a horrible experience with whatever they were just dealing with, and I asked them something simple and they snapped back at me. I've just been in that job long enough and worked also as a dispatcher to know I don't snap back at them, I just give them their space and then we'll talk about it later on, and usually everything's okay after that. So it's the stressors is what you said that cued me into that.
User_characteristics - KES	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] ...Some individuals like to do call taking more often and we'll do our best to accommodate those individuals to what they feel they're better in, strong, but they are cross-trained. So if we need to hold individuals on overtime, a dispatcher may dispatch the first eight hours but then they may help out for four hours in call taking. So everybody's cross-trained. But a typical day, they come in, they take a look at the board, see what their assignment is, sit down and get to work. We have very generous breaks.
User_characteristics - KES	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...I think in a lot of ways-- a couple of things. One is creativity, collaboration, but more importantly I think really understanding. Being able to compare current state with sort of what is possible, and understanding-- because a lot of engineers and technicians, they get so caught up in the weeds of certain aspects. And really understanding, kind of going through that and challenging them on a lot more fronts that says, "Well, what's more reliable?"

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - KES	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4]... So you make changes along the way, and you make it better. I mean, that's what we do. If you're not assessing, identifying the issues and gaps, you're not making the changes, you'll stay stagnant and you'll never solve the problems.
User_characteristics - KES	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	So my primary focus is narcotics and drug investigation. So that includes running a confidential informants, buying controlled substances, looking at groups of people who are-- there's a group of people, six people, selling meth. You look to see if there's connections and then if you can build a case out of that. Then whatever else they need me to do. Last week I was teaching a class to eight-year-olds about drugs. I'm also a [Job title]. So I go round the state and actually all over the West teaching about the drug impairment and drunk driving, teach all over the State about marijuana and the impacts, teach at the academy and so on... at [College] in the hood.
User_characteristics - KES	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: ski town narcotics office caseload] It does and it doesn't. Our base of the people that I deal with are somewhat steady because it's always the same people. I mean, I work dope, but I'm the worst narc ever because I've been doing this for 10 years, and everybody knows me. You see, I'm not exactly one that blends into a crowd. So they all know me. So I've got to find creative ways to get into them. The other people on my team, they're not as well known. They haven't been in The Valley as long, so...
User_characteristics - KES	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: authentication] ...Actually, this one does... Maybe it's an S because the C, they discontinued. But I've got a biometrics on this. I don't know if we have a departmental policy that you have to. I don't know. I do just because... I'm minor anal about this. So yeah. I've got a four digit pass code. I don't have the one where you need to type the Declaration of Independence to get into it because that's just annoying. But then I got biometric and then the pass. And then for our county email, it's all through Gmail. I'm not a fan of because I don't like the fact that Google keeps everything. I'm sure Apple does too. And I'd be naive to say they didn't. But then through that, then we have two step verification. So I can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								access my Google drive, I guess, every 30 days. And it's always at the most inopportune damn time... I've got to go into the Authenticator app and get my six digit number or whatever it is, and then go back and type it in.
User_characteristics - KES	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	So there's that. But yeah. English, Spanish, and German are the three most spoken in [State]. I know people that, if I need to, I can call, and they can handle all of those. We have deputies that speak Spanish. We have deputies who speak German, deputies who speak Portuguese because we get a lot of the ski resorts. They bring up people, and I think they're J-1 visas. So they bring a lot of South America. And then you'll get Portuguese up here, and they commit crimes and-- I'm sorry not Portuguese but Brazilians who speak Portuguese. And then so we've got somebody that speaks Portuguese that can speak to them. And their eyes about fall out of their head when they run into somebody because-- but if you run into somebody that speaks Mandarin, you're not going to know it's Mandarin. You're just going to know, "I don't know what the hell you're saying." We have phone call language lines that we can call up, and they'll provide translators for us.
User_characteristics - KES	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: common apps] I don't know. I think everybody kind of tweaks it for what they do. And those are ones that I've found that work for me. And if you told me, "No, you should try this one," I'm going to look at it because I don't know everything. And there's always something out there that could help me.
User_characteristics - KES	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: using Word for reports] It's not trying to be everything else. So I'm a horrible speller. It catches the majority of my spelling errors and all that kind of stuff.
User_characteristics - KES	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...I'm a different level than the patrol guys. It's not that I'm better than them by any means. I have to answer same questions, how to do stuff. If I end up pulling a patrol chief, I'm lost. But as far as the detail in the type of reports. When you're typing a homicide report, and it's your initial report, you're typing 30-plus pages, where on patrol, I don't think I had anything more than 3. Maybe an ugly domestic is 4 pages. But you're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								craving in so much more detail. And you can't just put in. The old days, they're doing a DUI [inaudible] arrested same, they're gone. You got to spell it out. My DUI report as compared to somebody else's is twice as long. But it's because I've got the extra training, experience so I'm able to learn how to articulate it, so.
User_characteristics - KES	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: report writing] I know better what's needed in court, rather than me at year 18 as opposed to me at year 2. We're totally different people. We know how to handle stuff better...
User_characteristics - KES	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...And being detectives, it's a spot we all have to attest for, and everybody gets picked because of that drive to do the right thing and get stuff done. But it gets very frustrating that the boss is always coming in and derailing your train of thought.
User_characteristics - KES	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	The pain in the ass is the thing is clunky. It's got an old BlackBerry-style keyboard... I got big fingers, I got bad eyes, so little screen, and it's not user-friendly from the physical aspect of trying to look. And you're in a car. It's 2 o'clock in the morning. It's a well-known fact. People don't like cops, especially at 2:00 in the morning when you've pulled them over, and they've probably had a few pops in them. So you've got video in the car. You've got your radio. You've got your computer system, whatever the hell you want to call it. Hopefully, you've remembered to just turn your XM, or whatever the hell you got, Pandora down. You turn that down. But you got to do all of this. You got all that going on in the car. You've got to keep track on your suspect, who's in his car, who knows he's going to county and may or may not want to fight you, and he may have something hidden under his seat. And you're trying to type an e-ticket...
User_characteristics - KES	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...the data that's available, information gathering. And I think it's a skill the newer guys have lost, or they don't have is go out and talk to somebody. That's like, "Oh, no, no, no. I can't do that." "Yeah. Go talk to them." And a lot of guys want to solve stuff from behind the keyboard. And you have to go out and talk to people. So there's good and bad. But just the technology, you have computers in the car. You've got the video

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								systems in your car. You've got tasers. There's all kinds of stuff. And I think most of it it's for the better.
User_characteristics - KES	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	But people don't like to talk and-- I say kids. Like I said, I've been in this 18 years now. People just getting new on the job don't have that ability to talk to people. They don't have the ability to sit down and be [inaudible] and sit down and wrap with people. Some do but others in the majority, they think there's going to be an app that's going to save their life, where they can send an emoji or a meme that's going to get them through a situation. There's not. Sometimes you just got to figure out how to talk to people...
User_characteristics - KES	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Well, I am. I mean, I got a car. I got a 4Runner, but I hate it. I had [inaudible] Ford I liked too much better. But patrol cars, there's just so much crap in there that it's tough for me to fit. And there were the different styles of cages. And if I went back to patrol, I'd-- I'm at a point where I could spec out my car within in the sense of, "Don't put this here. Put it on the other side. Or put this piece of equipment somewhere else." So I got that little bit of stroke. But I'm very blessed by that.
User_characteristics - KES	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...I get that now if I get a car, "Where are you going through radio? Where do you want this?" Because I know what works for me. Been doing that long enough that I know I like the radio way over there, not right underneath...
User_characteristics - KES	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...So I can remember when I started to where it is now. And I'm jealous of the people that will be here in 20 years because I might still be here. I probably won't be. But the cool stuff, they're going to have. Being a cop is being a cop. You can drop me in New York City. I could handle a domestic. But the technologies, and what still works, and what doesn't work, and what's been replaced. I think that's fascinating.
User_characteristics - KES	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: daily routine] Yeah. So expert in a lot of things, in charge of a lot of things so.
User_characteristics - KES	LE	U	Manager	46-55	31-40	Male	LE-U-020	I'm 24/7 on call... Yeah. And that's why they said, "Well, when are you going to retire?" I said, "Well, I'm still young," He says, "But nobody wants

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								my job [laughter]" I said, "There has to be at least two of me to do the stuff that I've done." But I've done it for a long time, so I can do it.
User_characteristics - KES	LE	U	Manager	46-55	31-40	Male	LE-U-020	I've been a director since '08, so nine years... [Before then] I was a regional manager, so I was in charge of one of the centers. So I did that for about nine years as well and then I was a dispatcher before that... Yeah, so I started from ground up and went all the way to the top. So I still understand what it is, the frustration, and what the end-user needs and when it doesn't work, what it causes them to do.
User_characteristics - KES	LE	U	Manager	46-55	31-40	Male	LE-U-020	Yeah, and every day is going to be different, and that's what I liked about the job. When I initially came on, I liked it when it went bad. I was a shit magnet, so [laughter]-- but that's okay. I liked those type of things, but you have to have the temperament and the abilities on that. So it is a younger, I would say, workforce. But a couple years back, when the economy went to crap, we had a lot of middle-aged, 30s, where people were applying because their line of work was not available anymore. So we got a lot of good people out of that...
User_characteristics - KES	LE	U	Manager	46-55	31-40	Male	LE-U-020	Florida does have it, and actually, it was one of the initiatives that when I was-- I had went to Florida with my family to Disneyland type thing. And I saw it on that they have Star FHP, so we did some research on that and then got in talking with them and says "Yeah, this is what we do." So then we brought it into [State] and set up the program and got it going.
User_characteristics - KES	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	we've put the little fires out, and we find them as they pop up throughout the day. Sometimes we'll get requests from people for information that they have access to, maybe they don't know how to get to it. So we'll also do ad hoc, get on the phone with somebody and walk them through a process and do some last-minute training on something. So that we try to do everything we can to make sure everybody can be self-reliant with the use of what we have. So they're not always-- because if we took care of every electronic need or every need for a video or something, we wouldn't get nothing done at all.
User_characteristics	LE	S	IT	Not	Not	Male	LE-S-015	[RE: heavy MDC use] They do. We'll help troubleshoot things, but as far

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Specialist	specified	specified			as the actual working on the laptops, the MDCs, that is handled by IT. So we send them over to what we call the radio shops and those computer technicians-- I mean, we're not computer technicians, so they actually will fix things when things are broken or sometimes, it's just like the guys mentioned earlier, user error. So a lot of times we can diagnose, "Okay, this one's just user error. Let's get this handled."
User_characteristics - KES	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	overall, I'm just about the newest-- by a month, I'm almost the newest guy to the unit last year. And I still work the road a lot because I'm workaholic. And I think overall, the computers were pretty reliable
User_characteristics - KES	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	the three of us have all been in the department for a long time, and have seen even before we had an electronic support section, just the department tries to stand-- I think we were one of the first agencies in the nation to get computers in the cars. And that was back in the late 70s, I think.
User_characteristics - KES	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: responding to incidents] SME S4: Yeah, I sell my soul several times a month to a DUI overtime shift, and it just kind of needs worked out, that I've worked the last five Fridays. So yeah, so I'm out there at least a couple of times a month SME S3: And I'm not nearly so greedy, I don't [laughter] currently go out and work the road, although we are allowed to go out and work the road, and actually encouraged to go out and work the road. Yeah, but I am 2 years removed from working the road after 35 years of being on the road, so. SME S2: And in my position managing the section, I'm never on the road, and it's been, what, probably eight, nine years since I've been on the street.
User_characteristics - KES	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	I was the first one to start writing reports in the car on our computers as the guinea pig, and I started teaching at the academy when everybody started doing it, teaching how to do that, and I have ever since taught out there as to how to do that, and the difference in officers from when we first started doing that as far as how adapted to technology they are and now, it's just night and day. It's completely different. So everybody is much more computer savvy now.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - KES	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	I'm pretty familiar with the technology that's out there for law enforcement. I've been in this assignment for seven years, and I think we're pretty much up to speed on everything that we want to be up to speed on. I mean, there's some technology that's evolving out there...
User_characteristics - KES	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...back when I started, I could listen to the radio and on a Friday night, where we have 25 guys working, I could tell you exactly where everybody was in the city. As we've become more and more dependent on computers, I can't do that anymore. Which I'm doubting that anybody here can do that anymore, which kind of makes it hard for me to understand why we don't use more the technology, instead of using the radios...
User_characteristics - KES	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	We'll call through the radio to ask for the tow to respond, and our dispatch center will then call our contract tow company and send somebody out. Sometimes if they're really busy, and I can tell dispatch is busy, I will use my phone and call the tow company direct and say, "Hey, I need a tow out here." But that's pretty much it.
User_characteristics - KES	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: dictating reports] ...So we went to Dragon Dictation, doesn't work. I mean, for us. We have a few people around who beat up and train their dragon enough that it works-ish, but the quality of reports weren't there, and then the reports got shorter. So then, most people just stopped using Dragon altogether. They went back to just hand-typing their reports...
User_characteristics - KES	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	So I started my career in dispatch. I did dispatch for 10 years in a couple different places. And then I moved to patrol. I did patrol for 3 and a half-ish years, and then I've been a [Job title] for a little over 2 years.
User_characteristics - KES	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	So I've worked for three different dispatch agencies. Two of them have been county-wide combined, so law, fire, and EMS. One of them was just a [Job title], so it was fire, EMS, and law, but it was only for one city. So you're taking phone calls. That can be anything from nonemergency calls, people looking for information, directions, that sort of thing to full-blown 911, "My child's not breathing," and that sort of thing. 24/7, 365

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you're working the radios so you're dispatching fire and EMS to calls. You're sending police to calls. You're getting other resources. If it's victims' advocates, coordinating with the jail, coordinating with the hospital, that sort of thing as needed. Running NCIC...
User_characteristics - KES	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: comms with FF and EMS] We don't have to do that a lot in my capacity as a [Job title]. When I was on patrol, we did it more, and fortunately, again, being a small town, we've got a pretty good relationship with the fire department, with the EMS. And my wife's father is actually-- he used to be the [Job title] of the fire department, so we would give each other a hard time a lot. But it helps having been in dispatch, I kind of know which radio channels they use, and that helps that I can kind of talk to them a little bit more directly than a lot of the patrol guys.
User_characteristics - KES	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: information from dispatch] A lot of that depends on having a good dispatcher that knows what they're doing is if they have the time to look up locals, if we've contacted that individual before, if we've been to that address before, how come we've been there? We've been there for a barking dog call. Hey, there's a dog there. You might want to watch out. Stuff like that. I know, in most CAD systems, if there's constant problems, you can usually put a flag on an address or a name that'll come up and say, "Hey, this has gang affiliations, or there's known drug-use or this, that, or the other." So that's always good information to have...
User_characteristics - KES	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	I started off as everyone else, the traditional out there in uniform, responding to calls. Did that for about three or four years, and then I transitioned into the training section of the office, who was in charge of all of our new hire training. From there, I realized being in charge of the training that we had some tools, particularly the computer system, that nobody knew how to use. So I figured out how to use the computer system, which then went back to rewriting the training manuals for more efficient work flow and using the database and other tools. And these computers were pretty new. And at that time, it was a DOS-based

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								system. I remember when we got our first PC, which everyone thought was kind of funny. So seeing the evolution and staying involved in that, which transitioned into more technical stuff and true computer work...
User_characteristics - KES	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I remember when we first got digital cameras, and those got tossed to me, and I had to figure out that protocol. I mean, for a while, people in the state would call me-- I don't know if we were one of the first people to buy them. That was from an interesting process and even being able to show kids, take a picture, as they did tours, and then print out their picture for them. So seeing a lot of those technologies come through that people starting off today just-- I don't say they take for granted, but they've just always been there, so they never knew life without them.
User_characteristics - KES	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: electronic evidence discovery process] And that's always an interesting one. When I first brought that up, the person in records was literally printing it out, rescanning it, and attaching them as a PDF. A said, "No, no, no, I meant just print it to PDF and attach-- it's all electronic. You don't have to physically use paper for anything." Then there's a whole discussion on, do you still keep paper files? ... Do you just keep electronic files? I think it's mixed within the county. At the sheriff's office, we still keep paper files. So everything is replicated into a case file that's stored somewhere. The salt mines. I don't know. Oklahoma, Illinois. I don't know where they are. So, yeah, we have all of the physical copies of everything.
User_characteristics - KES	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: ability to revert from desk to patrol] I think, in a lot of places where I talk to, yeah. I think, here in our community, it's out of necessity. I can't just say, "Okay. I'm now assigned to this tech unit and I'll never need to be called in to do anything else." ... I certainly see it as a strength and that flow of information. I feel quite fortunate. As I've told you, feel fortunate I'm able to do this. And at the same time, I think I've worked to get to that level. It wasn't just by luck. So just still try and balance some of those things.
User_characteristics - KES	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I guess that's where I see the differentiation on who's a first responder, someone responding to a scene or in the field versus all the other

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								people who are certainly part of the public safety system and may be on the front lines but don't get that full sense of engagement. To really have those impacts you've-- I've never heard about dispatchers getting tunnel vision or auditory exclusion or all the other things that we're regularly trained on and discussed to recognize in ourselves and in others because it creates a safety situation that can affect others. I think there is a line there and I think it's continuing to be defined... By FirstNet saying we've got to draw a line somewhere, and where is that line, and what could you objectively and scientifically measure and say, "Here's why there's a line." When I thought about it last night, I think that engagement of all five senses and the potential impact it can have to you, in the sense of immediacy and threat and security to you is what kind of creates that.
User_characteristics - KES	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: smart phones] ...Of course, it costs a little more. The cost of the device. The cost of the service. That has to get absorbed into the budget. Then I start hearing from people who are upset going "Well, they give me a gun and all this other stuff. We have to do all this training and now I get this handheld computer and I'm just expected to know how all the parts work." Some of it was in jest, some of it was legitimate from people who weren't that tech savvy.
User_characteristics - KES	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...Typical, there's probably nothing typical. It's going to change day to day. It's coming in and planning out your day and knowing what's coming up... And I think most people get into this line of work, that's part of what they like and expect.
User_characteristics - KES	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Now, the cars we picked up this year, so now the cars themselves are having more technologies with the backup cameras with some of the other display. You can set up the dashboard on your car to display whatever you want... And going through all the menus looking at those. The other day when I picked up a car, I knew I wanted to display my clock and my miles per gallon and where's my temperature thing going to go, and then the display for the audio and the climate stuff, and how can I configure that myself when I back up. Do I want the little lines to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								turn when I turn the wheel?
User_characteristics - KES	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	if I know my car but my car is down and I jump in somebody else's car, well what's different about it that I'm not going to know about?
User_characteristics - KES	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	And everyone knows that in a lot of wilderness areas, you're not going to have radio communications because you can't put a radio tower in there. And generally, wilderness areas are high and mountainous, which means there's valleys and radio signals don't get into valleys. So you know what valleys you're not going to have system coverage, you'll have direct coverage. But that just involves the pre-planning and training guys on the radio on the concept of a radio system and a repeated talk group versus a line of sight and direct talk group. And when do you change and what are the limitations. So their expectations aren't unrealistic versus what your technology can do. So you don't hear after actions the whole time that the radio system just stinks [laughter]. Well, it doesn't stink. Let's work to resolve it so the next time you know what to expect.
User_characteristics - KES	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	We all know who likes to ramble on the radio. As we said, if you have to say break when giving notes about a call, you probably should have typed it to your computer by yourself. That's just a little much for the dispatcher to be hearing and typing and doing everything...
User_characteristics - KES	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: radio signal repeaters] ...We review our busy reports quarterly to see if we need to do an update at a site or if you need to do a training to work with people on how to use their system better, to not use those resources. And just more things to be aware of.
User_characteristics - KES	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	something that doesn't get in the way of them doing their basic job. Technology's great but I don't think we've come up with instinct in technology. Technology doesn't turn on the valve and point the fire hose and run it 100 feet down the line. It can do some of those but not the whole process. So the technology part's great but don't forget the basic underlyings of what the job is, and what that intuition is, and that smell of smoke far away. Sure, an ion sensor can detect there's particulates in the air but I can turn and see where that smell is coming from, and say,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								"Look, the fire's that direction!" And it doesn't matter where I go, I bring all that with me.
User_characteristics - KES	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I mean, if you sit there and listen to radio on probably anywhere, and you hear the calls that gets dispatched out, you would probably sit there and go, "Okay." If you wrote down every call type, and realized, "Well, what is it the police officer's been given all these calls has to know?" Pretty much everything. And I understand when the citizens call in and they don't know where else to go. Maybe we don't have enough 211 services, 611 services, but I listen to some of these calls going, "How are we supposed to know that?" But we're going to answer the phone and they're going to expect something, and we don't want to look like fools.
User_characteristics - KES	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	I talk about when I used to deal with runaways, and people were telling me to counsel them and their kid. And I'm going, "I don't have kids. How is this my job? It was never a part of my training to bring all these things in." And so I don't mean it in a negative way when people talk to me about it. I said we need to understand what is being expected, and just because the law enforcement guys are there, and they're getting all these calls, it's a lot. And if you screw up any of them, then you're not doing your job and it's going to come back and impact you. Not that people don't screw up their jobs intentionally or in ways they should have known better. There just seems to be so much more coming in, and then the backlash within the country these days...
User_characteristics - KES	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I tell you the one thing I've noticed because I wasn't doing patrol shifts for a long time, and that's part of getting old, is having to wear glasses [laughter]. Now, focusing differences, you're out and you're watching everything that's out there, and now I'm trying to come back to focus in on the computer again and my eyes having to adjust. I guess it annoyed me that I was getting old, that I had to do that. And as I've talked to everyone else that I was hired with, I'm not alone. I mean, we're all having to recognize that. It's just a new challenge because sort of back in the day-- what a terrible term to use. I didn't wear glasses at all and my eyes were just fine. So I could read plates and then when I was

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								writing stuff so I-- but I think the computer is what's really showing that and the requirement of those eyes to change their focus levels...
User_characteristics - KES	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...If you don't have Bluetooth in your car, going back to technologies, the sheriff doesn't want us driving and talking on a cellphone. Public perception, it looks bad. Okay. Cars can pair up with only so many devices. So if it's a pool car, someone's got to go through and clear out that list and unpair everything so the next guy that uses it could pair his phone to the car... And some people are going to get in but who's going to do it for me? If you come in and say, "I don't know how to do it." What are you going to say? You told me I can't hold it up to my ear. I don't know how to pair it to my car. I got a cheap old car and I don't do that in my own life. That's legitimate. As supervisors, you can roll your eyes and complain the guy's a fool, but that's a legitimate concern.
User_characteristics - KES	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: typical calls] ...So some of it you kind of know what's going to happen based on the seasons.
User_characteristics - KES	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	So I do want to talk about the new FirstNet national initiative. However states decide to employ it should be irrelevant because it should all go through. When I talked earlier about the privacy and sort of counter-intuitive, sometimes people who are in law enforcement expect more privacy than the general public does. And mainly because we see the-- I don't want to say abuses. We just sort of know what's out there, and so we try and guard our privacy a little more. But I would expect, as part of this network, I would be giving up some privacy...
User_characteristics - KES	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So I started off as a police officer. And then I've had specialized training. So I have about 800 hours of crime scene investigation in terms of blood stain pattern analysis, shooting reconstruction, accident scenes, just death investigations. So that, essentially, I show up on a scene and I try to gather as much of the evidence that I can in order to solve a crime. So physical evidence or through interviews as well. So we're considered a detective here, but we're full-time crime scene investigations.
User_characteristics	LE	S	Other	26-35	6-10	Male	LE-S-021	...I've actually been deemed an expert twice in the use of FARO that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Public Safety Personnel					we've been able to in crime scene reconstruction. We've gotten FARO into court and actually used it as a diagram, actually walking through a scene on the stand. We've done that twice. In both of my cases, one was a shooting where somebody just fired a round at someone else. And then the other one was actually a child death. So it was more of documenting where things were in the scene. So it helped us to understand the layout out of the unit. Both of those cases are the first ones in [state] that we know of to be able to actually get it into court.
User_characteristics - KES	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So I would say, as far as the technology goes, it's very difficult to get the judges and everyone else to understand the technology. And understand it's not this CSI-effect thing where you're just doing voodoo and we didn't just magically create this. It's actually based off of technology and diagrams and measurements.
User_characteristics - KES	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...[information sharing software] is actually, basically, a storage of data. So it's a new version of [information sharing database] and it's a better one. It has analytics so that our analysts here at the department can pull up stats and keep track of things and try to figure out trends. So they tried a program here for a little while of trying to track those trends and then tried to think ahead and think-- it was called [program]. Okay, so they tried it for a while, it didn't work out. In theory, it's a great idea. But at the same time, we're not psychic and analytics can only take you so far. You have to use some cop skill and intuition...
User_characteristics - KES	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So I'm part of a CIR team, so it's a Critical Incident Response team. So anywhere in [county], if a shooting happens or an officer-involved incident of any sort, we can respond. So we get called out for that. So we won't just work in our agency, we work in other agencies. So now when we go over there, we kind of have to buddy up with another agency member and say, "Okay, you listen to your radio, I'll listen to mine, and I'll tell you what I hear and you tell me what you hear." That's the only way that we can communicate...
User_characteristics - KES	LE	S	Other Public	26-35	6-10	Male	LE-S-021	...So I went to a drone piloting class just this last-- or two weeks ago, or something like that.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					
User_characteristics - KES	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... I know we have a lot of old salty dogs around here that they don't even know how to turn on a computer. And they're like, "If it takes more than three steps, I'm not going to do it." So it's simplified. With everything across the board, if you don't make it simple, they're not going to do it. They're just going to move on to the-- or stay where they are, in the past.
User_characteristics - KES	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: using earpiece] So I just recently just started doing this again because I can't stand listening to it just blaring out through the mic here. But when I was on patrol, I would say I could probably make one last three weeks and then I have to buy a new one. It's usually, generally, not the earplug itself, it's generally the tube. But I mean, there's a variety of selections, like I said, of these. This one I cut down because there's all sorts of different flaps and stuff that they come with...
User_characteristics - KES	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: e-ticketers] Yeah, we do have those. They're typically used by our motor units, our traffic officers, so those are pretty convenient. I am technically trained on them, but I'm kind of lazy in regards to technology, so I'd rather just fill out paper tickets than enter it into a little [crosstalk] computer--
User_characteristics - KES	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	... When you go through the academy, there's just certain things you can't replicate until you're actually on the streets and working. So you have to really focus on a million things at once. And if you're not good at communicating and you're not listening to what other people are doing, then you're going to be lost...
User_characteristics - KES	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: various traffic fines] ...I'm sure those traffic guys probably know those by heart, but I don't ever want to take the time to learn that stuff. So it's nice to just be able to reference something and have it at your-- available to you, but not something that you have to dedicate a lot of time to memorize...
User_characteristics - KES	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: communication issues] I mean, the technology aspect is hard. I don't know how you would solve it. I've heard other people discuss, we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								need better radios and stuff like that. I don't know any different, so I use what I have and that's about all I can-- and you hear the older guys, "Oh, back in the day we didn't have anything." And a few months ago, the line got cut to Xcel, so we didn't have any Internet connection to our vehicles, and so it was like reverting back to 1950. And so you kind of get a perspective. It was like, all right, well, you do have a lot to work with, and these tools are very valuable, so complaining about them isn't making anything better. It's just utilizing what you have and making the most of it...
User_characteristics - KES	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	... that's something they harp on pretty emphatically is know your geography. Don't rely on your computer because if something like that were to happen, you have to be able to get to where you're going without the assistance of technology.
User_characteristics - KES	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: MDT lost internet connection] So getting dispatched somewhere, it was basically-- I had a pen-- one of the other officers kind of rigged this system up with rubber bands across-- I think it was on his steering wheel actually, with a notepad so he could just jot stuff down in front of him. I just had mine in my lap, so when they dispatch me to something, I had to take a second and pull over or whatever, write down the address, and kind of a basic description, names, whatever. So it took me a little bit longer, but it wasn't that inconvenient. On a Code 3 run or something like that, it'd be kind of-- because you're higher stress, you're driving faster, you have lights and sirens on, so that makes it more intense. I don't have the time to pull over and write that down, so you just have to function at a higher level, I guess, than you're normally used to.
User_characteristics - KES	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: learning geography] So that starts prior to-- I mean, it should start if you're anticipating working in a general area, then you should do it on your own. But in the academy, [city] had geography assignments, and we would get overtime pay for them, so there's two hours a week, which is pretty significant, just to go drive around or do whatever they want you to do, find locations. Within the academy it's hard because it's combined regional academy, so you have different departments like [city], [city],

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[city], [county], who don't all patrol in the same area. So I don't need to know the stuff that [city] knows. And I actually got in trouble for that, for not knowing [city]'s geography, which is ridiculous to me... But yeah, if you're not taking the time to learn it on your own, it's not going to happen.
User_characteristics - KES	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	... I think, within the car itself, I really don't have-- and I don't have a lot to base my comparisons on, so I'm probably not the best to ask about that. But I don't have any issues with the stuff that we use. It doesn't bother me. I know a lot of people do have issues with them, and I've listened to them. But being fairly new and still trying to learn the intricacies of the job, that's the least of my concerns. "I need better technology, or else I can't do my job properly." And I'm like, "No. Just... do your job."
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	I think our biggest thing is because we hire outside [City], like, hypothetically, [inaudible] recruit from, [come to train officer for the recruit?], I'll get that recruit from [City]. Has never been to [City], never been on the bus, never been on a cable car, seen the box when his mom was making Rice-A-Roni one day, and that's it. And all of a sudden now, he's a cop in [City].
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	And so when that guy on the streets gonna-- because all the bad guys know the new cops [laughter]. You can spot them away, and they'll punk them in a second.
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Cause junior, who's 15, that weighs 350 pounds, I'm not going to put my hands on him, because it's going to be a long night for me. But I will go talk to the elder, because the elder runs the house, and talk to the elder, "Can you please tell junior to put the car down, please?" All right. "And the couch, so we can talk to him right now." And usually the elder. But that's something that I've been in long enough that as a trained officer and sarge, you try to put that onto other officers. And [City] PD, they may have that. They may do something totally different.
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	But there's a certain point where I gotta go hands on and most of the time when I go hands on, somebody's going to get hurt, and it's usually

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the cop that gets hurt.
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Yeah, there's only one [Street], there's only one [Street]. Four. You can count the numbers.
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	...[Location], we get all these mall shootings, it's a matter of time something's going to happen, it's going to happen really bad, and they're going to have an active shooter, and they're going to say, "Where aid for a supervisor?" That's my worst fear, it's my worst disaster happening because I'm not going to be able to manage that scene because I'm not going to be able to communicate to the officers that are in there. There's no way I can do that, and you always have these scenarios as a cop. I get all these scenarios that go through your head and you start thinking, "Okay. This is going to be a disaster." And you hear the other cities that have the same stuff. You get all of these 30, 40, 50 cops running into a mall. At least they can communicate, but just to manage something like that
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	that's a huge side effect when-- we don't have a NEMS. You're suppose to have a National Emergency Management System. So I took all the courses. There are only certain officers that have taken all this stuff. But since I designed the command van, I've been to Texas, I've been everywhere they do it right. So if they do everything under NEMS, then you have your logistics, you have operations, you also have a radio person too.
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Yeah. He had to be up at it-- me and him talk all the time. "The reason the radio's this way is because this this this this this." Yeah.
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	So that police car that was out there, you saw that has the app in it right now. And it will pop up on my screen right away before it even goes to dispatch, the dispatch it has on our screen. So I get it about 15 seconds before dispatch. And then the 911 call comes in maybe a minute, a minute and a half later. Well you could figure how far can you get away in a minute and a half. So I can get it. All of the sudden I hear a pop, pop, pop, pop, and then I see that car speeding right by me. It doesn't take a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								rocket scientist to say, "You know what, that might be the bad guy car," or, "I need to get to that location." And you'll actually get a location, [Address]. If I had come here right away and that person's bleeding, I can probably save that-- by the time the ambulance gets there and somebody actually called 911, he could have bled out. If I'm right there, I'm already doing the compressions, boom. All right. He's alive because of shots fired because officers will get there quicker
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	As a trained officer, I tell cops I want-- I suggest that they wear them. When you go to protests and it's so loud, you can't hear what's going on. When you do building searches, the bad guy's going to know who you are before you know who he is. Because you hear the radio going off in the background. Even if you turn it down. Now you turn it down so much that you can't hear the other cops going. I tell them it's like a watch. So I've had a earpiece in for the last 20 something years. I used to work all the night clubs. So I couldn't hear. I had [Name] go in there for fights or something like that, I can't hear what's going on. And I worked baseball games. It's so loud down there. So I'm doing this, you're trying to hear. Concerts. So now I feel naked without it now. Now when I don't have it in, all these cops, "Turn your radio down, [Name]," because I have it up blasting. And it's just a mold, and the cops normally pay for it themselves. Every mold's unique.
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	They want to be really cool and put it out here, but then what happens, we try to tell them that this wiring gets frail after a while. And [if you?] lean against it. But it's a training thing, so, sometimes I let it get frail. Like, "Hey, that oven is hot, don't grab that cookie."
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	--what you do. So I said, "Here's a call. Here's a CAD. It's an A priority. One of these six people in that corner have a gun. And they're wearing black clothing. Wait a minute. All six are wearing black clothing? so what do I do? Do I get out and point my gun at everybody, because now its going to be on YouTube. Or I do nothing. Right. They couldn't answer it. One was said, "Well, you can't do nothing." I said, "That's correct. I can't do nothing." But if I do something, I'm going to get in trouble. Be called

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								racists. You know who's racist? The person who called 911.
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	So in the police cars, we have the CHP radio if-- and that's not a requirement that they listen to the CHP channel. I do, and I'm able to multitask because I've been doing this a long time. That new cop was trying to listen to the radio in his ear and just trying to get the day-by-day, and listen to the radio, so. They call it radio ear. You have to try to develop that radio ear.
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Through the time. I've been doing it for a while. A lot of cops don't listen to the other channel in the car. [inaudible] listen to the CHP, I'm just kind of geeky when it comes to this stuff. And I had to teach myself how to do that.
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	No. "Oh, no we believe in timeout. No. We'll give him a timeout. [We'll give him a long nap.?] We do this together." We have a huge generation gap. I got these. We got the new cops from [City]. And worked at Starbucks all their life, and never-- I got an [ebop?] instructor here. I got people who never had their license until a week before the police department, the academy because they never had to because there's Uber
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Yeah. And cops develop that. There's a certain breed of cop, and that's why they're cops. The little hair that sticks up on the back of your neck?
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Within the precinct, there are sectors and depending on seniority, you have a good sector and not-so-good sector. But depending on scheduling, you could bounce between the good, the bad, the ugly.
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Well, the Motorola people have a hard time. They haven't been able to quantify it. We've done lots of radio-- I've actually participated in lots of field-testing in the open air. In-building things are coming soon, but with the new building codes and requirements for the BDA systems and whatnot, there was a two-year waiver that our fire marshal granted to all the big buildings. So they weren't required to jump right on the wagon and started improving their in-building communications. So certain areas, you can get away with it. There's no calls for service. The [Name]

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Mall at [Street], horrible comms.
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Yeah, we do active shooter training, where our guys-- the first responders to UPS saved a lot of lives. Those first three officers got together, made a plan, moved to the shooter. The shooter saw them coming and he killed himself. He wasn't done. He had a list in his pocket of people to kill, but he was only going to play as long as he could play. Those three cops did what we taught them, moved right to him. He killed him.
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	People are dug in. I don't know how a handful of civilians can make the case that if they were to allow me to have their channels, it would interfere with the highway patrol officers doing their job, given the fact that the civilians at best work at a little lab playing with transistors, or they manage the people who play with the radios, or they manage the people who make sure that the transmitters and everything work, but they don't know shit about what's going on out in the field.
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Well, it's like everyone knows there's Android and OS systems and even some of the smartest guys I know who have an iPhone personal who are Apple kids have yet to master the Android. They find the whole thing a pain in the ass. I was going to buy my next phone as an Android just to see and I think that--
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	So our bosses historically and their bosses before them, the bosses before them would never invest in training and identifying people who had a penchant for radio. Because radio people are different than any other people in the world. Ham radio operators are the most unique ducks that fly. But they're out there. All you got to do is ask. You might find out that maybe Android wasn't the way to go. And this guy is a radio guy. This guy had eight years in the military, and he was their comms guy. But let's not use any of that.
User_characteristics - KES	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	And the more back to the-- what do I want to know when I'm going up the stairs? I want to know everything up to who cooked the dinner so who's in trouble. How many times I've been there, has CPS been there,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								has APS been there? All these things. A good dispatcher will see some of these things if they run the address separate. But if I'm running up the stairs and someone dialed 911 and put the phone down, and it's check on their well being, and then they won't answer the door, and then I have to force the door, which creates anxiety for the autistic person or whatever, if I know right off the bat that I'm dealing with someone with a diminished sense of communication skills [laughter] or a different set of skills, I'm going to approach it differently.
User_characteristics - KES	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Yes and no, depending on who you ask. A lot of the newer officers, it's very vital information. But you get a lot of veteran officers who have 20, 25 years in, it's all mundane. It's like, "Oh, here we go again with information I don't care about."
User_characteristics - KES	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Yeah, you should. You should know your district. Because if I'm calling for help, and you don't know where I'm at, and the radio's not really working like they do in our department, then you can't really go on your phone to Google Maps to find this small alley you've never heard of. It's hard to find people if you don't know the area. And I'm an FTO, field training officer, so I stress district orientation to the recruits. Because there are times when you can't get on your phone, so you should know where you're at.
User_characteristics - KES	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	And also, I listen to the radio too. So if it's vital information, I can pick up both. I've been doing it so long, I can both.
User_characteristics - KES	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	We've played a game, and you can tell a lot about someone's shoes. A lot of criminals don't wear nice shoes; they just don't. And then, some guys go, "Hey, man. You see--" I go, "No, he's wearing \$300 shoes. He's not going to commit any crimes with those \$300 Nikes [crosstalk]."
User_characteristics - KES	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Now, some guy wearing some old crappy shoe, you're like-- I've been doing this for a while. So you can read people, but shoes are a big giveaway.
User_characteristics - KES	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	I'd say I was a referee, for lack of a better description. I call in the strikes, the balls, the fouls, the outs, the ups, the downs. Kind of being the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								sounding board for a lot of issues and then responding when other people can't figure out what they should do in a situation. Or people have decided what they want to do, and they decided the wrong answer. That's what I would respond. So I would put it in that kind of description.
User_characteristics - KES	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	Yes. Communication, response. And that consistency is not mean that you come in and you're at this 20% range all the time. You're consistent in how you respond to different situations, how you respond to a different call for service, how you respond to different behaviors you may be getting from people or responses you're getting from somebody, somebody may be completely passive, somebody completely agitated or whatever. How you respond to that to bring it into a range where it's a manageable range. So how to get that person down, how to get the super calm person more engaged, so finding that medium but being consistent on how you do that. So you can't give it a box because it changes all the time, so I think that's what it is.
User_characteristics - KES	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	The other events, depending on the size of the events, we coordinate with the city because they do a lot of street closures. So we'll have different sections in the district that may be blocked off for traffic, or pedestrians, or bikes, and that's to facilitate whatever event is going on there. It's either a private party or it could be an open to the public event.
User_characteristics - KES	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	And then depending on what the calls for service, I mean, because it could go-- we just had the shooting with the [County] or the UPS. So it goes from a [convey?] to that type of scenario. And it can at any time just kind of change. So I think that people are aware of that. The officers are aware of that. They kind of plan for that that if you're doing your normal routine, then you're going to ramp it up, and you're going to go to a different gear for a while, and you'd be addressing whatever situation arises, but for the most part, it's a good station. It's a new station
User_characteristics - KES	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	... A lot of time, we'll use a-- for me, so I'll use the PowerPoints all the time to where I'll just superimpose a map in the background and then be able to plot out where the posts assignments are for our side and be able to make it a user-friendly digestible kind of idea of what the layouts

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								going to be. Because the event people will send you maps, and one's an architect, and one draws with blocks, and one has a big crayon that he likes to find.
User_characteristics - KES	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: phone and computer use] You're distracted no matter what. You're not paying attention to your surroundings. I mean, back when I started, we didn't have computers [laughter]. Or we got these fantastical green screens that all you could do it type in a plate. But now, with all the different functions, it makes actually seeing what's going on in the neighborhood harder. And somebody's looking at this box to tell them what's going on as opposed to actually looking at the surroundings and figuring out what's going on.
User_characteristics - KES	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	Part of the thing too, everyone's focused on this box of information as opposed to figuring out, talking to people, whatnot, and actually getting the full story. And I know I've been there too. You get a stolen car and it's like you're trying to call it in and figure out where you're at at the moment.
User_characteristics - KES	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I think, partially my generation, but definitely, the generation that's coming after me, we're more apt to text than make phone calls. And so I think we're not as good of communicators because of that. We're used to being able to plan out what we're saying before we send it and stuff like that. So that phone calls, sometimes you-- when I first came to the department, we had to start making notifications. I'm like, "Oh my God, I hate talking on the phone this much." It was just, it was something to even get used to, to be on the phone regularly.
User_characteristics - KES	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	In the smaller departments, it's also easier to manage the amount of folks you have whereas a police department this size, we have people that have trouble remembering simple ways to code out jobs. There's only 20 of them and they still can't figure it out so--.
User_characteristics - KES	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: 10 codes] I mean, there's 100 and I would say 20 of them are useful.
User_characteristics	LE	U	Field	Not	Not	Not	LE-U-024	I just think I would want the computers to be designed better in terms of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Responder	specified	specified	specified		the programs on them. After seeing different ways-- from state to how suburban department's PCADs function, ours is very poor. And I tend to think of technology now is, can I hand this to somebody who is from an older generation and they can just figure it out? And I would say our PCAD don't work like that. Even just for the ease ability of use. And I've kind of found a few shortcuts, but this is just me playing around, nobody told me...
User_characteristics - KES	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	... So, for example, if I'm driving, I may get a hit on a suspended plate. Well, I can't do anything on that car if it's parked. I can pull it over if it's moving, but I can't do anything on it. So then I have to sit there and acknowledge that, yes, this was a positive read or a misread, and it's a little cumbersome to actively be on the plate reader all day... But, at the same time, it's nice. I think now we're starting to learn how to use it a little bit more.
User_characteristics - KES	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: calls] Oh, they can queue up. We even have a-- it's called a RAP, Radio Assignments Pending. So the entire district will be in a RAP on occasion because there will be so many calls for service... Supervisors can see all of the calls waiting. There is a way to look on the computer. Regular patrolmen cannot see this the way that sergeants see this. However, there is a way to look on the computer to see it. Not all of them know how. It's not easy. It's almost like an Easter egg on the iPhone, sort of like you might sort of kind of know how to do it.
User_characteristics - KES	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: bike officers] We have them in districts. I used to be on the bikes. And that would have been very useful, to have the cell phone to be able to run plates.
User_characteristics - KES	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	I think the most important thing to remember when you get into this is, you've got to do it for you. You can't be worried about the outcome or what becomes of your efforts. You just got to remember what's important is your integrity. That's why I named it number one. You're always doing the right thing for the right reason regardless of what the outcome's going to be, what people are going to think, and even maybe regardless of what you want to do.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - KES	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	In our mind, we're developing a map of, "Man, on the north end, I got this going on. I got this going on over here." And when I'm in that area, things just start clicking for you. They just start popping out at you when you're aware of what's going on. And then, the other thing I would do is, I would read the arrest reports every single day. I read every single arrest report. Click on every single arrest report, take a look at their mugshot photos. What'd they get arrested for? If it's somebody of interest or if it was a violent crime, "Man, where'd he get locked up? Why? What did he list as his address? Where did he get arrested? Oh, he got arrested outside his house," or, "Oh, he got arrested over here. Oh, and his girlfriend was on the scene. So that must mean this was girlfriend's house." So I know, okay, these are two good addresses for him. And this would happen on a daily basis. And I'm kind of freak. I remember everything [laughter]. That's just kind of one my qualities, and I would remember everything. And when we would go out there, I almost knew almost everybody I was driving past without even really talking to them, because I was taking advantage of the work that the other officers were doing. And to arrest somebody takes a lot of time. It's an hour to do paperwork and all that. By me reviewing all those case reports, it's literally 24 to 50 hours of time that officers spend with people that I was just reviewing.
User_characteristics - KES	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	A few people, a few people. Majority of the guys think it's garbage. Majority of the guys feel threatened by it, I would say. They feel like, "Oh, what's a computer going to do? We lock people up. We're the real deal." And they don't understand that it's a tool, that it's not meant to replace you. It's a tool. But we are getting conversion. People are starting to pop into their heads as they roam little more and say, "Did you see this in the camera?" And the reason for that is because-- that's kind of why commander brought me in, because he knows I'm proactive. I have a good attitude. I want to do this. So he figured, "Hey, this kid will run with this and try make something out of it." And I have. And we've been able to get top-10 targets taken down fast. There's top-10 targets that drive violence, principal drivers of violence, in the district. And we've been finding them and locking them up. And we've been doing it with

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								technology, plate reader. Kind of figuring out, well, what area the car is being seen in, and putting ourselves in that right area.
User_characteristics - KES	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	I think it's everything. It's challenging, exciting. It's scary at times. I guess you never know what to expect. You got to be able to adapt to the minute's notice, not even a minute, a moment's notice, from what your reaction is to what somebody else's reaction is.
User_characteristics - KES	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	Me? No. I've always been the type to go from-- I prefer the north side of the district, not the Hispanic side. I don't speak Spanish. I think for me-- a lot of officers say, "Oh, it doesn't matter. You don't need to speak Spanish." But I think for me, I feel more comfortable speaking English to people instead of always calling for a translator. I don't know if it's an officer safety point of view but when I start talking Spanish and I don't know what they're saying-- so I prefer to work the north side. And for the past year, year and a half or two, I've basically worked in one little spot.
User_characteristics - KES	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	That's me. I mean, like I said, I'm pretty-- I don't want to say I'm a tech person, but I'm pretty good with a computer. Whereas there's other officers in the district that-- okay, I brought my phone. You have to log on this phone. I do log on it every day. If I'm a school officer, I'll take a spare phone. But they'll give us these HunchLab, if you know what HunchLab is?
User_characteristics - KES	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	Yes and no. It depends what you're looking for. I'll give you a prime example. I was off yesterday, okay. Coming today, I really don't know what happened yesterday. And some days, do you want to look for it? Yeah. Other days, I'm just getting my coffee. It's been a long morning. I'm just going to hit the street. So there is that gap where I think a lot of officers really-- I don't know if I want to say really care or really don't want to be bothered looking on the computer all day. They'd rather just hit the street and focus on what's in front of them.
User_characteristics - KES	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	Because it seems what's in front of you is more important than what you could get from a computer. The here-and-now versus what happened in the past maybe. I don't know, I mean, it's a hard one. Like I said, every

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								day, I give you a set of keys and I say, "Go do what you want to do?" So for me, me finding it, no, it's not a problem for me. But like I said, I'm pretty good with the computer aspect. Every once in a while, I'll fill in the commander stuff or the comps desk stuff. So I know how to pull Caboodle, and upload the gun reports, pull any major incident that's happened in the town districts or the area. So I don't really have-- for me myself, I don't have a problem reaching that information if I want to dig into it. But the issue is you're a beat car. Why are you in the station looking up all this stuff when you should be out there patrolling.
User_characteristics - KES	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	Yeah, I think so. Because even with your personal phone, and I'm not going to lie, every police officer uses their personal phones. But a lot of the times it's where you going to park and access this information. I would say that the station is more controlled and you're safe there, whereas being out on the streets-- you see, everybody sees the squad car. Okay. You can't see everybody looking at you. I think that's a big thing in every police officers mind is, "Who's looking at me?" Well, they're not, they're just, "Oh, this guy's on his phone all day." That's the prime example. You're here looking at them and they're all on their phone or they don't do nothing. Is that good for community relations, always looking down? But that's the thing. For me, no, I don't have a problem accessing that information. Okay. But I could see other officers, yeah that's a big issue.
User_characteristics - KES	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	Okay. So like I said, if I want to access a shooting, to see what was a shooting about, I could go on there, pull it up, and figure it all out. Is it going to take me a few minutes? Yes. But me as an officer, I know where to look for this. Other people, no. And there's only a few apps on here, the ShotSpotter, I assume you've been hearing about that.
User_characteristics - KES	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I think too one of the other apps I know there's an app like GIS so I know some of our officers use it for mapping. I have it but I have not figured out how to use it but I have seen like the fire department and a couple of our deputies like if they're looking for an address and they're confused on like which house is it they'll go to their app and it ties into the GIS

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								mapping through the county and I've seen it be pretty handy I just haven't figured out how to use it yet.
User_characteristics - KES	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	I couldn't even fathom having somebody dispatching something that they don't even know where it's at, because at least our dispatchers are from here, most of them reside in the [County] or residents of the [County]. So if they know where--they know where it's at personally, it's easier for them to picture and help us. Because they know ahead of time, well look, if he's going in this direction, then you may want to--may want to set up something over here. They don't know from [Lake] to [City] so that is the only time that you really have problems.
User_characteristics - KES	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	And then because, and then they didn't understand what we were talking about because of our accent, because of our verbiage. For instance, we may dispatch somebody down to the bood [phonetic]. Someone from out of town doesn't know what the bood is. Basically what the bood is is a rockpar [phonetic]. Rockpar is French for rockpar. Well that's where we're telling you to go, go to the rockpar, it's called the bood or the plant, the plant is the point, the point of something. So it's for them that was like what? So even though you could talk plain talk, you still had to--and it hindered it, it's in the verbiage.
User_characteristics - KES	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	... Where is crime going to occur? Where is this burglary going to happen? Now sometimes murders and domestic things you can't really prevent that. But you know narcotics is the root of all violent crimes across America, so if I know where the drug dealers are working, I know what they are doing, if I can set up cameras and catch this footage live, I think that we can cut off some of the crime in America.
User_characteristics - KES	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	...I worked in the early, late 90s, early 2000s, I was working narcotics, and I can remember when I know narcotic intelligence was just things that we collected and put on a little pin board, pictures and locations where we were looking and back then the big trend was they were tying shoes together and throw them over the telephone poles, the wires, you ever heard of that where they drape tennis shoes over? And that's where the drug dealers are selling drugs. That's how you would know where this is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a location where they're selling drugs. They would tie their tennis shoes together and throw them over the power lines...So things like that I believe really needs to evolve to where we're collecting this data. Because for one thing criminals, true criminals are people that are, do things like on a regular basis. They go eat at the same restaurant every day, they get up at the same time, they're people of predictable habits.
User_characteristics - KES	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	Yeah, it's a lot of the pre-packaged stuff, but I also found that the software salesman, I refer to him as the snake oil salesman of the 21st century, but I think it's useful. I learned how to program, I don't know, keypunch, and before that, it was on a tape, a punch tape, so I was writing Fortran, so yeah, it has gotten more user-friendly for sure, to me, anyway.
User_characteristics - KES	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	I think it's easy to get the information at least at my level I'm learning about it that the part with information on a--specifically on a game day for us is how do we disseminate and who does it get disseminated to when you're looking at certain things. And so you know I think a lot of times it may end up being a phone call to a supervisor of a section and saying, hey look, we've got this coming up, go get your guys squared away because--you don't always want to put out an all-call over the radio because if an officer is standing next to 25 fans and they hear this is going on, then it creates that panic and you can't get in place to do the things you need to do to make it safe so. And that can be a, I won't say a struggle, but you know it's always something he's got to think about and work around.
User_characteristics - KES	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	Okay. That leads into the next question which was how, if at all, have things changed, in terms of communication since you became an officer.
User_characteristics - KES	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	And there are certain times that I could just hear my name over it and know that somebody needed me somewhere, right then and there. That was either an emergency, or it was a more dangerous situation, and they needed somebody, and they just could call, you could tell, because you've been around them so much, wow, he's worked up, ask someone

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to go back him up, or clearly, something doesn't feel right to this officer, let me head over there and see if they need help, just from hearing their voice and having built that communication with them, that we could get a lot of the nonverbal aspect of that.
User_characteristics - KES	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	...This isn't even a place on a map somewhere, but you're calling us to it. That's the biggest struggle, we have communication here. Every officer takes a buildings test and a roads test, and a parking lot test. They have to take this big test, but almost every building on campus, someone actually--we have the buildings and rides officers know where they are, we have all the streets, rides, even though they're not well-labeled, we know what these certain parking lots are called. The person calling doesn't have to take [inaudible] . I don't know if they caught it, [inaudible]. So locations, I think, is our biggest--the thing that causes the most headache, it's not everybody in that process had to take a bunch of tests on it.
User_characteristics - KES	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	.... I've worked in I guess more traditional police departments in my life too before I came here, and this is obviously a more diverse group just because of we have people from all over the world that come to school here. So you have to be open-minded and understand that not everybody's raised the same way and not everybody has the same belief and culture.
User_characteristics - KES	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	Our local fusion center and we have some people in our department. They will monitor searching for keywords around this area to see if anything hits on social media, and it will alert them. Just searching keywords for threats that might be against the community. We'll learn about a suspect, maybe group that they hang out with, friends, tendencies, likes, interests, where they've been, things like that. Also possibly we know one suspect, there may be others that are unidentified yet in the report. They may be friends with them on these social media sites, and they may communicate, so things like that.
User_characteristics - KES	LE	R	Supervising Field	46-55	21-30	Male	LE-R-059	You know, the technology is there, like I said. You know, I know for a fact right now if I got on the state 800 system up in [city] that I could talk all

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					the way down to Guam.
User_characteristics - KES	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	... So they don't know that I gotta do, you know, all the inventories and the grant work and everything and ordering stuff to keep the department running; they just are - so, police work, you get in a car and drive around. So that is challenging. I mean, overall, it's rewarding; the detective bureau part is the rewarding part because you get to follow through on cases and stuff like that.
User_characteristics - KES	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	No, we are so small here. I mean, outside of it I have GPS, I use it all the time, googling elsewhere but around here I pretty much know every address block, everything. I mean, it's just a small city so once there is that, I know I got him. [Unintelligible] okay, we are going there and so and so lives there. [Unintelligible]
User_characteristics - KES	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	There is always the concerns of somebody you are calling getting your number but a lot of times I just call from a blocked number or if it is somebody I really don't want to know, I will wait until I get to the station and then I will call from [unintelligible] [city].
User_characteristics - KES	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Basically, I mean, that is, you know, if there are any weapons involved, they wanna know. Sometimes somebody calls and says, so and so has got a gun, that is obviously going to change your - we approach things cautiously anyways, but you it really stuffs it up, you know; somebody's neighbor calls and says, hey, he is out in the yard with a sniper rifle, well, you know, we are not gonna pull up in front of the house. So.
User_characteristics - KES	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Not really, I mean; if you are here for a while, you kind of learn what to say and what not to waste time with. But once we get a new guy and they just talk too much, you know. They will key up the mic and hold the thing so they are on the air but they don't know what the hell to say or [unintelligible] to think and yeah, ahhh, you know, it's not like [unintelligible] nobody else can talk because you are on the, you know, so we are pretty good about working that stuff out.
User_characteristics - KES	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	I have used Google maps before to find the location fast; I wasn't 100% sure where it was.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - KES	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	It's a budget issue, it is a political issue, it all comes down to [cities] coming to an agreement to put it into place; no one knows what's going on at this point.
User_characteristics - KES	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	You are chasing them young, [laughs] and -- it is imperative that you are getting in and out of those chargers, you know, 17 to 28 times a day and you are, you know, going from 0 to 90 -- you better have, you know, the ability to handle it.
User_characteristics - KES	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Like I was kind of already doing that because of the GIS aspect before and that's kind of why I got offered to be the disaster service coordinator because through my GIS work I was already working with these other entities and kind of doing work for them or information through them. It was mostly GIS related data obviously but yeah so just took the next step and did even more. Did more of the narrative stuff which has been kind of interesting because I'm not really a narrative person.
User_characteristics - KES	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	... I just recently learned about different technology, there's different software out there or technology excuse me that helps you develop plans you know where you just put it's like a template and you just got to type stuff in there and out it goes (00:38:06) and spits out an EOP so I don't know if that's something that I'd ever use because it's really expensive but I guess maybe like the one person that I was talking to that's promoting it was The State of Arizona had purchased it and the county was using it.
User_characteristics - KES	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	I leave them on speaker phone particularly when we have a barricaded subject or a guy that has made threats. The last thing I want to do is walk to an unknown with a person like that and so that's an easy thing for me to do. I just set the phone on my MDT I close it, I put my phone on speaker, I star 67 them so they don't have my number, I let them know I'm on my way and then when I get close I'm like where's he at? I say he it could be she it has been she. Where are they at? Do they have any weapons? Has anything changed in the last couple of minutes? Have they made any statements? Any threats? Anything like that because all that's playing into my response and when we disconnect from that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								person once dispatch gets the initial information so if they're dispatching us to a domestic so we're in route.
User_characteristics - KES	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] ... If you're really tight with your data on your phone sorry you better get to reading that map book and understanding your streets which we do for the most part. I mean that's one of things that we really clench on very hard with our newer officers is getting the geography down because [City] looks small but some of those streets they get really, really in depth.
User_characteristics - KES	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	[S3] And sometimes we're actually able to because we're out there on the street if we see something clash and it's at an address that we know might be off by a house or two we'll be able to identify and say hey, it might actually be this house and these two people because we go out there every night.
User_characteristics - KES	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] And it's also nice because we can pull up and we can actually recall it like what the forwarding party's is telling our dispatcher. We can say you know we're going to be in route to that call and instead of them getting and saying where we need to go through all that stuff you know at that point we show up and ask them if they have warrants and then we can go from there instead of wasting all that radio time.
User_characteristics - KES	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	[S2]... Well I laughed at that because for the last 2 ½ years that's all I've been know as you know and that's what I know myself as. When I'm in my car they don't say our names they say our badge number so I can be on a cell phone talking to my wife, talking to him doing whatever not really even listening a whole lot to the radio but I here my number and this side closes out and this side opens. I'm listening here instead of here so it's just you know and a lot of people haven't got that. Me and him are both field training officers and we harped on that a lot with our rookies because they need to get---
User_characteristics - KES	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] I was used to the radio because I was an [Job title] for five years prior to being a police officer.
User_characteristics	LE	R	Field	26-35	6-10	Female	LE-R-046	No ma'am. We really got to know this area here and that is a hard part of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Responder					our job really because it's not that big but it is a lot of different communities and it is a big space to cover but you just got to know it because here you know people are sometimes talking it's too west or north. We don't really have addresses.
User_characteristics - KES	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	Oh I don't think so not very much no. I would say that I think dispatch has gotten better since I started. They've gotten better at just communicating what we need and I think some of that is learning, some of that is just you know people getting better at their jobs but no I don't think things have changed all that much not since I've been here.
User_characteristics - KES	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	We use the radio all the time that's what we're using to communicate and so when that doesn't work then we got to find something else that works and maybe that's a cell phone but then if that cell phone doesn't work then we're out of luck then we got to drive someplace else until we get a signal or the radio works so that can be complicated there so I would say that's our biggest problem.
User_characteristics - KES	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	You are the special unit you know when we got here we had two radar units and one laser. A lot of folks weren't certified to run it, didn't have the training, they didn't have basic training to do DUI detection, they didn't have basic training to do speed detection, they've never been in training for investigations for anything like that, a crime scene process and the previous administration basically gave them 20 hours of training which is the bare minimum by state standards. I prefer I like to aim for eighty. This year most of our guys have gotten well over a hundred just because they had so much room to make up and you know you can't expect people to be professional if you don't treat them like professionals you know.
User_characteristics - KES	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	What I have found is people like the thought of change but the reality of change is much different and I think when you put something you implement something until the way it is the way it was people are going to complain about it then one day all of a sudden you recognize and what I found in [City] was they're like oh man I don't want this system blah, blah, blah but see for us as law enforcement our job is problem

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								solving. That's what we do and it's a resource because now I have all this extra data and information.
User_characteristics - KES	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	They do somewhat but the CAD system gives a lot of cues and they'll give cross streets and you can dispatch off that. We have people come from other counties that have never been here and they're experienced dispatchers know how to run the system and they'll have an issue.
User_characteristics - KES	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	It's a mixed bag. It depends largely on probably the officer's comfort level with technology. We have a wide range of police officers with both experience and age. We have some young officer's right out of the academy. I think largely just given their generation they are more adept at technology and so they'll climb on the MDT in the car they'll run all their own registration queries, they'll run their own wants and warrants queries and will rely very little on dispatch with the exception of sending them on call and even then a call can be pushed through the MDT and there doesn't have to be any radio traffic. Some of the older officers tend to be much more comfortable running all of their queries through the radio and less comfortable on the MDT.
User_characteristics - KES	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	I teach a portion of the citizen's academy focusing on law enforcement technology where I give them a glimpse of where law enforcement started in the United States a little over 250, 260 years ago and how further long this time a period of almost 200 years where the only advancements made were really in the form of repeating firearms and how swiftly from the 40's up until now.
User_characteristics - KES	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	In this day and age. When I see what they're developing here on campus teleportation is closer than it's ever been. Yeah there's some really cool stuff that's happening on campus and again it's probably just due to my generation and probably my lack of imagination that I can't come up with a better answer for you.
User_characteristics - KES	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S3] Sure. I think to touch on the chaos thing it's methodical addressing all the different things. You got to base the priority whatever the priority is at the time if you know one minute you could be handling something

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								but something else comes up you got to drop what you're doing and go handle you know if a high profile incident comes up a homicide and then you listen in that area basically we have to stop the burglary stuff and go to the homicide area.
User_characteristics - KES	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] I think the difference between our crime analyst she's looking at the names and numbers just in the system whereas we're out in the street, we're familiar with people who are doing these crimes and we can actually put you know their MO of the crime with hey we think it's possibly this person can we look into this person and we'll provide her with the names that we're aware of because we're out on the street and the guys that work in our unit both [name] and I don't know if I'm allowed to say these names. It's alright. Detective 004 here and an unknown another detective in our office are very good with knowing our frequent offenders so we have detectives that can rattle off their names, date of births because they're so familiar with them.
User_characteristics - KES	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S2] In our unit no. It just depends on where the problem is. Now there are certain officers within our unit that are better in certain parts of town okay they're very familiar like the other detective I was speaking about there's a neighborhood and a section that he's familiar with the gang activity over there and he's very familiar with that as compared to like this side of town where he doesn't hardly know anybody that's out here and the same goes for other people in the unit. They're better on this side and stuff like that.
User_characteristics - KES	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] We'll look on the videos like we've seen them livestreaming on say Instagram and look in the background and see something that we know and we blast that over the text hey this stolen car is in this area and we've caught them that way because of their social media or like the other day one of them posted had some guns one of them is a convicted felon we were able to geotype the picture, we know where the house was the house was in our jurisdiction so we did a search and arrest warrant for him and the gun at the house.
User_characteristics	LE	S	Field	Not	Not	Male	LE-S-050	[S2] I mean it's I agree but I think we've also become so good at it that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- KES			Responder	specified	specified			it's if a civilian got in the vehicle with us they would be amazed at all the things we have going on. I mean yes, I wouldn't recommend it it's probably dangerous but steering with your knee and typing it's amazing how much we can do in our vehicle.
User_characteristics - KES	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] That's what the tag readers and us just going okay we know this certain perp that we're looking for we know he's in this car so we will attack him, his area and look for that car. We just have to narrow it down because there's just too much.
User_characteristics - KES	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	There's coverage issues for the portables. I feel like we're able to get what we need from dispatch and I feel like we have a pretty good working relationship. Some are stronger than others and we're getting more people that have come from for a long time a lot of the people that dispatched here only dispatched here and I certainly don't hold that against somebody. That's this is where you got a job and this is where you learned but the learning curve and the expectations are a little different.
User_characteristics - KES	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	People coming from [county] and [name] because we hire a fair number of officers with prior experience so for some people it's no coming here was no transition for me I worked this precinct before so I know the system well. I know what their call signs are and that sort of stuff and but codes and signals here isn't too bad. [name] is a learning curve for some people. We're actually going to and I'm sure this is stuff you're talking about there's a conversation on a plain talk happening here because we have to communicate with multiple jurisdictions.
User_characteristics - KES	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	Stress, lack of training ability and then some people can just be difficult. Sometimes we've got officers that give attitude over any of us. It's like why are you getting an attitude? Sometimes we get dispatchers that get an attitude on officers. People are having a bad day but it can really impact our ability to communicate but I think when the situation gets stressful or it's a high you have officers messing up, you can have dispatchers messing up and I think when if people just don't have the intellectual capacity to do the job or are not properly trained you run into

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								problems. They don't know what to ask, they don't know how to ask it, they don't know how to relay that information.
User_characteristics - KES	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	Because I was a student employee here a long time ago almost 15 years ago so I've known part of the department peripherally for a long time and so we had two Sergeants who were both really good Sergeants and our now doing other jobs that were running dispatch and I don't know how well equipped they were for it then they finally said okay we're going to hire somebody so they hired someone who had run a large 911 call center and she's done a much better job of dealing with the personalities of bringing the standards of training up of knowing what to send people to so I think it was you know we had some people that were kind of deficient.
User_characteristics - KES	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	But we also didn't have clear guidance and clear direction of how we were going to run our dispatch and then we got someone who came in with all the skills and she's really helped bring that and they've identified they now have shift supervisors which they didn't have. They identified good long time people and put them in those positions and so I think training, incentivizing because it used to be not a dead end but you got into that job there was nowhere to go now there's people making you know the equivalent of a Sergeant's position in dispatch but better hiring process, better management, better training all the things you would think would make something better.
User_characteristics - KES	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	I think we do okay. I think we have a lot of people that are kept pretty competent and I think the people like we don't have a ton of people the people that you think might struggle manage to get by.
User_characteristics - KES	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	This shows you the most recent call so I can just scroll through and see all the calls and then I can tab over here to our case management. This is the face sheet, this is the narrative it hasn't been written yet the officer weren't working on it so it's a pretty it's actually a decent system. I like it but you have to know how to use this to work here it's just that simple and everybody does.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - Pride	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	And I think at the local level, we have such a problem, right, with budgets, right, because we don't have a pot of gold. We have a very structured financial [inaudible]. I can't replace this every five years. This thing's got to last 15-plus years. Right? Otherwise, I'd break the bank. And so when that new technology comes on board, typically, we are really kind of the last piece in line to actually adopt it. Whereas, it was really proud of our department to really see kind of some forward momentum and forward progress. But a lot of this was driven in part, is we just built this brand new Levi's Stadium next door for Super Bowl 50.
User_characteristics - Pride	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	And so in prepping for Super Bowl 50 and the 90,000 people or 100,000 people that were there, they wanted everything intact, and so, again, it has sometimes some benefits for us. For us, it's great. Right? The coolest thing is, all of a sudden, let's say we get into some event that requires all that, and then it's like, "Okay, let's slow down. Let's grab a couple of open channels and manage the event."
User_characteristics - Pride	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	It's always fun sharing kind of what my department does because when people-- they see it in a fire front, and they'll go, "What just happened?" They go, "Well, the cops got out. They changed their uniform into turnouts. They ran over. They did their thing and then they went back, and they jumped in the car and went back to work." And I go, "That's how it's supposed to work." And I've been to a lot of different meetings throughout the county and throughout the state, for what it's worth, over the years, and everybody always asks the same question, they go, "How do you do that?" And I go, "Let me tell you this history."
User_characteristics - Pride	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	...I had a disagreement with a patrol officer when I had patrol who was arguing about the laptops and how they don't work right. And I said, "Well, what's the problem?" And he goes, "This, this, and this," and I said, "Well, one, it's not supposed to do that." "Well, yeah it is. It always has." "No, it's never done that. I can promise you that." So then I brought somebody else in to confirm it's never done that. "Two, you're doing this wrong." "Well, I don't even know where to get the answer." "Well, yes, you do," so took him through it. And he says, "Well, I just wish we didn't have

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								these things." So he went to briefing. And he's been here a while, and I not as long as he, but I've promoted further.
User_characteristics - Pride	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	So this was my fire radio. So, yeah. So we're completely integrated. Only a handful of agencies do what we do. Kalamazoo, Michigan is one, but we're probably the largest, if not the second largest agency that does this. So, yeah. So all of our patrol officers are firefighters. All of our firefighters are patrol officers. We have firefighters working patrol overtime today. We have officers who get off duty and go work in the firehouse at night. So, yeah. So, completely integrated public safety. So when you hear us public safety, we are public safety.
User_characteristics - Pride	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Well, we're lucky, and I think that-- my boss is that way as well. Very open, very honest, and he's empowering for people. And I'm a good example of that. I mean, who would-- I didn't interview for the job. I didn't apply for it. I didn't know that I wanted it when they sought me out to come and be the director. I thought that was crazy. I figured I would retire as a supervisor. But they saw something that my predecessors did, that he thought that I could do this, and so the chief goes along. That's the kind of an organization that it is. I don't know if everybody's that way in our county, but I know that the town of [name] is, definitely. So, yeah. It's a good place to work.
User_characteristics - Pride	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	And she was traveling westbound on the interstate. And we had vehicle description, we had a couple state troopers behind the car, and we just kept with her, and the call-taker just kept talking, and talking, and talking. Finally, down by [name] she texted that she had taken the gun and thrown it out the window. And so we got the troopers to pull them over then, and everything ended peacefully. But two hours away and it's about 115 miles I guess. So that was a very good success story. And we promoted that through [name] and [name] both. And it made [Name]'s national website for a while. So it was a pretty cool deal, and it made a lot more sense to a lot of us to say, "Oh, this is something that could be handy. It's needed."
User_characteristics	COMMS	R	Manager	56-65	11-20	Male	COMMS-	It's going to be-- like I said, we've been working on it for months, so I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- Pride							R-002	think it's close now. The town of [name] has been very proactive with the technologies. We have fiber everywhere, and we have cloud servers, so we have everything we need. They've taken care of that. So I don't think it's going to be that big of a project. We're hiring an outside company to do the initial set, and so, she'll provide us with that, "Okay here's is your base."
User_characteristics - Pride	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	...And each day, you have slow days and busy days at different times of the year. There's different calls according to the time of the year. And so with all those variables, I think this job is very interesting.
User_characteristics - Pride	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	... It's not regular. Especially with this transition of the police taking over all the positions, we have very few numbers up here, so the few that we have up here are stuck here, until they get more staffing on the police side. It's coveted once you come up here and you know there's a lot of overtime. You can make a lot of money, and you have a lot of time off, but if you want to run calls and be out in the experience, running calls in the fire department, then coming up here is a detachment from that.
User_characteristics - Pride	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	So we have a lot of stressors but every once in a while you just get that feel good call where the person legitimately says, "Help me," and then they pause and whatever you say they listen to you, "Okay. What next?" And you go through your protocols appropriately, the protocols work because you know them, you're asking them and the person is receiving them. And you actually make a difference on the phone before the first responders arrive, because you can control the bleeding, you can help out with the seizure, the person's having a diabetic emergency, and we have protocols. Or the person's having a pregnancy problem and you're able to actually able to help them, or they're in a serious car accident and you're able to keep them safe until someone comes because they're listening to you.
User_characteristics - Pride	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	So you feel kind of good about that. [about helping people]
User_characteristics	COMMS	S	Comms	46-55	21-30	Male	COMMS-	Generally. Out of the fire department, out of I think it is 1,200 employees,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- Pride			Personnel				S-004	I think, there's only a handful of us that are qualified to work here. So we all work with each other quite a bit, whether it be on overtime, work substitutions, so I could work tomorrow and I know all those guys and gals, and they all know me.
User_characteristics - Pride	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	--that are qualified to work here of a workforce of 1,200 or more.
User_characteristics - Pride	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	And we just don't have it. We just don't have it. Fortunately, no one-- we haven't killed anyone. At least in my 27 years, no one has--
User_characteristics - Pride	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	So we have a lot of things coming into this area where they want to do test runs and trials with us and see what we're doing. One thing that we are doing already is we have established and I was part of this as the first year after the first year I moved off into continuing up my chain but we established in 2013 The [name].
User_characteristics - Pride	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Yeah we haven't found it too much else in other places. They may work with each other or one entity may be like the governing body and everybody else gets that technology because this is the bigger guy and it gives the technology it decides the technology for everyone else but this is the first time that we've been able to find which two different jurisdictions joining versus there are states that are completely joined together but that was a state who said you're going to do this.
User_characteristics - Pride	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	It's kind of like an integration of the tiers so it's kind of a fun time to be on the technology side of this scenario because within the next five or ten years it's going to be completely different in this area.
User_characteristics - Pride	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	... Not everyone that works in law enforcement is bad, because I consider myself to go above and beyond for anybody who walks through the door.
User_characteristics - Pride	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	Q: Anything else about your job you think we should know? SME: I don't think so. It's pretty cool.
User_characteristics - Pride	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	...I'm a fire department buff, 30-year volunteer fireman, lifetime member. And I think that one of the little-known facts is that Benjamin Franklin

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								was a volunteer fireman in Philadelphia. And some of the history behind that is just, if somebody wants something to read, it's real interesting.
User_characteristics - Pride	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	So protected. We don't know it's raining outside unless we hear the water dripping in the gutter [inaudible]. So it's kind of comical sometimes. A lot of people, they can't get over it that we work in a building that has no windows. But at the same time it's kind of a safeguard more than anything, so it's pretty neat. It's pretty unique, if you will.
User_characteristics - Pride	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	... I mentioned the 16,000 911 calls. But as a whole, we answer two dispatches 24-by-7, 365, answer on average about 82,000 calls coming in the dispatch center. Now you take the 82,000 and subtract the 16, that's all admin lines coming in for the simple fact they were so small that everybody knows that if they dial 562-2200, somebody is going to pick it up and not have to go through [inaudible]. So it's kind of comical, and a lot of those 911 calls also are maybe in a neighboring jurisdiction to where we transfer those calls to a neighboring [County].
User_characteristics - Pride	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	... But going back to the technology, I think we've always stayed at that cutting edge, right ahead of the curve. Not far in front of it, but just ahead enough, far ahead of the curve to make sure that we weren't left in the dust.
User_characteristics - Pride	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Busy. Unpredictable [Laughing]. You don't know what you're going to pick up and what's going to happen at that moment in time. But to me I enjoy it. It's very satisfying to know you can help somebody.
User_characteristics - Pride	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Enjoyable at times. Good feeling. Serious. Absolutely serious at times. And... hmm. It can be tedious also.
User_characteristics - Pride	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Just know that I love it. It's very rewarding and it takes a special type of person to do it, what we do.
User_characteristics - Pride	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	[Chuckling]... hmm. It's entertaining. Sometimes it's fun. Sometimes it's stressful. Sometimes it's difficult. It is... it's a lot of stuff [whispering] [chuckling].

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - Pride	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	... And...I don't think that it's a job, I think it's a career and I think it's a specialized career. There are many, many police officers that walk into this room, firemen that sit here and go, God, I never thought it was like this. I mean I thought you were just a secretary. Just answering the phone. And I couldn't sit here all day and do that. Well it's a specialized job.
User_characteristics - Pride	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	We--I guess the way that we view from law enforcement is that our dispatchers are the lifelines. They are the informational resources of these deputies and police officers and firefighters out there. If they need something on that scene, they look to the dispatcher to find that resource for them.
User_characteristics - Pride	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	... But then also I can go to a [County] president, I can go to the sheriff and say look, these how many calls we had coming in, in this certain amount of timeframe, and this is how dispatch has handed it, and they did a very good job. We're going to [inaudible] QC a lot of them. But at the same time, I think we did a good job for as many calls coming in, or this is where we need to brush up on.
User_characteristics - Pride	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	It can be very thrilling. We have some calls that, you know, they're very--we need to get an officer out there as soon as we can. It is fun, we do have fun, we are like a family here, so we do have fun, but when serious things happen, we get on the ball and we get them out there.
User_characteristics - Pride	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	It's a very nice community. I am--it's very [inaudible]. There's a lot of different things that go on around campus. I mean, it's a very nice campus, I enjoy working here.
User_characteristics - Pride	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: I think the original question was what would we tell and this is what I -- on the first day when we hire people, was this excellent job of getting [inaudible] we get the right people. We don't have a lot of turnover because of this type of work.
User_characteristics - Pride	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S1]: Wow. So, if you were to use adjectives describe this work, what kind of adjectives? This all communications based -- [S2]: Very important thing.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - Pride	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S4]: Rewarding. [asked for adjectives to describe job]
User_characteristics - Pride	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: But we have a lot of women in there that are married to dispatchers and married to police officers and vice versa, you know, like, they get it; it's personal too. This is not just a job, I mean, they care about the people and then it becomes personal and I think you gotta have some of that in there too, you know. You don't just come here and make the widget and go home.
User_characteristics - Pride	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I think - and this goes in the technology side - I think our system does a pretty good job of utilizing the worldclass dispatching center with dispatchers and EMD and the EFD. Is that what it's called? The priority fire dispatch.
User_characteristics - Pride	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: portable radios] SME S3: I think it's top of the line... It's the best that is out there. SME S2: I've worked for some other systems that were garbage, so this is amazing from what I'm used to.
User_characteristics - Pride	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I think the fire agencies do a much better job with mutual aid and communication with other agencies than the police agencies do, in my experience.
User_characteristics - Pride	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...we have a very robust communication system. We're lucky that way. [State]'s got the best radio system in the state... it's very well maintained. It's super reliable. We have a ton of talk paths. We get denial tones on the 800 megahertz trunk system. System-wide, we get denial tones at a rate of one a month, maybe?
User_characteristics - Pride	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...On an 800 megahertz trunk system where you run into trouble, it's not with the amount of talk groups you can have. It's the amount of talk paths that you have, the actual frequencies, and the actual [backhaul?] capability from place to place. And [City]'s is very good and very robust so we don't typically get problems there. So our radio system, if we are in [City], is excellent. It's very reliable. It has very few dead spots. When we do get a dead spot-- for example, we had, oh, down at [Street] and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[Street] Streets downtown - this was probably 12 or 15 years ago - Verizon put up a cell site and we just lost the whole intersection to interference from the cell phones. And you couldn't talk within about a half-block radius of that. But it got reported. Our [City]'s radio engineers went and talked to Verizon's engineers. And it took them about six months to get everything sorted out so that both people could use the site. But it got fixed. We had a temporary hole. So a lot of our holes are like that. Either you're really deep inside some building where no system's every going to reach or it's something like that where you're getting interference or something. It's a very robust system in terms of its technical capabilities...
User_characteristics - Pride	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	Those are major, yeah. So you're talking like Katrina level kind of stuff. Because even with the floods which wiped out several small towns and took out big chunks of [City] and a few small pieces of [City], at its worst, we never took anything in from out-of-state. It was handled with-- or even outside the front range. Just [City] unit is going north to help, [City] unit is going north to help. The National Guard jumped in, but that was-- even as big an event that was, we were basically able to handle it with regional resources as opposed to interstate resources...
User_characteristics - Pride	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	From my experience, the work of a paramedic is very important and it's not often publicized because they're just doing their job, and I was in the military. In the military we used to take care of our medics. Sometimes that doesn't translate over to the fire side. Whether it's here, whether it's in New York, whether it's in Boston, whether it's in Los Angeles, a lot of the paramedics don't get the acceptance that they should get. Like I said in the military, first thing they do is take care of their medics because their medics are going to be taking care of them. So I think it's just important that we recognize our paramedics.
User_characteristics - Pride	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: recognition of paramedics] Yeah. And even though they may not be going in-- oh, the other thing, yeah. We have the same courage, we have the same umph. We have the same that a firefighter has, that a police officer has. And sometimes, like I said, we're not recognized at that level

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and it's difficult to accept.
User_characteristics - Pride	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: recognition of paramedics] Why do I think that is? It's just the culture, the culture that we developed here and it's difficult to change. Like I said, when I was in the military, a record meant something. As a firefighter, you only have this. In the military, if you have a record that means you went above and beyond, and that's what I tell people. You have a record, you've gone above and beyond. Be proud of that record... So that's just from my perspective, from my experience. So yeah like I said, sometimes we don't get the credit that we deserve [laughter]... But it's changing slowly. It's a huge cultural change and we have some good leaders out there that are trying to make that change.
User_characteristics - Pride	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	...I think as far as technology goes, we're at where we need to be right now. So yeah, not much else I can think of until they get more advanced with medicine itself. I think we do everything [that an] emergency room can do right now.
User_characteristics - Pride	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: too many radio channels] It doesn't bother me. Someone like me, I'm going to learn the channel because if I can't communicate one way, I'm going to communicate another way. So if I can't communicate with EMS channel and I can't communicate to the fire channel, I know how to get to the police channel. The life guard channel, we have a life guard channel. If I can't communicate through the alarm office and the alarm office can't communicate to the life guard who someone is drowning in [lake], I know how to go into the life guard channel. A lot of people don't know how to do that. But I've trained myself or I've asked around people how to do that. How do you get to the life guard channel?
User_characteristics - Pride	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	...So, say if I'm calling 911, call taker comes on, "What is your emergency?" They're typing this in already. Me, as a paramedic, through the [local PD] number, I'm looking that information up. So I'll send that code number to the alarm office and that call taker information that they printed will come back to me on my MDT and it tells you everything that person on that 911 has stated. Not everybody knows how to do that.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - Pride	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	So we take EMS super important, because it's 80% of your call. And you need to be very efficient at your job, so we take a lot of pride. And I have an app on my phone that has my protocol.
User_characteristics - Pride	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	Okay, our radios, our chief's really cool about that. He buys the best radio stuff. So we were having an issue with our microphones. They weren't as clear, so he actually got us better mics for our radios, and they were way clearer. And we also, for a while, we actually went to this Scott mask that had that clip-in mic that you could-- hands-free. We didn't like them because the Bluetooth was messed up, so we went away from them. But as far as that, our radio stuff is just top notch. That's what's really cool about it is, is that's super important.
User_characteristics - Pride	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	So we have the nicest lights. We have the nicest tools. We take a lot of pride in cleaning our stuff and making sure we keep it nice. What else would be technology related? Our apparatuses?
User_characteristics - Pride	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	So you've seen our giant truck out there. That's my pride and joy. That was one thing too. If something happens with that, it's always immediately fixed. And I love it because it's got a computer screen in it and I can literally diagnose the truck, what's going on from that computer screen. So it's super important like it tells you everything. I can control all my lights from there, everything. So it minimizes my movements in the truck, which saves time overall in a call. I don't have to hop out, start a generator on top of the truck, get back down. I can just hit on my truck, and I know, I see it come on, and I can go help my team.
User_characteristics - Pride	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	I'm trying to think of what else we've had. So our fire department's really big about technology advances. Our chief is really cool about that. He sees something he likes that's new and he goes like, "Let's try it. Let's do it." And that's awesome because I feel like some fire departments are a little old school, and like, "No, we're going to do the same way every time
User_characteristics - Pride	EMS	U	Other Public Safety	46-55	21-30	Female	EMS-U-009	... They started March 1st, they graduated in the middle of May. And I get compliments on them all the time. About how outgoing and friendly they are. And they're young, they're much younger than this class.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					
User_characteristics - Pride	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	I would say yes. I mean for one, this job or the career is always-- when everyone's a little kid, they always wanted to be a cop or a fireman, whatever. So, but yeah, like that, everyone wants to say they've met a [City] fireman, a [City] EMS, whatever.
User_characteristics - Pride	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	The mic in the fire service has become kind of a big issue. We're pretty early adapters at [City]. We tried a Bluetooth system. And the problem with a Bluetooth system is it has to pair every time you turn it on. And it doesn't always pair. And then you're trying to smash the button to make it pair. And so we got rid of it [laughter]. We also tried to do a Bluetooth system in the cab of the truck. So as the engineer, my position, we tried to buy one so the engineer could jump out and still have his headset on. And he could listen to the radio and then be able to operate the truck, not be exposed to the noise of the truck and all of that. And same thing. So you'd have to pair it, and then the battery died. We ended up with a [Name] that's MIL-SPEC that works really, really well for the military. Because they get in in the morning, the HUMvee, or whatever it is, put in a new battery, pair it up, and they can go about their day. But it wasn't built for the fire service. So it's not built for the truck that gets backed in, gets turned off. Then, you get a call, start the truck up, it still needs to be paired or connected.
User_characteristics - Pride	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	It all works out. Well, like I said, we get the job done. It's just doesn't work as [smoothly?] as it should sometimes. And it could be maybe that's our disadvantage. I mean, we tried to do a training with a palm nailer a couple of weeks ago. The guy's like, "We never do that this way." Well, it's in the book. That's how you can do it. So not right or wrong, just different opinion.
User_characteristics - Pride	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	In [County], I think that's something that we've been proud of for a long time, is that we work well together here. We don't have a lot of the rivalries that exist in other places in the country. For whatever reason, we've always worked well together. We are on the same radio system. We can flip over on our channel and talk to them any time we want. So I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								feel like, in [County], that we do okay there. It's always a surprise when we go elsewhere, at least, when I sit there and go, "These people don't--" they just have these rivalries, and since we're kind of homegrown here we don't necessarily see that...
User_characteristics - Pride	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...But so far, it's pretty descent. I mean, there are challenges, of course, talking with the Forest Service, totally different radio system. We have totally different [units?]. And honestly, our radio system is far superior than the Forest Service's, so it's like when you go back a couple of decades in quality. It's sometimes hard to talk to them and hear them. So that's a challenge, talking to these [inaudible] in the states...
User_characteristics - Pride	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	The comment around the county, and this is solely attributed to [Name] being here in our organization, is that [City] fire uses the radio the best because our training is top-notch, and it's all [Name]. It has nothing to do me. But I think, in general, as we go up and down the valley, yeah, there's issues here and there. People get various training from various people, and you can definitely tell who's been trained and who hasn't. So I think we're fortunately selfish here that we have a resource that manages that for us.
User_characteristics - Pride	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...So here at this firehouse, you're talking about some really highly motivated people. Obviously, in every fire department across the country, you will find it's all based on call volume. So different departments, where all firefighters go through relatively the same type of training, firefighters that work in downtown busy areas just are significantly busier. They go to more calls... And they have a lot to do...
User_characteristics - Pride	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...so being able to come in without my emotional argument and bring in a logical argument and say, "Here's how this \$1.8 million could benefit you," is what these data analytics people could do, right? They're the ones that could come in and say, "I'm going to take your emotional argument, and I will show you how you can collect data, whether it's through response times, through call volume increases, through number of citizens that you're serving every time, how many touch points do you have. We can come in and actually utilize that data to justify a fire truck

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								or additional staffing." Chief [Name] is a master at that...
User_characteristics - Pride	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Fire Chief] ...He is phenomenal. Best chief we've ever had. Bar none. Hands down. He's amazing because, number one, he's a techie guy, so he loves anything technology. So he's always like, "What's the latest and greatest? How can we use stuff?" But he also understands that there's people out there that are-- that's their job to do that, and so he utilizes them really well.
User_characteristics - Pride	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...So Chief [Name] has really bridged that gap well by putting key people in positions that have a strong desire to see the department succeed and put the organization above their personal needs of wanting to go back to the firehouse. So I think that's one of the key reasons why we've advanced as far as we have.
User_characteristics - Pride	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Yeah. And I think especially when you're looking at a lot of city projects, everybody's competing for funding. So even with a very well-laid-out, high-priority project, the timing on it may be--the city could have other really-- in two years from now, this project could get pushed right through. But right now, there's three other projects that are super important. So it could just be killed. So, by Chief [Name] being where he is, he understands what's going on in the city and going, "That's a great idea. We need to push it. We're not pushing it right now." ... Because the timing is bad... And so he understands that. And he's a master at that.
User_characteristics - Pride	FF	U	Manager	46-55	11-20	Male	FF-U-021	Recruitment, there's never a problem with recruitment. It's more really just trying to mirror the city and the citizens that we served. So obviously, just like most other major metropolitan departments, we have difficulty recruiting people of color and women. As far as being staffed, we just added another full-time recruiter last year, so we have two full-time recruiters. We are very fortunate in that aspect. And we got a chief who's very supportive of all the things that we're trying to accomplished. So we kind of looked at the past of what has worked and mostly what has not, and we've kind of blown it up and we've shifted the paradigm...
User_characteristics	FF	U	Manager	46-55	11-20	Male	FF-U-021	We're here for people. We're making a difference.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- Pride								
User_characteristics - Pride	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So in [City], we try to process all of our incoming 911 calls within 60 seconds. It's NFPA Standard 1221, which regulates those. And I think we are at, I want to say like 94% compliance, or something like that. And then NFPA 1710 regulates the actual response. And so with 1710, and I'd have to look those numbers up, we try to be at all emergencies within four minutes. So from the moment you start dialing 911 to when somebody pulls up in front of your house or your car, we try to keep that less than five minutes. And we are--
User_characteristics - Pride	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	I think we're at like the 90% compliance rate with those times. And we've done a lot and lot of advanced study on those times and why those times are so critical. I know that NIST, different divisions, but have done studies on the fire-growth, fire-burn time, and whatnot, as far as, yeah, that four-minute response number is still pretty important as far as the burning. We've done, in conjunction with our universities here-- we have probably one of the premier medic programs in the nation, and they have found that, ironically, almost identical to some of the NIST stuff on the fire growth, that on the medical side, you have about the same four-minute window for a lot of your cardiac events. So if the heart stops beating, you have about that same four-minute window to start getting oxygenated blood back to the brain before they become very, very sick.
User_characteristics - Pride	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	If I had to describe the job, I would say it's a family-oriented department that we work for, a real tight-knit group. Pretty much, we're going to go help anybody that needs help, whether it's medical, fire, anything like that. If they need something, just call the fire department, we'll come on help them. I'd say that we're at their disposal for them.
User_characteristics - Pride	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	Well it's not so much the city versus the suburbs in a sense, it's more [City] specific, but definitely more discipline on incidents. We're a much more SOG driven department. Everything is spelled out, so I found--
User_characteristics - Pride	FF	U	Other Public	26-35	11-20	Male	FF-U-045	...So yes, I think we do a good job of separating whatever that big event is from the operations of the rest of the city. Just because two million

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					people are coming in for the inauguration or for 4th of July, doesn't mean that people's houses still aren't going to catch on fire, or people aren't going to get sick. Yeah, right. So that's all like-- you can't just use your regular operations and still handle two million in the mall because they're going to be doing what they do everyday.
User_characteristics - Pride	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	Yeah. I think probably the west coast has it figured out the best, just based on the wild land issues and stuff, where they have these massive, massive incidents. But we do a pretty good job.
User_characteristics - Pride	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Definitely. I would still pursue college. Our job is so-- it's like winning the lottery. For [City], there's usually-- they hire every other year only for like 150 to 200 positions, if that. And we get it close to 14,000 people applying.
User_characteristics - Pride	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	I think for us, it's cutting edge. It's been on the market for two to three years. Again, trying to let the industry test it and not let it be such bleeding edge technology. Let the bugs get worked out of it and then come back and do an assessment, and identify how we're going to implement it.
User_characteristics - Pride	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	It's the best job in the world.
User_characteristics - Pride	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] Second home away from home. It's challenging, exciting, and fun, kind of all at the same time. And if you have a bad day with someone there's six other people there to kind of go to. I mean, anything kind of goes, but it's-- everybody knows it's all business but you try to lighten the load by having a good time at the same time. You have the comforts at home in the workplace. You have a fully-loaded kitchen, you have a place to relax and do your thing, and then you have a place to study that's private/personal if you're working on your project and your career advancement. You can go to pretty much anybody else for help and using group effort to kind of do the same thing.
User_characteristics	FF	S	Not	Not	Not	Not	FF-S-035	[S6] Yes. If you have something going on, someone here knows how to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- Pride			specified	specified	specified	specified		deal with it. And the best way I always describe it to people is that a lot of people when they're heading to work they say, "I have to work today." I would say, "I get to work today." And today it hasn't changed. It's awesome.
User_characteristics - Pride	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] And everybody thinks their community's unique or the best or whatever and we're no different. We all think that. But the community here is pretty fantastic.
User_characteristics - Pride	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S5] Sometimes embarrassing in the sense where people gush. "Thank you so much." Going up, "Thank you for what you do." And it is our job. We're going to it because this is something we were good at, as far as going into a burning building. People are like, "Oh gosh." But we go into what you like. And so sometimes people are a little bit-- like I said, it can get a little embarrassing. You don't know what to say. You just say, "You're welcome." But nice in a sense. It's great going out with the little kiddos that are so excited, so.
User_characteristics - Pride	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] All things considered, working as a firefighter in this department as far as technology goes, I feel like we're pretty up-to speed in relation to some of our peers throughout the state. I've heard different firefighters for different organizations, actually throughout the country, and you talk shop.
User_characteristics - Pride	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	I would say it's all very important. Sometimes we're supporting the role of the other divisions in the organization, and we're also the community aspect of the fire department. We're the ones that are always out there interacting with the public.
User_characteristics - Pride	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	So the actual work itself, how does a person feel about it? Okay. Yes, it's very challenging work and rewarding, and sometimes it's very demanding at times. I mean, our crews work 24-hour shifts. So depending on how things go, it can become physically and mentally demanding on the person, individual folks. And it's exciting. I mean, people get into this business because of-- they want to serve and it's the kind of job that you come into work in the morning, you don't know

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								what's going to come of it. You don't know what you're going to get and there's that bit of piece that people like about the job as well, the unknowns.
User_characteristics - Pride	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	So yeah the [City] well is a contractor I don't know basically [Name] provides the ambulance and we provide first responders so we'll go and assist the scene and we actually we work really closely with [Name] with our EMS support and we do all of our joint training together for EMS and basically respond with our auto aide and mutual aid agreement and [Organization]'s we kind of definitely proud of how well the both organizations work with the EMS side of things.
User_characteristics - Pride	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Oh yeah the soda bottle ones, soda bottles or whatever and I think that kind of goes back to what's unique about our departments is that we have these events that are the face big city departments you know with those type of people so we interact with so many different agencies and so it's great. I mean that's what's part of the reason I love working in our department.
User_characteristics - Pride	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	D. All of the above. I truly believe that in my job I'm always going to be a student. The day that I feel like I've learned everything is the day I need to get off the truck and go find something else to do. I learn something be it good or bad every time I go to work, every time I'm on shift. Fun and exciting yeah I mean there's an element of the adrenaline there but I found myself as a person of service ever since I was young and I've had other jobs where was rather stale. You work coming in work going out it's not really you don't see the effects. It's a good job to really see the effects of what you do.
User_characteristics - Pride	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	Public safety is a brotherhood volunteer or paid. Ya'll experience such tragic and wonderful things you have to know each other and it helps to know each other especially when you're working. It's a good feeling of comradery and also you know it's good to know that people know you and have your back.
User_characteristics	FF	R	Field	36-45	21-30	Male	FF-R-049	Oh golly. It's not a job it's a career that you choose and it's a lifestyle that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- Pride			Responder					comes with that career. It's a calling and you have to be passionate about it and again like I said the day you don't have that need for education, don't feel that passion, don't feel called to do it and there's days you don't want to come to work but that's different from that's different from not being willing to give a 100% to those arenas you know those are the days you have to be real with yourself and say is this what I want to keep doing? I've had those days whether it be after a bad call or after not getting a raise or stuff but I've done a lot of things in my life like I said I think I've always been a person to serve. I served in the military so it's just the best job in the world.
User_characteristics - Pride	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	The people making the calls out on the road, get along without a problem. Yeah, you know there's always--there could be a hiccup here or there. Anytime you put personalities involved. But for the most part we have no issue. And when we do we work those out. We have some excellent dispatchers. We have some that just like anybody else, you can have a personality issue here and there. But from where we were... let's say 15 years ago, today is night and day. This building has a little bit to do with that. But they train. The person who had [Name]'s job before [Name] got it came from a whole bigger organization, brought a whole bunch of different ways of doing things and was better in terms of who he hired.
User_characteristics - Pride	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	The best job in the world.
User_characteristics - Pride	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	Go to work, you never know what you're going to do while you're at work. It depends on what the caller on the other side of the end of the line, what kind of problem or issue they have, depends on what you're going to do, you know, for that time. So it's not like I work in an office and I sit down and I do the same thing day in and day out. It's basically the same... work but it's always going to be in different locations and just different things like that.
User_characteristics - Pride	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	I told you in the beginning it's the best job in the world. I love it. There's nothing like it--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
User_characteristics - Pride	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] It's probably the best job in the world, where can you go get paid to go out and meet people and we do our pre-plan project, running our calls and being able to meet people and being outside and not stuck in my cubicle or bound to a certain facility for eight hours and go home you know.
User_characteristics - Pride	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] So it is nice we go out to eat sometimes, sometimes we cook in you know; it's kind of a unique job. I love it.
User_characteristics - Pride	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S2] I mean...every call we have been on the past month or two have been, you know, properly executed you know what I am saying.
User_characteristics - Pride	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...So I've got a lot of respect for those guys, and gals, and what they do. But they're not above teasing. I mean, firefighters, I tease them all the time about working out for calendars and going saving kittens. Their trucks, like the [Job title] you've just in here, their truck looks like a boar's head truck. So every time I see a boar's head truck, I snap a picture and send it to the fire marshal because it's that type of we're all on the same page. I think that's like a brother. You can say some stuff to your brother, but if somebody across the street says something, well we're going to throw. And to me, that's the kind of relationship. But I'm not afraid, and I should be...
User_characteristics - Pride	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: daily routine] Yeah. So expert in a lot of things, in charge of a lot of things so.
User_characteristics - Pride	LE	U	Manager	46-55	31-40	Male	LE-U-020	I'm 24/7 on call... Yeah. And that's why they said, "Well, when are you going to retire?" I said, "Well, I'm still young," He says, "But nobody wants my job [laughter]" I said, "There has to be at least two of me to do the stuff that I've done." But I've done it for a long time, so I can do it.
User_characteristics - Pride	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	the three of us have all been in the department for a long time, and have seen even before we had an electronic support section, just the department tries to stand-- I think we were one of the first agencies in the nation to get computers in the cars. And that was back in the late 70s, I think.
User_characteristics	LE	S	IT	Not	Not	Male	LE-S-015	...this department has always been kind of on the forefront in our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- Pride			Specialist	specified	specified			wireless mesh system and surveillance camera system, everything is really state-of-the-art.
User_characteristics - Pride	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	Yeah. I mean, I communicate with my counterparts around the country and see them at different conferences, and I think we're much more advanced than a lot of agencies. A lot of agencies move a lot slower than we do, and some of that has started to detriment. I mean, I think kind of like these guys said, we've introduced so much so fast that I think sometimes that gives officers on the street kind of overwhelming feeling using it. They just hit me with this, and now they hit me with this, and so. I mean there's some stuff that I'm actually kind of putting the breaks on. Okay, let's make sure that this stuff is working before we now take a leap on the other things anywhere...
User_characteristics - Pride	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I remember when we first got digital cameras, and those got tossed to me, and I had to figure out that protocol. I mean, for a while, people in the state would call me-- I don't know if we were one of the first people to buy them. That was from an interesting process and even being able to show kids, take a picture, as they did tours, and then print out their picture for them. So seeing a lot of those technologies come through that people starting off today just-- I don't say they take for granted, but they've just always been there, so they never knew life without them.
User_characteristics - Pride	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	We don't have body-worn cameras yet... most of the agencies in a county do. So I usually talk with them about it, just kind of the pitfalls that they've gone through. And then read their policies and there's bigger discussions on the privacy issues. When to record, not record. So we sort of stood back and watched that from the edge. The current under sheriff and I used to joke about, "The day my word's not good enough in court and they will demand to see a video, it's time to get out of this line of work."
User_characteristics - Pride	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: ability to revert from desk to patrol] I think, in a lot of places where I talk to, yeah. I think, here in our community, it's out of necessity. I can't just say, "Okay. I'm now assigned to this tech unit and I'll never need to be called in to do anything else." ... I certainly see it as a strength and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that flow of information. I feel quite fortunate. As I've told you, feel fortunate I'm able to do this. And at the same time, I think I've worked to get to that level. It wasn't just by luck. So just still try and balance some of those things.
User_characteristics - Pride	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I mean, if you sit there and listen to radio on probably anywhere, and you hear the calls that gets dispatched out, you would probably sit there and go, "Okay." If you wrote down every call type, and realized, "Well, what is it the police officer's been given all these calls has to know?" Pretty much everything. And I understand when the citizens call in and they don't know where else to go. Maybe we don't have enough 211 services, 611 services, but I listen to some of these calls going, "How are we supposed to know that?" But we're going to answer the phone and they're going to expect something, and we don't want to look like fools.
User_characteristics - Pride	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I tell people I feel very fortunate in the area we work and the level and the qualities of the guys I worked with. The stuff I hear about the bad cops. One or two guys French guys, but for the most part, I'm very comfortable with all the guys we work with...
User_characteristics - Pride	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...it's probably never taken well if you come in and say, "Well, we are the federal government, and we've done this research and decided this." ...
User_characteristics - Pride	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...I've actually been deemed an expert twice in the use of FARO that we've been able to in crime scene reconstruction. We've gotten FARO into court and actually used it as a diagram, actually walking through a scene on the stand. We've done that twice. In both of my cases, one was a shooting where somebody just fired a round at someone else. And then the other one was actually a child death. So it was more of documenting where things were in the scene. So it helped us to understand the layout out of the unit. Both of those cases are the first ones in [state] that we know of to be able to actually get it into court.
User_characteristics - Pride	LE	S	Other Public Safety	26-35	6-10	Male	LE-S-021	... So anyone that has a [information sharing software] login, they can now view our photos from our crime scenes, from our booking photos, anything else, surveillance videos from bank robberies, anything like

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					that. We don't have to now try to find an encrypted way of sending it, they can just log in and view it. We're the only agency that stores it like that so nobody else has that capability. But if you go to the desktop versions, you will now also be able to read any agency's reports from any of their systems. So while you don't get the media, you still get the reports, so it's all great sharing.
User_characteristics - Pride	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...On the southern end of our county we have kind of high desert and on the very northern end north of [town] it's a mountainous national forest recreation area. I think we have a fairly large Hispanic population in the community. I've heard upwards of 30% which is different than probably the rest of the state but all in all I think from a law enforcement standpoint I think we have a lot of support in our community for law enforcement and first responders. I think we have a very good relationships with our citizen reign. I think people I think we've established ourselves as a competent law enforcement agency that provides very good service to our citizens.
User_characteristics - Pride	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...I think generally we have a good culture of you know we have I think most if not all of our employees you know work very hard day in and day out. Some of them have really tough jobs and it's all in all I think it's a very positive environment. I think people can come to work and feel free to express new ideas and embrace changes and so that part is definitely one of our strong suits.
User_characteristics - Pride	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: IT staff time at station] We're over here probably 25% of our time maybe 30% of our time spent between three staff but I would echo everything that [name] said I think that when we come into this building it's a family environment and we're also included in that fold and we're treated as team members and collaborators and so it's a great environment and staff are capable, experienced and always striving to do better.
User_characteristics - Pride	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I was going to say after listening to [Name] talk about all the systems earlier it made me think like you know our computers and our technology work 99.99% of the time and that's a testament to [Name]

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and his team because there's from my perspective and probably most of our employees here when they turn on their computer they expect it to work and like I said it normally the vast majority of the time does and our systems work and it's probably something I mean I'm sure our employees have no idea what you guys do to make things keep working and so that's a testament to [Name] and his team.
User_characteristics - Pride	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...So the officers are entering information the supervisor is looking at that information and approving it, that information is going to the RMS administrator, she's viewing that information and approving that, that information is going back to the officer for final approval and getting pushed up to the feds. So there's constant electronic communication back and forth as far as checks and balances and making sure the information is accurate and it all flows very well and I'm always impressed at how much information is back and forth and not just via email but via these systems that the officers are using to maintain data.
User_characteristics - Pride	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	Yeah. [City], Canada. I met with the director. He came here, saw us, and he was very impressed but he said when they really started to move or be successful with video is when they took it away from the police department and had a centralized location. And they had one agency that dealt with it and they had their own funding, they had their own network. Network topology. And it was funded. And you have less eggs. All the police department has to do is say, "We need this video."
User_characteristics - Pride	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	...Yes. FirstNet, yes. I've talked with a couple of guys. One guy used to be-- he's a big commander here and he's taught me a lot, but I know he's involved with that now. I think it's a great thing.
User_characteristics - Pride	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	We're all law enforcement. The bureau that I work for is the Homeland Security Bureau. And that encompasses our Special Operations Division, which is our special events unit, which is very unique to the country. They are the motorcycles that escort the president and the vice-president. They're the ones that's been in all of the demonstrations, parade, marches, escorts of foreign dignitaries, and all that kind of stuff. And they're the motorcycles you saw at the front of the Inaugural

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Parade, the special events..... And a lot of our needs in this city are unique. We're more comparative to New York in that capacity than Atlanta because we have-- New York has the United Nations. Every time they have a United Nations meeting, all those guys want to come down here for their political meetings. So, we have a unique environment and a unique city here. Plus, we're not a state, we're a city. So if we were a state, we'd be the state police.
User_characteristics - Pride	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	It's doesn't. It's doesn't. We have very good relationships with the law enforcement agencies. I think there's something like 29 other law enforcement agencies in the city. We are the primary law enforcement agency. When you dial 911, we pick up and nobody else. Also, if there's any type of homicide, we handle it, no matter what.
User_characteristics - Pride	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] I have a stats unit that I work with almost every day, and it can be broken down by the number of calls, by their codes. So what we can see is there's a lot of, say, emotionally disturbed persons in a certain area, or there are a lot of overdoses. And so we do have pretty good analytics just on that. And, as he said, they have the mayor's office of data analytics as well. But my stats unit-- and also precinct COs, that's the commanding officer of his precinct, he also has access to all these types of stats--
User_characteristics - Pride	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	Fun, interesting, dynamic, challenging, rewarding, super rewarding, crazy [laughter].
User_characteristics - Pride	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	I still go after the chase and then tackle them, and the first thing I ask them, "How old are you?" "Eighteen." Yes! Yes! Yes [laughter]!
User_characteristics - Pride	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Then they get out-- then I get all, "I'm 47 years old, I got your butt [laughter]!" It makes you feel a lot better when you do all that stuff.
User_characteristics - Pride	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	Yeah, it's a large impact as far as just the interactions you have with the station, but you still get the overlap. The officers that work the station enjoy what they do. It's not a complaining station, so regardless of what the workload is, it is what it is. People have that kind of an attitude towards it. The changes that you see anywhere, officers respond to it,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								but again, they take it in, they process it, and they go forward. You dance with the one that brung you is kind of the scenario if you look at it. I mean, is that what we're doing now? Okay, then that's what we're doing now. So if we have a new policy when I came here. We have a new policy, so they're flexible and not rigid.
User_characteristics - Pride	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	--new dynamic. Yup. Maybe it's the same, even the same two people, but the problem-- and it may appear to be, on the surface level, the same problem or the same call, but it's never the same. And that's why we love our job. Because it's different. It's ch
User_characteristics - Pride	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Yeah, some people. But I definitely try to keep those relationships going throughout the day. But it's a great environment, very positive. I love it here. I mean, I get to sit down and talk to the chief often. I talk to my commander, [Name], out there. I talk to him.
User_characteristics - Pride	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	Oh this could be fun [laughter]. So I'm sorry. Philosophically, again, I'm thinking this through. Adjective describing the work at face value, not working relationships or--
User_characteristics - Pride	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[s3] Just wanted to be clear on that. Shoot, I guess I could start with a few adjectives. I think it's exciting. It's always exciting. It's dynamic. It's, what's the word I'm looking for? It's urgent in nature. I don't know a better descriptor for that, but it's-- we work with a lot of critical systems and life and safety and property issues, so there's that level of urgency. I think that's a good descriptor. Innovative, challenging, fun, yeah. I guess that's what comes to my head.
User_characteristics - Pride	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] And I will use one that he used is challenging. That was my number one right now. I'm basing it right now on how I feel. It's challenging. It can be frustrating, but on the other hand, it's fulfilling work, it's worthwhile work, and it's important work.
User_characteristics - Pride	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Oh it's awesome. It's like I've only been 6 months into it but yeah it's difficult but I think I have the best person and I'm just going to pat myself on the back and gloat a little bit but I think I have the best personality for that and I think it goes back to what I was saying about

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								being able to let things go and things slide because yeah I mean people are going to say things that you didn't inform this person or you didn't do this properly or you know you're doing this too much or that too little or you know this, that and the other thing and it's just like okay you know I may have three different people telling me to do something but and it's all three different things.
User_characteristics - Pride	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Well I'm doing it poorly so I probably won't give you the right answers and I know there's no right answers but anyways you know I'm talking mostly amongst the first responders here,
User_characteristics - Pride	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Exciting. [adjectives to describe job]
User_characteristics - Pride	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	No ma'am. I think that's about it. We have a job here. We try to do it as well as we can and we hope the people here in our communities are happy with the job we're doing but I think they are in general in general I think they are.
User_characteristics - Pride	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	That has been incredibly successful. Where people want to have an appreciation or an understanding of what does the police department what are our capabilities? What do we go through? They come in not knowing what to expect or having a very pre-conceived notion that we are a campus security department as opposed to a state certified and actually we're a national accredited law enforcement agency having attained our CALEA accreditation. So again they come in with this pre-conceived notion that we're campus security and they leave with an appreciation for the fact that we are in fact a very, very capable police agency with more capabilities than a lot of surrounding agencies. Our canine for example is used statewide.
User_characteristics - Pride	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	We train the most explosive detection canines of any other agency in the state so that speaks to the knowledge and the capabilities of our officers as trainers that we are looked to as that first in class agency when it comes to explosive detection canines. We have a number of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								firearms trainers that are just top notch and as part of the citizen's academy they go to the ranch, they experience what it's like to go through firearms training. We have a simulator that they experience, a no shoot situation in a very safe controlled environment.
User_characteristics - Pride	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	In this day and age. When I see what they're developing here on campus teleportation is closer than it's ever been. Yeah there's some really cool stuff that's happening on campus and again it's probably just due to my generation and probably my lack of imagination that I can't come up with a better answer for you.
User_characteristics - Pride	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	Chaos, fun. [words to describe job]
User_characteristics - Pride	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	There's a sense of fulfillment, there's a sense of it's interesting which sometimes police work isn't, engaging community engagement I really enjoy, I suppose important. I think the core of being police is answering calls and being there for the public but behind the scenes making sure that people are trained and we're meeting our standards and people can keep their power of arrest. I think there's a level of importance to that. I would say those.
User_characteristics - Pride	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	[name] is an amazing institution, it's a great place to work, we have access to anything we want but it's not municipal and it's not we are not you think about what municipalities put first and foremost? Public safety so the police department gets the raises, the fire department gets the raises, the fire department and the police get what they need whereas here we're part of campus services that's who we answer to in the structure. The name alone implies services.
User_characteristics - Pride	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	...Like I told you, last week I was at the first net meeting and there was some stakeholders from [State] that was there, and they was like, man, that's pretty amazing because here in [state] we don't have that capabilities yet. But just right here, in this radio right here, if I wanted to contact somebody in a different [County], we have the capabilities. In our radios we have every [County], 64 [Counties] in the [State] is in this

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								radio and I can click to it and find it and be able to call them
User_characteristics - Pride	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	...Very, very easy. So that was a very big improvement for us. In fact, here in [County], here in [County] where we're at, me and my brother wrote the grant to buy all of the fire department's radios throughout the entire [County] of [Name], and we were able to get that through the American Fire Act Grant and we bought radios for every fire department and every fire vehicle in the entire [County]. It was over a million dollars' worth of radios on that system, on that LWIN system.
User_characteristics - Pride	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	[Laughing]. Okay. And if you were thinking about describing that and using adjectives, what kind of things would you say about it?
User_characteristics - Pride	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	...I rode motorcycles here for 12 years and so that was always a conversation piece... I've never worked as another police officer in another department. I started my career here and I plan on finishing my career here but it... it's enjoyable.
User_characteristics - Pride	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	... Really, I think it boils more down to training everybody. I've--we have a lot of dispatchers who are very good,
User_characteristics - Pride	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	I think you have to have some self-drive. You need to take pride in your work. 'Cause a lot of times there's somebody, patrol officers on a regular shift that you see, the police officers that normally take your calls, they have typically a large rate structure.
User_characteristics - Pride	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	I would say, I don't think we use anything that's cutting-edge. I think we use a lot of technology that's been around for a while. We may utilize it better than some people who have used it, just 'cause we use it all the time. But I don't think that there's anything that we use that is state of the art that nobody else has heard of.
User_characteristics - Pride	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	Yeah, I have never really considered it. It certainly, I would go rewarding, it's certainly something that I would do, would describe, again; you know sometimes, it encompasses a lot of different things. It's very rewarding at times but again, you know I use the word 'tedious' at times because it is so, I wanna - I guess I don't really know how to encompass everything in just a couple of words. It really runs the gamut from, all the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								way from rewarding to days that, you know, are dreadful, quite honestly.
User_characteristics - Pride	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	You know, for us being successful in accomplishing our mission and that being, being able to help somebody in need, you know, having proper resolutions to criminal cases where people were victims of, getting that satisfaction for those people, if you will. Satisfying is a good word to utilize to describe the position; it can be very, very satisfying, but then again, the flip side of that is sometimes it can be struggling, and like I say, sometimes very mundane, dealing with some of the personnel issues - it can be very, very difficult because it's like a family and you know as well as I do when you have to discipline somebody in your family, it's never an easy thing.
User_characteristics - Pride	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	You know, [short laugh], I would say quite honestly for us, we are probably a little more towards the cutting edge of things because our jurisdiction is pretty good about their budgeting and forethought of what we need in the future.
User_characteristics - Pride	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	So one of our biggest obstacles as far as challenging is making sure that guys are trained properly because you lose the experience and training as the younger guys are teaching the newer guys - I don't have 20-year veterans like I used to, so my experience is gone, so that is very challenging. Very challenging because -and relates to I don't have much assistance because the younger guys, they don't understand what it takes of all the behind-the-scenes stuff. So they don't know that I gotta do, you know, all the inventories and the grant work and everything and ordering stuff to keep the department running; they just are - so, police work, you get in a car and drive around. So that is challenging. I mean, overall, it's rewarding; the detective bureau part is the rewarding part because you get to follow through on cases and stuff like that. But I don't believe it is as rewarding as it used to be because such a negative impact from the cops [unintelligible] now; I see the guys, they get burnt out quick, they get jaded and you know, whether it is political or if it is from the public, they feel like they are getting it from both ends.
User_characteristics	LE	R	Supervising	46-55	21-30	Male	LE-R-058	It has. It has, it's -- we've never had a rash of, you know, mistreating

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
- Pride			Field Responder					people or of officer --
User_characteristics - Pride	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	No, we are pretty cutting edge here. We really are pretty progressive and proactive.
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	For us, it's got to be the improved user interfaces. And I say that of... We can complicate everything to a point, but it doesn't make any sense to put more bells and whistles. I just want functionality. And I keep saying that over and over to our manufacturers, and I think they get it, but they're covering such a broad band of--
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	...let's talk SCBAs. So SCBAs, we are the secondary thought. The mining industry really is the bucks, and so we kind of get underneath that. When you're not servicing a clientele with real big pockets, you kind of have to make things generic. So I think they do a fairly good job of making things simple, but I see it all the time. They had a countdown timer feature in one of our [cabs?]. For example, so [an IC?] was supposed to use the [cab?], you're supposed to click on this touchscreen, which is really cool, and then you could manage in cockpit or in the battalion chief's vehicle, division one, or division two, and division three. And I'm like, "That doesn't work that way." Some people sit in the cab but they don't have time to really track it that way. They track it more of an approximation in their head, with their watch. And so I'm sure a lot of programming went into features like that, but it's almost like we don't need that.
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	I need a radio that works 100% of the time with no downtime. I need batteries that last a long time. I need equipment that if I dropped it from where I was sitting, accidentally [laughter], that it won't explode on the ground into 1 million pieces. The interfaces we use-- that radio was the patrol version or the tactical version. They make a fire version with really big knobs, and it's yellow, and... so people are addressing some of those things, which [are?] really great...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	...the in-mask communications, making sure that there's some sort of standard...
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	Just having some sort of-- okay, this is the standard for radio systems from now on to connect with an in-mask communication system. That would be important long term. Because, currently, there's really no standard, which blows my mind because there's money to be made [laughter]. If you could invent the whiz-bang gizmo, you probably could do okay. Again, it's a smaller market, of which I've tried a lot of different systems over the last couple years, and some are great, some are marginal, some are terrible, some just want anyone to sell you something every five years. And so I think those standards become important because if you don't have them, you're not going to meet them with some sort of demand. But, again, if I had a wish list, I'd want in-mask communications. I'd want radio sets that I could hear clearly. The cab of a fire engine is loud.
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	If you can imagine wearing your earbuds all day long for 365 days a year, they wouldn't make it. Your Apple product that everybody loves? They'd probably last three or four months, and then you'd have to go get a new set. Well, the problem is [laughter] that when we want a new set, we're like, "Okay, we need a new set. Okay, well, this isn't working." "Well, you're stuck with it for another few months." "Hey, we got to call the manufacturer and get somebody over here to service this. Three weeks left." So that downtime, I'm really suffering because there isn't plug-and-play components that are affordable, and cheap, and easy for the user to just say, "Yeah, I need this replacement and this." But, yeah, communications has got to be on top of my list. I wish I had audio files from fires before and after good communications in mask
Wish_List	FF	S	Other Public Safety	36-45	11-20	Male	PS-S-001	...And so, on patrol, you don't have that circular feedback because everybody's speaker is in your ear so you don't hear it. I mean, the potential exists, but it's just not there. So our needs, really, on a fire base

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					is we need better communications. And not so much system wise, but just somebody needs to be able to go, "Okay, here's the standard and we're going to use this standard. It needs to meet this standard.
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	[RE: drones] ...there's a lot of concerns with that type of program, and I completely understand that. But for that fire, that gave it an overhead perspective. It was a large building fire, huge, of which, the operation section shief could look down, and he's like, "Good, we've got everything in place." But for us to get a helicopter up and do the same shot, it's not only thousands of dollars more per hour, we just don't have those resources. I mean, they're busy. They're doing other things. My buddy's a helicopter pilot for CHP, and they get to fly just a few hours a day because of the cost these days. It's just expensive. So, yeah, drone technology is pretty amazing.
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	[RE: drones] The other good use for it is kind of the law enforcement side. It's a tactical tool, right? Let's say we have a bad guy pinned down with weapons and other things, having the ability to put eyes up in the sky and really look down [at an event?] is huge. My gut tells me because of where we live and some of the high-end brands around us-- I mean, you have technologies that they want to deliver your toothpaste via drone to your door. So I imagine that we will see progression into that, where maybe 10, 20 years from now, we'll see-- from the PSAP, we would see a drone launch when we have a fire or we have some sort of tactical event involving weapons or bad guys, and we would see a point-to-point coverage of where somebody [inbound of the event?] could look over at their CAD and they could see live... like, "Wow. Okay. That's what the building looks like. Oh. That's what the fire looks like in real-time." You plant something like that in the middle and go. I mean, technology, it exists right now to do that. It's just there's a whole bunch of other political--
Wish_List	FF	S	Other Public Safety	36-45	11-20	Male	PS-S-001	And again, we haven't figured out how to stay away from the fire to actually fight the fire or a hazmat event from afar. I mean, there has to be some interaction with tool-on-task, and unfortunately, people are

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					susceptible to some of those bad things. But, minimizing it over the years with good training and some technology-- and another thing for technology, I wish we had more money for monitoring equipment for a lot more people. For example, I have disseminators for this team at this station. I don't have them for everybody. I used to. Okay? They were grant-funded. The grants dried up. Post-9/11, we had a lot of money. 10 years later, not a lot of money, okay? I wish we had a four gas meter: oxygen, CO, whatever else, LEL [laughter], all the good stuff. I wish we had one of those for every engine company. We don't. Money. Right? I wish I had a natural gas meter, \$795 unit, for every [first-in?] engine company. I don't, okay? Some departments do. We don't. Being able to go, "Oh, yeah, there's no natural gas in the building. There's no CO in the building," okay, and ruling out a sick building based on symptoms is really critical, I think. And that's one of the things that, it costs money. Those meters are expensive, right?
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	. So technology, when it gets cheaper, it's actually better. But for gas meters, I wish the price point was down a little bit more, or I wish there was more grant money available, which there isn't, unfortunately. But, yeah, more metering, more stuff like that. There's down sides because you have to maintain those equipment's caches, but probably worth it.
Wish_List	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	That's very much changing. I think the problem that you're going to have is that the new technology has to be as easy as what they can buy off the shelf.
Wish_List	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	...So you go to Arizona and you run a driver's license, you get back the thumb print and you get back a photo of the person. [State], there is no connection to the photo database which is held by [State]-Photo in the Department of Justice versus Department of Motor Vehicles. They make us do it separately. So you would have to log into a completely different system. They treat it completely different. You have to have a case number in order to get in and get the photo. I mean, in my mind, I should be able to take my phone, do a QR scan of a driver's license and see the driver's license return right there... And there are states that do that. Not

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								in [State].
Wish_List	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	Well, I think facial recognition is huge. I think the body cameras are huge. I think getting those down to a smaller form factor to-- I mean, how interesting would it be that you have one little camera here and one little camera here? ...And how interesting would it be that if my body camera did facial recognition as I was walking up to you, and then dispatch got a notification showing that [Name] been contacted by police, based on facial recognition of body cameras, four times in the last six months. Here are the incident numbers. Here are the agencies. Here are the associated cases. And you were always a victim versus being a suspect, or you were always a suspect...
Wish_List	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	[RE: body cameras] ...Or even taking it a step beyond that when you go into the technology. What if it started reading your body heat? Body language? Starts looking at facial recognition and saying, "Okay... and the last four times she was contacted, she was a much calmer person, but she does have a drug history. Maybe she's high on something now. She's clenching her fists." So when we were talking about that, everybody thought that was a great technology. But what does it require? It requires something on the back end. There's still going to be human interaction. The artificial intelligence is growing, but it's not there yet. In the meantime, you're going to have to have somebody in a center that's looking at that and evaluating the criteria that's coming back because the officer doesn't have time to do that. And that's one of the things that a lot of technologists come up with. They come up with great ideas. It's like, "Okay. Well, yeah. But the officer doesn't have time to be pulling something out of his pocket... or looking at this or doing that." ... And that's why even the CEO of Axon says, he goes, "Our goal would be getting to an officer being hands-free."
Wish_List	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	[RE: changing radio form factor] I think we would in a heartbeat. I mean, if there was something that was smaller or easier to work with. I mean, I know they've got Bluetooth microphones and things like that now. Well, I've heard it's gotten better. But the first generation Bluetooth stuff was

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								terrible.
Wish_List	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	[RE: radios] No cords.
Wish_List	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	[RE: radios] Battery life, battery life, battery life.
Wish_List	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	So now the demand is we need to know, and even officers, we need to know what happened there before, who we contacted, what happened when we were there, and dispatchers have access to our records management systems. So when guys complain about that, I say, "Well, do you not want that information?" "Well, yeah, but it's just-- I just hate it when they say it's going to make me more efficient, because it doesn't." And I said, "Well, it does make you more efficient." I said, "Maybe not this specific task--"
Wish_List	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	Well just having come out of the radio discussion for radios I would want the responders to not only be able to have a radio in their hand but for all of them to be able to operate on frequencies that they can communicate with each other on. We just we see it time and time again that the left hand they can literally almost be standing next to each other and they don't know what the other is doing if it's not fire and law. Sorry. And so that would be I think my top priority is that funding...
Wish_List	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	...You know the first 911 event that caused that movement needs to be supported in a higher level. I think the responders should be able to communicate and I think there should be grant funding for that not just now I know it was out there in the beginning but it kind of just went away. With our state they now the [State] Public Safety Communications Commission now oversees the radios as part of the umbrella of not only 911 but also the radios and my goal this year is to make sure that funding those system is made a top priority because the repeater sites cost money, the radios cost money, the consoles or the base stations or whatever they all cost money and that's where some of the argument comes from...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[RE: location of callers] Yeah that's a big one and I know that that is definitely in the works out in the world. That's a big push and really what next gen is about or one of the things that it's about. You know I guess the rest is just really just ease of use for on the end user. You know some of these systems come through and I've even seen it in other 911 centers where the technology is really supported and it's a great system but when the person on the end tries to use it it's useless and so just having that focus of what are you trying to accomplish? It's great if you can get it going here but if you can't use it it's not worth it. And we run into that with our CAD system it's somewhat outdated...
Wish_List	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[RE: outdated CAD system] ...It's not the worst out there but it's not the best out there and you know so as we look to the next generation CAD system you know we have a lot of things in mind on what we want to see and the location the easy location and not only the easy location but like this one system that we're looking at actually will allow us to when somebody calls in from their cell phone doesn't know where they are they're in the back country we can send them a text that says push this that says it's okay for me to look at your phone or find your phone basically so it's a find your phone and then you can zoom in on that phone's location and even track them if they're moving so and that's the kinds of things that you know we need in today's society of mobile phones.
Wish_List	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	Not that I can think of. I think with FirstNet coming I would like to see the whole radio thing probably go out of the window and the cell phones to be able to be the radios and I know that that's coming someday and those radios should be able to be protected on ban 14 FirstNet system and they should be able to be affordable so that it's in everybody's hand and I think that that would be huge strides towards interoperability all together. I don't know if it will ever happen but we'll see. Kind of hard to get the LMR out of the picture.
Wish_List	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	The virtual reality stuff is kind of intriguing to me. ... I mean, they do it on NCIS, where they have one big screen, and that's got everything they

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								need, and they just throw it around like that. I suppose that's probably possible now...But it seems it would be nice for us to be able to have a big curve TV instead of six monitors, and still be able to manage the four different computers and the information that our dispatchers need to do their jobs. Seems like maybe virtual reality would be the way to make me do that.
Wish_List	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	I don't know. I would like to see some way to quiet things down in the center.
Wish_List	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	Minority Report. I died when I saw how he was able to have this virtual screen that he grabbed out of the air and threw-- whatever he was doing, I thought, wouldn't that be awesome if I could have that virtual screen as a dispatcher and I see a map of the county and I can zoom into the emergency, and I can just zoom in on it and see what their problem is, look out for the closest units and just touch them and throw them at the house and just go, you, you, you, you, go. And just have it happen. And then, the system will tell them everything and then-- I mean, I thought, "Yes. It happened on TV so it's got to happen now." ... because I don't have to type in all these commands, that whole fat finger syndrome, or that working 18-hour shifts and there's a major storm and the 18 hours turns into 48 and you're tired, so the human factor decreases and the computer-aided part, like garbage in/garbage out, perfection in/perfection out, that will raise it. The whole AI scare amongst all the techno geeks out there, "The AI is going to take over everyone," well, I don't believe so...
Wish_List	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	[RE: Minority Report-style dispatch interface] ...But we can take advantage of technology and in that case, it would be great to have that type of system where you put in so much technology into it that it does exactly what you want. So I can just stand there with no monitor and wiring and plug and screen, all this stuff that I got to-- control+Alt+Delete and to type in my-- all that stuff is just there and I can see the emergency, I can see the closest units, I know what they can do, I can just throw them at it and it just goes. That would be cool.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	Then also for one of those tactical channels, like for a river rescue, that would be awesome. Send a drone up in the air, search it out ahead of time, so then that drone can pinpoint according to our GPS, coordinates right to the person. We can have video, audio, tell the people, "We're here, we're overhead, help is on the way." Immediately, we can tell the people to pinpoint instead of us searching miles of stuff. Then if we have visual on them, we can see them, we can what the clothing they're wearing, male and female, what their injuries are. We can ask them questions and we can-- all of what stuff can already be ahead of, before someone even goes face to face. So AI in that regard is awesome, to be able to do something like that...
Wish_List	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	[RE: text to 911] ...Now with texting, we can't get the background noise, we can't tell if the person is having trouble breathing, we can't tell if the scene is secure or if there's any-- we had a call actually just this morning. The lady said, "I need my breakfast delivered." I said, "Ma'am, this is the fire department, you called the wrong number." She's like, "No, I am just confirming my order." I was like, "Ma'am are you in danger?" "Yeah, yeah, absolutely." So she didn't want to say, "Help, my boyfriend's beating the snot out of me and now he's trying to rape my teenage daughter," that was going on this morning. So I said, "Okay. Can you speak right now about something or do you need to go into another room?" She was like, "Hold on. I'm going to go get my credit card for this purchase." Then I immediately conferenced the police in, we've typed in the address, we send in unknown rescue and a police priority, then she said, "My boyfriend is beating me up and now he's in the room with my teenage daughter trying to rape her and he's on drugs." So if she texted "Help," she couldn't text all that... And so, we would go into a very dangerous situation... So the text to 911 is a great advancement. I just hope that there are certain buffers or barriers or something that--
Wish_List	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	[RE: sending photos and videos via NG 911] I don't know because I don't know enough about it. I would like something to where if you take the worst possible scenario, someone who doesn't speak English, who's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								having a panic attack about a major emergency and can't relay that. If we had that, I could see them, if there was some sort of magical technology that I could talk, it translates to their language, they could talk, it will translate to their language, so I see like a closed captioning exactly what they are saying, there's no communication breakdown, I can see what they're seeing so I could use my experience to plug in the holes of medical, traumatic, fire, whatever, and then I can tell them exactly what they need to know immediately and the communication is transparent, it's just there automatic, because of technology. Instead of having to delay and wait for all that.
Wish_List	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	[RE: language line] So that would be really nice if there was even-- I don't know if that's even a possibility to have. I know the military has those devices they can speak into and that, I don't know if they could do that instantaneously along with video or anything else.
Wish_List	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	I would say, first thing would be a more user-friendly phone system. That'd be number one. What else? A faster CAD system.
Wish_List	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	More staffing...I think you guys did a study on fire department staffing levels... Yeah. Just, it takes a lot of manpower to get things done quickly and efficiently... And we just don't have it. We just don't have it. Fortunately, no one-- we haven't killed anyone. At least in my 27 years, no one has--
Wish_List	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	So that is great and that's something that's been expressed to the county but one of the frustrations I feel like that we have here is we do feel like they don't the county does not prioritize public safety as much as you know maybe we should and so when we've expressed that we need a geodiverse separate building for public safety specifically for the PSAP they're like you know interested. They don't want to pay for it because it is expensive to set up and they just don't really see the value because they don't think the way that we have to think.
Wish_List	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Right. So we say we need two [separate public safety buildings] that makes sense to them but then we say we need something geodiverse

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and they're like why? Because they don't think that way so that can be frustrating sometimes.
Wish_List	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	I would really like anything related to geo stuff is very helpful. Location is again the most important thing that we always need to find out. You need to know that. We need to know where you are and we need to be able-- not only do we need to know where you are but we need to be able to guide the responders to that location. So when we ask our locations and my 911 calls-- again I have a little personal script and it's just my own preference but I answer the calls the same way every time. I say, "[County] 911 where is your emergency?" And then sometimes they listen to me and sometimes they don't. If they don't listen to me I'll redirect them to that question, "okay where are you?" You know and then if they do listen to me and they give me an address and you know you say, "[County] 911 where is your emergency?" And you say, "[Address]" and I'll say, "okay [Address]?" I verified it with them they say "yes." "Okay is that a house, business or an apartment?" And if they say it's an apartment. I say, "okay what apartment number are you in?" And then apartment number 810 because sometimes people don't think about that so I need to know what apartment we're going to.
Wish_List	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	...so location information is very important. I would love to be able to see you know this is a pretty big wish but one day I would love to be able to see you know accurate you know x, y, z coordinates. I'm talking like z coordinates would be cool especially in this environment where we have a lot [of cars].
Wish_List	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	[RE: accurate xyz coordinates] Exactly, exactly so if we get this is a problem you know we have if we get a 911 hang up from a cell phone or you know or even a yeah a cell phone if we get a hang up from a cell phone and it comes back to you know we don't know where you are but you're calling and you're just screaming and then I have to go trace your phone and I trace your phone and they're going to give me even if they can give me an address it's an apartment complex? I don't know where you are. We can't have the officers go check every apartment. We just

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								can't do it right? So knowing kind of an approximate would be really cool. That would be awesome. Anything where we can better direct people to where you are...
Wish_List	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Right and also it would be extremely helpful to have that I don't know if crowd source is the best way to put it in but some type of system where we can easily search for a business even if that business has only been there for like a day or two or if it was an old business right and someone says I'm at the old Mister [Name] right and I'm like I don't know what that is right but if they say oh it existed there in you know 1960 I guarantee if you Google Mister [Name] and it was like a big place then they're going to be oh did you mean [Address] which is now blah, blah, blah? It's going to pop up you know so we don't have that ability so that can be quite frustrating.
Wish_List	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	The next big thing is in building and Z coordinates in building which is very important for us. There are some phone companies that are building their phone to do that on its own. I believe the Google phone comes out where it works off the wifi in the building so it can tell you where it is in the building.
Wish_List	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Yeah it would be really nice if we had 12 there on a shift with a few overflows so that if someone calls out sick or someone wants vacation we still continually have 12 people on the floor.
Wish_List	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	[RE: photos and videos sent to call centers] So our hope is that they will come in as data packages and they'll be able to just take that data package a link... put it into the call where it's just a link and they don't have to view anything. They can attach it to the link whoever wants to view it can view it but it at least protects the dispatcher from having to see it...
Wish_List	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	[RE: beeper-size, belt-worn responder tracking device ] So this would be really helpful in trying to locate firefighters that are injured in buildings. They gave a statistic that I don't remember the exact statistic but the majority of firefighters who end up passing away in a fire, rescue was

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								about ten feet away from them. So having these additional devices would help out. So we're working with our fire marshals, we're working with our building inspectors, with some of the tower infrastructure that we have built in this area or just outside in [City] to see what capabilities we have in a kind of tight metropolis area and how we would be able to expand that to really give us good in building pictures and location identification for police and fire.
Wish_List	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	...They want you to have apps, they want you to be able to bring in apps, they want you to be able to bring in photos and videos and texting and this and that. The more stuff we add the more computer screens the more keyboards the more mice it just keeps adding and it's the more burden where I want to just sit there and not remove my hands...
Wish_List	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	...I think when I was at the PSCR conference I said one of the questions was what would be your ultimate dream and I said Howard Stark where he had you know glove like things on his hands and all he had to do was click and pop and it covered every single thing he wanted to do and he didn't have to take his hands from this computer to that computer to this mice, make sure you're grabbing the right one because if everybody decides they like theirs in a certain order. So then you got to make sure you find them to put them in your order...
Wish_List	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	...so it just makes it kind of difficult when the technology that you buy does not take into account both the technology and the operations side where they merge in almost seamlessly. You're just as good on the technology side as it is for training and getting your operations folks on board with it because if you don't have their buy in on the technology you're going to add more stress, you're going to add more people quitting, you're going to add you know and it's a ripple effect. So you really have to take into account how all this new technology is coming out is being integrated for your operations folks. It's great stuff. There's great stuff out there but if it doesn't integrate on what they have already and you want them to add more computer screens-- we have few computer compared to some jurisdictions. Some jurisdictions look at 8

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								screens. I couldn't imagine looking at that many screens.
Wish_List	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	[RE: number of dispatch computer screens] It's a lot and so having something that integrates all of those and you can work seamlessly through all of them I think is really where we're lacking in this world. The technology is there, the technology is great, it's going places but there's a divide where the operations folks know operations and the technology folks know technology. There's not many people that know both of them and that's where my interest in this world comes into because I want to take both of those aspects and worlds into it to make the best for both sides. So I think that's where we're kind of lacking in our technology right now is integrating those two sides together and making sure that if you're buying something for your folks you're not hindering them or adding extra steps for them to do because that just (01:22:09) adds to the frustration.
Wish_List	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	...The more information we have, the better. If we got a missing person, and somebody called and said, "[Name] just took off." But we had contact with him last week, and if we put all of his information in there then we have his physical, his last known address. If we have the most recent information, it just helps build our database, in case we have contact again. If [Name] just robbed the bank, then we know that we had contact with him last week. And at that time he had blonde hair and it was shoulder length
Wish_List	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	I think if they, I guess-- I almost want to say money because I think if we had unlimited amounts of money where we could get all the state-of-the-art technology, had really great facilities where-- a safe environment especially here where we deal with the public. So we had a safe environment. We had an ergonomically-correct workstation where you can stand. You can sit. You can move around. I mean, I know some centers have-- you can walk on the treadmill or whatever. And all the great technology where I mean, everything was at your fingertips. That would be awesome.
Wish_List	COMMS	R	Comms	46-55	21-30	Female	COMMS-	Let's see. We would have [laughter] computers that work. We'd have

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel				R-005	really nice phones, headsets. I mean, the-- what do I want to say? The possibilities would be endless. Because like I said. If you had state-of-the-art everything, and you've great phones and headphones, there's more clarity, and when people are calling and you have good, solid phone lines where people aren't cutting out. And I know cell phones-- sometimes that's uncontrollable, but you're putting your information in there.
Wish_List	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Well let me think. I think radios that went every place we needed them to go. That's I think the big thing but that's really that's I think really it for our work. Radios that go everywhere that we need to go.
Wish_List	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[RE: drone improvement] ...Battery improvement would be a significant one.
Wish_List	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	Good question. My mind, in terms of flipping that future, technology is around the Internet of Things right now... Particularly sensors and things like that. How we're going to start implementing that. How we're going to start-- how we're going to use our proprietary radio systems for some of these things or we're going to try and use LTE and FirstNet and all of these kinds of things. So there are just so many options now, how we're going to narrow it down as to what the best options are.
Wish_List	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	Yeah. Well, it's interesting. I think there's a lot of really good things going on right now in the technology world. Stronger standards would be great, particularly on the topic I just brought up on Internet of Things, around connectivity and manufacturing standards and those kinds of things because they're all over the place right now. A lot of what we're getting, vendors are trying to sell. We either get the ones that are really established and they have really good engineering or the polar opposite where we tested this out on a \$35 piece of hardware and now we're boxing it up and it'll work, but that's really not public safety grade.
Wish_List	COMMS	S	Other	36-45	11-20	Male	COMMS-	Right. Exactly. So for us it's a big question to ask but networking

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel				S-001	activities is kind of where my mind is going... Just making sure that everything is connected and then how to monitor it all once we do get it connected so that it can be seamlessly monitored. We're building a new EOC so that's where my mind is also going. So a lot of video and audio technology is what we're looking on with things. There's a lot of fiber-based stuff out there now so we can push a ton of video. Which is really nice but not everything is connected to fiber. So now we're... crossing media technologies to push stuff around and that causes some issues...
Wish_List	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	...In the mobile space, in the bring-your-own device is really going to be a critical thing. People don't want to have to carry a work phone, a private phone, a NCIC capable secure device, you know what I mean? You just start adding them on and on and on... You're running out of pocket space. It's a waste of hardware... So, it starts adding on. So if we can reduce that number and... logins as well. That's the big one...
Wish_List	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	...And then you know for us in the county, one thing that we could do better on is our governance and risk management compliance while adopting new technology. I know most of the organizations in the county kind of have a little technology committee or whatever but I don't think those committees share information. And I would like to have standardized-- a standards committee for technology across the board. So that, for example, we're trying to make this work right now with the FirstNet equipment manufacturers. It's like, "Yes, I am law and emergency management and my counterpart is fire." But 90% requirements overlap, you know?
Wish_List	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	Yeah. So we're trying to wrangle a lot of things in our county, right now. They're all positive things. We're working together in getting things going. On the radio side, it would be awesome if we had future radios that were LT capable as well as private or private network capable. So that they could seamlessly roam.
Wish_List	COMMS	S	Other Public Safety	36-45	11-20	Male	COMMS-S-001	We need to have a much larger pipe for our back hall for the microwave system in our county. That needs to be significantly upgraded. Lots of new technologies out there for that. Futuristic things, maybe I'm not so

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					good on.
Wish_List	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	Yeah. To me, it's bringing all your technologies and putting it into a form factor that's available. A single device, simple form factor. That's what everybody really needs. Can I do my regular job and can I do my incident stuff? Can I do it from the same platform without having to bring a ton of different stuff? Which makes it really difficult to do.
Wish_List	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	Yeah, you've got to follow chain-of-command. Some things have to be formal, some things can be informal, but you just need to inherently know that. And so I think culture really is our biggest inhibitor to having better communications. One of the things that on the incident side right, out there, cost of technology is a significant inhibitor to-- not everybody can have a radio. Right? Even though they really need it for their job. To spend \$7,000, 8,000 on a portable radio is just, it's wrong.
Wish_List	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	It's wrong, [laughter] just to be honest. To spend \$70 million dollars on the infrastructure is just mind-boggling to think about it. But there are other technologies emerging. Software applications that you put on your phone, integrate with those. What's inhibiting from that happening is, we really wanted to have a completely independent radio communications infrastructure from the internet. We don't want to open that Pandora's box from a security perspective. And so in order to facilitate that you stuff you actually have to have networks converge. That would make it more cost advantageous...
Wish_List	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	So exactly, right? So people end up carrying two phones everywhere they go. And not everybody's issued laptops or computers either. They might have a shared one or whatever. So if they could do all of their jobs from one device that would just make everything easier, more seamless.
Wish_List	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	But one thing I will say is you can't do everything on a phone. I'm not going to write a report, right, on a phone. So you'll have to have different form factors. You'll have to have something that has a lot of screen real estate and that kind of stuff for certain job functions. That's not going to go away. But if I can provide an ecosystem of applications that makes a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								lot of the jobs simpler, that's really where I want this to go.
Wish_List	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[RE: mobile app wish list] I have a list of 50... I don't know if I have them all on the top of my head. But yeah I'm kind of a visionary from that perspective.
Wish_List	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[RE: mobile apps] I think the more we can do the better. I mean, we have a lot of processes that are all paper-based. If I have to fill out an overtime card, they're still printing them out on pieces of paper. It just doesn't make any sense, right? I should be able to put in my pay. I should be able to submit my time off request. I should be able-- and all those kinds of things should be accessible from a connected device. Call-offs, call-outs, my on-duty status, my off-duty status; all those kinds of things really should be as simple as pushing a button. And today it's all done phone calls, face-to-face, all those kinds of things. So yeah, I've got a whole list of things that we are going to try and tackle.
Wish_List	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[RE: comms with emergency management office] And so it's those kinds of communication challenges that I wanted to tackle. And if I could put a layer in between, have a communications group or unit where I'm coming in to help you communicate, and they're thinking to themselves, "What do I need to communicate about?", now it's an education opportunity. I can start educating you. These are the things that they're going to use now and these are things that they're going to want to tell you and those kinds of things. Those have been the real positive, strategic moves that we've been doing over the last couple of years.
Wish_List	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	It's for sure sufficient. I thought we were top of the line, and then I went to an APCO conference back in Denver. And I learned that no, we're not even close. 'Cause they had programs that I wouldn't even have thought of, which that was cool. That was definitely a new experience for me. One thing that really stuck with me is that they had for their deputies, Motorola had just unveiled, and I'd never even thought that they even were that close to doing it in technology, I can't imagine that most people even know that they're that capable of doing it. But they have the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								handheld mic radio. What they unveiled last year was, and it had already been on the road for about a year or so, they did an official, yeah, an official release. It was a body camera mic. You can take pictures with it and add it to cases right from there. Like you just take it off, and you don't [inaudible] your computer. You just add all your, do audio recordings. I'm like I never even thought you could put all of that on one thing. And actually I ran and got [Name]... I was like look at this, look at this, and he's like we're not getting this. I'm like but we should.
Wish_List	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	I never thought that they were able to put a body camera, which obviously a body camera and a camera could go together. But like a body camera/voice recorder, almost a tablet like, 'cause you could add photos and basically talk into the mic. And it would change it into words, and you just talk out your primary narrative, and your whole job is done from your hand.
Wish_List	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	...right now we operate on three different computers per, which all the monitors are connected, so that's not a problem. But we operate on like three different computers. Seeing all that, to be able to do one, I guess one large or possibly 'cause tablets have the same processor practically as the tower computer now, like maybe one day we could switch over to that. Or like with the body cam/mic situation, maybe we can set our phones up, have a phone that basically does the same thing. And we take the call, and we answer, we ask the questions, and it's automatically on the computer. It's automatic, ready to go.
Wish_List	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	In general, yes. I'd like to see a little bit better of a computer sitting underneath the desk but I mean that's something we're looking into right now because every day that we add something or we add cameras to our security system it takes up more of the computer and they're getting to the point that they're a little... Faster processor is the problem there.
Wish_List	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Currently? What I want I just applied for [Laughing] is a--it's a KVM software and in took forever to find one that was affordable to the public sector. I had one guy come in and tell me it was \$150,000 to get KMB. There's just no way... KVM is keyboard video monitor switches. I was

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								always told that the switches entailed connected it but you actually had to turn a switch to whichever one you want to get on. But I was able to find a company that has them that it automatically--you configure your monitors when you're installing the software but it automatically can tell by the movement of your mouse which screen it's on and what system you're operating at that point. So you're not sitting here with--because people come in and they want you to run this or our radio runs off a separate computer than our network computer. Our hardware, police cameras, run off a separate computer. Then the other 2 computers, 911 is its own computer. So we have some stations that has 4 keyboards and 4 mouses on them. And it is a hindrance to switch mouse and keyboard to figure out which one you need to be on. So we're looking at that right now because that in itself will help us do our job more efficiently and easier than switching stuff... That is the biggest one right now in our communication center. All of my people, you know, want it, they asked me when are we getting it.
Wish_List	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	I would want to have the ability to see where my callers are. That would be perfect. That would just be so perfect. And I wish I could have the technology to see like a straight path to guide my officers to my callers... There are times when we've had calls where people were in domestic situations and they couldn't really tell us everything so that would help a lot.
Wish_List	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	[RE: guiding officers to callers] 'Cause some of our officers are not from here and they don't know the area as well as they should so they have trouble getting to where they need to go and I mean we're over the radio trying to guide them but if I could see and see my officers and I can tell them make a quick left, make a quick right, go straight, go you know?
Wish_List	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	... The only thing I could think of that I would want that I don't have right now is I would like to be able to see, you know, like kind of like see what's going on kind of with the person. I know that's really out there but [Laughing] I would like to see. At least when they get there I want to see 'cause we never even get the answer half the time, like if it's something

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that's going on like an emergency, EMS has to transport somebody that's it for us. Like we don't know the end result so that would be one thing. I would like to know the end result.
Wish_List	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Hmm. I don't know. Like if the radios would work [Laughing]... [better coverage] would be great.
Wish_List	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	I really want what they had on Star Trek. I want to be able to beam somebody from one location to another... I think that the media, and I'm not just talking about news, I'm talking about the whole gamut of media has given such a false impression of public safety that during a 24 or... 60 minute television show with commercials they have been able to have the crime happen, it'd be investigated and solved, why can't you do that today in 911? Why not? Or it only took them a minute to get there. I mean whenever the operator hung up with them on NCIS, huh, they were there. Well how did they get from one state to the other and you can't get here in 15 minutes? ...
Wish_List	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	[RE: the media] ...I think they've given a really, really bad impression and I think that started with the television show back in the early 90's called 911. Late 80's, early 90's called 911. They never showed the real outcome of most of our calls and they're not good. The outcome of most calls is not, oh, the paramedic jumped off of the bridge with a diving board, with a backboard, they stabilized this person and... that usually doesn't happen. That's the 1 in a million calls. That's the 1 in--and that's why they had to search so hard for that. They took 5 or 6 years before anyone ever died on the show 911 and it created some unrealistic expectations of what we do. So yeah, if I could do anything I want to be able to beam that police officer from this location to that location and get them there [Laughing].
Wish_List	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	Well I'm one of these that believes in our civil liberties. So I think we're bumping up against some of those civil liberties now. And I'm not really big on that. I think that there needs to be a lot of personal responsibility rather than additional rules and regulations made for us. So I don't think that--I think that there needs to be a lot of personal responsibility rather

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>than additional rules and regulations made for us. So I don't think that--I think that being able to mine the data that we already have access to that's public in nature to help people is probably one of the good things that I'm seeing. I'm just really leery of that because of the civil liberties. Things that could help our responders in a true way deal with the events and incidents that they have to deal with. Taking care of our responders better. I'm hoping that virtual, some of the virtual reality things that we have will be able to help us whether it's dispatchers, law enforcement, fire, EMS deal with the stressors, even our military. And I'm seeing that coming about from some of that in the military. Being able to help them with recovering from PTSD because I don't think that's taken seriously enough in the dispatch side of things.</p>
Wish_List	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	<p>[RE: better coverage for your radios and cellphones ] Be awesome. That would--that would be amazing if we had--and not just out building coverage, not on the street coverage, I'm talking in the building. In these--that type of thing. And I think the internet, FirstNet, they could help us with that with being able to tie these in-building repeaters, leaky antennas, whatever it is, into that. And I know FirstNet's not talking about radio. They're talking about more of the data side of it and they're not talking about 911, transporting 911 calls over FirstNet. And understand that because they're taking the first bite out of the data side of it. And great, great thing...</p>
Wish_List	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	<p>I guess being able to share that public safety data from one agency to another. I guess we talked about it earlier in the class is CAD interoperability. Being able to share that data. I guess being able to share that public safety data from one agency to another. I guess we talked about it earlier in the class is CAD interoperability. Being able to share that data. [County] right next door to us, they have a domestic violence case going on. The suspect may live here. It's going to take a 10-minute conversation between the dispatcher over there and the dispatcher here to catch up on all of the information on that suspect when all they could do is send us a file card over in our CAD system and,</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								boom, we have everything that they had as far as all of the comments. We can't do that now. Linking those CAD systems up, in an appropriate manner, do I need to see everything that [County] is doing right now? No, it's none of my business. But whenever something makes a difference here in us being able to respond and have that, then them sending that to us rather than them having to type all of this stuff in an email, send it in an email, that now we've got to type it into a CAD system, it's a lot of wasted effort. But having that data automatically transfer at the sender's request, not at the receiver's. I think that would probably be the number one thing I would look for.
Wish_List	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	[Sighs], I just hope that technology down the road does not create unreal expectations for them because them being able to give that information and be available for that responder which is their number one priority is their safety and getting help to the people out there as a secondary or is the very close second priority that whatever we do that we don't lose sight of those two main goals that we have of emergency communications.
Wish_List	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	24-hour IT specialists here. I've seen amazing like fiber-optic things where people can remote in and do stuff like that. I'm not very computer-savvy as far as IT networking, but I think that you can do a lot more with that. I think that that's pertinent. I think say if we were to have like a two-way phone, like say if the picture phones, I guess you could say, with the webcam, you could call, and you could explain to him this is what I'm seeing. And you could hold it up, and you could show him. And he's like okay, let me remote in. That's pretty amazing.
Wish_List	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	We have a mapping service, our camera systems. I would like a whole wall of nothing but, I have at least 25 cameras on the major hotspots on campus. This isn't just like one of those things where I get one. Like I would have to pick like that. I'd have to pick patrol mapping, finding them on the map. Those are two things that I wish we really had. I've heard there's, I think it's Georgia or Georgia Tech, my detectives went and visited, and they said they had their own virtual like setup. It was

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								amazing. I really wish I could've seen that. But they're away from the public. It's a huge room. They have all their files where they need them. It's everything. That's what I picture, like serious 21st, 22nd century-kind of things.
Wish_List	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	I feel like, you know, some things could be a little better. Like, if we had more monitors to monitor the campus, because I mean, we have these two. Sometimes the cameras don't work, and usually it's the ones that we need at the time, but that's about--I mean, that's about all that I would really think would be--really need to change.
Wish_List	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	I would say in here, for me personally, would be to get more cameras. Not more cameras, but more monitors to be able to pull up different things, especially if like, if we're in pursuit of somebody, we try to pull the cameras up to see where they're going, things like that. And it would be nice if we had more monitors in here to pull up more cameras to see where these subjects are going.
Wish_List	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[RE: GPS caller location accuracy] [S5] ...I can see where Z would really be beneficial... Yeah, I would like to see Z incorporated...
Wish_List	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[RE: accuracy of caller location] [S4] Oh yeah. And I think the mapping is a little -- like if we could somehow manage to afford, like live mapping or whatever. Like Google Maps or whatever.
Wish_List	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5] I'm old. I want to listen to that because -- but God, let me tell you why because I'm -- in probably 18 months I won't really care a whole lot about, I will [Everyone laughs]. But I really would like to see that FirstNet can deliver what we see in the movies.
Wish_List	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[RE: NG 911] [S2] Some of the things talking about videos and pictures with that -- and we know that that is coming but I don't think that should be something that is law delivered anywhere. You know, I don't care whether it's New York City or Boise, Idaho, and I think any of that technology should be something that the person sitting behind that console has the option to say -- yes, I want to see this or Ms Supervisor, I need you to view this. You know, I am just talking about the whole

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								mental viewing that -- I don't think that that should something that when we answer 911, that there is something that pops up in front of somebody's face...
Wish_List	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	...The locations, I would very much love to see the locations and not have to use a third-party app on phones, that that is something that is more streamlined that we are able to get that that better location, you know, being able to get the X would be awesome. You know, I know that that's some of the stuff.
Wish_List	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[RE: NG 911 photos and videos] [S5] You know something, she just said that -- the point she just said and I have seen diagrams where the data would not necessarily bypass 911, but we may not see everything but I do think it has to be live because you've got firemen that are going -- people are going to be screaming from a fire. So the responding fire trucks can actually see it in their car. Well, that needs to be live so they know exactly what they are facing. Like a police officer responding to a bank robbery. He is getting live pictures from there because it has got to be live but I have seen diagrams where the data comes in to -- doesn't necessarily come into the 911. There is a connection here where it goes out to FirstNet. So, I don't know -- I am not referring how that is, but that part has to be live. [Crosstalk]
Wish_List	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[RE: NG 911 photos and videos] [S4] Also I could say that would be nice if it like, they could see it but like we have that option to turn it on or turn it off. And like, maybe if they want to do that, we can turn on, like the phone companies would give up or like Apple or Galaxy or whoever it is, Note 8 or whatever, whoever makes that -- like, we have access to -- like if a caller, 90% of our calls are wireless. So, if they are calling in -- then maybe we would have access to their camera. Like, by them calling 911 would grant us access to let's say their camera... And that way like that would help us if we are having trouble locating -- I don't know where I am at. Okay, well -- let me see where you are at.
Wish_List	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[RE: caller's cell phone] [S2] Or at least allow the person, you know, for us to request just like if we are doing a WebEx or something like that. Can I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have access to your camera?
Wish_List	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5] Facial recognition -- I've been watching it for years and I like the way it's been going. I think it will be real beneficial. Maybe not for us per se but --
Wish_List	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	We're always looking at technology solutions, and not looking at technology to replace people, looking at technology that will make it easier and more efficient and less stressful... At least that's my personal look on it and it's got to be cost effective so for me to go to a board and sell...
Wish_List	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Because I found something that is Motorola capable, that's just as capable, I can tap into that system and I've always been one that goes do we care who we use? I am like, I want it to work. I don't care what name is on it. I want good customer support. We run 24/7, internet is important to me, phone system working is important to me, radio system working; those are my top three priorities. Fourth is that my employees and their needs to make sure they can do a good low stressful job because without those first three they have no job...
Wish_List	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	[RE: radios] I will still have three because the VHF, UHF and 800. The goal is for all of us to get to 800... There's just some barriers of political things in the way of getting there.
Wish_List	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	[RE: NG 911 - text and video] My concern -- my concern is that we need to set up policies on how we handle those calls. I don't want it to be a flood, I don't want them to be pranks or false. How do we validate a text? Same as a bomb threat. We have to change our thinking and we have to change our policies and procedures and we need to set a standard on how we're going to deal with it. My recommendation is any text we try to do a call-back... Some true verification.
Wish_List	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	You know if there's something going on and it's a video of a house fire and they turn around and we can see that there's flames shooting out the windows, advantage... But an ambulance call? Maybe, maybe not. If they're bleeding and we can see it's an artery or a vein, maybe it's an

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								advantage. I don't -- I mean video feeds of the scenes to help get the right resources a lot quicker I'm all for; videos for make a 911 call, not too keen on that. That makes sense?
Wish_List	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	I would like to see technology to continue to move forward to true total interoperability between every agency. I've heard that my whole career. For 30 years, we've been talking about interoperability and politics always gets in the way of interoperability. More than money; egos, politics. I'm in charge. There is no "in charge" and there is less of that here than I see in other places but, you know, over the years the police and the fire get about -- [State] code states that if a fire department on the scene of a fire then the highest ranking fire official is in charge of that scene. The police hate that... Especially if it's turned into a criminal thing. So you've got to work together. Yeah as far as the fire operations we are in charge, but we do have to be considerate of your criminal aspect and not destroy [crosstalk]
Wish_List	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	You know we get into level three in our contract, we do not send a truck on a non-emergency call. We have to keep three trucks available for emergencies, that's the way the contract is written. So [City]PD gets a drunk, they want us to come pick up and take to the ER, the only reason they don't want to take it is because they're going to get stuck at the ER; we're having two and three and four hour holds at the ER right now with the ambulances because of the flu and other things. So they want to take one of our 13 ambulances, which ends up being seven of our 13 ambulances are now tied up for two or three hours at the hospital because they don't want to go stand against the wall for two hours. So we have those talks go on. Look there's give them a ticket, call them to court, there's got to be a better way to do this than tying your resources and our resources. Psych is huge, it's a national problem.
Wish_List	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	No, I think that technology is coming whether we're ready for it or not, so I think we better figure it out how we're going to play it. I do know that there's mandates which I think the next gen 911's are supposed to already be in place by the mandate and it's not.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	New technology for me, you asked that question, I going to figure out how to get Uber to go get things that don't need an ambulance, and find funding for it... Las Vegas is actually looking at it... I've been picking their brains out, come on give me some info, tell me if it is working, because we get so many calls. To go get your psych meds? You don't need an ambulance... I don't have money for a taxi. I can take you and you can bill me and I am never going to pay it.
Wish_List	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	Oh, the thermal imagery in your mask, I thought it was awesome, right? We got to try one out for a while and it wasn't big enough, but it still did its purpose and I thought that was cool because it kept my hands free to search. So I used it as a tool in my tool chest, but it wasn't like I was glued to it. I carry one right now in my pack and I have to kind of loosen it up a little bit and kind of move it out.
Wish_List	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	[RE: in-mask TIC] ...I thought that having both your hands-free was super beneficial because you know two hands are better than one [laughter]. So that was big. I know it wasn't big enough, but you would be able to see things and be like, "What is that?" And you'd be able to move over to it. You wouldn't be able to, "Oh, that's a body right there, but oh, it's something." So I thought that was awesome. I wish that they would kind of-- that would be bigger. Like I said, I think time is precious so the faster you can search-- we used to use the mentality of how long can you hold your breath for, because that's what we're dealing with. So taking that into account, you need to be fast
Wish_List	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	...so for me, I love physical activity. So I love being physical, forcing doors, stuff like that. So I would never want a tool to take that away... Now if [the in-mask TIC] was faster, absolutely. But I do believe there is something huge to say when someone has mastered their trade-craft, yeah, craft - I'm sorry - and being able to be efficient at it and a master at what they're trying to do...
Wish_List	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	[RE: in-house SOP app] ...which I think is awesome because if you have a book of SOPs, I feel like going to a call, I could in turn do it. I have a search on my phone, I can just search it and I can look at it and go,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								"Okay." If there's something weird, I'll go like, "Hmm," you know? So perfect app...
Wish_List	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	I mean, I think a lot of the ones we have are very good. I mean, one thing I would say is I'd probably program my phone to automatically update instead of trying to make me update. So I try to do it first thing in the morning where sometimes they do about two updates in the daytime.
Wish_List	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	So I mean, perfect app: I think it would be cool if they had a guest, like a - I can't think of a name - a gas meter in the phone where you could - like a sniffer so you could- instead of having to carry something separate, if you just had that as your backup backup, it would still be able to like carbon monoxide or something like that. I think that'd be awesome.
Wish_List	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	But we hope to have a fully operational drone program at some point in time that would assist in search and rescue, or maybe even an aerial platform that we could observe what's going on real-time at a scene or something. We do a lot of outdoor concert venues out towards the [Address]. So it's a vast area. And if we could keep track of our medics and the situation, the crowd movements and stuff like that, using that aerial platform, that would be something that we would be involved in, as well.
Wish_List	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	But it kind of really doesn't do us or the patient any good to say, "Yeah. I saw a wreck. Okay. No, I'm not there anymore." Because I mean, our comm medics have specific questions. "How many people involved? Are they hurt? Is there serious bleeding? I'm going to tell you what to do. Are there fluids? Are people pinned? Thrown?" "I don't know. I don't know. I don't know. I don't know.
Wish_List	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	. Having better wireless location technology would be huge. Having the ability to have a device at your home that when you call 911 it senses that your phone is in this vicinity and would say, "Okay, they're calling from your house--
Wish_List	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	...All of the TeleMedics stuff that's happening, with the cars, and OnStar, where they're able to get G-forces and see which airbags deployed and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								how hard was the impact, we're seeing that now, as we can get that in with Next Gen 911... that's useful information in being able to get that to the medics. Maybe even change how we respond to something if we get it as a, we don't know what it is, there's a-- OnStar, it's a collision. Being able to differentiate between it's a collision or this was a t-bone collision and air bags deployed and the car turned over... So that kind of info, being able to get that to the responders and get it to the hospital. So that in addition to the picture of, here's what they look like, doc, they see that same kind of g-force- ...The telematics coming out of the cars... Good data that we can make decisions with and help people make better decisions with.
Wish_List	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	a way to confirm or better determine - and this is from the clinical side - things, for example, such as strokes that we would be able to - in a field setting - and in a rapid field setting - be able to determine who- whether someone is actually having a bleed. So that the faster-- and we know this, that these are time sensitive insults or assaults on the brain or on the body. So if you could find a way to confirm in a more rapid and more efficient way without having to wait until they get to the emergency room to have a CT, but something like that could be done in a field setting and not waiting. I know [City] is testing that they have a mobile CT. It's a CAT Scan that's on wheels.
Wish_List	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	Something for those kind of insults, whether it be a STEMI, so that some of that definitive care-- we're talking about reversal agents. Things that really make a difference in the quality of life, for not only an individual, but their family. If you could definitively identify those things in the field and then begin that treatment right there. And so you start that treatment at the patient's side.
Wish_List	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	But anything that would make the medics' lives and the patients' outcomes become more effective, where we can do stuff in the field, obviously. I mean, even shooting an x-ray or something like that. And then having the training and ability to even set and cast or something right there, so you're avoiding having to take people into the ER to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	But the interoperability, what would be great is to have a combination of like LTE, public safety LTE that's on top of the public LTE, and to be able to integrate radio communications into that. So it doesn't matter, when we're here, the range of our radio system I'm talking to the towers, in talking like we normally would.
Wish_List	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	I don't need pictures most of the time, but I can see where that's helpful. Yeah, I think interoperability, data sharing, just the healthcare network for us. Being able to track a patient from the time they call 911 until the time the first responder gets there with their patient tracking, until the time the ambulance gets there, we take them to the ER, they call a helicopter to fly them to another hospital, and to have all of that be one seamless patient record. Right now, there's no way to do that.... So from the first contact with EMS, you would get a tracking number, and then that number follows you all the way. If you go to tertiary hospital, and then they fly you into the big hospital, and the big hospital will send you to the rehab hospital. All of that would be tracked, and then as a provider, performance improvement side,... But once that patient moves beyond that and they go to a cardiac rehab, or they go to another hospital where I don't have a relationship, we have really almost no way to get that information.
Wish_List	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	Even at the individual level, just being able to have a patient care record, like a history, that is available to us at the patient's side so I can see. Like, we just took this person two days ago to the hospital for K2 or for heroin overdose, or they got a cardiac history and now they're unconscious and we're trying to figure out if I can see what meds they were on, when the last time they went to the hospital, who their doctor is.... And so, that interoperabilities, standardization, and being able to--everybody, at least some of the information, that critical information, is available regardless of what system you're in, regardless of where you're at, and we can get to it, keep it secure, but get to it to take care of people.
Wish_List	EMS	U	Not	Not	21-30	Male	EMS-	Self-driving ambulance is an interesting concept. And the reason why is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			specified	specified			U-001	because right now you rely on one individual in the back. And if you're treating, even if you're just treating one patient, not multiple patients, but a single patient, but a multi-system injured or ill patient that requires more than maybe one brain and more than one set of hands in order to better manage the treatment side of that patient's modalities, then you're doing it by yourself. And if you need hands, then normally you would ask for-- okay, send a couple firefighters with me, and their not going to have the advanced level skill sets that we do in anything. But that is-- so they're a basic mind set. They're a basic set of hands. They're a tool in the tool box. But not necessarily a functional tool. Whereas if you have a self-driving ambulance--
Wish_List	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	But even tie that in with the traffic light system or something like that, so there's absolutely no interruptions. It maybe clears out the intersection before you get there. So it clears up traffic and you just go. And then you don't have to-- driving 50 or 60 miles an hour, maybe you've set it to 40 miles an hour the whole time but you're never stopping or [inaudible].
Wish_List	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	We have not started to use that functionality, but being able to not just know where an ambulance is on the map, but being able to see where those medics are as they're [crosstalk] [inaudible] for safety, and even for response. If we've got responses going out where we have people on foot out walking around at a venue or walking down [Street], to be able to say, "Hey, there's a guy with a gun at the next corner." The PD has a gunpoint stop or, "Hey, there's a guy at cardiac arrest. We need-- I know you're walking,"
Wish_List	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	I mean, definitely a number of incidents. Yes, I wish I had more information.
Wish_List	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Whether or not the person has frequently called 911. What is the age of this patient sometimes? Now, I do recognize that our communications is tied by based on what the 911 caller says to them. So it's not a 911 center issue, it's more or less, "It'd be nice to have this information,"...
Wish_List	EMS	S	Field	36-45	11-20	Male	EMS-	Yeah. So it depends on-- but sometimes the dispatcher has to get the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				S-014	call out without having all the information because there might be a very significant event. But yeah, no, having some of the information like, "Has this person called 911 a lot over the past several months, several years? Is this a hoarding condition? What are some of the conditions that they're seeing on calls?"
Wish_List	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Definitely one of my wish lists would be we operate with a portable radio and everybody does - firefighters, paramedics, EMTs. It would be nice to have some form of remote. Like what you see how we utilize a cord that can get damaged in fires, if someone just shuts it in a door, or whatever, it would be nice to have some form of Bluetooth capable radio system. It would be nice to have something if we're wearing our SCBA mask to be able to click a button and be able to talk on a radio versus having to fumble around with a portable radio. That's certainly something that I've always envisioned to be a really nice thing to have. Be able to listen to the radio while wearing an SCBA. A lot of times we're operating in a fire or whatever--
Wish_List	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Tethered like this, and it depends on where you have it. You might have it in your coat pocket. You might have it on a radio strap. These things tend to be, depending on how everybody holds them, may get dropped on the ground, may break, and so that was always like a wish list item for me. It would be nice if we had something piped into our ears, be able to touch a button instead of having to fumble around with a radio. So that's kind of like a pie in the sky type ordeal [laughter].
Wish_List	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	That's one of the things I think would help out a lot of firefighters but I understand that a lot of our stuff needs to be durable as well. Coming up with durability and smaller objects is harder to do... Small is good. But coming up with-- I understand having a durable product too is-- having a durable product is more important than having a small product. But if we are able to figure out both, that would be a great thing to have.
Wish_List	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...I think when the 911 call taker receives information from someone that's calling, they obviously are on the phone with them the whole time frame for us to get there. So they're getting key pieces of information

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that I don't know about, or will have to repeat the same questions. So there's not really a good transfer of care, in a sense. So if you call 911 because you're having chest pain, and the 911 dispatcher's asking you all kinds of questions about where do you live, and what's your address? Where are you at in the house? What time did your chest pain start? Just being that dispatcher asking questions, those are all same questions that I'm going to have to ask when I get there. And I don't know them-- and I don't know them ahead of time. So they're already getting them, and they're staring at a computer. I would find it helpful if those questions that they asked, when they got put into the dispatch message, that they would also transfer...Push to me and also transfer over to my electronic reporting mechanism. Far as we already know their name. They know basic information. And I'm not asking them to do my job for me, but whatever they know, if it just fills in whatever blocks by default, that would be helpful.
Wish_List	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So my wish list. So let's see. A couple different things. So one, I wish the radios didn't time out. I wish they worked in all locations in the sense of if I have to talk to a physician or a doctor on the radio and I can't do it in a basement, I have to leave the patient and walk outside. Or go to my unit that has a repeater or a better radio system to try to deliver a message out...
Wish_List	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...I wish that the GPSs were more accurate and more dependable in the sense of I knew that it wasn't going to take me to a wrong location. That it knew steps and updated along the way, so if you're familiar with the traffic app Waze-- People drive around all the time know more than I know in public service, and I'm trying to get in. So if I know that we're getting close to 3 o'clock and traffic on [Street] is going to be increased and I need to get to the trauma center, my computer should auto populate-- something to give me the best route and think for me. And it's funny that - excuse me - it doesn't do that, but yet Waze does for the consumer trying to leave work. It just updated information along the way. Just being able to get that message out...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...I mean, I think we have a really good for [State], as far as the medic aspect of it, for me to be able to talk to any hospital at any time and deliver an EKG system. Some of the technologies in a sense of troubleshooting or shortfalls on, I think it's on our end, per se, if I'm trying to transmit an EKG that it could be a cloud in the sky that interrupts that, and I can't deliver that EKG to the hospital. So I wish it always worked every time I needed to send it-- but I don't know what that issue is as to if it's operator error on my part or-- bad signal...
Wish_List	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...We do have a talk around channel, which is like a chitchat channel that I can-- I'm going to be lazy and say that it's really hard to get to and you really have to double-check. It's not a quick fix and then I can deliver a message that I don't want the whole county to hear. So you have to switch to--Oscar. Yeah. O, Oscar. So it's all the way towards the end of the alphabet. If I'm always on Alpha or Bravo to go all the way to Oscar, confirm that I'm on seven's talk group. It would just be easier if a push button or something that would just give me that talk around just to be able to deliver that message a lot quicker...
Wish_List	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Better indication that the police are on the scene. With the AVL, we do have cross networked where the police messages come through our messages as well. So if we're not in the unit and we're outside walking up the street and they're saying that the bad guy with the gun is running down the street, we don't know about it. We know about it if we're sitting in the unit and the computer works, so.
Wish_List	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	I would say, and I know there are some rules and legality as to what you can say on the radio so that consumers or civilians don't hear it, but urgent messages, even if it's-- and I'll use the example. If there is a issue at a college or a school, they have the means of delivering a text message to everybody. I wish we had means in the county as a whole to deliver that via radio and to our phones, but even isolated to just those that are involved-- Or even those that are involved in that incident.
Wish_List	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Maybe more hospitals or more-- so I use the example of communicating, maybe if they're able to do radio phone patches like

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they do with voice control or the language line, but being able to switch to whatever channel and that channel will give me someone that can translate via my radio because I depend on my own cellular device-- to deal with it. And I depend on that all the time because I can't depend on-- the radio has limitations. Doesn't do everything I need it to do.
Wish_List	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...But if you could take a smartphone and put it on a radio, it would be ideal. So I could have five to six dependable apps that I use on my radio, I can utilize it as a phone if I needed to or wanted to, as well as to a radio communication and delivering messages...
Wish_List	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	I would say, location can never be specific enough. A lot of times, in this area, we have large buildings and so someone will say, "[Address]," but that building has three sides. And they may work in the building so they know their address, but they're actually going to exit the building on some other street side and if they forget to tell the dispatch center that, we will show up to the front entrance, which is where we were dispatched. But then we'll say, "Can you call back to the calling party? Where are they?" And then they say, "Oh, they're at the loading dock." Which means we now have to drive around. It would be much better to have that information. And they do a good job and sometimes callers are not great...
Wish_List	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	Yeah, so. It would be nice. We ran a call a couple weeks ago, where it would have been helpful to know if the patient was-- she was homeless but she was saying that she did not know where she could go. So it would've been nice to know which shelters had rooms. Which shelter she'd been to.
Wish_List	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	It would be great to transmit our patient data to the hospitals so that when we get there they're already registered and have an armband, and they were in the system. It would also be nice for us to see some of the data points from the hospitals.... So if there was a way for us to get hospital data linked to our electronic patient care, that would be awesome. Same deal if we could transmit from the field to the hospital so when we got there all they had to do was say, "Oh, Mrs. Jones. Okay.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Right. So you're here. You have left side abdominal pain. It's been going on for 10 hours. You took a stool softener, nothing helped. And your pain is a 5 out of 10." That would be awesome. Right now we have to literally repeat everything and then the hospital usually asks it again. So patients see it as kind of disjointed, "Oh, I told the ambulance guys that."
Wish_List	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	It'd be great to increase coverage in our dead zones, which the county is working on. And they push out updates whenever they're going to do work to put in new amplifiers or whatever. But it'd be nice to know that in the Metro, radios will always work or in elevators, radios will always work...
Wish_List	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	...I would like to see the call processing times decrease. They can do it now but give us a little bit of a heads up that, "Hey, we're taking a call about a house fire in your neighborhood." They do that for house fires. It'd be nice to have it for cardiac arrest or some of the more life--seconds matter kind of life calls. Because we don't have that right now. We would wait until the tones go off to find out someone had a cardiac arrest next door. So I'd like to see that.
Wish_List	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	...oh, it would be nice to talk across the country to other people. But in reality, it's a regional thing. So we need to be able to communicate within our region. And there are national talk groups that we could use if, God forbid we had some kind of big incident here. But by and large, I mean we don't-- we need to communicate with the jurisdictions that neighbor--that surround us. I don't necessarily need to talk to my friends in Rhode Island I used to work with, on the radio from here. So it's basically making good with your neighbors and having good communications with them.
Wish_List	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...I'm pretty on top of a lot of technology stuff anyway, but obviously better wireless coverage. I mean, our tablets do operate off of mobile networks when we're out of the firehouse. We connect to the department's Wi-Fi in the firehouse, but outside the firehouse, they are utilizing Verizon, or Sprint, or T-Mobile. And right now, I believe it's Verizon. But no matter what data provider you're using, especially if

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you're in the city, there's always dead spots. And we haven't had it-- it hasn't been an issue where we're out of a coverage area for long enough that it really makes a huge difference. But again, yeah, just better data coverage maybe, especially as technology advances...
Wish_List	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	... Again, like I talked about before about the monitors, and the [inaudible] EKGs. There may be a time when we're-- over time, we may end up transmitting more and more data over these mobile networks. So, higher speed data, [stuff like that?], all the stuff that I know is already being worked on [laughter].
Wish_List	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	The one up front has a hard-wired keyboard attached to it. The one in the back does not. It's one of the things that, again, during the pilot program, we said, "Hey, look. We really need a hard-wired keyboard. It's not easy to type these reports on this [software?] keyboard." The department said, "No. We're not doing that." From what I've heard, and also, I don't have any first-hand knowledge, but from what I've heard, their basic response was, "Hey, look. These people walk around all day texting on their cell phones, they can use an onscreen keyboard." You know, but.
Wish_List	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Yeah. And that and some of us aren't that adept at using text messenger either [laughter]. So for me personally, I could probably do my report, at least the narrative portion of my report, probably in half the time with a hard-wired keyboard.
Wish_List	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...a lot of times, the details are more important than what they're calling it... So I like to see the details of what-- and the dispatcher usually updates it, but for whatever reason you didn't hear it, I like to just look at the notes, or the dispatch already has the notes before they start reading it, so I like to read the notes because that might determine whether or not I'm going on that call rather than waiting, even the only one or two more minutes that they take to do it, to give the information on the radio. If I can read it, it decides like, oh, I can sit back down or I should probably go on this call...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...if you could see everywhere. The calls where they can pull it up-- because in [City], there's cameras everywhere and they can pull up certain cameras and be like, "Based on this we can see that it's this way on the highway. We can see it's at this intersection. We can see it's at this corner. We can see that it's behind this building." There's a lot more things that they can see.
Wish_List	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...I think also if there was a way to, on the reverse side, bringing in a patient that we're trying to describe what's wrong with them, or how they look, or how concerning they are, or how non-concerning they are despite their complaint or maybe one of their vitals is abnormal but you're like, "No, this is just drama." And then, but if we could show that to the receiving hospital, like, "Look, they're fine," or, "Look, you better open up a front room and get a bunch of doctors in there." So I think seeing-- there's a privacy thing now where, do I want to be on camera on every single call that I'm on? Probably not. Do I want to be on camera on any of the calls I'm on? Probably not. But do I run every call like somebody is filming me? Yes, I do, because they're everywhere. So it could be useful to see stuff. And once we get there, then we're like, "Oh." We have an idea about what's going on there. And once the patient gets brought to the hospital, they're like, "Oh." We can see that this is, "oh my God," or, "Oh yeah. This is fine." So seeing earlier I think would be helpful...
Wish_List	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	You need stronger ambulances. You need ambulances that don't explode. Not explode, but break apart when you crash. I mean, it's like driving around in a camper. So that would be more helpful than affixing me to my seat better and making me do my-- not be able to do my job as well...
Wish_List	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...I think also there's a whole side of technology, but I'm sure they can do a study that said if you get to the scene and you realize a patient is sick, and you need to go emergent back to the hospital, then you spend less time at the scene. You package up the patient. You put the patient down in the ambulance. And you start driving, and you never turn on your sirens. You would get to the hospital just as fast as if you get to the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								scene and go, "Oh, my God," and get in the back, spend 10 minutes or 12 minutes trying to do something with the patient before driving 60 miles an hour through lights. That, I bet, they would show that the time was the same, and the outcome was the same, and there's less crashes when you're not driving emergent...
Wish_List	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...I just think there's ways to-- some people think that the lights and sirens are there to save people's lives, and it really-- there's 1% of the calls, 2% of the calls, where it can make a difference. So that's where maybe people could chill a little bit and use research to prove something.
Wish_List	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: ambulances with GPS tracking] That's going to be kind of the next big step for us, I think...
Wish_List	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...So we're looking into hot-spotting each ambulance...
Wish_List	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: general technology] Well, it would work the way it was advertised, for one [laughter]... I mean, does this really do what you say it will? Like I say, the promise of technology is always overshadowed by its faults or its unintended consequences or whatever.
Wish_List	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I want technology that works... There's so much awesome technology out there if you read the ads, but when you try and apply it, it's like, [inaudible].
Wish_List	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I mean, reliability is absolutely key if you're going to rely on any technology. I mean, it's got to work the way you say it is.
Wish_List	EMS	R	Other	56-65	31-40	Male	EMS-	I was at a technology conference that's put on by our vendor of a lot of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel				R-008	our software, and it was-- everybody was complaining about this one software program like, "Why hasn't this been updated in years?" And they're like, "We bought this company from a company that bought another company that bought another company. And the guys that wrote this code, there are still people that are using the initial version. If we change something here, we have no idea. We might shut that service down that's still using that old technology." So backwards compatibility is a big deal, too...
Wish_List	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	The problem is the technology versus the actual performance. I mean, that's my big pick... I understand advertising people have a job too. But you better get out there and use it before you try and sell it to some people. Because you can kill people if it doesn't work right.
Wish_List	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...if you could text message a picture to 9-1-1, and they could send it to us, that would help as far as we could look and say, "This car accident here and the people can't get out of their vehicle." A lot of times, the engine is dispatched by themselves. We could see that picture and say, "Hey, let's add on a truck," and achieve to that so we can extricate. Let's get that ball rolling sooner. Images would be pretty fantastic, but actual words and perception is just so different. My pain scale might be very different from yours, so.
Wish_List	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	Our department has those MDCs, but it's kind of underutilized for a computer. I mean, all we do is get this generalized information that we probably could have sent in the '80s. We just didn't have the ability to make it small. Nowadays, it should be like an iPad. Something simpler that's easier to touch, and you could almost pick it up and take it with you so you could continue relaying information. So many of us on calls, if we have a unique situation, sometimes we will take a picture with our own personal phone and send it to our chief's personal phone so he can look at it, because the department doesn't issue the rigs smart phones. Only a flip phone, and then a separate digital camera. So we can't make it all work. So having an updated tablet or an updated cell phone for the unit would be very helpful.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...The first ambulance service that I worked for when I got out of paramedic school was out in the middle of Wisconsin in the woods, and we had to call the hospital by radio. We would do the actual radio mic. They didn't even use cell phones yet. And then I got hired with the full-time department in 2005, and then we started-- then that was my first real opportunity to use a cell phone to call in, so. It's changed a lot. I mean, it went from that to then having computers get dispatch information and with the GPS technologies, able to automatically be on scene within 500 feet of something, which has its own problems of its own. To now, I feel like our department kind of underutilizes technology for that. Yeah. It could be so much sharper. I mean, I get text messages from my ex-wife more than I would like [laughter]. I can't get information from dispatch straight to me that says, "Hey, this is a dangerous--" without having to make it out loud and everybody hears it [laughter].
Wish_List	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...so my wish list, by far, is an iPad for those rigs. An iPad mini would be perfect. Put it in an OtterBox case or whatever and it's going to be fine. I mean, the doctor's office that I got to go to, they have an iPad just to tell me how my visit was. That's how cheap they are. It's ridiculous that we don't have something like that that is more reliable, doesn't need a strong IT group to manage and function. As you probably know, Apples are really easy to use. We don't use it for a lot anyways and for what we use it for, I think we could do our inspections right on that thing. We could do our EMS call all on that. Because as it is, we've got the CF-19 or whatever it is. That's our MDC up front. And then we've got another \$2,000 computer in the back that we use for EMS calls to do logging, to do one thing. A \$2,000 computer to do one thing. Just when we could have a \$300 tablet and do the exact same. And we don't store anything on the hard drive. Everything gets sent. You don't even need a big one as far as memory goes. So that's my wish list, for sure. And we would only need one, hypothetically, mounted where the officer goes and the officer just hands it to the firefighter behind him or the engineer, actually. Our engineer is the one who does the documenting on our EMS calls because we're fortunate with staffing that it would be so easy, for sure.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	looking more specifically at tablets and getting away from laptops, because people don't like carrying laptops. Plus, they're a big target. Somebody wants to take one or whatever. But you can keep an iPad mini or a Motorola. You can keep those things. Some of our pockets on our EMS coats are gigantic. I mean, you could put that in there, no problem. So it would be really interesting to see the benefit in the programming knowledge there. Is it really hard to-- is it really that hard to mix and patch the dispatch information with our medical information, with the hospital's information? Is it really that difficult, you know?
Wish_List	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	...I think those emergency transmission buttons on the radios need to be more effectively monitored or used and or protected so the incidental bumps don't happen...
Wish_List	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Some of the other things we have in the ambulance, though, are-- we have a WiFi router in there. So connectivity for the CAD as well as our... So we have a lot of software with connectivity between the patient care records we have on our laptops to our monitors, which are the 12-leads and defibrillators and all that. So I think a lot of times there could be ways to improve the connectivity between that because it's so integrated. And you can't finish reports if the connectivity is not there, and you can't upload your monitor to your computer. So WiFi is plan A, and then there's also USBs that we can use if the WiFi's not working. But it just seems like that's a hang up in our system often and increasing the time of the reporting. And getting back into service until the report's done. So once again, technology issues there. But aside from that, that's about it.
Wish_List	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	How about downloading our EKGs? A lot of times, they'll want that included in the report, and it just won't connect. So sometimes they'll use a little zip drive. If there were just a hard wire where we could connect it. Again, old school, just run wire from here to here, but it won't do that. So I mean the simpler the better.
Wish_List	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	...We have very little to no communication with our police agency. We are able to scan their channel, but I don't think they want us on their channel,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and they don't come onto our channel. And that's been identified as a huge problem in some of these large-scale incidents around the country of, for instance, the [City] shooting. There was no communication between the police and the fire on one scene. So I think that needs to get bridged. I think that's done through policy and procedure. I think the technology is there. I just don't think we utilize it efficiently.
Wish_List	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I do think drones have a place in the fire service. I think video imaging and infrared, or thermal imaging with drones can be a hugely beneficial, safe, efficient operation...
Wish_List	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	...I know they're starting to play with the thermal imaging inside of masks and stuff like that. I think that could be good...
Wish_List	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	...I think hands-free wireless communication would be a fantastic thing. But those are just the outside-the-box spitball ideas.
Wish_List	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	The only thing I can really think of is our confined space that we use, so it's a hard line that's connected with our air hose, our air line. And it's hard to believe that that technology hasn't gotten any better. It's these old connections that they've used forever. You hear people say, "Spit on it and that will make the connection." But it's all this horrible stuff. But again, just like any other call, confined space, definitely the communications is the weak link there. So that wireless that you're talking about, yeah, that would be great. However, a lot of times we're underground or something like that. And so it makes it almost impossible. So that's why we have to have the hard line connection.
Wish_List	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	wireless EKG cables. That's obnoxious. I can't believe that's not wireless yet. That's all I got.
Wish_List	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Maybe a smartphone. Like I said, our phone that's in the medic unit right now is an old flip phone. So that would be the only thing I could think of.
Wish_List	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...We've kind of explored some-- I don't know if they're really new technology, but there's some of the - I don't know what you call them - the internet-mediated sort of-- ReadyOp is one. There's a couple of others. These are essentially programs that allow you to tie phone

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								traffic, radio traffic, pager traffic, SMS traffic, all into these kind of central hubs. We actually have that capability. As a hospital, we don't use it super heavily, again, because the systems we have right now are robust enough that we don't have to, and it's an added layer of complexity that we don't really use...
Wish_List	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...So I would definitely like to be able to have more robust data communications in terms of getting the details of the call. We've had horrible problems when we tried to put MDTs in every ambulance that was not robust. It was not reliable...
Wish_List	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...so there's no particular reason that a car should have to tell us when they have arrived on scene. It would be great if they could just push a button in their car quietly that says, "We're on scene," and the computer automatically notes that...
Wish_List	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...The stuff where you're getting the caution notes. Right now, if you're not a commander, the maps, we have no really good way of getting the maps to non-officer crews. And so you'll hear a dispatcher trying to describe how to get to the back corner of some elaborate-- we have this gigantic apartment complexes with several thousand units within them, and they all have one address [laughter]... So if we could send them that kind of stuff, that would be very nice.
Wish_List	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...And just a general reliability upgrade on the data side would be probably-- so that we can really trust that stuff and start to lean on it. Because right now, no matter what we implement on that side, it has to be the nice-to-know stuff, the, "Yeah, this is great, but we can't rely on it."
Wish_List	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	Yeah. I mean, the big thing is every thing we use, I mean, we don't have time to mess with it, or tweak it, or play with it. It has to work the first time, every time, or people will just to stop using it. They will just refuse to use it and go back to the old way of talking on the radio.
Wish_List	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] I would like to see power stretchers at this agency.
Wish_List	EMS	U	Field	26-35	Not	Not	EMS-	[S3] Eventually, it's the wave of the future power stretchers or hydraulic

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder		specified	specified	U-004	pressure. Their stretcher with the touch of a button. Hydraulics raise and lower the patient. It's been fairly definitively proven to reduce the number of at work back injuries. They also weigh three times as much as the other ones. You can argue that that weight is for-- the pros outweigh the cons...
Wish_List	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] I would like to get a CAD system back in an ambulance... But it would be a great way to clear up radio traffic.
Wish_List	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] The mapping that helps you get to get to calls, that would be cool.
Wish_List	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] If I'm trying to go on scene, this happens all the time where the patient can see me pull up and the fire department can see me pull up, or maybe there's a bystander trying to flag me in because it's their emergency, and so they're the ones freaking out. And I sit there in my ambulance, and I try and key up and the radio's okay. So then, I try and key up again and the bystander's freaking out and waving me in. And I'm just waving to them like, "Hi. Yeah, I'll be there in a minute."... And then I try and key up, and this time, it goes through, so now I can put myself on the scene. Or if I had a CAD system, I could hit a button that said on scene. So that way, if dispatch was busy talking with someone, and they wanted to know if I made it, they could look at their screen and see, "Oh, yeah, they've put themselves on scene." And that way my time is accurate.
Wish_List	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[RE: CAD] I can pull up my call notes in real time if the call taker is still on the phone with the reporting party during my entire response to the scene, sometimes new developments happen that are important that I would like to know. Well, dispatch and the call taker are two different people. So dispatch is not necessarily going to be reading all the call notes for the 15 calls that he has people responding to right now. So, if something interesting pops up, he doesn't know, so it doesn't get relayed to me.
Wish_List	EMS	U	Field	26-35	Not	Not	EMS-	[RE: CAD] [S2] As much information as I can gather helps me. But I also

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder		specified	specified	U-004	don't expect dispatch to sit there, and read it, and relay this to me because that's just air time, and it's a waste of his time, and he can't do that when there's 20 emergencies going on at one time. So, if I can do that in real time by myself, because all I'm doing is sitting there as my partner drives me to the scene, it helps me make decisions... But call notes will tell you it's actually in the parking lot behind that address. That's just the numbers they could see when they gave the numerics to dispatch or to the call taker.
Wish_List	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[RE: info via CAD] ..."Do I need to request PD before I even make the scene? Oh, my patient is 500 pounds. Let's get fire go into that because I'm not going to be able to lift that person with my partner. Oh, there are weapons on scene? Cool. This develops into a psychiatric situation. Maybe I'm going to go in a little bit more guarded than I would have before." It can be as simple as this is the address you're going to. Cool...
Wish_List	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] So everything that I can find out before that call is beneficial to me. If I'm going to a chest pain, it would be great to know if it's somebody sitting on their couch that developed chest pain or if his chest hurts because he was shot in the chest. And all of those things can be new developments after I've been dispatched, and I'm no longer getting information. I could go on forever about the information that I want before I receive a call because a lot of that's going to help me determine what gear I take in, whether I'm going to bring my narcotics in with me if someone is still actively seizing, all kinds of stuff [laughter].
Wish_List	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] I do agree that having that extra information would be nice. I definitely agree with the more information I do have before I walk into that scene, the better equipped I am to be able to handle it and just prepare for that situation. That said, you really can't account for every circumstance. And part of what I enjoy with this job is figuring out the best way to make do with what you do have. And I think that's fun kind of being a detective and tie together little bits information of you have.
Wish_List	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[RE: pagers] [S3] More detail on a page would be nice... Our pagers. Just our pager. Our pagers are pretty basic by default. I mean, it is a page

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								after all. It just has an address, and some signs, and times, and codes, and that's about it. Sometimes I wish a little bit more information came across on a pager because sometimes the Toughbook, it doesn't stay connected to the Wi-Fi and that type of thing. And sometimes, it depends on the dispatch, on just what's happening in dispatch within the call sometimes. Sometimes the police call taker is getting different information than our call taker is, and so sometimes if you monitor a different channel, you can get new information that way.
Wish_List	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S4] I would say probably a small PDA would be really cool to have in the back ambulance, and maybe just a remote-- I guess just be able to enter some basic demographic information in a really easy kind of format instead of having to grab the laptop sometime. I guess that would be my only ooh kind of moment.
Wish_List	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[RE: using a PDA instead of a laptop] [S4] ...I guess to be able to get some demographics together and then maybe to be able to obtain a signature, it might be a little bit easier if it was something that was really handheld that sort of lived maybe in the back of the ambulance. But that would be my only, I guess, thing of want.
Wish_List	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	I did like having a closed camera system from the front of the ambulance to the back, so I could watch my partner while I was driving in front. And that way, if anything got squirrely where he couldn't communicate to me that he needed my help, I could just see it on the screen and pull over and go help him. It came in handy a couple times. It wasn't downloaded to any system. It wasn't a HIPAA because it didn't go beyond real time, and that was kind of nice.
Wish_List	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	[RE: radios] Well, I think for me I'd like to just keep it simple. I'd like to have a device that I can communicate without having to turn-- go to so many frequencies, or try and push a button on this front face of the radio in the dark. And I'm trying to change zones and that to me, I don't care for that at all.
Wish_List	EMS	U	Other	46-55	21-30	Female	EMS-	Subway channels are the worst. And you have to be on subway channel

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel				U-009	or else you won't be able to hear anything. High-rise, terrible. I mean, yeah, if we had one device that could get us from subway to high-rise to whatever, that would be ideal. Because remember, when you're going into a subway and you have an incident, not only are you worried that you're not going to be able to communicate. That's my biggest concern. If I can mitigate what's happening down there, how am I supposed to get help? I got to run all the way back up there just to get a signal? I don't like that at all. I think that the one thing that we lack is probably-- that's probably the worst, it's the subway incidents.
Wish_List	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	Maybe something along the lines that patient tracking because that's a good tool. Doesn't get used a lot though. I think something that would be an automatic download to the Red Cross. If we had victims, multiple victims from an incident-- on our MRU, once we had their name and information, if we could tap a drop-down menu and say Red Cross or whatever, then that information would go right to their databank. And they would know where that person is. And the reason why we would notify them is if we didn't have-- if it was like a disaster situation, you know? Let's say a plane crashed. We have 100 people. If we have that information. I would like that we would be able to send it to them immediately, without-- because the hospitals, you start bringing patients, and then all of a sudden they're setting up their own makeshift triage area for these specific victims alone. And then if you say that, you put all the information. I'm going to the [local university], and you hit tap down, and notify Red Cross, it would be great that that patient information would pop up to the disaster coordinator [local university]. So they have it when we get there. They know we're coming with that person. And they know that the Red Cross has been notified.
Wish_List	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	... Ambulance attendants bringing you a 48-year-old female, involved in a plane crash. Crush injuries. ALS cure established. That's all you know. So family locator. Right? How does that happen? That happens from the Red Cross. So you take that information. that's the information I'm giving to you. I know what my patient's information is, if I have their ID or

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								whatever. I call the telemetry hospital. "48-year-old female. Crush injury. Plane crash. ALS cure. Going to UFC." That's all I have to tell them. That's all you're going to know at UFC. Right? So if I can put that information in there. And I'm sending you her age, everything else. And the fact that Red Cross has been notified. Now, they're already getting that to their databank. And they know that this crash-- because they're going to come out on it-- that we have a victim now going to UFC. Here's a name. Now they can jumpstart family locator. It would be cool to do that. And we do have patient tracking that essentially will do that. But patient tracking is just something else for the ambulance crew, fire crew to have to pull out that they never use. So they don't have a comfort level with it. Right? And we use MRU every day. For us, that's nothing. We're going to put that information in. Right?
Wish_List	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	one radio that would literally take care of everything easier. That would be great...
Wish_List	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	I think it would be cool if the city-- although the lights would be red all the time for everybody else. But you know they have those sensors. There's so many ambulances in the [City] that would probably be a bad idea. But when I go out to these [planes?], they have sensors. When a rig is coming, people stop. That would be nice out here. I mean, but like I said, they're always in motion. There would be the proverbial traffic jam if-- probably if we did that.
Wish_List	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	Hey, how many times have we been to this location? Were there any issues at this location? Or was the best place to enter into this building through the rear? How many times have we been up to this floor? Did we find any issues, somebody who wasn't receptive to us on that floor? Yeah, those are the kind of things we'd like to know... I think that somebody should collect that information and get it over to us.
Wish_List	EMS	U	Supervising Field	46-55	21-30	Male	EMS-U-010	...for violent incidents that we respond to, I want to know who's also responding. Are the police responding? Why do I have to call the office

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					to find out if the police are coming in? That should be an automatic, "Oh, yeah, by the way, the police are going there."
Wish_List	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	I can tell you that for large-scale events, from the command side of things, I would like to see or have some type of a [inaudible] saying, "Okay, you know what? These ambulances are coming from this direction and these ambulances are coming from this direction. Where can I place them so that they don't running into each other or direct them [crosstalk]?"... Some kind of GPS locator. I know it exists, it's just that we don't have it [laughter].
Wish_List	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	So some type of a drone with a camera. And before we go into this area, what do we have there? Is there something that can be relayed back to us and say, "Okay, you have three cars in this type of an accident. Here's a picture of where you can come in, it's easier for you to come in."
Wish_List	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	I mean, if the regular person running an errand, and then an Uber has to find an address quickly and can do it accurately, then you'd think that it'd be quite important for the ambulances to be able to do that. You can be detailed to an area you're not familiar with... So if the average person would do it, it seems crazy that the ambulance don't have it yet, but they don't... I would think that would be on everybody's wish list that drives a vehicle, yeah [laughter], to make it a little easier.
Wish_List	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	...I'd like to be able to fly my car into work [laughter] to be honest with you... It seems that should've happened a long time ago because you've got your limitations to, obviously, how much space you have for highway. I always felt maybe it would be nice if there was something I can come up with that was somewhere in between a regular automobile and a helicopter or a plane that was safe and kind of lift, take yourself to work and not have to follow behind every other person in congestion... It seems logical because there's room up there and there's no more room on the highways [laughter].
Wish_List	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	So I wish something technology-wise. I know people don't want to share trains, and buses, and stuff like that, to go. People like to have their own

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								individual-- the feeling of having a vehicle at work but it seems there was another option, realistically, alongside of an expressway, above it, any kind of other ultimate transport that you're not always in traffic. It feels like that's a long time coming [laughter].
Wish_List	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	...I think as far as technology goes, we're at where we need to be right now. So yeah, not much else I can think of until they get more advanced with medicine itself...
Wish_List	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	...I'd say about seven or eight years ago, we did a campaign here. I think CFD did a campaign, pull it to the right... I wish we could do a campaign again like that.
Wish_List	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	I have my portable Toughbook laptop where I keep all my information for a medical run. We can't communicate through that. There's no communication through that. That'd be great in case something happens. I could send an email out to maybe the alarm office or to my field chief who takes care of the district, through my Toughbook. That's a good idea.
Wish_List	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	...I wish I could be trained a little bit more. I think I've got a good grasp on my radio. But I think I could buffer it up a little bit more if we have a class on all my channels or just practice a little bit more.
Wish_List	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	SME: Every information is helpful for me... Any piece of information for me. Even if it's a stubbed toe, they'll give us the basic information, but I'll look it up. And sometimes it will be in there. How did the person stub his toe? He fell down the stairs and stubbed his toe. All we got was stubbed toe. They didn't tell us he fell down 10 flights of stairs and stubbed his toe. Q: How do you want to get that information? On the MDT? On your radio? SME: MDT's good. That's efficient enough for me...
Wish_List	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	...What would I think that would help us out there? I think at this point, I think that little things like our waves - I don't know the terminology - could be stronger. If I could be in the subway and just know that I could

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								communicate with them if that wave is stronger... if there's something like some type of technology ways that they could come up with where it's a stronger signal that I know that at any point they're there for me. If I could explain it in its simplest terms. If there's that one channel where they could hear me crystal clear.
Wish_List	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	<p>SME: Our cardiac monitors. We have Bluetooth modems, where we're able to communicate to the doctor at the hospital if we want him to see real time of our patient's cardiac rhythm. Say, "Hey doctor, can you look at this second-degree heart block? I'm going to send this out to you right now." So in my cardiac modem, I'll put in buttons, and I'll go scroll to the hospital, and I'll hit send, and that picture of the EKG gets to the doctor. It's pretty cool. I think that's cool. And it's real time. He'll get it right then in a matter of seconds. I think that's great.</p> <p>Q: Would it be helpful to be able to send any other health information that way?</p> <p>SME: Blood pressure. Everything... Oh, that'd be great. Like the first line vital signs. Because we do the blood pressures automatically and it does come on the monitor. It definitely comes on the monitor. How come that pressure can't be, "Hey doctor, my--" I tell them through the telemetry but what happens if I can't call? ... If I'm bringing them a cardiac arrest, that we probably brought back, and I can't tell them that, I'll send it through my modem. Like, "I didn't know you guys were calling but I know now because I got the EKG here. Now I know you guys are coming to us." But on that EKG it'd be great to have the blood pressures on there.</p>
Wish_List	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	On our run reports, I always put in if [City] PD's going to be there. I have to put that in manually. I always put that in my run reports in my computer. I manually type it in... That would be great, an autofill in for the PD, because sometimes PD's calling for us. Well, who's calling for us? PD114. Well, how come it's not auto filled in here? I got to put that in there.
Wish_List	EMS	U	Field	26-35	6-10	Male	EMS-	Well, especially during the summer, we're really busy and there's only

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				U-013	two channels for EMS for the entire city. We have a EMS main and a EMS [Neighborhood]... You get people stepping on each other. 20 different rigs trying to talk at the same time. Dispatch trying to dispatch someone. If you have a big event, you've just got people barking on the channels at all times... Oh, it's terrible [laughter]... for [City], they probably need-- downtown could probably use its own, not channel, but its own-- I guess, channel, yeah... Frequency, break it up a little more.
Wish_List	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	[RE: CAD] It'll give us the address. That's a big problem with downtown, is sometimes a building is the entire block, so we don't know which-- it'd be nice to know-- tell us what department store we're going, what-- something like that. What entrance are we using? Like the buildings around [building], there's a lower level, upper level. I mean, there's three levels before you get to street level, so it'd be nice to know sometimes. And then we have to talk back and forth and find out. And then they have to call them back to find out, "Hey, what-- you going to loading bay? Are you going--?" And so, that would be nice.
Wish_List	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	There's those, I don't even know what they're called, but I've seen them. They do compressions for you. Those things are really-- I think just a lot of stuff where a big department can't really put into budget or afford simple stuff like that.
Wish_List	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	Electric cots. Those things, I think, in the long run, would save a lot of EMS their backs. And stuff like that. I don't know. The power cots, I think they're called. A lot of the private companies have them. Stuff like that. I don't know [laughter].
Wish_List	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	I wouldn't want anything different. I just want a good crew. I just want a good crew to do this with. I don't care if you put the power loads on our ambulances, I don't care if you give us all Toughbooks or if you give us all cell phones that rule the world; I would like a good crew and maybe a cell phone that has some coverage. I don't need-- this is a pretty rudimentary job. You don't need-- your hands can do everything that all this technology will do so I wouldn't ask for any more technology. I mean we made it work for this long doing this. I just ask for a good crew

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								because if you get a crappy crew it makes this job so hard but if you can come into work and have fun and shoot the breeze with these people then it makes it well worth it-- you know that's why you get into this job to have fun and help people.
Wish_List	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	So maybe a cell phone with some good coverage and maybe a radio. I mean but we make it work just fine the way it is so we really don't need any of that.
Wish_List	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	I definitely would prefer to have a system where we do our patient PCR's. Here especially there's times where we have a 40 minute transport and then you've got to drive from [City] back where which is at least 20 to 25 minutes. In reality you could have your whole report done before you even get back to the station because your partner drives and whoever took care of the patient they're in the passenger seat so it would be nice to be able to have that plus you can keep track of-- we have a lot of patients that call us pretty frequently. They have you know diabetic and congestive heart failure so we see them pretty frequently. It would be nice to when you go out to see Ms. [Name] down the street that you can access you've already run her 10 times that instead of you just putting all of her information in there that you can enter in her last name.
Wish_List	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	[RE: ePCRs] I use the system similar in another county that I work for and then you can pull all of that up-- all of her information is already there, so you can concentrate even more on your patient rather than gathering the birth date and the social security number because it's already there for you.
Wish_List	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	[RE: ePCRs] Yes. Because it's the same they keep records of every patient you come in contact with so once they're entered into the system they're going to be there for however long and even if you go to that same patient and-- let's say they're unresponsive. I may have never seen that patient before but someone else here may have went to them several times before and they've entered in all of their medical history, what they're allergic to. So if I can get a name first and last name and enter it into the system and then it pulls up everything and then I can go

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								in and read, "oh wow, they're allergic to this so I can't give it." Because I don't have a patient to talk to me or a family member to talk to me so it's lots of benefits.
Wish_List	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	A better radio would be the biggest thing. If that is the only thing if I could only have one thing it would be a radio that we don't have to worry about not working because there are times when it's just extremely dangerous to not have it.
Wish_List	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	[RE: radio use training] I mean I definitely think it's needed even ten codes there's some counties that are trying to do away with those and just speak plain English but again it's not something that you're really taught or go over. I'm sure they concentrate in school about you know patient care and how to take care of the patient but this is your lifeline whether it's a portable or if it's one in our truck so I think it's pretty important to know that and some people you don't even know what channel to switch to. I think it should be taught in school as well as when you come to a new service that they should do some classes with it as well.
Wish_List	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	As far as technology and communication I don't think so. It would be much easier if we had better technology that's for sure. I love my job and but that's one of the more frustrating parts of it is to be somewhere need help or need to communicate and not be able to and I love working in a small community like this very rural. You get to see a lot of those people you get to know them by first name and a lot of the folks are related and stuff like that but it's also difficult because they all listen and then so if Aunt [name] down the street has had a cardiac arrest they hear the address on the radio and then you've got ten people at the scene that you're trying to take care of your patient then you've got family members and they actually had one this morning and they had all of this family that was rushing them. They were only on the scene for 7 minutes which is extremely good and so that's frustrating.
Wish_List	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	...so I think if there was a way to take the general public out of being able to hear our traffic and us be able to communicate easily and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								efficiently with each other without all of the areas that we don't have coverage it would be much better.
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	We buy a system, and we buy a radio that's going to hold a million channels in it. When am I going to use a million channels? And so I'm paying for capacity that I'm not probably going to use in a life of that piece of equipment. So that would be issue one, because then I could spread those dollars out and use them for either more of something, or divert it to another purpose. So from the MDC standpoint, what would I want is something that gives me intelligence about where I'm going, that's pushed to you..... So, as an example, it would be nice if you knew, if I'm going to an EMS call, what is the information that I would want? Well, if it's an apartment building, the building number, maybe a map... and obviously, you can tell if it's typically on the first or second floor. That would be ideal...
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	And obviously, you can tell if it's typically on the first or second floor. That would be ideal. The other piece of that is, if I'm going to an assault, or a shooting, how many other of those types of events have occurred there would be nice. The other piece of that would be, if I'm going to a fire-- that it delineates between the type of call and says, "Okay. Well, these are some of the things in priority that you might want to know. There is a known hazardous material there. There are known water-supply issues there. There are forcible-entry issues." Maybe collecting data from previous experiences in that that drive future data and make it a little bit more intelligent would probably be ideal. In regards to radio, we don't have a lot of complaints about radio. We push the button. It works. It communicates. We don't have a lot of issues there. GPS tracking and location would be ideal.
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	We don't have GPS for the individual. Now, obviously GPS becomes a whole new issue because if you're in a building, then you're not going to get that. But we certainly could, with a mesh network, have the ability based in the vehicles to triangulate based on where somebody is and their radio. So when you're looking for a firefighter, that would be ideal.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								You have a lot of people out there that are competing with those issues now with one-offs or add-ons to SCBAs or these other devices. From a wildland perspective, it would be nice from an incident commander's perspective to be able to see where people are operating.
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	The idea of the emergency alerting on radios is absolute crap. It's a theory and a concept that was created in an air-conditioned room on a whiteboard, but when you're scared to death, you're going to do what you do 99.9% of the time, and that is you're going to hit the side button. You're not going to push the small little button that you've never pushed in your career in the moment that you're scared to death. So a big piece in a radio system would be that dispatch has the ability to move people over to another talk group. Because if I've got 40 or 50 people on an incident and I need to move people to another network or to another channel, if I transmit and say, "Everybody move to another channel," with a gloved hand, maybe in zero visibility, maybe I'm outside, I don't know, and then I've got to pull this thing out and I've got to move over-
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	Yeah, is this the right channel? That would be ideal because then the dispatcher, if I have a lost firefighter or some sort of emergency, could then take a group and just move them over, drag and drop them onto another talk group. Now I can run this, and that didn't require any effort from--
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	There's zero situational awareness with these people over here. So what would be ideal in a perfect Utopian world is that you have a datalink video from each vehicle that could feed into a data center so that you as the [Job title] could say, "I wonder what's going on over here."
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	And you can see it. Or that there's the ability that that camera would be tied to the MDC so that I could push a button, take a picture, and transmit that without sitting here and opening an email, figure out who's working today, who's going to get this email, or does it go into some black hole?
Wish_List	FF	R	Supervising	46-55	21-30	Male	FF-R-008	So they'll put a layer in our MDC for where these buildings are. Have that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					in a more usable format would have been nice. The topography: potential flood areas, known flood areas, historical data on the types of hazard that might impact a particular area historically. Especially flood lines, right? It would nice to know that, "Hey, if I get four inches of rain in a 30-minute period, what is that going to look like?"
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	Probably, from a technology standpoint, not strictly for communications, the use of drones in those type of incidents would be very, very helpful. It aggravates me in that my son could go out and use a drone, but I can't because we're part of an agency, so now we fall under the commercial guidelines. But I can take a million dollar aerial apparatus and stick in the air, or I could go and do \$1,000 drone and get that situational awareness. And then the ability to transfer that information to other people would be a key piece.
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	When you have a flooding event and you have hundreds of people stuck on their roof, and then you limit yourself because the road network that you've relied on traditionally is no longer passable, so how do I get people to that location? And what information do I actually have that suggests that I can? Is it now an island? How long is it going to take? What is the reaction time? So yeah, I mean, any major event. Because it happens in such a condensed time frame with a limited amount of information.
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	No, not really. I mean, I think what the guys would like is the ability to somehow have an easier way to collect data for their incident reports.
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	I go back if we were creating a utopia, that that data is scrubbed and filtered so that it's not looked at as a past event, which certainly it's an archive, an artifact in time of that event. But then information is filtered through there in hopes of driving information needed for the next event at the same location. And we certainly have the ability to do that, it's a question of imagination, one. And then the limiting factor in communications often times is that you go and invest in this system and it has boundaries. And then to change that or to add something into

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it is usually not compatible, so you end up with a situation of, "You do this with this system and you do that with this system," but they're not integrated.
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	So, first would be interoperability statewide. It would be nice if every radio you had-- and it may exist and I'm just not aware of it. But if I go to [City] and they have an 800 or 700 system, I can talk to them. If they have a UHF system, then I can't talk to them with my radio. Unless of course, I bought a dual band. So now I'm in a situation where I've got to pay an extra \$1,000 for a radio in the off chance that the world came to an end and I was going to go to [City]. So, that doesn't make-- who would spend that money for that? But if somebody could set that as a standard, that public safety radios, and it's not an option, then I think in a generation we drive towards that capability.
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	So I think that would make communication much, much easier. But it has to have some capacity to it as well. The other thing is the use of portable technology, iPads for patient care records, for inspections, for incident data, situational awareness, even receiving information. That's that integration piece. So it would be nice if I had this iPad that is not just a stand-alone. So I've got my MDC, but the two might be linked in regards to the data that's being pushed. That would be helpful.
Wish_List	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	I don't know if there's a better way for dispatch to get the information from the call. I think sometimes there's a little mix up there on whether it's pending or not. Somebody will get in a wreck and they'll say, "I'm in my car right now." So they get dispatched as a vehicle rescue. Say they can't get out of their car. So you'll send six units to them, and then you get there and it's nothing. So it could be stuff like that. I think that's just where it would get lost, in expectations of what you'd see on scene. Our guys, he's not here today, but he had a trash fire he went to, and then he got there and the whole house was on fire. So instead of sending just our squad, he had upgraded to several companies.
Wish_List	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	But then again, I don't know how technology could improve to help that because they don't find the guy you still have to go help the guy that's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								injured even though they haven't found him yet. So I don't know if that would be another drone thing or if there's anyway technology-wise to block people off. But it seems like on calls like that the party still goes on. So I think if stuff like that would stop maybe they would cooperate more. You get 500 drunk guys, I mean, probably not going to just stop them.
Wish_List	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	If there's anything, I would wish that if a patient was in trouble that somehow they could send us-- or send somebody a video come up on our screen because you can tell by looking at a person if they're in serious trouble or if they're not. We have tons of calls where they'll get dispatch for priority one chest pain, having a heart attack. And you get there and they're sitting there smoking a cigarette outside on the front porch or something. So that would be nice if you could have some actual visualization. Or if you knew on scene, "Hey this is going to be a hoarder house," or something. If there was any way to get the layouts of people's houses I guess before you went in, kind of like-- I guess you have the Google Maps. You can see the outside.
Wish_List	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	but we don't have a system right now that is fast enough where if they gave us the address, that house would pop up somewhere. Instead of having to type it in Google Maps, find it, and zoom in. Look for anything, or it would show you the nearest hydrant there. Stuff like that would be good. A lot of times Google Maps, there would just be stuff in the way of the hydrants. So even though it shows up on your-- because they'll shows up on your CAD system. It will show up where they're at, but you won't know that it's covered in trees--
Wish_List	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	Like I said, it would be nice to have a video or something if that was possible, a video of the house or exterior or anything like that that would automatically generate when you got a call. I'm trying to think of the EMS related because the majority of our calls are EMS related.
Wish_List	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	We were doing CPR, but the problem was is where it's positioned you couldn't see anything. You could hear what we were doing, but you couldn't see actual visual of what was going on. You just see I think the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								top of somebody's head, you know? So if there is any way to get more information like that, like you were talking about. If there is any way to get an actual camera in the ambulance, this is what a sick patient looks like, stuff like that would be really beneficial to everybody just in training because you get the training videos, and it shows a guy with a wet cloth over his head and he's sitting there in the chair, and that's supposed to be the sick patient. That's not what you're going to get.
Wish_List	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	So if there's any way to have [a video camera] located somewhere where we can record the actual patient, patient care that's being given, that would be good. And it gives us a way to monitor our rookie firefighters too. If they're doing something we think is wrong or they could do better, that's a good thing to look at just to improve them.
Wish_List	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	Yeah, if there was a way to, you were on this call, maybe en route, they give you all that- I guess they can't give you all of it en route because they don't know when you're going to leave so the scene or when you're going to get there, but once you clear the scene maybe if there's a way how to say, "Hey, you got that call. Here it is."
Wish_List	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	Even just to know the patient's outcome would be nice too because when you do CPR on somebody, and they take them, you always look up in the computer, see did they make it out or not? Or you look in the obituaries, be like, "I'll probably see this guy here." You kind of know on scene what's going on. So stuff like that would be neat, and it would be something to learn from probably too.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	So we have people who show up to and help film the scene, they're like our training officers, so that we can go back and revisit the fire. Because when I go to a fire scene I get a really good rep in, right? It's experience for me, we solve a problem. Well, the other seven BCs didn't necessarily get to go. So how do I share that to help them get better? It's true that if they get a rep it may not be the best rep, but it's as close to getting a rep as you can get. So we can watch the movie, stop it, have them give a size-up, talk about what happened, what could you do better? So that's a really cool technology. It'd be really neat if every firefighter, say, had a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								helmet cam on. And then you'd have mini views from--
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Yes, location detection. So seeing where they are at, I know that our new air packs have the ability but the software isn't there yet. So to send out how much air they have, that's a really big deal because as people get close to low on air, it doesn't tell me where they are in the building, but it tells me how much work time they have left.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	-- so if you can just envision a city block, and something on fire-- to drive around this, try to get situationally aware and how many times would I have to do that to really remain vigilant, versus throwing that up (drone). Or even on a house fire, throwing that up and being able to see on a monitor, live, what's going on from above or from the back. Because right now I use people. I'll say, "You're next on scene as a commander. Go to [Name] and you just be my eyes back there and let me know if anything changes."
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Big enough scene that I'm going to have a Baker, a Charlie, and a Delta eyes on scene. I use people which-- that's probably the primo, but with technology, if we had the ability to-- every fire somebody shows up and shows me a picture, or on a green-bell call, shows me a picture as an incident commander, that would be great.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	So technology, if everybody had TIC-- not everybody has a tech, there's one TIC per unit - thermal imaging camera. They have the technology now that every firefighter's mask has a TIC inside. So it's super expensive--
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Firefighter Location would be great. To know where they are. Having a TIC in everybody's SCBA. If everybody has view of the fire and how hot--
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Right. I think it's probably overkill on a lot of our fire scenes, but if you have one more bit of information you can refer to just to look at that backside without having to send somebody, that just gives you more real-time. Throw it up there and watch the hover. We've been lucky enough to see it on a couple of special operations calls, especially. We

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								did some training where we put a dummy on the side of the seventh floor. They were stuck. And then we would send people down and they sent the drone up to be in the area to watch what they were doing. And so it was a second set of eyes watching. And we want them to be trained and obviously make wise calls about what they're going to do, but a second set of eyes watching the interchange between the rescuer and the victim, that can only help.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	And I'll say this, the more integrated it is into our protective equipment that it's not so ancillary or exterior that it bogs us down, the more-- because I really am asking somebody to be a triathlete. And all these extra clothes and anything that's cumbersome, wires or anything, is going to be a hazard. And so the more streamlined we can make it, lie faster, longer battery life, all those things, protection--
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Oh, wow. That's a loaded question. So I would like the ability with all the gear - since we're talking about communication - better communication with the people immediately around me. Specific to structure fire use. We live in a world now where once I put all that gear on, I could scream at the top of my lungs, and you would be hard-pressed to understand what I'm saying. And so, we turn to things like voice amplifiers and that technology. We're currently trying to test some Bluetooth technology on. When I'm in a big room with a group of firefighters, as a captain, trying to say, "I want you to knock down that door. And I want you to spray that hose line. And I want you to break out that window." I have to walk and slap you on the shoulder and do this, because I have a big muffle right here.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Yeah, and I would think that it would be easier than it apparently sounds to make that happen so that everybody could communicate. Just like you and I are having a conversation right now, why can't I have a conversation when everything's pitch black with everything muffled. So that's what I want to see...
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	...I would like to see better thermal camera technology. So I'd like to see more advanced, user-friendly thermal camera technology... When I carry

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a camera, it's really nice and it's a \$10,000 camera. Why not in the world of technology, cost aside, why can't that be heads up? ...I know that there's some of that stuff out there. But why not be a useful heads-up display that's just as useful as this camera? ...It tells me heat differential. And so it tells me where the hot and cold spots are, so I can tell with all that gear on, the new one gives me a temperature. Tells me it's 800 degrees. Some of them are color coded, so all those things are good.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	...We talked a little bit about whether it's on the radio, or on my air pack, or my SCBA or something, but the ability to track me from the outside. For the chief, to be able to look at a computer screen, outside, and watch where I am in the building... A breadcrumb so that if something happens to me and I push this orange button and I say, "I'm in trouble." ... He can show everybody he's right here. Go get him. We just killed a firefighter in [City]. They looked for an hour for him. They couldn't find him. So those are the big things in technology I'd like to see.
Wish_List	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	We have pretty good pre-plans on our computers, they've gotten a lot better through the years. I think on the-- if there was a way we could get closest hydrant to pop up, that would be cool, and the service status of that hydrant. So is it out of service, in service, and what GPNs it provides... and if it's on a loop main.
Wish_List	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	Road closures. I don't know if that's relevant but we don't have a really good way of, if a road's closed, we'll just drive up on it, it's closed.
Wish_List	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	To me, maybe it's another box I can push on the MDC and kind of hit it. And it would be like a priority box or a message, it would just shows up as a message, new message, and then it pops up and there. That would be fine. If it's in the main text, it gets down to the bottom and that's new —
Wish_List	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	Prep-plans is a pre-planned button. So hydrants, you can't have a button for everything but I think that even if it just was an extra message, especially for the-- I think for the hydrant it could be a button and for the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								road closure it could just be a message that just comes up... an alert message.
Wish_List	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	You can pull up where the hydrants are but sometimes it would just be easier if there was-- there's a lot going on. And it's gotten easier, on the map you can see the hydrants but it's kind of hard to see. It doesn't have an address in front of it or it's just kind of ... Not it's just, "Oh, it looks like an F block away." And we don't know-, it doesn't say if it's in service or out of service or anything like that.
Wish_List	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	[RE: radios] that's the thing, these get wet and they get kind of ruined... It's not good. I don't know, it's like I almost want to be able to submerge this... Well, no. I don't want to do it with this one [laughter]. But if I had the perfect radio, I'd be able to submerge it. Because we go on boats all the time. We have swift water and we have everything here, and... it has ruined in the past. Not every time, but this thing, even in a fire, gets soaked, gets drenched...
Wish_List	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	It's not good. I don't know, it's like I almost want to be able to submerge this. [radio]
Wish_List	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	The cops have sonar for finding bodies in water. So, that could be helpful. People are talking about the drones' stuff. I don't know anything about that stuff. So, I can't speak on it. But it seems to help. But we have a active shooter program and we practice with the cops. And we had a drone. And we said, "Why don't we just fly the unmanned drone up to give us a view of what's going on and bring that information back?" And they were adamant we couldn't do that. So we really don't understand why... The police said it would hinder their operations... But we thought it was a great idea. So we don't know. I'm just saying I don't know anything about technology. I'm not a very savvy guy with technology either.
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	Maybe if there was some way of connecting the caller and the guys from the fire truck responding. If there was maybe some way out-- I don't know how, but if there was some way to kind of bring them a little closer to together to-- I don't know. I'm just thinking out loud here.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	If they could hear the call, what's going on on the phone. If there was some way for that, that might help them kind of get a better picture of what they're going into, getting into, and it definitely would show what the dispatcher is dealing with [laughter]. It's like, "Why am I not getting this information?" So, yeah, maybe I could see that definitely being a benefit. Having a little more access to that caller.
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	if there was a way that more closely tied that person who has having the emergency with the people that are responding. I mean, that's the goal is to move the information from the caller to the engine. But sometimes things get lost in translation or, like I'd say, the call taker gets tunnel vision and only focuses on this when the guys in the truck are like, "What about this?"
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	So it would be nice to pair a lot of it down maybe instead of having all of these different pieces of equipment, to have it all integrated into one. Now I could see that being, okay when that one breaks then you lose everything, but I know that you could get a radio that you could do your status, your-- if I'm an available station or if I'm responding to a call, you could hit the button on the radio and stuff like that and more of a device it would-- our MDCs are mounted in the trucks or locked in the trucks, but we're looking at going towards tablets, so once you leave the fire truck you could take that with you. So more mobility, portability.
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	... And probably the biggest thing is a device that works 100% of the time [laughter], not 90% of the time. And with that maybe more live, real-time data. I know it could be done but if that tablet was-- there's an easy just click a button and see where everyone else is, all the other units are and their statuses, stuff like that.
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	...so our radios do have Bluetooth capability, so we're kind of exploring the option of being able to-- one of the hardest things as a fireman is talking while you got all your gear on and the air mask and everything. And it's hard to understand the guy who's screaming on the radio through his air mask. And sometimes there is a real mumble and you can't understand it. Clear communications...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	...then, even more, data as far as you could put some kind of the command, the guy at the command truck would be able to get, like, "Okay. This is our location in the building. This is the temperature that they're experiencing right now. This is the guy's body temperature," maybe, "This is the guy's heart rate," all that stuff. I know some of that's available, but that's information for the command center to make better decisions like, "Hey, this guy is getting really hot. His environment is getting really hot, let's pull him out." ...
Wish_List	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	I used to be on the HAZMAT team and we had cameras that you can take in and it can send a video feedback to somebody outside. I don't know, some kind of a-- I don't know if it's like a GoPro or if it's like FaceTime, some kind of FaceTime application or something that as I'm walking down the hall, the chief sees us and is seeing what I'm seeing exactly and at the command post on a screen or something like that. That would be kind of beneficial because that might cut down on a ton radio traffic because command doesn't need to know if there's smoke in a stairwell because he can see it. So that might be something that's kind of cool.
Wish_List	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	If all 12 of us are inside a building, if we've all got air packs on with a little chip or card or whatever it is, command can see little pings, little dots, and can track our progress moving through. If we had that technology available today at every fire and command could see that outside, that'd be very beneficial. I think we're going to that though.
Wish_List	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	We have TICs, thermal imaging cameras. This actually kind of goes back to the radio thing. On the ladder, the TICs are actually a lot larger than they are on the engines, which, we're already carrying a lot of equipment. Usually, it's just clipped onto our air packs, but I think in that situation, smaller is better. I think the ones that we do have on the ladder, though the batteries do last a lot longer, I think they only last for maybe about 45 minutes to an hour if they're strictly on. So maybe a little bit more battery life on those would be nice. But at the same time, a smaller more compact thing. But if you're going into a fire, you're going to use that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								camera pretty quick and usually, fires are out in a pretty fast manner if you're actually going inside and using a TIC. Where if it's some big fire from the outside, it's like, "Yeah, I can see the fire. I don't need the camera to see it." ...
Wish_List	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	The equipment that we use right now really not a whole lot to pick apart at it, but the one thing I think we lack is just to have it more seamlessly kind of aligned with when we go to a call. If we can hit a response button and have all the equipment on the fire engine, or whatever unit that you're on, automatically go to that assigned channel. Occasionally we use just direct channels for line-of-sight communications below grade down here. But everything pretty much works well equipment-wise. I guess, technology - I think it exists - that we could just seamlessly have it that you hit the button and your unit [responds?] and everybody's radio channels kind of link up.
Wish_List	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	But we had a fire recently where someone had a gun inside of the house on fire, and so we all had to back out. And then we weren't really sure what police was [doing?], but we can kind of hear their communications, but they don't use plain English, they use 10 codes that we really can't make sense out of. But just if there was a way for us to communicate with police more easily.
Wish_List	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	we have a system where we update buildings downtown, or buildings throughout the city that we have-- locations of different fire protection systems: fire pumps, fire control panels, fire department connections that we keep in the system. And if we had something just to kind of make it more easy to look at, easy to move around, that kind of thing, that you're kind of used to on your technology at home. Like pinch to zoom or find information very easily that you want to find. It's just kind of complex, and not user-friendly.
Wish_List	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	It'd be nice just to have that kind of information. And if you're inside of a building, maybe nobody has this at all, but just to maybe just by whatever division, whatever floor somebody's on, if you could somehow track those people with some kind of positioning system, that'd be cool.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	...When we respond to a unit, we hit our response button, and we're automatically synced up on our radios to the correct [FireTech?] channel. If we take an assignment on an alternate channel that we have to monitor, like the emergency channel for the rescue team, then we can just hit a button and we're [over?]. If somebody's on that channel that you need to go to. Or if we need to go an alternate channel, we can just assign a staging function or what have you...
Wish_List	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	...And so we can plot kind of where everybody is, link up with their air supply, and just kind know what companies are on scene, where they are. Because you see a lot of times, our job as commanders is having to write that stuff down on a dry-erase board and listen to all this stuff, too. So it was just kind of being tracked automatically to make our job a lot easier...That's the big thing. If there was a way just to-- yeah, I think that covers it but just to track units on scene, personnel on scene, and accountability on some kind of system we could look at from the command vehicle and just have all that recorded. Yeah?
Wish_List	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	Just in our initial response before any fire units are on scene? That would be nice to just have better maps of all the units, or all the buildings, properties that are downtown, or wherever in the city. That and a lot of times we'll have premise hazards in our MDCs and maybe even you even can look at previous calls you've made there if it's not actual fire, if it's like a constant fire alarm system malfunction or whatever kind of hazards that might be on ground. You can look at a previous calls type prior button and get that information. But I think the biggest thing just easier to look through maps and kind of more easily identify stuff that you've done.
Wish_List	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	Yeah, so that's probably the big one. There's going to be tons of radio traffic, and I'm sure someone is going to hit that button and say, "Emergency traffic. Building collapse." Whatever needs to happen. "Evacuate everybody." If there's a way to, communication-wise, if there's a way just to confirm that that message has been received by everybody-- that would be a cool button to have, just like if there's an

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								emergency event, and everybody has their just like, "Okay. We got it. This crew has it." But just the fact that-- and it's all kind of sectored, and so they have like, this division's supervisor is going to account for all his crews, but a lot of times when we're there at an incident, and there's something that the division supervisor-- we had a guy with a gun not long ago, and so, "Check in with me, Fire Engine One", and then we checked in, and then we were kind of waiting, so if we just had a way to communicate directly, so it was like, "All right, we got it. We're all coming out." And the guy at the command vehicle can see that it's all been taken care of, just on a screen or something, it would be cool, yeah.
Wish_List	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	And you know that all of our nozzles are pretty much rated for a specific flow of water. But it would be cool. Something like an LED ring, something that would be like a green light, from the nozzle tip, when it's flowing, it's ready to come out. That would be cool.
Wish_List	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	And then you have other communicators who are very direct and to the point, which around here, in this environment, that's preferred. If you say, "Hey, let's go clean the property office for two hours. Here's the game plan. Let's do it." There's no question about what needs to get done. Everybody knows where they fit into the picture. So the very clear, concise communications around here is what works most effectively...
Wish_List	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...With police, I know that they have certain different-- I think they still use codes like--10 codes, yeah, in the police departments around here, which I don't know anything about those, really. I think 10-4 means okay, but [laughter] that's about all I know. So, I don't get into any of that. It would be easier if they used plain language, but I don't know what their plan is. I know that the FEMA Plan is to use plain language, so I trust that. It works for us pretty well to have the unified communications systems, but we also don't do that much with police...
Wish_List	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...The other problem is if somebody is driving an ambulance, and they sit on their mic, and so it's open. And so it's transmitting while they're driving or something, and they don't realize it, then everybody in the county hears that. And I don't know if there's a way that they can shut off

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that radio so that everything else can go [crosstalk] right, right. Or if it should do that because maybe there's a situation where they're in danger, and so they need it like that. But that happened like a week ago where, for a minute straight, someone was just sitting on their radio. And it was transmitting.
Wish_List	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	There is an app that already exists that our county doesn't use where you can actually listen to the radio on the app... so if I'm sitting right here, and I see that they put out a vehicle overturned 10 miles from here, I can just swipe on it and pull it up. And I can listen to the communication on my phone... But I do like that, that PulsePoint app is what it's called, where you can hear these things going out and listen to the call... But I don't really need it. It would just be something like-- a little bit nice...
Wish_List	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...I'm trying to think if there's any way that they could have a map of where fire fighters are that we could have access to. I don't know. You don't want to have additional equipment to carry, but if they have a-- we have thermal imaging cameras where we can see-- if I show it right at you, I would be able to see your outline because you have different heat than the room. I wonder if they could make a second screen on that, that track people that were working in that incident, so while I'm doing a search, I know that there are three fire fighters in that room and there's a fire fighter above me. But I have no idea how they would actually do that, but that would be pretty cool. So we would know if someone's in that collapse.
Wish_List	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...If we're concerned about the structural stability of that, it might require us to leave. But if it's this wall that comes down, or a non-structural component comes down, we're not too concerned. I think from the incident command standpoint, they would definitely want to know a blueprint of that building so they know what is structural and what isn't. So I don't know if they have access to that right now. I think they do for a lot of buildings, but they might not have that for all buildings...
Wish_List	FF	S	Field	Not	31-40	Male	FF-S-040	[RE: receiving radio audio] ...So the thing I haven't seen a good solution

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder	specified				for is sort of the receive side of that equation... Something that puts the audio in my ear. Now, I have seen some that-- I think it's NSA that's got a [earpiece]...It's like a boom. It comes off the face piece. So I got the speaker thing up here. That's maybe a solution, but that's kind of got some drawbacks because of other issues on the other side of that interface in terms other stuff you got to have that involve wires [laughter]... I haven't seen one that sort of encapsulates the whole thing that doesn't involve wires yet.
Wish_List	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	-- there's products on the market where we can see our thermal imagers through a heads-up display in our face piece. So I've got the thermal imager attached to my face piece, so where I look, I've got a little heads-up display right in front of me. So I can either look out through my face piece and just see what's in the environment or I can glance down at that HUD and look through the thermal imager if the smoke is too thick for me to be able to see through otherwise. A HUD for the radio would not be a bad thing either. To put a display that mirrors the display on my radio so I can see what my coverage is, I can see what talk group I'm on. I can see all the stuff. One of the things that we do with our radios is - and not every jurisdiction does this, but we take the time to do this - is that we alias all of our subscriber radios within the radios
Wish_List	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	[RE: HUD with radio display] ...Similarly, if there's an emergency, the emergency enunciates on the radio for those radios that are aliased in that list. It's a little complex. I don't want to get way into the [laughter] depths of managing a radio system, but we only alias the radios for the radios assigned to firetrucks, basically. Only the portable radios assigned to firetrucks. All the other radios scramble around too much. The mobile radios that are bolted in, they all scramble around. But for the portable radios assigned to the firetrucks, we alias all those. So if I hit my emergency button on my radio so I can get priority access to a talk group, that emergency displays on the radio too. And that once again, they can see it's AT735 OIC AT2... Once again, if it's in the heads-up display, then I can see that.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	[RE: HUD with radio display] So while that isn't like a communications improvement in terms of improving coverage or something like that, it's improving communications because it's providing context for me that's not otherwise easily available to me and gives me a means of getting to that information that's available to me but not practical to use right now. So mirroring the functionality that we're starting to see enter the market with the thermal imagers, getting a heads-up type display, once again, probably a Bluetooth type of thing. I don't want wires. Don't give me wires. Wires are the enemy. But give me something that I can see that type of information in my face piece.
Wish_List	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	There's always the desire, and I understand the engineering constraints and materials constraints that cause us to have what we have. There's always a desire for it to be lighter, smaller, cheaper because they're very expensive devices..... Like I could potentially sort of foresee maybe at some point doing pie in the sky stuff back to sort of the building telematics thing where we're talking about pushing out the building information to the user in the firetruck so I can see what zone and stuff it is, where the smoke detector is activated, on what zone are the sprinkler systems activated. That kind of stuff. Maybe we get to the point where we not only push that out to me on my NDC in the firetruck, but I'm actually getting a heads-up display with that data as I'm walking through the building and maybe even providing context in terms of location within the building. So the building is smart enough to know, hey, I'm walking down this hallway and the zone that you're going to is up here around the corner to the left. And that heads-up display is telling me, hey, I'll go down the hallway, took a left here, you're in the zone. That's the sprinkler valve that's activated or the zone that's activated. There's the smoke detector that's activated. So I could foresee, as data is becoming more robust, data pipelines becoming available.
Wish_List	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	I've been on [Name] for a while telling him what-- I love the vibralert, but what they need to do is have it sound for 5 seconds and then be silent for 10 seconds.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	So one, life safety is our biggest concern. So if [County] is on the phone with the person that's calling the house fire, I hope [County], our communication, and dispatch, tells me, "I'm on the line with the person. They're the only person that lives there. They report everybody out of the house." Instead of me coming to the scene, there's fire in the building, and I say, "Oh, man. There's a car in the driveway. Oh, man. I don't know. All right. Well, people are going to have to make a risk assessment." And if I don't need to make that risk assessment, my life's better because I don't need to injure anybody. So are all the occupants outside of the building and accounted for? ...
Wish_List	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	...What's on fire and where is it? Are we talking about an outlet that's on fire, or are we talking about a kitchen that's on fire? Okay. Are we talking about, is it in the second floor bedroom? Are we talking about, is it in the basement? Okay. And if it's in the basement, do we have a walkout that I can quickly go into? Or is there no walkout, and I've got to go down that hot steps to fight this fire? So our biggest thing is life safety, incidence stabilization, and property conservation.
Wish_List	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	...life safety could be, "Hey, we have a car accident." Okay. Are all the occupants out of the vehicle? If they're not, does that mean they're trapped? If they're trapped, well, then I would need a rescue squad to cut them out. How bad are they hurt? Do they need a medic, or do they need just basic EMS? Do their injuries bring them to a trauma center? Do their injuries bring them to a specialty center, like a hand center, spine, if they can't feel their legs? So it's always first you. Your property's not important to me. I'm going to try my best to go ahead and save your pictures that you love. I'm going to try my best to save your animal that you grew up 13 years with. I'm going to try my best because I know those things are very valuable to you, but quite honestly, your life's more valuable to me. So once I have you accounted for, okay, can I go ahead and fight this fire from the inside? How do I fight it? Where is it? And then after that, okay, the fire's out, let's go ahead and save the items that are inside from more damage...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	My wish list is to get the call dispatched to me and then for them to follow me to the call and show me how to get to the call. And then instead of them telling me things on the screen while I'm driving, to tell me somehow on the air, but that leads to communication overload.
Wish_List	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	[RE: Minority Report movie] do you remember when-- and I don't know if this could be done, but do you know how certain things are-- movies, a glass screen and it shows pictures within the glass screen, and you can move things? ... I kind of would love to have that in front of me to do, where I'm able... to see through it because I want to see things change, but I would love to see maybe my command chart on the screen. I would love to see-- I would love to move things on the command chart... I would love to see my notifications that I get on the MDC on the side, so I can basically say, "Oh, okay, they're reporting that they have just a outlet fire. Okay, no big deal. But I don't know if that's possible.
Wish_List	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	Quite honestly, I would love to have headsets... So I guess I can't have full headset but maybe one headset that gets broadcasted based on when I talk so it'll be like voice command where I'm driving. And instead of having to pick up a radio, a mic, I would go, "Announce," and then I would say what I wanted to say-- something like that. I would love for that to happen.
Wish_List	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	It would be great to have location devices on firefighters' hats so that I can see, "I have two in the basement right now and there's supposed to be only two. Good. I have three on the second floor, and there's supposed to be five. Where are your other two people? Hey, there's a mayday in the basement." And, "Okay. It looks like I have this engine in the basement, and they must be calling the mayday." ...
Wish_List	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	... It'd be good to have just a regular house layout... Not so much a layout but basically, a two-dimensional view of the house, which is basic empty framing to show--
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	So technology-wise [laughter], yeah, the way that a lot of these CADs and the way they interact with tablets, their setup is they're not for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								actually relaying the information or reading the information. It just runs it like a running log, like you're looking at a phone bill, basically, whereas they should be set up more where it's more filtered information. It shouldn't just have all the generic information displaying. And that's across the board. That's [county], that's here, that's everywhere that it just-- the way the CAD vendors do it, it just dumps whatever information is in the CAD remarks all into one rather than actually having it more of a filtered stuff. I don't care what the contact log information is. It should be in the background. I just want the actual remarks... The ProQA comments and the remarks. I don't care which dispatcher touched it. I don't care which operator number they are. I don't care that you've combined four different incidents and the four different addresses repeat it all over again.
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	That is a good question. Just better reliability. I actually don't like the technology as much or using it as much. I think we rely on it too much. We, in this city, don't use map books. We never have used map books.
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	...So my technology wish list is let's slow our horses a little bit, and let's back up and... Instead of introducing all this extra new stuff let's, one, make sure what we have actually works better. And then, two, let's not rely on it so much...
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	I mean, it's great that everybody-- a safety thing that everybody has radios now, but now that's a problem because of the feedback and the emergency buttons going off. And too many people think because they have a radio they have to talk on it [laughter]... So my wish list is actually to step back a little bit. Because now as an officer, I'm expected to maintain a cell phone if I'm on apparatus, a radio, then I also have this tablet. It's almost just too much... Which is why they throw all the extra stuff at us because it's redundancy. Well, let's focus on making what we have work instead of adding new stuff that half-ass works.
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	[RE: managing database of radio aliases] ...So if we did a better job of that, I think it would be huge because that means I could sit in a buggy, on a fireground, be next to the chief because our chiefs have an aid. So I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								could be watching the radio, and because a lot of times you might, "Who was the last transmission?" Well, if you had caught the last ID that came across [you?], you'd know exactly who it was...
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	...the MDTs have the ability to take pictures. So let's say I go on a hazmat, and I want to take a picture of said white substance so I could pass it back out to the hazmat unit. I mean, in theory, the way the infograph program works, I should be able to take a picture and send it in a message. It would never send the-- it would never send the picture. I could send messages, but I could never send the picture... So I don't know if it's a capacity thing, or if it's blocked, or what the issue was. But I was like, this would be a great thing. I'm the first unit in on this hazmat call, and they want more information on it, and I just go Yeah, "Here you go." And, in theory, it's on our secure network and all that stuff, so...
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	[RE: sending pictures via MDT] ...it would be great-- let's say something happened. It would be great visual documentation after the fact.
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	...And then, what would be nice is to be able to have a mobile, portable mesh network where you might be able to bring out some cameras, tripod them around the incident and then say-- now that commander sitting in his buggy's got a 360 of the whole building just by you dropping these cameras out.
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	...maybe we could bring the drone up and do all that and give them an aerial view. Especially where the only people that are flying over the city is [City] Police or [City]PD. And even [City]PD is restricted on some of what they can fly over. So you're not getting much of that. And the only time we really ever see [City] Police's camera is during major events when they allow us access to the video. So it's not something that's immediately accessible on a day-to-day basis. Which, I mean, you have some of these big incidents. I think that would be awesome to be able to have an aerial view of your incident, you know?
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	I mean, I look at really any of the apps that these cell phone carriers are using right now, and it needs to be accessible on work devices. I think a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								lot of the issues, again, it's IT people. It's people building networks that everyone doesn't want anybody to have access to. So I can't have this app on it. I can't have that app on it. Bandwidth is probably a huge issue... But having that ability to pull that data in like that would be awesome. Right now, we have, again, a system set up where [it's so?] I have to go to a website, it links me in, then I got to put a password in... And it's not realistic on an emergency, you know?
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	-- so on the radio cache, you're worried about doling out assets. So the idea to have some sort of asset management tied into my device - so like a barcode reader, RFID reader, anything like that - so that I could then take-- if I have a case of 100 portable radios and I just need to dole them out as fast as possible, the easiest way for me to do that is to scan your ID and then read the chip in the radio. Right? So if it's an RFID, or we put a QRF code on it, or something like that, have that all within an app or device so that I can easily assign assets and track them.
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	[RE: equipment tracking app] Rather than waiting in a line that's going to take them 20 minutes to get through, we could just be, "Okay. ID. Boop. Here's your radio. Boop. See you later. When you come back, we'll scan it again." And plus, I imagine it would be tied to a filterable spreadsheet that when they say-- I know with us, a lot of times when we do inauguration and stuff like that, we're handing out radios to people that never touch radios.
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	[RE: equipment tracking app] "--Oh, that's me." So one the things we always do is we write the alias down, and we put it next to their cell phone number... So when I hear communications hounding somebody about a mic, I flip through it, find the alias, and be like, "Hey. You have [an open mic?]." ... "Turn the radio off. Do something," right? Where, again, if you had a filterable spreadsheet, you could be like, "Oh, it's so and so. All right. Take care of it." Yeah.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	...I would like to have-- so we use a lot of maps, obviously. And our dispatch program has a map. And then there's a separate icon and Internet site that has our hydrant apps and GIS. And then I have to go to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a third website to get the federal railroad map of the railroad system. And then I have a separate app for metro. And I'm like, "Maybe I watch too many movies. I want it all on one [laughter]." I want one giant thing with lots of different layers that I can turn off and on to get the data I need. That's my expectation as an end user and they're not there.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	...So, once again, I'm wondering where our robotics and aviation division is. We don't have one. I wish we had one because I think we definitely have a need for it. There are lots of incidents where having a drone fly by and take a look would be really helpful.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	[RE: OneNote] I'd love to be able to just push a button and pop up a new worksheet, without me having to save it and click it. So it's a little clunky there.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	...I feel like we desperately need that and from little stuff-- there's no policy on how a file name should look. So how many employees do we have? 1800 employees? We have 18 different versions of what a file name looks like, whereas we had a chief [inaudible]-- Chief [Name] was his name. He has this, "I want every file look like this." And so it was nice having structure, and order, and he knew what to do, and he understood what a firefighter wanted and be able-- he could work with tech guys and get them to where he had a good product out.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	So where's the gas? Where's shutoff? Where's the water shutoff? Who is the emergency contact? All that stuff like I had for tunnels should be on our tablet for-- and you see how the construction going on. Now is the time to get in there and get all that, and identify what type of construction each type of building is.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	...So we're on a subway issue and sometimes radios don't work underground. And [chief], calling me on my personal phone, Facetimed. He's like, "Hey look, we're going down here. Come on, come with me." He's like, playing. He thought it was so funny. He was like, "Here, watch the incident." He pointed it towards with this thing sparking. So I'm upstairs in my buggy, Facetime. I can see what's going on in the tunnel...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								So yeah, there's technology out there and a lot of us want to use it and adopt it. You'd think that-- yeah.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	...There was a fire when I first got here. I could not understand what that guy was saying. And I'm sitting here in a quiet room because he's got his gear on and everything was so muffled... And I know there's technology to put a microphone or something inside that mask so I can really hear you because hearing somebody is really important.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	I would love to send drones and robots to be able to get to places more quickly than somebody on foot can, whether it's fly down a trail and see where the injured person is or fly down the river and see if somebody's there or even enter a structure that is untenable. Sometimes we have to search-- sometimes even putting a dog in is a little-- I don't know if I want to put a dog in there. Send a robot. That's fine...
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	...And then even technology for even fighting fires, I think-- I've seen there's some development of hand grenades that put out fires to some level where they-- I don't know if it displaces the oxygen or it does but things like that.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	I want that [laughter] in my fire truck [laughter] with weather and all the other-- everything. As a technology geek, I want everything real time now on my tablet or on my firehouse there. Gosh, other technologies. Well, we use a lot. We use infrared technology on our HAZMAT team for product identification. So we are using a lot doing our job. But communicating-wise, I'd like to see-- well, not technologies, more policy and control of it because I don't think we're where we quite should be in terms of how that goes. Wow. Magic wand. Anything I want, huh? That's all I can think of for now.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	A lot of the incidents I deal with there's-- so it's the river. It's the highway and railroad. Nobody ever knows where they are. And actually, so on the incident where the guy was on the railroad tracks, I ended up calling back the calling party on my personal cell phone again [laughter], saying, "Where were you?"

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	So knowing where the-- so we spend half our time trying to figure out where the emergency is. So if we could use technology to better locate people, whether it's through cell phone pinging and-- I don't know if that's-- if I've watched too much TV. But we can translate cell phone GPS coordinates.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	I just want this stuff to work. [inaudible] the computer in the fire-- in the car. I can't access my Office 365 mail.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	...So I'd like to see more policy control from these people. Get coordinated effort
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	...Until you could manage the data, it's just data. It's not real useful information. I found it very frustrating up there to manage that. I was asking for a-- what did I ask for up there? It was a program out there for-- oh, gosh what was it? Risk management software, essentially. So the idea is that every vehicle can have a QR code. So I'm on an accident. I can scan the QR codes and so now I know that Engine 7 is involved in the accident. I have all Engine 7's data. I could scan your ID card. I'd know that it was you. I'd scan your ID and that technology's available right now, today. And yet, our accident investigation is a 12-page-- pages of paper, that I don't think it's ever been to any kind of-- we're just collecting paper. And unless we can analyze this data and find out trends and see-- maybe Tuesdays after 2:00 are bad for us. We don't know what the data is going to tell us until we analyze it. And we don't analyze it.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	[RE: risk management software] And so on the same program that I asked for - why can't I remember the name of it - You could take pictures from your phone. Here's the injured worker. Here's what happened. Doot, doot, doot. And you're done. As soon as you hit click, you're done. It's in the system, ready to go. You don't have to go back and fill out the paper and scan the paper and then email it to the next guy who has to open the email, print it, sign it, scan it, email it. Document management. Our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								document management is horrible. And once again, there's no vision to say, "Hey, we need to improve this." So if we could have better document management, that would help a lot. And like I said, better use. That program out there is out there right now. God I could [inaudible] my brain. I just can't think of the name of it. But it's out there. I talked to the salesman and went to a whole webinar. I'm like, "Oh my gosh. This is going to be incredible for my job." But I don't have it.
Wish_List	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	And even especially with [Company], there's a lot of times [Company] will send a crew down to investigate an incident in the station and it would be nice to pick up the radio and be like, "Hey, what's going on down there before we send our people down there?"
Wish_List	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	[RE: responding with Metro] ...ultimately anybody that's in that position is the subject matter expert. We're almost their guest at their incidents. So they're going to know more about it than we are. So to have the ability to say, "Hey, what's going on?" and have them actually give us an accurate report and say, "Yes, this is a big deal," or "No, it's not," yeah, would be extremely helpful.
Wish_List	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	. I think what we lack at pre-plan information here for building construction, occupancy of building, just information of which stairwell to use for evacuation where the standpipe connections are, where the hydrant is, that could all be easily loaded onto a tablet and should auto-populate as you're dispatched on a response. We have very minimal data.
Wish_List	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	So I think the concept of, maybe not the drone itself, but the ability for the incident commander or for the company officer to see all sides of whatever's going on. It could even be a medical emergency, just the environment that his or her people are going into or the conditions in the back of the building when you're in the front of the building, the ability to have some way to broadcast that on like a closed circuit television or something like that, I think would be huge. I think a designated-- especially in bigger incidents, a designated communications company that was just responsible for ensuring effective communications,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								ensuring the radios weren't honking out, so to speak, something like that would be extremely helpful. Sort of like a field communications unit.
Wish_List	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	I guess the best example I could give is, however many years ago when we had the earthquake here, everybody's talking on the radio, nobody can call anybody on their cell phones. So you're going to get to a point where everything is just jam logged. And to setup an independent cell phone tower or an independent closed circuit television to see what's going on you know that Chief [Name] or Chief [Name] can log into. Something like that so they can sit here in the office and be like, "Okay, we need to think about this, this, and this and forecast what our needs are going to be in the future," I think would be huge.
Wish_List	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...I realize is that they're a volunteer, right? This is a volunteer thing we're asking from them. With their job, they have all these. And their second job, they might have all these. So a volunteer might have 15, 20 different apps and some of them are duplicate. We have people who work up at [town] full-time. They use WhenToWork. We use WhenToWork. But certainly, in the app, you can't just change users. You have to totally log in differently... Really, they need to interoperate, or if you could have some sort of single sign-on where it covers all of them, that would at least take some of the burden off.
Wish_List	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: NG 9-1-1] ...There's all this stuff that changes based on the information we have, that if we can get better information right off or even look at it-- someone said, "Oh, yeah. There's a smoke report that we're calling in." We can capture that however, video or photo. And we can look at it and say, "Well, one, we recognize where it is, and I'm going to take a brush truck to get there because the pavement queen's not going to even get close."
Wish_List	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: radio] 50% bad, 50% good. But for firemen, it needs to be built by Fisher-Price. It's got to be bacteria resistant. It's got to be waterproof. You've got to be able to throw it in the dishwasher. It's got to go through high temps, got to go through low temp. It can't have thin wires. It's got to have big buttons because I'm wearing gloves. It's got to be built for a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								three-year old. This is not. Because this is how we use it. We use it in the water. We use it in the cold. We use it in the hot. We use it with calls.
Wish_List	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: radio] And it's got to be functional. I mean, it's great that we have mics, but mics don't work. It's got to integrate better with our masks. It's got to be clearer. There's nothing worse than talking through a mic when you're wearing an air mask [laughter].
Wish_List	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	it has to be affordable, and that's the challenge. Of course, they're loosely related. I mean, there are companies out there that sell all this stuff, but it's never achievable for us. We'll never be able to spend \$10,000 on a radio. We have a hard enough time spending-- right now, I mean, our radios are costing almost 4 grand for radio. And that's why we have older radios because we can't afford the new stuff. So, I mean, we're barely-- having a hard enough time buying cell phones. So it's one of the challenges, I would say...
Wish_List	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...It's careful what you wish for, right? I would love to have everything-- radio, everything into one thing. That's why we used to love our Nextels. When Nextel existed back in the day, the iDEN format, that was awesome because you had the cell phone. We could use them as radios. And then that technology kind of became unsupported and went away. But we really kind of miss that. But the challenge to us is then everything's in one thing. I lose the one piece of equipment, and now, I've got nothing. Or there's so much information coming into it that I can't sit there. It's just like when you're trying to type a text and things binging you, email here, calling here. It's like, "All I want to do is send a text. Knock it off." ...
Wish_List	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...I mean, right now, on an incident, I'm carrying usually two 800 radios, a VHF, and two cellphones when I'm running an incident. And that's ridiculous... So, I mean, I'm usually sitting in a vehicle. It's also too much information... When someone's talking, I can't process all that information. So to fix that problem, we're not carrying so many different-- just to be able to talk to different people through cell phones, consolidate it down, but then, somehow, have it manageable.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	But I think it comes down to the manufacturers of an SCBA to have an integrated radio with one channel in their mask, and they can talk out from their mask and not have to take in the radio that they took in the fire and have an extra thing hanging off to get caught up on, or that I have to keep dry or not get wet, or that I have to worry about where the mic is keying up against my chin because it's bouncing back and forth. I think it's the radio guys meeting up with the mask manufacturers and coming up with a one-channel radio that's on the mask, that's affordable, waterproof, built for a three-year-old.
Wish_List	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Well, the video stuff is always nice to be able to have, just that where-are-they kind of a tracking, keeping accountability. It's like all these things come with just privacy issues too, though. We're trying to figure out how to balance...
Wish_List	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	I would just love to see a manageable picture from RP [reporting party] to end user, a way to-- a picture's worth a thousand words. Let's get those pictures out there. And I know dispatchers might not want to see that or whatever...
Wish_List	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Well, we know right now in the fire world, cancer is becoming a real deal... And so whatever we can do to keeping people safe or detection of stuff, things that are bad for us, because we don't know until after the fact. Like asbestos, it's not till a week after or a month after when we've done what we can, and we've found out, oh yeah, the place was full of asbestos. Well, great. Well, we hope we followed best practices. But there's something real when you know, well, the danger's here right now. We can deal with that... So I think just some of that awareness or something to help us be safer.
Wish_List	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...Or just even new technology. We hate when the fire service is so stuck in tradition. We try to be a little bit more aggressive. I mean, you could go to different conferences around, and they're like, "Oh no. You just got to do a solid stream," and they don't embrace technology. We use CAFS. We use straight stream. We use [solid force?]. We use everything as a tool for the toolbox. And then, through education, you learn when to use

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that tool versus one thing fits all. But it'd be better if-- there's got to be a different way of fighting fires. I mean, yeah, there's home sprinklers and they do stuff, but I don't know...
Wish_List	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...If there's some of this stuff, why are we putting people in harm's way to put out a house that's probably getting knocked down anyway? I mean, you have all these houses down here. We've had a rash of fires lately, and we're actually getting comments from the insurance company. They actually wish we'd burn it down because it's cheaper for them to replace it than it is to mitigate it. We lost the third floor off of a house. You'd think we'd rebuild. Well, all of the stuff that they're having to do to mitigate what was left in the hall is more expensive than if it had just burned to the ground and replaced.
Wish_List	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	My only thing in 20 years and I'm hoping we're going to get there, is station alerting. So the way it works now is... they send out this sound high-low sound to alert people. Well, the problem with that is that it's the same sound at three in the morning as it is at three in the afternoon. So you are startled up. I mean heart palpitations, it sucks. And so what station alerting does-- there's probably four or five companies that are actually really good at it. Unfortunately, it's very expensive, as all of it is, but basically, it is a system that is embedded into the CAD at dispatch and then at each station then has equipment that receives the call. So instead of this high-low thing, it will provide kind of ramped tones, so it's soft, louder, louder, louder, louder. And with that is a ramped LED lighting that's red...
Wish_List	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: station alert system] ...So each bedroom, for instance, will, when there's a call, the sound will come over, the light will come out-- will also come up. The red light's important because it preserves your night vision so that you're not turning on the light and then going right back out into the dark. There's a lot of components. They add a lot of bells and whistles to entice people to buy it, but I just want us to get away from this high-low thing. In the '80s and '70s it was a bell, like a bell, a buzzer, so we've come a long way. But we're just stuck here because

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								with station alerting-- because it's an all or nothing thing. Everybody has to have it or nobody gets it. And so then you go out west to [County] and [City], where they don't have a lot of money so they can't really invest in it. [City] doesn't even have people in the station every night, so what use it for them? ...
Wish_List	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: station alert system] ...So anyway that's kind of my number-one thing is getting station alerting. Our chief is to the point where we may just foot the bill for, say, the dispatch end of it and then figure out a system to-- because if we put in the dispatch part of it, everybody's going to be enjoying the fruits of it, if you will...
Wish_List	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...I think as our technology opportunities change, if we get to a point where our CADs are talking to each other, we could look at some-- we have some areas where dual responses, coordinated responses would work out really well for us. But it takes some time for us to have the comm center, notify a comm center, and then they process it. A call gets shipped out, and there seems to be some delay. Whether it's a training issue or a technology issue, not super sure yet because we haven't pushed that far into saying, "Yes, we're going to run dual responses together." But I think there's some opportunities in the future as money gets tighter, and that you just can't build fire houses wherever you want anymore. You have to figure out how can we work together to cover areas on the fringes of your protection area. So I think there's some opportunities in the future. It's just, okay, how do we work through that?
Wish_List	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: dispatch] ...We used to have free standing fire dispatchers years ago, and they were really good at free-think. I mean they'd be like, "Have you thought about this? What about this? Do you want this resource? Should I be calling this?" That's just not the way our comm center works right now. They're super busy. They crank out a ton of calls and try to process a lot of information for us. And with priority dispatch, I think it's really increased that. I mean, the demand on them is tremendous, I think. Just trying to keep a full workforce for them, I think, is a battle, let alone teaching them how to be advanced in free thinking for the fire

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								department. I just don't think they have that opportunity right now.
Wish_List	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...I'm excited about some of the technologies coming forward where we'll be able to track our people. I know Scott's starting to come out or some of the companies start to come up where I could literally watch a screen on my vehicle and track my people based on their movement. We don't have any of those technologies, but those are the ones I'm most excited about, is how can I keep track of my people. And then if they get in trouble, know where to send the resources versus now I've got to go in and blindly look for them. I look forward to that and the communication improvements with the Bluetooth, if they get it all figured out...
Wish_List	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...Hopefully, with our mask, because talking on the digital radios, we've-- when we switched radios, we went all digital. We still had a lot of analog channels. Our organization embraced and loved analog channels because the communication was so clear and we have struggled to make that transition to digital because you get those digitized or scrambled communication. We just weren't used to those and we're finally understanding it. But some of the in-mask communication stuff we're excited about. We hope that that plays out so you're not holding your radio up to your mask and then having it move through an amplifier and through your microphone...
Wish_List	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...We're going to new microphones that have five port-- five, I guess, speakers because we're having issues with people. We don't like to wear our radio belts. So we all talk like this. While the microphones are on the front, and we all talk at the top of our radio. And now the new ones have a microphone on the top so they have five microphones. Back, front, top. Hopefully, that'll improve some of our communications too, as we switch to those. Because you're supposed to take them and turn them and talk at them. And we don't because we're all wearing these. We all talk into the top of our-- in analog it, would pick up fine. In digital it does not.
Wish_List	FF	S	Supervising Field	46-55	21-30	Male	FF-S-017	Me, personally. I would love, at some point, whether the technology exists or not, the bigger issue will be funding and working with IT. I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					would love to have a tablet that I could get my calls on, that I could do my maps on, that I could do my pre-plans on, that I could have my inspection ship too. Because we still get stacks of dot-matrix-printed paper inspections. That I could do my EMS reports on. So I've got a mobile data computer mounted in the rig that I push en route and do all that. I've got a smaller one in the back, we take in for calls and enter information, and use it to transfer over via Bluetooth to the ambulance company. But I'd love to have one thing that I could just carry-- that I could put my rig and put it in a docking station, use it to go en route. Get my maps and do my inspections, do my reports, do my pre-plans, do all that stuff. And I would love to see that one day, and when you came into the station, everything just downloaded into the system and you were good.
Wish_List	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	I would love to see that. I would love to have that where everything was just on one thing. The officer could carry it around. He could use it. A caller comes in, you could go to the rig and just put it in the dock. But we're all fighting for the same dollars. And IT is doing the best they can to try to keep up with everybody's needs right now.
Wish_List	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	I'm excited about the future. I don't know how we change some radio stuff. But I'm excited about the opportunity, I think, tablet-wise to improve the way we do business. So I think there are some cool opportunities. And some of the heads up-- whether it's heads up display or communications that the improvements we'll see in our face pieces, our masks and could be pretty huge for us. Especially if we can integrate it into the helmet and everything else, if we can figure that all out, it'd be awesome.
Wish_List	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: HUDs] I think [Name] starting to move that way. They've got that plug-on or that add-on thermal imager. So they've got that now. And they're going with some of the Bluetooth comms. And at some point, I'm hoping that you'll put out a mask where I can-- maybe I can track my people on a little map. Or I can flip through a little side screen where I, as the officer, I can get a thermal image. Or I can track my people. Or I can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								get some kind of heads up information that the IC could send from something inside. If we can't communicate well that way, can I get stuff that would come up on a small heads-up display? I don't know. Maybe by the time that comes they won't let us go into fires anymore so.
Wish_List	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	...We've gone through different programs in every different aspect of it through the years, some good, some bad. But I think they're always trying to find the best one which it's hard because if there was one program that did everything, I think that would be the best. But they all don't talk to each other, so.
Wish_List	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	The only thing is over the last-- since Target Solution's been introduced, there's two separate places where you can do trainings and training reports which is a little cumbersome sometimes because just going back and forth, it would be nice if it was just, "Here's where you do it."
Wish_List	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Or if you log in once and you log into one program and you can do your daily-- pass off your reports, you sign up for overtime, it'd be nice. But I don't know if that exists in the world. It'd be nice if some company just came out and said, "Here's everything you possibly need to run your fire department. And it all talks with each other.
Wish_List	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: SCBA comms] ... I don't know, seems like the technology needs to catch up with-- I mean, people that have those things in their ears all day long for their cell phones. But we can't get it to work for our radios.
Wish_List	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	...in the truck, we have headsets on, and we can talk to each other without yelling if it's loud. And we're responding emergent to a call and with the siren and truck noises, and so we can talk to each other just fine, and it doesn't transmit over the air. And I always thought it would be neat if we were inside of a building, we could talk to each other. And then you could click a button and you're transmitting. I always thought that would be neat versus yelling at each and "What?"
Wish_List	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	I know other departments are playing with the whole drone thing, especially wildfires, that gives a different perspective, and you can kind of see with that...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	...I know different manufacturers have the thermal imager. Either on your personal ones that you can see as you're going.
Wish_List	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	...being able to talk to each other more clearly in a fire. And then being able to talk to command more clearly to where the same transmission doesn't have to go over two or three times because nobody can hear you.
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: Inspections] ...We've looked at a couple different ideas of going to a digital system. But without building it ourselves, nothing really exists that does what we need because the physical check are just a database of saying yes, it's there, or it's not there. It's pretty simple to build. And we've actually kind of, here, worked on a real simple process of doing that. But what really needs to be done is to have a log of, it's there, but then a log of how it's working. So is it working? Then, if you did a repair to actually notate or maintain record of the repair. There really isn't a system that's there. And then, the other thing would be is if it's not broken, but there's still something that's whether it's not quite right or not operating right. Kind of like, even in the airline industry, they have something that they call a squawk sheet. So where you would actually put just there's-- maybe it's squeaking, or it looks like a bearing's going out, or a bushing or something. To be able to notate it, but then have that annotation carry through from today to next week to next month. And then that way, at least you knew that there was an area of concern that you could keep an eye on...
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...So it'd be nice to have a program that you can say, "Hey, [app?], let me see all of his certs. And one they're his certs, too. What are his credentials? And how long has he been on? Any injuries? Any exposures? How did he do on his physicals?" So then you can say, "All right. From this guy in [City] compared to this guy in [City], how do they match up?" Same firefighter, but a little bit different elevation.
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...there's not just one program that communicates with everything. It'd be tough. I mean, I think it can be done, but there's a lot of aspects.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...at a firehouse you can move, and you can go to different places. And so when everything lived in Gmail, it lived in the cloud, which was really nice because you could go to the firehouse, and you've got access anywhere...
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	I think that radio's, in my opinion, probably one of our biggest weaknesses and my biggest fear. Absolutely. Because you'll find three guys in a room, and every guy, he'll say the same speech. Every one of them you can hear or not hear, just based on where they put the radio and how they put the radio.
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	... We also tried to do a Bluetooth system in the cab of the truck. So as the engineer, my position, we tried to buy one so the engineer could jump out and still have his headset on. And he could listen to the radio and then be able to operate the truck, not be exposed to the noise of the truck and all of that. And same thing. So you'd have to pair it, and then the battery died. We ended up with a David Clark that's MIL-SPEC that works really, really well for the military. Because they get in in the morning, the HUMvee, or whatever it is, put in a new battery, pair it up, and they can go about their day. But it wasn't built for the fire service. So it's not built for the truck that gets backed in, gets turned off. Then, you get a call, start the truck up, it still needs to be paired or connected.
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: Bluetooth mic system] Yeah. And so we've only ordered one truck like that. It is something that I think is a neat concept, but if they could tailor it more towards the fire service or just be more upfront that--
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: Exposure Tracker] ...It would be nice if everything talked together and you could actually open up the program and say, "Oh, look. You've ran 10 fires this year, and you've ran 50 car accidents." And even if you had to download the data yourself every year...
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...it's finally getting to a point where we can have all of the needed information in one place. As first responders, to have access to the water maps, sewer maps, gas shutoffs, all those kind of critical infrastructure, would be ideal. We're not quite there yet. But one day we'll

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								get there. Having access to the information that's on the web and out there in books in digital format so you can carry all of it on your phone and not in your pocket. It's getting there. But we've found a tremendous amount of work-arounds to make that happen. At some point, we'll get past all the work-arounds...
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	It's in one resource that you can go to, [access?] it, depending on the page you want. You'd have your weather on there. You'd have your chemicals. Not only that chemical at that site, but maybe next door has a thousand pounds of ammonia, right? Just because we're fighting this fire; we're safe here, but what happens if it gets next door?
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...It would be very nice if there was one encompassing piece of software that tracked. That worked with the CAD. That tracked our calls. That tracked our exposures. That worked with our scheduling software so that it would know if you're on or off the apparatus and then track your exposure. For inventory in the fire department, it would be really nice to have a piece of software that would track it from purchase to death. And then you could also use it to track if it is working, not working. And then the maintenance and all of that kind of stuff. And then you could also do a cost analysis, so you knew when you were putting in so many hours or-- so many hours of maintenance, or so many pieces and parts, that it's probably to the point of getting rid of it...
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...And all of these technologies we have, but we don't have in one place. We don't have one that talks. Because we have Dude Solutions; that's when we buy stuff. We have Wasp; that's when we track stuff. And so we have all of these things, and it would be really nice if they worked together...
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...The communication side, I think we're getting to the point that we can talk to anybody, but we just can't talk to anybody in the environments that we talk. We can talk to anybody sitting in the truck on a nice calm day in the middle of the road. But when you're in a structure fire, it would be really nice to have a great radio system where we can talk just like we're talking...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...The other thing I think that would be really nice is to have talking from me to him...So if you could have a Bluetooth, or a VOX system, or something where I could just talk to Chris, and then we could push the button and you would talk on the radio. That way we could communicate in a lot better environment. And even if you did get separated by a few feet, you could still know that you're there. And you don't have to have that hand on the back of his leg, or hand on the back of his boot type of contact.
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: radio communication] Well, there's too many people talking that are 20 feet apart. And they're talking because they're 20 feet apart because of the noise on the fire ground. Because in a hazmat suit, you're wrapped in a giant Ziploc bag [laughter]. So you're trying to talk to each other, and you're 5, 10 feet apart. Which, the technology also exists to communicate 5, 10 feet apart, but it's not integrated together...
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...we have one thermal imaging camera. We send one in with every group of firemen that go in. So they have that technology there. But the people in the front that are on the nozzles that are doing the job-- to be able to talk to them and to tell them, "Hey, I see this," or, "I see that," because you're focused on your one job. I think that would bring more value than everybody having \$50,000 worth of stuff attached to them... When maybe not everybody needs that. Everybody needs to be in contact and to be able to communicate everything that's happening. Because I think now, everybody wants to have a TIC because they can't see it. But if you were just being told in a regular voice where, "I didn't have to push a button. I didn't have to do this. I didn't have to do that," you wouldn't feel the need to have to have everybody have a TIC to be able to see...
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	There's a huge cost issue. And so I think that a lot of things can be done on a lesser scale. You can give one guy the \$10,000 TIC, but then give him \$50 worth of communication that he can now more freely speak and be able to communicate to get out what he needs to do that doesn't take over precious radio time. Because we're getting dispatch. We're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								getting command. We're getting all of these things that-- it's turning into a lot right now. And I think we're just trying to figure it out.
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...ZOLL put out a monitor that has the ability to send an EKG strip, but you have to make sure that the facility has the way to receive it and see it. And then they're still doing calls on the phone. So every time they take somebody to the hospital, they're calling the hospital and saying, "Hey, this is what we have. This is what we're bringing you." And so that used to happen over the radio. Now it's a lot clearer signal because we're using phones. But it will be neat if you could attach all of that, and then somehow send it. And they can just say, "Okay, received. And go to room five when you get here."...
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...That's probably the biggest common thing, if the CAD goes down. Then they're running off of their old run cards, which are 3x5 flip cards in a big book. And everything goes really, really bad. And so I don't know how, other than just redundant systems, how you could fix that. But we've become very dependent on it...
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...I think, eventually, you're going to have where that drone is going to be in front of the chief, and he has a better of a view. And then he can say, "Yeah. We don't need all these apparatuses, based on what I see."
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...Personally, if I could do anything, I would like to see us move to a more dedicated TAC channel type of environment. I think if you could have a perfect world, it would be neat if I could dispatch, and push a button, and make all the radios on that truck go to that TAC channel.
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	That would be really cool. If I could say, "Okay. Rescue 54 in these four portables are assigned to that truck," and I know that I'm toning them out to [Street] If I could make that truck and all those radios go to TAC four, and I don't have to worry about them changing their radio channels-- which is why our admin doesn't like it...
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...if I could push the button and say, "Change these five radios to TAC four," and then they're on TAC four, you wouldn't have to worry about it. Or if you could do that for a big group. Because when we do have a fire,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we do utilize a TAC channel because there is a lot of traffic that we don't want to interfere with daily traffic...
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We try to do a silent dispatch here. And, again, it was more admin and technology than just-- admin didn't agree with it and the technology wasn't quite there. That was about five years ago. We haven't brought the idea back up. I think, personally, it's a great idea if you could prove it to happen-- prove it to work 99% effective.
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So you can get in the truck, push the responding button, get the call on the MDT, know all the information. Because to have that back and forth that's already on the screen that's right in front of you, but to just hear it from a person-- I don't understand why, if the technology could work.
Wish_List	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	But that's one of the things, I think, that would be neat if it worked. It would be neat if all of that technology could work together.
Wish_List	FF	S	Manager	46-55	21-30	Male	FF-S-023	So now I still have two separate systems out in the cloud that I have to figure out how I pull that information to a place where I can analyze it. They keep saying, "Well, we've got great analytics," which is true, but it's not going to give me a holistic picture in the long run.
Wish_List	FF	S	Manager	46-55	21-30	Male	FF-S-023	Correct. Correct. And not only that, but I think when we really start looking at data as we go, we can start looking at things like, well, how many miles does engine one put on versus on-calls, and what is that costing us maintenance-wise? How can we project out what that maintenance cost is going to be over the years? So I have to bring on my finance data, my fleet data, and my fuel data, and it all has to somehow coalesce into something that we can look at.
Wish_List	FF	S	Manager	46-55	21-30	Male	FF-S-023	And the same thing with even facilities. How often does that garage door go up and down and is that counting as far as our financial commitments for the next thing? So we have to really project out into the future where we're going. And again, that first year's good, then that cone gets really wide, but if I can budget out that one year-- there's nothing worse an apparatus getting a call, getting to that garage door, hitting it, it's dead. So if I know that I'm that only going to get 50 garage

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								door up-and-downs, I'm of course making it up--but if I know that I can put a thing where it says, "Boom, we're getting close on this one, we need to get somebody out to look at it," preventative maintenance, zero failure. That would be the goal...
Wish_List	FF	S	Manager	46-55	21-30	Male	FF-S-023	...So there's all of this data: so I have a finance system, I have a fleet system, I have a facility system. For our community, risk reduction, they have their own system. It does permits and inspections. So all of their commercial information is in a separate system. Then we've got - well, let's see what else we have - our human resource and our training systems, payroll systems. So all of these systems and none of them actually talk. So we have to figure out a way to... create our own data lake to kind of get to it and actually work through it. So that is a huge undertaking, and it's a big problem.
Wish_List	FF	S	Manager	46-55	21-30	Male	FF-S-023	...They try to work out all of the technical pieces, like how many banks do we have, how many frequencies, or how many talk groups do we have on any bank, and all that stuff. Then we have operations chiefs that meet and talk about what they want to accomplish: they want to be able to have several different EMS groups, they want to have several different fire groups, regionally PD wants their groups, too. They don't always mesh as far as boundaries go...
Wish_List	FF	S	Manager	46-55	21-30	Male	FF-S-023	...All of our repeaters work this one system. If I move away from this system and these repeaters here, I can go to a different bank. I can go to a different system, but I have to physically change my radio to go to that different system to pick up those repeaters. So our firefighters don't often remember that or know which system they're in, so as they're going on a mutual aid, especially our hazmat team goes out a lot and they'll go way east. As they get out there, all of a sudden they can't talk. Well, that's because there's not enough power to get to our system. If they would change their system, they could still talk and it would be fine. So a lot of training with that and a lot of our firefighters are firefighters and problem solvers and they do this stuff. They don't necessarily want to know, "That I've got to do all this changing on my radio and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								programming and stuff," so would be kind of cool if it would automatically switch, but... As soon as you get to a system that has a higher amplification it would just swap over.
Wish_List	FF	S	Manager	46-55	21-30	Male	FF-S-023	...there was one when we actually got on scene and there was a gun in play and we didn't know that... It turned out it was a non-issue but as we're walking in the door-- to get that information it just changes your entire environment. So, anyway.
Wish_List	FF	S	Manager	46-55	21-30	Male	FF-S-023	...It would be great to know what the building looks like, or what the streets look like, at the time of the incident. If we had access to cameras on the apparatus, or even our dispatch center, they could say, "Hey, look. What I'm seeing from this location is no smoke or I see a fully-involved structure,"...
Wish_List	FF	S	Manager	46-55	21-30	Male	FF-S-023	...So if you could get into the truck and have information there readily available, like a picture of the building, and a residential buildings. Now, a lot of our commercial buildings we'll get pictures, but they're historical pictures or pre-[crosstalk] pictures. If I could get accurate on-scene information in front of me before I leave, can change my entire way of thinking. And if I can shift that thinking process earlier to, "Oh. Well, this is a fire, so I'm going to think of X, Y, and Z," versus, "I don't see anything, but I need to look at X, Y, and Z. But I'm going to focus on A." So I think that would help those responders a lot.
Wish_List	FF	S	Manager	46-55	21-30	Male	FF-S-023	Police, same thing. If they could see where they were headed, if they could see, maybe, somebody running southbound, they could start their search from the south and come north. That kind of thing. So a visual, I know we have cameras on a lot of places. If we could get access to them, that would be awesome. And get that information out pretty quick.
Wish_List	FF	S	Manager	46-55	21-30	Male	FF-S-023	Okay. So here's another set of data that would be awesome. I've taken Uber and Lyft recently, and there's an application out there that will tell them where accidents are, and which roads to avoid. If that's out there, shouldn't we get that? Shouldn't we get that information back to the fire trucks and say, "Hey, look, this road's closed, we know this," instead of us

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								having to it get into the system and type it in, because if we don't know, we don't know. But there's so many cars out there reporting so much information to so many people, road conditions are, I think, known now. It's just we can't get that to the responders. If we can get that road information up there I think that would make their responses more-- I don't think it would make it much faster, but it would probably make it safer.
Wish_List	FF	S	Manager	46-55	21-30	Male	FF-S-023	...if I could get traffic information as I'm coming up to the intersection, nobody stopping, we got a lot of people going quickly, warnings beep you got somebody coming maybe help slow them down. Or I've got two apparatus coming together, slow it down, that kind of stuff. So that kind of real-time information, I think that's the key, real-time information that's usable.
Wish_List	FF	S	Manager	46-55	21-30	Male	FF-S-023	...There is technology that's coming, that's going to make us safer. Robots, drones, that kind of stuff actually doing some of the hazardous work. So there's that kind of technology that's coming. And it makes sense, you've got building on fire, it's just like a bomb. We sent robots to go defuse bombs, why not send a robot into a burning building? If it's not something we have to actively go search for somebody. That way if it collapses, what do we lose?... A million dollar robot, who cares? It doesn't have a family, so there you go. So robots, use of the UAVs to give us situational awareness. I think that could come fairly quickly. There's a way you can pull up, you can say, "Give me a one-block radius or a one-house radius, and the thing can just--" at least the insync commander could have a picture.
Wish_List	FF	S	Manager	46-55	21-30	Male	FF-S-023	...From the data side, my wish would be, that what people do gets documented real time, and I think that's not an impossibility. Whether they say it on the radio, whether they push a button, whether they, as it comes out of the pouch, the medication comes out of the pouch, or as we squeeze the syringe, it gets documented. So I would take a lot of small technology, like a lot of communication, and little sensors and stuff. A lot of the things that they say on the radio, and I've already said

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								this, say on the radio if we could capture that and make that the data point, I think we'd be much more accurate in what we're doing. We need a lot more data points in our analysis.
Wish_List	FF	S	Manager	46-55	21-30	Male	FF-S-023	...So if we send all this stuff, which we're trying to meet standards, what does that mean? How does that affect that incident? So there's the after-action incident or even the before-action incident, what does it look like when they get there? If I could capture that, and what does it look like when they're done? If I could capture that. What did we accomplish? And if I change my responses do I change that outcome? If I add people or subtract people, or put robots in, or whatever, am I making a difference? Right now, we don't know and there is no way to know. We don't have insurance information. There's no coordinated information that says a building of this size and this region is worth this much so here's what you saved. So there's no talking. That information's out there but there's no talking. There's no metadata that we can look at. So data, if we could get it immediate, right away, chart it right when they're actually physically doing the work that would be awesome and get more metadata so we can figure outcomes out.
Wish_List	FF	S	Manager	46-55	21-30	Male	FF-S-023	...And then there's the personal technology, some more physical stuff. I think the radios need to be hardier so that if they are exposed to chemicals, or if they are exposed to fire, if they are exposed to these things they keep working. Radios have become the lifeline of this industry--that is how they get help, need help, whatever, that's where they live.
Wish_List	FF	S	Manager	46-55	21-30	Male	FF-S-023	...So radio information in headsets, in the masks, mic and when they are on air, if there's some kind of an integration of the mask radio. It's hard enough to talk through the mask anyway even though there's these speaker holes and stuff. And we practice, and we try to figure out where the best place is to talk. If it was integrated into their systems somehow. Integrated things like thermal imaging. Integrate things like radar or some kind of a situational awareness picture thing so that the people inside could actually know what they are looking at when they are in a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								hazardous environment...
Wish_List	FF	S	Manager	46-55	21-30	Male	FF-S-023	So one more piece of technology is, how do we prevent all this? How do we get people to start sprinklers and all that stuff, but that's different. That's probably not radio technology stuff but that technology-- there are so many ways we can prevent all these incidents from happening anyway. How do we get industry to change how they build stuff so that that they're not building pretty much just liquid flammable stuff? Which is what they've built in the last several years...
Wish_List	FF	S	Manager	46-55	21-30	Male	FF-S-023	...Technological-wise, I think if the interfaces were more direct and less traditional. So we do a lot of interfaces on a keyboard. My problem-solving firefighters unpack when they type and their typing is subject to how they, I don't know, how they can type, how they can write. If they could somehow interact better with that putting stuff in. Just grab a statement and put into their system or however that works?
Wish_List	FF	S	Manager	46-55	21-30	Male	FF-S-023	...actually, going back to that documenting medications, if there were some kind of a device on the, "Okay, I'm giving this, I'm doing this," and it's just counting down and then I could take that information and throw it into the report...
Wish_List	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...if there was a way to say, "Hey, you're responding to [Street]." And something were to come up that actually shows you [Street], it definitely would be advantageous to say, "Okay. Wow. This is this type of building of this type of construction, it's this time of day which means I have this kind of a hazard. If it's this time of day, it's a totally different hazard." But being able to visually see that would be good...
Wish_List	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Well, definitely being able to see-- I mean, you know who else is coming, which is kind of good. So, other resources that are also going to be there...
Wish_List	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...I think kind of knowing maybe what fire systems are inside of a particular structure. By code, buildings are all supposed to have certain fire protection systems and usually, you could look at it and say, "Okay. This building is built around this time." So if there were a way to tie in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								some of that information that the fire prevention division gets to a real time, "Hey, you're going to this building and here is--" ...
Wish_List	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...In addition, too, somewhat similar, would be we have hundreds upon hundreds of buildings that have hazardous materials inside of them. And the fire prevention division is required to collect that data from those private businesses and companies as they report through what's called a hazardous material inventory report. To take that data and be able to plug into, kind of like I was discussing before, into that building. So when I'm responding to [Street], I know that in the notes it'll say-- like I was talking about, in the notes it may say, "Hey, this is a-- there's a person here with a gun and they've gone to jail five times for assaulting police officers," it would be nice from a building perspective to have something in there that said, "Here's all the hazards associated with this building," kind of like the gun scenario but maybe a little bit different where you can actually look and say, "Wow, this building has all these--"
Wish_List	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So, usually one of the bigger challenges-- I mean, and this is-- it's not an iPad-y app thing, it's our radios. And so what we found is that they're-- I don't want to say they're cumbersome. They're difficult to use in the sense that I think they could be-- radios could be made more simple to use. Really difficult to use with big, blocky gloves...
Wish_List	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...And so this little mic, maybe. Just that piece right there has been an issue that we've had recently that we've been looking at. So trying to figure out something that would be more-- I wish there were a way to somewhat similar to our AUGA masks with diving under the water where I can be under the water blowing bubbles and I can hear my tender perfectly and he or she can hear me perfectly, yet in a structure fire, [inaudible], and the incident communicator's like, "Engine whoever that was, could you say your last transmission?" They're having a hard time because they've got their face piece on. The hoses are loud. The saws are loud. And the microphone is out here. My lapel mic is way out here or down here or somewhere out here. It would be nice to have it integrated somewhere near my ears. And I don't know if that ends up

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								being something wireless. It seems like they could have something that would be more wireless that you could or when I was in the military, we used to use little, like a little throat thing. So you just put it on right here and then my transmissions are completely clear and an earbud piece that goes in your ear and now I can hear really well instead of this exposed to the environment and not close to my speaking thing and my hearing thing. So I don't know. For me that's, especially at the task level, when the firefighters are trying to actually communicate critical functions during critical times to an incident commander or to somebody else that's a supervisor of a task. "Hey, I'm trying to get this done," or whatever. We seem to be missing that piece.
Wish_List	FF	U	Manager	46-55	11-20	Male	FF-U-021	[RE: TICs] ...there is a lot of technology that's up and coming where they're built in rather than a camera you're physically having to hold where they have it built into the mask now... that's kind of out of my realm, it's out of my division but it's something that we're paying attention to. I know we've met with [Name] and a few other manufacturers, they're very costly, but the benefits of them would be huge because right now only there's one assigned per unit... And generally it's on a truck, engines don't have them. And we have them in chiefs' cars but it's one of those things where it's better to have and not need in my opinion than to not have and need it. And they are costly but the benefits of having it integrated into your mask rather than having a hand that's taken away from you that can be utilized for other things... So to me that's a technology that's up and coming that I would love to see us be part of...
Wish_List	FF	U	Manager	46-55	11-20	Male	FF-U-021	...There's also a lot of stuff on-- my passion's auto-extrication and there's a lot of stuff out there that are in the form of applications but there's nothing that we're utilizing right now. So to give you an example, the way technology is changing with car stuff either being hybrid or fully electric, there's a lot of dos and don'ts and it's good to know where those components are shutting off the vehicles, the high voltage versus medium voltage versus low voltage. There's schematics that are

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								available in these apps where you can pull up any type of car and automatically know where the high voltage is running, where you can cut it, where you shouldn't, where fuel lines are, things of that nature. So does the car have one battery? Does it have two? ... A lot of things that are important, and airbags. So that's technology that's there. But again, it's on an app and that's costly, but that's something I would like to see us go to eventually where you should be able to pull up on a scene and either on your computer in the rig or an iPad automatically puts in the first ten of the VIN number, it'll pop up that car. And you'll know right there that you have in your hand where it's safe to cut, where it's safe to stabilize, how many batteries there are, if it's electric, if it's partial hybrid, if it's even hydrogen. There are a lot of different vehicles that are out there. That'd be beneficial for us.
Wish_List	FF	U	Manager	46-55	11-20	Male	FF-U-021	Again, I mean, I think the built-in, the thermal imagers in the face pieces. I mean, to me I'd love to have one for every person. I think that would be huge...
Wish_List	FF	U	Manager	46-55	11-20	Male	FF-U-021	...As far as, I think, some type of a portable, something similar to an iPad but more of a-- that's obviously a little more durable because we're really good at breaking things. But that way we can utilize, automatically you get on scene, you can pull an address and automatically have a Google map of this is the roof, we have skylights here. This is what the Charlie side or the back of the building looks like. These are where the utility shutoffs are. I mean, I know it's out there, so you should-- I mean I'd love to have technology going to a call where you can pull it up on your computer and look at a map, look at aerial views and have a general idea of the makeup...
Wish_List	FF	U	Manager	46-55	11-20	Male	FF-U-021	...Same thing with high rises. I mean, I know they have it out there, here's the skeleton and here's where the elevator shafts are. Here's where the shutoffs are. Here's where your fire department connections are because a lot of times they're not where you think they are. An address could be-- should be on the front side of the street and sometimes it's not. I mean, the same thing, you have one-way streets downtown. You're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								trying to find the fire department connections, sometimes you're driving in circles. So things of that nature.
Wish_List	FF	U	Manager	46-55	11-20	Male	FF-U-021	Same thing like we spoke to with automobiles. I mean, just have that technology where you can pull up automatically, and either put in the type of car or like I said, real quick if you can get to it, a VIN or something to where it pulls up the schematics of the car. So that would be a nice safety feature...
Wish_List	FF	U	Manager	46-55	11-20	Male	FF-U-021	...I know, as well, there are tracking devices. So every headpiece can have a different- and they have these, so as an incident commander I can look at my pad and know, "Okay, I've got three people on the first floor. I've got four people on floor two. I've got seven on floor three. This firefighter hasn't moved in over a minute. I can communicate with him verbally, "What's going on up there? Is there something I need to know about?" ...
Wish_List	FF	U	Manager	46-55	11-20	Male	FF-U-021	...And also, there could be something where heat signatures or something where I can tell just by something they're wearing what the temperatures are. Is that something we need to be concerned about? Do we need to perform some type of ventilation?
Wish_List	FF	U	Manager	46-55	11-20	Male	FF-U-021	...Construction types, so knowing certain types of construction, obviously there's a lot of lightweight stuff now that's very dangerous, buildings go up quick and they come down quick. So it would be helpful to have stuff like that. A little bit more fingertip knowledge right there.
Wish_List	FF	U	Manager	46-55	11-20	Male	FF-U-021	Warehouses, same thing. I mean it's a highrise on its side. You get in there pretty far, things go bad. Where are the water supplies? Where are roll-up doors? Same thing with hazmat with chemicals. I know we have the capability, but it takes a long time. You put the chemical in or you put the number in, it will show up on the computer what element it is or what's good, what's bad. Does it interact? Does it react with things? ... you have to take the time and you're logging it in. Yeah, but it would be nice just to have something right- and again, fingertip technology, we could just type in a quick number, off the side of the real car

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								instantaneously. But there's connections. WiFi, there's things of that nature.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...I think where we may run into some issues are the durability of technology because we're not very delicate with things, so everything that we use that is going to be-- whether it's a tool or a communication device, has to be durable, for sure...
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...And something that they're also looking at is, which they should have done years ago, are more of a GPS-type direction of travel, which is huge. City's big. And if you are moving around from one area to another, say, I was a relieving officer, so I would go this firehouse and to that firehouse and then that district. So there was a lot of areas where I wasn't real familiar with, so even going from point A to point B, I couldn't tell you. So it would be nice to have that immediate, boom, hit a button. It shows you the travel route, just like the GPS that we use to go anywhere else, should pop up immediately and give you the quickest route and the more-- so those kinds of things are coming, hopefully.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: GPS capabilities] Q: So is that, perhaps, a technology that could be useful in those situations? SME: I think it will-- I think it will be when they go to the iPad... Yeah, to the tablet. I think that's where we may see that.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...A lot of things that hit the fire ground or the fire service in general, especially with this new technology, we're worried about losing it. We're worried about it breaking. And then, at the same time, now you have to train firemen that are 25, 30 years on the job who-- they didn't grow up with technology, so now they've got to learn something. So those aren't easy tasks, especially if the technology they are using is a little more high tech than they're used to. A lot of different steps. A lot of different pushing this and pushing that. A lot of different frames that they have to go through to get where they want to go. The less is better. So in the more simple form and format is better because anything that requires less steps are going to be better for us. But I think the tablets may have its benefits as long as they're durable. That's big. That's big...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...if I have a radio that's expensive and something happens, I lose the radio or it gets stolen, the officer gets time. So it comes out of his pocket or he gets time with suspension. So that's a big concern, is that, say I'm an officer in engine, we get these new tablets that are easy to break. I'm not going to be happy about it because then now, that's something else I got to worry about. And when you're slinging tools around and your big concern is getting off this rig, putting your stuff on, and getting in there, you're less worried about delicate things. We're not delicate. We're just not delicate people. So when you put something on there that is a level of technology that is where we are today but is not durable, that's a concern for us as firemen.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	Yeah. I think I would say, in terms of-- now it's getting better with them letting us know that these are dangerous buildings. So that's kind of changed where if it comes in through dispatch that there's a fire in this building and an address, now our main office has addresses that are built into the computer saying that these are dangerous buildings, or abandoned buildings, and those kind of things - Those are good to know - or what may some of the contents in the building be. That's good to know. I think for me, as far as my experiences go, is it's good to know that. But at the same time, what's imperative for us to know are, is it unoccupied or an occupied? Are there occupants in the building?...
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	When we're responding to calls. I think two things. For me, I think it would be awesome to have real-time video of locations and whether it would be something with a satellite kind of thing or whatnot. And that's been talked about before where every street has cameras. And you're going to this address, and you hit this button or maybe the main can tell you, but you hit this address and it pops up, a camera pops up and gives you a good, real-time, visual shot of that street. And you could look for, "Is there smoke blowing across the street, or is there--?" So that would be awesome...
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: responding to calls] ...And then the other thing would be just a mapped out route because if you don't know these streets well, it takes

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a minute to think, "Oh, I've got to take a right or left or--" So I think an immediate travel, immediate route of travel, would be good and then real-time visual of the location or area en route.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...But I think with getting back to the tablet and some more of the more recent and up-to-date technologies, I think there's room for it as long as it's durable and it's user-friendly. That's huge. Because when we need the technology, we need it to be simple. We don't need it to be complex because we don't have the time to work through complexities in anything technology because our decisions are instant, and some things that we need to do need to be made. The decisions need to be made now and not in 10 minutes. We're not sitting in an office and trying to sort through different programs and analysis. We need to make a decision now. And so technology is great, but if it's complex, it kind of is counterproductive, so.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...I would like to see something take place with a biofeedback technology where, when you're interior, something that can actually monitor your physical condition. And they were looking at that. We had a phone call from Homeland Security. They have a group that are looking at ways to do biofeedback, which I think's important. I think it's very important. One is to have something that lets you know what your location is, in position of the building, and your biofeedback. What's your body core temperature? What's your respiratory rate? All those kinds of things that I think would be interesting to know during the actual time of operation, so.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	Q: do you envision firefighters being inside and also being able to self-monitor those pieces? SME: I think it would be both. I think both would be great. I think if you had it set to where your core body temperature is reaching 104 degrees or 105 degrees, there should be something that alarms. And if your target heart rate is in the red zone or whatever may be determined at that time, I think those kinds of things would be good to know. There may be a way to, with respiratory gas analysis, to know are you dehydrated? Is your body being bombarded with cyanide, with

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								other environmental toxins that are interfering with your cell metabolism, and oxygen use, and all that kind of stuff? I think a lot of that would be great to have.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	I would say, it's coming, would be the handheld but being able to have a thermal imaging camera that's built in. Those kind of things would be nice to have... Maybe we're in a hallway and we're stopped for the moment, and I had a TIC camera. I think it would be nice to be able to hit a button and look at the screen on my TIC camera and be able to get an outside view of the building. Someone out there is actually filming the building and sending that to you. You're interior. You're pulling ceiling. You're hitting fire on the cockloft. It'd be nice to know-- I'm looking. They're hitting it. it'd be nice to know. I'd hit the button and see what the outside of the building looks like because we don't know that...that sort of feedback technology, I think, would be great to have.
Wish_List	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	As far as technology, I mean-- well, a huge one would be-- and I know it's probably out there, but not in the city. When we get a run, having the map on the computer, I mean, that's huge, because I cover a third of the city, and I cover from [street] to [street]. I cover the whole lakefront. And I mean, you go into [neighborhood] and you get the angle streets, and off [street], and it can get confusing. I've been around for a long time, and I've lived up north, and I've driven trucks around, so I know the north side. And I got guys who are south side, so they know the south side, so we're pretty good. But sometimes you hear a street, and you don't know where it is. Or like you get a street along an angle street and you're, "What side of the angle street it is?" Because it doesn't hit anything at all. So if we could get mapping GPS built in.
Wish_List	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	I mean, there's so much new technology with cars. If you could pull up something-- and I know there's software out there that does like where the batteries are in different cars, fuel cells, the different safety stuff on different cars. I know there's some hazmat software out there. You can look up chemicals and all that. But if it could be more user-friendly or on a tablet-- we don't have tablets, but if we had a tablet, that might help.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	[RE: GPS mapping] I mean, if I could-- the problem is I'd have to pull out my glasses, and pull out my phone, and pull up Google, and type in the address. And while we're running, I'm also watching for traffic and stuff, so I'm kind of-- I mean, if I could just press a button on my computer and it went-- I know there's a - I forgot what it's called - Waze or something like that. If I could press a button, and my computer went to Waze and show me the quickest way to get somewhere, that would help because-- I mean, street shutdowns, sometimes we don't get notified of that. And then gridlock. I mean, I leave my firehouse, we go out on a run at 5:00 on a Friday afternoon and we can't pull out the door. I'm in the [neighborhood]. So it's impossible anyway. There's only a couple streets you can take. It goes [street] and [street]. You don't go anywhere. So once you make a bad decision on which way you're going to go, it affects everything you're doing. So I mean, I don't know if that's possible, but.
Wish_List	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	[RE: navigation with road closures and traffic alerts] Well, there's technology out there already to do that but to incorporate it into-- But if you could put Waze or something like that on my computer screen-- I mean, right now, it's just-- it gives the address, the cross streets. If you're on a cul de sac, it doesn't give the cross streets. Or if they give a corner address. If they give you the corner of [street] and [street], it will not tell you what hundred it is. But if the address is [address] it'll say, the 600 block of [street] or the-- it'll go to the next cross street. But it gives you a corner. We don't have a reference. So that's a--
Wish_List	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	I mean, I think the mapping thing would probably help getting to-and-from runs, and I don't know if a tablet, as far as getting information, but most of the time that doesn't bother me because most of my stuff is talking to people... And if radio gets overwhelmed I do a face-to-face. Or I send somebody else.
Wish_List	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	I mean, the mapping thing would be the greatest help. I mean, to a regular company in a regular little district, that wouldn't help them because they know their district backward and forward. But to a chief or

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to a company that-- or an area like a suburban area that does mutual aid, I think a map-- and a lot of them probably have it. It's just a city is-- the computers in a city, I don't think are as up-to-date as some of the newer ones because it would cost so much to change the-- but that would be tremendous.
Wish_List	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	[RE: TICs] I mean, every year there's new-- there's masks that are coming out now. They have heads-up display as far as what your-- what your air is left. And there's heads-up displays for cameras where you can look in your mask without holding the camera up. The camera's built. I mean, there's technology out there but it's all so expensive.
Wish_List	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	...I don't know why it never was completed, but there was like a high rise survey. So some buildings we'd get how many stories, standpipes, what stairwells, have smoke towers, stuff like that. It could definitely be used more efficiently.
Wish_List	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	...I mean, there's no reason why, in this day and age, when our mobile data terminal on the rig can't have, at the very least on the way there, a map or a picture of the building we're going to. I mean, Google Earth. I go on my own computer and do that. And there's no reason why it shouldn't have the number of stories, standpipes. All that stuff should be on there. Any particular hazards that may exist.
Wish_List	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	Oh, I think there's always could be more information passed along. Like I said, the buildings that we're going to, or-- and I think it's be a lot better. Not as much as-- I just came from a spot where I was assigned, so I knew the area. But when you're relieving, you're going to different areas every day, definitely, definitely, more information would be better. You may not know the buildings, or the areas, or the streets. So more information would be better. Like I said, I don't think we use that mobile data terminal to nearly its best effectiveness.
Wish_List	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	Or even you're a reliever, it'd be nice to have the shortest route pop up. If you've lived your whole life on the south side, and now you're promoted. You're lieutenant, and they assign you. First day you're up on the north

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								side. You've never seen this place. The streets are totally different. There's angled streets. You look over and the guy, the engineer, is a reliever too. You're like, "I guess we'll get there."
Wish_List	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	Traffic info might be nice. Or another thing is, now that-- they say like 99% of downtown, from [Street] to [Street] down to [Street] is all under video. It'd be nice to have, like if you're going to incidents where-- maybe not a fire scene or it could be a fire scene. Nice to have a click video pop up or something, or a camera feed. If you're going to somewhere that might be a hostile situation, it might be nice to see that at a time. Or even a fire situation, so you can start thinking about what your tactics are going to be.
Wish_List	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	I don't know. Some of it's nice. We get it on the print-outs and the mobile data terminal. Like I said, they have to be on something that you can digest quickly. It may be too much information to put on any one thing, or it may not be able to process it as quickly as you'd like. But some of it would be nice to have on the screen. You could scroll down. We do have it on some of those where-- how many floors, because I go to high rises all the time. I don't know how many floors are on there. I mean, so I've got hundreds of buildings in my [inaudible] district of high rises. I don't know each one how many-- what the floor is. Be nice to have that either on the printout or on the screen so you could access it.
Wish_List	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	[RE: current technology] I guess I believe it's adequate for our needs, but it could be so much more.
Wish_List	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	Like I said, I'd like to have a little more information heading into the scene, maybe a live feed picture. I'd like to have radios that I know work all the time. Get through whatever we need to get through, be it a high rise or subway incident or anywhere. It'd be nice to be able to keep track of where everybody is at. I mean, I know that's way far away in the future. But being an officer, your men obviously don't work directly underneath you. Many times they're scattered throughout the building. It'd be nice to be able to keep track of them in a better way. I don't know how that would be, though, obviously.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	...I mean, I'm thinking already on the way there of-- one of the things that would be nice, even if they didn't even show the live feed, just a picture of the building just to jog my memory so I can adjust my tactic, orders. There's a huge difference between a one-story ranch or a 100 by 200 courtyard building. That changes our tactics immediately. In some places, you don't remember that building. So it'd be nice to even have an idea of what I'm coming into.
Wish_List	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	...I'm sure for the chiefs and stuff above me, they like to have more equipment. I know if I was the commander, you feel like-- I know they're piloting a drone program here where the drone can kind of leave and show the command van. If you're at the command post, you only see one side. You're relying on your other members. Maybe they don't see what you see, or maybe they don't see it at all, whereas something like that, where you could actually focus on areas that you want to look at would be good. But as I said, that's way above my pay scale [laughter].
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	I think that from my personal-- I haven't had any issues. I think our equipment is pretty much up to date. When we compare ourselves, you have to have a comparison to other people. Other big departments are pretty much on the same wavelength as us and we're vice versa with them. So I think our technology has finally caught up. I can't really think of any issues that could pose a problem, but we could be operating portable radios, for instance, in dead zones, high rise, metal, concrete buildings where you might not be able to get that transmission out. That's what's important because their transmission may be very important. It's important that everyone hears it.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	[RE: getting information via MDTs] Excellent means of communication and then I think that one is still in its infancy, still developing. Because you can also relay a very critical building components from preplans. For example, fire department connections, where are they at and where is the gas shut off. Where's the water shut off? How was this building made? Is it a light-weight construction? Is it a truss roof? It's giving you the information that would help use any sort of commander or the first

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								officer arriving, help base your decisions, what your actions you're going to take. They send a lot of this information, has come about. Without that, it was all either guess work or you had to go and investigate how buildings was made, where the sprinkler connection was, which side of the building we shot the gas off. Hit it just the-- what a great concept and I think, yeah, it's starting to evolve. We can put so much information on these computers for us today.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...I have to go and get data from here, or from this computer, I have to listen to this radio, this channel has 20 different frequencies, 10 different-- there is a point that says keep things simple and you do have to-- because of the task at hand. Again, what I talked about was the task saturation. You're overwhelmed with the incident itself. That's why today's technology, it should be very user-friendly and it should not require a huge degree of brain energy or expending mind-thought, when you have to actually use some of that, at an incident, and calling your plans, and your shots, and what you're going to do for successful outcomes. Everything we do is successful. It requires a lot of mind-thought. I would rather dedicate it here than as opposed to technology or using things at hand. It might have it because there is an issue of complexity.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Whoever said face to face, that's the best method of communication. Receiver and sender and sender and receiver. You got me and I got you, and we understand our messages from face to face. Relying on technology so, "Oh I hope he got that message." Or, "I hope I got this message to achieve that might be three blocks down the road on a large scale inset." The assurance of knowing that you got your messages across and especially critical messages. There should be no doubt or wondering if this is going to fail us, this system. Did he get the message or-- again, nothing beat face-to-face communication. I say, "Well, I'll write him a letter."
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	I can either want to do and too much-- remember picturing yourself in a conversation with five people talking to you, or you had to-- or being

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								overwhelmed or being overloaded with stuff? If there's a way to just funnel one aspect, if you're receiving from one, maybe two, you might be able to handle. I think that's all you're able to handle as your brain is going to process. It's the biggest technology. Your computer is your brain that you're using. Funnel or filter or triage messages. What's important, what's crucial, what is information that we can actually hold off on for right now, what is crucial for the incident, what can we hold off and funnel it, keeping it simple. I keep going today. Keeping things on a simple basis...
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...Gaining complexity is the real killer of simplicity from my perspective. And how to improve that? A lot of face-to-face communication, maybe having one guy operate the radio. Giving messages instead of everyone having radios, and all this talk and garble. I have to be responsible for listening to all this, because it may apply to me. So funnel. So you take your five people in a room. You tell them all be quiet, one speaks. So that would be just a suggestion for that, just not being in a position where you're going to be overloaded with, where this technology has become rather burdensome in your decision making or thought processes right now.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...One day they're going to be able to do it if you think of technology doing surgeries and they're doing it with robots and stuff in a high-resolution scans of bodies and stuff. It just, in the medical aspect, in that field and what technologies are going to spill over to the fire service. Perhaps, we may have locators on our bodies through technology to find out where is Lieutenant such and such or five-- here to see where they are in actual real time on the fire ground, what floor, and in what room?
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	[RE: locators on responders] Well, that would be-- yes, it would be for accountability purposes. What companies you have, who's in there and where? ...
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...And also, it's evolving with our breathing component system too, with built-in heat temperatures, to know what environment you're in. What is the heat of the ceiling? Thermal imaging for victims. Air pressure in your

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								tank. CO levels. It's all in your heads up display. Wow. Is that something?
Wish_List	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: digital radio issues] Just transmissions not being heard is really the number one thing. And that's where it all goes to hell, so... it can jeopardize not only the civilians, tax payers that are paying us to respond, but the first responders. So without us, now we have a big issue. But like I said, it's so much better than it was. And so many more people have radios now. I'm sure it's going to get tweaked in the digital world. It's always a large-scale building or a building, in my opinion, that has floors and floors of concrete. It's just digital transmission can only do so much. I have a layman's understanding of how it works, so I get what the issue is. But it seems like the people that are involved in the actual manufacturing of radios have to work a little closer with the building people, maybe [laughter], and just from the onset of a building being put together, maybe have repeaters throughout the [laughter]-- you know what I mean? Be proactive a little bit and just because of the state of the world. That wasn't a thought 25 years ago, but today we have to think that way. Yeah.
Wish_List	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	...in the near future I'll have a lot more information available to me en route, which is nice. We do have an enormous amount of information in a high-rise building given to us on a run sheet when we're en route from the firehouse... But the problem is, how about when we respond from another call? Now we don't have access to that. Now it will come up on our display, the same information. But it's much more difficult to get through and sometimes doesn't scroll right. And you're manipulating traffic and weaving it, you know what I mean? So you're moving and the lighting conditions may make-- you've got sunlight. There's a lot of obstacles to read it en route like that. Unless our displays change and it makes it a lot more easy to read or look at, or is legible from everybody instead of just the company officer. Because he has a lot going on in his head, he or she, and to have to en route, try to concentrate on everything that's [laughter]-- it's a lot of information...
Wish_List	FF	U	Other	46-55	21-30	Male	FF-U-029	... if I had a display that was very legible and easy to read on board, and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel					obviously the way the apparatuses are - and they can be different from different firehouse to different firehouse - because budgets don't allow us to buy the same thing throughout the city. The more people that could see it, the better. Any information I always had, I would always try to just verbally tell everybody because I didn't feel like I should be the only one that knows this. I would leave the firehouse with that printout but if I saw something, I would say, "Hey, the 20th floor, they're saying is loaded with gasoline drums." I would tell everybody [laughter] about it. I don't want to be the only one that knows that. I feel like the more people that know stuff like that, the better. I get technology is there. It's always, "How is it going to be paid for?" So is the near future that we'll all have access to all this information now? That would be great, but I know that's probably not realistic because of budgets.
Wish_List	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	if technology would allow us in buildings that were-- especially non-residential. Residential, it's kind of hard to tell because you don't know who's coming or going at any particular time. But if we had the information on number of people that are normally in that building during what are considered normal hours, hazardous materials, of course, building dimensions, number of basements. We go into buildings sometimes that look like they may have one basement and we find four, and a fire's in the fourth sub-basement. And those are horrible for us....
Wish_List	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	...We want dimensions. We want all height of the building helps out because we know from our codes here in the city that if it's greater than 80 feet it has to have a standpipe system in it. Things like that. Sprinkler or not. Yeah, that information is pretty critical from a technical standpoint. At the lower ranks maybe not so much, but for the people that have to do the decision-making in the early goings of an event, definitely. It would be nice to know that...
Wish_List	FF	U	Other Public Safety	46-55	21-30	Male	FF-U-029	[RE: building information via CAD] So if it was something that was really legible and bigger, but how big can you go? You can't have a 36-inch screen on a dashboard, so it's a catch-22, sort of... Unless it was audible

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					and was looped, where you would-- but then how do you do that without it interfering with me making radio transmissions in route, as well?
Wish_List	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	...Since I've been here, we've been trying to initiate the drone project. And there's been bumps and push back and all that and it always involves money. But recently it seems like there's a little bit of a go ahead now, of course now that I'm leaving [laughter]. So we did just purchase one to train with. And some of the other major departments are already doing it. They went a little quick because they found some pitfalls with it and stuff, but we're trying to learn from their mistakes. But I think, in the near future, that's going to be hot and heavy in our department here. It looks like it now, that they finally have been sold on the idea. I don't know what took so long...
Wish_List	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: drones] Well, I mean, it really is limitless. It depends on what your department may have the ability to purchase and if you have the ability to train guys to use it right. And you may know a lot more about them than me. But say this drone may only be able to carry this pen, the payload only allows for that. So this pen, if I have hazardous material, meters that weigh this pen or less, and I can fly them into an environment and not put anybody in harm's way. Monitor the environment, fly it back, and get readings without ever putting anybody in hazmat suits, or anything. That's a good thing...
Wish_List	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: drones] ... We have a large lakefront here. It could be used on the lakefront to-- we get a lot of calls for boats in distress. People that are missing, that were swimming. We have an air/sea rescue, we have rescue divers, we have helicopters, we have all that. But it's the time that's always the issue. So I always thought if we had drones along the lakefront, they could fly out to the last seen point for the people that were in distress swimming or boats in distress. And our water's pretty clear, it might be able to actually see victims before anybody ever even--
Wish_List	FF	U	Other Public Safety	46-55	21-30	Male	FF-U-029	[RE: drones] ... at the scene of fires, which is probably going to be our step-off point, for using the one we have, anyway. So you fly over and get a nice aerial view of the building and it really aids tremendously to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					whoever the incident commanders are for tactical decisions as far as fire-spread, roof conditions. Even hydrant locations, believe it or not, because in certain times of year our-- there's a variety of things weather-wise that affect fire conditions, like barometric pressure, and humidity levels, and things like that. Sometimes we can see everything outside of a fire building. If this were an industrial building let's say, burning, sometimes we have no problem knowing everything that's around it. But sometimes that smoke lays so heavy that for blocks surrounding that building we almost can't see each other walking down the street, so it becomes another obstacle to try to attack that incident tactically. So drones can be used then.
Wish_List	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: drones] We had an 80-car pile up here on the [highway] here last summer. And it was cold and somewhat windy, and it started to rain, and it took them over an hour to really get a handle on the number of victims they even had. And it was because of the way that they were piled up. And it was on an elevated part of the expressway, so you really couldn't get a lot of foot traffic up there to just run up and down. And that was a perfect opportunity for a drone to be used in that situation. It could have just flew up and down, up and down, and it could have got a really good handle on what they needed as far as resources go. And resources for an incident like that are critical for life-saving. Do we need five ambulances or 50? And if they don't know, now the people that need them the most are going to have to wait the longest. So that's not good...
Wish_List	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: drones] ... I thought that would have been a great thing, if we could actually fly a small drone into a fire building just to get a handle on number of victims, where they're located, fire conditions, things like that. And they were talking about it being able to learn at an exponential pace. For instance, the first time it would fly into a fire building, everything it encountered-- if it flew up to a clock, it would log a visual image of that clock, and later on, they would be able to input data saying, that was a clock. And so it would never stop and look at another clock again because that would be wasting time. It was things like that. So there's all

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that. I know that's all the future and it's coming. And it's exciting to know about but unfortunately, I probably [laughter] will never see it.
Wish_List	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	that kind of information, real-time info that could be transmitted and given to firefighters, or policemen for that matter, prior to entry to any kind of a structure would be tremendous. It really would.
Wish_List	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	I mean, in a perfect world, to me, in the future, I would pull up to a building that was on fire, and the building would tell me what I had going on. So I may be able to, at some place in the building that I knew it existed, I may be able to get all my information before entering the building. For instance, how many people are in this building right now? The building would know. And the building could tell me, "There's four occupants that are currently in the bedrooms on the third floor. I mean, that would be-- I mean, talk about affecting our job tremendously. That would be unbelievable. First of all, we would not search in an area-- I shouldn't say it that way. We would always search in areas that we weren't being told there were victims, but those would be secondary to what we were being told. Whereas right now, we pull up and we have no idea, so there's a lot of wasted time. Wasted not being the correct word, but it's truly is wasted if we search-- if it's a three-story building and everybody's unconscious on the third floor, and we spend the first ten minutes on one and two looking for them, those minutes were critical to their survival rate. So if we could go right to three, that would change things. So if we had smart buildings in the future, that would be awesome.
Wish_List	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: smart buildings] I mean, the information that we need right now is, even if it's not fire-related, say it was a hazardous material incident where people in a corporate setting were suddenly all getting sick. Just to pull up and know how many people are working in the building right now. Are there any medically trained people in there, and has anything been done prior to our arrival? What else? Where are they located? Is there a rallying area where all the victims were brought to? These are all

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								things that we encounter. Time is always the issue with us. It's always about time, victim time, because their clock starts whenever the incident started. In this case, if it was a carbon monoxide leak in a corporate setting, and people were suddenly getting sick. So that clock started as soon as the first people started feeling sick. But if they didn't make the call until 15 minutes later, and now instead of the first 5 people that were sick, are now 80 people that are sick. To know when it started gives us an idea of how bad of an event it's going to be and what we should bring resource-wise to it...
Wish_List	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	... smart buildings would be awesome. So you come home from work and you're the first one into your place of residence. When you cross the threshold, the building now knows that you're there. So then if your kids, or husband, or whoever lives in the house with you comes home, each time a person crosses the threshold - if you have multiple ways in the building, it would have to engage it from multiple ways - it registers. And when they leave, it subtracts it.
Wish_List	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: smart buildings] ...So it's so easy to count people coming in and out of a building. It's just a matter of, will we implement it? Will it become regular protocol? Will it malfunction after it's installed? Can we rely on it? So there would definitely be a grey period where we wouldn't rely on it, but we would look at it and say, "Okay, the building's saying there's five people here." We don't know yet because this is a new thing. But maybe, 10 years from now we can compile hard numbers where 98% of the time those numbers were dead-on, so now we can kind of rely on it.
Wish_List	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	I mean, thermal is the big one, recent, as of the last 10 years or so. And it started off-- now that I look back at the first one that I had in my hand, compared to what's out there now, it's unbelievable. The clarity is unbelievable. I mean, just being able to see in a fire is a-- I mean, if we can incorporate thermal-- well, they're already doing it. And again, it goes to budgets and accessibility to more money because there's heads-up displays in masks where-- let's face it, even big departments like this one are going to have a big problem coming up with the money for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								everybody to have that kind of technology. So that's the big one, it really is, because we're mainly about saving people. And people give off a temperature and so thermal is big, it's really big...
Wish_List	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	[RE: thermal imaging] ...It's also big from the tactical standpoint because if you-- from the drawing standpoint, if I can fly over a building and get a good handle on the fire extension in that building from above, that's big. That's huge, yeah. And they're doing it, it's happening, but it's going to get better. I feel like the thermal, the technology of the image is going to get even better from that standpoint. I mean, look what the police do sometimes, what they can see. I'm sure our astronauts are figuring it all out right now [laughter].
Wish_List	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	So I came up with this idea of... an ordinance that every address had to be made out of reflective numbers, first of all, and it all had to be in the same position. In other words, on every residential building, they all had to be, whatever, 18 inches to the right of the door. And so that was my idea just from a firefighting standpoint that I would always know exactly where it was, and that I would always know, at least if it was dark, I could shine a light on it and it would light up. But we never followed through on that. But so to your point, if somewhere in the future addresses were very, very illuminated somehow and were all easily--
Wish_List	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	The computer on the fire truck is a three-year-old computer and now the new computers are faster so they have to be replaced. And it's always that catch-up with what technologies are coming out. And all we want to do is go on the call and make sure when we type the information in or log on or turn it on, that it works.
Wish_List	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	I guess it would be stable funding of the fire service. And I don't mean just more money, what I mean is stable funding so we're not reliant on levy's and votes. And we have adequate staffing, so we're not-- let me just close this door. So that we're not trying to get by with the very minimums.
Wish_List	FF	S	Field	36-45	6-10	Male	FF-S-032	And then the other big thing is basically just the information about the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					buildings that we are-- our environment. So on an EMS call, it's the access. "How do I most quickly get into this person's house to help bring our care to them?" And on a fire-related thing, it could be, "What's the layout of this building, and what are the hazards?"... And then having that displayed to us in a way that's meaningful and that we could use on a future call is a very significant area of gap of the information that's out there. And then I guess the other thing concurrent on that information is that there's really very little done on trying to predict or learn where our hazards are, because we don't capture that data in a meaningful way.
Wish_List	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	It could be captured in a better way, and analytics run on it, and figure out, "Well, where are your most high-risk buildings or what is the most likely area to have a response, and how could that be used to preposition or to help train on the types of buildings that we know are going to be dangerous. Or to make sure that our apparatus are close to the areas that are going to have--" so all that information that's out there right now is not being captured or utilized in any fashion, or just at a very, very superficial level right now.
Wish_List	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	[RE: patient medical history] ...bad information is worse than no information. So most of it gets pushed away and we have to focus on what information we can develop or gain from what we're seeing right on site. And that works most of the time. But if there was a better system for us to be able to reliably depend upon that information, we would certainly utilize it.
Wish_List	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	I think that the big need right now is just that access to all the information that's out there, and for that to be-- for some method to be put into place where that's able to be created without the need for money from a third-party vendor [laughter], right, for us to access that level of design and technology from some other means. So the ability to have access to the information about where I'm responding and who I'm responding to. So access to that patient information, the access to the information about the building that I'm going to be into and how that could affect our safety or our tactics, or how that information could be

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								utilized to help us predictively plan where our calls may be to help us.... so I think ultimately, for me, it's that access to better data and utilizing that to make better decisions and keep everybody safer and all that kind of stuff.
Wish_List	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	I think that there are people out there, obviously, with the skills and the desire to put those skills to use in a meaningful fashion or in a somewhat selfless fashion that helps the good of society or whatever, if you want to utilize that, but there's really not that motivation right now to do that when on a smaller scale.
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	[Whether?] I wished we had? Oh, yeah [laughter]. In a perfect world, I-- so I think I would like one tablet-type device that has all of our information on it. Kind of like the computers do. Our tablets currently don't have that. I would like that. Also, it's got to be quick and responsive, too. So the mapping system right now has definite room for improvement. So typically, if you look up a map on your phone, you can with two fingers easily zoom in, twist around your perspective, rotate. And our current tablets and mapping system don't do that. They're much slower and clunkier. And when we're responding to an incident, when we're more probably going to be there in five minutes or less, plus I have whole a bunch of other things to figure out, I don't have time to be trying to figure out how to make my map work the way I want it to. It's got to be quick, and it's got to be responsive...
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	...I would like to see us get away from handwriting, paper copies. Two reasons. One, I think it would lead to people being much more thorough and in-depth with their reports if they can type them as opposed to writing them. Since most people now operate computer, [literate?], and they can type faster than they can write. AutoCorrect's for spelling errors. It's going to look neater. It's going to look more professional. I think it's going to have more detail involved in them. So those are things that I would like to see.
Wish_List	FF	S	Other Public	36-45	11-20	Male	FF-S-033	...Also, our pre-fire program. The way that the maps pull up right now, I think it's clunky. I would like it to be more seamless. And I know that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					they're working on that. They're trying to make it better.
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	But in a perfect world, I could have my tablet and have my whole information come in. And I could hit a button, and go to a map view. And then, manipulate my map. And then hit another button and my pre-fire would pop-up. I wouldn't have to search for a pre-fire because right now, I have to search a little bit. And all that takes time. And this is all information that-- as a first to arrive an officer, you need to process it quickly so you can quickly formulate a plan and a strategy. And if you're spending your time waiting on technology then it's not necessarily going to be helpful. It's going to [inaudible] to be a hindrance. So those are things I'd like to see happen.
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	And then, if it's a commercial building, I want to see the pre-fire. I want to see, specifically, the building layout and if there's anything I need to know about that. So I would like detail of the building. And then, obviously, what TAC channel we're responding on? What other units are responding with us? And then, any other details that the dispatcher has gotten from the caller.
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Oh, yeah. I would love our personal radios to be improved upon.
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	...So that's one thing I'd like to see. The fire service, anyways, to have radios that are specifically engineered and designed to withstand water and heat. And I'm sure somebody's working on that, hopefully. But as far as I know, it's not there yet.
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	...fires are loud and chaotic anyway. And so if you're caught in a catastrophic event and you needed to radio out, you might not be able to because your radio just got fried. That's the one first thing. I would love to see is fire-rated radios or a system of better improving that. Now if I had-- and that's realistic and doable, I think...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	...Now, my wish list, I don't know how realistic and doable it is. But if I could have the pie in the sky, we will have our face pieces that we plug our air into. And man, if we can have a heads-up display [laughter]. There's thermal imaging cameras out there that-- they tell us heat differences. If we could be able to thermal imaging display into our face piece-- if we can build-- and that's probably a little bit extravagant. That's like a Hollywood effect, probably, right? But I'd love to see that.
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	TIC information would be great. If we could see our air level, if we could have a time to our air bottles so we can see our air bottle... There's a little gauge but we have to look at this gauge... And if it's dark, you might not see it. We have a variety of different warning systems of [when there's no?] or air is running low. But if we could-- that could be in the head-up display.
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	But having something where you can hear and speak clearly is key because right now, we're talking through a mask so our voice is muffled by [just running?] through a mask. And--
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	--and sometimes that makes it worse. If we could get integrated microphones in our face piece that connect to our radios with built-in speakers in or near our mask by our ears, I mean, that would be huge. And it's got to get there. It's going to get there someday. I just don't know when it's going to be but I am sure it's going to get there someday. So that's my wish list.
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	I mean, a drone's not going to put a fire out. A drone is not going to solve a car accident. But what a drone can do is give you information. And I have heard in some instances where a drone can be dispatched to the incident address before anybody gets there and provide a 360 aerial view before anybody gets there. And that's great information. So if we're responding to a house fire and it takes us five minutes to get there, but the drone can be there in 2 minutes and have a live feed 360 view of what we're going to, that would be invaluable. Any information is good information...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	[RE: drones] That's one more thing to have to look at and one more thing to have to process while you're responding. And maybe not everybody has that... Maybe it's just the chief who is responding. When they're responding, they can look at the drone view because the first responding officer has to also be figuring out, "How to get there? What is our best hydrant going to be? Where's the best access [for it?] to be?" And that would be good information for them, too. That'd be something interesting to see. But man, that would be very, very helpful information.
Wish_List	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Not specifically. I was hoping that we could talk about the communication, and the radios, and my desire to see fire-rated radios. And I was glad that I have talked about my pie-in-the-sky [face feed?] [laughter], so. But--
Wish_List	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] ...you need relatively simple what I call "Fisher-Price technology." Big shapes, big buttons, colors, things like that so that I don't have to scroll down menus and things like that. I need it very simple because I don't have the time or the mental capability or the bandwidth to be looking at a lot of different things. When you're under stress, you want something that will do simple things quickly. And a radio is very good for that, but when you're in trouble, that's where you need that the most.
Wish_List	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] You have so many tasks that you're trying to achieve or everything you're trying to do it is very easy, like you said. Simple shape, one button, boom. I can contact whoever I need to. Given that all things are going well as far as not being in a basement or anything like that. It is super beneficial to be able to just hit one button, find that one thing. It's in the same spot on your gear every single time.
Wish_List	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] Yeah, I think technology needs to be scalable based upon the dynamics of the incident or the situation. It needs to be able to scale back to a simple, one-touch operation. And if you had the need to get more technical under less dynamic situations, you have that scalability. But that's definitely a big part of I think what communication technology is going to require in the future.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] A cord gets in the way of a radio. It's come behind you, it gets stuck in a door. Those things are always limiting. Cords, in our business, are a terrible thing, in my opinion. If everything could be wireless, perfect. But, yeah.
Wish_List	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[RE: cell phone apps] [S4] That's one of the technology things that we are continually struggling with, is compatibility. I personally try not to get uni-taskers. It's very easy to have 12 different devices that all do one thing. For the most part, if we can get three devices that are somewhat compatible with it or there's a lot of ability to sort of do multiple things, then we're always going to try to do that. But there's still a lot of diversity out there in terms of technological platforms [inaudible] devices.
Wish_List	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S2] One thing I think would be awesome would be a heads of display in your actual mask when you're in a fire, where we have a TIC that can see heat, so something like that that you could see without having to use your hands. You might be able to see easier when you're talking about where there, just being able to see heat signatures
Wish_List	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] You've got a hose and you've got an ax and you've got one hand on your partner, trying to make sure we're going the right way, and it's just a matter of managing that right now, but the TIC in the mask would be helpful.... the Apple Watches there. I mean, that's a personal thing, obviously, but watching the individuals that have that, I mean, that's-- the call comes through on the phone and it pops up on your watch and you're like, "Okay, there it is. There's the map. All right, let's go." It's pretty savvy, so.
Wish_List	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	I would like more wireless stuff. And I'm not talking about radio things. So when you have a mask on and you're inside your building, we recently got the wire earpiece, kind of like a Secret Service agent, if you want to call that. But you've got to remember to put that on before you put a mask and helmet on, because once all that stuff's on, you can't get it back in without taking it off. So now you're not just listening to a lapel mic - which you can miss a lot of things in the heat of battle, if you want to call it that - that thing's squawking away. You don't realize that you're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								being called. But if it's in your ear, it's almost-- you almost can't miss it because it's embedded into your ear canal, right?
Wish_List	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[RE: radio microphone] [S3] But if that thing was wireless [laughter] or you had a speaker system instead of-- there's not room for it inside of a mask, where you would always what's going on and then not necessarily have to reach down the lapel mic, policy would do it. But easeability toward that radio did not have a lanyard on it to catch on everything and still be able to talk at just the push of a button or some sort of thing that would transmit and receive without having to change your position so much and worry about dragging a cord around with you, and the radio just stays in your pocket the whole time. To me, that would be perfect [laughter], but I'm simple, so.
Wish_List	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] With the earpiece thing, too, I think that we've-- it's a huge step for us to be able to have those. The only step further is that if it's ever possible, some departments have some that are molded to each individual's ear. Because I've noticed, sometimes, with that, I would prefer that ear piece far more when trying to listen to that without a mic, because there's so much going on, it's hard. You have to lean over anyways. Having an ear piece in is great, but I've found several times they were popped out. And when I'm in the middle of something and I can't reach up and grab it right away, so I have to remember, "Okay, I'll pop that back in." And I think that problem is somewhat avoided with the ones that are molded to individuals, the specific individual's ear, but that's way down the road. I can't really think of anything else.
Wish_List	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] I think some sort of hand-held device or wrist watch kind of device or something like that, but it's basically the central communication point for all of that. If you had the pre-fire information sort of embedded in the buildings or that transmitted to the central dispatch center and then transmitted to your personal device. And so everybody was carrying around their personal device like that had access to all those things and it was compatible with all those different applications.
Wish_List	FF	S	Not	Not	Not	Not	FF-S-035	[S6] I think that I would like to see a-- well, in time interoperability. So

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			specified	specified	specified	specified		right now, we have different... for example, we have Apple phones, we have the Microsoft tablets, we have whatever it may be. And some of those don't mesh well, as far as trying to transfer information, or whatever. It's a lot easier if it's the same manufacturer. I think that would be big. And I personally would love to see if we can get to a point where-- almost everyone has a smart phone now, and like I said, the Active911 is fantastic.
Wish_List	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S2] A technology I think would be kind of interesting would be just personnel tracking. So right now, when you're on a big incident, and we're tracking with a plastic tag that has your name on it that goes on a plastic board that you're writing out. It would be interesting, I mean, you could have incident commander with-- or have tablets there that could-- if you could have a tracking device of every person that's there and actually be able to see on a map.
Wish_List	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] Ultimately, it would make sense if there was something that was on the sleeve of their equipment that basically is GIS connected that we could send messages to them, or they could send messages back to us or they could access information and it was all compatible with all of the tools.
Wish_List	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] ...I believe that there's a lot of companies working on those type of systems where you can track individuals on an incident, but on top of that, a lot of them are also integrating heart rate monitors with those, as well. Which I think would be extremely beneficial, being that heart disease and heart attacks are one of the biggest killers of fire fighters. If we're able to consistently monitor individuals on the fire scene, we may be able to prevent a little bit of that.
Wish_List	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] To add what he said about keeping it simple, try to keep it from breaking. As firefighters it's very easy for us to-- we're pretty good at breaking things.
Wish_List	FF	S	Supervising Field	Not specified	Not specified	Male	FF-S-036	[S3] Talking to being dispatched to a man down, which is a common one. As much as they can know why man down they want the history of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					that because a man down because he fell is different than a man down because he was stabbed. So anything that could just tell them what they're going in to.
Wish_List	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	But sometimes we have dispatchers that say too much when we used to do it. Now it's all MDC, but there was an injury accident. It was a Ford probe that turned in front of a green SOB. The people are talking. Now they're on the sidewalk. Just tell us it's an injury auto at the center section and people are up.
Wish_List	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] If you're going to a fire, crews want to know all occupants are out. Even though we'll hear that, we never take that for granted. But it is one of those-- if I am talking to the owner and she says her kids and her pets are all out of the building. That is a nice thing to know.... But I'd say they want to know as much about what they're going-- needed information.... But the difference of a head-on accident, heavy damage blocking, and two cars are pulled into a parking lot following an accident tells them a lot.
Wish_List	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] Location and situation.
Wish_List	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] --dropped the numbers. And we have CAN, we call it CAN, getting our crew members again, conditions, actions, needs. That's what I need to know. What are your conditions, what are you doing, what do you need, and then what's your error? What you got left, it's just four things. What I need to know, keep them very brief. "I don't need a yellow hose around to that. I need a hose to the second floor. Can you send, take it off Engine 17 to pull it up the south stairwell to come in. I need a hose on the second floor." That's just there to streamline their communications. I think we have-- we've done a good job doing that when it comes to communicating with other, outside, as you said, I think we still, we're trying to get there, I think.
Wish_List	FF	S	Supervising	Not	Not	Male	FF-S-036	[S2] I know you're going to have some need questions here, but I would

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder	specified	specified			say that's one of our biggest needs is-- so even the State Patrol are on a different system than we are, and certainly, DOT's on a different one. And yeah, if we bring our communication van, and get a portable from each one of them, we can take the ACU-1000 and tie them all together. But we need to build technology where it doesn't take an hour to do that. And Wildland uses VHF and BendixKing radios. And there's D&R has all their frequencies and the Forest Service for Wildland. And somehow, we need to find a way to bring all these together so when we do need to, we can talk to each other. And I know that's a goal of most of this, but--
Wish_List	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] Yeah, I mean, I like the personal accountability. So yeah, knowing when they're clicking whatever they're using. I know where they're coming at, where they're talking to me from. And then I really like that drone
Wish_List	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] They're not made for the fire services as much better than it used to be. But we're still not there is when you're wearing an air-pack, being able to clearly understand somebody in the building... And there's devices out there, but it takes a lot to set up, it takes a longer to get your mask on. And they only work half-fast, anyway. So it would be nice just to have some simple, dependable, technology. So when they put their mask on, we can hear them.
Wish_List	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] ...They do have some communication one that do work better throat mics and things like that put on that help, but they're really expensive. And to outfit every body with that is not financially feasible at this time. So I think it needs to be something that it's just kind of known, right? We bought the external microphone to help. Well, that won't work. As a matter of fact, it probably causes more trouble than it does. Some of it comes down to training. The learning of how to use-- when you're in the mask, you tend to want to yell because you hear [officers?], so you want to speak louder which is the worst thing you can do in a fire situation. So I just think some built-in, once you're in there, whether it's plugged in, I don't know. It's just automatically-- so you can just talk normal.
Wish_List	FF	S	Supervising	Not	Not	Male	FF-S-036	[S2] I think also thermal imager with a heads up display in your helmet...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder	specified	specified			It's out there but so costs prohibitive that you can't do it.
Wish_List	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[s2] Another one would be nice for fire investigators. And I used to be a fire marshall and did a lot of fire investigations. So we use CO as basically, a test gas. So with the CO levels got okay, we assumed the other gases were fine, and we can go without an air-pack anymore. And now we know that even when the fire's cold, it's off gassing some bad stuff. So it would be nice to have some type of meter that would tell you that. So we know when we can go in there and just wear a particle mask and not be breathing air. And when it basically-- so we know when it's safe.
Wish_List	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	I think something that brings all of the tools that we use together, so you can get all of those pieces. Right now, I have to go here to get this, and here to get this, and here to get this, and here to get this. If I had something that brought all those things together, so that I am working on XYZ project, and I need something from here, here, here, and here, it all can come together. . I don't know. You do some sort of search and it brings everything about that property, or whatever it may be, in one place because I feel like there are so many places to go to get information. It would be nice to have just one central place.
Wish_List	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	I would like to see some sort of alternate communication plan should cell phones go down. Like how are we going to communicate with other folks? And I know that radios are a great way to do that, but what if those go down? Is there some kind of backup to-- I would like to see some kind of backup just in case.
Wish_List	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	I'm sure there are a million apps out there. I mean, I think that's part of the problem too. There are so many options for things. Everything is super cool, and let's have that in its latest and greatest. And then you go to use it, and you're like, "Oh, maybe that wasn't so cool." So, I mean, a lot of it's trial and error, but I feel like if some of these companies could get together and have one big app that kind of addressed all of the needs that fire service has-- because there's apps for hazmat, there's apps for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								special rescue, there's apps for-- I mean, so putting something all together [inaudible] like the fire service app and having it be broader, then I think that would be kind of cool instead of all of these individual things.
Wish_List	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	There's some autofill from dispatch but not from the IPCR to RMS... We've talked about this for years, trying to find a program that will do both, that's one-stop shopping for the crews that they don't have to do these two reporting systems but from my knowledge we haven't-- the technology is either not there or we haven't come across it yet [laughter].
Wish_List	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	...In a perfect world, there's an incident commander who's got 20 people on an incident scene. And he's got some on the rear of the structure, he's got some inside the structure, he's got some over here in rehab changing out bottles. I think in a perfect world like you'd mentioned, a locator, I mean, if you had some kind of a screen in your vehicle that, "There's my Engine 22 crew over here. That's where everybody's at." ... So that would allow the incident commander to actually track his personnel on the scene. And I'm sure the technology is out there for that with everything else that's going on.
Wish_List	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	But anyway, I think that would be a piece of technology that would be very helpful (referring to GPS). And I know the air monitoring technology is out there. That is a program that you can buy today through MSAs, the group we use. I don't know how refined it is. I know when I looked at it a number of years ago it was still just in the beginning phases and it wasn't really something we thought would work. But if you can use air monitoring along with GPS location of your personnel, that would be something else for the field commander to have... monitor people on that versus a whiteboard with a marker. So that's one piece of the field technology that I think would be very helpful.
Wish_List	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	...and that could be something that could be assigned to us, to monitor people on that versus a whiteboard with a marker. So that's one piece of the field technology that I think would be very helpful. Like we talked about before, I think a reporting system that was more user-friendly, one

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								stop where we didn't have multiple things we had to do would create the efficiency piece a little bit more.... I'll get a call from somebody that needs information on a particular call. I have to go into this system and find out this information, then I have to go pull up the medical and find out that information. Then I have to go into the CAD that this batch creates and go into that. So it's actually three pieces that I have to venture into. It'd be nice if it all talked to each other and there's one. I go to this call and it's got all the information laid out.
Wish_List	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	I guess I would just add that the field folks are always looking at ways to be more effective and be more efficient. And anything we can do, any tools we can give to help them with that would be beneficial in the end to the citizen, because it's allowing us to do our job quicker, more efficient in the turnaround for the next one that comes in.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...If somebody else sees that patient later and you've already mentioned that or put that into the medical records, if they put in the right name, a little flag pops up that says, "Hey, is this [Name]?" If you click yes. It's like, "Oh. Last time we saw [Name] was this date and time. Here's all the medications she was taking. Here's what we saw her for. Here's her concern. Here's all of that type of stuff." So being able to get that information. We're not there yet just because it's a new enough system. But that would be huge in being able to share that with hospitals and stuff.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: earpieces] ...The problem that we found is, as far as just one, there isn't one solution that fits all. So we're walking around like this, with just nothing else. I may be able to use my earpiece in here and it may stay in fine. But if I go into the firefighting mode where I have to put in a hood over myself and I have to put on the SCBA mask with straps, that same mechanism may just not be able to stay in the ear or something like that. Even between those two, I may go onto a hazardous materials response, where we get into the big moon suits, the self-encapsulated whatnot. They've got a helmet and whatnot and your arms are in gloves, you can't really reach... We'll keep the radio in a holster on the inside, but

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								as far as the audio stuff, we've tried conductive mics, either on the throat or on the head. We've tried hands-free stuff, but we just have not found any one solution that meets all of those needs... the VOX, the voice-activated-type stuff, but also the hands free I guess to a limited degree.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...So, we often joke in the fire service that in the late '60s and early '70s we were able to talk to people on the moon just fine, but here 45 years later we still can't have good, reliable communications from the outside of a fire to the inside of the fire. So there's a huge need...
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...Like the military, public safety will often operate in kind of a squad mentality, that you may have a bigger incident with incident command and commanders and stuff that you need to talk to, but you have these little squads everywhere that also need communications amongst themselves. And so we're starting to see some people that are kind of piecemealing it together, but you have the kind of deal where it's almost like two radios within one, where you can hear the command level stuff going on, as far as updates and what's going on, but you would have the ability to, while hearing that, still have a squad-level communications...
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...And then to just make it worse, ideally, the squad-level stuff would be hands-free voice activated so that I've got a chainsaw or tools in my hand, but I can say in my protected environment, "Hey Firefighter [Name], can you help me over here with this?" Not having to key anything. Not having to push anything. And then Firefighter [Name] hears and acknowledges and he comes to help me, in that regard. If I need to talk to command or something like that, then, yeah, push a button or something or key up and, "Hey, this is ladder one. We need blah, blah, blah." or something like that.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...fire service and law enforcement operate an incredibly high-noise environments. So fire service is chainsaws, and fans, and apparatus at high idle. Police, same. The sirens and stuff. [It's?] the same for them. Gunshots and whatnot. Ideal would be some kind of hearing solution that also affords you hearing protection. So if I had the magic hearing

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								aid [laughter], my hearing aid would provide protection when I'm in a high-noise environment. It would provide enhancement when I'm in a low-noise environment, or maybe a confusing or noisy environment. And then it would also allow me to hear communications that are either specific towards me, squad level, or communications that may be command level that will impact me, as far as, "Oh. They're coming in the back door," or something like that.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...we have been working with you guys, on taking the Internet of Things concept, and pushing it more towards the public safety environment. So with FirstNet and stuff, we're building the pipes. I keep coming back to that example. So in public safety, we have a lot of stuff that we'd like to run through those pipes. So a station like this with a hazmat team, when our hazmat team goes downrange, they'll have medical telemetry, they'll have telemetry from their breathing apparatus, they'll have geographical telemetry as far as here's where I am, here's how fast I'm walking, here's where I'm going. They'll have incident mitigation telemetry. So they're taking sensors with them that are monitoring for the amount of oxygen, hydrogen sulfide, CO, CO2, explosive levels, and all of that. For hazardous materials, they'll sometimes take a camera with them, a GoPro, or something like that.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...So one of the things that would be a future concept that would be really cool - and this is going to involve work on standards and everything like that - would be if all of that could go back through the one pipe instead of all needing its own pipes and different proprietary systems and something like that. Integrated communications for all of that.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...we have a lot of improvement that can be done on the administrative level. Going back to that kind of Internet of Things type concept, our apparatus [Anymore?], million-dollar apparatus, loaded with sensor suites and stuff. Our apparatus should be able to talk real time all the time with our facility managers, our fleet managers, our mechanics. I mean, that happens in the airline industry. You take a typical Boeing

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								airplane, a Boeing airplane will be talking to-- pick your airline, Alaskan, American, or something like that. A plane will be talking to Alaskan's fleet services all the time, as far as, "Hey, things are running fine," or, "Hey, we got a little engine problem." And you, or the pilot-- you as a passenger or the pilot may never know that it's going on, but when the plane lands, the mechanics are there with the lawn guys, and they're checking stuff out that was a minor glitch that didn't ground or crash the plane, but it was something that was talking to them. Why fire engines, ladder trucks, and stuff can't be doing that same thing?
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	Personnel issues throughout the department. It's kind of a pain in the butt, as far as something happens to one of my crew members. I get notified as a company officer by voice, or they talk to me. I have to notify the chief. There's this whole up and down, and stuff, and then there's the paperwork shuffle that catches up with it. There could be so much more automation on there, that firefighter says. "This happened," or, "I'm not feeling well," or whatever, that there may be an initial set of verification. But then there's a lot of automation, where it goes all the way up, payroll automatically-- there's stuff that automatically happens in payroll, as far as now you're getting paid out of sick time versus regular time, and a lot of automation on the staffing that could be done.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	We could do a lot better on training. Training is probably one of the single biggest costs that public safety has, just because the citizens pay us to be able to respond. And so they'll put companies out of service for mandatory training and whatnot, to all drive to central points to get a message, or whatever, or to drive to a central point to do some kind of manipulative stuff. If there's a lot more of that that could be done, either in an online environment, or some kind of interactive environment through technology, that would save lots of time and money on that regard...
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	From a technology aspect, one of the challenges that I've seen is that a lot of efforts, DARPA, and some of the other federal efforts and stuff, are really focused on kind of the short-term stuff, as far as how can I get

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								some OTS, off-the-shelf-type stuff, maybe slightly modified and into public safety. There don't seem to be a whole lot of people, if anybody, that are doing the long-term stuff, certainly for public safety. Maybe more for Internet of Things, for the bigger general population... There doesn't seem to be any public-safety longer-term stuff that, yeah, this is going to take probably five, seven years to get it, but there's a big-need-type stuff. So that might be a big gap, or a shortfall that I've seen.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	And in theory, at some point - and maybe even with the tablets - but we should be able like pre-fires. You go and you do a pre-fire building, and you have a layout of where all the fire protection systems, where the water shut off is versus the sprinkler shut off, and the alarm panel. And In theory, you should be able to pull that up on a computer and be able to see it. Right? And we're not really at the point that we're- I think that we're capable, but we're not doing that yet. It hasn't been used, but that could be a benefit.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	I mean, it would sure be nice if we were able to get to a point where you had wireless earbuds, kind of communication that was voice-activated or something like that.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	But it's not to say that maybe within the CAD system, because it recognizes the address and/or the premise, that it might have a screen that provides that information out of our inspection database that tells me exactly where the sprinkler shut-off is in the northwest corner of the basement. That there's sectional valves on every floor. The fire alarm panel is inside the lobby or not. That type of thing. So there's always that potential to, in theory, provide more information upon dispatch.... And again, to have it available. You don't want all that clogging communication radio traffic, but at least to have that available on MDC to look at and maybe have a better idea..... So it's a building that I've never been to or I'm not familiar with, so that information would be even more beneficial.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	So along those lines, as far as knowing something about the patient, we get that to a certain degree. It's very brief, it's not lengthy. I don't get their

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								history, all their medical history and all that. That's kind of around the corner. I think that's-- whether it is available today or not, we have access up there at the alarm center that people could kind of sign up for a certain program, that they can put in their medical history and all that kind of stuff.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Some people don't want their information out there, that kind of thing. But sure, before [there?], especially if the person is unconscious or they've got a decreased level of consciousness that they're not really [inaudible] and not providing information, to be able to pull something up and go, "Oh, look, they've got a seizure history. [inaudible] probably," or something like that, would always be beneficial.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	And so I don't know if this is really necessarily communication-oriented as much as I could wrap it around to you, is this almost sci-fi where it's having like the fighter pilots dude, stuff like that, having a level of visibility in the screen in front of your face. Which also, whether it be a mask, whether it be a visor, that it could be a protection as well. But to have something that has a level of that 3D animation that shows you a structure where you are within the structure, even to the point that maybe you could see what other units or individuals.... Well, in theory, we should be able to do that all in a sci-fi world, like each one of us has a GPS.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	If I fall through a floor, next thing they know is that I'm on floor 22. The ability to maybe be able to track people with individual GPSs in our backpacks, in our radios, something like that. So at any given point that the command post, like you see in the movies with everyone standing around the big 3D, 3-dimensional, and you could see where all your units are, all your people. I mean, you want to talk about making the fire scene safer, as well as more efficient.... And to have an ability to see that, will probably alleviate communication to a large degree.
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Other than I think the bigger picture you're able to see in that 3-dimensional way, or know where people are, the less communicating you're going to have to do with knowing where they are.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	So I'm green because I've got over 75% of my bottle. All of a sudden, I go yellow. Without me even knowing it, already somebody out at the IC is tracking it and they know that Engine [Name], the officer is getting low on air. We're going to have to think-- now, already they could be planning for a transition, for a replacement crew. You know? I mean, that much more ahead of the game to make things more efficient, instead of me having to recognize it where I may miss it and/or then have to communicate it out audibly because I've got to raise them.
Wish_List	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	part of the newer technology we're rolling out is an Accountability software component. So we can do accountability of our firefighters and first responders on scene and to be able to see where they are, what section they're assigned to, who's assigned to what engine, and have level one and two accountability. So we got iPads for that, and we're testing that type of technology. And I see that's where that newer technology is going to help us real time to be able to see where our people are. We haven't implemented in any of the GPS-type technology on the subscriber units, on the portable radios. We have it on all the engines, so we can see where the engines are. What we don't have is on the person. And a lot of that technology is up and coming...
Wish_List	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	...We're looking at Bluetooth communications to the air masks to the radio so they don't have to put the radio up to their mask to talk. They can just do a push talk from a big button or their speaker mic. And it's audible through their mask. Health and wellness vests inside their turnout jackets. We're looking at taking advantage of that technology through our radio system. We just opened up 100 of our portable radios to do some testing with that Bluetooth interface.
Wish_List	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	I think having the GPS information, not only X, Y, but Z, so you get elevations in buildings. So you have a better understanding where a subject or a person is and how that overlays onto say, a Google Map and building plans. So we have a better understanding in terms of where we're at in a facility, or a big warehouse, or whatever type of structure we're in...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	...new technology in the SCBAs of having some type of information on the screen in the visor of the SCBA. Kind of a heads-up display of all your health-monitoring applications. Your air, it's all up here in kind of on the mask itself. It's not impeding your vision, but you can just look to see that it's there. So that technology's coming, but that's more localized to the person. But you have to get that information back from him back out to the command post or to somebody that's being able to monitor everybody. And that's the command post. That's the backhaul. Is that over wi-fi? Is that over Bluetooth? Is that over cellular data connection? Using The Big Pipe, FirstNet? I mean, there are so many interactions to that technology, how we backhaul it. Are we using local wi-fi? Are we using a mesh technology to build upon everybody else's little node to bring it back? So from that perspective, I think the jury's still out. And I'm not sure we have a really good understanding how to do that yet. Or people to be able to set that up to make it work on the fly.
Wish_List	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	Building pre plans would be one huge part of the information when they're in the building having access on some type of a device to be able to see where they're at and the layout of the floor structure once they get in there. Because they've got gloves on they're in a IDLH environment where they have to have their air mask on, and they have gloves on, and they have to have some means to be able to see where they're at after they get in there. The data for emergency radio calls. Who they are. Where they're at. How bad are they hurt. Just being able to share that information right now. It's all verbal, but once you tie that in with the health and management of their systems that identify their-- or maintain their health monitoring, that is another-- it just all ties together in how you get that big picture back to the command post.
Wish_List	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	Coming from my current perspective of managing and helping maintain communications for everybody. Identifying how we could do communications through LMR, cellular, and satellite communications. To be able to balance between the different technologies so it automatically roamed between your best connection which would entail

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you never being out of communications unless you were some place underground that you had no access to the sky. You had no access to any cell sites or radio site. And even there having that understanding that if we had a wireless network wi-fi access point most everywhere, we could utilize that technology to get back to the mothership somehow, someway, it's having that connection. But having the satellite system in play that allows us to roam between the networks, commercial versus the government, and having a means to talk back to the mothership.
Wish_List	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	At this point, I think we're using a lot of the technology. We just need to refine it. I think it's going to be a challenge once we start moving forward with really trying to define the use of The Big Pipe for FirstNet. Access to it. Who gets what.
Wish_List	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	I think getting that background information, unless it's like a safety issue, is more efficient coming over the MBT than having somebody tie up the radio.
Wish_List	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	The only thing that I ever really thought of that I think might make an improvement is on the push-to-talk button. Having to push two on each side before you can transmit because a lot of times you know, like I said, everyone has a radio. If you're up on a roof or you're in confined space, and you're beating away at something with an ax, your push-to-talk button gets hit [crosstalk] on accident frequently, and when that happens, it ties up the radio for about three or four seconds... It's a single button. So I don't think it would be that big of a deal that'd require you to squeeze both sides.
Wish_List	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	So our radios, if they could be more of a smartphone. They wouldn't be as cumbersome. So anything like that and you could actually get text on the call itself. So you could be-- so instead of being on a radio, you could just be on the phone or speakerphone.
Wish_List	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Yeah, so if you're dealing with a medical and you've read it on a text on the NDT, but then you're at the scene, and you're all, "What was that apartment number again?" And it's on the-- so I have to walk back and if

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it was just... right there, it would be much easier.
Wish_List	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	The ones we have does have the capability of an instant read, as far as directions, that would be helpful. And I know that this technology is out there. That it's location-specific. I think the ones we have now is all the routes are from the fire station, as far as directions, but if you could do it like Uber or Lyft does, it's all site-specific
Wish_List	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	So where the hydrants are, as you're responding, time of day, traffic, any specific hazards.
Wish_List	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	My pet peeve is that there's no specific class on radio ethic, and so you want to be short concise and some people just love to hear their voice and if they're always talking. And in an emergency situation, it should be just what's needed to be said... Because you imagine, if it's a fifth alarm, there are so many people. And people are just stepping on each other when they're talking... And not everyone needs to be talking at the same time.
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	...They have things like thermal imaging cameras that can check heat. Well, they make them now where it can be embedded within your SCBA mask, so you don't have to carry a camera. It's like Terminator vision, right? So those kinds of things actually do exist. They're just incredibly cost prohibitive. So a lot of the technological solutions aren't that it's a pie in the sky like, "Oh, I wish they invented this," it's more, how do we get it to an economy of scale that a fire helmet costs \$200? How do we get a thermal imaging camera that anyone can use, and that is state of the industry, state of the art, full color, let's you know temperatures when hot, and find victims? How do you get that to be also like \$200? So that way a city can go, "Yep, every single member is going to have one on their mask." And that way every single resident is protected by that fire department, right? You walk in and they can scan a room and go, "[inaudible]. There's a warm body right over there." That technology does exist. It's just that it's cost prohibitive. Same with things like iPads on all the rigs. It's an expensive thing, and people like to steal them. And so there's a replacement cost and a maintenance cost for things like that.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								But if you had those on all the rigs you could do a lot more. For example, when you do the hydrant checks, you could just have the iPad with you, and you don't have to do it on paper.
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	So I think smaller, lighter weight versions of all the equipment we already have, would be the wish of almost anybody. The number one line-of-duty injury for firefighters is usually vehicle accidents, and cancer, and some of those things. But a lot of times the injuries are back, knees, hips, so those are all repetitive stress things that happen. So that's the thing you'd like to see reduced, right? ...
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	...So you've created this situation in which they have all the technology and all the protections, but the protections don't do them any good because they're actually a detriment, right? Imagine you could probably get yourself to a place, where the suits that the bomb diffusers wear, would probably be the best things for us to wear too because if there's an explosion we'd be protected. Except, have you ever seen those guys try to walk around? Right? You get to a point where you go, "That's not working."
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	So I think that's the biggest thing. It's actually the weight. And the thickness and the protective factor became so much on preserving the body inside from flame and smoke, and forgetting that this body is designed to go rescue other bodies that have no protection. You've weighed me down so much now, that you have slowed down my ability to save you from a burning building. Now, I'm more protected, but you are less protected and the response will be slower to get you. If I've got the protection, maybe you can incur some injury to save you, as opposed to, there's no chance I'm going to get injured, but there's no chance I'm going to rescue them either. So if I could do anything, it would be light weight everything...
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	...maybe there's probably a cultural and a sociological component to what's our acceptable level of injury because there was a-- and this is controversial, but there was a cultural movement in the fire service when the firefighters are dying, like, "Oh, we've got to make it to where that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								never happens again." It's like, well, what if we had that response for our military? We have to make it to no military member can die. You go, "Well, that can't really work," right? Because the best way to do that is just never take them to battle. Well, fires happen either way. So you're going to just not put us inside? And then no one will ever die, but no one will ever get rescued either. And at a certain point, you are more important than us, and I firmly believe in that. And so I think, no, if we can make lighter gear that maybe there's a better chance I get burned, but a better chance I pull you out, well, we've won, right? There's treatment for burns, right? But there's not a treatment for death. My own opinion. That's editorializing....
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	...There are probably other things, like the estimation of distances that would be better. I know these kinds of things do exist with laser levels and stuff in construction industry. And they can do it when a guy hits a home run and it says, "That was 551 feet."
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	[RE: distance estimation] that engine only has 1,000 feet of hose on it. Two beds of 500. So it's really only got 500 feet of hose. So from a hydrant to wherever it's going, it's got to get it right in 500. And if it's not, it needs to know that, so that we've got to connect the two sides and to take it to 1000. They also have hoselines that are pre-connected to the apparatus and the hoselines that aren't. And they have to go as far as on the fourth floor or the third floor, but looks like it's in the front of the building. Do I think 200 feet will get there or will it be 250? ... Everything is eyeball... It would be interesting to have something-- it would be hard to have, but we're talking pie in the sky. Perhaps a [crosstalk] that says that, from here to there is 450 feet. And you go, "Perfect! Pull 500. We'll have a little extra." And you would know.
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	[RE: distance estimation] I know the technology exists. The only thing where it wouldn't exist is on the inside of structures that you didn't have the blueprints for. You wouldn't know, and maybe that's the pie in the sky, right? Well, they have scissor stairs and they're all the way in the back, so you have to go all the way to the back, up the stairs and back, to go.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								So you will traverse 50 feet. You will lose 50 feet for 3 floors, and you'll traverse back 50 feet, so 250 gets you to the door. Therefore, bring 300. You know what I mean?
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	[RE: distance estimation] If that kind of technology-- distance estimation is something we do a lot. With our ladder, same thing. And we have ways of doing it. There's ways of looking at the power poles and what's on the power pole, and going let's-- "14 feet. 17. 20. That window looks like it's about 20 feet. Okay, get the 24-foot ladder." But if there was a way you could go, "[inaudible]. It's 21 feet to that window sill, we need the 24."
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	I would say thermal imaging and distance estimation would be two things that we can't ever have too much of. How far away is that? How tall is that? How hot is that? Where are the viable bodies? Because even the thermal imaging technologies and the heat reading technologies that are out there are limited, not severely limited, but they're limited. So that would be something that you could-- they can't see through glass because it reflects the way they read the heat, right? Even if there's a body out there, I'm just going to get a reflection of that, so you go, "Damn it! I wish I had one that was more logical than that."
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	And then I think the other thing is it's going to happen anyways, but it takes longer for it to get here. And that's probably the question of anything technology for the fire service, is it's already there at NASA, it's just not here, would be battery technology... Battery technology is always a limitation for any rescue service because-- how great is that radio? It's terrific. How long's that battery last? 45 minutes. Okay, so it's not [laughter] that terrific, right? I could get you from [City] once, and then the battery dies, right? And that's with our thermal imagers, with our radios, with our rescue tools. You name it. We are limited by the distance of a power cord or the distance of battery. Or sometimes, if you are not going to go electric, the amount of fuel that you have to power the machine that's going to give you-- that you're bringing to the scene to-- you know what I mean? So I think battery life is the new future towards,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								how do we fix some of those problems you're-- if the batteries lasted longer on anything you have, everything would be better.
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	[RE: smaller, faster batteries] That's all what we're waiting on. Everything has to be powered. How are we powering it? And power is your limitation. And it could be a cord or battery or fuel, but that is your limitation. And how do you extend that and get more efficiency and more power? Got to get that too because it's got to be more effective. You don't want the same thing 10 years later, but it lasts twice as long then, but that thing hasn't improved. That tool isn't stronger, or that camera can't zoom further, or whatever it is.
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	Whatever NASA is doing could work for us because it's the same thing. It's emergency responders in a dangerous situation with a limited amount of resources and time. That you need to know everything about them. If one were to go down, how to help them quickly. Their issue is distance and help. And for us, our issue is temperature, heat in the building. But in the same respect, I got 30 minutes of air on my back, and if a floor falls through, you need to know-- you would love to know my pulse, my respiration, and all that. "Hey, he's breathing and his heart is beating. We're good, guys. Let's go get him." Or, "No pulse. No respiration. This is even worse." Right?
Wish_List	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	[RE: distance estimation] And I know it exists, but if you could just get off and point at a window and have a red dot go [inaudible], 21 feet... Perfect. Now, some people will say, "Well, that's part of being good at this job is the ability to--" then as you get good, you'll eventually develop that.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	[RE: Tablet Command software] So when we have an incident, you can manage it. And then it gives you your companies here and then we have check boxes. So if I were a new building. So these come up automatically so it's quick, right? I mean, if I need to add things in I can. You just add a column. So then you just move people to where they need to be. So you have all your laundry list of people that moved and then I can just double click, just like everything back and forward really easy.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								So it works out really well. So I really do like it. But what I was going to say also is that things that could do better with them is either have it color coded. So when we have a single alarm or a double alarm or as it gets a greater alarm, each company, each code would be different. Because the problem is when we move people in and out, if I have a greater alarm, I don't know where they came on. Or even a line that just kind of moved them back into the box of where they came from.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	[RE: Tablet Command software] ...So it would be nice if we could color code it or divide it somehow so that it would just be a little easier. Also, it's like we have a notes column up here so you can write things, you can write things in, right? And then they stay in this little part, but you have to open it every time to see it. It'd be nice almost if- because we more than often don't use this whole thing so it'd be nice if maybe the bottom part is where you need to write your notes so we could actually see them as you're moving people.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	[RE: Tablet Command software] ...That's the other thing they don't have would be needed if we had like a sync somehow. So because the battalion operators usually get there first, the battalion chiefs. And if they started doing this when I get on scene, I take over. So I usually either just take their iPad or I watch theirs and catch up. So depending on what's going on... but they have the smaller iPad, so I'm kind of spoiled now that I have the big one and I'm getting old and going blind so it's easier to see [laughter]. So it would be neat if there was just like a sync or a press and boom it just comes to mine and I already have that stuff on there...
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	Yeah, well it's weird because we're such a hands-on kind of job. So it's hard to think about what the technology would be. I mean, Dreamworld having drones to be able to fly around a fire ground would be kind of cool, but could also wreak absolute havoc, so. And knowing the players that we have, it wouldn't necessarily warrant something like that. But it would be fast.
Wish_List	FF	U	Supervising	46-55	21-30	Female	FF-U-013	[RE: drones] So it's kind of nice to be able to actually see that. But if

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					you've got good officers, they're reporting it back to you anyway. So I mean, the biggest key is to have-- would be to have communications that never died.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	That would be the absolute clear communications. Somehow get it so that people when they have their Scott masks on, you can actually understand them, and they're not totally muffled, or maybe if they just sounded like Darth Vader that would be fine, so that you can actually hear them. Yeah. So I think that's the biggest thing is some sort of magical communication that always works.
Wish_List	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	...And maybe this a little bit outside the skew, but one of the things I always thought would be really beneficial is-- so you're an engine company. There's four people working together, but they share the radio channels with everybody that's going to a call. I wish that there was a way for them to just be able to talk to each other so nobody else can hear them, so they can have regular conversations. And it would be nice if it was Bluetooth technology where they're the only ones that can hear it when they have their masks on, to be able to talk to each other. And I'm sure there's something out there that is close to that, but we don't have it.
Wish_List	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	So I think that my number one thing would be that, either through the use of our radios or some device, that we can get accurate physical accountability on the fireground. So it's not just the X, Y coordinate. I want the X, Y, Z coordinate... And that information would be transferred onto a device that the incident commander could say, "Oh, there's firefighter [Name]. She's on the 10th floor of this building." And we don't have that technology now. And I'm sure there's probably somebody that's working on it, or it's probably military grade. But from an accountability perspective, somebody gets turned around in a building and they're lost, I'd like to be able to say, "They're right there," and we don't have that...
Wish_List	FF	U	Supervising Field	56-65	31-40	Male	FF-U-014	...number two is what I said earlier. I think that the development of Bluetooth wireless technology for clear, better communication built into

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					your air pack would be fabulous. And it needs to be bombproof, bulletproof, and so there can't be any loss of communication in smoke, heat, and all the other things that go along with it. ...
Wish_List	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	...I'll just say number three, that without the Bluetooth technology and the limitations of that, the current microphone cord that we use is way underrated. And I think it's almost criminal that they are giving any firefighter in this country a microphone cord that, at 160 degrees, begins to degrade...
Wish_List	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	I mean, I think, just from my perspective, that all of those are firefighter safety issues. And anything that goes along with improving firefighter safety: better ability to communicate, being able to transmit a radio message that gives me more accurate location of where they're at, and not limiting the number of people that could be communicating at any given time.
Wish_List	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	And I guess, maybe the other thing, if you're looking for technology, although it exists, is probably better thermal imaging camera technology that would allow us to visualize things more from a distance that was more user-friendly. But that's rapidly evolving.
Wish_List	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	..on my number one thing in the wish list was the accountability component. So if we have the ability to X, Y, Z somebody within the building, that means we have good communication and connection with them. And if I can also look at that person and see what the temperatures were for the building, and the heart rate was for that firefighter, and any other sensors that we thought were important, all of that is situational awareness. Most of it, it might be that's normal, but there might be something that's out of the ordinary that's going to make a difference for somebody, some day.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	If we had all the business blueprints of all the high-rises and in here we could send that to the MDT, reality is the bandwidth can't handle it right now. And the engine company, we're there in two to three minutes. You don't have to chance to look at it anyways, we don't have iPads that we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								can't take with us that could give us the blueprints and take advantage of technology, which is capable of doing that. We're not capable of using that technology yet.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	We need to build a -- start taking video and share that on-scene with the Incident Commander. We need to share that video with the fire department operations center back at headquarters and with the city's EOC, if need be. And in a perfect world, I'm sure the government would like it, having spent time in the federal government, the National Operations Center. If it was another 9/11 and another building comes down, we should be able to shoot video and send it directly to the National Operations Center, coming from us, not a news station. We just don't have that capability, we don't have the systems, we don't have the money to have the capability to do that.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	we need to be able to do GPS tracking. Maybe GPS is the wrong-- we need to be able to do geographical tracking of our personnel. GPS can be problematic with height. There are other ways to do that. And I think even cell phone technology, but we can't get everyone to carry a cell phone. We're not going to issue cell phones to every single firefighter. They don't need it, so. But that's the next evolution, to be at an incident such as a high-rise building across the street here, have firefighters in on it, and we have the blueprints and the markers of each individual firefighters show up in a 3D model on an iPad, showing us exactly where everybody is.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	So I want to be able to send drone video to my EOC, to my fire department operations center, to my Incident Commander, to the National Operations Center and it's significant investment to make that happen. So the applications here of drones in a earthquake are huge because imagine if I can send a drone and it does a windshield survey for me through the air. Software that can detect if buildings have collapsed or it'll do a base survey, give you a baseline. It knows the position of every building. And then when the other earthquake happens, you send the drone out again. It'll pick up what buildings have collapsed

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								because it'll notice what's different in the software. That technology is just about there for that. And that could save me a lot of time, but I don't have anybody to operate the drones in emergency.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	So I wanna see a full-time drone unit. I think it would be very beneficial to the fire department. Probably three people with a van at a station that could respond 24/7. We can save lives. It's not just to view fires. That's nice.... But where we could really make a difference is out at [City] where we have a lot of cliff rescues and surf rescues and we can send the drone over, locate the actual victim. Because we spend a lot of time searching for the victim because it's very difficult to get an exact location on a cliff where you can't see the bottom.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	...So there's another technology that is capable now and it's called Wave Relay technology... So you can put a camera on every rig and you create a mesh network, and I can see the arrival video of it, every fire, of every rig here. We don't have the money or the will to change... And there's a benefit for Wave Relay, they can penetrate the ground, so they can do the camera aspect and I can instantly see the arrival video in the operations center, where at home on my iPad.
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	where they problem is, you don't always have your mask on. So what do you do when you don't have your mask on? Now you want to go back to a lapel mic. How do we make that happen that you can talk in either one?
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	This is going to be problematic, but telemetry of each individual firefighter. Biometrics. Right? It's like aliens, right? We should be able to see everyone's heartbeat and that kind of stuff, so how do you make everyone wear that?
Wish_List	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	Special events. So earthquakes and special events, they're kind of the same thing. I want the ability to do live satellite mapping....
Wish_List	FF	U	Supervising Field	46-55	21-30	Male	FF-U-016	Live satellite mapping. I need to be able to tap into a satellite 15 minutes after an earthquake and go, "That block is devastated. This one's fine.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					This school got 300 kids in it, but it didn't collapse. It's okay. We don't have to go there." And so forth. So that live satellite mapping is huge. So when it comes to special events, same thing. How do I monitor my special event live with that kind of aerial view?
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[RE: solving comms issues] Money which is you never have enough of. And... money gets you the equipment that you can put the technology on that can take some of the human factor out. If that person is sitting over there typing in dispatch notes and it's showing up on the terminal in front of me, I don't have to wait for them to tell me what they have. And I--and I know departments that have that. They've got dispatch terminals, you know they've got a terminal sitting right here. And let's say that I go out and you know if I'm doing law enforcement stuff and I want to run a license plate or a driver's license, type it into that machine, boom there it is. That technology is available, it's just a matter of do you have the money and the infrastructure to do it and the bandwidth to do it?
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[RE: solving comms issues] Training-wise, again, I'm going to talk to [Name] when I leave here about getting their people to prompt them to go to respond coord. And it's going to have to be that they tell everybody on particular calls and if they have more than one call they're going to have to move them to something else which we all have. We have a response--every one of us have response channels on these radios. And you can segregate your two calls and only they would hear the two of them...
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[RE: big events] It's supposed to change. You should be able to have 3 to 4 different levels of communications. What you really need, you need the people making the big decisions of getting more assets and all that that has nothing to do, you know, all right, let's start at the bottom. You have your grunts in the field doing your work okay? They need to talk to each other. And then they need to be able to talk to their supervision. The supervision needs to be saying, all right, this is what my grunts need. Hey, I'm not the person to get it, I'm the person that tells you I need it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								And then it goes up that food chain to the people that get it and then tell you how--feed it back down.
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[RE: big events] And so you've got those levels of things. And they should be communicating amongst themselves and only certain ones, as you move up, should be talking to the next level. That's training. That's frequency. Allocation. That is, you know to make sure you have enough of them. That's the ability to talk to other agencies when you bring them in. Like we do Auto Aid with the two of [City] but we're on the same radio system. We do aid with the city of [City] and [County] and [City] and [City]. I can't just talk to them. It's--you know [City] is not in my radio but [City] comes here and [City] goes there and we go there to do things. I can't talk to them. I have to get on a response channel instead of being able to say--tell my dispatch I'm going to be on [City]'s frequency. And just dialing over to be able to get to their primary 2 or 3 things.
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	I want a terminal that when you stick it in a holder in a truck or in whatever, or plug it up in a vehicle that it uses the same radio to communicate but it brings me my data. It's like my--all right, it's like your phone and your Apple watch. Okay? Your Apple watch gets its data from the phone. Okay So when I put my headset on, it has a Bluetooth to my radio and I should be able to--you know when I--whether that's a headset I'm talking on, a face piece for my SCBA, all of those things could be seamless that I can use them and they're effective because if I'm trying to take that microphone and talk into it while I'm wearing a SCBA you hear whah-whah-whah-whah and you're guessing at 4 of the words that I just whah-whah-whah-whah, you know? ...
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	...And so the other thing that was... we go out and collect all this different data. We have all this stuff in file cabinets and electronic files and it sits right over there across the road or it sits in this building. And it should be on a server or multiple backups that are tied together and when we go somewhere they should be able to take my pre-fire plan for any building and send it to every deputy so they know what they're going

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								into. All that data is out there. I own a 3D camera. Okay? I can go do a 3D map of every building in the [County] if they wanted to do it. And then I could turn around and have--you know that could be linked to where they could send it to them and they could say, okay, we're going to this building and be able to walk through it, any of the public spaces...
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	...If somebody wanted to let you pre-plan their house, we could have their pre-plan. We shouldn't have to say, well, where does little [Name] sleep to know where to look for little [Name]. You know? That stuff should come right there at our phone, be able to go straight to our phones, go straight to our terminals on the truck...
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	...You know it's a whole lot better if you have a guy coming in whether it's a deputy going to somebody's house on a domestic call or if you can have a picture of the front of the house, a picture of the driveway, it's easier to find. If you can have a layout of the house or a general idea of how the house is laid out or a building or a school or a church or whatever you know where the pitfalls are.
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	And you can do training on those things where, you know all that stuff's available. I mean half the houses in this [County] have been up for sale at some point in time. So the floor plan of those houses are available. And, you know, it's all public out there. You just got to go out and get it and put it in there and tie it in to be able to use it. That's a problem. We don't take that data and mine it and then regurgitate it when we need it. And 'cause we don't have the systems to do it.
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	And if you just tell them, all right, I want you to go to all the--there's between Zillow and a few of those other sites, they got all kind of information about this stuff. And the [Job title] has dimensional drawings of every building in the [County]. We have aerial photographs of everything. But I can't pull that stuff up driving down the road unless somebody feeds it to me.
Wish_List	FF	R	Supervising Field	46-55	21-30	Male	FF-R-051	And if the system says, hey, I'm sending you to my house, okay? If the system has the data it ought to be bam. It's touch of a button there's a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					map, there's the this there's--and so, hey, there's the map. Okay I know where I'm going, I don't need the map. What's the floor plan of it look like? I can, you know, the guys on the truck that are fixing to fight the fire or whatever and say, hey, oh, wait this guy has a sprinkler system in his house or this guy has--this is where his electrical disconnect is and this is where--all that stuff is available and can be added to--
Wish_List	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	...I tell people every time when you go in somebody's house to a first aid call, the question you ask before you leave is did you check your smoke detectors lately. Don't have to go back there 2 weeks later and say, hey, you know we're checking people's smoke detectors. Ask them. Put them up before you leave. I don't care if it's 2:00 o'clock In the morning, they're already up.
Wish_List	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	...Be something as far as like communications. Make it simpler on a fireman level where you could--you know if you need to--instead of turning a knob, push a button. Just because that's easier and I don't have to see what number I'm pushing the knob on or what zone I'm on. You know if I had something that I could just a button and it was automatically on the channel that I wanted to go to or whatever that would definitely probably be beneficial to me personally.
Wish_List	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	I guess if the prices of the gadgets weren't so expensive and/or if we as government entities did not always have to go with low bid type stuff maybe more people could have, you know, the better technology... and that technology may make the difference between whether somebody comes home one day or somebody shows up at their house to tell their spouse and their children that they're not coming back so.
Wish_List	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] That's different situation. We shouldn't ever go in there without back up from law enforcement and that happens a lot. If we can't get through 911 call takers to get the accurate information that we need to be able to respond appropriately. We get a call for a car crash, sometimes we have got a tractor trailer carrying hazardous materials; we walked into the scene that can potentially be life threatening for us. You know we need that information, so you are asking what kind of information we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								need, we need everything supposedly we could put together before we get there because when we are driving to a scene our hamster wheels are spinning rapidly.
Wish_List	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] Complicated calls; if it is a known gunshot wound of some sort, we want to know are the police are en route for one, you know? Is the assailant still on the scene or was it self-inflicted? You know we need that information. because lot of times we can help law enforcement if we go and we can kind of get close to where the address is and we can take mental notes of cars going by people will see walking.
Wish_List	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] I feel like the system that our governments talked about in the past that integrates all of our communications with one I guess global type of knowledge sharing you know. [restaurant name] Restaurant that is down here on [City], it is in the city of [City]. Well the fire station from the city has to come from way down national highway near [City], we are just a hop and a skip, it would be nice to know if there was a heart attack taking place there and we could go and respond there and they talked about over the years... the government actually talked about one time or another that this new CAD system would send the closest respondent in an incident whether it is here or the city, because who cares where it is coming from as long as somebody is there to help quickly.
Wish_List	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[RE: AVL] [S4] We now we are doing that, with rural metro. I was at the interstate and a call came out in the county that was just maybe across the river, we might be a little bit closer than another responding truck even though it is their area, they would send that because we are close. Now our system is doing that for our truck at this time... What I would think would help as if, if I am sitting at the interstate and and a call goes out to [restaurant name] I would like to know.
Wish_List	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[RE: most important information for typical call] [S3] What it is and where the address is.
Wish_List	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[RE: most important information for typical call] [S2] How many is hurt.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[RE: most important information for typical call] [S2] Possible hazards.
Wish_List	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S2] The only thing that can be helpful is how many resources you will need. Like say he is driving and I come with someone else; he is there and I am already there and we could you know brought a tanker or whatever else if we had a house fire or something.
Wish_List	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S3] Be able to communicate better on radios.
Wish_List	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S2] More towers around here.
Wish_List	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	[S2] I would like an app that's like I mean you know I mean this is just like Google, like Google Earth you know [indiscernible] you can actually see what the house looks like so you can prepare to pull like say here is the Alpha side which is the address that I [indiscernible] say they come over the radio it is at the garage, garage we know it is on the left of the house, you know.
Wish_List	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	One thing I wish and I wish that we could do is you know those things they sell at [Organization]? They are in the mail box section, they are green, and they have fluorescent letters or... I wish our county would commission people to buy them for each mailbox throughout the county. Because all the time, we are in a fire engine, we are coming down the road and of course we have got phones, it has got GPS and we have Active 911 which is super, and we will pass a mailbox and it's like you've just passed it, it is two blocks back, you've got to turn around and come back. Meanwhile another guy is pulling in there... Because he knows what is going on and he gets in there first and if you got a truck you got to turn the truck around and come back. So, I wish -- I've been trying to figure out a way for the county to do a grant or something so everybody in the county can go to the courthouse and pick one of these signs up and put your number on it and just put in on the mailbox.
Wish_List	FF	R	Field	46-55	5 or less	Male	FF-R-055	[RE: means of getting more information during major incidents] Probably

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					cell phone.
Wish_List	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	To get new radios. Go digital. I would like to have iPads on every truck for GPS mount, so when we go on a call, we could hit it on the GPS and pfft --here it is. Shortest route, there is a hydrant here, you know, and we've already got a lot of the buildings we have [City] right now, we've got set plans. Because if there is a fire in that building we got the plan on the iPad, we just throw it up and there is a hydrant here, there is a fire outlet here that we plug into and like [inaudible] and electric. We visit that every year to make sure there is no changes and find where all the plugs are so we can hook up to it if there is a fire, we would put it out really quick and we are not to worry about.
Wish_List	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	[RE: hydrant details and status via Active 911 app] Oh that would be -- that would be awesome. Because [laughs] when you have had hydrants before we open them up, they are dry.
Wish_List	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	A new CAD system for dispatch. I know they're working on it but of course funding is a big problem for everything we'd like to see in a CAD system. In a probably the biggest thing that would help I think there's eight fire departments in [County] and if we could all get together as one and have everybody with common terminology, common communication equipment, common systems and consistency in vehicles and training I think that would make a huge difference here in having a little more elaborate repeater network.
Wish_List	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	... so it would be nice if we had a better group here. We have pretty good coverage now using other people's stuff like the Heli ski repeater and the hand repeater and the forest service sites but it would be nice if it was all one repeater network public safety.
Wish_List	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Yeah I agree I think it's one of those things having two separate organizations we really rather than kind of both having the same problems it would be nice if we could just be working together like it's just one problem that we're solving so we could solve a lot more problems if that kind of makes sense. When it comes to technology I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								definitely have a few ideas that I think that will be kind of in effect here soon. I think drones are going to be one of those things that are going to affect emergency services in general and we've got a drone for search and rescue with infrared.
Wish_List	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	... The other thing is using drones for mobile repeaters I think will be something in the future. So a lot of these canyons where we get restricted being down in them we can launch a drone that would then relay that radio signal out for us and so I do think that that will be a possibility here in the not too distance future.
Wish_List	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	But yeah just having that ability to launch a drone in the back country so that's one of those things that I definitely see that progressing and that's using more of them around here but also for seeing size ups so having that ability to launch a drone and have it arrive on scene before us so that the officers can have it on their iPad and be able to do kind of that 360 a little bit before we get there because we get so much snow it makes it difficult to do that 360 and actually determine everything about the building so it's not uncommon for us to have 5 to 10 feet of snow around a house that we're trying to trudge around to see what's going on or what kind of structure we have and so have that ability to do the virtual 360 would be huge...
Wish_List	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Aside from communication you know on [equipment name] this year for back country rescues you know those haven't been around very long but I'll tell you what what a difference that makes. Instead of having to pedal your mountain bike up some ridiculous hill to a patient than just zip up there on an [equipment name].
Wish_List	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	I think it would be good if there was a way to be able to share progression in technology... so if there was some sort of a way that there was kind of a way to get this information out about the changes and communication and technology would be beneficial for different departments.
Wish_List	FF	R	Supervising	36-45	11-20	Male	FF-R-047	... If we had more money we would have other things. Thermal imaging

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					camera would be awesome to have for structure fires but I mean that's a lot of money for one of them you know.
Wish_List	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	Yeah if I had a deal in my truck to where I mean this is going to sound funny for being such a small town but at 3 o'clock in the morning and you have a heart attack come across the radio you know and it tells you [Street]. You're thinking of the heart attack and what you need to do and not necessarily where the streets are at so if there was something that atomically had like you know kind of like a GPS display in the trucks that were tied with our call system somehow and it pinpointed that and gave you the directions to get there you know that'd be pretty neat I think.
Wish_List	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	My wish list would be newer trucks. I mean newer gear. We probably got some of the oldest equipment. I mean we need new jaws of life, we need more time, more training, more time to take training, a slower paced life but I guess that's kind of my biggest deal maybe a little bit bigger, I'd like to have a few more pieces of equipment as far as vehicles and I mean I'd take all the new technology they got out there for fire or EMS or anything like that I mean you know we've got well even training stuff. You know they make the smoke deals with the smokeless room and of course it wouldn't hurt anything but it would be like you're in real structure house on fire you know just things like that that would be neat to have or nice to have for training purposes.
Wish_List	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	I would yeah have more volunteers that don't have to have a day job. I'd love to have a full time probably and I am paid like I said but I guess when I became chief the old chief decided that the town pays \$45 a month to the chief well he decided that wasn't enough so he the department agreed that they would pay \$45 also so I make \$90 a month which still isn't I mean you ain't here to make the money because it ain't going to get you very far but I mean I really think it would be awesome to have anybody that just didn't have to work. Or a retired guy that you know still had a lot of life, a lot of heart left in him that like I said could just take care of all the government stuff maybe was good at writing grants doing stuff like that you know run the meetings just keep all the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								training up you know that we need to do annually or every two years and all that you know and possibly you know like I said kind of IC the fire situations.
Wish_List	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	That's something else though as far as technology would be nice to have but it's very expensive is being able to communicate from the driver to the guy on the back of my truck. Now they make the headphones and the mics but I think last time I priced them it was like close to \$3,000 per maybe set for truck but there's times that fire is roaring so hard and fast and loud and cedar trees are blowing up depending on where you're at you know but especially if you're out west on those big task force.
Wish_List	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	...if we had some type of a helmet mic system to where we could still be safe with our gear but have that earbud or something and be able to just be nicely talk to our driver and say get me out of there or get closer or we're out of water or something you know because the new truck that we got built is an extended cab and I got that for the reason was going out there you know a place to put all your gear because that bunk gear takes up a lot of room.
Wish_List	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	I have maps and stuff on my phone. It's not through the department but if I ever needed to I could pull it up. The Who's Responding app does have a mapping part on it to where they can, with the E911 systems that we have in place, now that dispatch can pinpoint that call for us and then if we need to we can map it out. I personally have not got to use that on the app yet, but I think that is a very helpful thing because a lot of times, even though we are on a a 911, you know addresses out here, you know, and all of our roads are marked. Our calls don't necessarily come in that way because [Name] down here on-- he's on [Street] place down here by such and such. Well he'll call in to the dispatch over there and say, "Well I'm 2 miles east, three miles south, a half back east and follow that last road in." We have gotten calls that way, and then so then you get a mix match. Now dispatch can look [at] that and, you know, trace the call and pinpoint that. I have not got to use that yet, but that is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								something that's going to be, you know, very helpful. Now if we get everybody to call in and say, "I'm on county road such and such," and you know, "right south of intersection such and such," that would be great, you know, we could get there quicker, you know, or save the confusion.
Wish_List	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Yeah get some more you know headsets to communicate between driver and the crew on the back of the truck.
Wish_List	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	More training apps. Just you know apps that I could say guys go to this app and you know let's just review some stuff here you know just basic stuff like that because maybe they can do it on their personal time at home. I think that would be kind of interesting to really see that way especially from a volunteer perspective they don't have to come here and then you know but it keeps it fresh on their minds you know at home you know and I think that would be that would be a good app I would believe. I don't know if there's one out there or not...
Wish_List	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	...On the communication side of it just becoming more precise and being able to handle you know hear them like having ear pieces and stuff like that. I think that's a wish list.
Wish_List	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Yeah I mean obviously you know our trucks are getting outdated. I mean but you know we're working on a tanker right now to replace the one we've got and it's going to cost over a hundred thousand dollars just for the tank part and the bed and that's not including the cab and chassis on the truck which was donated thankfully and like our jaws you know ours are hand me down, hand me downs and I mean you're looking at ten to twenty thousand dollars for a set of those you know stuff like that...
Wish_List	FF	R	Other Public Safety	26-35	6-10	Male	FF-R-048	...you know there's always things like gear. Gear is more important. I was at a training deal extrication class and one of the instructors was the [city name] Fire Department and he's like yeah he goes it's funny

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					listening to you guys talk you know you're going gosh I wish we could get a truck you know, I wish we could get you know jaws, get this he goes we got guys complaining because their gloves are a [town name] Fire Department over there that I'm on we got a couple of guys don't even have gear and well until they just got some wild land gear but at a structure fire they can't go to a structure fire. They can show up on a car wreck...
Wish_List	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	...you know we've got guys here that are you know it's getting to the point where we've got to get some more gear but you're talking just the coat and pants alone are about \$3500 that's not including boots, that's not including helmet, that's not including gloves you know, that's not including you know radios, you need hand tools, flashlights you know I mean there's a lot of hand tools that would be nice to equip every guy to have you know just for breaking glass you know but we have to have everything up to code. We can't just go down the hardware store per se and get a hammer you know to do this and that. Would it probably work? Yeah but inspection wise we got to have everything you know the fire tools that work better you know for our stuff.
Wish_List	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	[RE: equipment failure] You got a helpless feeling that you can't help you can't do anything. I mean yeah we can support and kind of you know our EMR's can you know get the guy stabilized. Yes the guy survived I mean we may have flighted him out and he did survive but I mean that's seconds, seconds matter you know and what makes it harder in this area I didn't know him personally but when you're on a scene and it's involving your friends who people that you know and treat like family it makes it harder and everybody knows everybody you know kind of a deal in these small towns so we want our stuff to work.
Wish_List	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	First and for most I'd ask I want all my firemen to have brand new gear. I want them safe. I want well we've got a couple of the trucks that we need updated. Those would be the first things and then from there it would be the tools. It would be jaws, it would be just new hand tools you know whether it's Halligan's whether it's you know just I mean anything

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you know just seat belt cutters just stuff that you know we could equip all of our guys that way we're not searching in trucks going which truck is out again you know everybody's like okay I've got mine right here we're good...
Wish_List	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	...you know just that way our new SCBA's, our air masks. I mean ours are getting we're able to still do them but I don't know the price wise on those but I know they're expensive to replace and I know ours are getting old you know I mean because I can't afford to have a guy in a building in a structure and that thing messes up because then we've got to focus all of our attention on our firefighter and that's what it's going to be.
Wish_List	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	[RE: cause of communication issues] On the scene just guys being able to you know hear their radios you know if they're in and out because you get on scene things are loud. You're going to have to yell at guys you know face to face. I mean you and I are what five feet apart we'd be hollering at each other most of the time trying to communicate you know depending on the scene. Just being able to hear each other and you know so we can understand each other that would be a main thing I think on a lot of it. So just you know just improvement radio wise I think would be huge. You know we could have every guy have ear pieces on their gear or something included in there where we can be talking and doing stuff and hands free stuff would be great.
Wish_List	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	[RE: radios] Better clarity, hands free you know because if we have big gloves on you know trying to it's hard to do so stuff like that would be good. Just durability of things being heat proof, waterproof you know most phones can handle a lot but you know I mean we're in situations where you know we've got a lot of heat, a lot of moisture stuff like that would be good...
Wish_List	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	...Mapping in trucks I mean if we could get to a point where we could have GPS in trucks to where we cannot have you know one guy searching on his phone we can just punched something on the truck give us directions right there in his truck you know just to get there

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								quicker you know to save on confusion.
Wish_List	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	[RE: personal cell phones] ...I do know that as a volunteer I do believe with most carriers you can get some sort of a discount on your phone, being a professional public safety, but I do believe you can as well for that. But I'm an advocate for safety all things safety and I wouldn't expect the county or my entity out here to issue me a cell phone, but a good shareable radio system would be great and it would be--
Wish_List	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	I would say a radio system here that worked fully the way it should be. We have limited dispatchers but still have channels specifically for sheriff's, specifically for EMS, specifically for fire. You know and that's not just saying have dispatch channels for all but have one dispatch channel but as soon as you're dispatched have a good enough radio system to be able to assign a fire channel to a structure fire that's going on and if there's another wreck at the end of the county and you send out fire units to that two incidents on one channel it's impossible, it's impossible. Better communication out here. If any technology we could have I would say that one (00:30:06) 100%.
Wish_List	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	Wow. As far as fire service goes? Oh gosh. Outside the box...oh man have a robot show up and put out the fire. I would be out of a job but--
Wish_List	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[RE: current state of technology] It could be upgraded a lot. It could be upgraded a lot.
Wish_List	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Computers, MDT's, tablets could be upgraded a lot. A lot.
Wish_List	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] More so the need and use of this changing. I look at it when the world's changing with the phones, with how small computers are now. We need an upgrade too because we're not an entity that just sits there on the spot. Our whole job is about so we need something that can actually move on us.
Wish_List	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] I want to say the biggest thing would probably be GPS to where they could plug in an address and show them where to get there faster. That's the only thing I can think of right now.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] I'd have to say just from and I'm being biased now because of what I do my assignment now is along the lines of WMD and Hazmat response is the standardizing of equipment at the state and local level. Why do I say that? In my research for my thesis I found that between especially in the health public health between public health and the federal level when it comes to WMD biological the training and equipment is standardized across the board. When you get down to the state and local level everybody's stuff is different which makes it difficult to accomplish the mission.
Wish_List	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] Always the equipment isn't actually reliable. That's the other thing I'm finding. Once it goes to a criminal investigation you know a brand new student out of law school can probably get their client off if that equipment that was used is not correct.
Wish_List	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] I guess it just irritates me with the GPS on firefighters that I can to an app right now and I can find where my app A is exact location but if somebody is in the building we're guessing and running around trying to find out where they at so I get GPS on something when some locator on firefighter equipment to where as soon as they go into a building I can look at it and it'll show me a full scale. That'll probably be the best invention ever made right there.
Wish_List	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] I want technology but it would need to be an easy use. Nothing complicated nothing where it takes more than four or five steps to get something to them and that we have a problem. As long as it's a do this do that we have no problem. For me fixing everybody's equipment the more steps it is the more problems they have.
Wish_List	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	Probably, just for it to work 100%. I mean, there's no such thing as 100% of the time, but just to try to maximize the percentage of times that it would work versus not work, and every aspect of it.
Wish_List	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	...In the police world, if you want somebody to use something, it has to be simple. The more complicated it is, it's very seldom getting used.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	So it would be nice to be able to just look really quick and see if there's any kind of alerts, or history, or things like that before I get there, and before they're able to give it to me if they're busy.
Wish_List	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	[RE: nearby departments] I feel like we're so close that we should be able to talk on the computer or something, you know? But they use a different program than we use, we use a different program than the sheriffs office use. So if it wasn't for cell phones and the crappy radio service, sometimes it would be that we couldn't get hold of somebody that's two blocks away from us... It would be nice if we all had the same kind of computer system or something so that there was always at least one way to communicate with that person. If a natural disaster happens or something and we lose radios and cell phones, how do we talk to each other? So that's kind of concerning.
Wish_List	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	...we were just talking back there the other day about pursuits. Whenever you have to get out of the car and chase somebody. I personally have been in a couple where they run into the woods and you don't know where they are, and up until recently when we had a K-9, it's a lost cause unless you go in there and he's hiding really close... So one of the guys back in the control room the other day said to have a drone come off of the car [laughter], and follow the guy with lights and things like that, so... I mean, it would be great. But something to be able to track if someone left or something like that, that would be cool...
Wish_List	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	if you have a big crime scene or something, having a drone go in and photograph or video the entire crime scene before anybody goes in, so that nothing is disheveled or anything like that. That would be cool just to be able to use it for photographic purposes.
Wish_List	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	The only other thing I can think of is having my camera communicate with my radar, my speed radar, to reflect on the video what speed I was being shown on my radar. Because I've gone to traffic court many times and the defendant has said, "Well, I can't see what speed you saw." And it's true because I would have to put on my body camera and point it towards my radar, and that's just one other thing that I have to focus on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								while I'm trying to pull somebody over, you know? ... So it would be nice to show-- I don't know how it could tell my video monitor, "Hey I'm showing that he's speeding at 45 miles an hour," but for court purposes and things like that, other than my word, I don't have any other way to prove--
Wish_List	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	All the time because we don't have work phones. So we use them to look people up on Facebook and do research like that and stuff if we need to. But it would be nice if we had work phones, but I don't mind doing any of those things on my personal phone either.
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	That would be bad, for instance, if I was eating lunch at a restaurant and if I happen maybe to go out of my sector at a restaurant, or if across the street was a different sector and if something was going on there that I couldn't take care of, if I wasn't aware that was happening because I wasn't on that right channel if I didn't have my computer screen up, then there's kind of a delay there in response time, whereas if it was a-- if the calls were more based on your location or whatever... your proximity-- There's maybe a five-mile proximity radius or a mile proximity-- so you can kind of see what's going on in your immediate area. That might be a little more beneficial.
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	I need to know as much as I can about what's happening in a timely manner. There's a little bit of a disconnect-- I'm sorry, not disconnect. There's a little bit of a delay, because currently, when someone calls 911, the information goes from a call taker to dispatcher to us. So there is a few seconds even to a couple of minutes delay in getting the information. So I like to-- especially if it's a hot call, I like to kind of get as much as I can, as soon as I can before I get there. I like to know who's responding, how far away they are, their approximate arrival time for when I get there, traffic [accident?].
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Now we can take it out with us, but it's a Toughbook, so it's kind of bulky. So most people don't take it out unless they're on lunch break. Something that would be awesome would be if we had cell phones or small tablets where we could continuously get updates from the call

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								instead of having to go all the way back up to the call and look at it or sort of having to carry that big thing with us. That would be great.
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Man, that'd be so awesome if there was a way that I could-- some way of kind of-- if it was a big emergency-type situation of-- kind of like an all-call, all law enforcement in the area. Because even here in [City], we have constables, marshals, sheriffs, state troopers, police, and we don't communicate.
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	[RE: interagency communication] ...on a patrol level, at least here in [City], it's-- yeah, we don't work together. We don't take calls together, nothing like that. I mean, occasionally, if I see a deputy making a traffic stop, I'll pull in behind him, and walk up, and ask, but there's no communication on the radio, nothing like that. It's just more of in-person communication. So if there was a way-- if we had phones or something like that, if there was a way-- if there was a terrorist activity or something that impacted a lot of people for every law enforcement type official in the area to kind of have a way of kind of getting on the same page and kind of coordinating a little bit. We're not merely staring at chickens till the heads go off [laughter].
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	the idea of the pager is that if an incident happens - I mean, that's still an open line of communication - we're supposed to carry those. They still use AA batteries, so they go out from time to time. But a lot of officers don't carry them. But yeah, if there was a way for-- if we were getting police cell phones for them to be on a whole separate net or something greater. So that way, if something were to happen, and all the phone lines or all the cell towers get clogged up, we're still able to communicate.
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Well, with that Google Maps and-- [hang on?], with things that would give you real-time updates on traffic are a huge benefit, especially if there's a crash and you're trying to get to it, and 35's all blocked up.
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	So we have in-car cameras. Right? And the technology is there for us to be able to stream what is going on in our car to our supervisors or

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								anyone else, but we-- I think, mainly due to bandwidth, we do not have that feature turned on. But that would be something that would be kind of nice. If you were going to a call, to be able to look to see what your partner is currently seeing would be very helpful. So you can have an idea of maybe where I should come in from or if he's in trouble, what's going on or I look at the suspect before you even get there in case he bolts and just starts run.
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	But we don't access to the driver's license database. That's DPS, so we can't do that. We've had some companies come through with missing persons type software where you can take a picture of somebody. It does facial recognition. Some type of facial recognition software would be great, because a lot of times, people lie to you about their full name, or their real date of birth, or whatever
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	So I would like to be able to do everything that I can do in my car away from my car via a cell phone, or a tablet, or something portable I can put in my pocket, or put in a backpack, or magnetic somewhere, or something like that. I'd like to be able to tap into our camera systems, be it our downtown-- our cameras around town or, more specifically, our body cams or cars. So that way, you can kind of see what you're getting into, or kind of see what your partner's getting into, or whatever. And just, with those tablets, have wide open access to do what we need to do without being restricted.
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	From a recruiting aspect or as an officer that travels a lot, I think the main thing is-- my biggest concern with where we're at technology-wise is just being able to communicate with outside agencies. Like I said, traveling a lot to different schools and military bases, especially in today's day and age where you're seeing attacks happen more frequently. Yeah. I would hate to be at an event and have something happen and, I think I would probably feel useless if I wouldn't be able to communicate my position or communicate what I've seen to any of the law enforcement around unless I get on the phone to their dispatch, which that ties up a hand now. So yeah, if there's a way to-- some type of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								technology that, whether it be a cell phone, or a radio, or something like that I can bring that, if there was an emergency, it'd be able to pull everybody together in a given radius to help kind of coordinate and handle the event.
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Instead of having a Toughbook, they had a tablet. And it was in an OtterBox, I think. But they had a dock. So they could pull the tablet out, and then dock it, and have the keyboard and all that. But it was still a pretty good-sized tablet. So it still wouldn't be something that I think you would want to bring on a call just because you have to carry it. If it would be smaller, you could just put it in a pocket [laughter] or hook it on something, or strap it your leg, or-- I don't know, anywhere other than in your hand. That'd be good.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	One way to communicate that something as simple as overtime is available, or something as serious as the city is burning, we need as many officers as possible. One of the main ways they're going to communicate that is through a pager, which is great, but not everyone checks their pager. Not a whole lot of people have it on the all the time. So having a cell phone with a large type of - I don't know exactly how you would say it - some sort of network that everyone's on. A wireless messaging system that everyone is communicating through would be very beneficial.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	So I could see that being-- I mean, other than that, sure, it could be less bulky and less heavy. That'd be amazing. It's just one of those things we've gotten used to, and people don't really complain about it because it is what it is. So, in a perfect world, yeah, the radios are weightless and have no bulk
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	Yeah, weightless, adds no bulkiness to the belt that's not already there, or decreases that bulkiness, crystal clear. That would be great. Comfortable, not just with the weight and bulkiness, but, like I said, I wore an earpiece. Wasn't always the most comfortable. Crystal clear on both ends, going out and coming in. Probably not the typical patrol as more-- I probably get this from my new job, but maybe being the ability

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to transcribe it, for like an audit.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	I think the cell phone would take care of it. Like I said, it's you can do paperwork on it, you can take pictures, you can take video. I think that would take care of a big chunk of stuff.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	I'd like to know involvement of the residence that I'm going to and then any specifics, for instance, if it's an apartment complex how do I get there? We have hundreds of apartment complexes just in my sector. So I can't memorize all of them. But if we got a certain apartment number we can, via kind of back routes, figure out where the building is inside the complex. And at that point get a little closer and start looking around for apartment number. But that takes time. And it keeps a policeman driving and everything else.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	So there are CAD layers that are showing the exact or very similar exact design that what the building looks like on the map. But what would be better would be having Google Maps or a satellite image that we could actually look at. That would help us in a variety of ways. We have a foot pursuit. Now, we know that there's a coal field behind here they could be hiding out, there's a tree line behind we think they could be hiding out. And all we have is a pastel color background with a square outline of a potential building that could or may not be accurate.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	CAD is supposed to integrate with Google Maps. It's not currently. If that were to happen that'd be fantastic. It can be a great tool.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	We have a guy who died in the woods, and we went to find him in the middle of the night. There are probably 12 to 15 different paths to get to this particular transient camp, and we had cops everywhere. And if one of my cops had fallen, had broken a leg, had set on a booby trap, or had just gotten lost, how am I going to find them? And there are solutions out there. Google's got a great one that allows you to kind of track each other via an app. And that's good if you've got a cell phone tower, but I would definitely want something like that personally, so I can make sure that everybody is okay if things were to happen.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	I worked robbery as a detective there and I was violent crimes response, so I was more mobile than I was in an office. And to have the ability to do that stuff in the field would be great, because if I was on a search warrant and I wanted more information on the search warrant, obviously I would then go back to a computer.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	An earpiece that's capable of filtering both the noise that you're listening to and being able to hear the radio. Currently, we have a single one that just stuffs in your ear, and everybody is deaf in the ear they use it in now because they have to turn it up so dang loud. People that work downtown, they all wear earpieces and they can still never hear anything. So there's no way of something working for both. I know that there's jawbone technology that's just supposed to be really amazing and we've never seen that.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	We have a huge deaf community here because we've got some of the only state schools for the deaf. And we have no means of-- we have very few sign language interpreters, maybe one citywide that's certified to be an ASL. One's on my shift, which is helpful for us, but if we had a device that we could teletype back and forth, that'd be great but we don't. Sometimes officers use their phones or they use a notepad, and that's not-- it's not fair to them, and it's not an effective or quick means of communicating.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	A Google car driving us somewhere 80, 90 miles an hour. Yeah, that'd be great. I think that's fantastic. With the ability to take over when we need to because sometimes we need to violate traffic laws or drive over a median or a curb. That would be great. A more effective way for everybody to communicate, jaw bone technology so we can chat with each other without having a static background or that kind of stuff would be really nice. Having our tech work everywhere. It doesn't work everywhere. It doesn't work in the jail, it doesn't work in some apartment complexes, it doesn't work in the woods sometimes, as far as radios and even our cell phone. That would be nice. Couldn't tell you anything else. Taser's don't work for crap. That's a little outside of what y'all are going

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								for, but maybe 50% of the time, so more effective less-lethal means would be very nice, too.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	So all of my, star-six-seven, I'll call the person back. Well, star-six-seven can now be defeated which means that if they spend any effort, they can go back and figure what my telephone number is. And if someone that doesn't like you finds out what your telephone number is, that's a problem for a cop. So a spoof, a way of spoofing the telephone numbers so they don't know who's calling you, that would be great or just having the city number that was designed for us to--
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	I mean, pie-in-the-sky, I would like it to be delivered to me in some form of, I would say, a tiered-alert, meaning certain things should be classified as higher priority. They're assaultive, they've attacked police officers before, they've made threats before. I would want that delivered in some sort of readily recognizable emergency-type alert. Something that maybe is-- and I mean we have to be careful, of course, but maybe a medical condition, like they have Alzheimer's and they're known to walk off frequently and often they end up at the coffee shop. I want to be able to access that information, but that's secondary to anything that's going to get me hurt or someone else. So again, a tiering effect, and then something that's delivered to me instead of me having to request it and wait for that response.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	Certainly, we do get calls on individuals that are known individuals for whatever reason. Maybe it's a warrant service or - I'm just throwing something out there - a parent will call in on their son. So we have the name, we have the date of birth. It would be nice if, instead of me having to again pull over my car so I'm trying to be safe, search all over the databases, if somehow there was a tool to do that for me and return it to me.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	So if I go beyond just hardware-- I mean, obviously I want to the hardware to be fast. I want it to be reliable. I want it to work if I'm in town or I live out of town. If I'm with my family, I don't want to have to carry my pager and my phone. I want to have one device that can somehow split

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that. If I need to be able to do work on it, I can do work. If it's also my personal device, then it can do my personal stuff, keep those roles separate. But again, it's one piece that goes with me. From a software perspective, I am tired of having a new sandbox for every single thing that I do. Our RMS doesn't really speak very well to our CAD. So again, maybe-- it's easier to explain this way, I think. If I am going to take a call and I need to write a report, I'm going to run the person on the way to the call. But that never makes its way into RMS. So I'm going to type them into my CAD, even though it's on the same computer. I'm going to then-- I'm proficient. So I alt-tab between the screens. But some officers click the bar at the bottom. So they click over, they type the first name. If they can remember the whole thing, then they click back, look at the middle name, click back. And it's a long process. And we duplicate work. Then, if I have to do an arrest, I got to fill it out on arrest paperwork. I got to fill it out on any affidavits I do and it's a manual process. So I would like to see an integration between all those desperate systems that make it so I'm not repeating the same work over and over and over again, giving me more time to go out and do what I'm supposed to do, which is take calls.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	But the joke is, officers today, our job is paperwork. We spend more time on the administrative side of the coin than actually answering the calls for service, which is what we want to do. We want to get out there and help you, but every time I do that, I have a mountain of paperwork I have to fill out. And again, I know technology can bridge that gap for me
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	So I guess the only thing is, I believe that there is some great potential in a-- whether it's nationwide. I would hope that it's a nationwide. I don't know what it's supposed to be. But I also know that things can [laughter] somehow fall short of what their goal is. But I really would hope that - as an officer that travels around the state, whether I'm teaching or visiting to look at other technology - I would like that at least something that can be statewide, that's seamless. And again, pie in the sky, I would like it to somehow work with my existing technology. I won't have to carry two phones. So if it can somehow handle that transition of, this is either my

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								personal phone that does both or my city-issued phone that I can - whether it's a double SIM or something - I can still do-- because I mean, these phones are huge now, which is great. But I don't want two of them. So something like that would be-- it's the only thing that I just hope that we get there. I know we will someday.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	[RE: body cameras] ...From a technology perspective, it was awesome. No matter how the camera was oriented, it always looked like you were standing straight up and down. It could see in a dark room. It could be almost completely black and you could see everything in there. That's awesome. But from an officer's perspective, that's scary. Because if I walk into a dark room and someone knocks me over on my head, I don't want you seeing everything in the room better than I see. I don't want the room to appear straight up and down when I'm upside down, because I'm going to make decisions based on what I'm experiencing. And if your video that you're watching in a nice cool air conditioned office later doesn't match what I experienced, you are now going to be conflicted. Am I lying? Is it this camera that is really good? So we pumped the brakes and said, "Well, hold on." Again, that's great from a technological perspective, but what are you trying to get out of a video that's attached to an officer? You want their perspective. You want what they see. So let's not make the camera better than the officer's eye. Don't illuminate that room when the officer is still in pitch black. So it's things like that that, without that perspective, we could have made some-- in my opinion we would have made some bigger mistakes.
Wish_List	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	...even with the new implementation of body cameras. To have everyone to have a cell phone, because you have to go find a dock I guess now. I mean, I don't know the whole spiel about it. I've heard bits and pieces. But you have to find a dock, upload the video, and then where if you had it on your cell phone, you can classify the video right on your phone and be done with it. But they don't issue a cell phone.
Wish_List	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	[RE: department-issued cell phones] Some in specialized units are. They'll be issued them. And usually, some supervisors will have them

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								too. Or they'll get a cell phone stipend but patrol officers don't. They don't have that option. So that would definitely be beneficial to have just a work phone... Just even something that you could just check out at our equipment room and just have a work phone with all the applications that you need to do your job. I mean, that would be helpful. I mean we have the Toughbook to be able to have that as well would be instrumental, I think, to be able to do some of this stuff.
Wish_List	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	Just the functionality and the car itself too. Like the big Toughbook right here, you've got the big console, everything in here. Why can't we just have a flat screen or something on the dash that you can touch or something like that? Because I was in a really bad crash on duty. And I got hit on my driver's side door. And you get stuck in there. And it's like a coffin because you've got one side and you can't get out. And it's just so big and bulky and then you have all your gear and everything else. So that would be nice to have something, maybe, more built in to make our car functional.
Wish_List	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	One thing I wish were changed, we have pagers. To this day, I have a pager [laughter].
Wish_List	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	This is so old (pager) I don't know what to-- how to set it up." They page overtime notifications on there. They'll page road closures on there. Yeah, we have a pager [laughter]. So to get rid of that would be amazing...
Wish_List	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	So I have a hard time trying to fit everything on my belt as required in policy. Especially if you're some of the smaller officers, male or female just depending on your waist size, it's like you don't have enough real estate to fit all this stuff that's required. So a lot of people have dropped tasers or that kind of stuff. Now they're adding the body camera's right here. And you have a radio right here. You have the mic. This is just here. And then you're like-- and then you've got your notepad. You've got your pens and then everything around your waist and your gloves. So I would hope that sometime the technology could help us remove some of all this hardware that we're carrying around all the time. That would be a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								big deal. I mean health wise for officers too. I don't know very little cops that have back problems or hip problems after years of doing this stuff.
Wish_List	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	So a big thing when I was in that unit is we did crash reports, which are big forms. And so then you have that, which is separate. But then you also have your call screen, which is CAD. So when you show up to a crash you run somebody's license plate. You run their driver's license. We would of loved if that information from the CAD screen would have populated onto our crash report. But the interface for the two is just out of the question. So we have to get the information from there. We either copy and paste it if we can. Or we just have to go to the other side and type it in. So if we had the fields that auto-populated or things like that, that would be easier because we have to fill out a lot of paperwork as it is. And a lot of it is duplicate.
Wish_List	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	In a perfect world, I would like technology that's small, that I can talk to and would get rid of all the stuff I have to carry [laughter]. Some things are never-- I mean my gun, taser, that kind of stuff. That all makes sense. But some of the other stuff, if we could just kind of work it into one thing that was small and light possibly, that'd be ideal.
Wish_List	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	I would think the big thing would probably be just work cell phones that were just multifaceted and functional. Even if we didn't have all of the same companies and everything wasn't able to auto-populate. Just if we had something kind of available at our fingertips if we needed to without lugging that Toughbook everywhere. If you have somebody in the hospital or something you've got to go sit with them. You've got to lug that thing around or lug it out into the jail. And then you're carrying all this other stuff. And then you got this. And your hands are full again. I mean, if you get in an incident, you're just going to drop everything. But still, that second that you take to drop something. So if we just had something smaller.
Wish_List	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	But obviously, in today's day and age, with the technological capabilities, I think having the ability to go on your phone would probably speed things up to a certain extent if you could search that database, the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								EJustice database, the Linx database, if you could search that sitting right there while you're talking to somebody, sure, instead of having to back to the car, or go back to the station, or make a phone call. I'm sure that would speed things up.
Wish_List	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	You just have to A, know where to go look for it, and have the capability of doing so. I guess it would be more along the lines of knowing how to go get that information. And if that process was streamlined and made easier, then I think the information is there.
Wish_List	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	I think an ability to identify folks, whether it would be using the new retina scanners or the fingerprint scanners. We have fingerprint scanners. They're just not as... competent as what I would like to see. Again, if there's prints in the federal system, I think if we had a better version of that, where we could very easily identify folks, I think that would be good...
Wish_List	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	...I think the ability to talk messages into computers, talk messages into whether it's report writing, to dictate, I'd want a self-dictation there...We have the technology on our phones, we have the technology everywhere else.
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	I guess, if I had the ability, if you could have a real-time satellite picture, that would be nice. So if you can get an overhead, how you can get an overhead of a satellite picture of an area. If you could get a real-time to see if it was a burglary and you heard that the liquor store was being broken into and you could pull up a picture of the liquor store, a video showing real-time and see the person running-- You could say, "Well, okay. Well, I'll use my dog and go to this area." ...
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	I mean, like I said before, if we could get the radios to work through different buildings or terrain or stuff like that. That would be nice. And I'm sure that they tried to do it this way, but sometimes it doesn't work out. But dumb down some of the technology. So instead of doing all these commands to do one function, just make it one button, make it simple. If you want to talk to someone, hit talk, and then go from there or

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								make it more of a push button, easier.
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	[RE: using technology] So it's almost like if you ever heard the phone the jitterbug, the old people's phone? ... It's just numbers and talk, and that's it. So almost the same thing. If it could just be a little more dumbed down, at least on my end. I mean I think the younger kids that are on the department, they're doing fine with it because that's their generation, but--
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	[RE: using technology] So it'd be nice if you can just smack a button or something.
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	Well, I'll say that we have camera systems for our dog. When I'm with the SWAT team, we have a camera system... It sits on the dog. It's like a periscope almost, it looks like. And we have a wristband that you can wear that has a little, tiny monitor so you can see where you're searching. The only problem with it is, one, the antennas usually go bad. So how far they can go from us, we lose reception. So it would be nicer if we could see that a little bit better. And it's only black and white, it'd be nice to see either color or infrared would be nice... It doesn't have a night vision capabilities but it'd be nice. Or even just thermal. Thermal would be nice because then you could just see the heat and say, "Well, there he is. He's hiding behind the chair, "even if the dog doesn't see him or smell him, so.
Wish_List	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	...I know there's a plan to make this private network and I think that's very important because I think it's going to help-- well, one, it will be a private network that law enforcement could utilize. If law enforcement is just on that network, it will be a great thing because now you don't have the commercial networks competing. And anytime there's something as big as inauguration, the commercial networks generally go down anyway...
Wish_List	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	...primarily, I would like to see one dedicated just for audio/video. I would like to see a technology that's dedicated just for audio/video and then there can be another broadband that handles data like just

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								processing, PC processing, and things like that. But if it had one that was dedicated just for video so that you don't share that same bandwidth that you would be utilizing for your day to day operations. Because even today, when we have network-- sometimes you might have all the cameras running, and if I'm pulling it-- if camera's running through a URL's no problem. But cameras running through where I have to-- like ours, we have to log in to a system that's a client server base, that's running on the same system that all my other servers are running on as well that's handling day to day operations. So sometimes if I run them all at the same time, bring them up, I could start having problems... You have resource issues. Bandwidth issues.
Wish_List	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	...I think it's important that if we could get all of that under-- and primarily, like I said, since it is the hog of information right now, I think that if the audio/video had its own-- literally had its own broadband network where it traveled on, and it didn't touch any other part of your network, I think it's a good thing. I think it would really help solidify the quality of video that we get, we can get even more high def quality video coming. Because sometimes we got to dial it down because of the network that it's running on. You still see what you see but it could be a whole lot more high def. The cameras have the capability. We just got to dial it down because the system can't take it.
Wish_List	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	...So being able to share information between agencies, a lot of that has to do with individuals allowing it to happen. The powers to be allowing that to happen.
Wish_List	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	...But I think from one major point that I can see that I think that would help everybody is I don't even say [City]PD should be-- [City]PD can have their own video system, but I think if the city had one system that the [City] government was responsible for and it was one agency within a city and that private network ran those cameras and now everybody shares it... And it will be a centralized location that controls all video that comes in the city and they support law enforcement. And all law enforcement has the ability to access that video. But certain ones,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								certain law enforcement agencies might have the priority.
Wish_List	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	...if you have one major one like the centralized location, money could be funded to that one central organization all by itself. And now you don't have to worry about fighting over each agency, "We need more money for the video aspect of it here," and they go, "How do you best distribute it?" Everybody share from the same pot, but all the cameras are available. There may be some of those agencies would not even have access to them, because they don't have a need to have access to them. But for those who do, you would have access to what you need at all times. And they would be supported. I don't know. Homeland Security would support that grant. I don't know who it would be, but it would be on their private network...
Wish_List	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	...recently, whenever you came in service at the beginning of the shift, you would say who you are, what your ID is over the radio... If you have any specialized training - let's say you have a patrol rifle; you're certified in field sobriety testing - you would say that stuff at the beginning. And she'd say, "Okay, I got you in there." But if you have a computer, now, we don't have to do that at the beginning of our shift anymore. Through the tablet, I put in my call sign, I put in if I have a partner, I put in specialized training, and I hit submit. And then it logs me on automatically. And so they came out with an order probably six, seven months ago, maybe a year even that said you no longer have to come in service over the radio if you can on the computer... Instead of the dispatcher adding it in, you're adding it in... You have to add it in every time... other than your name and ID, it doesn't really associate anything with you, like training, which would be nice if it did, because then you don't have to add it every time.
Wish_List	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	The dash cam would help, yeah, but the problem is once you're out of view of the dash cam, it doesn't really help you at all.
Wish_List	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	I think the body cameras are the big thing.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	And I think, yeah, being able to do more stuff on the cell phones because, right now, the people on foot are very limited in what they can do, other than use the radio. So I would say increasing the technology so that people can run people's names for warrants or run people's driver's license on their departmental phones and using that platform and with the tablet to kind of integrate it all.
Wish_List	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	So a lot of times, you'll get a caller, and they'll say that they have just been robbed, and then they'll hang up. Or they'll tell where they're at, and that's it. So you don't know if they were robbed at or at knifepoint or-- all that information is good to know before you get on scene, but the dispatcher just doesn't know it yet.
Wish_List	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Some of the things, I think, that would benefit our profession and some of it even already exists - it just needs to be improved a little bit - are shoulder mic system for our portable radios. It would be awesome to have that cordless opposed to a long cord that tends to either get caught in something or it can theoretically be used as a weapon against you, strangled with
Wish_List	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	So sometimes, I only get the last half of the dispatcher's transmission. So if that delay could be shortened certainly or it would switch over more efficiently from scanning, that would be ideal too.
Wish_List	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Faster computers in our cars, more reliable for running stuff, tags, people, that kind of stuff. Anything that cuts down on the amount of time you have to be out with somebody or dealing with somebody that may be a threat. The cameras I'm sure are going to get smaller and smaller. Like our body-worn cameras, they're like a square like that, but it's like a four-inch square or something right now. Anything that you could make lighter that we have to carry is always going to be good because we carry a lot of stuff.
Wish_List	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	...Depending on what type of deployment we're using. So it runs anywhere, I think, between-- with your vest, because your vest is heavy, 20 or 30 pounds... Average. So anything we can do to make it lighter,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we're happy [laughter].
Wish_List	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	No. I guess the biggest thing, I think, that would help first responders is an easier, more efficient way to communicate with each other when we have to. Like us and the fire department. I mean it's not something we need to do every night, but when we need it, it's important. So the more time we can cut down on that, the better.
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	...So instead of me going directly to the source, I now have to go through somebody else who has to communicate what I'm saying to somebody else. And then that person gets a response from the ECC, and then they communicate it to me what I'm trying to deal with whatever situation I'm dealing with. Same thing within the basement. If I'm in a struggle in the basement, and I don't have-- this person outside could be inside helping me, but they can't because they had to be able to communicate with everybody else coming in, what's going on. And usually in that case too, I wouldn't be by myself, it'd be two, three people with us, and then one person outside. But if there was a way to make it all work without having to do that, that would be better.
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	[RE: change] I think it's good. I think as technology moves forward, we should move forward. Instead of staying behind the times because there are so many different things that have come out that would make our job easier, like GPS on the phone, the computer telling us where to go, how to get there. So I think as technology progresses, we should progress with it.
Wish_List	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	...I would guess things would continue down that line. I mean, kind of the seamless integration between phones, computers, social media, will really kind of-- it'll just kind of all turn into one thing, I would imagine, at some point in time. Kind of like it has with cable, and cell phones, and things like that. So, I mean, I would see a progression like that more in immediate communications, easier communications. Obviously, now our cell phone's gone from something small to big to back small again and more of a computer. But just making sure the process is more efficiently, longer lasting batteries as time goes on, the availability to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								keep them charge...
Wish_List	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	...I would see at some point, the integration of our traditional walkie-talkie radio would go away and it would become-- it would be a push-to-talk app or some sort of-- it will all be-- obviously, the issue is it has to be very robust. And radios are very robust and cell phones aren't as robust. But I would imagine, at some point in the future, it'll all become one device. And I know now there are some walkie-talkies that really kind of have that phone capabilities things out there. It's really able to happen. But having a robust device that kind of can do everything, I think, will really be where at for in the future of law enforcement. You won't need a radio and a cell phone. You'll have one device that'll handle your reports, your body camera will be associated to view whatever on there. It will be your radio. It will be your kind of serve-all for everything. That's what I think in the future.
Wish_List	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	As much information as possible and it's concise, a manner as possible. And that goes for patrol. That goes for special events. I don't need to know where every port-a-potty is on the Mall. I need to know the resource where I can find them. On the street, I need to know where I'm going, why I'm going there, and what could be a danger to me. And it is, in some ways, the same. I need to know-- on a large-scale event, I need to know where I'm going, what my mission is, what my hazards could be, and what is expected of me when I get there.
Wish_List	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	Respond for a suicide attempt, well, how are they trying to commit suicide? We need to know that because if it's a gun, it's different than if it's pills, things like that. So there's been a couple of times where you wish you had-- and there's always hindsight, that you wished somebody asked the questions that you needed to know, or they didn't give it to you fast enough. Because there can be a delay and that has gotten so much better over the years. And sometimes you just have to wing it just because you don't and you never will have the information you need until months afterwards, so.
Wish_List	LE	U	Field	46-55	21-30	Female	LE-U-040	...when I go out on patrol, I don't have a computer in the car. I have to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					borrow a car from motor pool. They don't have computers. So we've tried to instill in the dispatchers that, don't just dispatch it over, it has to go over the air too. We need to know who's or where. Because if I hear somebody yell for help and they can't tell me where they are, somebody's going to recognize their voice and will remember where they are. So it's a matter of you have to backup the technology with good old-fashioned sense, so.
Wish_List	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	I think it would be the ability for each member to have access to a-- to be able to have a computer like they would a radio. And for each member to have that and to be issued that, so that if you get in a car one day and you don't have a computer, then you can say, "I got mine. I can handle everything I need to handle. In some way shape or form, I know that not every-- and I loved a Toughbook. But they're really phasing out the Toughbooks and going to the iPads and stuff like that. But you need something that your technology will be safe and stable, and you can get it knocked around or it can be in a crash and it will survive. But the ability for everybody to have the access to the information they need very quickly. And the MDTs are great for that because you can read our notes as somebody's typing in our dispatch, rather than having to wait for you to file it, so. And they trust us with a radio and a gun, so they might as well trust us with [laughter] it. ...
Wish_List	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	...In some ways, my personal thought is that we need to stop making everything social media-based and relying on social media to drive policies and procedures. And that is a technology-based issue, but I don't know if there's a better way to not necessarily control the release of information, but have a better way to get ahead of the negative. And I think that might be a quicker turnaround on public information that could be with a faster method of culling information. Because if there's a shooting in the seventh district, it takes a while for it to settle down, enough to be able to get the correct information. By that time, you had 18 reports that are wrong, from [Name], who saw one side on the street and judge it. And it's a matter of being able to release the necessary

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								information quickly enough so that we get the correct- whether you like it or not, it's the true and accurate facts of the representation, rather than social media, because that's the biggest damage to us.
Wish_List	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...and then the ability for that particular product to integrate with other systems, we're finding, even though we were told, "Oh yeah, it's easy." It's not. And they're using it as a way to increase revenue by saying, "Okay. Well, if you wanted to integrate this way, it's going to cost." So, yeah. It's been a really, really disappointing process. And that's one of the things just for in technology in general with, I think, most law enforcement agencies is there are many disparate systems that need to communicate, and that's one of the real challenges is getting our CAD system who's made by one vendor to talk to our RMS, records management system, who's made by another vendor and get all that information to feed to our analytics system, which is a completely another vendor, so those kinds of things are really a challenge. I'm sure you've heard that from other agencies, but that's a challenge for us.
Wish_List	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...you always have the issue of officers looking at the computer when they should be looking out the window. So a way to have a more heads-up display would be great...
Wish_List	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: HUD] And we explored that technology a while back. It's actually been a lot of years ago, and there was some issues with how you project it onto the windshield and where that camera placement is to project it. And if you're in a collision, you don't want any kind of equipment by your head, and then the other issue is the reflective- if it's a light that's then reflecting off the windshield at night, it can be an issue too so. To illuminate the officer [inaudible].
Wish_List	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...facial recognition is a huge thing. There are some significant privacy concerns revolving around facial recognition, so my advice to our chiefs now has been let's hold off and wait and just kind of see how this technology shakes up. First of all, it doesn't work really well, and secondly, there are just some huge privacy concerns over the law enforcement use of facial recognition. So I think that will come at some

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								point...
Wish_List	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...I can tell you from my perspective just our biggest constraint is always budget, budgetary concerns. We mentioned we had 10 fingerprint readers. We'd like to have 400 fingerprint readers. So those kinds of things are-- usually, it's just constraint by budget.
Wish_List	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	And there's also some technology emerging for triggers to turn the body cameras on because that's a big issue every day in the news, so with stuff like a gun shot, or taking your gun out of a holster, or turning on the sirens, something like that, there are some news out there causing those sorts of things causing camera to turn on, so probably further on down the line that will be probably a good deal.
Wish_List	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...I think an integrated car, in-car and body camera system...
Wish_List	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...I know this is going to sound stupid, but some type of EMP that we could use against fleeing cars to memorize car chases... Something that we could use that is there some way to localize that magnetic pulse to temporarily kill that car without frying the whole system to give us enough chance to cut a chase down, to cut these people taking off from us all the time. Something like that would be nice.
Wish_List	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...And back when I started, I could listen to the radio and on a Friday night, where we have 25 guys working, I could tell you exactly where everybody was in the city. As we've become more and more dependent on computers, I can't do that anymore. Which I'm doubting that anybody here can do that anymore, which kind of makes it hard for me to understand why we don't use more the technology, instead of using the radios. Because the radio, like I said, the bandwidth is such that we can get busy, and I have to make traffic stops where I cannot call out on the radio because I can handle the stop and be done before they're done yammering on about something.
Wish_List	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...one of the deputies was in our city, actually ended up firing shots at a suspect. We got the call from another party in the house, and we were

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								already responding had units on scene, before we got relayed that it was a Jeffco deputy involved, and then we've got the scene shut down. We're taking care of it when the Sheriff's Department and all their resources start rolling into the scene, and we're immediately screaming at them, "Stay in your car! Stay here! We've got this." We don't want any blue-on-blue stuff because you don't know where we're at. We don't know where you're going. Because in order to switch everybody to a channel, it takes time. You would think that they could hit a button and do it, but it doesn't work and so--
Wish_List	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: RMS] I cut and paste because it'll put-- it's [inaudible] technology, it'll puts it in a PDF-- fills out this data accident report. But because systems don't talk as well as our records department would like together. It's click, click [laughter]. But for me, it's faster than our other traffic guys. We're using our phones, and we're taking pictures of license, registration, insurance information, and then we come back, and they're either pulling it up on their phone or using a generated PDF on the phone of that data, and put in the next-- split the screen and then manually typing it in. So that's another thing we use our phones for. Take a lot of pictures for that type of stuff
Wish_List	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	I would like to, as much as possible, combine the LT and the land mobile. And we do have an app that I can actually converse through our radio system using my phone. There's like six of us that have it...
Wish_List	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...I also like to be uncorded. I would prefer some Bluetooth microphone and that type of stuff as compared to cords and everything that get stretched all over the place...
Wish_List	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...While I like my eticker, it's fantastic for what it does, and technically I can use it as a phone. It's got a place I can put a SIM card in it. It's a little too big for my phone. It's just a little bigger than this. It's this Panasonic N1, so it's not much bigger than this. And technically I can run that application on my phone, but the camera doesn't work as well as the scanner. So in the handheld, for ticketing, it's got a built in scanner that scans drivers licenses, scans VIN numbers, and imports all that data in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there. The camera doesn't work as well. It'll still do it, but it takes longer than to do that. So combining that type of thing-- if I could carry one device that I could use with my phone, was smaller, and then I can do that stuff from, that would be great. If I could have all that on one thing and essentially kind of as a radio as well, that would be great.
Wish_List	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Everybody is getting to body-worn cameras and stuff. We don't. We don't have cameras on our cars. We don't have body-worn cameras as a department. We are allowed to wear them on our own under certain guide lines, and I do that, but it'd be nice to have one device where, if I wanted to, I could hit the button and hit record, and record all that stuff...
Wish_List	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...Like you said, we carry a lot of crap. And I think technology is fantastic, but finding one thing that does everything, I don't see that ever happening. You have some things that do something very well. And when you try to combine that stuff together, then you have one thing that does everything kind of half-assed. So I don't ever like that. We'd had a deputy chief here for a while that he didn't like the one-trick pony. He didn't like our etickers because that's all it did. But our taser, that's all it does. And so I think if you try to combine everything, you're not going to get the best use of anything. So the more things I can put together, that actually are the same thing, I think you're better off. But trying to combine a lot of stuff that doesn't naturally go there, isn't going to work.
Wish_List	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: electronic v. paper forms] things like tow sheets. We're still doing them on paper, even though technically I can build an app into our eticketing where we could do that. We have a lot of forms from the state. Like drivers, if they get a DUI, then those revocations, they won't allow us to do an electronic version. We try to come up with an electronic version and, "Oh no. You can't do that." I don't know why not. I can print out three copies. But they don't like that. Other things, like DUI field notes and stuff like that that I've already generated as a PDF, we're still not using electronically. We have access in our RMS system to do affidavits which then keeps it as part of the permanent record in there. But, again, at the command level, we haven't forced the officers to use

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that, so some still use Word and type it up. And then we're scanning and attaching, all to six different systems, and I think that's the big challenge. There's a lot of things that-- there's really almost nothing that we have to do on paper anymore, I don't think, but we do. Even our eticketing, it imports directly into the court. They have it the next morning. They still print out paper copies. Our records department, it could import directly into our RMS system, but because they had to click three times to merge the records, they print them out, and they hand type them in. There's job security there [laughter]...
Wish_List	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...primarily we're secretaries. We take reports. The emergency responses are limited here, but everything has to be documented, so you do that. So our officers were in here all the time, so now we're going back, and we're now going back to another dictation system. And that's an app, it'll be on our phone that I can record, and it'll send it to them, and they'll type it up for us. So hopefully our reports will get better and faster, as far as that type of stuff goes...
Wish_List	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: apps] I mean, I'd love that. Our records management system are-- so we can look up inmates. So we can look up names and stuff. I would absolutely love that... they could look up Walter White. They could look him up and they'd pull up his picture. That kind of thing... that'd be nice.
Wish_List	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: using cell phone] I don't want to be able to type my reports on here because--it'd be a pain and then-- I'm a different level than the patrol guys... as far as the detail in the type of reports. When you're typing a homicide report, and it's your initial report, you're typing 30-plus pages, where on patrol, I don't think I had anything more than 3. Because between 5:30 and 6:30, you can get more done than you did in the previous nine hours.
Wish_List	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...we do e-tickets for warnings and tickets - you're going to have to be focused on this damn thing. It's about the size of the original Game Boy. Except with a keyboard. And I'm like, "Put it on an iPhone. Put it on a Samsung. I don't care what Android or iOS, Apple platform it's on. Don't put it on Microsoft because that's why it's on, and that's why it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								garbage." But make it user-friendly. We all know how to work touch screens. We can all zip through that. And if I could zip through that, take my [inaudible], and put it on my phone, so it's an app. I hit my button, type in my ticket, walk up there, take their picture, it send...
Wish_List	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: e-ticket app] ...I still have to go back to my car to get the ticket, which unless-- and they have a thing we can wear, the printer, hook it onto our belt but it's a pain in the ass because you've already got gun, taser, bullets, handcuffs. Your black belt's on... You got utility belt. The last thing you want is a printer. They make it thin so you can slip it into a container on your belt and keep it there. I've seen, and I'm like, "Oh, enough. Just calm down." ...
Wish_List	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: e-ticket app] ...But it would be so much easier on the phone as opposed to an outdated and acquitted technology that's your user interface when everything else with the system is awesome...
Wish_List	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Well, in technology-based is nothing talks to each other. And if you want it to talk to it-- if you want program A to talk to program B, A and B is going to have their hand out for a monetary supplement to give you the patch that they've already created or to create a patch. So that's frustrating. You think everything should work together, and then you watch a movie. Iron Man. Tony Stark can do everything off his damn phone...
Wish_List	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	a lot of it you think would be just, "Oh, you have a picture of this person? Just put it in there." I'm not saying we need a picture of they drive a red F-150. We don't need the exact red F-150. But when it comes up to the plate, it comes back to a red F-150. Show a generic photo of the-- just simple things like that...
Wish_List	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	A universal translator, like Star Trek [laughter]. Put the damn thing in your ear, and it would just translate... So that would be-- if I could make anything happen, it would be that, universal translator so you could talk to everybody. It's something small, nothing big and gaudy. I don't want to get silly.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	I guess nationalized reporting database, or so maybe not reporting but name database... we kind of have that with the NCIC. But it's not user-friendly. And I want to be able to type in the first three letters of the last name, whatever, the wildcard asterisk, parenthesis, or whatever. The last name, the first three of the first name and then a date of birth and just see what comes up. You can specify by state because you may not care about California, but the guys we're dealing with that are dealing dope, one of them I can think of, he's from Florida. So if I could just tap into his stuff in Florida and then have it pushed over to our end, that'd be fantastic.
Wish_List	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	I'd love to be able to pull up somebody's name, information, criminal history, warnings, and whatever on the phone. Pretty much anything you've seen in Minority Report or any of those, I'd love all that stuff.
Wish_List	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	cars that I fit in [laughter]... I want a good air conditioner
Wish_List	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...I love for vest to get lighter, and stronger, and more powerful, and all that kind of stuff...
Wish_List	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	... I like boots to get more lighter, that kind of stuff...
Wish_List	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: vest technology] Stuff like that would be awesome. They could monitor heat or heart rate or any of those kind of things. We all have wearable technology. And I've got it. It watches my steps, and sleep habits or lack thereof, and all those. And I think those are fantastic. And it's the more miniaturization that we can do...
Wish_List	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Dodge is coming out with kind of like the Tesla. They've got the iPad built into the dash. So all your computer, short of your keyboard, like controls and everything is going to be built right into your dash... And I want to get one of those cars because I want to play with it. I mean, I was the kid that was into Star Trek and Star Wars for like the cool stories but also what kind of technology they had, the touch screens and everything.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	I really like our body-worn cameras in concept... something smaller, lighter-weight, less conspicuous would be nice. That said, I absolutely, absolutely love having video in the cars and body-worn cameras.
Wish_List	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: body camera data] So it's held locally on the camera until it's put in the dock to charge and download at the office, the system that we have. I know [City] PD just down the road has a different manufacturer, and they can pull up the-- they have an app on their phone. They can pull it up, tag it, do whatever they need to do, and it's done. So they can sit in the car and do that, or be wherever and do that. We have to physically go back to the office, put it in the cradle, and wait for it to download and cycle and all that stuff.
Wish_List	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	...I'm trying to think. I think my biggest gripes are that e-ticketing machine and just the fact that it's not well thought-out for the application. I don't think there's any reason why it couldn't be done on the phone that I already carry or the computer that's already in the car. So integrating technology with stuff that we already have, that we already carry. Because when I'm on patrol, I carry 30 extra pounds of stuff, which doesn't count the two bags which are probably 30-pounds each of stuff that I keep in the car. So adding more stuff to all my stuff is more weight and redundant. So I think finding ways to use what we already carry...
Wish_List	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	...So adding technology or applications without adding something physical that I have to carry would be really nice [laughter].
Wish_List	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: Blackberry-style buttons on e-ticket machines] Well, that's why it pisses me off [laughter]. It's 2017, we should be able to have buttons big enough for me to push.
Wish_List	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I can certainly see an area in body cameras coming on, policies aside, where we talk about proximity sensors. If you get so far out of your car, or just as soon as you leave your car, the main system knows you've exited and it's going to turn on your body camera. Or if your lights are on, it can tie into that, and it knows that's probably a traffic stop or high-risk

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								thing. I shouldn't have to stop and think, "Oh, yeah. Turn on my camera." As soon as I leave my car, the body camera should come on if that's our department policy to use body cameras on all calls.
Wish_List	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	But it's redundant to have the body camera on while I'm driving for 20 minutes when my in-car camera is on. That's an unnecessary waste of data and resources. So I guess I would expect those things to come along and get integrated a little bit more...
Wish_List	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...Big audio quality on body cameras is still kind of tough. We all joke about you've got a body camera on your chest, but as soon as you go into shooting stance, all you see is the butt of your gun. But it's too cumbersome to put the cameras on your glasses that a few places have tried. And if you need to wear prescription glasses, and you don't like contacts, how do you overcome that? So I think working in some of the technologies that have come out recently to make them more usable for both sides, both for the person who has to wear all this stuff...
Wish_List	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	So as all these new technologies come out, they're talking about Bluetooth speakers and microphones, well, something else you've got to remember to charge. If it's not charged, is it hot swappable? I think, as we look at new devices coming on potentially with the Broadband for Public Safety, that was a question. If we go to mission critical voice over LTE on a phone, do we get a hot swappable battery? Because I forgot to charge it that night or I've been on a shift longer than I thought, how is that going to be figured out?
Wish_List	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Make sure you change the font size on a small e-ticket or display.
Wish_List	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: FirstNet] ...I would expect, as part of this network, I would be giving up some privacy. Being a national network, I would expect whatever devices I have, I could show up in any state within the country and somehow there's an identifier, and I guess that's the part that has to be worked out, that I can say, "This is me and you can put on my device all the local resources that I need or talk groups or whatever else to get

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								involved in this situation, enough to show up and get programmed." I don't know how, on a national level, you accomplish that, whether FirstNet organizes that, but somebody at a federal level or a national level, since FirstNet, like I said, they're not federal, has to sort of track and manage all this stuff. And whatever identifier it is in my device that's going to be unique nationwide, apparently to include Guam, Puerto Rico, all the other islands of the the US territories that include to this, I can show up and say this is me, and I'm able to get all those resources and the local people can see where I am, and I would expect that situational tracking, GPS tracking, to prevent the blue-on-blue stuff that we saw in [State], to take all the lessons we've learned at all the local levels that-- I've talked a bunch about locally we've been able to implement these things, and now we need to integrate it at a national level...
Wish_List	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: FirstNet] ...So I guess that's my expectation as these devices are coming forward and these procedures are going through, that it truly becomes not just I can go to New York and my phone's going to work, but if I go to New York in an official capacity and I'm there to be integrated into an event, I don't need a radio cache to give me the communication stuff. Whatever I'm using here should be able to work there with maybe minor disruption or a little tweaking, but that would be my expectation as a national thing is getting rolled out and a data network, beyond all the apps and voice over LT and the other things, but just as a community coming together, that if I gave you my identifier and you plugged it in, you know I'm a [Job title], what my qualifications are, any certifications, as we're all about you need to be certified to do what. If I was a SWAT operator or commander or a high-angle rescue person, all those credentials and everything should be there so if I need this resource, I just look at who's checked in on scene, and I've never met you but here's what your profile says, and so I need you know. That's, I guess, my expectation...
Wish_List	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: FirstNet] ...So how do you incorporate that in devices, whatever that device ID and identifier's going to be, and still maintaining the security of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								any data that's being shared, and whether it's two, three, however many factors of authentication to make sure someone didn't take my device and they're now sneaking in pretending to be me. We've got to keep those things in mind. Just things to think about as these things are being created and standards and tested and how's thing going to work...
Wish_List	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: FirstNet] So how is it going to come in and enhance and not get in the way of doing that so I go to another scene and this doesn't work any better than the last radio system that didn't work either?
Wish_List	LE	U	Manager	46-55	31-40	Male	LE-U-020	...We don't utilize this, but it's something that we're looking into in the future where on the steering wheel, he can maybe flip a switch and lights come on or sirens come on. So, they're trying to deal with the space issue and the technology inside of patrol cars as well. So, real estate's a big deal...
Wish_List	LE	U	Manager	46-55	31-40	Male	LE-U-020	...that's another thing we're working to. That we would like them to be their individual cars, but it's all budgetary thing.
Wish_List	LE	U	Manager	46-55	31-40	Male	LE-U-020	...I think if there were more reasonable satellite-type of communications because we get into terrain issues with the mountains and no matter how much we use to try to fill in our gaps, we're not going to put a 750,000-dollar tower to fill in one canyon. But it's important for us to talk in that canyon. So the ability to look at, and especially the mountain areas, the ability to implement satellite communications for cellular, or for broadband, for land mobile radio...
Wish_List	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: nationwide interoperability] ...the ability for us to do that better, if there was the ability to have the ability for satellite-type of things... We don't put towers in [State]. So there's a reason. And they don't put their towers in [State]. So when they get into our areas, it would be nice if there was the ability to do that.
Wish_List	LE	U	Manager	46-55	31-40	Male	LE-U-020	... And I think moving more towards a - and I know this will never happen, but - a common platform for emergency communications. Well, who's it going to be? Is it Motorola? Is it going to be Harris? Is it going to be-- there are too many companies selling their own thing for it to be a one-

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								type ability. And I know that's not going to happen, but pie in the sky, it'd be great if everybody could use one. But [State] is very local-oriented, so we can't get that done in the state, much less the nation [laughter].
Wish_List	LE	U	Manager	46-55	31-40	Male	LE-U-020	What they did is they've put up a silo because now the officers, boots on the ground, where they had the ability to talk to each other. They back each other up. They knew when each other was in-- that because they went on a different system, even though it's the same system, but it's theirs. And now the two cars can't hear each other. And it's been very difficult on the boots on the ground to say, "We lost this, and we can be right here and this other officer can be getting his butt kicked. And we don't know about it." It's going to take multiple phone calls to-- and then dispatches, and time. And it wasn't a good decision, but it was a political decision that they created our own silo. And that's tough, but that's what I'm hoping that FirstNet won't become as well.
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: Lumen information sharing app] ...it gives me nicknames, heights, weights, tattoos, these are all tattoos and scars, personal data. And then if you keep scrolling down, it will give you associates, it will give you vehicles, addresses, any of that stuff, so it's extremely helpful. And it's great that I can get it right on my phone because before, what we were having to do is I would have to contact dispatch on my radio and I'd say-- tell the type, DMV, and request from them for a DMV photo. And then they would email DMV and say give me a DMV photo and then you have to wait for a person at DMV to go to a computer, type in that person's photo, download that photo, email it back to our dispatch, then our dispatch emails it to us. Then we have to log in to our computer in our car and then get the photo and then you-- meanwhile, you're sitting on the side of the road with this guy ...
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	Well, technology was great because we had a tracking device that the bank teller had given the suspect. So we're trying to track through that but here's your problem, is you have the Feds that are doing their Safe Street program for the bank robberies, they have the tracking device. We also have a tracking device here or a tracking system here, [County] has

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								one, I don't know if [City] does or not, but all of them are looking at their systems. They're then all calling up to our dispatch, so our dispatchers who are already handling two channels are now handling three different people calling into them to give them information instead of that source coming straight to the officers on patrol. So if they could just air up with us and then give us the information straight, that would be great...
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: tracking device / suspect] ...so it's on a delay already from the tracking because the GPS is not immediate. So that would be one of the biggest things that we could get...
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: tracking device / suspect] ...So our channels are encrypted so no one can listen to our channels. But they take it to Metro and now they're telling all the information, so now everybody else is-- if you're scanning the Metro channels you're hearing that we're tracking someone. So if the suspect is listening to that, they now know to get rid of the pack, which they did. Okay? So if we can-- I don't know how it can happen because you have to share encryption across everybody. So I don't know if it's a monopoly then if everybody has to have the same system or same-- plus, then, if the encryption code gets out, then now you have to deal with all of those issues. But if there's a way...
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: tracking device / suspect] ...So if we could get on and just air out our information that we're doing this but have it be encrypted for everyone, then it would be good. And then those people that have the trackers can just air up for us and give us direct information because at this point, throughout today, I'm following, trying to catch up to this car, and I'm already two steps behind because the tracker's so slow. And now I'm another step behind because of the information getting relayed.
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: tracking device / suspect] And then I have to wait to get on the air, and by the time we find out that the tracker has stopped, we now block off the roadway, but by then, the person is already long gone. We don't realize that because we think it's immediate information, which it's not. So speeding up technology. I mean, as fast as we can...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...When it comes to the radio systems themselves, we got these new ones which I think are better. They still, of course, have issues. We have issues. We need more towers all over the place because you go into a low spot then you lose it. If we go south and we go east, we've got a straight shot, no hills, no bumps, or anything, you could go miles and miles and miles and still listen to the radio. You go two blocks in our city north, and you hit on the other side of the hill, and you lose transmissions. So the more towers we can get, the better. The more signal that we can get out, the better...
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: radio volume control] ...Then with the earpieces again, so you turn it up and then your earpiece goes dead, you clean it out, and now you're deaf. You're deaf because you can't hear. So if you could do away with something like this, I don't know. I've seen people with Bluetooths and that sort of thing. I don't know how the technology works. I know how it works with my cell phone to my car, that sort of stuff, and how it ages out, and then you have to replace the system because it gets upgraded. But something that would be small enough to where you could still-- you could hear out of it...
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...The nice thing about this system that I use, I use a small earbud because I want to be able to hear not only this, but whoever's over here. There are specialized ones that you can get that are form-fit to your ear. They make it to where you can hear really well on the radio, but I can't hear anything on this side of my head. So I want to make sure that I can still hear so it can't completely shut off. It can't be like earmuffs are...
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...since I'm in the lab, I'm constantly collecting surveillance, too. So I have to go out and with thumb drives, and collect surveillance that way, and back it up over here. So any easier way of doing that would be awesome...
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...But with the advances of technology, you put the tablet in the dash, now you're staring down like this instead of looking up like this at your computer. So some of our cars still have the old-fashioned, big [MDC flipbooks?]. And we actually prefer that for the most part, I think.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...some of us live out of radio range from the station and we're on call. So we get called out in the middle of the night, and immediately, they say "Hey, we need you to go to this spot." So we go grab our radio and turn it on because we want to hear what's going on the call on our way in. Well, you can't hear it at all. So if we had something that-- if we can't get the radios to go that far, if you can get your radio to transmit to a cell phone or a tablet-- I don't know how that technology works, but if you could do something like that, that would be extremely beneficial. Even if it just went to that car, to the take-home car, then that way, you're driving in, you have all the information, and you don't show up on scene blind and say, "I have no idea what I need to do."
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...so one great thing that we've done here is our fire department has the same channels that we do now. So when they go to an incident to help us out, they pull up on scene or they get dispatched to it, they flip to our channel, they answer up on our radio, and we know that they're hearing us and all we have to say is, "You're good to come in," and they can come in... So that's been beneficial, but if we could expand it to include other agencies, which, I know, again, it brings in a can of worms.
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	I would say, easier communication to where if you could turn your radio into a cell phone or your cell phone into a radio so that you could do a two-way communication between people. I know that it's possible, but I know it's cumbersome, in order to get to that and to do a patch or whatever it's called...
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...It would be great if it was easier to do interoperability, it needs to be from agency to agency. We need to be able to communicate back and forth in a timely manner. And hopefully, we could do it all encrypted...
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...The radios, if they could be smaller. I mean, this is-- yeah, it sits on my back all day. And I'm constantly hitting the buttons, and if you hit the red one, then it's your emergency button and everybody gets to hear you pee [laughter]...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...If we can implement everything into this one device so I don't have to have multiple devices, that would be great. And then, I don't know, dock this in your car and then it connects to your computer so that that way, I'm automatically connected there.
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	Yeah. If you get a chance to go in our cars and jump in there, jump in both versions. Don't just jump in the one that has the tablet. Jump in the other one that has the big monster machine, which we actually prefer, and I don't know why you would think that we would, but we do because of the fact that you can manipulate it and move it around. If it could be smaller, that'd be fantastic, but at the same time, the screen needs to be that size. You can't get a screen smaller but the keyboard and everything else-- and even the keyboard, I would say no. A standard size keyboard because we have big hands.
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	Yeah. So, yes, advancing in technology is great but to a limit. I don't know. I think all of the solutions, if you could incorporate it into one device, it would be awesome. The digital recorders, the cameras, all of it, even if it was your body camera that turned into a regular camera too. If it's all in one device, that would be fantastic...
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...The better transmissions somehow. I don't know how other than more towers. Inside buildings is a big problem too. We have hotels and stuff here that you go inside, and as soon as you go in, before you go in, you get on the radio and you tell them, "I'm going inside the building," because nobody's going to hear you once you go inside. You're just done, and I can't imagine-- we only have two big buildings here. I can't imagine what it's like in [City], when you walk into the steel towers and it's just like-- you can't get through.
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...right now we use the FARO for our accident scenes, right? If we have one that's three blocks long, we can get all those scans from the ground. But right now, we're limited vertically. We have to get into the back of a firetruck, climb up on the ladder, and sit there while it's rocking and shaking, and try to get a still photo. And if we can-- the one drone that we're looking has the capability and the software with a 4K and a FLIR

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that you can go up there, it can create its own point cloud, and then that point cloud is actually connectable to the FARO SCENE program. So we'll be able to get the overhead views of everything. So it's endless possibilities for that. I don't know. If everybody could have a drone, that'd be great...
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	I've seen the smart watches, like how you can get your texts and all that. I think something like that would be beneficial, in order to get updates from your MDC to your watch. Because everybody has a watch. Everybody carries one in order to know the times on their calls. I mean, we carry cell phones now, too. But if I could just go to my wrist and get updates that way, without it being too cumbersome or too difficult...
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...I know we have a lot of old salty dogs around here that they don't even know how to turn on a computer. And they're like, "If it takes more than three steps, I'm not going to do it." So it's simplified. With everything across the board, if you don't make it simple, they're not going to do it. They're just going to move on to the-- or stay where they are, in the past.
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	there have been some people that we've been able to teach so many different things with technology. Just because you sit them down and you say, "Look, it's really not that hard. We can simplify this for you to benefit you and personalize it." I think personalization is huge because it's-- we still need to maintain a structured system where you do things a certain way. But if you can personalize it to that person's needs of, "Hey, I need to know my MDC stuff," or "Hey, I need to be able to look at photos on my-- for my cases," that sort of stuff, if you can do that, it's great.
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...So being able to hear inside the cars too, a lot of the systems they end up putting in a speaker that they attach to your MDC, so that your normal stereo can go through the regular speakers, which I think you can do without that. Yes, could we still use music, but we really need the sound system to be used for the radio. So instead of having one speaker, if it can come out in more locations, it's easier to hear in the car. I don't have to have it blasting to where I sound like a G-ride going through town [laughter]. It's just sound, so being able to hear it...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...So some people use two radio systems. I use my car radio when I'm in the car. I use my portable when I'm outside. Well, when you shut it off, now you have a delay when you're waiting for your portable to boot up. Or you get back in the car, you shut that off, you turn on your mobile, and you have to wait for that to boot up. Because it's not instantaneous, it takes probably about five, six, seven seconds... So I personally leave both of them on and that way if, like I said before, where you're standing next to someone and a radio will pick up on this person and not on me, if I'm in my car, either my mobile will catch it, or this one, so I'm not missing it. One of the two will catch it. So I don't know what the catch is with that, why it's doing that, but that's always been the way it is. So this is the only solution workaround for it, is earpiece. So I think a lot of it comes back to earpieces.
Wish_List	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...we have a bus that's down there that we use as our crime scene vehicle. We have to run a generator off of it, and an alternator in order to-- or an inverter in order to get more power and to keep things running, and electronics, and all that. In the wintertime, our MDCs, if you don't leave your car running, your MDC freezes up, and then you have to wait for it to thaw out in order to get your information [back?]. So if there's a better way to keep the computers warm so that they operate during all temperatures. They get too hot in the summertime if they've been running too long, so you have to keep your AC running. I think that's it.
Wish_List	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: cheat sheets] ...So when you write a ticket for-- whatever speed over the speed limit, it's a different fine, or CC, or-- so things like that that which I don't want to ever memorize because it's just ridiculous... I don't ever want to take the time to learn that stuff. So it's nice to just be able to reference something and have it at your-- available to you, but not something that you have to dedicate a lot of time to memorize... so our cheat sheets, if they're on our phones, it's because somebody took the time to scan theirs and then email it around. That's how I got mine, as well. Another officer took the binding off and actually sent it through the scanner.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	...So if somebody's been arrested here, then I can pull up their information and stuff, but if it's in [City] or [City], it's not necessarily going to come up. But they're trying to combine us with [City], [inaudible], [City], [City]. And so just having that general database of individuals and their associates, their vehicles, their locations, their phone numbers, that's invaluable to investigating and figuring out how you can pursue people and charge people with stuff.
Wish_List	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	...It's all perspective, I think, to a certain degree. If they could do the job in the '50s without all this stuff, why can't we-- I mean, running people and finding warrants in databases and stuff like that, that's definitely something that we need as law enforcement, but whistles and gizmos and stuff like that are not necessarily things that I find particularly necessary.
Wish_List	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	I wouldn't mind having a GPS on every single cop. Know exactly where they are. And maybe one day we can have that through their phones when they have the phones on them. But it would be nice because there are still times a police officer will yell into the radio for assistance.
Wish_List	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	So as we get closer, I think some of our immediate goals are, really, how can we leverage some of the technologies to decrease the airtime, cut out the stuff that's, "Hey," from going 10-75i or going into a-- I should be able to-- I shouldn't have to wait to transmit that over the air. It should be something that I could just press a button and then the dispatcher knows, "Hey, yeah. That person's doing a vertical." But these are sort of things that really take time because if every transmission doesn't make it through, then what happens? It has to be perfect all the time. It's public safety, right? We would like every 911 call to make it through every time, and that's what we strive for, right?
Wish_List	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	I wouldn't mind having like The Jetsons where we could [crosstalk] because that would save a lot of time in traffic.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	[RE: CAD] Well, we really didn't have one because we barely had cars that worked, and we barely had PDTs that worked. I would say, 70% of the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								time, we didn't have a PDT... Because we were trying to fight to get phones, to get [inaudible] on the phones because we heard that there's a free service. There's some organization that offers them for free, but your department has to authorize it. You can run plates and names through your phone, which I can't now. They gave me one of those now... Which is awesome, phenomenal. Because many times, we worked in a covert capacity. Many times, I was undercover in a regular Toyota Camry driving around being a police, and I need to run this guy's plate because I see some car pull up to a suspect we're watching and exchange something. And I need to run that plate, and can't do it.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	[RE: smart watches] ...You have to kind of look at your display. Ultimately, the display will dictate how you can use that technology - that's what I believe. Because that what you interact with, is that display. So based on the size of the display and what you can do with the display, you have limitations in what you can use it for. This display would be great if I needed to know, "This guy's got a warrant." Say, I run something. And say, I have a person who's wanted in front of me, and I run their name. The display should be like, "Are you clear to copy?" I literally have to turn my radio down and put the ear to my radio or step away from the person, who's probably wanted and is probably creating more distance to get away from me. And it would be like, "Yeah, he's wanted. Blah, blah, from out of this county, and he's got this warrant." And then, I walk by and like, "Sir, can you put your hand here?" Just dumb, you know? ...It'd be nice where is, "Ding. All right, got it." You now? ...That would be a good functionality for the watch, but they were trying to replace the entire PDT on the watch. That's not going to happen.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	In a foot chase, when you're chasing somebody. It would be really nice if a dispatcher could just GPS and see where you're going... Instead of you worrying about calling it all out all the time. You've got to run, you've got all this stuff, and you're like, "I'm going left. I'm going right. I'm turning right. Southbound here and northbound here," and sometimes you don't even know what streets you're on. You're running. Could you imagine if

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you didn't have to do that, and you could have your hands free and just focus on chasing after this guy? And the dispatcher would be like, "All right, northbound, southbound." Because whatever direction the police officer's running, then that's the definite direction that the offender's going. So the police officer's almost like a trail, a marker, a trail marker, a GPS trail marker behind the offender. And if you could see that in an aerial view, you can dispatch and coordinate cars to come from the north, come from the east and west...
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	[RE: visual information from dispatch] And that visual has to be pushed. The push is important, how it gets to the officer. Flying, ping, and you just see a big picture, "This is the car we're looking for." That's awesome. If it's an email that they got to open up or this and that, it's not going to work. The format's wrong. It's a dynamic situation. They can't get to it. It needs to be boom, "Wanted vehicle for this," boom, and just the picture of it. Simple, bold writing. That's the key. Now, if you give them too much information, if it comes up in a format where, "Year 1997, Ford Taurus, VIN number." I don't need all that. Let me see the car. Let me know what-well, now I know what I'm looking for... Give it to me so I can digest it. If you eat too much, you can't digest it [laughter]. If you can't swallow it, it does you no good. That's kind of what happens with that information, the way it gets sent out.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	I would love to have access to the cameras on my phone. I would love to be able to see those podcams on my phone. Which I know I can, but I guess only exempt members have access to it at the moment. But when I'm doing surveillance, man, that would be awesome to be close enough, but- far enough away where they can't see me, but close enough where I can see them, and I can see they're on the camera. I think it would just- I mean, even from a safety perspective, right now we're just communicating back with SDSC room. I'm on the phone literally the whole time, "Hey what do you see? All right, is he coming out? What does he have in his hand?" And they got to tell me, and then I got to kind of run, and then I got to be on the phone. And it would be nice to see on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the camera and know how to act or coordinate...
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	...I would like to be able to see where the rest of your guys are at too. It would be nice to see that... If I'm here, where are my other guys at? And maybe we could kind of position them better and coordinate better.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	[RE: radios] I don't really have a communication problem as far as communicating with people on the street. I haven't felt like, "Man, I wish there was some other way." You know what? I wish it was lighter, and I wish it was smaller.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	I would like that GPS. I would like the situational awareness type of thing. I would like to have some type of dynamic information dissemination technology if it exists. If that makes sense...
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	I would like to really work on-- I would like to work on that PCAD. I would like to make that PCAD functional. I'd like to make it informative and easier to use. I'd like to be able to access all the data I need. I'm able to access it in the station on that PCAD...
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	...I would like to have a live - I've already called it SDSC Live before. I'd like to have a SDSC Live because what I'm seeing in the SDSC rooms, I really want my guys to be able to see that ASAP. I want to be able to get-- I think the visuals in a dynamic situation-- in an unfolding situation, the visuals, there's no replacement for that. A picture's worth a thousand words, literally. You can put it out there. You can see a Taurus, but if they see that Taurus, and they see it in their face, that's going to be awesome. If there's a possible offender we're looking for, a named offender that may be fleeing, and we know who it is, I would like to push that out. The officers can do that. They can go to data warehouse, and that's never going to happen. You're driving around. You can't do that. And you're moving, and the car's bumping, and the links are so tiny, you can barely get your finger on it. So I would like to be able to have SDSC where you can command some type of a data flow to the PDTs and be like, "Oh, this is the guy we're looking for." Just that easy... It'd be so much easier.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	I think I probably-- I would like it if maybe you guys could integrate everything into one unit, yeah. We have radios. We have cameras. We have the mic. I would like everything to be integrated into one unit, even maybe the GPS positioning or whatever. Everything would fit in one unit. That'd be nice, yeah... That way, there'd be less stuff we have on, yeah... Less stuff to lose... or be responsible for losing or whatever...
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	The phones have the ability to pretty much do what you can do on the PCAD... the difficult part is you're staring at the phone like this trying to type information and there's multitude of lines, and you have to put your PC password each time you do the search... you'd think that once you log in to the system, that would allow you to run anything as opposed to constantly having to enter it...
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	SME S3: ...With the way things are, you'd log in to one thing and as long as you log in to this program and says you're there, you should be able to do whatever you want. SME S2: Like Google.
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: communication with other jurisdictional agencies] ...And I think that we could do better with it, especially with something like [Espurn?]. With state police running in the city and we don't have their emergency network to know when they need help, I think is a little-- I mean, I don't know how we would integrate it...
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...when you're going by the fact of State Troopers calling for assist, that's all that will come through. It won't say, does he need an-- it should be more clear. Sometimes, they'll put out an officer needs assistance, and they'll make it like almost like an emergency, where the guy just needed a transport. There should be a better way of-- we just need this or that, so.
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	SME S3: Personally, I think eventually the radio, the body camera, it'll all be integrated into one where you've got your microphone hanging and have a camera built into it. So eventually, you would think once you get dispatched a call, if you're signed up for radio, you should just simply be able to have the camera turn on. SME S2: Yeah. When you turn your

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								lights on to go to a call, the lights and sirens, your in-car camera automatically kicks on. So that's not even something you need to take care of, it just happens as you go to a call on its own... it would just be a matter of the technology would almost have to be updated at the same time so everything could shake hands... SME S3: It would be less equipment for the officers to sign out, to worry about...
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	Even with something as simple as when I sync my microphone, I sync my camera, and then they're all on together. Or eventually eliminating the mic pack that comes with the in-car camera because then the mic pack's in the body camera. There's definitely room for something to be eliminated.
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...It'd be nice to integrate everything into the computer, like with ShotSpotter or with HunchLab where you have the screen, at least you can see where you're supposed to be or where it's going off, as opposed to if you hear it go off, you unclip it and you have to open the phone, put in your password and then go to the app to see where it's at. It would be nice if that information, even with the dispatcher got it, they just shot it with the screenshot like, "Here. You're going to go here." It's there. There's not-- I know that technology's getting there, where they're going to push video and what else to the cars.
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...Everybody tries to get on the radio at the same time. Sometimes the dispatcher just-- they have a hard time controlling the entire situation. The officers have a hard time not cutting each other out... So some way of better controlling the airways when there is a critical incident.
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	That we have something where even if the dispatcher calls the air she can listen to everybody talking and then just put the information out clearly and concisely, that would be ideal. I don't know that it's a technology thing, but it would be nice...
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...I came from a department and we had different technology on the computer... if he got a call and I wanted to go on his call, I could put it in the computer-- we used 10 codes there. I would just put like 76 to blah-

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								blah-blah's call. So I never had to go over the air to dispatch or [inaudible]. At least it was on the computer, which I think some people may be a little old school or worried about, "What if I get in a crash. I never said I was on the way to the 10-1, then I'm gonna be in trouble."
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...when you're alone, it'd be nice if the-- if you got a job and you could hit a button and it-- have the computer read whatever to you, like talk to text almost where it would just say, "Hey." That, I think, would be ideal for some officers especially-- even when you get older, it's harder to take the glasses off sometimes.
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	And the computer where it's at, it's not really comfortable. I mean, I would hate to have to write a report in the car. My back would be killing me because you have to turn, and lean, and type, and it's not-- it'd be nice-- it's supposed to be a portable data terminal but it's not. It's fixed in the car.
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I just think I would want the computers to be designed better in terms of the programs on them. After seeing different ways-- from state to how suburban department's PCADs function, ours is very poor. And I tend to think of technology now is, can I hand this to somebody who is from an older generation and they can just figure it out? And I would say our PCAD don't work like that. Even just for the ease ability of use. And I've kind of found a few shortcuts, but this is just me playing around, nobody told me. At my old department, it was all one-handed use. I could say, "Okay, I want to run a plate, I want to run a person," and it was just-- it was an underlying letter, and it went to that page. And then we had an overall command line that we could run everything, everything but templates from.
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: PCAD] Whereas in the city, you're like, "Okay, I'm going from running this person to running them." And sometimes if you have a truck plate, you got to put in the truck code, whereas in however the previous system I used was designed, it knew it was a truck, it knew it was a firefighter plate and so on. So it was a lot easier to be on the move and say okay... you can't go forward and back in your messages. Whereas

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there you can go back, back, back, back, back. Okay. Now I got to go back to his ID. Forward, forward, forward, forward. Whereas here, we're kind of in how we describe that screen, sets up a second screen. And it's all your pages. And you're like, "Okay. Which one is it?" And you could click through 10 of them and still not find the one you're looking for. So it makes it hard. So I think just a better designed user-friendly system would serve us.
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: PCAD] And then have a voice activated, "Hey, run this plate," where you don't have to even look at it. Whatever-- like Alexa, or Google, or like-- I mean, you would think that just having the-- telling the plate and it being run would probably save-- I mean, I know of supervisors and people that have gotten into car accidents because they're [looking down]
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	My thing for technology, I'd like a podcam-drone... Drones with high definition cameras. I mean, that to me, it would seem like that would-- you have a call for service, they can have a charging station or whatever in the district. And if you have a pursuit, you have [anything?], you have eyes on the vehicle or you're able to get to that area a lot faster than a police car.
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: drones] ...If you can see the video from what's going on and that you actually have-- you know what's going on that second. But from somebody making a phone call to the five minutes it takes you to get there, the entire situation might have changed or it might have gotten worse. The person wasn't able to call 911 or they weren't able to get the information out. I mean, that would be ideal. But with the rooms and then, we have more people watching the cameras and stuff...
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	With the fire department, it would be fantastic, too. We have a house fire. Well, the drone goes over it. Yeah. It's fully engulfed. You notice on multiple trucks right away, better control things.
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I'd kind of like more sharing between all the databases. I know we have LEADS 2000. If you're certified in that, you can pull up pictures of people.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								But I think that all of those databases should just be rolled. The states should be able to communicate. You should be able to-- the county and the city, the court systems-- you should be able to, "Hey, you know, you're locking up this guy. You should automatically know he's got a pending court date for this," his arrest history for the last few months, if he's a gang member. Everything kind of needs to be tied in together because everything you have to pretty much run separately through different databases and through different ways. I think it would be a lot easier for officers if all that information was just all kind of integrated into one nice package. Federal warrants and stuff-- I would think we're at the time where instead of just a description of the person, you should have his arrest photo come through with that.
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	Even, like you said, LEADS 2000 which not every officer has access to for Chicago but you could get driver's license photos. So, if someone's playing the name game and says that their brother-- well, of course, you know your brother's birthday and his address, so you can easily say, "Yeah, I'm him," and we would never know the difference... So something like that. I mean, the Secretary of State has everyone's photo nearby, especially in an urban area, and it would be nice to be able to say, "Yeah, that's you." "No, that's not you."
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...I think it would be nice if the plate reader knew if you were in motion or not. So, for example, if I'm driving, I may get a hit on a suspended plate. Well, I can't do anything on that car if it's parked. I can pull it over if it's moving, but I can't do anything on it. So then I have to sit there and acknowledge that, yes, this was a positive read or a misread, and it's a little cumbersome to actively be on the plate reader all day.
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	The vigilance system, I mean, the city has it, but there's limited access to it, and they wanted to give it to certain districts, but they haven't done that yet, and that to me would be fantastic to have, like if a private company has a hit, it should automatically somehow get transferred to dispatch, like say, "Hey, there's a stolen car here," not 10 hours later when somebody at headquarters runs it and finds out where it's at and then

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								sends it to us, and then by the time we send a car there, it might not be there.
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...Last week, we had a robbery pattern where three guys were targeting Hispanic women, and they were using the same stolen vehicle, and we had to choose to get that plate run to find out if there's been a hit on it in the area. And it probably took 45 minutes before we were able to convince them to do it. And after they did, the car was parked two blocks away from where it was seen like two nights before. So we'd sent a car and said, "Hey, why don't you guys just tour this area, do a great search?" And they found it in like two minutes, and they set up and watched it for hours, but nobody came back to it. So it'd be nice for something like that if we could just do a simple GPS, toss it on the car, and, hey, it's moving
Wish_List	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I mean we can't we can't do facial recognition, and with all these cameras, you should be able to do facial recognition. It would be nice if the cameras, like, say, we see a car that went through this camera, if the computer connects, you say, "All right, it's a white car, it's whatever shape," and look for it in all the cameras around it to see if it's passed...
Wish_List	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	[RE: apps] the only really one is this HunchLab. But you see, I think there's a big-- I don't know what the word to use is - but this is where I usually work. So if I click on here, it's just saying, "Aggravated battery firearm." But it's not just telling me anything. What was it about? Who got shot? Who was the victim on here? If there would be something that you could kind of get a little bit more in-depth. Because really, does this really tell you anything? No. This whole area right here, this is [neighborhood]. This is where all the majority of the shootings are happening in [district]. Yeah, you know who's supposed to be to be out there, but like me having a day off, and I come here and I know that's a hot spot, but is it going to tell me anything [crosstalk]? I know that's a bad area. [crosstalk] It's been a bad area for 10 years. Okay. But now, it's saying, "Let's do this mission." From what is the mission? What happened? Who was shot [crosstalk]? What is it gang related?

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	I think that's the issue that I have with the HunchLab. If it could be a little bit more in-depth or a couple more boxes just to click on. Just to click on and see there was shooting [inaudible] blah, blah, blah. They don't want to give-- and just a quick briefing of what was it about. What is it drug related? That's something that when I log in on the computer, I want to find out that shooting, that's what I read. And there would be some from the detective's division saying, "Okay, victim, possible offender information, possible gang problem." And the detective's good with it because they will always label preliminary what they think the justification that shooting was. Was it gang related? Was it calculated? Was it road rage? And they'll say, "Male standing in the corner was approached by blah, blah, blah." And it's a pretty short paragraph like, "Okay. That's what that's about." But that's something that you really can't access on here. I'll have to go back, and here I am, head down in the middle of the worst area in the town district, and now I'm logging in here trying to find it. So I mean, that's the biggest thing. The information is there. It's the problem of accessing it and get the information. Cops are very impatient. We want everything here-and-now, okay? And if it's going to take me too long to try to find it, then why bother?
Wish_List	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	[RE: mobile fingerprint reader] That would be nice if I could roll somebody's finger and get their identification right then and there. Is that going to happen?
Wish_List	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	[RE: SSO] I think obviously that would be helpful. I tried to put one or two passwords the same for everything. I know that's something that IT guys don't like. They want real long passwords with numbers and letters and commas, but for functionality, the average officer doesn't want it. They want the simplicity of using one or two passwords only. And then e-learning on the computer, that's a different username and password. I mean, it just kind of gets-- I could see how officers get overwhelmed by having different usernames and user passwords to access all these different systems and that's why I think a lot of them don't take advantage of it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	... I think that's the biggest struggle is, the older guys, the technology. And the more and more-- I think if it could be easily accessible, and not hard to log in, I think more and more officers would use it. I think more like touching on the PDT to get stuff. If you could put this HunchLab on the PDT and use that screen and use it as touching, I think that would be even better than having a cell phone. But that's something I don't know if it will ever happen. Like I said, the ease of accessing, pointing your fingers, instead of, "Okay. What is it? Hold on, okay? Let me turn that on and press the button. Let me swipe it, 3510, Okay. Let me go back to the HunchLab. Okay. And let me click on this box," whereas if you had it right there then we'd just do it.
Wish_List	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	I mean, like I said, ease of access. I think logging in the PDT and having everything at one login, and having everything like the HunchLab on here, okay, having the ShotSpotter on your PDT, I think that going to be more useful to the average officer than going on this phone...
Wish_List	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	...I think if we were able to get-- the PDT, if we could have that and access the HunchLab, have that access ShotSpotter where it's just touching. I think the more or less you've got to type stuff and everything in, the more or less coppers aren't going to use it... You know what? I would love to see it on one terminal... Ease of use, I think that's that.
Wish_List	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	No PDT. A tablet... That's whether or not they give them. Like I said, they gave them to all FTOs. And I was honestly thinking about being an FTO but I didn't go through with it. But I think, yeah, the technology is getting better. I think, for the average officer, making it more simpler to use. You see these IT guys who have years of-- it's dying, that's what that means. Years of experience doing this. I think sometimes they might become naive to the fact that a lot of these guys don't know how to use these systems. Make it easy to use or you're just maybe touching.
Wish_List	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	Q: do they get the same phone every day? Same car every day? SME: No. We used to and that was nice. We no longer do that.
Wish_List	LE	U	Field	36-45	11-20	Female	LE-U-026	SME: FTOs have tablets... So if they don't have a PDT in the car, they

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					have their tablet and they can write reports on their tablet. Q: And do you think that would be useful for all officers to have? SME: They'd just fly around in the car. PDT is better. Q: Okay. Because it's fixed? SME: Yes... However, if there was-- it's the same thing but they can bring it with. They can go inside the station and we would be able to take those out. So yeah, it's not much different but the PDT is stable inside the car.
Wish_List	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	One login, one password for everything. That would nice. You log into your PDT and it logs you into ShotSpotter, it logs you into Data Warehouse, it logs into your HunchLab, it logs you into everything. That would be very nice.
Wish_List	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...Something that would tell you who owns this building or who owns this property, just put that in, like this is a vacant property, this is owned by the city. Then we would know this building is owned by so-and-so, so we could let them know. The officers would be able to say, "Hey, this is owned by so-and-so. He owns this building. He lives three blocks away." So, in case there's something going on, we could let them know or hold them liable or something to that effect...
Wish_List	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...It'd be nice if we would be able to buy our own radios so we wouldn't have to turn them in. There's much smaller ones. So if we didn't have to, or even if we were able to buy one from the department and just keep it as ours, that would be nice. Because sometimes we run out of radios. Like at special events, it's one radio for a group of people... So it would be nice if-- because I realize that we have the radios, they have numbers so that they can track who's talking on the radio. So if there was a way for us to possibly buy them and just keep them as our own, sometimes I think that would be more useful.
Wish_List	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: cell phones] I don't think they've made a whole lot of difference. I mean, they have HunchLab on them so that makes it easier for the officers. If we could get that on the PDT, they wouldn't need one more thing to take out.
Wish_List	LE	U	Field	36-45	11-20	Female	LE-U-026	It would work very well for, let's say-- some things work well for bike

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					officers. Like if you could get the phone to run a name on there, if you had access to leads on the phone, that would be great for people who are on the bicycle. Because they don't have a PDT, they have to run everything over the air...I used to be on the bikes. And that would have been very useful, to have the cell phone to be able to run plates.
Wish_List	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: single sign on] Yeah, that would be very nice. Just log in and that would be it and you have access to everything. I think that would have more people looking at it, and exploring it, and not being so scared of it.
Wish_List	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	We talk about these things all the time and I can't remember anything right now other than a single sign-on that I hear almost every day...
Wish_List	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...So on our GenTech map, there is a feature on there that is called social media. I have seen it before where there was an officer who had access to it. They were able to type in the geographical location of a shooting and you're able to see everything that was uploaded at about that time. A little bit before that would be very useful. A lot of people post that they're, "Hey, I just shot so-and-so," or, "I was just here," whatever. We would like to be able to see that...
Wish_List	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...There's a program called Vigilant. We'd just like to have access to that. Vigilant is like the plate reader but it is in a car. Have access to it in the station, that it would be nice being able to see all the plates and look at the plates. Because right now only CPIC has it and by the time they send us the information, the information is old. A car is mobile, so it's not going to be there for that long, so having access to that would be nice...
Wish_List	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	They would really like to always have a computer in their car...
Wish_List	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...That would be very nice to log into the PDT and have your in-car camera log on because you also have to log into that. You have to log into everything. So just log into one thing...
Wish_List	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...We still have a few paper reports left, could get that on the computer. That would be nice. We have these things called supplemental reports, that would be nice...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...Just having updated technology in the station, computers that work. Some of them are not all desktops. Some of them are the very old version of the PDT that was in the car that is mounted to a table.
Wish_List	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	A communication officer, communication? Yes. It may not have to be as fancy as everybody else's. But if they had-- not everybody needs HunchLab. Not everybody needs all of that stuff. But if there was somewhere for them to go that, "Hey, I need this information." I have just a place to disseminate information. "Hey, this is going on in my beat. Can you look into it? Can you send it out?" Somebody in our district came to me, said, "Hey, this guy, he's a convicted felon. He has a security company and he's threatening some other businesses. But they don't want to make any reports." So I said, "We'll tell the state's attorney." And the state's attorney actually knew who they were. And they we were able to disseminate the information. So almost like information services, but inside of the district.
Wish_List	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	That would be nice. We could upgrade our computers in the station. That's very frustrating when officers come in and they're like, "I have this arrest. I would like to do it but there's no working computers." There are no working computers. So then they would actually have to wait. So we could actually get officers on the street if we had stuff that worked... It's pretty consistent with people who come in with arrests on a regular basis. 7 has a newer station. They have computers. In my office, we would like to get one more computer. That would be nice. We have four people in the office, we have three computers... So sort of sometimes it's just we need more computers... And upgrading them.
Wish_List	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	So what's going on there? How many people are there? What kind of weapons are there? What happened? ...So we want everything we can get to get there, but the biggest concern is safety. So we want all the pieces that have to do with our safety, officer safety and victim safety. Location, where they're at in the house. Of course, how many weapons, I already said. It's one of the most important. Are they separated? ... that's really important to have that idea. But the more information we have,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								like, "Oh, the victim has locked herself in the upstairs back bedroom. The suspect is heard to be down in the kitchen." Now we have at least an idea. We have two people in two different locations. It helps us with the plan, how we're going to approach that. So the more information, the better. But we don't always get that because the victim might not be able to provide that to us and that's the hard part is that they're scared. They maybe don't know that much. They don't know where the suspect is. If someone's frantic in that kind of situation, they can't always communicate very well, so.
Wish_List	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	...but having access or having the victim having access to some sort of security system, this is kind of big world stuff maybe doesn't-- but having access, to be able to hit a button that gives a layout of the house or provides that to-- I mean, that's just kind of cool. That's on the TV step. But I mean, hey, it probably exists somewhere. But having a layout, knowing where they are, giving us an idea when we go there, we have a better view. Bit somehow maybe they can give us access with the push of a button to their security cameras.... Yeah. I mean, having us be able to gain access to their surveillance when we get there or if we're sent. Because what if it's a hostage situation where-- or a barricaded subject. We're not going in right away. We're going to stage out front and come up with a plan. What if we have access to that? Can they give us-- it's some sort of emergency button on their remote or on their phone that says, "Okay. Access can be granted to--" and then I don't know. Probably, it's feasible. So it might already exist. I don't know, so.
Wish_List	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	I mean, having access. The more the better. The more eyes on we can have, the more information we have, the better. Because we want to go home safe. We want the victim to go home safe. We want the citizens around to be safe, and we want to get the suspect into custody...
Wish_List	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	...And people use drones already. But having your own drones, don't go inside the house, but it's good to get an overview.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	But having infrared or something on a drone, that's one way above the house. That's one way of getting a location too without having a surveillance, so we don't have that...
Wish_List	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	We're in an active situation or active high-priority situation or high-risk situation, and we're like, "We need a description." So if you already have a picture that came through, and it gets sent out to all our computers or whoever's on patrol, because that's what they'll do is they'll send the DOL photo, drivers license to the MDCs, and they'll throw. So we all have that picture. So we kind of have an idea. It might not be the picture of him that day, but it's going to be who that person is. So if somebody on the street that's called 911 gets a video or photo and can upload it immediately somehow and then they have a photo of him that day with the clothing he's wearing, that would absolutely be helpful.
Wish_List	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	so cell phones, like pictures and stuff, would be great. I love the idea. I wish everybody in this department had an iPhone on them that was theirs, that was checked out to them, and we could do-- because we do stuff like that already. I mean, to people I know have cell phones, I'll send pictures through my phone. So that definitely happens. It's just not everyone has a phone on them. Because the phones that are in the cars are not all iPhones. Some of them are flip phones.
Wish_List	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	So I think that it would be good for everyone to have one, every patrol officer, everyone. Because I think that you could use a smartphone a lot more, and you could be more efficient and use it in better ways with sending information, sending pictures, because I use this all the time to get my email, getting the picture stuff, whatever.
Wish_List	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	I'm usually in front of it but-- so there could be a lot more done using smartphones and transferring information. Because we want to get pictures. Video, now if I get a video sent, and I have to go through it and find out where it is, that's not practical heading to a call.
Wish_List	LE	S	Other	36-45	6-10	Male	LE-S-027	they have so many different people that use their surveillance systems,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel					and they rarely do it right half the time [laughter]. So you always have to go back one more time. So for them trying to get it to us in the active call, it's not going to happen. I don't see them ever being able to physically do that in time. But could they send a picture? Maybe... A snapshot will be-- it's easy. And it's now. Because like I said, DOL photos or driver's license photos are how many years ago. They still are that person, we can get basic identity or physicals on them, but then it's-- I mean, how many times are they going to look like that? ... I almost guarantee they're going to be different, and are they on drugs? Have they been using drugs? Are they a lot skinnier? So you can change a lot, so.
Wish_List	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Some people say too, "How do we do it?" Like we're heading to a high-risk violent call or something and we have our MDC with all this information popping up, we're trying to read it, and we're dealing with stop lights, and we're dealing with pedestrians, and we're trying to get there. I mean, we're running cold. How do we do all that? And people think we're crazy, and we're not safe. You learn to be safe. You learn to do it properly, and you multitask. We learn to multitask. I mean, we have to. But we don't want to add anymore crazy technology necessarily to that scenario. But what we already have, if you can take and just deliver the right pieces to us at that time, I think is the key. ... The right amount and the most important at that time is what needs to be delivered. When I get to the scene, having pictures on my phone maybe ready for me. So I get out. I already saw it on my computer, but then I have some more. I can have that. I'm the fourth officer. I have the time maybe to do that...
Wish_List	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	...I mean, when you look at where technology is going, I would like to see officers have the ability to access some of that data from a personal device as opposed to a laptop. I mean, I'm sure someday you're not even going to have a computer. It's going to be a cell phone that you just plug into the back of a stand that's got a screen, and you'll just work off of that. But until we get to that day, we miss the ability to connect with large-scale data outside of our cars, so.
Wish_List	LE	S	Supervising	36-45	21-30	Male	LE-S-028	Well, it might be a driver's license photo, so that we -- because I might

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					want to know-- I'm standing talking to this guy. I might want to know if the name he gives me is actually him. And I can access that in my car, but I can't access that standing on the street, so. And then you talk about safety concerns, having to leave that person or whatnot. So sometimes it would be much easier for me to just get that data on a personal device as opposed to the screen...
Wish_List	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	...When you look at what might be useful, certainly from a sergeant's standpoint, if we deploy on a scene, I can see where all my cars are. So our radio, our computer-aided dispatch system allows me to look, and it will show me where each of my car-- each of my patrol officers are and cars... Yeah. But if I park my car and I get out, I don't know-- I know where that car is but I don't know where that officer is. And so I mean, I'm not worried about that in everyday stuff, but say we go out on a significant incident, and I have to deploy people out on a perimeter, it would be nice to be able to see on a screen where I've deployed those individuals on a personal device. And so that's where it would be nice to see technology in a way that we can then-- I don't think every one of our officers wants to be identified by GPS, but in the certain situation, maybe you can flip on everybody's personal devices to start screening GPS so that I can now see where all my officers are on the scene. So for accountability purposes, and for, "Do I have everything covered that needs to be covered?"
Wish_List	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	...And so that's technology I would like to see, the ability to map-- using photogrammetry or whatnot, the ability to map scenes so that we don't have to get out with the tape measure and do those types of things, and whether that comes from a drone or from a more classic-type device. So for us, I mean, I know agencies around here are using drones with photogrammetry to map accident scenes. They just put the drone up. The drone just takes a bunch of pictures. Then you have a two-scale look at a scene that's an actual photograph or a moving scene as opposed to this basically drawn out map... a diagram. Yeah. So I certainly would like to see that kind of technology for us. Unfortunately,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								those are very expensive and we don't have enough incidents I think to really bring up the need for that-- the need for that...
Wish_List	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Eventually, I think we need to find some increase in both photo and movie or video technology. Right now, we commonly use our iPhones as our cameras and whatever videos that might need to be done. And there's limits to the quality of that. And that kind of tails over in a little bit with drones, and FARO devices, and that type of thing. But just simply going out to the scene and taking photos. If I really want good photos taken, I have to ensure that I remember to grab the nice camera here at the office that's just not available all the time.
Wish_List	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	...we don't have a real quality video system. I mean, we have an older video camera that can be used, but it's not real high quality because that technology changes so fast. If you invest in it, a year later it's worthless. And so having the ability to do that in a better realm. And then for us, we've looked at systems to record our interview rooms because a lot of times just like you've thrown the recorder down here, we'll have to do that in an interview. But you go to other agencies, and you go in the room, and as soon as you close the door, the whole thing, it starts video taping you and recording you... they have a multimedia setup. And for us, that would be really nice to have something more like that where once you close the door, I don't have to worry about, "Oh hey, the battery died in my--"
Wish_List	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	So some of that type of technology, some of the pictures, video, drone measurement technology, increases in measurement, those are the type of things I would really like to see us be able to invest in. Right now, obviously cost can be prohibitive, so.
Wish_List	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	So I would love to come up with a way for communications to be able to prioritize on safety issues first. Because now they've got computers, they've got cell phones, they've got so much technology stuffed into the cars. And so I don't want that important officer safety to get lost in the snowstorm of information coming towards them... But just from my standpoint, making it a little bit easier would be great. And then some

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								way to be able to prioritize so that somehow that anything that has an officer safety aspect to it is flagged. So it would be easy to miss it otherwise.
Wish_List	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Some of the parking enforcement officers have those as well, but I have one in each precinct. I would love to get more. (talking about automated license plate reader)
Wish_List	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Most sergeants have a cell phone, all lieutenants have a cell phone. But I've not been able to find the funding to get-- I would love to get cellphones.
Wish_List	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	But I would love to get smart phones because there's a lot of other technology that I would like to put in the cars but it's just-- it's a funding thing.
Wish_List	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	[RE: Microsoft program] ...I think it's called Blueforce, that actually puts a large flat screen computer in the back of all this-- what I would like to do is put-- I'll describe it and then-- what I would like to do is put one of these units in the back of every sergeant, lieutenant, or captain's car in patrol. It's got a large flat screen computer, probably about a 42-inch computer that you can actually pull up locations, you can pull up overheads of locations, you can touch screen. So like if I respond and someone's barricaded inside their house, I can pull up the location on Blueforce. I can touch screen and go, "Officer [Name] is there, Officer [Name] is over there." You can actually map out your tactical situation so you can have awareness. And then if officers have cell phones or smart phones, you can actually send that image, get everybody on there. Everybody on the call, you can track people by their GPS locator on the radio so you know where officers are at, at these critical incidents. If you have, whether it's a barricade or a bad car accident or something, it gives the commander the ability to know what's going on at the entire thing. Right now we actually end up using paper and pencil to do that.
Wish_List	LE	U	Supervising Field	46-55	31-40	Male	LE-U-029	Exactly. And just getting that institutionalized so people know that, "Listen, if it's not important, I'm not putting it out on the radio." So that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					we save that airtime for an officer who might need it, or a sergeant that might need it, or if I might need it. So if it's just a humdrum not important, I'm going to send a text. And I'll look at my texts when I get a chance. If it's more important but not an emergency, I'll make a phone call. And if it's an emergency, I'll put it out on the air. But just institutionalizing that so that everybody does it.
Wish_List	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	The information I need is a very clear synopsis of what's going on; including any history or anything else. Like with an incident-- like here a few days ago, I think last Saturday we had a medium size protest and I was incident commander.... That's sort of kind of information that allows you to do kind of a threat assessment. And then you have ongoing information that you're constantly getting as the event goes on.
Wish_List	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	...Again, being able to map things. Because again, having that communication system that I talked about in the back of the cars, that kind of back command console would be-- that's a big deal for me.
Wish_List	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	I would love to come up with a way-- one of the things that really bothers me is we have officers staring. You're in a car and a call comes in and I'm having to look down there... MDT is right here, and I end up getting a lot of cars dented because people are looking at this to look at the call, and they kind of don't realize the traffic has stopped. A lot of updates come up on here. I would love to figure out a way-- I know they can do it in fighter planes. There's got to be a way to put that information up where I can look through it. Yeah. Or something.
Wish_List	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	[RE: new cars] You don't have to look down here for the speedometer, it's right underneath the windshield. But something that puts the information up there, so that I'm not looking down there. That always bugs me.
Wish_List	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	...Our MDTs are fixed. I'm actually pushing to go away from that and to go to more of a laptop... So it can be detachable...
Wish_List	LE	U	Supervising	46-55	31-40	Male	LE-U-029	They have to come back to the precinct, they have to write the report,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					then they go back out. So we're looking at things like are there secured locations. Again, that's why I would love to then get a laptop. You take it out, you go into a small secured shop of some sort, and you can write your paperwork there. But that would be kind of the next generation of RMDCs...
Wish_List	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	...But from a safety standpoint, I really don't like people looking down. So the heads up would be fantastic. Like I said, in my daughter's car that we're buying her, I never have to take my eyes off the road to know, "Is my blinker working?" All of my dash stuff is right there. It's a Honda Civic. I looked at that and I was like, "That's great." Because you can see the road. You're not looking down to look at your speedometer, or the temperature gauge, or any of that stuff."... fighter jets I know they have a heads-up display that they can put everything up there. It would be phenomenal to be able to do that... And just figuring out how to-- and then the cost and whatnot. But like I said, we've never had a bad accident because of it, but I have a lot of rear end accidents that I think could be avoided.
Wish_List	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	The command consuls in the back for the sergeants and above that big flat screen computer. Those are the two that jump out at me.
Wish_List	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	[RE: local 700 sq. mi. park] ...Well, searching that for a lost person is pretty difficult, but you can put a drone up. Especially with a forward-looking infrared, you might be able to find them. I wouldn't be a big fan of them for routine patrolling and that kind of stuff. It is a little too big brotherish for me. But for a barricade, being able to put a drone up to get a view of the house to purchase barricade in, or looking for lost people in like [Park] or something, I think they'd be phenomenal.
Wish_List	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	...We've actually gotten the authorization to hire up to 200 more officers... But we're having a difficult time doing that. So anything that I can do to make their time more efficient - using technology to make getting reports done faster, processing scenes faster, things like that is kind of what I look for for technology. I might not be able to add a bunch

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								of officers, but I can save time for the ones that we have.
Wish_List	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	...And so, in that moment it would be nice to know definitively whether we had a second suspect, and where is he? And I mean that's a very dynamic, rare, high-stress incident. But just a missing child situation where a young child has gone missing, well, who was the last person who saw them and where did they see them? And we get conflicting information about that. And so, yeah, there are times when you would just like a definitive answer to the question you're to resolve, but that information just isn't available, so you just have to keep taking whatever next step is available to try to clarify the situation or get a clear answer to your question.
Wish_List	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	What would be really cool is if you just had a little earbud type of thing that encapsulated the entire communication system... Instead of this flopping around on my belt, just something really almost miniature-type communication. But then if it falls out of your ear or gets knocked out of your ear, then you have the problem of finding the contact lens in a sandbox [laughter], right? So I don't know. I suppose if they're smaller, lighter, more reliable. But I mean, I find these pieces of equipment pretty reliable.
Wish_List	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	I suppose you could have a cellphone-sized radio, easier to carry in a pocket as opposed to having this, we call them, bricks but-- as opposed to having this brick hanging off your belt. But I suppose as technology advances, we might get around to the point where something the size of this smartphone is now my police radio, and it has all the capabilities of the larger more cumbersome units.
Wish_List	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	So I mean improvements in that where we didn't have to worry about the cameras dropping out of service, the remote microphone is not working. I mean, those kinds of improvements, I'd be very much in favor of.
Wish_List	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	I know the body-worn cameras are fairly large and bulky. I mean, it would be nice to have something closer to business card size as opposed to that big box because it's just awkward. I try to carry. Actually, I try to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								carry as little equipment as I possibly can, but there are other officers who carry, it seems like, an entire warehouse of equipment with them.
Wish_List	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	[RE: electronic booking form] ...It would be nice-- I think we could probably do that on a pad, if we had that capability...
Wish_List	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	[RE: bike patrol] ...I don't understand why we don't have GPS.
Wish_List	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Another issue I see a lot is like-- well, even this. A lot of officers now are-- eat really well. They're not donut-eating, coffee-drinking, fat slob anymore... they eat in their cars a lot. You've see them, they'll take out jugs of water, but where do they put them in their car? ... this would fly out of it if there's an accident. This would become a projectile in the car. Or let's say it doesn't hit you and you're not in an accident, but now it's spilled everywhere, all over that nice technology. Or their sandwich went flying. I guess what I'm saying is - this seems kind of silly - but why don't the cars have a little fridge in the back or a little compartment for the officers to put their food...
Wish_List	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	if you look in the back of these patrol cars, I mean, we have modems, and this, and that, and flares. And why can't we just have just a small little something to put our lunch. (still talking about a little fridge)
Wish_List	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	This shouldn't be any surprise to you because it's probably the same for regular people, but the ability to charge things. Not just a cell phone but my flashlight. I'm probably going to need to charge my camera, so... Well, the radio does okay. I can get through a whole shift.
Wish_List	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[RE: exploring new technology] And I kind of wonder if it won't be something that is kind of a CAD and RMS. That it's not separated anymore because of the way that we need to collect demographics and how we contact people, and yeah. Because I kind of see it all melding into one.
Wish_List	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	all the body-worn-- all the video that's happening. All of that needs to get integrated. Every bit of it needs to get integrated, and we're so far from that. I mean, we're struggling with that right now with how are we going

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to take body-worn and know what the call was and what was the officer doing and just all of that? As simple as a number for the event getting somehow tied to that video. I mean, it seems so simple. It's not, right?
Wish_List	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[RE: RMS autofill] There's a little bit of that right now. It's not perfect. We're looking at potentially new RMS here, and so we're absolutely wanting to make sure that that remains. So yeah. I mean, you need all of that. Anything that can make the job quicker, more efficient, less repetition of entering the information, which just opens you up to more mistakes, right?
Wish_List	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] More intuitive things. If I am entering a-- if I'm creating a police report on a certain, specific nature of that report, that technology should be able to lead me through something that's logical rather than have me searching, and looking, and going around in different areas of the report kind of aimlessly or blinded... There's a lot of silo-disparate systems, as you mentioned earlier. Some of them talk to each other. Some of them don't. Some should. Some shouldn't. And I think we're in that one foot in this pond, one foot in the other pond situation where you want some things to be decoupled and sort of segregated for certain reasons. And then you do want lots of interoperability in other areas
Wish_List	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] ...Just personally I've always wished that there was, I don't know, some type of a group internally that got together regularly that was the police officers and the dispatchers and they worked through the issues of policy procedures, just all of that, and we've never had it.
Wish_List	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] Apple for law enforcement. That's what I always think about. All of our systems being just one seamless-- it doesn't matter what device I'm on, I can access the same stuff from any device. And, yeah, that's what-- it just came to mind when you said-- because I'm always teasing that I said, "Yeah, I need Apple for law enforcement."
Wish_List	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Interoperability is huge. Yeah. So many benefits. Again, you do kind of get into that saturation discussion, but there's so many benefits to having data shared amongst all these different systems... I'm working on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								this document here, I want to now ship it to my phone, and I want to go out in the field, and-- yeah, seamless. That's a great word for it.
Wish_List	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	The one thing that comes to mind is a Tom Cruise movie, Minority Report. You remember that? Not the whole premonition thing but as far as technology goes, touch screens, intuitive, [crosstalk] making things part of your environment. So I've been following VR since I was a kid but now augmented reality is on the scene, and I think that is something huge. If I don't have room for six physical monitors across a space, but I'm wearing glasses that I can draw a monitor here and a monitor here and a monitor here on this wall and move it over here, then we're talking. I think then I see some weird dystopian future where the dispatch center of people's homes are just painted some beige or white color. There's hardly any furnishings or anything decorative at least, and it's all through augmented reality. And you're obviously interacting with the physical world too, but I guess less typing and just things more natural to the human body and being able to visualize more things. Right now we're looking at lines of text and colors that barrage your eyes and things like that.
Wish_List	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	...I think augmented reality out in the field can be interesting too. Now, you'd have to get into the whole distraction and what's real and what's not thing, but for certain things, imagine an officer wearing glasses, whether it's Google glass or some other vendor, and being able to see the physical location of the 911 call on a highrise or something, some beacon or indicator. So there's cool stuff like that you could do.
Wish_List	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	I still would like to see an easier way where all I've got to do is have the dispatcher tell me, "Go to this B channel where you're going to [City]." Or even better, hit a button, and it patches it all the way through to the [City] side. I'd love to have that, see, because right now I'm doing, "I'm on pursuit on the bridge and I've got [City] [inaudible] next to me and "What's your phone number?" You know with [inaudible] [laughter].
Wish_List	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Are they armed, a description that might be helpful. Basically are they armed and what they're already doing right now, so I mean we've been

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								pretty good with-- dispatch is in training mode right now. They hired a bunch of new dispatchers who are sometimes are not as quick on the ball, but that's with anything. I have new crews who are doing the same thing, so it's just one of those things.
Wish_List	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	Make things more simplified. In order to do that, it'd cost money. And the agencies have to sit there and bend over backwards to be above everybody else. This department's always falling behind. And we fall behind because we have to deal with all the red tape.
Wish_List	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	...I think license plate cameras at major intersections. I think that'd be extremely helpful, and it hooked up to dispatch, like [City]. They have it set up beautifully. They have a pole with an LPR camera hooked up to dispatch...
Wish_List	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	To be honest, again, it depends on the call, if it's a gun call. What's he look like? Where's he going? Where's he running? Does he have a car? Does he have anyone with him? They want everything and they want it right now.
Wish_List	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	A multiband radio-- not multiband, but a radio that - and they exist, and Harris makes it, but we didn't buy it - depending on where I am, it will choose the best way to communicate with home whether it's through radio, through Wi-Fi or through cellular. It will choose the strongest signal and that's how-- instantaneously.
Wish_List	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	[RE: dynamic radio network connection based on signal strength] In real time choose. So, if I go into a building that hasn't been updated, it's going to switch to cell, and it's going to communicate with the dispatchers via cell phone. And then I don't care if the building owners didn't want to spend \$6 million in their antique building, their historically preserved building. No one wants to spend this money, and they're going to fight it. So wouldn't it be better to use the technology that exists that your phones use between cell and Wi-Fi every day and move to a software defined radio instead of well, the way we're doing it? That would be, so for officer safety, boom, step one. Two, put a real computer

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								in the car with the same connectivity that you would expect if you were going to put one in your brand new car.
Wish_List	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Yeah. And then data on-- if I'm going in to a house and you have an autistic son, and there's a call for service-- he's 6'4, 250 lbs, but as soon as he sees bright lights or something else, he's-- I don't know that. All I know is that guy is someone who's not responding to me. He's not listening to my commands, all of a sudden [things] ratchet up.
Wish_List	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	And the more back to the-- what do I want to know when I'm going up the stairs? I want to know everything up to who cooked the dinner so who's in trouble. How many times I've been there, has CPS been there, has APS been there? All these things. A good dispatcher will see some of these things if they run the address separate. But if I'm running up the stairs and someone dialed 911 and put the phone down, and it's check on their well being, and then they won't answer the door, and then I have to force the door, which creates anxiety for the autistic person or whatever, if I know right off the bat that I'm dealing with someone with a diminished sense of communication skills [laughter] or a different set of skills, I'm going to approach it differently.
Wish_List	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	...It's just the luck of the draw. But why we can't develop some way to allow-- but my project to identify the autistic families and put in something in the CAD, so the dispatcher would see it took off in a whole different direction after an officer-involved shooting. And then it got left to the wayside. So now, we're all getting crisis-intervention training.
Wish_List	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	Just out of the box, huh? If you can have your information put into-- like vehicles now, they have their odometers, pedometers on the glass on the dashboard. That would be something nice for the officers, because now your eyesight is not looking down towards the computer. Everything is visual on the screen, transparent to you, in front of you while you're driving. It's like what you see in the Sci-Fi movies. But it's not too far away, that technology, because of they can do this. But your speedometer, how fast you're going, is just a matter of time before you can integrate that information on the screen. So the officers in itself will

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								be able to see everything on the screen. Touchscreen, everything that make it fast for time, have an earbud in there, so they can hear everything that's going on.
Wish_List	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	Auditory as well, yes. Voice commands, "Can you repeat the address that I'm going to?" And it'll show everything. Callback number, "Can you call for me to make sure that the victim is there or I'm at the right address?" Or, "I need an interpreter." Stuff like that. So everything is hands free. So I meant, that would be just incredible if they did that, if they had that for the officers in the car. Just think about it, right? I don't have to press my mic. I'm just going to voice activate and start talking, and the computer's going to dial the numbers for you. You can have it all on the screen on your windshield... Some may be in its synthesis stages, but it's already there. A lot of it's there. It's just time and money, and who's going to be the first to leap into that for law enforcement. For having the vehicles, how do I integrate that into a software program that will project that onto the glass?
Wish_List	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	Preexisting vehicles, especially older vehicles too. I mean, that's something I would like. I meant, then you don't have-- half of your thinking process is gone because everything is voice. You don't have to worry about being too computer literate. You just have to know what commands to ask the computer to do... Call this phone number. What's this guy look like? What's the address again, computer? Can you repeat? And you can still talk to dispatch too. But everything will do. We have a facial of the individual, because you can access our database that we have and it brings up an image on the screen, so you can see everything in plain view.
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	[RE: email] Yes, but they don't use it properly. They over-abuse it. You're getting a list of suspects that you want to look for, and then you're getting [Name]'s retirement party in your emails. It's not broken up. It should be separated to where you have pertinent information you really should need, and then someone's retirement party in six months... Categorizing emails to where you're not getting 55 emails a day, and 3 of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								them are what you really need, and the other 52 are just basically spam, spam emails.
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Responding to calls, especially certain types of calls, not enough. Too much information is good. I want to know what the guy looks like, because a lot of times we just get, "It's a male with a gun." And I'm standing on that intersection. I'm like, "Can you tell me what he's wearing? Does he have a backpack, a purple hat, green-- what does he look like?" And they'll just go, "It's a guy." No description of race, nothing, "It's a guy with a gun." And that's happened to me, where I'm at the corner, and there's a guy with a gun. And I could be standing next to him; I don't know. So more is better with that type of call.
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Basics. You want race, gender, age, description, clothing, anything specific. Like, is he wearing a Giants hat? Is he wearing a purple hat? Is he wearing blue shoes? Shoes is a big thing for us, because criminals don't change their shoes. So if someone steals something, they can take off a shirt, or a sweater, or sometimes they have shorts underneath their pants, but they never throw away their shoes. And then, if you can give me the shoes-- because shoes are very specific. I'm wearing very specific shoes. You're wearing very specific shoes. They could say, "Female with sandals." And I'm, "Oh, she's wearing sandals, and she's a female," so it kind of narrows down. So certain information is necessary.
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	[RE: new technology and communication tools] It's over-complicated. I call it 'dumbifying.' They should 'dumbify' a lot of-- just make it simple. Cops are smart, but we're smart in a different way, but adult learning is different. When you're older, you don't want to learn new things. You don't want to learn how to utilize this iPad for work. You don't want to learn how to utilize this new MVT system because it's-- now, when you would get in the car, you only needed like one password to get onto the computer. Now, you need like 5. And they have to be all different, and it has to have a hashtag. It has to have this, a number. It has to have-- so me, I put them all on my phone, because I forget. I'm only almost 40, but I'm already forgetting things. But you have to know nine passwords to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								get on your technology. Make it simple, face recognition. You get in the car. A little camera scans your face. They know it's you. Or a fingerprint in the car. You just put your fingerprint, and then it uploads all the information.
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	They integrated that into our system, where if they give you an address, it gives you prior calls for service of what, good and bad. Because you get one address or there's a problematic address, I don't want to know about the noise complaint three days ago. I don't want to know about the neighbor and the other neighbor fighting. I want to know if this guy or this specific address has had gun calls, domestic violence, or any kind of police resister. Just those three categories alone would save the four pages of noise complaints, of garbage complaints, homeless complaints. We had that- because when the call pops on the screen, there's an additional screen. And it shows you the address and all the prior calls for service. But it's like three pages of homeless guys sleeping or someone's peeing in the alley on that address. So it's not pertinent information.
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Dumbify the email. Make it easy for us. Make it to where BOLOs, pertinent information, terrorism activity, then birthdays, and Christmas parties, and [Name] retiring in three weeks.
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Drones... [because] You're not going somewhere blind. You're not going into an alley blind. You're not going into-- we have a lot of areas that are-- I grew up in a very bad neighborhood by the Cow Palace. A lot of that area is just grass and dirt, no street signs, trees. The criminals know the area better than we do. I grew up in that neighborhood, so I know it. But you're going to go into alleys. You're going to go into areas that are-- it's almost like a lot of the projects in [City], they're built on hills, which is a sniper's advantage. So we have to trek up these hills, when the suspect already has an advantage over us just from the hike. There's areas that are dark. We don't know... Yes, information. Yes, recon. I would love to get drones, but that's not-- I'll be retired before that ever happens.
Wish_List	LE	U	Field	36-45	11-20	Male	LE-U-013	Even ground drones. I was thinking about the BB-8 character from Star

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					Wars. So there's a guy with a gun in the building, and I get that little ball with the camera and just send him in there... Reconnaissance. We don't need the tact robot with the arms. We just need that little ball with the camera... And just send them in there, and you can do recon for us, and you can look on your phone. And you go, "Okay, the guy's in the room. This is the break in the room. And so, the door opens this way. It's a long hallway," so just drones.
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	...I'm not pushing tech anymore. But just drones and just simple information. You have people in law enforcement. They want to build a legacy, and they're utilizing technology in the wrong way. They're making it harder for us because it looks good for them.
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Simple, simple, simple. We want simple, easy to use, simple.
Wish_List	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	...But if there was something in place to where there was a shared communication line that was not restricted, that was event specific to where we could actually share a radio. And even if we lost a radio, it wouldn't be an issue if it gets lost at the event or whatever because the lack of responsibility from whoever is in our private sector is much different than an officer who's responsible for their equipment. But if something like that was available, I think something that would be a lot easier because that would be a channel that would allow the private entity to speak with the city agencies and actually close some of the gaps. You know what I mean, in the communication? But then that opens up another box because you'd have to get additional training for those people, so it's not just gibber-gabber because a lot of times, it's on the security radios.
Wish_List	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	[RE: report writing] ...some really great ideas as far as some of the preloading the documents and emailing documents that are pretty standardized, which was-- I go to the freezer. I get the box of ideas. That's a great idea. That's exactly what people would like. It's super easy, and then it's a lot easier than bringing the forms with you. When you have them on your phone, it's already loaded that information on the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								form. You're just emailing it to the right person. So he's definitely in the right vein for where we could go, or are going, or need to go, which will get that.
Wish_List	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	A lot of times, we may run into somebody who doesn't have any ID, but they may have a driver's license or they have been arrested. There's a record that exists someplace. Now having that cell phone and those applications available to utilize, the officer doesn't have to leave the street and go back to the station and try to figure out somebody on who they are. It's a lot more effective on the street.... Information, that's a huge resource because again, it doesn't mean we have to go back all the way to the district station to try to identify somebody or if you're booking somebody, where you could be citing them or releasing them from the scene and because-- unless you're going to book somebody, and really, there's no reason to bring them back to a station. And the only reason you would is if you happen to arrest them and you can't release them because you can't identify them.
Wish_List	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	[RE: mobile fingerprint technology] Hugely helpful. Yeah. And a lot of it is because you run into different people in different situations. So you got a homeless person who has no ID. All their property is gone. It's been bagged and tagged by DPW and somebody cleaned up the street, and there goes their ID and everything else, so now, they lost all their stuff. But for whatever reason, you're trying to identify them either they're under arrest for something. They're being cited for something. Having the print machine definitely helps. It may be difficult depending on the level of damage to a particular print. Yeah, but it would be nice to have the resource. The other ones if you get people who are purposely avoiding bringing identification with them, so it's better having it out there, and it's a lot easier when you can identify somebody right there on the street. It also is a huge tool to get through a lot of the smoke and mirrors, which is kind of a euphemism for lying. So when people are less truthful as far as their identity, if they know that that system is right there, it's like, "Oh well, why bother? They're going to figure out who I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								am." So yeah, that's a huge tool.
Wish_List	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	...So one system is allowing you to enter in more of a little narrative, the field interview, of what a particular contact is, whatever the uniqueness of the contact. Field interviews, if there's a gang element to it or there's a robbery series element to it or whatever could be that information is there, but that information is not in the eStop because the eStop is covering-- the reason for the stop, the reason for a search is if there is an arrest case numbers, the officers at their scene, the race, and age, and gender of the person contacted and whatever the reason for the stop is. But then the other information that would be available or useful for investigations is in the FI, so... Currently, they don't [talk to each other]. And then currently the FI information is intertwined with our crime data, our report writing system, but the information is not pushed in there. So if there's a query for the investigators when they're doing their work on particular case, if they're running out Johnny for whatever contacts he may have had, they'll see the FI contacts, and they'll see the police report notice, but they have to run out each contact to get the actual extracted information. So it's not like you run Johnny, all of them come up, and now you can see the panel and just kind of click those little contacts and see it. Or even if it just pushes it out in one report, it currently-- no...
Wish_List	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	I know in the private sector that it's just a matter of a scan card. You just throw your scan card into the reader, and automatically, there's your access. No passwords, no need. If the card's in, it's working. If the card's not in, it's not working. So if we go that direction, I think that would be good because that is really a big headache for people because either they forgot their passwords for a particular query, either the Tamron or something they're not using on a regular basis. We use LexisNexis. That's huge for querying out different locations or even just different people during the events, or investigations, or whatever we're going to be doing. But again, if you forget that password... So if we get a universal password, if we go that direction, that would be good.
Wish_List	LE	U	Field	46-55	11-20	Male	LE-U-014	I think a technology that would be helpful would be having a digital

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					board at your command post that would be automatically linked to CAD. So as CAD is being generated, your command post is actually seeing those lines and threads populate automatically on your screen. At the same time, that would be hyperlinked. So if there's a particular location somebody's talking about or their officers are at, that you're actually able to click that and open up either the same screen or different screen to a Google Map or whatever kind of satellite image of that particular area. Having that at the same time when you bring in that hyperlink that it would actually plot the officers from their GPS, from their phones, or from their devices, that will actually show you where they're at in that particular footprint, which would assist when you're setting up parameters, when you're setting up responses, when you're trying to coordinate scenes that you would already have that. I mean, it's kind of like that UPS commercial. Don't mess with my dots kind of thing. So having that populate automatically, I think that that would be huge especially when we have these larger incidents with the active shooters or whatever because it would streamline it. It would be faster. You would know where your holes are, where you would need personnel.
Wish_List	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	When you have that CAD being able to have that link with other systems, I think having that active board, having that ability. Because the touch screen is there. I know it's there to marry in the systems even that. So when you've got a suspect that is named in a particular incident, you can pull that up. When you've got a location that's named in a particular incident, you can hit that location. So you're at an event and you've got people hanging out in front of a particular bar or whatever. You can pull that up and when you hit the bar it comes up, and it's got your point of contacts for the owner, for the manager, or whoever. And all of that stuff is populated in. And that kind of cuts through the chase of trying to figure that out, calling the station and having them go through the paper index to do that. I think that's huge. I mean, outside the box, kind of pie in the sky kind of thing. I think that would be great.
Wish_List	LE	U	Field	46-55	11-20	Male	LE-U-014	...when you're trying to locate officers that are non-responsive at a scene

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					but you're able to see them on the board, you can have a coordinated response to go to that particular location and actually see if there's a reason they're not coming up or responding. You can actually do that. You can click on that board, send them a direct message to either their MDT or to their phone because you now have that ability on the board or on the board under your screen on the computer whoever it is that you can actually go to that and everything is just interlinked. And I don't think that that is unrealistic, but I think it's a monetary thing for sure and an infrastructure thing, but that's something that can be done.
Wish_List	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	...So your phone is connected to CAD. So when you go back and you have your CAD on your phone, you can actually click on it and then select a particular form that you want to transmit to somebody that you can select that form. Open it up. It populates with the date and the time and the case number, and then you just fill in whatever's relevant that needs to be transmitted to the victim or the witnesses. A lot of times, your victims will be going somewhere and you're not able to transmit that information with them, but you can transmit that to the hospital. You can transmit to somebody else that actually-- information can make it around. I think creating that kind of platform or that ability would be huge, not only for that, but then that's also a resource for any of the inspectors. Because then, any of the inspectors courting that case number would also be able to what forms were transmitted, what was written on those forms, what the contact information was on those forms. So it's another record that's available.
Wish_List	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	Well, you know that hey, Officer so-and-so gave them a follow-up form or gave them whatever. With the forms that we have, there's the citizen's arrest forms. They're both signed, and that form may go back or whatever. But if we have that associated to a particular person-- and now it's populated with their driver's license number or some identification number. And that person is actually signing the screen. They're looking at it, and that's transmitted and automatically married into the report. It goes paperless. The officers don't have to bring the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								papers. It doesn't matter if it's raining or not. The people can read it. If there's an issue, they can switch the language on it and then go ahead and have them read it in whatever languages best for them. Or if there's any other disability, as far as hearing or sight or whatever, there's a workaround, something for that. So I think that would be good for resources for the community.
Wish_List	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	We do a lot of language translations. So I know that this exists in other places, but the ability to Skype with a particular victim or witness or whoever in a different language and is automatic, so you're speaking in your language, and it automatically is translating to their language so that they're able to see it or read it. Having that, I think that's a huge technology because in [City], we have-- I don't think there's a country that's probably not represented in [City]. I mean, there's everybody. So to have that ability to make it seamless...
Wish_List	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	[RE: language translation] ...but outside the box, I mean that they can-- that would streamline it because we get a lot of counter reports where victims will come to the counter at Southern Station or any other station to make a report. And there is a language barrier. And victims don't like having to-- or it's traumatic to the victims to have to keep repeating things and reliving the scenario. So if they're able to do it first-hand, not telling it one person and wait for that person to tell the other guy, that delay when a lot of people like to just kind of brain dump what happened. And I think having that Skype ability or something of that translations works because it also captures the video. It captures the expressions. It preserves that evidence at the same time. Because when an officer's writing a report-- and I spoke to the victim. The victim was crying. Okay, that's what it says on paper. But when you're looking at the video and you can see the victim is traumatized and they're crying and all that, I think that carries more for the victim when you're trying to present that case to the DA and kind of paint a picture.
Wish_List	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	The cars, I think we're moving towards hopefully getting newer vehicles. That would be nice. We'll see how that goes. I mean, there's something

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								in the budget that's in play for that, so we'll wait.
Wish_List	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	I know that they're transitioning right now to the eCites, which is the electronic tickets on the street. And so that's starting to roll out. I think our traffic company may be doing those already. But having that ability to be able to generate the ticket right there on electronic, the downside of that is it's another device for officers to hold, to bring up. But again, if it's an ability to marry your CAD stop into your computer, then you just do it on the computer. And it just prints up the ticket and you bring the ticket up, and that's it. That would be good. And they can sign the phone for the ticket. That would be better. But then the down side for that is you're presenting your phone to somebody to do whatever. Currently, I think it's a little box or whatever for the tickets. The printers in the car are tough just because of where they're situated and there no real estate.
Wish_List	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	[RE: e-tickets] The pit systems in the field, that would be huge, either internally or externally. If there's a flip on the side of the car but by the corner panel or something, where you just kind of flip up the flap, and they don't even have to get in the car - they just stand next to the side of the car - that would be good, all the mechanisms for the internal so either in the trunk or somewhere else, but it would be faster, streamlined...
Wish_List	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	[RE: technology built into vehicle external door panel] ...It could be utilized for when you're citing people for misdemeanors and you need a fingerprint, that that would scan it automatically onto the ticket instead of writing out. We currently have an ink pad that we use, and we'll use that, and those prints are interesting if you go try to look at them later. I mean, they're there, to say that they printed. But you're not going to get the best print. But if you have the digital scan of a print to use, not only is it a huge resource for the tickets, but if you end up with a [Name] victim later when you can't identify, and that's the only print in the system. That's huge because you've now identified somebody...
Wish_List	LE	U	Field	46-55	11-20	Male	LE-U-014	Having some way to automatically notify different districts as events are

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					moving into their district, so say [City] has a lot of activity. They've got their own calls for service. I mean, Uptown is 200,000, right? But when they have a robbery or a suspect or something that is now in pursuit at our direction, that once it starts to get to an automatic area, it should automatically notify the next district that this is coming. And currently, it's when dispatch gets a break because they're multitasking trying to communicate with the supervisors, notify the officer that's in pursuit, notify somebody else, and at the same time, they may have a call taker on the phone that's trying to give them information. So those dispatchers are kind of inundated with information. And then for them to get the switch over to tell the next district that this is coming, there could be a delay. So having something automated to where-- if the dispatcher in a particular district sees that it's going to a particular area, that instead of coming up on that channel, they just kind of punch the button and now they'll just bring up that channel and then make it a little bit seamless, more seamless...
Wish_List	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	...having the ability that if you're querying a particular individual that you're able to query them either regionally or statewide, and not just for arrests because you can do CNI and your NCIC or whatever for all that kind of stuff, but to be able to just to query the stop because that's huge in investigations when you're looking at stuff and you're trying to figure out where people are. So for the law enforcement agencies at either end to be able to share that information and know that these records exist someplace else, "Hey, John's been stopped up here in [City] 15 times." You can call them for those records and look, but you can at least see that there was a contact. I think that would be huge...
Wish_List	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	Yeah, and then the other one I was thinking is that when you talk about equipment and stuff in the field, having the mobile rollout, either the vehicle that's equipped with it, so the mini-commands that are assigned to district stations that those are assigned and able to roll out, so you have that ability to have a command post set up on scene pretty instantly. Right now, we have the ability to set up command posts, but

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it's a little bit more labor intensive when you're setting it up. But to have dedicated vehicles at particular stations so that they're already populated with the maps of the area, the digital footprints are there. So have those screens either externally or you can actually do it. You can set up a tarp and drop it down or whatever. Basically, kind of like a U-Haul truck with a little tent for privacy, but you can have the briefing for the command staff in there. You can utilize all the information right from there. I think that's huge. Because I think that's something that's a lot faster, and it's a lot more coordinated, especially when you have different entities coming in to respond, either your tac units, your district units, your specialists, your investigation units, whoever. It's a lot easier to coordinate all of that.
Wish_List	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	I think you're talking outside the box, and I think that mini-command would be great because we have a couple large command vans we use for events. Some may roll up that threshold, some may not. But if you have this, when we have barricaded suspects a lot, that's just something that'd be great. You put it out there for a barricaded suspect. You've got a spot for hostage negotiators. You've got the victims or friends of the suspect, or whatever. They can be brought there. You can actually utilize that to research the locations of the subjects, the whatever. What you have is all contained in a particular unit that's easily accessible and utilized. I think that's huge.
Wish_List	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	I think technology is on the right path. For a supervisor, for like I'm like again I'm in the tactical world, being a [Job title], and also being certain years in the canine, to be able to visually see what is around me at that immediate moment. Because it's--in my mind, I know what it looks like in my head, but is it really what I'm looking at out in the street, so it's me like with the technology of the drones, I know we have them but immediate live feed to the people on the team. Not just me, but the other team leaders, and to be able to alter it or highlight it, put an edit into it, show them where I want them or where they need to be or where something is located. I think to me in my aspect that would be

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								something that we would look, that would be awesome, outstanding technology.
Wish_List	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	...our GPSs are in our car. As soon as they turn the car on, it begins. Actually it's always tracking them because it's programmed into the computer of the car. The internal car computer. So it tells us if they're wearing a seat belt, if they hit the brakes too hard, if they accelerate too hard it's sends out all these notifications. If technology could do anything, you could take quit sending me loads, because we get inundated with notifications because we have to know when anytime somebody's going out the [County], they need the car again, so, but the GPS is strictly for the car.
Wish_List	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Now don't get me wrong, a lot of it is farming, a farming community, we have three stations and nine fire trucks, and we collect about \$500,000 a year. That's our operating budget. No paid people, so don't get me wrong, I would love to have laptop computers in our units. I would love to have an automated dispatch for us, but the funding just isn't there. We don't collect that kind of money to be able to buy that type of equipment.
Wish_List	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	No, no, I do believe that there's a lot of things that we could do in law enforcement that would--that would be more beneficial to us. I believe some of the things is, you know, crime cameras. If we can--if we knew where there like, especially in the investigative where you're almost trying to predict crime. Where is crime going to occur? Where is this burglary going to happen? Now sometimes murders and domestic things you can't really prevent that. But you know narcotics is the root of all violent crimes across America, so if I know where the drug dealers are working, I know what they are doing, if I can set up cameras and catch this footage live, I think that we can cut off some of the crime in America. Now is traffic, is traffic cameras the answer? I don't believe so. I believe that that's just a money making tool for them, but if we could use the camera to capture data that would be able to be beneficial for crime prevention and crime deterrence, because you know that police officers, marked police officers just passing through an area is a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								deterrent. So if we know if the area increases, if we can watch it live time, and just send a marked unit in that area, it would deter things from happening. So yes, I do believe that there is some places that we can go in technology that would really benefit not only the police department, but it would benefit the good people in the community. It would deter crime from happening.
Wish_List	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	...I believe that the data shows you trends and patterns. If you can collect that data and develop patterns, I mean look for years seven years out of my career I spent working narcotics. I worked in the early, late 90s, early 2000s, I was working narcotics, and I can remember when I know narcotic intelligence was just things that we collected and put on a little pin board, pictures and locations where we were looking and back then the big trend was they were tying shoes together and throw them over the telephone poles, the wires, you ever heard of that where they drape tennis shoes over? And that's where the drug dealers are selling drugs. That's how you would know where this is a location where they're selling drugs. They would tie their tennis shoes together and throw them over the power lines. So things like that I believe really needs to evolve to where we're collecting this data... So I think that yes, we need to be able to somehow capture that data, analyze that data and that data will make us much smarter in predicting crime and catching criminals.
Wish_List	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	And we don't have in the fire department here; we don't have too much technology. We don't have the computers in the units. We, I mean the Active911 coming to our phone was like a big step for us man. That was a great enhancement for us, especially the mapping portion of it because I mean in our district we have a lot of lanes, small lanes off a big highways and it's hard for you to remember all of them lanes. And the mapping software really helped us out tremendously. But I mean I would love to have computers in all of the fire units that we--I mean we still generate handwritten fire reports. When an officer goes to the scene, he generates a handwritten fire report, brings it back and turns it into the station and we put it into the computer system.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Well, in the police service, I mean as far as here we're more modernized, okay. One of the issues that we see is that the equipment that's being issued is not rugged enough. I mean remember that as police officers were out there in the sun, we're out there in the freezing cold, in the rain, they're getting in and out of their police units so they equipment needs to be more rugged. It needs to be more for the last couple of years we've had Panasonic notebooks and they--we had a lot of trouble with them just recently we went with Dell Toughbooks and they seem to be working really well out in the field. They are much more rugged, they're more durable. The processors work a whole lot faster.
Wish_List	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Well like I said, I think cameras where we could actually see crime, while it's happening, probably predict before it happens. Actually visually being able to sit at your desk and watch high crime areas as a detective. Especially as a patrolman that's patrolling that beat. I mean in your 12 or 8-hour shift you can only patrol on one street, but if I'm patrolling this street and I'm watching on my screen, and I can see four or five other hard crime areas and I see something happening, and I can go to that area before the call gets dispatched, I do believe that that could help us. It really could help us. And then on the other side of that as far as police work, I think being able to take that information that we're--that officers are putting into the computer system, and developing trends and developing patterns and stuff, and allow all of the officers to be able to see that information is important because you may have a burglary that occurred on this shift, but the shift that's coming in tomorrow morning unless somebody tells them, didn't even know that that burglary occurred. Or they could have had five or six car burglaries in this specific area. Well, you know as a detective that that--if that criminal went over there that morning, more than likely he's going to go back to that same general area and do the same things he did if he was successful. So once again, if the officer, if the regular patrol with uniform officer knew that yesterday's shift took five vehicle burglaries around this time, he knew that he could be patrolled in that area, he could either catch him in progress, or he could deter that crime. If there was some way that we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								could get that information so the officers would be able to know, I think we'd be more successful as a law enforcement community across America.
Wish_List	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Well, on the fire side, I would like to see... I would like to see us become more computerized. I would like to see us do more things in the units. I would like to see the fire trucks be more, more efficiently by themselves where you don't have to manually go there and pull valves and open valves.
Wish_List	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	... Look, one of the best training conferences in America is FDIC in [city name] every year. We try to send two people every two or three years. I would love to send two or three people every year, to be able to get that knowledge and training but once again, we only--we are limited on the amount of money that we can spend.
Wish_List	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	...Going to a fire or going to an auto extrication is only a small portion of your job. The hardest thing that you've got to do is go clean up all of that equipment and get it ready for the next call after that fire is over. Cleaning all of that hose, cleaning all of that gear, cleaning all of the equipment, the fans, and everything that access that to use at the fire, that's where the real intensive labor is. And if we could just had people to be able to go to the stations, that would do that for us, it would really help out. That would really help out.
Wish_List	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	Well, again, the reliability of the system. It's kind of like--remember the old cell phones, that when you were traveling, you'd lose your call until you picked up--well, now it's pretty much transparent to you when you switch from one cell tower to another. Probably a more rock solid network as far as the signal and that type of thing, and as far as grouping and parsing out everybody to the different groups, that's just a matter of control of the incident and the span of control that each person has.
Wish_List	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	I want a taser, and I want the beam me up Scotty thing... That way, you can get from one place to another pretty quick.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	I think one device that you can do a lot of things on, like the Smartphone, where you can use it for your communications, you can use it for your text messages, your photographs, those types of things, and also, it's understood, you may have the capability that if somebody's camera system is on the Wi-Fi net, they can give you access into it, and you can see live what's going on inside a bank building or a school or whatever. I think the rock solid of where the--I think the rural broadband initiative is bringing a lot more internet access in, and not having to deal with the radio here, radio there, and this and everything else, camera and so forth, so yeah, I think eventually, the technology will get there.
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	[RE: data analytics via social media, real-time cameras, etc.] ... you know my technology piece would probably be more from the analyst side and being able to monitor real time information on the internet and pull that stuff out and be able to analyze it, use it, and push it out.
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	And see, I think in a perfect world, yes, we would have a full-time analyst. And I don't know that here you would stay busy 8 hours a day with it so they're probably going to have some other responsibilities but, yes, I would like to have a piece that we could do when we're actually--we have one of our detectives looking into some software programs and they would do it but they would still have other primary job duties as a detective. So.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	Those are generally personal cell phones. We have some people here with departmental cell phones, I wish we had more of those, especially for when--it can be convenient, I'm one of them, but a lot of people just don't want to call a suspect or a witness or anybody that's not someone they work with personally on their personal cell phone.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	... I wish we could--I wish there would be--there are some things that don't necessarily have to do with what we're wearing but how we're wearing it. I would personally prefer to have, like, an outer vest that I could run suspenders from the belt and keep that weight way up on my shoulders from running around my hip.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	I like some of the stuff we have, I just wish we could have more access to it, and even though I'm back to Patrol, I've got to go through two different people to get--to ask to be approved to get issued a laptop.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	No--oh, Blue Force Strikers, I would like those, those are neat... How Marines [inaudible], there's nothing in our vehicle or on our person that says where we are... Location-based service that has a supervisor I can look up on a screen, and see via--I have these officers here and these officers here, even if it's just--even if it's not active, even if it's just a--these two went out here, if it shows up to me on a map, whereas now, I can look it up from there, I can go ask who's on what, I can click on the calls and at least see where those locations were, so I can't, [inaudible], but it's almost better off just taking--I just need a map and someone to drop pins where people are if they're on something, so I have a general idea of where--how spread out we are, what our coverage looks like, that's what I would like. We call them Blue Force Strikers in the Marines, it was usually all in the computer, on the vehicle computer, so you'd open it up, it would show where everybody was at, and you could communicate through that... Before that, [inaudible] was good, too, so if we needed to know if we were on a secure area if you're online, or lined up appropriately, you could and see, okay, we're all covering everything, and it would be nice to--even if it was something that Comms is updating, like an officer says he's at this street and this street, and they click that street and that street, and assign an officer to it, I have a way of setting up a perimeter when we're looking for somebody, I don't have to--especially if we have to go beyond campus too far, our officer becomes less familiar with the area as far as I can look at it and say, well, there's a street here in the middle, I need to move this person here, whereas it's almost guesswork, where I've got to either drive around or hope that it's covering, there's a lot of gaps in what we're doing.
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	Any technology. Hmm. I mean I have ideas on technology for police work that I think would be great. I don't know necessarily if it would help me. So as far as, we do DWIs here. And I'll get on this. I mean it's not

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>really dealing with my job. We don't work a lot of them, but I think it's, if you're asking what technology would be great, we're going to more computerized, everything used to be forms. You would read them the forms, all the rights related to the chemical test, a questionnaire about what they'd been doing throughout their day. And then you read them a section on what the test consists of, if they fail it, what would their punishment be if they fail it within this range, what is the punishment for this, underage drinking versus adult. It goes through all these things, and it's pages and pages of reading. And typically when these cases go to court, police officers aren't getting beaten because of the probable cause [inaudible] or the evidence isn't there. They're getting beat because somebody messed up procedurally through these tons of paper and forms. I would think some type of computerized system that you can hit play on, and you could eliminate the human error out of it and say no, I pressed play on the machine, the machine went through, when it got to the question, it read the question. I typed in the answer, and the entire thing is computerized where you're just literally hitting next, next, as they get to that part, would eliminate some issues on the police officers and those technicalities that a lot of DWIs or DUIs, wherever you're at, are getting thrown out on. Also it could be read in different languages, where they're complaining of some type of language barrier. It could be displayed on the screen on English where we know where they at, but it's reading to them in their native tongue. I think something like that would be great. I don't understand why that hasn't happened yet, something along those lines. But yeah, as far as advancement or something, that's the only thing over the years I've thought of would be a great tool. So I don't know if that really hits on what you're asking for or not.</p>
Wish_List	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	<p>Oh, [inaudible] another thing, and I'll hit another one on this. It was, the way it happened back then, when I first became a police officer, we didn't write our reports. We used a Dictaphone, which you would call in, and you would speak your report, and somebody would type it on the other end [inaudible] and it saves a lot of time. It saves, some people I think</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								struggle grammatically, and maybe it holds their reports back. But if ask somebody to talk, they can usually talk and talk and talk, where if there was some type of automated report-writing system, maybe there would be more information in reports. People wouldn't cut corners 'cause they could get done with the reports a lot faster by just speaking into a recorder. I think something like that, that was done 10 years ago or 20 years ago, and they got away from, there's got to be some, maybe they could remove the human aspect of it, somebody typing it, and there's a computer that processes the reports or something like that. I think things like that are worth looking into. I don't know if there's any research into anything like that either.
Wish_List	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	...But it is true but you are not going to regress, you know, so we got to embrace this. And my [Job title] [Inaudible] was -- no, they have got enough on their belt. You can't put no more on them. You can't do that to them. You cant -- They have already got in car cameras, you know, we are just going from the car to wherever else we are going, you know.
Wish_List	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	[RE: mobile fingerprint reader] Well no, no. But that's a great idea. We've got you know inkless printing, [inaudible], but that would be, that's really sexy stuff really, you know.
Wish_List	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	You know suspect -- you know you are always -- you are trying to get a picture of what you are going into I guess and dispatch gives that to you, right. So, you know, and they do a good job of suspect information and trying to let you know what you are going into as much as they can give, you know.
Wish_List	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	I think down the road, may be not in the so far future, it will be like real-time dispatching. I mean, it won't go from a call -- the call processor from 911 -- the way it is now being, that crime mapping that we do. I mean, why couldn't they see where that officer is at or where the closest officer is or why couldn't the community touches that officer directly?
Wish_List	LE	R	Supervising Field	46-55	21-30	Male	LE-R-058	[RE: public facing officer mapping] The flip side of that is the bad guys will know where the officers are at, you know, so -- but I don't know what

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					if that call went into a group and an officer had to grab that call instead of 911... Or the officer would know where the call is coming from so he would -- I mean, there is something there that will take the middle man out and increase our response time and effectiveness in dealing with the public -- I don't know but I think that is probably --
Wish_List	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	It could be then there again you know, you have that thought of the bad know where your police officer is, but what if the call comes in and the police officer knows where the call is coming from? So, maybe they don't know where the police are but the police know where are. And maybe that would be even better. But I think that is common. I really do. I think you could see that drive efficiencies in law enforcement, efficiencies on dealing with -- communicate with the public more effectively and cut response times, you know?
Wish_List	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	[RE: all-in-one device] Sure, I do. I mean, you know, when you can -- that it drives efficiencies and that saves money and that saves time and that precious time for it's really important you know.
Wish_List	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	Yeah. With any radio system, you are always going to have a certain level of coverage issue. Because we can't truly plan for every type of building that we go into, I can't - I have - I don't wanna say this. We have to have coverage at street level; that is where we do the majority of our work. I can't truly plan to be in the basement of a high school or a hospital that is, you know, fifteen to twenty feet below street level surface surrounded by concrete and dirt and still expect to have the same level of reception and transmission. Would I like to have that? Absolutely, and in a perfect world, we would all want that, but you know, we do the best that we can with the technology that we currently have, to accomplish that, yeah.
Wish_List	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	...But that I think is probably the most frustrating thing, and if there is something that I could change, it would be that, just the fact that we all need to have a system that we can rely upon when necessary, and quite honestly, the citizen should demand that and they just don't, you know, because I don't know that the average everyday citizen understands how

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								fragile our communication system truly is - I don't think they understand that I can't talk to, I can't even talk to [County] which is less than, you know, fifteen miles away from us, you know; I don't have that ability, and I don't think people truly understand that.
Wish_List	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	...The issue that you typically run into in technology is - you know, we know it is available, but nobody wants to pay for it... So, for instance, this interview room, since we interview witnesses, suspects, arrestees, it would be nice to have a video camera here... Nobody is going to pay for it.
Wish_List	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	[RE: useful information en route] Probably I think as it relates to any potential safety concerns we might have when we get there. So is this person known to be combative? What is the nature of the call? So it is, somebody stole something from the store or is it something very emotional where, you know, emotions are high, people aren't thinking rationally and becomes an issue. So anything safety-wise, their anatomy and everything else is just secondary.
Wish_List	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Oh, absolutely. You know, computer programs would be nice to enter the person's information one time and have it populate across the applications... No [unintelligible], so you are duplicating, which is time lost doing other things.
Wish_List	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	I wish [State] would put the color of the vehicle on the registration forms. A lot of other states do. [State] doesn't. Now granted obviously people can paint over it and whatever, but painting a vehicle is not a common thing... So, you know, we don't have that capability so although I might know make and model, there are hundreds of those around so color is important.
Wish_List	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	...You know, our inability to have dedicated channels to talk to different folks where the Fire has the capability to go to different channels, so for instance, there is the main Fire frequency that everybody gets dispatched on and then if there is - if it is a big enough incident, they might go to a secondary channel, but once they go to a secondary

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								channel, people that don't have that, whether they are, you know, coming in or not, you know a lot of time, agencies that respond in won't have that secondary frequency so they won't know what's going on. And there are certain things you have to do once you arrive on scene, so how do you get that? ... And interoperability would be a big piece.
Wish_List	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	You know, because the big push is to stay off - we really only have the main frequencies in all - I shouldn't say all, like we have our own frequency, [City] police have their own and the sheriff's department those are pretty much the three. But every fire department has the main, so everybody tries to stay off the main because you don't want to tie it up, so they go to their second channel, and not everybody has those. Fire does, to a degree. At least the frequencies are variable, available for them if they want to put them in their radios, but nobody else has them... Access and you know, the ability to transmit and receive, you know.
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Yup. We got body cameras. I think they are phenomenal. I would like to have some better ones. They don't have any night vision capability and that is a big damper. I have noticed definitely the way officers talked to citizens as my complaints have gone substantially down. So that is definitely a positive impact. On the same note, I don't know if anybody has ever said this, but I believe the cameras have kind of had a negative impact also. I don't believe that they are more - I don't want to say caring, but more open with somebody when they are on call when you used to be able to go to a call and like freely like, listen man, come on, which, you know, you really don't want to do this, let's do this or do this or maybe- hey, just separate for the night. But now, since everybody is videoed, it's yes ma'am, no ma'am, and they are afraid to make a discretionary call with the fear that you are gonna get in trouble and because you are being recorded.
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Communication equipment could be more beneficial... Overall, what I would love to see communication-wise, it will never happen, is one central downriver dispatch... That is the absolute way to go but again, when you bring politics into it, nobody is going to give up their own

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								individual kingdom. If I could have one thing, it would be one centralized dispatch for all the police departments where we have dispatchers able to communicate with everybody on the same - so they will need one room - knew everything that was going on in entire communities and could relay and use departments appropriately. I mean, I am a huge proponent of I think they need to combine all the downriver departments; having 16 separate community police departments is redundant, it is a waste of money, it's a complete communications disaster and the only way that will ever change is the state would come in and just offer up a grant where it would make it worth these guys to give up their kingdoms... Consolidation is definitely the way to go, even moneywise.
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Oh yeah, that would be nice. Like, fingerprinting devices, like mobile? ...We have looked at those - the little, little mobile stuff, you know. It's one of those wish-list things, especially when you have the situation that we are going into with [City]. We are going to be transporting prisoners to [City] PD so it is going to take our officers off the road approximately 10 more minutes than what normally would be. To have a potential fingerprinting system available for them to do on the back of a trunk, that [unintelligible] a lot quicker... It would be phenomenal, but again, that a cost factor and is not gonna happen.
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Night vision, technology like that. God. I mean, I would like to get some less than lethal equipment. I would love to get like pepperball guns and stuff like that. They are phenomenal tools that save lives and officer safety. Again, we can't afford it. So it all comes down to money but yeah, anything less lethal, anything to help the guys see at night, I mean, I would love to get one of the flare systems just so that the people out there know that we have them and maybe they won't come here.
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Knowing that we can see at night but you know, yeah, stuff like that; that's what I want, you know, something to help the officers out and improve public safety and potentially save lives.
Wish_List	LE	S	Field	36-45	11-20	Male	LE-S-061	Nothing real crazy in particular. I would like to see the overall image of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					police be run up so that I can - you know, these guys are so strongly affected, they are being baited on traffic stops and trying to get them to smart off or something like that and the morale is so low that it is affecting not only the officers but it is affecting the community because they dont want to work. So I think if anything, we get the impression of us back up.
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	So but overall I mean, lots more help... Like a secretary or somebody that could help me with the paperwork but, you know, I can't complain.
Wish_List	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	[RE: improving communication with Fire] Yes and no. I mean, we have been doing it real simple, which is nice and then it would be nice to be able to send them a message somehow through the car or something like that. But it's not bad what we have now.
Wish_List	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	[RE: communication with state police, etc. during bigger incidents] Usually Dispatch has to do that, too. Like I dont have [State] State police's radio channel on mine so I can't just radio them. I know that getting that would be nice, but I dont know they are going to figure out a system that is not extremely complicated [unintelligible] radio now, but there are times you wish you could talk to them or Department of Corrections will come out to pick people up and you know, they got their radio systems where their guys can talk, we have ours and we can't talk to each other unless on you are on a cell phone or yelling, hey, you know, guys, we are on it. Then [unintelligible]
Wish_List	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	A couple of things. Number one, I would want better body cameras. The ones we have suck, plain and simple. And I thought of this in my mind many times, I dont know if it exists out there with some rich departments or not, probably not, but I envision a system where you are driving down the road and [unintelligible] patrol car and what you would have would automatically scan licence plates and then almost kind of like a video game where you see [unintelligible] square floating above their head or something of that nature if you are in the car, how much gas you got, whatever. Also I wish like there could be some kind of heads-up virtual display like over that car, like it would scan it, you would

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								be driving, showing like see-through letters, like driver suspended, no insurance, stolen plate, you know, vehicle not registered, warrants, you know and it would be different color coded; if I knew how to develop things, I would create one of those. And then I could retire, but that would be my dream software and just better body cameras. Radios that dont have the poorly placed and too easy to turn on and off button, just fine tuning some stuff. I dont really like our 911 thing, the way that it is laid out with the phone that just sits on the desk and falls on the floor, it falls in the garbage can sometimes which is out of the desk, you gotta try and wipe the pudding off of it or whatever and, you know.
Wish_List	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Maybe an app where you could - if you are out of your car on scene somewhere, you could scan somebody's drivers licence and have it pull up their information; you know, it would have to be an extremely controlled app where only law enforcement had access and you have to log in and all that kind of stuff but, something of that nature would be, because a lot of times, if you are - let's say I am out of the car and I am in somebody's back yard and there is something going on back there and I dont want to leave my partner back there alone or I am the only person there, but I want to know who somebody is because they are, you know, getting a warrant, I dont have to walk back to the car or anything like that. So right now we have to call it in over the radio, if you run by name [unintelligible] and we do it that way. Whereas if you had some app on your phone, you could just go scan or you know like those I-phones have those things where people pay with credit cards they just slide it - I would like one where you could just slide the driver's licence or state ID card and make it so that they can pick up from other states, there are issues in the system where you know, some of the states are just stubborn and won't do it but like if I run a plate from say [State] in my car on the MDT, it will come back, but there are certain states that it won't; you know, if I run something from -I can't say which state offhand but certain states they just won't give you any information, not available, you know. It's like, okay.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	The only other issue with the radios would be - I think it would be more beneficial to have like a - you have only so many frequencies on this radio that are programmed into them. Like you got this city, you got [City], [City], [City], [City] I think, maybe a handful of other ones in the [unintelligible] area but if we ended up going into [City] for anything, we wouldn't be able to communicate with [City]Dispatch at all, which is dangerous. Like I have gone into [City] and had people coming out of the woodwork and can't get on the right frequency to call for assistance so you are pretty much at the mercy of the other - like [City] usually backs us up pretty and I got in a chase and I crashed in [City]. I was there for an hour, still in the car; [City] never showed up. It would have been nice to be able to switch over to [City] and call them and say hey, you know, send a car over here.
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	[RE: communicating with other agencies] ... what I think would make the most sense is to have like one system that you can access everybody, or one system where everybody at least has like a monitored frequency for all agencies where I could get on there and call [City] if they would be monitoring that frequency.
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	There is a device that reads plates automatically and looks for stolen cars. My understanding of it is that it is very expensive so very few places have it and the ones that do usually have it [unintelligible]
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	[RE: department cell phones] You know, maybe for - like I think the detectives have them just for contacting people or if they are trying to get a hold of people that - you know, I wouldn't give my cell phone number out to anybody, so I mean if you are doing any work that required someone to be able to get a hold of you, like a detective's job, then yeah, it would be useful.
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	Probably just like mobile data, like a computer, CAD software that was fully functional that worked when you needed it to, that had you know, good map function that you could rely on where you can see where everyone else is at, just for your safety. Something maybe that you know, would give you audio alerts. I mean, that stuff exists; it's just a matter of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								cost... [Unintelligible] dont wanna pay for or they dont have the money to pay for it.
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	Most of the agencies out there all have different systems and I think it would be nice to have something across the board that had all the functions that are user friendly. There are different computer systems out there; like the one that we have currently is pretty user friendly; it's real easy to use, it has kind of a lot of new features, one that they might go to if there is a merge with [City], that it is still going to go to a different system that is not as user friendly and doesn't have the features that the current one has and we will have to learn a brand new one over again that is not going to have the same features, not gonna be as good, in my opinion, because it is not going to - we are gonna lose the functionality that we had before that we took for granted, like the large database of names and stuff that we already have for the downriver area; not in that system anymore, we are not gonna have that anymore.
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	So it would be nice to have like a fully functional system that everybody could communicate with anybody in the state, you know, if you had to easily, without, you know; I mean obviously, you can send like a LEAN message to anybody in the United States, but I dont have the access to do that in the car.
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	Just the ability to have user friendly report writing functions and search functions and stuff like that, you know; when it is not user friendly, it becomes frustrating because it is time consuming and then if it doesn't work thats even more frustrating because then it eats up your time by trying to get around - it's easier if you could just write your reports in the car when it works, instead of having to come in here and do it. It is faster, it is easier. If the network is down, then that's impossible.
Wish_List	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	And add functionality, I mean, if you have one that doesn't have a lot of features that you take for granted with the one you currently have, then that's kind of frustrating too because then you - for example, the one that we have got now has got a huge name database that - and if you have a first and last name and that's all you have for somebody, like oh

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								yeah, [Name] did it [unintelligible] there are a million [Name] but all I gotta do is type in the first and last name and it comes up with a list of all the contacts if they have ever had, like if they were even arrested or got a ticket or say been a name in our record, it pops up with all those options to choose from. Now you go to a new system all those names are not gonna be in there... So it hinders our ability to investigate stuff and it takes us a step back.
Wish_List	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	It would be nice to maybe not have so many options of ways to communicate like one standard one that works rather than so many. I mean I think if I had a wish list for the Sheriff's department it would be to have a better radio system as far as its reach so it didn't have areas in the county that didn't have any cell service or any radio service...
Wish_List	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	From my perspective... One of the challenges that we see, not just in this environment, we have approximately-- not quite 30 different organization units within the county, from the coroner to the road and bridge to the weeds department. Obviously the Sheriff and some of the more well-known ones, but you have so many different silos of information and communications that it is often difficult to consolidate that. A lot of these systems don't talk to each other, they weren't designed to and they have no way to interface and so a move towards a more integrated or consolidated technology, in my mind...
Wish_List	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...I think the newer users have more of a desire to see you know some awesome asphalt calculating utility or how many tons of paper come out of our recycle center in a day. Those different things aren't as important to me as the underline technology and infrastructure that supports it. I want to be able to take whatever app [name] thinks is the coolest thing and his staff need and pop it in there and turn it on and his staff can access it and it's secure. Nobody's going to get into it that shouldn't be and it does whatever they need it to do and so I'm more of a big picture guy. There's lots of things I could use most of them already exist.
Wish_List	LE	R	Not	46-55	Not	Male	LE-R-042	... if [name] comes to me five years from now with his list it's going to be

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			specified		specified			totally different than what's available today, the capabilities and the ease of use, the interfaces that they have the ability. You know we see a lot of head's up displays in certain applications. We'll see high in military and stuff like that. I'm sure someday that officers will have the ability to broadcast information from their vehicle upon the dash so that they're head's up and they don't have to be looking down at their mobile touching media buttons. It's all visible and they're not worried about endangering citizens as they access all this information coming at them so it's all coming, it's all there. It'll be here before we know it.
Wish_List	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: touchscreens] ... and so as these new technologies come into the work force. I think that some environments 24/7 operations 365 they're always being used they're just not robust enough for some of the environments that we have here in county to put a computer out in the recycle center out on the floor. It has a short life span and so the robustness of the technology I think is something that often fails us and we're challenged to keep it functioning properly even though it's super cool sometimes it just doesn't work in that environment so it would be nice to see some of these technologies the organic technologies and different things that are coming out of these research labs to be designed to be robust and usable instead of fragile and cool.
Wish_List	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	...I guess ultimately like if looking at what there is now and what would be really awesome is that if we could all come together and just agree like the whole inoperability thing right like let's just all buy the same radio and the same radio frequencies and whatever and the same system. Just have one you know that's what I would like to see. It's not really new technology it's using the technology we have and not having to be all individualistic about our technology and being so like it's our technology and why don't you use I'm not going to use your technology which is really tough right? We as humans are individualistic.
Wish_List	LE	R	Other Public Safety	36-45	6-10	Male	LE-R-043	Just like their phone right? You pick it up, you dial a phone number, you talk but maybe that's what we need. There's a technology idea right? A radio in which you pick it up and you dial the number and that gets you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					the channel that you want. Man, I should sell that idea. Can I patent that?
Wish_List	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	So call history is really important to us as well. We don't have the ability to lookup call history as far as repeat events so sometimes and this goes for even the full times guys so we're four on three off and then three on four off and then vacations and everything else so there's times where schedules literally you won't work for two weeks which is great. A lot happens in 2 weeks so you may have a neighbor dispute it's an ongoing issue and you know you're getting sent to a call that you think is a brand new issue, you get there this thing blows up in your face and you're like I wish I would've known what was going on. I wish I would've known what [Name] had told them. I wish I would've known what Sergeant [Name] told them. I wish I would've known that they were given information to contact an attorney. It's a civil matter so that kind of information on past events will help us solve the issue quicker and especially where they're trying to manipulate law enforcement on civil issues to see who they can get. Maybe they can get the new guy who doesn't necessarily know and they'll get him to actually write it and give it to the prosecutor. That kind of stuff is helpful...
Wish_List	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	...The other thing that plays against us that I wish I knew more is and it's hard to do some of it but criminal history before we're dealing with people so knowing a little bit more I mentioned the vehicle walk up to the vehicle and know if the vehicle is stolen. Knowing just a little bit about the vehicle before I get there and then the same thing with the people. A lot of times you got to do a lot of digging to get to incidents even in our system, our local database you know you kind of know who the players are in the valley but there's always new guys coming and going and that information across state lines that we have locally in our database does not go anywhere except for local.
Wish_List	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	...The need that I see is trying to communicate with in our instance life flight so our helicopter services for critical incidents. That may seem simple. They're on VHF. We don't have VHF. The fire department also on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								VHF, EMS also on VHF. When we have a pursuit or something go over the hill or across county lines 8 counties on 700 or 800 megahertz so we go to valley on call which works sometimes, doesn't work other times, ISP runs on a couple different channels so the idea of a full spectrum radio communication and like a network statewide set of repeaters so we have coverage everywhere would just be blow my mind so that you know literally we could dial up any channel, any agency, encrypted, non-encrypted whatever toggling on and off wouldn't matter because there's a public perception issue for always operating encrypted but having that stuff available and ready to use would be critical...
Wish_List	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	...The other thing that would be really handy that I would love to see is some way to run and ID from a radio so all of our ID's have barcodes on them now. Some way to check that person over a radio because right now I got to go back to my car in a rural agency I mean sometimes we have to park at the end of the driveway because it's locked and hoof it in... So we're walking sometimes a quarter of a mile and we're not near our vehicles you know and that's very common or we have injured people in the middle of the field riding a horse in back country or whatever and we need GPS coordinates. Well crap I just left my GPS in the car you know just having kind of a device or something that's all in one that can do a lot of different things and communicate and be able to communicate you know having inoperability that's really the key for me in my mind is being able to talk with whoever we need to talk with to get the resources that I need...
Wish_List	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	...Oh the other thing that we have just we've actually kind of kicked around the idea that would be really neat is a way to shut down a vehicle from your patrol vehicle. To end a pursuit without a pursuit... a way to shut down that vehicle something I don't know you know that's kind of a pie in the sky thing for me
Wish_List	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	There's a huge disconnect between society and people's perception in law enforcement and what actually happens. A way to bridge that gap is something that I think the industry law enforcement industry needs to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								work on and should be identifying and figuring out how to change that perception and body cameras have done amazing things for us on a lot of different levels and I think that technology is continuing to evolve because people can easily see what's been going on but it's not the full picture. It's a visual indicator but it's not the sense, it's not the smell, it's not the gut feeling, it's not those other things that you have it's a step in the right direction but we're not there yet with changing our perception of law enforcement. So I would like to see on some level somehow just a pipe dream a way that we can bridge that gap between standardized law enforcement practices and people's perception of what law enforcement does and there's bad apples out there just like there's bad attorneys and there's bad this and there's bad that. Let's identify those as bad but not identify the industry as bad and I think if people realized how little you're paid and the risks that you are in at times I don't think a lot of people would do it...
Wish_List	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[RE: MDTs in all the cars] [S2] Absolutely. In this day and age that's going to be a crucial thing that we're going to need.
Wish_List	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] Realistically? I would probably want a Bluetooth headset for the times that I don't have to be all wrapped up when I work nights. You know especially on our SWAT team you know a lot of us wear earmuffs when we're in there in case you know flash things are loud, gun shots are loud. You know it would be nice so we could have headsets where we could communicate with headsets instead of having to wear a regular patrol radio on the phone so that would be nice.
Wish_List	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Like you were saying Bluetooth that would be nice that would definitely help out a lot and flare unit that would be nice.
Wish_List	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] A helicopter, a plane maybe. A drone. I think they've actually been talking about trying to get a drone for our county but with technology nowadays if we can get a drone or two with the flare unit on it anybody that bails we're going to be able to find.
Wish_List	LE	R	Field	26-35	6-10	Female	LE-R-046	...I think we've got about everything we need out here. It's so like again

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					it's so remote that I don't know what we could have that would really help. It's not like it's not like cameras are really good help. It's not like you know I don't know when you think about technology maybe you think about drones that's not going to help us out here. What's that going to do for us? I just don't think there's a whole lot of other kind of technology that we need that's going to help us do our job better really. I think maybe you know if we could have radios that didn't drop out that would be great. Maybe, maybe a department cell phone but I don't even know none of us have had any issues using our personal cell phones that's really all I can think of.
Wish_List	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	I just might have a very good high speed wireless network. Something that the computer could tag onto like a Verizon or something like that and you'd be good to go. I'm getting some hot spots for our computers and stuff in the car but even here the county and stuff is just not what it needs to be. We have the community to actually send us hot spot information as far as wireless churches, businesses and stuff like that and I'll send that list out to the deputies and they'll go sit in front of the business and use their wireless that's hooked on to you know fiber optic or something that'll be a lot higher speed but I mean ideal that's what you want...
Wish_List	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	...You want your radios to work and you want your cell phones to work all over the county. I mean that's pretty much it. I think the infrastructure there is just a matter of the [INAUDIBLE]. Having the capability of doing it wherever not having to worry about you know. We did a missing person scenario down towards [County] in the national forest and nobody's radio worked... radio didn't work, phone didn't work. What do you do with that?
Wish_List	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	I like drones. I think that's the next thing... I plan on getting one. I'm getting my son one for Christmas. I'm getting him a VGI Phantom 4 which is actually the same drone they use for different stuff. So I plan on him learning how to do it and then come using it as a resource to find stuff. Missing persons and stuff like that. There's a flare camera you can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								put on the drones and they're about \$1200. I think that's money well spent. It comes down to search area timeframes. If you get somebody on scene in 30 minutes your search areas is much, much smaller especially with a flare camera or something like that with a missing person or an elderly person or a child as compared to waiting 2 hours for a helicopter to get here because in 2 hours your search area expands exponentially It's a little ridiculous but if you can quickly get some resources on site it makes a huge difference in the amount of time and also setting up perimeters and things like that so it makes a big difference.
Wish_List	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	...We have the same bad guys that plaque our campus year after year after year breakdown in the court system that allows them to come back in such a short timeframe job security I guess for our officers for myself but where we could begin to automate and increase the speed with which we identify these individuals. They're coming into buildings where we have existing video surveillance capabilities but because facial recognition relies so heavily on controlled lining, consistent lining, consistent angles for the camera to the face in order for it to be effective and there's largely that proprietary nature of the software and the hardware having to be from the same manufacturer very little open source capabilities there. If we could develop facial recognition to a point where it was reliable and able to utilize the existing infrastructure of cameras so that we could leverage our current capabilities with that new software to more readily identify these individuals and to capture them before and catch them as their coming out of campus as opposed to after they've already committed their crime and left...
Wish_List	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	... Robotic technology. Not to replace our officers but again to act as a force multiplier. This is a technology school. We are driven by technology here. We are developing these technologies here. We need to be able to incorporate them in the community. These kids, students, young adults they embrace that. Some of them are more apt to interact with a robot then they would an actual live police officer. If we can cater

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to that community's desires and provide them with the device that they want or the means with which they want to communicate with us we owe it to our community to do that and so we are looking to develop robotic technology, autonomous robotic technology that can go out and perform patrols to notify us of dangerous environments. If there's dangerous gas detection, carbon monoxide in a parking deck by it going through and conducting its patrols with LPR on board to identify stolen cars that go through the parking deck, identify dangerous levels of carbon monoxide before someone suffers ill consequences from it, be able to be sent into a lab where there was a chemical spill in order to either aid in monitoring the levels of the dangerous gas or even the cleanup of the spill. So I would love to see us leverage robotic technology more...
Wish_List	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	...Robotic technology I do see ground based robotic technology. Facial recognition I see those coming along. I'm looking forward to that. Is there a technology out there though that's just the gee whiz bang oh we got to have it? Automatic vehicles probably would be something where if we can allow an officer to not where they could focus on other things and not the driving and allow for reliable autonomous navigation from point A to point B to get our officers there as fast as possible, as safely as possible that would be cool. Teleportation would be great.
Wish_List	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S3] I mean I would like for all of us to be able to track every car. I mean like a stolen car that you know there's no reason a \$30,000 car that you can't track. I mean---
Wish_List	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[RE: smart buildings] [S4] Well that and like active shooters that would be good too.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	... so we're still handwriting state accident reports or typing them in just filled filling not actually doing a software system. GEARS is the system where you actually you know enter information and do street draw to draw the accidents. We're very close to getting that but we don't so a lot of officers complain about that having to hand draw their diagrams and hand write their accident reports. Ticket writers I think people would like

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								ticket printers you know having electronic ticketing I think people would like to have but again we don't write a ton of tickets here so when guys complain about that it's like if you were writing 20 a night I'd feel bad for you but you write like 4 a month you know you can make it happen and then having access to NCIC in the vehicles which I think is important. We don't have it. It'd be nice. Going over the edge is time consuming. It's easier to walk back to the car and put in the information and get it back. I wish we had that...
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	I suppose who, what, when and where. I think the why and how we'll get later but kind of what's going on? Who do I need to meet and who are they describing? If it's a crime I need to know what this person looks like, where they're going.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	That's funny. It's something that someone pointed out to me. Self-driving cars are going to be amazing both for the public and for us. No more wrecks hopefully you know no more ideally if we have a world of self-driving cars we can get on that train and we don't have to do traffic enforcement anymore and we don't have to work wrecks anymore and we don't have to deal with that. Seven years is still going to have glitches in the system but self-driving cars might be something needed for the future think in a more realistic world.
Wish_List	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	...Having fully capable MDT's where we can run NCIC, GCIC where every car's computer works and does what it's supposed to do that'd be ideal. Ticket printers just because some courts like the court that we send our tickets to here the [County] Traffic Court several years ago said they were going to stop taking paper tickets well that never happened. We were supposed to get on board with that because [County] isn't in the police department in moving towards the ticket printers. I think they may be fully electronic with their citations but this was like five years ago. Everybody is going to have to be well we're still not electronic it'd be nice to get to that point. I'm trying to think yeah.
