

# PSCR First Responder Quotes

The Usability Team of the National Institute of Standards and Technology's (NIST) Public Safety Communications Research (PSCR) program works to identify issues faced by first responders surrounding the use of their existing and emerging public safety communication technology. The Usability Team conducted a series of in-depth interviews with approximately 200 first responders across the U.S. to understand the wide range of first responders, their tasks, and contexts of their work, as well as to examine their perceptions about their work and the roles that communication and technology play.

The data below were retrieved from over 20,000 first responder quotes from the first responder interview data. These quotes, accessed via the PSCR Usability Results Tool: Voices of First Responders, can be freely used to influence the design and development of communication technology in the public safety domain. Any quotes used in published materials should properly attribute the Interview Quotes Tool, as well as the appropriate NISTIR reports as indicated at [publicsafety.nist.gov](https://publicsafety.nist.gov). Information about the research methodology and interview protocol design, as well as instructions on how to interpret the results, can also be found on the tool's website.

For more information about the NIST PSCR Usability Team research, or for questions regarding the PSCR Usability Results Tool, please send an email to [usability@nist.gov](mailto:usability@nist.gov). More information about the PSCR program can be found on the PSCR website - <https://www.pscr.gov>.

*Disclaimer: All interview recordings were transcribed by a professional transcription service; as such, the accuracy of transcription text is dependent on the transcriber. To protect the identity of the first responders interviewed, all quotes have been reviewed for personally identifiable information (PII) and all identifiers redacted. Due to the large size of the dataset, context and/or descriptions of participant quotes may have slight inaccuracies. Any mention of commercial products or reference to commercial organizations is for information only; it does not imply recommendation or endorsement by the National Institute of Standards and Technology, nor does it imply that the products mentioned are necessarily the best available for the purpose.*

Change	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	But, within the [City] area, as part of the EBRCS system, we have kind of migrated to a digital platform. And I don't know a whole lot about whether or not it's IP based. That's a [Name] question. But really, that system has taken us into the 21st century in my mind. I mean, we were on, basically, the radios where I could communicate in-house, but the minute I went mutual, it was very problematic. And we would either have to share a patch channel or we would have to just go, "Okay. Well, here's my radio." I'll show you here in a second. I'll go get my fleet map so you can actually see what products we're using--
Change	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	Back in 1950, we had a very, very small fire department of about 20 people. It was volunteer, and we had a very, very small police department of about 20 to 30 people. Back in 1950, those two groups merged and they taught the firefighters how to be cops, and the cops, they went to a little bit of fire training, and they all knew each other. So back in 1950, 70-plus years ago, somebody had a really good idea. And, for us, it's translated forward into everybody tries to be public safety. Our neighbors have a police force, and a fire force, and an EMS response, but they really aren't. We have one chief.
Change	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	And when I started getting involved in our interoperable projects in the county and I started learning what it was, I started understanding, "Oh, okay. Well, that's our radio." So when I did that, I started going back and trying to understand how radio evolved. I didn't pay attention as I came up as a law enforcement officer. I just knew that I had something there. And I have been in an era for 21 years that I've always had a hand pack. I've always had a mobile radio in the car. And what I didn't understand was that in the '60s they only had a mobile radio. Prior to the '60s they had call boxes. So the hand pack was supposed to replace the mobile radio. So when they developed something that you can carry, when I started talking to people from those eras, "Oh yeah. We were getting this thing that we were going to carry and that was all we were going to carry. And they were going to stop putting them in the car because this was attached to us." Well, then they found that, well, the power of the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								mobile radio was more, so they got better distance, and there were areas that that didn't work. So as they continued to improve that through the '70s and the '80s, and the '80s kind of-- I don't want to say perfected it, but did a lot better than in the '90s. I would say land mobile radio really kind of perfected itself and became extremely reliable. There was very little fault, there were very little failure, things like that. As you got towards the 2000s, you started to see some of the failures of the systems because they weren't maintained properly or they started to not spend money on them. And then you had this window in the early 2000s where broadband was becoming big and people were saying, "Well, you know what? You don't need these super costly Motorola systems to buy something that you can communicate with." So you had people that were trying to use bridge-gap solutions, or that's when you have the KENWOOD's or the Yaesu's or the other companies that come out-- Vertex Standard, that come out with these radios that are a lot cheaper and they say, "Oh, they work great." Well, you drop one of them and then it stops working. Well, why did it stop working? I was reading some articles on this and, oh, well, the speaker on the radio, the case was hardened, but the speaker wasn't, so when it fell, the speaker broke. So, well, okay. I can throw that anywhere I want and it works.
Change	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	And then you have the Motorolas of the world showing you how technology can work on my iPhone that can help me communicate over the radio. People think it's neat stuff. Well, then you get, again, the concern. Well, I don't have time to take this out of my pocket, open it up, unlock it, whatever, and communicate. I still need a radio. Well, what if the radio could go directly through-- what if the radio was a broadband radio? Now Motorola has the dual purpose. They have the broadband through a portable. I think the biggest thing we still see with broadband is the, I guess-- whatever. And since we haven't seen FirstNet in full swing-- but from a broadband perspective or Verizon, or AT&T, or any of them, you run into those traffic issues. Whereas we don't know what FirstNet's going to provide. I expect that we're not going to see any issues. Everybody I talk to with LA-RICS says they're not seeing

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								bandwidth issues as far as capacity. So they're not running into those problems. So reliability has been very good for them. I'm hoping that's the case. I think, as you mentioned in your email, looking at the next 20 years, I think in 10 years, I think you're going to see a lot more technologically advanced devices that could be used as a radio or over LTE. You're going to see different styles of portable or things that would be different types of form factor. I think you'll probably see a reduced cost in some of those.
Change	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	So just a simple thing. If I put out something and tell guys on patrol, "I need you to check this box in the report every time you have a case that involves city property or something like that," just a checkbox, it'll take us months to get people to comply. Some people do it and some people don't. Sometimes we don't catch it, sometimes we do. And it's just, "Well, I've never had to do that before. I've been writing reports for 15 years and I've never had to--"
Change	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	So the adapting to change is huge. When we started going to radio, we had all the naysayers coming and saying, "Well, I read this article that digital radio kills people and digital radio-- here are these articles in Fire about guys died because of digital radio." Well, no they didn't. You read the after action report and you'll actually find out it was-- no. It was protocol problems that they had with their operations, had nothing to do with the radio. The radio didn't fail. So managing change is huge. And the easiest way to do that is to provide resource. When we switched to our digital radio, luckily enough, I led the project but I had a team of about 20 people for our department that's 201 [inaudible]. So 10% of our department participated in my change team. And I did that and I wanted a big team, or at least a good percentage, because I wanted them to not only-- I don't want them to say ownership. I wanted them to understand. I let them pummel with the questions.
Change	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	Yes. And you don't respond to them. I think that's the biggest concern people have. People know the Internet bogs down. What people don't understand is FirstNet's going to be a huge pipe for a small number of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								users. It's going to be a dedicated pipe. It's basically going to be LMR in the same fashion. You had a private radio network. You're going to have a private broadband. Now we need to see how that works. And I think, I mean, we're going to see that very soon. If AT&T delivers the way they say they can deliver, in the next five years FirstNet's going to be either a massive success or it's going to be the biggest \$7 billion failure we've ever seen.
Change	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	[RE: technology] I think in the next 5 to 10 years you won't have an officer who won't understand it... That's very much changing. I think the problem that you're going to have is that the new technology has to be as easy as what they can buy off the shelf... So I mean, what did we have? iPhones came out and what did departments still have? We still had BlackBerrys, big cumbersome BlackBerrys that-- you had weird applications. And iPhone was you just clicked on the app store and clicked on this and you touched a button and it worked... And now we're getting the iPhones and the question is, is where in the next couple of years is everything going?
Change	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	And then the news media. So you run into-- I think that stress on officers right now is probably the number one thing. I think it's not under-- and it's hard because I think-- and I think there's some credibility, and I would say a small amount of credibility, to the fact that as a profession we've needed to adapt better. There's been times when we needed to adapt better to things. But I think overwhelmingly we have done a decent job, and the right job. And I think people overwhelmingly do the right thing. But sadly we have those in the profession that have ruined it for many. And I think that's the same thing in society with criminals. If criminals were the majority of society, we wouldn't be living the way we live.
Change	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S1]: Actually, it changed may be years ago probably, probably at least 10. It's been -- it started out as a slow transition but then became pretty fast. A lot of people don't have smart phones --
Change	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: 14 days yeah, we got really short several years ago. We used to run day shift, evening shift, and night shift like everybody else. We got really

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								short and we were looking into how we can cover more time with fewer people and we actually copied the hospitals, their nursing staff and ran their schedule.
Change	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: You don't ask what kind of changes we have seen. I mean, I remember the day when I was at the police [Crosstalk]. There was a phone and you got three lights on it, that's a 911. So, if somebody called 911, it came in there and I would pick it up and I would say -- "what's your emergency?" and they would say -- "I need a policeman." And you would say -- "okay, hold on a minute." And then you put them on hold. Then you pick up a phone and you call up the Police Department and say -- hey, pick up the line 1, and then they pick it up. So, we have come a long way from there.
Change	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5] Okay, because new technology and people are here and people are having trouble with it and misrouting calls so we're just going to wait. Okay, so we waited and we waited, and we waited, and we waited. So, finally we got to the point when we said okay, we need to do this because I think the States won't have it rolled out by, you know, end of the year. So, okay -- we are ready to do this. Well, that's where things really started to happen. [Everyone laughs]. Okay, first of all we bought a phone switch that is next get ready. So, okay -- we are ready for NextGen. Oh, well -- you're going to have to upgrade your phone switch to really be ready to go in there because things have changed in the past year or so, things have changed. So, you have to do an upgrade your phone system to make it compatible to go on NextGen.
Change	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S1]Now, as far as it's going to be [inaudible], you know, I mean, they are going to have plenty of capacity because, you know, there are going to be [inaudible] that's not going to be a problem but they have never been encrypted before and, you know; it's going to be all new them, new sound and everything, that's what we are waiting on right now.
Change	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: Well, it's going to be different, you know, once they do that and the call trackers and it's going to be -- it's going to sound different than --

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So ATCO has a program called ATCO Meds and we use it on our computer when we [indiscernible] calls. It's not very...it's a new program that's just kind came out a couple years ago and they partnered with another company. So we've been working with them since we got this program a year and a half ago, to make it better, to work better for what we do, this is where you'll find out most things that are set up for communication centers are set up for government, than just dispatch
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So I also have the third party compliance software called First Watch. We worked with them and we built a lot of triggers, we also built triggers for the health department. So there's things they watch during the year, such as heat emergencies during the summer, cold emergencies. Right now it's narcotic overdoses we're looking at, anytime those things come up, and they'll trigger in First Watch and they'll be able to go in and get that data out of our CAD immediately and by going through that third party there's no HIPPA data exchanging, all that stuff's clean, and I also pull my daily reports, hourly reports, compliance reports, because we have a county contract. We have to be at all emergencies in 10 minutes or less, 90% of the time. If we don't, we pay fines.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	The reason for that is politics. So the people that ran rural metro helped create some of the bankruptcy issues. They all quit, walked out the door one day to go start a new ambulance service and part of that they knew what was going on, so they entered into this contract that we're in now, some things to make it difficult for us to remain here, but we're smarter than they are; we're doing financially well and they're suffering so, but it's politics, so they got in and they agreed, 'we will do this for free, we will pay those fines if we can't do it', so it's a mutual agreement from our side of the company, those people don't work here anymore, so that's how you end up in a thing like that, but if you look at a lot of -- we've gone full circle so, we used to get at one point if I can remember \$90,000 or \$100,000 a year to pay for the indigent people in [city] who couldn't ambulance, to offset those possibilities. And then negotiated a way and it went down to \$ 30,000 and then it totally went away. So we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								get no money for anything, for indigent.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So our dispatch is. We have shift work. So they used to be straight 6 am to 6 pm when I took over two years ago and it wasn't efficient, because everybody coming as 6 to 6, all the dispatchers and the call takers.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	It went crazy, the whole things. So I staggered the shifts, so we now have, we're looking at our busy time, so we have three: the supervisor and then two 6 to 6, we have three 6 to 6, we have a 7 to 7 and then we have a 10 to 10 and then at night we have three more 6 to 6 come in and relieve the other 6 to 6's, and then we balance it after 10'o clock at night, there's just four of them in there, because we're not as busy. Then we have my two IFT guys that one comes at 7, one comes at 8, they work 10 hours, 50 hours a week and then we have a 5 pm to 1:30 am Tuesday through Saturday, that comes in at midnight because that's our little busier time and they work 40 hours a week.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	No. you'll see more the private. Its union driven because of bad management practices in the past I think.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	I don't have any problem with it out here. I mean it's simple for me in Communications, so what I do is we build policies and procedures so something else I've really redone and still working on, over the last two years and we got to re-do EMS, so I have a set of policies and procedures that condone how we conduct business in the center. You come to work on time, you wear this uniform, and then I have a procedural manual about this is how the CAD works, this is how we put in a call, this is how we dispatch calls, this is how EMD is, and then when it comes to your volunteer fire department say [town], it's your policies and procedures on how you want us to dispatch it because it's your department. I will not make policy for your department. I will give you advice on what we should be and what the national standard is, which we have done and we've worked with them to build up policies, but I've gotten away from, EMS you make your own policies and procedures; if you want me to send you an ambulance an hour before off-duty so we can do these tasks, you put that policy in place, I will issue it, and we will

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								follow it.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	I'm 52 years old and I really don't want to keep doing what I was doing when I was 20. So this position came open and I migrated to here because I was really the only one that knew the CAD, knew the communications center and all that stuff, so we hired a new so I help him. The fire department, the fire chiefs, once I came from there [indiscernible] we need policies on how you want this truck dispatched on calls, how many trucks do you want dispatched on this type of call, this type of call, we built all those policies, and then it's easy for me training my dispatchers. If you're within policy, I got your back 100%. You violate policy; you're on your own. APCO; you APCO a call correctly and we find out the APCO codes need to be updated, you're covered. You don't use them, or don't do them, you're on your own, I can't protect you.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So we use the UHF frequency on land mobile radio for EMS, both are 911 and IFT side and then all the Fire is on VHF, only different frequency. So all our ambulances and all or our fire trucks have to go on that radio zone. Now we're going to 800 and everybody is buying tri-band radios. Fire, excuse me, is going to migrate from the VHF to the 800.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	EMS is not. So we're working on some legislation changes. So in the ambulance service requirements for the State of [State], there are certain frequencies that we have to carry - VHF, 155, 205, 295, and 304 those are the disaster frequencies. So the State does not migrate it, but all the hospitals are on UHF to talk to them. Now we're going 800, so I've been meeting with the State and other people so we got to change the laws, because all you're doing is creating expense. So for EMS to go to 800 right now is an added expense, because we still have to maintain those older channels because we can't get rid of them because the State requires them.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So, even though I know you're recording, but between us, so Motorola is going ...they went to a new Motorola radio system. I looked at that because I'm upgrading my radio system. I want to be able to hopefully talk and have those 800 channels, because if the fire department goes

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								through, I have to dispatch them, so I got to have them. Right now, I am full; I cannot add any more frequencies to what I have. I have old technology, it's been great technology, and we've been using it since the 90s.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Forever, and I can't get parts for them. So we're going to a new radio system. So for one console from Motorola is \$110,000. Through another company, I was able to do the whole center for a less than \$100,000.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	We are and I've been going to those meetings. I've been really keeping up. I've met with AT&T and I beat the crap out of that when I first talked to them because they are like, hey, we are gonna be the company and I go why? Your crap sucks.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	And they go like oh we know, we're going to put all this money in there and I'm like why are all the 911's suing you for money if you've got all this money? You know, it's a long story, but...AT&T here locally, it's terrible. I have seen huge improvements. We did a study when we did the ALLs. Those are off of SIM cards, just like you have in your phone. So we put AT&T, Verizon and...
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	The family's [indiscernible] so he's taking care of you, he's frantic, he calls one of your kids, your kid calls us, I don't know, they don't know the answer to the question. So anytime we have anything that's a flag like that, an emergency to the hospital, we look at every one of those calls; two reasons, one is the medic new and should've been an emergency to the hospital, did we code it correctly, so anything that we could learn from any of those calls we do. So we don't have those much anymore, rarely have those types of calls and then we really, we went from the cards to the software on the screen, so it pops up because the cards are hard, you got to know where the card is...
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So that's part of that. We didn't have a card for -- in May of last year, we had no card for narcotic overdose
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	The good thing is we're going to go with APCO who we've been working with the last 18 months, and when this comes out it's pretty much going

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to be set up exactly the way we want because we're the only one's been giving them feedbacks; and hey, can you change this; can you make this fluid, this is difficult for our dispatcher; these questions pop up and they shouldn't pop up, can we fix that? I love software.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	They're going to a new 800 that is supposed to make it more easier to talk to each other once everybody gets to 800. But there are a couple of different frequencies. So this is an 800 radio, but I sit and listen to it because I always want to make sure we're playing nice together here in there. This is our EMS UHF radio, the big and fat antennae's are VHF radio, and then the others are 700-800 radios that's on our TBRS system. Now the new system that the 800 is changing to will combine this radio and that radio on the left.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	I will still have three because the VHF, UHF and 800. The goal is for all of us to get to 800.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	[town] is on 800, they're moving to the same new technology, so [town] like great we're going to go 800 too. [county] just went to a brand new 400 trunk UHF trunk...
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Yes. So the great thing is we worked on that with EMA and through the [state] we now have -- so it's kind of we now have this TBRS system, which is the State system. So we have what's called Tac. We have a U-tac, a V-tac and an 8-tac. So if I - I don't know if I will find it here - I don't know which band it's in because I don't use this that much. [state], I don't want [state] - fire department. They have a bunch of fire department mutual aids, but there will be a - and we have EMS mutual aids. But we have a V-tac, a V-tac, and an 8-tac, so if I am on a UHF and I go to U-tac, and you're on an 800 radio and you off to 8-tac, and a VHF radio goes to V-tac, they're tied together in the building and we are on the same channel even though we're all on three different frequencies.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So they're in the process of trying to up and fix it. The great thing about new technology and me changing my phone system to a voice system which I'm still not keen about because I'm learning, so phones are my

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								weakness. I don't know very well about them, I'm learning. I'm pretty good with radios,, but what I like is if we put everything on servers and pull up an internet protocol and I can leave this building and go somewhere and we can flip that switch and take that phone with us. Right now we have, my backup is seven cell phones.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Because nobody's using it that I know of and they're struggling with their phones trying to get it done. But then their system and we're talking about piggybacking on their system to replace my phones and the part of that is we can get the texting, that why I want to do it.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Mine's antiquated, that's why we're replacing them. So another good thing about going to the new systems is we're replacing very old antiquated systems. A trunked 800 works a lot better than our portable or our mobile repeater system, it's either you do or you don't, there's not multiple a lot of places to go, so the new technology is safer for the crews, it's more apt to work -- you know all the stuff is great, it works, but some of the stuff is 10, 15 years old and so we're - and its ageing.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	-- and now for the same amount of money you can upgrade to newer stuff. So the problem with us was we weren't in a financial place when everybody else started doing it and now we're playing catch up.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	The other is, is if somebody would do that and not communicate. We're really, really fortunate here. So in [city] and [county], we all meet all the chiefs; we have the LAPC meeting once a month. After that meeting, all the chiefs, we have a meeting and we talk about these things. Fire department, police department, sheriff's department, rural metro, we're all there. So we do great; our EMS region, Region 2, our 16-county region, we meet monthly. We have the best of the best people to work together. I'm a private ambulance company, and we work great with all the other private ambulance companies and the other government ambulance companies.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	I would like to see technology to continue to move forward to true total interoperability between every agency. I've heard that my whole career.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								For 30 years, we've been talking about interoperability and politics always gets in the way of interoperability. More than money; egos, politics. I'm in charge. There is no "in charge" and there is less of that here than I see in other places but, you know, over the years the police and the fire get about -- [State] code states that if a fire department on the scene of a fire then the highest ranking fire official is in charge of that scene. The police hate that.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	And get you included and those are the things that I have been working on tremendously over the last 10, 12 years trying to fix and get those -- and we have that here; we'll talk, we'll communicate, and they'll say something and I'll go "I had no idea that was an issue for you" [indiscernible], alright, let's look at changing that, how do we fix that? How do we make it better for you, but not punish us? And then they're like "oh we didn't realize that went on for you" and it's all about that relationship and communication and that talking. Because if you don't have those talks then [indiscernible] freaking pigs. But if you're not out there, you don't know, if you're not having those talks, you don't know. I mean there're a lot of people the thing you say, "I didn't know that", people won't know.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Honestly, what it comes down to, we all got to go to it, so we got to find the funding so that we can get there and it'll be and it'll work, because there's going to be some small counties in this State that can't afford to do this, and that funding's got to be there for them.
Change	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	And that's what we have you know, they went to a new system and we didn't because it wasn't talked about, planned financially, or any other reason to plan and then now the ones with the most money [indiscernible] the technology get farther and farther away from those who can't afford it, or have the knowledge, I mean they may not even have the -- I wouldn't be surprised that there are some [City] 911 centers that have no idea about next gen.
Change	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] It's going to change things a lot I think. It's going to change how the calls are processed. It's going to change the transfer information will be

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								I don't think a lot of people will even consider what the capability will be for the transfer of information, patient's records going to the hospital you know patient's records dumping into your CAD and then dumping straight to the hospital just because they've signed up for you know like the smart what is that smart 911 which even now through our text to 911 if that person has already signed up we can go in and pull that information if it's necessary. But in the future that's you know just pretty much with a push of a button, you'll get the recordings, you know people will be able to submit pictures, videos you know whatever the case may be so it will change the dispatcher's job dramatically. Right now they are trained to draw pictures in their head of you know envision what they build the picture of what is happening so they can accurately reflect that to the responder and the next generation they'll actually be seeing---
Change	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	Q: Yeah. Are people worried about the effects of seeing those pictures? [S2] SME: They haven't really started talking about it. They will as soon as they know it's starting to head in that direction and I would imagine when that day comes those positions will be more specific so call taking will change in that way. I think the day that's going to get driven is going to be handled differently as well so I don't know I don't think anybody knows what the real picture is going to look like.
Change	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] And I think it's going to take quite a while to get it up and running and actually I think we'll be operating in two worlds for a bit of time on legacy and the next gen so just as the transition goes through.
Change	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] Well we were just talking like with the teletype. I mean it used to come out on the [system name] and you'd have somebody with a long criminal history that would you know like a 4, 4 and how loud that used to be you know and so you'd be trying to talk on the radio and that's going on so trying to get that information to the officers or whatever where now it's sent over their MDT's and so that's come a long way. Let's see what else? Obviously not using type printers anymore or index cards so all of our records management. We moved out of our card files and implemented them into the records management system so that it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								shared across all the agencies so they have that access to them. You know if they'd come across an individual they can see well okay this guy's been doing this, this and this you know or whatever so that's definitely been useful.
Change	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S3] No you've moved to some software as a service. Solutions now are public notifications that we send out to citizens. Those are hosted in the Cloud. I think [name] is consistently looking at customers and trying to find pieces she mentioned that they're implementing a fire piece into their ProQA their query software so that they can better gain information from the customer. I think when I first got here you guys had foot cards exclusively that you were using now that's automated and so I've seen a lot of changes since I've been working.
Change	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S3] This is is the first time I've worked with a piece out in my career and so it was eye opening to say the least at first but I think that it's more for a lot. It's changed from when we used to have our own selective router here in the [County] because had multiple ESOPS in the [County] that was consolidated and the way that we received calls, the equipment that takes the calls is new. We're looking at replacing that with nex gen. It's constantly involving the changing.
Change	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] ...We just got it last end of last year I guess so we're still working on getting that up and running with quality assurance but it's another piece of just being able to provide a full picture to the person who is handling the quality assurance so they can make an accurate analysis of how that call actually went so for providing better customer service.
Change	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] We get a lot of 911 hang ups mostly off the mountain. Now with the smart watches doing 911 hang ups. They move their wrist. That's a real pain. That's worst than the pocket dials.
Change	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] Yeah that's a big one and I know that that is definitely in the works out in the world. That's a big push and really what next gen is about or one of the things that it's about. You know I guess the rest is just really just ease of use for on the end user. You know some of these systems

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								come through and I've even seen it in other 911 centers where the technology is really supported and it's a great system but when the person on the end tries to use it it's useless and so just having that focus of what are you trying to accomplish? It's great if you can get it going here but if you can't use it it's not worth it. And we run into that with our CAD system it's somewhat outdated.
Change	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Not at one time. Yeah, so we just did that big change and then re-cabled everything for all the different computers, and we finished that, but we replaced six dispatch consoles with eight. But we didn't have enough money to put the radios and phones in the two extras. So that's what we're looking at for next year.
Change	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Yes. This one has been-- the remodel has been fantastic. These consoles-- if you look, they're linear. Our last console furniture was when I was in training. And they put in for the old CRT monitors, the big heavy ones-- that's got all that space back there that's just wasted because all we have is this flat panel computers, and we were able to put eight consoles in where we had six before we had more room and in the room.
Change	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	We just changed over to a new [software name] with [manufacturer name]. We had an older computerated dispatch before from Motorola and this is a newer system, and right now because its just a few months old, nobody likes it because its new. We're trying to-- we have years of experience with the old system, we were fast and efficient with it. This isn't an easy transition either because its a completely different type of system.
Change	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	Yeah, exactly. It has a lot more capability, but at the end-user perspective, doing our day to day functions are different, because everything we input, all the commands that we have to type in are different now. So from before where it was like muscle memory and we were fast and proficient typers, now we have to pause and think, "Okay, I used to be able to take an engine company that was out driving around. Now they're back in quarters. They're available in quarters now. Now I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have to do a different thing for them." And so, as long as we continue to practice this new set of systems and new set up, I think we'll get better.
Change	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	Very little, and it was a long time ago because this was such a major changeover. As an end-user perspective--
Change	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	...There wasn't any continuous, it was very difficult and they changed some of the components afterward. So like our phone system, it changed three times from what we were used to, to a temporary one, to a new one, and we felt like the old phone system was good. We took a step down in the temporary one with promises it will be better, and everybody on the floor thinks its worse than the temporary one. So we went backward in our trust in the phone system.
Change	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	So based upon the old commands that are gone and we haven't been given any new training, we're very deficient with that. So our quality of 911 in pinpointing people have actually gone down in the past six months, than in the past 60 years. As far as the dispatching goes, the dispatching in some ways is much faster, much better because have more variables with the P1 software system. We can drag and drop fire trucks, we can just click on the fire engine that's in the station, just drag them over and drop them on a call if we want.
Change	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	When I first came onto the department, on the ambulances we had something called a [name]t. It's just push button. We had no computer screen, no laptop, no nothing. We had pagers for each unit, in case something happened and it would give us an address. So there's no cell phones or anything like that. We pushed a button and it said, "En route." We pushed a button that said, "On scene." And we pushed a button that said, "We're going to a hospital." Not which hospital, just a hospital. And then we'd have to come up on the radio and tell communications specifically what hospital. Then we were going down the road. And all the medical technology stuff was also very hands on. We had to do automatic blood pressure cuffs, all these other things. Nowadays there's a lot of machines that do a lot of that. And then so that was that. And then the same thing with the fire trucks. The fire trucks were very basic,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								handled a little bit of water, could only do a little bit of pressure. So over the evolution of radio technology, now we have laptops, we can talk and the laptops inside all the fire trucks and the ambulances, we can talk to each other, there's AVL. They can see all the calls other people are running. They can talk to the police, they can talk to the sheriff. They can talk to us.
Change	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	Yes, text to 911, we are getting ready to implement that here. We haven't had any training so it's still in the background supportive stage for that, but when that comes in it will change the feeling on the floor considerably, because we're a little intimidated, like we're understaffed as it is. Once you add in, from before, landline phones, people call, we send them help. Now with cell phones, you have 400 people calling for the homeless man on the corner who appears in distress. That's a waste of 911, it's a waste of resources because the guy is fine but all these people with cell phones don't know. None of them wants to stop and help, they just use their phones--
Change	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	I remember when we didn't have email [laughter] back in the day. Everything was done by paper memo and you'd have to go to your mailbox--
Change	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	--technology as far as communication via email, cell phone. I didn't have a cell phone until probably the late '90s, I would think, or early 2000s? So that's changed communication quite a bit.
Change	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Like I said about listening to a radio recording that we just heard, as a supervisor, I used to be able to just, "What did they say?", and go to my [name], my phone, console, click on IRR, which is the incident repeat, whatever, tab. And then double-click on the recording and listen to it. I can't do any of that now. Because the one we have now just doesn't work.
Change	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Exactly. And so right now our training model uses hours and then kind of as subjective evaluation from the trainer as to see if you're where you need to be. It's not the most robust training model and it's something

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that I think we're looking at reevaluating. I think what would be a better model to look for is like a core competency model and then if you happen to meet this core competency within 2 hours of being on training then you should be released you know but that's something that I know that's in the works and above my pay grade but I know it's something that they're discussing and looking at so in answer to your question it's complicated.
Change	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	I mean my call taking has changed and approved since I became a police dispatcher you know because I'm looking at things in a different way. Exactly. And then on the other hand you know answering questions about you know warrants or teletype or something like that dealing with the officers is very different now that I've been basically trained in teletype so (you know it's nice to have that but then at the same time it takes a while to train everybody in everything and we are spending a lot of time and investing a lot in each individual which other agencies don't do. [city name] they train in call taking and then---
Change	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	We do. Yes we do have an interim. That's what we call it text to 911 and we're using it through a third party web based application. It is not integrated into our system at all at this point. We are getting a new next generation capable or ready telephony system and that will have the integrated text to 911 into it but we do have it and we've had it for about a year and a half now roughly.
Change	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	So it's a lot different when we do have to go over to our backup center. So with combining the two centers we do have some additional options once the rest of our technology catches up, once we get an integrated CAD, once we figure out our radio system and how we're going to get them to work together then we'll be able to in those instances when we need to leave [name] when it just effects the courthouse area we will have a second backup center that we can go to as long as they're not as well occupying it.
Change	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	So there are also some talks in the area of potentially building a geodiverse co-inhabitable backup center. So it's somewhere where

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								multiple jurisdictions could go to and all of us would pay into this backup center. That's been in the talks for quite a few years and so we'll see what happens as we start sharing servers and start getting integrated CAD systems together and start buying stuff as a region.
Change	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Exactly yes and with the new technology that is coming out we will have more capability of being able to grab command center laptops and go to somewhere and set it up and answer phones.
Change	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	It's a very it's getting more and more robust as the years go on and it's been establish since 2013 since it's working on its fourth year of kind of being up and running. It was late 2013 so in October actually [Date] was the first day that we were full time in the Watch Desk yes so it's evolved a lot over the years and because it's evolved the EOC team that I had originally created has melded into that so they have taken over that bridge responsibility.
Change	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	... Things are very spread out so the old CAD I used to be able to just I knew all the commands, my hands could stay on the keyboard and I never had to lift my hands. I have a foot pedal that I can push to talk on the radio and my hands I would just type commands, I had it memorized how to type the line segments and it was great. We get a new system that is great on the technology side but it takes me 2 to 3 steps to what used to take me one.
Change	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Where I used to just view a type of command out into a line, line string out I now have to start a command hit tab find which section I want to go to so the location might be here but to enter a license plate it's down here and to enter a color of a vehicle here and it's a makeup. It's you end up using your mouse and for me having to remove my hands from a keyboard when I don't need to look away from I can look away from the keyboard and keep doing my job.
Change	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	So it's a lot of credit to him as well for who he is fitting into those positions and trying to pull in to help with the overall for [City] and with [City] now because we are going to be partnering with them.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	And then with this new system, every time we do a report, other officers can look. Like if someone just had an incident in their jurisdiction with that same person, they'll see that last week we had contact with him. Whether he assaulted his wife, or he committed a retail fraud at [name], then they can see something [crosstalk] history up, but they can see the contacts we've had. Whether it was five drug overdoses, that wouldn't show on his [crosstalk]. Just kind of gives a little background for that person.
Change	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	Q: So the next question... is how things have changed? And you started talking about the fact that well, we've got computers now, and a lot of this autofills from 911. And we do have some old technology, but it does sound like things have changed. SME:Right. Things have changed.
Change	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	Because back when I started, I mean, we used to have-- they were called Dcards. You wrote everything down. Our [inaudible] printers, or that you would type everything in free-form. And then there's this big, huge printer, and it was like a [name]Data, and it was loud. It was da-da-da-da, like a dot matrix [laughter]. So I mean, we have come a long way [laughter].
Change	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	I think so. I mean, usually, anything we get, we usually get training. I mean, sometimes it takes a while to get used to, especially when there's a new change. But most of the stuff that when we get something, in the long fun, it's better and easier to use and probably gives us more information. We all have to adjust to that little change, which some do better than others [laughter].
Change	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	I don't really think they have really. I think things are pretty much the same. You got a phone, you got a radio that's about it. Maybe we use the computer a little bit more for reports or something but in general it's about the same
Change	COMMS	S	Other Public Safety	36-45	11-20	Male	COMMS-S-001	[S3] Yeah. Primarily, my daily job is technology project management. So I run different technology projects. For example, we're upgrading our helicopter's digital video dialing system right now. We're doing radio

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					reprogramming across the county right now. So it just runs the gamut. But technology project, primarily. I also do application development and support as well so.
Change	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah, so last year we rolled it out entirely. We have a little more than-- almost 700 users on the platform up and trained. That means they've been through the training classes and gotten their credentials and all that kind of stuff to use the application. So yeah.
Change	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] So this whole building becomes the EOC for our county. So every room will have a designated purpose in this building for a different function. And they used to have to be physically here before they could even start their job. Now they can access it from anywhere and they can start and or work it from their own offices if that's the only option.
Change	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] There are some people that don't understand that concept, right? That those problems were there all along, you just didn't know about them [laughter]. And now you're getting it out, right? And so I think we're working our way through that phase right now. And I think things are improving and then we'll just get to a much better place where hey, yeah, it's not that difficult for a fire guy to call a law guy and a law guy to call a fire guy. And we're all the better off for it.
Change	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] I would say it's probably been live since last winter, so eight months. [talking about the commercial size drone]
Change	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Just making sure that everything is connected and then how to monitor it all once we do get it connected so that it can be seamlessly monitored. We're building a new EOC so that's where my mind is also going. So a lot of video and audio technology is what we're looking on with things. There's a lot of fiber-based stuff out there now so we can push a ton of video. Which is really nice but not everything is connected to fiber. So now we're doing cross--
Change	COMMS	S	Other	36-45	11-20	Male	COMMS-	[S3] Yeah. That's not cool. We just got rid of our MDC's and went to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel				S-001	tablets. So part of the reason for that is so you can pull your tablet out of the car and utilize it. We also dropped hard-wired modems in the cars and exchanged for a modem built into the tablet so that if you do pull it out you can actually still get connectivity. So those kinds of things. I mean, they're small but they make a big difference for some, in some cases to have that accessibility.
Change	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] I don't think so. I'm looking forward to this whole [name of technology] discussion. I have some significant reservations from a technology perspective. Specifically around using the for both commercial and public safety. So I'm interested to see what comes out of the [name of technology] discussions.
Change	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	Yes, they have. Ten years ago I can say that we would write down more versus technology. I can say the programs that we use, they come in handy so, so much. It's like a lifesaver. It's way more that you can save rather than putting everything on a paper and filing everything. You can save it on your computer, and you go back at any time and get that information.
Change	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	... But long story short, there is the inevitability we're going to end up having to go to a paid or four different departments. It's not how, but when. It's just so, daytime hours is just so bad for us as far as fire coverage, so it's coming.
Change	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	And you talk about the technology. Think about a flip phone or bag phone that we had first, and now all of a sudden why you never answer my email? Well I was in a two-hour meeting. I couldn't answer your email. It's like everybody expects something at the snap of a finger, which doesn't always happen.
Change	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Dependent on text notification. Before when we had the old pagers, not even the two-way pagers, did that person receive that text, I mean I'm sorry, receive that page? To where now you can see on your phone if somebody's received that message right away.
Change	COMMS	R	Field	18-25	5 or less	Female	COMMS-	It hasn't really, like in here really, we went from, I started working in an

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				R-012	outdated building. So when we switched, it was a big difference. We went from slow computers to faster computers. That's essentially, that's all about the difference.
Change	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	... Our record management system is actually where our CAD is at which I am involved in greatly and I love that fact. We do probably updates every 3 to 4 months on it. And it's constantly evolving and growing. We're developing a hurricane module right now so it's going to track everything we need for the hurricane including whatever FEMA needs at the end of if which will make it super easy to do.
Change	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	I would have never thought 15 years ago we'd be doing the things we're doing on a computer. But being involved with our record management system, as I am, I constantly see day by day where we can improve and get further and do more and more into the system. So technology to me is what it is today but tomorrow it could always improve. It can always get better.
Change	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	... It doesn't allow them to do signatures just yet and a couple of other things that we would prefer if we're going to go for it and buy into the cost of that technology at the moment for the amount of employees we have for it to be truly worth it just yet. So we're waiting for it to develop and like I said they update every three months so we know there's more coming. [Laughing].
Change	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	So day to day it's constantly... constantly improving in that records management system 'cause we think of one thing and we have--we have a person at our agency that specifically does that record management software. That's his job. Find ways to do this or fix this or make this better. So each day that we think of, well, can we do this? And we call him and he'll work out the backend of making sure it doesn't interfere with anything else or change anything on something else because we change this. And if that makes it simpler then that's where we're going.
Change	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Vastly. We have went from our own radio system that our sheriff's office managed to we are on now the [State] Wireless Network System which

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the coverage in itself for our officers is huge. We went from a basic CAD that we inputted information into and deputies never saw and they just heard us over the radio and that's it. They never saw the actual call for service to now they can pull their own if they want [Laughing] in their car. But they can see everything that we're tying right now. I started just after we went to basic CAD. So I never got to actually experience paper but I heard it wasn't fun [Laughing].
Change	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	We've gotten... we went through a couple of supervisors since I've been here so we've gotten better equipment, better programs and... yeah, it's improved since I've been here. A whole lot.
Change	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Well... normally for communications we'll at least bring in 3 dispatchers instead of the normal 2. And the road, on the road deputies like a lot of them will come out so it'll be more people to talk to, more people to keep up with and all that. So that's the main thing that changes.
Change	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	And I really like our CAD system. Ad we just got a new phone system that we're still learning [Laughing].
Change	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Well like I said we have our multi-select button now which I love 'cause we can talk to all of the different departments at the same time. We have the... I forgot what it's called. Oh [Laughing] I forgot what it's called... the pairing thing where they can talk to each other if we just click the button, they can talk to each other. Our CAD is has been updated to where it's not just like you type everything in there or whatever, like we can send the pages now to the officers. Like if they didn't get an address or they didn't copy it because we were talking over the radio we can send them a text and the address will come through their phone directly. So I like that part of it. Our computer screens are bigger [Laughing].
Change	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	...And we had just signed a contract to construct this facility that we're in now which is the third floor of the new courthouse. And so that kind of sped that project up to get us moving into a new facility quicker than what we had planned. But also gave us the opportunity because we had

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								planned on moving some equipment and purchasing some new equipment with having insurance we were able to apply those savings or those insurance claims to the new facility.
Change	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	People sit up further towards the edge of their seat and they [Laughing] they just answer as many as they can and as quickly as they can, getting the pertinent information. It's not a--it's not something where you can say, hey, call me, get me one of the secretaries from downstairs to come up here. Myself and the lieutenant in communications will try to sometimes go out there and help do what we can. But again it's--by the time we--they call us and say, hey, can you come in here, it's usually, okay, we're slow again [Laughing].
Change	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	I mean we're 1984, '85? At our best right now. And they're using notepads and writing down information. They're handing it to someone else and they're keeping notes of that. And I don't mean just a stack, a small pad, I mean stacks of paper. And they're using their mind, their brain to figure out problems. They're not relying on the technology to solve the problems.
Change	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	... Used to, we had to bring it to them, sign it and bring it back. Now electronic signatures, ship it to you and you've got it over, over the applications, faxing applications or email. I mean technology has really helped us there being able to share data about certain events.
Change	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	Okay. Yeah. And so it sounds like things have changed since you started.
Change	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	Mostly. State police, say I mentioned national crime information computer, we get that information in. And I don't, they keep changing how to put in certain, like your cell phone was stolen, they might have changed that, what that code is in the thin, and I have to call them. That happens a lot. I think they've redone a lot of stuff, when I'm actually working on stuff to get an actual breakdown of what we need to put in things under. So that comes off on me. That's another task I do, is I find things. If it doesn't work for me, I find something else.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	I think that people are understanding that it's not just a person sitting behind a desk doing nothing. I think that people are starting to realize oh, you're having a lot of drama about it now. There's one I think that came on Fox called 911. You get to see, people are now understanding that oh, I have to give them the right information for them to come help me, or they're not going to be able to find me. So I have to be, I have to give them that information. I need to respect them more. You're finding a lot more people respectful of it. Getting raises, we're not just making like \$7 an hour anymore. You're seen as the first point of contact for everything. You're seeing oh, this person, if I call 911, they're taking all of my information. They're sending me help; they're doing something. There's federal money now that's getting put back in the system for that to even update radios and what have you.
Change	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	I mean, it's--I like it. I mean, I don't necessarily like that we're up in the front, but, I mean, that may change. I think [inaudible] is going to be leaving, they're going to have their own, so we're going to have this whole building at some point, I believe, and I do--I enjoyed it, I enjoy the people that work here and everything, so I enjoy it here.
Change	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	I mean, it hasn't really changed too much. I mean, I've been doing this three years. I actually worked for [City] Police before I worked here, and--which I like it here a lot better, because at City, you don't really know the officers. They're just a voice on the radio to you. Here, it's like, we work with them every day, so it's very personable, and I like that, but things haven't really changed since I've been in.
Change	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	It can be. We have mutual aid agreements. We all have very similar SOPs, whether it's fire and EMS, but once again, talking to some of these jurisdictions can be difficult. It's gotten much better. Years ago we could not talk to each other. Had different radio frequencies. We also used to have separate radios. So if you worked in a border station, like down in [City] or [City], you had separate portables to be able to grab when you want to call into their area, but now we're able to utilize our radios, and go to their channels.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...But we have taken a lot of steps in [County] to be able to communicate with other jurisdictions now...
Change	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...we just went to a brand new computer-aided dispatch program and fire alerting system at the firehouse. And that was an extensive project that was done that took many, many-- probably well over a decade to develop.
Change	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	The computers would turn off just going down the road. A lot of the communication from those computers to a cell tower would be horrific. But over the years we have invested a lot of time and money into improving our technology so that the computers don't shut off. So that we are getting the most up-to-date information. So it's kind of trial and error as we get something. It's better than what we had, but there's a lot of hindrances as well to it because the technology had not caught up to what we were operating under
Change	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...I remember the days of mobile data computers going in and we could be going on the road. I'm looking at a dispatch on a computer, and all of a sudden, the computer just completely shuts off on me. Or I'm trying to respond on a call and the computer communications is too slow. But I know we've had to change things up... It seems like with each generation of technology, we are improving our service.
Change	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...So yeah, have things gotten better? Absolutely. And as our new reporting system has come into effect, things have definitely gotten a lot better. But it's just a few things that I see from my view that would help out.
Change	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Technology advances can be an issue, maybe as not catching as fast as we want. Or maybe we're using a system that's one down from what's already happening because I'm sure you know as well as I do, technology is always moving, and a jurisdiction has to operate under here because they've already spent a lot of money on a particular ends, and it may not communicate with that technology because it's outdated...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...But yes, so some of the technology can be more advanced than what we're able to operate within, and that can be definitely a hindrance. And that's certainly something that we were watching unfold with our old system, but now we've come in line. And it may be another 10 or 15 years before we get another system, and what technologies are going to come out that we won't be able to communicate with.
Change	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Within the last couple of years, it's the the first that I've ever had to really work hard to maintain that professional image, in a sense of a lot of negativity within community or the changes of social media, civil unrest. And not going into too much depth of that, but everybody loves a fireman per se. Some people may not understand salary or taxes or why we're sitting in front of a grocery store, but I think education's the best part of that.
Change	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	[RE: police] ...I think we've gotten better with some time, but I also don't know every officer that's in my area. I don't know their first names. I don't have their cell phone numbers. I don't know their radio identifiers. We don't have that relationship to communicate that personally, I guess.
Change	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...We do have the new tracking system, AVL, that you may be a little bit more familiar about, or others have spoken of. So that's a relatively new technology that incorporates a lot of different things.
Change	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	I mean, I guess it's the day and age radios have changed a lot and I think we're just talking about more or less the interview was communications in general. But if you could take a smartphone and put it on a radio, it would be ideal. So I could have five to six dependable apps that I use on my radio, I can utilize it as a phone if I needed to or wanted to, as well as to a radio communication and delivering messages. So the radio does not make noise if there's a tornado coming. My own phone does [laughter]. I'm not required to have a cell phone. I'm not required to have it activated, but I do so because the two together make me successful.
Change	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	[RE: CAD via tablet] ...I don't know if they took the at at-quarters button off or not because they recently changed policy and we had the status

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								in-quarters from the terminal in the firehouse now instead of doing it from the mobile unit. So I don't know if they took that button away, but that may still be there. No, we don't use it [laughter].
Change	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...they're allowing us to actually-- if the person is in cardiac arrest, we don't transport them as often as we used to. Because it used to be we would just start CPR and do what we had to do on the scene, and then take them to the hospital. Now, we've kind of changed our policies a little bit, where mostly ALS care that we can do is the same thing they do at the hospital anyway. So rather than transport them to the hospital and have them declare the patient dead pretty much when we get there, we'll work them for 20 minutes on the scene-- at least 20 minutes on the scene. Do everything we can. If we don't get a rhythm back or anything, then we'll call our medical controller and ask for permission to just terminate there on the scene. And at that point, it becomes a [City]PD issue because then they got to call the-- they'll handle notifying the coroner and anything else to do with their investigation. Usually, it's an apparent natural, so usually, it's not anything related to a crime, but they still have to do their little investigations.
Change	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...it's changed a little bit over time. They've changed their criteria for when we can terminate on the scene and when we can't, so. But the initial push started probably about two years ago, I think
Change	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...I mean, basically, a lot of the advanced equipment that has been used on ambulances for years is starting to become more technology-enabled. For the EKG monitors we have now, have modems and or Bluetooth, and they can transmit that EKG directly to the tablet, into our report as well as to a server. We can transmit EKGs to the hospitals for them to look at. If we have a STEMI, we'll [transmit?] the EKG to the hospital we're transporting to. And I don't know for sure-- I've been told that when we send the EKG to the hospital, it automatically alerts not only the ER attending physician, it alerts the cardiac cath team, and a cardiologist as well. So that everybody's pretty much looking at it, seeing what they got...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Yeah. So it attaches and again, with upgrades in the software and everything else, things have changed a little bit. It used to be that it would attach it as a attachment to your report and you had to actually open it up separately in a separate application to actually view the EKG that's provided by the monitor manufacturer. Now, with the latest software we're using now, it'll automatically put the EKG in your report. If I go log into the server right now and pull up reports that I've done in the past where I did an EKG and transferred it over, right on my report will be a picture of the [inaudible] that I did. So it's almost become part of the report. Now, it's even more so-- I guess, I would say it's easier now because instead of having to open up the EKG in a separate application, it's right there on the report.
Change	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	It's a little bit of a mixture. I mean, most of it's fairly new, relatively new. It's stuff that's pretty much probably still up-to-date as far as enterprise and business stuff goes. The tablets up front that we're using up front for the CAD are probably about, I want to say, five years old maybe. I mean, it's a guess but-- and they're running Windows 7, which again, most businesses enterprises haven't switched over to Windows 10 yet, anyway. So I mean, they're getting kind of older, but they're not really outdated for what's currently being used yet. The tablets we're using for our patient care reporting in the back of the unit are actually Android tablets. And those, we just got the beginning of this year, end of last year. So those are really up-too-date as far as technology goes.
Change	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Not too often. I mean, the original software we're using was designed on Windows XP, actually, but we have been using that since 2007, I want to say, and we just now changed over to the Android version. The software developer actually-- this, I think, about the fifth major version of the software [inaudible]. And I think it's the third one that we've had because I think [they were already?] on version three when we first started with them back in 2007, and then after that, version five, so...
Change	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...But, again, not all of those have had major changes, especially, not for the user on the front, and this is the first time that they've changed it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								There was actually a significant change to the front-end user [thing?]. I know when they changed from version three to version four they changed some back-end database structures and it required a lot of IT work in the background on the back end, but it wasn't something the user actually had to deal with [erstwhile?]
Change	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...So [when?] running two databases simultaneously while we're in the middle of changing it over. Because the old version of the software wouldn't talk to the new database, and the new version wouldn't talk to the old database properly. So it's like we had to-- during the changeover, we were actually running two separate databases and two separate versions of the software. And the tabs that hadn't been switched over went one way and the other went the other, but yeah.
Change	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	That's probably not anything that's necessarily atypical of any kind of software thing. Anytime, we have a software upgrade-- and again, that's back-end stuff that the end user didn't have to deal with or have to see. As far as they were concerned, everything was the same as it was before.
Change	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	There's a number of patients that we run over and over. And the other thing is, the database maintains a fairly significant history. And again, I don't know how it's currently configured, but last time I knew for sure, the database actually maintained at least three years of data in the active database. Then it would archive it off into an archive...
Change	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...The way that the current system's working, I'm not sure how far it goes back. But basically, because it maintains that large currently-used data set, that active data set of like three years. If we've transported somebody anytime in the last three years, it'll pull up at least...
Change	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Oh, fairly-- well I would say fairly significant since I first became a first responder and that's for sure working here 17 years, in the last 17 years. Well, for one thing, the department as a whole has had a different structure then, too. The EMS side was a lot more-- it wasn't completely separate but it was kind of a separate-- more separate from the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								firefighting side than it is now. They were still both kind of in the fire department, but the EMS was like a separate bureau or a separate division within the fire department. They've kind of combined it all into one operations division now. When I first came on, the firefighters in the fire apparatus and on the [A buses?] used two separate radios. And we couldn't even talk to the fire engines that were on the scene.
Change	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	So now, of course, we're all on the same radio, have the same radio on the same radio frequencies, the same radios. So we can talk to them. And that was several years ago. That was probably back in 2000, 2002, somewhere between there that they actually-- we would be able to [serve?] with the same radios that the fire department was using...
Change	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...Other than that, I mean, other than just administrative changes in terms of what channels we use to talk on for different stuff, I can't think of any real big changes with the radio communications. At least, not from a user standpoint. Again, the tablets up front that are [inaudible] CAD [inaudible] those are new or relatively new. So again, we used to have to do all of our status changes verbally on the radio. So we would have to tell one [inaudible] that we were responding; that we had arrived on the scene...
Change	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...Then, we moved from that to the radios actually having an integrated data keyboard into the radio itself. So it wasn't real-- didn't have any kind of a graphical display or anything, it just had eight buttons on it and we had little reference guide taped to the dashboard of the unit that said, "Okay, Button one is, arrived on scene. Button two is in service or whatever. And we would just hit the button and somehow the radio was keyed to the [inaudible] and changed our status...
Change	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...And then we went to the tablets that have the whole CAD system on there, so. And the move to the tablets has probably been, as far as I'm concerned, the biggest benefit as far as the first responders and actually responding to calls because of the fact that it actually has the CAD information on there so while we're going to the call, I can look through the remarks, and notes, and see exactly what the dispatchers have put in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there. And instead of just having the dispatcher say, "Oh, yeah, it's an asthmatic, probably." Usually, we had basic information before. Now, I can actually look through and see and get a little bit more detailed information on exactly what may or may not be going on.
Change	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Well now it's a-- I say the majority of the personnel are cross-trained to do both. There are some like me - there's still a few - who were EMS only. And again, that goes back to when it was separate. The EMS had put their hire just for EMS. The firefighters have been cross-trained to do EMS since '87, I think... at a basic level...
Change	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	At a basic level, yeah. And then, I guess, was around 2000 or 2002, somewhere in-between there, they actually started working on putting paramedics on the engine companies. And the first way with that was actually taking paramedics who were already paramedics in the EMS division or the EMS side of it and having them run on a couple of the engine companies as a pilot program. But since then, they've started actually hiring firefighter paramedics. And when they initially started putting medics on the engines, those medics were still just single-role medics. They weren't trained for firefighting at all. They were just riding on the engine to say they had a medic on the engine, that they could possibly get to the scene faster than a actual ALS transport unit with a medic on it. But as I say, since then, it's become a lot more. [As I said?], almost everybody the fire department hires now is cross-trained...
Change	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	There's private ambulance services in [City]. In the past, they haven't been used for 911 services at all. I guess it was starting about a year and a half ago, I want to say - I think it was last March - they did start using a private ambulance service for some of the basic calls to try to reduce the load on because it was getting to the point where we just didn't have enough ambulances and personnel to transport everybody.
Change	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	Yeah. So [City] done a really good job at promoting themselves as a more of a year-round thing than just a summer thing. And I started here in 2010, so I've seen I think seven winters. It'll be my eighth, I think, seventh or eighth winter this year. And I've noticed an uptick just during

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that time, significant. It used to be dead in pretty much April, May, and June, and dead in half of August, September, and October. And now it's slow in May and slow in September, and then it's pretty busy in the middle of the summer, and busy in the winter. So yeah, they found a way to fill it in pretty well.
Change	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...And we used to be two separate agencies. One in the west end. One in the east end. So there was a little bit of cultures to mix when we merged...Around 2012, 13. It was kind of a slow process that was happening behind the scenes without the people knowing that it was happening. We all kind of had our suspicions [laughter] that it was happening, and then it was announced that it-- I think they had to do some legal things behind the scenes to make sure that it could happen before they told us it was going to happen, and then said, "Oh, never mind. It's not going to happen." So there was that. And I worked in the east end first, and we had three stations, and they had two and we merged. So now we have five. But it's gone fine. It just took a couple years to transition into and changed things for both ends of the county when it happened.
Change	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	And you're coming from the slow end and this sort of seasonally busy end, and that never end transfers and their end transfers, and had a way higher property value, and that was managing themselves okay financially. But because of financial downturn, and because a lot of our money is based on property taxes, and because it takes two years for the property taxes to actually trend one way or another, even if they're going down, it still takes two years. They were in trouble financially. So it was to their advantage to merge with us. And their person that was in charge of them, saw all of that. And I think it also makes us stronger overall as an agency, to be together with five different fire departments. Fire departments sometimes like to take over EMS agencies, and if you have one through out the county with five different fire departments, it's a lot harder for one fire department to say, "I'm going to take your whole thing over when they only cover a certain part of the district."

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	Yes, we do. So we have cruise scheduler which is I believe created by Zoll. I just found out literally an hour ago that they're phasing it out. So in the next 18 months it's going down.
Change	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	In a lot of places, they work in a fire station. They're a part of the fire department. They're either cross-trained as firefighter paramedics, and then they work in a fire station and they do that. And then what we have is a county-based, tax-supported system that is separate. It's a separate tax district. So it's a special tax district, a health services district, and it's a-- I don't know if that's only a [State] thing, or if it happens all across the country. But they had to go and create this thing 30 years ago. We used to be part of the hospital. The hospital thought we weren't revenue-generating enough, and they didn't realize [laughter] the potential. And so they dropped us and then they created a special tax district...
Change	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	So we have four or five different apps I would use. And some people use them more than others. So we have a Whiteboard. So basically, it's like a-- it used to literally be a whiteboard, like a grease board that you would write on and wipe off. And I would have everybody on the schedule that day, and where they were, and who-- whatever. All that stuff was on a greasy board. And since I've been here-- so in only six or seven years, it's gone to a-- it's a computer monitor that's like just big Samsung television. It sits on every station on the wall. And it's a computer. So you just update it with a keyboard. And you use the scheduling technology to tell you who's working that day. And then the supervisor, in the morning, updates the board. So who's there? Then you update it throughout the day. So if a crew goes on a transfer, you're going to "x" them out and say, "Now, these people are working," or, "Nobody's working that station while they are there," or, "These people are covering for them," whatever it is. So that's how we do it. Then you can see the whiteboard on the phone and that's a newer thing.
Change	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	And then we use the Map, just the Google Maps. I use Google Maps and the Apple maps. And there are addresses that do not exist in there, in both... And we have map books for old technology. When the dispatch

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								tells us where we're going, it gives us a cross street and a map page. So technically, we should be able to find it. It's just that sort of new, younger generation of people just saying, "I'm not going with a paper thing when I can just ask Siri where I'm going, or ask Google," You can start it finding where you're going while you're walking down the stairs rather than walking down the stairs, stopping, not even turning on the vehicle, opening the book to the page, trying to find the cross streets. You could have already been driving. So it's just faster. So we don't use the map books nearly as often as even six years ago.
Change	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	I've worked in systems with radios mostly, and then I've worked in systems with pagers and radios. And I've worked in systems with that little phone that would chirp-chirp, where they would call you specifically, so nobody else would hear what you're doing, usually combined with a pager. And then, I started with pagers in [City], and radios, and a phone that was hardwired to the ambulance. And actually, before that, in [City], they would have a radio-- it was like a radio phone. So it was like a-- it would only call certain hospitals, and it would do it by radio. So you'd kind of have to hold and talk and then let go and listen...
Change	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...the radios have gotten smaller and lighter throughout the time that I've been doing this. I mean, they used to be like-- you could them as a weapon if you had to [laughter]. And now they're as big as old cell phones. It's happened so slowly that-- I can't really think-- I hated the chirp-chirp thing because I'd like to know what other people are doing, and where they are, and that kind of thing. That was the biggest reason why I hated it. And I also thought it was just-- they only did it for financial reasons. I mean, it was cheap, so that's why they did it.
Change	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...These radios have improved, technology-wise, since I've started here as far as they've gone from I believe it was analog, although, I'm not sure, but they've gone to digital. And during the transitional phase, it was kind of bad. It sounded really digital, like you'd hear a weird thing, or it didn't work as well in [City]. It didn't work as well in places with more canyons, with higher mountains, with more obstacles, physical

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								obstacles. But they've added enough I guess repeaters and antennas, stuff like that. So it works a lot better than it used to work...
Change	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...And same in [City]. It used to be fine, and then they kind of went for this transition, and there were lots of problems. It wouldn't work in elevators, wouldn't work in garages, wouldn't work in concrete buildings that you're in, parking garages. Wouldn't work in certain parts of the city. You could park 10 feet away and it would work, but right here, it was like, it wouldn't work. But that's gotten better also.
Change	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	But I think we've gone way more towards phones. Everybody has a phone, everybody texts. So a lot of that. And then pagers are gone for the most part. I mean, some services use-- the volunteers, use pagers, or very rural places use pagers because they can reach places that phones might not reach, or radios might not reach. But the pagers cost money for services, so [City] got rid of pagers. So now, you can get a pager but I would say 5% of the crews use an actual pager. And they almost all get texts. So they can just get a text instead. And you get all your information on a text and or on the radio...
Change	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...you used to have-- in [City], you used to be able to call the hospital on the radio. It didn't happen that often. But you'd do it 5 to 10 times a year. That hasn't happened in years. They still have the channel, but nobody ever uses it. So that's gone away. So some things have changed like that.
Change	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: trip reporting] ...some of them, they can drop-- the dispatch can drop the patient information into their call... They can drop the address into the call. They can drop the times into the call. They can drop the miles into the call. They can drop the hospital address where you take them into the call. And those are good, and we like that... And this place is just slowly moving to that...
Change	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: trip reporting] ...And this is not happening with anyplace that I've ever worked yet, but I've heard it talked about so It's probably going to happen, where if somebody doesn't want to go to the hospital you can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								be like all right, "I'm going to video tape you, and I'm just going to talk to you and say, here's the risks of you refusing. You understand that this could be going on with you? This could be going on with you and you accept those risks?" And they say, "Yeah." And that's way better in court if the family's saying, "This paramedic--" ... That look, they clearly had decision-making capability. We clearly explained to them the possibility. We told them five times, "Will you please come with us?" And they would go. So now I think it's better in some ways...
Change	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: trip reporting] ...Some agencies have ways to track how fast you're going. If you make dangerous turns at high rates of speed, that kind of stuff. And the ambulance, some of them have cameras in the ambulance. Some of them have-- some paramedics have cameras now. No place that I've ever worked, like the cop cameras...
Change	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...so we used to have a technology here that would, you had fog and you would beep it in when you would drive, and it would keep track of your driving, your speed, around the curve thing. I'm sure it had some kind of driver scope inside the ambulance to tell you if you're taking the turn, all that stuff. Everybody hated it and the day it got uploaded every month. And they didn't really use it punitively. But it made noise. So it clicked when you come around a turn. And if you take the turn too fast at all, it would alarm. It was so annoying. And even if you were hitting this at a normal speed, it was telling you you were taking it too fast. Let alone when you were actually going fast, then it would just alarm the whole time. So everybody hated it. We kind of mutinied. And when we merged, we got rid of it...
Change	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: new ambulance setup] ...But now we're getting a couple of new ambulances with a multi-hundred thousand dollar grant that we got. The grant's awesome, the technology is kind of back with the new ambulances in some form. So there's technology that isn't good, or that we don't understand the use for it. It doesn't make our job easier. The goal is safety, but it doesn't really seem to make it safer.
Change	EMS	R	Supervising	46-55	11-20	Male	EMS-	we've gone from-- so I've started where we had van ambulances, which

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder				R-007	they still use in some places, but they're all diesel, and they've slowly, slowly moved. If you want a certain size ambulance, specifically one that works best in a city or isn't huge. And mostly, people that buy the huge ones are firefighters, and I'll leave that alone. But a normal size ambulance, like we have, that's basically a pickup truck [inaudible] or whatever, nobody wants to make them anymore. So Ford and Chevy are the last two-- Mercedes makes something, but they've gone from diesel. Nobody makes diesel anymore. So now they make gasoline like a V10 engine. So they get five miles to the gallon. But they're powerful enough and they're more reliable than diesel, but there should be so sort of incentive for companies to keep creating ambulances and there's not. They've stopped. There's no money in it.
Change	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I find often, technology drives us in directions that we aren't necessarily ready to go yet as a small organization.
Change	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Well, that's exactly it. You learn how to use something, you get used to using it, that's obsolete, next generation, or that company just went out of business. I just got an email today saying that our scheduling program, which is very complex and I schedule 65 employees, they're discontinuing it. Yeah. So [in the service?]- I mean, it's 12 months, 18 months from now... Now I have to go research all kinds of new schedule programs, what's going to work best for us, how it connects with payroll, how is-- you see what I mean? ... So one little change suddenly creates enormous amount of work.
Change	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Everybody else in the agency has to now get used to doing this right. So it has payroll implications, over time implications, it's just-- in EMS, they say there's three things you don't fool with, the three Ss: schedule, salary and spouse [laughter]. You don't mess with those three things... So messing with people's schedules, even if it's just to go to a different technology platform, is stressful. And change management in healthcare is a huge deal right now because everything is changing so

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								fast. And it's not just reimbursement, it's what you got to do to get reimbursed.
Change	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	When I started here, there were six people, six employees and one station. And now we have 75 employees and five stations.
Change	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: GPS on ambulances] That's going to be kind of the next big step for us...
Change	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: ambulances] I mean, in the last five years, we've gone completely over to LED warning lights because they draw so much less power than the old incandescent ones. That's been a great thing. But we've made up for it by hanging all this other [laughter] stuff, this other new technology.
Change	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	I mean, we just signed on to a new billing add-on to our technology and basically, it's just an aggregator. It takes information from multiple different places, that their billers have to open, one screen for this and another screen for that, go to a different program for that. It brings all of that into two screens. So that you don't have to keep changing screens, looking back and forth, going to different websites, to get this bill ready to be sent out... So it has great promise, like all technology. It's affordable, we think we can support it because it's written by the vendor we already use. So we're going to try it.
Change	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: change in communication] I'm not really sure they've gotten all that much better, from paper to what we are now. I mean, I understand why we're forced into using technology. I mean, it's volume, basically. We just couldn't do what we do any more on paper, it just takes too much time, and it's, shuffling the papers around. But, like I say, the time wasted on technology is enormous. I don't think anybody admits what it really costs. Yeah.
Change	EMS	R	Other	56-65	31-40	Male	EMS-	Radiologists in the hospital, they used to actually go look at a patient

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel				R-008	sometimes before they'd take an X-ray to make sure they were getting the right thing or whatever. Same thing with the [ER docs?], they won't even go see a patient without X-rays, or cat-scan, or something first. They want the X-ray, they want the cat-scan, they want the lab results. They want everything when they walk into the room to see the patient, because it's time. They're allotted so much time to see the patient. They want to have everything in front of them before they do. And so we are spending billions and billions of dollars doing this, instead of just going, looking at the patient...
Change	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...doctors and paramedics and other people who take care of people used to-- people who had done it a long time had a finely developed sense of when somebody was sick. They could look at him and go, "There's something wrong there." They don't have that anymore. It's like firefighters, there's a whole generation of firefighters who is out there now who have never fought a big fire because there aren't any, other than wildfires. A lot of agencies don't have big structural fires, especially if you're not in a city with all the buildings. I mean, I can't even tell you when the last big fire we had was here. I mean, structure fire. It's dumpster fire or it's hazmat spill or brush fire...
Change	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Ask anybody in this county or anywhere [inaudible] area, really. I mean, you could go to [City], same thing. It's a nightmare [to?] staff because how do you staff full-time, qualified people when your call volume in May might be 200 calls in a month, and my call volume in January is 700 calls in a month. So I have to be able to expand and contract responsively, because you can't build [the church?] for Easter Sunday [laughter]. Taxpayer's money, it just doesn't work. It's not sustainable. So I have two paramedics in every ambulance, and then in the winter, I hire EMTs who do seasonal work, and have some other job as their main job. You have to get very creative about staffing around here.
Change	EMS	R	Other Public Safety	56-65	31-40	Male	EMS-R-008	--people just don't understand all the fall out that a new technology involves. It's, like I say, a lot of unintended consequences. You deploy this thing, and somewhere down the road, somebody didn't think of,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					"Gee, why is that happening? Oh, it's because we didn't change this."
Change	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	. I was at a technology conference that's put on by our vendor of a lot of our software, and it was-- everybody was complaining about this one software program like, "Why hasn't this been updated in years?" And they're like, "We bought this company from a company that bought another company that bought another company. And the guys that wrote this code, there are still people that are using the initial version. If we change something here, we have no idea. We might shut that service down that's still using that old technology." So backwards compatibility is a big deal, too...
Change	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	Our department has those MDCs, but it's kind of underutilized for a computer. I mean, all we do is get this generalized information that we probably could have sent in the '80s. We just didn't have the ability to make it small. Nowadays, it should be like an iPad. Something simpler that's easier to touch, and you could almost pick it up and take it with you so you could continue relaying information...
Change	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: nokia cell phones] I had to pull the antenna up. Obviously, that's leaps and bounds different from where we are now. The first ambulance service that I worked for when I got out of paramedic school was out in the middle of [State] in the woods, and we had to call the hospital by radio. We would do the actual radio mic. They didn't even use cell phones yet. And then I got hired with the full-time department in 2005, and then we started-- then that was my first real opportunity to use a cell phone to call in, so. It's changed a lot...
Change	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...I mean, it went from that to then having computers get dispatch information and with the GPS technologies, able to automatically be on scene within 500 feet of something, which has its own problems of its own. To now, I feel like our department kind of underutilizes technology for that. Yeah. It could be so much sharper. I mean, I get text messages from my ex-wife more than I would like [laughter]. I can't get information from dispatch straight to me that says, "Hey, this is a dangerous--" without having to make it out loud and everybody hears it [laughter].

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	But from the EMS side, we do so many things where we talk and we experience, based on what we see. Whether your face is drooping or if I'm talking to you and you're not quite making sense. You are making sense, but I'm picking up on something that isn't quite right. So how do we portray that to the hospital sooner? EKG monitors. Our monitors don't have WiFi or Bluetooth capability. They purchased them right before I got hired here, so I think they bought them in 2006 or 2007. And if you think back then, WiFi was still kind of limited. We can't send our 12-leads. We can't send our heart monitor pictures to the hospital. If I thought it was important, which I never do, I could lay out their EKG and take a picture of it and send it. But again, we don't have that capability with the department...
Change	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Currently, [City] fire has their own dispatch center, and that is soon to change in the next year or so where [City] fire will be going to a [County] communication center. So it's a county-based dispatched center with all the fire and police in one house. That's essentially all I know about it. I think countywide it's a good thing. I think there's going to be some challenges in the short term going from in-house to countywide dispatch, but the red light goes off in the fire house, we've got a call [laugther].
Change	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I came from very small single firehouse fire department, mostly volunteer, to start and it was one radio amongst the entire fire truck. We had a county-based notification center that was not a really dispatch center for fire. So it was really self-made. So you live or die by the decisions you make versus when I come here, it's very systemic with policies and procedures and guidelines and very rank-and-file. And the guidelines are all put in place for you to just try and apply those guidelines to your daily routine and incidents you respond to.
Change	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...We're currently just finished up doing an RFP for a new LMR radio system, so I was involved in that. If anything breaks, I get involved in making sure the right people are coordinating to fix it. And then just the everyday stuff, too. I just listen to the radio, I make sure ambulances are

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								behaving themselves on the radio, dispatchers are behaving themselves on the radio. When mistakes are made, I send a lieutenant out to investigate, and then I take the results of those activities and would go ahead and take whatever action's appropriate there, so.
Change	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: pre-plans] ...every once in a while, something really weird will happen. President [Name] decided he wanted to address a crowd. I don't remember what it was but at a local high school. So the man can draw a crowd [laughter]. Basically, on four or five days' notice, we had 20,000 people showing up to hear the president speak on what was essentially just a high school football field. So it's not really geared for that kind of crowd or anything and you just wing it. Those are the ones that are a little more interesting in terms of getting that information together and then out to everybody, especially because those change up until the last moment when you get-- he, the president, whether it's [Name] or not, they're just notorious for-- I mean, the president, if they change their mind, everybody else changes around them, not them. But other events do it to a lesser extent, where you're adjusting on the fly and you need to get all that information out to everybody.
Change	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: interoperability] It actually works pretty well. It's had a lot of work put into it. It was not good initially. So, like many things in EMS, a lot of this work came after big system failures. Probably the first of them was the [Name] did a [Event] here back in the early '90s and they had a volunteer medical system that essentially collapsed. They had the not such a great idea to have all the kids do a day of fasting and then walk from Downtown [City], the 20 miles, to where the [Name] was going to address them. And it was in August, so it was a very hot day, and the obvious mass dehydration occurred and it overwhelmed them. And so we sort of cobbled together a system that nobody had talked to anybody else...
Change	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: interoperability] ...The famous [City] shootings, there were a few more like that where things really just didn't go terribly well from the communication's setup which led to a lot of committees and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								interoperability committees. Here in [City], they mostly operate under the aegis of the [Name] region of UASI, the Urban Area Security Initiative, which is the federal program for large metropolitan areas. So they have a communications committee that has kind of become the lead organization for planning all of this stuff. They produced a TICFOG which I couldn't tell you what [laughter]. It's Tactical Inoperability Communication Field Operations Guide.
Change	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...Basically, there's a committee that's made up of representatives from all the public safety agencies, a few of the state like the state government coordinators, communications coordinators, and all of the various radio technical IT departments, and they put a lot of work into-- initially, they used a kind of an ad-hoc. They called it-- was it Network First? Network First, which was an ad-hoc, behind-the-scenes set of operability channels which had a server. What did they call it? Star Game. I think they named it that [laughter] - why not - that could talk on a limited set of channels, that could talk from central server for the various systems up and down the front range, and that has grown as P25 technology. We're pretty close to being P25 compliant here in the front range...
Change	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...so all of the interoperability stuff has been taken off of the old Network First servers and been transferred to P25 ISSI connections. And that was challenging technically, I'm sure, although I didn't have to deal with it. But, of course, the political piece of it is a big chunk, too, making sure that everybody has permission to be on everybody else's channels, getting the various programming keys shared around for the radios and sort of basically coordinating who can have access to what, and the inevitable argument over who pays for the talk paths, the interoperability talk paths, who can use them, how we keep them from-- that has been the function of the NCR/UASI committee. And they've actually come a long way to smoothing that all out...
Change	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...so now, actually, the front range does all the work, not as tight-knit I would like to see or as ideal. Every time somebody buys a radio system

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								or wants to make changes to a radio system, all that stuff does get taken into account. And we don't always get the answer that we want, but we spend a lot of time hashing it through in an organized and efficient manner before people start doing stuff. So that helps a lot.
Change	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	So fire, EMS, police, the sheriff's department which, in [City], is not a field law enforcement unit. They just run the jails, essentially, and the courts. [City]'s a unified city county, so we just have a police department. All the sheriff's department does is provide jailer and court-martial services for the court, that sort of things. Public works. Everybody who is or was City of [City] or is ex-City of [City], like the Paramedic division which has been independent for about 20 years, works under one unified radio system with one organization that takes care of it...
Change	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: communication with frontline supervisors] ...cell phones, of course, make up a big chunk of that. And then we have-- although they are not used very much, we have some car-to-car channels and a command back channel that we can use if we want to talk to them off of the main dispatch channel. Or we have the ability to do what's known as an ICALL which has become almost obsolete now that cell phones are so widespread. When I first started down here, we had cell phones but they were the kind that were still attached to the car [laughter].
Change	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	So every person, and that's a choice. So we actually will issue them an alphanumeric pager. Most of them, at this point, and this transition has occurred over the last probably four or five years, four years, have turned in their alphanumeric pagers. They don't carry them anymore. We can turn the pages into SMS messages and send them to cell phones, or we can turn them into emails and send them to an email account on a cell phone. And the overwhelming majority of people, probably in the order of 75%, prefer to just carry their cell phone and use that as a pager receiver via that system as opposed to actually carrying the dedicated pager.
Change	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	we've actually recently-- we've started using all of our ambulances because of the need to get data up and down to the PCR laptops, which

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								meant we didn't have to wait in the hospitals. So now, all of our ambulances are essentially a broadband hotspot via commercial MiFi Wi-Fi. Or no, I think we use Verizon Jetpacks right now...
Change	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...Our main dispatch channel before-- we just split it into two main dispatch channels. Prior to that split, which occurred about six months ago, was three million transmissions a year on one channel. And so you physically couldn't give them some of the information you wanted to give them. You just didn't have time on that channel. And now we've taken care of that problem but at the expense of splitting everything into two. We have to have a second dispatcher. You can't monitor both channels, so you're only listening to half of the system at any one time...
Change	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: district chief of EMS operations] There used to be two people to do my one job that I'm doing now.
Change	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...Now communication with the firemen, that was easier because we did have a channel that we could go to communicate with them if there was some distance between us. Otherwise, we would be we knew all the companies that were around us, and we constantly had runs with them. And so they knew what to expect from us and I knew what to expect from them. But otherwise, communications via radio was simple because we would just turn the switch over to that channel and communicate with them. And now that everyone has radios, I would assume that it's much easier.
Change	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	I could tell you that paramedics are better at the radios because they constantly have to use it on every run. We used to be able to communicate with the hospital through our mobiles, and we have to give reports over a clinical radio to the hospitals. So we were in tuned to using the radio then than a regular fireman because back then, not all of the firemen had their own radio. Only the officers did.
Change	EMS	U	Supervising Field	46-55	21-30	Male	EMS-U-010	[RE: Google search] ...now we have our standing medical orders on a app. So yeah, I think they're still used to look up medications, to find out

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					about diseases that we're not very familiar with, or that we don't encounter a lot of.
Change	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: changes in technology] Absolutely, they have been for the better. It has made our job a lot easier. It's very difficult for us to change but it has improved. It's easier for us to do our reports. Whereas before we used to have to write everything out, check boxes, remember what a 1B means on a report but now we don't have to do that, so yeah, it's much easier. As a matter fact, now I prefer to type versus write. So it has improved our ability to do things easier, I think. At least from my point of view.
Change	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: change in communication] The shift has gone from, like I said, something personal even when you're writing something. You're writing a letter and whatnot, it was personal. Now it's not personal anymore, now it's just a message and a screen. With what is it, Twitter's 150, 200 characters and that's it? So yeah, it's taking that personality out. So I think that's for the worst.
Change	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...As far as communications with your partners. Because of our different characters, different backgrounds, sometimes people-- I don't think it's as bad as it used to be. Where I'm saying bad is, there were people who were on for 20, 30 years and when you have that amount of time in a certain company, you're set in your ways and whatnot. Versus today we have a lot of younger officers, a lot of younger people coming onto of the job, candidates out there now. Just in the last 4, 5 years we've had over 300 new candidates. So we have a lot of new people on. And again, they come from different backgrounds, different areas. And sometimes, communication is lacking where there's a three or five-year officer who is still learning the job, trying to communicate with a candidate who has a month in the job and trying to teach them what they know to survive the streets of [City]. So yeah, there are some challenges out there.
Change	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...I guess technology is constantly getting upgraded. As a matter of fact, we're in the process of upgrading our mobile computers, our patient care computers to newer versions, so they have to relearn it. Even if you've known the system for a while, even though we've kept the same

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								company, it's still a new program. You're going to have to relearn the whole thing. So that may frustrate some people...
Change	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: paramedics] They need to know the streets. They need to know the cross streets, the hundreds. We're in a grid system, so they need to know where they're going. They need to have an idea of-- depending on what kind of emergency they're responding to, they need to know what their closest hospital is, what the trauma center is. And as a matter of fact, nowadays I think it's even a little bit more difficult for them because they need to know their cardiac centers, their stroke centers, their pediatric centers, their OB centers, their specialized OB centers. So there's a whole host of new things that they have to know. So that can be challenging for them. And then they have to know the people that they're delivering the patient to. Some nurses and doctors are nice and kind to them. Others don't give them the light of day, which is unfortunate. So they're not partners in that way. But I guess they're out there to do their jobs. And for the most part they do.
Change	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	From my experience, the work of a paramedic is very important and it's not often publicized because they're just doing their job, and I was in the military. In the military we used to take care of our medics. Sometimes that doesn't translate over to the fire side. Whether it's here, whether it's in New York, whether it's in Boston, whether it's in Los Angeles, a lot of the paramedics don't get the acceptance that they should get. Like I said in the military, first thing they do is take care of their medics because their medics are going to be taking care of them. So I think it's just important that we recognize our paramedics.
Change	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: recognition of paramedics] Why do I think that is? It's just the culture, the culture that we developed here and it's difficult to change. Like I said, when I was in the military, a record meant something. As a firefighter, you only have this. In the military, if you have a record that means you went above and beyond, and that's what I tell people. You have a record, you've gone above and beyond. Be proud of that record... So that's just from my perspective, from my experience. So yeah like I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								said, sometimes we don't get the credit that we deserve [laughter]... But it's changing slowly. It's a huge cultural change and we have some good leaders out there that are trying to make that change.
Change	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: congestion] You get used to it. My partner came from the Southside of the fire department where there's not that much traffic to this. And he was like, "Oh my God. I can't believe how much lights and sirens." The biggest thing here is that they still don't pull to the right. They don't. They don't pull to the right. I'd say about seven or eight years ago, we did a campaign here. I think CFD did a campaign, pull it to the right. That was great. We had stickers. We had billboards. And I noticed that worked out great. And we haven't done that in a while. So lately, I've noticed that the community has failed on that because we could be stuck on traffic and everyone's pulling to the left. And we got to zigzag especially in downtown.
Change	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	So if we are unfamiliar with the area and we're not on a call, we will go up in-service, through the alarm office, called area familiarization. So we will go around the community and just look around to see what's new, new roads, especially in the [city] area, they're building and subdivisions... [City], they're building a whole new community in that area. New roads are being built. So, the summertime, me and my partner will drive around and see what's new, road closures, there's always road closures, there's always construction. So if it's not a busy day, which every day is busy, but if it's not busy, Sundays, maybe we'll go drive around, see what's new and get to know the area a little bit better.
Change	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: problem using dedicated hospital frequency] Not if you're trained and you do it a lot. If it's something new to a paramedic in charge who's becoming a new officer, it's going to be a headache for them for a little while. They have to learn it. They have to learn it, it is. I remember when I first started, I was like, "Oh my God." Shuffling, "What channel is this? What channel is this?" It's a little headache but you got to work it, you got to learn it.
Change	EMS	U	Field	36-45	6-10	Male	EMS-	Just recently in the last couple of months, we've been told that if we do

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				U-012	get a subway call we have to get a firetruck or an engine truck, a company with us, for line of communication. So it will be the ambulance, and then it will be the company of the firetruck in the subway station because we have one fireman up at the engine, and then we'll have a channel called fire, and we'll be able to communicate through a fire line. It's a short-distance channel. We're able to communicate. So kind of like telephone, we'll have one channel to the fire station and to the fire channel, and then back to the firemen that's up on top who can communicate to the alarm office, kind of like that. And that's just recently in the last few months we've been told to. If we get a fire call or a medical call in the subway, we have to get a fire truck with us, which is great.
Change	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: experience] Going on a little bit over nine years now. So of course, we get a lot of people that have been on the job for many, many years, even. And they'll tell us stories and I listen to it and I take it in. And to tell the truth, I think we've come a long way, [local FD]. My dad who's been on the job, he's retired now, he was on the job for 29 plus years and it's come a long way. Growing, learning, technology, equipment, I think it's grown, so.
Change	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	So here in [County], when I joined, it was six years ago, and we've updated the software, and we've gotten newer Panasonic Toughbooks. But our radio channels, our talk groups, have remained the same. They've added a couple of encrypted ones, which is nice, so we can talk about-- we don't give patient names but we may get into a little more detail on the overdose or whatever. And that can't be scanned, which is very good. So it's just us and the person we're talking to. That's been a new addition, which is nice. Overall I've served in Rhode Island, [City], and [State]. And I got started in [City] and Rhode Island, and I know that it depends a lot on the jurisdictions tax base and how much they devote to this stuff. In Rhode Island, we were using, basically, just VHF. They weren't digital. They were analog. It was not by county. It was by region. So three or four different towns shared one radio channel and so you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								heard everybody at all hours of the day and night. We didn't have station alerting systems. Here, we have a system that will set off certain lights and it used to open doors. It doesn't anymore but it'll announce the call. It'll do all this stuff. Up in Rhode Island, we just had to listen to a specific tone that meant it was our town. And then we had to listen to which unit was being sent out. So we had Motorola pagers that would only go off when that specific tone was set off. But that was something that we did to kind of prevent us missing a call. So it depends on what the resource allocation of the jurisdiction is. We're very fortunate here to have this technology we have.
Change	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] It's improved dramatically in the 10 years that I've been in EMS. And with the new dispatch updates, it's improved a little bit more just with the access to different frequencies that we've never had before. And it can be pretty technical. There's a lot of federal laws with a federal merger like the FCC. They regulate all kinds of things. And having us, as field crews access all of that can sometimes be tricky. Historically, the city has had a single channel for kind of mutual aid, and it was traditionally just called grain, and it was just a frequency that all of the varying agencies used, and it was at times difficult to transmit back and forth. There was a lot of relaying between dispatch between different agencies. And with the newest update when we went to the two-channel dispatching, we had access to a lot more of those radio channels for the metro area.
Change	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] ... I mean, it was only in the '60s that we landed on the moon and all these radio communications were still fairly new. And the Internet didn't really exist until the '90s and now look. The world moves fast. Everything is connected. Everything is technology these days. There's wires, there's cables, there's radio channels, and there's computers, and it's just sort of the way it is. You have to be current. Things evolve. Things change, some for the best, some not so much. You just have to accept what you can. Hope it's for the best, and if it isn't, it changed.
Change	EMS	U	Field	26-35	Not	Not	EMS-	[S3] That's a hard question. I guess the short answer is no. There's a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder		specified	specified	U-004	<p>huge culture with EMS, and fire, and police, and some of that culture is very, very-- EMS as a whole is a fairly new culture. Fire, for example, is a fairly old culture from the very early days of this country. And some of those traditions and those things are very, very slow to change. Sometimes some certain cities-- [City] moves along pretty well. Certain system, I won't name any names, but they are a little bit more archaic in their practices. They read on the paper some practices that are maybe dated and should be changed. They are eventually with varying degrees. But sometimes as in the case of [City], [City] Fire was fairly resilient-- resistant I should say rather, to certain changes and certain economic problems. And ultimately, that agency, unfortunately, went out of business. They completely disbanded and were absorbed by [City] Fire, and [City] Fire is no more. It's gone. And I could say there's a lot of examples. I wouldn't be able to definitively say any of them are a factor, but things happen. You have to evolve. You have to change.</p>
Change	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	<p>[S3] I would hazard to say anything definitive, but it would just seem to be an accurate guess that yes, a greater surplus at the end of the year. We certainly need a greater potential for the ability to buy that new equipment to the best of those-- in those new researchers or that any research and new equipment and that type of thing. Maybe a more efficient ambulance. We went from an entirely diesel fleet to an entire gasoline fleet a few years ago. And whether you believe in a change or not, it has its pros and cons like anything. But that was certainly-- that was a long process to do that. It's very expensive. You have to retrofit those ambulances to have a gas section on a diesel one different. Lots of different things that they do when those ambulances were retired. They would rebuild it on the same frame to save some cost, but they're very, very expensive.</p>
Change	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	<p>[S2] When I started in the EMS, we used manual stretchers, and they were super light, and it was all I knew because that's all that existed since EMS started. And medics are very resistant to change. We get comfortable in something and then we don't want that to change. So</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								when they started rolling out the power stretchers in my service, I hated it. I was like "Ra-ra-ra-ra, this is terrible. This is heavy. What are you talking about?" But then when I actually began to use them the way they were intended, which is a two-man lift and not a single-person lift, then it actually was lighter, easier on me, and I saw the benefit to them.
Change	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] I don't know. Those two activities are fairly different. Some cases, like the case of a cell phone, well, when I first started EMS we had just, we just had a pair of brick phones, and then everyone had flip phones. But no one used their phone to navigate. You had fold out maps. For years, and years, and years, I just had a cheapie phone if anything. Now I had a smartphone that I can use for that type of things. Certain things, I mean, I guess I would say my computer at home is faster than the computer I have at work. It's also less durable. I like amateur radio. I have a very, very good radio that I use when I'm out in the woods with my friends that would be useful potentially in the city, but it's just different. It's not quite the same construction as the radios that we use. We use a government commercial grade radio that's built to be durable and can handle the abuse of that type of work. I guess certain technologies, hard to really pick one or the other.
Change	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] So not necessarily. Generally, when they're doing a huge change like new monitors, new chart writing, there's always anger with people that are involved in it. Frequently, they put it out as for volunteers. If you want to be part of the committee per se, then you certainly can be. And there's committees to design new ambulances that we would get. We trial a bunch of monitors because those affected everybody, and there are people that tested the various strip writing softwares. There's really not that many companies that do the EPC or the electronic patient care rewards. But there's still subtle differences between that you have to go through, and so it really depends on what the change is and how many different options there are, if there really is options to choose from. And if there really isn't, then it's just going to be something that sort of happens, and then we all get trained in it as it is. With the case of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								monitors, there's a lot of different heart monitors. And so there were demos, and we were all involved in surveys, and testing, and that type of thing. So it depends. But for the most part, they're pretty good about saying, "Hey, this is coming down the pipe." The timelines, there's some changes, of course, with that. That's just business and life. But they're pretty good about letting us know when things are changing.
Change	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	Well, I'm sorry. We still do have the Toughbook. I can't think of the name of the one we had before. I really liked that. That was in 1997. But the Toughbook, it's a great system. It works. I mean, no issues.
Change	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	Yeah. I've been on CFD now almost four years, so I mean, I've had the same radio-- nothing's really changed. New monitors, that's about it for [laughter]--
Change	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	I am career now. I used to be, I used to volunteer here and when I got I kept going with that but I was responding from [Name] so it was I was spending a lot of my own money trying to get here so when I went to EMT school and got hired here I quit volunteering because it let me focus on my actual job where instead of in the volunteer field you may go, you may not go really you know you're not responsible for anything. I now have responsibilities so I needed to focus on that rather than dealing with the drama and you know things that go with volunteering. So like I said I don't live in the county so it was harder for me to volunteer especially with the long hours that EMS works. I worked in [City] and here so back then I was working you know four or five shifts a week so you don't have time to volunteer. You know if you're gone for 24 hour periods you can't make calls, you can't make meetings and stuff like that.
Change	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	We're using paper here right now. We just went from an iPad back to paper because something happened with the copyright of this company yada, yada above my pay grade so I'm just filling it out on paper. My other both of my other companies I work for use computers.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	[Date] is what I was told today. We because of the problems with the copyright or whatever it was on the old system we had to stop using it and they've been testing out other systems trying to figure out what's going to be best between the field to the billing to you know our records and I'm sure that that's a balancing act you know that the director has to work on but that's just not my thing. I worry about user friendliness you know of the software.
Change	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	It was yes it was very user friendly. It was probably the easiest report to do. I mean I just want to tell you what's wrong with the patient. You know I don't want to have to go through and search things. I don't have time to do that so I just want to go through yes, yes, no, no narrative you know. If I can get my point across as simple as I can it's better for everybody because we can catch another call in five minutes and now we're two reports behind so then you run that report thinking oh man, what was that other guy, what was I going to say about him? I can't remember you know and now your report is down.
Change	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Sure I mean paper reports are the easiest you can get. I mean they were quick. I had paper reports down to a you know a 10 minute deal and it could be a complete report you know now I got to write my paper report but I can't write my narrative yet so I write my paper report with all my demographics then I go on to the computer and write my narrative then I have to go to a separate computer app to pull up my times to write on my report and then after that I got to take a copy of it and put it with whatever drugs I use, submit that, then I've got to put my we used to have to put that into a computer system then after that.
Change	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	We're pretty far behind compared to other counties in the state and elsewhere I'm sure. We're one of the few I think that even do paper reports. We did have a system they finally got one last year and it was horrible, didn't work out so they've done away with that so we're waiting now to see if the county picks up something different.
Change	EMS	R	Field	36-45	5 or less	Female	EMS-	Q: Right so have things changed in terms of communication since

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				R-019	you've started as an [Job title]? SME: Not really. I'm new to the game so not much has changed since I've been here.
Change	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	But there is definitely a push for people to follow their SOPs, their standard operating procedures more. And to communicate less of the stuff that should be assumed. Like, I know if we were in a fire right now, our job is to do a search. That's our primary job. That's our primary job. Our secondary is to is to control utilities. No one needs to tell us to do that. So if we're really adhering to this policy of less radio traffic, no one should have to tell us to do that. When we're done with those things we'll say, "Rescue squad 741 to command, we've completed the primary search and it's negative. The utilities are gas and electric and they're both controlled." That transmission right there took 20 seconds, and that should be the only transmission...
Change	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So, yeah. Man, it's kind of hard to track it exactly. But the most recent change is there's now this-- there's different systems for the computers and dispatch, which has been a very big change. So I can talk about that real quick... So now they track your unit based on its actual location.
Change	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...The other interesting thing that I don't think it's always been there, but I just recently learned about it with the new roll out and the training we had to do for that, is that they have pretty good information about the address, the incident address. So if this person calls 911 every week about something minor, it's in there.
Change	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	There is an app that already exists that our county doesn't use where you can actually listen to the radio on the app... so if I'm sitting right here, and I see that they put out a vehicle overturned 10 miles from here, I can just swipe on it and pull it up. And I can listen to the communication on my phone. The thing that the county has done that's pretty good is that now they also changed, with that new dispatch system, they changed what we listen to in quarters.
Change	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So I guess not in this room, but in most of the rooms, there's a scanner too. So you would hear any relevant transmissions over that scanner as

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								well. So that's a new thing. In the past, it was just Alpha, which is the main dispatch channel. You didn't have any of the operations channels. But now you do. So that's actually a really good feature that they just put in too. So I think they put a lot of work into this whole new thing, and it's definitely addressed a lot of the problems or wishlist items. But I do like that, that PulsePoint app is what it's called, where you can hear these things going out and listen to the call.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. Right now, everything's done on paper. We've looked at a couple different ideas of going to a digital system. But without building it ourselves, nothing really exists that does what we need because the physical check are just a database of saying yes, it's there, or it's not there. It's pretty simple to build. And we've actually kind of, here, worked on a real simple process of doing that. But what really needs to be done is to have a log of, it's there, but then a log of how it's working. So is it working? Then, if you did a repair to actually notate or maintain record of the repair. There really isn't a system that's there. And then, the other thing would be is if it's not broken, but there's still something that's... whether it's not quite right or not operating right...
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So we have a technology, it's called LifeSize... And what that allows us to do is, you have a TV screen, and every station, basically, is on camera. And we'll go through each of the stations. They can tell us what they're doing for the day, any trainings. If they're going to be in service, out of service. And then we also use that for critiques. Where before, we'd meet at one central location, and we'd talk about an incident, whether it's fire, a large incident, EMS, mass casualty. So now what that has allowed us to do is stay in our primary area. So if we get a call, our response time is a lot less...
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: data analytics program] it also shows where the need is and where the need isn't. And so that's been one of the big changes in the last 10 years that we've seen, is a lot of stuff went on paper, or a lot of stuff went into unusable databases. And now, we're finding that there's programs out there that we can extract some of that information. But

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we're also finding that there's 50 different vendors, and nobody wants to work nice with each other. And so you have to then hire-- you have to hire a programmer to make the patch from program A to program B so that you can get it to spit out some information that would be usable...
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...So you can get these hot and cold zones. You can get the hours that are more busier than others. And then you can even-- in [State], we can break it out into season because we can see that-- during colder months, we get more CO calls. We get more things of that nature. During the summer is when we get the outside broken arms, broken legs... all that adventure rafting and stuff. So it's interesting when you really start to look at the data. The things that we knew in the past just by experience and rumor, now we can actually see a true example of what's going on.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So they're trying to create a standard. But to do that all across the United States is almost [tough?] because you got to look at data back in the history of years past. And you might have done yours in Excel, and he did his in DOS, and I just did mine on paper. So there's really no set system, just like [Name] said that we had Fire Zone, we have different software programs, but none of them communicate with each other. So it's just a lot of data entry. Then all of a sudden, we'll start doing it. And then all of a sudden, the computers don't run on certain programs. So then you got to get rid of that program, and then you end up with a new program. So it's constantly changing.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...I mean, we send our gear out for a deep cleaning. Our station, we clean after every fire. And that's come around a long ways. It used to be you have your gear, you do your fire, you go back and wear your same gear. You don't wash it. Now we changed it so we have a backup set of gear. So it's changing, it's evolving, but there's not just one program that communicates with everything. It'd be tough. I mean, I think it can be done, but there's a lot of aspects.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...these guys track it, our payroll, but we just changed it, and it was a nightmare. And it's still a nightmare. And we weren't getting paid. And

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								nothing against these guys, but it's just another program that this program wasn't communicating with our scheduling. So it's constantly evolving. Like [Name] said, the CAD. You change the CAD, and now this program doesn't communicate with that CAD. So then, all of a sudden, you got to change the program, which is what we've being going through. We used to run everything through Gmail. We got rid of Gmail, and now we're on Outlook and totally different.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Gmail's an interesting thing, because at a firehouse you can move, and you can go to different places. And so when everything lived in Gmail, it lived in the cloud, which was really nice because you could go to the firehouse, and you've got access anywhere. Outlook and Microsoft products are a 50/50 split between the cloud and a desktop. And so if you're not on the particular desktop that it worked really, really great at, they have a really terrible user interface for their web version of anything. And so we made the transition for, I think, the wrong reasons, but it's been a hard lesson here in the fire department.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: switch from Gmail to Outlook] The reasons were financial, because we're also in a weird-- I mean, I'm sure you know that, doing interviews about technology, there's a weird transition right now between gen X and gen Y, who are very technologically savvy, and the boomers, who are on their way out into retirement. And so I think that that older generation is still stuck on Microsoft Word, Microsoft Excel, those types of programs, because that's all that they were exposed to for 15 to 20 years. And Google and the cloud-based softwares don't work exactly like the software that they were used to. And so they have this big affinity to going back to what they know and not learning something new. And even though Google Sheets worked as well as Excel, it's just things are in different places. You don't have the ribbon on the top or whatever. You can do everything you need it to. It's just different.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: switch from Gmail to Outlook] And then there's just the compatibility issue. So some of our admin is pretty old, and they would do something in Excel and then send it out for the membership to look at or to use.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								And then that creates a compatibility issue of having to upgrade it or change it. And then, when they would get something back, they would get it back from Google Sheets, not in Excel format. And they didn't understand how to change it back. And so, finally, they just said, "Okay, we're going to buy Excel for everybody." But then you could buy one for every desktop and then still continue a cloud-based service, which is now buying two programs. Or they just buy Microsoft 365, which gives you the web version, but then also gives you five free licenses, or desktop, or whatever. Then, that creates a whole nother problem for our IT department because there's-- and I don't know what your background is in computers... But you have to support them, and you have to load it on the computer. And then access and all of that, so.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: in-house IT department] ...And then just one of our programmers-- or, not our programmers. One of our latest IT guys does a lot of building forms and sheets for us now, which is kind of a new technology that's started to come out. And we're using that more as a patch to fill the need to track some of our data in a very simple form because when you build a form, it just dumps it into a spreadsheet. And so it gives us at least something, but it's not a great something because you still have a lot of back-end work with the spread sheets. You have to stop the form every year and start it on a new spreadsheet, or you end up with this giant data set... And then how do you break up the original sheet into useable data? And then it's just a sheet, so it doesn't talk with all the other sheets, so.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So it's definitely come a long ways from where we were, especially as a volunteer. Because we used to get a printout from matrix computer, dot matrix. When we put it out... So it'd spit it out and it'd tell you best way in, and then it'd tell you where your closest hydrant was, the address-- God, I don't even remember what was on that sheet. So now, it's all in the computer.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So it's definitely evolving. The technology's gotten better. But between the computers, the radios, they're constantly changing. We still have,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								with the radios, we have dead spots. It's a big concern. So [when you?] get inside of a building, you have no communication. We don't carry our cell phones in fires, obviously. Now, we have is a voice amp. So when you have a mask over your face and it's muzzled, now you can actually communicate, and you're a little bit more clear and precise. And we can hear each other. The problem with that is you're going to be getting some feedback on your radio, based on how loud you have your radio up. So there are definitely pros and cons...
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...With our masks now, you can-- we call it what? A heads-up display. Tells us where our air level is and how much air we have left and when need to get out. Then we have vibe alerts, where basically it starts to tell us, depending on where our air level is, they need to start going out. So technology's definitely changing in our advantage...
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We have-- we call it TIC camera, thermal imaging camera... Where before, we'd tear this whole wall out, and now we can pretty much isolate certain areas and move it a little bit more beyond that...
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...we had the dot matrix, which was the Rip-N-Run. It was really cool... That was what the manufacturer called it. Even in the industry, it's still referred to as a Rip-N-Run because it's all your information in just a little piece of paper, and you grab it and run out the door. The CAD is actually what kind of-- or the MDTs is what replaced the Rip-N-Run. And so we went to really generic DOS-based MDT, the black with the green lettering and stuff like that. It worked well, but it was in transition. Now we've gone to a full MDT, so we have the Internet and everything in the trucks...
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	We have an MDT-- we have an MDT in each one of the apparatus. And then they've actually put a cellular antenna into each one of the trucks. So the trucks are tracked by cell and by GPS. And so there's two-way communication now from the apparatus over the Internet.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	We have our radios, which, like [Name] was talking about, we've gone from a VHF, when we were in the low frequency. We've gone into a UHF, which started some of our communication problems because we used

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to have a longer range. And it was actually a longer-- it was a lower lower frequency which got out of buildings better. But when they've gone to a completely digital system now, it's clear, but it's also a shorter length that it can transmit. And it's also susceptible to more interference.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	And so when they first did the system, we had a lot of interference because of cellular, because we're moving closer to cellular bandwidth. We had a lot of bleed-over from a cell tower. And they brought out a company that did monitoring around the entire city for about a year and try to find all the cellular bleed-over. And it was actually a digital system that was between two points. And I don't know the exact information. [Name] may be able to tell you. But it basically sounded like it was sending a Morse code between two points. And depending on the weather and other things like that that affect radio signals, we would get the beeping of the Morse code, the dee-dee-dee-dee-dee-dee through our system. Or it would either just be this low-tone static through our system that was just bleeding over because the bandwidth has become so used. Or not the bandwidth, but the radio waves had become so used that it's just saturated. But it's gotten really cool, because when we were in the other radios, we couldn't talk to anybody. Now we have the ability that every one of our radios has FERN on it. Everyone of our radios has-- that's the Fire Radio Network.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yep. And then we also have green channels now, which are EMS channels. And then we have blue channels, which are police. And silver, which are the feds. And so all of our radios now have that. And all of our radios can connect to these networks, which is really cool when you're starting to work with other places. But you get one thing, and you're starting to lose something else. And the other thing that we lost was just the distance and how well the other radio used to work. And so they're doing things now to fix it. In the city, there's a new push to do an amplifier into large buildings. And so it's just a based repeater that they actually would have to install in new construction. But that doesn't--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Well, and that's why the big push was for the in-mask communication. But then it had the Bluetooth pairing problem, and we abandoned it. And then we went to this radio, which has a microphone on the back that's supposed to do noise canceling, but it works 50/50.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: exposure tracker] And then we just had a guy that came up with prostate cancer, and it was before all of this. And so he doesn't have a good record of the calls that he ran on, things like that. I would say the follow-through is probably 50/50 on whether guys are doing it or not...
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Communication's changed a lot from the radios that we use to have to the radios that we have now... Now we have the MDTs in the truck, so we now have a lot more access to information, which is great. But it's just getting everything to talk...
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...Having the Internet so available for hazmat calls and stuff like that is actually really great. Because on our hazmat truck, we do the research side of things. That's what our primary goal is on hazmat [forward?]. And we had a whole bank of books, and that's where we did all of our research. So from the ERG, the emergency response guide that comes from DOT, to the CHRIS manual, which comes from the navy, I think... It comes from one of the armed services. And then we had just chemical dictionaries, things like that. Now you can just type it in and everything gets queried for you...
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...And we've actually just got a new program from the county, which is kind of an-- it's an interesting concept. They pay a ton of money to a company and they gather all of this free data and put it into one piece of software. And so you type in ammonia, and it brings up the ERG. It brings up the NIOSH Pocket Guide book. It brings up all of these free pieces of information but it's all together. It's called PEAC Software. PEAC-WMD made by AristaTek. That's out of Gillette, Wyoming. So it's really cool, but it's unfortunate that it's that expensive. So it is kind of cost prohibitive for other places to probably purchase...
Change	FF	S	Not	Not	Not	Male	FF-S-022	...But to have all that information in one piece of software that once you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			specified	specified	specified			click on Ammonia, it just gives you a bunch of tabs. And you just click on every one of the tabs, and you can get all the information, so. That used to take half an hour to pull up all of these books to find that one particular product... And now, it's all there in one place, so.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. And then that's one of the other technologies that's kind of neat is our Tier II reporting used to all be paper. And it used to actually sit in a box underneath the captain's desk, and that's where it lived. And now, the Tier II reporting is in PEAC. So things are getting there. Things are getting a lot better in forms of communication, access to the technologies, access to the data. But it's moving slower than the world, I think. It's the politics and the... how fast government works to make the change...
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	I know we do-- we use the red channels a lot... Because of the hazmat and because of the rescue. So we go to a lot of other jurisdictions because of that. And then [City] decided to split their-- or [State] split the state into four quadrants... So we have red northwest, red northeast, and then so on and so forth. And then they actually used [Street] and [Street] as their kind of boundary because it actually works as a perfect square through the state. And so that's been pretty neat around here. And then the fact that, up until we went to the digital radio, we couldn't talk to our neighbors. And so that's helped a lot... And now you can just switch the channel and get there.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We used to do inspections, and now we do what we call pre-plan. So any new construction, we walk through the building. We look for hazards. In the event that that building starts on fire, we'd say, "All right. In that corner, that's where an ammonia is. And that's a roof access over here. That's our FBC." ... "These are exits. This is how we're going to lay hoses, and this is where we're going to throw our ladders." So it helps us out.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...It's a small [crosstalk]. We just have to do it. We have torches. We cut stuff, and then we have people that walk in and we've got a ring on their finger and it's swelled up, so now we got to cut that off... Now, you can't

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								cut every ring. I mean, some rings cut easier than others, but. So it's constantly changing.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...we can always have more access to more information. I don't think that there's ever a point that you can say you have too much information. And it's finally getting to a point where we can have all of the needed information in one place. As first responders, to have access to the water maps, sewer maps, gas shutoffs, all those kind of critical infrastructure, would be ideal. We're not quite there yet. But one day we'll get there. Having access to the information that's on the web and out there in books in digital format so you can carry all of it on your phone and not in your pocket. It's getting there. But we've found a tremendous amount of work-arounds to make that happen. At some point, we'll get past all the work-arounds...
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	I mean, there's things that are in place. And our AED's come a long way. And as you know, most places have AEDs. That's a big advantage. Our prams are a big thing now... They're stretchers. They're automated.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...Even little things to-- like our ambulances, the way they ride. And we just got a new fire truck compared to what our old truck is, and just the ergonomics. That in itself is [better]... So that's constantly changing.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We had an RMS from ZOLL, which was neat because it integrated with our monitor. So they could actually download all the information that was in the monitor instead of-- in the past, when we had the LifePaks, you would turn it off or do a summary, and then all the information was gone. And all you had was the printout of the summary. Now you can actually hit Download, and it downloads anytime that there's a change or event that happens, they're recorded on the monitor, which is really cool...
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	We're moving to a new RMS on [Date]. It's not made by ZOLL. So the interface is there, and it works pretty well. We've seen it now in training twice. But the idea now is, is this new RMS will actually integrate with the hospitals. So the hospitals can see all of our data now, and we can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								also see the outcome of the patient. And so that's really cool.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...the thing that is here, at least in the metro areas - and this is from the manufacturer of the new RMS - that it just so happens that the [City] metro area has the largest integration into this one particular program. So where we're at, out at the hospitals-- what'd they say? Six of the eight? Six of the eight hospitals that we commonly transport to are going to this new RMS program... And we're in that RMS program. So it just happens that it's working out now... That wasn't planned... That's a happy coincidence...
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	That's a happy coincidence. So that's some of the neat things that are happening with EMS. I know all the monitors now have the ability to send the EKG to a hospital. But it's just the receiving hospital has to have the right technology to receive it... And somebody looking at it. We're getting there. One of the hospitals we go to, they're only a trauma... so they don't have a doctor on staff for strokes at night. But they do have this little robot that drives around. And then it's got the camera, and it has a screen. And the doctor can actually drive it around, move up, move down.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	In the EMS world, there's a lot that's happening. But it's just the same thing that's kind of happening with the fire services. ZOLL put out a monitor that has the ability to send an EKG strip, but you have to make sure that the facility has the way to receive it and see it...
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...they're still doing calls on the phone. So every time they take somebody to the hospital, they're calling the hospital and saying, "Hey, this is what we have. This is what we're bringing you." And so that used to happen over the radio. Now it's a lot clearer signal because we're using phones...
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: sending EKG strip] ...So there's still a lot of steps that need to be taken to make the thing work. But I think it's just-- there hasn't been the big push to get EMS, and hospitals, and everybody working together... the thing is, one's government. One's the hospital. The hospitals are a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								business, I guess... They're out to make money. And so they want people into their system. And so now they're building these outlying EMS places. And I don't know if that's a big thing where you're coming from, but.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	We have stand-alone ERs everywhere. And so the idea is, they want to funnel in-- they want to funnel in somebody to their system. So if they build a stand-alone ER in suburban areas, they can take care of a certain amount of things. But then, if it's really bad, it already puts them into the system and they kick them over to the hospital. And so now we've kind of become the transport between these stand-alone ER's and the big ER. Or if somebody goes to the stand-alone ER, but they're really, really, really sick, they won't even take them. We just go pick them up and then take them over to the hospital.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	I think it's evolving. It's going to be to where you'll have ambulance show up on-scene and they'll help you transfer to the hospital. Hospitals are inundated, big time. So you cut your finger and you need a couple stitches. We'll send a unit. We'll stitch you up. We'll give you some [of your?] medications. And then after that, you get with your pharmacy. I think that's kind of the wave of the future, I really think, now.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: stand-alone ERs] You save that money. You save that ambulance transport... Puts us back in service quicker for the next patient. There's still a lot of kinks that need to be worked out. A lot of it's insurance and what they're paying for, and what they're not paying for. So I don't know how it's going in [City], but we've had it here through a private agency. It's called a CCT unit... Critical Care Transport. So that unit would show up and then, like I said, based on what it is, they [would either?] take care of you right there and send you a bill or transport you. So I really think that's the wave of the future for multiple reasons, and I think it's a great idea. You're going to have those people where you absolutely have to transport them... But from the hospital's perspective, they don't want you to do that. They would rather see you in their building...
Change	FF	S	Not	Not	Not	Male	FF-S-022	It does. With the transition to the technology, there's been a lot of-- [!]

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			specified	specified	specified			do say that-- we've started to depend on it a lot. There's a lot of dependence on it because we got away from the Rip-N-Run. If the MDT doesn't work, or if the cell phone module in the truck dies, everything goes bad because we went to an IP-based alert system in the stations. We had Comcast. Their line got cut one day. And we had no alert system in the firehouse, so nobody could go to bed. You had to stay up and stay with the radio...
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...So I, personally, think we're going to have a drone, eventually, where the drone will go out before the chief. And he'll basically get on scene, and he can do a 360 of the house. Then the chief can say, "Yeah. The whole back of the house is on fire. This is our action plan, based on that." Where now, basically, they show up on scene, and he's waiting to hear what your size-up is. So you go to the back of the house, you say, "Yeah. Half of the house is burned." Well, really the whole house is burned. So your envision and his envision are two [different?] things. You may say, "It's two story at the back and it's three in the front." He's like, "How's it two? It's three in the front." Well, it's a walkout or whatever, you know what I mean? We've had that happen. So again, that's back to that communication thing, where it's your vision and my vision are two different things. I could tell you it's red, and you're like, "That's pink." You know what I mean? Kind of like that. That degree. So I think, eventually, you're going to have where that drone is going to be in front of the chief, and he has a better of a view. And then he can say, "Yeah. We don't need all these apparatuses, based on what I see."
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	--so you don't have to put one of us in harm's way. I'd work on the meters and stuff like that, as well, and so. That's one of the things that's come out is we have the meters work over radio frequencies now... So we can actually take a monitor-- we have to physically take it. But we take a monitor, and you can actually leave it inside of a structure. You can leave it around a facility, and then we can actually monitor that remotely... So it's one of the things-- it's cool, but that's on another piece of software that doesn't talk with anything else. But it is cool. It's neat. It's neat

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								where technology's going.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We've lost a lot of the older dispatchers that were really good at the run cards. I've done it for a while. So you start losing some of that once you get the-- when I started, we had two monitors [laughter]... I think ours has eight. So there's the EMD card, then there's the map page, and then there's 911. Now that we're moving into the new Annie Alley system and the level three 911, it's really cool because we used to just get an address. But that was really neat because everybody had a landline. Now everybody has a cell phone.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...we're going to a regional dispatch center next June or July. So that'll help in halving the transfers. You'll just be transferred in house by primary dispatcher to maybe somebody that specializes in fire EMS, because they can ask the particular questions. Because we do EMD. We also do the EMD for fire. So they have all the cards, and they'll ask the particular questions to be able to get the information that they need. And it's helped. It's helped a lot on the streets...
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...When I first started and we were just on the streets, you would just get an address, very generic information. Now we actually get pretty specific information. So age, gender, hopefully a good idea of what kind of ailment they have or how big the fire is. The dispatchers now have a very regiment set of questions to ask, which it was just more of kind of conversationalist and trying to get what you could out of them. But when you start to ask those questions, you can then determine whether the apparatus needs to go emergent or non-emergent. And that puts a lot less strain on the system. It puts a lot less strain on the citizens because you're not going lights and siren and tearing through a city when it's just a car fire...
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...So for the dispatch side, it's neat. I think our dispatch side, we could get a few more technology things that would it make it nicer and better. But it's neat where it's gone. The Rip-N-Run was a concept that's actually kind of coming back into vogue. But it's coming into vogue in more of a technology standpoint. Not the rip the piece of paper off, but they're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								doing a monitor next to the garage door so that, once I type in everything in the dispatch center, you hit the button to tone the truck. It pops on the monitor next to the apparatus. You can actually physically see something instead of having to hear it.
Change	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We try to do a silent dispatch here. And, again, it was more admin and technology than just-- admin didn't agree with it and the technology wasn't quite there. That was about five years ago. We haven't brought the idea back up. I think, personally, it's a great idea if you could prove it to happen-- prove it to work 99% effective.
Change	FF	S	Manager	46-55	21-30	Male	FF-S-023	Eight stations. Six engines. One truck, and one rescue. And then we have five medics. Five ambulances. We do our own EMS transport. And that started in 2013, so. That seems so long ago [laughter]. It's really not.
Change	FF	S	Manager	46-55	21-30	Male	FF-S-023	...Let's see, as far as the community goes, primarily a bedroom community-- well, I guess bedroom community-- primarily residential. Most of the commercial and we have support that. So... restaurants, shopping centers, that kind of stuff. We do have some light industry. Not a lot. There's some light industry. And then we have a couple of pockets of bigger industry out west. Our northwest area used to be all rural and within the last five years this huge development, actually, two huge developments have come out there. The [Name] and [Name] communities have started building our there and it is by the end of it I think we're looking at 3,000 homes plus all of the stuff that goes with that, shopping centers and that kind of stuff.
Change	FF	S	Manager	46-55	21-30	Male	FF-S-023	it's growing at about, I want to say, 300 hours a year. And at the beginning, it was vacant land, and now it looks like a big urban center is moving up that area. So they're all stocking mid-rise to high-rise buildings in there, hospital, that kind of stuff... So by the end of it, it's going to be a fairly dense area.
Change	FF	S	Manager	46-55	21-30	Male	FF-S-023	So we have two properties and we use time analytics like a GIS modeling. So I've got a part-time GIS guy, one of my IT guys do [JAZ?] pretty well. And they run response times from those stations and then

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we look at call volumes in those areas, growth in those areas. And we're trying to dictate which one we're going to build. So we're going to build probably next year or the year after.
Change	FF	S	Manager	46-55	21-30	Male	FF-S-023	[RE: medical supplies] Yeah, it's all about the money, I think. So anyway, so we're trying to reduce the waste that way, by using data again, to analyze how much they need: what they really need at the station, what's expiring, and maybe move stuff that's not expiring, or expiring to a more busy station so it can be used up. Yeah. Exploring things like how do we, maybe, partner with a hospital to get the stuff that they're going to use in a heartbeat, and just do a swap with them so that it doesn't expire, because that's just a waste of money.
Change	FF	S	Manager	46-55	21-30	Male	FF-S-023	...We're now moving to a web-based PCR in [inaudible] reporting. So now I've got all of this historical data that is out in SQL and other places, and we're going to this other thing that-- when we were buying this system, they swore up and down that they had two systems, that PCR and Fire weren't just going to be the same, and that is not the case.
Change	FF	S	Manager	46-55	21-30	Male	FF-S-023	So when I first started we had UHF and VHF radio. So the 100 and 400 frequency radios. The 100 stuff we still use for aviation and I think wildland is still 100. So it's the VHF stuff. Those radios were pretty much radios. They were crystals. You'd tune it in and you had only a select number of channels you could get to. They were highly reliable and they had good penetration out of buildings. You didn't have to have as much infrastructure. You didn't have to have as many radios on repeaters and all that stuff in the area because they had a little bit more power, UHF is slower wave. One of the reasons wildland hasn't gone to any of the 800 or anything like that is because you don't have repeaters and you don't have-- and that 100 level radio that we have is actually much longer distance. It's still line of sight but it goes a little bit over the horizon I kind of thing.
Change	FF	S	Manager	46-55	21-30	Male	FF-S-023	...So that was the 100, 400 era. Then we started with the 800s, which is all digital. And it's not UHF, whatever 800 is. It's the ultra-high frequency or whatever. So we went from mechanical radios with crystals and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								tuning and solid-state information-- or solid-state stuff in it to what we have now in the radios, which is all just pretty much a computer. And these digital radios, they have to be in a system. So they have to have a key in a computer somewhere that the computer recognizes that this radio's talking...
Change	FF	S	Manager	46-55	21-30	Male	FF-S-023	...And going back to the 400s, the 400s I tune it into a radio frequency like 401.02, whatever. The 800s now have a bank of those frequencies and when they key it up it picks whatever's open, sends it out and then when it comes back it could come back over any one of those frequencies... So you're not actually tuning in a frequency anymore. You're tuning in a bank...
Change	FF	S	Manager	46-55	21-30	Male	FF-S-023	Yes. So, over the last several years, we've gone through a couple generations of these radios. We're now on the most recent generation, and we've added some towers. We've added some computer capacity and some communication between computers and stuff. So it's pretty reliable, but we still have a lot of weird dead spaces. Valleys where [City]'s radio can out broadcast our radios, and all of a sudden we can't talk. However, the interoperability of those radios is remarkable. I can put 15, 20 banks and have a bunch of different talk groups in each bank. In the past, we'd have to pick a couple of fire agencies that we wanted to talk to, and then we would tune that in to our 400s. Right now, I have [City] PD, [City] PD; I can talk to the state PD. I can talk to [City], [City]. Anybody in the area, I can talk to on their channels or we can code to a common channel...
Change	FF	S	Manager	46-55	21-30	Male	FF-S-023	So there's several different facets to that I think. I've been trying to look into the future, my IT administrator is futurist. So we talk a lot. There is technology that's coming, that's going to make us safer. Robots, drones, that kind of stuff actually doing some of the hazardous work. So there's that kind of technology that's coming. And it makes sense, you've got building on fire, it's just like a bomb. We sent robots to go defuse bombs, why not send a robot into a burning building? If it's not something we have to actively go search for somebody. That way if it collapses, what

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								do we lose? ... A million dollar robot, who cares? It doesn't have a family, so there you go.
Change	FF	S	Manager	46-55	21-30	Male	FF-S-023	So one more piece of technology is, how do we prevent all this? How do we get people to start sprinklers and all that stuff, but that's different. That's probably not radio technology stuff but that technology-- there are so many ways we can prevent all these incidents from happening anyway. How do we get industry to change how they build stuff so that that they're not building pretty much just liquid flammable stuff? Which is what they've built in the last several years...
Change	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	SME S2: It's better. So we recently, is it the last two years, we switched radio systems? We went to a new... So about a year ago. So our communications prior to this switch to Motorola, we had a freestanding MACOM system. We could talk on a Mutual Aid, kind of regional-- are they the first net, the Reds? SME S3: No, no, no, just we are in the state's DTR system. They have designated specific interoperability talk-groups that all systems are programmed with. SME S2: So we'd go to this interoperable talk-group, [Name], a regional channel. And we would use that for all Mutual Aid calls. Sometimes it works, sometimes it doesn't. It really wasn't meant for us to run large-scale operations on, and we were, and sometimes you could have multiple events going on. Our radio system, because it was freestanding, didn't really interact with anybody else's and the range on it wasn't very good, once you got outside our four antennas really. So then, last year, we switched up radio systems, so now I have banks over the state channels. Is that correct?
Change	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So we have the state channels now and on my banks of state channels, I have the ability, when we run with [City] Fire, I can go to their channels, their operating channels. When I operate with [City] Metro, I can go to their channels. When I head out east, I can patch together. I can have our channels patched to their channels and we can talk. Our biggest problem right now is we're waiting for one of the departments to absorb the other department. And when they do, then we will go-- right now, we're still using Red [City]. We're not using each other's channels

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								because of these multiple comm centers that are involved. Once [City] Metro takes [City] and absorbs them in, they'll be one comm center. And we will then start going to a policy that states whoever dispatches the call, as a Mutual Aid or a dual jurisdiction call, will have oversight and we'll use that channel and we'll be able to switch over and start using each other's channels and talk on their talk groups. That'll make our lives way easier.
Change	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So they have a call taker. They have a group of call takers. They take the call. And then depending on-- we just went to priority dispatch. So depending on how that is set up, it is either sent to PD or to fire. And then they may ship it over to PD or fire depending on which one went first, what additional resources you need. We don't see duplicate calls unless it's something where you're just getting multiple callers and they're all loading the system at the same time, the dispatcher grabs one and adds resources to it. I just go in and get rid of them so they don't show up as incomplete reports.
Change	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So some of the projects I'm working on now is working with the training bureau and the engineer that has oversight of our fleet. And we're purchasing new hose. So, inch and three quarter and two and a half inch hose. Purchasing new nozzles. We're looking at the way we do water supply. So we are looking to changing and adding gate valves on to our hydrants so we can get more water out of our hydrants than just using the five-inch supply line. So working on those projects to do the R and D. And there's crossover between training and operations, so working with them to kind of make-- right?
Change	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	I think really good. We work very closely with a similar size or smaller departments. We have a good working relationship with [City] Fire, but they're big city fire department, with a lot of big city calls, a lot of issues going on. We have some border calls that we work together. We don't do a lot of aid back and forth to each other. But I would say, otherwise, and especially now that we've improved the radio systems, that's made it even better. I think as our technology opportunities change, if we get to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a point where our CADs are talking to each other, we could look at some-- we have some areas where dual responses, coordinated responses would work out really well for us. But it takes some time for us to have the comm center, notify a comm center, and then they process it. A call gets shipped out, and there seems to be some delay. Whether it's a training issue or a technology issue, not super sure yet because we haven't pushed that far into saying, "Yes, we're going to run dual responses together." But I think there's some opportunities in the future as money gets tighter, and that you just can't build fire houses wherever you want anymore. You have to figure out how can we work together to cover areas on the fringes of your protection area. So I think there's some opportunities in the future. It's just, okay, how do we work through that?
Change	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	For our city, if you look at a map, our fire department really blew up. And we came into existence, we really started with paid firefighters in the '50s. So we had a fire department starting around 1900, the price is on my stuff somewhere. But we went to a paid fire department in the 1950s. As the city started to grow, so did the department. We saw a huge growth in the '70s and '80s, things kind of slowed down. Back then, you had a neighborhood fire house. It wasn't uncommon to-- the fire house was part of your neighborhood. And a lot of times when a developer came in to build a neighborhood, a fire station was part of it. And, really, that's part of the city's philosophy now as this land is dedicated by a builder for a temporary fire house and for a permanent fire house. But back then, the neighborhoods were kind of smaller. You've got a neighborhood firehouse, and if you look at our fire stations in the older parts of town, their response circles lay over each other so they're 6-minute, 30 or 8-minute circles lay over the top of you. And you have circle over circle over circle over circle. When you get out to the new portions of town, the circles just barely touch each other.
Change	FF	S	Supervising Field	46-55	21-30	Male	FF-S-017	[RE: AVL] So, we have it. And right now the only rigs that we use the AVL technology in is the battalion chief vehicles. So it picks the closest

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					battalion chief. We have it in the fire trucks. Organizationally, to this point, we haven't chosen to turn it on, because we've tried to control how many responses our rigs get by setting a response area that will control how busy they are. The new fire chief-- we just got a new fire chief, and he's interested in turning the AVL on for everybody. We know that it will cause some of the apparatus to spike. Their call load is going to spike because they will be the closest. So really, I think we didn't turn it on to try to balance our call load by setting response areas versus having the AVL turned on.
Change	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	We're working on going to a move-up module or we may even be into that but we're not using the move-up module yet. So right now we're manually-- I sit there and look at what calls are there and I know where my resources are and I just start shifting them around to make calls. And then we had an area where we had all our resources in the southeast part of the town were being used. So I started using Mutual Aid resources to cover into that area because we just had too many calls going. We had a house fire going on and then our extraction rollover, and a chest pain, and all in this southeast part of town, so my responsibility is resource management at that point.
Change	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...We used to have free standing fire dispatchers years ago, and they were really good at free-think. I mean they'd be like, "Have you thought about this? What about this? Do you want this resource? Should I be calling this?" That's just not the way our comm center works right now. They're super busy. They crank out a ton of calls and try to process a lot of information for us. And with priority dispatch, I think it's really increased that. I mean, the demand on them is tremendous, I think. Just trying to keep a full workforce for them, I think, is a battle, let alone teaching them how to be advanced in free thinking for the fire department. I just don't think they have that opportunity right now.
Change	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...Yesterday, we ran with [City], so we went over to [City]. So now they were trying to monitor [City] and we had a working fire going and tons of medicals going on and a dispatch channel going on. So, it's interesting

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to watch them try to manage our call load, especially when we hit a peak, when we just get busy. I'm just trying to think of what else we do. Those are really our primary channels. We really don't meander off too often off of the dispatch channel and TACs two through six, and then [City]. We're hoping to move away from that as soon as this merger is done and we start moving over to their channels.
Change	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: working in Arson] Radio-wise, by the time we got there, everything was over, everything was done. Most of ours was face-to-face communication or cell phone comms with each other, the other investigators, or the state investigator. Everything was cell phone or text message. It was rare we do a lot of radio comms...
Change	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: working in Arson] People were touching your stuff and moving your stuff and dropping your stuff, and at some point, you just went, "I'm going to write on a piece of paper with a pen." And that's it. And I went back to pen and paper. And a good pen that could write when it was 20 below and that was it. Because trying to use technology in that-- it made sense, but it just was impossible to do. It was just too hard.
Change	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: communication with LE] So they'll request entry. We can communicate on this. So we recently had a SWAT activation for a guy who had some hostages. So we had an in-sync commander who will do unified command post. And then, we'll listen to whatever PD channel they're on. And then, we'll operate on our own fire channels with our fire person. We usually only have the in-sync commander go to the PD channel because they really don't want us talking on their channels if we can help it. But we have access to all their channels. And within the last year, they've added our channels onto their supervisors radio. So they can come up on our channels now to-- up until a year ago, they didn't have that access. They didn't want it. All of the sudden, something happened where they couldn't get a hold of us and they realized they really wanted it and they've got to add it on to their radios.
Change	FF	S	Supervising Field	46-55	21-30	Male	FF-S-017	The new radios where we have the ability to have our radio system and the state system-- so most of the, I think-- I'd love to give you an

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					accurate number. There's probably 10 free-standing agencies that have their own radio systems. And everybody else is on the state system. For us to have access to the state system makes it nice because we occasionally will go out as a strike team. So five departments with five-like resources will go to an area as a strike team. And to now have radios where we can communicate or we can go to state interoperability channel and operate is fantastic. We didn't have that ability before. So it's really cool. The new radios are really nice.
Change	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	The old one was just as free, truly free-standing MACOM system that worked well within the city, but was incredibly frustrating when you try to leave the city because other than going to the red channels, you really-- or the statewide Mutual Aid channel, you had nothing else to communicate on. And if you had a complex multi-agency incident, you weren't able to communicate. And, like I was saying, the red channels were not meant to be this large intense operation that system just can't tolerate it...
Change	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...So now having it where we can move to somebody else's tactical or fire ground channels, just makes it so much easier. Now we can communicate. I had no way to communicate other than red north east with the departments up north. And now I have multiple state channels that I can go to the top right on. So it just makes my life easier as an incident commander.
Change	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...Hopefully, with our mask, because talking on the digital radios, we've-- when we switched radios, we went all digital. We still had a lot of analog channels. Our organization embraced and loved analog channels because the communication was so clear and we have struggled to make that transition to digital because you get those digitized or scrambled communication. We just weren't used to those and we're finally understanding it.
Change	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...We're going to new microphones that have five port-- five, I guess, speakers because we're having issues with people. We don't like to wear our radio belts. So we all talk like this. While the microphones are on the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								front, and we all talk at the top of our radio. And now the new ones have a microphone on the top so they have five microphones. Back, front, top. Hopefully, that'll improve some of our communications too, as we switch to those. Because you're supposed to take them and turn them and talk at them. And we don't because we're all wearing these. We all talk into the top of our-- in analog it, would pick up fine. In digital it does not.
Change	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	I don't believe we have the-- our old radios did, but we can't just talk to each other. It'll go through everybody. Everybody will hear it. There's no just portable-to-portable or unit-to-unit transmissions. We can just go on the tac channel and just speak and everybody'll hear it.
Change	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Oh, wow. I mean, when I started 20 years ago, we had Minitors, basically, pagers. So you just wore it around all the time when you were a volunteer department. So that would alert you that there was a call and then we responded to the station to get apparatus and stuff. Obviously, we had different handheld radios and radio. But other than the technology changing, we use them in the same manner. And that was a handful-- I didn't even have a cell phone when I started. That was pretty ways off. We still did reports written, handwritten reports, which is kind of a big difference. So then shifting into being able to do those on the computer was a big change. And we've changed a handful of times how we're doing those reports, the different software companies and things like that. I think we've progressed in the right direction.
Change	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	And when I started, obviously, you didn't have a smartphone. It was 12 years ago. So you'd have to log into the computer and check. But it seems like email has been the, pretty much, standard for the official announcements and everything because that encompasses everybody versus the daily-- if he's on vacation, he's not going to get some of the info. So seems like email is our main official communication. Yeah. We've gone through different programs in every different aspect of it through the years, some good, some bad. But I think they're always trying to find the best one which it's hard because if there was one

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								program that did everything, I think that would be the best. But they all don't talk to each other, so.
Change	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	And then reporting software, we went from-- for me, it's the third different one that we've had. And it seems - this new one, we just did a training on - it seems really good. We've changed email servers three times since I've also been here.
Change	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: switch from Google to Office 365] SME S2: And it was a process to do the change. And then, once we got it-- again, it may just be me, personally-- but, how I use it. SME S3: I think it's frustrating because, I think, you have this huge Google platform and we never had any issues from it. SME S2: And then everybody learned it. And everybody was fine with it. SME S3: So then, sort of, changing to change.
Change	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: switch from Google to Office 365] I don't know. Change is hard in the fire services sometimes because, for the most part, I would say people are pretty good with technology. But not everybody's an expert. And when you change the whole system, it's hard for people to make that transition on just basic stuff on how to use Office 365 and transfer documents and opening documents and what it'll read for Google and what it won't read, all that stuff, so.
Change	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So with that, yeah, we've have changed payroll because we have high plans for our scheduling and payroll and all that. From what I hear is that they were going out of business so they can't sell their payroll stuff. So weve had to search for a new one of those which, obviously, with any program change, there's growing pains and it doesn't do everything you want it to do. We've had different CE platforms for continuing education, whether it's a fire training or medical, stuff like that. And we've had several different ones. And I don't see any of those have ever been bad.
Change	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Yeah. Wo we're transitioning from our maintenance to this new one. It's called Dude Solutions?
Change	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	I mean most of it's just been the difficulty of learning a new system. Like he said with our pre-plans. Everybody got used to one thing and then we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								switched it. And then that didn't really work, so we switched it again.
Change	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Yeah. We have a newer fire truck, so it has a screen which shows which doors are open and all that. And it has all the interface to show you. I mean, it's new, it's nice. It has a screen and tells you a lot of information. You can click through that, cameras around the truck and stuff like that, which... It's a separate command zone. [City] fire trucks, they put it in there. And it has the cameras so you can see around the truck. You click your left or your right blinker out. Ambulances have that, too. The screen pops up and it shows just like a vehicle backing up. And then the right and left blinker shows the-- I think it's safer. It keeps us from accidents and all that, so yeah.
Change	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	I think truck six is the only other apparatus with cameras and-- oh no, engine one. So I think the newer ones, as they're getting replaced, all come with cameras and the upgraded stuff like that.
Change	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Financial and staffing are the two biggest-- volunteerism across the country, we know, is plummeting. The expectancy or the expectations of firefighters continues to astronomically grow, and so it's becoming more and more difficult to have volunteers who have time, commitment, and ability to do what's expected. And then with all those expectations comes enormous cost and trying to keep up with everything.
Change	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Back in the day, when I started, it was more of the community. You are a part of your community. It was a way to give then your community, and so it was that volunteer community fire department. Nowadays, because of all the challenges that we've discussed there, and that change in the society, the only volunteers we're getting are the young college-age level kids that want a fire job, and so they're using this as a gateway to get experience and get in. And then as soon as they have the opportunity, they're gone. So our average is about three to five years
Change	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	My long-range planning is really what I spend a lot of time on because it's hard to determine, again, with our transient volunteers, again, through no fault of their own, what are their needs going to be. How do we need

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to make them successful in our organization? What classes are going to be available and at what cost? Classes are getting more and more expensive. We were just talking this morning. There is a class-- we're getting our last guy through it, which as we've gotten everybody else through, was 100 bucks just to-- the tuition to get into class. That doesn't include the supplies, and hotel, and everything to get through it. But that class is now 500 bucks.
Change	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	So, I mean, everything is getting more and more expensive. There are classes out there that are 1,000 bucks for a week. There are classes out there that are 3,000 bucks for the week. And so the more active the volunteer, the more we're going to be able to throw at them for training, but anticipating those needs is really long-range...
Change	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Yeah. So I wear a lot of hats and it doesn't all get done. And one of my frustrations that I've always said is, as a firefighter, we're the jack of all trades but mastery of none. And so back in the day, I like to have projects and see them all the way through. And it seems like I'm getting on the project and I always hit the good-enough phase, then I'm on my next project. We're never actually completing or mastering anything, or finding efficiencies because we're just-- all we're doing is just putting out emergencies and going on to the next thing, so.
Change	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...I mean, it's funny if you look at personality and look at how people behave, when you analyze people communicating or working together, they tend to work together if they can talk to them. It's that simple fact that back in the day, when it was up valley, down valley, they had different radio systems, and so then there was rivalries and stuff because you don't really know what's going on. You can't really interface. But as soon as you make it so they can just casually talk to each other, then the relationships grow. And it's not even an intentional thing but it just-- because that foundation is there, they talk, and then they work together more. And I think that's important. That's a subconscious thing that actually happens when you look at interpersonal dynamics.
Change	FF	R	Not	36-45	Not	Male	FF-R-019	Currently, we use Motorola as our vendor, and that can change any day.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			specified		specified			We're not stuck on them. We use the digital trunk system because that's what we're on in the county, so whatever best works there. We issue radios per person, which is very expensive, especially with the cost of these radios. But we've found that then you can ensure accountability of them...
Change	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Well, when I started, you rode beaver tail in the back of the truck. There was a horn, a button for the horn. One horn for stop, two for go. That's so you knew, if you were driving the truck, if everybody in the back was ready, so [laughter].
Change	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	And we used to-- our radios were bad enough that we used to do click. It was the same thing. You'd kind of get the message out, and if you copy and everything was okay, you clicked twice on your radio. And you'd hear that [inaudible]. Yup, I got that. And just one [inaudible] was no I didn't hear that or repeat. So, I mean, it's almost Morse code. So now we're able to talk plain language for quite a distance, so it's improved quite a bit.
Change	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	So we're putting our people in the way to have that problem? There's got to be a better way. I don't know. Our trucks just started having piercing nozzles. I mean, just fill the thing with foam or something. So I think as our fires have changed, especially structure fires because of all of the plastics and all of the different products, we have to change how we're fighting fires and have different products that do it. Just going in and putting water on it is not working.
Change	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	You're no longer pulling your volunteers from your community because of the change of society. It's those who want to. So they might live in [City]. They might live in other towns. So you have very few of our volunteers live in town. They have to commute here for the full shift.
Change	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	And it had to change. And that wasn't budgeted. Our budget certainly doesn't support a million-dollar building. And it's obviously not a Taj Mahal. We don't have marble. We don't have all this stuff that really costs a lot of money. This is bare bones, drywall and wood addition, so.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So we're currently moving forward with our drone program. We haven't actually purchased the drone yet, although we are in the process of purchasing several drones. We've done all the research on it. The other captain and I have taken several-- we've gone to different conferences and have talked to various people around the country in the industry, both from a public safety standpoint and the commercial user kind of TV commercials, bridge inspections, and we've collected all of our data and kind of-- we're at the point right now where we're actually next week sending out for bid the drones that we actually want to get, so.
Change	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Yeah, and I think there's only two-- there are two departments in [State] that are currently using drones. They're not using them 100% the way they-- I shouldn't say the way they should. There's just some certain regulations and rules that are needed to be followed but they just started so they're kind of moving down that path, so we didn't want to-- because we wanted to make sure that we were-- we had all of our ducks in line prior to starting the program. We wanted to make sure that everything was vetted through the city attorney's office, through the state. Governor [Name] actually formed a drone commission.
Change	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Yeah. So we don't technically have the drone program yet. We're right on the cusp of actually bringing it forward.
Change	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...Recently, the police department and the fire department and the sheriff's department took our radios and we made them all the same so that we can-- where police has their main channels and we have ours, fire can now access police channels and police can access fire. So incident commanders can actually-- we can actually talk significantly easier now because of the way our radio channels and our trunk [inaudible] is set up.
Change	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	With that said, we're right on the outskirts of the [Name] district, so a lot of business. What we've seen recently, honestly, is we've always had a fairly large population of homeless but it's exponentially increased over the last few years because of the marijuana legalization. So every 16-year-old that's angry at Mommy and Daddy because they don't let them

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								smoke marijuana decides to leave home and come out here. So if you look out right where they're going, right over here is a high-density area for homeless people and drug usage. So it becomes, for us, we've seen that increase dramatically and with the homelessness comes-- and the marijuana, it just takes-- it goes from the marijuana and then they come out here, the next thing you know, it's some type of cocaine, heroin, just whatever. So we're trying to-- and there's not a lot of places to put them, so the mayor's priority is really trying to get people into some type of housing so that they're not out there just-- and programs that really help the people that are out there coming in and just getting addicted to stuff, so. But this firehouse really has just a wide-- if you just head just a little bit that way, it's low-income. If you head a little bit that way, upper-end business... So this area kind of hits it off... This area just totally sees it all.
Change	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Our call volume has increased tremendously. We're reaching a place where, as we're looking and staffing and we're trying to track and trend the data that shows, okay, this is how our call volume has increased, and here's a direct correlation to population increase and some of the other various factors like marijuana. And so there's a direct correlation between the population increase and our call volume. It just is. So as the [City] keeps doing better and better and better, which we have, we are growing and growing and growing. I think there's a projected 187% increase in-- yeah, I think we just surpassed Baltimore in size, which is... crazy.
Change	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...when I moved here 20 years ago, we were about 500,000. Now, we're pushing 700,000 just in the city. The metropolitan area has increased-- I mean, it's grown also. So we went from this area of 500,000 in the city and in and around the metropolitan area, maybe close to 2 million. Now, we're 700,000 in the city and close to 4 million. So the infrastructure from a first responder standpoint has been taxed, so.
Change	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...The mayor's baby is this peak performance thing, which really is-- peak performance is something that he started, which brings city employees

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								together to really empower them to make change at the lower levels. To see things that need to be changed and have a formalized process that says, "Here's what we're seeing. Here's how we'd like to implement these changes." So it really engages and empowers people at every level to say we need to make change. And it kind of forces the various levels of management to take a look at it because of the way it's set up to look at money, error, time, various inputs that say, "Oh wow, wow. I never really realized that if I did this, I could save time for a citizen who's a taxpayer. Instead of them coming down and taking eight hours to get a permit, it's only three hours. That saves them time with their business." So there's a lot of that that goes on...
Change	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So I worked with a group called the Special Event Group which is a city-- basically, about four years ago the mayor realized that as the city was growing, we were getting more and more events in the city of [City]. And I think we were doing, just on public property, about 1,700 runs, races, walks, just various events. From things that are a couple hundred people to hundreds of thousands of people. And the city was lacking in standardized processes as well as interdepartment communication. So it made it really cumbersome on somebody coming in to want to host an event. Going through the permitting process, and how do I close roads down, and how do I get [bag needers?], and how do I put out community outreach to these businesses? And so how do I get my fire permits? What do I do to go to excise and licensing, and environmental health to get a food truck to be at the park?
Change	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Situational 360 program] If I have 18 fire trucks working here and a bunch of police cars because we had a Boston Marathon bombing, something like that, we still have all the other calls for service in the city. People are still having heart attacks. There are still fires. How do you service that, is through mutual aid and prearranged agreements that you have with these other jurisdictions. Well, if you're operating on an island, kind of hard to start communicating those things. So trying to increase that. Increase the common operational picture for all these agencies.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								And so this is a tool that we're trying to-- this is the first iteration. It just came out two weeks ago.
Change	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Really, I mean, just from a basic level, when I first came on, only the chief and the company officers would have a radio. Now, everybody has a radio. Everybody also has a voice amplifier that's hooked up to the face piece that allows us to communicate face-to-face easier. While I'm talking like this [laughter] I now have the voice amplifier which makes communicating face-to-face easier in a-- what we call an IDLH environment. So--
Change	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...So now with that, in addition to looking for that specific problem, one of the things that we did is on our software in a program that we were using called Firehouse, which now we're using a different program, we created a safety hazard box, which is-- essentially, if I go on a call and there is a safety hazard, I can click that box and write in what that safety hazard is. That safety hazard, when I click that, gets sent to the highest levels of the [City] Fire Department. The chief sees it, the deputy chief sees it. The division heads see it and some key other people. And that safety hazard will be immediately looked into.
Change	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So now instead of the company officer calling dispatch to call the ambulance which is essentially a different company, a different entity, the firefighter can call the ambulance.
Change	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...We're using a new program as we're-- in EMS for-- it's an iPad-based system for patient contact, where it has everything there, and we can actually share. So when the paramedics get on scene, our iPad will link up with their iPad and they can see, "Yeah, we already wrote down all the medicines they're on. Here's their history," and it links up with them so they have it. And then when they get to the hospital, subsequently, it just shares with them. And it also gives us the ability to see resolution with the patient outcome. So that piece that we've always been missing, "Hey, this five-year-old girl, she had anaphylactic shock and she wasn't breathing. We took her to the hospital," and the firefighters are always saying, "I wonder what ever happened to her?" You'd actually be able to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								see a patient outcome on that, days later. So it's a pretty interesting little tool that we're using, that we're going to. We're not actually there. Probably within the next four to six months, we'll be-- it's called ESO.
Change	FF	U	Manager	46-55	11-20	Male	FF-U-021	Recruitment, there's never a problem with recruitment. It's more really just trying to mirror the city and the citizens that we served. So obviously, just like most other major metropolitan departments, we have difficulty recruiting people of color and women. As far as being staffed, we just added another full-time recruiter last year, so we have two full-time recruiters. We are very fortunate in that aspect. And we got a chief who's very supportive of all the things that we're trying to accomplished. So we kind of looked at the past of what has worked and mostly what has not, and we've kind of blown it up and we've shifted the paradigm...
Change	FF	U	Manager	46-55	11-20	Male	FF-U-021	...So what we do now, we only have with civil service-- I'll back up a little bit, they are in charge of the hiring process. It's completely separate from [City] Fire so it's civil service commission. It's a different entity or arm of the city government. And there is a limited number of spots...
Change	FF	U	Manager	46-55	11-20	Male	FF-U-021	...So what we did now is we started something new where we actually have an orientation class and we built basically it's an eight-hour classroom, and it has our component where we got buy-in from civil service. So now, 50% of all the test logs come from our mentoring classes. So everyone that spends a full day with us, gets a guaranteed testing position. So we have more of a say of who's eligible to register for the test.
Change	FF	U	Manager	46-55	11-20	Male	FF-U-021	You know we have a MDT, we'll have it on a portable MDT, Well we only have so many of those and we-- with the new individual we just added for PIO, my PIO person shares responsibilities with the two recruiters, so it's kind of three of them kind of working together because it's too hard for one person to be PIO 24 hours a day. So they have that MDT for them, for their use, so that's why I don't have it in here.
Change	FF	U	Manager	46-55	11-20	Male	FF-U-021	[RE: TICs] ...So there is a lot of technology that's up and coming where they're built in rather than a camera you're physically having to hold

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								where they have it built into the mask now.
Change	FF	U	Manager	46-55	11-20	Male	FF-U-021	...So the big thing is in the past, you may or may not have chalked a car whether it needed it. But if you have a hybrid, you don't hear it running. You don't chalk the car and maybe you're just going to put spreaders and move it away from the Jersey barrier to get someone out that doesn't need to be fully packaged and put on the backboard. They can walk, but they just can't-- you don't want them to open the door on the busy side. We've had instances, not here but in the country, where they moved the car away and the car goes driving down the highway because it's silenced.
Change	FF	U	Manager	46-55	11-20	Male	FF-U-021	Not as much as I would like us to. That's something we teach now to new hires in the academy but just like communication technology, automotive technology is no different. I mean, you had a car with two airbags two years ago. Now you have a car with 20 airbags. So is it a one stage? Is it a two stage? There's capacitors involved, how long do they hold electrical charge? So there's a lot of things that can hurt us as firefighters, and it's something we need to be more diligent about...
Change	FF	U	Manager	46-55	11-20	Male	FF-U-021	...You need to stay in shape, so you don't have a heart attack. You need to train people on the importance of recognizing the aspects of cancer and what we're facing. At the same time, you have to drill to make sure you can operate functionally as an engine person or a truck person. You need to know a little about a lot. But it's something that we need to take a step back and, at least, maybe twice a year put people through classes.
Change	FF	U	Manager	46-55	11-20	Male	FF-U-021	...We've got different types of headless and communication sets where it's kind of a throat mic for a confined space. Things of that nature. So that's something we're-- We're definitely always behind technology-wise but those are different types of communications that we use, and they keep getting clearer and clearer. Obviously now we've got-- rather than having to have a radio with a microphone, they've got the headpieces now. So an engineer at a pump panel, you're not holding the microphone to your ear. It's kind of built in to the headset. So they've got those as

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								well in headsets. So wireless communications.
Change	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: search and rescue operations] We used to get called in for those, and it was very disorganized. So what happens now is there will be someone lost or someone injured out off of the grid. Away from highways, if you will. And what they do is they will alert the fire, EMS, mountain rescue, and law, whoever's in charge for the day. They tone those four people, we meet on a certain channel, dispatch issues the information, and then the four of us decide who's going to do what. Most of the time, mountain rescue handles everything. Occasionally, they will ask us to help. We're just not outfitted for that, but we will help.
Change	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	It does. I mean, our call volume will follow that. So our busiest time is basically middle of December through New Year's. That's when we have the most people. 20 years ago when I started, this whole valley was a ghost town after the last lift went up for the year until the middle of summer. Now it's becoming year-round, but we still have tremendous fluctuations in the winter and a lot in the summer.
Change	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[City] has a resident program. So [City] is all career, and then they have student residents. They live in the station for free, they get their own room, their own kitchen. They pay for their schooling, and in return-- and now, they get an hourly rate of-- some sort of hourly rate. And then, in return, they work at that lower rate for the fire department. I went through the same program in [City] 20 years ago, and it was-- they paid for my schooling and that was it. They didn't pay us. We had to go get jobs, and then we would work two days a week, but it's gotten a little bit better than that. I thought they were going to get rid of it, but it's just too much potential savings on paper for the town council. They just can't ignore it, even though it's-- anyway, we got rid of it.
Change	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	And that was one of the selling points for going to 800 megahertz up here was we could talk to road and bridge. I mean, none of us talk to road and bridge. I mean, it was-- I am very anti 800. It is terrible. It's gotten better, but up here, we have to deploy technology hardware. We have to deploy hardware to get through and around the mountains,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								where in the Front Range or in the Midwest, they can use half the hardware because there's nothing in the way...
Change	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...so the first-- man, I was here-- so I've been here since the implementation of 800, and it was tough in the beginning because you-- it take care of the valley, the [Highway] corridor, we call. Everything on the ground was-- on the valley floor was covered, but so many neighborhoods are up in the hills and stuff, and it's taken years to figure out how to place everything, microwaves and what not, to make sure it all works. So we still have some dead spots...
Change	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...VHF, UHF, I mean, that was awesome, but the voters-- in '96, the voters said no and then sheriff was-- we're three sheriffs away now. Then sheriff said, "Okay, we're just going to pay for it and just do it."
Change	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	That was the biggest change. So when I started in [City] in '96, it was still VHF or UHF, one of the two, and at the time I didn't have nearly the responsibility or the knowledge, so to me, it was fine. It worked. It worked great. And then throughout the whole 800, it's just taken years to try to get every coverage where we need to get it. It's gotten better. Depending on the size of the structure, we'll require BDAs, bi-directional amplifiers, so then that just takes the radio communication that's outside and available, and it pulls it in through the concrete into the buildings because we could go into a parking structure and have nothing...
Change	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...So if Motorola decides to change their portable radio, it doesn't mean we have to change, but if we have to replace any with the newer model because they don't make this model, that's when we will make the change. So they're pretty good about giving 7 to 10 years before they make changes. This one has been pretty good. I don't know if they'll do that even at 10 years. Bu anyway, so we have an equipment replacement fund where we will take that amount that we paid for all these radios, we add a 10%, and then we divided it up into 10 years. And then every year, we have a budget, a line item for that, and we apply funds to that so that when we get to the 10-year mark we can just pay cash and we don't have

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to fund it.
Change	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Well, I mean, I can't keep up. One of the complaints I get is that we're trying to use technology to fix all of our problems. And there's some truth to that and I don't like it. I can't remember the name of it. Oh, [Organization]. We're trying to bring something called [Organization] on, and it's been a nightmare. It's been 30-some thousand dollars and they've been trying to help develop it to our needs and I'm still not sure exactly what it's going to do. And we haven't even implemented it yet. So it might be something that we need. But purposely, I just don't get on those committees. I don't. I just don't.
Change	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: station alerting] ...So each bedroom, for instance, will, when there's a call, the sound will come over, the light will come out-- will also come up. The red light's important because it preserves your night vision so that you're not turning on the light and then going right back out into the dark. There's a lot of components. They add a lot of bells and whistles to entice people to buy it, but I just want us to get away from this high-low thing. In the '80s and '70s it was a bell, like a bell, a buzzer, so we've come a long way. But we're just stuck here because with station alerting-- because it's an all or nothing thing. Everybody has to have it or nobody gets it. And so then you go out west to [City] and [City], where they don't have a lot of money so they can't really invest in it. [City] doesn't even have people in the station every night, so what use it for them? ...
Change	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	We have a system for callback, but we don't require it and it's rare. We might get one or two. But now, with five-staff stations, we have a minimum staffing of four, which is [Organization]. The chief, we spend hundreds of thousands of dollars in overtime to make sure that these engines have four. So we can do a lot more now than we could 10, 12 years ago. 10, 12 years ago, we were doing callbacks for a lot of things, but it's rare now.
Change	FF	R	Supervising Field	36-45	21-30	Male	FF-R-024	[RE: dispatchers] They generally are four on, and I think from 3:00 AM till 5:00 AM, there's a two or three-hour gap there where they're down to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					three. And that's improved. That's gotten better. There were two people on at night in the past. One fire at 2:00 in the morning and nothing else-- I don't know how they keep up.
Change	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Well, I mean, I think, I guess, for me is if we're going to explore technology, let's explore and keep it and quit jumping around or trying to solve this with that. I mean, technology evolves so quickly that I don't know how anybody keeps up, but we're not going to slow the private sector down. They're going to keep evolving and keep creating all of these incredible, awesome things, and we're just going to keep shelling out the money for it. Yeah [laughter]. We can't keep up so.
Change	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	And we still take care of the problems that we're called to the same fashion that they did 100 years ago, so all of this technology is not even-- some of it doesn't even have to do with our daily duties, our most important duties.
Change	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	I don't know. I think nowadays departments communicate with each other much more freely than the '80s and '90s, when there was a big territory thing. Consolidations are happening. Now, we haven't gotten that far up here in [County] yet. There used to be two EMS agencies, and they consolidated. They figured out that it was better, but the fire agencies just-- we just can't come to that, but at our level, the responder level, pretty good relationships. Yeah, people, they do things off-duty together, that kind of thing, and even the chief level, it's gotten much, much better, so. Unique? Probably not. Getting better all over. Probably back east, very territorial where you're from. Very territorial. You look at [County] which is 1,500, 2,000 firefighters, and half of them are volunteer and half of those volunteers operate in stand-alone-- I don't even know how it works, and then they have fist fights in the front yard. That's been on the news, by the way. It's probably different back east than out west.
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	It was kind of a-- it used to be, when I first got down here, almost kind of like a retro-type community. But it became so hip that a lot of new people have moved in, so it's not even really retro anymore. Now

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								everybody that's here is all kind of nouveau [laughter]. So there used to be kind of these kind of grunge dive bars and now they're all kind of these hip places, and it's really kind of weird in that regard. But a lot of art. So, it's basically a big mix of business and residential down here, so.
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...At the local level, our region is replacing their 800 megahertz trunked radio system [with] a new P25 Phase 2 system. But I chair the operations committee, which is all the end users kind of advising that project as far as, what our needs are, what our problems are, shortfalls, training, all of that... I believe the ballot measure was passed, I want to say like two years ago, so it's an expected or anticipated completion date somewhere in 2019, 2020.
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...So, one of the biggest challenges that I think that we've had in the fire service - actually just public safety in general - is we have had to adapt other preexisting technologies to meet our needs because our user base just isn't that big...
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...So, I mean, when I first came in, everything was on paper forms and carbon paper, and everything like that, right. So you start to move into computers, and then, "Hey, isn't this slick? Well, boy, can we automate a lot of this? What can we do? Or how can we share this information? Oh, yeah, boom." So there's the next step and it's like, "Wow, we're collecting all this data. Now, what can we do as far as sifting, and sorting, and analyzing, and disseminating it?" Boom, boom, boom. So now computers get bigger, faster, so we've got smartphone devices now...
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: communication with LE] It's gotten a lot better, and I would say that it is incredibly regional as to how good or bad it is. This area of the country, this greater metro area, has been working on it for a long time. 15 years or more. And so, in this area, I would say that it is really good. If we're weak in any one part, maybe, in some of the training. At technology level, every responder in the region has the ability to talk to every responder in the region, but sometimes, people aren't using it a lot. They may not remember or they may not know where do I turn in my radio or whatnot. It's a perishable skill. Use it or lose it. But this area of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the country's worked really well. I know from a lot of my national stuff that there are areas of the country where it is not very good at all.
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...we just switched to a new medical records platform, and so they're still populating a lot of the databases. But being able to have information on that patient from previous calls and previous history is really cool because filling it all out the first time can be very time-consuming. What medications do you take? What medical history do you have? Have you had any surgeries? All of this stuff. If somebody else sees that patient later and you've already mentioned that or put that into the medical records, if they put in the right name, a little flag pops up that says, "Hey, is this [Name]?" If you click yes. It's like, "Oh. Last time we saw [Name] was this date and time. Here's all the medications she was taking. Here's what we saw her for. Here's her concern. Here's all of that type of stuff." So being able to get that information. We're not there yet just because it's a new enough system. But that would be huge in being able to share that with hospitals and stuff.
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: NG 911] We have not rolled out, yet. So in this area, the 911 services are administered at a county level. And so we have, I want to say 12 to 14 PSAPs in this county. And so trying to coordinate those and getting everybody going at the same time has been kind of a challenge. So I know that they started buying some equipment for some of the 911 stuff, but they have not installed and configured it as of yet.
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So, I mean, we all studied the whole communications model in undergrad, right, as far as sender, receiver, feedback, message, content, and all of that. Those are where the breakdowns are, right? I mean the technology's there. Again, after September 11th, you literally get almost any device to talk to any other device. But coming back to our communications model as far as the people, if you're not willing to receive a message for whatever bias, or if the feedback loop is not there, you may send the message to me and either-- so our city has-- when we put out voters' pamphlets or something like that, I think they publish them in 32 different languages. So the message may be coming, but

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[laughter] if it's in a language that I-- I can't even recognize what language it is, let alone pick out some of the important words or something like that, that's a breakdown in communications, right? Again, an important one...
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So the fire service, we used to be able to monitor-- we used to have annual industrial-hearing testing. And the industrial hygienists were able to find out-- they could tell you without seeing that part of the form, how long you had been in the fire service by where you were on the hearing chart, and how much hearing you had lost... Just again, air horns, and sirens, and chainsaws, and all of that stuff.
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	I was a paramedic for years. Same thing with communications or radios. And then they've kind of moved to the use of cell phones. There's some cell phone use when you're calling hospitals and stuff like that. So they do utilize a little more modern technology in some things. Now, actually, we are looking to go into more of a laptop or an iPad kind of device for communications. So we are kind of evolving a little bit with technology. I think where we may run into some issues are the durability of technology because we're not very delicate with things, so everything that we use that is going to be-- whether it's a tool or a communication device, has to be durable, for sure...
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	They are going to those iPads, so right now we have little computers, little laptops in there that we use for hitting a button saying we're on-scene, or returning, or doing other things. But you can also get on there and type. So we do have little laptops on there, but they are looking at going to more of an iPad type of technology...
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...something that they're also looking at is, which they should have done years ago, are more of a GPS-type direction of travel, which is huge. City's big. And if you are moving around from one area to another, say, I was a relieving officer, so I would go this firehouse and to that firehouse and then that district. So there was a lot of areas where I wasn't real familiar with, so even going from point A to point B, I couldn't tell you. So it would be nice to have that immediate, boom, hit a button. It shows you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the travel route, just like the GPS that we use to go anywhere else, should pop up immediately and give you the quickest route and the more-- so those kinds of things are coming, hopefully.
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	Well, a few things have changed with communication is that everyone has a radio now versus when I first came on, there was minimal radios, so not everyone had a radio. So a lot of things were based on face-to-face communication or they were based on an officer-directed communication. He would get information from the outside and then relay that to the members inside who didn't have radios. So there was a lot of face-to-face, but now everybody has radios. So that's one change with communication, which has certainly helped tremendously...
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...I think maybe different improvements in radio function or capabilities have changed. Radios we used to have years ago just didn't have the transmittable capabilities, didn't have as many channel selections. And they weren't really high-tech radios. They were very basic, which is okay too. But I think the level of high frequency versus very high frequency and those kind of things, the capabilities of radios have changed. But I think that our biggest change, just in fire ground operations, is that now everybody has a radio, and I think that has really changed a lot.
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: state of communication technology] I think it's good. I think at first, there was a lot of overtalk. There was a lot of-- everybody had a radio, so everybody felt like they should use it at first. So there's been kind of a transition of learning with that and more listening versus talking. So when you have a radio, a lot of times, it's really to listen to what's happening. Listening to the progression of the fire attack. Listen to what maybe could be dangerous about the building. Are there holes in the floor on the third floor? Are they getting the fire under control below you? Those kind of things, is the more listening when it comes to communications...
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...what's really advanced, too, or helped us, too, is that having everybody have a radio, now everybody has the capabilities of transmitting things that are dangerous, whereas, let's say, you and I were upstairs and we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								didn't have a radio, we may run across something that should be good for everybody on the fire ground to know, and there's no way of transmitting that. So that's really improved. So I think that's improved the safety of fire ground, and it's helped us really stay aware of our environment and the progress.
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...now it's getting better with them letting us know that these are dangerous buildings. So that's kind of changed where if it comes in through dispatch that there's a fire in this building and an address, now our main office has addresses that are built into the computer saying that these are dangerous buildings, or abandoned buildings, and those kind of things - Those are good to know - or what may some of the contents in the building be. That's good to know. I think for me, as far as my experiences go, is it's good to know that. But at the same time, what's imperative for us to know are, is it unoccupied or an occupied? Are there occupants in the building? That changes our game plan. It changes our risks versus benefit, which I've talked about before...
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...So now, the radios that we have, they're digital. So if I click and talk and half of my message doesn't go through, you don't get any of the message. You don't get, "Hey, this is Engine 93. We've got this," or, "We're looking at this." And then somebody say, "You know what, 93, we didn't hear that." What would happen is they wouldn't even hear me say, "Engine 93, we've got this." The whole message would be deleted. So there would be no reason or any kind of a reflex to say, "Hey, 93, what was that?" You know what I mean? So that's kind of changed our communication in a bad way, a little bit...
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...I would say technology for us, engines, pump panel, and engines, whether it's you got a digital readout versus dials. Sometimes when you first come on this job, you're used to reading just gauges, right? And you're focused on reading gauges and understanding those gauges. But when everything became computerized, touchscreen, and digital, that was a little complicating. So I think what it is is that you've just got to kind of evolve and learn, and there's a lot of resistance to learn or to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								accept new changes...
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	I think it's time. I mean, it's time to progress to those more sophisticated areas of communication. And one thing that we have seen happen in the fire service with interior tech is the thermal imaging cameras in which, if you wanted to go back to that one question, that technology is something that could be hindering to someone who doesn't understand it and doesn't understand what they're looking at, what color forms they're looking at, what does that mean. And that's improved. The ability to get a better picture's improved with the technology on the cameras...
Change	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	Drastically. I think we're just entering the 2000s right now as a fire department. When I go here, they were at telegraph. We were still on a telegraph, right before I got here. So I mean, it's drastically better. Not everybody had radios. The radios worked sporadically at best. So yeah, it's definitely gotten much better.
Change	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	[RE: radios] They work better. I mean, there's times where they don't work as well, especially in high rises. You may not get out as much, but apparently, they're always working on that. Subway incidents are another hard thing to use radios at. They have phones in there for us to use. And now they've put repeaters down there, hopefully making in better. But it's definitely much better than it used to be.
Change	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	[RE: cause of communication issues] It's probably two-fold. First, a lot of it is operator error. Like I said, radio discipline - being able to use your equipment and also being able to make the correct communications at the appropriate times. And I'm sure there's also a technological aspect where you have to make sure it works. If anything, there's a tendency that things may break, need to be replaced. As a whole, our department, we don't embrace change very well. So we have a lot of people that-- I mean, I don't think it's as much now, but I know that whenever I get a radio, in the beginning, some people are like, "I'm never going to use it." Just like the computers, "I'm never using that." 150 years tradition unimpeded by progress. We're just getting to the part where we don't file forms with carbon paper anymore.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	[RE: equipment en route vs. on scene] I don't know if it'd be different-- well, once I get there, I'm going to rely on my radio because I won't have anything else. I'm sure for the chiefs and stuff above me, they like to have more equipment. I know if I was the commander, you feel like-- I know they're piloting a drone program here where the drone can kind of leave and show the command van. If you're at the command post, you only see one side. You're relying on your other members. Maybe they don't see what you see, or maybe they don't see it at all, whereas something like that, where you could actually focus on areas that you want to look at would be good. But as I said, that's way above my pay scale [laughter].
Change	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	It seems like we're definitely moving in the right direction. I know they're going to roll out-- for the medicals, I think we're going to get iPads soon where you can do all the information, capture patient information via the iPad, and then have them fill out their paperwork instead of being on paper like we still are.
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...a great majority of our runs are EMS related. And now some of us are paramedics, some of us are EMTs. Now we have to know about life-saving skills, what to do with a [neuro?] addict, get people to breathe, CPR, identify a medical component that's giving someone a big problem or an issue, and address it, and fix it for them. It's at the snap of the finger. How much time to go and get your medical book and say, "Ah, this might be happening to you." See the flow chart and how to treat it. And then, again, it can go off into another hauler of hazardous materials, water rescue. I mean, it's endless. Trench rescues. These guys are doing outside your confined space rescue, which is a discipline of rescue. So it's all-encompassing to have knowledge in every little aspect, to make you very proficient but very efficient on it and get the job done. That's the whole main goal, is to get the job done. And that's why they call us. You are the jack of all trades.
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	I haven't had any issues. I think our equipment is pretty much up to date. When we compare ourselves, you have to have a comparison to other

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								people. Other big departments are pretty much on the same wavelength as us and we're vice versa with them. So I think our technology has finally caught up. I can't really think of any issues that could pose a problem, but we could be operating portable radios, for instance, in dead zones, high rise, metal, concrete buildings where you might not be able to get that transmission out. That's what's important because their transmission may be very important. It's important that everyone hears it.
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Excellent means of communication and then I think that one is still in its infancy, still developing. Because you can also relay a very critical building components from preplans. For example, fire department connections, where are they at and where is the gas shut off. Where's the water shut off? How was this building made? Is it a light-weight construction? Is it a truss roof? It's giving you the information that would help use any sort of commander or the first officer arriving, help base your decisions, what your actions you're going to take. They send a lot of this information, has come about. Without that, it was all either guess work or you had to go and investigate how buildings was made, where the sprinkler connection was, which side of the building we shot the gas off. Hit it just the-- what a great concept and I think, yeah, it's starting to evolve. We can put so much information on these computers for us today.
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Well, things have changed. When I first came on we had the - what was that - dual band radio or [megahertz?] working at 154 whatever X amount of megahertz, now we're at 800 or digital trunked systems in there. I think that's a very big step, again, in keeping up with other huge metropolitan departments. And I think it suits us. It suits as well with the communication system that we have now. Again, it's not something that is not problematic. If things were problematic, you can sit here for quite some time and explain it at length. But if you're not having the problems, you only have subject of discussion.
Change	FF	U	Field	46-55	21-30	Male	FF-U-028	Technology does not remain static. It's always dynamic. All right? It's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					always changing and evolving. So one day you may be at state of the art. A year or two later, that stuff that you had was state of the art is not state of the art anymore. So trying to just even keep up with pace and that's pretty prevalent in everything, even with computers and these phones that we use. They're always continuing to get better in each model. So the one that you have would be obsolete back then. People make fun that I still have the iPhone 3 or whatever. They say, "That's outdated." But it served its purpose in that time period or that time frame. But technology will continue to advance with that. As far as I think with technology advances, I think there's a form of complicity that comes with it. I'm speaking for myself, too.
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Perhaps, we may have locators on our bodies through technology to find out where is Lieutenant such and such or five-- here to see where they are in actual real time on the fire ground, what floor, and in what room? ... for accountability purposes. What companies you have, who's in there and where? And also, it's evolving with our breathing component system too, with built-in heat temperatures, to know what environment you're in. What is the heat of the ceiling? Thermal imaging for victims. Air pressure in your tank. CO levels. It's all in your heads up display. Wow. Is that something? That's technology.
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	... When you come back 20 years from now and ask these questions, I'll be long gone, but ask them to other firemen or fire officers, they might say, "Oh, it's real easy. We got this on the rig and it tells us where the fire is at. We've got pointers and lights." It's going to be amazing what fire service is going to be like in 20 years. The name of the game still hasn't changed or you still got to get water on the fire, but things that help us increase the safety to work in our favor is going to be greatly enhanced through technology.
Change	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	So there's this balance of public safety versus network security. And we've moved forward a little bit. Now we have iPads that are cellularly connected. Just like this iPhone.
Change	FF	U	Supervising	46-55	21-30	Male	FF-U-001	I'm much better off than two years ago. I'm way ahead of the game in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					terms of the ability-- just the other day we went to a call where I was like, "Man, I'm not really sure."
Change	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	So our preplan used to be just paper. So people would do a couple of things in their territory, they'd make copies and put them in a big book. We had a period of time when that kind of faded away, and now we are moving into an electronic.
Change	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Right. Okay, so I'll tell you, when we were doing the RIT Pak training, the old style that allowed you to see their air, and there was also a device called a Pak-Tracker. So on our SCBA, currently, if I push a button, it will make a big loud noise. And we know that somebody could be hurt and then it's going to help us find them. So that's called a PASS alarm
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Yeah. We just went through a new class with them about all these things that these radios can do. To us, at the end of the day, there's really not that big of a difference between the radios we were using that are 15 years old
Change	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	...And then you have-- it seems like we're always kind of tweaking and changing things a lot and that gets a lot of people frustrated because they don't remember, "How am I supposed to do this now?" So sometimes if we change things too much, it gets some feathers ruffled.
Change	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	...I do feel like-- and not just in communications, just in, we. And, like I mentioned, we're kind of resistant to change. So I feel like some of the issues we have, there might be solutions out there, but maybe it's just a fear of that technology failing.
Change	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	...We strive to keep our communications short and to the point. And there's lots of different tactical benchmarks and things that you're expected to say depending on the call that you go to. So that's something that's changed in the last few years, that becoming more structured and rigid and paying more attention to what you're saying on the radio.
Change	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	...I mean they're always doing different technologies for the equipment we use, but I don't know if maybe like the AEDs. I'm trying to think of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								something electronic that I can use for an example. I mean they're always changing. I don't know if it would be better to have a consistency with it. They're all pretty similar. I am kind of reaching for that one, but--
Change	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	Yeah. Now, it's becoming very suburban. Yeah. I grew up not too far from here, and it was very rural. This was farms. I mean, I remember what basically all of this was farms around us but it's been very rapidly developing for about the last 10 to 15 years, and the master plan has a population of [City] for about, I want to say, 60 or 80,000 people--
Change	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	Yeah. And that's over several decades but we're heading towards that rapidly. They're putting up condos and garden apartments and townhouses and single-family homes all over [City], so it's rapidly developing. So that presents challenges for us because there's constantly new streets and new buildings that we need to be getting ourselves familiar with. So unlike some areas in the lower portion of the county where you have occasionally they put up a new building or maybe they rework some street or something like that, we come into work some days and, oh, there's a whole new neighborhood going up over here. They closed off this street. Actually, one of our main response routes, [Street], right up here, there was a section of [Street] that was closed for over a year while they were rebuilding it, which had a significant impact on our ability to get into parts of our response area.
Change	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	Right. In the upper part of the county, where we are here, in [City], high rises are essentially a non-issue. But we do have a challenge in the lower part of the county, which basically is really from [City] down south in the county down to the D.C. line where those older neighborhoods that used to be more suburban are becoming much more urbanized. And where there used to only be a few high rises, we're starting to get into a highly urbanized area where it's predominately high rises. If you look at [City], [City], even parts of [City] are starting to develop into--
Change	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	In the SCBA, just when you stop moving. The not moving alarm. And changed where the emitters are on that. So now they're more on the back. And that's helped a little bit. Now, the radio folks have come up

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								with noise cancelling technology that's very efficient at cancelling out a lot of this noise, even the vibralert that got-- because that's set to specific frequency. They've gotten pretty good at cancelling that out, particularly the Motorola products
Change	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	No. No. No. So we started to do Internet-based, I guess, management back in let's say, maybe '98, '99, 2000. So it's been well over 15 years. And it started out very small where you would only get stuff that, normally, they faxed, and you would post it on the board like that. And then it became-- okay, well, it became everything. Everything. So most people have their notifications sent to their phone. Some people don't. I would say the ones that aren't involved in the movement of apparatus or supervision of personnel like Fire IIs, Fire IIIs, Masters, those people don't. But unit officers, battalion chief, assistant chiefs, it goes to their phone.
Change	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	Well, if I include the volunteer stuff, we used to have the old Motorola, basically the old-- I don't even remember what they're called. But anybody could buy one. Anybody could go online-- or not even online back then, but anybody who had the [inaudible] or knew where to go could go buy the radio for like \$300 a pop because we only had one per unit or per rig where we volunteered, and this is at [County]. And then if the department wanted to, we'd then maybe buy a second one for the wagon driver, the truck driver. But all the [wackers?], anybody who wanted one could just go buy one. You didn't even need a scanner, you could actually have a radio. There was no way to block people from keying it out. There was no identifiers. There was no way to know who was talking on the radio. And now it's gone to the point where it's basically a computer. It's not even a radio. It's a computer.
Change	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	It's not even a radio. It's a computer. Yeah. 5 to 7,000. And then if you want the encryption keys you're paying even more. So basically having truly a two-way radio to now having a computer. And that's how it's changed.
Change	FF	U	Supervising	46-55	21-30	Male	FF-U-044	Well, we had rotary phones, and onion skin carbon paper [laughter]. So

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					things have changed dramatically [laughter]. For a long time there-- so we were in a period where we had a deputy fire chief in charge of IT, and I thought he did a really, really good job of bringing us into the future for a lot of this stuff. And they eliminated that position - I don't know how many years now - four, five years ago. Maybe more than that by now. I feel like we desperately need that and from little stuff-- there's no policy on how a file name should look.
Change	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Yeah. And even past devices in locating downed firefighters. That didn't exist. Well, it sort of existed when I got hired, but was never used. And now we've integrated into the SCPA, and I think eventually we'll have something where we have a 3D model.
Change	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	We just went to digital, and it's getting better. I mean, when you first went digital all the voices were very metallic. Now I can recognize voices on the radio, so it's much more natural now. Add an extra alarm where the-- the problem with everybody in my opinion-- the problem with everybody having a radio is, there's people who are on the radio that don't need to be.
Change	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	When I first came on there was no portable radios. There was one radio on the rig, and that was it, it was all. The chief had a radio, and that was it. I started in [Date].
Change	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	I would have to use one first. And if it's a pain in the ass, then it wouldn't be-- I mean, our first TIC cameras are like this big. The batteries lasted like maybe half hour. Now, they've progressed where you could use the battery for an hour. And they're smaller and they're not-- I mean, I got one that hangs right here. It's just small. The problem with that is the screen's smaller. But it's color coded. The hotter it is, the redder it is. I mean, it's fantastic technology.
Change	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	... And our department was a little slow on the uptake of having a shared drive where we can all access the same things, but in the last couple years they've really stepped it up a notch. So it's getting better as far as accessibility to video or PowerPoints that people may have wanted to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								attend but couldn't, things like that. So we're starting to go in the right direction.
Change	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	... So it's a condition of employment now to keep your EMT license if you're a new recruit. I want to say the cut off was maybe 1995. If you were hired before then, you can be a firefighter without being an EMT, but we're kind of slowly phasing that out, where you're always going to at least be an EMT. And now we have so many paramedics now that they either-- we have the ability on our department to come on as just a single-role paramedic and then cross over and become a firefighter paramedic. Whereas in the suburban area, it's mostly firefighter paramedics. But that wasn't the case here in the city. So once again, the city was a little slow on the uptake of that, but we're almost getting to the point, I would say in the next 20 or 30 years, everybody will be firefighter medics. It looks like we're going that route. But about 80% of our calls are EMS-related, so a new recruit or your standard firefighter working in a firehouse out there every day really has to prepare for that.
Change	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Okay. So it's a good thing, because when I came on 28 years ago, only a warrant officer on every piece of apparatus had a radio. And he only had a fire ground frequency which would only be good for me to you on the fire ground but not transmit to our firearm officer, I think. So in the case of something that went horrible, we could only talk to each other, or actually, that one officer could talk to another officer. And his four firefighters that were with him couldn't talk to anybody--
Change	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	--no radios, we had one radio. And so, that was a big issue because the lack of availability of the radio. And then you had the whole human aspect of, is that person using the radio properly? Because as a young up-and-comer, I worked with officers who did
Change	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Good. But there's always room for improvement. We're much better at radio communications, the equipment itself has gotten a lot better. Our frequency availability, at least from the chief officer's standpoint, I can direct companies.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	At the chief level, there's a little bit more than in the lower ranks but not too much. And actually, in the last, about 18 months or so, we're starting to use less and less hard copies of anything. Everything's going into our Clear Site which is like a cloud and it's all being stored there, so that helps a lot, too.
Change	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	... We used to fax a lot of stuff. As well, at the lower ranks, in the firehouses, there's computers available for, really, pretty much anybody to use. Not one for everybody, but there's a mainframe computer that anybody can get on. Email's really big on the fire department now and that's only popped up in the last 18 months or so.
Change	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	I mean, thermal is the big one, recent, as of the last 10 years or so. And it started off-- now that I look back at the first one that I had in my hand, compared to what's out there now, it's unbelievable. The clarity is unbelievable. I mean, just being able to see in a fire is a-- I mean, if we can incorporate thermal-- well, they're already doing it.
Change	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	...But starting off with a physical map book or a map on the wall, and cross-referencing the streets based on the dispatch, that's how you found your responses. I would have to say probably in the last ten to 15 years, the introduction of the mobile data terminal computers became prevalent. Where instead of getting on the radio you'd push a button responding. And when you get on scene, you push a button that you're on scene. But the platform for that delivery failed at the dispatch center. The failure rate of communication and system failures and software crashes was predominant, and
Change	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	And then there was a vendor change, and a program change, and the stability became much more unified. And so now, it's very, very rare that your mobile data terminal in most cases will not function properly
Change	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Necessary, I suppose is a good one. There's definitely an element of change that's involved in the job. But yeah. So I would say yeah, necessary. [Asked about How you feel about your job]
Change	FF	S	Field	36-45	6-10	Male	FF-S-032	In-house, yeah. And we have an IT department that at least facilitated

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					that. Now it's not a large enough department to continue to improve it and deal with all the bugs, so we've had some issues on that front. But all in all, the adoption of technology and the level of technology that we have is pretty outdated, it seems. Yeah. And I think that that-- as prevalent as the kind of hesitation to change is throughout the department, I would say it's also, maybe ironically, there's also a very common feeling that our technology is old and outdated and doesn't work
Change	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Yeah. So the smartphones, the tablets, the pre-fire application, those things all changed. When I came in, those things were not here. The MBP, the software on the computer is almost exactly the same. The radios are almost exactly the same.
Change	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	So it's not like they're not-- they're not used to the point that they've become completely necessary or dependent. So the technology change in the department over the last 10 years compared to what technology has done in society or in other industries in the last 10 years is a huge, huge, huge difference. We've moved very slowly--
Change	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	--compared to the world around us and the industries around us. There's a little more-- I suppose people are a little more familiar with Outlook email, but even some of our processes of just interdepartmental communication and the way that we utilize technology. The mindset, I think, is the thing that hasn't changed. So the people that are trying to develop systems to make this department work are very much in the technology of 10 years ago that they experienced when they were maybe coming up in the department. So there's not much in the way of training on new technology, or certainly no incident for motivation for us to try to reach out to the newest, latest and greatest because of those reasons, that reliability and resistance. Any change that we see in stuff that typically is kind of forced upon us. Maybe the thing that's kind of on the forefront is we're changing-- 89% of our calls are EMS-based responses. And currently, we write all of our forms on carbon copy type paper, and so we're changing to a tablet-based reporting system which

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								will send that information to a database and facilitate better communication with the hospital and, basically, the electronic patient care record kind of system. We're finally starting to adopt that. But so yeah. That will be a significant change, I suppose. But most of it, not a lot of change.
Change	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	And yeah-- and uses that that transition has been done in other industries but it really hasn't in ours, I think.
Change	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Yeah. I mean, again, the first hump is getting passed the resistance to technology, and change, in the department. And we did try on our individual specific level. We attempted to do that in our own in-house with the pre-fire program, with the application we utilized to help streamline our pre-fire process. So instead of just relying on a paper-based system, which we still use as a backup in case, the system goes down, we still need those maps, we try to process or to produce a system where we developed an application to house this data online and to disseminate it in a much simpler fashion to everybody to keep things much more current
Change	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Personally, no. I think it's way beyond this. But you just look at kids today and society, and everybody's so wrapped up in their phone and their texting and the computer, that there's a lot less interpersonal communication that I don't think is a good thing.
Change	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] Yeah, in the last three years, four years, we've really slammed these guys with a lot of technology. We were actually kind of on the back end of technology for several years, and we've had a shift in leadership and then finally we felt like the technology was to a point where we needed to sort of step up and could jump in because we're always kind of waiting. It's a moving train and you've got to get on it at some point, and then so since we've been kind of lagging for a long time, we sort of put ourselves out there more. So now we're sort of on the leading edge of a lot of the technologies for communication, patient care, patient transfer information, things like that. And one of the leaders here just because number one, we've lagged long so far behind.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4]... And we need our people to be relating to our patients. We need our commanders to be looking at the fire. And there is a saturation point too. It's like, okay, now we got this new app that's going to do this. Because things revolving. And this job is dynamic enough and if you're continually hitting them with new stuff, they never get a sense to get sort of centered and be able to do their job really well. So that's kind of, I have to triage a lot of that out.
Change	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] I think it's worth looking into in the future. I think it's-- we have a new chief coming in. It will be anxious to see his view on what he thinks, how he communicates. But I think there's a few things to try.
Change	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] So it's change in the fire services can be tough sometimes. We get a lot of very type A personalities. Everybody's got a way that they do it, that are usually not exactly in line.
Change	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] [inaudible] when Chief [Name] started, [until when I?] started, we had three air masks and three air packs 3,000. We shared it. Right. That is you, don't share you air masks. That's your own. If you plugged it in, then that's yours. Back in the day, we'd have to buy 15, 20 of these voice things and heads up display. Well, not now. That safety and all the other stuff we'd have to buy 300.
Change	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	Yes, exactly. Exactly. Whereas I think 10, 20 years ago, we were able to give our message to the media, and they typically just went with what we were telling them. Whereas now it's like, "Okay. [Name]. Public told us this, and you're telling us this. Why is it different?" And so then you have to explain those differences, and--
Change	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	Just, I think, the reliance on computers just to function in your day-to-day life. I mean, I started here in 1994, and the Internet was kind of just getting going, right [laughter]?
Change	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	Well, I think I have found it to be very beneficial. Well, one for me, I've been in the service for almost 34 years. So I came in way before all of this business. I mean, we had one portable radio on a fire engine for the crew of three. Well, crew of two in the beginning, then we got three. So I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have a good understanding of the benefits of face-to-face versus just the emails and the texting. I understand the benefit that it's easier for me to communicate with you face-to-face than a short little blurb on an email... I could walk into any fire station at any time with any crew and feel comfortable and they're comfortable with me being there. They're not saying, "Oh wait a minute. What's the guy in the white shirt doing here this morning?" because they've come to expect that, "Hey, [Name]'s going to stop by and maybe have a cup." And it's just by generation. I mean, I wasn't brought up on this. I'm just learning it as I go in this position and in life. I'm learning how to deal with this. I call my daughter a lot and she helps me because she understands it, so.
Change	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	We're kind of phasing out the standalone GPS unit. Those are kind of on the phase out because we've seen this new technology come along with the Active and the MDCs. So that is still out there, but it's not being widely used right now. And we put those in place
Change	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	... Yes, there has been and I will give you an example of when we implemented the electronic reporting in the field. I'll say back in the day when I worked in the field we had a clipboard and we had carbon copy pads and had all the information that we would fill out, and I'd start writing and it was quick. And if something came up and I needed to give a hand, I'd put that down, give a hand and then get back to business. It was very quick and it was very easy for the field. I could rip a copy off, give it to the ambulance company say, "Okay. Here's your copy. Here's my copy." So then I would get back to the station, I'd-- and that was basically just an information sheet in the field. And then I'd get my paper report, the official paper report, and I'd sit down, have my cup of coffee, and I'd fill out my report and turn it in, put it in the box and I was done. Granted, once it got put in the box and the admin person would get it, they'd do their thing. So I understand moving forward with the technology piece. But now having the technology in the field-- and it's gotten a lot better now. The guys have gotten more used to the program and more proficient at using it. But it slows things down a little bit in the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								field sometimes because there're so many steps, so many drop down boxes that you got to do for each field, versus back in the day I'd just scribbled some information on there, and then I would decipher it to the report once I was back in the station.
Change	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	.... And with that new technology, we've kind of changed the way we do business on fires or bigger incidents. We keep our battalion chief in the vehicle, our incident commander stays in his vehicle back. Prior, he would get out without with his portable and run around and point fingers. Now they command from their vehicle. They have headsets they put on that's attached to the radio. So they don't miss-- we used to miss some radio traffic that was important because of the old system. And even the new system, I mean, you can miss radio traffic if you're not paying attention or if you're being distracted as an incident commander. So now we've kind of focused on that that you have to pay attention to the radio because we have a great system.
Change	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	The reality has changed. Yeah.
Change	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	So I think there's always room for improvement and communication. But that's just-- I think things like that are bound to happen, especially when you're behind an incident and trying to catch up. But it does happen.
Change	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	I would say it's up to date. It was old for a while [laughter]. And it seems like they're doing a better job now. We've got brand new MDTs in most of the rigs. We have nicer radios than we had before. They have LCD readouts on them and everything. And they have a lot more channel capabilities than they used to, which is nice.
Change	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Yeah, it's like the land God forgot. I mean, it is the definite-- and then it has a big immigrant population of Vietnamese, Laotian, and they're not necessarily very demanding of services or whatnot. They try to keep it low profile, and they shelter in place. They leave early and come home late, and they don't-- and then the rest of us-- I mean, so many people are

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								so poor that you can't even go call them impoverished, and it's--
Change	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Yeah, and so that-- it's up to the driver to know if it's a Friday evening, if there's an event going on, if you've lived in the area, which routes get congested. So if we're going to a fire, you avoid the freeway on a certain time.
Change	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Well, just if you look at that number, you have to put that together with, between 2007 and 2011, 2012 - probably that six- or seven-year period of time when there was a huge downturn in the economy - in [State], in particular, nobody was hiring anybody because shutting down fire houses-- yeah. A lot of fire houses that were shut down during that period of time - not in [City], but across the [City] - have not opened up again because of the economic downturn that happened. Fire departments didn't hire, and so they ran short firefighters and they used overtime to fill the gap. And then all of a sudden, we're hiring a third of our department in the last five years. And so we are probably the norm of what's happening in [State] and probably across this country. So you take those 400 people that have been hired in the last five years, I would venture to say that more than half of them have not been first in at a working fire. So they don't have that experience, right? So the first time they burst in at that working fire, they might do some things that-- and you can try and train them all you can, but--
Change	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	And I think we are probably the norm across-- at least in [State], we're probably the norm. Because there's been a lot of hiring that's happened over the last few years.
Change	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	...So trying to get that-- I want to say it's challenging to get the law enforcement to come over to the inter-op side of the world. They're learning ICS. As of 10 years ago, they couldn't spell ICS. Now through grant funding and kind of through Department of Homeland Security, it's becoming the norm of communications, clear text, and the structure of how we run incidents. It's using ICS. So it's becoming easier, but there's still that gap of having them come over to one of our inter-op talks to share information without going through the dispatch centers. I'm sure

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it's better in other parts of the country than it is other places,
Change	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	... Whether it's an earthquake, flood, we use that [bottle?]. EMS, they don't practice that nearly as frequent as we do in the fire side. And law enforcement, they're getting better, but there are certain pockets that trying to get them all in the same spectrum, meaning some of them are on VHF.
Change	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	We have some radios from the early 90's still in service, a whole bunch of them actually yeah that's the ones we're trading out.
Change	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	So being a [Name] community we have a lot of second homeowners. So we have kind of a small full time population but with that we have massive influxes of tourists coming so we can go from being very quiet to then getting into the holiday period where we have large influxes of people which actually kind of then strains emergency services because you've got to be prepared for that year round but it's kind of it changes so much.
Change	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Well when I started here in [Date] we had a limited number of brick portable radios and mobile radios on all of the fire trucks and we had huge pagers. What was interesting back then those big brick radios worked really well. A lot better than today's radios and narrow bandit for this terrain. Everything has been VHF for this fire service here because we do wild land fire their VHF and helicopters are VHF so and a big push to go to the 700 megahertz system but while it works fine in buildings it doesn't work so good out in a canyon so and then over the years we didn't have computers back then.
Change	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	Well its changed in the past five years. I think we've went through four or five different call out systems by [company] which is your insurance grading of your town or fire department in the town. They want it to be radio so [county] that's our dispatch center in [town] at the sheriff's office and all of us now have radios. We didn't before we just had a handful that we lucked out here but now everyone has a radio or fixing

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to. I put on a couple of new ones that don't yet but anyways they will page us out on that radio first over just a 2-way radio and then just recently we got a new app it's called [application]
Change	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	Oh I would say not as far as communication. We did have trouble with communication but within the last year we brought in a company out of [city] and they came to every department and they redid everybody's radios, got all the exact same channels in everybody's trucks and handhelds and everything in all the departments and I think [county] also I think we purchased a new tower repeater out there west of [town] so I'd say within the last year it's gotten a lot better.
Change	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	Yeah. I mean like I said we have protocols that it's mandatory that you take so much training but just for safety reasons you know. You can learn a lot from the training but you know they want us to have you know continued education and continued and continued to keep up on things and the medical side I can see you know because a lot of things are changing there...
Change	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Currently we have just switched to an app on our phones on our smartphones that's called [App] out and then it will give us the information for the call, it will be followed by a text through text messaging through that system we can either say we're responding to the scene if we're closer than where we're at to the scene or we can respond to our department or we can stand down and in doing that through the app it goes directly to everybody on the department so everybody knows who is showing up and it also goes to dispatch and they can know okay we have a firefighter or EMR that is in route either to the station or to the scene.
Change	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	They're getting better. They're getting better. We do have pretty good service out here. We have a cooperative cellular company that does pretty good in our immediate area and there are some outside services that do pretty good too so it's usually not a problem. I mean we do have our dead areas that I mean we get down along the river and not much is going to work down in there.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	It is a huge issue. I mean funding is a huge issue. Up until I think we're coming up on the first year of having the sales tax for our county and other than that we were funded by a yearly fundraiser. It was basically the town donating their personal money to protect them basically you know and that was I think the state did allow some funding but I mean it wasn't enough to make a difference. If a truck went down that truck's gone until we can save up the money or get a grant or figure out something to fix that truck. I mean we were living year to year as a department you know and that depended on the size of the department and the size of the town.
Change	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	Let's see here. Our dispatch here is pretty decent. I think we've come a long way with getting them a card statement of what we need. We'll just say a structure fire for example we need to be alerted which can be we use a tone out, we need to know who needs to go, we need to know what it's for, we need to know the involvement so that's units that need to be dispatched, what type of a call is it if it's a structure fire we need to know the involvement, is it fully engulfed as descriptive as possible, paint us a picture, paint us a picture, are there people entrapped things of that nature and it's gotten a lot better out here. Over the past 10 years we've got some good people dispatching now.
Change	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] They have a newer version of the MDT more so of a tablet form MDT so they've been using that a lot lately. That's more easy for them to carry around. They really have to carry around a used tablet like that so more so of a tablet.
Change	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Right now is we're trying to upgrade. They say by the beginning of next year we will have four new systems but that's still kind of it works right now so hopefully that will fix all of our issues right now.
Change	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] We use I used to have a pamphlet in my office that I'll give you for Hazmat we use what's called e-plan which UT Dallas developed and that platforms allows again as we go away from paper the big industrial companies that make the chemicals they now electronically submit their tier 2 reports into inspections...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] We were still doing fire reports with pen and paper and the station log book I think we were still writing books well some of the captains do. They'll do a handwritten daily log but everything else is done electronically what he pulls up so if you need to query something so it has come a long way.
Change	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Mostly not since we've switched over. We just got new radios in the last two years so we've been issuing them out to everybody and these radios have bigger buttons on them and a lot of the issues.
Change	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] ... when I was coming up there were no computers to regulate how much water was going to flow through that truck. You really had to be sound in your math versus now the truck can do everything for you so the technology is here you just have to accept it and my running joke here and he hears me say it all the time.
Change	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] So when I went to I left one department and came to this department so everything that I get over there it didn't matter. It's like starting over when you go to a new department so we weren't in the same trainer class to learn how to drive and operate the rigs but the younger guys got through it a lot easier.
Change	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S1: Oh okay, so yeah so that is a difference yeah, okay, okay. According to this, you have been in the service for a while. How have things changed in terms of communication since you...? S4: Growing leaps and bounce.
Change	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	[S4] But then with the upgrade of repeaters there is more repeaters than there used to be.
Change	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S1: Oh I see okay. These changes that made things better for communication? S4: Absolutely.
Change	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	The big thing about that is they just went to a new radio which is like a, it is called Digital, it is like the quality when you are talking on it, say like there is noise in the background on there you can hear through these radios but on theirs it like blurs the background out so you can hear the actual person talking.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	I mean they practice like they teach you, like we train on how to do communication better. We used to not tell what we have when we were on calls, like what do you have you know, like say we had a wreck, it tells what you got and that way we can prepare [indiscernible]. We got to do that plenty of times, no one has actually told us what you know was going on.
Change	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S1: When was the last time you guys upgraded the radios? S2: Actually we got these about...how many years ago? S3: Probably ten years ago.
Change	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	I have one and I can get a hold of Dispatch in -- I have a personal, but we are about to switch over to digital. We are trying to get a jump on digital before the county does because we have (what I call them) Scanner Queens [laughs] that get on there and they listen to everything that is going on and then get Facebook and just blow everything out and it is like, you don't even know what is going on, like the school thing the other day at the high school, they blew that all out proportion.
Change	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	I'd say they have changed a lot as far as, you know, communicating with other people as far as other departments. I think our dispatch and their dispatch have gotten better communication because when we had the big fire, I mean, the radios were going beserk. I mean, they had a big mobile command unit up there that was an RV and it was nothing but telecommunications and radio. And it was huge.
Change	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	We switched to the 700 system pretty much last year because we have a 150 megahertz system. And in the terrain we're in it works pretty good. Portable to portable. We've got multiple tower sites and repeaters and Vodor systems and it's kind of complicated but it works until lightening hits it and just fries a bunch of it. And the last time it took out most of it. And we're still trying to put it back together. That's our main dispatch where we get our tones from. But we switched to the 700 system that the state takes care of.
Change	FF	R	Supervising Field	46-55	21-30	Male	FF-R-051	...We have some excellent dispatchers. We have some that just like anybody else, you can have a personality issue here and there. But from

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					where we were... let's say 15 years ago, today is night and day. This building has a little bit to do with that. But they train. The person who had [Name] job before [Name] got it came from a whole bigger organization, brought a whole bunch of different ways of doing things and was better in terms of who he hired.
Change	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	And we've seen that. Before you would get hired--before our dispatchers were just jailers. You know? Whoever was working in the jail was who dispatched us and what information you got, our biggest problem right now is we probably need a third one in there all the time because if you get a good call going, you have somebody on the phone and somebody trying to talk to three agencies at a time. And to you get to where one takes priority where maybe it shouldn't be at that time.
Change	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Dispatch has gotten to where they give us cross streets which we didn't get always. They give us a cross street, they give us numbers, you know and all that. Part of our problem here is a third grader numbered our [County]. Actually she wasn't a third grader but the way the system is supposed to be... you can go put it in Google Maps, Google Maps will tell you that you should go to this place for this particular address because Google Maps knows that you're supposed to assign a street number every so many feet. Okay? That's not the way it was done. They would look in the book and say, oh well, so and so lives here and so and so lives there and they live in the middle. They live a little closer to this one maybe but I'll say--I'm just going to give you this number.
Change	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	I think that technology is kind of evolving daily. Just like you know with anything else, you buy a computer and in, you know, 8 months from now or a year 2 years from now it's obsolete because of technology changing. And we have--we're faced with the same problem in the fire service. The technology evolves so often that you know you get one thing and at the time you get it, it's the cream of the crop but you know months later or just a year or two down the road it may be, you know, still good and usable but it just may not be as advanced.
Change	FF	R	Field	36-45	21-30	Male	FF-R-052	They've come a good ways. Of course, you know just like with phones

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					and things and everything was this size when it first came out and then it goes down to this size and then they bring it back up to this size and you know everything was, you know, make it smaller, make it smaller, but like just one example is the pagers we used to wear were great big old pagers that we wore on our hips and now they're, you know, a little smaller. They're a lot smaller pagers and they barely, you know, cover like the width of your belt or whatever.
Change	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: department issued iphones] ...We just got our patrol but everybody at the Sheriff's office has an iPhone. Text messages between co-workers and bosses about things you can need. And sometimes it's as simple as, during the workday, "Hey." I'm interviewing somebody in the jail, "Can you bring me a form?" Cool. Or it can be 10 o'clock at night, "Come find me in the morning," or, "I need to do this in the morning." And some of that bothers me, some of it doesn't. That's why I try not to go through the emails. But some of them are-- there's a lot of junk mail. And being me, I get my Cabela's emails sent to my phone. So that way I just-- but on weekends, I'll spend 10 minutes at a time just waiting through it. I haven't gone on. And I've just waited through...
Change	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: department-issued iphones] So the detectives got them and command staff got them before everybody else. Patrol just got them the last year and a half or two years. And I want to say I've had one for-- well, since the five came out, so probably three to five years. They don't buy some nice ones. I mean, the one I got now is a 5C. C stands for crap [laughter]. But we get the ones that-- they're not upgraded if I break it. I might break some stuff. I'm kind of clumsy like that. Because they'll give you the new Penny phone, the new Penny iPhone. I'm like, "I cracked the screen on one of them. I'll just go get it fixed. I'll pay you the 20 bucks." ... No, just give you a new. And everything is backed up through our cloud. So it takes half an hour to swap everything over, so is what it is.
Change	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	So there's that. But yeah. English, Spanish, and German are the three most spoken in [State]. I know people that, if I need to, I can call, and they can handle all of those. We have deputies that speak Spanish. We

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have deputies who speak German, deputies who speak Portuguese because we get a lot of the ski resorts. They bring up people, and I think they're J-1 visas. So they bring a lot of South America. And then you'll get Portuguese up here, and they commit crimes and-- I'm sorry not Portuguese but Brazilians who speak Portuguese. And then so we've got somebody that speaks Portuguese that can speak to them. And their eyes about fall out of their head when they run into somebody because-- but if you run into somebody that speaks Mandarin, you're not going to know it's Mandarin. You're just going to know, "I don't know what the hell you're saying." We have phone call language lines that we can call up, and they'll provide translators for us.
Change	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...Our records management system are-- so we can look up inmates. So we can look up names and stuff. I would absolutely love that. I mean, [Name] down the [City]. And this was 10 years ago when I first started getting in the dope patrol. They already had that on their cracky Blackberries. But they could look up [Name]. They could look him up and they'd pull up his picture. That kind of thing.
Change	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...I'm a different level than the patrol guys. It's not that I'm better than them by any means. I have to answer some questions, how to do stuff. If I end up pulling a patrol chief, I'm lost. But as far as the detail in the type of reports. When you're typing a homicide report, and it's your initial report, you're typing 30-plus pages, where on patrol, I don't think I had anything more than 3. Maybe an ugly domestic is 4 pages. But you're craving in so much more detail. And you can't just put in. The old days, they're doing a DUI [inaudible] arrested same, they're gone. You got to spell it out. My DUI report as compared to somebody else's is twice as long. But it's because I've got the extra training, experience so I'm able to learn how to articulate it, so.
Change	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...when I first started as a cop, we had NBTs in the car. And they were about the size of colon cooler. And we drove the big Crown Vics, and I mean, they were huge, but it was only like a four-inch screen. And it was DOS-based, and it was just black and white and an old keyboard. And

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								then when I moved out to [State], because I started in [State], we had nothing. It was a notepad, your radio, and your siren box. That was it. And since we've got progressively better MCTs, or whatever the hell they're called, and all those computers in the car, more and more stuff...
Change	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...the new [State] driver's license, they've got so much information on them. It's - I don't know - like a six font. These guys have literally gone out and bought the Home Depot or Walmart and got magnifying glasses so they can read the-- so you're doing this. There are workarounds, [State], and there's other states that are now going to like a QFR code on the back so you can scan it... But of course, it doesn't work all the time.
Change	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	It's a lot different. Radios have gone from VHF to digital. And in [State], one of the-- I recall, but it was a horrible event. But one of the benefits are there is state-based radio system. So I can talk to-- we'd have to go to a certain channel, but I can talk to somebody anywhere in the state on the radio shy of, I think, two counties who are part of it. So there's that. That's different. And that's awesome compared to when I started...
Change	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...the data that's available, information gathering. And I think it's a skill the newer guys have lost, or they don't have is go out and talk to somebody. That's like, "Oh, no, no, no. I can't do that." "Yeah. Go talk to them." And a lot of guys want to solve stuff from behind the keyboard. And you have to go out and talk to people. So there's good and bad. But just the technology, you have computers in the car. You've got the video systems in your car. You've got tasers. There's all kinds of stuff. And I think most of it it's for the better.
Change	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	I think for the most part. I can't think of any technological advancement that is bad. Some of them aren't great but going from handwritten reports to dictated reports, to a crappy DOS-based report system, to now, where you can have a word processor, that's easy and the information sharing is great because through the various systems, we can communicate all over the world. If I need to email copy [Name] on something, he's going to get that email within 30 seconds of me hitting send. You can't just bounce jurisdiction to jurisdiction, state to state and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								get away with the same crimes.
Change	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...Technology does the lack of communication and the lack of governmental agencies like our [Agency]. it's the [State] version of NCIC, is still primarily a DOS-based. They've added a little bit of color. But it's a very basic code-driven system. They just in the last-- I want to say six months to a year, we got it so we could get driver's license photos. We could always get them before, but you'd have to go through a long-about route. But now, you can just check a box, and it pops up. And we've been getting stuff from Florida, Georgia, other places, where it's built into the format. And some of that is state government. Some of that's federal government. But just the inability or the lack of wanting to change is frustrating. So some of that stuff-- and I mean, a lot of it you think would be just, "Oh, you have a picture of this person? Just put it in there." ... I'm not saying we need a picture of they drive a red F-150. We don't need the exact red F-150. But when it comes up to the plate, it comes back to a red F-150. Show a generic photo of the-- just simple things like that. But they don't have them.
Change	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...I guess nationalized reporting database, or so maybe not reporting but name database. When I first started here, there were, I think, five or six agencies in the county. And we each had our own report writing system. In that report writing system, you each had your own name section of names, the addresses, and everything. Well, then we all joined up, and we got on one common one for the country, so all agencies because you'd have the same person entered six times in each of these things. Now, we're all just entered once, one big name database...
Change	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: radios] No. If we go out, I have one. Yes. But just walking around, if I was going to run get lunch, go to the deli, I don't carry a radio. I don't call out. But I go in plain clothes. And I'm not under the [inaudible]. I mean, I love for vest to get lighter, and stronger, and more powerful, and all that kind of stuff. I mean, my first vest compared to the one I got now, it's night and day.
Change	LE	R	Field	36-45	11-20	Male	LE-R-017	...So I can remember when I started to where it is now. And I'm jealous of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					the people that will be here in 20 years because I might still be here. I probably won't be. But the cool stuff, they're going to have. Being a cop is being a cop. You can drop me in New York City. I could handle a domestic. But the technologies, and what still works, and what doesn't work, and what's been replaced. I think that's fascinating.
Change	LE	U	Manager	46-55	31-40	Male	LE-U-020	Yeah. Well, it depends. Currently, we're building a new dispatch center in [City]. Projects today that I was working on, we're actually moving another one of our dispatch centers. We're actually combining State Patrol dispatch centers into the traffic operation centers with the Department of Transportation. So those are two that we're actually actively working, and that's taking up a lot of the time that I have now. In addition, I'm on the [State] FirstNet Authority Board, so working a lot with that specifically, the [State] Plan came out in June. We're doing evaluation in that. So that's a meeting I go to this afternoon.
Change	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: new CAD system] That was a good thing, and that's kind of why we stuck with Motorola, that there are very few dispatch-related changes. It's more functioning-type changes, working with our RMS, a smart copy feature... And the ability for the officers to take, say, a response from our DMV and be able to put it into our RMS system, eliminating duplication of entry and those type of things. So those are some of the big upgrades that we did functionality-wise.
Change	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: new CAD system] ... On the dispatch side, there's very limited. But on the officer-trooper side, it's more intensive, and that's where we're having [inaudible] issues on that. But in the long run, it's going to be good for everybody, so.
Change	LE	U	Manager	46-55	31-40	Male	LE-U-020	...when our CAD went down, we went back to manual. And we used to be on a card system, and writing things down on cards and the frustration level of our dispatchers was through the roof because they're not used to it, writing things down. There's very few people left in this business, you don't stay in this for 30 years. So they had no concept of what writing things down were and then the ability, when it came back up, they had to go back in. The frustration of back-filling information. And so

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it's gone from a-- when I started, we-- the radio system, we shared channels. It was VHF. So we still had multiple-- we actually had more dispatch centers. We had 17, now we have 6. So, we did consolidate
Change	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: consolidating 17 dipatch centers into 6] Part of it was we were mandated by the legislature to do it. So it was a mandate, but it was one that was a money saving, instead of having to keep up 17 individual dispatch centers we can consolidate. So, you don't have 17 recorders, you don't have 17 copy machines, in the equipment end of it. But people, mostly all of them, we kept the majority of what we had. So it wasn't an FTE savings, it was more of an equipment savings. And an efficiency savings with one of the biggest pieces-- most of those were one-man centers. So, if you got into a situation, you were it.
Change	LE	U	Manager	46-55	31-40	Male	LE-U-020	In a consolidated center, you've got multiple people there to help you all the time. And typically each area doesn't have an emergency going on at the same time. So a lot of pluses on that, the ability to talk and have different channels and those types of things. I've seen it evolve...
Change	LE	U	Manager	46-55	31-40	Male	LE-U-020	...And I think the next step when we move into the FirstNet broadband, I think that's going to be the next significant step because once it gets done-- I mean it's not eminent, but once it gets done it's going to be very good in the next step. I see that that's where it's headed. So things we're doing now, again, will be kind of archaic, like writing things down, like it was in the past...
Change	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: text-to-911] And that's new. It's a new thing, I mean, it will get more and more...
Change	LE	U	Manager	46-55	31-40	Male	LE-U-020	One of the things we have, it's called the Safe2Tell program, which is it's for kids to call anonymously to report incidents involving in schools, whether it's bullying, suicide attempts, all those type of things. It gives them a unique perspective to be able to call into-- when it started to-- it was a toll-free number, totally anonymous. And when we started this back, maybe 10 plus years-- and it was good, it was busy, it was those type of things, but a year and a half ago, they implemented the app and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it went through the roof.
Change	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: text-to-911 Safe2Tell program] Because you have to look at the generations you're dealing with, and yeah, we went from just total talking to people, and kids don't talk to people. My kids don't like to talk to people, those type of things, so it was marginally-- it was effective but marginally effective but we've seen two consecutive years over 70% increase in use.
Change	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: text-to-911 Safe2Tell program] So we found their sweet spot. Unfortunately, we don't have a lot of extra personnel to handle those now, but it's amazing the number we do have, but that's just the technology leap. And that from a text-to-911, it's-- and that's why I went with the correlation that they just haven't grasped it yet. And we went to text because we went to text before the app. We did see a little bleep but not anything else. But when it went to a full blown app, it's gone crazy because you hit their sweet spot and that's how they're going to use it.
Change	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: text-to-911 Safe2Tell program] Yeah, and when we first started is-- when we had just the phones, it came into our [City] dispatch center and that was the only one statewide that it came in to. When we saw the-- we were looking at texting and then the app, we needed to open it up. Oh, and there's also the web bit. They can do it over the web as well... Yeah. So now we get 20% phone calls and 80% apps or web tips, so.
Change	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: text-to-911 Safe2Tell program] So I said, "I can't have one center doing this," so we gave first the web tips and text tips to our Pueblo, which is our second largest center. And when we did the apps, we gave it to Pueblo as well. But we went from-- when we first started the web was like 75% voice and 25% web or text, and now we've flip flopped it... Yeah. So now we get 20% phone calls and 80% apps or web tips, so.
Change	LE	U	Manager	46-55	31-40	Male	LE-U-020	A lot. Everything they do now is MDC, it's computer based as well. So the ability for putting docks into cars, space inside the cars, the ability to put modems in the cars, in addition to their radios. As state patrol, we carry both DTR and VHF radios, so they have two radios in every car. The lack

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								of space-- even as patrol vehicles get smaller with cages and those type of things. The ability to put shotguns, rifles, those type of things. Space is very limited. There is new technology coming out where a lot of the stuff gets moved to the trunk. Even the ability to turn on lights and sirens, and those type of things. The smarts, the technologies in the trunk...
Change	LE	U	Manager	46-55	31-40	Male	LE-U-020	...And then it's kind of like your car, if you have hands-free radio and stuff, so, they're able to-- and it's a newer technology. We don't utilize this, but it's something that we're looking into in the future where on the steering wheel, he can maybe flip a switch and lights come on or sirens come on. So, they're trying to deal with the space issue and the technology inside of patrol cars as well. So, real estate's a big deal. The ability for us to have an MDC. We don't have an MDC for each person right now, so they do swap them out sometimes. So there'll be multiple troopers using the same MDC type of thing so--
Change	LE	U	Manager	46-55	31-40	Male	LE-U-020	And we've gone a way to-- another trend that we got a way with, there use to be a-- we build the patrol car and then we put in all the other stuff. You know, the light bars, the radio, and everything, so a lot of stuff, push bumpers. Now we're ordering a lot of that on the car. So where we use to switch out type things, for a budgetary person, it was probably a really good thing, that you can-- but the down time of the cars and the ability that you've got four-year old light bar on your car that you're going to run for another four years is probably not the best thing. So we order these things and then they come in one package. The only thing is when they're done, they belong to our fleet management. Then everything involved, we take the specialty stuff off of it, but like the push bumpers and type of things, they go to sale at a fleet so-- it's a good thing that we have the ability to tap into it because we know those cost and we don't have to retro fit-- And our build outs are a lot quicker.
Change	LE	U	Manager	46-55	31-40	Male	LE-U-020	...One of the things now, typically, and I'm going to update myself a little bit, that calls that came in were sporadic. For an accident, you might get one or two calls because they either had to go to the next exit, find a pay

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								phone to actually call it in, those types of things. Now with cell phones and everybody, we get dozens of calls for one accident. So the volume, which is good that we're getting more calls, so we can piecemeal better information. But just the sheer number is so much before, so. You talked about, we don't get the information. We got less information before, but now we just have to-- where we run into trouble is when we, our centers, don't get the person to ask the questions that we want answered. We can go from it's a three car accident, or a two car accident, and then everybody's walking around to turn it into a fatality involving seven cars, in reality [laughter]. So that, the information-- we only give what we have, so. I don't know.
Change	LE	U	Manager	46-55	31-40	Male	LE-U-020	And one of the things we have in [State], we set up a-- it's Star CSP line which we use for road rage, and impaired drivers. And those calls are directed to State Patrol dispatch centers whether they're in a metro area or not, because we're not taking away from true 911, it's not a 911 call. But they did direct it to us and we typically are responsible for the highways. Those calls obviously go through the roof as well. One of the huge numbers that we have. So, again, it's a technology that we saw an issue and said, "If there's a way we can get some of these calls direct to us, we'd get better information." So we worked with the carriers, all the major carriers, we met with them and set it up. And initially, when we did that, time on phones was an issue, people didn't want-- so we got it to be a toll-free call.
Change	LE	U	Manager	46-55	31-40	Male	LE-U-020	So there was never a-- so you call Star CSP, *277, those type of things, where it was a free call, so we got people involved. But as technology changes and-- just for an example we-- Star CSP, we tell you to call Star CSP. But, typically, and on a lot of phones the alphabetical piece is tiny or non-existent. So that's--Although it's a good-- it ties us to State Patrol, CSP marketing tool, *277 and people go, "Uh, how do I do that?" So--
Change	LE	U	Manager	46-55	31-40	Male	LE-U-020	Florida does have it, and actually, it was one of the initiatives that when I was-- I had went to Florida with my family to Disneyland type thing. And I saw it on that they have Star FHP, so we did some research on that and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								then got in talking with them and says "Yeah, this is what we do." So then we brought it into [State] and set up the program and got it going.
Change	LE	U	Manager	46-55	31-40	Male	LE-U-020	...in this day and age it takes a while to implement things, and especially if there has to be money involved and going out to RFP and those type of things where you're line level person has no idea of the frustration that that is.
Change	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...we're just now getting into drone deployment, and I'm sure that's going to escalate and be a big deal in the future. We haven't done too much of that yet... Right now we only have three pilots who are-- can do this, and we've been doing a little bit of training. We have one drone for the department. Hopefully we'll get a budget for a little bit of more stuff, but we are able to do some crime-scene mapping. We haven't done that yet. On certain types of SWAT calls, we're allowed to go out and assist on that part around the outside of whatever the target area is, and we have on one instance deployed a small drone inside of a residence to try and get an idea where the target person was.
Change	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	Just a few months. Yeah, in fact our policy is still awaiting signatures, so we're trying to refine going through ICP's best practices, that kind of thing, to establish our program... we have three individuals who have attained their FAA certification to be able to fly them. It's kind of in its infancy stage as we're trying to take things slowly to do it right basically.
Change	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	the three of us have all been in the department for a long time, and have seen even before we had an electronic support section, just the department tries to stand-- I think we were one of the first agencies in the nation to get computers in the cars. And that was back in the late 70s, I think.
Change	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...we talk about the MDTs that we used to have. I came from another smaller department here in the [city] area, and we would have to go under the station and do it all, but we typed all of our reports, added all of our comments and notes to our calls at the station at the end of our shift or throughout the day, and then I came here, and we hadn't gone to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								computerized report writing yet, and so I got here first, and this is 2000, or-- okay, which forms do I need. I need six of these, three of these, four of that, and now we're into your ten-page report, and you got your writer's cramp...
Change	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	from my perspective what's happened over the last probably five years is that there've been so many advances in technology that's related to law enforcement that it's, I guess, I don't know if overwhelmed is the proper term, but it's overwhelmed some officers that worked for years with really the only real technology they had was the laptop in the car, the MDC, but really nothing else, and now with the advent of the body cams, the surveillance cameras, the license plate readers, we have our motorcycle enforcement team has hand-held e-citation devices. Or exploring now, putting printers in all of the patrol cars, so we can do more electronically and print in the cars...
Change	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...So I think particularly a lot of the younger officers that don't have that history of doing a lot of the paper, it's probably not affecting them as much as the officers who have been around for at least 10 years, and they're getting hit from all sides of okay this is all being changed now, and we're making things-- this technology is going to make things easier for you, and really, it's not. From their perspective, it's, "Gosh now I've got to make sure all my video from all day long is tagged correctly."
Change	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	I was the first one to start writing reports in the car on our computers as the guinea pig, and I started teaching at the academy when everybody started doing it, teaching how to do that, and I have ever since taught out there as to how to do that, and the difference in officers from when we first started doing that as far as how adapted to technology they are and now, it's just night and day. It's completely different. So everybody is much more computer savvy now.
Change	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...we just went to a form for putting our property in, booking in property and evidence. That is getting rid of the paper form. So in a sense, it's easier. You're not lugging around-- you don't have a briefcase, you taking in the car that weighs 20 pounds because it's full of stacks of papers

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and forms that you need. But now there's additional steps you have to do on the computer to print out your barcode to slap on your property before you turn it in, and those extra steps, people are like, "Easier, my foot. This is a pain in the butt." When it is kind of-- actually, it's a lot simpler in the long run.
Change	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: technology] They're just don't like the change.
Change	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: technology] Yeah, change. I think this biggest thing we fight, and cops are the worst, I think about that, about changing and--
Change	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: change in technology] And part of this is they don't see the backend results, and just using the property thing as an example, by an officer in the field electronically entering evidence into the system and then printing out an evidence tag, when they get into the head quarters, where they push a button that prints out the tag, they can put it into evidence, that then saves a property technician behind the scenes from having to get a paper form, and then enter it into the system, but the officer on the street doesn't see that, that backend. It's the same with the e-citation stuff. Electronically printing a citation into the system allows that data to be electronically transferred to the courts, electronically transferred to a records management system. The officer on the street doesn't see that there isn't the records technician or the court technician now who asks to take that paper taken and transcribe it, so.
Change	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...we have over the last few years any of those things about as fast as we possibly could because of all the new advances and stuff...
Change	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...One of things we're exploring is making the transition from a typical laptop configuration in the patrol cars to more of the tablet configuration, so the officer can take the tablet out on a scene, and that's probably going to happen this year. That's going to be just another change. Functionality, they'll work about the same with the exception of the Windows 10 operating system as opposed to what we are using now.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: switch from laptops to tablets] Really not doing anything new. I mean, it's not going to be a huge change for us. They're so used to using the machines now that the computers that being able to take the screen off and walk into the house with it, it's just going to make it lighter and a little more mobile. Because they can do that with the whole laptop now.
Change	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: mobility of laptops] ...I used to when I was on patrol. If I had a burglary, I know it's going to be in there for a while, put in a bunch of the information, you have to [inaudible] safe. Get the computer, come back in, "Can we sit down?" Okay, give me all the information. SO yeah. And hopefully more and more if we make that change to more of a tablet style. Hopefully, that will help.
Change	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	It's another new thing they just did was a got to [inaudible] dispatching. I hope you are familiar, but that scripted thing that the call-taker do when they get a call. It affects how the call prints out, or how it displays in the car, and it affects how it's aired, and when it's aired. And so there's been some growing pains with that. But everybody is getting more, and more used to that too. I think they, for the most part, they do pretty well. There's been some problems, some complaints, and one of the solutions that they just went to is to bring dispatch back under the police department umbrella rather than having it as a separate entity that it was before, so that means they can do rest here.
Change	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	Well, one of the things we haven't mentioned so far that's been a big change just in the last year probably is our public information outreach, using social media has changed considerably in the last year, so.
Change	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: mobile fingerprint readers] Just from what I've heard from the radio and from talking to people, I feel comfortable saying they probably get used two to four times a day... As people get more used to them, they get more use. And now we have two of them out there that it's going to help to increase that use, I think.
Change	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...One that comes to mind is facial recognition is a huge thing. There are some significant privacy concerns revolving around facial recognition,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								so my advice to our chiefs now has been let's hold off and wait and just kind of see how this technology shakes up. First of all, it doesn't work really well, and secondly, there are just some huge privacy concerns over the law enforcement use of facial recognition. So I think that will come at some point...
Change	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	And there's also some technology emerging for triggers to turn the body cameras on because that's a big issue every day in the news, so with stuff like a gun shot, or taking your gun out of a holster, or turning on the sirens, something like that, there are some news out there causing those sorts of things causing camera to turn on, so probably further on down the line that will be probably a good deal.
Change	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Right now, our primary focus with crime scenes is we're using 3D laser scanners. So we've gone all the way from-- when I started we were using tape measures, where your plus or minus six inches is good enough. Then we've moved on to two-man total stations, then semi-robotic total stations, which is one man. We've moved onto the 3D scanners. So now we're down to about two millimeters of accuracy. And the next move, sometime before the end of the year, is what we have in UASes to do our outside scenes.
Change	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...When I started, I started in the age where cell phones were just beginning. When I got here, I started in '95, we had a cell phone in the car, and it was mounted into the car, and had the cord and everything. You really weren't supposed to use it. And then as we've progressed, we've gone through-- I think we're on our fourth or fifth generation of issued phones. We're all issued Samsung smartphones now.
Change	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	All of our patrol cars have MBCs. We do have a few unmarked, I guess, pool cars or command vehicles that we use, that do not have computers. Our detective vehicles don't have computers. And our motorcycles at the moment do not, but probably by first of the year, they'll all have tablets on them as well. And then, all of our newer cars are actually WiFi hotspots with the tablets that they can be removed, and we have about a 400 foot range around each car.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	When I started, we didn't have computers in the cars at all. So we started just from that, no book sitting between the seats. And moving on now, and we're now getting ready for our next RMS system. We had one when I started, and this'll be our third change going to that. Then the scene stuff, all that technology has changed over time. We're on our second radio system since I came here. Our first one had run out its life, so we had to move on from that. That's about it.
Change	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...back when I started, I could listen to the radio and on a Friday night, where we have 25 guys working, I could tell you exactly where everybody was in the city. As we've become more and more dependent on computers, I can't do that anymore. Which I'm doubting that anybody here can do that anymore, which kind of makes it hard for me to understand why we don't use more the technology, instead of using the radios...
Change	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	We're in the process of-- just kind of rambling on here, but we're going to a regional comm center... It's been a two or three-year process, and they've had to fire the director a couple of times. But when that comes about, it will be the entire team of [county], ongoing CAD system, which is between police and fire, there's like 26 agencies. Which in my mind, is a very big step backwards as to where we are now because our dispatchers now know us. They can hear differences in our voices. They can tell when something isn't right. They have an idea as to how our city is laid out, how it works. And I think we're going to lose that when you go to a comm center...
Change	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: transition to a regional comm center] ...They say they're going to try and keep people the same from this agency because our comm center-- they essentially lose their jobs here, and they're offered a job at [regional comm center]. And so, very few are actually going to go. We've been losing dispatchers over time since they made that announcement. But I think, in reality, we're going to have a dispatcher on the radio today, that may have never worked with [city] at all. And tomorrow they're working for [county] or [city] ...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: transition to a regional comm center] ...while it's one regional comm center, each agency is still going to maintain their own radio systems. So we're on Harris. [city]'s on Harris. I think [county]'s on Motorola. [city] on Motorola. And so, we're not going to combine radio systems, just dispatchers... So that patching is going to be an issue. Even though everybody's working out of the place, and could just scream across the room at each other, we're not going to hear that...
Change	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Well, the computer has the ability that I can see every call that's on the screen. I can click on it, and I can technically hit the button to assign me that call, and I would pop up, and it would be assigned to me. But patrol's not allowed to use that. Our animal control officers, they can look at it, and they can hit the button and self-dispatch. So again, I think it's just stuck in the-- the biggest fighters we had about going to self-dispatching, which we tried a dozen years ago, was we had a few old time sergeants who wanted to hear absolutely everything that happened. And they told their people not to engage in the testing, so then it went downhill. And without support from the supervisors, it didn't progress. So then we're back to the radio, and most of those supervisors are gone now. And most of the supervisors we have now, frankly, started way after I did [laughter]. And I think technology is moving that we can move more in that direction now. Just a slow process.
Change	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...In my house, our radio works just fine. I can call back and forth, no problem at all. I get down here to [street] and [street], half a mile from here, and the radio's drop because we have dead spots. We have interference from-- we have interference from the high-rises in [city] that it's ricocheting back off and it's blocking the signal so it's dropping. So we're building extra towers and stuff like that, but we have areas of our city out west that we don't have coverage. They're building now towers, but that takes time, so.
Change	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: MDTs] it's a Panasonic tablet. Well, the newer cars have Panasonic tablets that then they dock. And then we have a-- the screen is mounted into the dash of the Explorers. They're now changing that, and we will

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								keep those Panasonic tablets, but then we're changing the screen configuration because some people didn't like it built into the dash. And then some of our older cars still have a Panasonic Toughbook laptop. They're then mounted in there. And those are actually mounted in the back with the PRC screen up front. So we're kind of in a blend at the moment, but those old Toughbooks are going away. One, we can't get the screens anymore, so that's why we're going to the tablets. And the idea's that now the car's a hotspot, you can take your tablet out, and you can go in and do a report. Easier said than done [laughter]... Nobody does it.
Change	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...have an app to resources that I can pull-- the Line of Duty Death resource, the Patrol Pocket Guide, and all those type of resources. We have access to them in our phone, as compared to the plastic cards we used to carry in our pockets...
Change	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Well, it's really weird. You would think that our younger officers would now be more technologically inclined since they've had cell phones since they were born and that type of stuff. But we still have some that come in, "I don't know how to use a computer." You have a four-year degree. I'm pretty sure you had to type something for a class sometime. But then you have others that are just permanently attached to their fingers. So it's kind of unusual there, even though they are the same age there is that difference. I think eventually, as time progresses down, we'll get rid of the dinosaurs and we'll get more into that type of stuff.
Change	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...The thing with technology, we used to dictate all of our reports. We never typed. I mean, we'd fill out the face sheets but then our narratives we would call in-- when I started our records department typed them. They ended up getting so far behind that we ended up laying off our [inaudible] clerks, and we moved to a private company, a dictation company. And we'd call in there, and they would type our reports for us, and we would get them back within a day or two. Or within hours if they're a emergency type thing. And again, that's a quarter million dollars a year...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: drones] Policy's written, we just haven't made the purchase yet. In fact, two of us are going to [City] on Sunday to the training to get our pilot's license. Because we're the government, so you have to go through extra hoops [laughter]. Yeah, I could buy one on my own and fly it over my house today. But because I'm the government, I have to get a license and all kinds of other approval. So yeah, it's coming. Strictly for the purpose of [inaudible] crime scenes, search and rescue, tactical situations, and that type of stuff. It's not for the spying. So we've had to--everybody gets concerned, so we have to put all these special caveats in our policy that this is what it's for. Again, [Name] can do it, but we have to be careful.
Change	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Fire has access to our encrypted channels because we share a radio system. But the channels that they use primarily are not encrypted. And we thought that that was going to be a big issue, and so our PRC, our Public Relations Coordinator was all freaking out because the news was going to be able to get our radios. It has not been an issue at all. It has actually improved because we used to stop cars, and they have the app up, and then we could hear ourselves key it up, and it's coming through their phone. And now that doesn't happen. So it's very good. We still let the news know what's going on. Tweet them or whatever [laughter].
Change	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	...The evidence one is actually new as of last year, so we're still kind of working the kinks out on that one. But for the evidence system, it's got a bar code printer and a bar code so you can just scan where it's going and this that and the other. We've got a tablet that we have just for the detectives that we can take out to a crime scene if we need to and do evidence remotely or connect to any of the computer systems in our office remotely if we need to, which would work a lot better had I not dropped it two weeks after we got it.
Change	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	So when I started, dispatch had one computer screen, and an analog phone, and one radio screen. Now, I think they have six computer screens... And digital phone system and digital radio system, so it's grown significantly since I started

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	...As far as communications, cell phones were just coming into their own when I started, so I don't know that that's changed things a lot from what I've seen professionally, but certainly, it helps...
Change	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: comm center] there's the computer aided dispatch system. There is the [state] CIC system. Like I said, there's an alarm monitoring system. The phones are on a computer screen now instead of-- you actually hit the button for the phone line. We've got email, and they've got access to our records, or our report writing software stuff. So they've got access to a lot of different things. Yeah. And it's been a while, so I don't remember exactly what's on all of them.
Change	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: dispatch CAD system] ...So if you get a call and its cardiac arrest, or abdominal pain, or a poisoning, or something like that, usually-- when I started it was you had to flip open a card, and find it, and open it up. Now, it's just integrated into the CAD system, and it will just bring up exactly the questions that you need to ask...
Change	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: report writing software] Not as much as it used to. When I first started in dispatch, 2001, 2002, the software that we had - which is different from what we have now, obviously, because it's been 16 years - that would go down, I think, once a month for maintenance, or updates, whatever. And it was scheduled, more or less, which was good. And sometimes obviously it would just crap out and go down. But we had a system of cards and so write everything down by hand, and file, and hand off, and whatnot. Which I don't think they have to do very much at all anymore. I think it's gotten a lot better.
Change	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	The body-worn cameras we just got last year, I think, so those are relatively new. The in-car cameras we've had for 8 or 10 years-- well, probably 8 years. We've had those for a long time.
Change	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	one of the other things that is our responsibility is if let's say, there's a DUI crash and there's injuries, so we have to write a search warrant to get blood draws. I don't necessarily need to drive 30 or 40 minutes into the office to write that if I have the tablet, and I can just type it up on that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								just as if I'm at my office. So taking that home while I'm on call, it's a huge time saver. It saves me an hour, at least, of drive time. It saves the department an hour of paying me drive time. And I don't have to leave. I can do that in my pajamas [laughter]... That's a huge, huge piece that we just got this year, probably within the last eight months.
Change	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: e-ticket machines] That one, I think, has only been in the last year... It's relatively new.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	I started off as everyone else, the traditional out there in uniform, responding to calls. Did that for about three or four years, and then I transitioned into the training section of the office, who was in charge of all of our new hire training. From there, I realized being in charge of the training that we had some tools, particularly the computer system, that nobody knew how to use. So I figured out how to use the computer system, which then went back to rewriting the training manuals for more efficient work flow and using the database and other tools. And these computers were pretty new. And at that time, it was a DOS-based system. I remember when we got our first PC, which everyone thought was kind of funny. So seeing the evolution and staying involved in that, which transitioned into more technical stuff and true computer work...
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...So as I tell people, everyone starts off getting into law enforcement and you're the street cop out there answering calls, but then there are other career opportunities. And that kind of moved into the tech world. I started going down that path and decided I didn't want to support computers my whole life so I pulled back and stayed more on the training and application side, dealing with the new stuff that came through for law enforcement. And then the mobile data computers started coming in so I got put into that...
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	When I first started, there was a bag phone in the car, but don't you dare use it because it was so darn expensive...So that was only for a true emergency that you can take it, and you had to unplug it from the wall and then plug it back into your car. So you didn't really have the cellphones. And then as it progressed, then I started supporting more of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the in-car computers as those systems started getting more robust and they could do more things...
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...We've had a big challenge lately with the increase in surveillance systems that private businesses have and which formats or what types of files do we want to bring in to our evidential storage system, and which files and formats we're saying, "We can't really say these are secure." I can't testify that the video's authentic because I didn't take it anyway. So do we treat it the same as a witness statement? Because whoever owns the system is going to have to come testify. So what's our procedure for making copies of that to get to discovery? So more and more of these things keep coming up...
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...the frontier and the work always has to keep going as new things are always popping up, such as you've got a box of thumb drives that we're issuing to everyone because we realize people started using their own private thumb drives. When they go to the gas station, the guys say, "Well, I've got this video I can give you." Well, how do you transfer that stuff?
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	So yeah. Did I drive fast, and have a gun, and go out and shoot stuff, and that's what I did growing up, and studied in college? Absolutely. But has it gone a whole different direction? Yeah, I think so... And as I say, what I'm doing now didn't exist growing up or when I was even in college... Because technologies change, and products have changed. And that's a hard one to get through to people of-- what you know now is not what you're going to know later so make sure your mind stays open because it's going to change.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: body-worn cameras] And the data storage, cloud-based, and then how do you get that file to the defense for discovery purposes. Sometimes we don't get to have the final say. Most often, we don't get to have the final say. It's going to come back and the attorneys and the courts that are going to make us change our practices, whether it's in evidence storage...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...We've gotten state-wide a new electronic discovery process. Just adds that much more time to our records folks to do what they used to do. And, okay, now stop and now go into another system and make sure everything gets transferred over from our system and uploaded. More stuff keeps getting added in. I'd like to look at it holistically and say, as a system, we're saving time and there's efficiencies. You, as an individual person in this position, it may not help you.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: evidence discovery process] Today, if they [district attorney's office] were to call us up, we'd just make a new copy of whatever and take it to them, which we probably already gave them a copy and whether it got lost, got misplaced. So there are a few safeguards built in and a few potentially helpful things as these systems come up. And that's sort of the tracking, the data integrity, all the other stuff that people think that any system should have when you're talking about data and data transfer.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: evidence discovery process] certainly the CEJA standards start coming into play with that, who can see stuff, and how secure everything is, and is it encrypted, and the FIPS standards start to come in where you're talking about the in-car stuff. So all these new layers keep coming in that you have to incorporate in as well.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: department-issued cellphones] Even for a while, it was kind of the-- I don't want to say it was a running joke, but as technology improved, the cellphones we had didn't have texting. They were more of a basic cellphone.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: app for situational awareness] ...But it was kind of a new concept at the time since, as I mentioned, the department wasn't using cellphones yet, or the smartphone, so the concept of having apps that did all this stuff wasn't there. The chat was more encrypted than I think if we just think of the standard messaging apps that are within the phone. Sometimes that comes into play, sometimes it doesn't. Sometimes the tracking of those messages can come in if we're all using one app. And so we go through a server and we tell everyone, "Hey, guys, all this stuff

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								is cataloged. Just be aware it's discoverable." That's always the issue guys want to know. A lot of time guys will use apps that aren't official apps because no one knows they are using them, so it could never be discovered, just like a phone conversation... Everyone knows everything on the radio is recorded, but if you call me on the phone we can talk about whatever we want.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...there's probably more apps to come. There are wildly creative people out there who can come up with all sorts of interesting things that we didn't know we ever needed... and that becomes such a part of life from then on and people don't give it a second thought.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...Kind of a paradigm change from how it was before of, I'm going to show up at your house. People don't want us showing up at their house anymore. They only want to talk to you on the phone. If you suggest, "Well, I can come to your house and meet you," "Oh, no, don't do that. I just need to have a question." I don't know if that's a change in attitudes in general with society if we can deal on the phone and just resolve it then, I just wanted the information so it's done. I don't know. I haven't given that one that much thought... But it kind of relates back to the equipment that's in the car and why we have all that equipment in the car now... The boosters are the big one. They get the fringe areas...
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Now, the cars we picked up this year, so now the cars themselves are having more technologies with the backup cameras with some of the other display. You can set up the dashboard on your car to display whatever you want... And going through all the menus looking at those. The other day when I picked up a car, I knew I wanted to display my clock and my miles per gallon and where's my temperature thing going to go, and then the display for the audio and the climate stuff, and how can I configure that myself when I back up. Do I want the little lines to turn when I turn the wheel?
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: assigned vehicles] For the most part, they are, but things break. Cars get hit. It's never an always. For the most part, yes, they're assigned and people customize them. I'm amazed how many cars I get in to do

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								work on and there's a satellite radio receiver. I mean, these guys live in their cars and I understand that...
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...the old days of the police car had an AM/FM radio and nothing more... Now they've got the auxiliary audio input. There's USB ports for charging your phones. When you first get into your car, you have to log in to the video system. Everyone has an assigned USB stick with their identifier that they have to plug into a port to log on to the video system so the display shows their name. So all those things just keep building and more power and more plug-in stuff. Again, it goes back to customizing the cars and all the technology that's in there now far exceeds just the cost of the car.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...We're fortunate that we've got the [military training site]. So they bring in helicopters, crews from all over the country, the world. I know we've had Israeli troops in here and they do the training. We benefit from that in our mountainous area with some of our search and rescue stuff. Back in the day, if you will, things were much looser and we could just call up the station and the commander would drive up there and say, "We've got a lost party in this area. Can you guys launch a bird and go look for them?" or "We need some support." ...
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...It was a challenge when the MHz stuff first came out because, on the VHF world, that air-to-ground communication was pretty clear and they could just dial in whatever frequency they wanted. With the 800 stuff coming out, for a while the standards didn't allow a direct air-to-ground channel. They're worried about, on a repeated system, the helicopters getting up too high, lighting up too many repeaters, and tying up resources...
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	When I started, we were on VHF single system, the dispatcher would change which tower they were broadcasting from. So you regularly get half the conversation because you can hear the tower but not the person talking who may be on the other side of the county. Within our county, we were split. East end of the county was on one radio system, west end was on another radio system. At the sheriff's office, we carried a pack

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								set that had the east end system because, obviously, we drive through their town, and if we needed help, they had to come out of their town to help. Just staffing level being what they were. We still have that today. It's going to be mitigated in one part of our county where they're still on different radio technology than we were. So the cars assigned over there get those radios in the cars. So they have our 800 MHz system and they still have a VHF system in the cars. That part of the county is now switching over to 800 so it will be easier to communicate. In the late '90s, when one dispatch center left the county, we consolidated...
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... we stood up an 800 MHz system within our county. So we all had each other's talk groups but everyone was still afraid to change the channel on the radio or talk in somebody else's talk group because they just didn't do that before. So that took a while to convince people that we have new response protocols. And if multiple agencies are responding to a scene, we're going to move off the various dispatch talk groups and go to one response talk group. It took law enforcement a long time, and they're still not really there, that they're going to go off their channel to go to that response channel because their thought is they're always waiting for the bigger and better deal to come along and go do something that is more fun than directing traffic on an accident scene. So they always listen to their talk group. So we try and do that from a resource utilization standpoint, from an information sharing standpoint. If we're all driving up and down the interstate and no one's found the accident, it's nice to know that...
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... The biggest thing we used to joke about is the law enforcement officer does not need to tell the dispatcher that the fire truck is on the scene. The fire trucks knows they're on scene [crosstalk]. This goes both ways. We have lots of tapes of the fire truck telling the dispatcher that the law enforcement is on scene. So that was the training years ago. They know they're on scene. You don't have to tell anybody that. Resource utilization, talk time. So we finally said, "Okay. Look, if the tow truck gets on scene, we don't track the tow trucks. You can tell them the tow truck's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								on the scene, if it makes you feel better." But again, just something we would sit there and laugh about, going, "They know they're on scene. Really?" But it made them feel better, I guess, to somebody was on scene.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... So early on, a couple of radio sites, much higher power, so you could get a little further away. Now, on the 800 stuff, a little less power. We need more radio sites as they start to fill in coverage areas...
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... I know a lot of other areas, they have got enough repeaters within their sites, the certain talk groups they designated are always turned on. So if it was on your scan list, you'd always hear it. But that was a big change early on when people were complaining they didn't hear traffic, they'd call each other. So the result of that it goes to a little more talking on your main talk group that everyone is listening to, to tell them to go to their secondary talk group, and that's just the only way to get around it.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Now that we're on this shared state system, we don't know how many units the Department of Transportation has that may be using the same tower I have. We're no longer an island, where it's just the people in our little county and our responders. Anybody could be driving through here and tying up those resources. And I go to hit my radio and I get a busy signal. I'm like, "Why am I getting a busy signal? It's a clear day. There's no accidents." Well, there's more people out there now. Or it could've been somebody didn't turn off their radio and they drove through and they're dragging a talk group and tying up my resources. So trying to explain some of those to people, again, we try and mitigate it by putting more repeaters in a site if we have to so we don't get busies...
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	So then, in response, a lot of agencies have gotten to encrypting their radio talk groups. And then the press is like, "Well, wait a minute. What are you hiding? Why can't we hear what's going on?" Kind of a whole nother discussion on privacy and just the way our system works. So we have been able to change our protocols on how vague can you be. You're on foot patrol and give the town. And if I want to know, I can go look on the computer and see exactly what business complex you're at.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								But we expect people are listening. A lot of our guys have the scanner app on their phone because they like when they go on vacation to listen sometimes. I don't know why.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	And so we know how ubiquitous that is, and everyone's out there doing it. So rather than trying to hide all our radio traffic, let's take the steps to safeguard ourselves or our procedures to still get our job done but not let anyone think we're trying to trick them, or hide anything, or be the big, bad government that a lot of people suspect we are.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	"Boy, things are so good today. Look at all this technology we have." And I'm sure every generation thinks that, and we all think that today, but when I think about what we had when I started, and how little technology we kind of had working, and now how much we're expected to deal with, so then it gets, "Do I want more technology or do I just somehow want it to integrate and work easier?"
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Unique to this area we're starting to deploy as many places are more AEDs in the vehicles. As a first responder, if you're the closest, and it's pretty easy to run with an AED and pop it on somebody, and we know that saves lives. So if we're the first one there, or the ambulance is the first one there, the fire department is the first one there, it's not who gets the picture in the paper and the hero award, it's that you saved a life...
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: AEDs] ...So we kind of recognize, and as those costs have come down, and we start to deploy those countywide and nationwide as we're trying to put in our can in the cars. So in our county, we've got that deployed now through a program with the state. We've already had a few times those reused. So more and more stuff are going into the cars as it's recognized as people are out there in the public calls in, well, who can sort of solve their issue.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: difficult to read driver's license format] ...they're trying to use more security in their driver licenses. The REAL ID Act necessitated that, so responding to the federal stuff. I know some states have now the actual enhanced driver's license. I think there's two or three of them. We're not

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								one of those yet but that may come along, so there's going to be more and more stuff going into the driver's license to get a chip. Yeah, so things to think about if somebody actually has to read this still while talking on the radio and watching ahead of them and that eye focusing thing. I mean, I want to look down at my license to read it but I'm still keeping an eye on the car I got pulled over, so now as I know my eyes are taking a little longer to focus from close to far away, how do I change my work practices?
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: FirstNet] At this point, I guess everyone just has the expectation that it's going to work and that it will someday replace the radio system and do all these things that we hope it's going to do, and I think we're too soon in the planning stages. I guess I think more of we're in the-- well, when it's actually deployed, what are all the things that we expect it to be able to do? But we'll get to the specific applications and what benefits that are going to be there. Remember, it still won't put out the fire. It still won't determine who the bad guy is.
Change	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	And [information sharing database] ended up going away because they weren't going to continue maintaining it. And another company, [company], took over. And so they bought out [information sharing database]. Well, [company] owns [information sharing software] and [information sharing software] is actually, basically, a storage of data. So it's a new version of [information sharing database] and it's a better one...
Change	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: information sharing software] So what it does is it-- you log in and then after you log in, it asks you for verification, so previous indicators that I've put in here, so I gave them an email address and I gave them a phone number. It will then text me a pincode. I put that pincode in here and then I can log in. So most users have [information sharing software] desktop which is just a desktop version, easier to see on a big screen, or [information sharing software] Mobile. I have CJIS. We'll go into that in a minute but that's a little bit more-- but this is something that they just came out with which is an even easier template search engine. So they

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have it by person, vehicle, or location. You can go in person. You can just type in their names.
Change	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: person of interest information lookup] before, what we were having to do is I would have to contact dispatch on my radio and I'd say-- tell the type, DMV, and request from them for a DMV photo. And then they would email DMV and say give me a DMV photo and then you have to wait for a person at DMV to go to a computer, type in that person's photo, download that photo, email it back to our dispatch, then our dispatch emails it to us. Then we have to log in to our computer in our car and then get the photo and then you-- meanwhile, you're sitting on the side of the road with this guy
Change	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... So anyone that has a [information sharing software] login, they can now view our photos from our crime scenes, from our booking photos, anything else, surveillance videos from bank robberies, anything like that. We don't have to now try to find an encrypted way of sending it, they can just log in and view it. We're the only agency that stores it like that so nobody else has that capability. But if you go to the desktop versions, you will now also be able to read any agency's reports from any of their systems. So while you don't get the media, you still get the reports, so it's all great sharing.
Change	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... When it comes to the radio systems themselves, we got these new ones which I think are better. They still, of course, have issues. We have issues. We need more towers all over the place because you go into a low spot then... you lose it. If we go south and we go east, we've got a straight shot, no hills, no bumps, or anything, you could go miles and miles and miles and still listen to the radio. You go two blocks in our city north, and you hit on the other side of the hill, and you lose transmissions. So the more towers we can get, the better. The more signal that we can get out, the better...
Change	LE	S	Other Public Safety	26-35	6-10	Male	LE-S-021	[RE: vehicle dashboard with built-in tablet] ... once they put in the tablets, and then people started saying, "Look, number one, I can't brighten my screen anymore." Before, with the old rotation ones, if the sun's coming

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					in one direction, I can rotate it and block the sun. Now, I have to sit here and do this [crosstalk] to try to see on the screen. Or I turn my brightness way up and then it starts making the dash real hot and everything else.
Change	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So in the cars, too, I'd say, is one of the biggest problems. They did it, a revamp of the way that they put all of the computer systems in the car. So in the back, it's now on a folding tray. So it used to be, before, in the Crown Victorias, they used to take up basically the whole trunk. And then we had a storage box that had blankets and flares and stuff like that. But it still took up a whole lot of space back there. You had an extra computer in the back, a extra computer in the front, and then all of your boards and everything else are in the back supplementing it. So it takes up a lot of space. So they were actually, somehow, able to reduce a lot of that and then put it on a folding tray, so now we have the SUV crossover Ford Explorers. And so you open up the back hatch and we've utilized the space that's beneath where the spare tire was. And you open that up and you have some storage down there too. But then they also have a folding tray that folds up against the back seat. So they just pull a pin, fold it back down, slide it out, and they can work on the system, and it doesn't take up a whole lot of space. Now I still have room for full-size cones and flares and all that sort of stuff.
Change	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	...right now, we're getting a new CSI vehicle and we're having to figure out how to structure that, what type of monitor we want, where to put all the data because it's going to be a pick-up truck where we need the whole back for storage. So now do you put it under seats, do you put it where...
Change	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So if we could just-- so one great thing that we've done here is our fire department has the same channels that we do now. So when they go to an incident to help us out, they pull up on scene or they get dispatched to it, they flip to our channel, they answer up on our radio, and we know that they're hearing us and all we have to say is, "You're good to come in," and they can come in. Whereas before, we call our radio, our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								dispatch, they call their dispatch, they send them, and actually, we're sitting next to each other-- So that's been beneficial, but if we could expand it to include other agencies, which, I know, again, it brings in a can of worms.
Change	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	For investigations, they have-- so unmarked cars, but generally, there is, I want to say, 10, maybe 10 total for all of investigations. And they're just basically keys hung on a board and, hey, there are known cars of these are these people's cars... It's known like that. But at the same time, we don't have enough for everyone. We used to have enough, and then if a person is on call, they can take one home with them every night. So we're on call, generally, from week to week, so 7 days at a time, 24 hours. So they can take that car home with them and then they can switch off.
Change	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: take-home vehicles] ...So as far as CSIs, we don't have one, but we're on call 24/7. So that's why we're trying to get a new one. So we just got a grant that allows us to do that.
Change	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: surveillance video] ... So where it comes to the size too, we're starting to go to a online paperless system through the courts. So [county] has had this for a while, where they can do online submissions and they would upload-- they scan all the documents and then send them electronically, but then they would still send a disc of all the photos or surveillance or whatever else. Well, now they're able to upload that electronically, but it's got a limit of two gigs... it's not helpful at all. So for example, for one of our cases that we had at the beginning of this year, we took 3,800 photos. I'm trying to think. How much was that? Oh, I can't even remember how much surveillance, I mean, but it's-- man, if I could remember the gigs. It's astronomical... a single officer taking an average amount of photographs on a domestic is going to be close to a gig and a half at least, but for this case, I mean, it was-- it took, I think, like seven DVDs in order to get all of the photos onto there...
Change	LE	S	Other	26-35	6-10	Male	LE-S-021	[RE: data sharing between LE and DA office] ... So we create what's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel					called a web share which is actually giving them not just the raw data, but the raw data that's been turned into the product so they can view the product up there. When it goes to the public defender's and they get the raw data, they have to create the product themselves. But it comes into constraints of, "How do we get this up there?" [county] is soon going to a paperless system. And we've been learning through [county]'s problem that if they don't make the pipe bigger, we're not going to be able to get it up there. And at this point, there's no solution for it. It's just flash drive after flash drive. And so every photo disc request that we send to the DAs office, we have to send three copies through. So three discs of the same photos up to them, so that one goes to the courts, one goes to the prosecution, and one goes to the defense. And that's per defendant. So then if you have multiple defendants, you're having to do it multiple. But if it exceeds the capabilities of the DVD, you either make multiple DVDs or if it's a phone dump, then you have to do flash drives. So at this point, they're willing to accept one thumb drive to accept it, but then they will have to make their own copies, but if they're trying to get away from the paperless system, it's not going to work unless we figure out something else.
Change	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... So we're getting a drone too, maybe, at some point, but it's not been approved yet, but we've been looking into all the issues, positive and negative, with it. And we've seen that Ford is actually implementing a new cruiser that actually comes with a docking station in the back of it for a drone... So that you could just open up the hatch and the drone can fly out. And it's tethered to the car so you don't lose it. Yeah. We just heard about this...
Change	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: radio systems] ...I used to, when I first started here, we'd drive in certain areas and we just knew, "This block to this block, I'm not going to have coverage, and if I try to key up, I'll not be able to get out." So we would purposefully wait or call out ahead of time and say, "I'm on scene," and then not really be out until you get to that location because you know once you get there-- and we still have locations like that. [Street] in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[City]. It's a dead zone. They've tried to do everything that they possibly can, but there's just certain spots.
Change	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	... we used to have a program that's called Dragon or something, which is just the dictation service. That was prior to when I started working here...
Change	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: communication issues] I mean, the technology aspect is hard. I don't know how you would solve it. I've heard other people discuss, we need better radios and stuff like that. I don't know any different, so I use what I have and that's about all I can-- and you hear the older guys, "Oh, back in the day we didn't have anything." And a few months ago, the line got cut to Xcel, so we didn't have any Internet connection to our vehicles, and so it was like reverting back to 1950. And so you kind of get a perspective. It was like, all right, well, you do have a lot to work with, and these tools are very valuable, so complaining about them isn't making anything better. It's just utilizing what you have and making the most of it...
Change	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: vehicles with CAD] They've replace a lot of them with the newest generation, but they're still-- they go down for maintenance if the car goes down and we get a pull car that PDT doesn't necessarily work in that car because it's different mounts and since it's just a pull vehicle, they're not going to put all the newest latest and greatest things that are going to work in it. It's just a car to use while yours is being repaired.
Change	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: comms with other officers] Within our department-- within the police department, I think it's very easy, where you could send a message on the PCAD. Now that we have the department phones, that's an option, and most of us have each other's cellphone numbers. So that's the easiest action, probably.
Change	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	Obviously, the body cameras are very new. I think most of the in-car camera systems are the same. That seems to work for the most part. Unless something is messed up, it works [inaudible]. There's not a lot of bugs in that system. We recently got a lot of our computers updated, but

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								prior to that, buggy or broken [laughter]. I think the computers are probably the most dated, but they're probably the most expensive to fix as well.
Change	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: phone and computer use] You're distracted no matter what. You're not paying attention to your surroundings. I mean, back when I started, we didn't have computers [laughter]. Or we got these fantastical green screens that all you could do it type in a plate. But now, with all the different functions, it makes actually seeing what's going on in the neighborhood harder. And somebody's looking at this box to tell them what's going on as opposed to actually looking at the surroundings and figuring out what's going on.
Change	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: body cameras] I think they're not-- I'm newer to the district. Did they get them last year? So I've had it since about March. I think it's more of a-- it's not too conscious yet to say, "Okay, now I got to turn this on." Because you're used to hit the lights, "Okay, where am I going? What hundred block is that?" And sometimes you're figuring out your route and you're doing a lot of other things in your head and you get to the call and you're like, "Oh, I forgot." So I think it's still-- it'll eventually be in most officers just your natural thing to, "Oh, I'm going to a call, I turned it on." But it still has to be-- it has to get to that point. Time will fix that, but it's you push a button, it's really not that hard to use.
Change	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	Personally, I think eventually the radio, the body camera, it'll all be integrated into one where you've got your microphone hanging and have a camera built into it. So eventually, you would think once you get dispatched a call, if you're signed up for radio, you should just simply be able to have the camera turn on.
Change	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	Before we didn't have tasers, we didn't have-- probably, they had no cell phones. I mean, the PDTs were just coming into the cars. And they've really, from the time I started to now, it's kind of like going from an Apple IIc to this brand new gaming system that you almost have in the car. You could say the same thing about cell phones. I mean, before your cell phone was to make phone calls, and now it's [laughter]--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I think, partially my generation, but definitely, the generation that's coming after me, we're more apt to text than make phone calls. And so I think we're not as good of communicators because of that. We're used to being able to plan out what we're saying before we send it and stuff like that. So that phone calls, sometimes you-- when I first came to the department, we had to start making notifications. I'm like, "Oh my God, I hate talking on the phone this much." It was just, it was something to even get used to, to be on the phone regularly.
Change	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: cars with license plate readers] A handful... I think some officers do not like it at all. I don't know how to describe it. It's just more noise in the car... Between the computer making noise to you hearing, like you said, you listen to the radio, but not always, it's just kind of it almost becomes chatter some days, and then if you turn the talk show radio on and then you hear this thing go, "Boop, boop," and then you run the plate, and I think it would be nice if the plate reader knew if you were in motion or not...
Change	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	... So, for example, if I'm driving, I may get a hit on a suspended plate. Well, I can't do anything on that car if it's parked. I can pull it over if it's moving, but I can't do anything on it. So then I have to sit there and acknowledge that, yes, this was a positive read or a misread, and it's a little cumbersome to actively be on the plate reader all day... But, at the same time, it's nice. I think now we're starting to learn how to use it a little bit more.
Change	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	The vigilance system, I mean, the city has it, but there's limited access to it, and they wanted to give it to certain districts, but they haven't done that yet, and that to me would be fantastic to have, like if a private company has a hit, it should automatically somehow get transferred to dispatch, like say, "Hey, there's a stolen car here," not 10 hours later when somebody at headquarters, runs it and finds out where it's at and then sends it to us, and then by the time we send a car there, it might not be there...
Change	LE	U	Field	36-45	11-20	Female	LE-U-026	[RE: same car daily] No. We used to and that was nice. We no longer do

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					that... It's very random. You can have a nice car this day. And you can have one that's-- like your brakes are maybe not so good. It changes every day.
Change	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: SSO] That they think they're-- well, we're being GPSd all the time anyway so I don't know what they're scared of. It's just new. Change is hard for policemen. They've been used to doing things their way. Sometimes they're just not willing to adapt as easily as, let's say, newer officers who just grew up with all of this technology. Because there are some older people, probably most who have retired, they wouldn't log on to their PDT. They did not like them.
Change	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Well I think I personally don't use it but our patrol guys have mobile data terminals in their vehicles. [Name] might be able to speak more to how they function or work because I don't really know to be honest but I think yeah in our county we've had some issues with inoperability which I don't know if you're going to touch on but it's something that you know we have our law enforcement partners here in the [County] are on board with our getting a grant when a national grant when we switched over from UHF to 700 and some of our fire departments chose not to make that switch and so I think when I hear from a radio communication standpoint a lot is the inoperability issue...
Change	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I think all in all the communication is a good system for us here. We do have some geographical challenges. We have parts of our county where we have no radio coverage at all and it's been that way for many, many years. We have started trying to work towards installing a repeater in the north end of the county. We're actually just in the process of that right now. We've met with the forest service, we've met with the radio tower owner and I think our goal is in the spring once the snow melts and we can get up there is to have it all installed and up and running by early summer.
Change	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...Certainly for our body cam systems I think so far we've not run into a storage issue but we will at some point. It will get full but we've only had body cameras for about a year and a half or almost 2 years perhaps but

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you know as far as the video systems we have the surveillance systems in the building, we have the in car video and the body cam video and I think at some point you know it'll be maybe more difficult to manage...
Change	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...I remember when I started my career in law enforcement we didn't have cell phones. I remember email kind of becoming big. I think it existed I mean I started in '95. I don't know when email started. I'm sure it was before that but I don't remember email being a significant player in communications then. I know over time it certainly became that. I think the radio systems are better, more reliable. Like when I started we were UHF radios and we had several repeater sites throughout the county and now I think that technology is vastly improved although we still have challenges.
Change	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	We certainly didn't I think I remember we had maybe one video camera and it was like a camcorder and you lashed it to your dashboard and you pushed the button. It was a handheld type of thing and I think I remember people didn't like it. Officers didn't like it because it recorded them doing stuff they shouldn't be doing or saying things they shouldn't be saying and so I think that's just a sign of the times but I mean yeah I don't want to sound like my grandpa or anything but it has changed a lot since we all started I'm sure.
Change	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Certainly and in this valley originally there was a 19-2 modem system with a repeater just right up here on this mountaintop for county because we have such a wide or big geographic area. The cities we use 4.9 broadband modems and so we have several different technologies that we utilize in the vehicles to communicate back to the Sheriff's department and so now that they're all on 700's and cell based communications for the in mobiles I think it's a lot more reliable, the coverage is vastly better, the ability to interact not just with local agencies but across the state and federally has come a long ways to BHS, DHS the different organizations that have come in and helped make these more robust and so just the radio systems alone have vastly improved.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I know the probation department has systems and they work directly with the juvenile offenders, the correctional institutions, the prosecutors are constantly working with different agencies throughout the state. We're tied into hub and spoke network with the [State] Supreme Court and so there's a centralized brand new system in the State of [State] where the Supreme Court has servers both at each county and also centrally located and so there's constant communication, probation prosecutors, public defenders and defense attorneys are all tied into that system as well. And so that information is funneling from law enforcement to the prosecutor's office to the courts to probation and it all ties in seamlessly...
Change	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...Another thing that we see within our department as a challenge is the constant change. My daughter is kind of a social media junkie so it's hard to keep up with the platform that she's currently using. Am I looking at her blog? No dad we don't use that anymore. That's a fake account. I don't even use that...
Change	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	So the different channels and how quickly the latest flavor of communication arises sometimes somebody says hey, you know send me a Marco Polo. I don't use that anymore so it's just diversity of technology that you can use to reach out to someone sometimes causes confusion and delays in communication.
Change	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	You got a three and a five year plan. You can't keep much past that. I can't envision what's coming so it's just too tough.
Change	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	... Our further facility is down in [town] which is about 40 miles down the road here. We've got a road and bridge shop there. We've got a road bridge shop in [town] which you drove up through and so all of these different business units need to be interconnected and secured and how do we do that and how do they seamlessly connect? The applications that ride those pipes they're going to change over time...
Change	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	... if [name] comes to me five years from now with his list it's going to be totally different than what's available today, the capabilities and the ease

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								of use, the interfaces that they have the ability. You know we see a lot of head's up displays in certain applications. We'll see high in military and stuff like that. I'm sure someday that officers will have the ability to broadcast information from their vehicle upon the dash so that they're head's up and they don't have to be looking down at their mobile touching media buttons. It's all visible and they're not worried about endangering citizens as they access all this information coming at them so it's all coming, it's all there. It'll be here before we know it.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	Okay. Yeah. When I first started, there was no computers. I think there was five inside the car. There was about five of them. They came on a big sheet of plywood, and the screen was maybe [laughter] three inches. And it was very, very, very slow. Of course, now it's a lot faster, and everybody has one. So I think they have one per district. I remember when I first started on the department, my FTO, who's the officers that train you once you get on the road from the Academy, he told me, "Make sure you have change in your pocket in case you have to use the--
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	Yeah. In case you have to use pay phone. I mean, that's how far we've gone. I mean, we had cell phones--
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	I had my personal cell phone. We had radios, but there may be a time where a detective wants to talk to you on the phone, and you may be away from the station to call [inaudible]. And if you're not near another county building, you'd have to pull into a gas station and use the-- when the dispatcher would call you-- now, the radio was even worse back then. I mean, the reception was bad. But there was no computers, so you had to write down every call. Then once you write down the call, of course, there was no apps to find GPS or anything. So we had the old maps. We had to pull them out and find which way to go and stuff like that. Report writing and everything we did were-- when you arrested somebody and you charged them was all done by paper. I'm trying to think what else we did that-- I mean, it was all-- everything was either hand-written, or-- tehe one thing that was nice about-- we had a radio system when I originally came on the department. The only thing that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								was nice about it was, it had a button so you could talk on the main channel, but all you had to do was flip a little switch. And we called it the talk-around channel. You could still hear the dispatcher, but it would no longer be on a repeater. It would be a direct channel. It would be more of a walkie-talkie function. So I could talk to you, and you could talk to me, and the dispatcher would not hear it. And then, if the dispatcher was trying to raise me, I would just flip it back to the repeater, and then I could talk to the dispatcher. So that was the one thing I kind of liked.
Change	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Well, we have two systems as technology has quickly changed. The system I have only calls my cell phone. The new system that the newer cars in the last two years essentially, they now have an app on their cell phone that they can actually live monitor the temperature in their car.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	Well, the old system used to be like an instant message. The new system has been out, I want to say at this point, three months maybe. It's more of a-- sort of like an email.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	There's more, I guess, reliance on the computer. I don't think we had phones-- I don't think we were issued phones. So we're relying more on the phones also, where before it was all through the radio. I remember we had cell phones, but we didn't really-- I don't know if text messages were big back then and things like that. We didn't rely so much on, I guess, the electronic portion of it.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	I think it's good. I think as technology moves forward, we should move forward. Instead of staying behind the times because there are so many different things that have come out that would make our job easier, like GPS on the phone, the computer telling us where to go, how to get there. So I think as technology progresses, we should progress with it.
Change	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	Well, I mean, in the past 10 years, the methods of communication, the whole social media platform, things like that-- I mean, it used to be, in law enforcement years ago, we had call boxes. And then, finally, it got towards radios and handheld radios. And we still use handheld radios as we call it. But really, they're more computers than they are truly radios. I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>mean, there's integration, some-- [inaudible] radio is what they really are, some walkie-talkies as they call it. There's integration through apps, through cell phones. So you can use apps and you can talk on your radio through the apps. There's a lot of things that technology has allowed us to do where, years ago, even radios, they were very limited. So a radio of the size that we used, you couldn't transmit anywhere. You had to go through a repeater system and things like that. Where now you don't have to have in-car repeaters and the technology is so much more advanced. The battery life is so much longer. If you need to upgrade the radio, you don't necessarily have to get rid of the radio. You can plug in the computer, upgrade the software, as opposed to having to replace the entire hardware. So I mean, the life longness of the object itself or the hardware, this can last for a longer period of time because it might not be outdated. You can upgrade the software, kind of like your cell phone. You're updating your operating system. You can get more features and things like that until, eventually, the device is kind of past its usefulness. But it extends longer and longer and allows for the integration. It allows for integration through a lot of platforms. I mean, we use-- in the cars, we have the tablets that we use and that's integrated through the CAD, the computer-aided dispatching.</p>
Change	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	<p>So me, as a patrol officer, I'm in the car. Maybe there's a theft at a store. The dispatcher can come over the radio and say, "Hey, 3051, there's a theft at the store XYZ," and they'll send the call to you on your tablet. And you can see, boom, you have all the information that the call-taker at the office [inaudible] communication has put in there. You can read everything. If you need to run people's names and tag numbers, and all that kind of stuff, you can do all that. You have the integration right there. And then if you need to take a report you can take it on a tablet as well. So just being able to do all that is much more effective and efficient. When I first came on we had hand reports. So if you needed to communicate with a dispatcher, you had one option and that was use your radio. Or if you had a cell phone, you could call them on a cell phone. But we didn't really issue cell phones. Now, our officers have cell</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>phones that are associated with their body cameras. So just about all the patrol officers have them. The lieutenants and above, they have cell phones already. And then our specialized units - gun dogs, K9, bomb techs, things like that - they have cell phones anyway because they're on call 24 hours. So if there's a bomb somewhere or a call for a suspicious package, they have to be able to call them. So they'll page them, call them. So everything now is kind of connected. It's no different in law enforcement than it is in the rest of the world. You have to stay up with the times. So as social media becomes more popular, we have to adopt that, and embrace that, and move forward because if not, we're behind the times. And a large majority of people-- 20 years ago, you had your major news networks, and CNN pops up, and Fox News. Now, people get their information from a variety of sources. And if you don't embrace that, then people are missing your message. So if you're not pushing out your own message, then yeah, it's kind of lost. You have to be your own best advocate. So when we're doing good things, we have to make sure we broadcast that as well. If there's issues or concerns that we're addressing, we want to make that [inaudible] as transparent as possible. So by being able to push out your own message to social media-- there's a lot of good things that happen in law enforcement that, in the past, unless the newspaper or the local media kind of want to pick up and do one of those feel-good stories, it kind of got lost in translation. Now we can push that out ourselves. "Hey, our officers just rescued these folks from this burning building last week." Maybe the media would have got it. Maybe they wouldn't have. But if something bad had happened, it's always out there. So being able to push out forward things out there-- and then a lot of times the media will grasp on, "Hey, this is a really good story," and then they kind of re-tweet it. They push it out. Maybe they'll make their own story that goes to a larger audience-- or more traditional audience, I guess, is kind of what you say. But young people today, they embrace it. And as those young people get older more and more of the population is using social media, using these electronic platforms and less so much of newspapers and things like that, so.</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	Yeah. Communications-wise, it is the ability to have the mobile data terminals. The ability to have the iPads. The ability to have-- I have a phone now instead of a text pager. I personally didn't even have a pager until I went into the academy, and I didn't have a cellphone. That's my generation. I didn't get an iPhone until I had my kid, which was like four years ago because I wanted to take a lot of pictures. So the department changes as technology changes. So it started with phones, text pagers then Blackberries. And moving from floppy disks to thumb drives. Each piece of technology has moved. Body cameras, our body cameras don't have to be docked to get the evidence, we can do it off our cellphones, things like that. So as the technology for the world increases, it increases for us. But there usually is that lag time to be able to figure out how to apply that securely and safely to a law enforcement entity. Because we don't want everybody else to be able to hack into our body cameras.
Change	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	Yes. Sometimes you do have to end up going to paper and pencil for-- a lot of signatures are not electronic and there's no way to be able to do that anymore. It's definitely not like we-- we had carbons and handwriting and all that kind of stuff when I came on. So, yeah. And that was just 20 years ago. So there's not a lot of paper and pencil other than there is-- I think for me, it's generational. When I correct something, I'm a red pen kind of girl and so is the chief. And it's a lot easier sometimes than trying to electronically correct something because people miss it. You're not going to learn with an accept changes, but you will learn if you're looking at red penned document, and we literally use a red pen, so.
Change	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	So once the transfer came in, we would get none of that person calling information. Now we do. So that's another good upgrade.
Change	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...So Chief [Name] and I, we met and we're going to be working with him on making some adjustments to, like I said, tweaking some capabilities that we have. So giving EMS access to communicate with us in the subway, for example. There are ways to putting this tactical

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								interoperability channel in all our radios, all their radios. So there are some things that we've done to optimize our interoperability. So ESU, our Emergency Services Unit never had an iMac. Now they have an iMac. So you make changes along the way, and you make it better. I mean, that's what we do. If you're not assessing, identifying the issues and gaps, you're not making the changes, you'll stay stagnant and you'll never solve the problems
Change	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	I think it's everything. It's challenging, exciting. It's scary at times. I guess you never know what to expect. You got to be able to adapt to the minute's notice, not even a minute, a moment's notice, from what your reaction is to what somebody else's reaction is.
Change	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	That's what I like about the job. I have had other jobs in the past and I sat in an office once, I didn't like. I like being out and about. I like not having the same thing to do day by day. So that's the thing with being a police officer. You never know really what to expect the day that you go to work. It can be a slow day with really nothing going on, or it can be a busy day where it's just out of control. That's what I like about it.
Change	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	Well, yeah. It's the lieutenant standing at the podium with the-- they call it the-- I can't even think what it's called. We call it the book, but the roll call book. And the roll call book, it's a giant binder from any type of information brought from the commander's office, and they post it in the book to be read at roll call, like you've got restrictive time due, if there's openings in other districts, if there's-- I don't want to say important stuff, but stuff that maybe the average officer who's not computer literate, who doesn't go every day, check their emails, doesn't log on to a computer just to see what's happening in the district, that's more or less the old school way of doing things.
Change	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	... And that was years ago where you didn't even have access like you do now. I could go on my phone in here and look up the major incidents that's happened in the last few days in the 10th district.
Change	LE	U	Field	36-45	6-10	Male	LE-U-025	... We've got new PDTs now which basically every car is outfitted with

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					newer PDT which is-- I think it's phenomenal. I remember being younger on the job and I always had the crappiest car. No PDT. No Air Conditioning. But I learned how to work through that. A lot of these new FTOs and everything.... But I think the PDT is that the information now is coming real fast compared to maybe two years ago. I can't remember when they had the last upgrade. I want to say about three years, maybe three years ago or four, that you'd run a license plate and it'd take maybe a minute to get that information back. And there was a serious lag between the responses coming. I don't know if you've ever seen a PDT hit on a license plate but when the first one come back, clear, whatever, and the next one, it will tell you it was stolen. The next one will come back to the registered owner. Well, now as soon as I send that information, you're getting it like three seconds later. So I think that's really, really helpful.
Change	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	Yeah. I think the city chairs do the best they can to provide us with up-to-date electronics and everything. This is something new with it they've come out. I think more or less due to the shooting. But they don't want us using our personal cell phones anymore to use these.
Change	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	Yeah, they're mobile. They could take them out. That's nice about them, that you could take them out. If you're in a crime scene, you got to be close to a door. You can always take it out and start typing away and stuff. Back in the day, you weren't able to save it, but now you're able to. As long as you're close to the car, you can save that report and you won't lose it.
Change	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	I think that things are getting better. Okay. Like I said, when I first got on, they had the old PDTs or just letters, words. That's it. No pictures. And then along came the new PDTs where you could access a picture. And now they're even faster now, okay. And now we've got report writing on them, okay. And now we've got traffic crash reporting on them.
Change	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	Yeah. I think they would-- because, like I said, this year I was worried about do I have it on me? Because I've dropped this so many times. I think it's slowly-- just like society, you see how basically the mobile

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								phones have changed in the past 10 years, how much faster, how much bigger they are, and what you can do on them. It's like personal computer now. I don't even use it at home anymore. I do all my online banking with my phone and everything else. But I think as time goes by, and I'm going to be the dinosaur because I'm not going to be up-to-date on these newer features.
Change	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Okay. So Sector is what [State] State Patrol put into place a long time ago to do traffic [app?] accidents. And then also, it's our ticket manager, so all criminal citations and tickets are done on the computer, and then they get printed into your car. So that, for me, was-- so when I first started in patrol - it was in a different department - we had to write out accidents and then also paper tickets, which those still exist. But traffic accidents on a form, you had to do a diagram by hand on the car. Now, it just came-- it's existed for a long time, but for me, some of the smaller departments-- it just showed up at my first department right when I started. So I had a transition of-- I was doing a few of the accidents, and then I got this. So with that, all you do is you stop somebody or whoever, you get their driver's registration, and that's where you scan their driver's license, scan their registration. It automatically populates into the computer. And then you just hit print, and it prints out an exchange of information or the accident report.
Change	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	...So I've seen a huge amount of change when it comes to using all the technology, but using the new social media and all those things. That has been the biggest change over the years, how we use it. Because our city, we use Facebook. We use Instagram, Twitter. I mean, almost every department is using them now. So it's definitely a big change....
Change	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	It's eight years. Yeah, 8 years. Yeah. So yeah. I almost guarantee they're going to be different, and are they on drugs? Have they been using drugs? Are they a lot skinnier? So you can change a lot, so.
Change	LE	S	Supervising Field	36-45	21-30	Male	LE-S-028	This is a town that's growing very fast. I've been here for almost 14 years, and we've more than doubled in population.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					
Change	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	I started in a very small city in [State] and there were only four officers in the department I started with. So I mean, we're talking-- was it '93? We didn't have computers in the cars. Up and where I started my career, they still have to change in between the different repeaters depending on where you are and on-- I worked on [City] and depending on where you are on the island, you have to switch between talking off that repeater or talking of that one. And you have to change it manually on your radio.
Change	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Well, I mean, technology, in and of itself, is always a blessing and a curse because you're expected to be able to do more, and more, and more, and more things, and more things more efficiently with technology, so. But I think if you look back at me the police officer 24 years ago and me the police officer now, if you put me in a car without a computer in it, I probably wouldn't know what to do now. So literally the first 10 years of my career I didn't have a computer in my car, but I'd be lost without it. So it allows us to do so much more to investigate, so much more to be more responsive, to be more efficient. And as far as radios go, I mean, I feel like any issues that we've had with connectivity haven't been much. And you could certainly see areas in the city where the connectivity isn't as good as it is in others. But I don't know that anybody's been helpful or not helpful. You know what I mean? I feel like it gets better, and the dispatch uses-- the technology that's been in dispatches increased and stuff like that too. So I feel as the technology inside our dispatch center changes, our job becomes easier, and we become more efficient at it as well because their job becomes easier, so. And we replaced systems in there. But like I said, for the most part, what we use-- the software has changed, but the actual hardware has remained pretty stagnant, so.
Change	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	I think where it gets in the way is the over reliance on it. Like I said, for me, after 24 years, even though the first 10 years of my career was in a car without a computer, if I was to get into a car without a computer now, I would probably not know what to do. And so I think that's where

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								your barriers are. I wouldn't say that there's ever been a situation where I thought that technology got in the way. There's an expectation, I think, out there in this day and age that the community, having watched all of the crime shows that have been on over the years, there's an expectation that we have technology that isn't available. Everybody thinks that, well, you can get DNA in 45 minutes because they do that on TV. And whereas even though that technology is certainly-- as you go to the crime lab, that's certainly more widely used than it was 5 years ago and more widely used than it was 10 years ago, it's still not technology that's available to me in every single case. So I think there's an expectation of the availability of technology that's been more of a barrier than maybe technology in and of itself, so.
Change	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	... And when you want to present that information to a jury, you can put up a diagram on the screen, and people understand it, but it doesn't give you the same feeling as actually seeing the scene. And they're already working on hologram technology now where they'll make a 3D version of the scene where you can actually stand and look at it as you would if you had been standing there. And so that is-- the ability to take the data that we collect and then communicate it to another individual who wasn't there through photographs is so important. And so as that-- I remember when I first came here, we had a digital camera in the old department I was in that you put the disc inside of it, and when I came here, we were still using film. And you would take the pictures and then just put the canister into evidence, and if it went to court, they'd get developed.
Change	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	--develop the pictures. Yeah, to save money on developing photos. And now you look at where we are with digital technology.
Change	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	When I first came on the department, it was significantly different. I mean, equipment was a lot different. I mean, we didn't have portable radios or even had portable radios when I came on. Communications was... Everything was radio. No computers in the cars, anything like that.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								So everything was voice dispatched. So all the details of the call, everything-- you didn't have any record unless you wrote notes down. Obviously, that's completely changed now. The equipment that we had was very basic. The training that we had was beyond basic. We had minimal annual training on anything communications or tactics or anything. We've obviously changed that significantly. No phones or anything back when I started either. That was long before cellular phones were there. So the difference between then and now is significant. I mean, there you were metered out a certain amount of information and now it's almost like drinking from a firehose for the new officers because they have information coming at them from so many different sources.
Change	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Yep. Everybody has a portable radio. At this point, I would love to buy officers smart phones, but I don't have the funding for it. So right now the only communication device that the department supplies is the radio. And each is individually assigned to an officer. So like when I was-- when I started, once we started getting portable radios, you just used it for your shift, then you gave it to somebody else. Now officers have an individually-assigned one
Change	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	But just kind of a side note, back then, you would check out your portable radio at the beginning of every shift and turn it back in. So everybody shared the same radios. And now, we all have radios assigned to us. So I mean that was kind of... Not so much a technological improvement but a logistical improvement. So when the first in-car computers came out, I think we called them MDCs back then, Mobile Data Computer. The technology back then, it was a very small screen, monochrome, text only. But even then, I mean, I remember being amazed that we had that kind of technology in the car. Because prior to that, if you wanted to run somebody's name for criminal history or to see if they had any warrants, it was a matter of switching over to a different frequency on the radio, calling in, having the folks down in radio run all that information and relay it back to you. But now, in the car, you could

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								actually do it yourself. So that was cool enough in and of itself. But then when the technology improved, I went back to patrol in about 1992 or '93 when we first had the touch screens and the ability to receive photos. And then now, the technology in the car, its universe is ahead of what it was when we started. And so the technology in the car now, I think, absolutely makes police work more effective, far more efficient, and wonderful. I mean the advances in the technology for law enforcement, as far as in-car computer work, it's wonderful.
Change	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	I changed uniform shirts today, so I haven't put the earpiece in, which makes it even better because it's more covert and it's easier for me to listen inside my ear than have this thing on my shoulder. But like I said, the technology in the radios we have now is light-years ahead of what we had when I first came on. The radios have gotten smaller, lighter, and, I think, clearer. But there still are issues of being inside buildings or being in those little dead pockets that occur throughout the city.
Change	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	--easily twice as long and two or three times as big around, and yet this puts out more light than that one ever would. And so I mean, technology has brought me this little wonder as opposed to that three-pound flashlight I used to carry around. So I don't know. Because even though it seems like the technology is accelerated tremendously recently, I think there's still time to just get used to those steps, those progressive steps in technology.
Change	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	I mean, back in the day just before I started, there were radio systems that-- the portable radio was actually part of the in-car radio system. And so they would take this and they would dock it in a unit in the car, and that was your in-car radio. And when you left, you took it with you, which eliminated the radio in the car. But if you work in a two-officer car, only one of you could carry the radio.
Change	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	He wears the ballistic shield in it. But he's young, so. So in a car, you're really dependent on that computer quite a bit for what you need. To be honest with you, in my career, I started in patrol and I went to motors in 1986. We didn't have computers in the car before that. Everything was

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								hand-written. I was in motors till 2005 when I got promoted to sergeant, then I came back to patrol. So I've really never responded to calls like an officer would, with a computer in the car, all right? So for me, that gives some kind of unique challenges because I've tried to learn the CAD, but I didn't get it. I didn't understand some things
Change	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Yeah. Well, they eat in their cars a lot. You've see them, they'll take out jugs of water, but where do they put them in their car? I mean... there's a cup holder but... this would fly out of it if there's an accident. This would become a projectile in the car... Or let's say it doesn't hit you and you're not in an accident, but now it's spilled everywhere, all over that nice technology. Or their sandwich went flying. I guess what I'm saying is - this seems kind of silly - but why don't the cars have a little fridge in the back or a little compartment for the officers to put their food... And it really would go to their comfort level as well.
Change	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Well, I've been here long enough where it used to be really bad. It's much better now. To be honest with you, I think our current policy is, if you're in a building where you're not getting good reception, you're supposed to let our radio know, not 911, but the people that set up the whole radio system, and they'll try to make improvements with that.
Change	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Okay. If I was to describe my work to a complete stranger-- I attempt to be a bridge between public safety operations and information technology, and I try to speak both those languages. And then as we all know, technology shows up. It surfaces more and more throughout public safety and throughout our jobs. It's more accepted. It's more used at places like the 911 center. And because of that there is a gap I think oftentimes between the vernacular and what means what-- what some of the operations mean as opposed to IT. And, again, I speak both those languages. So I think that's a plus side of my hire, but specifically I was hired in to usher next gen 911 technologies into the city and regionally for the county. And what that means, again, speaking to a stranger is giving equitable accessibility to all of our citizens who might use 911 to be able to do other things in voice calls. We're going to start with text

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								messaging and eventually move into multi-media and things of that nature. But overall the whole system, 911 came about in, what, the late '60s or so? Not much has changed except for the advent of wireless calling. And now a lot of things are changing rapidly. And so that's what I attempt to do from day to day. The other side, I guess, of what I do is operational because I've worked on the street before as a firefighter and a medic and a police officer, so I know that world and I think that's important as well. And so even though I'm IT I do try to maybe to some people's begrudginess step in on the operational side of things to provide some of that insight.
Change	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] That's a really good plan. Looked at it that way. Just talking across the country and the climate of transparency, that's changed dramatically over the last two decades. So yeah, we're having to totally change gears in a lot of ways to be able to present all of that data in such a way that it's safe. We're not exposing any criminal-justice information, and then that it's totally transparent.
Change	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] It is, yeah. Yeah, because then it-- and there's also a movement going on in the dispatch world or in the public-safety communications world where dispatchers, we're trying to re-class them from clerical to public-safety first responders, and I think that's a huge step because that's the perfect example of you're there now dealing with the emergency almost face to face.
Change	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] Yeah and just the evolution of just taking a call too. I mean, when I started, you took a phone call and you wrote it on a card. I ask a few questions and boom, you're gone, right? There wasn't a whole lot to look at on a screen. And then, of course, you went into computer-aided dispatch and the phones got a little better, but you still were in that 60-second call taking thing. What I find kind of unbelievable is that we're still there in the 60 second are we not?
Change	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] Isn't that still the standard? And I'm thinking, "Oh my gosh. We've added so much more complexity to just taking a phone call and we still are expecting people to be under the same answering standards."

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] Yeah. I mean, we argued as trainers and things like that in the comm center a long time ago. "Hey, they're going to be doing more. They've got to make a callback on all these cell phone calls now, and they have to triangulate almost and on and on and on," and it's just not the same. It is not the same anymore. It's changed. It has to change.
Change	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] And I guess the one other comment I had about that was why changes can be difficult sometimes or sometimes beneficial. I think it's just the state of affairs we're in today in this year with technology in general. It is going so fast that maybe our decision makers don't know what's the best way to go.
Change	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] I could show you a great graph. There's just this big X of landline usage down, cell phone use is up, and we're about 80% now cell phone to 20% landline or VOIP.
Change	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] Here. So there used to be a time when you used to do it in the police cars. We had Toshiba and Panasonic Toughbooks.
Change	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] ... So for instance, the clinic that's in [City], the clinic that's in the [City] district, a clinic that's where the wealthy-- there is no clinic there. So where do they move them? They move them down here to the [City]. Now that area is cleaned up. That city's supervisor gets all this praise for getting rid of that clinic. Well now that clinic is down here.
Change	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] ... What do you tell the person who called 911 who is pushing their kid, going, "Hey, I'm sorry. We're trying to clean this up." The big thing is displacement. See, I do have that officer in that corner. And he just kicked out that whole block of people there who were shooting up. Where did they go? They have to go somewhere. So then they go somewhere else, and now somebody else calls and says, "I don't know. I've been here for three years. Now all of a sudden I have all these people here." Why? Got displaced.
Change	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] Normally they're using it to check their email because there's pictures of bad guys on their email so whenever you talk about the picture them up in my pocket here. In the old days I used to carry a big

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								huge book with all these pictures of mugshots and stuff like that and your pockets sticking out. Well now I can put everything on here, and I can hit save or whatever. Oh, okay, [that didn't?] save, kinda like a PDF file of my new bad guys, label it whatever and you can just kind of go through it. And then you can run up police reports.
Change	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] No, there's no reason to use GPS. Now some officers out in the [City] district they have their own little GPS units, and they have them on the dashboard or police car, because there are streets out there you can't even pronounce, and you get lost. It is what it is, you know. It's kind of a new thing I used to have-- we used to have the old map when we were out there. Where is that street at? I can't pronounce the street, where is it at? Is it way up somewhere you know like.
Change	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] Yeah so they had cops that are carrying two batteries in their pockets walking around with their tag book, with everything else. So that was a big [failing movement?]. But since we just moved to these new APXs and Lieutenant [Name]'s been really on it with that stuff and making sure, you know. The problem with the commanding officer or lieutenant above when they're at a unit is they can be transferred at any time. So if he has a project, he's doing all these different steps. All of a sudden he gets transferred to a station or gets promoted. Then the next person that goes in there has to start all over from one. Learn radios, learn this, learn all that stuff and then as soon as he gets up to speed, the new Chief comes in and they move him around.
Change	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S3] Yeah, the actual job has changed.
Change	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] It's a lot more paperwork now. And that has a lot with the district attorney. They demand more paperwork. We're supposed to be the paperless world. I'm killing trees left and right in here with all the paperwork that we're going through. I don't know. I don't know how to fix it. Technology is going to keep on getting better and better and better. This is how we use it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	There's a lot of carpet baggage here in general, so I don't know it's a problem. I mean, there are a lot of people moving in, moving out. It's a very expensive place to live. So those that have been here for any length of time tend to be here forever, their lives. Lots of families. There were lots of couples as they're getting once they start having kids, they start looking across the bridge. The grass is always greener on the other side.
Change	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	And you don't have to live in the city anymore, right? Yeah, my dad talks about-- my dad was a cop. My grandfather, all my uncles, everybody cops and firefighters. And my dad talked about that shift from when you were-- because when he was a cop, you had to live inside the city, and he talked about that meant that you went to everybody's christening for their kids, and you went to baptisms and you went to--
Change	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	--birthday parties, and you went to graduations, and you went to weddings, and you went to-- because that's how well you knew these people, and that really shifted in how much that changed the culture and the relationships then amongst those people.
Change	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	Yeah. Google Translate's on the phones. And the reason why I say-- I guess, interpreter just comes into mind because [City] so multicultural. It's just not your regular English, and Spanish, and Cantonese or whatever. It's everybody under the sun that's here, which we welcome anyway. And you have to be able to communicate with all these different nationalities out there. And even when we have the interpretation service, I can't even recall now how many other languages. It used to be a trifle, which they were a lot [laughter].
Change	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	It's mixed. You have billionaires, and you have a lot of homeless. [City] used to be a lot of the area no one wanted. There was a lot of garages and auto repair shops, a lot of warehouses and stuff. Nothing was there, but then when the Giants moved in in 2000, that whole area just super-developed. And now that the Warriors are coming, it's super-developing. So I call it disturbance of natural habitat, because that was the area people would send the homeless to hang out and no one cared.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	But now, they're super-developing. Condos, businesses, restaurants that you had the homeless that were hidden, they're not hidden anymore. They're right on the main streets. So it's a developing neighborhood, but it's super-developing. High-rise condos, housing, tons of restaurants. The Warriors are coming. So it's an area that you never went to, but now it's like you want to go there.
Change	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	Cellphone, the laptop in the car, computers at work, Internet, a lot of Internet. I try to utilize apps when I can for work, just to make my job simpler, but we're very barbaric in our department. We're still 20, 25 years behind. And we're in the center in [City], but law enforcement is hesitant to change. We've always been that way, and you can see the-- I've only been 13 years in [City], but it took - I don't know - eight years to get a cell phone, and then another six or seven to get email for the department. We're hesitant to change
Change	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	I think they said a [City] department just got rid of it. [City]'s trying to get rid of it. Some other small department's trying to get rid of ShotSpotter, because it's not working for them. And I did research on them, because they first came to [City]. [City] said no. They went to [City], [City] bought it. And then, I guess there was a homicide that ShotSpotter helped, and they're like, "Oh, look, we helped capture a murderer." And then, [City], "We want it," because it's reluctant to change. We don't want to try [inaudible] do new stuff.
Change	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	So now, you have a much bigger density of people down here. So the city is going through a huge development, so it's changing all what we taken for granted before, as far as traffic, and changing our responses to that to be able to respond around those types of situations. So the emergency corridors to try and get down the roads, the increased bike lanes for the city to try and make it more of a bike-friendly kind of thing, which impacts traffic, which impacts us because you can't really do anything about massive traffic. You're not going to get through it unless you're walking there, on a bike, you might be able to zip through it. But even if you turn on your lights and sirens on the police car, there's no

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								place for a car to go. There's no place for a car to go, so we deal with that, try to plan out the strategy and routes for that in particular events. So we utilize different methods to get around so we know what our routes will be and all that kind-- these conversations, we have at pretty much every event, as far as what the response will be, how we will get there, how we do different things,
Change	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	... So [Street] has been completely revamped as far as its traffic patterns. It's mostly taxis and buses now, so they now have more control up there. There's a lot more red lanes being put in, the emergency vehicle and bus lanes. So the parking control officers handle a lot of that.
Change	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	So communicating with the Coast Guard, who has now seen different issues that they hadn't seen before because of the change and the developing in different areas, we now have a bike path that goes across the Bay Bridge that drops onto the island. Before it would be random. You would see somebody on Coast Guard side because nobody ever went that way [laughter]. But now the bike path drops right above them, so it changes all of it. So staying fluid to that and addressing those concerns and questions, whether it's coming from either the military, or the public, or the private sector and them speaking for their employees, it's a daily juggling act.
Change	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	... We've had them just over a year and a half maybe close to 2 years now. Prior to that we had no technology in the vehicles. So it's I have experience with them but a lot of guys didn't and our demographics of our agency are how do I put this politically older and so there's been a lot of resistance to change in technology even if it means increased deficiency and some of the younger guys like myself that are there are kind of really pushing this you know hey, we could do things better like [application], like [application], ISP, [state] Police are using [application] where you know right now we manually hand write citations.
Change	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	... So there's a lot of people that move from [state] and are starting to move into our county which brings some different political views and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								stuff like that with it but overall the people that have been there a long time even in [county] the locals really seem to handle their own problems and they're not afraid to talk to their neighbors or if there's a party going on they go over and they talk to the neighbors. What we find is that if their neighbors are not from the area then it becomes a confrontation and a fight.
Change	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	It [demographic] is very much. It is very much changing. So yeah and I don't know I don't really have any data to quantify that but I know that there is some out there.
Change	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	There's a huge disconnect between society and people's perception in law enforcement and what actually happens. A way to bridge that gap is something that I think the industry law enforcement industry needs to work on and should be identifying and figuring out how to change that perception and body cameras have done amazing things for us on a lot of different levels and I think that technology is continuing to evolve because people can easily see what's been going on but it's not the full picture. It's a visual indicator but it's not the sense, it's not the smell, it's not the gut feeling, it's not those other things that you have it's a step in the right direction but we're not there yet with changing our perception of law enforcement.
Change	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	And I've seen the industry change around I want to help people who want me to help them but if you're the guy that's saying screw the police and you call because your neighbors are harassing you I don't want to have to respond to you but I have to.
Change	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] Like he said there's a lot of options here that's been here you know for 15 to 20 years so they're accustomed to doing what they do. You know there are officers here that tell us stories about when there's a call there used to be a light on [name] Tower that would flash red that's how you would know there was a call. You would go to a phone and pick it up go to dispatch they would tell you where to go so you know it's definitely advanced since then.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	The previous administration's philosophy was if somebody was hurt don't touch them which I don't agree with you know. If you can save a life, save a life that's the number one priority so we're getting every single one of our deputies and first responders certified. We're also going to medical aided dispatch. So if somebody calls in the dispatcher is going to be able to talk them through how to maintain that person until help arrives and what we'll start doing is when we have a medical call, emergency call, we'll send deputies and they're actually going to have their own jump bags to take with them for medical purposes and that's just a fourth multiplier again because that's part of shepherding your community you know.
Change	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	...That's a huge impact and so we're trying to implement that and change that you know we got the first round through and everything so but the deputies you look for you don't want somebody who is looking for a routine.
Change	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	... Previously here they had people that would work by themselves. I'm not going to do that. If I have to come in personally and dress out and work with them my deputy is not going to work by themselves so we have eight 12-hour shifts that cover 24 hour clock 365
Change	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	It's a work in progress. I made upgrades since I've been here. We don't have a lot of money so you have to kind of figure out where you can upgrade. They've been talking about changing up the radio system for 6 years. I'm not a wait and see kind of guy. I'm a let's get it done kind of guy and I told them I said this year we'll get it done and they just never had anybody that really pushed it you know and the radio room itself and I'm over dispatch here I'm on the radio just the basic stuff they never fixed is ridiculous.
Change	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	... Now we also have a 100 megabyte switches in there. When I got here they had nine network stack on top of each other.
Change	LE	R	Supervising	36-45	21-30	Male	LE-R-048	... That will change once we get the new system in place. I think

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					changing from the 100 megabyte switches to the gigabyte switches is going to make a huge difference just in speed.
Change	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	... Now before we would enter them and then the probate court would enter them. It became problematic this year. Last year the first 10 months I think the county wrote 688 tickets. This year we wrote 4,510 so probate court was like they're having court once every 2 weeks and once every 2 months.
Change	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	... What we're going to have in the next 4 weeks we're actually implementing all this stuff right now is we're going to have the computer systems in the car where they can actually run GCIC, they can do E-tickets for 6 out of 12 because it's \$950 per license. It's not worth it to keep on writing tickets... The way it was here previously until about 3 weeks ago was you had to come to the law enforcement center, sit a computer back here and write the report. If you got a call you had to go to the call you had to come back here, sit down and write the report so you're having a lot of transition time driving which made it very difficult so we changed that somewhat so that's getting a lot better.
Change	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	We're improving. Before they didn't communicate with anybody. They truly didn't. Some of the fire guys they had one guy in particular that was very difficult.
Change	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	... you know what we can do to help each other out and we want to proactively help and they never had that before and they have the [Organization] about medication for the elderly and stuff like that.
Change	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	...They worked their side as far as traffic control, we worked our side, the fire department has gotten there, great team effort which is 180 degrees from where it was in January.
Change	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	...Previously the previous administration they wouldn't tell you what somebody was charged with. If you called here and asked they wouldn't tell you and I'm like it's probably the record. Just tell them.
Change	LE	R	Supervising Field	36-45	21-30	Male	LE-R-048	...The way it used to be is when they came in here is all phone calls came into this facility came through dispatch so they're answering jail

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					calls, they're answering all these medical calls, the front desk call came through dispatch and they would transfer them.
Change	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	I don't remember back in the day if you had a big wall size map of a community oh man you're hot take man we got this map and now it's like every day. It's not a big deal but back then it was but see now you got all this information through the reporting system that you have in your car.
Change	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	The local behavior has changed.
Change	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	Radios are about to be updated. These are the old [manufacturer] radios bomb proof as everybody knows and of course I'm not saying that as an endorsement of any product as a stated representative but we are about to update the radios... We continue to go acquire properties that are farther and farther out so our jurisdiction is continuing to grow and as such we need to improve the range of our communications.
Change	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	I think they've only made things better. They allow us capabilities that we didn't have before. They allow us to reduce our response times. They've allowed us to increase our situational awareness and many times they're allowing all of this simultaneously so you really see some force multiplication through the use of these technologies where previously all you needed was the gumption to get out there and fight crime and tackle the bad guy and it was probably largely force on force or it was who could out smart who.
Change	LE	U	Other Public Safety Personnel	46-55	11-20	Male	LE-U-049	Football season starts the same time every year and is the same time every year. The weather patterns are the same for us and we can begin to see trends with homelessness and when the transient population begins to seek shelter on campus or when the bicycle thieves begin to receive that resurgence the weather is getting nicer, the bicycles are more plentiful, people aren't locking them up properly but through our analysis of this sick look behavior of campus or nature of campus

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								through our analysis and trending of these crimes. We then begin to look for how we can either employ technology or change our behavior patterns in order to interrupt those cycles of crime where they've trended in the past and we can see that pattern coming, we can forecast it, we know that April into May we're going to begin to see an increase in this criminal behavior.
Change	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S3] Yeah I mean as far as accomplishing our tasks in our job I think it does but along with the hectic thing has become with so many lines of communication in ways of receiving information is has become a lot there's so many different things going on you got to pay attention to 20 things rather than just listening to the police radio.
Change	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] We would go out and only had was the radios you handled calls and you look for stuff and you handled whatever was in what you know but now because of technology that lattice problem is our problem and the only reason we know that is through technology so we're able to work together and handle a problem like say there was a lookout on a specific vehicle. If I didn't get it at roll call I may not get it until the next day at roll call and say I stopped for a wreck that day on the way into work I may not get it until the next day or I had two days so it may be five days and that car may have been say recovered in that time so something happened and I never knew about it.
Change	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S3] Like just like he said unless it came out of roll call look out for a certain vehicle and we've like he said when we determine that these cars are committing multiple crimes in multiple jurisdictions so all these jurisdictions have been putting out a list of stolen cars okay.
Change	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] In early 20's you know and cell phones have been around for as long as they've been alive. When we first started and we were handwriting reports. We didn't even have access to a computer when we first started.
Change	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	Before that up until very recently the officers carried a cell phone and everyone out there knew the number and they'd call the cell phone and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								say we need this and we need that and that's how they operated and out there they really were not happy when that cell phone went away and that was only a transition we've gone through in the last year or two but here in midtown we've always been on a dispatched radio system where people call in and there's no we're not slaves to the cell phone.
Change	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	You know, certainly we are little more with them. They are little more advanced. They deal with the body cameras, the in-car cameras, the mobile data computers in the cars, certainly cell phones for them, you know. If you look at a patrol car when I started 24 years ago compared to what a patrol car looks like nowadays, you would be somewhat frightened at what you see, and maybe a little intimidated by what you see, you know. They have got printers in the cars, they have got, like I said, it is a rolling office, quite honestly. So really they are dealing with everything that I deal with in my office, only, it is in their patrol car.
Change	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	[short laugh] You know, I don't think they are any better. I will be pretty honest with you, and the reason I say that is because we haven't - again, we haven't learned anything from our previous experiences you know; what we were experiencing 25 years ago in our communication systems and the breakdowns that occur in our communication systems still occur today. They still do. You know, I think we are getting better, but they are still there, still there.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Well, I mean most people have an idea of what a fire-fighter and police officer does. The problem is, it's very limited, so yes; we take bad guys to jail, alright? Or, we put out fires. But it's almost regardless of what I feel; I guess it's really transitioned into a lot more than what those traditional roles were. You know, for instance, you might get called; there might be a 911 call for just to go help an elderly lady put her batteries back in her phone. So it's become a little bit much more community service, nondenominational, if you will, level of service. Most people dont know what paramedics do, they know it is some sort of medical something or the other, but it entails quite a bit as far as, you know, understanding Cardiology and Pharmacology to the point where your interventions are

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								pretty much mirrored to what they would do in the emergency room for those significant cardiac events; cardiac arrests, you know, heart attacks and so forth. Early detection as far as police work, all the traditional - take complaints, investigate crimes, make arrests, prepare for court, testify.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	At one point, I thought it was. I wouldn't get into it again. I wouldn't get into public service again, I don't think.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Probably the burdens placed on, whether it be, you know, just the saddle burdens. You know there is a lot more scrutiny, which can be a good thing, but now it's almost to the point where in law enforcement, you know, traditionally we have been kind of separated from the politics, but not so much anymore. So any time politics drives a service, you know, there is room for abuse.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	I mean, I think technology does have a component into just basically how everybody is so connected where it used to be divided, but now with social media and the different apps that you know, while connectivity I think we use the present tweets. Okay, that is always positive, right? So, normally - I shouldn't say normally; historically, you didn't really have that kind of medium to be opinionated; there were some filters before it actually got out the mainstream public. We dont have that, and as far as police work or firefighting and public safety in general, you have people YouTube, you know, traffic stops and so forth and you know, the problem with that is - I mean, I dont mind if somebody wants to videotape me. The problem is they might only get half the story, and nobody wants to listen to the other half.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	So, cell phone text. We use Facebook as a department so put out information on Facebook. So the radio, computers; there is not a whole lot of - they do have a message capability county wide through the MDTs through CLEMIS there is supposed to be but we dont know how to use it. We are just new to CLEMIS so I dont know exactly how to send messages just yet. E-mail.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	I think it's when they switched from - they just did a switch not too long ago; narrow band, I'm not a big technology guy on that - the radios, but I can be - for instance, if I am at [Intersection], I can't talk back here. I can talk to the county but I can't talk back here sometimes.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	So they are thinking about going to 800 but that doesn't solve that problem; it probably actually increases that problem because 800s are nice outside but you get inside, then they are not really that powerful.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Well, we didn't have MTDs when I started so we relied on all radio traffic. So I think with the use of MDTs, it has allowed us to kind of do for ourselves what we count on other people to do for us so I don't need [name] to run somebody now, I can run them through. Also you get probably a little more information because [Name] might not want to say - you know, so and so is the same person we dealt with, you know, two weeks ago over this deal but she can kind of type it in so we can see it and don't have to broadcast it.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Both. Again when the technology is working, it makes things easier but when it is not working, whereas when you used to write everything, nothing is going to break that you can't fix. So now if the reporting software goes down, we can't utilize it until it gets fixed. So we are not doing reports in a timely fashion which dictate when it gets to the court and so forth. But when it is working nice, I enjoy it. Some people are a little technology averse here but.
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Which was identified as a big problem then and it still is. You know, our inability to have dedicated channels to talk to different folks where the Fire has the capability to go to different channels, so for instance, there is the main Fire frequency that everybody gets dispatched on and then if there is - if it is a big enough incident, they might go to a secondary channel, but once they go to a secondary channel, people that don't have that, whether they are, you know, coming in or not, you know a lot of time, agencies that respond in won't have that secondary frequency so they won't know what's going on. And there are certain things you have to do once you arrive on scene, so how do you get that?

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	It's very challenging because of the limited amount of experience we have in our department because it's younger. We have to constantly guide and change officers' behavior by how they do things because again with the FTO program, I have such a young department that now I have got guys who have got 2 to 3 years on - these guys are my FTOs, and before when I started, they wouldn't even look at you until you started having 15 years on to start training people.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	So one of our biggest obstacles as far as challenging is making sure that guys are trained properly because you lose the experience and training as the younger guys are teaching the newer guys - I don't have 20-year veterans like I used to, so my experience is gone, so that is very challenging. Very challenging because -and relates to I don't have much assistance because the younger guys, they don't understand what it takes of all the behind-the-scenes stuff. So they don't know that I gotta do, you know, all the inventories and the grant work and everything and ordering stuff to keep the department running; they just are - so, police work, you get in a car and drive around. So that is challenging. I mean, overall, it's rewarding; the detective bureau part is the rewarding part because you get to follow through on cases and stuff like that. But I dont believe it is as rewarding as it used to be because such a negative impact from the cops [unintelligible] now; I see the guys, they get burnt out quick, they get jaded and you know, whether it is political or if it is from the public, they feel like they are getting it from both ends.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Yes. Back in 2005, we had a pretty mass retirement. It was the guys that all came on together back in 1975 and they all left. At that time, the city felt that it was more profitable for the city to save money by lowering the pension; they eliminated the pension for new guys and bringing in 401K. Then they decided to pay a substantial amount and the new officers pay a substantial amount into the healthcare benefits. So at one point when we started hiring officers, for about a good solid 7 to 8 years we were probably at almost a 60% turnover rate.
Change	LE	S	Field	36-45	11-20	Male	LE-S-061	I think yeah, it plays a lot into the hiring process itself. I think there is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					such a negative image on police now that you know, back when I started keeping 200 people for an open position in the police department. Nobody wants to be the police any more. It's a negative career and it's a negative full-time career and you dont have the applicants out there like you used to. Nobody wants to do the job.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	We have two Hispanic and we do have an Arab officer. We have two female officers now who have only been here for almost 5 years but before then, I mean, they never had any female officers. We definitely try to be as diverse as we can but by no means get. My applicant pool is not diverse.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	I would say it's shifted. I would consider it maybe lower middle class as far as income; like, we were discussing the dynamics of the economy and when everything collapsed several years ago, and we got to renting - I think at one point like 50% of the city was rentals.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Well, originally when I first started, there was like a north and south PD as far as, you know, channels. I mean, it was like six of us on the same channel, so we did know what is going on, but once they went to 800 MHz and they kind of switched up to everybody having their own channel, it kind of just isolated everybody. I mean, I remember so many times where I would be on midnights, I would hear something going on in [City], I know it is heading my way and I would get ready for it coming down [town]. Well, if I was on midnight right now, I would [unintelligible] with Fire and ask them both; I would call the station like, hey [unintelligible] is chasing one through the city. So we have isolated ourselves in that aspect.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	It's going to be a big adjustment. Big. These guys - well, they are going to have to - first off, they use the radio system - our radios and everything are the same, but now they are going to have to get used to competing in monitoring because we are going to be on [City] channel, [inaudible] traffic. The computer system, personally I think it is a lot - I don't like it, I think the CLEMIS system in comparison to what we got now is not user friendly, the computer system that we got now is phenomenal but

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								CLEMIS is not user friendly, it's going to take a lot of work to get these guys used to it because these guys have been using it for 15 years, and then overall, it's a complete different structure for the department because now these guys are gonna be all on the road. They will be transporting prisoners to [City], they are going to be coming here to do the paperwork but there is not going to be anybody here. So again, yeah, it's a huge transition and it's going to be - we are gonna fight them a little bit but it's - if we don't do it, we will go under.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	For a couple of guys that are coming from inner city departments kind of [inaudible] stuff like that, I think it's substantially slower. I think that is a big adjustment. I actually think they like that it is slower. We are not busy enough. If you want to go out and do - get out and walk around and talk to people, you are got plenty of free time to do that stuff. Honestly, I dont think - oh, I know for a fact it's not done much because I think the whole perception with the whole police thing people are just -officers, they get blinders and they don't wanna deal with people unless they have to a lot of times; I really, really do see that; they just - you could go up on a just a normal meet and greet just to talk to people and it always, you knowing, the interest turns negative or they want to complain about something, you know, citizens have a habit of really complaining about every single thing that goes on in this city, whether it my neighbor is cutting their grass and it's on my sidewalk to they want to complain about the mayor. So, a lot of times, the officers, they have the opportunity to go out and talk to people but they dont want to because they dont want to hear it.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Well, it's a total different scenario now. [city] took over our fire department, so they are [city] employees and it used to be - I would go over there for dinner and I knew all those guys like first name. I could walk over there right now and I couldn't tell you one single person that is in there. They have isolated themselves from us. There is kind of a - I get the impression that they don't want to be here and they really don't want to deal with us and that is the officers' impressions that they get. They

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								are not the same buddy-buddy guys that we used to know all the time.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	... On the same note, I don't know if anybody has ever said this, but I believe the cameras have kind of had a negative impact also. I don't believe that they are more - I don't want to say caring, but more open with somebody when they are on call when you used to be able to go to a call and like freely like, listen man, come on, which, you know, you really don't wanna do this, let's do this or do this or maybe- hey, just separate for the night. But now, since everybody is videoed, it's yes ma'am, no ma'am, and they are afraid to make a discretionary call with the fear that you are gonna get in trouble and because you are being recorded.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	I noticed that because I was always a big one on the road that, you know, you talk to somebody like you would talk to your dad or something and you can calm situations down or resolve stuff with like - everybody is semi-happy and no charges are being pressed and everybody goes their separate ways but now it's like they don't wanna say, you know, if someone says I wanna press charges, you know, we were like listen, do you really wanna to press charges on your husband or do you just wanna just - everybody go their separate ways, calm down for a little but now it is click, you are going to jail. So I think it's a little bit on that aspect.
Change	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Yeah, we get that. These are not the radios I had when we started here. Those were actually better and less problematic as far as design goes, but then the batteries all wore out and they didn't have quite the signal strength. These are very good radios, they just, I don't know if the switch moves too easy or what, but [unintelligible] a little bit, everyone here has got their complaint about them and as well as every other department who uses them.
Change	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Yeah, that's a pet peeve. I mean, when I started here, we had a very different 911 phone system. We had these big black boxes with red lights and stuff on them from like the 1980s. They were dead reliable, they had no problems, they were high quality, they were well laid out,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								nobody had any problems with them, they were just fantastic. Then we upgraded to like the \$75,000 touch screen 911 system and all that, and for all that money, you know, they give you the receiver, they don't give you a place to hang it, you just set it on the counter and I can't tell you how many cords we have been through, how many receiver hands have been dropped and damaged and for all this money, they couldn't spend you know, 10 cents to make some plastic mold to hang it on but and there is a big learning curve for me to figure that out and sometimes the glitches - it just freezes up and then, you know, everyone is in panic mode, how do we fix this, because, you know, with the old stuff, if something goes wrong, you hang up, you pick it up, everything is fine and we have a phone that we use to dial out on, you know if you gotta call somebody to ask, you know, whatever, or even call for a lunch pickup order, I mean, just anything. It's just an auxiliary line but the phone that we have there is still like a 1980s like foreign phone from the 80s, no one wants to get rid of it because it works flawlessly and things back then were made of a lot higher quality than now, so I [unintelligible] retired.
Change	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	For the most part I would say better. When I started here, there were no body cameras. We got the body cameras, and I am a body camera advocate; I like them, I like having them. I would not want to make a traffic stop or work without them now - because around here a lot of people just make false allegations. So it's like when somebody goes to a restaurant, eats half the dinner and says, I didn't like this, I want a free meal, you know, just trying to get out of stuff, we get that all the time. People come in to complain and I will drop my complaint if you get rid of my ticket for me and I am like, no, not happening. And people make every false allegation against us under the sun and you know, now I get a dead body, [unintelligible] oh he said this and did this and oh, let's play the tape and then, you know, none of it happened and it's a very good tool for, you know, doing things the right way and by the book. I can't see why you wouldn't want one.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Change	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Yeah, we have a very good skills training program when you are new so when you are new you get trained on all of our software and equipment and if you are already here, the upgrade stuff, usually they are pretty good about making sure everybody knows how to use it, and things of that nature. Most of it is not that big of a deal, things around here change gradually, you know. This radio does the same thing the last radio did, but you know, this knob is over here and this is different and has a better signal and the battery lasts a lot longer, so.
Change	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	Recently, we came out with a kind of citywide split for zones; A and B zone; that is basically split down the middle but as the double car, we are more of a city-wide function, so we can [unintelligible] whatever we need to.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	Radios - I have no issues with radios for the most part as long as they have the newer batteries that are conditioned. In some of the older radios, the batteries wouldn't last and they would, you would have the radio on for 15 minutes and the thing would start chirping that it has got a low battery. These have been pretty good so far. These are new, within the past 5 years, so.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	We used to have something a long time ago called Intercity. I don't think [city] even monitored it, though, but it was - nobody uses it anymore.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	[unintelligible] with these newer ones, like a long time ago but another department I worked for had coverage issues with the radios; they wouldn't work out of the west part of the city.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	These newer ones are based off the cell towers, so they usually have no issues.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	When I first started, there were no laptops in the cars. There were only these mobile data terminals you could just run the plate on.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	Most of the agencies out there all have different systems and I think it would be nice to have something across the board that had all the functions that are user friendly. There are different computer systems out there; like the one that we have currently is pretty user friendly; it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								real easy to use, it has kind of a lot of new features, one that they might go to if there is a merge with [city], that it is still going to go to a different system that is not as user friendly and doesn't have the features that the current one has and we will have to learn a brand new one over again that is not going to have the same features, not gonna be as good, in my opinion, because it is not going to - we are gonna lose the functionality that we had before that we took for granted, like the large database of names and stuff that we already have for the downriver area; not in that system anymore, we are not gonna have that anymore.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	They were just going to take over our Dispatch and our housing of prisoners and then we would use their computer system which, to my understanding, is pretty barebones basic software. It doesn't have a lot of bells and whistles, so it's kind of like a downgrade in my opinion.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	No, it wouldn't be that type of merger because we would keep the police department here; it wouldn't be like a merger with - like our fire department became [city] fire department. We would still be [town] police, but we would just be using their computer system that they will be dispatching for us, so everybody is going to have to learn a new - learn how to use the new software.
Change	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	And add functionality, I mean, if you have one that doesn't have a lot of features that you take for granted with the one you currently have, then that's kind of frustrating too because then you - for example, the one that we have got now has got a huge name database that - and if you have a first and last name and that's all you have for somebody, like oh yeah, [Name] did it [unintelligible] there are a million [Name] but all I gotta do is type in the first and last name and it comes up with a list of all the contacts if they have ever had, like if they were even arrested or got a ticket or say been a name in our record, it pops up with all those options to choose from. Now you go to a new system all those names are not gonna be in there.
Change	LE	R	Supervising Field	46-55	21-30	Male	LE-R-058	Yes, well I mean, you know, you want to try to keep as much as you can separate, but with today, it's just -- it's just very difficult, you know, and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					years ago when cellphones were more expensive, you really try to keep [inaudible] when it was 25 cents a minute, you know, you really try to [inaudible], but you are really trying to keep that down to a minimal personal use or use your personal cellphone. But today, the way the plans are today, it is not as important as it was.
Change	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	We have -- I have been here for a long time, almost 30 years. So, I've been here at a time when the Sheriff and the Police Chief would not speak to each other. I've seen when the county mayor and the city mayor could not communicate, didn't like each other. But today, what we live in today is totally different. We get along famously with our police chief. We work with other agencies, like the ATF, the FBI, the DEA, the Marshal Service, we have all right task force field and we work really well within our law enforcement community with all our partners.
Change	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	... and in our community, there are more people that live in the county than in the city so there is -- and then those demographics haven't changed a great deal. I remember in 1990, I think it was the first time, 88 may have been the first time that there were more citizens living in the county than in the city. And so, there was that big push, you know, that flight from the city. And we've got 260,000 people I think that live in outside the city limits right now and about a 190,000 inside the city limits. So, the demographics of the city and the population of the city have not changed a great deal since 1988 but county sure has.
Change	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yes, I have a radio on that's in my [inaudible]. I have a portable radio but yeah, I do very little of that, my job doesn't require that but our people, you know, if you talk to [name] yesterday, I mean you know, that we're going to [state] Valley radio system, and digital and all that and in that swamp over right now and --
Change	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yeah, we were kind of cutting edge around here on that. We were knocking on their door. They weren't knocking on ours. Or actually, let me reverse it. They were knocking on our door because after [City], everybody went to them. And in that interval we were already implementing our program. And we did that and I talked to our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								community a little bit, it wasn't because we had bad officers that we wanted to watch. It was, we really wanted our community to see what our officers were doing for them. What they were putting up with. The mentally ill that we had to deal with and the closing of [city] and what it means to us as a Sheriff's Office and what we had to deal with that comes from our community. And that was the biggest reason. We wanted people to see what we do and it has paid dividends for us.
Change	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	S1: Yeah. So, you said -- when did you start that program I am sorry I -- S2: We started this first in 13, I think we went in 2013 is when we started. It is 18 and this is our fifth year, so yeah.
Change	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yes we have. Every two and a half years is the contract we wrote and get the lightest and greatest updates every two and a half years at no cost to our taxpayers. So, it is a five-year contract with a five-year extension. Two five-year extensions that are in and they've increased our storage and everything so we are really -- we are pleased. I mean, it is Axon, the same people that made our -- the taser weapon system and we are happy what we got so far.
Change	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yeah, lord, yeah, you can have a picture house, you know, a camera that used to cost 6000, you can get one for 600 now, alright.
Change	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yeah. We still have a server. We still have to maintain some things you know here. But, on our chain-based evidence from patrol, you know we will be looking soon to outfit and interrogation room, our interrogation room is downstairs so we can upload that to the cloud on our evidence.com platform so when a DA goes to look at a case, they can sit at their computer and pull every video, every officer that was there, any interrogations that were done of suspects, they can look at all that right there from that, they don't have to get CD here and a CD here and a type of copy of this tape and it's all at their fingertips.
Change	LE	R	Supervising Field	46-55	21-30	Male	LE-R-058	... So, I think that was a big part of losing some of our reserves, but just can't continue to -- we were just talking in here already. We have not had

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					any -- although our budget has increased but it is we picked up juvenile or because we picked up, you know, animal control or other things have been handed to us to do and it comes with that budget increase but as far as us getting law enforcement positions because we have more people, we need more policeman on the street, we haven't. We just went from five shifts to four shifts so we could put more officers on the street. These guys are working 12 hours a day now and we got to stop that.
Change	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	We've got 14 patrol zones now, we had 12. We've added to [City] its own zone, you know.
Change	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Prior to this you would drive downtown to the City County Building and see the [Job title], it's right outside the store over here and swear your warrant, sign your warrant and you may meet a paddy wagon here. If you could meet a paddy wagon here, you'd have to take your prisoner [inaudible].
Change	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	And we've dropped our crime rate -- our crime rate has been cut 26% two years down there. In two years, our precinct with an Office of County Sheriff's Office on it, it's in [town] -- being able to have that presence, shrinking our zones and those officers moving around not there more and I'll tell you too -- we've got young guys.
Change	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	We've got young guys. We've had a big turnover with retirements that we have had. We have a pension that's in place that's allowed people to retire with a defined benefit, you know, a percentage of their income. So, a lot of guys have taken advantage of that and that gave us an opportunity to be younger and younger agents. And when you get out of here and you are doing that work, I'm 53 okay. Some of my years were dog years, so I have lived 7 and 1 a few, but I am telling you, that's a young man's forte there. When you are out there in that patrol car and you are chasing bad guys, you ain't chasing a 53-year-old man.
Change	LE	R	Supervising	46-55	21-30	Male	LE-R-058	But today -- today, what we are talking about today, I don't believe not for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					<p>one minute that it happens like it did in 1960s. Not for one minute. I have never in my 30 years of law enforcement ever, ever heard of anybody say -- oh, let's get us one today. Never, never. It didn't happen. They will lock up bad guys and it don't matter what color you are. It doesn't matter. They answer calls for service and they handle the calls when they get there and it doesn't matter if you are republican, democrat, black, white, yellow, green -- it doesn't matter. It doesn't matter. So, the recruiting that we've have problems with is -- you know, I had a football coach come in from [high school], [name]. He came in and talked to our training staff two weeks ago on millennials -- on how to deal with young people. Why? What their thought process is? And he talked to -- he has been coaching for fours years. He had to talk to our people about how he had to change his mindset on how to deal with people because when I was growing up, you know, a football coach could beat you. [Crosstalk] it didn't matter. They could hit you, you know, I had a football coach in Junior High School, would grab your facemask and he would run his foot up and down your shins on the side while your mom and dad he is up in the stands watching and nobody could see you but he sat there to punish you for a bad play. They can't do that anymore. It is different. The way you treat people is different and that is what he was talking to our staff about. How do you get through to these kids, this age. What are they looking for? And, it's different, you know. Me and my wife -- we got a 16-year-old daughter. We were talking last night, you know, I have got some things going on in my life that adds stress to my life and my daughter, you know, I have to tell [Name] -- as soon as the selection is over, I want to put this phone down for two days and not touch it.</p>
Change	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	<p>Oh mercy, yes. You know when I found this body worn camera, new age technology, right. So, it's new -- we had in-car cameras but I had my chief of operations, who he is retired now, you -- And Sheriff, oh that will never work. That will never work, that's crazy. And [Name], he wanted to take the cameras and dump them off the [Street] Bridge and [inaudible] because he said a policeman's word doesn't mean nothing anymore.</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								And it is sad you know you can't go up there unless you have got it on video, it doesn't matter. The policeman's word doesn't mean anything. That's crazy. But it is true but you are not going to regress, you know, so we got to embrace this. And my [Job title] [Inaudible] was -- no, they have got enough on their belt. You can't put no more on them. You can't do that to them. You cant -- They have already got in car cameras, you know, we are just going from the car to wherever else we are going, you know. And I remember a guy in 2013 at the [state] Sheriffs Association -- [name] was the Sheriff from [county] and was the President of Association and we were at the [place in city]. And this guy is set up there for 45 minutes with a PowerPoint presentation telling us how we need to audio and video every custodial arrest and any time we come in contact with the public we need to audio and video and he went on how it would be and how great it would be and he opened up for questions and the first thing [name] said as President [state] Sheriffs Association and he said -- you take that Teddy-Kennedy bullshit back up to Massachusetts. He said, it ain't go work down here. And you know what? That's exactly what we are doing today. Exactly what we are doing today and it is as good as he said it would be. 2003, I thought -- man, can you do that? They will never talk to you. People will never talk to you. The criminals we deal with are pretty stiff. Did they tell that? They were like, we're glad. We're glad.
Change	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	We don't know, our in camera cars we did away with since we got body cameras.
Change	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	They are coming up with a Axon that matches our camera for in car where if we are driving to a call, it would be the in car camera and then we put it in park and get out, it switches to our body camera.
Change	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	S1: Now, they have to turn the camera on or? S2: They do. At this point they do. Blue technology is already there. We will be getting that with our next NN CAD systems -- they are kind of a CAD systems now that would be able to 911 would be able to initiate turning on your camera because

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you know technology is growing so fast.
Change	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	We've got drones, yes. We've got drones and have cameras on them and we have an aviation unit with, you know, flyable helicopters, we've got a Huawei and some OH-58 Jet Rangers, but these drones I think are the future for aviation. I mean, for us, you know, it's a very expensive proposition to own, maintain a fleet of helicopters. Our helicopters were free. We got them on a government program. It was, you know, surplus military equipment but the way the drones are growing in technology, it is just -- man. If I call for the aviation unit, if they weren't flying, you know it would take them an hour, you know, I mean, once they got somebody to hangar, pulled the bird out, warmed it up, and got up and got to you -- I mean, really. But a drone, you can off from your car. So, if you needed to do some surveillance, if you wanted to know what was behind the house, that you are fixing to hit, you know if it drone, and you can get it on your phone, you know. They've got iPads that you can operate a drone from. [Name], my techie guy, he first in the [Organization] -- they first got one a couple of years ago I guess. And it was -- and then they got another one last year that was \$ 2400. It was so much far advanced than the first one they had bought. That had the camera that had the ability to lock on to something but the battery lap on those things are the biggest drawback right now. I think it can fly for 20 or 30 minutes but -- but look, if you've got a couple of them, you know, you got three or four batteries, then you can be up for a while.
Change	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	No. No, I think it would, you know, and you know really the dispatching and we talked about the radios and stuff, they will be all out of here before long anyway, you know, you will have one --
Change	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	Compared to when I first started, night and day. I started in '95, we weren't even issued portables. Once you got out your car, you were on your own. They didn't have cell phones. So if you got into a bad situation, there was a time when we got into a fight, or on a foot pursuit, we had to knock on somebody's door to borrow their phone to call the sheriff's office because we were away from our car, you don't have a portable,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you didn't have a phone, so it's changed. For me, being an old dinosaur as they call it, I am impressed of like just using our computers, seeing our computers following the deputies on GPS because I can see all this, just on a simple look up at my screen I can see where every deputy in the [County] is.
Change	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Well, prior to [Event], prior to [Event], we had no interoperability at all. We were kind of just--here in the [city name] for [Event] you were kind of just shut out from the world, you couldn't communicate with nobody. We were actually... the military was flying in medical supplies here to our university, and we were actually escorting medical supplies into the [city], to the [Organization] building with no communications for nobody there. Us and the military were just bringing medical supplies and dropping them off there. But since then we've developed our interoperability program within the [state name], the LWIN communication center, which kind of gives us interoperability now with the radios that we have, we can simply switch a channel and be able to communicate with every [County] in the State of [State] with our EMS, with our fire with just a click of a switch we're able to--we're very fortunate on that.
Change	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	So things like that I believe really needs to evolve to where we're collecting this data. Because for one thing criminals, true criminals are people that are, do things like on a regular basis. They go eat at the same restaurant every day, they get up at the same time, they're people of predictable habits.
Change	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Well one thing is is that across America, about 75% of fire departments across America is volunteer. I can tell you that since I've been in the fire service, the volunteer fire services are a dying breed. We've seen a steady decline in the amount of volunteer fire service. I remember when my dad was a chief we probably was 400 or 500 members strong. People were able to be able to leave their jobs and now, it's just, it's dwindled away the way we-- we get a working structure fire today, we may see 25 or 30 people there. So during the daytime. At nighttime, we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								might see 125 or 150 people at a nighttime fire. But during the daytime, it just seems like owners of businesses and they just don't allow their employees to be able to go anymore... We're having to do cross training things, like years ago when I was growing up when my daddy was the fire chief, the fire department had no responsibility on medical emergencies. The ambulance service takes care of that... We're having to do cross training things, like years ago when I was growing up when my daddy was the fire chief, the fire department had no responsibility on medical emergencies. The ambulance service takes care of that.
Change	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	Now it would. I think you have the mutual aid net and all of that, all the matrix where you can dial in and link up to different agencies, and put everyone on different talk groups and that type of thing.
Change	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	Really, a lot of things were done on paper, and now with word processors, our reports are a lot easier to write than handwrite. I think we have better accountability as far as what information we collect on calls, how we track the data, how we track all the information and the people and those types of things, so it has expanded, the data and the resources that we have, and the ability to get back to it, whereas before, with paper files, you put them in a box somewhere and who knows where they end up, so--
Change	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	I think it's kind of, in my view, it may be I'm a little more removed than maybe some of the other people that you'll talk to. Most of my interaction now is through email or text. I'm very little on the radio unless there's a major incident or we're working some large event. From the department side, hmm, we put a lot of emails but not... not critical information. Yeah, if we have a certain call or a certain thing that needs to be done then we're going to do that either via radio or pick up the phone and make a phone call. So I think it's maybe the shift is just mine and not necessarily the trends of what's going on in the department.
Change	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	So obviously we're university police so we're serving [State] University which is I think our student population is just over 30,000 right now. And then you figure, I don't know, 5,000 to 10,000 in faculty and staff every

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								day, you're looking at a small city here on campus. Staff... is not that big of a turnover I guess but when you look at the student piece, every 4 years, you know you've rotate a completely new set of people in theoretically. And so you know we see it in some of the safety campaigns that we've done. You'll see an improvement and then a rotation comes through and you've got to start back over because the group that you educated that understood it has now moved on.
Change	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	I can't think of any. The MDTs were not in place when I was a patrol officer here so when I was a patrol officer it was strictly radio traffic. But... no, I can't think of any.
Change	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	Oh, no, I can tell you it's changed dramatically since I started 16 years ago and not to sound like the old man in the corner--
Change	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	-- but you know when I was first starting, cellphones obviously existed and everybody had them but they were not--they were not as much a part of everyday life as they are now. You know, if I lost my iPhone my whole schedule would crash and I don't know what I would do without reminders and calendars. But I think you're seeing... the MDTs have been around for a while but they still seem to be a vital piece of what everybody's doing in their agency because you've got real time information in front of you instead of, you know, when I got the call of a suspicious person I had to remember what it was, drive, get there, and try to locate and so now you get on the MDT and you see, oh, it was a white male with a grey shirt.
Change	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	And so you have that information right there. So I think those are--that's a piece that I don't see changing. Now maybe it gets better, maybe the way it works changes but I think that piece is constant. And you know the technology with radios has grown leaps and bounds. I can't even remember what type of radio we had when I first got here but it weighed about 50 pounds and you could have 2 channels on it and so the features that are on these radios now are just absolutely incredible.
Change	LE	U	Field	36-45	11-20	Male	LE-U-057	I think it's changed [inaudible] the years for sure. I mean it used to be a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					lot of phone calls and face-to-face talking. Now everything seems to run through email. Everything is regarding email, you know responding where I think sometimes maybe things are better relayed person-to-person and in daily conversations. And I think maybe we rely a little bit too much on email. But it's the trend. Everybody wants to cover their behind and make sure that they have these email trails. I don't necessarily think it's a productive way to work, but I understand the reasons why it's done that way, and it's kind of the world we live in now where this is, everything is relied upon email.
Change	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	Oh, [inaudible] another thing, and I'll hit another one on this. It was, the way it happened back then, when I first became a police officer, we didn't write our reports. We used a Dictaphone, which you would call in, and you would speak your report, and somebody would type it on the other end [inaudible] and it saves a lot of time. It saves, some people I think struggle grammatically, and maybe it holds their reports back. But if ask somebody to talk, they can usually talk and talk and talk, where if there was some type of automated report-writing system, maybe there would be more information in reports.
Communication	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	..."But, yeah, communications has got to be on top of my list. I wish I had audio files from fires before and after good communications in mask. It's scary to the point where I had somebody from the public-- I was teaching a class, and they go, "You know what? We were listening on the Five-O app." I don't know if you've ever seen that, so--
Communication	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	[City]. So you flew over that little [pass?]. Okay. So that was on fire two days ago. We get sent from another station down, and they say, "Okay. You're going to be responding on [VFIRE21?] on the mutual aid [bank?]." And I go, "Perfect." So I get my fleet map, go MA/1, go down to [inaudible] channel 3. So zone MA/1 channel 3. Okay. All right. So I get on to talk to a county [com?]. They go, "Hey. Your operational frequency is [City], local command, tone 5." And I'm like, "Copy." And I look at the guys, and I go, "Do you guys know what that one is?" And we're like, "No." And so my buddy's in the back seat and he's got a fleet map, so we're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								looking through 500 channels, very quickly, mind you. And I'm going, "Dude--"
Communication	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	...So they've kind of coordinated a fleet mapping program for our radios. So we have talk groups that actually will ultimately, once all these systems are completed, that I already have in my radio, that I can go to the [City], I can go to the [City], I can go to the [City], I can go to the [City] nodes in the radio system and be able to communicate. So the planning is there. The money is being spent to make it happen. The fleet mapping piece is done for the talk groups on the radio. But currently, right now, we have a handful of radio channels that are available through the state that we can use for major law enforcement events. We have a few other interoperable channels that have been developed between a couple of the counties and things like that that can work. It's not great, but it's better than it has been and at least the discussions are real now.
Communication	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	I get to work roughly around 6 o'clock in the morning. I relieve the person that was working before me and more or less do some kind of pass it on to see what issues they encountered yesterday, and at that point I would do my apparatus check. And once that's all taken care of I normally get to my office and start going through my emails. See what kind of issues that I need to address for the day and I check the operations briefing which is put out by the duty operations chief and see what areas I need to help out the duty operations chief with the overall operations of Fire Rescue. And once that's done, typically a breakfast...
Communication	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...Answering a lot of phone calls that providers may have issues with and more or less I'm just kind of a support role to see what is needed. And if I can fix something, I certainly do. Typically, by the end of the afternoon, start going back to the office again, eat dinner, and at that point I start winding down for the day. I work a 24-hour shift and I'm off for 48 hours.
Communication	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Typical communication, for the most part, is by cell phone... This is my county-issued cell phone. This is my personal cell phone... I carry them both with me. This county-issued cell phone-- when I get off in the morning, I hand it off to the next guy... This is a shared phone. And the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								county also gives us a county-issued personal cell phone so that we can take it home and be available for calls as needed... This is my personal personal cell phone [laughter]-- in which-- I typically don't carry my county-issued personal phone, but I call-forward to my personal phone... So if my boss calls me from his phone to my county-issued phone, it will go to this phone and I'm good. So I'm not managing three, four, five different phones at any given time.
Communication	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	So most of my communication is through cell phone... But there's a large sum of my day that I'm operating on the radio as well. Providers may be on the scene of a call having a difficult incident and may need to call me on the radio and then we'll talk back and forth on a secured channel and be able to talk securely and be able to talk about patient information.
Communication	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...So pretty much predominantly I operate with a cell phone and a radio. Also, some of the other communication technologies we have is a mobile data computer. It's a tough book that has all of our dispatchers on it and that's how we respond on calls, clear from calls, and go available in quarters, available on the radio.
Communication	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	I mean, I guess to elaborate a little bit more, we operate with phones, radios, computer, email, face-to-face. So I tend to, if I can, I try to operate face-to-face.
Communication	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Most of my role on those type of incidents would be to communicate with the hospitals and find out how many patients can each a hospital take? And then I would start coordinating which patients go to which hospitals at any given time...
Communication	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Sure. Normally, the people that are taking care of the first triage are the ones on the fire engines and fire trucks. It could be ambulances and medic units. We have four providers on engine companies, three on trucks. So we typically utilize those crews, so that they can get through a lot more people, and triage them and give us a number as to how many people we're dealing with.
Communication	EMS	S	Field	36-45	11-20	Male	EMS-	...then typically we'll have a communications officer, and that's pretty

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				S-014	much what my role falls in. I would call our SYSCOM, which is a [State]-based medical communication system, and then I need to declare a mass casualty incident, and then I need to coordinate with the hospitals and find out what the bed counts are. So, yes. It's a very similar command structure as a fire. You're just using different terminologies.
Communication	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Yeah, typically when we get dispatched on a call, our dispatchers will say, "Respond on [Name]. Eight, we know, is a [County] unit. Or nine something. Typically, part of the dispatching is something you have to listen for, as to what channel you'll be operating under.
Communication	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Well over 90% of our calls probably operate-- we typically dispatch on alpha, [Name]. Then we respond on [Name]... these are just channels. And most calls operate that way...
Communication	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...On low-scale calls, not a whole lot of communication that needs to happen. We'll have five or six people on an incident, and they're operating within a house, so we don't need to talk to each other via radio. We can just do face-to-face. On big incidents like house fire assignments, hazardous material events, mass casualty incidents, then we go to a whole separate talk channel. There's not a whole lot of talking on that radio, other than what's on that particular incident. So if we have six, seven, eight units dedicated to one incident and you know there's a lot of talking, we'll go to what's called 7 Charlie, or 7 Golf, and we'll have a talk group that we can operate within. And only people talking on that channel are on that call...
Communication	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...More than 90% of calls we operate under is 7 Alpha, 7 Bravo, and there's not a whole lot of chatter on the radio, other than I may need an additional resource. I may need just to clarify something through my communications.
Communication	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	So our communications they dispatch every single call whether it's a fire call, an EMS call, hazard materials, you name it. It's all done on [Name]. We have well over 100,000 calls a year [County] wide. And every single one is dispatched on [Name]. Well over 90% of the calls get-- respond on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[Name]. And that is only an operations channel. We don't dispatch on that channel. They just do request of resources and questions and stuff like that of people that are on an incident.
Communication	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	One of the main apps that I use is called CHATS. It's C-H-A-T-S. It's a [State]-based hospital status program. I can look at the app and it shows me all the hospitals in [State] and what diversion level they're on. At least from my role, I can see what hospitals open, what hospitals are closed so that we can-- and also providers on ambulances, can use that resource as well to see, "Okay, I've got a patient that is very sick. But this closest hospital is very busy." It might be better to go five minutes down the road and be less busy of a hospital so they get better treatment. So that's one application that I can utilize.
Communication	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	We also have hazardous materials apps so that if we run a hazardous materials incident, we can check to see what UN number it is, what the product we're dealing with is. We have pill identifier apps in which if we have a patient that is taking a number of medications but they don't have the pill bottles, I can look up the number on the pill identifier and say, "Okay. They're taking X medication." And it helps me treat the patient knowing that they've taken certain medications...
Communication	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	there's a wide range of applications that we can use straight from my phones... We can access it through the MDC... But a lot of times, if I'm operating inside of someone's house, I can take my phone off and go, "Okay, well, Holy Cross Hospital is very busy right now. How about you consider going to Washington Adventist?" or something like that. It just helps the patient out so that they're not going to a hospital and wait six, seven, eight hours...
Communication	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...If we feel that our life is in danger, then our first priority is the first responders. If we feel so inclined, we will exit the scene. We will call for a police officer to show up on the scene. We have certain things in place, some nomenclature that will say, "Hey, our lives are in danger. Please get police here right now." We would back away, protect ourselves, and then call for police.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...I normally find where I'm riding and get that position ready with my gear. Makes sure it's all ready to go. And then I sit at our breakfast table and generally do breakfast and coffee. And then at 07:00 in the morning, we have lineup which is a traditional term. What that means, that the nine gentlemen or females that are working on my shift, we sit and we have a face-to-face discussion about previous shifts, the day ahead of us, what needs to be done, accomplished goals for the day. And that generally takes about 15 to 30 minutes uninterrupted...
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So in the state of communication, I would say all forms of communication. In regards to informal and formal communication, both written-- so the first part of the day is that we're utilizing computer technology and communication to figure out the lineup as to who's working and where they're working so that we can do a matrix or an assignment based on who's riding what piece of equipment.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Back to the communication, so we have that form. And then we do more of the verbal communication, sitting together. Everybody face-to-face, talking. There's some documentations or policies that are read every morning. We may share a quick YouTube video if need be of an incident before, lessons learned type thing. And then after that, most of it is all just one-to-one or individual verbal communication throughout the day. And then if there is a response or a 911 call, then we get more into technology in the sense of calls placed from the 911 user. Calls 911, it goes through our CAD or our Computer Aided Dispatch. They generate the 911 call, the type of people that are needed for that call. And then it's transmitted to the station where an alert goes out. It's dispatched using additional technology or forms of communication through the radio system. And then we respond...
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	While responding, communication is utilizing our computer or our mobile terminal, which is a-- someone not familiar to it, I would say is a glorified GPS system that has GPS, email, and text messaging for someone that's not familiar with it. So we get a, if you will, text message or a dispatch prompt that tells us where we're going and how to get

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there, the type of call that it is, whatever feedback or comments they can provide if they have them. And then radio that is doubled in, we get it as a text message, but it's also a verbal prompt or a verbal piece of communication through the radio system. So we get the same feedback through that.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So at the station level, it would be face to face. On actual incidents, important or urgent messages are delivered via radio so that they can span the whole audience, whether it's just myself or my partner on the scene saying that we're going to the hospital or that we're at the house or what we've come across. If it's just something I need you to go to the second floor and check the battery and smoke detector, that's face-to-face. That would not need to be transmitted over the whole county or the whole population. So I would say most all communication in my profession is done verbally. And probably 50% is face to face. The other 50 would be over a means of radio communication or phone.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So I do use a cell phone. So I guess this is what would stand out for me as an ALS provider. So if we're just talking about technology in general, there's multiple applications that I use on my phone from a simple calculator to do and double check mathematic formulas to my protocol of my medical guidelines that I need to follow within the state. I have that as a computer app as well that I easily look back on. I am not embarrassed to say of the amount of information that I am required to know and utilize very much outweighs how often I use it. So checks and balances of just to make sure before I do something that I double-check myself...
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	[RE: apps] ...we have the means of looking to see what hospitals are open or closed via a website, as well as if I need to look up a phone number for adult protective services, or child abuse, or poison control, or things of that nature.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	I search. And then would use my phone to-- and we may get into it further, but you're somewhat limited as to what you can say on a radio and talking because it's a push to talk. It times out... It times out in the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								sense of you can't just hold in the microphone and talk and have a full conversation. It will time itself out.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	And it also depends on who the end user is. So if I'm needed to a family member to get medical history about a loved one, they don't have the radio system that we do. So I can't talk to them on the radio. If I need to talk to case management or a social worker, they don't have that radio. I'm limited as to who is on our network, who to speak to.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	If I need to utilize a language line to talk to a patient of a different language base, I can't do that through my radio. I can, but there's a lot of extra hurdles that go through that. And in my profession as an ALS provider, time may be of the essence. And I need that time and don't have the time to talk to three to four other people to find someone of that language to then convey and talk on the radio.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...So I think communication's pretty easy in the sense of we're very fortunate in the county that we work in. Even neighboring counties that we have, and I'll use the word interoperability, we have a good means of communicating both through a lot of training or unofficially that we know one another. We know who's working. We have a lot of background knowledge of different stations and what to plan for, and although our department's very large, it would not be difficult for me to call [County], which would be just shy of an hour drive, so it's a large county. An hour drive and talk to a fire station to an individual that I really don't know. May be able to pick him out of a photo album, but to be able to communicate with him or address an issue or concern, and get immediate feedback from them just by picking up a phone.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	Certainly emails, hundreds of emails go out throughout the course of a month with significant means of information to communicate to everybody. YouTube training videos that we put up so that we can understand what the direction of the department's going...
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Means of radio communication of we can talk from one person down to the other. There are slight hiccups every once in a while if you're in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								certain basements or buildings or large box stores, so if you go into a grocery store to the back towards the deli or far corner of a store, that you may lose means of communication. But we work around that with different policies or adapting. Or on the river, we may not have complete radio communication but we still have cellular communication should we need to make a phone call...
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	Communication-wise, may not be the greatest in the sense of we may not know everything that's going on. So if I respond as a medic to a call, and the police may already be there for whatever reason, I may not know that, that the police are there. I may not know that the police are the ones that called us...
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...If I go to an assault call, and the police are on their way there, I don't go until it's safe for me to enter... So dispatch tells us that, but it's also a formal policy that we have that we stage or maintain a distance.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	But the police could be there for 15, 20 minutes, and the assault person be another state away. But while they're doing their reporting and talking to one another, they don't realize that we're sitting two to three blocks away, so it may take me to call and ask, "Hey, are the police there? Did it?" "Oh, yeah, yeah. You can come in." To find out that it was safe the whole time. So there is a delay in that...
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	[RE: police] ...I think we've gotten better with some time, but I also don't know every officer that's in my area. I don't know their first names. I don't have their cell phone numbers. I don't know their radio identifiers. We don't have that relationship to communicate that personally, I guess.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...It may be a little bit of a delay if you have to leave, and the wording that I would use is mutual aid. So if we have to respond mutual aid to an outside county or, for us, it could be another state is, how are we going to talk to them? Mostly, that would be done by radio communications. We have the ability to do radio plugs or communicate to a free channel, but that's above us in the sense of that's communications or dispatchers to assign us to a mutually acceptable channel that interface. Since we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								went to the 800 megahertz system, where it's a lot easier to do that. Easier for us, but if not every agency that we respond with has 800 megahertz, that could be a challenge...
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	Yeah. So the AVL is a new where it's not just-- it's a part of CAD or the computer-aided dispatch. It dispatches 911 resources to the closest available rather than that response area... So it's just sending coordinated resources that are the closest available via distance. And then it incorporates speed bumps, and jersey barriers, and medians. And so if the closest unit is right across the street, but has to go 10 miles down the road, and get off on an exit, and do a U-turn to come back, well, that may not be the most appropriate resource to send. It may be more appropriate to send someone from that exit that doesn't have to do all those navigational directionals.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	Paper, hard copies. So we always have redundancy in everything that we do. Technology getting in the way of if I utilize my phone and one of the applications, FireApp, to use that to get directions to a call, if the address isn't an updated address, or the mapping software, Google, or apps, or whatever browser you're using doesn't know it, it defaults to a generalized location. So I'll be honest when I say that, embarrassed as I may be, that I didn't realize it and that the app was smarter than me and took me way out of the way... Rerouted me to another location, and that I need to be smarter than the software to know that was in a complete different station's area, and that there was no reason for me to be there. So it failed me. It made me look bad, and I've learned from that...
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Sometimes radio, if it's a major incident, a major emergency, only one person can talk at a time. So if you're trying to get urgent messages out, technology will not allow you to do that because only one person can talk, and you can only talk for limited periods of time.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...I think when the 911 call taker receives information from someone that's calling, they obviously are on the phone with them the whole time frame for us to get there. So they're getting key pieces of information that I don't know about, or will have to repeat the same questions. So

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there's not really a good transfer of care, in a sense...
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...So if you call 911 because you're having chest pain, and the 911 dispatcher's asking you all kinds of questions about where do you live, and what's your address? Where are you at in the house? What time did your chest pain start? Just being that dispatcher asking questions, those are all same questions that I'm going to have to ask when I get there. And I don't know them-- and I don't know them ahead of time. So they're already getting them, and they're staring at a computer. I would find it helpful if those questions that they asked, when they got put into the dispatch message, that they would also transfer ... over to my electronic reporting mechanism.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So I get the basics of it's a sick person, it's a troubled breathing person, but it's all very vague. So it could be trouble breathing, but the person also has been outside doing gardening work all day or playing basketball. Well, of course they're going to have trouble breathing. It's not a trouble breathing asthma attack. It's not a trouble breathing call. It's a heat-related injury. So I guess more specific type questions, or I feel like we guilt people into-- when the dispatch, guilt people into, "Are you sure you're not having chest pain?" "Well, I might be," and then they code it as a chest pain call and it's really not. It's more of a indigestion at a restaurant.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	What causes communications? People not doing it. So people not communicating or vague in the delivery of their message. So I will say firegram because that's common terminology for us, but as a medic, ALS provider, on the firegram in the sense of going to someone's house - the incident location, firegram, however you wish to - is somebody may say, "Come around back," but not say, "Utilize the left side because that's where the sidewalk is." So they're very vague in their means of communicating. Again, we don't want to talk a lot on the radio because what we say on the radio, somewhat the whole county is listening and doesn't need to know that the gate's locked on the right, use the one on the left. So we just don't do a very good job of delivering basic

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								messages.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	What I mean to say may be different from what you mean to say. So it can stem all the way down to basic cultural differences and diversity to department policies and procedures of if I work tomorrow, the captain may have a completely different way of operating and may call me on the phone rather than delivering a message on the radio, something I'm not used to. I may not have my phone with me and he's been trying to get a hold of me, well I'm not used to that. I'm used to my officers talking on the radio or so.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So me personally, my time, my experience. If it's a message that I don't know, I repeat it back to them. And that's just educational knowing of communications and repeating messages back. Confirming what they mean to make sure that I understand. And I think that's done very tactfully saying if I don't understand something and it's you want me to go to the second floor, that may indicate to that individual, "Yes, I need you to go to the second floor and do a particular task. I may need you to." If you're repeating back to them and they hear it, like, "Oh, yeah, I didn't give as much information."
Communication	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Each person has their own log-in. Although, usually, only one crew member is actually logging in. So usually the officer of the unit or the senior person will log into the tablet up front that we use for the CAD system and to get our dispatchers and get all of our call information. The tablet in the back is for the patient care reporting. And generally, whoever's doing the majority of patient care will sign into that one, which may or may not be the same person [laughter].
Communication	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	The one up front for the CAD stays on the unit. The other one can be taken out. And it depends on what type of unit you're on. The fire trucks take it out more frequently than the ambulances because they'll take the tablet in with them when they go in somebody's house or something. So if they need to get-- the person decides not to go in, and he can sign a release or something. They can get it. Plus, they can record the information that they're getting when they first arrive, and then when the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								ambulance gets in, they can transfer it over to their tablet. So they usually keep theirs with them. The ambulances, a lot of times, will keep it on the unit because they'll just fill it out at the hospital or on the way to the hospital. So they don't bother taking theirs in with them when they get on the scene most of the time.
Communication	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Majority of our information comes in over the tablet. Often, it's connected to the CAD. We get dispatch on there. We change our status on there. We let communication know that we're responding. If needed, we let them know that we're on the scene. Usually, that's connected to the GPS. Usually, it'll pick us up when we arrive on the scene or when we get close to the scene. It'll automatically put us on scene when we get close. But if we need to, we'll do that on that tablet...
Communication	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...And again, transporting to the hospital, we change our status with the CAD on the front end. We do talk over the radio to our EMS supervisor or communications. Let them know what type of patient we have and the priority. Find out what hospitals are available at the current time to transport to...
Communication	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...if we need to, we can status manually that we're arrived at the hospital, and at the hospital it's mainly just regular communications with the supervisor or communication. We let them know when we've actually transferred care of the patient to the hospital staff, and then if there's any delays at the hospital we let him know over the radio. And then, when we're ready to go back in service-- well, actually, back in service, we usually use the CAD tablet up front for status on there.
Communication	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	[RE: CAD via tablet] The software has buttons on it for all the statuses. So it's got a button for en route to the scene, arrival on the scene, transport to the hospital, arrival at the hospital, and back in service, as well as a couple of other statuses. Available mobile on the air, if you leave the firehouse for some reason and you're not actually in quarters. I don't know if they took the at-at-quarters button off or not because they recently changed policy and we had the status in-quarters from the terminal in the firehouse now instead of doing it from the mobile unit. So

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								I don't know if they took that button away, but that may still be there. No, we don't use it [laughter].
Communication	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	We usually interact with them frequently and well, usually if we need to talk to other first responders, police officers, or whatever, usually it's face-to-face on the scene. We don't have radio communications with them. Our radio systems aren't connected to theirs. So if we need to relay information to them before they get there or something like that, then we have to do it through our communications. Our CAD systems are connected, though...
Communication	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	[RE: comms with LE] ...So the CAD tablet in the front of the unit will have remarks for the call. And any remarks that [City]PD's dispatcher puts in there, we can see this because they're documented on the same call. So we can see any remarks that their dispatcher puts in, but we can't hear directly what they're saying on the radio.
Communication	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...they're allowing us to actually-- if the person is in cardiac arrest, we don't transport them as often as we used to. Because it used to be we would just start CPR and do what we had to do on the scene, and then take them to the hospital. Now, we've kind of changed our policies a little bit, where mostly ALS care that we can do is the same thing they do at the hospital anyway. So rather than transport them to the hospital and have them declare the patient dead pretty much when we get there, we'll work them for 20 minutes on the scene-- at least 20 minutes on the scene. Do everything we can. If we don't get a rhythm back or anything, then we'll call our medical controller and ask for permission to just terminate there on the scene. And at that point, it becomes a [City]PD issue because then they got to call the-- they'll handle notifying the coroner and anything else to do with their investigation. Usually, it's an apparent natural, so usually, it's not anything related to a crime, but they still have to do their little investigations.
Communication	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...I mean, basically, a lot of the advanced equipment that has been used on ambulances for years is starting to become more technology-enabled. For the EKG monitors we have now, have modems and or

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Bluetooth, and they can transmit that EKG directly to the tablet, into our report as well as to a server. We can transmit EKGs to the hospitals for them to look at. If we have a STEMI, we'll [transmit?] the EKG to the hospital we're transporting to. And I don't know for sure-- I've been told that when we send the EKG to the hospital, it automatically alerts not only the ER attending physician, it alerts the cardiac cath team, and a cardiologist as well. So that everybody's pretty much looking at it, seeing what they got...
Communication	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	No, it's not even a-- yeah. It's actually, it's like a basic flip phone. It's not even a smartphone. So it's just your basic flip phone. I think they might have even disabled the data capabilities on it. So even the limited data capabilities it has on it, I don't know if they're enabled on the phones. They're used pretty much just for telephone communications.
Communication	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...I know that at one point, they were, at least, working on, I guess, a CPR app or whatever that would help citizens with CPR. But as far as in my daily work, there is a protocol app which the department, I believe, provides information to the developer to keep updated so I can quickly pull up protocols on my phone, if I need to.
Communication	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...There are some that I personally will use. Children's Hospital has a pediatrics app that I will use for pediatrics. It pretty much has the-- it lines up pretty much with our pediatric protocols anyway because our pediatric protocols were written by Children's Hospital. So it's pretty much the same information, but it can be a little quicker to find the information than digging through the protocols to find it in the protocols. And there's a drug reference app that I'll use for medications occasionally.
Communication	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...the CAD tablet up front does have a application for the old-- basically, a digital or electronic version of the old hazmat response guide that we used to carry in the units. So if we're running a hazmat call or something or whatever, we can look up hazmat information on there, and specific chemicals, and stuff if we need to. Again, it's very rarely if ever used so off the top of my head, I think that's still there [laughter]. [inaudible].

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	[Q: is protocol a pdf?] No. It's split up. And actually, the department just provides the current copy of the current protocols to the software development. The app is actually developed by a third party and they do protocols not only for [City]. It's a protocol app, but they provide protocols for various places in the country. So basically, anybody who wants to connect with them or whatever. The only thing the department does is they have some sort of agreement with them. I'm not sure exactly how all the agreements work out to. but the app normally costs \$10 and with us, somehow the agencies will get a deal with the developer so we can actually use the app for free.
Communication	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...Other than that, I mean, other than just administrative changes in terms of what channels we use to talk on for different stuff, I can't think of any real big changes with the radio communications. At least, not from a user standpoint. Again, the tablets up front that are [inaudible] CAD [inaudible] those are new or relatively new. So again, we used to have to do all of our status changes verbally on the radio. So we would have to tell one [inaudible] that we were responding; that we had arrived on the scene...
Communication	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...Then, we moved from that to the radios actually having an integrated data keyboard into the radio itself. So it wasn't real-- didn't have any kind of a graphical display or anything, it just had eight buttons on it and we had little reference guide taped to the dashboard of the unit that said, "Okay, Button one is, arrived on scene. Button two is in service or whatever. And we would just hit the button and somehow the radio was keyed to the [inaudible] and changed our status...
Communication	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...And then we went to the tablets that have the whole CAD system on there, so. And the move to the tablets has probably been, as far as I'm concerned, the biggest benefit as far as the first responders and actually responding to calls because of the fact that it actually has the CAD information on there so while we're going to the call, I can look through the remarks, and notes, and see exactly what the dispatchers have put in there. And instead of just having the dispatcher say, "Oh, yeah, it's an

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								asthmatic, probably." Usually, we had basic information before. Now, I can actually look through and see and get a little bit more detailed information on exactly what may or may not be going on.
Communication	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Well, the private ambulance service that we actually use for the basic calls-- the way it's working right now is our communications will always dispatch a fire department resource to every call. So, at the very least, you're going to get a first responder, engine company, a truck company, and in most cases, you're probably also going to get an ambulance and/or medic unit dispatched to the call. If we get there and we assess the patient and we say, "Okay. They're stable. They don't require any treatment on the way to the hospital," then we'll call and request that they send a private ambulance.
Communication	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...instead of spending an hour transporting a patient to the hospital and doing our report at the hospital and everything else, we can just get the patient's information, transfer it over to them, and we go back into service usually in half an hour or less, instead of being out for an hour on this...
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...The schedule gets built a couple of months ahead of time. Then people ask for time off, or get sick, or get pregnant, or get hurt, or want to travel around the world, or whatever they want to do. So then holes come up in the schedule. So then about two months before the schedule, two months before the actual date happens, [Name] builds the schedule. He's the number two person here. He builds the schedule, and he puts out the openings in the schedule. So he says, "Everybody want this stuff?" And we have them make sure a full-time people and part-time people. Almost all the full-time people are paramedics. There are a few full-time EMTs and almost all the part-time people are EMTs with exception of one part-time paramedic.
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...So we only manage-- the field supervisors basically only manage the immediate holes in the system or the holes that are coming up this week. That's it. If we have time to look ahead of the schedule and say, "Hey, there's some openings. We'll send out pages and see if people will

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								pick up." So that's the scheduling thing. And then you can place people in the schedule. We can take people out of the schedule. We can put the reason why they're in the schedule for extra time or less time, or put people off sick, all that stuff. We can do all that stuff. But as far as the overall global schedule, he does that. We manage the little holes in the schedule.
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	So I communicate with my staff mostly by phone and mostly by text. That's just me. And we communicate through our dispatch mostly by radio and the hospital mostly by phone, mostly by phone calls.
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	So one's personal, one's work. So we have a supervisor phone, one for each. Every ambulance has a phone-- so there's supervisor. Each has a phone. And then, each ambulance has a phone with phone number. But then, I also know most of the people's personal phone numbers.
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	So sometimes, it just depends on what the discussion is. It'll be personal phone call or text. And sometimes, it'll be using the word phone call or text, just depends. And then mostly, we communicate with our dispatch and other agencies by the radio.
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: Whiteboard scheduling app] I like it fine. I usually go by memory... But that is not always right. So it just basically says where people are and what they're doing and what their phone numbers are. What MO's they're at. And then there are some day-to-day things to pass along...
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...And then this is a thing telling us about all vehicles. If they're having any maintenance problems. If they have winter tires still, that's the WTO, all that kind of thing. And if it needs to go get serviced or anything like that.
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: apps] ...we have one for paging. So I can page from the phone. So we have Everbridge for that. And I don't usually use this. I usually just do it from the desktop. But I can sign in from this and send a page from this and pick who I want to send it to. And it comes through as a text message no matter where I send it from and it comes through also in an email for them when you send it. And it's actually fine. It works pretty

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								fast. It's pretty easy. All you have to do is remember password...
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: apps] ...there is one for the fleet. So it actually tracks you where you go. Although it looks like somebody has turned this one off [laughter], tracking off in this one, whatever... I think it even tells you how fast you were going and stuff like that. And it can even say like dangerous things that you've done. I don't know how it knows. But it kind of knows. And then you're supposed to put the gas in there, like when you put gas in the vehicle. You put where you got it and how many gallons. But since not everybody does it, it's not super accurate as to how good our gas mileage is because not everybody's putting everything in there. And it's kind of a newer thing.
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: apps] ...Then there's ES Chat which we very rarely use, but it's some sort of way to text multiple crews at once. It was pre-built. [Name] could tell you way more about this than I. I've used it a few times. It's supposed to be one of those things where if there's was a major event and all the cell phones started not working very well or the radios got jammed, that this would be able to get through. Without making a phone call you could kind of drop yourself in or out of the conversation, that type of thing. I find group chat, I mean, group texting to be as reliable as this. So I don't use this as much. It looks like you could also talk on it sort of in a-- what was that old where you would click and chirp, chirp, and you would talk? I don't remember what that technology was, but I think it does that sort of like that radio talk. You have to push and hold and talk.
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: Active 911 app] ...then we have a kind with a call. So when the calls come, it gives you some information, like where it is, like an address, the nature of the call, who's going on it, what time did it happened...
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: Active 911 app] So yeah, somehow it's linked to dispatch. I don't know how it works. So they send the call. They dispatch out the call. The crew acknowledges the call. They start on the call. And this tends to have a little bit of a lag behind it, and then you'll see drop in it. It just drops in on your screen, and it goes away. It doesn't disappear until you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								specifically erase it...
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: Active 911 app] ...But it's my understanding that-- two things I don't like about it is you can't click on it and map to it. Oh, yeah you can. Okay. I was wrong about that. You can't look at the details of the call...
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: Active 911 app] ...So a lot of times, the details are more important than what they're calling it. They might say shortness of breath and it might be-- the details are if it's a 28, female who just got into a fight with her boyfriend, that's a different call than an 87, female who has COPD. Those are two different kind of calls. So I like to see the details of what-- and the dispatcher usually updates it, but for whatever reason you didn't hear it, I like to just look at the notes, or the dispatch already has the notes before they start reading it, so I like to read the notes because that might determine whether or not I'm going on that call rather than waiting, even the only one or two more minutes that they take to do it, to give the information on the radio. If I can read it, it decides like, oh, I can sit back down or I should probably go on this call. That is called-- I don't know if you saw it. It's called Act of 911.
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	And then we use the Map, just the Google Maps. I use Google Maps and the Apple maps. And there are addresses that do not exist in there, in both... And we have map books for old technology. When the dispatch tells us where we're going, it gives us a cross street and a map page. So technically, we should be able to find it. It's just that sort of new, younger generation of people just saying, "I'm not going with a paper thing when I can just ask Siri where I'm going, or ask Google," You can start it finding where you're going while you're walking down the stairs rather than walking down the stairs, stopping, not even turning on the vehicle, opening the book to the page, trying to find the cross streets. You could have already been driving. So it's just faster. So we don't use the map books nearly as often as even six years ago.
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	And then, in the urban systems I've worked in, you could talk to the police on the radio. You can talk to the fire department on the radio, and you have a radio in your ambulance, and each person has a radio. So

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you're constantly listening to different channels, where here, you're mostly listening to your own channel. You can talk to the police on this. Although, they're not as used to it, so when we come up, they're like, "Whoa." And we're not as used to it. So it takes a little longer to find it...
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	But I think we've gone way more towards phones. Everybody has a phone, everybody texts. So a lot of that. And then pagers are gone for the most part. I mean, some services use-- the volunteers, use pagers, or very rural places use pagers because they can reach places that phones might not reach, or radios might not reach. But the pagers cost money for services, so [City] got rid of pagers. So now, you can get a pager but I would say 5% of the crews use an actual pager. And they almost all get texts. So they can just get a text instead. And you get all your information on a text and or on the radio...
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...you used to have-- in [City], you used to be able to call the hospital on the radio. It didn't happen that often. But you'd do it 5 to 10 times a year. That hasn't happened in years. They still have the channel, but nobody ever uses it. So that's gone away. So some things have changed like that.
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	Yes. We use laptops for trip reporting. So every patient, we have a trip report that we have to write about them. And then it goes to a server, and it goes to billing, and it goes to the hospitals. So they can have a report of what happened before they ever got there. And different places have different abilities to make it better for the crews. And some places focus on-- I mean the billing is important because you need the money to keep doing the job. But some places it seems like a little higher priority [laughter] in making it better for billing, or QA, or research, versus the people that are running the 10 calls a day, who have to write the 10 trips reports per day...
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: trip reporting] ...some of them, they can drop-- the dispatch can drop the patient information into their call... They can drop the address into the call. They can drop the times into the call. They can drop the miles into the call. They can drop the hospital address where you take them

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								into the call. And those are good, and we like that... And this place is just slowly moving to that...
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: trip reporting] ...And this is not happening with anyplace that I've ever worked yet, but I've heard it talked about so It's probably going to happen, where if somebody doesn't want to go to the hospital you can be like all right, "I'm going to video tape you, and I'm just going to talk to you and say, here's the risks of you refusing. You understand that this could be going on with you? This could be going on with you and you accept those risks?" And they say, "Yeah." And that's way better in court if the family's saying, "This paramedic--" ... That look, they clearly had decision-making capability. We clearly explained to them the possibility. We told them five times, "Will you please come with us?" And they would go. So now I think it's better in some ways...
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: trip reporting] ...some places have ways to transmit like the EKGs. So you take an EKG of a picture of somebody's heart on the ambulance, you can transmit it to the hospital. The agencies where I work, we don't have to do that because we have a relationship with the hospital that they trust that we can interpret it as well as they can interpret it. What we're saying is happening is what is happening. So I haven't worked in an agency where you have to transmit it before. Some places you upload the EKG into the trip report and then I have had that, and other stuff that you upload. And it's mostly to try to protect you...
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: trip reporting] ...some are tablets, some are tough books. They're not that dissimilar. Touch screens are pretty big, and that kind of thing. And then some of them. they call information, drops in automatically. Some of them you have to tell it, "Drop this in here and connect these two things together." And then they have the ability to sign the refusal on the screen, sign the acceptance of billing on the screen so you need less and less paper, stuff like that.
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: trip reporting system] So each ambulance has it. And then the people do different-- in [City], one person runs all the calls all day long, and then in here, they usually switch every other call, so you just share

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								with somebody. Sometimes if you have multiple patients in [City], then you're like, "Here I got [inaudible] and you write it." Like if it's a car crash and there's three people and they refuse or whatever, I'll write that one up, or I'll write those two up and you write this one up, that kind of thing then you switch it back and forth. And you log in each time as yourself so it knows that you're creating this trip so it can come back to you if there's any issues. And here, it's the same way but they usually just switch off person. You just identify yourself as the person that was taking care of that patient on that call.
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...So you'll get dispatched by your dispatcher, the paramedic dispatcher, to a call and they'll say-- they're generally right about the address, almost always right about the address. They're generally right about the patient's gender. They're generally right about the patient's age, within five years, usually right to the date but even if they're guessing like it's a person sleeping on the street or something, they're usually right within five years. They're generally right about the nature of the call to a certain degree, kind of based on a series of questions that they ask the caller...
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...But a lot of times, there's other information that they can see if they look for it, that they don't read out to you. They just don't. I don't know if they're busy. I don't know if they're just reading the first four sentences. I don't know if it's buried after like another bunch of notes and they don't have time. I don't know why. So if you're listening to the police channel, a lot of times you'll hear the police get sent on the same call, the same information. And then all of sudden, they add two extra sentences and you're like, "Oh, that's helpful information that I got indirectly by eavesdropping on another--" we're totally allowed to do it. But that gives me information about that.
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	Also, you can read all of those notes on your laptop. It drops into your laptop. So you can read all of those notes, if you have time on the way to the call, to open it up and take a look about what's happening. And you can see the stuff that they have told you. And you can see stuff like, "Why didn't they tell me that? Why didn't they tell me that?" They try

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								though. And they'll try to give you information like, "We're sending the police with you, and this is why we're sending the police with you." And so you're like, "Okay, good." So yeah, so that happens all the time...
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: new ambulance setup] So I mean, I've spent my whole career literally standing up in the back of a-- well, moving around during the call in the back, and it's not like I'm running around, or there's drama, or whatever. It's just like, I got to grab this, then I got to grab this, then I got to grab this. And there's railings on the top. So you're kind of holding on the railing, grabbing this thing. You're looking at the traffic, and you know where you are. So you're like, "Is it going to be bumpy," or, "There's going to be a stop." And your partner is also trying to tell you like, "I got to stop fast," or, "There's train tracks coming," or, "There's a bunch of traffic ahead," or whatever. So all those things are happening. And you're not trying to be like cavalier and be like, "Oh, I can swing from the bars," or anything. I need to be up...
Communication	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	I think also there's a whole side of technology, but I'm sure they can do a study that said if you get to the scene and you realize a patient is sick, and you need to go emergent back to the hospital, then you spend less time at the scene. You package up the patient. You put the patient down in the ambulance. And you start driving, and you never turn on your sirens. You would get to the hospital just as fast as if you get to the scene and go, "Oh, my God," and get in the back, spend 10 minutes or 12 minutes trying to do something with the patient before driving 60 miles an hour through lights. That, I bet, they would show that the time was the same, and the outcome was the same, and there's less crashes when you're not driving emergent. I just think there's ways to-- some people think that the lights and sirens are there to save people's lives, and it really-- there's 1% of the calls, 2% of the calls, where it can make a difference. So that's where maybe people could chill a little bit and use research to prove something.
Communication	EMS	R	Other Public	56-65	31-40	Male	EMS-R-008	It's fine. And we're the sole provider. So in the mountains, there's not a lot of resources when it comes to EMS. If we need help, we usually are

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					the help to the surrounding counties because they're even more rural than we are. So if somebody has a big crash, or there's a big fire, or there's something else, they're using us for help. We're limited in our mobility to basically [Highway] corridor and a couple two lane roads north and south. Lot of recreational activity in this area. So hunting season's always interesting because people shoot themselves, or fall off their horses, or roll their jeeps, or all kinds of things way back in the woods where there's not a lot of help. No communication. You can't track anybody back there.
Communication	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: being in a rural area] ...And no, really, communication, so we built a lot of things that are sort of automatic like our medical protocols. In this situation, you can do this. You don't have to call on the radio because... it doesn't do any good because you can't talk to anybody. A lot of systems are very tightly regulated. You have to call medical control to do this or that or this. We have a much more - what should I say - liberal system, in that, there's a lot of things we can do just based on "you can do this if you can't have communication." That kind of thing.
Communication	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: apps] ...When I'm at home and I don't feel like listening to all the chatter on the radio, then I have an application that tells me when we get a call [laughter]. So if I want to turn my radio on and listen to it, I can.
Communication	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	There's pretty much five little municipalities in town. And so when there's a call for [City] they just air the call and they say, "Attention, [City] ambulance. Here's your call. Here's your location. Here's what's going on." We can get that information on a mobile data terminal, as long as we have cell service [laughter]. And so that's all great...
Communication	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	...Now, in EMS, you never know how many calls you're going to get or when, or anything else. You may get three calls in [City] . All of your other ambulances are 45 minutes away, so that's not going to do you any good. So all they know to do is throw out the call on the open airwaves and say, "[City] ambulance, you've got another call." And it's up to us to sort of triage those calls. Supervisor picks up the radio and says, "Hey,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								ambulance 2. Can you come up here to [City] and help with this call?" as opposed to location based dispatching, which, if you had a map and you could see all your ambulances on a map, you could tell which ones were available and which ones was the closest. Then you would optimally send that one. We don't have the technology installed, currently, to do that. And it would solve problems and it would create some, too, because it creates increased workload on dispatchers, who aren't that familiar with how our system works. I mean, they don't work for us. They don't know all our policies and how people move around and how long it takes to do this, that, or the other thing. And so, that's probably the next big step we'll take. So we're looking into hot-spotting each ambulance...
Communication	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: frozen towers] we wait until it warms up and it falls off. But in an emergency, sometimes we have to hire a helicopter. Sometimes we go up in a snow cab or the technician does. I mean, that's dangerous, expensive work. And the radio system is kind of like your iPhone. You shut it down and people are like, "Whoa. What happened [laughter]?"
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	Oh. So as a firefighter-- I've been a fireman for 15 years. Well, that's not true. I've been licensed to be a firefighter. I was a paramedic right out of school and I did paramedic for a while before I got on full-time as a-- fire department. So I'm pushing 12 years as a full-time firefighter. Well, I was, the first couple of years, trying to find a job. So I'm the senior firefighter, senior paramedic. So because we're on a busier engine, I'm also a field instructor, so I tend to have new paramedics on the rig with me. Either they're new in general or new to the department, one or the other. So we do a lot of talking, just discussing. When it comes to our equipment, like when to use our equipment, what's it really for, what's the reality behind it, like a thermal imaging camera, you got to know its limitations as well. So we discuss a lot of that reality...
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...And then just a lot of conversation with everybody, really, and, first of all, how I can help the officer. And then how can I help the newer member fit in with that role and understand that my job is to kind of know what the officer is thinking so that we can make decisions really

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								quick? Even on an EMS call, if the environment gets hostile, just being aware when to stand up and step away, or when to ask your officer for help. When do we need more help? Things of that nature. Do a lot of-- that's probably my biggest role in the backseat is just bringing reality back to situations because we tend to always win in our trainings. We always come out successful and it's just not the real world, so.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: rig communication via headset] No, no, only when they talk to us. And then the same thing goes for us. We can say whatever, but then the front seat, the engineer, and the officer has a button they can push and then they'll talk to dispatch. But they can only hear what comes out of that microphone correlating to that button they push, so.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	Sure. So we should all be carrying a portable radio, and we do. And then there's specific codes that we use if we need police emergent. If we just say, "Have him come emergent," we'll get like one officer, maybe two, to come and then we'll tell them whatever the problem is. But if we say, "Code one," then that's like a mayday call to the police. And then we'll get every officer that can drop what they're doing. They'll come available and come to help us.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	it's tough for them from what I know is because they're in a cubicle. So you might be the police dispatcher and I'm the fire dispatcher. You can just stand up and tell them, "Hey, we got an emergency. Send everybody to Engine One's call." But then they got to remember to push the button and talk it through, too, so it gets recorded and stuff like that.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...sometimes, if I've got something I've got going on, or the other firefighter has something that he or she has got going on, when they come in a little bit later, we'll ask, "Hey, did you already check the oxygen bag?" "Yeah, I got that." Or, "I didn't." So it's pretty much face-to-face communication. There's no electronic record-keeping on that.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	So it's not really different, with the exception to-- when we're in the station, there's a button that can be pushed that, when dispatch tones us out-- and I don't know exactly what they do, but when they tone us out,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it'll say Station [Name] and then we will hear our tone for us. We don't have to hear every other call in the city. When we are out-- I guess traditionally you'd say when we're out on the air-- if we're doing inspection, or groceries, or whatever, we have to listen to everything. Then we got to hear our own call...
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...Now, if we're in the engine, we use the MDC and then that will pop up. Our notes and everything pops up whether we're in station or not. And then we have to hit the en route button. So if we're in the engine, when I act officer, I like to have all the sounds on. And I'll close the computer so that I'll hear the doo doo doo sound and then I'll know that that call is us. And then we'll hear the tones through the headsets. But when we're out walking around, talking to people or whatever, we got to hear. We got to listen.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	In the rig, when we have headsets on, we hear everything. But we sit facing backwards, so we don't see the computer. Only the officer sees the computer. When we're out walking around and not in the fire engine, we don't see anything on our radio. It doesn't tell us that it's us. We just have to listen.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	Well, our department has paramedics and firefighters on our engine. The ambulance service is a third-party ambulance service. So we do have to communicate with them and then the police, of course. So we do have three separate entities that we'd have to communicate with. To go in order, if it's just the fire department to the fire department, we just would say, "Hey, you from me." So, "Hey, Engine Two from Engine One, this is what we have." For the ambulance, the company, then we call them whatever ambulance-- the call sign they are. Now, we know that when we're dispatched. They'll say. So we would call-- 101 is the ambulance, say. 101 from Engine One...
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...Now, we don't traditionally talk directly to the police. There's a switch we have to switch to talk to police. We can get onto their channel and turn, but we have to ask dispatch. We do that when we have standbys for SWAT or whatever. We'll switch to their channel and then we'll listen.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								And we can hear the police request entry, and then, "Okay. We'll go in." And a lot of times, there's a minute or two delay before the fire dispatch will tell us that we can go in, whereas if we're just listening to that police channel...
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...Now, when we communicate with the ambulance, as far as I know-- because they don't use the same communication program, computer program, that we use. So they don't get dispatch notes. They only get what they hear on the air. Right. And so there can be information lost based on that. But dispatch airs all our notes. They talk it out loud and we can read with them. We see exactly what they're going to do. But the ambulance providers don't know that. They only hear the notes.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...For me, in my perspective, like I said, I'm really based on reality, and been a paramedic for a while. I don't care. All I want to know is, what equipment do I have to wear? Do I need a black coat or EMS coat, or do I need my fire coat? That's really the only thing that matters to me. Now, I need to know if the scene is safe. That would be nice. If there's a hostile party, are we going to-- is it so bad that we're going to wait for police to get there first, even though the call is for a baby not breathing? We have that luxury here. Not everybody has that. Now, some people want to know more. They want to know if it's a adult or a child. Breathing, trauma, they want to know. For me, it doesn't matter because, so often, the information that dispatch is receiving from people is very much exaggerated. "Oh my God. There's blood everywhere." "Well, compared to what you're used to, yes, there is blood everywhere. But it's right here and it's right here. It's not that bad." So that stuff really does never-- I don't have a lot of value in that...
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...But if there was like-- nowadays, especially since this is what we're talking about, if you could text message a picture to 9-1-1, and they could send it to us, that would help as far as we could look and say, "This car accident here and the people can't get out of their vehicle." A lot of times, the engine is dispatched by themselves. We could see that picture and say, "Hey, let's add on a truck," and achieve to that so we can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								extricate. Let's get that ball rolling sooner. Images would be pretty fantastic, but actual words and perception is just so different. My pain scale might be very different from yours, so.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: receiving information] Going back to my district that I serve, no. Because those people can't afford iPhones and stuff like that. They're going to have a lower quality image, if they even have that. And a lot of them only have the administered phone that's really the same thing as this recorder. There's not a really lot of capabilities. So for my particular situation, no. I mean, if they could take a picture and send it, that's cool, but it really doesn't help me on the way...
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: receiving information] [Name], that's a rather wealthy community. Everybody there has iPhones and brand-new phones that can take fantastic video and pictures that you'd see on the nightly news, you know? ...So that would be a whole different story, depending on the district that you serve. If you have the capability, we'll take it. I would take it, because again, where I work, major hospital, a lot of physicians and nurses driving through this area, they could easily take a picture or video and send it in. Doesn't necessarily have to be that demographic that calls all the time. So I would find that helpful.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	Our department has those MDCs, but it's kind of underutilized for a computer. I mean, all we do is get this generalized information that we probably could have sent in the '80s. We just didn't have the ability to make it small. Nowadays, it should be like an iPad. Something simpler that's easier to touch, and you could almost pick it up and take it with you so you could continue relaying information...
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...So many of us on calls, if we have a unique situation, sometimes we will take a picture with our own personal phone and send it to our chief's personal phone so he can look at it, because the department doesn't issue the rigs smart phones. Only a flip phone, and then a separate digital camera. So we can't make it all work. So having an updated tablet or an updated cell phone for the unit would be very helpful.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	So using that flip-- having that flip phone with those sensitive numbers in there, that's really helpful. And I've used our phone plenty of times to call the hospital or whatever. But the ambulance company has smart phones, and a lot of times they do take pictures. And they have all that capability.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	I actually don't do it very often. In fact, I don't think I've ever done it with my own phone. But the people that do-- I think we tried to send it to another person's private phone so that they can make decisions. I think for the-- and the not knowing, not with intent, they're trying not to, and we can't because we don't have the smart phones back and forth, but try not to mix our business phone and pleasure phone. You know what I mean?
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...I mean, it went from that to then having computers get dispatch information and with the GPS technologies, able to automatically be on scene within 500 feet of something, which has its own problems of its own. To now, I feel like our department kind of underutilizes technology for that. Yeah. It could be so much sharper. I mean, I get text messages from my ex-wife more than I would like [laughter]. I can't get information from dispatch straight to me that says, "Hey, this is a dangerous--" without having to make it out loud and everybody hears it [laughter].
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	But from the EMS side, we do so many things where we talk and we experience, based on what we see. Whether your face is drooping or if I'm talking to you and you're not quite making sense. You are making sense, but I'm picking up on something that isn't quite right. So how do we portray that to the hospital sooner? EKG monitors. Our monitors don't have WiFi or Bluetooth capability. They purchased them right before I got hired here, so I think they bought them in 2006 or 2007. And if you think back then, WiFi was still kind of limited. We can't send our 12-leads. We can't send our heart monitor pictures to the hospital. If I thought it was important, which I never do, I could lay out their EKG and take a picture of it and send it. But again, we don't have that capability with the department...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: EKG transmission capability] ...The ambulance company does, but they don't utilize that either with telemetry and stuff like that. So there's a lot of underutilization. Yet, because those things are so darn expensive, they want to get 10 years out of them. It's kind of like a car, you know? ... You want to get as much time out of them as you can before it's necessary to progress. So labs, blood draws, stuff like that, we just can't take advantage of that due to that limitation.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	So for us, we don't have dead spots, which is generally pretty good.
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: dead spots] We had one. I think they fixed it. For the most part, we can get information out. Unless we're inside of a concrete building which everybody has that problem. We can't fix that yet. But we have pretty good radio communication outside...
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...In our agency, and then for our specific department, we have a problem due to staffing issues with dispatch. This is just my opinion on it. I don't have the-- I'm just a firefighter. I don't have that upper-level knowledge. But every EMS call we get goes to our TAC channel called TAC 2. Unless it becomes a complex issue, maybe we have an EMS call because a building collapsed, we will change channels for that. But if we have-- which happens often, if we have eight EMS calls going on, which eight EMS calls is 16 units, we still stay on TAC 2. So we can never get out, even to tell-- if all I want to tell is the ambulance to come from the north, not the south, I can't get that. Because other units are doing the same thing. 16 channels is just too many...
Communication	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...it's my understanding that the limitation is when we switch it to a dedicated private TAC channel, TAC 4 is for fires, or if something major comes up, hazmat call or something, then a dispatcher, some other dispatcher will go and monitor that channel. But now we've strained dispatch and they just don't have enough dispatchers to say, "All right. We don't want any more than six units on a TAC channel." And then so, six units on TAC 2, six units on-- all it takes is-- and this happens every day. As you know, it's true out east. We get two accidents on the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								highway on top of our four EMS calls. A highway call is two units because we try to keep a shadow of safety. I mean, we have almost 15 units on one TAC channel. It's just too much. So for me and technology, we can talk. But can we get our message out because the highway, the traffic highway, our verbiage highway is just full. So we're in the traffic jam and we can't talk because of the traffic jam that's going on there. So that's our limitations, by far. TAC channels, having more channels.
Communication	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	We work 48-hour shifts. First thing we do, we come on in the morning, and we put our gear on the engine or whatever unit we're on. Go in. We have a pass-off with our crew that is going off that day. And then, we have a meeting on our life-size unit, which is a like a closed-circuit TV. So the battalion chief and all the different stations, including dispatch and here in this building administration. And if there's any training or anything like that, they'll make anybody aware of what's going on. If there's any changes, we talk about it, discuss it...
Communication	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: dispatch] So they don't just send everybody just because. They actually pay attention what the caller says and use that information to make educated decisions and assign appropriate resources. We can always ask for more, but they send the least amount of resources to effectively mitigate the situation. And then, we can add units to that as necessary.
Communication	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: dispatch] They will tone us, tell us where we're going. And then, usually as we're taking off from the house, they'll tell us what the code is. So depending on if we need to emergent or non-emergent. And then they'll tell us-- usually there's some notes in there too. If it's an older person that can't get to the door, maybe there's a key somewhere.
Communication	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: dispatch] And so, what's nice about this system is if grandma falls out of bed and she's uninjured, she's just too weak to pick herself up, you'll get just an ambulance non-emergent with no need to go lights and sirens. If there's a cardiac arrest and you need more caregivers than are on-scene, they'll send the engine company and the ambulance emergent to the scene to quickly get there and mitigate whatever's going on. So

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the dispatchers play a vital role in our system and are very useful to the end-user crews. But we do use TriTech CAD, so it's got the CAD which gives us directions if we need them and call notes in there and all kinds of stuff.
Communication	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: missing information from dispatch] I don't put a lot of validity into it just because the dispatchers are asking questions to a hysterical individual and they aren't thinking clearly or straight. So they don't really know right, wrong, or, indifferent. So we show up a lot of times and it's completely different from what was told to the dispatcher. So I think some people will get tunneled in on what the dispatch information is versus what the patient actually presents as. So I don't put a lot of stock in that information just because I think it pigeonholes you into going down one path without critical thinking. And information is only as good as what you get, so it's not the dispatcher's fault, it's not our fault. It's somewhere in the communication breakdown along the way of somebody's calling 911 for reasons, so they're probably stressed anyways.
Communication	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	The tone that just alerts us that we're going to a call, but when we're en route, they'll usually tell us the severity... But usually when they tell us what the call is, we have an idea how we're going to respond. So we'll go ahead and turn our lights and sirens on, or just go without lights and sirens. And it's like he was saying, there's somebody that's talking with the patient and then there's somebody else dispatching, so they may be long winded and not getting the information that they need right away. So it may take a little bit longer and it's no fault of theirs or ours. So it's just what it is.
Communication	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	It's always the weak link and it doesn't matter if it's a hazmat call, a tech rescue call, a swift water call. Communications is always the weak link. And in all the studies, and even like line-of-duty death, a lot of times, it was a communication issue.
Communication	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I mean, I've been on structure fires where either it's stabilized or you're asking for specific resources, and you can't transmit out the radio. So

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								either it's a connection issue or somebody's walking all over you. And so, any needs that you need in the short term are not being met because you can't talk to your supervisor. Which 90% of the time, it'll be consequence-free. But we don't live in best-case scenario worlds. So I think we want 100% and I think we won't accept anything less than 100%. So it makes a lot of people's jobs difficult to try and improve the system. And thankfully, we have a lot of people working hard at it, but at the end of the day, it's a matter of life safety that is on the line, so I don't think you should ever get comfortable with that.
Communication	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I've been standing at the door just ready to go in with a nozzle and my officer was waiting for open air before he could communicate. And I'm just [laughter] screaming, "Let's go, let's go, let's go!" And, "Calm down, calm down, calm down." Yeah, but that's everybody. Yeah. So that's the only thing I can really think of.
Communication	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I haven't ran any, but we've had a couple instances, one very recently, where one of our paramedics was involved in an altercation in the back where the patient was fighting and biting him, and he was trying to get out on his radio. And I don't know if it was lost in the system somewhere or whatever the case was, but it wasn't until another crew in their firehouse was listening to the radio and pretty much stopped the systemic response and just told our fire dispatch, "Hey, we need police at this location emergent right now for a patient that's involved in an altercation with a paramedic now." ...
Communication	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: emergency radio communication] ...Because, obviously, the system is in place--which is a good thing, and there's policies and procedures in place, but a lot of times, I think when it's retroactive to the effect of if one of us needs help, we need it now. And it looks good on paper to have these policies in place, but I don't care. I just want the help I want and need right now. So I think there's always a time delay in that... Yeah. So it's not that it's disheartening. It's just frustrating. I think it's frustrating for the end user when you need all that stuff now and it's, I think, hampered a little bit by policy and procedure, which needs to be in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								place. So it's a Catch 22.
Communication	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Yeah. So we have the actual mobile unit in the ambulance, as well. And that monitors all the channels, so we can hear all of it all the time in the ambulance... Anytime the truck's on, you set which channels get scanned. But essentially, it's the operations channel, the dispatch channel. And some of them have them set to the PD channel, as well.
Communication	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Because the back of the ambulance is loud, so the driver up front will just hear all the static and background noise from the road, driving down the road. But I mean, you can manually turn it on and use it, but it's easier to just yell back there. And if you need to talk to your partner, it's effective communication [laughter] front to back.
Communication	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	How about downloading our EKGs? A lot of times, they'll want that included in the report, and it just won't connect. So sometimes they'll use a little zip drive. If there were just a hard wire where we could connect it. Again, old school, just run wire from here to here, but it won't do that. So I mean the simpler the better.
Communication	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	So thankfully, our fire and EMS system is one entity, which is great in my opinion. Everything's in house. The employees, the communication system, all that. We have very little to no communication with our police agency. We are able to scan their channel, but I don't think they want us on their channel, and they don't come onto our channel. And that's been identified as a huge problem in some of these large-scale incidents around the country of, for instance, the [City] shooting. There was no communication between the police and the fire on one scene. So I think that needs to get bridged. I think that's done through policy and procedure. I think the technology is there. I just don't think we utilize it efficiently.
Communication	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	We also do mutual aid with neighboring departments, too. And the same sort of issue. I mean, we can actually use a common channel, so we have made advances there, so it is getting easier to communicate with them.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	So in March, I went out to the [State] wildfires for a week. So they made a resource order on 10 o'clock on whatever night. So they gave us until 5 o'clock in the morning to assemble a crew and drive out there. So we drove out there with a [Name] brush truck and a division supervisor, F-150, drove out there. So we were told where to meet and who to contact as our point of contact to check in. And then, they had the system kind of built from there.
Communication	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: wildland ream response] Through the dispatch. Through the [City] dispatch center. So the [State] State Forest Service made a request for X amount of resources, and that went to the [City] dispatch, which is the dispatch center for our wildland team. And we were able to assemble a crew that met their needs. And so we went to the [City] dispatch, which was in communication with the [State] State Forest Service.
Communication	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: wildland ream response] I was going off shift at 7 o'clock the next morning so once this was all met, the battalion chiefs said, "You're leaving at 5:30. We'll bring coverage in for you at 5:30." So I mean, there's some logistics on the back end that needed to happen, that needed to occur, but it's usually pretty easy on that side.
Communication	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Our wildland team is a specialty team. It's a volunteer specialty team, so they come out. The wildland team has an email text list that says, "Hey, we're getting an order for this. Who's available?" And so, X amount of people respond, and then the coordinator will say based on hours of deployment, this person, this person, this person is going to go. Because you have to be available for 16 days. So there's a lot of parameters to work within to fill the titles on a fire truck and the availability of the workforce.
Communication	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: flip phone] It's a department-issued cell phone for communication. So we use that to call the hospitals. We use that if a patient needs to call somebody to arrange a ride or let them know, so we're not having to give them our personal cell phones and them having our numbers and coming and killing us.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	So we just message each other, so standard commercial messaging systems. Again, at an enterprise level, for sharing files around, we have our own intranet with shared central drive systems. That gets heavily used. We asked for something more mobile-friendly, and we got access to the box.com platform which is very nice...
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: box.com] ...But again, they put enough security limitations on the use of it that there's typically a lot of ghost networks built off of free Google accounts that offer a little more flexibility. So you'll see a lot of those in use on a day-to-day basis. People moving files around via Google Drive or whatever commercial service they can get a hand on. You just have to be real careful you don't put any PHI, anything that's HIPAA-protected... PHI is personal healthcare information... Or is it private healthcare information? I forget. So it's the stuff that's HIPAA-protected that gets you into big trouble with the feds, both as an institution and personally, if it leaks out. So we don't play around with that stuff or take chances with that stuff. But operational information, which is less secure, we rely heavily on commercial networks as well.
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	So we send maps, we send pre-plans. So people typically get themselves-- any kind of large event that we can plan for is going to have, I don't know, about a 20-page document that details who's going to be there, contact numbers for who's going to be there. So other commanders from police, from fire, the facilities, and organizer information for whoever is going to be there. It'll have detailed information on what we've pre-positioned, what kind of assets we already have on scene, what kind of resources are going to be-- what channels we're planning on using. All of that thing is-- we also have access to fire pre-plans which give us building schematics. That comes up occasionally. Things like that is your most likely. You do occasionally see pictures and things traveling back and forth as well.
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: pre-plans] ...every once in a while, something really weird will happen. President [Name] decided he wanted to address a crowd. I don't remember what it was but at a local high school. So the man can draw a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								crowd [laughter]. Basically, on four or five days' notice, we had 20,000 people showing up to hear the president speak on what was essentially just a high school football field. So it's not really geared for that kind of crowd or anything and you just wing it. Those are the ones that are a little more interesting in terms of getting that information together and then out to everybody, especially because those change up until the last moment when you get-- he, the president, whether it's [Name] or not, they're just notorious for-- I mean, the president, if they change their mind, everybody else changes around them, not them. But other events do it to a lesser extent, where you're adjusting on the fly and you need to get all that information out to everybody.
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	So on an 800 megahertz trunk system, when you press the button, you don't actually start transmitting. You're basically requesting from the computer that it open up a channel on your talk group. And so you wait for what's called a grant tone which is a little-- it goes beep which tells you it's okay to talk. Takes about half a second in normal operations. A denial tone, also colloquially known as a bonk, it sounds like mah. And it's the computer telling you, "I don't have a channel to give you right now. You need to wait." We never get them. If you talk to the guys up in [County] County, they will generate them at a rate of 150 a month because they just have a much less robust backend system...
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...On an 800 megahertz trunk system where you run into trouble, it's not with the amount of talk groups you can have. It's the amount of talk paths that you have, the actual frequencies, and the actual [backhaul?] capability from place to place. And [City]'s is very good and very robust so we don't typically get problems there. So our radio system, if we are in [City], is excellent. It's very reliable. It has very few dead spots. When we do get a dead spot-- for example, we had, oh, down at [Street] and [Street] Streets downtown - this was probably 12 or 15 years ago - Verizon put up a cell site and we just lost the whole intersection to interference from the cell phones. And you couldn't talk within about a half-block radius of that. But it got reported. Our [City]'s radio engineers

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								went and talked to Verizon's engineers. And it took them about six months to get everything sorted out so that both people could use the site. But it got fixed. We had a temporary hole. So a lot of our holes are like that. Either you're really deep inside some building where no system's every going to reach or it's something like that where you're getting interference or something. It's a very robust system in terms of its technical capabilities...
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	And then we also have all the privates in town, the private email services that we work with, because they do event coverage as well. And so we have-- typically, if we're going to have a big event, it's not infrequent for it to overlap with multiple outside agencies. And so we need to coordinate using the various interoperability channels, make sure everybody has communication systems that are either compatible with [City]'s or with the state's, interoperability radio system, make sure that if we're going to use the state's-- the green channels is what they're known as, that we're not going to overload that system, and making sure that everybody who's going to show up with an ambulance has some way to talk to everybody else and that they know what channel to do that on.
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...I used the interoperability stuff a lot because we call for-- "We need three more ambulances," and then say, "You get ambulance 51, you get ambulance 53, and you're getting Northglenn 8, so we're going to need to move this over to green one." Because Northglenn 8 doesn't have native access to [City] channels, so we have to shift everybody over to the interoperability stuff. So we used it a lot like that, but it didn't make any of the decisions in terms of how the system was structured at that point. That came later when I promoted to captain.
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: interoperability channels] So we have a dedicated set. They're called the colored channels... So green channels are for EMS, red channels are for fire, blue channels are for police. Excuse me. And then there's a few-- a channel called [Name] which is intended for com-center to com-center communications. So we actually monitor that here. And then there are a few spare command channels, gold channel. The feds have their own

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								channel, in case they want the command and start playing on the system. And then, of course-- and so that's what we typically use for an interoperability...
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: interoperability channels] ...There's the whole federal inoperability system behind that, so your national MAC channels, your fire channels, your HEAR channels. And we have those in our radios. And if we ever need to use those, which the last time we needed to use any of those was when the [City] front range was having all those floods about five years ago. We sent ambulances far up north that they couldn't use our [Name] system anymore and they had to jump onto those channels. Probably 80% of our guys couldn't find them; they use them so rarely. So we sent a lieutenant out before we shipped the ambulances out of the city, like, "These channels here on your radio, this is what you're going to be using." So the commanders know where they are. Our medics typically don't know where those stuff for ground-air operations and things like that. We have them, but we have to put some special effort into using those if we ever need them. But that's going to be your bigger-- your straight up disaster is when those are going to come into use, when we're getting out-of-state ambulances or we're sending ambulances out of state or to other parts of the state where this becomes more relevant.
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	So fire, EMS, police, the sheriff's department which, in [City], is not a field law enforcement unit. They just run the jails, essentially, and the courts. [City]'s a unified city county, so we just have a police department. All the sheriff's department does is provide jailer and court-martial services for the court, that sort of things. Public works. Everybody who is or was City of [City] or is ex-City of [City], like the Paramedic division which has been independent for about 20 years, works under one unified radio system with one organization that takes care of it...
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: frontline supervisors] ...So in terms of how we communicate with them, they have a number of different ways they can get information. We talk to them. We dispatch them on certain calls which are sort of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								pre-selected for, "This requires a lieutenant's attention." Certain tactical police standbys, large fires, plane crashes, things like that, automatically get a lieutenant dispatch. And in that case, they're dispatched similar to an ambulance. We call them on the radio, tell them where they're going, and off they go. We can also page them as needed on our paging system. Obviously, they have radios...
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: communication with frontline supervisors] Uniquely, in this system, our ambulances don't have MDTs, mobile data terminals. They sort of have a back-door mobile data terminal in that the laptop that they use to type their reports on has a wireless link that also uses the-- we automatically download the dispatch information to them to be plugged into the call. They can look up the call notes on that, but they have to open that computer, call up the right call, and do some things. It's not just like riding around like in most modern units. They don't have an MDT that can see CAD. The lieutenants do. So command cars come equipped with an MDT, so they can get a lot of information off of that. Mainly that's self-driven, so they go and they'll hear something that piques their interest and they'll go, "Oh, I want more details on that call," then they'll ask for the notes and all that they come up.
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: communication with frontline supervisors] ...cell phones, of course, make up a big chunk of that. And then we have-- although they are not used very much, we have some car-to-car channels and a command back channel that we can use if we want to talk to them off of the main dispatch channel. Or we have the ability to do what's known as an ICALL which has become almost obsolete now that cell phones are so widespread. When I first started down here, we had cell phones but they were the kind that were still attached to the car [laughter].
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...So we used ICALL heavily, person to person, as cell phone. Now everybody has a cell phone on them at all times and it's very rare to see ICALL used anymore. But we still have the capability.
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	So they receive their initial dispatch and their primary dispatch via the LMR, and that's a positive closed loop communication system. We give

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								them the address, they give us the address back, we give them the address again and we give them any relevant details. Emergent versus non-emergent. You're looking for a 45 male with this problem. Here's the description, if they're going to be outdoors or they're in the bedroom, if they're going to be indoors. And here's the caution notes on the address, all that kind of stuff. So that's the primary communication...
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: dispatch via LMR] ...But they automatically get a page that contains the address and a nature code for the call, which is going to be a very general like a seizure, a cardiac problem, a shooting, whatever. And then that same system also, at the end of the call, when they call out at the hospital where we refer to it locally as Code 24, it gives them their times and their mileage. So it will say you were dispatched at this time, you arrived at this time, you're transported at this time, and you got to the hospital at this time. And it pulls all that from the CAD system. So they're giving us that information, the call. We're on scene, and we'll mark them on scene. We're transporting nine to [Name] Hospital with one patient. We'll put that all in and then we dumped it all back down to them. And that is primarily it's supposed to automatically go into the trip report, but sometimes that system pick up. So if it does, they can then manually type in the times and [the figures?] that they need.
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: call notes] They can get them on the laptops most of the time. Because, again, the system it's not primarily intended to be a mobile CAD system, so it can be slow. There's a gateway between the CAD system and that system that sometimes fail, so you can't really count on that to be there. Excuse me. But 99% of the time, if they want to, they can go in and look at the CAD notes.
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: LMR talk group usage] ICALL is very low. I would say it probably verges on zero at this point. A lot of the people, of the new hires, probably don't know it exists. It's so rare. The back channels and the car-to-car channels, that is something that you're going to mostly see officers using on a big event where they want to have a conversation that isn't-- and it's not even that they're trying to keep it secret. It's just

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that the primary event channels is something that just gets clogged. There's so much stuff that everybody needs to hear that if you have something that's only important to a couple of people, it's good to get it off of that channel, if you can. And so that's when you primarily see those being used, is by officers at large events to have a sidebar discussion about something that's important enough to go on over the radio but not so important as to chew up valuable main channel time.
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...We've kind of explored some-- I don't know if they're really new technology, but there's some of the - I don't know what you call them - the internet-mediated sort of-- ReadyOp is one. There's a couple of others. These are essentially programs that allow you to tie phone traffic, radio traffic, pager traffic, SMS traffic, all into these kind of central hubs. We actually have that capability. As a hospital, we don't use it super heavily, again, because the systems we have right now are robust enough that we don't have to, and it's an added layer of complexity that we don't really use. I mean, we can if we're going to do, say, an all-call-- if they're going to do a hospital-wide emergency notification, the hospital actually uses that to send a message. "The blizzard's coming. Leave early for work today." But the paramedic division has enough other stuff between the pagers and the other systems that we typically don't bother to use that stuff because we have all of our user groups set up and on there. So yeah, we're not opposed to it.
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...our average transport time is 9 or 10 minutes. It's very short. Because we're purely the urban core. We don't cover most of the suburbs. We cover a few of the smaller suburbs, but we're primarily the urban core of the [City] metro area. So 100% urban and very quick times. If it's trauma call, our scene time is going to be around eight minutes. Our transport time is going to be around nine minutes. There's just not a lot of time. You have to move quick to get the basics done in there. We're not looking to do a lot of extra stuff in terms of communications in that time period.
Communication	EMS	U	Field	46-55	21-30	Male	EMS-	...Our main dispatch channel before-- we just split it into two main

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				U-003	dispatch channels. Prior to that split, which occurred about six months ago, was three million transmissions a year on one channel. And so you physically couldn't give them some of the information you wanted to give them. You just didn't have time on that channel. And now we've taken care of that problem but at the expense of splitting everything into two. We have to have a second dispatcher. You can't monitor both channels, so you're only listening to half of the system at any one time...
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...so there's no particular reason that a car should have to tell us when they have arrived on scene. It would be great if they could just push a button in their car quietly that says, "We're on scene," and the computer automatically notes that. The stuff where you're getting the caution notes...
Communication	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...Right now, if you're not a commander, the maps, we have no really good way of getting the maps to non-officer crews. And so you'll hear a dispatcher trying to describe how to get to the back corner of some elaborate-- we have this gigantic apartment complexes with several thousand units within them, and they all have one address [laughter]... So where the heck is [Street] 1A? So if we could send them that kind of stuff, that would be very nice.
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	people have taught me that you start cleaning the ambulance from top to bottom. So I'd get my bucket and my soap and water, and my disinfectant, and just bring it out there, bring the stretcher out, start cleaning it from top to bottom. Sometimes, you find things from the night before because they were busy that you-- blood, or needles, or whatever, clothing. And you would have to turn it in or discard it appropriately. But that was the start of my day. Then I would communicate with the officer, or my officer, and tell them, "Okay. We're deficient on this. So we need this, we need fuel, we need oxygen, etc." And then, we start our day that way and just wait for a response or for us to get a call. We'd get into the club, meaning that we pay for lunch and dinner and that's always the best part. Sometimes we didn't always make it because we were out constantly running.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	It wasn't very difficult in our area. We always had a good rapport with the police officers. I can't say that there was one time where I can say we didn't have a good communication with the police officers. They were always backing up. They knew when we got a run. So communication was mostly verbal and on the scene they would just stand behind us, watching over us, and making sure that no one else was around.
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: comms with LE via radio] That was very difficult. We didn't have communications with them on the radio. We communicated with our fire alarm office and the fire alarm office would communicate with them, somehow [laughter]. And not necessarily they would communicate with them but they would communicate with the operator on the other side of the police dispatcher.
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...Now communication with the firemen, that was easier because we did have a channel that we could go to communicate with them if there was some distance between us. Otherwise, we would be we knew all the companies that were around us, and we constantly had runs with them. And so they knew what to expect from us and I knew what to expect from them. But otherwise, communications via radio was simple because we would just turn the switch over to that channel and communicate with them. And now that everyone has radios, I would assume that it's much easier.
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	I could tell you that paramedics are better at the radios because they constantly have to use it on every run. We used to be able to communicate with the hospital through our mobiles, and we have to give reports over a clinical radio to the hospitals. So we were in tuned to using the radio then than a regular fireman because back then, not all of the firemen had their own radio. Only the officers did.
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	Well, currently each member has their own radio, their own portable radio. And then they have their MDC. Their mobile data terminal, or MDT. However you want to call it. Which was where they get their runs. They also have an MDC inside the firehouse where if they're in quarters they get their runs that way, and they have to-- basically it's a touchscreen

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								where they have acknowledge their runs when they get them. Sometimes the firemen do it for them. They also have a mobile recording unit which is basically a laptop where they do all the patient care reports.
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	That is in the ambulance. However, it's a separate unit from all those other units there that I just told you about. The MDC and the MRE are two separate units. Then they have the telemetry radio which is an onboard radio inside the ambulance, which they use to communicate with the hospitals. Then their own personal phones, and tablets, and whatnot, so.
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: cell phone use] To communicate with the hospital, to communicate with each other, to communicate with their field chief, with their higher ups, whether it's a text message, whether it's a, "Hey, we're going to be going to get some fuel right now," and their chief responds, with their personal phone, "Okay," because they need their permission basically. "Hey, by the way, [Name] not feeling well today. I going to take him to the hospital." "Okay." So they're using their personal phones for business, which is sometimes some people have an issue with that because they're not getting paid to use their personal phones. And they believe that we should be providing a phone or some sort of communication to them so that they can communicate easily with their chiefs, and sometimes that's difficult on our side because now we would have to supply phones for everyone and it's just not; money-wise, it's not going to happen.
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: paramedics] So now we do provide phones for them, however, they're flip phones, and they're locked down. So they can only call the hospital, they can only call the office, which is the fire alarm office, so they don't have the opportunity to send a text or make phone calls. And the same thing with their mobile reporting unit, the computer where they do their patient care reports. It's locked down for security reasons so they're not able to go on the Internet, they are not able to go search Google or whatever, do some research on it; it's locked down, so.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	I can tell you way back when I was in the field, I did do research because I would say-- someone would say, "Oh, you know what? I'm taking this medication," and I'm like, "I never heard of that medication." So I'd turn on my phone, look it up, "Oh, yeah, okay, so that's what that medication does." So now I would know, "Okay, this is a medication that may be affecting or is a result of why you're feeling this way." Not that I'm going to tell him that, but at least I have some information on my end saying, "Okay, this may be causing this type of-- your illness."
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...now we have our standing medical orders on a app. So yeah, I think they're still used to look up medications, to find out about diseases that we're not very familiar with, or that we don't encounter a lot of.
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: GPS] I can tell you that I use it myself sometimes where I don't know every street [inaudible]. If we get a run somewhere down in the Southeast, looking it up. Oh, okay, what major street is it next to? Okay, now I know how to get to it. So yes, absolutely. GPS units, we use the GPS map on there. I forgot to mention that we also do have GPS units on the ambulances.
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...Technology, I can tell you from my experience, not out in the field obviously but yes there's this one example. In a mobile recording unit back way back when we started documenting patient care, people thought that, there were certain individuals at a higher level who thought that, "Hey, if we give them a drop-down list of things that they can select, all they have to do is select, select, select, select, and that'll tell us-- it will be easier for us to grab data so that we can do some Q on it." So they don't have to write a report anymore, and I didn't agree with that. I think that we always have to paint the picture is what we call it. What you saw. What you found. Give me some facts. What you did. What you didn't see. And so I think technology may get in the way of-- that we take that human aspect out of it and you're just tapping drop-down lists or typing yes or no, and you're not actually giving good and accurate information to the other side, to the reader. So I think that that's one way technology can get in the way...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...The other way, like I said, sometimes that technology can get in the way is, like I mentioned, emails, text messages, they don't have any personality behind them so they may be taken out of context. So that's a way that it can get in the way...
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: medical technology] Well yeah, the life pack monitors? Yes, we do. The AEDs, they're bulky. They're heavy. You have to know how to use them. Every monitor is different. Sometimes that does get in the way where our paramedics are there for 24 hours and they go home for 3 hours. Obviously, we don't have it, the medicine in their head all the time so they go home and it takes them a while to remember, "Oh yeah, this is how you do it on this monitor." So technology is constantly getting upgraded so by the time you come back, it may be something new and the information on how to use that piece of technology may not have gotten to you.
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: paramedics' personalities] There are many personalities out there. Yeah, yeah they do have their own personality. I guess that they have to be of strong character. Otherwise, you believe everything you're told and it's not always the way you're told.
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...We don't have a lot of issues. We have very few issues that sometimes are widespread. In other words, communications between somebody who's getting relieved. That piece of communication doesn't get transmitted to the oncoming paramedic. So in other words, if I'm leaving the ambulance and I forget to tell you, "Hey yeah, by the way, you're going to need fuel." And your first run, you're in need of fuel. That's something that didn't get communicated to you. And if it consistently happens, we have an issue...
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...As far as communications with your partners. Because of our different characters, different backgrounds, sometimes people-- I don't think it's as bad as it used to be. Where I'm saying bad is, there were people who were on for 20, 30 years and when you have that amount of time in a certain company, you're set in your ways and whatnot. Versus today we have a lot of younger officers, a lot of younger people coming onto of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the job, candidates out there now. Just in the last 4, 5 years we've had over 300 new candidates. So we have a lot of new people on. And again, they come from different backgrounds, different areas. And sometimes, communication is lacking where there's a three or five-year officer who is still learning the job, trying to communicate with a candidate who has a month in the job and trying to teach them what they know to survive the streets of [City]. So yeah, there are some challenges out there.
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...As far as radio communications, it's better now than the past. We're able to listen to a lot more channels, police channels. We're able to communicate with officers, [suppression?] unit to an ambulance unit. But it doesn't always happen. They forget. Or either [question ID?], don't know how to use the radio, or it's on our side. And then how to set your radio, like I said, some people come in and they want to know everything about the radio. Other people, they're just like, "Give me what I have to know so that I can do my job. I don't want to know anything else [laughter]."
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	What's the issue, what they know, who's on the scene, who's responding to the scene? Police, are they en route? Do we have any fire companies coming to assist us, as far as for the paramedic side? Who else is on the scene, any nurses or doctors on there? What else do you know, are they breathing, are they not breathing? Whatever information they can-- "Is the offender still on the scene?" We get a lot of. Sometimes the police site knows, but that information doesn't get relayed over to us... It is a problem, it is a huge problem.
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: lack of information sharing] I think it does have to do with that and the amount of calls that they have. So sometimes even though the police have it, they don't relay it over to us because they're busy getting ready to go on to the next call. So that information doesn't get relayed to us. To be honest with you, I don't know the exact reason why it doesn't get relayed over to us because we know that they have it, it just doesn't get shared with us, which is a problem.
Communication	EMS	U	Supervising	46-55	21-30	Male	EMS-	[RE: missing information] Specifically, "Hey, how many times have we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder				U-010	been to this location? Were there any issues at this location? Or was the best place to enter into this building through the rear? How many times have we been up to this floor? Did we find any issues, somebody who wasn't receptive to us on that floor?" Yeah, those are the kind of things we'd like to know...I believe they do have that information up at the fire alarm office. Whether it gets where the black is, I don't know.
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	Well right now, what we have with our current data we have, if we get a patient more than once or more than twice, we're able to pull up, the technology is there right now where it'll search and say, "Hey, by the way, you have responded to this person in the past. Do you want to accept it or not?" Because then that gives us their history, their allergies, their medications.
Communication	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	So some type of a drone with a camera. And before we go into this area, what do we have there? Is there something that can be relayed back to us and say, "Okay, you have three cars in this type of an accident. Here's a picture of where you can come in, it's easier for you to come in." I know that's way in the future, but.
Communication	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	So our hardware is a Panasonic CF-19 Toughbook that we use to create the report. And then we partner with a software company known as SafetyPAD. And they create the software, and they modify it for the City of [City] in order for us to do the report. And then there's a function that is at the 911 Center, or the OEMC, and that's the main server, or the CAD component, that's maintained by Northrop Grumman. So we get a run. It'll push out to the fire house. It'll actually push out to the tablet itself. We accept it, create a new report, and then based on your disposition which would be, "No patient found," "Refusal of care," or, "Transport," then there's a number of fields that are required for the medics to fill out before they can complete a report. There's also a component known as NEMSIS, which is the National EMS Information Systems. And we're required to collect data for them and to also send data to the state under NEMSIS. So there's quite a few components that are involved in data collection.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	[RE: paramedics] They have another CF-30 Toughbook that is strictly for dispatch. So they do all their status on there. The run will come in on there. And then they'll press buttons like en route, on scene. This computer is dedicated just creating the run report though.
Communication	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	[RE: run reporting] They can do it anywhere. Right. So these all have their own 4G Verizon connection. So whether you're in the ambulance or you're in the patient's house, in the hospital, it has connectivity usually wherever you go.
Communication	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	[RE: technology in ambulances] The systems work very well, actually. The 4G connection of Verizon is very reliable. The drive itself is a [solid-state?] drive so we've had virtually no data loss. And then we can control, like I said, the components of what's required. We can easily push out an update. If, for example, our medical directors, who kind of oversee what we do medically in the ambulance, decide in a couple of weeks we're going to get rid of one drug and then introduce a new one, I can go online, remove that one drug, introduce the new one, push a wireless update, and then they can just accept that update... We can push that wirelessly and make changes so there's very little confusion about what fields are required, if one require or not require a field. We don't have to touch the computers. It's all pushed out wirelessly. So they're very reliable.
Communication	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	We can send messages right to the ambulance itself from the CAD computer. And then this one, they would get a notification that there's an update that they need to process. And then once they press the button, they would put the new fields in place, or change, modify fields, whatever we have to do to put them out there.
Communication	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	[RE: communication issues] I think it's on individual basis. If people are not clear, especially if you're on the scene and you need additional help or other things you have to do manually, things can kind of get confused or messages can get missed, I think, sometimes. For the most part, I think it works well. But when you have the human element in there, there's always the possibility, at least, that there could be some things

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that don't always work with the radio's communication.
Communication	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	[RE: using technology in the field] we do a class for everybody. So what I handle on this part is the CAD part of it and then the SafetyPAD program itself. We're lucky that our software company seems to be very user-friendly. We've had other people come in and we've looked at other programs that, I, personally thought were sort of confusing. But I think by just having the one class and then over time by using it, they use it pretty well. At least, the component I handle at the reporting part of it.
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	So once we're completed with the run we'll let dispatch know we're done and we are available for the next run. If there's no runs available, then we'll just head back to the firehouse.
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: getting call information] Through the OEMC dispatching center... In the ambulance, we do have a radio. I forget the name of it. And then with us, on our personal body, we have our handheld radio. So there's two ways we could communicate with the alarm office.
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: getting call information from dispatch] We have what's called the laptop or the MDT... So that information gets sent to us. I believe it's through WiFi or through the airwaves, I'm not sure [laughter]. So yeah, it gets sent out to us and it tells us, the time that gets dispatched, the kind of incident, any special remarks, any special things that we should be aware of. It tells us what other companies are going to be coming with us, the nature of the call, and sometimes if police will be coming with us, they'll let us know there would be police with us on the run.
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: report writing] ... With the runs that we get in, that's medical runs, that occurs in a Toughbook... In a Toughbook. Minimal information gets transferred from the alarm office so it'll tell us the time it gets to-- all our times come in. The nature of the call too also. There's an event number that comes in. Let's see. What else? Just some basic information.
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: report writing autofill] Yes, it does. Sometimes. It doesn't always happen if there's-- if something's wrong with the system, if the system's down, the alarm office will tell us, "We had a system failure or system's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								down," then it has to be done by hand. So that's when I would do it manually on the Toughbook.
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: comms with PD] We don't. We don't communicate with [local PD] in our frequency. And our frequency is only just EMS. I am able to communicate on the fire side frequency. That's not a problem. Let me backtrack. We can communicate with PD on the frequency, only a few people know how to do that, and I know how to do that because I learned it. I wanted to learn it. But there is no really set memo, or order, or documentation where they tell us, "If you need to communicate with police, do it." There isn't. I just know how to work my radio really well that if I need to get a hold of the police I could switch to the frequency and do it that way. A lot of people don't know how to do it and a lot of paramedics don't know how to do it. I'm teaching my partner how to do it. He's liking it...
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: comms with PD] ...Every day on my radio I listen to-- I'm defaulted to EMS and then I have a channel for the fire side and then I have a channel for my zone, my zone for the PD. So I'm able to listen to EMS, fire, and PD in my zone. I will listen to that. A lot of people don't do that but I do because I like to know what's going on in the neighborhoods.
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: listening to PD frequency] A lot of people don't like to do that. It's too much information to them. It doesn't bother me. I like it. I like to keep a heads-up. When a call comes in under 911, it always comes into the PD side. So if we're at the hospital, I'm finished documentation and I hear the PD zone say, "Hey, we have an incident on [intersection]," a guy fall down or something, it comes into PD side. And then by the time it transfers up to the fire side, to EMS side, it takes about two to three minutes. I didn't time it but time, I just know it takes about two to three minutes to get to us because then they'll be calling us, "Okay [company], go to the person who fell." And I mean, okay, about two, three minutes. Now they're calling for us. So there's a delay there.
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: listening to PD frequency] if I'm already hearing it on the PD side, I'm hearing it at PD-- someone's calling 911. I believe someone fell and they

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								injured themselves. But I can't. But I have to wait until EMS dispatch tells us to go. Which is fine. Something critical like that and I'm hearing it, at least I'm ready. I'm always in a ready position, "Okay, hey, guys there's a fire. There might be a fire coming out. We'll be ready. We're going to go."
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Okay, well we'll start off with my handheld radio. We have I would say about a good 100 channels on this. I can hear from my handheld radio from channel 1 all the way to channel 16, and in each channel, there's about 10 channels per that channel. So we do communicate with the hospital on this also, too. We have a hospital channel. We've [hospital], we have [hospital], we have [hospital]. We can communicate on this.
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Very important to communicate. When I'm in a high-rise, on the 30th floor of the [building] and I'm treating a patient and the patient doesn't want to go to the hospital, it's a refusal of EMS. Instead of coming all the way down and going on the telemetry radio-- we have a telemetry radio now that's hooked up to our hospital, the [hospital]. We have to call the doctor and get a refusal. So instead of coming all the way down, we have our handheld. So then we have to switch channels.
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	I have my cell phone. In my own cell phone, I have numbers to the alarm office. I have numbers to the hospital.
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: handheld radio] ...Under the subway station, there's no communication except for one channel and it's [local transportation authority] metro channel. But I'm not 100% sure if the alarm office has a channel to listen to us. But when I do get a call for the subway, I do let them know, "Main [dispatch], I will be switching to new metro [local transportation authority]." So at least they know that I'm--
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Just recently in the last couple of months, we've been told that if we do get a subway call we have to get a firetruck or an engine truck, a company with us, for line of communication. So it will be the ambulance, and then it will be the company of the firetruck in the subway station because we have one fireman up at the engine, and then we'll have a channel called fire, and we'll be able to communicate through a fire line.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								It's a short-distance channel. We're able to communicate. So kind of like telephone, we'll have one channel to the fire station and to the fire channel, and then back to the firemen that's up on top who can communicate to the alarm office, kind of like that. And that's just recently in the last few months we've been told to. If we get a fire call or a medical call in the subway, we have to get a fire truck with us, which is great.
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: high rises] I've come [encounter?] with that too, where I switch it over to my hospital base station. If I have a trauma call up in the 30th floor and I can't communicate with my hospital, I've got to call on my cell phone landline. I don't know if it's really a landline if it's a cell phone, but they call it a landline cell phone and I call it my cell phone.
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	I have my portable Toughbook laptop where I keep all my information for a medical run. We can't communicate through that. There's no communication through that. That'd be great in case something happens. I could send an email out to maybe the alarm office or to my field chief who takes care of the district, through my Toughbook. That's a good idea.
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Definitely, it could be better. I don't want to say it's poor. I think it's okay. It's okay. I really don't have too much issues with it. The only issues I do have with it is the subway. If I'm at a high-rise, I can't really-- no, there's a few times where the alarm office can't hear me if actually-- in like the [high rise] or-- maybe because there's other things that are going on in that building. There's a lot of technology going on... In the hospital, that's another one. They can't hear us in the hospital. Sometimes, I've got to come out into the bay so they can hear us. So if I'm in the hospital in the ER, and I'm transporting patient care and, "[company], we need you. Can you--?" Yeah. I won't be able to hear them... I think because in the hospital, there's so much stuff going on, technology-wise, in the air.
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: apps] I Google maps and then the regular yellow page maps, I use. But the thing is, in downtown, it bounces. That's the word they use, it bounces off. We do have a GPS in the ambulance. We don't use it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								because it bounces off too. We've tried it. We'll put in an address from my firehouse, [address] to-- get me to the [high rise]... It bounces off walls or recalculating. So maybe the model's old. I think we got those GPSs, I want to say, probably about six years ago, [inaudible].
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: technology] Has gotten in the way? The only thing I want to say about that is maybe if there is a lot of incidences going on at once in a small area, two fires, maybe a real bad casualty of a bus flipped. We've had EMS Plan 1s where we need multiple ambulances, and then there's a fire call. There's just a lot of communication. But when that happens, we're trained to switch it to another channel. We're trained to switch it to another channel. Yeah. We have to switch it to another channel if there's too much stuff going on in the district.
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: too many radio channels] It doesn't bother me. Someone like me, I'm going to learn the channel because if I can't communicate one way, I'm going to communicate another way. So if I can't communicate with EMS channel and I can't communicate to the fire channel, I know how to get to the police channel. The life guard channel, we have a life guard channel. If I can't communicate through the alarm office and the alarm office can't communicate to the life guard who someone is drowning in [lake], I know how to go into the life guard channel. A lot of people don't know how to do that. But I've trained myself or I've asked around people how to do that. How do you get to the life guard channel?
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: communication with other jurisdictions] I don't know about other suburbs but definitely [airport]. And that's another thing, it's another radio. The ambulances in that area have to have maybe two radios. So that's probably another company you probably should talk to... That's [airport] ambulances.
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	So, what I do, when I get dispatched a call on my MDT, I looked at the time, the location, the incident. I'll look at if it's male, female, conscious and breathing. I look at most important information and that information will be there. The alarm office will have remarks on there depending on the caller. They also put on there, which is great, I'm glad they do that, it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								called the [local PD} hashtag number. I know how to retrieve that number through my MDT. Down at the bottom, you're able to type in to send information. I'll type in that [local PD] number out to the alarm office and somehow, some way, it comes back to me with what the first 911 call was. What the call is from the call taker...
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	I know a lot that goes on at the [dispatch center] and they're very busy and they get a lot of calls. I can just imagine them sitting there and get all these calls, and I understand the call taker, they're trying to get all this information. But I think the information they give us is limited because I think it's just a lot of work. They tell us what we need to know. We have an injured victim, he's conscious. We'll send you another company, the basic information. I know if it's a critical call, if it's a battery and the offender's still there, they'll let us know. They'll let us know what we need to know. Because it's so busy in there. I just know it's just so busy in there.
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: dispatch] Any piece of information for me. Even if it's a stubbed toe, they'll give us the basic information, but I'll look it up. And sometimes it will be in there. How did the person stub his toe? He fell down the stairs and stubbed his toe. All we got was stubbed toe. They didn't tell us he fell down 10 flights of stairs and stubbed his toe.
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: dispatch printed ticket] I have it. So when we get to the scene of the address, I have that ticket with me because I don't have nothing else, besides my radio and that ticket. Because we could go to a high-rise, the [high rise] on the sky level, and the security there's like, "Hey, what do you guys have?" I pull out my ticket, "This is what we have." "Oh, okay. I'll take you to that person." A lot of times, they don't know we're coming.
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: cardiac monitor transmission to hospital] Just the EKG. You're able to do the EKG, you're able to do the pulse. You're able to do the SpO2. I don't think no blood pressure can be sent... Oh, that'd be great. Like the first line vital signs. Because we do the blood pressures automatically and it does come on the monitor. It definitely comes on the monitor. How come that pressure can't be, "Hey doctor, my--" I tell them through

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the telemetry but what happens if I can't call? And there's many times where we'll go to [hospital], and that's another telemetry channel that's really bad. If I'm bringing them a cardiac arrest, that we probably brought back, and I can't tell them that, I'll send it through my modem. Like, "I didn't know you guys were calling but I know now because I got the EKG here. Now I know you guys are coming to us." But on that EKG it'd be great to have the blood pressures on there.
Communication	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	On our run reports, I always put in if [local PD]'s going to be there. I have to put that in manually. I always put that in my run reports in my computer. I manually type it in... That would be great, an autofill in for the PD, because sometimes PD's calling for us. Well, who's calling for us? [PD unit]. Well, how come it's not auto filled in here? I got to put that in there.
Communication	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	We drive around. You return from the hospital, we say, "Ambulance [Name] is returning. We're leaving Mount Sinai Hospital." and then there was always another one waiting. So you just keep going. You're dispatched and communicating constantly from that vehicle for 24 hours.
Communication	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	Sure. We do communicate with the police. As far as FBI or SWAT, if they have a zone, then we'll be told to go to what zone on the radio.
Communication	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	Q: What about other jurisdictional agencies? Ever a need to communicate with state folks or--? SME: No, nothing, nothing. Actually, the only other people that I've communicated with is CTA. We'd link on with CTA and sometimes we can talk to them depending on where we're going, like in a platform or something like that down in the underground.
Communication	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	Pictures no, but we can transmit from our monitors, we can transmit EKGs of the heart and stuff like that, we can transmit the entire run, all the vitals, all that kind of stuff, what we're looking at on our end.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	We do have cell phones on the ambulances. They don't have data. They're just flip phones. So we can do phone calls. That's another backup and a way for us to communicate with them if the radio system is down or we're having problems. Most everybody has smartphones, and we've got all those numbers too.
Communication	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	And we do. Because we use it heavily because at any time the chief can call or anybody else, so we've got to be able to maintain that accessibility.
Communication	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	Causes communication problems? It depends. Some people won't say enough on the radio so people come into the call maybe like-- he may just very briefly just say something and then the incoming crews are like, "Do I get another update or what? Is this it?" Thankfully, honestly, at my department, we practice so much on size-ups and what to say on the radio; I don't think that happens a lot. But we've ran with other departments and we've seen it happen before. I mean, I think the biggest breakdown would be is people not talking to each other. That would be the biggest thing or assuming things [inaudible] should say.
Communication	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	Day by day, fire to fire, or EMS to fire, fire to EMS, EMS to EMS, those are relatively easy. We have a 800 megahertz digital system and so we can communicate pretty reliably. There are a couple of dead zones that we know about that our radios will not work in. So we have to develop other alternatives. But for the most part, communicating amongst fire is pretty easy. Communicating with police, right now, we don't have a way to directly communicate with them by radio or by a computer, so it flows through our dispatch center.
Communication	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	.... I think where we've encountered some struggles is the jurisdictional terminology and kind of the etiquette they use on the radio. We overcome it. It's really not that hard. But the first couple times you communicate with another jurisdiction, you learn how they communicate with their dispatch and--
Communication	EMS	S	Field	26-35	6-10	Male	EMS-	--big incident here. But by and large, I mean we don't-- we need to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				S-016	communicate with the jurisdictions that neighbor-- that surround us. I don't necessarily need to talk to my friends in [State] I used to work with, on the radio from here. So it's ba
Communication	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] If we miss them calling us and it's for a call, they have all of our cell phones in a database that they'll send us a text message with the call information. So, for whatever reason, maybe my radio isn't working, or I accidentally turned it down, or I'm being irresponsible and not paying attention to my radio, and then my phone dings with a text,
Communication	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] And post assignments and that type of thing, like the non-emergent traffic, and requests, and that type of thing. And then when you clear your call, or whatever incident you're on, then you go back to the main channel, and that's how you get either your next assignment or your next post.
Communication	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] Generally not. A lot of times, it's more efficient. Occasionally, we'll ride on scene and the fire department isn't necessary, and it's quicker to just jump on their channel and say, "Hey, you guys can--" It's called pickup if go back and service. If we need a partner I was saying earlier, if we need police coverage, police assistance, if a person is getting very combative or whatever reason we would need, in an emergent sense, we would get on the police channel directly for the police district that we're in and ask for help that way.
Communication	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2]... So the only thing coming to a new service that I had to learn were the operations. They talk on the radio a little bit differently, but that's not anything I'm going to learn in academy. That's just doing it out on the street. The rules for their post assignments, a little bit different.
Communication	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] It's improved dramatically in the 10 years that I've been in EMS. And with the new dispatch updates, it's improved a little bit more just with the access to different frequencies that we've never had before. And it can be pretty technical. There's a lot of federal laws with a federal merger like the FCC.
Communication	EMS	U	Field	26-35	Not	Not	EMS-	[S3] So whereas I can't specifically talk to [City] Fire, say, if we had a big

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder		specified	specified	U-004	incident on the border in the case of the [City] shooting a number of years ago, when there was a lot of different agencies talking on various channels, I don't have their channels, and they don't have ours, but we do have several citywide mutual aid channels. There's various levels of green. There's also various other tactical channels that span jurisdictions that the whole metro area is still a work in progress. They're getting all of the agencies updated to the same standards. Some of them have older radios that require different programming and that type of thing, but the goal eventually to have basically regional emergency frequencies for those mass casualty incidents and those mutual aid things.
Communication	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	All calls originate on one channel. And then it's strictly dependent on the incident how that channel then gets broken up. Because an MCI - it's mass casualty incident - are really just defined as an incident that overwhelms the resources on scenes ability to handle it. So one ambulance with two paramedics, if there's six people in that car and they all need to be back-boarded even if they are not severely injured, we don't have six spots in the ambulance to lay people flat. So at a minimum, you would need three ambulances. That might realistically happen on just one TAC channel and that would be it. And sometimes you might have just one channel for an incident commander to dispatch things. Sometimes you wouldn't. Sometimes everything would just be on a TAC channel from the original call that you may have been dispatched on is still a dispatch, an emergency channel for the other things that are happening in those cities. And so for large incidents, frequently all traffic is completely removed from the main emergency channels for that incident until it's done, just because there's so much that needs to be said between the multiple agencies.
Communication	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	A lot of the time you'll have to call but still you'll run into places out here where cell phones if you don't have any service either.
Communication	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Out here it's any number of things. We've had I mean I've had people walk up to the station, I've had people call the station say hey, I'm sick.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Should I come down there or should you come here? We will get toned out by dispatch, they'll call us and say hey, the police are coming with a blood draw and that'll be a call technically so but they'll come to us so it can be any number of things but most of the time it's a dispatch.
Communication	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	So for the most part here you hear dispatch calling to see if you're okay. So you send somebody back to the truck to tell them you're okay. You can hear on your portable you know it's garbled but you can hear you just can't respond. So you'll tell them you know yeah we're okay then come back. The problem with that is you know service where you just have you and your partner now you're down one in the house there trying to work on somebody so often times if it's a real bad situation we just won't answer. I mean you know we just won't answer until we can get back to the truck because we're more interested in the patient's wellbeing than we are letting dispatch if they send us somebody else great we got somebody else you know. So that's typically what it's like.
Communication	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Yeah. You'll see us in the back of the truck taking names and demographic information down right then so that we can use that to show the hospital so that we can get them registered and get them cared for quicker. So we got to have it right there with us. The patient signed, the computer you know so we've got our whole record right there on that computer. Don't have to do three different things like we have to do here right now.
Communication	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Sure I use apps on pediatric doses for medications. I'll use Google. I mean we're not too far gone from doctors that I mean when you tell us a whole list of things that are going wrong that could be anything in the world I mean I'll type them into Google and say well it could be this but I don't know you know so I'll look up something for the patient. I'll use it to get us there so yeah there's lots of things I use.
Communication	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Speaking on the radio with full words and enunciating what you're saying because we're not playing games here. You know we need to know where to go when you tell us where to go so don't say don't slur your words to where we're sitting there going what? What road are we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								going to? I mean we can't see it written out anywhere so we're relying on you to tell us so let's enunciate a little bit, speak up and that's a big thing. Codes, ten codes and all that mess.
Communication	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	You know if we're busy we have calls if you mean radio communication. What we do is first thing in the morning at 8 a.m. our dispatch will send over a test tone and just basically tell us good morning, we respond back so we know the radios are working.
Communication	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	It does pose an issue. As far as I know no one has been hurt because of lack of communication but there are definitely calls where you need to be in touch with dispatch. That's your really that's our lifeline. If we get on scene and we have a lot of psych calls so if we get on the scene and there's a psych patient that is planning on hurting themselves, hurting us we're the first people a lot of times that have contact with them and if we can't if they don't know for instance they don't know it's a psych patient, if they do they try to send out the Sheriff's office but if they don't we get on scene and we realize oh, this is pretty bad and we need help if we can't communicate with them they have no way of knowing. And then in that 10 minute timeframe or whatever it is that they go by has to pass before they and they don't communicate with us before they say okay we need to have a deputy check on them and reality ten minutes could be way too late so for us to not have communication is really bad not for just our safety for our patient's safety
Communication	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	I don't mind using my personal cell phone. It hasn't come into play yet but I would assume that there is always that possibility with using my personal cell phone to communicate with dispatch that maybe it could be taken if anything should go to court. It could be confiscated and then I lose my phone and all the information in it.
Communication	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	It kind of depends on the day and the situation. We all you know we have these radios and like for instance mine is on the EMS channel right now so as of right now I hear what comes across from dispatch to us and us only or the first responders because that's where they put it out for EMS first responders. If we have a fire for instance and we get dispatched to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that fire unless I switch over to either their channel or I put it in scan mode I don't hear their traffic, they don't hear my traffic but you can't keep it on scan all the time because then you also hear SO's so every time they pull over a car we hear that information and if you have a patient you definitely don't want that going on. We can speak to if I need to speak to SO directly I can either go through dispatch or my MS channel or I can switch over to SO's channel and try to get in touch with them that way. I can do the same thing with fire.
Communication	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	They may not be angry at me but I'm the person they're going to take it out on because regardless of how fast I move or how efficiently I'm doing their job all they can see is that their family member is hurt and no matter what I do it's not going to be fast enough or good enough at that moment so those are the ones when psych patients and things like that those are the ones that it's scary not to have a working radio because if I need help I know I'm not going to get it because they don't know so I think if there was a way to take the general public out of being able to hear our traffic and us be able to communicate easily and efficiently with each other without all of the areas that we don't have coverage it would be much better.
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	And then you have other communicators who are very direct and to the point, which around here, in this environment, that's preferred. If you say, "Hey, let's go clean the property office for two hours. Here's the game plan. Let's do it." There's no question about what needs to get done. Everybody knows where they fit into the picture. So the very clear, concise communications around here is what works most effectively...
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...So you have everybody in between, the totally vague to the very specific. So there are aspects of the job where when you realize that you're working with someone who's not as good at communicating, or who you start to realize that someone might learn differently than you, and you have to explain things differently to them, you start to pick up on that pretty quickly around here because of what we do and the intensity of it. And you adapt...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...So there are crews that-- tomorrow's Sunday. I know that the people I'm riding with tomorrow, if we have to cut a car, we might not have to say a word to each other... I can look at my technician or my officer right in the eyes, and I know what I need to do... But then there are other times where you need to say, "Okay, you need to pick up the spreader, and you need to do this. Put it right here, and do it like that. I'm going to be doing this." And so it depends on the person and the chemistry, but sometimes you don't have to say a word. You could be speaking a language that I don't understand, and we can still get the job done.
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...the tone is really hard to understand in these emails. So sometimes it causes a little bit of conflict when somebody-- especially if someone questions your idea, or offers up a suggestion that you don't agree with. And the tone of the email, it might be somebody older or younger, and they don't interact with email the same way. So when I read an email from an older person telling me something, even if somebody younger wanted to say that exact same message, they might say it differently. And I might get a different end result from that...
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...radio communications are a big part of the job too. And every single day we hear something on the radio that we're like, "Come on. Why did he say it like that?" or, "That's not what you're supposed to do," or, "Don't say anything at all," or stuff like that. But around here, for the most part, especially the more senior people are fairly good with the radio communications. You keep it concise. You use the right terminology, that type of thing.
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So someone who's naturally a very good communicator, they won't have as many issues as someone who isn't. Similarly, the more experienced people are usually better, but not always. We have some people who've been here for 30 years who say, "I can't even touch the radio. I'm so bad at it." And then we have other people who have been here for a year, and they totally get it. So experience isn't everything, but for the most part, I'd say on average, the more experienced people are better with it...
Communication	FF	S	Field	18-25	5 or less	Male	FF-S-039	...And then also training. We do an in-house communications training

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					where we explain what the radios are, how they work, and the language that we use, and the points that we're trying to get across. There's also a county technology class that we take on the radios. And that's usually pretty good about at least the basics of how it functions, but not necessarily what to say. So that's also dependent on who taught you that, when it was taught to you, how frequently you use it...
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...So all of those things come into it, but you can tell somebody's experience level usually by the way they act on the radio... But not always. I mean, there are always exceptions. And we see them everyday. But for the most part, you can tell if someone's new or not, based on that.
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: comms with other disciplines] It can be challenging, especially since we don't train together all that much, especially people outside of this station. And we don't train together. We don't run as many calls with people outside of the station, and we don't cook together, hang out together either, so... Anybody that's EMS, fire, or police that's not in this station...
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...So, if we run a call with one of the companies up the street or an ambulance from a different department or the police, it's going to be a little bit more challenging, but we do have common ground in some aspects. We have common terminology, for the most part, especially in the EMS and fire realm...
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...With police, I know that they have certain different-- I think they still use codes like--10 codes, yeah, in the police departments around here, which I don't know anything about those, really. I think 10-4 means okay, but [laughter] that's about all I know. So, I don't get into any of that. It would be easier if they used plain language, but I don't know what their plan is. I know that the FEMA Plan is to use plain language, so I trust that. It works for us pretty well to have the unified communications systems, but we also don't do that much with police...
Communication	FF	S	Field	18-25	5 or less	Male	FF-S-039	I mean, when we're on a call with police, they're usually in a more of a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					supporting role, at least for the rescue squad, because if we're on a fire and police show up, it's because they need to block off the road. We don't need to talk with them all that much for that. We'll say, "Hey, can you block off the road?" Not really that bad, or if it's an accident, we're the ones cutting the car, and they're basically either blocking the road, or they may have to check the ID of the person or do a sobriety test or whatever it might be. But our interactions with them are usually pretty straightforward. So, even though we might have bigger communications differences, I'd say we don't even have that many problems with it, because we don't do as much high-stakes interaction with the police.
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So we don't run with other counties around us just because of where we're located. Once in a while, we might run something with someone from [County], but not even that frequently, especially not anymore...
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...What we do experience that's unique is we run to [City] a lot on the ambulances. So people can special call our dispatch office instead of 911 if they're having an emergency in [City], in Upper Northwest, and we'll send them an ambulance to help them out. And we still have to go onto the [City] communications channels, which are different channels. It's 0-12. And so, when we're on that channel, it's pretty straightforward. They use slightly different terminology. If we're in the county, we'll say, "Ambulance 741 bravo to [County]," if we're trying to reach the dispatch center. In [City], you say, "Ambulance 741 bravo to communications." So slight differences there...
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...They also have slightly different dispatch procedures. So if you have a lift assist, for us, that's usually just an ambulance, but for them, if you say, "We're responding for a lift assist," they'll usually send you an engine to help you out. So I don't know if they still do that, but when I was driving the ambulance more, that was something we dealt with. And you had to specifically say, "I don't need any manpower," or, "I need additional resources," something like that...
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...Also, our computers aren't synched to [City]... so we can't just push on-scene and [City] won't get that message. We have to tell them on the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								radio...
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So we use the radios of course. We use the computers, the MDC computers. Mobile Data Computer, I think. Then the ambulances, more than the rescue squad, but we have one, an EPCR. It's a patient care report. That's just a toughbook that you enter your patient information in it when you have an EMS call. And then, we have our own internal radio system that we use just to communicate between units and our own dispatch center here.
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: internal radio system] We don't carry those on the call, but we just have it mounted inside of the unit. So if the ambulance is downtown getting dinner in [City] and somebody calls our dispatch center having an emergency in [City], our dispatch center will call that ambulance on our special radios. But we don't use them on any incidents.
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...So I know that the federal departments have their own radios and that can be problematic. I know we ran a fire on the Walter Reed Base six months ago and they were operating on their own radio system, but we were responding to them and we don't have their radios. So when we got on scene, they actually handed us their own types of radios that we had to use. Even though, when they respond to us, they already have their own [County] radios, so... Not vice versa. So that was definitely a challenge, and they have one for our whole unit. So our officer got one, but the rest of us didn't have a radio that would work, so that was definitely something we were all like, "Woah. I did not know they still did that stuff. That's kind of weird." ...
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: mounted internal radio] ... in-house, yeah. It's just for communicating, "Hey. Can you pick up ice cream?" That type of thing. Pretty simple communications... We have that on all the units, including the utilities.
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: Active 911] ...it's a good app because it tells you what units are on it. It tells you the location, and if you click on the location, it actually pulls up a map where it shows you the best way to get there. Or, at least, its

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								prediction for the best way.
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	Has got in the way? I'd say, one time when it does get in the way is when people are communicating on the radio too much. When you're running a fire, and I can't think of a specific example, but I definitely know this happens all the time. If you're responding on a fire, instead of clicking the button on the computer, which you're supposed to do, sometimes the computers will go down. And people will say, "Engine Seven whatever, responding." And then they'll just say that the radio. And so then you've got five engines, two trucks, a rescue squad, and an ambulance, and potentially four chiefs, all saying that on the radio. Meanwhile, one of the engines is on scene and they're looking at a house on fire with somebody hanging out the window.
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	SME: They can't say, "Engine [Name] to [City]. We have people trapped and the house is on fire." They can't get that message across. So a lot of times you'll hear people like the Command Officer on scene try to order radio silence. Which is like, "Just shut up. I don't care if you're responding or if you're on scene. I have an important message to get across. Let it happen." ... He just says, "Radio Silence." Or, "Emergency communications only." Or, "Priority traffic only." Something like that. Q: How long's the silence supposed to be [laughter]? SME: As long as people adhere to it [laughter].
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	But there is definitely a push for people to follow their SOPs, their standard operating procedures more. And to communicate less of the stuff that should be assumed. Like, I know if we were in a fire right now, our job is to do a search. That's our primary job. That's our primary job. Our secondary is to is to control utilities. No one needs to tell us to do that. So if we're really adhering to this policy of less radio traffic, no one should have to tell us to do that. When we're done with those things we'll say, "Rescue squad 741 to command, we've completed the primary search and it's negative. The utilities are gas and electric and they're both controlled." That transmission right there took 20 seconds, and that should be the only transmission...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...But a lot of times you'll hear, command will ask, "Hey rescue squad, can you please do the search." And we're already half way done the search because we already know that we need to do that. "Yes, sir. We're doing it." That's two more communications. Then they'll ask us two minutes later, "Hey, is that search done?" "Still doing it." That's two more communications. Then when we're finished with it we'll say, "We've finished the search and it's negative." And they'll say, "Okay, can you do utilities?" And we'll say, "We're doing that." And so now we're at like seven or eight communications, when we really just needed one or two. So that can be a challenge because someone else has to listen to that and it's distracting to them. But then they also can't get a communication across if they need to.
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	Yeah, definitely. It definitely requires a mutual trust. And I think that a lot of times people do it because they've seen that they can't necessarily have that trust all the time. And a lot of times people would rather rely on the expectation that you can't trust the units because it's probably safer that way, right? So you can't blame them for that. For saying, "Hey, if I don't tell them to do this it might not get done." Versus, "If I tell them to do it there's a little more radio traffic but I know it's getting done." So they have to weigh that in their heads...
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...that's a benefit that we have here because right now if we were in a fire, our chief of this department can run that with us. And if he's command, he knows that he doesn't need to tell us what to do. But the [County] Battalion Chief might not know us and might not know that he can trust us. We've never proven otherwise but maybe if a different rescue squad has, or a different engine company has. And then because he might not-- he might have experienced that lack of trust, he might just rely on that.
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: AVL] ...Instead of dispatching us back somewhere two miles that way, they might send a different unit that's actually closer. And they can see if that unit is closer. And it tells them. It will recommend that unit above us. So we might think, "But hey, that's our area. We should be there." But in reality, the computer is doing all these calculations. They

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								know we're on the air so we'll be able to start responding sooner. So it gives us an additional minute. So it gives us, or I guess it takes a minute off of our response time. But they also know that that other unit is physically a mile closer. So even though it takes them an extra minute to get out the door, they can get there faster anyways. So it's doing all those calculations that a human dispatcher can't really do as well.
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	They've been really good about-- the dispatchers update their computer with any pertinent information that comes in from 911 calls, or also from the radio traffic. So they're always monitoring that. So if we're running a fire this morning, as soon as they find out that someone's trapped, they'll enter that into the computer, and all the units will get that message. Even units that aren't responding. So if a Chief sees that he might say, oh, I should probably go on that. And then he'll start responding. So they get the information out there pretty well...
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	Or if it's a building that they know has a lot of chlorine in it, they'll mention that in the comments too. So any special risks or any information of past incidents there, you might see that they had a domestic dispute, a stabbing, a decreased level of consciousness, a sick person, and another domestic dispute there, you might want police. And so you can see all that now. So I'd say that I haven't really had an experience since this new roll-out where we wanted information and we didn't have it.
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: info via MDC] You have to click on the incident information...tablet or tab on it. But it's pretty user-friendly. So...as long as you know that that feature exists, you can find it pretty easily... you can get additional information that maybe the dispatcher missed.
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	There is an app that already exists that our county doesn't use where you can actually listen to the radio on the app... so if I'm sitting right here, and I see that they put out a vehicle overturned 10 miles from here, I can just swipe on it and pull it up. And I can listen to the communication on my phone. The thing that the county has done that's pretty good is that now they also changed, with that new dispatch

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								system, they changed what we listen to in quarters.
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So I guess not in this room, but in most of the rooms, there's a scanner too. So you would hear any relevant transmissions over that scanner as well. So that's a new thing. In the past, it was just Alpha, which is the main dispatch channel. You didn't have any of the operations channels. But now you do. So that's actually a really good feature that they just put in too. So I think they put a lot of work into this whole new thing, and it's definitely addressed a lot of the problems or wishlist items. But I do like that, that PulsePoint app is what it's called, where you can hear these things going out and listen to the call.
Communication	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...I know one of my friends, who lives in [County], he has that for their area. So if he's at home, he can hear if somebody goes into cardiac arrest on his street, and he could go out and render first aid to them. And he could also listen to a fire that's happening 10 blocks away, and he'll know if he needs to adjust his personal traffic, whatever, based on the apparatus that's there. Stuff like that.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So we work 48-hour shifts... So two on, four off. It starts off, in the morning, we'll do a pass-off with the off-coming crew. So this morning, we came off with A shift. And they'll tell us, basically, pertinent information in terms of calls. They'll tell us how many calls they ran, how many our ambulance ran, any training they did, any issues with the truck or equipment, or issues with the station. So that's that. And then at 7:15 in the morning, we'll do what we call pass-off with the rest of the stations.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So we have a technology, it's called LifeSize... And what that allows us to do is, you have a TV screen, and every station, basically, is on camera. And we'll go through each of the stations. They can tell us what they're doing for the day, any trainings. If they're going to be in service, out of service. And then we also use that for critiques. Where before, we'd meet at one central location, and we'd talk about an incident, whether it's fire, a large incident, EMS, mass casualty. So now what that has allowed us to do is stay in our primary area. So if we get a call, our response time

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								is a lot less...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So they're trying to create a standard. But to do that all across the United States is almost [tough?] because you got to look at data back in the history of years past. And you might have done yours in Excel, and he did his in DOS, and I just did mine on paper. So there's really no set system, just like [Name] said that we had Fire Zone, we have different software programs, but none of them communicate with each other. So it's just a lot of data entry. Then all of a sudden, we'll start doing it. And then all of a sudden, the computers don't run on certain programs. So then you got to get rid of that program, and then you end up with a new program. So it's constantly changing.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah, that's another item of contention right now, especially in our fire department, is gear. So right now, all of our bunker gear is made by Honeywell. And so Honeywell has a program that tracks model number, serial number, all of those things. And so all of our bunker gear is inventoried in a particular program that our fire department bought. But then, all of the repairs, warranties, and stuff like that are tracked in another piece of software that's accessible online through Honeywell. And we use a third-party vendor to do our repairs. So when they do the repairs, they have to certify the repairs, and they enter them into Honeywell so that they can track them. But when we do in-house cleanings or things like that, we don't have access to that system. So then we track it through our inventory software, Wasp...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...at the end of the day, there's accreditation. So accreditation says that you have to have programs to track your inventory to certify repairs. But it's two pieces of software that don't talk that have, each, about half of the information that you need to compile together to make one.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So, I mean, like I said just a minute ago, that when you talk about technology in the fire service and our rapid adaptation to it, we've never found anything to bring everything together. So there's inventory of equipment, and tracking the equipment from birth to death. And then the costs of repair, and when is it time to replace? And then inspection, and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								service tests to show that you've inspected it, and how it's lived...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...Rope is another thing that-- on our truck, any time you use a piece of lifeline, a rope-- so you have two different ropes. You have utility ropes, and you have lifeline ropes. And a utility rope, we don't care about. So we would just track that we bought the rope, and then you would say, at the end of its life, that you threw away the rope. But a lifeline needs to be tracked anytime you inspect it, anytime you use it. Because you need to show how many times it's been weighted or unweighted, things like that.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: lifeline rope] And so we have an inventory software that we can track when we bought it, and we can track when we throw it away. But the only way to track all the stuff in the middle is a piece of paper.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...I mean, we send our gear out for a deep cleaning. Our station, we clean after every fire. And that's come around a long ways. It used to be you have your gear, you do your fire, you go back and wear your same gear. You don't wash it. Now we changed it so we have a backup set of gear. So it's changing, it's evolving, but there's not just one program that communicates with everything. It'd be tough. I mean, I think it can be done, but there's a lot of aspects.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: in-house IT department] ...And then just one of our programmers-- or, not our programmers. One of our latest IT guys does a lot of building forms and sheets for us now, which is kind of a new technology that's started to come out. And we're using that more as a patch to fill the need to track some of our data in a very simple form because when you build a form, it just dumps it into a spreadsheet. And so it gives us at least something, but it's not a great something because you still have a lot of back-end work with the spread sheets. You have to stop the form every year and start it on a new spreadsheet, or you end up with this giant data set... And then how do you break up the original sheet into useable data? And then it's just a sheet, so it doesn't talk with all the other sheets, so.
Communication	FF	S	Not	Not	Not	Male	FF-S-022	It's a computer. We call her Susie. And the computer will come out and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			specified	specified	specified			say, "Medic 51, respond," and whatever situation. Gives you the address. Right? And then our dispatch comes on, and it'll tell us what the call is. So it'd be a 17 Alpha 1 or whatever. And then you check in. So that and the screen - it's all touch screen in the front of the fire truck - it basically shows you a map of where you're going, shows you your hydrant locations. It'll show you all of the rest of the department, if they're on any calls so you know if you need to specialize in, maybe our heavy rescue, and they're on a call [if they're not?] available, so.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So it's definitely evolving. The technology's gotten better. But between the computers, the radios, they're constantly changing. We still have, with the radios, we have dead spots. It's a big concern. So [when you?] get inside of a building, you have no communication. We don't carry our cell phones in fires, obviously. Now, we have is a voice amp. So when you have a mask over your face and it's muzzled, now you can actually communicate, and you're a little bit more clear and precise. And we can hear each other. The problem with that is you're going to be getting some feedback on your radio, based on how loud you have your radio up. So there are definitely pros and cons...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...With our masks now, you can-- we call it what? A heads-up display. Tells us where our air level is and how much air we have left and when need to get out. Then we have vibe alerts, where basically it starts to tell us, depending on where our air level is, they need to start going out. So technology's definitely changing in our advantage...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...we had the dot matrix, which was the Rip-N-Run. It was really cool... That was what the manufacturer called it. Even in the industry, it's still referred to as a Rip-N-Run because it's all your information in just a little piece of paper, and you grab it and run out the door. The CAD is actually what kind of-- or the MDTs is what replaced the Rip-N-Run. And so we went to really generic DOS-based MDT, the black with the green lettering and stuff like that. It worked well, but it was in transition. Now we've gone to a full MDT, so we have the Internet and everything in the trucks...
Communication	FF	S	Not	Not	Not	Male	FF-S-022	[RE: radio mic placement training] Absolutely. I mean, we do it all the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			specified	specified	specified			time. But still, you can get in a unique situation, just like we do in TRT and SET. And you get in that one space, and you can't actually be spread out like that. So now you're communicating like this, where maybe [this?] your choice. And they've tried this. [Name] said they actually have headsets built into the masks. And there's a cost affiliated with them. And I'm not sure how those work. We haven't had them. I think we tried them and messed around with him, but didn't really come out.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Google translate works pretty well for language translation...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: PulsePoint app] It's an app where, basically, it'll tell you-- you can notify, say, just on structure fires. So it sends you an alert. So you get it before the radio does... Auto accidents, you can set it up for hazmat. So it's just an app and it'll tell you where-- the whole principle was, is the next closest unit, whether it's a chief on a bus-- so if you're having a heart attack, and I'm right next door, it notifies me. And even if I'm on or off duty, I can go over there and help you. That was the whole principle of it. And then just kind of tracking. You can see what the guys are doing. So if you're at home, you can say, "Oh, yeah. They went over here, and over there, and--"
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. Some of them are paid. Some of them are free. Some of them are mandated, like the AskRail is a mandated app. And so the railroad companies actually maintain them. But you do have to send in an application to get access to it. And then they'll send you a username and password.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	The city actually uses a web-based program that they track all their water and sewer systems. And so we have access to that, that you can actually go into just a GIS map.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Exposure Tracker. We use Exposure Tracker because the CAD and-- the CAD sends us to calls, but the scheduling is what schedules you. And so there's no real direct tie-in between your name and the call that you ran. And so we use a web-based program, which has an app called Exposure

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Tracker. And it's just on your own. It's your own responsibility. And we track, so we're supposed to go in there and put calls that we run on. So something that you may be exposed to, a hazardous material, you may be exposed to a fire, something like that. So you can actually track your exposures, personally, and then have that information if you develop cancer, or have a problem, or have hearing loss. So there's vision loss, hearing loss, cancer, all these things that you would then want to show your doctor, or human resources, or whoever that these are all the things that you've been exposed to over your career.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. And then that's one of the other technologies that's kind of neat is our Tier II reporting used to all be paper. And it used to actually sit in a box underneath the captain's desk, and that's where it lived. And now, the Tier II reporting is in PEAC. So things are getting there. Things are getting a lot better in forms of communication, access to the technologies, access to the data. But it's moving slower than the world, I think. It's the politics and the... how fast government works to make the change...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: frequency of using different radio channels] It'd have to be a mass casualty incident, or when we do what we call mutual aid. We go into somebody else's area; we can go onto their talk group.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	I know we do-- we use the red channels a lot... Because of the hazmat and because of the rescue. So we go to a lot of other jurisdictions because of that. And then [City] decided to split their-- or [State] split the state into four quadrants... So we have red northwest, red northeast, and then so on and so forth. And then they actually used [Street] and [Street] as their kind of boundary because it actually works as a perfect square through the state. And so that's been pretty neat around here. And then the fact that, up until we went to the digital radio, we couldn't talk to our neighbors. And so that's helped a lot... And now you can just switch the channel and get there.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: radio channels during mutual aid] Yeah. When you respond, they'll tell you to check in on red northwest or whatever.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. So if we went-- and the only thing that they would monitor is that somebody else in that northwest quadrant, or southeast quadrant, or whatever, wasn't already doing something. So if they are doing something, then you may switch to a radio channel that's out of that quadrant, but just that dispatch is monitoring and they know that isn't busy. Or we can go to a non-repeated channel. Something like that. So they'll find a work-around to make it happen if we need to make it happen. But it all comes through dispatch.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	I'd say, I was just on a call a couple of days ago. It was an officer-involved shooting. And we basically have a set system of, basically, command structure, right? And there was no command structure in that. So nobody's knowing what is going on because you have multiple jurisdictions. You got [City], where it happened at. You have [County] sheriff that was serving a warrant. So he was serving a warrant and he got shot. So obviously, he's calling us, calling [County]. So everybody's coming in. So is there really-- they should have a command post and the command post will delegate, "Okay, you're going to be my safety officer." And it just goes down chain of command. Well, it was just free for all.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	And that was one thing I was going to talk about with the radio that's gotten better is, in the past, anybody could get on the radio. We're all safety officers. So if I need to get on the radio and I say, "Hey, this wall's coming down. It's going to collapse," I get on the radio and I let that be know. Well, now we have basically an officer where, pretty much, you say, "Hey, doc. That wall's going to come down." But he doesn't do it or he doesn't see it, you're welcome to get on the radio. But we just don't have-- it's not free for all. But our command staff is where it needs to be because once that domino goes downhill, it goes downhill fast. So you just don't show up and do whatever you want...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We all have certain tasks that we do, certain jobs, and they'll change depending on where you are and who else is around you and where they're at. For the most part, we're a truck company, but if we have a fire in our backyard, we may switch over to an engine company. An engine

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								company may be a truck company. You just never know. So that constantly changes. But that's the biggest part, is that command structure.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...I mean, they're calling for one of us - I was on the ambulance - calling for a paramedic. Well, we don't ever just go as one. It's a rule: two in, two out. So we ended up fixing that, but our command staff was not happy, either. They wanted to set up a designated command staff in that post. And then we work and they say, "Okay. We need one medic. We need two medics. We need five medics. We need six beds." And then our command staff calls our dispatch center and they say, "All right. We got six reds, five blacks." And then they start delegating to where you need to be transported to, and who's available and who's not. So it just all happens. And if you don't do that, then nobody knows their right foot from their right hand from the left hand, so. It can be a mess real quick.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Well, I think the thing is, is firemen and policemen and all people that work in these industries, they're really good at just adapting and overcoming. And I think that's what we've always done for years and years. So there's even from the command structure, there's even from communication things. Like I told you about the call that we had that the city showed up with an iPad app that showed all the water. At the end of the day, we always get everything done. So we always cut the car. We get the water shut off. We get the officer that's been shot to the hospital. Things can always be done faster and better...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...The communication side, I think we're getting to the point that we can talk to anybody, but we just can't talk to anybody in the environments that we talk. We can talk to anybody sitting in the truck on a nice calm day in the middle of the road. But when you're in a structure fire, it would be really nice to have a great radio system where we can talk just like we're talking...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...The other thing I think that would be really nice is to have talking from me to him... So if you could have a Bluetooth, or a VOX system, or something where I could just talk to [Name], and then we could push the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								button and you would talk on the radio. That way we could communicate in a lot better environment. And even if you did get separated by a few feet, you could still know that you're there. And you don't have to have that hand on the back of his leg, or hand on the back of his boot type of contact.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...sometimes, I think there's too much communication to where if you really had an emergency, you can't even talk.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...we have one thermal imaging camera. We send one in with every group of firemen that go in. So they have that technology there. But the people in the front that are on the nozzles that are doing the job-- to be able to talk to them and to tell them, "Hey, I see this," or, "I see that," because you're focused on your one job. I think that would bring more value than everybody having \$50,000 worth of stuff attached to them... When maybe not everybody needs that. Everybody needs to be in contact and to be able to communicate everything that's happening. Because I think now, everybody wants to have a TIC because they can't see it. But if you were just being told in a regular voice where, "I didn't have to push a button. I didn't have to do this. I didn't have to do that," you wouldn't feel the need to have to have everybody have a TIC to be able to see...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. There's a huge cost issue. And so I think that a lot of things can be done on a lesser scale. You can give one guy the \$10,000 TIC, but then give him \$50 worth of communication that he can now more freely speak and be able to communicate to get out what he needs to do that doesn't take over precious radio time. Because we're getting dispatch. We're getting command. We're getting all of these things that-- it's turning into a lot right now. And I think we're just trying to figure it out.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	We're moving to a new RMS on [Date]. It's not made by ZOLL. So the interface is there, and it works pretty well. We've seen it now in training twice. But the idea now is, is this new RMS will actually integrate with the hospitals. So the hospitals can see all of our data now, and we can also see the outcome of the patient. And so that's really cool.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	In the EMS world, there's a lot that's happening. But it's just the same thing that's kind of happening with the fire services. ZOLL put out a monitor that has the ability to send an EKG strip, but you have to make sure that the facility has the way to receive it and see it...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...they're still doing calls on the phone. So every time they take somebody to the hospital, they're calling the hospital and saying, "Hey, this is what we have. This is what we're bringing you." And so that used to happen over the radio. Now it's a lot clearer signal because we're using phones...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: sending EKG strip] ...it will be neat if you could attach all of that, and then somehow send it. And they can just say, "Okay, received. And go to room five when you get here." Now when you show up there's a big, giant TV on the side of the entry door in the EMS lounge and it says [City] Fire, kind of a little brief description of what the nurse or the receiving nurse reported, and then the room that you're supposed to go to...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: cause of communication issues] I think lack of training, maybe. Adrenaline... I mean, I can honestly tell you it doesn't happen here. We may get off of track a little bit, in terms of an individual or two, but for the most part, we get toned. Our chief gets on scene, he takes command over instantly, based on if it's a fire. Not every time. It's his discretionary, based on what he's hearing en route. He may say, "Yeah. My officer's got it under control. I'll let him have it." But it's still in-- you still have somebody in command, right? He basically is there to support you, but not like I just come in on [Name] seat and take it over, unless he tells me or I ask him to. So I think that part, here, is really dialed in...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: cause of communication issues] ...But in terms of when we get with multi-agencies, that's when it's kind of a measuring contest. We should all work together, but it doesn't always work that way. Like I said, we are on a north area team that we do a trench rescue on. And we've had a couple calls. [Yeah?], it gone smoothly. It got the job done, and outcome probably came out the same. But it's just too many people. Everybody wants to be a chief. Too many chiefs, not enough Indians [laughter]. So

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[inaudible] [that is?], but how do you fix that? We train on it. But I just think, again, you have your certain guys that you work with, and all of a sudden you're off on vacation, and I'm not working with you. So were not on the same page. And I'm working with some guy from A shift, and he does it totally different than the guy I used to work with.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	It does. With the transition to the technology, there's been a lot of-- [!?] do say that-- we've started to depend on it a lot. There's a lot of dependence on it because we got away from the Rip-N-Run. If the MDT doesn't work, or if the cell phone module in the truck dies, everything goes bad because we went to an IP-based alert system in the stations. We had Comcast. Their line got cut one day. And we had no alert system in the firehouse, so nobody could go to bed. You had to stay up and stay with the radio...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...When the radios go down, so, say, the cell tower that goes into its backup, then we have to move from-- we have a cell-- we have a radio tower in [City], so we're lucky. We have pretty good radio. But then, when it goes to the neighboring radio tower, we have really spotty issues. And so when it goes bad, it sucks bad. That's probably the biggest common thing, if the CAD goes down. Then they're running off of their old run cards, which are 3x5 flip cards in a big book. And everything goes really, really bad. And so I don't know how, other than just redundant systems, how you could fix that. But we've become very dependent on it...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We moved to a-- we moved to a closest apparatus dispatch system. So they don't listen to the radio as much, because the CAD's supposed to be working in the background and picking who's going to go. Yeah. Just a lot of that. That's probably the biggest failure is, when it doesn't work, it really doesn't work.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	But it can start from our communications, too. You call an emergency, based on our dispatcher interprets that. They got flip cards. [Name] was a dispatcher. He knows more about it than I do. But based on how you relate the information to our dispatch, that basically determines who's going and what we're going on. So they may say, "Yeah, it's a small little

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								fire on the corner." So they send one apparatus. Well, the whole building's on fire, right? ...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...So I, personally, think we're going to have a drone, eventually, where the drone will go out before the chief. And he'll basically get on scene, and he can do a 360 of the house. Then the chief can say, "Yeah. The whole back of the house is on fire. This is our action plan, based on that." Where now, basically, they show up on scene, and he's waiting to hear what your size-up is. So you go to the back of the house, you say, "Yeah. Half of the house is burned." Well, really the whole house is burned. So your envision and his envision are two [different?] things. You may say, "It's two story at the back and it's three in the front." He's like, "How's it two? It's three in the front." Well, it's a walkout or whatever, you know what I mean? We've had that happen. So again, that's back to that communication thing, where it's your vision and my vision are two different things. I could tell you it's red, and you're like, "That's pink." You know what I mean? Kind of like that. That degree. So I think, eventually, you're going to have where that drone is going to be in front of the chief, and he has a better of a view. And then he can say, "Yeah. We don't need all these apparatuses, based on what I see."
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	--so you don't have to put one of us in harm's way. I'd work on the meters and stuff like that, as well, and so. That's one of the things that's come out is we have the meters work over radio frequencies now... So we can actually take a monitor-- we have to physically take it. But we take a monitor, and you can actually leave it inside of a structure. You can leave it around a facility, and then we can actually monitor that remotely... So it's one of the things-- it's cool, but that's on another piece of software that doesn't talk with anything else. But it is cool. It's neat. It's neat where technology's going.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: NG 911] So it's neat. I think it's giving a lot of-- there's a lot of ways to get information to a dispatcher to be able to get people en route to a call. Some of the texting and some of that, when you're getting away from the phone call, it's difficult to be able to gather the needed

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								information to get the right truck to the right call, which is one of the biggest problems. It's being able to ask the right questions, being able to get the right answers. You're dealing with people that are... really distraught. They're really worked up. And you're trying to have them come up with a good answer, I guess, is the best way-- I don't know. You're trying to get them to think and to say the right things. You're trying not to be leading, because once you start being leading, then you start getting misinformation. So the text thing I think is neat, but it doesn't give you that rapid communication where you can get all the information. But at least it's another means to get people there...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	The CAD that they have now, now that we're doing closest dispatch-- so the CAD monitors via GPS, which apparatus is where. It's actually creating shorter response times, because we're getting apparatus that are driving between the station and another firehouse, or the station and a store. So they're at a position, but they're still in better position for the call, which I think it's a lot better for everybody. So that's neat...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: cell phones] ...And that's created another level of communication and problems, because you have your different level PSAPs. And so most cell phones usually go to the PSAP one instead of PSAP two or three. And so, like here, the PSAP one is the county. And then, they will transfer you to the PSAP two, which, in [City], is PD. And then, if you need EMS, you go to the PSAP three, which is EMS and fire. So now you've been transferred three times. If you hit a tower that they know specifically is in the city, you probably will go straight to the PSAP two, which is the City of [City] Police Department. Then they say, "Police or fire?" And then, you get transferred to fire.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...When I first started and we were just on the streets, you would just get an address, very generic information. Now we actually get pretty specific information. So age, gender, hopefully a good idea of what kind of ailment they have or how big the fire is. The dispatchers now have a very regiment set of questions to ask, which it was just more of kind of conversationalist and trying to get what you could out of them. But

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								when you start to ask those questions, you can then determine whether the apparatus needs to go emergent or non-emergent. And that puts a lot less strain on the system. It puts a lot less strain on the citizens because you're not going lights and siren and tearing through a city when it's just a car fire...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...So for the dispatch side, it's neat. I think our dispatch side, we could get a few more technology things that would it make it nicer and better. But it's neat where it's gone. The Rip-N-Run was a concept that's actually kind of coming back into vogue. But it's coming into vogue in more of a technology standpoint. Not the rip the piece of paper off, but they're doing a monitor next to the garage door so that, once I type in everything in the dispatch center, you hit the button to tone the truck. It pops on the monitor next to the apparatus. You can actually physically see something instead of having to hear it.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	The technology that [Name] was talking about, [Name]. We use a multi-channel dispatch concept, which I'm sure you've heard of a lot. You have your primary dispatch channel, and then you go to another channel to check in. So [Name] is just an automated voice that announces what the call is, the call type, and all of that. And then we dispatch on channel three-- or channel two. I'm sorry. Either one. So we dispatch on channel one. [Name] happens on channel two. And in a typical system, you would change to a TAC channel. We don't do that. We don't do that because our admin is older, and they don't like the switching back and forth between channels, which I think is a big thing for us. It's caused a lot of radio communication on one channel. It muddies everything. Personally, if I could do anything, I would like to see us move to a more dedicated TAC channel type of environment. I think if you could have a perfect world, it would be neat if I could dispatch, and push a button, and make all the radios on that truck go to that TAC channel.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	That would be really cool. If I could say, "Okay. Rescue 54 in these four portables are assigned to that truck," and I know that I'm toning them out to [Street] If I could make that truck and all those radios go to TAC

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								four, and I don't have to worry about them changing their radio channels-- which is why our admin doesn't like it. Because if [Name] remembers to change his radio, but I don't remember to change my radio, and then I need to get ahold of [Name], I can't. And then I have to wait for dispatch to tell me to change my radio, or dispatch needs to become my relay...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...if I could push the button and say, "Change these five radios to TAC four," and then they're on TAC four, you wouldn't have to worry about it. Or if you could do that for a big group. Because when we do have a fire, we do utilize a TAC channel because there is a lot of traffic that we don't want to interfere with daily traffic. But we will always, inevitably, have at least one or two apparatus, or one or two officers, that are checking in on the wrong channel, or that are getting a size-up or getting something on a wrong channel. And so then, as a dispatcher, you become the, "Hey, change your radio to channel--" and then jump to the other channel real fast, try to give the relay to keep everybody up to date. And then they give the same size-up because they're still trying to get out, and so it uses up a lot of radio traffic...
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We try to do a silent dispatch here. And, again, it was more admin and technology than just-- admin didn't agree with it and the technology wasn't quite there. That was about five years ago. We haven't brought the idea back up. I think, personally, it's a great idea if you could prove it to happen-- prove it to work 99% effective.
Communication	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: silent dispatch] So you can get in the truck, push the responding button, get the call on the MDT, know all the information. Because to have that back and forth that's already on the screen that's right in front of you, but to just hear it from a person-- I don't understand why, if the technology could work.
Communication	FF	S	Manager	46-55	21-30	Male	FF-S-023	...So I have the dispatch center, and we have two full-time dispatchers on at any given time, plus a dispatch supervisor and we use computer-aided dispatch. A Q/A, it's a EMD/EFD system. So it's a question/answer system that they go through. But we also have a station alert system

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that they activate. Westnet is the brand. And then we have-- what else do they have to do in there as far as a call goes? A lot of recordings go on, a lot of extra radio, like backup radio systems, that kind of thing. So they're pretty technically important. Huge trunks from our phone provider, so there's a lot of telephone coming in and going out from them.
Communication	FF	S	Manager	46-55	21-30	Male	FF-S-023	So we have to use-- currently we have, just on an incident we have three systems that capture data for us. That's our dispatch system, our CAD, computer-aided dispatch. We have an infer system. Which is just as the in-first reports. And we have a PCR System, a patient contact report system. In our current system, none of them talk. Well, that's not quite true. Times get pushed out from the CAD to all these other systems. But to analyze that data I have to download those three data sets and have to figure out some commonality between them because they don't have the same common numbering system. So I have to download it from an off-site server, which is our CAD, and two SQL databases...
Communication	FF	S	Manager	46-55	21-30	Male	FF-S-023	And quite honestly, that's a highly overused medium. We find that most of our emails are for trying to educate or inform through email, don't go out to the masses. It's just junk. In their head, it just goes away. So every morning, we have a life-size briefing for every shift change with the crews. There's a life-size briefing which is the Skype. It's just a television meeting with all the crews. So I join in on that. Listen for any things that might be for my division. So I have my maintenance guys join in on that, so they can inform people what maintenance needs are...
Communication	FF	S	Manager	46-55	21-30	Male	FF-S-023	...because I have dispatch as part of my purview, I try to listen to radio the entire day as well. So I have a radio in my car, I have a portable that I have on the desk. So listen in on that. If I'm out and about, and a call drops that I'm closer to, I'll go to that. If it's a fire or something, I'll go to that. So it's all part of the gig. So radios, email, Skyping, or the video stuff, telephone, that's primarily how we communicate. I mean, face-to-face. But a lot of face-to-face stuff too, but. And then I try to to get out to each one of my locations frequently, and each one of those stations frequently, so that I can talk to people and try to get what's going on.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Kind of that management-by-walking-around stuff.
Communication	FF	S	Manager	46-55	21-30	Male	FF-S-023	...Up until recently, I was on a company so there was a lot of listening to PD, talking with [City]PD, talking with [City] at the time. We couldn't get [City] PD, but trying to get a hold of them...
Communication	FF	S	Manager	46-55	21-30	Male	FF-S-023	So when I first started we had UHF and VHF radio. So the 100 and 400 frequency radios. The 100 stuff we still use for aviation and I think wildland is still 100. So it's the VHF stuff. Those radios were pretty much radios. They were crystals. You'd tune it in and you had only a select number of channels you could get to. They were highly reliable and they had good penetration out of buildings. You didn't have to have as much infrastructure. You didn't have to have as many radios on repeaters and all that stuff in the area because they had a little bit more power, UHF is slower wave. One of the reasons wildland hasn't gone to any of the 800 or anything like that is because you don't have repeaters and you don't have-- and that 100 level radio that we have is actually much longer distance. It's still line of sight but it goes a little bit over the horizon I kind of thing.
Communication	FF	S	Manager	46-55	21-30	Male	FF-S-023	[RE: 100 frequency radios] ...We carry those on our apparatus... The 100. Initially, we got them just as a backup in case our systems all failed or if we got a mutual aid out of the district for a wildland event. But they're there. They rarely get used if ever get used because we haven't had any failures.
Communication	FF	S	Manager	46-55	21-30	Male	FF-S-023	...And going back to the 400s, the 400s I tune it into a radio frequency like 401.02, whatever. The 800s now have a bank of those frequencies and when they key it up it picks whatever's open, sends it out and then when it comes back it could come back over any one of those frequencies... So you're not actually tuning in a frequency anymore. You're tuning in a bank...
Communication	FF	S	Manager	46-55	21-30	Male	FF-S-023	Yes. So, over the last several years, we've gone through a couple generations of these radios. We're now on the most recent generation, and we've added some towers. We've added some computer capacity

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and some communication between computers and stuff. So it's pretty reliable, but we still have a lot of weird dead spaces. Valleys where [City]'s radio can out broadcast our radios, and all of a sudden we can't talk. However, the interoperability of those radios is remarkable. I can put 15, 20 banks and have a bunch of different talk groups in each bank. In the past, we'd have to pick a couple of fire agencies that we wanted to talk to, and then we would tune that in to our 400s. Right now, I have [City] PD, [City] PD; I can talk to the state PD. I can talk to [City], [City]. Anybody in the area, I can talk to on their channels or we can code to a common channel...
Communication	FF	S	Manager	46-55	21-30	Male	FF-S-023	[RE: radio systems] ...So the interoperability of that information, or getting that stuff, theoretically, is awesome. It requires a lot of programming and a lot of coordination, and that fails, occasionally. So there's pretty much the state system. [City] has a system. [City] has a system. A couple of the counties have a different system, and if those don't coordinate how that technology talks - even though in theory it would work really well - when I change the channel, or change my tuner, or whatever, and I try to talk to them, it's not working, because it can't recognize that computer. It can't recognize that thing. So in our state system, since we're all our own individual communities, it takes a lot of coordination, a lot of people talking at a lot of levels. There's a good part of that. That means we're all talking. There's a bad part of that, a lot of errors.
Communication	FF	S	Manager	46-55	21-30	Male	FF-S-023	...there's the PSAP and then there's our dispatch, so we have two dispatch centers. The Police Department gets all the 911s and then they have their radios. Now we're on their radio system so that's okay. So their dispatchers get information and they send it to their police officers. They usually send calls then to our call center and we will get more information, more in-depth information, send our fire trucks...
Communication	FF	S	Manager	46-55	21-30	Male	FF-S-023	...In this particular case, one of the dispatchers on PD got bad information and thought that one of the buildings might have been occupied. We change our operations if we think there's people at risk.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								We'll very, very, very, very aggressive if we think people are at risk. As it turns out that wasn't the case, nobody was in either building. The PD didn't give that information to fire, but they aired it to a couple of their officers. One of our dispatchers happened to hear that and gave that information out. What they didn't hear was the officer said, "No, I have these occupants here."
Communication	FF	S	Manager	46-55	21-30	Male	FF-S-023	...at that time-- now this has changed, but at that time what happened is two more fire fighters went into the exposure building that was catching on fire, did a quick search but while they were upstairs it blow up on them. A lot of fire came down to the floor. Our more senior fire fighter says, "We got to go," ran outside. Well, he's fine at that point. Turns back and his partner wasn't with him. So he goes back in. Tries to call for a mayday, but his radio melted through. So he grabs his partner who was getting melted to the floor which is part of this too, so he grabs his partner bodily and it's kind of humorous because [Name], who's the hero here, he's only about yay high. He's a very small troll-looking dude, very, very strong. So he pitches out this guy that's taller than I am out the door. During that when his radio melted through, one of their two radios did an emergency broadcast and set off alarms. Well, [City]PD at the time just silenced those alarms and didn't tell anybody. So that was information that you might have helped [laughter]. Now, we fixed this, but there are other agencies that are of dealing with that I'm positive...
Communication	FF	S	Manager	46-55	21-30	Male	FF-S-023	...it was just a few weeks ago we had a fire fighter hit the emergency activation button and now I need PD at this location and ran back because his partner in the ambulance was getting beat up... Sort of. I mean there was a fight going on. Well, now those emergency terms come to our center and it went up and they didn't hear what they needed because it beeps it goes, "Beep," and then it shuts and during that beep is when he said I need PD at that location... Our police department didn't hesitate, they went ahead and sent an officer, they started an officer that way and one of our other medics was getting a call at the same time and this was 2 o'clock in the morning, just happened to be scanning,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								heard that and let the police know what was going on...
Communication	FF	S	Manager	46-55	21-30	Male	FF-S-023	...It would be great to know what the building looks like, or what the streets look like, at the time of the incident. If we had access to cameras on the apparatus, or even our dispatch center, they could say, "Hey, look. What I'm seeing from this location is no smoke or I see a fully-involved structure," changes the tone of a lot of stuff. And 2 o'clock in the morning, if you get woken up, it takes a couple of minutes to get all cylinders firing; some of us takes longer. I don't know which side I am [laughter]. You get down there, and you listen to the information. And if it sounds like a good call, there's a lot of adrenaline. There's a lot of-- your heart's pounding, and it's a big deal...
Communication	FF	S	Manager	46-55	21-30	Male	FF-S-023	Okay. So here's another set of data that would be awesome. I've taken Uber and Lyft recently, and there's an application out there that will tell them where accidents are, and which roads to avoid. If that's out there, shouldn't we get that? Shouldn't we get that information back to the fire trucks and say, "Hey, look, this road's closed, we know this," instead of us having to it get into the system and type it in, because if we don't know, we don't know. But there's so many cars out there reporting so much information to so many people, road conditions are, I think, known now. It's just we can't get that to the responders. If we can get that road information up there I think that would make their responses more-- I don't think it would make it much faster, but it would probably make it safer.
Communication	FF	S	Manager	46-55	21-30	Male	FF-S-023	...So robots, use of the UAVs to give us situational awareness. I think that could come fairly quickly. There's a way you can pull up, you can say, "Give me a one-block radius or a one-house radius, and the thing can just--" at least the insync commander could have a picture. So there's the physical stuff...
Communication	FF	S	Manager	46-55	21-30	Male	FF-S-023	...From the data side, my wish would be, that what people do gets documented real time, and I think that's not an impossibility. Whether they say it on the radio, whether they push a button, whether they, as it comes out of the pouch, the medication comes out of the pouch, or as

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we squeeze the syringe, it gets documented. So I would take a lot of small technology, like a lot of communication, and little sensors and stuff. A lot of the things that they say on the radio, and I've already said this, say on the radio if we could capture that and make that the data point, I think we'd be much more accurate in what we're doing. We need a lot more data points in our analysis...
Communication	FF	S	Manager	46-55	21-30	Male	FF-S-023	...And, actually, going back to that documenting medications, if there were some kind of a device on the, "Okay, I'm giving this, I'm doing this," and it's just counting down and then I could take that information and throw it into the report. So there's a lot of data we're not collecting. There's a lot of data points that are inaccurate. I think the interface we have with technology for the people that need to be giving me this information is very clunky.
Communication	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	I'm kind of the go-between between the battalion chiefs and the deputy chief for the executive staff. So, like this morning, I had a half dozen emails that related to emergency medical services issues, CPR cards that didn't get issued, people who didn't get to go to advanced cardiac life support class, people who were having issues with medical equipment. So I would then have a conversation with the emergency medical services commander to try to work through those issues, and try to get those issues resolved. I had a staffing issue about somebody being moved on to a fire apparatus on short notice. So, trying to work with them on how do we make those recommendations, how do we do our job a little bit better, how do we make sure that we communicate amongst our co-workers in a better fashion.
Communication	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So they have a call taker. They have a group of call takers. They take the call. And then depending on-- we just went to priority dispatch. So depending on how that is set up, it is either sent to PD or to fire. And then they may ship it over to PD or fire depending on which one went first, what additional resources you need. We don't see duplicate calls unless it's something where you're just getting multiple callers and they're all loading the system at the same time, the dispatcher grabs one

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and adds resources to it. I just go in and get rid of them so they don't show up as incomplete reports.
Communication	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So normally I'll go out. There's two reasons I go to the street. One is to work with the battalion chiefs. So I'll either have group meetings. So we'll sit down. We'll do a little training. We'll have conversation about what's gone on at headquarters for the day or any issues that they have in their battalions that we can work through, the four of us. Sometimes I'll have one-on-one meetings. So like this morning I went out and had one-on-one meetings with the battalion one chiefs. I caught them at shift change, so I caught one before the other one came in, had a meeting. Then he changed and left. I sat down with the other one. And then yesterday I went out because all three chiefs were on calls, so that I went in service as the fourth chief. And then it's also my responsibility as that fourth chief to maneuver our resources around.
Communication	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	That beeping you heard is probably one of them texting me. So there is a tremendous amount of texting communication throughout the day. If it justifies more than texting, then we move to phone call. And if it's more than a phone call, then we move to a face to face meeting. A lot of texting back and forth all the time. So we do a lot of communication by cell phone, a lot of emails go out. I try to do when there's a lot via email or I'll just a cluster, push it out just because it's effective and I can show, yes, I did send you an email and here it is and it went out. So those are really my main ways of communicating with them.
Communication	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	Yeah, like I said, the timing couldn't have been better. We had just finished a meeting. We'd just opened our brand new department operations center. They had a beautiful white wall for us. There's a map in there. One of our firefighter's kids is a dispatcher at a neighboring department where our fire calls roll to when the system goes down. So they go to [County] and they roll them to [City] Metro Fire MatCom. And he called one of my chiefs on his cell phone and went, "What is going on? We're getting your calls. What do you want us to do with them?" So we went into the department operations center and set up a makeshift

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								comm center until they could get everything up and running again.
Communication	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So we went to a interoperability channel. They would get the call, MatCom would process it and call us on an interoperability channel. My BC would take it. We'd write it on the board. Another chief would pick our-- go, "This is the run card. This is who I'm sending." Somebody else was tracking it on the board, and another person was tracking it on a computer screen and pulling up maps just in case we had to-- because we lost our mapping, everything. So just in case we had to route somebody in then we could route them in. So it just happened to be at the end of a meeting when everybody was upstairs. So we just pushed everybody into the room and everybody's like, "Why didn't dispatch do something?" I go, "What did you want them to do?" It's not what they're trained to do. So, yeah, it was fun. It was really fun.
Communication	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: wildfire incident] ...So what was cool about it was, MatCom has a dispatcher that drives around in a pick-up truck. One of their dispatchers is set up in a pick-up truck. And, at some point, I'm trying to get resources and coordinate my radio communications, and he pulls up next to me and he goes, "Hi. What can I do for you?" And he's standing there with an iPad. And I go, "I need five brush trucks right now." And he goes, "Okay." And you see him push a couple buttons on his iPad and he goes, "Done. Now what do you need?" I go, "I need five type one engines right now." "Okay. Done. You want me to spin you up some weather? I'll spin you up some weather and give you live weather. If we can get the airplane up, I can get overhead video for you."
Communication	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: wildfire incident] So having them come in and provide this amazing-- so he coordinated all my radio channels. So I had 27 Mutual Aid agencies on the call. I've never experienced anything like that. And he coordinated all my comms, rigs coming in, rigs going out, having everybody go to certain radio channels for me. And he's like, "Here you go. Here's what you have. Here you go. Here's what you have," which was an-- because otherwise I'd have just been sitting in the cab of my truck, trying to figure this out on my own, and he was able to set me up. He

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								was able to talk to the state and get certain channels freed up for me to use, which was really cool.
Communication	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: working in Arson] Radio-wise, by the time we got there, everything was over, everything was done. Most of ours was face-to-face communication or cell phone comms with each other, the other investigators, or the state investigator. Everything was cell phone or text message. It was rare we do a lot of radio comms...
Communication	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	Sure. So usually what happens is, say we're going to a shooting, a party with a gunshot wound. We won't go in. We stage a way. Fire and ambulance stage a way, block two blocks away. En route, the officer on the engine or ladder truck will come up on dispatch and go, "Dispatch, tell me what PD channel and the officer in charge." And they'll be like, "Okay, go to PD3, Lincoln 27." So we'll switch over to PD3. And, usually, we have an extra radio in there or they'll use their portable to keep the rig radio on whatever TAC channel we're on. And then listen and listen to hear PD say, "Request entry." So they don't tell us it's clear anymore. They just will request entry when it's safe as it's going to be for us to come in.
Communication	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: communication with LE] So they'll request entry. We can communicate on this. So we recently had a SWAT activation for a guy who had some hostages. So we had an in-sync commander who will do unified command post. And then, we'll listen to whatever PD channel they're on. And then, we'll operate on our own fire channels with our fire person. We usually only have the in-sync commander go to the PD channel because they really don't want us talking on their channels if we can help it. But we have access to all their channels. And within the last year, they've added our channels onto their supervisors radio. So they can come up on our channels now to-- up until a year ago, they didn't have that access. They didn't want it. All of the sudden, something happened where they couldn't get a hold of us and they realized they really wanted it and they've got to add it on to their radios.
Communication	FF	S	Supervising Field	46-55	21-30	Male	FF-S-017	The old one was just as free, truly free-standing MACOM system that worked well within the city, but was incredibly frustrating when you try to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					leave the city because other than going to the red channels, you really-- or the statewide Mutual Aid channel, you had nothing else to communicate on. And if you had a complex multi-agency incident, you weren't able to communicate. And, like I was saying, the red channels were not meant to be this large intense operation that system just can't tolerate it...
Communication	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...Cell phones have made life better and life worse because I get text messages 24/7, whether I'm at work or not. And the belief is they know you're going to see it so they expect that you're going to answer it...
Communication	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	But some of the in-mass communication stuff we're excited about. We hope that that plays out so you're not holding your radio up to your mask and then having it move through an amplifier and through your microphone...
Communication	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	I think Scott's starting to move that way. They've got that plug-on or that add-on thermal imager. So they've got that now. And they're going with some of the Bluetooth comms. And at some point, I'm hoping that you'll put out a mask where I can-- maybe I can track my people on a little map. Or I can flip through a little side screen where I, as the officer, I can get a thermal image. Or I can track my people. Or I can get some kind of heads up information that the IC could send from something inside. If we can't communicate well that way, can I get stuff that would come up on a small heads-up display? I don't know. Maybe by the time that comes they won't let us go into fires anymore so.
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So we start our day with our daily pass off from the off-going crew. They tell us anything to note, just what they did on the day before for anything, any issues. And then we go to our life-size system which is a video conferencing system through all the stations and headquarters and dispatch. Everybody gives any more pertinent information and what's going on with the day. And the time chief and the support officer run that. After that, we go out and do our truck checks, get everything ready for the day. My lieutenant spells out what we'll be doing for the set the two days that we're on, and we go from there.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So we have two truck check sheets, so to speak. So we have an inventory list that's really just kind of more of an in-house-- we're checking specific pieces of equipment and we're doing it on paper and check marks. And then we have a daily truck check that is more the basic mechanical stuff and making sure the lights and sirens work and the radio and things like that. And those also are on a sheet of paper with check marks, and then they get sent to our maintenance division.
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So we'll scan them and send them to maintenance. I believe our maintenance secretary enters them for that for the ISO and all that.
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So we do have a dispatch center, our own dispatch center. So they verbally, over the air, and on our NDT's give us information about, obviously, where the call is and pertinent information. A lot of the information doesn't come over the air, but I'll get notes on the NDT telling me specifics. And then we all wear headsets, so we can talk to each other in the truck.
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	The majority of our calls are just face-to-face verbal conversations when we're on scene because, for the most part, on medical calls and motor vehicle accidents, we're close enough that we can just talk. I don't have to talk to these guys over the radio. Now if we have a fire scene or a larger scene, the way we work, our truck companies and the rescues we split so we're two and two. So I can talk to other companies or these guys via the portable radios.
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So with that, too, I mean, if we're working a fire, we'll assign to a tac channel and that'll be separate from all the other operations throughout the district. But, for every other call, everybody shares the same channel versus for the operations dispatch. As they dispatch out the calls, that's on its own separate channel.
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	I don't believe we have the-- our old radios did, but we can't just talk to each other. It'll go through everybody. Everybody will hear it. There's no just portable-to-portable or unit-to-unit transmissions. We can just go on the tac channel and just speak and everybody'll hear it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So really, if we take a fire scene, command is in a separate vehicle. And usually there's at least two people in that command vehicle. So they're giving overall orders for the scene. So it's a back and forth of-- we echo everything, so, "Rescue 54, I want you to do ventilation." "Copy. Performing ventilation." And then we can talk to other crews, also, which doesn't happen, usually, on our fire scenes. Everything goes through command and then send information back out to the crews.
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Most of the directly surrounding departments, we can get on their tactical channels through our radio, so it's real easy. And then we have kind of an all-encompassing channels that we can use in this area. It's called Red [City] . So all departments can get on the same channel, be it their portable and apparatus radios. And then we can all talk to each other. So it's pretty straightforward and streamlined anymore.
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	With that, [City] Police Department's also-- we can also get on their two tac channels so we can talk to them and listen to them, also. And vice versa, they can get on ours. And there's been several times they get on there and let us know stuff, so.
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: communicating with surrounding departments] It's pretty easy. And we have cheat sheets in the apparatus just so you can remind yourself where the channels are, and how to get to them. It's pretty easy.
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: communicating with surrounding departments via radio] SME S3: Not really. I mean, that works pretty well for us because it's pretty limited interaction for the most part. SME S2: And if we need a phone number, dispatch will get it for us. I don't think there's a need to have it all spelled out on something when they could just get it for us and relay that info.
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	I mean, I've, personally, been on mutual aid, where we went to a house fire in a neighboring district, and it was pretty easy. Our dispatch just said, "This is where you're responding." And the map came up on our MDT, and they said, "This is the tactical channel you need to be on." So we could listen, obviously, at a delayed response for us. It took us a while to get there. But we could listen to the incident as we got there.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								And then we did it face-to-face with their battalion chief when we got there and were assigned. We were already on their channel so it worked pretty easy.
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Most of the surrounding departments use a typical command structure that's similar to ours. So, really, it's the same verbiage, and tactically they may do things differently, but it's pretty easy to understand what they want from us or vice versa. So it's like I said, pretty straightforward and basic.
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: radio in the rescues] The officer usually is talking into it.
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: radio in the rescues] The officer and the engineer both have a button to talk. In the back, we don't have a button, so either one of them can talk, but he's the main.
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Hazmat we have in-suit communications. So that's just a thing that clips into your mask and then it has a speaker that goes by your ear. You have a button that you can push through the big level A suit. You can push it through there and then speak. We have a radio system on that hazmat that we use for that, but it just uses regular radios.
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So we do have voice amplifiers on the side of our mask, so face to face communication is a lot better.
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Kind of, in the truck, we have headsets on, and we can talk to each other without yelling if it's loud. And we're responding emergent to a call and with the siren and truck noises, and so we can talk to each other just fine, and it doesn't transmit over the air. And I always thought it would be neat if we were inside of a building, we could talk to each other. And then you could click a button and you're transmitting. I always thought that would be neat versus yelling at each and "What?"
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	We are. We're telling chiefs, support officers, and then we have an office administrator, that she builds the schedules. And I don't know what the process is on all that. You may want to talk to them. But as far as what I hear with this TeleStaff, I hear it does it all. It calls people. It's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								automated. It's a computer that does it all, so.
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So if someone calls in sick, they call TeleStaff, and they say, "This is so and so. I'm out for 24 hours." And then TeleStaff starts rebuilding the schedule for them instead of-- for us, it's our time chiefs have to start calling people. Sometimes it goes really quick, but it can be a lengthy process.
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	...sometimes there's been information that's been lost in translation from people on the scene to the officer, to their dispatch, to our dispatch, to us, confusion about if somebody's inside or not which really changes what we do tactically. So we're doing something, thinking there's potential rescue when there's not. So you're really putting guys in quite a bit more risk...
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: dispatch] For the most part, I think they do a pretty good job giving us pertinent information.
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Yeah. So generally station five is our support, or we support each other with technical rescues. So we always respond jointly. And again, with that, we're part of the [Name] Tech Rescue Team. So our last one was a trench collapse with a guy in the bottom, out in a different jurisdiction. And so we responded with them out there. And yeah. So we go on scene, and there's a guy in the bottom of a collapsed trench. And for that, we'd shore up the sides, and then we start digging out. And as far as communication, it could have gone better. There was the incident command structure, and he was delegating all the tasks and all that. But, yeah. I don't know if we had a common radio channel. It was mostly face-to-face on that one. How in-depth, do you want me to go about the call?
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Yeah. Our engineer, he was one of the leads so most of the stuff relayed through him and that other guy from the other department, who were managing the technical part, were then relaying it all to the operations and to the [inaudible] commander.
Communication	FF	S	Field	26-35	11-20	Male	FF-S-018	So, I mean, my role, I talk with my lieutenant. I barely get on the radio.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					Everything's relayed through him and same with him to me. He talks to me. And then he's usually assigned through the radio from instant commander after the command's open, it passed the battalion, to the chief.
Communication	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Really, for the most part, it's the company officers talking to command. On a larger incident that could change because they could set up divisions. So I might be talking to a specific person who then has four or five companies under them. Then they talk to command.
Communication	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Along with the texting, we do use some [webnostic?] programs out there to communicate, like Everbridge. So, obviously, you can use that for notification of the public, but we also use it as a group to send out events or callbacks. Dispatch uses it at [inaudible]. We use WhenToWork as our scheduling program. So there's some communication there, who's on to do what shifts. So there's a communication element there.
Communication	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...I mean, it's funny if you look at personality and look at how people behave, when you analyze people communicating or working together, they tend to work together if they can talk to them. It's that simple fact that back in the day, when it was up valley, down valley, they had different radio systems, and so then there was rivalries and stuff because you don't really know what's going on. You can't really interface. But as soon as you make it so they can just casually talk to each other, then the relationships grow. And it's not even an intentional thing but it just- because that foundation is there, they talk, and then they work together more. And I think that's important. That's a subconscious thing that actually happens when you look at interpersonal dynamics.
Communication	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	We work with the state, with the [Organization]. We're one of the few fire departments that have a fantastic relationship with [Agency] when we're out on the road. And I think it's because back in the day, we made sure we had their radio channels. We communicate with them. Every time we went out in the interstate, we don't need them or anything, but hey, we'd call up, and, "Hey, we're going to the interstate for this call." And just them knowing what's going on builds a camaraderie, and now we train

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								with them all the time. We do all this other stuff, so that is key.
Communication	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	No. We have the [inaudible] MDTs, but I think we would call it a failed technology. Because it relies on Verizon to communicate, it just doesn't work. We spend more time wasting time trying to keep that thing working than we do doing our job. So we've given up on it. My vehicle, which actually is an old sheriff's office vehicle, because they built it in certain ways and it's actually one of their old terminals and all that stuff, it works okay, but I certainly would never rely on it or make it a priority.
Communication	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	That's our radio template. This exists for every single radio in [County] County. All 1,200 radios have the exact same template. It doesn't matter if you're a public works person, trash collection, or the county manager. We all have the same template. That's something, again, as a group in [County] County, we've really embraced. And this has helped us really work well together, that we know how to find each other, and it's open. I mean, you're not going to get your hand slapped because you went over and called someone and talked to somebody.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...Recently, the police department and the fire department and the sheriff's department took our radios and we made them all the same so that we can-- where police has their main channels and we have ours, fire can now access police channels and police can access fire. So incident commanders can actually-- we can actually talk significantly easier now because of the way our radio channels and our trunk [inaudible] is set up.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Yeah. So that's frequently how we-- we'll just set up and have a communications plan. Police will be operating on whatever channel it is. And then we would have that. And we would spread that information to whoever that unified command incident commander is who's working in that specific incident. And then we would take down and pass-- if we wanted to have subchannels underneath there, we would pass that down to fire commanders or to police commanders who are working underneath, like in a fire branch or in a law enforcement branch, or an EMS branch...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: LE multiagency terrorism information] ...it could be anything. "Hey, a firefighter had his equipment stolen out of his car." Doesn't seem like a really big thing until, from an intelligence aspect, you start saying, "Well, we have an event coming up over here." And if a firefighter's gear went missing and somebody was wearing that, could they just gain access into this event? So we will then take this information which has been disseminated to key individuals, and we will pass that throughout our organization and say, "Hey, look out for this." Or I might coordinate with the [Name] security to say, "Hey, we have a Knox-Box key," which is on every building. "So, hey, one of our Knox-Box keys was stolen. So you need to--"
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So every morning, I check with the Joint Terrorism Task Force, the [State] Information Analysis Center, to see if there's anything credible that's going on and see if there's anything that's going on within the city and county to see if there's any correlation. And if there's information that I need to disseminate, then I take that information and I push it on out to the operations folks.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...I specifically don't use Twitter and Facebook, but the fire department, we do have... like our public information officer and our community outreach that we have...
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...But as far as other modes of communication, it's really just email and phone. I mean, if I wanted to talk to you or talk to the shift commander, it's usually just-- rarely, unless it's critical, on scene, well, we use radios. But that's the predominant way we'll communicate with each other.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...there are communications equipment specific for confined space rescue where they have communication, little thing, little earbuds and throat mics and things like that. And so they'll make sure all the comm pieces are set up appropriately. Same thing with the diving. So they have full piece, what we call AUGA masks that are a full-faced mask. And so when they're diving, whether it's under the ice or just in a pond, they can talk to a tender.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Yeah. Absolutely. So there's two ear pieces on the AUGA face piece and then there's a voice mic in here. So the communications is laid into a-- it looks just like a rope but it plugs into the mask. And so what you do is you kind of tether it into-- you tie a knot and it tethers into your equipment so it can't pull off your face... And then it just hooks up into your mask and so you can talk. The tender wears kind of a communications box and he has you on-- you have your communications line and a tending line and he or she just talks to you. They're usually watching your search patterns under the water and saying, "Hey, you're doing okay. It sounds like you're breathing a little heavy. Slow your breathing down a little bit." Or, "Hey, I'm going to move you on over to this area right here because that's the last known area that we saw the person." And so you can just maintain that communication. But all that has to be looked at every morning.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So Tablet Command is a program that, in a nutshell, we-- a company came in and helped develop for us. And so what it does is it takes live data that comes in from dispatch, and we use it on a tablet, and it puts the incident on a map and then it has an incident command kind of application. So it's kind of a live feed thing. So it's an incident commander saying, "Hey, Truck One and Truck Two, I want you to go to the roof and be my vent group." It will drop them in. Everything is live feed, live recorded, and so it really helps us after to actually see what transpired. And so rather than using a tactical worksheet and say, "Okay. Truck One, Truck Two to the roof. You're my vent group." It has trucks color-coded as red. They are now the vent group. You could just slide them on over and drop them in as the vent group.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Tablet Command program] And so it's very intuitive. It's live, and it records everything just like all of our communications to dispatch. And the other piece is that you're getting this kind of Google Earth, top-down view of an incident, which is kind of nice. So not only do I get to see what my different-- my various resources, what they're doing and how they're doing it, but I can kind of have this overview map of exactly what

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								my incident looks like from a bird's eye view. We're going to try to tie that in with a real-time feed instead of using Google Earth to utilize our drone to actually--
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Yeah. So that's kind of what the goal is, is to have Tablet Command interface with the drone. So let's say I show up, and I have the drone, and I'm flying the drone. The incident commander will be able to see... This is actually what you're seeing, and I could use-- it was yesterday or the day before, we had a pretty good working fire with a multifamily building that had a fire up in the attic. Well, now I could take the thermal imager, and I could actually show the chief, "Hey, here's where all your fire is. Direct the crews to go over there and cut a hole right there." So that has a lot of application... Yeah. The drones that we'll be using, they'll have the TIC mounted to the drone.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Tablet Command program] Yes. So only one person can really make-- so the incident commander is the only one that could really make any changes, but multiple people could see it. So let's say Division Chief [Name] is the operations divisions chief and he's sitting in his office and he wants to take a look at what's going on at this fire over here. He could turn on his radio, listen to the radio, and he can pull out his tablet and see exactly what's going on, where the crews are, how they're being utilized. What we didn't want was a second and third battalion chief on scene being able to manipulate data. So I'm not quite sure how that piece works, but if I'm the second-in chief, I'm not the incident commander. I'm the safety officer, or I'm assigned to be on the back side of the building. I can see things but I don't have the ability to actually drag and drop companies. That only comes from the incident commander and dispatch... So if the chief's super busy, dispatch can actually take that and they can actually assist the chief in doing--
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...sometimes CAD will come in and say, "Engine one, respond to this call." Well, it's not taking into account that this road is closed, and so engine 11 may actually be closer because right now there's a protest going on, and so this road is closed. And so it just automatically assigned engine

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								one... So, us having firefighters up there who actually understand firefighting... They understand, "Hey, you know what? I got this road closed." And usually, they're not quite as-- I don't want to say fearful of making a decision as maybe a civilian who's hired to be a dispatcher. "CAD told me to do this so that's what I'm going to do." I have firefighters who are like, "No, this is the best reason why I would do this." Or, "Hey, Chief. Do you want me to start you a second company on that? It looks like you're running a little low on truck companies. I'll start you another one." So having those firefighters up there is kind of a-- every time we come to collective bargaining every three years in the city we always fight to keep our dispatchers up there.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So what we did was we were able to get our technology services division within the city who are our tech people. They dedicated a couple of people and about a year and a half of time to develop what we call a-- what is it called? It's not WebEOC. It's Situational 360 or something like that. I'm not quite sure what it's called. And this tool allows you to see everything that's going on in the city. So every event is put in there. You can click on a map and it'll show you, "Hey, the [Name] are playing a baseball game today. Here's a point of contact. Here's where the event is." Is there alcohol being-- one of the things we thought was important, is alcohol being served there? ...
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Situational 360 program] ...So we could look at Pride Fest, right? And Pride Fest is a large event here. It's one of the larger Pride Fests in the country. About half a million people. So if you clicked on that event, it would go, "Here's the event organizer. Here's the footprint of the entire event. Here's where the parade is. Here's the--" And you can go and see what road closures are in there. You can see construction road closures real time, as it's happening...
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Situational 360 program] ...From an incident perspective, there is also-- it kind of splits. Most people would have access to that. So if I'm a firefighter or a company officer and I'm working downstairs and I wanted to get on that tool, I can say, "Hey, what's going on today? It's Saturday,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								July 4th," and I could just start clicking. "Man, this road is closed here. We've got to take this route over here."
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Situational 360 program] ...Or, "Man, I totally forgot that [Name] Festival was going on this weekend, and there's going to be a couple hundred thousand people at [Name] Lake. Man, that's going to mean we're probably going to be heading on over there for a lot of calls." There's also a public safety side to that, which is not accessible by some of those other people within the city. Only by public safety, which actually does something similar. It's tied into 311 and 911.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Situational 360 program] And so as calls actually come in it drops them into the map and so you can actually click on that and see where police cars are, where fire trucks are. If you click on them, it'll say, "This police car is responding to this domestic violence call. They're at [Street] on a domestic violence call." So you can actually-- you could pan it out. You can look at the whole city. You could look at just this one little area. So you could start seeing if I have multiple large events going on or, "Boy, that's really strange. I have this going on over here. What's going on over here?" Ultimately, we want to tie that into the metropolitan area, where we could start saying, "Hey, [Name] just had an event right here." Whatever it is. What does that do to the surrounding jurisdictions?
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Situational 360 program] If I have 18 fire trucks working here and a bunch of police cars because we had a Boston Marathon bombing, something like that, we still have all the other calls for service in the city. People are still having heart attacks. There are still fires. How do you service that, is through mutual aid and prearranged agreements that you have with these other jurisdictions. Well, if you're operating on an island, kind of hard to start communicating those things. So trying to increase that. Increase the common operational picture for all these agencies. And so this is a tool that we're trying to-- this is the first iteration. It just came out two weeks ago.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Situational 360 program] So, the events are inputted from-- there's an office. One of the things that we did was we actually created an office

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								under the mayor called The Office of Special Events. So people from The Office of Special Events enter the event data in there. The public safety side of it is directly tied into the 911, 311 system. So there's really not-- everything is just live feed directly. However they did it, I have no idea. So it's direct feed into there. As a call comes in it's live fed into there. So you could see, "Hey, that fire truck just went in service. This fire truck is--" so, yeah. That's kind of how that--
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Situational 360 program] So yeah, the ultimate goal is to ensure first that everybody within the city is utilizing it the way it should be utilized. Trying to get more agencies on board. And so some of the stuff we're struggling a little bit with is trying to-- if I'm an incident commander and I'm working at this particular house fire and I have roads here, and I say, "Hey, I'd like the police department to come in and block off this road right here to protect our hose lines and make sure nobody goes down there," how do I show on the map that these roads are closed? ...
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Situational 360 program] ...We have a way to do it from public works, when public works permits that building which is being built over there and they're closing the road down. As they pull their permit and they say, "On July 20th, we will have this road shut down because we're doing crane operations." That data gets inputted in here so you can actually see that road closure. As something happens where I have the SWAT team working barricade suspect we don't have any availability right now to show that road closure. We are working currently with the water department as well as with public works to refine that a little bit more. So the water department can show, "Hey, we're working on this water main over here, so you're going to get less flow out of these fire hydrants." ... So, yeah. So that would be in there. So you know as an incident commander, or even as an engine company officer, I'm not going to get all the water I thought I was going to get out of that fire hydrant... So I might [crosstalk] go to this one over here. Or I might need two engines to do-- so, it gives you an increased situational awareness...
Communication	FF	U	Field	46-55	11-20	Male	FF-U-020	[RE: Situational 360 program] As we start working through that, the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					ultimate goal is to bring in these other municipalities in and around the area so that all the jurisdictions in and around the metro area are operating on the same sheet of music. So that we can actually all see exactly what's going on. That's the ultimate goal, that we're not operating in our own silo. That we're actually really sharing as much of that information as possible. So that is the ultimate goal.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Really, I mean, just from a basic level, when I first came on, only the chief and the company officers would have a radio. Now, everybody has a radio. Everybody also has a voice amplifier that's hooked up to the face piece that allows us to communicate face-to-face easier. While I'm talking like this [laughter] I now have the voice amplifier which makes communicating face-to-face easier in a-- what we call an IDLH environment. So--
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Yeah. The other thing is the MDTs where we're seeing information. As the dispatchers are getting information, it's immediately coming into that company officer. "Hey, dumb-dumb. Guy got gun [laughter]." Right? There it is. I don't even have to put it over a radio. As he or she is taking the notes or putting it in, as I'm going to the call it's coming right onto my mobile data terminal.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	I can see that information right there. We also have the ability to say, at the same location, "Dumb-dumb has gun in house. We've been here 10 times." So we flag that. So as that address comes up we know, "Hey, this building, there's a guy with a gun. We've been there five, six, seven, eight times. We know he has a gun." So we can enter notes. "Hey, this particular building has some type of a construction feature that's hazardous to firefighters." So we will take that information and share it throughout our organization and even from [Name] Health and Hospitals, [Name] Police, and the fire department...
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...So now with that, in addition to looking for that specific problem, one of the things that we did is on our software in a program that we were using called Firehouse, which now we're using a different program, we created a safety hazard box, which is-- essentially, if I go on a call and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there is a safety hazard, I can click that box and write in what that safety hazard is. That safety hazard, when I click that, gets sent to the highest levels of the [City] Fire Department. The chief sees it, the deputy chief sees it. The division heads see it and some key other people. And that safety hazard will be immediately looked into.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: hazardous construction features] And so now, rather than it coming and going through kind of a bureaucratic-y kind of, "Well, maybe we'll get-- who's going to get to it? I don't know," there is, I'm a company officer. It's 2:00 in the morning. I went on a call. I found whatever the hazard is. I immediately click safety hazard. I write in what it is. And then that's going to be immediately, that very-- immediately, the next day, people will be assigned to flag the building, go out and look to see if it's meeting code, put it in the dispatch notes so all the key players who would be involved in communicating it and mitigating it are immediately involved.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: radio training] Because there's various radio channels that you have to go to. You still have to mitigate the emergency and now deal with this other challenge that you have going on. In addition to that, we'll take that down kind of at the base level and we'll train firefighters on, "If you are the firefighter who is trapped or missing or lost, here's how you do that." When we switched over to our new-- the way our radio channels are all set up, we conducted training on exactly how to utilize all those radio channels. Because there's quite a few but it's actually set up significantly better than it used to be.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So now instead of the company officer calling dispatch to call the ambulance which is essentially a different company, a different entity, the firefighter can call the ambulance.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	And so, same thing with the police. Rather than saying, "Dispatch, could you find out what police car is coming on this?" I can actually switch over to police district six and say, "Hey, police district six dispatcher. This is Captain [Name]. I'm working at the accident over here at 2nd and [Name]. Who do you have coming on this? What's their ETA?" "You're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								going to get car 54 on that. Their ETA is about six minutes." "Okay. Thanks." And so rather than putting that middle person in there, you have the ability...
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...if there was a way to say, "Hey, you're responding to [Street]." And something were to come up that actually shows you [Street], it definitely would be advantageous to say, "Okay. Wow. This is this type of building of this type of construction, it's this time of day which means I have this kind of a hazard. If it's this time of day, it's a totally different hazard." But being able to visually see that would be good.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...We're using a new program as we're-- in EMS for-- it's an iPad-based system for patient contact, where it has everything there, and we can actually share. So when the paramedics get on scene, our iPad will link up with their iPad and they can see, "Yeah, we already wrote down all the medicines they're on. Here's their history," and it links up with them so they have it. And then when they get to the hospital, subsequently, it just shares with them. And it also gives us the ability to see resolution with the patient outcome. So that piece that we've always been missing, "Hey, this five-year-old girl, she had anaphylactic shock and she wasn't breathing. We took her to the hospital," and the firefighters are always saying, "I wonder what ever happened to her?" You'd actually be able to see a patient outcome on that, days later. So it's a pretty interesting little tool that we're using, that we're going to. We're not actually there. Probably within the next four to six months, we'll be-- it's called ESO.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...we currently use iPads for inspections, which has really significantly increased our ability to-- like any technology tool, we've had some glitches with it, but I think, overall, it's helped us.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...So I don't know. For me that's, especially at the task level, when the firefighters are trying to actually communicate critical functions during critical times to an incident commander or to somebody else that's a supervisor of a task. "Hey, I'm trying to get this done," or whatever. We seem to be missing that piece.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So the other stuff from a technology standpoint, for our department, because our chief is so-- I think he just got TVs in every firehouse so that we could use this training program so we could live feed training to a firehouse. They could pause it, go on a call and come back, hit play again and the training is up on the TV. He can talk to every firehouse if he wanted to and give a, "Hey, I'm the chief. Here's the mission of the fire department. Here's the direction we're going in." And if they went on a call, they could just pause it and hit play again when they come back, they could finish watching him. I think it's even interactive. I think they can even ask questions back to-- that piece I'm not sure. That stuff, that's not in where I work.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Communication problems in our work? Number one, I would say, a lack of understanding of whatever that process might be, whether it's radio or email or chain of command or whatever that specific process is for communicating that information. And a lack of information sharing. So, frequently, we get just-- frequently, we get people that will bypass the chain of command...
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: communication issues] ...so somebody may call me. Let's say the same lieutenant, "I lost my fire hydrant wrench." Well, now that person didn't inform their captain, their chief. And so their captain and their chief have no idea that this was lost. Not from a punitive standpoint but because they're, and I'm just kind of using it as an example, because that fire apparatus is missing a critical piece of equipment. Or let's say it's not a piece of equipment...
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: communication issues] ...Let's say it is something to do with a policy or a procedure, and now this lieutenant calls up our administrative captain and says, "Hey, I need this. There's a pay thing and I don't know why it's doing that." They didn't go through the captain or go through their chief to come through the administrative captain. They went through the administrative captain. And so now their captain and their chief miss out on that opportunity to learn on how they could have solved that problem. So frequently, I think, from a communication

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								standpoint, we miss out on opportunities for people to learn and kind of just, I don't know, maybe-- I don't know. I'd say that's pretty much it.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Yeah, when I was in the military, we said the same thing that we say in the fire service, communication and the ability to share information is, bar none, the most important-- it's the most important thing that can happen. And it keeps people safe and without it, we're just kind of fish in the water.
Communication	FF	U	Manager	46-55	11-20	Male	FF-U-021	If there's anything paramount that, again, needs to be taken care of immediately, I meet with the assistant chief of administration, and if there's any IA concerns, people-- if there's any law violations, anyone under investigation, sometimes things we need to handle immediately, so we kind of have a discussion around on what's going on with discipline issues or any investigations.
Communication	FF	U	Manager	46-55	11-20	Male	FF-U-021	Face-to-face meeting every day. Same thing, I kind of update on city attorney stuff, things we have going on litigation-wise or if any of the concerns he needs to be aware of. He's over at a separate building. That's where arson's staffed out of, so he's kind of my eyes and ears for arson, and we also run the Youth Fire Stop program as well, so that staff's a smoke trailer and does all the education components for the schools, for DPS, and things of that nature. So I kind of get an update from him what's going on. Investigations, any arrests, anything in that aspect I need to know about...
Communication	FF	U	Manager	46-55	11-20	Male	FF-U-021	I don't know. This one is personal, this one's department. So I tend to forward my department to my personal. Probably not the smartest in the world, legally wise. But to me, it's just easier... I don't like carrying two phones and it's just--
Communication	FF	U	Manager	46-55	11-20	Male	FF-U-021	...So as far as-- there's a lot of texts. So we get certain text, any time there's an injury, 24 hours a day 7 days a week, I get a text of that. And then my team is responsible for going to the hospital. So we'll actually meet someone there that, whether or not they're by themselves and frees up the assistant chief, whoever took them. So they can go back

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and service them, stay with them. And either take them home or make arrangements for them to get picked up. If it's a significant injury, numerous of us will respond. But we always have someone from administration there...
Communication	FF	U	Manager	46-55	11-20	Male	FF-U-021	...At any significant incident, any type of fire, we get paged on 24 hours a day 7 days a week as well. So that's some of the technology we use as far as the pagers. And then obviously, face-to-face communication, phone communication, email communication, texts. And that's really about it as far as that type of communications are concerned. Probably the most utilized, I'd have to say, would be email. Probably, roughly 75 to 125 emails a day, back and forth. It's quick, it's effective. Text, very quick and effective as well. Less and less phone conversation.
Communication	FF	U	Manager	46-55	11-20	Male	FF-U-021	I personally don't. I do, obviously, with police, being in different types of meetings we'll communicate about civil service hiring, promotions, recruitment practices, something, behavioral health, a lot of stuff that falls under administration, I'll speak with the other administrators from [City] Police. A little bit from paramedics but obviously on the job, day-to-day interactions, it's non-stop with firefighters. I mean, you're running calls, you're having verbal communications with paramedics. We're a two-tiered system so we're generally on scene 90% of the time first so we're kind of giving them a hand-off when they arrive on scene anywhere from 5 to 15 minutes later on...
Communication	FF	U	Manager	46-55	11-20	Male	FF-U-021	...What we've been doing and what the issues are with a particular type of call. PD, again, it's dependent on the type of call but if it's an active shooter or something significant then we'll have some type of a joint command. Same thing with ALS but those are not as frequent but again, you still have, they respond a lot to accidents. So there's that verbal communication and we will listen to them on the radio to find out if the scene is secure and safe for us to approach. So we'll definitely go to the radio channels and monitor the radio channels. Same thing with ALS, we can go to their channels or let them know that they're not needed or vice versa. They'll pick us up on our channels if we're not needed at the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								scene.
Communication	FF	U	Manager	46-55	11-20	Male	FF-U-021	[RE: in-mask TICs] Well again, that's kind of out of my realm, it's out of my division but it's something that we're paying attention to. I know we've met with [Name] and a few other manufacturers, they're very costly, but the benefits of them would be huge because right now only there's one assigned per unit.
Communication	FF	U	Manager	46-55	11-20	Male	FF-U-021	[RE: in-mask TICs] And generally it's on a truck, engines don't have them. And we have them in chiefs' cars but it's one of those things where it's better to have and not need in my opinion than to not have and need it. And they are costly but the benefits of having it integrated into your mask rather than having a hand that's taken away from you that can be utilized for other things... So to me that's a technology that's up and coming that I would love to see us be part of.
Communication	FF	U	Manager	46-55	11-20	Male	FF-U-021	...There's also a lot of stuff on- my passion's auto-extrication and there's a lot of stuff out there that are in the form of applications but there's nothing that we're utilizing right now. So to give you an example, the way technology is changing with car stuff either being hybrid or fully electric, there's a lot of dos and don'ts and it's good to know where those components are shutting off the vehicles, the high voltage versus medium voltage versus low voltage. There's schematics that are available in these apps where you can pull up any type of car and automatically know where the high voltage is running, where you can cut it, where you shouldn't, where fuel lines are, things of that nature. So does the car have one battery? Does it have two?
Communication	FF	U	Manager	46-55	11-20	Male	FF-U-021	A lot of things that are important, and airbags. So that's technology that's there. But again, it's on an app and that's costly, but that's something I would like to see us go to eventually where you should be able to pull up on a scene and either on your computer in the rig or an iPad automatically puts in the first ten of the VIN number, it'll pop up that car. And you'll know right there that you have in your hand where it's safe to cut, where it's safe to stabilize, how many batteries there are, if it's electric, if it's partial hybrid, if it's even hydrogen. There are a lot of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								different vehicles that are out there. That'd be beneficial for us.
Communication	FF	U	Manager	46-55	11-20	Male	FF-U-021	Oh boy. A lot. I mean, I was on the special operations team so we use a lot of communications. Because you'll be either in a Level A suit for hazmat or confined space. We use a lot of comm units where for diving it's integrated into one of the-- you'll have basically a rope system and part of that you'd have a comm, so you could communicate in your auto mask...
Communication	FF	U	Manager	46-55	11-20	Male	FF-U-021	...We've got different types of headless and communication sets where it's kind of a throat mic for a confined space. Things of that nature. So that's something we're-- We're definitely always behind technology-wise but those are different types of communications that we use, and they keep getting clearer and clearer. Obviously now we've got-- rather than having to have a radio with a microphone, they've got the headpieces now. So an engineer at a pump panel, you're not holding the microphone to your ear. It's kind of built in to the headset. So they've got those as well in headsets. So wireless communications.
Communication	FF	U	Manager	46-55	11-20	Male	FF-U-021	...The biggest thing that I feel we're getting better but we're still not there is intrinsically safe radios. I mean just like any type of-- I don't care what field you're in, communication is the key to either success or failure and you're only as good as your communication components and your knowledge of communication. So we're always lacking, in my opinion, when it comes to radio communication. There's always problems, there's always problems getting on the right channel or being able to communicate with a different entity or different agency...
Communication	FF	U	Manager	46-55	11-20	Male	FF-U-021	...You see that in, unfortunately, but you've got mass shootings and there's always a problem with cops being able to talk to firefighters. There are paramedics. There are [City] being able to talk to [City], or this or that. And I don't know what the answer is, but I mean, there's hundreds of millions of dollars of grants that have been thrown towards it and we get better but I don't know if-- I don't know what the answer is to that streamless communication. Practice. But I mean, there's always technology that's going to give you problems.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	FF	U	Manager	46-55	11-20	Male	FF-U-021	Yeah. Back to the technology, what I found when I was in the firehouse it was more, I think it's training, and what we would try to do is try to communicate differently, holding the microphone because they say you're supposed to hold it on the opposite of your voice amp. Does it make a difference? So we would try different ways. Hold it on the [doorstep?]-
Communication	FF	U	Manager	46-55	11-20	Male	FF-U-021	...As far as, I think, some type of a portable, something similar to an iPad but more of a- that's obviously a little more durable because we're really good at breaking things. But that way we can utilize, automatically you get on scene, you can pull an address and automatically have a Google map of this is the roof, we have skylights here. This is what the Charley side or the back of the building looks like. These are where the utility shutoffs are. I mean, I know it's out there, so you should- I mean I'd love to have technology going to a call where you can pull it up on your computer and look at a map, look at aerial views and have a general idea of the makeup...
Communication	FF	U	Manager	46-55	11-20	Male	FF-U-021	...Same thing with high rises. I mean, I know they have it out there, here's the skeleton and here's where the elevator shafts are. Here's where the shutoffs are. Here's where your fire department connections are because a lot of times they're not where you think they are. An address could be- should be on the front side of the street and sometimes it's not. I mean, the same thing, you have one-way streets downtown. You're trying to find the fire department connections, sometimes you're driving in circles. So things of that nature.
Communication	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Well, daily routines are set. So I'm not talking to them about everything they do. But cell phone, email, we have a desk phone, but we were issued portable laptops, so we don't- the other [Job title] and I - we have one that's vacant right now - we spend a lot of time on our laptop away from our office. So the desk phone rings and rings and rings, and we would like to get rid of it, actually. But mostly it's the cell phone. It's the radio during calls.
Communication	FF	R	Supervising	36-45	21-30	Male	FF-R-024	[RE: search and rescue operations] We used to get called in for those,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					and it was very disorganized. So what happens now is there will be someone lost or someone injured out off of the grid. Away from highways, if you will. And what they do is they will alert the fire, EMS, mountain rescue, and law, whoever's in charge for the day. They tone those four people, we meet on a certain channel, dispatch issues the information, and then the four of us decide who's going to do what. Most of the time, mountain rescue handles everything. Occasionally, they will ask us to help. We're just not outfitted for that, but we will help.
Communication	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: laptops] So the battalion chiefs and upper issued them. It allows us to work remotely. We can bring them to meetings. I can do work at home. I try not to. I don't get overtime. We're exempt. But really, it's a way to kind of free us from the desk so we can work at the table. We can take it to the stations and use it for training if we want or whatever.
Communication	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: comms with other disciplines] We do. If dispatchers and if everybody sticks to protocol, it's not so difficult for us to get on the same radio channel, but it doesn't always happen. So EMS and fire are pretty much on the same channel. Law is on their own set of channels. Dispatchers will tell them to move over to our channel if it's a big, long, drawn-out call. Otherwise, if not, then we got to tell dispatch to tell law enforcement. Law enforcement has to give-- tell dispatch the answer. Then they have to tell us.
Communication	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...And then what we, as [City], and by policy we, our operations-- so by operations, I mean when we are working on a scene, we take all of our traffic to a non-repeated channel by policy. It's not recorded, but we have decided we don't care if it's recorded or not. We just don't want any-- when somebody keys up the mic, we want them to be heard. For example, [City], on the other hand, is the opposite. All of their operations are on the repeated channel because they want everything to be recorded. And you get far more distance out of that because it's on the repeated system. You get almost a mile on the non-repeated. That's plenty. Unless it's a massive hazmat, we are not operating over more than a few hundred square feet. So that is one thing that we have done

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to improve is we just don't use the technology.
Communication	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Well it's finally robust enough that other repeaters will take over for that. But there are probably some spots in East [City] that were not covered. The [Name] Pass is tough. Highway [Highway] is really tough going to [City]. So it's gotten better, but that's one of the tough ones. And we had to switch to MAC channels so that we can talk to state patrol. They're not even on the same system as us.
Communication	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: Dragonfly] I'm not even sure. It's an incident command tool so we can use it in the field on our mobile data terminals, MDT's. So there's many components. I believe there's an accountability component so we can keep track of our people on certain scenes. There's a hazardous materials component, I believe, so we can calculate exposures, evacuations, and stuff like that. If I understand correctly there is a lot involved with it. So it's just a multi-use software.
Communication	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	So for that point there, every week all of the agencies from [County], which is one county east-- from [County] to the [State] border, conference call every week. So I didn't know this until last week when the chief said he couldn't be there so I had to call in. And so not everybody makes it every week, but at that point, there were 46 people on the line. And so what happens is the [Organization] kind of goes down the list of agencies or counties and they just chat about current fire conditions. How are you feeling about it? When it's rainy, there probably isn't much to talk about. When it's dry, a lot of them-- there's a lot of chat about what they've had. We've had some incidents here and there, whatnot. The particular phone call I was part of was, "Let's go to stage one fire conditions," or-- yeah, stage one. So basically stage one is just you can still have campfires but the have to be in an approved camping ring. You can't just light them with rocks on your own, if you will. And so it's that phone call where the decisions are made, and then every agency has a PIO up here, everywhere.
Communication	FF	R	Supervising Field	36-45	21-30	Male	FF-R-024	...We have a huge Facebook follow. That's been very successful for [City]. I don't even know how many we have. We have thousands of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					people. So it goes out on Facebook. We also have a Twitter account, but our PIO doesn't use Twitter that often. I don't know why. She puts a lot of stuff out that I feel like should be tweets, like road closures and stuff, but she puts it out on here...
Communication	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Anyway, we get thousands of followers. We get good really feedback through Facebook. So anyway, decisions are made, PIOs are notified. They put together a little press release. They send them out. Up here, people are really good about listening to and abiding by the restrictions, even the visitors. The people who live up here understand what happens if you don't, so.
Communication	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...The other thing about station alerting is right now someone answers the phone, they start taking information, who, what, where, why, what's going on, and then they hit a button, whatever their procedure is, and then it goes to the other consoles. Then the person who's dispatching sees the call, they read the notes, okay. They start building the calling CAD, and then they have to go to this other screen and they have to choose which radio channels need to be awoken, if you will. Then they use a button, they make the noise, and then they send out the dispatch.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So our communications is anything and everything, depending on the nature of the disaster. So in emergency service, it's not unheard of, whether it's communications or anything, to kind of have your main plan, your backup plan, your backup to the backup plan, your backup to the backup to that. So depending on where I'm working, the communications will be different. So in operations here in the fire station, we use smartphone-type devices.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: smart phones] FEMA issues a device for their search-and-rescue environment. Usually I'll have that one forward to this one or something like that.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...So on a smartphone device, I've got the ability-- if I meet somebody that's deaf, or maybe somebody that's mute that can't talk back or something like that, between the two of us, we'll have applications for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								EMS where they can show me pictures of what's wrong or spell it out or something like that.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	In the pharmacy, people may say, "I'm taking these medications." And as you can imagine, there's thousands and thousands of different pills and medications. I may have no idea what that is for, but I can look up within seconds and find out, "Oh, that's a diabetic medicine. So do you have a history of diabetes?" And that can lead into entire lines of questioning that maybe very pertinent to why we're there for their medical condition or whatnot.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: apps] Yeah. So we've got an emergency-response guide, which tells us-- so trucks that are transporting chemicals will have a placard with a number on there that tells us exactly what that chemical is, and then we can reference that... back to what that is...The department has created apps so... time-off request, injuries, disabilities. Even being able to see off shift what calls are going on in the city at any given time... That's all available in there...Chemical databases...We've got information on here for, like I said, what's going on in the department at any given time. We have apps in here that are communications related. For example, if we get a big incident there's an app that will tell us what frequencies are available, what radio channels people should be using so we can push that out to people coming in and share that.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: apps] ...we've got information on rail stuff that shows us rail crossings, and what may be coming on trains, and where to go, and emergency contact numbers for that... Well, in our major city we've got lots of-- [Name], and [Name] track, and trains coming and going all day, every day, year round. In fact, this is a very narrow rail corridor. So it's not much as finding an alternate route as opposed to trying to find out what's in this train. This train just derailed or hit a car crossing. And there is this white cloud coming out. What is that? Is it good? Is it bad? Is it who cares or whatever? ...
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: apps] ...A lot of our medical protocols are on the smart devices set up in apps as far as just reminders, as far as, "Hey, these are things

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								where you should call a doctor," or, "You shouldn't," or, "You're good." Whatnot... We've got apps on there that will tell us that if anybody is doing CPR within a three-block radius or something like that, that there's CPR in progress. So as trained responders, if we're available, we may be able to run out of the building real quick and across the street before we get dispatched to find out and help start doing CPR or something like that... And that's all in addition to just texting, and emailing, and meeting, scheduling, and that regular stuff as well.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: communication with LE] It's gotten a lot better, and I would say that it is incredibly regional as to how good or bad it is. This area of the country, this greater metro area, has been working on it for a long time. 15 years or more. And so, in this area, I would say that it is really good. If we're weak in any one part, maybe, in some of the training. At technology level, every responder in the region has the ability to talk to every responder in the region, but sometimes, people aren't using it a lot. They may not remember or they may not know where do I turn in my radio or whatnot. It's a perishable skill. Use it or lose it. But this area of the country's worked really well. I know from a lot of my national stuff that there are areas of the country where it is not very good at all.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: communication with LE] That they don't. What we have found since September 11th, is that after September 11th, public safety put out the word that, "Hey, we need a lot of help with this." And in short order, we got a lot of technological support. So there are the little black boxes or apps or software. You can pretty much make anybody talk to anybody. So that was part of it...
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: communication with LE] ...The challenge that we had starting shortly after is the people side of it. So just because you can talk, police chief to fire chief, the cultural limits, the busyness, who knows whatever reason, they still may, to this day, not talk to each other. In which case, I can give you all the technology in the world but I can't force you [laughter]. We like to describe it in the national level, with FirstNet and SAFECOM and whatever, that we manage the pipes, we don't manage,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								necessarily, what's going through the pipes. That's up to every fire chief, police chief out there.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: communication with other jurisdictions] So it really depends. Our first choice throughout the whole region, and again, pretty big region, is using the radio systems. The reason we like the radio systems, excuse me, is because we built those and the reliability is incredibly high. And they'll work when a lot of these other systems don't. Day to day, there's the cellular device where I can just call them. Or even the wired, the landline stuff. We have a pretty robust satellite network in this area.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: communication with other jurisdictions] So if all that other stuff fails, we have, like I said, a pretty good satellite-backed call so that we can at least talk from command centers to each other, in that regard. The technology that I see most of the guys and gals using every day is like the text messaging and stuff. So that seems to be the biggest one.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	Yeah. And so on our MDCs we have status messaging on there. We have dispatch messaging. We're able to look up limited inspection information on those as well.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So, yeah, time is everything. And because of that time, the data management, the being able to get the information that you need, when you need it, how you need, is huge. And quickly people find that operations company officers and what not, if it doesn't work for them, then things get shelved and get dusty very quickly [laughter].
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: NG 911] I see a lot of pros and cons with that. There's the potential that you might get good stuff or that you can communicate that stuff, as far as showing a receiving emergency room doctor a picture of the crash, or the 911 center getting a picture of the crash, then you can gauge the level of response that would be appropriate to send to that...
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: NG 911] ...The downside from everybody we've talked to and everybody that's doing the Data911 is it's so much more labor intensive because just processing that information. And we strive to finish- or not finish, but on a 911 call to be able to dispatch an appropriate resource

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								within a minute. If you're having to look through text messages and JPEG photos and all of that, there's no way. I mean, your averages are going to go way up just because of the time and the responding and figuring out what's what.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So, I mean, we all studied the whole communications model in undergrad, right, as far as sender, receiver, feedback, message, content, and all of that. Those are where the breakdowns are, right? I mean the technology's there. Again, after September 11th, you literally get almost any device to talk to any other device. But coming back to our communications model as far as the people, if you're not willing to receive a message for whatever bias, or if the feedback loop is not there, you may send the message to me and either-- so our city has-- when we put out voters' pamphlets or something like that, I think they publish them in 32 different languages. So the message may be coming, but [laughter] if it's in a language that I-- I can't even recognize what language it is, let alone pick out some of the important words or something like that, that's a breakdown in communications, right? Again, an important one...
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	Yeah. So public safety is horrible, collectively speaking, at ongoing communications training. Most police and fire folks will get initial training in whatever academies they're going to. But then anything ongoing, so often it's just taken for granted that, "Oh, here's your radio, and you turn this knob to turn it on, and you turn this knob for wherever they tell you to go." The real rub about that or the irony is that other than the station uniform itself, I can't think of anymore equipment in the fire service that gets used more than the radio.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So we require annual training on our apparatus to drive them, and move around, and whatnot. We require annual training on everything that's on there: the hoses, the ladders, all of that. We require all manner of specialty training, as far as, "Oh, Ebola hits the coast, and here's what you do. Here's how you prepare and everything like that." The one device that-- I mean there are stations around the country that may not go

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								anywhere during a given day just from slow call volume or something like that, but even they will be listening to the radio and making decisions whether, "Am I listening to the right stuff? Do I need to change the channel?" or something like that.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	The problem that we found is, as far as just one, there isn't one solution that fits all. So we're walking around like this, with just nothing else. I may be able to use my earpiece in here and it may stay in fine. But if I go into the firefighting mode where I have to put in a hood over myself and I have to put on the SCBA mask with straps, that same mechanism may just not be able to stay in the ear or something like that...
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: communication in HAZMAT suit] We'll keep the radio in a holster on the inside, but as far as the audio stuff, we've tried conductive mics, either on the throat or on the head. We've tried hands-free stuff, but we just have not found any one solution that meets all of those needs.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...Ideal would be some kind of hearing solution that also affords you hearing protection. So if I had the magic hearing aid [laughter], my hearing aid would provide protection when I'm in a high-noise environment. It would provide enhancement when I'm in a low-noise environment, or maybe a confusing or noisy environment. And then it would also allow me to hear communications that are either specific towards me, squad level, or communications that may be command level that will impact me, as far as, "Oh. They're coming in the back door," or something like that.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	... So with FirstNet and stuff, we're building the pipes. I keep coming back to that example. So in public safety, we have a lot of stuff that we'd like to run through those pipes. So a station like this with a hazmat team, when our hazmat team goes downrange, they'll have medical telemetry, they'll have telemetry from their breathing apparatus, they'll have geographical telemetry as far as here's where I am, here's how fast I'm walking, here's where I'm going. They'll have incident mitigation telemetry. So they're taking sensors with them that are monitoring for the amount of oxygen, hydrogen sulfide, CO, CO2, explosive levels, and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								all of that. For hazardous materials, they'll sometimes take a camera with them, a GoPro, or something like that...
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...Our apparatus should be able to talk real time all the time with our facility managers, our fleet managers, our mechanics. I mean, that happens in the airline industry. You take a typical Boeing airplane, a Boeing airplane will be talking to-- pick your airline, Alaskan, American, or something like that. A plane will be talking to Alaskan's fleet services all the time, as far as, "Hey, things are running fine," or, "We got an engine problem." And you, or the pilot-- you as a passenger or the pilot may never know that it's going on, but when the plane lands, the mechanics are there with the lawn guys, and they're checking stuff out that was a minor glitch that didn't ground or crash the plane, but it was something that was talking to them. Why fire engines, ladder trucks, and stuff can't be doing that same thing?
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	Personnel issues throughout the department. It's kind of a pain in the butt, as far as something happens to one of my crew members. I get notified as a company officer by voice, or they talk to me. I have to notify the chief. There's this whole up and down, and stuff, and then there's the paperwork shuffle that catches up with it. There could be so much more automation on there, that firefighter says. "This happened," or, "I'm not feeling well," or whatever, that there may be an initial set of verification. But then there's a lot of automation, where it goes all the way up, payroll automatically-- there's stuff that automatically happens in payroll, as far as now you're getting paid out of sick time versus regular time, and a lot of automation on the staffing that could be done.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	Well, communication for us has been a major player when things go wrong. That's normally one of the-- probably the main, I would say, most common denominator of anything that's gone wrong in the fire service is the communication breakdown. So we use radios. The radios that we use are fairly good. Where it comes into issues with communication is when you're actually interior and you're actively doing something, and being able to communicate what's happening or what you're doing may

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								not be as easy as it may seem. So plus talking through a face piece and into a radio mic, the clarity isn't the greatest.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	I was a paramedic for years. Same thing with communications or radios. And then they've kind of moved to the use of cell phones. There's some cell phone use when you're calling hospitals and stuff like that. So they do utilize a little more modern technology in some things. Now, actually, we are looking to go into more of a laptop or an iPad kind of device for communications. So we are kind of evolving a little bit with technology. I think where we may run into some issues are the durability of technology because we're not very delicate with things, so everything that we use that is going to be-- whether it's a tool or a communication device, has to be durable, for sure...
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: cell phone use in FF] It's not going to be used as much. The chiefs do it. They'll use cell phones to communicate probably to our main dispatch center when they can, just because they have the capabilities. They have the time to do it. They're set back from the scene. They're not actually in the trenches, so for us to use a cell phone in fire situations are less likely, but other incidences like maybe if it's a situation where we're able to step back and not get so involved, we may be able to use a cell phone. But when cell phones are used, it's mainly an incident-command type of situation, not actual-- the companies are actually mitigating a situation. We don't really get into cell phone use at this point, so.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	Well, a few things have changed with communication is that everyone has a radio now versus when I first came on, there was minimal radios, so not everyone had a radio. So a lot of things were based on face-to-face communication or they were based on an officer-directed communication. He would get information from the outside and then relay that to the members inside who didn't have radios. So there was a lot of face-to-face, but now everybody has radios. So that's one change with communication, which has certainly helped tremendously...
Communication	FF	U	Field	46-55	21-30	Male	FF-U-025	...I think maybe different improvements in radio function or capabilities

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					have changed. Radios we used to have years ago just didn't have the transmittable capabilities, didn't have as many channel selections. And they weren't really high-tech radios. They were very basic, which is okay too. But I think the level of high frequency versus very high frequency and those kind of things, the capabilities of radios have changed. But I think that our biggest change, just in fire ground operations, is that now everybody has a radio, and I think that has really changed a lot.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: state of communication technology] I think it's good. I think at first, there was a lot of overtalk. There was a lot of-- everybody had a radio, so everybody felt like they should use it at first. So there's been kind of a transition of learning with that and more listening versus talking. So when you have a radio, a lot of times, it's really to listen to what's happening. Listening to the progression of the fire attack. Listen to what maybe could be dangerous about the building. Are there holes in the floor on the third floor? Are they getting the fire under control below you? Those kind of things, is the more listening when it comes to communications...
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...there is a few incidences where we were caught into some pretty scary situations inside looking for potential victims, especially in occupied buildings. So situations where either it's unoccupied or the people calling in saying, "Hey. There's a fire at this address. No one's in the building," there's been a few times where we've been inside and we've been caught up in some scary situations where the people outside knew that there was no one in there, and we never got that information. Those kind of situations are critical because then, we wouldn't have been in those situations, and we wouldn't have been in there to where fires break through the door and starting to fly down the hallway because we're in there looking for somebody. We wouldn't have put ourselves in that situation if we had known that there's no one in the buildings, so I think those are critical pieces of information.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: usefulness of computer] If our attention is directed to it, sometimes it's just one of those things you've got to develop habits. And you've got

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to break some of the old habits. So you've got to develop new ways of doing things. Now for me honestly, I never focus on the computer when I was going to work because I'd look to see what the address was. But then there was times where I was more focused on listening to the radio. I was more focused on making sure everybody was ready to go and then looking for the smoke. So I'm concentrated on outside. I'm looking for the smoke. I'm looking for the streets. I'm watching traffic. And then I'm looking for hydrants...
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: overwhelmed] That can potentially happen, for sure, especially in larger size incidences where it's involving a major commercial building. Or one thing that can be overwhelming would be-- they would call them mayday situations. So where a fireman's trapped or injured or there's an incident and a mayday is called. So when a mayday's called, then there's a lot of-- there's a lot of things that go through your mind. What's happening? What's wrong with the situation? Why was there a mayday? And so for a brief moment, the situation gets chaotic and very uncertain. Those are situations that they can pose those stressful uncertainties. And then other ones would be emergency evacuations. So when you're inside and you're fighting the fire, you're doing what you need to do, and then they tell everybody to get out of the building, they start blowing horns outside to let you know you need to get out, there are times where we're not real sure why they're pulling us out...
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...So through time, we've learned that when you have somebody outside telling you to get out of the building, just get out. Get out and ask questions later versus being in there getting on the radio, "What's going on? We got it." There's been a number of situations where, I myself included, are guilty of that, slowed getting out because we thought we had it knocked. And we thought we had it under control. "We got this. We got this." I mean, that kind of thought. And then you finally back out slowly and then you turn around and look and you notice that the roof's getting ready to come in or the building's getting ready to-- and it didn't seem like that inside. So those things are situations where

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								communication-- and not even that it's poor communication; it's just there's a period of time where there's an unknown, so.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	I would say, initially-- I would say the first maybe five minutes of the scene because there's a lot of overtalk. There's a lot of companies talking over this person and talking over that person. So that's when we run into those issues, is when they first arrive and there is a lot of things going on. And so there's a lot of times where people want to say something and they're not listening to the radio. They just want to say what they think and what they want to say. So there's a lot of communication crosstalk that cut out...
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...So now, the radios that we have, they're digital. So if I click and talk and half of my message doesn't go through, you don't get any of the message. You don't get, "Hey, this is Engine 93. We've got this," or, "We're looking at this." And then somebody say, "You know what, 93, we didn't hear that." What would happen is they wouldn't even hear me say, "Engine 93, we've got this." The whole message would be deleted. So there would be no reason or any kind of a reflex to say, "Hey, 93, what was that?" You know what I mean? So that's kind of changed our communication in a bad way, a little bit...
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...I think when you have a chaotic scene where there's a lot of things that need to happen, there's a lot of-- maybe you pull up and there's a big fire, and it's communicating to three or four buildings, and you may have some occupant issues, when you have a large incident like that, at first, the first five minutes are very-- they're very, I would say, chaotic with communication because you don't really know what's happening. You can't really set up a game plan because there's just-- you can't make a decision. So.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	Subways are huge. A lot of issues with subway radio communications. I would say there have been a lot of issues with high rises just because of all the interference, frequency interference in downtown, for sure. And I would say that's probably the biggest communication issue, especially when you're on fire ground. Sometimes our fire ground frequency only

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								goes so far. It's not a very strong signal. And so if you're 25 floors up or 40 floors up and you're trying to talk to someone on the ground floor, it may not go through as well. So there's times where even other departments, they'll put almost repeaters that are on different floors that transmit and repeat their message. Or there's repeaters built in the high rise. So there's all different kind of things to think about with that. But then we set up our command staff, which is one of the reasons why we do that, a few floors below the fire floor so that that radio communication doesn't have to go all the way down. So it would go to him, and then it would go down.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	we also have a computer in our rig which runs our dispatch over, gives us our information on where we're going - tips on street locations, cross streets. It also gives us, sometimes, information on what we're heading into like some-- I don't know why it never was completed, but there was like a high rise survey. So some buildings we'd get how many stories, standpipes, what stairwells, have smoke towers, stuff like that. It could definitely be used more efficiently.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	Yes, and mobile data terminal. And then at the firehouse, we have a terminal where we get the dispatch from, which is very similar to that one, and then also a computer where we do our daily reports, and everything should be done on that.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	[RE: change in technology] I think it's definitely a good thing to move up. The only thing with having more radios, we have to have better radio discipline. There's a lot of things that don't need to be on the channels. A lot of people like just hearing themselves on the radios rather than-- clogging up the airways when pertinent information needs to get through. I mean, you'll see. If you listen to our radio channels, there'll be a big fire, one with a lot of messages. Then some other company - it's not even close - and all will be like, "Yeah, we're on the scene for an ambulance assist," instead of just hitting the button to let them know they're on the scene, right in the middle of an incident going down.
Communication	FF	U	Field	46-55	11-20	Male	FF-U-027	Oh, I think there's always could be more information passed along. Like I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					said, the buildings that we're going to, or-- and I think it's be a lot better. Not as much as-- I just came from a spot where I was assigned, so I knew the area. But when you're relieving, you're going to different areas every day, definitely, definitely, more information would be better. You may not know the buildings, or the areas, or the streets. So more information would be better. Like I said, I don't think we use that mobile data terminal to nearly its best effectiveness.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	I use my cell phone for a lot. I use it to call the office, like our dispatch center. Especially for stuff I don't want on the radio. Or we use it a lot for EMS runs. Each company also has a cell phone for the EMS with-- so when you're calling medical control to talk to a doctor, rather than just use the radio, you can use a cell phone. So I use it to communicate to the chief. Maybe the chief's out, and you have a question about a drill we're doing, or where you want us to be, I can call him on his cell phone too.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	[RE: cause of communication issues] It's probably two-fold. First, a lot of it is operator error. Like I said, radio discipline - being able to use your equipment and also being able to make the correct communications at the appropriate times. And I'm sure there's also a technological aspect where you have to make sure it works. If anything, there's a tendency that things may break, need to be replaced. As a whole, our department, we don't embrace change very well. So we have a lot of people that-- I mean, I don't think it's as much now, but I know that whenever I get a radio, in the beginning, some people are like, "I'm never going to use it." Just like the computers, "I'm never using that." 150 years tradition unimpeded by progress. We're just getting to the part where we don't file forms with carbon paper anymore.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	I'd like to have a little more information heading into the scene, maybe a live feed picture. I'd like to have radios that I know work all the time. Get through whatever we need to get through, be it a high rise or subway incident or anywhere. It'd be nice to be able to keep track of where everybody is at. I mean, I know that's way far away in the future. But

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								being an officer, your men obviously don't work directly underneath you. Many times they're scattered throughout the building. It'd be nice to be able to keep track of them in a better way. I don't know how that would be, though, obviously.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	I haven't had any issues. I think our equipment is pretty much up to date. When we compare ourselves, you have to have a comparison to other people. Other big departments are pretty much on the same wavelength as us and we're vice versa with them. So I think our technology has finally caught up. I can't really think of any issues that could pose a problem, but we could be operating portable radios, for instance, in dead zones, high rise, metal, concrete buildings where you might not be able to get that transmission out. That's what's important because their transmission may be very important. It's important that everyone hears it.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	In the field, we have the mobile radio on the rig. And then, once we're off the rig and ambulating on a scene, for primarily, on our portable radios that we have and both are made by Motorola, digital. I think we work on an 800 meg system. We have plenty of repeaters throughout the city. So they hear us except for those trouble spots. But those are our two primary ways of communication as far as getting hold of, for better sake of term, our dispatch center. It's relaying critical and non-critical communications.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...Gaining complexity is the real killer of simplicity from my perspective. And how to improve that? A lot of face-to-face communication, maybe having one guy operate the radio. Giving messages instead of everyone having radios, and all this talk and garble. I have to be responsible for listening to all this, because it may apply to me. So funnel. So you take your five people in a room. You tell them all be quiet, one speaks. So that would be just a suggestion for that, just not being in a position where you're going to be overloaded with, where this technology has become rather burdensome in your decision making or thought processes right now.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...on the EMS aspect, our cardiac monitors that we use for monitoring someone's heart rate. That has come a long way as well, as we're able to do more cardiac procedures from pacing people to having real-time information when people are innovative of how much O2 are they getting. What is their expelling of CO2? Diagnostic tools that help us in the field, again, the ability to save lives or identify a problem and correct it, and from any EMS standpoint. In the great technology that has come along in regards to EMS, 12 lead EKGs. We're doing these into the field where we're early identifying if there is a STEMI, or in layman's terms if there's an acute myocardial infarction aka the heart attack. We're being able to diagnose that and find that in the field, where they would have to be transported to a hospital, have them do their work, and their workups. It saves him time. It buys him time and it gets him enough time to get to a cath lab, or however their cardiologist is going to treat the underlying problem...
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Perhaps, we may have locators on our bodies through technology to find out where is Lieutenant such and such or five-- here to see where they are in actual real time on the fire ground, what floor, and in what room? ... for accountability purposes. What companies you have, who's in there and where? And also, it's evolving with our breathing component system too, with built-in heat temperatures, to know what environment you're in. What is the heat of the ceiling? Thermal imaging for victims. Air pressure in your tank. CO levels. It's all in your heads up display. Wow. Is that something? That's technology.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Cell phones, I think they're-- yeah, again, very useful. We all have one. We all carry one. If you look at the cell phone usage, job-related for use at an incident - at an incident where you have time obviously - where you're not googling or looking up things. It's a great mechanism if you had learn to-- "Oh, I forgot how to tie this knot." Go on YouTube. Various fire departments and well-known fire instructors also put out information in series or in format so you can use it as a drill, or call it up and doing searches on single family dwellings. So then we can use the technology

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								as a form or basis of your training for the day...
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Everything there's a fine line in every detail. Do we have time or do we not have time? Or when we process data, you don't have the time. When things that are happening real quick and real fast, it's hard to go through the technology to find things. I'm thinking of the other side of that spectrum is that when you have time. Because when you have time, you can look up every resource that you want using technology at hand and what we have available as a fire department. Yeah, flood yourself, get the upper hand. Knowing your enemy, knowing what you're getting yourself into through technology means, but again it's practical then not practical. And I think that's your dividing line. We have time to use technology, or we have no time to use it.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Going to an apartment building fire, for example, the only technology piece that I would find useful is the thermal-imaging camera and obviously the portable radios that communicate messages back and forth among people. Not overwhelming with messages, but enough to get the gist. It's what is putting the fire out, is using your hose line. It's not the computer. It's not the technology that's doing this stuff. We're still going into time-proven ways of doing things without the presence of technology. From that aspect, as a line officer, I look at that...
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	[RE: communication issues] Failure to communicate is one of them, yeah. But as far as communication from a technical aspect - buildings, dead zones, again, metal buildings, being encased in concrete - you're just not getting that signal out. What is causing communication is possibly the-- in fact is that we have possibly too many radios operating on one fire realm. It can be cumbersome, and lost messages will occur. Some of those are crucial, or non-crucial... Sort of triaging your messages, yeah. What needs to be known, readily known right now? What can wait? If you've got some guy at an active fire that says, "Yeah, I've got a water cooler out on the rig for you guys." You don't need to say that. It's hogging up air time, we'll address it later. I think those are the two communication problems. Those would be the two that I've

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								experienced. I'm sure there's more, but from what I've experienced, those seem to be the two problem issues.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	There are certain benchmarks that must be set and made on the fire ground to be successful and to know what area or what part of the fire you are just by simple benchmarks through the progression of the fire. So heavy reliance and the portable radio is of utmost priority. This is our lifeline to an incident commander out there, but also for other companies in where they're going to be filling in the gaps, and where they're needed, and where they're needed right now.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	[RE: portable radios] I've never noticed an issue with that as far as you're looking at weight or user-friendliness. You never give it a thought. There was no problems. There's nothing to draw from is that I have a problem. I haven't had no problems with these. There could be a problem with the portable radio if left outside of your protective equipment due to thermal insult or a thermal exposure to it. Yeah. You'll melt the thing and it becomes useless, then you've got to rely on yelling, or if you're lucky enough, escape a pre-flashover. So if worn right, worn correctly, and following the procedures or guidelines of the fire department, it won't fail you. Most of those things that occur in the fire service, a lot of it is then human error and miscommunication. Communication is a big factor.
Communication	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Good. But there's always room for improvement. We're much better at radio communications, the equipment itself has gotten a lot better. Our frequency availability, at least from the chief officer's standpoint, I can direct companies. Say we had multiple fires in a close proximity, that could be an issue because we would get bleed over communication from a fire. And you wouldn't know if, "Am I hearing a guy that's in trouble at my fire or at the fire that's three blocks from here?" So we have the ability to-- we can offset that now by changing frequencies. There has to be an initiation made by somebody to make sure that that goes down properly. But once it does, if I, for instance, tell, "Hey, everybody on the scene," then I'll give the address. "Everybody here on the scene of "address" [Street] Fire Academy, switch over to ops channel 8 for the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								remainder of the fire." And then, if they do that, everything's good. Now I won't be miscommunicating a transmission to somebody hearing me on another fire, calling in a Mayday, or something which would really make things bad if we don't know.
Communication	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	We carry-- it's a radio, as well. But the battalion chief-- well, each district in the city here carries a-- they call it a RIB radio, and basically, it's a little stronger. We tend to use it more in high-rises than anything else, just because of the same problem, talking from grade level to the, say, 25th floor became an issue sometimes. And so we would triangulate our communication which, obviously, now you're involving more people. So now our large-scale incidents or fires in high-rise, or anything else that may happen in a high-rise, because the event would be escalated in our city to extra alarms, that radio comes in the building, as well. They set it up and then it aids in the communication from the command, the people that are in command throughout, it trickles down throughout the ranks that are at that incident. So that's been good. Communication wise? On the EMS side, which I really can't speak of, they've come a long way. I know they're already doing a lot of documentation on tablets and things like that, so that helps, I'm sure, on their end as far as documentation goes. Let's see.
Communication	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	... Email's really big on the fire department now and that's only popped up in the last 18 months or so. Yeah. I mean, as far as the way that it's being used now, all the way down to the fire fighter rank, they'll put out maybe, a memo on our shared drive saying, "Check your email." And they'll dump something into the email of every department member. And they'll kind of flag that they should be checking it because it tends to be on the lower ranks that they don't check it as often because there isn't anything too important in there for them. Whereas, at the upper ranks, it's the main source of communication I would say right now, maybe even being abused by some. I've had people in the building here email me something insignificant that worked down the hall from me and I'm like, "Listen. Just come down and talk to me." I mean, really? You're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								going to say this in an email? Come on.
Communication	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	On your rigs, we have on-board computers. We have the ability to type in narratives to the fire alarm office. They do the same to us if they don't want to transmit something that somebody outside the department may be listening to because people have scanners and listen to us. So we can communicate that way. It also documents all of our arrival times and route times, on the scene times, when we're returning... And now the alarm office can read that and send up a typewritten message to the responding ambulance to let them know what you're encountering. For instance, somebody may say-- they tell us they're HIV-positive, or something, rather than put that out over the air, for the sake of the patient, really, more than anybody.
Communication	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	...Any information I always had, I would always try to just verbally tell everybody because I didn't feel like I should be the only one that knows this. I would leave the firehouse with that printout but if I saw something, I would say, "Hey, the 20th floor, they're saying is loaded with gasoline drums." I would tell everybody [laughter] about it. I don't want to be the only one that knows that. I feel like the more people that know stuff like that, the better. I get technology is there. It's always, "How is it going to be paid for?" So is the near future that we'll all have access to all this information now? That would be great, but I know that's probably not realistic because of budgets.
Communication	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Too much communication. I would say, yes, you can have too-- I'm not trying to dwell on anything specific, but you definitely can have too much at once, depending on how many players there are in the process. As a chief running a fire event, I've many times had to tell people, "Standby, because somebody's breaking in," maybe. And so, there's a problem there, too. I would have to wonder, "Why are they breaking in?" They should be able to hear me having a transmission already, so possibly on their radio, they weren't hearing. So, you have to wonder. But then I would have to stop, contact that person, transmit a message to them, standby so that I could finish what I have going on here. But it becomes

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a juggling act because I have to decipher in an instant, is what he's trying to tell me more important than me finishing my communication with the person who I- you know what I mean? So yeah, it could be a little hairy sometimes. So can there be too much? Yeah. I've had incidents where there was too much at once. But I don't know if too much is a word you should use with communication, because the more, the better, right? I mean, the more, the better.
Communication	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	... But as soon as I pull up, this is all I have. It's all I have. That, and whatever anybody is transmitting to me that they see that I can't. So it's really all I have as far as technology goes. Now, do I have access to my cell phone? I do. So in a pinch, if this malfunctions, the best that I can do- I can't really contact anybody at the scene that's working, but I can call the firearm office, maybe tell them, "I'm having radio problems. I'm going to secure another radio from somebody else, so I'll get that to you in a minute." I may do something like that. So in a pinch, I could use my cell phone, definitely. Definitely don't go anywhere without it.
Communication	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Right. And there are times that I don't want to transmit certain things over the air. And I'll call our line officer on my cell phone just to let them know, give them an update of something that went down that they might need to know about.
Communication	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	...So I have a big problem with civilian traffic in the building, getting people out. So in our job we- and it's going to vary from department to department. So I have to worry about things like evacuation stairwells, and I have to designate one for people to come out of and one for fire attack. I would automatically- in the city here, I would be asking for a Plan 1, which is at least five ALS ambulances...I have to get a look at that stairwell or at least have people that I can trust that can communicate by radio from the stairwell to me, "Yes, we can get them down from eight. We can negotiate it. Right now, the conditions are okay that we can get them down from eight."... And that puts people's minds at ease a little bit. But if they hear nothing, no communication is good. No communication is the worst kind.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	... So it's all about communication at that point..., I would automatically bring more ambulance personnel just because it sounds like the possibility of there being even more victims is much greater now...So company by company, we will make radio transmissions to make sure that everybody's accounted for from our standpoint. Because without us, now the public has nothing... So again, it would be about proper radio transmissions so that I could get as much information as possible which would enable me to bring in enough resources to mitigate it.
Communication	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Yes, in an incident scene, I think I kind of covered that in terms of I'm the coach when just I get to the scene. If we need to call in more teammates, I do that or, "Hey, now we can let people go," because you have to guess in a way-- "911, what's your emergency?" "My house is on fire," and you get there and it's a trash can, well we don't need seven units. Everybody else go home except for one. "Hey what's your problem?" "Hey, I see a little bit of smoke," we send a smoke investigation unit for smoke investigation, and suddenly it's a big fire. "Hey, we need a bunch of more folks." So juggling that dynamic, helping out with culture and chemistry. When things go awry, I become a counselor and a psychologist all in one.
Communication	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	...And so the battalion chiefs all get together at 10:30. They look at how many people are on vacation, sick, or training, and we staff our battalions and we talk on the radio, basically an open-talk channel like a-- when you hit it, everybody else is listening to your conversation or what you're saying and we pick people from a list, as a group, to fill all the spots. And so a radio helps us do that, that is, it doesn't have to be encrypted, it can be open. It's not a big deal. We also send out our orders about, "I have these stations, these people, this movement." And we've created a system on Outlook which is a meeting notice that every station saves, this recurring notice, it's a blank template, and then we go in. And I think every BC does this now where it's, "Here's who's coming to work, who shows off, and here's any special--" like today I've got some people training. Somebody's training at 2:00, somebody's training at

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								3:00, somebody's training in the morning, and so my whole team reads that daily order email or meeting notice, and then they have their marching orders..... So we have the radio that we all get on one channel, say channel one, and we're all listening to that channel. So when the first person gets there, they tell us what they have. "It's a fire. Here's how big it is. Here's what I'm doing."
Communication	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Right. That's right. So we do it on-- we feel like we could predesignate, but instead, we ask all seven to be able to do basically all seven so when they show up they say, "I'm taking task one. And I'm Engine blah, blah, blah." And so my job as a coach now, is my [Name] changes every time. So I've got to remember - I remember because I have a tactical sheet that helps me, a hand-written one - that when [Name] when they go out and say, "Hey, I'm the quarterback," I've got to remember who the quarterback is. So when I get there, I can say, "Hey quarterback, what are the conditions inside the house?" And then they can get back with me. And if something goes wrong and the real, real, real reason, it's a span of control. Where, when you're doing very critical tasks, we have a very small span of control.
Communication	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	And then also, situational awareness, "Oh, being situationally aware. Part of my job role." If you look at The NIOSH 5 and see the reason people die from-- communication is always in the top, not following SOGs, not being accountable, having situational awareness. And if I don't have situational awareness and the crews too, boy, that really puts us in a bad spot.
Communication	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	And that helps me be situationally aware of where it's at, picturing if a hose line, perhaps, would be wise to take right in the front door and go to that back corner. Or if they have super easy access, they might just run down the Delta side to knock it out. That's another option. And so technology. Thermal imaging cameras help us, being able to communicate to everyone at the same time, which has its pros and cons.
Communication	FF	U	Supervising	46-55	21-30	Male	FF-U-001	And also, technology-wise, dispatch, we have a certain number of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					dispatchers. You can always overwhelm any system. There is no such thing as a bulletproof system. And so we have a certain staffing level. And when we have a fire, we also put a dispatcher on it, meaning they're listening to that channel with the people inside. And they are dedicated to listening to what's going on.
Communication	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	So if I am sitting here upfront and I miss something, there is no such thing as multitasking. We can only focus on one thing at a time, be fully engaged. It's a life. You think you can do two. It's just those. So if I'm focused on this and something comes up, and I'm talking somebody and they say, "Command, I need blah, blah, blah," I could totally miss it because I'm auditorily excluding. And dispatch comes in and can say, "Command, the inside crew just asked you for some help. Thank you." And we also bring other people to bear at our command post to help us listen and to be a second set of ears, too. But it takes time, of course.
Communication	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	So that's really helpful as we move into-- and also when we have not necessarily our incident scenes, we can watch videos from others. And then basically, I say pretend but just say, "Okay. You're on scene, go. What are you going to do?" And then hear them talk out, "Here's what I'm going to do. I'm going to send command. Pull this kind of line. I'm going to park here." We'll have them draw it on the chalkboard. And show where you would park. "Okay, you're next. What are you going to do?" To run through those plays. Those positions.
Communication	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	There are departments that have older air packs. So the Phase 1 air packs that have the software that reads it, but that was a blah, blah, blah bit system, and now they said, "Hey, this bit is more up-to-date," but the software, they haven't built that bit system integration yet. So I was like, "Oh," because I went and we got to see this in action and I go, "This is great. This gives us more info." And then we have got a team that drone, showing pictures from above. That can only help with situational awareness.
Communication	FF	U	Supervising Field	46-55	21-30	Male	FF-U-001	Right, earlier. Just overwhelm with information because if it's really big and you've got, let's say, 100 people to evacuate, the building is half on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					fire and the water supply is jacked, not very good. You have 30 things to do and you've got 4 people to start. And so what you pick and how you start to act and operate, just that whole communication stream is-- somebody else isn't on the page as you, it could just be muddled.
Communication	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Right. Being disciplined, practicing, all those things are things that help, but if you're not-- just like any other sport, if you're not doing a bunch of reps and trying to stay leaning forward-- that's your best opportunity to communicate well, succinctly and with the right message. So you said, "What are the barriers?" So not doing that would be a big barrier.
Communication	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Right. And face-to-face communication will always be the best route. If I'm talking to you right here, if we just put a barrier up right now, inference and stuff will be lost, there may be so many things that we would lose.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Yes. Last week. Brand new radios. And so, we've used the-- we used to use the 5000 Motorola series. Now we use the 8000 Motorola series. We had some comments on the way down here for this. So our communication, in our world, is meant to almost exclusively happen over these radios.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Right. So the radio's of course-- like buying a new sofa. Things have changed a little bit, and you've got to play with it and get used to it. So there's lots of creature comforts that are nice, but at the end of the day, especially when you look at cost and all kinds of stuff, I think that the lion's share of benefit comes on the internal side, on the communication side.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	At a time. And in our organization whoever's got control of this wins and gets to talk. There's some on that channel, and so that has been problematic in some of our-- people that should be talking and saying things can't get out on the radio because someone else is talking. And so, I know some departments handle that through certain people. People are on different channels, or something, people have the ability to talk to certain people.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Well, we have lots of channels but typically we operate on one channel in an incident, but anybody's got a radio. They're all the same. My radio's no different than the kid that came on the job yesterday and he has a radio, too. And so, he can talk same way I can--
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	So giving everyone that fourth radio. The number of channels has great-- when I first came on the job, there were two channels. Right? One for people north of the river and one for people south of the river [laughter], and now it's now we have just hundreds of channels depending on where you are in the city or county or region or what have you. So that is very beneficial that I can get very specific by my region and probably the most important thing, especially since 9/11, is now I have the ability to talk to other public safety resources. If I want to go on the radio and talk to the police, I can talk to the police. If I want to talk to EMS or to the sheriff in a different county or to specialized units like SWAT units, bomb units, I can talk to them. And that's a huge-- in a big event, that's a huge, huge thing.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Sure. Yeah. Yeah. Any message communicated has to be received, it's kind of like a communication loop. But I guess more to my point, any emergency incident, there's good radio traffic and there's bad radio traffic. Good radio traffic is things I need, there are important among different groups that are operating to be successful. And then, there's radio chatter.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	I don't think it's from the technology standpoint. I think it's more from incident dynamics, and human emotions or error or things-- people's ability to handle incident, emergent problems. It's not a communication issue, it's a human error issue.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	People's ability to communicate clearly, and not be-- let me turn this off for you so it doesn't--
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	So people's ability to be concise and clear and communicate their needs, what they need. We tend to-- again, a lot of it's a training component, and if you can imagine my generation versus a new

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								generation that's used to, you know, talk, talk, talk
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	You need to translate for it. You know, any new communication doctrine will tell you that we speak in plain text, ever since-- the presidential directives, NIMS, all that kind of stuff, we're supposed to speak in plain text. There are still organizations that do not, and why they don't, you'll have to ask them.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Sure. There's been times where, in a way-- I've been on incident scenes where the technology has failed. And radio systems or channels have failed, and completely prevented our ability to communicate with each other. Other than line of-- right? I mean right now I can communicate with guys in the next room, just by not moving, by pushing this button. If that fails, how do I communicate with the guys? And I can communicate with you, because you're right here, but I can't communicate with them. And so it's a communication failure, and it's technology failure, that complicates-- when we rely so heavily in our job for this to work. When it fails - which is rare - how do I communicate?
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	So we have lots of-- any of these buildings downtown we've input maps. So it's a great example of communication overload. What a wonderful resource to have if I'm going into one of these big high-rise tall buildings. Right? So it's a great resource to have. No one would ever argue that. But then all the sudden, I've got this 30-page map. It's got everything I want to know about that building on a computer. That's overload because that doesn't--
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Yeah, and I would think that it would be easier than it apparently sounds to make that happen so that everybody could communicate. Just like you and I are having a conversation right now, why can't I have a conversation when everything's pitch black with everything muffled. So that's what I want to see. And I would like to see better thermal camera technology. So I'd like to see more advanced, user-friendly thermal camera technology.
Communication	FF	U	Field	36-45	11-20	Male	FF-U-003	But I would say that almost every line-of-duty death or injury, the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					communication side always comes up and it's mostly us just not being confident in what we're doing. If we're confident in what we're doing, we don't even use the radios. The best fire grounds are run when you hardly hear anything.
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	–we're fine. But what it is [crosstalk] is it's cover your butt. So, they have to write down the [manpost?] and did they check the 13s, the 12s, the 10s? As they get PAR they're checking off each unit, instead of just saying, "Who doesn't have PAR?" Yeah, but there's so many things that go into it, but I say that communication side of it's the hardest thing, the technology. It's helped us, and hurt us. Because the easier it gets, the more people want to use it.
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	I would just like it to take a step back. I would like us to just become more reliant on our implicit communication, on using less radio traffic, only saying things that are necessary, really bring things back in because I think we've gotten a little out of control.
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	It usually doesn't because they go to a separate channel when they're responding. They're not responding on your unit, they report to that staging area. And as the battalion chief on scene needs them, he calls for them.
Communication	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	...You didn't depend on the computer to know where everyone was. When the other station was going to go out and be somewhere new, we kind of had– we would talk to each other and we'd know like, "Hey, we're going to go do training. We're going to be on the north side, so if a call comes in in our territory, y'all need to cover." Okay. And now it would almost be impossible to manage that without this system.
Communication	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	...And it's hard to understand the guy who's screaming on the radio through his air mask. And sometimes there is a real mumble and you can't understand it. Clear communications. And then, even more, data as far as you could put some kind of the command, the guy at the command truck would be able to get, like, "Okay. This is our location in the building. This is the temperature that they're experiencing right now.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								This is the guy's body temperature," maybe, "This is the guy's heart rate," all that stuff. I know some of that's available, but that's information for the command center to make better decisions like, "Hey, this guy is getting really hot. His environment is getting really hot, let's pull him out." That kind of stuff is definitely-- I guess that is what I would like to see is again, maybe a tablet command center or whatever, that he's getting that information right in there.
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	We're fortunate in that we have, on each of our rigs, we have at least one radio per person. There's a mobile radio and we have a pretty robust radio system around town. There's multiple agencies using multiple different frequencies and we're able to communicate with each other on a pretty easy basis. We have a central dispatch that we talk to. They talk to us. We're able to talk to other trucks out in the field. We're able to talk to other agencies. We can talk to police and fire-- or police and EMS if we need to and it's-- the only communication system I know and have known is what we have in [City] and it seems to be a very good system.
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	Well, because I can get on the radio and talk to someone and it's more than likely going to be acknowledged very quickly. The communication is going to be clear even in times of very high call volume or very bad weather, there's usually no service interruption. I can recall throughout the years, where there's never been a time where radios were dead and we couldn't talk to somebody. There are a few unique circumstances where communication goes in and out but for the most part, it's a good system.
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	As we've grown as a department and the way that-- our communication has become more structured. There's more rules regarding how much you should say, how much you should not say. We strive to keep our communications short and to the point. And there's lots of different tactical benchmarks and things that you're expected to say depending on the call that you go to. So that's something that's changed in the last few years, that becoming more structured and rigid and paying more attention to what you're saying on the radio.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	Let's say I'm going to a fire call and there are seven fire trucks going. Dispatch will put us on a separate channel. The department won't hear it unless you're scanning, unless they want to. But anything I say on that tactical channel, everybody hears that's responding, also dispatch hears. And they're kind of waiting. It gives them a picture of kind of what to anticipate when they show up on scene. And dispatch is hearing what I'm saying, recording it, and making notes, and making sure that whatever I say, they will kind of repeat back so that in case somebody misses it, they'll dispatch and catch them up on the back end.
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	...We go one floor underground and radio communication is done for. You can't talk. So we'll try and go to our direct channel, which is kind of a walkie-talkie mode, that works sometimes. But sometimes, it's kind of funny, with all the technology that we do have. We had a call a couple weeks ago, where we were getting somebody unstuck from an elevator. So we had people down in the machine room and we had people on the fourth floor. Radios don't work. Direct is kind of garbled so we just were calling on our cell phones, talking to each other.
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	Not really. I could do it face-to-face but then only the person I told it to knows. And something like that is some big significant deviation from our policies needs to be on a radio so everyone can know, especially the chief and dispatch.
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	Very often when we respond with police in general. We're pretty much when we respond to a medical incident with EMS, which is the third system in [City], but we operate on the same radio channel so if we have to stage for law enforcement to secure the scene, or we're on a scene where law enforcement is involved in the actual scene, it's very difficult to get information from them. We can scan their channels but we don't really have a good process. And maybe it's not so much the communications. It's almost just is getting it solved to communicate better with law enforcement. But we had a fire recently where someone had a gun inside of the house on fire, and so we all had to back out. And then we weren't really sure what police was [doing?], but we can kind of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								hear their communications, but they don't use plain English, they use 10 codes that we really can't make sense out of. But just if there was a way for us to communicate with police more easily.
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	So when we went downstairs, we're on just a regular channel, repeated channel; didn't get out, just because we were down in a parking garage. So we ended up having to run the incident on the direct channel. But so in the incident that it's a high-rise fire we have to communicate which stairway we are going to use for a fire attack and designate an evacuation stairwell and that's just going out on our regular portable handheld stuff.
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	Okay. Smoke, just at least need some way to communicate to those people and there's a system in [City], that I'm not really too familiar with that-- I know in a lot of the high-rises that we go to fire alarms and stuff they have a Twitter, and I don't know how it even gets activated, but they can communicate with building occupants on some kind of social media. I'm not sure who does it. But we can at least tell people to go inside or just to reassure them, "Hey. It's just this nearby fire that's causing-- and a lot of time stuff like that's handled at the dispatch center. People will call in and they'll say, "Aw, it's just this type of thing." But if you need to just notify people advising them to stay inside because of the smoke or if there is danger from the smoke or from the fire, you can assign additional units. And it just be on scene personnel that would make that call. "Hey. We need additional units to go maybe evacuate these people, or at least to tell them to stay indoors or something."
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	...I guess, maybe notify dispatch to notify the occupants to what's going on. And then also communications with law enforcement and just getting them to block off streets so we can get in there. A lot of times, too, we'll get there-- and this is part of our not communicating well with law enforcement-- they'll park to block people out, but then they'll have a fire apparatus needing to get down there and you don't know who's car it is or where they are, so just trying to get people there. But this

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								communicating better with law enforcement thing is our big issue and it's probably just more of a policy issue than it is a technology issue.
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	You're going to just need communication from on-syncers to not get adequate flow and there's a unit that's assigned to supplement the flow and a lot of times on our-- so it just kind of looks like I thought there'd a sign at the fire department connection that says, "Pump this pressure." But if they don't have that sign, then on our MDCs it says, "Pump this pressure." And it may not even say it on the MDC it hadn't been updated. So you have to go down to the pump room, and then get the pump, and kind of calculate the incoming pressure and the turn pressure that's labeled on the pump. So then you have to kind of just add those up and that's going to give our pressure. So then if all else fails, there's kind of the height of the building and start off in the minimum pressure. And if you have your minimum pressure, like your 150 PSI, plus however many for however many floors it is, then you still aren't getting adequate pressure, then you have to have a way to communicating it, probably just done with our portable radios down below, "Hey, we don't have enough pressure." From the guy at standpipe who will have a valve right there-- or, I'm sorry, a gauge right there, to see how much is flowing. Just the communicating, it's just with our portable radios.
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	...But I guess probably the best way is just through portable radio if there is an issue or maybe even if they were going by the pressure we're supposed to be pumping, but this is not working. Maybe there's pressure reducing valves that nobody knew was in this building for some reason. Yeah, I think just portable radio. I wouldn't really even know a better way to communicate it than just the guy at the standpipe, at the gauge. Yeah, I think just portable radio is probably the best. There's a new upcoming that-- I didn't even know about that would be able to communicate that.
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	Yeah, so that's probably the big one. There's going to be tons of radio traffic, and I'm sure someone is going to hit that button and say, "Emergency traffic. Building collapse." Whatever needs to happen. "Evacuate everybody." If there's a way to, communication-wise, if there's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a way just to confirm that that message has been received by everybody-- that would be a cool button to have, just like if there's an emergency event, and everybody has their just like, "Okay. We got it.
Communication	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	...But as far as talking to the cops, that's not-- we have the ability to do that. We have the channels that are in our radio. We get the same text on our MDC that they get. So, there's that. But it's not really interoperable because we would never switch over to talk to them. And they would never switch over to talk to us because, what unit is that? Who is it? We don't know the nomenclature, we don't know the personalities.
Communication	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	Maybe not. And so our brains are not as analytic as one might hope it to be, and so we fill in the gaps. And so that leads to a chain of events that can lead down a bad path. So that would be my number one, communication error. Communication on the radio-- the nice thing in the fire service is that everybody now has a radio. The bad thing is that everybody has a radio. And so, we have this tendency to just talk and talk and talk and talk, but it's meaningless and nobody's taking action, it's just to hear ourselves.
Communication	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	...And then the limiting factor in communications often times is that you go and invest in this system and it has boundaries. And then to change that or to add something into it is usually not compatible, so you end up with a situation of, "You do this with this system and you do that with this system," but they're not integrated.
Communication	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	So I think communication problems start probably from the top. We used to not get our daily expectations I guess, or what you're doing for the day, our layouts...So communication-wise, I wouldn't say anything malfunctioned, or we didn't get our stuff. So Chief's rolling out right now, what he's doing. We do truck checks every morning. He might have told you this, but now we're getting an iPad.
Communication	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	So communication's often very difficult. So the first thing to understand is when a federal asset's coming into a local jurisdiction, we're there to support the local jurisdiction, not to take over from the local

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								jurisdiction...In terms of us communicating with the local resources, like I say, sometimes, we're setting up the incident management structure for them to sort of use. Other times, we're interacting with our existing structure. And sometimes that's involved either exchanging cellphone numbers if the cellphone network is actually up and it will handle the network saturation that's often an issue in the aftermath of one of these events. Or exchanging radios. We sometimes do that. We'll get one of their radios or we'll give them a radio.
Communication	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	--taller, very urbanized areas. And that's certainly presenting us with some challenges. Didn't really get into sort of my whole background, but one of the things I've done is I'm sort of one of the communications guys for the county, and when--
Communication	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	Yeah, basically, doing a sort of a bucket brigade thing where somebody stands here with a radio that's got coverage, and this person's over there with a radio that doesn't have coverage, and then they talk.... And in specific, there's a public safety communications committee within COG, and then under that, there's a fire committee and a police committee.
Communication	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	--in my EMS unit scenario. They've both gone into the incident. So that's where the coverage is really important. To have robust coverage available, to try to minimize the number of times that those single resources find themselves out of communications.
Communication	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...people are in distress and they need help and some of it's life-threatening stuff, but they're very straightforward simple incidents that only require a few units to mitigate the incident. There's not a whole lot of complexity. It doesn't require a whole bunch of additional communication or coordination to manage the incident... one, every unit in [County] would know how to get to that channel, with no confusion, because it's a very simple pattern that everybody can understand. And we would be operating directly on their radio system just as we were a native [County] radio user. So that plan has been implemented throughout the COG region and works very well and helps to coordinate our communications within the fire rescue community.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	They have missed the fact that their radio is on the wrong resource. Occasionally, they get told to go to the wrong resource, and they go where they're told to go, but it turns out that's not the right place to be. That occasionally happens when there's a breakdown in communication between communication centers.
Communication	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	And then when we drop down to Zone 72, we have two more sets. So we can have six simultaneous incidents going on in [County], each incident being allocated three talk groups that are discrete to that incident with no cross-communication across any of those-- nine, not six. I'm sorry. Nine simultaneous incidents with three talk groups a piece, with no cross-communication across any of those nine incidents. But that means users have to change modes on the radio, which we don't normally do. Because 99% of the time [crosstalk] we're using 7 Charlie or 7 Golf. And most people don't get too confused over that, but occasionally, that introduces confusion. So occasionally, there's problems there. The other thing that can sometimes cause communications problems is when we get resources in from outside the COG region.
Communication	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	No. Now the police communication talks to the fire communication, talks to the unit officer to say that it's secure.
Communication	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	There are times that communication gets held above me or there are times that communication is brought down to the station level, and I don't know it. Yeah. So communication, not communicating, is a big deal. That's a thing that we struggle with.
Communication	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	But communication is the biggest thing, obviously not within our job, but on the fire ground too. So it's important. The only problem is, I have to tell you, is that everybody wants to talk.
Communication	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	...I mean, all the military units have-- or military fire department units have at least one [City] portable. So there is the ability to communicate but that's just one person, that's not the whole crew.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	FF	U	Field Responder	26-35	11-20	Male	FF-U-042	--it's by radio. Sometimes we'll hop on other jurisdictions' channels when it's water rescues that are right on the border. Sometimes we'll have to hop on with [City], or [City], or if it's a Metro assignment where it's [City] and to [City] or G
Communication	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	--you could be the primary but not closest to the scene. And now you might not have the most effective communication.
Communication	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Other fire departments it's very easy because we can all get on the same channel, and we have interoperability. Same with EMS. Law enforcement can be a challenge. Typically the law enforcement people don't want to come to the command post. Funny how who's in charge at the scene is usually-- sometimes difficult. [answering how easy or difficult communication is]
Communication	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	No, we don't have radio interoperability. And that's, for us, I think, a fallacy. We don't want to have interoperability. I don't want to call them on the radio. Tell me where the command post is. We'll get there, we'll meet face to face, and that's how we want that to be done.
Communication	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Yeah. We have some very easy communication back and forth. There's no ambiguity. We're always on the same page.
Communication	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	...So generally my day - if it wasn't on an incident response or an investigation of an injury or something like that - was busy communicating with our vendors, with my boss, the Risk Management Deputy, on what we need to do to project purchases, stuff like that. Lots of vendor meetings. We did quite a bit of face-to-face or conference call meetings about new products coming out or stuff that we want to see that we think that could maybe work for us.
Communication	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	Yeah. I think it's a double-edged sword because, obviously, you don't want to put anything out too early. But as far as kind of updating your people-- I mean our public information office does a pretty good job here of updating the public and citizens as to what's going on, and sometimes we use it as communication.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	...It was so bad that I actually had to get on my phone and call the Battalion Chief, the incident commander on his personal phone. So I went back, typed up the thing, sent it off to our communications liaison basically.
Communication	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	Yes, you're relying on communications for whether train movement stopped, whether power's down, whether the fan status of removing smoke, whether the stations being evacuated. I mean, there's so many things that can't happen while you're talking on a cellphone. You need to get that information out to the entire assignment. Not just from one person on the phone, so.
Communication	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	We have pretty good communication with the surrounding jurisdictions and 10 codes. Everybody's on the same radio so we can talk to each other. That's generally not an issue.
Communication	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	Yeah, no. I think the ability to teach our people, whether it's a first day firefighter or a 30-year chief, radio discipline and effective communications is key-- and that's just not our jurisdiction, that's anywhere. That's kind of key to streamlining everything.
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	The communications come down in a very paramilitary style, so it works its way from the division chief to the battalion chiefs, and the battalion chiefs disseminate that to the house captains. And then, that's when we get it. It'll either go directly from the house captain or through lieutenants to the individual crews. But usually, that's stuff that happens at roll call.
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	But there is some protocols for switching channels. If there's a RIC operation in progress, they'll ask to switch everyone over to a different channel to keep the people involved in RIC on the channel that they were on and just clear traffic away from that. But that's usually up to the division chief. It used to be automatic, but I think they changed it after an incident to prompt the division chief and see if they want to do that.
Communication	FF	U	Field	36-45	11-20	Male	FF-U-010	Q: Okay and so much of your communication is with and through

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					dispatch? SME: Right
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Most of it's verbal. If it's a major incident, like a fire, a huge auto accident or something like that then you'll have a TAC channel, tactical channel, assigned to you. And if you're not within eyesight of the person who you talk to, it's gonna go over the radio.
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Yeah, like I was talking about, you know some of those incidents where you get there and you find out that this is a police matter or we got dispatched for a small fire and find out it's a big fire when you get there [laughter]. Things like that.
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	I would say, for the most part, it's the accidental transmits and then it's people getting too excited and not trans--or not communicating effectively over the radio and not knowing how to speak into a microphone and have that come out clearly on the other side. A lot of people get up too close and you hear over-modulation [laughter].
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Yeah, it's just professional speaking. We don't send a whole lot of personal messages over the radio [laughter].
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Sometimes we'll get a tiny bit of crossover like they'll use a police code for a deceased person, they'll say like an 801 or an 802 or something like that. Not everybody knows what that means but the dispatchers all know because I think they usually work both sides. But on a day-to-day basis, everything is plain English.
Communication	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Some people do have email and work email on their phone. I don't have it on mine because everything that we get is firefighters at our rank level, also comes over the general orders. So.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Or I'll give you an example, the other night we went to a vehicle crash here, two blocks away on [Street], and the police were first on-scene. And it was a drunk driver in one pickup and then another SUV, and they were both pretty banged up. And so in that case, communication when I first on-scene with the officer, "Just how many victims do you have?" And he would point out, "I have two." And there actually turned out to be a third victim that was sitting down. It's when a officer pointed that out

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to me, some other officer, and so I went and checked her out. And I go, "Which vehicle were you in?" And she goes, "The black SUV." So I went back and I communicated with the person that was driving that vehicle and I go, "Do you know this person? She says she was in your vehicle." He goes, "No. I've never seen her in my life." So I tell the cops what's going on. Turns out that she was a prostitute that was in the car with him, and he did not--
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Q: So now, when you say, the headsets, they're integrated how? SME: Just within the rig. And the officer has capability to talk to dispatch.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Yeah. So then, outside the rig, everyone else has a radio that can communicate on whatever tactical channel's on. So you can, within the crew on that incident, or to radio. Because I think at radio, someone's assigned to listen to each channel.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	No. I mean, our tours change all the time so you're working with different people, and you get to know how people work. So say you didn't work-- you haven't worked with this person before, it'd be nice just to have a face-to-face and work things out how-- if we do get something, how things should go.
Communication	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Because in the radio-- that dispatch knows that that radio's assigned to whoever's on that roster. So if you go missing-- God forbid you go missing on a call, they will know who's missing.
Communication	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	So it's usually on radio. So at an instant when we get there which they come in and check in with the chief, I'm usually just listening. I'm the second set of ears and I'm just moving people because he doesn't have to tell me, I can just hear it, right?
Communication	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	And then they'll go do their assignment and then you're listening on the radio. They'll either say it-- so like the chief is usually head of fire attack and then you assign all these companies to fire attack. So if somebody in fire attack says, "Okay we're done, we're coming out," or whatever, then I can hear that and I'm like, "Okay, they're either coming up."
Communication	FF	U	Supervising	46-55	21-30	Female	FF-U-013	Well like with our radios and stuff, sometimes they don't work when you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					go below grade. They don't work some in the high-rise because the concrete and so then that-- and that for our job realistically, 99.9% of when things go bad is because communications has either been nonexistent or muffled or miscommunicated or something. It's something to do with communication. I think it goes across the board for relationships in general, right [laughter]? Life in general, any problem is usually some sort of lack of communication. So we do run into problems with the radios in buildings. We get around it. Luckily we've had it happen enough now so when it does happen and we have enough people on scene, we'll have people go to direct channels and then we just have to kind of get in a line of sight. It's almost like the old bucket brigade and you have to kind of stay and feed that information back up and down the stairs, or up a building. So it's a little harder when we're going up into a high-rise because then trying to get communications back down if it's closed is hard. The basement's a little bit easier because it's usually only so far down and then you have stairs. So that's probably the biggest thing is when our radios don't work and then it's kind of like you're dead in the water because we really need to be able to communicate and orchestrate stuff because that's where the danger is. Is that if people start freelancing and doing their own thing because they're not being directed, they can do things that are going to hurt other people without knowing it because they don't know when
Communication	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	--where we're operating. We have different radios that we carry that have some different loads of zones that we can go to, that other firefighters don't have the ability to do. They're broken down into the airport zone, and then some mutual aid zones that
Communication	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Yeah. I mean, if I went on the call right now, I would be dealing with two battalion chiefs, three engines, two truck companies, a rescue squad, so I have a lot of people. So 35 radios are showing up that I have the ability to communicate with. And so we organize that by either just talking to the officer in charge of those engines or breaking them up into groups and talking to just one person using the span of control to be able to talk

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to people correctly. But yeah. There's a lot showing up, and that's a good thing, and it can be a hindrance sometimes. Somebody gets with a stuck-open mic. So if you're working doing something, and your microphone ends up in the wrong place and it opens, then everybody on the fire ground loses communications.
Communication	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	So if we were all at an incident right now and we were on the same frequency, and you happened to be on an open channel-- oh, I talk to the communication center on a different channel. Yes, I do. Yes.
Communication	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Well, I mean, there's two facets to that. We take care of 99.9% of our stuff with just our department within the city and county of [City]. There are some areas to the south of us that we might interact with them a little bit. But when I'm talking about the mutual aid component of things, along the sea, the ocean, and out towards the Golden Gate Bridge, we may have to communicate with the coast guard, and the CHP helicopter, and maybe another department for a boat in distress or somebody that's in distress in the water. And so, if we have to communicate with them, we need to have the ability to quickly find that channel and talk to them instead of having to go through zones to try and find them.
Communication	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	... The verbal communications is kind of what we see when we pull up to an accident or fire, how we do our assignment verbally so people are listening to the channel that they're responding on. So a lot of it is verbal traffic. And then when we're working in the incident, if it gets real busy, we'll break it up into two different channels. So a lot of it is verbal communications, not necessarily data-driven at that point.
Communication	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	They are. Within our county, [County], that's how we communicate with the hospitals. When we're doing patient transports, it's all done over cell phone verbal communications.
Communication	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	What I find after doing it for 15 years now is the relationships, and who your point of contacts are, and how you maintain those relationships. Because you don't always have a lot of time to start trying to figure out who's who in the sandbox when you need to make decisions and get

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								mission-critical communications backup. And it could be a line of sight communications. It could be regional communication. But you need to have some plans and some contacts so when stuff goes south, you can reach out and have those conversations.
Communication	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	In our geographical area, fire and EMS, it's relatively easy for us to communicate across those two disciplines because mainly the fire service dispatches the EMS component, so we're tied at the hip because we're responding. Law enforcement's kind of a different animal. We have inter-op talk groups and channels that we can communicate on. But the law enforcement side, they don't like leaving that dispatch channel, which is their lifeline to their dispatchers, to their vacation center. And to get them off and talking to somebody else, it makes them nervous if they're missing something over here on their primary dispatch channel. So trying to get that-- I want to say it's challenging to get the law enforcement to come over to the inter-op side of the world. They're learning ICS. As of 10 years ago, they couldn't spell ICS. Now through grant funding and kind of through Department of Homeland Security, it's becoming the norm of communications, clear text, and the structure of how we run incidents. It's using ICS. So it's becoming easier, but there's still that gap of having them come over to one of our inter-op talks to share information without going through the dispatch centers. I'm sure it's better in other parts of the country than it is other places, but--
Communication	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	And I'm going to preface this with the fire side first. And I think from the fire service in [State], we do a very good job communicating with one another because we have what we call a Master Mutual Aid Agreement. And we move fire trucks from end of the state to the other very easily and very quickly. And we have an agreement that we all have this set number of channels in all of our radios, and they're all the same. So no matter where we move in the state, we have a set of radio channel that we can jump to for interoperability to work with other agencies.
Communication	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	As in terms of instant management teams being called up and-- yeah. There's challenges, but I think we deal with it so fluidly. When we get

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								called up, there's 56 of us, and we get called up. And there's four of us on my team that deals strictly with communication stuff.
Communication	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	I'm not sure I can answer that question just because in every after action review, communications is in the top three items that need to be reviewed and improved upon. And so, I mean, I don't know if I can answer the question if it's helped or hindered. We're still in the top three of items that always seem to be an issue in any major event. I'm sure it enhances it to some point, but we may rely on the technology to share that information where verbal communications could have, should have been directly involved. And I mean, that could have been walking up and talking to somebody, versus trying to send them a message through an MDT, and the system being down or congested, and it never made it there to where-- it's dependent on the situation and what's happened, but--
Communication	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	Yeah. It needs to happen at the Incident Commander level. That's where the interoperable needs-- when the police want something and the fire chief says, "Okay." Then he tells his people, and vice versa. That way command and control is maintained, we have accountability of what's happening on the scene, we both know what-- the police and fire know what's happening, who's been requested to do different tasks.
Communication	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Yeah. Primarily email is the mainstream communication model. Going on right now, at 8:05 every morning, there's a conference call with the battalion chief. The battalion chief is the shift supervisor for all nine stations. That conference call will go over what's on the schedule for the day, what issues there are, what training is going on, what companies are out of service for training or maintenance or whatever. It's just sort of a collective gathering on the phone that okay, I wasn't aware, I didn't read the email yet, but today is X. So for example, there was training that was scheduled in [City] this morning that has been canceled. And so that information was sent out via email last week and it will be confirmed this morning that there's no required in [City] today. And then face-to-face sometimes when you meet up with-- the battalion chief will

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								go around to the stations and meet with the crews and confirm that this is the chief's meeting minutes. I want to go over it with you, with the crew. So there's the physical, face-to-face communication as well.
Communication	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	At face value, it's very difficult. There's different radio frequencies, there's different broadband channels, there's different physical radios. For someone to try and communicate with [City] police, unless there's handed down knowledge of, I'll go to this channel and you can talk to the dispatch center in [City], just fine. You wouldn't know that trying to communicate with agencies outside of our dispatch center. Our dispatch center is in [City]. It's called NORCOM, N-O-R-C-O-M. And they dispatch for approximately 20-plus fire agencies and several police agencies, and so if I wanted to talk to the [City] Police Department dispatch center, separate, just down the street, I would have to talk to my [City] communications specialist. And then they would have to contact [City] police and we relay that information in three-way communication versus just getting on the radio, turning the knob and contacting the dispatch center myself.
Communication	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Right. So sometimes if some of our stations that are near the border of [County]-- we're zone one, they're zone three. They'll just get on the radio and they already know because they work at that station that you go to Valley Com automatically and you just communicate with them directly and leave NORCOM out. However, that causes some problems because if I'm just going to communicate with someone over here and I don't let you know that I'm doing that, that puts confusion on your end.
Communication	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	And it's prevalent sometimes when, let's say city of [City] fire department requests a task force or a strike team of units. They need a dozen fire trucks to go to a big fire. Well, for us to get that information and to rally those trucks and then making sure all those different fire trucks get on the same channel, that's a major problem. Maybe two out of the 10 fire trucks would be able to go to the proper channel to communicate--
Communication	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Unless you've done it before. And that's the problem. It's not a continual thing. There isn't a required training module. It's, "Oh yeah, 10 years ago I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								remember I went in on a big fire and I went to this channel and I talked to the dispatch center." So there are definitely some gaps. I want to say it's not a failure rate of 100% but there's definitely gaps that need to be communicated.
Communication	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Yes. So I have a department issued phone in the training division but each company officer, lieutenant or captain or battalion chief, will have a department issued phone. And that's their means of communicating just for that crew and that shift.
Communication	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	--good time to do that. And if I choose not to upgrade that, then I can't get that information and I have to go to an alternative means, and that's radio communication.
Communication	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Yeah, sometimes they do, but oftentimes they do not. So, yeah, oftentimes there's not a lot of communication currently between the building owners and us, or no method for them to do that yet. So a lot of it is just rely on us noticing that something has moved or is relevant, and then marking that on our paper, communicating it to the people that would maintain that system, who can then disseminate that information out to everybody else, so.
Communication	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Yeah. Certainly, so communication within our station is almost always face-to-face. And even often with our outlying stations it's-- I guess it wouldn't be face-to-face. It's often over the phone if you want to-- there's nine stations in [City] that are staffed [inaudible]. So face-to-face communication and then a lot of telephone. If you wanted to reach somebody, we can see in our staffing, daily staffing, kind of software where everybody's at. So if you need to get somebody, "Oh, this person is at station such and such. I'm going to call that station." Communication from the administration is very much not face-to-face, it's through email. The department relies a tremendous amount on email for communication, and yeah, to the extent that it's almost, at some degree, starting to become a problem, I would say. Just the fact that everything is just kind of-- if I've pushed out an email, I assume it's read by everybody and just lots of email, lots of communication that way. So,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								anyway, so the inner crew, definitely face-to-face. Your direct supervisor, face-to-face. Communication to and from admin, a lot of it is not face-to-face and done via email.
Communication	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	It's very easy when the calls are small, and it's very challenging when the calls are big. So most of the communication is done through radio, and radio is a one-time, one-person-gets-to-talk type of thing, technology, right? So if we just need to talk to one other unit or we need to talk to the dispatching agency or we need to talk to one police officer, it's not that difficult. I suppose it is a little more difficult for us to communicate to police just because they're on a just different channel--
Communication	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	No. Anything like that is done over the radio. So if we have a question, or if we want to communicate something back, it's pick up the radio and call them. They have the capacity to type on their end and send us information about the call. So they would send us then, what type of call we're going to, what kind of notes they have from the dispatcher who took the call. So that's the other piece of technology that's in all of our apparatus. We have recently, somewhat recently, started to make use of mobile devices - smartphones, tablets. So we use those, primarily, right now just to access those pre-fire plans that we have. They can also be used to do a variety of other things, but that's typically what we use them for. I suppose the other element that we're starting to use those smart devices for is there are some third-party applications out there that will help us route to the calls and mapping applications that--
Communication	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	It's not difficult. We, typically, only interact with police when we have a joint incident. So something that requires law enforcement and an EMS response. And then, same thing kind of applies if we're in close proximity. We'll have face-to-face communication. If it's not necessarily close, then we can listen in on a couple of their radio channels with our portable radios, and our dispatchers can also patch us together onto the same tactical channel if that's necessary.
Communication	FF	S	Other Public	36-45	11-20	Male	FF-S-033	Most of our incidents were on channel one. And so you're used to just going to channel one, but this incident's on channel two-- and this has

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					happened to me, where you've been on scene and you're making communications but you're on the wrong channel. And so you're telling people information that they're not receiving. And then, by the time you've figured it out and you realized it--
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Most of the communication all goes through our alarm center. So if I'm on scene and I need the cops, I usually don't call the cops. I'll call my dispatch to indicate that I need [City]PD expedited or a backup, or whatever the case may be.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	It can be, right? Because it just not only provides another step in the communication as far as what you're communicating, the length of what you can communicate, how well that is transferred from your intentions were versus what-- right, the whole thing, tell one person and go around a circle. But also, it delays in time.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	It just depends what kind of run. If it's an aid run and there's four of us there, obviously it's just face-to-face. There might be times where I get separated from-- we get separated from the driver, based upon we have to go up in a high-rise and I keep him downstairs to wait for the medics. To let them in the front door because it was locked, or something like that. There's times where medics are responding and I'll give them a report. So there are times that I'm using my radio on the designated channel. For fire responses, when you've got multiple units going, and you've got-- I come in and I take command in the lobby, and then I send a unit up to investigate, we're definitely communicating via radio.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Not normally. Normally, it's pretty good. They've got quite a few within the 800 megahertz system. There's quite a few towers. And specifically within [City], we've got three or four. I think it was three. I don't think we have a fourth one. But, no, I would say the majority of the time communication is pretty good. Other than too much communication.
Communication	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Wherever I am, they can know that Lieutenant [Name] is right there. If I fall through a floor, next thing they know is that I'm on floor 22. The ability to maybe be able to track people with individual GPSs in our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								backpacks, in our radios, something like that. So at any given point that the command post, like you see in the movies with everyone standing around the big 3D, 3-dimensional, and you could see where all your units are, all your people. I mean, you want to talk about making the fire scene safer, as well as more efficient. And in that way too, I think it would alleviate communication. Because a lot of the communication we do, is because they don't-- maybe I'm having to update where I'm going. I've cleared this floor, I'm going to the second floor. Well, that's good to know. And, yes, there's times you're going to want to say that. But sometimes, you're having to communicate because you don't know where somebody is or what's going on. And to have an ability to see that, will probably alleviate communication to a large degree.
Communication	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S5] I know there is, definitely on their standpoint. But sitting here, I try to keep and kind of do my own thing, in the sense of I make a lot of contacts within the community daily, whether it's in our car seat checks, whether it's dealing with people within the city, within the school district, within parent groups, within a big variety. And then on top of that, with their emergencies, it's communicating with the media regularly. So even if I'm not aware of something going on, necessarily here, the media will call, and then I would go online in the middle of the night and check and see what the emergency is to be able to communicate with the crew that's on the emergency before I go back to the media, and to make sure that I'm putting out the right information.
Communication	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] On scene, yeah, probably the radio. That's going to be how we're going to communicate with dispatch. And that's how we'd communicate with incoming units if we're calling for additional resources, talking to them about asking for things to bring into the scene. if we need something like a back board or something like that or the stretcher, we could tell them through the radio what we would need while they're still in route. And then, even if they're out of the rig.
Communication	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] It depends. Not often, but if-- so say we're on a call and there's something we need from the engine company that's the kind of thing

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that's a little bit more complex than just saying, "Hey, I need you to grab such and such off the rig." Sometimes the officer will call and say, "Hey, call me on the cell phone." So that way you can just communicate straight back and forth instead of having to wait and ensure the radio traffic is clear to pass your information, but it's not that often.
Communication	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] Yeah, I mean, if he doesn't have an iPhone and I do, then, of course, we're not going to communicate. But if he has a certain app that will communicate with my FaceTime, then we can effectively communicate the same way. But turning that camera on and sending that video feed outside while you're in some sort of environment that not everybody can be in is pretty crucial.
Communication	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S6] Even kind of we as I department, I think we're very strong in the practice of the chain of command. Right? So if [Name] was my lieutenant for a long time or when [Name] is sitting right seat of the engine and we going in an incident, unless there is something desperately wrong or I need to communicate with something that he's asked me to keep communicating to him with or about, I'm not talking on the radio. He's the lieutenant and that kind of helps filter it a little bit, right? Not every guy is going to be out there going, "Oh, I see this, I see this." I'm going to come straight to [Name] and I'd say, "Hey, did you catch that?" And filter it that way. It's probably the most-- I believe it's the most appropriate way to try to manage that radio traffic and get the most critical information out there in an appropriate manner.
Communication	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S4] It's a double edged sword, however. Not [inaudible] texting versus a whole bunch of different phone calls. When communication occurs over the radio, everybody gets to hear it. Not everybody gets to hear the face-to-face communication, so I used to not like to have a whole lot of radio communication, for instance. I would always try to do face-to-face. What I found was is it created a lack of situational awareness on the incident as a whole, so it was really incumbent upon me to make sure that as the incident commander, I transmitted out important information. But if I needed-- if he was the guy, I would get the information from him face-to-

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								face, because when I have a face-to-face conversation, then I'm going to have the best of what he says. I may be able to read a lot into what he says based upon how he's saying it and the look on his face while he's saying it.
Communication	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] How do mean? So I can talk to you from my level. I send out an occasional email explaining what's going on in the department. I would love to meet with every crew once in a while, but that's 54 stops. So by the time I get to the 54th, everything is changed from the first one. It's impossible. So we have to depend on the information coming from [Name] to the battalion chiefs that can go out and communicate with the crews. I think it's important for the chief to get out, but it's impossible to get to all the stations.
Communication	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] I think it's worth looking into in the future. I think it's-- we have a new chief coming in. It will be anxious to see his view on what he thinks, how he communicates. But I think there's a few things to try.
Communication	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] Mostly. I talk to my battalion chiefs, usually at least one of them daily, out of the three that are on. So I do talk to them by phone, cell phone more than anything. A couple of them I see. I see one more than the others because he's in this area. But email is probably our number one. It's the only way to get out to 300 people.
Communication	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	So I communicate with the folks within the organization. I communicate with folks in the community. I mean, I do a lot of that through phone calling, emailing. It just depends on the situation how I would do that. Sometimes, text message. That's probably the rarest form. Other than, "Hey, are you almost here?" You know, something small like that.
Communication	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	[S2] Well, on my level maybe a little bit differently than on somebody who's actually responding to the incident [laughter]. They would probably be communicating via radio, whereas I would probably be communicating via cell phone to somebody else, whether it be the police PIO or our PIO or-- so mine is mostly in major incidents via cell phone. If our cell phones went down, I think I would be in trouble

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[laughter].
Communication	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	[S2] So I have been on a couple incidents where I was in the rig for the fires in Okanagan, and a lot of that communication was-- well, we communicated well within our group. A lot of it, we had to go-- while we had the cell phone numbers, they weren't always answering. So a lot of times, we actually drove to the site where the other group of PIOs were to ask those questions because just-- but what we did that we found worked well, was having a conference call every morning at a certain time, so that people had it on their schedule in the morning. So that worked pretty well. But, again, if you didn't have phone service, I think it would be really a struggle. Same with if there was no email, or text, or [laughter]--
Communication	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	[S2] Yeah. And currently, there is no way for them to know what we've done on our inspections, and the things that we've found. And sometimes we try and communicate some of the big stuff like hazardous materials and things like that. We'll communicate with our hazmat team and our hazmat folks, but there's no way to automatically have those things update. So if it's not us handing it to them, it's-- yeah. So just our regular old annual inspections, they don't have access to those.
Communication	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	[S2] I think sometimes you just don't recognize that you have a message that needs to be communicated [laughter]. Sometimes it's like you may be doing something or working on a project, and you may not think about the impact that it might have on somebody else or another division. So I think maybe sometimes you just don't recognize the need to communicate what you're doing [laughter]. But I think, overall, our communication here is pretty good. I mean, I guess we try and do a good job of letting each other know what's happening. So--
Communication	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	Computers, yep, all that business. I do believe there is a-- I use email a lot to get a general message out to the troops that I need to-- it needs to be-- everyone needs to be notified, and it's not something I can go meet up with everybody and notify them. So I use it all the time for that kind of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								thing, and I get those as well. I mean, we use email a lot for communicating. It's just the way it is now.
Communication	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	Calls come in a couple different ways. So we have South Sound 911, which is our regional communication, which you're aware of that I'm sure. So 911 calls go to the dispatch center. Well, they go do the primary, and we're considered secondary. So they go to the Firecom. Firecom plugs them, does their CAD business, and pushes it out to the stations over VHF to the majority of our stations with the exception of this one right now. It's a VHF system, and then now we're getting into things that I'm-- I don't know a lot about technology when it comes to this stuff, just kind of what I know. It's gets pushed out to the stations. This station has a unique system. It's US Digital. It's something we put in last year or the year before. It's pushed out a different way from Firecom. They have a backbone built in the Firecom and it gets pushed out via either computer lines or something, and it triggers an alarm in the stations. So we have that.
Communication	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	So that's where the guys are sitting in their-- guys, girls sitting in things, and the lights go on, and they get all that business. But we also use Active911, which is the program in our phone, that is also triggered through Firecom through the CAD. It's an automatic trigger that when they do their business and hit send, it pushes it out here, and it's just a text-- well, actually there's two ways. We receive a text message through regular texting and then through Active911, which is a program we purchased and utilize.
Communication	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	They are using either the radio-- they're communicating back to dispatch or communicating with other resources that are responding, say, if there's multiple engines or battalion chiefs that they communicate via the radio. And then they'll use the company phone to make contact to the hospitals for EMS type contacts that they need to get patient reports or whomever they may need to call.
Communication	FF	S	Supervising Field	46-55	31-40	Male	FF-S-038	...Everybody needs to know they're on that channel because dispatch can't hear it at all because they can't communicate on a direct channel

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					like that. So the incident commander has got to be very careful when he uses that channel, which we don't use very often because we haven't had the need to use it very often.
Communication	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	Yes. Monitoring the radio, windows up. They may get somebody that comes up to their window that wants to ask them a question. Unless they're ready with everything they're going they won't roll their window down and talk to that person yet. Now if the person-- if it's an emergency, certainly, but we've become disciplined, I guess, in that aspect where we understand the importance of listening and paying attention to the radio.
Communication	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Being a very active community we do a lot of back country rescue and communications again is one of our biggest issues so we kind of look at different ways that we can improve communications and have backup communications for those responders that are going out into the field because especially during winter with avalanches there's so many additional hazards that the responders face out there added on top of it so what we've been using between the radios, hand radio we've also started using [name] units which are similar to the spot units for tracking of our members and our teams. The nice part of the [name] units is that we can actively track where they are out in the field where it will send a location and it also has freeform text messaging so they can either say if they've lost all other communications to the satellite they can then request a helicopter there to their location which will then give us the coordinates and everything and we use this summer actually on a rescue where they were I think 30 miles out a canyon where we didn't have radio communications and I was actually at home and received a message on my phone that they were just letting us know that they were okay.
Communication	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	No but the [name] thing is another tool that for me like back at the fire academy if I hear a call or see a call come in on the phone I can then turn on the radio and monitor the traffic back at the fire academy and see if it's anything that I can help with from back there and we have we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								can communicate directly with each other and it basically just gives us more tools when one goes down that we can then access another one to kind of communicate with each other.
Communication	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Yeah I think there's the different levels of communication whether it's just within like internal with an organization for getting stuff done can be a problem where certain stuff that needs to be relayed doesn't and stuff that doesn't need to be relayed does and then from a paper call perspective it's just having that because it's not their full time job. It's one of those things that they listen to the radio and they don't get on the radio very often so that's part of the problem with calls and that kind of thing is not having the experience on the radio.
Communication	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Another kind of aspect I guess would be when if somebody starts saying something on the radio that's different then the volunteers hear it and think that's what's supposed to happen so then they start using it so then it becomes a bigger problem again and yeah I guess communication in general is one of those things that if you can just most problems can be solved if they're brought to people's attention and talked about it but that doesn't always get through to people and so it kind of builds up and becomes a bigger issue.
Communication	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	But yeah just having that ability to launch a drone in the back country so that's one of those things that I definitely see that progressing and that's using more of them around here but also for seeing size ups so having that ability to launch a drone and have it arrive on scene before us so that the officers can have it on their iPad and be able to do kind of that 360 a little bit before we get there because we get so much snow it makes it difficult to do that 360 and actually determine everything about the building so it's not uncommon for us to have 5 to 10 feet of snow around a house that we're trying to trudge around to see what's going on or what kind of structure we have and so have that ability to do the virtual 360 would be huge and yeah I think the improvements of communication will be interesting to see what happens in five years.
Communication	FF	R	Supervising	Not	Not	Male	FF-R-046	When we've had some incidents where people have tried to use incident

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder	specified	specified			command where like on a wild line fire. You have the communications unit right and they do all the radios, they clone everything so everything works, they put repeaters out but it's a big incident so we've had people who think of smaller incidents as needing all this stuff and the reality is we don't have the staff and if it's an isolated incident that's a low frequency you know high risk thing that involves ten people we don't need a communications unit with all these different channels.
Communication	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Currently we have just switched to an app on our phones on our smartphones that's called [Application]. With it, it will the app will come across our tone for our department will go out and then it will give us the information for the call, it will be followed by a text through text messaging through that system we can either say we're responding to the scene if we're closer than where we're at to the scene or we can respond to our department or we can stand down and in doing that through the app it goes directly to everybody on the department so everybody knows who is showing up and it also goes to dispatch and they can know okay we have a firefighter or EMR that is in route either to the station or to the scene. So it helps with a lot of confusion. Let's see we've only been on this app for 2 or 3 months maybe 4 months no about 4 months so it's still relatively new. Prior to that we were using what was called [Application] another app and then we still have the text messages and a phone call that would come through but through that we just see the deal and look at it and go and we didn't know who was responding so what we were doing is we were on the phone and calling are you coming? Or calling the chief saying hey, I'm at least showing up you know and then or if what I would normally do is I would call the dispatch and say I am in route to the station.
Communication	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Mostly through our radios. What we can do is say we show up on a scene and we need additional help we will radio in to [County] to our dispatch and say can you dispatch so and so for assistance? And so they will they'll do that and send them out and then once they're on scene we can all get on the same radio frequency and then

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								communicate with each other.
Communication	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	I have maps and stuff on my phone. It's not through the department but if I ever needed to I could pull it up. The [application] app does have a mapping part on it to where they can with the E911 systems that we have in place now that dispatch can pinpoint that call for us and then if we need to we can map it out.
Communication	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	On another department that I am on [name] they have one rig that does have a headset that is very beneficial because the guy on the back can say hey you know we need to go over here where if the guy driving can't see it but then the guy driving is the one communicating and can listen inside. So that can be a problem you know if we're out and just not being able to hear our devices.
Communication	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	On the scene just guys being able to you know hear their radios you know if they're in and out because you get on scene things are loud. You're going to have to yell at guys you know face to face. I mean you and I are what five feet apart we'd be hollering at each other most of the time trying to communicate you know depending on the scene. Just being able to hear each other and you know so we can understand each other that would be a main thing I think on a lot of it.
Communication	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	I'd say so. Our I think that goes back to working together because you have to have communication but it's a good relationship. I know when I've worked here and EMS, SO, Sheriff's office comes by and chit chat a little bit. Public safety is a brotherhood volunteer or paid. Ya'll experience such tragic and wonderful things you have to know each other and it helps to know each other especially when you're working. It's a good feeling of comradery and also you know it's good to know that people know you and have your back.
Communication	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	Are we talking about on a scene which to me is what's going to be the most important. Lack of communication. Lack of being familiar with the incident command system. That being said lack of knowing how to use the incident command system in the setting with the resources you are

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								provided. So you ask people to go out raise money for barbeques, respond to calls in the middle of the night and then you say oh you need to go take some classes too.
Communication	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	Yeah. Communication is invaluable whether it's over radio, whether it's face to face. In light of 9/11, [Name] as brand as it is it is vital to understand at least the basic incident command system. It's the first step in safety and from that you know it responds whether it's face to face verbal, whether it's over radio communication things of that nature. On a scale of 1 to 10 out here our communication on scene I would rate it at a six.
Communication	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Yeah we have a system called Voice net. Voice net is pretty much attached to our radio communication center. As soon as we get a call they will tone out pretty much give you a certain buzz to say there's a fire, there's a medical alarm and it will say exactly who is being dispatched.
Communication	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	Q: Okay and so the initial stuff is coming through on the radio. The same information coming through on the MDT? [speaker 3] SME: Yes, yes ma'am.
Communication	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	Q: I meant to also ask are there call takers and dispatchers or just? [speaker 3] SME: Yes. We have call takers taking in a call.
Communication	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	Q: And is that does communication vary depending on where they are? [speaker 3] SME: Generally.
Communication	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Just being closer to the airport. We deal with a lot I know a lot of spots when I worked at an airport there were a lot of dead spots out at the airport. There weren't a lot of reception because you know their antennas are a lot stronger than ours so but for the most part not too bad just a lot of dead spots around there.
Communication	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Not really. Just because of the dead zone you don't realize too many on the terminal it's pretty strong so your dead zones would be out on the runway somewhere but more so in the terminal it's pretty cool in the terminal.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] All involved. Any way you can get your word across is the best way.
Communication	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] I prefer face to face but if there's a fire in this building on multiple floors and he's doing something above me somewhere in the building that's going to affect my operation on this floor of course we're going to be talking on the radio but me personally I prefer if we can do a face to face at some point during that incident.
Communication	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] And from time to time if you have multiple crews working you may get some walk over or if individuals work together and he's in charge and he's trying to communicate there may be some kind of I don't know if the new radios do some type of echo or I may have to move off from them.
Communication	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Training. The little stuff that you said is all the majority of it besides you going to a basement you know don't work everything else is in there most of the time.
Communication	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	It is all radio dispatch and it's all--I mean if I have somebody somewhere I can get them to like email it to me or something using either getting it on my iPhone or whatever 'cause we all have our own technology but in terms of having the technology to bring in the information available. I mean I can call--if I'm outside this building, if I'm dealing with a suspect on an arson or a car that we're investigating or whatever I can get any information I want sent to me over the radio and then they'll copy it to the CAD and we get that later on. But in terms of having something printed in front of you that you can sit there and walk up and say, okay, when she reads me--if she gives me a VIN which is sometimes the only way I can identify a car I've got to go sit and write it down then go take it back or I can read it to her and she can say, yeah, that's what it is.
Communication	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Now let me tell you this. We have... other than the 2 radio systems that we're dispatched across 'cause we're dispatched still across 2 different ones because that's a rating thing, for rating purposes. But we also use other technology that we don't get credit for but a lot of people get their

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								messages this way. We have a tech service that we use that comes out of here that AT&T does. It's through the AT&T system and then we pay for what's called Active 911 and that system sends a message to our phones. And those 2 things seems to go down more than--frequently. And it's not--usually it's just some little glitch and once they figure out it's down, the biggest thing is figuring out it's down. Once you know it's down, you tell them and they figure out how to fix it most if the time.
Communication	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	If they don't have one, they don't get that service. But other than that, no. I mean none of us complain about the fact that we're using our own. You know? It's a nice feature for 2 reasons. One) I don't have to carry the radio. Let's say I want to go to dinner which I carry mine if I'm in the [County] but if I'm close by, I can leave, you know, I can leave the radio outside. It'll--there is a delay in it though. The text messages, some of them come before the tones do because as soon as they're generating the call it'll generate the text message. So we'll--a lot of time and I've got a couple of people, we call it across the concrete divide or the road between the two, as soon as they get a text message they want to start calling on the radio do we have a call?
Communication	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Not understanding they're still building the call. You know if you get the text message and you're that worried, go get in the truck and wait for them, you know to tell you to go. But... used to the Active 911 would hit first. We'd get an Active 911, it tells you what it is, where it's at, same thing the text message shows but Active 911 actually builds you a map to where--from where you're at to it. It's helpful. You know all of those technologies, they're--one's extreme, you know one does a whole lot more for you, one does a little less. I can, on Active 911 I can hit a button and them I'm going.
Communication	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	It's... not difficult with the 700 radio. It's a matter of me turning a knob. And I can talk to any one of them that's coming to the scene with--I mean I regularly do it. I should get the call and just turn the knob all the way to response coord and we should all be there. And I'm--since that's on my mind, I'm going to talk to [Name] about prompting them to do it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								To tell them to go do it.
Communication	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Impossible to talk to. We have--it's not impossible. We'd have to go to a region frequency. See one of the things that aggravates me about the 700 system in [state] is that that radio works everywhere in the state. But if I'm in [city] which I regularly--I go to [city], I go to [city], I go to everywhere, if I'm going down the road and run across a problem I have to go into that radio to find something that might let me talk to somebody. I can go and have immediate help or I can pick up the phone and dial 911 and have to go through a series of operators instead of saying, hey, I need a trooper to come to this area or , hey, I need, because I--they monitor our region channel, okay? And I can get to our region channel pretty easy.
Communication	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	But when I go to another region channel you don't know whether those organizations monitor it. State police usually do. They can get you to one of the others. But. 911, I'm not doing anybody else any more good than [Name] driving down the road because I can call them on the radio and say this is what I have, this is what I need, and bang, it should be done. Where instead calling 911 and they're going to just go through their normal deal and they may be sending me what stuff I don't need when I can say, hey, this is all I need for this particular thing.
Communication	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Well I own my own and I have the latest version of the iPad Pro. I think the others probably have Airs or Air 2's. So I mean they're functional. We're not having any issues with those. Over there you can find everything from the latest Samsung and you know they all have something. They all know how to make it work for what we do. But it's not the primary communication, you know, on a scene. If we got out on something that's long term, we have Wi-Fi hotspots, we have computers that we could bring out. But in terms of it showing up on the truck or you driving down the road, getting the information you need, it's not happening for most of the people.
Communication	FF	R	Supervising Field	46-55	21-30	Male	FF-R-051	And if the system says, hey, I'm sending you to my house, okay? If the system has the data it ought to be bam. It's touch of a button there's a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					map, there's the this there's--and so, hey, there's the map. Okay I know where I'm going, I don't need the map. What's the floor plan of it look like? I can, you know, the guys on the truck that are fixing to fight the fire or whatever and say, hey, oh, wait this guy has a sprinkler system in his house or this guy has--this is where his electrical disconnect is and this is where--all that stuff is available and can be added to like I tell people every time when you go in somebody's house to a first aid call, the question you ask before you leave is did you check your smoke detectors lately.
Communication	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	We're dispatched through the 911 center. And it goes across our radios. Most everybody carries their radios. Some people still carry pagers but not very many carry the pagers anymore. There's also, speaking of technology, there's different apps that are out there.
Communication	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	Up here it seems to be fairly easy. I would consider fairly easy because our radios all have everybody's channels programmed into them and we can just go to their channel if we're not already scanning it and communicate with officers if we're going to a wreck or something like that or EMS if it's, you know, we need to get in touch with them because we may get--they may be, you know, somewhere else in the [County] or they may have left with patients from the [County] and maybe both of the units may be in [city] or something at one time. And we may have to call and say, hey, you know either call like [town] to send an ambulance or it might be Life Flight out of [Town].
Communication	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	... And I think that was the idea behind it initially. But I think we have a lot of other people's... we may not have like their direct communication center program but we'd have like their fire ground or something like that that we could try to get on.
Communication	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	So if I try to get on the radio to call them because I need something from them, typically if I'm on scene and I need something I do it, we would usually do it through like the 911 Centers. You know? Whatever my unit is, hey, can you contact them? Well then they can get on the telephone or whatever, however they contact them, and say, you know we've got a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								crew that's at this location and they're requesting, you know, X, Y, and Z for you all. Can you--but now if they're on the way I don't know if I can talk to them.
Communication	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	...when you get here, we're the third driveway on the right but I need you to stage by the oak tree or you know whatever. And they're not going to know that unless I call back to communications and then communications probably calls their dispatch center, you know, on the phone or landline or something and I don't know how that works.
Communication	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S4: Each truck has a different type of mobile unit based on its needs, so some could have a whole lot of different bandwidth; some have different channels where we can communicate with other counties as a mutual aid agreement, as far as [State] codes for mutual aid. Some of those radios may not even have that it is just sometimes they need programs and sometimes with other agencies like the [city] fire department has a certain type of radio system, it is hard to communicate with them [indiscernible]. Now our 911 center can marry us together and we can talk to each other based on [indiscernible]
Communication	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S4: So then we were able to communicate with that. We don't get to communicate with law enforcement because they are on that certain bandwidth as well and we have to go through Dispatch. Our dispatch talks to their dispatch and then they relay information and that's how...
Communication	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S4: Well, both. If we are here at the station they send a certain tone out through their system and activate some alert system here and they give us a preliminary dispatch, an EMS call for a seizure, okay so we get in the truck, we go respond to and then we do a secondary dispatch that tells us it is a seizure with somebody who has history, somebody with epilepsy or it is a febrile seizure for a child or something of that nature, give us a little bit more on the secondary. But the initial dispatch is to get us to the truck and get us on the road and then kind of build this thing.
Communication	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S2: So we get those messages sent to our phone and I'm responding.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S4: Yeah the global communication, the government actually talked about one time or another that this new CAD system would send the closest respondent in an incident whether it is here or the city, because who cares where it is coming from as long as somebody is there to help quickly.
Communication	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S1: Yeah it was a nightmare at first and [indiscernible]third day when we told people to stay off the phone and when the electricity got back up and when the towers were repaired, communication became a lot more easier, but it was hard at first.
Communication	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: Then we communicate with Dispatch and other fire departments we use.
Communication	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: Yeah it is an all-county dispatch.
Communication	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S4: It is very good, everyone communicates good.
Communication	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: So you got radios, they all like to contact on it. You got the Jaws of Life also your trucks and stuff. You got your generators, pumps, thermal imaging cameras, gas meters.
Communication	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S3: They give it to you through the dispatch.
Communication	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S3: And like on this app on here it gives you the address everything it on to too so you can follow it.
Communication	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: The big thing about that is they just went to a new radio which is like a, it is called Digital, it is like the quality when you are talking on it, say like there is noise in the background on there you can hear through these radios but on theirs it like blurs the background out so you can hear the actual person talking.
Communication	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	S2: Well they dispatch us all. And all our pagers go off at the same time and usually a lot of people are at work during the day. So, when we are at the meetings, we try to figure out like me -- I am off during the days,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								during the weeks, I work at night. So, during the days, most of the time I will respond, with two other guys or three other guys and if somebody is off, they will respond. And like today, I am off all day and off tomorrow and half of Sunday, so I can respond to whatever.
Communication	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	S2: And you will charge it and -- but that's what I'm doing. We are hoping -- I am hoping it happens, because it will be easier to communicate. It will be easier to find out what truck is going on scene, how many guys are going, how many Active 911, you can look at that and it shows you the people that is going but you cant do that driving down the road, not when you are going 50 miles/70 miles an hour and you are looking at that and going I cant tell who is there, you know, but in this here, the numbers going off and what trucks are going, that is better -- yeah.
Communication	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	S2: I'd say they have changed a lot as far as, you know, communicating with other people as far as other departments. I think our dispatch and their dispatch have gotten better communication because when we had the big fire, I mean, the radios were going beserk. I mean, they had a big mobile command unit up there that was an RV and it was nothing but telecommunications and radio. And it was huge.
Communication	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	S2: We got information at our station, what was going on. And, when we crossed over, we could still talk to ours, but they kind of said they wanted us to talk to [county] dispatch because we were out of their county, but when we got back into the county, we could talk to them but they wanted to keep our station clear for [county] and others.
Communication	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	S2: So, but they call us back in but how did they -- I don't know how they did it. That's a good, that's a good -- I never thought about that. How they communicated because everybody they had their own band or whatever you want to say. So, I don't know --
Communication	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Text messages all day long. We all have iPhones for better, for worse.
Communication	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: department issued iphones] ...We just got our patrol but everybody at the Sheriff's office has an iPhone. Text messages between co-

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								workers and bosses about things you can need. And sometimes it's as simple as, during the workday, "Hey." I'm interviewing somebody in the jail, "Can you bring me a form?" Cool. Or it can be 10 o'clock at night, "Come find me in the morning," or, "I need to do this in the morning." And some of that bothers me, some of it doesn't. That's why I try not to go through the emails. But some of them are-- there's a lot of junk mail. And being me, I get my [Organization]'s emails sent to my phone. So that way I just-- but on weekends, I'll spend 10 minutes at a time just waiting through it. I haven't gone on. And I've just waited through...
Communication	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Both. But I try to use my desk phone more because I'm inside. And maybe it's because I'm in my 40s. So it's just as easy for me to pick up a desk phone. Plus I got the big foamy things so I can rest [inaudible].. Also hands-free. So I'm like this, and I can still type. But yeah, both desk and cell. And I've got a car that's got Bluetooth. So I've got my phones wired through that so I can talk as I'm driving down the road. And that happens quite often. I got police radios. I got one in my office. I got one in the car. And everybody, if I don't answer my work cell phone, they have my personal cell phone. So they'll call me in there. Thankfully, that tends to be more trash-talking. And that I thoroughly enjoy. I should cut down on my trash-talking. But at this point, I'm enjoying that.
Communication	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: apps] ...Some specific ones, I use for the job. One's called Theodolite, T-H-E-O-D-O-L-I-T-E. And it's a surveying app. But what it does is surveying, but you can take pictures with it. And I also put it up here. So you can take a picture and then it's going to have your GPS coordinates... And then you can take that picture and then put it in your case files. So we have a homicide. And like I said, there are some spots where it's just you and God out there. And this way, you can get a GPS coordinates of it, or an approximate GPS coordinates. Otherwise, we go by the Fore Service map which will narrow it down to a square mile. This will narrow it down to a few feet...
Communication	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: apps] There is a DUI app, where it-- I've got it, but I use it more in a teaching scenario. And I tell people about it. But what it'll do is you go

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								through it and you go through all the steps in a DUI process, and it will prompt you [inaudible]. Okay. Did you see it? Yes or no. And then it'll email you everything so you have a lot of stuff already filled up for your report. I like certain aspects of it, but I don't like using it on the street because I think you're too busy. You get dug into your phone and safety issues. One called Units. And that just helps convert times, distance, weights.
Communication	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: apps] Once called the US Cop. It's basically the only one I would tell people to actually buy when I teach in the academy. And I'm like, "It's five bucks. Buy it. It's worth it." ... It's got all kinds of stuff on it. It's got drugs, schedules, news feeds, traffic laws, law enforcement contacts... It's got some Spanish stuff. It's got a little bit of everything. So if you have traffic laws, traffic questions, you got something about tire size, speed difference. I mean, this is a big one here, front license plate states, and it'll give you a list of-- I mean, we could have the measured power of Google and just do it that way too, ... And then compact and non-compact states. Compact is states that have gotten together and signed. So if I get a speeding ticket in California, or-- no. Let's say Florida. Florida. It affects my [State] driver's license. But what I love about being from [State] is it's a non-compact state. So as long as I didn't get a speeding ticket in [State] it didn't affect my [State] stuff.
Communication	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	So there's that. But yeah. English, Spanish, and German are the three most spoken in [State]. I know people that, if I need to, I can call, and they can handle all of those. We have deputies that speak Spanish. We have deputies who speak German, deputies who speak Portuguese because we get a lot of the ski resorts. They bring up people, and I think they're J-1 visas. So they bring a lot of South America. And then you'll get Portuguese up here, and they commit crimes and-- I'm sorry not Portuguese but Brazilians who speak Portuguese. And then so we've got somebody that speaks Portuguese that can speak to them. And their eyes about fall out of their head when they run into somebody because-- but if you run into somebody that speaks Mandarin, you're not going to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								know it's Mandarin. You're just going to know, "I don't know what the hell you're saying." We have phone call language lines that we can call up, and they'll provide translators for us.
Communication	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...Our records management system are-- so we can look up inmates. So we can look up names and stuff. I would absolutely love that. I mean, [Name] down the [City]. And this was 10 years ago when I first started getting in the dope patrol. They already had that on their cracky Blackberries. But they could look up [Name]. They could look him up and they'd pull up his picture. That kind of thing.
Communication	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	So the front desk folks, if they need help, they have a question, they kick it back to us. And we get a lot of, "Hey, can you come here? I need you for five minutes." Well, five minutes, and five minutes, and five minutes, and five minutes. Then where our office is, it's kind of a-- so for you, it's an L-shaped corner. Our office, the detective office, is between the [Job title], [Job title], and the [Job title]. So everything filters into our-- and it's a corner office. So everything would filter into there, whether it's some command staff just coming in to BS, which is-- it's cool. "We're letting you know we're one of the boys." But they come in there. Or if they have a special project that needs done right away, they come in to us. "We need this done right away." And all you do is say, "Okay." Whatever I was working on, it wasn't the priority. Now, this is my priority. But what happens is they come back to you, "Why didn't you have that done for me?" "Well, it's because you told me to do these three other things." "That doesn't matter. Why isn't this done? I don't want to hear any excuses." So we're kind of a dumping ground of-- we get everything...
Communication	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Not so much right now in my current position. But yeah. You do. When I was handling general crimes and there's a fire, you go there and you check in with the IC, the command, and find out what's going on. And depending on who the [Italian?] chief is, is how much trash you can talk because they don't always know me, and I kind of just if it's here, it comes out. There's not much of a filter. So I'll start teasing them right off the back. "Hey, what time does lunch show up? We're hungry [laughter]."

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Just to let them know that you're not better than anybody else... I hurt a lot of feelings too...
Communication	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	I think for the most part. I can't think of any technological advancement that is bad. Some of them aren't great but going from handwritten reports to dictated reports, to a crappy DOS-based report system, to now, where you can have a word processor, that's easy and the information sharing is great because through the various systems, we can communicate all over the world. If I need to email copy [Name] on something, he's going to get that email within 30 seconds of me hitting send. You can't just bounce jurisdiction to jurisdiction, state to state and get away with the same crimes.
Communication	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: new CAD system] That was a good thing, and that's kind of why we stuck with Motorola, that there are very few dispatch-related changes. It's more functioning-type changes, working with our RMS, a smart copy feature... And the ability for the officers to take, say, a response from our DMV and be able to put it into our RMS system, eliminating duplication of entry and those type of things. So those are some of the big upgrades that we did functionality-wise.
Communication	LE	U	Manager	46-55	31-40	Male	LE-U-020	In a consolidated center, you've got multiple people there to help you all the time. And typically each area doesn't have an emergency going on at the same time. So a lot of pluses on that, the ability to talk and have different channels and those types of things. I've seen it evolve...
Communication	LE	U	Manager	46-55	31-40	Male	LE-U-020	...And I think the next step when we move into the FirstNet broadband, I think that's going to be the next significant step because once it gets done-- I mean it's not eminent, but once it gets done it's going to be very good in the next step. I see that that's where it's headed. So things we're doing now, again, will be kind of archaic, like writing things down, like it was in the past...
Communication	LE	U	Manager	46-55	31-40	Male	LE-U-020	...You talk about different apps and different things and the ability to use those more, and being able to get videos of scenes, and next gen 911, and those types of things are things that will start coming into

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								communication centers and you're going to have to deal with those a little bit differently than you do now. On one hand, it's going to be great because one of the complaints on dispatch use is they're in a tunnel. They never get to see. They can only think... what's going on. When you have a critical incident, and we've had our share, and always the viewpoint of the dispatcher is always worse than the actual event itself.
Communication	LE	U	Manager	46-55	31-40	Male	LE-U-020	One of the debriefs we had, we had a charter bus accident with multiple people in. And when we did the debrief, and you actually got the officers with-- I mean they had some video of things, and even though it was bad, in the dispatcher's mind, it wasn't as bad as what their mind's eye was picturing. So, when they're starting to see some of these things arrive, they're going to be subject to more immediate trauma because you could see, you've got another sensory that's going to be involved, but you're also going to have more of a realistic view of what's going on at the time. So I think as we move forward into this, it's a growing. There's going to be good and bad, but it's different things that we are going to have to deal with.
Communication	LE	U	Manager	46-55	31-40	Male	LE-U-020	One of the things we have, it's called the Safe2Tell program, which is it's for kids to call anonymously to report incidents involving in schools, whether it's bullying, suicide attempts, all those type of things. It gives them a unique perspective to be able to call into-- when it started to-- it was a toll-free number, totally anonymous. And when we started this back, maybe 10 plus years-- and it was good, it was busy, it was those type of things, but a year and a half ago, they implemented the app and it went through the roof.
Communication	LE	U	Manager	46-55	31-40	Male	LE-U-020	[RE: text-to-911 Safe2Tell program] Yeah, and when we first started is-- when we had just the phones, it came into our [City] dispatch center and that was the only one statewide that it came in to. When we saw the-- we were looking at texting and then the app, we needed to open it up. Oh, and there's also the web bit. They can do it over the web as well.
Communication	LE	U	Manager	46-55	31-40	Male	LE-U-020	...When DTR came in, when Digital Truck Radio system came in, the ability for responders to be on the same talk group, same thing, share

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								information, is there. We still have agencies who, for one reason or another, did not adopt DTR. They're on a different system, or they're on a DTR system, let's say silo, because they want to control off of states. We do have silos of communication, so we do have interoperability channels with all the different agencies. So there are some that we can still talk direct to even interoperability to multiple systems. But there are some that have to go through dispatch to dispatch. So we have a little bit of everything. A lot of our centers that we dispatch police, fire, EMS, we're dispatching it all, so that's a one-stop shop. So we have the ability to go from-- we do everything to-- we have the interoperability and then some we don't have much of anything other than dispatch to dispatch.
Communication	LE	U	Manager	46-55	31-40	Male	LE-U-020	So that's the ability for us to-- and that's required of all of our centers. We have our busy radios with the multiple troopers, and everybody has to have their ability to work that radio. And we get kick-backed sometimes and says, "No, we want our dispatch. We want this dispatcher." And I'm saying, "Yeah, but I've got to make sure this other dispatcher that may not be as fast, and may not be as fast, has functionality in you because your favorite dispatcher may not be here someday. And if the other one has never been there, it's going to be a lot worse."
Communication	LE	U	Manager	46-55	31-40	Male	LE-U-020	True. Well, a lot of stuff on the front range, we're dependent-- the initial call does not come in to us. So if you dial 911 on the front range, you're not going to get to state patrol unless they either transfer it, but a lot of the times, some agencies will take down the information, and then they'll call us. So we're basing the questions that they asked, where it may not be the same questions that we would ask if we were actually talking to the person...
Communication	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...as far as our role in repair or diagnosing problems, typically, what happens is an officer will email-- we have email accounts set-up. It goes to all of us. Our team consists of seven people. It goes to all of us, and the officer will email us and say, "Hey, my camera fell or was knocked off in a fight and broke." Or, "My video isn't downloading," or whatever the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								problem is. And then we try to respond within a couple hours even on weekends and overnight if one of us sees the email. We'll respond, just tell them what they need to do until we can get the camera repaired. And then typically, first thing in the morning, we replace or repair the camera. So that's kind of how, in a nutshell, how it works.
Communication	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: SWAT technology use] Up to this point, it's been almost all pole cameras, being able to see through a window on a second story, one up. That's mostly cameras that you can put into a business or a residence, see what's going on, introduce that way, and then they run that back wirelessly to the command post so the commanders inside the command post can see what's going on real-time. What's going on outside, and if possible inside where the target is...
Communication	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	If the officer gets in and logs into the program for the LPRs, license plate readers, then whenever a plate that's red trips an alert for whatever alert it's set for, then that pretty instantly pops up on the screen in a way that it's set to override anything else on the screen. And that's the one thing that you get is a picture of that license plate in the direction, location, base and description on what it's wanted for.
Communication	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: LPR results] We're really not talking about great deal of data. I mean, like the downloads we're talking about are text files. The hits that come up on it are a photo of the vehicle, and photo of the license plate. So it's not like we're transmitting video.
Communication	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: radio system] And it is digitally encrypted, and we can communicate with pretty much anybody in the state. And the MDC is the mobile digital computers inside the car...
Communication	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	...From a technology standpoint, I think that probably the biggest issue with it is, it has really, really inferior mapping and routing capabilities which are really critically important to public safety to be able to get to where you're trying to get to efficiently and by the shortest route. So that's one of their huge shortfalls and then the ability for that particular product to integrate with other systems, we're finding, even though we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								were told, "Oh yeah, it's easy." It's not. And they're using it as a way to increase revenue by saying, "Okay. Well, if you wanted to integrate this way, it's going to cost."...
Communication	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: CAD system purchase] ...So, yeah. It's been a really, really disappointing process. And that's one of the things just for in technology in general with, I think, most law enforcement agencies is there are many disparate systems that need to communicate, and that's one of the real challenges is getting our CAD system who's made by one vendor to talk to our RMS, records management system, who's made by another vendor and get all that information to feed to our analytics system, which is a completely another vendor, so those kinds of things are really a challenge. I'm sure you've heard that from other agencies, but that's a challenge for us.
Communication	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	I've obviously seen officers using their cell phones to navigate to a call. I've seen that map on the computer.
Communication	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: MDTs] Yeah, any time that goes down, you get officers, they have to be on the radio and ask two or three times for the address because they didn't write it down.
Communication	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	It's another new thing they just did was a got to [inaudible] dispatching. I hope you are familiar, but that scripted thing that the call-taker do when they get a call. It affects how the call prints out, or how it displays in the car, and it affects how it's aired, and when it's aired. And so there's been some growing pains with that. But everybody is getting more, and more used to that too. I think they, for the most part, they do pretty well. There's been some problems, some complaints, and one of the solutions that they just went to is to bring dispatch back under the police department umbrella rather than having it as a separate entity that it was before, so that means they can do rest here.
Communication	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	So internal communication, there isn't a lot except at the chief's level, I'm sure there is. But there isn't a lot of, I guess, communication interaction between the agencies. Now from a radio standpoint, or a radio system,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we have the capability to talk across police, fire, that kind of thing. So that's pretty seamless. I mean, we all have the same radio system. Everybody in the city has the same radio system. We have it set up so that if a street worker is in trouble and needs help, they can get on the radio and call dispatch and get a police response.
Communication	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	Yeah. And there's been times I've heard people from the fire department get on to our channel because they see something going on or they need something. "Hey, I've got this going on right here. Do you have somebody that can come respond?" So usually, they'll tend to do that more at the captain or chief level.
Communication	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	[RE: PIO use of social media] They'll put out information about things that are going on, mostly putting the police department in a good light when possible. They'll respond to questions from citizens on social media.
Communication	LE	S	IT Specialist	Not specified	Not specified	Male	LE-S-015	I don't know how much time you've spent interviewing police officers when pretty much everybody lies to a cop, sometimes during the conversation, so.
Communication	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	We use cell phones quite a bit too. We try not to use them too much when we're on scenes because it's not recorded. But a lot of times, once the scene's stable, we'll be using our cell phones back and forth to get the stuff we need instead of using up the air time because we're limited. Only one person can talk at a time, and some stuff is more important, some stuff isn't, so there's a lot more cell phone usage...
Communication	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...so back on car traffic stops, do all that. I can do the computer dispatching a little bit if I'm not-- I can assign a case number or if I'm going on something where there's not going to be any public contact. So if I'm vehicle maintenance or if I'm going on a follow up or a meeting, meetings contact, then I can do it on the computer that way. Now, our animal control people, they can put themselves on dispatch calls. They're going to the same houses and their not armed, so a little confusing as to why they don't have to do it on the radio either, but it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								how that works.
Communication	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Well, the computer has the ability that I can see every call that's on the screen. I can click on it, and I can technically hit the button to assign me that call, and I would pop up, and it would be assigned to me. But patrol's not allowed to use that. Our animal control officers, they can look at it, and they can hit the button and self-dispatch. So again, I think it's just stuck in the-- the biggest fighters we had about going to self-dispatching, which we tried a dozen years ago, was we had a few old time sergeants who wanted to hear absolutely everything that happened. And they told their people not to engage in the testing, so then it went downhill. And without support from the supervisors, it didn't progress. So then we're back to the radio, and most of those supervisors are gone now. And most of the supervisors we have now, frankly, started way after I did [laughter]. And I think technology is moving that we can move more in that direction now. Just a slow process.
Communication	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Yeah, technically there are channels that we can go to to do the interoperability. I can go to-- there's some state channels that I can go to. It's like [channel], and I can go there, and everybody in the state has access to that channel. So technically we can talk back and forth. There can be some delay, because everything goes into one place and then gets reformatted in digital or analog and then gets pumped back out, and so it's not always the perfect thing. I can be standing right next to the guy, and I can key up, and it takes a second for him to hear. And it does work when we absolutely have to. But when it comes down to emergency type situations, it's very difficult.
Communication	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	...one of the deputies was in our city, actually ended up firing shots at a suspect. We got the call from another party in the house, and we were already responding had units on scene, before we got relayed that it was a [county] deputy involved, and then we've got the scene shut down. We're taking care of it when the Sheriff's Department and all their resources start rolling into the scene, and we're immediately screaming at them, "Stay in your car! Stay here! We've got this." We don't want any

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								blue-on-blue stuff because you don't know where we're at. We don't know where you're going. Because in order to switch everybody to a channel, it takes time. You would think that they could hit a button and do it, but it doesn't work and so... We just shut them down, we handled it, and then it was all face-to-face conversation, and it went through that way. And it got taken care of...
Communication	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: running a person's information during a traffic stop] We have the option to do that. Either through the radio or through the computer, we can hit the [state database], NCIC databases. And so, sometimes we do, sometimes we don't. Traffic, very seldom do we actually run people because I don't care. I don't want the warrant because if I get the warrant, then I have to have somebody from patrol come over and take them because I don't have a cage in my car. Motorcycles don't have cages. Our job is to go out and impact traffic and run with that. So it's very seldom that we run people unless they don't have an ID. And so, we have the ability to do it in the car and if I'm going to do it, I do it in the car. I do it through the computer. I don't have to radio...
Communication	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: running a person's information during a traffic stop] ...we have a few people who will not use the computer, use only the radio, which then takes up bandwidth for everybody else, but they won't change, and they're our trainers. So when you have trainers who are teaching people to constantly do that, it's like, yeah I can teach them how to, but you don't need to do it all the time. So it just, there's a lot of things that we can do with technology that our people are preventing. Whether that's dispatching, whether that's running inquiries and stuff like that on computer, because we just get a mindset of, "Well, this is how we've always done it."
Communication	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	We'll call through the radio to ask for the tow to respond, and our dispatch center will then call our contract tow company and send somebody out. Sometimes if they're really busy, and I can tell dispatch is busy, I will use my phone and call the tow company direct and say, "Hey, I need a tow out here." But that's pretty much it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: relationship with dispatch] I think it's pretty good. I think we have-- again, we have people who think that dispatchers should be doing more than I think dispatchers should be doing. Where we have officers asking for so much stuff that I can do myself. And that's just me, I guess. If I can do it myself, I'm going to do it myself. I'm not going to use somebody else to do what I can do... And I think that's, again, a mindset that, if I can do it myself then I'm going to do it myself. If I'm in the building, I'm going to do it on the computers compared to keying up the radio. From the back of the holding cell, I'm not going to call dispatch on my radio to get them to run a query for me. If I can't do it myself, I might call them on the phone, just the landline phone back there. But I'm not going to use the radio up to do that.
Communication	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	... we'll have the officer who will spend all this time on the radio, okay, asking dispatch, "Okay, can you go and can you check this other database and see if you can find this person, find a phone number?" and all this stuff. He's got a computer in his car. He could do it himself. But now he's having the dispatchers do it, who are then also still answering phones and dispatching calls. And so then they get upset when I don't get my responses back real quick. It's like well, that's not their job, they're communications and dispatch. They are not to do your follow up for you...
Communication	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	[RE: officer to officer comms] We have a channel that we can talk back and forth on. And it happens quite a bit. But, again, when you get into the real nitty gritty of a case or something like that, we go to cell phones as compared to that. Also our primary channels are all encrypted. But our traffic channel is not, so.
Communication	LE	S	Field Responder	36-45	21-30	Male	LE-S-016	Fire has access to our encrypted channels because we share a radio system. But the channels that they use primarily are not encrypted. And we thought that that was going to be a big issue, and so our PRC, our Public Relations Coordinator was all freaking out because the news was going to be able to get our radios. It has not been an issue at all. It has actually improved because we used to stop cars, and they have the app

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								up, and then we could hear ourselves key it up, and it's coming through their phone. And now that doesn't happen. So it's very good. We still let the news know what's going on. Tweet them or whatever [laughter].
Communication	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	Generally, start by checking emails. If there's new cases that come in, review cases. See what's been done, what needs to be done. When it comes to evidence, all the patrol officers will package their evidences and then submit it to us. We have to review it and make sure that it's packaged correctly. All the T's are crossed and I's dotted. And then we'll put it in the evidence vault with our tracking system so that we know which pieces go where, what cases they're associated to, when the statute limitations is up that we can dispose of them, that sort of thing...
Communication	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	...as far as caseload goes, it's usually most of what we do is follow-up phone calls, following up with witnesses or trying to obtain video, writing warrants, affidavits, search warrants, and reviewing stuff like that.
Communication	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	... If we're out doing something, and we don't really want to be known that we're in the polices, we usually text each other via the phone, so we're not using radios. If it's people that just have questions, usually we'll just come back to our office and we'll talk about it face-to-face. Other times, if it's someone that's not working or if it's for everybody, we'll do email- excuse me. Or, like I said, we do a lot of follow up on the phone too, so a lot of phone calls.
Communication	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: jurisdictional agencies] we've got a pretty good relationship with all of them. I think the biggest issue is that State Patrol's on VHF or UHF, I can't remember... And we're on 800, and our dispatch center has the ability to patch our radio channels so that we can talk to each other. And then we've got certain mutual aid channels that we can all get on from our individual radios and talk to each other, which is very helpful...
Communication	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	...But on a kind of day-to-day basis when there's nothing important really going on, it's not a huge issue. We can either call their dispatch center and get patched through or whatever we need. We've got their channel on ours, that's patched, and they can get- a lot of the State Patrol guys

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								carry an 800 radio so that they can get a hold of us. So it's not uncommon for us to be talking back and forth. And then obviously the fire departments, they're all on the same radio system, so you've just got to change channels.
Communication	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	I know we went to [County] two weeks ago, and they don't have 800 radios, so our radio channels were incompatible. But it wasn't... So I was working on a wildfire up there, so I was just helping man a checkpoint, so I was with a guy from [County]. So I just didn't really worry about the radio. That was his issue. So usually cell phones will work or, yeah, just call dispatch and get patched through.
Communication	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	... being a detective, we're on call usually every other week. But instead of having to sit by my phone at the house, or call and say, "Hey, I'm going to this restaurant if you need me," or "I'm going this movie theater," I can just have my cell phone. And I can kind of go, and be, and do as I please as long as I've got cell service. So that makes that a little easier.
Communication	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: comm center] there's the computer aided dispatch system. There is the [state] CIC system. Like I said, there's an alarm monitoring system. The phones are on a computer screen now instead of-- you actually hit the button for the phone line. We've got email, and they've got access to our records, or our report writing software stuff. So they've got access to a lot of different things. Yeah. And it's been a while, so I don't remember exactly what's on all of them.
Communication	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	Yeah, I will use maps if I'm going somewhere that I'm not familiar with, usually out of county. We text each other, but just use it as everyone else uses their phone, so.
Communication	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	... from my time in dispatch, I know that talking to people in crisis they don't always answer questions the first, second, third, fourth or fifth time you ask.
Communication	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: dispatch CAD system] ...So if you get a call and its cardiac arrest, or abdominal pain, or a poisoning, or something like that, usually-- when I started it was you had to flip open a card, and find it, and open it up.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Now, it's just integrated into the CAD system, and it will just bring up exactly the questions that you need to ask...
Communication	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	[RE: dispatch CAD system] ...based on those questions, it will code what response it thinks the ambulance needs to go to, whether it needs to run lights and sirens, or if it's just a pretty benign sort of thing. So once you get through the coding, then it will pass it off to the dispatcher who's actually going to tone the fire department to send them out. And they'll say this is-- like our system right now, it's Alpha through Echo. So Alpha is, I have a paper cut and I need a Band-Aid. Echo is not breathing, not conscious. So on that sliding scale. Then, once we know exactly what the issue is, it's been coded. This is how you're going to respond. Then, it kind of forays into, this is what we're going to do about it. Whether it's instructions for CPR, instructions for choking, instructions to try and ward off shock, this, that, or the other. And having that on the computer is very helpful because you don't have to, under stress, flip through, find the card, code it yourself like we used to have, and then do all that stuff...
Communication	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	If it's a fire call, you want to say, "Is there smoke? Is there anyone in the house? Is there anyone nearby? Do you see anything?" for pretty much any fire call. So there's variations, but a lot of it's very, very standard. Cops always want to know the same thing [laughter].
Communication	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	... part of why dispatch has access to all our report-writing stuff because they don't write reports. They don't need to access it for that, but when they can pull up and say, "Hey, we've been here. We've taken four cases on this," because the CAD system logs pretty much every time someone calls the police or calls for a fire department. The report writing-system only logs anytime we take a case. So if someone calls for something, and it's not really to the point where we need to take a case on it, it's still documented in one system, but not necessarily the other. So they have a lot more short-term information. Everything from the call to the time we get there, pretty much. And then the report-writing software is pretty much everything from the time we get there, whatever follow-up, anything that we've saw, what video we need to get, this, that, and the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								other. So it's kind of dispatch has the shorter term, immediate information, and then the report-writing system has the longer term.
Communication	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	So when a [Job title] goes out to a call, and they say, "Yes, I need to draw a case on this and write a case up," they'll ask for a case number which will be issued through the CAD system. When that case is closed, when they clear that call in CAD, it then dumps that information into the report-writing software. So if you pull up the case number, it's going to have the address that the call was billed to, the times, and that's about it. But you kind of have a baseline to start off, and then you just add to it.
Communication	LE	R	Field Responder	26-35	11-20	Male	LE-R-018	... Interpersonally, email is a blessing and a curse in that it allows everyone to talk to everyone. But you kind of miss the non-verbal cues. You don't know if it's necessarily directed specifically at you if there's an email to the whole department, that sort of thing. So I know communication interpersonally is something gets brought up at pretty much every department meeting that we need to improve on, so.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: new technology] ...so you start to see there's more of a support need but then there's still the work flow tieback. So as you talked about, sometimes new stuff gets introduced and the sales guys or the tech guys may say this but it doesn't transfer the work flow. So I like to see myself now as sort of that bridge. So I'll still go out occasionally and work a shift to try and remember what it's like [crosstalk] just to, basically, take a call and then come back and follow it all the way through. From the initial call takers with dispatch flowing through to the car computers, then to the records management side, and then all the way down to the jail. And now, of course, we'll be incorporating in the body cameras, all the videos we're taking, all the new audio formats...
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: electronic evidence discovery] We certainly from the district attorney's office, probably their efficiencies have gone up huge. And from the defense attorney's side, being able to provide that discovery is big. It does provide electronic tracking. So as soon as we send it, it's stamped and they get it. So there's no questions on, "Ready for trial?" "Well, you never provided this photo to us." "Oh, yes, we did."

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: evidence discovery process] Today, if they [district attorney's office] were to call us up, we'd just make a new copy of whatever and take it to them, which we probably already gave them a copy and whether it got lost, got misplaced. So there are a few safeguards built in and a few potentially helpful things as these systems come up. And that's sort of the tracking, the data integrity, all the other stuff that people think that any system should have when you're talking about data and data transfer.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...I'll pop on the emails. A lot of people know if they want it immediately they're going to text me. A few people who, I guess, are kind of what I would say my frontline main users, when there's an issue. I got a text today of the [state crime database] system for running people and plates, wasn't saying connected for them. He thought it was related to an update we pushed out to the computer which-- I said we made an update to this part of the program and it shouldn't affect that part of the program but we'll see. But that is something they've come to rely on and so that's an immediacy thing, that they want to know what's going on. So I think, currently, that cellphone is probably the most immediate way to get ahold of people.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	I do have a department-- this is my personal one from doing the contract work so a lot of people just know I carry that one. I have my department issued cellphone for when I'm doing patrol shifts because if I call people back I'm not going to use my own cellphone. So it's kind of a mix of which one I use. And I usually carry them both now but my department issued one's not on as much unless I'm doing more patrol work where dispatch is transferring calls to me. Yeah. Then it's to get in and check the emails and respond to a few of those. It's for the more formal, written stuff. And then, occasionally, I actually get to have meetings with people.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	I think most everyone carries two cellphones because everyone has their work phone to keep that stuff separate and then they got to stay communicated with their personal phones. Because that's how everyone

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								talks to the family and friends and everything else these days.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	The department issued cellphones. Well, now, a lot of people communicate primarily through text. So if you're trying talk to a suspect and you have a cellphone number and they just wanted to text with you or they're using just an app that doesn't even have cellular service, whether, it be a WhatsApp or any of those, those are creating issues in guys out in the streets doing their jobs. So finally, the department bought smartphones...
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	We haven't that much into the app world yet, I would say. Although, on a smartphone, what we think of the basic phone part, recognize that's an app. It's the highest priority app on the device. Because if you're doing anything else and your phone rings, it's going to pop up. I think that concept doesn't exist for people because it started as phone and they think of it as a phone first and not recognizing now it's just an app within the phone and all the other apps could be prioritized over that. The texting app that's there. People keep their calendars on it now. My whole family has their calendar and we're all shared so we know what's going on. So if somebody asks can I do something or pick up a shift or something, I can look at the calendar to see what everybody else has going on.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...there's lots of apps that I use regularly in my day mainly for communication, and organization, making sure life keeps moving and doesn't get too hectic. Our department hasn't gone into work-specific apps. Certainly, they are out there. The response apps. I know some of the other agencies in the county have the information apps that are tied into dispatch because they carry their phone. So as soon as the event is created they get a notification on whatever device that your agency has a call coming through. And that's going to be dictated by their workflow and the type of device they have. The mix in law enforcement versus fire...
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	When we had the ski races in 2015, we used a couple of apps to do messaging and chatting in situational awareness and just trying to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								figure those out and then each day train each crew coming on as a [inaudible] of a device. Going, okay, this app is going to be on and we can track each other.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: app for situational awareness] It did work pretty well. In the command center, I could see it. I was able to take pictures. We were able to monitor crowd size. So from the field, I would take pictures within the app and then it would tie it into the app. It would show up in the command center. Then they would relay it to the public relations people. So I'd watch how long it would take when I'd say, "Stands are half full." And then that would go to the command center, they would pass it on to the PIO group who was putting out, on the public side, the notifications. And it's usually about a minute or two and then it would come through, "Stands are half full." And then the people in command could actually see the pictures, so if something did come up they could have gone back to those pictures at the time that I took them...
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: app for situational awareness] ...But it was kind of a new concept at the time since, as I mentioned, the department wasn't using cellphones yet, or the smartphone, so the concept of having apps that did all this stuff wasn't there. The chat was more encrypted than I think if we just think of the standard messaging apps that are within the phone. Sometimes that comes into play, sometimes it doesn't. Sometimes the tracking of those messages can come in if we're all using one app. And so we go through a server and we tell everyone, "Hey, guys, all this stuff is cataloged. Just be aware it's discoverable." That's always the issue guys want to know. A lot of time guys will use apps that aren't official apps because no one knows they are using them, so it could never be discovered, just like a phone conversation... Everyone knows everything on the radio is recorded, but if you call me on the phone we can talk about whatever we want.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	The duties that someone has to do and you can pull guys in for overtime, but they can get burnt out on that. You don't want a shorter shift so a lot of the time it'll come to me to say, "Am I open to go do it?"

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Quite often I end up going down to do that and getting the car from the jail. Can you pick up an inmate on the way back who's sitting in [county]? So you always kind of have that in the back of your mind of being prepared to do those things and bringing the stuff with you, whether it's an extra pair of shackles or letting them know, "No, I'm not in a vehicle with a cage." So that's sort of the part I think most people get into being a first responder is that you're never really sure. I think I'm just going to [city] to swap out a car and I'm going to come back with two inmates, but I didn't know that at the time.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: vehicle swap / inmate transfer] Sort of think about it or I know the other day I had one and they wanted me to pick somebody up and I said, "The weather is not looking good. Let me get back through this mountain pass before I tell you yes because I maybe two hours getting back through this pass and I don't want to commit if they actually need to be here to be back in court the next day and I'm not going to be able to get them." So that's the nice part of that...
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: in-vehicle boosters for cellphone coverage] And certainly that is necessitated by the public's demand that when they call and they have a question, they expect to be transferred immediately to someone. Nobody wants to wait anymore. This idea of where they're going to call you back, that's not what the public demands any more. They know communication should be instant...
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...Kind of a paradigm change from how it was before of, I'm going to show up at your house. People don't want us showing up at their house anymore. They only want to talk to you on the phone. If you suggest, "Well, I can come to your house and meet you," "Oh, no, don't do that. I just need to have a question." I don't know if that's a change in attitudes in general with society if we can deal on the phone and just resolve it then, I just wanted the information so it's done. I don't know. I haven't given that one that much thought... But it kind of relates back to the equipment that's in the car and why we have all that equipment in the car now... The boosters are the big one. They get the fringe areas...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...We're fortunate that we've got the [military training site]. So they bring in helicopters, crews from all over the country, the world. I know we've had Israeli troops in here and they do the training. We benefit from that in our mountainous area with some of our search and rescue stuff. Back in the day, if you will, things were much looser and we could just call up the station and the commander would drive up there and say, "We've got a lost party in this area. Can you guys launch a bird and go look for them?" or "We need some support." ...
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: helicopters from military training site] So there is a more formal process, the chain of command to make a request for a resource. And then they approve it, or don't approve it, and then it comes down to logo base to say, "Yes, you can use the resource," whether it was a budgetary standpoint. Fortunately, we didn't have a bad situation that necessitated this. No one got hurt and was told, "You weren't even approved to be up flying." So that's a good thing. But I think they wanted to tighten things up and know when the resources were being used and why they were being used...
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...The other thing we have here is because we have federal wilderness area. So if we have a lost hiker and we need to put a helicopter up in the air, we have to notify the forest service because we're using motorized equipment within the wilderness area. We have those protocols sort of pre-established on the sense of urgency that's needed and is it just a notification because we're going to be going in there, especially if you found somebody, we're going to go get them out. If some of the forest services can't answer the phone right now, we're not waiting for permission to go on and do it. Other times, we are. We're just doing a search. It's a very broad area. We don't have an actual victim. We need wait for permission before we can use a motorized whatever within the wilderness areas.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	And everyone knows that in a lot of wilderness areas, you're not going to have radio communications because you can't put a radio tower in there. And generally, wilderness areas are high and mountainous, which means

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there's valleys and radio signals don't get into valleys. So you know what valleys you're not going to have system coverage, you'll have direct coverage. But that just involves the pre-planning and training guys on the radio on the concept of a radio system and a repeated talk group versus a line of sight and direct talk group. And when do you change and what are the limitations. So their expectations aren't unrealistic versus what your technology can do. So you don't hear after actions the whole time that the radio system just stinks [laughter]. Well, it doesn't stink. Let's work to resolve it so the next time you know what to expect.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... we stood up an 800 MHz system within our county. So we all had each other's talk groups but everyone was still afraid to change the channel on the radio or talk in somebody else's talk group because they just didn't do that before. So that took a while to convince people that we have new response protocols. And if multiple agencies are responding to a scene, we're going to move off the various dispatch talk groups and go to one response talk group. It took law enforcement a long time, and they're still not really there, that they're going to go off their channel to go to that response channel because their thought is they're always waiting for the bigger and better deal to come along and go do something that is more fun than directing traffic on an accident scene. So they always listen to their talk group. So we try and do that from a resource utilization standpoint, from an information sharing standpoint. If we're all driving up and down the interstate and no one's found the accident, it's nice to know that...
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... The biggest thing we used to joke about is the law enforcement officer does not need to tell the dispatcher that the fire truck is on the scene. The fire trucks knows they're on scene [crosstalk]. This goes both ways. We have lots of tapes of the fire truck telling the dispatcher that the law enforcement is on scene. So that was the training years ago. They know they're on scene. You don't have to tell anybody that. Resource utilization, talk time. So we finally said, "Okay. Look, if the tow truck gets on scene, we don't track the tow trucks. You can tell them the tow truck's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								on the scene, if it makes you feel better." But again, just something we would sit there and laugh about, going, "They know they're on scene. Really?" But it made them feel better, I guess, to somebody was on scene.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	... I know a lot of other areas, they have got enough repeaters within their sites, the certain talk groups they designated are always turned on. So if it was on your scan list, you'd always hear it. But that was a big change early on when people were complaining they didn't hear traffic, they'd call each other. So the result of that it goes to a little more talking on your main talk group that everyone is listening to, to tell them to go to their secondary talk group, and that's just the only way to get around it.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	Now that we're on this shared state system, we don't know how many units the Department of Transportation has that may be using the same tower I have. We're no longer an island, where it's just the people in our little county and our responders. Anybody could be driving through here and tying up those resources. And I go to hit my radio and I get a busy signal. I'm like, "Why am I getting a busy signal? It's a clear day. There's no accidents." Well, there's more people out there now. Or it could've been somebody didn't turn off their radio and they drove through and they're dragging a talk group and tying up my resources. So trying to explain some of those to people, again, we try and mitigate it by putting more repeaters in a site if we have to so we don't get busies...
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	So it's changed from a technology standpoint, but we sort of say, the radios, for the most part, don't do anything different than what they did before. I push the button and talk and a [Job title] hears me, and they push the button and talk... What it does is the same. Okay...
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	...the in-car computers are great, and yes, you get a confirmation of what you did. But your supervisor sitting in the office doesn't have the computer in front of him to know that that's what you're doing. And they've all said they'd like to hear that you've cleared your traffic stop. That you went out on a traffic stop. They want to keep a little situation awareness and they're currently using the radio.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	So then, in response, a lot of agencies have gotten to encrypting their radio talk groups. And then the press is like, "Well, wait a minute. What are you hiding? Why can't we hear what's going on?" Kind of a whole nother discussion on privacy and just the way our system works. So we have been able to change our protocols on how vague can you be. You're on foot patrol and give the town. And if I want to know, I can go look on the computer and see exactly what business complex you're at. But we expect people are listening. A lot of our guys have the scanner app on their phone because they like when they go on vacation to listen sometimes. I don't know why.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: body armor] ...So then we started looking at the shoulder mics and everything else, and because it's fairly new and we've only had a few trainings wearing all this, people are realizing you're going to have to rearrange stuff to maintain those communications. And then even putting these helmets that are not very comfortable. Just learning to work with all the new equipment that's out.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	[RE: dispatch] ...they may be giving you information as you're responding to a scene that that issue has come up. Do you have the dispatch center continue to talk to the person and relay information? A lot of guys would rather talk to the person who is calling in themselves. So do you really want to do that when you're driving, especially if it's a hazardous situation? When you get there, we expect you're going to hang up, and then you've lost that person? That's probably not what you want to do. Again, going back to the radio and dispatch training, they're not going to tell you how to do your job, but just think about that, not just transfer the RP to me. It is something you think you are pretty sure you're going to respond to. It may not be the best decision.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-019	But it goes into the training of-- if the dispatch tells you it's windy, that was a big discussion. If when the new system came in, if you're digital, do you want dispatch to tell you you're digital? Do you want them to tell you why your transmission didn't go through based on their point because it was too windy and they couldn't hear it, because your

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								microphone was too far away and they couldn't hear it, because it was digital? Or do you just want to be asked to repeat? Big topic at discussions, guys like, "I can't do anything about being digital. What good does it tell me you're digital? Just tell me to repeat." But if it was windy, you should be told, "A lot of wind noise. Please move." Little annoyance things. I try and count. Some guys are, "I'm glad this is the biggest annoyance you have today, and we can resolve this."
Communication	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... So we just had a bank robbery today. So I am on my way driving down the roadway and they air it out on the radio-- well, so here's the problem. So on channel one, we have a incident of somebody trying to kill themselves. So they hold the air, so they give us-- all the traffic that's on that channel is specifically for this call, so everybody else needs to move from channel one to channel two. So now on channel two, we get the bank robbery. So now all the traffic is isolated to that channel. But the problem is you're having scanning covering, so we're getting channel one covering channel two even if you take off your scanning functions. Sometimes it happens, sometimes it still covers it. So right when the bank robbery was giving out the information, the dispatcher was giving out the information, channel one relayed up something and it covered over channel two, so I missed the description of the person going out as we're rolling up to the bank. So we get up to the bank and then we continue to follow.
Communication	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: bank robbery incident] ...throughout today, I'm following, trying to catch up to this car, and I'm already two steps behind because the tracker's so slow. And now I'm another step behind because of the information getting relayed... And then I have to wait to get on the air, and by the time we find out that the tracker has stopped, we now block off the roadway, but by then, the person is already long gone. We don't realize that because we think it's immediate information, which it's not...
Communication	LE	S	Other Public Safety	26-35	6-10	Male	LE-S-021	... some of us live out of radio range from the station and we're on call. So we get called out in the middle of the night, and immediately, they say "Hey, we need you to go to this spot." So we go grab our radio and turn it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					on because we want to hear what's going on the call on our way in. Well, you can't hear it at all. So if we had something that-- if we can't get the radios to go that far, if you can get your radio to transmit to a cell phone or a tablet-- I don't know how that technology works, but if you could do something like that, that would be extremely beneficial. Even if it just went to that car, to the take-home car, then that way, you're driving in, you have all the information, and you don't show up on scene blind and say, "I have no idea what I need to do."
Communication	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: critical incident response team] ...say, for instance, State Patrol comes into our agency because we have all these highways that surround us, and they're working an accident scene and somebody runs from that, they get onto their radio, they call their agency, their agency then communicates on [urban city radio channel] to ours and says, "Hey, we need you to come help." We then come over here and okay, now we need to get somebody to that [state police] officer so that we can do the buddy system again unless we can get to a toggle station that's active. But the problem with that toggle station is we don't have enough dispatchers to cover that additional jurisdiction station.
Communication	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	So if we could just-- so one great thing that we've done here is our fire department has the same channels that we do now. So when they go to an incident to help us out, they pull up on scene or they get dispatched to it, they flip to our channel, they answer up on our radio, and we know that they're hearing us and all we have to say is, "You're good to come in," and they can come in. Whereas before, we call our radio, our dispatch, they call their dispatch, they send them, and actually, we're sitting next to each other-- So that's been beneficial, but if we could expand it to include other agencies, which, I know, again, it brings in a can of worms.
Communication	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	[RE: police departments in general] Yeah, half of them use military, half use police. Half use 10 codes, half don't use 10 codes... and they all don't use the same 10 codes... and military has their own set of 10 codes. So it varies from branch to branch, it varies from agency to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								agency. So, yeah, if we went to a place like [city], I believe they use 10 codes, we would have no idea what they were saying. Even if we did just toggle over to their channel, we wouldn't have any idea what's going on. Whereas ours is plain speak, but maybe it does take a little bit longer to get things out...
Communication	LE	S	Other Public Safety Personnel	26-35	6-10	Male	LE-S-021	... So right now, we have, I want to say four main channels that we use. So our first one is the main, "Tell us what we're doing". The second one is we do clearances, so it's like administrative work, so like, "I need you to clear this person," or, "I need you to do this for me, I need you to do that." Third channel, it's for animal control so that they can operate on a channel, not ours... And then the fourth one is car to car, so we can go through and just talk plain speak to each other...
Communication	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	So within in [city], we have three different-- well, four different sectors with three different areas that have a specific building, I guess. So here in Baker, one in Charlie, and one in Adam. And we all kind of teleconference, similar to this. And so here in Baker, we'll have whichever officer's listening to Charlie's commander or sergeants or Adam's commanders and sergeants on whatever issues they have to present, so.
Communication	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: typical communication] In patrol, I mean, it's a combination of things. We have our personal phone, so if our sergeant needs to get hold of us, that's typically how they'll contact us. Or if there's a longer conversation that needs to be held regarding a specific situation or whatever, then officers will contact each other via telephone. But most of our conversations-- our [inaudible] or whatever occurs via our handhels or the radios on our vehicles. And then, obviously, email's a big portion.
Communication	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: comms with FF, EMS] I don't directly, but when EMS or fire's dispatched to a call that we're on, they occasionally will be on our channel so that we know that they're either staging or in route. I have never personally contacted them. So that's the extent that I've been contacted via the radio.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	... we have our [information sharing software] and Messenger and those types of things, so those are just different programs that we're able to utilize to obtain information on individuals or whatever we need to do.
Communication	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	Yeah, so at the beginning of shift you have to log in to your computer so that it's assigned to you specifically based on the vehicle, your ID, your password, so they can monitor who's using what, where they're at, and then within that you have to log into-- certain officers pull up different programs. It just depends on what you want to do because we can run stuff through dispatch if we want to, but I like to run people if I can just on my own so I don't have to call dispatch, wait for them to do it and then call me back, as opposed to me just typing it in and it coming directly back to me. But you have to log in to those, so they're different programs...
Communication	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	... There's potentially four things that I would log into given specific days, so the computer itself, or I/LEADS, which is where we submit reports and document what we're engaged in for that day or whatever. And then [information sharing software], which kind of a localized database of criminals, criminal activity, locations, things like that. And then Messenger which provides us with D and B clearances, vehicle registration, warrants, those types of things.
Communication	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	Yeah, so as a [Name] unit-- so we're all assigned our own identification, so I was [ID]. And that's what we refer to ourselves as. So if I call out on a traffic stop or something, it's [ID], and then they respond to me as [ID]... Yeah, so my sector partners would be a [ID] or [ID], and those are the people that I'm with in my sector that I'm trying to back up or just know where they are at all times and make sure that I'm just aware of any situation that they might need help in or something.
Communication	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: apps] Some of the translator stuff is very beneficial. We have a lot of Russian-speaking individuals in our city. I mean, it's kind of a subpopulation, but we handle a lot of calls where it's hard to communicate. We have certain officers that can speak Spanish and stuff, but nobody that can speak Russian, to my knowledge, anyways. So

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								having Translation, which is just basic communication with different languages, is very helpful.
Communication	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	I think, in general if there's ever information that's not provided to us prior to arrival, it falls upon the reporting party or their inability to communicate effectively through dispatch. People are in states of panic or whatever, so it's very hard to communicate. And so dispatch has to do the best that they can and provide us with the most succinct and direct response to what they're being provided. So yeah, a lot of the time we show up, and it could be a suspicious incident or something, and it's actually an active domestic. So you get on scene and it's, "Okay, well, I wasn't provided this information," but it's not necessarily their responsibility to tell us everything that we need to accomplish our end goal...
Communication	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	...I don't want to make it sound like it's a negative thing, but you have a lot of strong-headed people that are very intelligent people, and it's not that one way is the right way or-- no one way is the right way or another way is the right way, they're both good paths to take. But everybody wants to do it their own way, so sometimes that gets a little conflicting especially when you have a sergeant that'll tell you one thing and another sergeant [inaudible]. It's not like either one's wrong, it's just they don't always tell you the exact same thing, so. There's a little bit of a communication breakdown, I think, in those regards, which it isn't a bad thing necessarily, it's nice to have different perspectives. I guess that's from the top down, involving control directly.
Communication	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: code 3 run] Those are essentially if human life is in danger. So one of the most common ones that we have is an unknown injury traffic accident. So say, just over here on [inaudible], we get dispatched, unknown injury traffic accident. It's been reported, and we know at least two cars or whatever have been involved, but we don't know if that person's laying on the ground bleeding out or something, so we have to respond as quickly as possible but still being safe and regarding traffic laws and stuff like that, but. So we're going lights and sirens, and that's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								when traffic is supposed to get out of the way, and we're able to kind of-- not blow red lights, but kind of not adhering to those, necessarily.
Communication	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	So a Code 0 would be the situation or-- there's a robbery, or anything like that. So when they call out on it, there's a tone, so all units be ready for a tone, or however they word it, and it's just a siren over the radio, so that means that channel 1 is specifically dedicated to whoever is being dispatched to that call or any other units that are associated with that call. Nobody else can talk on that channel. All other traffic goes to 2 or whatever else...
Communication	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	... So there's Code 0, Code 3, Code 7's our lunch break. Code 9's if you can't hear somebody. Code 6 is if we have-- if somebody has a warrant or something like that. So a lot of departments have different ways of communicating. We use plain speak, I think is what it's called, so we talk very directly. We don't have a lot of Code 10-4, 10-20, 10-82, stuff like that. So it just kind of depends.
Communication	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	[RE: learning geography] So I have my duty bag, and I keep my-- so we have, they're laminated and they're yea big or so. And so each side is a sector, so you've got Baker one side, Adam on another, then Charlie and Delta. So if in situations like that, if you absolutely needed to pull out your map, then you just-- and that's what they do with a lot of the recruits or people in training is they'll have them pull over, identify where it is, and go.
Communication	LE	S	Field Responder	26-35	5 or less	Male	LE-S-022	I think what they're doing with [information sharing software] is going to be very beneficial because right now, it's kind of located within our city and the surrounding areas. So if somebody's been arrested here, then I can pull up their information and stuff, but if it's in [City] or [City], it's not necessarily going to come up. But they're trying to combine us with [City], [inaudible], [City], [City]. And so just having that general database of individuals and their associates, their vehicles, their locations, their phone numbers, that's invaluable to investigating and figuring out how you can pursue people and charge people with stuff...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	For me, usually I come in to see who has court, check the sheets to see who's working, then we'll do roll call or we'll address the troops. A lot of times we'll get the information from our SDSC room that anything that happened or from the previous lieutenant that was working just to let officers who we're looking for, if there's been a crime pattern or something that has recently occurred. Afterwards, when I review arrest reports and then anything that the desk sergeant can't do, I've got to take care of. But in most part, the desk sergeant kind of runs the station and their assistant is the next level. And then if there's any use of force, we have to review and approve the TR-- they're called TRRs, Technical Response Supports. So if officer is using a type of force to document it, we have to make sure it was proper, and necessary, and reasonable.
Communication	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	like say, I'm digging for a warrant or something on the beat I'm looking to look for that day, I would be through a database. It's typically easier to navigate at a computer on the station. And if not, it'd be in the car. The car is sometimes not updated enough to get those systems to run. And if it was something like a call, they will come to the computer as well or the [CAD] inside the squad car.
Communication	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	Cell phone-- the radio would be the initial call getting put out. Maybe you need an update or you need dispatch to call that person back because we don't have access to their phone number after they call. So that's all on their end. So any information like that is going to be on the radio. If it's for cell phone really, unless something's happening and you don't necessarily want to put it on the radio is when I would typically use a phone call. And then if it's just something like looking up a database, for the most part, it works on most of the computers and if they're nearly updated by now.
Communication	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: comms with dispatch] Mostly on the radio. Sometimes on the computer if they ask for it to not be put over the air, but they're doing a lot. So if they're in the middle of something, like they have a-- somebody has a pretty good scene, if I send them a message, they're not going to get to it right away. So for the most part, it's easier to talk to dispatch

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								over the air.
Communication	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I mean, I have a department phone, a personal cell phone, obviously, and then if I'm in the station, we can call the zone directly if there's something-- if I want something done but I don't want it to tie up here, put it over. We also with the SDSC room, they do send out if we get information, they'll send out an email to all the phones and everyone, in theory, can look at it right away and actually see the picture of the person or whatever else-- if we had stolen car, and if they caught it on camera, I'll just take a screenshot from the PCAD computer or whatever, the video monitoring, and then they'll put an email and shoot it out so--
Communication	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: picture of person/vehicle of interest] It is because you get to see who-- what kind of a car it is or if there's any distinguishing marks. It's a lot easier to-- I think, give the picture description as opposed to just describing the person by words. Because, gray sweater, blue jeans might mean dark gray to me and acid-washed jeans, whereas opposed the other person-- everybody takes the description differently. So I think that the picture is probably the best thing, especially when there's people that are wanted now with everyone having-- a lot of them have video in their houses and stuff. So I mean, if they have a picture of the actual person that did burglary or that tried to break in, it's better to shoot that out because then you can see who you're looking for and you can reference back to it...
Communication	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: getting call info] It's radio and they'll throw it-- you'll get it on the computer pretty much simultaneously. If you don't have a computer, usually I ask them to repeat it, and you write it down on a piece of paper.
Communication	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: comms with other officers] Within our department-- within the police department, I think it's very easy, where you could send a message on the PCAD. Now that we have the department phones, that's an option, and most of us have each other's cellphone numbers. So that's the easiest action, probably.
Communication	LE	U	Field	Not	Not	Not	LE-U-024	[RE: comms with other LE jurisdictions] Occasionally. Say, I recover a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder	specified	specified	specified		vehicle from a suburb, usually you reach out to the agency just to let them know that you found it. I think I was very briefly an officer in the burbs. And I think that we could do better with it, especially with something like [city]. With state police running in the city and we don't have their emergency network to know when they need help, I think is a little-- I mean, I don't know how we would integrate it...
Communication	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	Two sides of our districts are bordered by expressways. So it-- there's a police shooting on the-- not a police shooting, but there's a shooting on the [street] ramp and trying to coordinate between the dispatcher talking to the state police dispatcher then to us, and getting all the information back, there's a lot of confusion going on. I mean, we had people chasing people. Nobody knew who the offender was. Until you get there and somebody can actually put it out that this is what happened, there's-- it's confusing sometimes.
Communication	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	...on the radios, we are able to change networks. So for example, if we did have a chase from state coming to my old jurisdiction and we communicate with state dispatchers. We don't communicate with our own. We said, "We're leaving this network to go to this network." And then, we talked to [city] with state, with all of the other agencies that were then chasing, probably all the suburbs. So it puts all of us on states network with their dispatcher. So it's all going through one.
Communication	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: report writing] It can be a little buggy sometimes. You'll have a signal and then it'll drop out. So you might be in the middle of a report, you go to update it or go to the next page and there goes your whole report [laughter]...And I already found that if you start it in the field and you save it and you go to open it in the station, it's not what you saved [laughter]. So I usually try-- if I'm going to do it in the station or the car, I do it 100% and then save.
Communication	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: body cameras] I think they're not-- I'm newer to the district. Did they get them last year? So I've had it since about March. I think it's more of a-- it's not too conscious yet to say, "Okay, now I got to turn this on." Because you're used to hit the lights, "Okay, where am I going? What

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								hundred block is that?" And sometimes you're figuring out your route and you're doing a lot of other things in your head and you get to the call and you're like, "Oh, I forgot." So I think it's still-- it'll eventually be in most officers just your natural thing to, "Oh, I'm going to a call, I turned it on." But it still has to be-- it has to get to that point. Time will fix that, but it's you push a button, it's really not that hard to use.
Communication	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I think, partially my generation, but definitely, the generation that's coming after me, we're more apt to text than make phone calls. And so I think we're not as good of communicators because of that. We're used to being able to plan out what we're saying before we send it and stuff like that. So that phone calls, sometimes you-- when I first came to the department, we had to start making notifications. I'm like, "Oh my God, I hate talking on the phone this much." It was just, it was something to even get used to, to be on the phone regularly.
Communication	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	To me, it seems easier to communicate because everyone has multiple ways that they can reach out to each other, whether it's through their own phone, through the department phone or the PDT. We can push out information quicker, but I don't think the process is smooth yet. It'd be nice to integrate everything into the computer, like with ShotSpotter or with HunchLab where you have the screen, at least you can see where you're supposed to be or where it's going off, as opposed to if you hear it go off, you unclip it and you have to open the phone, put in your password and then go to the app to see where it's at. It would be nice if that information, even with the dispatcher got it, they just shot it with the screenshot like, "Here. You're going to go here." It's there. There's not-- I know that technology's getting there, where they're going to push video and what else to the cars, but--
Communication	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I'm more of an audio learner. So, even when I do read-- if I'm going to a call and something's on the PCAD, I tend to read it out loud to myself. Or if I do have a partner, somebody does read it out loud. Usually, the person not driving [laughter]... But I would say audio works better for me and of course, it's nice to reference though, "Were those pants black?"

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								And you can look and of course, it's easy to look at the PCAD and read it.
Communication	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	You know what, I think sometimes the shortfall is what the caller gives us. So, part one of the puzzle is the 911 call and if that starts very poorly, then it's that bad game of telephone just totally degrades by the time it gets to us in the car... Sometimes we'll get good descriptions right off the bat and that's way more helpful, but that's part of the equation that we cannot control. I think for the most part, people get updated, you can see who's on the scene, the dispatchers will update the tickets with information as it's given out. So I would say on our end, it gets updated and it's used very well.
Communication	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[To the?] aspect like the radio communications that there's something going on. "Shots fired." Like, "We have an officer shot." Everybody tries to get on the radio at the same time. Sometimes the dispatcher just-- they have a hard time controlling the entire situation. The officers have a hard time not cutting each other out. So, like we had one officer that was shot while the other officer didn't know she was shot because they work in a pair. He took off chasing the guys. So, she's trying to come over the air saying she's shot while he's coming over the air saying he's chasing this person. Then people would step in, that, "I'm going. I'm going." Where then that person doesn't need to-- you just go. So some way of better controlling the airways when there is a critical incident.
Communication	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: 10 codes and plain language] I think it's a little bit of the radio like how we talked about radio discipline. I think it's a little bit of the problem. But it's not encouraged here. It's keep it short and sweet. Now I've noticed that I've gotten that way a little bit, too. Now that I'm working here, I will get on the soap box and maybe hold the air for too long where it would have been totally inappropriate at the last department, and there's a 10 code for inappropriate use of radio. So if somebody was on the radio too long, somebody would come over and say 10-39, like you shouldn't have done that. So you got called out on it.
Communication	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	In the smaller departments, it's also easier to manage the amount of folks you have whereas a police department this size, we have people

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that have trouble remembering simple ways to code out jobs. There's only 20 of them and they still can't figure it out so--.
Communication	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	[RE: calls stacking up] Well, if they stack you, they will. When you do multiple jobs. That will happen sometimes through afternoons and midnights when there's a higher level of call for service. But the officers in their cars, at least before it was, they can't see what's pending or what's waiting. Only the dispatcher can and the supervisors can. So from the station, I can run and see how many calls for service we have waiting. Around the 4th of July, you get 3,000 calls of disturbances with fireworks. And we'll tell the dispatchers [not to?] call them unless there's a caller that wants to be seen because, literally, you can't handle-- you're going to be in a back log all day if you're--
Communication	LE	U	Field Responder	Not specified	Not specified	Not specified	LE-U-024	I'd kind of like more sharing between all the databases. I know we have [state criminal database]. If you're certified in that, you can pull up pictures of people. But I think that all of those databases should just be rolled. The states should be able to communicate.
Communication	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	when the ShotSpotter goes off, we go over the areas that spotter detects the shots. And we call it out. And then we see if there's somebody shot, and we dispatch officers there immediately. I have HunchLab. So with that, I help deploy. I assign our overtime cars from the Violence Reduction Initiative. So we determine where we need the extra resources, where our regular beat cars in the district don't-- aren't able to always cover. So where there's a high propensity for violence. So we will put the extra overtime cars there. So I do that when I get to work also...
Communication	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...We also have a meeting, and it consists of the commander and all the other bosses. And we go over any violence, any shootings, any robberies from the night before to make sure everybody has the same information. There's a PowerPoint slide. We send it out to all of the officers on the watch on all three watches, the TAG team, any other outside unit who needs it. We do that. I make sure that the probationary police officers feel comfortable with their FTOs. If they have any questions, they can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								come and talk to me. They can come ask me questions when they're not with their FTO. If they're scared to ask their FTO or if they have any comments, cares, concerns, they can come to me just like anybody else on the watch. So there's probably some other stuff but I can't remember.
Communication	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	I get to work approximately a quarter to 1:00, maybe 12:30. I get there and we go over what is called a daily brief. And I get ready for the meeting that we have with the commander, other bosses, other sergeants, other units. Take notes during that meeting. And then anything that needs to be updated gets updated on the PowerPoint slide. Any new information gets disseminated. And then at 2 o'clock we may address roll call. If there's any new information, if there's any officer safety alerts, we will go down there and do that. We will print out the HunchLab map for that day. It changes at 2 o'clock. We'll print it out...
Communication	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...I will then go to the VRI office, which is the Violent Reduction Initiative, and will ask them how many cars are detailed to the [district name]. They will tell me how many cars. I will go upstairs myself if the [special information officer], if he is there. We will place the cars strategically where we're expecting violence. And then I will type out all of the HunchLab boxes that they are going to be into. And then I will mail it to everybody that needs to be mailed. And then I will go and bring it-- bring the maps downstairs. They don't have a color printer. We do. So I have to go down there and go give it to him. I will go over it with him, see if there's any questions they have, and then I will go back upstairs...
Communication	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	...From there, I will then approve and look over all of the daily observation reports that all of the FTOs do for all of their PPOs. Meanwhile, while all of this is going on, if there is a person shot I will have to do the report for that. I will have to find out who was shot, where they're shot, the location. I will have to make some notifications. I will then have to find if there is a gang conflict, who they're in conflict with, and then send that report out to my commander and everybody above him. And then every other task that would come out...
Communication	LE	U	Field	36-45	11-20	Female	LE-U-026	[RE: patrol officers] So they get a lot of information. They get information

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					through their email. They get information through the department phones. They get information on their PDT. And then they get information over the radio.
Communication	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: checking email frequently] A lot of the newer people do. Our schedules in the [district] are disseminated through their phones-- well, through their email. So they check it if they would like to know what they're working. They don't have to call anybody. They don't have to ask. They can see the schedule. So I would like to say in the [district], the majority of them check their email regularly.
Communication	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: roll call] The information that goes out on the department cell phone is the same information that I send out on third watch to their personal email. So in case they don't check their personal email, they are getting it on the department phone.
Communication	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: patrol officers] They get calls for everything. They get calls for, "I no longer want my child anymore." "My child is misbehaving." "My neighbor's watering the grass." "There's a person shot." "There's--"
Communication	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: calls] Well, it gets dispatched through the radio. And then it gets dispatched on their PDT if they have one in the car.
Communication	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: dispatch via radio and PDT] Well, we need both. It comes over the air, so then if another unit is nearby they can go and assist you. Other units listen to the radio. But it's nice to see it in case there's a lot of radio traffic. I can read what the dispatcher said, so you don't have to ask them to repeat it. Another unit is calling for help or they're chasing somebody, it's on your PDT so you can read the information.
Communication	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: patrol officers] Lots of information comes through the PDT. They can look up criminal history. They can read the daily bulletin. They can read stuff on the wire. They can inventory things from the car.
Communication	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: patrol officers] They can write their report in their car. Everything that's on the computer in the district is on that computer if they have a new computer. If they have an older one, they don't.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: patrol officers] In roll call, there is a large monitor and in it, that PowerPoint that gets pushed out through the phone and in their email is playing on a loop. So they see wanted individuals every day. They see what's going on. They see the officer safety alerts. It's all on there... And it's just continually going on a loop the whole time they're in roll call, so they may see somebody on the street and say, "I remember that face. Where did I remember him from?"
Communication	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: station life] There's the desk officers. So there's the desk, people come in, people need reports, people need help, people complain. At the same time the desk sergeant is there, he's approving case reports, he's approving arrest reports, he's approving inventories, he's going to lockup to check on the prisoners, he's sending out emails if there's a person shot, and anything else the lieutenant might need him to do. I'm off to the side. I'm in this information center and I'm in there with two other officers.
Communication	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	I know a lot of people in the community. I'm just a text message away from some of them... I was a patrolman and, yeah, that's how I met them. Some people would meet me in the back of an alley to give me keys to an apartment building so I could catch drug dealers. Some people will email me and tell me what's going on. They still call and text.
Communication	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: comms with other LE jurisdictions] Oh, when there's something going on, when we have information, I don't see any problem... We call. When I was in the [district], we bordered [neighborhood] and those districts over there. What else would be over there? [neighborhood]. There's another frequency, it's called [inaudible], and that's how we could communicate on the radio with them because we were on the border. So if I was calling for help at [street], they're probably going to be closer to me than any other beat car in the [district], so they will come and help.
Communication	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: patrol officers] They'll see that call and any other calls that they were assigned. They will not see any calls that are waiting to be dispatched... So they can have a dead body waiting at the hospital. They can have a domestic. They could have a noise disturbance and a kid bit

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								by a dog. They can have all of that waiting because it's assigned to them, but they may not see that there was, let's say, a call on the next block or that just hasn't been assigned yet.
Communication	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	[RE: work cell phones] I don't think they've made a whole lot of difference. I mean, they have HunchLab on them so that makes it easier for the officers. If we could get that on the PDT, they wouldn't need one more thing to take out. ShotSpotter is on the PDT. So I think it would depend if you had a PDT in your car or not. Because if you have the cell phone, event numbers, stuff shows up on there. It would work very well for, let's say-- some things work well for bike officers. Like if you could get the phone to run a name on there, if you had access to leads on the phone, that would be great for people who are on the bicycle. Because they don't have a PDT, they have to run everything over the air. So some things could be used for-- they're a great technology, but if you have a PDT some of it is the same technology.
Communication	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	Well, we don't use a lot of 10 codes. We only use 10-4 and 10-99, but most-- yeah, most of the time if you're by yourself you'll just say 99 or 10-4 and that is it. Those are the only 10 codes we use.
Communication	LE	U	Field Responder	36-45	11-20	Female	LE-U-026	Well, with us having the SDSC room they have a place to give us their information. Somebody said, "Hey, I have all these lots. I don't know who owns them." They won't have time during their shift to figure all of this out. So they're able to just to send it to me and then that's stuff I can do in the room for them, other places without this or without a sergeant or without somebody for them to go to to help them get this information.
Communication	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Well I think one of the big things not necessarily with me routinely but you know we obviously have a 700 megahertz radio system. That's certainly part of my daily routine as monitoring the radio. Certainly speak on the telephone a lot, cell phone and land line fielding citizen's requests or complaints via telephone and email primarily. We do have a fairly good social media presence with our Facebook page which I'm one of the administrators on. We do have a staff member that primarily handles the social media but and certainly communications in person

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								daily with our staff and that's about it.
Communication	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	So I'm communicating primarily with customers and a lot of those customers are departmental heads or elective officials and so a lot of the requests that I receive are high level. The majority of my requests are going to come in via email whether that's through a ticketing system or direct communications. I spend a fair amount of time on telephones as well both land and cell lines and other than that's about it you know.
Communication	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Well I think I personally don't use it but our patrol guys have mobile data terminals in their vehicles. [Name] might be able to speak more to how they function or work because I don't really know to be honest but I think yeah in our county we've had some issues with inoperability which I don't know if you're going to touch on but it's something that you know we have our law enforcement partners here in the [County] are on board with our getting a grant when a national grant when we switched over from UHF to 700 and some of our fire departments chose not to make that switch and so I think when I hear from a radio communication standpoint a lot is the inoperability issue...
Communication	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I think all in all the communication is a good system for us here. We do have some geographical challenges. We have parts of our county where we have no radio coverage at all and it's been that way for many, many years. We have started trying to work towards installing a repeater in the north end of the county. We're actually just in the process of that right now. We've met with the forest service, we've met with the radio tower owner and I think our goal is in the spring once the snow melts and we can get up there is to have it all installed and up and running by early summer.
Communication	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	They are. Yeah they're tightly integrated so when an officer calls in and needs something to tag that to call for service that number is generated within records management system and so that number that CFS will follow that incident throughout the life of it whether it ends up at Supreme Court or not. It's all tied directly into and starts with the records management system so when the dispatcher issues that it comes out of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								records management and creates that and starts it once it comes back into the office and they login to RMS it's there and they can start adding notes, entering evidence and do whatever they need to do.
Communication	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: CAD and RMS integration] Sure and there's challenges there. Both of those systems are standalone systems are extremely expensive and so to replace one you're either going to have to build an EPI it'll seamlessly allow that to happen. The CAD also ties in with our mobiles and so officers can see notes that are being communicated via dispatch notes that they're taking those will pop like to a certain degree within the mobiles as well.
Communication	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: RMS access from MDT] They can access the RMS yeah. It's mostly a text driven system or they're inputting various pieces of information whether it's referencing photos that they've taken or recordings that they've handheld, voice recorders that they've used so all of that is difficult to do in a vehicle and I think most of their time is spent rolling as opposed to sitting staffing information so they can access it via the VPN technology that we have in the mobiles but it's of limited use. I think mostly your supervisory staff is accessing those records so that when they have a 15 minute break they can go they can review other officer's notes, approve those and keep the process flowing.
Communication	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...I think we need a lot of information and specifically I have a hard time coming up with things I mean for my job from a command staff level I mean we do a lot of in person communication. We certainly have lots of meetings face to face I know that sometimes as nauseam. But as far as the information I mean I'm trying to think of it from my perspective or from one of our average you know patrol officer/jail deputy's perspectives I think they just constantly need information passed verbally through email, through telephone, radio...
Communication	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	Yeah I think for our average employee that's out in the field they're constantly seeking information certainly through the communication center and the communication center gets it from the CAD and RMS and other data bases and eyelets and the blogger.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	The blogger is a running tabulation of not just calls for service but also contacts and things of interest so that when officers move to a new shift they can look back at that blogger they can see it from both the vehicle and from desktops with this facility and so one of the things that I see as a constant float information back and forth mostly between supervisor and command staff is the checks and balances built into the records management system and even the crash investigation software...
Communication	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...So the officers are entering information the supervisor is looking at that information and approving it, that information is going to the RMS administrator, she's viewing that information and approving that, that information is going back to the officer for final approval and getting pushed up to the feds. So there's constant electronic communication back and forth as far as checks and balances and making sure the information is accurate and it all flows very well and I'm always impressed at how much information is back and forth and not just via email but via these systems that the officers are using to maintain data.
Communication	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I mean I think that on a daily basis. I mean that not only just with technology I mean certainly the state operates the eyelet system which is a law enforcement database for criminal histories and driving records and vehicle registrations you know all types of vehicle registrations boats, planes and so I think that's a constant daily hourly thing. I think I can't think of you know there's probably tons of other things. You mentioned like the fingerprint system and like anytime someone's booked in the jail their fingerprints are transmitted electronically to the state. There's tons more.
Communication	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I know the probation department has systems and they work directly with the juvenile offenders, the correctional institutions, the prosecutors are constantly working with different agencies throughout the state. We're tied into hub and spoke network with the [State] Supreme Court and so there's a centralized brand new system in the State of [State] where the Supreme Court has servers both at each county and also

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								centrally located and so there's constant communication, probation prosecutors, public defenders and defense attorneys are all tied into that system as well. And so that information is funneling from law enforcement to the prosecutor's office to the courts to probation and it all ties in seamlessly...
Communication	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	... Secretary of State is a direct connection for us as well so the voter systems, registration, voting booths all of that stuff ties in automatically and information transferred nightly between different agencies. I know that the [state] State Patrol maintains a crime lab and so a lot of the investigative pieces of our investigations go there and there's a system that we can access 24/7 where we can view the status of different pieces of investigatory evidence and where that's at in the workflow and so we're very tied in to agencies throughout the state...
Communication	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	...I think we have seven or eight direct connections not including the cities which we also directly connect to. Some of the evidence management we do have an evidence management system and some of that ties directly into the cities where they have the ability to log evidence up there enter information and then it comes down here to a centralized evidence locker where that stuff is maintained piece by piece row by row aisle by aisle and so it's a lot of integration.
Communication	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	I think too one thing that popped in was like our communications with the state emergency operations center in times of disasters or like specifically the flooding events that we went through in the spring there was a constant I think we have some type of integrated line that's a direct communication with the state EOC. We do use a state I guess internet based communication called web EOC. That's something that we really used a lot. I think it took us a while to get on board with it but we really saw the value during the flooding event...
Communication	LE	R	Not specified	46-55	Not specified	Male	LE-R-042	[RE: [Organization]] ...That was our primary way to push out information to local first responders and commanders for fire and law enforcement and EMS along with like the health districts and the state EOC. We had a lot of users in the county that was pretty much their primary source of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								information during the flood events as far as the daily operations and updates. I think it took a couple of I think [Organization] has been in place for many years but it really took a while to catch on here I guess and now I know during this flood event the state guys were like you guys have so many users now it's becoming such a big thing and it's like well that's good that's what you guys wanted. The management of it has been excellent and the training and it's really been a big tool but it really only gets used when something's bad is going on.
Communication	LE	U	Field Responder	26-35	6-10	Male	LE-U-023	... That takes half a day going back and forth, meeting schedules, talking. Maybe you have to talk to a neighbor.
Communication	LE	U	Field Responder	36-45	6-10	Male	LE-U-025	I would break down our communications into probably different-- I would label them. There's inter-partner communications. There's communications, and then there's intelligence communications. You have to kind of break those two up. There's communications of just getting through the job you're at, which is speaking with your partner, letting the dispatcher know where you're at, letting the other surrounding officers know what's going on, notifying supervisors what's going on. I would break those down into-- those are basically, primarily done on a radio communications. But then, there's this whole other component, which is really to delve into the [inaudible] of the department. They're calling it smart policing, and it's the intel which is so important. And that communication is just like any other business communication.
Communication	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	A valley, and so that hurts us in our communication. And this being so far away from Austin hurts us. It's improved from when I first started to where we are now, but it's still not 100%.
Communication	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	...But yeah, that was always the biggest headache, it was dealing with other agencies just because communication was so difficult.
Communication	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	Well, it just kind of varies. There's different forms of communication that patrol would use on a regular basis, anywhere from your normal stuff that you hear, the radio, communicating with dispatch, communicating between officers. Then you have your messaging on our computer-aided

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								dispatch, on our CAD systems. Essentially, it's like text messaging, but on the computer. Or even on a broader state, just emails going back and forth with day-to-day stuff, with our BOLOs, be on the lookouts, just information, briefings, going on our emails a lot of the way that that gets communicated, and obviously cellphone, and face-to-face, and all that.
Communication	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	I would say, for the most part, it's good. I think there's always room for improvement. I think one of the main downfalls in our communication is handheld devices. One way to communicate that something as simple as overtime is available, or something as serious as the city is burning, we need as many officers as possible. One of the main ways they're going to communicate that is through a pager, which is great, but not everyone checks their pager. Not a whole lot of people have it on the all the time. So having a cell phone with a large type of - I don't know exactly how you would say it - some sort of network that everyone's on. A wireless messaging system that everyone is communicating through would be very beneficial. And I know that's out there, so it's just a matter of the department getting it there.
Communication	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	It's kind of a-- like I said, for the most part, it works. So there's not a whole lot to be fixed. The communication mostly, when I think about it, is through the radio. And it's so, in the grand scheme of things, basic. It's hard to kind of mess up. Now, there's reception issues from time to time.
Communication	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	[S2] So we have a lot of different officers that are on different channels. But depending on where you're working, they will tell you how to get a hold of the other officers. Like you will have a show up briefing. So before you start whatever assignment, they'll tell you kind of where you need to be and stuff like that.
Communication	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	[S5] Could be technology. It doesn't have to be. So you mentioned the EMS incident, for example, where they tweet something and say one thing and you would release it in a different way, for example.
Communication	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	Sure. So you can use the radio to communicate directly to the dispatcher. You can also use the radio to communicate directly to other

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								officers. And you can use the radio to communicate with other jurisdictions and other areas if you know what you're doing. It can be kind of confusing switching from one jurisdiction to another. So there's a whole host of ways to communicate with other folks. We can even-- I guess the best way to describe it would like texting via computer. We can communicate car to car with other officers, so you can send messages, like direct messages to a specific officer without utilizing the radio or the phone or anything else. So we have an ability to communicate using that mobile data terminal in the cruiser as well. You can communicate with the admin staff at the station if you wanted to, electronically. They very rarely use the radios, but they can use the computers as well. But there's a whole host of ways that we can actually communicate.
Communication	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	We have a very good relationship with [County], so my agency communicates directly with them on their radio channel. We supplement them. They supplement us... You could have an event taking place there and the county wouldn't know it and the city wouldn't know it until those two dispatchers communicate. And again, there is that time delay where there's that missed moment of shared information. So again, for us, I guess you could use the state police. The state police communicate on a radio and they have [Street]. I personally scan multiple radio channels as a K9 officer so I can hear what the state police are doing, even though I'm not on their channel. The rest of the patrol officers do not. So if they had a problem, or a shooting, or a bailout, or something that's taking place right on [Street] in our district, they wouldn't know it until their dispatcher contacted our dispatcher and communicated it to us and hopefully somebody's close.
Communication	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	Yeah. Communicating with other officers, and that sort of stuff. But other than the audio-video recording system and that sort of stuff, I believe that's probably it.
Communication	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	The usual communication I have on the department is with our radio system, and it'll just be me and the dispatcher. Rarely, will I talk officer to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								officer. If that--
Communication	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	I don't know if it's gotten in the way, but I don't think they've quite developed the ability to communicate everywhere.
Communication	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	Communications [crosstalk]. So they're actually-- they're like the Big Brother. They're making sure that those calls are going through and things that are-- and that people are following up and they update the watch commander or the commander in the command center at that time,
Communication	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	You got to maintain control or you can get overtaken inside the footprint, so. But so I just say that to say communication-- you asked me about communication. I think that communication is getting better. But radio communication is still a problem because of frequencies at this time. But I think it's getting better.
Communication	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	But yeah. So communicating so there's-- through the tablet, you can go through the Internet and get other internal NPD stuff and our resources for running people's names and people who have histories. And then there's an application, Mobile for Public Safety, MPS, and that's the application that the dispatcher sees at our office of unified communications. And those are all where we can see all the 911 calls that come in.
Communication	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yeah. So there's no way of us really communicating over directly to them. [talking about law enforcement going through the dispatcher to tell [City] Fire that the ambulance location is changed]
Communication	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	...And so you can usually raise a Capitol Police officer on our radio because they're monitoring it, or sometimes Federal Protective Services on our radio. But most jurisdictions, you either have to call them directly. So if I need to contact the Secret Service office about something, I got to call their duty office because I couldn't communicate with Uniformed Secret Service, I don't think, other than calling their dispatcher.
Communication	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Most of our contact with coworkers is either on the telephone, cell phone, or on the computer, our mobile data terminals in our cars. We'll

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								send messages back and forth on that like talk screen messages. And supervisors typically, it's a telephone call.
Communication	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	With police officers, like for other officers on calls and that stuff, again, most of it's done through the computer, I would say. Most of it's done off the radio, unless we're running calls with them, and that's pretty much it.
Communication	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	So we use the radios and we use the phones to communicate.
Communication	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	Generally, no. If there's a time crunch with something, they'll call me on the radio or they'll call my phone. Or they'll ask the dispatcher to ask for my phone number or ask to give me their phone number so I can call them.
Communication	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	It's easy for the dispatcher to communicate with them. Usually, if there's a call and we need fire and rescue to come out and help, we request it through the dispatcher and the dispatcher request it through their dispatcher and they get dispatched to help out. So we don't necessarily communicate with them directly, fire and rescue.
Communication	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	I've communicated with state police. Federal wise, anything I've done with them, it's usually we will brief together and then we'll take care of whatever the assignment is. But radio wise, federal level, I haven't used radio for that level.
Communication	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	The MDTs I communicate with local law enforcement agencies. If there is a way to communicate with fire and rescue-- I know they use the same system, but I don't know if I can or can't. I'm not sure about that, but I know all the different agencies in this area I can communicate with through MDT.
Communication	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	We have a system where we have a direct, I guess, I don't know, link or where we can talk directly on radios without going through a repeater. So what we'll do is we'll switch over to that channel and we'll have someone stay in the location where they can communicate with ECC. So I will talk directly to that person, to their radio, and they'll relay the message to ECC. So the same thing with whether it's if I'm in a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								basement, somebody would stay outside or if it's a rural area someone will stay back far enough to hear me through the radio and then communicate with them.
Communication	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	Well, I mean, in the past 10 years, the methods of communication, the whole social media platform, things like that-- I mean, it used to be, in law enforcement years ago, we had call boxes.
Communication	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	So me, as a patrol officer, I'm in the car. Maybe there's a theft at a store. The dispatcher can come over the radio and say, "Hey, 3051, there's a theft at the store XYZ," and they'll send the call to you on your tablet. And you can see, boom, you have all the information that the call-taker at the office [inaudible] communication has put in there
Communication	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	...There's always your informal communications that you have through email, but the same thing, we've got a paging system that we use so if something pops up, "Okay, we need to have 10 officers for this event that's going tomorrow," we can page it out and the officers can call back into our Command Information Center, or to our Special Events Branch over at the special operations division, and say, "Hey, I'd like to work that detail," whatever, and we can staff it that way. So kind of going back and forth. Same kind of methods.
Communication	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	Sure. So I mean, we use a lot of communication methods. Depending on what we're planning, if we're planning a special event, a street festival or a rally, march, whatever, obviously, coming together as a group, the in-person planning, conference calls, there's a lot of email communications back and forth, especially when you're working with organizers... So there's always lots of task groups, and groups convening communicate on a more routine basis about what's going on, sharing information back and forth.
Communication	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	Sure. I mean, yeah, obviously. So whenever we have a special event-- so I guess I should kind of start with, a routine day-to-day. Routine day-to-day here in the city, every patrol district has a radio frequency that they do their general communications on... So they may be in the building and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								not have full communications. And sometimes tactical assets like SWAT teams are on their own separate channel. So maybe a SWAT team's in the building and maybe active shooter teams are in from patrol or from other agencies, and how are they communicating what's going on, because normally SWAT people talk on their own channels because of their own self-enclosed team and move like that, so.
Communication	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	... But, at the end of the day, we'd be like the state police for the city. So everything kind of-- we're responsible for making sure things are covered. So making sure that we're communicating. So we do a really good job with that, and it all comes back down to personal relationships, talking about what's going on. And the same tools, I mean, email, in-person meetings, phone calls, just picking up and, "Hey, what do you guys seeing on this?" I mean, information sharing is key because, as we talked about, things rapidly evolve.
Communication	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	Sure. So, yeah, fire and EMS. So whenever we get special events and things like that, they're all involved in the planning.
Communication	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	And then on game day we use the ICS structure so for large events we activate, what we call the Joint Operations Command Center here. There's a fire comm that the fire department stands up and we have liaisons in all the locations. So if we're having a marathon, we have our command bus up, we'll have someone from the fire department on there. So an officer will say, "Yeah, we have an individual he's passed out at this location. It's a 35-year-old male." Fire department's right there. We tell them, they're on the radio, they're dispatching their units that they have for over there. So the communication, although we use separate radio systems - as in different frequencies - but the same thing, we have the ability to communicate...Sharing that information and then that way they can control their assets, we can control ours and then you don't have that cross talk when you don't really need it. If you need the crosstalk you can directly communicate, but a lot of times it causes confusion.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	... So for a patrol officer every day, they go in service on the radio, log onto their MDT, go in service for their car. They get the calls dispatched out to whatever area they're responding to and their communicating through the MDT, through their radio. Maybe some cell phone back and forth between each other or with the sergeant if they have questions. Responding in person, talking to people, responding to the station so that everything is basically done like that.
Communication	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	99% of it is email, and that is something that has scaled down. But it also makes it easier to track. If a citizen is able to email us a question, then we have their email address. And it's so much easier to be able to email back a response.
Communication	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	The communication we have mainly is established through command centers on large details. There are different agencies that-- Special Operations has the ability to switch in between certain jurisdictions and to speak with Secret Service on secured channels, but it's not a department-wide thing.
Communication	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	But we are trying to get to a comprehensive system where we could share radio communications if we need to. And we are working with our Fire Department and EMS to do so. Some certain are encrypted different ways just based on their security function.
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] Yeah, it's underground, but they actually put repeaters down there and so you can communicate down there, and it costs money. We were switching over to 700, and they have a huge hub at [Street] that's going to go underground at [Street] and [Street] which might help with the radio at [City] Mall. Because now we're separate, we're on 700 MHz now and their in the process. These radios are all 700, 800 capable. So when they do hit the switch to 700, it's hit the switch and the cop's not going to notice a difference.
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] And that one radio unit would do all the grants, get all the-- at [City] Mall, we need communications, they do all that stuff. They don't.
Communication	LE	U	Field	46-55	21-30	Male	LE-U-010	[S2] During scenarios you might have a critical incident on the border

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					somewhere. Say the airport, because that's technically [City], [we need a command van down there?] and you send a bunch of cops down there, and [inaudible] because say if I send two cops to each station, when he comes back, that information filters out to the other cops when they're in the locker room and stuff. Or when something does happen those two cops get on the radio, "Hey, guys, go to this channel." We don't practice that. And unfortunately until something happens, then they make changes. And that's been the history of every police department. Until something happens then they make changes.
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] So he's Asian, the other guy is straight from Ireland, so obviously they're going to go, "What did you say [inaudible]," and we mess with them all the time around here. That's why you see all these pictures of--so [inaudible] that's me and all the radio mics.
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] Yeah, because [City] had to be [City] and this has been going on since the '60s. [talking about 10 codes]
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] We use part of the 10 codes
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] Right? But that's what and right now and that's the biggest issue we have and the biggest divide is you can't communicate with anybody anymore.
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-010	[S2] [The community means a lot?]. And this first time the community has talked to the cops in months. And they're still doing this thing. The Captain says, "You got any issues, you email me." I'm looking at him like [laughter], "Why?" If that was the fact, why are we having a community meeting? We just do a mass email. How about that? Let's just video tape it. We'll video tape it in here. Everybody logs on and you video tape so you don't have to talk to anybody in person anymore. But that's what society has turned to now. And that's where technology is hampering, I think law enforcement, is they're not getting out and not talking to you. Every once and a while, you'll get a clip of a cop playing basketball with a kid out in the street or something like that. But they're not doing that.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								You can't communicate with them unless it's PlayStation 4 or some crazy stuff. There's nothing to relate to. There's no Monday night basketball. I remember you had to be home before the streetlights came on. And if I screwed up, my neighbors had permission to whip my butt. Then I got two of them, from them and then from my parents when I got home.
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	It was driven by the radio. It was driven by calls to service, and depending what those calls entailed, and that was your day. I mean, it was literally going from run to run to run, and communicating with dispatch, dispatch not dictating, but directing where the runs were coming from.
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	On their phones communicating with others.
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	So you chase the young woman down, under the-- to the mezzanine of [Street] and then she ended up going to the food court and into a stairwell. No comms. Officer and the female. Female fought like she had her life to-- and got complete advantage over the police officer and ended up pepper spraying him. Couldn't get his gun out of the holster, tried though. Tore the mic off, disconnected. So his partner couldn't find him. So then the suspect was seen running. She ended up going back down to the BART platform and hit. Once again, the radio's don't work down there. There's a procedure protocol for communications down there that we don't grow and practice enough, and some of the dispatchers have very short memories, and so they don't say, "Hey, this is what you need to do. This is what we're doing. Move to Channel C8. We'll patch it to your A2 channel. When you're on the platform but as soon as you start coming up out of the ground, you got to switch back. We don't train." Comms is the last-- if there was ever any shortcoming in our day to day, it's communications training.
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	There is very little direct positive communication between the ranks, between the station level individuals and the management.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Not easy. Not impossible. We could go to an event channel. I can go. I have a couple of fire channels in the radio. Even I who played with the fleet map of the channels all the time would have to go through and find it.
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Yeah, and okay, it's not there and not there. [City], the East Bay. Is it 700? And I spent a lot of time, but I've never communicated with a firefighter on my police radio.
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Yeah. Well, if back in the day the general consensus was I don't want cops on my fires. I don't want cops talking to my radio and police. I don't want fireman talking on my radio. Recent event, the UPS shooting. Lots of people there that day. They should have known better. Lots of different agencies all working together with the exact same radio. No one thought to use an event channel so they could all talk to each other. They all have the same event channels programmed in their radios. Could have gone to B4.
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Very advanced [laughter]. Yeah. So our low band-- CHP uses low band throughout the whole state. We can hear one of their primary low band channels. So the guys on nights that work around the freeways and whatnot will listen to that and try to catch the guys coming off the road. But in a conference call with all the movers and shakers of [State] Highway Patrol three weeks ago, I said, "Listen. I'll trade you. I'll give you my A-bank. You unlock the other half, other side of the low-band equation." You would have thought I was asking for everyone's first born on that phone. "If we do it for you, we'd have to do it for everybody. We'd have people on our channel that'd be unmanageable." It's the same shite that everyone had been predicting would happen if we ever had anything that was like you had. No one would be able to talk.
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	People are dug in. I don't know how a handful of civilians can make the case that if they were to allow me to have their channels, it would interfere with the highway patrol officers doing their job, given the fact that the civilians at best work at a little lab playing with transistors, or they manage the people who play with the radios, or they manage the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								people who make sure that the transmitters and everything work, but they don't know shit about what's going on out in the field. I can have a CHP officer out in front in a life and death situation, and he will be calling his dispatcher to call our dispatcher to call a cop to come help him.
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	And it's happened. And it happens up and down the state... It's happened to me. You go over the [Street]. I was in an unmarked car, me and my partner, following what, at first thought, was just an auto-booster, but we didn't have enough for the stop. But as I worked, my private cell phone calling the car rental agency to find out who had rented the car, and then doing some follow-up computer work to realize this guy was a very bad guy that I knew of, who always had a gun with him. And so once we got over the Bay Bridge, got towards the [Street] tunnel. We started to lose comm, so I'm talking to dispatch on my phone. And I'm trying to get them to talk to CHP, to get CHP to come out because I'm in an old hoopty car, and so it turns into a chase, goes up [Street] to [Street], and then all of a sudden, there is 16 outside agency, police cars chasing me. And I have the phone on speaker on the dash, and my partner was driving. And I'm talking to the dispatcher, and I'm telling her, "Okay. Listen. I don't know what you told them, but you got this all fucked up."
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	We don't train any of our officers to be comm L trained. We don't take the comms part of it seriously. We just take it for granted that it will work, and then someone else's makes sure that the towers are up, and that everything is up, and turn it on, and it works. But we don't train individuals at all the stations on what to do if all sudden, you can't talk to dispatch, there is a problem.
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Yeah. What do you do if all of the sudden, dispatch goes off the air? You're going to drive to dispatch to see if anyone is home. Right now, that's what your average cop would say. They drive over here and see what's going on.
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Radio. And you might get some of it-- now the driver is going to be depending on the urgency of the run and the response. You're not going to be able to spend a lot of time reading along texts on your screen and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								safely operate the car. So your passenger is going to be your comms guy, communicating with dispatch and reading the CAD. And whether they need assistance or they want backup units, all that is going out over the air. It's not getting typed up. It's going out over the radio.
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	A multiband radio-- not multiband, but a radio that - and they exist, and Harris makes it, but we didn't buy it - depending on where I am, it will choose the best way to communicate with home whether it's through radio, through Wi-Fi or through cellular. It will choose the strongest signal and that's how-- instantaneously.
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	In real time choose. So, if I go into a building that hasn't been updated, it's going to switch to cell, and it's going to communicate with the dispatchers via cell phone. And then I don't care if the building owners didn't want to spend \$6 million in their antique building, their historically preserved building. No one wants to spend this money, and they're going to fight it. So wouldn't it be better to use the technology that exists that your phones use between cell and Wi-Fi every day--
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	No. As far as technology goes, I mean, we focused on the commutations aspect of technology. Information sharing across platforms, I shouldn't have to run you three or four different ways to get an FBI return, to get this return, to get that return. I should be able to run your driver's license number and get everything I need.
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	And the more back to the-- what do I want to know when I'm going up the stairs? I want to know everything up to who cooked the dinner so who's in trouble. How many times I've been there, has CPS been there, has APS been there? All these things. A good dispatcher will see some of these things if they run the address separate. But if I'm running up the stairs and someone dialed 911 and put the phone down, and it's check on their well being, and then they won't answer the door, and then I have to force the door, which creates anxiety for the autistic person or whatever, if I know right off the bat that I'm dealing with someone with a diminished sense of communication skills [laughter] or a different set of skills, I'm going to approach it differently.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	LE	U	Field Responder	46-55	21-30	Male	LE-U-011	Yeah. The dispatcher that someone's called and says, "Hey, my son is--" because the call taker is only going to listen to so much of your input before they have to get the thing up. So they're not going to listen or they don't have the capability to process the nuances of what you're telling them so they can type it, answer the little questions that come up on their computer-generated checklist, whether they should dispatch who. But if there's some way-- I don't know. Get back to communication and technology training.
Communication	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	Q: And communication on the radio with them? SME:Very little. Very little.
Communication	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	I would say you have to have both. You have to have a base. Dispatch gives you the base. You want to be in communications to know where they are, so you're not walking into something blindly, especially, if this is a repeated offender.
Communication	LE	U	Field Responder	56-65	31-40	Male	LE-U-012	Yeah. Google Translate's on the phones. And the reason why I say-- I guess, interpreter just comes into mind because [City] so multicultural. It's just not your regular English, and Spanish, and Cantonese or whatever. It's everybody under the sun that's here, which we welcome anyway. And you have to be able to communicate with all these different nationalities out there. And even when we have the interpretation service, I can't even recall now how many other languages. It used to be a trifle, which they were a lot [laughter].
Communication	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	So with our department, we have our line up in the morning. It's like roll call, I guess in other departments. They give us information. If we're looking for someone or if there's someone that's wanted, they'll show us a BOLO or a be on the look out for. Information that's passed down through the captain or command staff, if someone is ill or if there's a birthday in our station, we kind of relay information. So we have that in the morning, and then we have what's called secondary line up, which means a few of us will go grab coffee somewhere else and just catch up on the week, especially if it's our Monday.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	They're in the same center, but they still have to contact them who's at a different desk maybe 20 feet away. We're not connected with fire or the medics. The medics and fire are connected to their own channel, so we would have to switch our radios to go to a different channel to contact fire.
Communication	LE	U	Field Responder	36-45	11-20	Male	LE-U-013	We don't. Specialized units can contact [State] Highway Patrol. We can in our cars. We used to because their was channel was different. They have better technology now, but we still have old radios on our car that would connect to CHP. And the sheriffs are on our-- some of them are on our channel; they do patrol in our area. But it's still hard to contact [City] PD. We literally have to either call the dispatch on our cell phone or have dispatch call them on a phone and notify them that we're on the border. We don't border any other county where we're at. But I used to work [[City]?] which bordered [City] and [City]. So you had to call their dispatcher and say, "Hey, there's this in your area." Or our dispatcher would call them on a cell phone and let them know that we're in their district, because the border would be a line.
Communication	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	So yes, because the events that we'll get-- it's either we could have an impromptu protest would show up, a demonstration. We'd have the response from that, which would draw on our resources from patrol. But in addition to our own district, we would be drawing from the Field Operations Bureau. So they would be assigning additional personnel to come down. As we're dealing with that, either we share a channel or we get another channel. And we try to coordinate that, meet with the spokesman or whoever is in charge of the demonstration, coordinate with them on what their plan is, and then coordinate our response to that.
Communication	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	So the PD, in [City], you have the patrol. So they'll patrol the sector cars and manage the different response to call for service and needs in the particular sector in the district. We have what's called Traffic Company, which is our motorcycle officers. We have some that are assigned to each district station, but we also have the unit as a whole that responds

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and conducts their own traffic enforcement operations. They are on a different channel and don't usually communicate anything to the district unless it's going to impact the district. Though we seem to stay within the district. There's parking control officers that are out there all the time doing enforcement and traffic control for different new street configurations.
Communication	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	So the communication at the larger events, the issues become when you've got multiple entities involved. So you've got the police department, the fire department, the medical services, the EMS guys that are actually on-site. Typically large events have medical staff assigned to the venue, and the purpose for that is so that we're not drawing from our fire department site to go into a footprint that already has medical staff there, so it minimizes some of the impact for the surrounding district. In addition to that, the security staff and personnel that are at the venue because PD will be at a lot of these larger events, but the responsibility for the security for these events is actually with the event. So they'll hire their own security companies, their own volunteers, so getting communication in a timely fashion, and the information disseminated from all those different components to the point of contact for the PD and do our command post and then coordinating that with the district station at the same time. So a lot of times, we'll get a different channel, another PD channel, separate from the district channel.
Communication	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	And then to try to put an event in there and try to coordinate in an event on their channel would be very difficult. Because in addition to just having the activity that goes on there, the ambient noise with the stages, the speakers, just the overall den, you wouldn't be able to get it out. So it's a big part of-- we coordinate communication with the event planners, the stage managers, often by their radios that they have there because we're not giving them ours. Because that just doesn't happen. So we try to have either a liaison from us with their staff, into a command post type situation, and then have that information pushed out.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	But if something like that was available, I think something that would be a lot easier because that would be a channel that would allow the private entity to speak with the city agencies and actually close some of the gaps.
Communication	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	So usually, for the officers that are assigned to the particular event, and they all know they're on a particular channel, and they'll monitor that channel. Each squad has a sergeant squad leader that's assigned that will typically monitor that radio for any communication coming out and then designate what personnel would respond to a particular call. We know where officers are posted within the venue. So they'll have a call sign for a particular quadrant within the venue. So at the command post, we know particular officers that are in these locations. So when we contact them, we'll go officer to officer, just unit-to-unit kind of communications. And if there's an issue there, then we'll dovetail in dispatch, and then we'll ask dispatch to raise that unit. Sometimes, I don't know, maybe they're just luckier than us, but I don't know if they have a better broadband or broadcast ability, or if the officer had maybe changed channels, or whatever it is, but oftentimes, we'll utilize them to communicate with those officers if we don't get a direct, but often that's not an issue as much because we'll have direct communication with them.
Communication	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	To communicate with fire, if there's a fire call that we need, we coordinate through our dispatch. And then they go to whatever channel that they communicate with fire because it's completely separate from ours. And then they'll go the response in from fire. If there's medical, if we have a good communication going with the medical that's on-site within the command post that's already established and we can communicate with them, we'll do that. If we're not getting a response from them, if there's going to be a delay for any reason, we'll notify our dispatch that will notify our fire and have a unit responding in. And then they'll draw from outside districts. So depending on what kind of staffing the medical personnel have on-site for a particular event, they could be

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								impacted and unavailable.
Communication	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	So if, say, it's an event that gets really hot and they get a lot of people falling from heat exhaustion or girl over intoxicated, and the units that they do have assigned to the event are now tasked trying to deal with that, and the ambulances that are on site that are now transporting are unavailable, we will coordinate through our police dispatch to get another fire unit to come in. And that's never been an issue coordinating that. So we staff the channel with a dispatcher who monitors and then keeps a log of everything else's that's going on for the calls for service. And if there's a need to query somebody's criminal history or something like that, we would utilize dispatch to do that as opposed to the officers on site because they're able to run it much faster and get us back the results and do that. So they're there. We don't ask the dispatchers with much with a whole lot of involvement in the event, depending on what the event is. But for the most part, it's unit-to-unit communications, and the dispatchers there as a resource and a backup if it goes beyond of the scope of our ability of what we need at our level.
Communication	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	Because we have the cell phone that's engaged now, we have the body worn cameras. They're linked together now. So you're going to have one with the other to be able to utilize them. And officers have them and they're required to have them with them at each event. That is a good backup. It's not a guarantee because, depending on where they're at, some venues we have zero cell service or they would just be poor cell service. So it's a good backup if we need it, kind of send out a message, "Shift your personnel over this direction." Maybe we'll communicate it that way. But first line communication we use is the radio. And then if we can't, then we'll try to raise somebody on their phone and ask them, "Hey."
Communication	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	Yeah. Depending on what's needed, yeah, there is. But a lot of the marching orders and the instructions are already given at any of these events at the lineup and at the briefing. All right? The expectations, the parameter, what the idea is for the event, and then what the chain will be

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								if there is a response for something or a need. We establish that. And then the proper contact for any of the officers that are on post is that squad leader. So that squad leader is pretty diligent as far as staying in communication with the command post or whoever the event commander is.
Communication	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	Radio to radio. Yeah. Not so much person-to-person. So the person-to-person, once that venue gets started and people are on post that person-to-person is not really person-to-person. It's unit-to-unit over the radio that you'll deal with radios.
Communication	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	...Communications, everybody speaks to each other, talks to each other. It's the calm before the storm, usually for calls for service because we have a large district. I mean, it's a pretty good size district. And the calls for service could be minimal at a moment and then spike. So depending on the day, you'll get these thermal meters of crank density towards the afternoons or towards the late nights or whatever, but then you've got all these different calls for service in the middle.
Communication	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	So it's interesting because the sheriff's department, for the most part, doesn't have patrol units on the street, but they do have units that are occasionally on the street, so they do monitor the district stations that are on our channels. So if we're looking for them, we'll try to raise them on the radio, but unless we know they're assigned to something, then we won't find them. The sheriff's department, if we have a large event, will assign their units to us. They'll be on our own channels. They'll have their own call signs. We communicate with them. If we have a large demo or something like that, where all of a sudden we are going to have a lot of arrests, we'll call the jail and coordinate with them that way. So we don't share a channel with them. They have their own channels in the jails. So on the street, we have minimal communication, and I think that's just because of a limited presence from them on the street. Fire, we have no direct communication with them.
Communication	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	...So if it's a medical call for service, we have a pretty standard format that we'll give dispatch. It's the location of the incident that we need, the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								particular observation of whatever the injury is, the age and sex of the person, and whether they're conscious or unconscious. And we'll push that to fire. Fire will make their own determination from there depending on that call for service on how they'll respond and then they'll respond. There will be no communication beyond that, just that we're coming, which is fine because the officers are already rendering aid or engaged in whatever they're doing, either ensuring the scene is safe. To be in communication with fire asking a bunch of questions, I think, would be a detractor, so that system works.
Communication	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	...We've got the airport where we've had [County] made issues down that direction. So there definitely is a need to be able to communicate we the other agencies. So that is a huge resource that we have now. The department cell phones, not just the fact that we have the cell phones, but on those cell phones, we have access to our crime data warehouse. We can run the mug shot system from our cell phones and actually look those up. CalPhoto from the phones, we can actually look and see and try to get a little bit more information from somebody.
Communication	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	. So we utilize that going through the websites and trying to figure out that stuff and then try to have a pretty open communication with the event planners. Because at a lot of these events, I mean they all come with their own agenda. They all want to get more for less and have a great event, which is great. But for us, we're trying to get as much actual information as possible and coordinate it from that, and care less about their event. It's going to happen regardless. But trying to get the best information for us is a big one.
Communication	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	So we communicate closely with our DEM folks, their emergency medical guys. Because we can kind of see what their plan is, where they're going to be situated but also try to work out a better plan for our communication between them and us and whatever else is going on at the event.
Communication	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	..In addition to that, when you're trying to locate officers that are non-responsive at a scene but you're able to see them on the board, you can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have a coordinated response to go to that particular location and actually see if there's a reason they're not coming up or responding. You can actually do that. You can click on that board, send them a direct message to either their MDT or to their phone because you now have that ability on the board or on the board under your screen on the computer whoever it is that you can actually go to that and everything is just interlinked.
Communication	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	Reception. So the beauty of a big building is the fact that it's a big building, and it interferes with your transmissions. And we're rolling out the new radios. We're running into that, but these are areas that we've already known existed for bad communication or no communication. Getting private entities to think beyond what their own infrastructure is
Communication	LE	U	Field Responder	46-55	11-20	Male	LE-U-014	But other than that for communication, really, the reception for the area that we run into. [City], really poor reception. [City], I get the back side of [City]. Almost no reception.
Communication	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	I don't think it would be much different. So with everyone in here, it's just-- I mean, more [as?] person when you're walking by or it's email. I don't know. That's the main thing. And the guys that I know or I'm more friends with, we text on our personal phones outside, and sometimes we text at work, the same thing when it's not necessarily work-related, or it's just hey-can-you-come-over-here-and-see-me type of thing. But it won't change a lot. It's going to be basically the same. Email, and we all email. Email's kind of that professional-- it makes it real, I guess, and then it's official. So we all email. I don't know. I'm not the biggest fan of email, but we do it, so.
Communication	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	--so I can send a message. If I'm out on patrol squad, I can set a group, so all of them are grouped together, and I can send it to the whole squad, that type of thing, so.
Communication	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	... So it's usually done here at our dispatch center than everybody go to some random radio frequency, and then trying to communicate that across the group that's all deployed on a scene, so it's much easier to do

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it at- we're at the trunk than it is to do it at all the branches. And we can monitor other agencies' frequencies as well as state patrol, and so I can go and I know where I can talk to other agencies on my own radio frequency, if I, for some reason, need to reach out without being patched. I can find that avenue, but it's a little more difficult to do that.
Communication	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Yeah, that can start with people. And then when you talk about technology again, there's always spotty coverage, especially when you then get out of that car, and you're talking off a mobile device as opposed to a boosted car device. Like you said, what we talked about earlier, the interoperability between agencies and/or radio systems, and/or frequencies. I mean, I don't even know if we can communicate with somebody who's not on 800 megahertz. I don't know enough about our system to even understand whether that's even possible. Talking outside of organizational, so going from police-to-police or police-to-fire, and without the cumbersome ability to have to change radio frequencies, and that type of thing. I think that a lot of radio systems and the methodology in which we communicate is still pretty cumbersome. Obviously, email is very fast, but that's not something that we use to communicate on a scene or in an in-progress incident. That's something that you go back to the office and have to answer. Somebody has a question about something so you answer it that way. So--
Communication	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	The airtime is usually what causes things to crumble because if I can't communicate because everybody's trying to get on the air-- if I can't communicate to people, I can't tell them what I need them to do. And you can have incidents fail because you can't get that direction out. To me, that's the thing we've got to do. So we've got to come up with alternate ways to be able to communicate with people, or to get the information of, "Okay, listen. Officer [Name] is there, officer [Name] is there," but be able to do that without having to use the radio.
Communication	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Our current radio system, we have common channels. We don't use them all the time, so when we get somewhere we have to make a conscious decision of, "Okay, let's put our channels together." Which I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								think is not a bad thing, because again you're cramming a lot of people on there. But we do have the ability with our new radio system with [inaudible]. I could probably tell you about that. We have the ability to patch frequencies and we have common frequencies with local law enforcement as well as the fire department, so we can get on the same channel if we need to.
Communication	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	So in specific to patrol, they're doing more proactive police work. But some of the calls well, actually, the dispatcher will actually put it out as information and so if they're close by, they can take them.
Communication	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	No. Like I said, for me, I'm not a very technologically savvy person. Never have been. My daughter fixes my phone for me. But just being able to prioritize, because that's the one thing that I notice is-- like this protest on Saturday. Very easy, no issues with communication, because nothing happened. But as soon as something happens, communication goes out the window. You can't get on the radio. So part of it's internal of getting people to understand, "Listen, this is the hierarchy. Get on the radio if it's an emergency." And then for me, it's just going to be finding the money to get the technology to the officers - of tablets, of cell phones, things like that. Our department's trying to get larger. We've actually gotten the authorization to hire up to 200 more officers.
Communication	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	And if it's a big event, say, it's a big building fire where there's a multi-agency, multi-department response, then we would setup a common command post. And so the commanders for the police department, the fire department, whatever their city agency, they would all be there and be able to talk face-to-face at a command level. And then those individual commanders could talk to their respective subordinates on their respective radio systems. So sometimes, it gets a little complicated to get information back and forth, but that is very, very rare. I think in my opinion, we've always had an excellent working relationship with the fire department, and we just work out the communications issues on a as-needed basis.
Communication	LE	U	Field	56-65	31-40	Male	LE-U-030	It becomes even more cumbersome but much the same way because if

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					I need some information from [County] sheriffs, again it's a matter of going through our dispatch to their dispatch to whoever they're trying to reach out to. Now, there have been occasions where I've given my cell phone number to whoever it is from the other agency that's trying to contact me or I've gotten their cell phone number, and we've had those telephone conversations, but those events, those situations are very rare. There's been far more numerous times where I've communicated with someone from another jurisdiction on an issue, not an ongoing, in-progress incident but some other mutually inclusive situation. And that's predominantly emails or sometimes a phone call. But operationally, it's not easy to talk directly to someone on the radio from another jurisdiction.
Communication	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Yeah. I mean, so there is a tremendous amount of communication that goes back and forth now on cell phones instead of-- because each precinct, there are five precincts in the city. Each of the precincts has its own on radio zone. South and Southwest Precinct share a radio zone. So there are four main radio zones, like there's East Radio--
Communication	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Yeah, yeah. We talked about it. So we went this way and then these guys ended up making an arrest. It was a guy in a stolen car, and there wasn't quite a scuffle, but almost a scuffle. So they got on the air and we came zipping around, and now--
Communication	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Yeah, yeah. We do a lot of texting.
Communication	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	It's irrelevant to me, but he feels it's important. So I mean, we've met with the captain, but it feels like to me, what needs to happen is, is if he wants me to think like him, then he needs to tell me why it's important to him.
Communication	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] I think electronic mail is the biggest form of communication.
Communication	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] Messaging. So you might roll messaging and email together as a primary and then I would say my second is phone and in person. There's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								sometimes that I just feel better communicating with a person.
Communication	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] More discussion. I think you can communicate your point better or there's no emails and messaging as you know just from texting can not portray exactly what you're meaning to portray, right? And I think face to face, I just think you can communicate better that way.
Communication	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] Yep. So yeah, we used a 800 megahertz trunk radio system here. That's the primary means of communicating to the first responders on the street. We use sort of the car-to-car messaging which would be through our CAD and MGT applications. There's probably a lot of that that goes on.
Communication	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] So I'd say the hierarchy is radio, voice radio, and then messaging, whether that's email or instant messaging, and then phone.
Communication	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Yeah. And we don't have first responders often coming into our dispatch center for face-to-face communications, most strictly done by those other means.
Communication	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	--hurt somebody or impact an operation. And then also the privacy part with the address blurring and things of that nature.
Communication	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] Well, and it's hard with communications, and even the street-- both the street and communications, because you have minimum staffing. So you can't pull people off. The very people that you need there that are the boots on the ground are the people that can't take the time to be pulled off into the meetings and the this and the that.
Communication	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Usually through emails. People will call. We have a system as far as like updates for the parcel and then that will include road and address points where we built a script and once a week we run it and so if the assessor breaks out and plats a new subdivision and records that new subdivision then I get they create new parcel ID numbers and then so there's a script that runs over the weekend that says these parcel ID numbers are not in the GIS layer so that tells me that there's new stuff that they did and then I can go in there and update that and do those updates so yeah and as far as you know other things that need to be

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								updated you know people will send me an email saying this address needs to be updated or this thing text messaging thing needs to be updated or who knows what so yeah.
Communication	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Yes. Yeah it's mostly email. You know occasionally phone calls but they'll it's nice of the emails because it's a written document and you can always go back to that. It's like it's a way of keeping track if you've done it or not right because you can just delete it when you're done with it. And if it's not deleted then you still need to do it. At least that's the way that's my unfortunate work plan.
Communication	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Communication problems. I don't know everything causes problems right and that's such a cop out answer but it's true. Over communicating, under communicating you know sometimes you tell people too much information than they need, sometimes you don't tell them enough, sometimes you don't tell the right people the right things, sometimes you tell the wrong people the right things, sometimes you have communication technology that doesn't work. I mean it's computer, it's technology, it's electronics right? They don't always do what we want them to do. You know software has bugs. It breaks and so you have problems with software, you have problems with equipment, you have problems with any of it yeah it's just the cost of doing business. It's kind of the good cliché for that.
Communication	LE	R	Other Public Safety Personnel	36-45	6-10	Male	LE-R-043	Well I'm doing it poorly so I probably won't give you the right answers and I know there's no right answers but anyways you know I'm talking mostly amongst the first responders here, the county commissioners and the [state] and so I'm more of a liaison between the [state] and the local responders as we go through this. My work with the local responders would be more the you know the emergency operation plan, the EOP they call it in developing that, developing your all hazard mitigation plan.
Communication	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	Well we do lots of it over the air and we are continually doing lots of it so prior when I first started like I said we had pagers which was not cell phones which seems weird even ten years ago but we had pagers and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the we would run all of our wants and wants over the air so from a privacy standpoint or we were you know saying [name] date of birth, address, valid suspended, registered sex offender, concealed weapons permit holder all of that was coming over the air. If we couldn't readily identify them we use socials so we would be given social security number over the air all of which can be picked up by a scanner that a lot of people listen to and we've gone away with that with CAD in the last couple of years really kind of pushing communication.
Communication	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	I think it really for me focuses around communication because I can't effectively I mean I'm only one person so when I'm on a scene I need to get resources, I need to figure out what I need to do to stop the situation from getting worse and that generally involves other people so I need to be able to quickly concisely communicate with them. The other thing that would be really handy that I would love to see is some way to run and ID from a radio so all of our ID's have barcodes on them now.
Communication	LE	R	Field Responder	26-35	6-10	Male	LE-R-044	Well crap I just left my GPS in the car you know just having kind of a device or something that's all in one that can do a lot of different things and communicate and be able to communicate you know having inoperability that's really the key for me in my mind is being able to talk with whoever we need to talk with to get the resources that I need. So for me it's really about communication I guess not necessarily other I'm trying to think of any other technology that would be cool.
Communication	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] It's with other law enforcement. It's other departments, [counties]. Over the phone we'll talk I've had to talk to [county] in [State] that's as far as I've had to talk to. It just depends but as far as other first responders like life and fire we do the same calls and life and fire code 3 or code one and our dispatch will take care of it.
Communication	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S2] I couldn't answer that. I mean I've worked dispatch for four days when I was in training but I mean there's a little bit but it's nothing major. If we say we need life and fire they all have headsets on they can all hear what we're saying so when we say hey life and fire here now. Fire dispatch gets on and helps the fire when we said it. Life on the other

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								hand there's been times on injury accidents where because usually in town we usually only have one or two ambulances running at times and there's times where they work three counties. They don't show up for half an hour and we need them there within 5 minutes.
Communication	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] Cell phone or radio. The county is with radio. [county] we can communicate with them through our radio. The jail we can through our radio. We do have frequency on there for it's called [Organization] which is other state agencies that we can speak with but most of the time we don't need to speak with anybody else out of [county] major county.
Communication	LE	R	Field Responder	Not specified	5 or less	Male	LE-R-045	[S3] For the most part they try to stay a little bit similar but I know [county] is [city] but I know our 88 which is our intoxicated driver is their vehicle registration so different ends of the spectrum. I mean sometimes it's everybody knows that the only one that I've known that is seen around the same around the state is 10-8 and 10-7 which is I'm on duty I'm off duty or he's alive he's not.
Communication	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	Well like I said we're often alone so sometimes there isn't a whole lot of communication. We're monitoring yeah we're monitoring usually we're on our radios and if a call comes through it's on our radio so that's generally how I'm getting information if I need it is through the radio but a lot of times you're just out there you in your car yeah.
Communication	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	We really don't. It's very difficult for us to communicate with fire. They've got radios and we've got radios but they don't really talk very well together and so I know we can we just don't really. It's just easier just to call them up on the cell phone so we'll figure out which community's responding and often times when we got a fire there our fire trucks from a lot of these different small towns going.
Communication	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	So (00:14:50) it's not that hard but it's also kind of not it's not through the radio like the rest of our communication is with dispatch. Dispatch is sending them usually the calls.
Communication	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	Well they aren't always real comfortable right. We got this microphone here and you got the cord and it kind of wraps around and you got the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								radio and it's a little bulky sometimes but you know that's part of being an officer here right it's that's what we need to communicate, that's what we need to do our jobs and so I think I don't know we're just very used to it.
Communication	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	Oh I don't think so not very much no. I would say that I think dispatch has gotten better since I started. They've gotten better at just communicating what we need and I think some of that is learning, some of that is just you know people getting better at their jobs but no I don't think things have changed all that much not since I've been here. It's only been 7 years.
Communication	LE	R	Field Responder	26-35	6-10	Female	LE-R-046	. We already talked about the fact that the radios don't work everywhere that's the biggest problem really. We use the radio all the time that's what we're using to communicate and so when that doesn't work then we got to find something else that works and maybe that's a cell phone but then if that cell phone doesn't work then we're out of luck then we got to drive someplace else until we get a signal or the radio works so that can be complicated there so I would say that's our biggest problem. Maybe I would say another problem is we have trouble getting dispatchers and so that's kind of a communication problem for us because then we don't have anybody there or we're always having to train people and you know there's always a learning curve there. There's a learning curve to any job and that makes that difficult I think for those people yeah.
Communication	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	They truly are. So most of the time they talk by radio and then you have sometimes they say such stuff they really shouldn't say but you let it slide you know it's like the other day we got in a chase and this guy was doing over 120 miles an hour in a Mustang convertible and [Name] gets on the radio and says [county]. I don't know what he got up under that hood but it must be something good you know and it's like and coming from where I come from it's like that's not really professional but in the context of here it's kind of funny. So you let it slide and then folks are talking about did you hear what he said about you know what I'm saying

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								but you want to keep it reigned in and not get too out of control about with it but I mean it was funny you know.
Communication	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	We're improving. Before they didn't communicate with anybody. They truly didn't. Some of the fire guys they had one guy in particular that was very difficult. He wanted to be in charge and he didn't want to do stuff. He wanted to make me do what he wanted me to do and I'm not that guy. I'm like listen I'm respectful of you be respectful to me. He refused to come out to a call one night because I hadn't called him back yet and he called out here and cussed out my dispatchers and then he got in court and was ugly so I said that's fine so I went through and documented everything. At the fire association meeting I said hey this guy is making you look bad. This is your business you deal with it but I'm not going to call him back.
Communication	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	We do. We'll do that through dispatch. State patrol is on a different radio system. We'll contact their dispatch. We'll contact state patrol. A lot of our guys has the state patrol's phone numbers and they'll call directly. State patrol works off stats. They need a certain number of tickets, certain number of DUI's, certain number of accidents. We'll come them directly and say hey, how far out are you? If you're working they know who is working. You know we all hang out together and talk you know we have good relationships. Last night had a fire over there near [county] line.
Communication	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	Q: And so most of that communication though would be through cell phones? SME: A lot of it is through dispatch.
Communication	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-048	It started through dispatch and then actually we seen some of them had the other cell phone stuff but most of us still let [Name] know so and so and so and so.
Communication	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S3] Not to mention, typing. We use an app to communicate between our agency and with other agencies so we're also on they're typing to The [City] or whoever trying to deal with each other. We always got a number

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								of things going at once.
Communication	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] Dispatch. I mean if we're over in a certain area the way our unit works is we generally communicate within our own little group. Dispatch doesn't really get involved unless we're addressing a certain problem. Like I said we don't handle necessarily the 911 calls for service. Now if we're in a certain area for a certain type of crime burglaries for instance we'll let the dispatcher know that and we'll be on a separate channel from the regular patrol units and then the dispatcher will switch over and say hey I got a burglary in your area so that way that's our priority that's why we're there we head over that way but in the meantime like we said all these other forms of communication if we're working on stolen cars that's when we have most lines of communication come in because the stolen cars travel from jurisdiction to jurisdiction and we're getting this information from so many different officers.
Communication	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] Yeah we're texting, emailing, using the app, on the radio I mean we're just blasting out information.
Communication	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S4] Well day to day if we're out doing something we have this crown trend of sliders where kids are jumping in the cars at gas stations because people leave their purses and their keys in their car. Well if they're happening on us but we know they live in [city] we talk to [city] we'll just flip on their channel and talk to them. Hey, we've had a car stolen or vice versa they'll let us know so we have great communication there. On the UASI end we've had full scale incidents where training incidents so I'll go to one area and we've had comm checks or whatever and we've been able to talk to the command posts and incident command and whatnot.
Communication	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S3] And to touch on what he said non-incident type things. The [abbreviation] group itself has you know become a huge communication to where if you need anything in another jurisdiction or hey we're looking at somebody down in your jurisdiction you know anything from police chiefs down to line officers have tools to communicate with each other like there's a SWAT commander group that has an email group and all

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the metro SWAT commanders you know they meet monthly along with team leaders, team leaders another level they meet monthly and communicate on what incidents they've had and any kind of training or what something new that they found on the SWAT incident so I think the communication has become a lot easier amongst jurisdictions in just within the last 10 years.
Communication	LE	S	Field Responder	Not specified	Not specified	Male	LE-S-050	[S2] But now now I mean like we just know we have good relationships with everybody around here and just it's been a lot more activity on the communication end along with meetings.
Communication	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	Yeah we it's probably by most standards not too much communication but our dispatch is in the center of the police department. It's accessible by the officers.
Communication	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	...It is there but I think for purposes of like offline communication people are going to use their cell phones and we use our radio system quite a bit.
Communication	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	She would have been the person to be with but they did like a ISD inline at [name] to allow communication so they're on the radio there so they have operability with our main campus but their portable is not going to reach here.
Communication	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	...If they go on a call they might need a CAD they take it with them and most officers keep their portable tuned to our channel and may change their car radio to the county channel so they can hear what's going on but your portable should be on the channel you need to be on so with regard to you know communicating with [name] and CAD you can just hop on the radio and say and we use the same codes and signals as [name].
Communication	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	...We're actually going to and I'm sure this is stuff you're talking about there's a conversation on a plain talk happening here because we have to communicate with multiple jurisdictions.
Communication	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	And have. Some even know our codes and signals if they're really bad guys so our ability to communicate with [name] and [name] and out at

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[name] so they're in the [city] which is a tiny little city with almost a part time police department. They have a super close working relationship. They contact each other on phones but they also have radio operability and there's [county] Sheriff that provides coverage as well and they have their radios so we're dealing with three jurisdictions, three different codes and signals so we as an agency are kind of trying to find our way like how do we communicate with everybody we're trying to communicate with and how do we also deal with the fact that we're bringing officers and in most cases we sent some people to mandate but a lot of our officers are coming with prior experience and so you have a Hodge podge of codes and signals.
Communication	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	...People are having a bad day but it can really impact our ability to communicate but I think when the situation gets stressful or it's a high you have officers messing up, you can have dispatchers messing up and I think when if people just don't have the intellectual capacity to do the job or are not properly trained you run into problems
Communication	LE	U	Field Responder	26-35	6-10	Male	LE-U-051	... We have these radios for a reason. We have means of communications. We don't need to always but there's probably more face to face here than there should be because of the commun--not in terms of personal interaction but people like during the course of their job either calling or going back there to talk to dispatch instead of just doing it I think either over the radio or on the MDT but again this is me offering my personal opinion as opposed to what but I think I speak for the communication supervisor as to what she would like to happen.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	... You can open it up and then you can go through each bulletin and read if it's a... BOLO, be on the lookout for a murder suspect or someone who's requesting X patrol in a certain neighborhood or residents due to crime. It's all listed there, so we don't have to keep passing that information on. They can read it for themselves as soon as they come to work.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	Same way, either via radio, I'll call them and then tell them, look, check the bulletin, make sure you're patrolling this street tonight, ex crime, or I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								will call them verbally on the radio. I'll also reiterate, make sure this is done.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	Ninety percent of the calls, their assignments will come through communications
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	For us it's not an issue. It's more like our first responder, our EMS. We have [Ambulance company], we have a private company, [Company] Ambulance, they're a private organization that works our areas. We have their radio, but we frequently don't get on the radio to talk to them. We will call through communications and let them know to notify them. Fire Department is actually dispatched from here in that other room, so all of our dispatchers for fire department and our agency are in the same building... So those are all the other agencies within our [County], they're hearing exactly what's going on in our end, we hear what's going on in their end.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-052	Yes. Because during the hurricane, the hurricane something of that magnitude, you will get outside agencies and after [Event] we had units come down from Oklahoma, sheriff's office, just from [State]. [City] Police Department came down into our area. They all worked. So we couldn't use our own channel. We actually used a regional talk around channel. And our signal codes are not the same in New York. Our signal codes are different just from one agency to another because what we normally use our signal codes are our criminal codes. For instance 14-103 is a criminal for disturbing the peace. So we dispatch it as a signal 103, which it all coincides with that number.
Communication	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Pretty much, yeah. I mean I get up early every day; I'm at work for 7:00. I mean in the afternoons, usually every afternoon I usually stop off at the fire station, make sure I didn't get no mail or if we had any calls during that daytime, see what, see exactly what went on. If I need to sign any paperwork, any phone calls I need to return there. I mean at the police department I kind of have two secretaries and a staff that work under me, so throughout the day they're constantly taking messages and calling me so that's pretty much taken care of on that end. But the fire

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								service side is all volunteers, so you just you've got to pick up the information when it comes in or we all come together and when there's a call or when there's a meeting or training, other than that you don't keep in contact throughout the day on the fire service side.
Communication	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Alright, so in the volunteer fire service they don't have computers in the car, nothing is computer animated for them. Everything comes over the radio or pager. You wear a pager on your belt, and they have a paging system that they send out that alerts the fire department. All are done through radio systems. We don't have computers in the trucks or anything like that.
Communication	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	Well you can talk through the radio, or you can use your cell phones, I mean we use cell phones a lot. Especially if we coordinate in training or if they have like officers on the scene, and I'm unable to respond, he'll call me on the phone or you know.
Communication	LE	R	Supervising Field Responder	36-45	21-30	Male	LE-R-053	... That way the officer doesn't have to change noting on his radio whether it's the sheriff's office, the fire department whatever channel, whatever departments that are working, that incident, we bring them in a box and they can stay on their regular channel and they'll be able to hear the Sheriff's office talking, they will be able to hear the ambulance talking, everybody will be on one channel.
Communication	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	Well, between unit to unit, of course you've got the radio traffic, and they use their cell phones quite a bit. There's some face-to-face, where they meet with each other and discuss what's going on or whatever, but typically, they respond to calls, if it's not enforcing traffic, of course, if they're out checking for speeders or whatever, but then you have your dispatch calls to your accidents, your medicals, sometimes if they need assist, Fire Department. Again, your domestics, robberies, just the whole spectrum of things that can happen that law enforcement has to respond to.
Communication	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	No, we have no communications in the car other than the radios, the 700 radios.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	Not so good. The radio coverage on a 700, when you get into a building, it probably drops out on you. We have areas of the [County] that, the terrain, because of iron ore or nickel in the minerals in the makeup of the soil, block a lot of the communications. I'd say the cell phone coverage is probably as good as our 700 coverage from our repeaters, but again, most of our official communication goes over the radio, and we've got some really bad areas in the [County].
Communication	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	Right. We ended up using down there, in [City], was Verizon, I think, their push to talk, so now they've brought in a whole bunch of cell phones, and we were able to talk on different talk groups and that type of thing. The only radios that really work well for us down there were the 150 MHz that the Fire Department had, and we were able, from [City], to hit the repeaters up here with portals, it was fairly impressive, but again, that's 150 MHz, and the wavelength on that is a lot better.
Communication	LE	R	Field Responder	Over 65	11-20	Male	LE-R-054	Well, if you go through the Incident Command System or--what is it, the FEMA programs and things like that, not all communications--you've got your incident commander up here, so not everybody is talking to him, so with the talk groups, you can go, I think, seven or eight in your span of command, they talk to this guy, he has seven or eight people over here, this guy has seven or eight people talking to him, and then they kind of build up the tier to where they're talking to the guy that's over the whole incident, so--
Communication	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	The majority of the time it was all through, you know, radio. You would get dispatched via radio, you would communicate via radio. Supervisors would contact you. You know I think more recently text messages and emails are kind of becoming the norm but I think for most patrol officers radio is their main line of communication.
Communication	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	Right. You'll get, you know, if you're working a case or you've left a case card for somebody and they'll call and you know maybe an officer's out patrolling and that victim needs to contact them so they'll patch through to cellphones or...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	Yeah. We... we probably don't use our MDTs quite as much as somebody might. [city] whose call volume is super high, you know, we don't generate quite as much radio traffic. So we still do a lot over the radio. But the calls are pushed through CAD, through their, you know, through their MDTs. They're able to run license plates and enter their own paperwork and stuff like that. But you know a lot of our calls take you away from the car so you're still doing a lot of the information through the radio and having communications enter it and then come back and complete your reports.
Communication	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	... So we utilize the inter-op, the state inter-op radio channels when we work those large events. You know it kind of changes how things are dispatched and we go to plain talk on those days. So, yeah, it's a little different but you know the main piece of pushing the button and talking is still the same and it's still--you know certain groups communicate more regularly through text messages like our commanders will set up a group text and they're communicating that way. But if we have an incident, radio is probably going to be our primary communication piece.
Communication	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	Yeah, we're [Laughing], we're slowing moving away from it. We've had the mandate out for about 2 years now. But you know if an officer's been using a 10 code for the last 20 years it's hard to get that out of their head. We still do call numbers. Everybody here has a radio number so when you at--you know--a football game you can't say 102 to headquarters 'cause nobody knows who that is from the other agencies. So we go to agency, officer last name, so it would be[University] PD, [Name] to headquarters. And so the Sheriff's Office does the same thing, State Police does the same thing so we're all on the same page.
Communication	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	Our... until we're set up and running on those interoperability channels and you know on a daily basis most of our contact and communication until they arrive on scene is through our communications officers. Our officer on scene is seeing X, Y, and Z. They're relaying it to communications. And communications is relaying that over to EMS or fire or whoever is coming.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Communication	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	Then it's kind of a face to face interaction, you know? Assuming it's just a normal, everyday, we either had a small fire or medical emergency of some sort. It's just interaction between their personnel and our personnel. Hey look, this needs to happen. We've got to do this and we have to do this. You know? I would... in a major incident that's going to change just because of the mutual aid and everything that's going to be going on and I... I'm not quite knowledgeable enough to speak exactly on what that would look like.
Communication	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	Oh. Cellphone that includes social media, email, text, phone calls... day to day a radio is not a big piece of my operation. I have one that sits on my desk and I listen to it obviously when I'm in my car I listen to it. But typically my communication is not through there unless we would have some sort of major incident then obviously that changes. That's pretty much it for me. Do you want me to speak to the officer's side or you--
Communication	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	--going to talk to them? And then you know I think we've already talked about it but they have the MDTs in the car. So they're getting information and communication through that. They're dispatched via radio so they're getting information through that. And then any face to face interactions that they may have where they're getting information and communication.
Communication	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	Maybe personal calls. They may have a question that they don't want to put out on the radio that they need to ask a supervisor. There may be a... if we have a large incident or maybe not even a large incident but an incident where we don't need a lot of radio traffic, I think they use their cellphones to kind of coordinate through that. I think if I go back and listen to our audio recordings for communications there's probably a lot of, hey, what was that you dispatched? What--I quite--I missed that. You know? And so they're going back and pulling that information that way. So yeah, I would think they use them a good bit on a day to day basis.
Communication	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	So you know as a typical patrol officer they want to know who, what, when, where, and why, you know the typical where am I going, what am I going there for, and who am I looking for when I get there. And I think

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								our--and maybe it's just our officers, but our officers are very demanding of our communications officers on details before they actually get to the scene. You know who, is he still there, did he leave, where was he going, this, that and the other. Whereas you know I think maybe a lot of agencies just dispatch the call, the officer gets there and figures it out when they get there. Not necessarily a bad thing it's just kind of the way we operate here and our communications officers are really good at trying to go that extra mile and get that extra information so that they have as much as they can before they get on the scene.
Communication	LE	U	Field Responder	36-45	11-20	Male	LE-U-055	But at a more upper level, you know you're looking at how are we managing security for these sites, maintaining security on campus. I have to communicate with this patrol group. I have to communicate with this shelter group. We have to communicate with EOC. So the reliability is the biggest word I can use in situations like that. You don't want to have, I know my cellphone jammed, I couldn't get the call to go through. The radio tower went down. So reliability is the key I think when you're looking at those situations.
Communication	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	Most of it is radio communication. I stress with my guys, I like to keep the net as clear as possible, I don't like a lot of radio traffic that doesn't need to be there, if it can be sent in an email, or we can talk by phone, or we can meet face-to-face again, we're small, so I can usually--at the office and go find them and meet with them in about five minutes. Important information, emergency information over the radio, I don't need an entire synopsis of what they did back over the radio, it just ties up the radio for an actual emergency.
Communication	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	Right, and so would you say that--I mean, since most of the communication happens through dispatch, I would imagine.
Communication	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	It can, certainly. I had several situations where, when I first got here and it was like that, I worked the same hours every day, which was 11:00 at night to 7:00 in the morning, and we also used--we have a car-to-car on our base radios that a lot of us would use at night. It was just the culture then, that we liked to use the car-to-car for those conversations that we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								may not want our main dispatch, just because it will take up too much time. I would rather give somebody a phone call, if we want to let the whole shift know something, if we had to get that much larger synopsis over the radio, we weren't tying up a primary channel, we were tying up a channel that all of our calls were coming through.
Communication	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	We have a very large EOC, Emergency Operation Center, that they activate for those events. They will--communications, they will link multiple channels to one channels, so the officers here won't change their radio from Dispatch 1, but various inter-op channels that the state has will get patched into that, so that way, everyone can hear what's going on for Dispatch. There is the change--generally, an officer may go to a call while a game is going on, and we are going to be a bit busier, they will roll into a different channel, and just let communications know what channel they're going to, to pass things like license numbers and names, if they need to call in a name or something like that.
Communication	LE	U	Field Responder	26-35	6-10	Male	LE-U-056	That seems to work pretty well. The big part there is, when I was in Motors for it, we got a list of all the tasks we were expected--all of our escorts, and each escort had what channel that escort would be on, so for us, we used--let's say it was Inter-op 4, Inter-op 5, which were the escort--those channels were set aside just for escorts. In Motors, we were expected to communicate with each other a little bit more, especially while we're doing something, we have to keep people who are also in the escort abreast of what's happening, if the intersection is not secure, or I need another officer to come up there and help me secure an intersection for the escort, I need to be able to say that to them, and we generally ran--even had one channel was for away team escorts, and one channel was for home team stuff. Athletics, I'll give them credit, everything happens on the mitt [phonetic] with them. They've got it down to a science of when they have to move people, when people--how long it takes to get somewhere, so you are--when that escort sheet says, you know, 16:00, we're going to do something, we're starting that at 16:00, so there's never multiple groups

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								trying to communicate on that same escort, about different escorts, on that same channel about different escorts.
Communication	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	We do use them. I would say that we don't use them as much as other officers. But yes, we will use them. If we're out in the field taking care of something, we will use our radios and contact communications that way.
Communication	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	We use cell phones a lot of times to communicate between each other, but yeah.
Communication	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	... We were on scene just to make sure, we had cameras and crime scene resource where we could assist the fire inspector if he needed us. So we had an incident command set up. But other than that, not too, too much. We do communicate with other law enforcement in the area.
Communication	LE	U	Field Responder	36-45	11-20	Male	LE-U-057	A lot of text messaging too, yeah. But I don't, we don't typically text message with our victims or suspects or anything that we're looking for. I guess if there's no other way to get in touch with them, they may send a text to meet up with them. We try to avoid that. But we will text amongst each other, me and the detectives, say hey look, I need you over here to help me collect some evidence, where are you at? And they would respond that they're doing this instead of picking up the phone and talking. A quick text or something like that.
Communication	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	Generally it will come through our dispatch center and it could come through radio, it could come through phone, it now has the ability to come through computer or in-car computer, so all three of those are often used on an everyday basis, quite honestly, so, you know, and certainly email is another option that we have. You know, there are just so many different sources that we get our information from; I am sure that I am not thinking of right now, quite honestly.
Communication	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-059	Well, you would be surprised. We are a little archaic in our communication system, and again that is because, you know, we are not a high density population county. So when I talk about this, I am not talking just specifically for our city, I am talking more generally with our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								county - a bigger picture, if you will.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	S1: Okay. And so most of that communication is face to face with colleagues? S2: Can be email, texts.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Umm, I mean not really; I mean, usually for communicating with like school staff or something that don't have the radio capabilities that we have. We try to - actually there is a culture here - we try to limit our radio traffic - we are not gonna give, you know, a two-minute narrative on the radio when I can just call them and tell them.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	For the most part. You know, the dispatchers do a pretty good job at determining what questions need to be asked, you know, so that we have an idea what we are going to; some domestics, for instance, you know, Dispatch will ask if there are any weapons in the house or if someone is intoxicated, and in pretty much all the calls that we get dispatched have an element of questions that would typically go with them. So I mean, generally it's pretty good. And some of the stuff may be a little more colorful stuff that you dont put over the radio is entered into the MDT.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	It's almost nonexistent. We do have the frequency but it is a county frequency so, you know, if I wanna talk to [Town] Fire, I can do so, but a majority of that cross-discipline radio traffic is unheard of generally.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Oh, for sure. You know, like if I have to pass on something to the fire department, I generally call back to Dispatch. Dispatch then will call the county dispatch. County dispatch will then relay it on the Fire frequency over to the Fire department, so there is a huge delay.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	I mean, I can't call [County], call on the cell phone. I can't call [County]; we don't have their frequencies available, so it would all have to be relayed from us to here to County, to their dispatch to their officer and then back to the state again.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	You are passing through a number of people which will tend to distort what comes out the other end but also you are touching base and using terminology that is so different, probably, and you are hitting different

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								points along that snake that they might not know exactly what you are talking about. So they don't know what they are hearing, they can't really pass it on accurately, I don't think.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Oh, absolutely. You know, computer programs would be nice to enter the person's information one time and have it populate across the applications.
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	Which was identified as a big problem then and it still is. You know, our inability to have dedicated channels to talk to different folks where the Fire has the capability to go to different channels, so for instance, there is the main Fire frequency that everybody gets dispatched on and then if there is - if it is a big enough incident, they might go to a secondary channel, but once they go to a secondary channel, people that don't have that, whether they are, you know, coming in or not, you know a lot of time, agencies that respond in won't have that secondary frequency so they won't know what's going on. And there are certain things you have to do once you arrive on scene, so how do you get that?
Communication	LE	R	Field Responder	46-55	21-30	Male	LE-R-060	You know, because the big push is to stay off - we really only have the main frequencies in all - I shouldn't say all, like we have our own frequency, [City] police have their own and the sheriff's department those are pretty much the three. But every fire department has the main, so everybody tries to stay off the main because you don't want to tie it up, so they go to their second channel, and not everybody has those. Fire does, to a degree. At least the frequencies are variable, available for them if they want to put them in their radios, but nobody else has them.
Communication	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	I am pretty much just email and phone, yeah. You know, person-to-person contact when we have meetings and stuff like that but a good chunk of it is just email and phone.
Communication	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	S1: Okay. Okay. And for your patrol officers who are out there, how are they usually communicating with each other, with Dispatch, with you? S2: Well, pretty much it is through the radio system.
Communication	LE	S	Field	36-45	11-20	Male	LE-S-061	...it's the smart thing to do because for me to pick up here and transfer

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					over there is kind of dumb and up until 6 months ago, they ran a complete different radio system than us; we couldn't even communicate. We had an old 400 MHz radio at the front desk that they were on. They were at 400 MHz up until about 6 months and that is one of the big reasons why I think the guys are so hard pressed to combine with [city] because I mean, up until now, the only [city], as a road officer, I have probably dealt with [city] 3 times in 20 years because we never had any communication with them.
Communication	LE	S	Field Responder	36-45	11-20	Male	LE-S-061	Okay. So can you tell me about the kinds of technology that an officer out there in the patrol car is going to use on a daily basis?
Communication	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Most things are done with our police radios. We can also send messages over the computer if we dont want to call, you know. A lot of the public have police scanners and certain information that may be sensitive for specific crimes you dont want to go out over the airwaves where somebody is going to, you know, immediately post on Facebook or on the internet or call the station in a panic. So we will send that over our private messenger system.
Communication	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	...We communicate very well with them. We can see where they are on the computer. We can instant message them if we need backup, [unintelligible] you know, especially on shared borders. A lot of it [unintelligible] on our drive we share that border with [town]. If I see a [town] officer on a stop, I pretty much listen on the way to somewhere, I always stop, make sure they are okay, see if they need any help and vice versa. We communicate very well. It's difficult for us to communicate with the fire department because they are on a whole different radio system than us, so I can just, you know - a little different than trying to operate my radio and talk to them, I can't do that right now.
Communication	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	We radio to Dispatch and Dispatch calls them from the station. They will call their Dispatch and their Dispatch relays it to them. So it's a bit of a lag there, but at the same time, you know, you wouldn't want your radio picking up Fire stuff all the time because we just have so much chatter interruption it's - so. If we need an ambulance somewhere, I would radio

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to the station [unintelligible] station, you know, we need an ambulance to this address and then our dispatch would tell me, okay, and they would call [City] and then [City] would send their guys out and I would let the dispatch know, hey, ambulance is on scene or Fire is on scene.
Communication	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Usually Dispatch has to do that, too. Like I dont have [state] police's radio channel on mine so I can't just radio them. I know that getting that would be nice, but I dont know they are going to figure out a system that is not extremely complicated [unintelligible] radio now, but there are times you wish you could talk to them or Department of Corrections will come out to pick people up and you know, they got their radio systems where their guys can talk, we have ours and we can't talk to each other unless on you are on a cell phone or yelling, hey, you know, guys, we are on it. Then [unintelligible]
Communication	LE	S	Field Responder	26-35	6-10	Male	LE-S-062	Sometimes, there are communication - I mean, we try and be pretty good but now and again between like the 3 shifts; like midnight is almost like being on an island because you are cut off from all of the normal day stuff and every shift is different days - like you deal with the schools, nuisance stuff, if the businesses are open, things like that. Afternoons gets a lot more of the crime kind and then midnights -it varies, but the communication between days and afternoons is pretty good. Like a lot of times I will hang over and do traffic overtime for a couple of hours after my regular shift so I talk to those guys at noon, make sure that everybody knows what is going on, to let me know stuff that is going on in that afternoon shift. Whereas midnight is a little different, you know. A lot of times in the morning they barely got their eyes open, wants to get the heck outta here, not linger around and talk, but at the same time, I mean, we have, on our computer system, we can go there and read all the recent reports; we can see what happened last night. I generally try and read the reports every morning; if there is a problem, I will answer. If I think we are going to [unintelligible] some more I will know.
Communication	LE	S	Field	26-35	6-10	Male	LE-S-063	Yeah, I would say about in the 80-20; 80% probably face to face and then

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					20% that is probably going back and check the logs for the computers and scan documents or something like that or check previous calls to that area.
Communication	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	I would say about 85% of the information that we receive that we act on is through phone calls that we receive up front here and then -
Communication	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	Right. Yeah. We receive a phone call or a walk-in and I would say about 85% of the calls for service that we have are generated based off those phone calls and then about 10% of it is maybe someone walking in or [unintelligible] on the road or something like that and then another 5% is just straight off initiated on the road, so..
Communication	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	Yeah. If we need to get another car or additional resources or something like that, like a rescue unit, I can key up and say, hey I need a rescue over here from whatever I need it for and they are generally pretty good about that.
Communication	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	Yeah. I would say the majority of our enforcement activity is either somebody calls us and says, hey, there is a reckless driver over here on one of the side streets or to run stop signs in this area. Can you give us special attention? Or, you know, some officers have spots that they prefer to [unintelligible] give a ticket or two or kind of make their presence known, so, I would say generally, though, driving around until you get a call and then you are - call on your computer or via the radio.
Communication	LE	S	Field Responder	26-35	6-10	Male	LE-S-063	We - I know some departments have it but we do not have internet in our cars, so if we need to look some information up, we usually use our personal phones. It's only the detectives that are issued city phones, so; look at our numbers or addresses or other resources like that, calling on people's behalf. I have an app that I use for calling people on the road that I can call them with a local number that is not mine so, stuff like that as far as - the phone is the big one. Our MDTs are - we have a digital camera for taking evidence photos. We have radar in lighter units for traffic enforcement [unintelligible]
Communication	LE	S	Field	26-35	6-10	Male	LE-S-063	We can -if we need some information or something like that, we can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					type out something and run it off real quick and -
Communication	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	S1: Okay. And do you think that that is a useful tool to have when you are out there? What do you tend to use it for? S2: To call the station, ask a question about something.
Communication	LE	S	Field Responder	36-45	11-20	Male	LE-S-064	So it would be nice to have like a fully functional system that everybody could communicate with anybody in the state, you know, if you had to easily, without, you know; I mean obviously, you can send like a LEAN message to anybody in the United States, but I dont have the access to do that in the car.
Communication	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	I think in our agency with the resources we and our technology, I believe we are doing very well. How, we are reaching -- and for us, not just the way we communicate internally but how we communicate externally to our citizens -- I think we do a really good job with the -- we have a crime mapping initiative that's an online initiative that's on our website that you can go in and see what's happening in your neighborhood or you can set a radius up around your address to see what has happened and you can see and it is updated. If I come to your house to a burglary report, it is updated as soon as it is approved in record. So, you know, we update hourly on that thing, so we try to let people know what's happened in their community because we believe that those people are a great force equalizer, you know, you can't be successful in this job, in law enforcement unless your community trusts and supports you -- you can't. So, we have great trust within our community and great support. We really do. We are very fortunate to live and work what we do.
Communication	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	Yeah. We still have a server. We still have to maintain some things you know here. But, on our chain-based evidence from patrol, you know we will be looking soon to outfit and interrogation room, our interrogation room is downstairs so we can upload that to the cloud on our evidence.com platform so when a DA goes to look at a case, they can sit at their computer and pull every video, every officer that was there, any interrogations that were done of suspects, they can look at all that right there from that, they don't have to get CD here and a CD here and a type

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								of copy of this tape and it's all at their fingertips.
Communication	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	I have got the mobile radio and, you know, I've got weapons in there and things that I might need, but yeah it is more like an office to me. Then you know, I don't use the mobile battle units or anything like or the terminals like that. I don't have -- if I need to use at all, I will call somebody, you know.
Communication	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	I think so. I may be wrong about that. [Name] [inaudible] just called me while we were talking, it was [Name], but I'm not sure -- but, it's an expensive process to get through, but if something happened at Neyland Stadium on a Saturday in October, you know, you would never be able to get out on a phone, you just wouldn't. So, you know, you saw that in 9/11, you saw it in other places at tragic events where, you know, bandwidth was gone. I mean, you know --
Communication	LE	R	Supervising Field Responder	46-55	21-30	Male	LE-R-058	You know, [inaudible] [crosstalk] that I wouldn't know. Those radios they are using today for us are pretty advanced and, you know, we can talk to different agencies without -- you know seamlessly. And that is going to help if you ever have, you know, a major incident, you know, but I don't know about the timeframe.
Communication	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] Just so you know, in dispatch there's zone communication which primarily focuses on above-ground communication in particular precincts, and as chief was saying some are combined. One dispatcher can handle multiple precincts within a zone. Some precincts are so busy it's just one precinct in that zone. And then there's the specialized, citywide SOD and citywide where we have-- our citywide radio channels that handle protests and other details and counter-terrorism and special operations.
Communication	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] For the most part, police officers in the field communicate with dispatch and rarely-- unless the request comes in unit to unit in a lot of cases, and we have the ability to control that from the dispatcher position. However, there's a lot of special requirements that we have that make mission-critical voice unique. For us is that if our infrastructure is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								in use and a police officer is speaking to a dispatcher, in a lot of ways there are other people that contend. Voice traffic can get busy and other people can contend for traffic, or the dispatcher is communicating out.
Communication	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] They're supposed to have-- yeah. We essentially have 36 radio zones plus multiple citywide zones plus transit radio channels as well plus interoperability radio channels that we utilize as required to communicate with the fire department, if needed. For example, every second-alarm fire that's broadcasted out or received, we have a special procedure where we put a dispatcher on what are called our NYMAC interoperability channels and we assign one of those channels for that purpose. And so if there's a fire it needs to tune to that, or at a command level, interoperability, they can turn to those dedicated channels and communicate so that all those procedures are put in place. Recently, during the UN General Assembly, we activate special patches between the federal interoperability channel, which is VHF, and our UHF system. And we conduct daily roll-calls twice a day, and make sure that all lines of communication are open between federal and city, and really stay in authority because the MTA police is on there, [State] Police. And so everybody is-- all lines of communication are open. Hold on one second, please.
Communication	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...So we need to ensure that every single radio communication transmission is heard by the dispatcher, right? And every unit here is the dispatcher. So it's very unique when it comes to our voice communication. Again, the smartphone communication is greater situational awareness.
Communication	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...So we're handling the incident and, really, day-to-day. That's the majority of what we do. And so on a day-to-day basis we handle, I mean, really, department communications required just amongst ourselves. And even at the PSAC you'll see upstairs face-to-face or walking from one side of the floor to the other, there's a lot of communication that can happen that way just upstairs in the PSAC. But out in the field as well, as an incident may be growing, we deploy field command posts and other--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there are sort of forward command posts and command posts that are set more back. And there's really a lot of face-to-face interoperability going on in the field
Communication	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] Very easy. So, again, we have 24/7, 365 staff here that supports the dispatchers. And, essentially, we have constant communication. Our radio technicians are on the floor working with our other technology coordinators, I'll call them, to work any need. So it's basically an intercom call from the supervisor down to the tech room and it patches up like that.
Communication	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] .... Rarely is our communication point-to-point. Everything is done through dispatch, except in cases where you have your special- we have special TAC channels between the police and fire and TAC-U, but we have that point-to-point with the fire department.
Communication	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	Yeah. We're very good with communicating with them. I meet with them all the time. I speak with the upper echelon of their agency. But that may be- and I just wanted to touch upon that.
Communication	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...So Chief [Name] and I, we met and we're going to be working with him on making some adjustments to, like I said, tweaking some capabilities that we have. So giving EMS access to communicate with us in the subway, for example. There are ways to putting this tactical interoperability channel in all our radios, all their radios. So there are some things that we've done to optimize our interoperability.
Context_of_Work	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	Yeah. So for example, this station, we do annual sign ups. So each year, we'll bid for either fire division, patrol division, or special operations. Special operations is like our training units, our internal affairs, our community service officers [with the schools?], detectives, our motor unit. So anything that isn't kind of the two main bureaus falls under special ops. But fire bureau, within that bureau, you have a whole bunch of specialized assignments. Like this station has, normally, a platform, a ladder truck, and so that's a specialty assignment. This is also your hazmat team, so it's a specialty assignment. So within those

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								assignments, we have rotations for specialties that are anywhere between three and five years. So being the supervisor in charge of this hazmat program on A-shift, I have that window of I could be here in this role anywhere from three years to the maximum of six years. I mean, obviously, there are some [spin-up?] costs, and training costs, and just getting to know your job. Likewise, same with a canine officer, or a detective supervisor, or something like that. So it is a very unique challenging place to work at. There's lots going on.
Context_of_Work	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	And so our fire assignments-- so typically, on a first-alarm fire where another agency might be getting anywhere from 16 to 20 bodies, on a first-alarm assignment, to make anywhere from, maybe, 4 to 5 work groups, 3 to 4 person work groups. Our response is we send 12 fire base personnel, and then we supplement that with 6 patrol personnel.
Context_of_Work	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	And so technology, I mean, we have-- I don't know, like one, two, three, four-- yeah, so I have a computer on the rescue. I have a printer, all-in-one printer, and I have, no, three iPads. So when I'm putting together like tech ref for an event, somebody's doing technical reference using all of those things and then backing up with some of the paper stuff that's in the libraries on the rig.
Context_of_Work	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	... So they have a volunteer firefighter that their job is to come out to the scene and fly that drone and get aerial footage, relay it to the command post.
Context_of_Work	FF	S	Other Public Safety Personnel	36-45	11-20	Male	PS-S-001	So what we're looking at right now is because we're running so many of these currently because we're a couple of years after they implemented that law, and we're starting to see unit failures to the point where we're getting two or three of these false alarms a day. And for a department of our size, that doesn't sound like a big deal, but it's just three more calls that we're running all the time. So, typically, we'll have a rescue that has the meters go out on all of those, right?
Context_of_Work	LE	S	Not	Not	Not	Male	PS-S-002	...So managing change is huge. And the easiest way to do that is to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			specified	specified	specified			provide resource. When we switched to our digital radio, luckily enough, I led the project but I had a team of about 20 people for our department that's 201 [inaudible]. So 10% of our department participated in my change team. And I did that and I wanted a big team, or at least a good percentage, because I wanted them to not only-- I don't want them to say ownership. I wanted them to understand. I let them pummel with the questions. We train the heck out of them. And then we train the heck out of the rest of the line staff.
Context_of_Work	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	We've been very slow to adopt a lot of that and part of that is [State]. So you go to Arizona and you run a driver's license, you get back the thumb print and you get back a photo of the person. [State], there is no connection to the photo database which is held by [State]-Photo in the Department of Justice versus Department of Motor Vehicles. They make us do it separately. So you would have to log into a completely different system. They treat it completely different. You have to have a case number in order to get in and get the photo. I mean, in my mind, I should be able to take my phone, do a QR scan of a driver's license and see the driver's license return right there.
Context_of_Work	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	We have an easy flow. I mean, we're right around 38 to 40 percent available status. So I mean, about 60, 62 percent of our time is tasked, meaning whether it's self-initiated or not.
Context_of_Work	LE	S	Not specified	Not specified	Not specified	Male	PS-S-002	So from the EMS perspective, we're just basic life support. We're not paramedics. So from the EMS perspective, we're just basic life support. We're not paramedics.
Context_of_Work	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: I am [name] I am [Job title] for years and years, been here about as long as everybody else, 30 -- over 30 years and that's what we do.
Context_of_Work	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: [Job title], 29 -- well, October will be 30 years.
Context_of_Work	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S5]: [Job title]; and I am on my 23rd year. I am the baby.
Context_of_Work	COMMS	R	Not	Not	Not	Not	COMMS-	[S5]: My job, I would describe my job as making sure that the people that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			specified	specified	specified	specified	R-019	answer the phones know how to work the computers and that the computers do what they needed to do.
Context_of_Work	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: I would explain my job as making sure those people that answer the phones, know what they are doing and that they are properly trained and to make sure that we keep our accreditation.
Context_of_Work	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: I do the hiring process or see them throughout the process. I oversee their training process. Any issues that come up, personnel inside the centre, I handle and then oversee the accreditation.
Context_of_Work	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S4]: I guess, the main thing with me would be to make sure -- get them to understand that the radios are the lifeline to Fire, Police, EMS, public safety, you know, basic -- you know push-to-talk, whether to listen if they need help, that it has to work, that it has to work, make sure that the towers and all the equipment are up to where they need to be, you know, so -- so there's no lack in communications for -- to send help out to people.
Context_of_Work	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: So it takes a special type of person to do this. It really does. Because there has been people -- I mean, over my span. You know I have trained people and there are some people that are just, they are good but they can't do the dispatch part of it. They, you know, they are great on the phones and then want to move over and things have changed from the way we do it now to back when I did, you know, a 100 years ago, because I have had people come from the call-processing side moving on to Dispatch, and tried to train them and it's not that they are untrainable, it is just, and it's a different type of beast. It's the hearing and being able to listen to four channels at one time and type the information and remember this officer wants this information and this officer needs this information, you kind of got to prioritize. You got to be able to work on the phone and prioritize who gets what information first, because it could determine what's going on, you know, for that officer.
Context_of_Work	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: But those are not 911 employees. We share the same CAD, there's no delay in anything. We do transfer the caller, if it's a medical call to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[Organization] and then they do the pre-arrival instruction.
Context_of_Work	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: 90 something seconds, yeah if you are talking about telephone call, I think that is still around 90 seconds.
Context_of_Work	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S2]: Again, initial dispatch is probably 20 seconds, maybe.
Context_of_Work	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: I guess, the next biggest would be the bad calls. The ones nobody wants to hear. The ones you should never have to hear. Yeah. So those -- and then on the other side of dispatch, you know, when you get an officer shot and you are responsible for it, you know, that's -- that's high stress. Well, we teach them downstairs, you know, what to hear, what to listen for, (not what to hear but what to listen for), things like that. We don't see what the officers in the street are seeing. We just, we hear it and we maybe get a picture of it, you know, what we think it might be, but if we start getting video, I don't know how that will handle.
Context_of_Work	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S3]: You know, we follow their -- their call-handling guys, and then we send it. And then, from there the dispatch call-handling guy tells how many units have to be sent on what type of call. If it is a property check, it gets 1. If it is a domestic it's going to get two. So, that's how the general --
Context_of_Work	COMMS	R	Not specified	Not specified	Not specified	Not specified	COMMS-R-019	[S1]: We being 911, our job was to get a radio system in and we had a 20-channel analogue trunking system up here and we are putting in a new 20-channel digital system up here. So, our job is to get the system in, test it out, get the new consoles in, test them out and hopefully be ready for the users.
Context_of_Work	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	I am responsible for our communication center here in the 911 Center for AMR. So we primarily dispatch [County] 911. We also dispatch [indiscernible] the rescue squad. We dispatch all the first responders in [county]. We also take calls from our outlying counties; [county names]. We have some smaller EMS and they call in here and get the right numbers. We don't dispatch them, but we maintain the records. We also have another dispatch set up in the 911 Center in [county], and even

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								though I'm not over there, I really helped them get set up because their manager is more of a supervisor, a young man and they're smaller, they only have two. They run 50, 60 transports a day where we do over 200. Including we do fire and everything else, they just do their ambulances. So a lot of mine is set up leadership, because we help set up and get the equipment, get them put in, radios all that stuff. So in a nutshell, I am pretty much over, even though I may not be financially or physically responsible for all of our radios, telephones and communication for operations in East [state], I kind of, I'm involved in all of it to make sure that we're all on the same page, we're all doing the same thing and moving in the right direction, it's good for everybody. So that's more of what my job is.
Context_of_Work	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	We do what we call IFT transports - which are Inter Facility Transports, or anything that is not 911. So nursing homes, hospitals, things like that, we do the non-emergency transfers, so that's a whole separate business unit.
Context_of_Work	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	But we run it together. So by being efficient and me being able to be involved in all that stuff, we make that more cost effective and more efficient. I don't know, if you got to go inside but when you are done, I will take you into the center and I'll kind of show you what we're talking about. So we have a fire dispatcher, we have an EMS dispatcher, we have a call taker and then I have what I call a [Job title] that sits between the Fire and EMS and then we have two [Job title] dispatchers; one is out sick today and then I have a couple of trainees in there today too. So each one of them have a job, but all of them answer emergency phone calls and take emergency calls.
Context_of_Work	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	They have to code it correctly: emergency / non-emergency. Build it very quickly; as quickly as they can, with as few questions possible to get that right: emergency or non-emergency; get the ambulance dispatched or the fire truck dispatched as quickly as possible; and then keep up and maintain that the crews are safe, and it's that same repetition, that's the basis of what we do. There's a lot more into it, there's a lot more record

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								keeping, all those things; but that's the basis of our job. We are, I mean our business guys so anyone in our meetings I tell these guys that "you guys have got to understand we're a consumer. At Dispatch we're a consumer, EMS is a producer, and Fire is a producer. We make no money. We don't do anything that provides any income for this business."
Context_of_Work	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	So ATCO has a program called ATCO Meds and we use it on our computer when we [indiscernible] calls. It's not very...it's a new program that's just kind came out a couple years ago and they partnered with another company. So we've been working with them since we got this program a year and a half ago, to make it better, to work better for what we do, this is where you'll find out most things that are set up for communication centers are set up for government, than just dispatch. Most are either police-oriented CAD systems or fire-oriented CAD systems, but there's really nothing set up for EMS because it's on the east, they just always fall in ...so [county], they get an ambulance call they treat it just like a police call, they build it and they do it, and they send it. They don't pull stats, they don't look at efficiencies, they don't do all that, so that CAD works fine for them. But I'm on a CAD that I can pull out of, I pull reports daily, that's not a part of my job, except for the EMS and fire guys, we pull reports all the time. So I'm always looking, which they look at that too on the 911 side, how long do we have the call, how long before we get it out, that kind of thing, but I also look at the efficiency of our...so over your head is something extra we bought that 911 didn't buy. This is called OPTIMA. It's an add-on program to the CAD, and right now I'm looking at all the trucks that are available in [County] that are ALS for the 911 system. So if they're blue or green they're available, if they're red or orange they're on a call or at the scene of a call. So here are all the trucks that's available now, and here are all of our trucks that are on duty and in there they look at all that, this thing also has a deployment. So, we use this for our posting that is why I got it for them and we are two and a half years into this, I still haven't tweaked the way I want it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	They would come in and log onto the computer and pull the CAD up, get OPTIMA. Depends on which station they're at. Fire does a few little different things they have to do and I will show you that when we go I there, because they're just taking care of our fire department, [indiscernible]. So they have...Fire's a totally different piece than Ambulance. Fire, you know they run out of one station, they have their area; if they're on a call you send the next station that's closer, whether it's on the right or left hand side of that station; it's strictly straightforward and simple. Ambulance is dynamic, they are moving all. We could have 15 available and then 10 minutes later we will have three ambulances available because we had a bunch of calls come in. So we're constantly moving and if you look at that map, you'll see the shaded areas?
Context_of_Work	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	We'd get Narcan because we give directions so we had the direction cards: how to give CPR, how to control bleeding; so if those things are going on we will give those instructions to the layperson on the phone. So we will ask, he's not breathing and I can't wake him up - do you want to do CPR? - I don't know how - I can walk you through it, do you want to do CPR? And we walk them through to do CPR on the phone. So we had to add Narcan administration because we've never done that before, so it's really simple with them. It's easier with that; with cards, you had to pay money and print out all the cards. With the new, we will pull off a script, we write out what we want it to be, how we want it to flow, we send it to our medical director, he approves it, same as we do with our policies and procedures for standards of care and then we send it to APCO, and they add it and we load it into the software.
Context_of_Work	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	That was a huge event; we probably could've used 140 radios.
Context_of_Work	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	If we have to leave this building and go out and get in that truck, or if I go to our AOC, our operational center, I'm going to be operating those cell phones. Now my CAD is set up, our CAD which we have that they don't have, so we use Citrix, I don't know if you know Citrix so anything that I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								need, and again this is because of the HIPPA rules and security of it, so we built a secure Citrix system, so when I go to Citrix on my laptop anywhere outside this building, I can get to everything I need to sitting in my office. Or I can dispatch calls.
Context_of_Work	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	The other is, is if somebody would do that and not communicate. We're really, really fortunate here. So in [City] and [County], we all meet all the chiefs; we have the LAPC meeting once a month. After that meeting, all the chiefs, we have a meeting and we talk about these things. Fire department, police department, sheriff's department, rural metro, we're all there. So we do great; our EMS region, Region 2, our 16-county region, we meet monthly. We have the best of the best people to work together. I'm a private ambulance company, and we work great with all the other private ambulance companies and the other government ambulance companies. We meet and we take care of each other, we pool our money, sometimes we get money from the health coalition. We just bought those Broselow tape for years for babies. We still have one, but you have to replace them every so often and they're expensive. So Broselow tapes, you lay a kid out, and it not however long they are, and then it'll say they weight this and this is the color of the kid and here are the drug dosages for that weight, so it's a really quick thing for the [indiscernible]. So there's a new program called the PD-SLEEVE, because in a Broselow tape if something changes, and I just bought 10 of them, I got to buy 10 more because it's a prank call.
Context_of_Work	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	The PD-SLEEVE's you can change [indiscernible] it's the same thing as the Broselow, it's got the dosages from the weight and the size, but we can individually change and update and it costs half as much. So it costs half as much on the front end., but we got a grant through the health coalition and we just brought those for every ambulance service in 16 counties, through that grant. So, when we do stuff we don't do it just for us, we do it for everyone on the region.
Context_of_Work	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	My job is to make sure they're not mistakes that cause harm to anybody, or delays. But when I deal with our people, when I deal with irate people--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we had people that called the other day; I called 911 you showed up at my house non-emergency - yup; your big toe hurting for three days is non-emergency, but [indiscernible] - I don't care, I called 911, I want an ambulance here emergency. Doesn't work that way. I have those conversations all the time.
Context_of_Work	COMMS	R	Comms Personnel	46-55	31-40	Male	COMMS-R-020	Well it is because EMS has been the -- EMS is the stepchild that everything gets kicked to when nobody else wants to do it. So for instance: you are elderly, you fall down at home and you're not hurt, but you can't get back up and you just need help getting back up, but you're not injured. In the county, the fire department, or the metro fire department will go do that, pick them up. In the city, they won't.
Context_of_Work	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] I oversee the 911 center, the personnel responsible for the management of the daily operations and the technical equipment in the center and all of the partners.
Context_of_Work	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] So they're called takers. They handle police, fire and EMS.
Context_of_Work	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] Typical day. Let's see mine started at one in the morning. I just woke up and started working but no so usually when I arrive at the office I check in with the employees, discuss some calls that have been going on overnight if there's something pertinent or if there was any kind of technical issues that they had they've probably either emailed it to me or they report it to me when they come in and from there my day kind of gets going based off of whatever just got reported to me so if they say station 3's not moving then I've got the tool bag out and... I'm working on the station and but typically my day is consist of mostly meetings. All of the administrative budgetary tasks I'm responsible for and the scheduling which is that takes a good amount of time. The policies, procedures and any of that work that needs to be done, timekeeping so basically all of the operational tasks so my life is split up basically between operations meaning your day to day ordering what is needed, working with the radio technicians or the IT or vendors of some sort, processing invoices or timesheets or that sort of thing scheduling,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								working with personnel or working with the chiefs you know the users you know handling whatever issues are coming up.
Context_of_Work	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] And for the radio they handle 700 megahertz radios they answer on fire the HF radios and there's I don't know off the top of my head probably they handle four primary channels, radio channels and then up to six it's probably about right six to eight I guess and that's also through the [manufacturer] IP based radio system and the phone system is IP based as well and okay so there's the phone. They have a CAD system so their computer system they have eight different screens so eight monitors, CAD system which is operated off of a desktop and the software programs they run would be the CAD system itself, computer aided dispatch and then the our the eyelet system which is your criminal justice information. They run that program. They have a [application] which is a 911 text program that they use and then emails, general management, records management, they have the jail, they're able to take the control over from the jail so they're able to use touch screens to open doors or whatever they have to do if they have to.
Context_of_Work	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] Thank you. The EMD programs the emergency medical dispatch is through priority dispatch or it's [software] and they also use [software] for the daily DOR's and what am I forgetting [name]?
Context_of_Work	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] It's going to change things a lot I think. It's going to change how the calls are processed. It's going to change the transfer information will be I don't think a lot of people will even consider what the capability will be for the transfer of information, patient's records going to the hospital you know patient's records dumping into your CAD and then dumping straight to the hospital just because they've signed up for you know like the smart what is that smart 911 which even now through our text to 911 if that person has already signed up we can go in and pull that information if it's necessary.
Context_of_Work	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] So they get the address, the first piece of information, their name, their phone number, they determine the call type and then from there it will determine whether or not they're opening up the EMD program.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] Technically it's from the officers requesting it but we do receive requests from the prosecuting attorney's office if they have somebody who is requested discovery that we send it to them so yeah that's used. I wouldn't say a lot. We probably do two or three a month.
Context_of_Work	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] The questioning comes from the EMD software. You're not supposed to vary from it only mildly but there is a lot of decision making processes that are happening outside of that related to the CAD because calls can change or escalate in seconds so you're listening to what is happening in the background so you might have somebody that's just making little noises but then you can hear something else. So you have to be able to think outside of the box and kind of capable of building a bigger picture of what's actually happening if we're willing to but yeah decision making and decision making in short time frames.
Context_of_Work	COMMS	R	Manager	46-55	11-20	Female	COMMS-R-008	[S2] Well we have the code red up on our smart phone. That's for emergency alert notification and I guess I have Skype if I need it. Let's see mapping, voice recording, we have a mountain bike project app so mountain bikers will go wherever and it's anywhere it's not just here and then they map their ride and so the map actually shows you the trails and we actually had a 911 call where we used the app to help the rider get back because he was like I don't know if I should turn here because you end up with like four different choices of forks in the road or whatever to go so he wasn't sure where to go so we were able to use that app based off of what other riders had done to go okay well you're trying to get back over to [City] okay don't turn left there, don't take that one, go this way so we've used that one before. Code red. [name] is there another one help me out.
Context_of_Work	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	I'm the [Job title].
Context_of_Work	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	But I really answer to everybody, all the chiefs. We have 24 dispatchers and supervisors, and I herd them [laughter].
Context_of_Work	COMMS	R	Manager	56-65	11-20	Male	COMMS-	Well, right now we're in budget season, so I'm doing a lot of budget

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
							R-002	work..., I have to do a report on my report on my payroll. What's that going to be? Because that's our biggest expense usually.
Context_of_Work	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Writing those proposals. And then I spend-- in our comm center, I spend a lot of time with personnel. We had some issues with a call last night. So it happened to be a trainee and a trainer that were dealing with that. And so I met with them, and spent a few hours with them.
Context_of_Work	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	... It's pretty simple. And I pump some of those out too, but whoever it happens to be on duty as a supervisor, they come into our email and from the District Attorneys. Maybe if they just need a phone call, it might take 10 minutes to do that. Sometimes we have more complicated ones that they want, but not too time-consuming. [talking about keeping recordings for a year and dealing with the DA]
Context_of_Work	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	... That that's necessary so when I-- we do applications through the town, and then I have a dispatcher who calls those the first time, and she goes through and checks if they'd done everything right, or if they don't have a driver's license or they felonies, or they have whatever. And then if they get through that process, she sets up a test for them and we have-- we use credit call.
Context_of_Work	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	You're ahead of me, and it doesn't make any sense to me at all, but it's part of the packet that we buy for testing. And if they pass through that, all of those tests, they get it, I interview them. And then we start their background, if we like them to come to work for us, then we start their background and our detectives do that, [Name] does a lot of those.
Context_of_Work	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	[RE: university PTSD research] Is in charge of that. So we've worked with them. Worked with a group to do some research. We did our own and then we had the basic PTSD study that's online everywhere, and we took it and kind of promoted it ourselves among dispatchers. And we ended up with 1,700 responses on this SurveyMonkey survey that we did. It was completely unscientific, and we made a lot of mistakes but--
Context_of_Work	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	Yeah. That's probably my biggest push for me, personally, in workplace and our workforce. And one of my goals is to-- it's all part of retention, I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								think. So I just want to make it a good place to work. Kind of my goal.
Context_of_Work	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	So what we've done in the past is we've gotten data from [name] County, which the GIS department has sent it through to us and it's not the same, so we have to clean it. We have to make it match, and what we've decided this process that we're doing and everybody's on board with this again so far anyway, that 911 is going to live in the comm center on our own server, Town of [name] got a server for us. We got an [inaudible] license or whatever, we need there. And we're going to send it out to all these other entities. And so it's our data, we own it. We store it. If it changes you need tell us, and we'll send out once a month or once every two months or whatever.
Context_of_Work	COMMS	R	Manager	56-65	11-20	Male	COMMS-R-002	No, they do. We try to rotate every day. Since we have four disciplines, we try to have each person-- if there's four on shift we try to have them take one a week. Or they work four turns. It just works out. That doesn't always work because we have trainees and they have to have a certain channel, but we do try to rotate. We also rotate their shifts. We rotate every quarter, and you can pick the same shift three-quarters, but the fourth quarter you have to take something opposite.
Context_of_Work	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	...And in recent years, more of the police have taken over the call-taking, but the dispatching is still all career firefighters.
Context_of_Work	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	... So there are firefighters that sit at our operating channels. And as a dispatch supervisor, I make sure that when the addresses come over, they have their proper cross streets, apartment numbers if there's apartment missing, or look for all the little details, make sure that when-- according to our dispatch policies, who the closest transport is, who the closest manpower piece, if it's a fire call type, the proper number of fire trucks and fire engines and rescue squads are going to that. Because we have a lot of policies that dictate who goes on what call. And so I make sure all of that gets implemented. And then obviously if any of the firefighters need to take a break or anything else, I immediately drop into that role, and I'll take over either the dispatch channel or operations channel.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	So this massive river that is very fast and very dangerous, around a lot of people who may or may not know the dangers. And there's people that unfortunately drown every year in the [name]. And we do all the rescues and all the body recovery and everything else.
Context_of_Work	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	Which is, for everyone except the fire department is between an 8 and a 12-hour shift. Only the fire department, because of how we work in the field, we work a 24 hour shift up here.
Context_of_Work	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	... We have an 18-hour work shift and then we have a six-hour rest period, so within those six hours we're able to go and rest. And then during that 18-hour block, we have a two-hour that rotates during the daytime, so we have a PT period, which is physical training.
Context_of_Work	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	Most of us work PT, so between 7:00 AM and 7:00 OM, someone is always on a PT period, so that we always have our staffing level upstairs on the operations floor, but down here, they can go to lunch or breakfast or whatever. They can run some errands. They have to be within a 10-minute response.
Context_of_Work	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	–the local people that are trained. They have all the EMS equipment. They come in and They stabilize that patient and then when the transport unit shows up, They take her to the hospital.
Context_of_Work	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	... So we have a language line that we can call immediately and it has close to 100 different languages that are available to us.
Context_of_Work	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	...So then this person is still waiting on the phone this whole time. We do the best we can, and then it could be anything from my smoke detector battery needs to be replaced to my house is on fire to my infant child is having a seizure to I think I have stomach pains but I don't know what it is
Context_of_Work	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	So you call 911 because your roommate, spouse, family member, neighbor falls down, split their head open, they're bleeding, they're unconscious, and I'm asking you what the address is. Then I have to ask you, "Can you repeat that for verification? What is your phone number?" And then someone will say, "Well, just give me the ambulance." What is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>the phone number for verification? So you have to duplicate that, then we get into our medical questions. They don't understand our medical protocols that are nationally based, and that it's [State]'s state law that we have to ask. It's the EMD, or the emergency medical dispatch and emergency fire dispatch and then emergency police dispatch, so all three disciplines have protocols we have to ask the 911 caller, that helps pinpoint exactly what type of help that they need because of all those variables. And some of the public doesn't quite understand that, and they range from, "Just send me help," to the belligerent people that just go off, and they're calling for help but then you get this verbal assault and abuse of F-you, and they just start cursing at you, "Just send me the help," click, and they hang up. And all you want to do is help them but you need to calm their stressors down. So that adds to your tension and your anxiety and your blood pressure because they're angry at you and you have to get through your protocols, to the person that's a little child that says, "Help, help. Mommy won't wake up," so then you got to talk to a little child, and then you get to talk to an elderly person who can't hear, "Sir. You're in the hospital [laughter]. Hit the nurse button."</p>
Context_of_Work	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	<p>Most of them we get medical calls. Firefighters love to go to fires. It's just that with the newer technology, obviously with NIST you guys have your whole fire section... Fire research lab is amazing but for firefighters, we don't like you guys because [crosstalk] we don't go to as many fires, we don't go to as many fires because you guys are doing a great job. There are a lot of great advances in fire protection so we don't go those calls as much anymore. But that's good. So we deal with a lot more medical than fire and within that medical realm, we deal with a lot of just typical things. People in their 40s, 50s, and 60s have chest pain, trouble breathing, stroke. So any sort of cardiac, breathing, stroke, diabetes, seizures, those are our main ones that we run a lot of. Then you have this massive group of just generic sick people. Everything from headache, fever, nausea, to stomach pains and just simple little-- and then we have a traumatic injury card that goes to anything from they stubbed their finger, to an amputation. So we don't run those too often,</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								but I would say the majority of our calls are the sick people and then you have the chest pains, trouble breathing, strokes, seizures, diabetics.
Context_of_Work	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	I don't understand it. So we have to go through from scratch and ask everything. So once we get their name, their phone number, and the address, then we ask usually, "Do you need the ambulance or the fire truck?" Well, the very first thing you hear in [name], the first thing they ask is, "Do you need fire, medical, or police?" And then once that's divided, then it gets sent to the fire/medical call takers or the police call takers. Then they deal with the address and the name and the phone number and all that. Then the first thing we ask is, "Okay, tell me exactly what happened." That's the first protocol question. Then based upon that we're trained, because someone can say, "I stubbed my toe because I fell down. I have chest pains, I am a diabetic, and I have a history of cancer." So then you're like, "I can do four different," so what's the highest priority? So we've been trained to go "Okay if somebody stubbed their toe and fell down, why did they fall? Is it because they had a heart attack?" That's more important, or did they just stub their toe and fall down? Then it's just a simple fall, or are they having trouble breathing because of something else? Or is their arm broken because they got hit by a car, or something else? So exactly, there's a huge difference. So we need to kind of investigate that. Some other people will say, "I'm not feeling well, I have a fever, and I don't know what to do." Then we know automatically, sick person card. We have 33 different cards. Yes, 33 different cards and each card has a specific set of questions.
Context_of_Work	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	...So we're trying to tell them, we just caught you in your lie. We're calling you and they'll say "Yeah, that's correct, we're okay." And then they have the follow up of their Field Captain and their Battalion Chief that follows up with, "Hey guys, you can't do that. This is a 911, this is your job. Hungry or not, throw a candy bar in your unit and do that." And that's where it's been helpful for us because if we have a legitimate emergency we can see who the closest unit is, and we can take advantage of that technology that didn't always have before.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	COMMS	S	Comms Personnel	36-45	11-20	Male	COMMS-S-003	I've been here eight years. And I would say the call taking has gotten better, because before we only had firefighters. We had no script. So when someone called up, we'd kind of say like, "Fire department, where's the fire?" "Oh, I need a medical." "Oh, where does it hurt?" "Oh, I have an arm injury," "All right, well cool. Thanks, we'll send you help." And then we'll just, at our own discretion, decide whether it's ALS or BLS. Very few follow up questions. There was no set standard, at all. So that was a huge change, having this nationally certified, state-mandated program come in. So now for a firefighter, it's kind of hard to say these questions because we're trained at a medical level. This EMD program, this set program is trained for a non-medical person, who can just come off the street and start asking questions. They have no medical background at all. So for someone who has a medical background, it kind of hinders you a little bit. But it also, if you accept it and just go with it, it streamlines everything and there's no variables, so you're actually doing the best thing for the person who has an emergency because you're asking all the appropriate questions, without any of this, all right we'll send you whoever I feel like. So that's good. As far as the actual radios and computers and stuff, again like before, I think we've gone backwards, at this specific center. It's not as nice.
Context_of_Work	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Well, my job title is fire rescue captain, currently assigned to the emergency communications center, and I am the shift supervisor for A Shift.
Context_of_Work	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	No, I think we're one of the very few communications centers that has firefighters actually doing the job of dispatching and call-taking.
Context_of_Work	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	And that's basically what I do. Now, when something does happen, like a little bit of turbulence, that's when I have to step in, and when you see something, say something. That might be in the process of being taken care of by someone. But I need to verify that it is because if I don't say something and it's not being taken care of, then it's back on me.
Context_of_Work	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	No, we just do fire. So a trainee will take the ETC course, EMD, EFD, then they'll take a CAD class, which is taught by one of the uniform folks that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								work for us. And that's a week long, and then they'll go to a two-week simulations lab, lab simulations where we'll focus on call taking and dispatching in the training lab.
Context_of_Work	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Let's see, well, I talk to the public if they have a complaint, for example. That will immediately come to a supervisor. So I will get their name, phone number, what the gist of the complaint is, and I will forward that information to my boss who will then figure out who it belongs to and distribute it to that chief...So my job is to collect the information, not make any judgments or anything, just thank them for the information and then send it along. I talk to the PIO, if there's any-- we have specific incidents that require us to call the PIO--
Context_of_Work	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Yeah. Had to talk to our technology battalion chief this morning about a radio outage for a short period of time. Had to talk to one of my employees because he was being a bad boy [laughter]. So, yeah, I talk to lots of different people during the course of the day.
Context_of_Work	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	The first thing we do is make sure that we look at the line-up and make sure that we have the right amount of people.
Context_of_Work	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	And then we assign them their positions for the day. We rotate through phones and radio. We also have civilian-- I'm not sure if [name] touched on that. We have civilian personnel as well. So we're also looking at their line-up and seeing who's coming in, and then based on the uniform line-up and the civilian line-up, we do our rotation schedule, so who's sitting on the dispatch channel? And who's sitting on the operations radio channel? Who's sitting at the tactical talk group channel? And who our call takers are. Then we rotate them throughout the course of the day.
Context_of_Work	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Usually, the dispatch channel and the operations channel, they're just listening to their radio channels. I'm listening to everything. I'm listening to the dispatch, operations. I'm listening to mutual aid, so if [name] County calls us for assistance, then I don't necessarily handle it but--
Context_of_Work	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	--I'm looking to make sure that someone else is handling it. But it's really not a requirement that everyone listen to every single channel. I think the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								bare minimum would be the dispatch channel, ops channel, and the mutual aid channel. And then if we ge
Context_of_Work	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	I guess when it gets really busy, I think my stress level goes from a zero to a two when I walk in the door, right off the bat. And then once we get really busy and we have a fire going on and there's a lot of things for me to do, I have a lot of notifications to make. I have to make sure that if there's big area coverage issues, I mean, that's my job to make sure that I move resources in to cover the big gaps, the big holes, so that can be stressful. Not getting calls dispatched in a timely fashion, that drives me crazy.
Context_of_Work	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Well, what we do is we just dispatch them all at one time.
Context_of_Work	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	...So we dispatch all three and we wait until all station alertings are done cycling, and then we'll dispatch all three at the same time vocally.
Context_of_Work	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Once for the address, and the second time to verify it. So address verification, you have to ask it twice for a cell phone caller. Then they ask for the phone number, and that's usually correct with [inaudible] that comes over. The phone number is usually right. And then we ask their name, not a big deal but if they're struggling or-- it's really not a big deal. Then we move on to we open our protocol, EMS protocol or fire protocol. And then we begin asking them the questions on the protocol.
Context_of_Work	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Mm-hmm. The call takers will-- there's a question about a call like, I'm not sure which protocol to use, they'll come to the supervisor and say, "I'm not really sure what protocol to use here. The caller's saying there's smoke coming from the back of the house, but they're not sure if it's coming from the house or coming from the [inaudible]. They're not really sure. What do I do here?" And that's when I'll make a decision, send it as this. Then that's on me, not them.
Context_of_Work	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	So then the call taker will process the call and then once they get a call type, the call automatically goes to our dispatch pending screen, so the dispatcher-- and it makes a beep, and that lets us know that there's a call

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								for us to dispatch. So the dispatcher opens it up and the supervisor, the dispatch supervisor opens it up, looks at it and makes sure it's the right call type, the remarks match the call type. And then the dispatcher will dispatch it.
Context_of_Work	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	The dispatcher will get a response package recommendation from CAD, and then if it looks good, then they'll hit F12 which dispatches it, which sets off the station alerting in the station and-- yeah.
Context_of_Work	COMMS	S	Comms Personnel	46-55	21-30	Male	COMMS-S-004	Well, we're required to read the script, but we do have, at the end, it's called an emergency disconnect so you don't have to read all of the post-dispatch instructions in the protocol. You can just say, "Ma'am, I have more calls to answer. If any changes or it gets any worse, call us back." And then you hang up and you're onto the next --call. We have something called condition red, which means that we have so many calls to answer that our resources are very limited so we go on condition red and that means that I can send whatever I want to a call. So, I love condition red [laughter]... I get to make decision... use my experience to make decisions, "Okay, you don't need that for this call." Send that unit to there. Send that unit to that call. But it usually happens during a thunderstorm or a big rain event, where we have a whole bunch of swift water calls and it just overwhelms our water resources. I go on condition red and that means I can send one boat to that call and one boat to that call because our water resources are limited to begin with. And I can't send two boats to that call, I can only send one. Just go and do your best. So that's called condition red.
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	I answer emergency and non-emergency calls from the public. I interpret that information and I translate that into a language that public safety and first responders can understand. I collect important and impertinent information. I disseminate it appropriately and I also assist in the dispatching of emergency services to a need.
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Sure. So when I come in I will always have my breakfast and then I come in here and to our roll call room, sit down for a meeting, they'll go over any important information, sometimes we have trainings in the morning,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we will go over any like major incidents that maybe occurred the day before, anybody that we're looking for stuff like that. Anything related to ECC if there's some type of technology issue if there's something like that and then upcoming announcements and things like that. Just like housekeeping stuff and then after that I will go into the room depending on we're assigned something different every day you know based off of what your qualifications are then they try to fit in training.
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	So we like I said we do 12 hour shifts so we have 3 rotations so we have basically three positions that you'll be working and they're all four hours. So if someone's fully qualified they could be on five ground radio for four and then they'll move over to maybe teletype for four and then they'll move to police dispatch for four.
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	So for example today I came in and I'm working the police administrative channel which is something that I'm qualified on one of the two radio positions and then after that I'm going to do four hours of training in teletype and then I'm going to do four hours of training on my police dispatch radio so but again like not every day is like that. People that are in training usually their days are a little bit more structured. That's traditionally the structure that I'll have for my days but that's just because I'm in training and that's kind of where they expect me to go to meet the training requirements.
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Okay so let's say I'll use a domestic because a domestic I think is a pretty good example of a regular call that we take so the most important question that we ask always is the first question we ask is what is the location. We need to know where it is right? Our technology in terms of locating people is just not there. We don't know where you are you know I've used the map as a reference but based off of the cell tower that you're hitting off of I don't know where you are. You could be anywhere you know and that's why we get a lot of calls for different jurisdictions.
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Mmhmm and then we'll have to transfer and it's not as time consuming or as bad as people think it is but if you're calling in not giving us information or you're being you know or you're not able to give us the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								information.
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Right. It can be a challenge because we don't know you know and if I'm asking you questions about where you are and you're giving me landmarks and stuff to an area that I'm not familiar with because it's not my jurisdiction I have to think about that could possibly be and then transfer. So sometimes it can be a challenge in that sense but so anyway so most important question is always where are you? Where is the location? Always ask try to get the street address. If they don't have a street address or they don't know ask for the closest intersection and then if they don't know the intersection or they don't even know that I'll ask for like a hundred block or something like that just like what street are you on and then I'll ask them for landmarks for a last resort if they really don't know where they are. I don't like using landmarks because there are some areas of the county that I'm really familiar with and some areas that I really know and if you describe something to me I'll know what you're talking about but a lot of that is very subjective and it's based off of my own experience.
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	But sometimes it can be challenging especially if someone uses a phrase or something that you're just not familiar with. You know I had somebody what was it someone used a phrase the other day or like last week where they referred to it as like [Name] Parkway or something like that and I said it wasn't me it was actually a different dispatcher somebody else said like [Name] Parkway and I had and no one had any idea what they were talking about and we called park police where [Name] Parkway was. They had no idea. We called state police they had no idea what it was. We called [City] they didn't know. Nobody knew what [Name] Parkway was.
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	So anyway so location and then after I collect their location I want to know a brief description of like what's going on so usually I'll say okay well tell me what's going on there you know tell me exactly what happened and you know if there's type of whatever they say you know say like arguing with my boyfriend or you know my girlfriend just hit me

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								or my wife is you know doing whatever I'll enter that information and then I'll get them started. That usually takes maybe 30 to 45 seconds for me to get that call in and depending on the cooperation of the caller, the clarity of the information they're giving me and then I'll go straight into my main officer safety related questions. I'll ask them okay are there any weapons in the house? Yes, no? If there are weapons where are they located? Does anybody have one?
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Right so and again and the reason is that because I had really good training and the other stuff will come with time but those core competencies and that's why I was saying moving to a core competency model is I think where we should go but like being able to get I think of it like blocks yeah so I think of it as having like little blocks. Being a call taker gets really easy once you learn like kind of your own scripted information and if it makes sense to you and you're able to take control of the call. Once you're able to take control of the call and you have certain questions that you're able to ask about certain topics the nervousness and everything goes away because you're just going to the questions and you know what you're dealing with. You know I ask the same questions that I ask every single time about people.
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	I know how I want to get a description of a person and we're trained on that and then I've added my own flair to it you know and so once you learn that stuff it becomes a lot easier to process a call even if it is a high stress environment and then also that being said we also work you up to that you know we start you off on phones. You take really basic calls and then you take the non-emergency line and in the non-emergency line you are going to need to use some of those skills you know in a trespassing person or a disorderly subject or something like that. You still need to get a person description but you don't need to get it as high as important as you might need for like a hot call or something like that's really active.
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	And so there's always this baseline level of tension that you never know what's going to happen and then the other part of it is too once you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>become more experienced in this job and you do start doing other things like police dispatch and stuff you know I'm starting to recognize the officer's voices and I know some of the officers you know now that I've worked here for a while because we do ride a long a lot, we work with them, we meet them in teletype and stuff like that and so I know them as people and if in addition to me being nervous for perhaps the person on the line because you do get invested in these people even though you don't know them you're still worried about them you care you know. You'd be talking to them you stress for them and then on the other hand you're also stressed for the officers because or the paramedics or whoever's responding you know because we're all kind of one family and we all care about each other and your job and this is how we think of ourselves our job is to keep them safe and make sure they get the resources they need. Make sure that they are prioritized you know and we're sending them into these crazy situations and we want to make sure that they're going to be okay. So there's a lot of stress about just again the unpredictability just don't know what's going to happen and then in addition to that the liability that if anything that goes wrong you are responsible.</p>
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	<p>There's a lot of emphasis on that and it could be for anything. Could be something simple like teletype where you're entering a warrant and then you put in the wrong information and then that person gets let go because you didn't put in the right information right? So or you could put in the wrong information and the wrong person could get arrested right? So you know you have a situation where somebody is getting stopped and then you get a hit off of this person and then the information in there has something that says for some reason this person is a white female 200 pounds or whatever when in actuality it's an Asian female who is the same descriptors, same similar name and instead it's an Asian female it's one letter right? You put an A or a W and the officer could arrest the person because they're like this is an Asian female fitting that description and they arrest this lady and she's never done anything wrong in her life.</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	I would really like anything related to geo stuff is very helpful. Location is again the most important thing that we always need to find out. You need to know that. We need to know where you are and we need to be able not only do we need to know where you are but we need to be able to guide the responders to that location so when we ask our locations and my 911 calls again I have a little personal script and it's just my own preference but I answer the calls the same way every time I say [county] County 911 where is your emergency? And then sometimes they listen to me and sometimes they don't. If they don't listen to me I'll redirect them to that question okay where are you? You know and then if they do listen to me and they give me an address and you know you say [County] 911 where is [address] and I'll say okay [address]? I verified it with them they say yes. Okay is that a house, business or an apartment? And if they say it's an apartment. I say okay what apartment number are you in? And then apartment number 810 because sometimes people don't think about that so I need to know what apartment we're going to.
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Right I'm in apartment 810. Okay and what is the name of the apartment complex? It's you know [apartment] or whatever and then I've got that info and then I go into my next question okay what's going on and they tell me exactly what happened right and that is then you know regardless of what happens after that if we get disconnected now they know exactly where to go so if the numbers aren't really obvious on the because this could be a place they've never been before right so if the medics need to go there and they see you know they don't see the numbers on the building but I've written in [apartment] then they'll be like okay [apartment] and they'll know which unit to go to and I just cut off you know if for whatever reason the phone disconnects like right at that second after I got I don't need it I should call you back and get more information but I can get them started you know.
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Yes we should get the call back number as soon as we can. The our [INAUDIBLE] will display the number they're calling from if we get it on a 911 line. If we get it on a trunk if we get it through a transfer that's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								usually one of my first questions. Is what call back number are you from? Especially if you get a transfer I always try to verify that you know because I have had that before where I've made a mistake where I didn't get that information straightaway and then I wasn't able to call them back but at least I had the location.
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	...Most people when they're out and about when they're not at home they don't know where they are so they'll call out and they'll say I'm at this place, I'm at you know they'll be outside and they'll be like I'm at [Company] which is the restaurant downstairs. Right you know or I'm at [store] or something they'll just and in an emergency right, right so in an emergency they'll just say oh I'm at this place you know and for us it can be challenging because the only way that we're going to know where you are in our own system if you call out that common place. If you can't give me anything else, can't give me a block or a cross street or anything. The only way I'm going to know where you are as if your name is in our common place. If we've put it in there.
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Right. So we have to manually enter that information into our CAD system in order for us to be able to search it and then present our CAD system is not as dynamic as say Google right? If you type in Google some like let's say you say let's say there's a place called [Restaurant] whatever at [City] right? So if you tell me I'm at [Restaurant] at [City] or if you tell me I'm at [Restaurant] I can be like okay and then type in [Restaurant] and then in Google and then it'll come up with did you mean [restaurant] at [City] right? It will come up with a suggestion because it's like okay you're probably talking about this. Our system does not work that way. You must now if you have to enter it exactly as it is in the system so for example---
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Right and also it would be extremely helpful to have that I don't know if crowd source is the best way to put it in but some type of system where we can easily search for a business even if that business has only been there for like a day or two or if it was an old business right and someone says I'm at the old [restaurant] right and I'm like I don't know what that is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								right but if they say oh it existed there in you know 1960 I guarantee if you Google [restaurant] and it was like a big place then they're going to be oh did you mean [address] which is now blah, blah, blah? It's going to pop up you know so we don't have that ability so that can be quite frustrating.
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Because sometimes you know sometimes it could be a simple problem right or it could be something really dire but you just your biggest concern is you cannot send help until you know where they are.
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	Exactly. You know I had a call one time from a woman this was like the worst scenario. A woman had received a call from her father who is having a diabetic emergency in [City]. She was located in [City]. She had no idea where he was in [City]. All she could tell him was oh gosh what's the name of the it's a sausage place in [City] it's like [restaurant] or something like that so anyway so she mentions she's like I have no idea where he is right and I'm like okay what's his the only thing I have---
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	He's having a diabetic emergency. I don't know what's going on. He's in a white truck on the side of the road. Okay in [City]? I don't even know if he's in [city]. Okay we think he's in [city] we don't know right so you have this man who is unconscious in his truck having a diabetic emergency, the daughter is in [city], she doesn't know where he is, she has his phone number so you have to be a detective and use his phone number and figure out based off of where he was as your own local knowledge where could he be now. And then eventually we get I don't even remember how we got there but eventually we got to this thing where she said he was at [restaurant] or whatever and basically I had to Google [restaurant] and it came up with a location and I entered it and got them started out there. Gave them the description of the white truck and thankfully they got him.
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	So it can be quite can be quite difficult and the process for tracing a phone people think it's really easy it is absolutely not. It can take 20 minutes.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	COMMS	U	Comms Personnel	18-25	5 or less	Male	COMMS-U-006	It can take 20 minutes to trace a phone because we're going through the cell company. The cell company has to then ping the phone it just takes forever you know we don't have that ability so even if you're having a life-threatening emergency we got to wait 20 minutes for them to fill out their paperwork in order for us to get help to you. People don't know that.
Context_of_Work	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	I am the 911 systems manager. It sounds like I manage everything but I really just manage our telephone system.
Context_of_Work	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	But we made it systems because with the new technologies coming out with texting and whatnot I'm also in charge of anything anyway in which someone would reach 911. So text, phone it all is encompassed underneath me.
Context_of_Work	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	So that position not only do I manage the system itself there's a lot of different components to it.
Context_of_Work	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	And the 2216 is the actual phone that sits under the desk. Some of the items that we have in our back room are as well no longer being made. We have to kind of just find that different P4 processors and things like that so my job entails a lot of stuff. It's a lot of mitigating issues, trying to do a little bit of research to see what I can fix on my own and then contacting out to our vendor is either [name] who handles a certain portion of our demarcations and [name] who is our current vendor integrator for us.
Context_of_Work	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	So I have to build everything 6 times X 8 and that's how many times I have to build I think for 12 employees which we've hired since March of this year. I entered almost 600 different profiles to get them fully in both systems so the new system is much simpler. There's one place to enter it and it enters it in both sides of the house but the current system it's just the way it was built. It's an old antiquated analog system so unfortunately there's a lot of steps for it so it's the administrative part. I also do investigations so if anybody says they're not able to reach 911 they're wondering why their phone reached a different jurisdiction, there

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								are any issues with transfers between jurisdictions I investigate all of those. Why they happen, what occurred. I pull in the vendors that I need to look deeper into the technology because our system is so old we don't have any remote incapability. So I have to physically get them out here, we hookup the computers to the PDX, sweep information from everything so I'm also investigating different things that happen depending on who calls.
Context_of_Work	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	So it's a lot of even bridging of SOP's and also setting the expectations for the city and council so they know what the expectations will be if we are put into one of those situations. You know we're not going to be able to provide it would be impossible for us to provide exactly what the citizens are expecting us to provide if we're in one of those last-ditch effort evacuation type of situations.
Context_of_Work	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	We have lots of non-emergency calls stuff that during the day other county departments instead of knowing where to transfer them they're like we'll just transfer you to the non-emergency number and then we are then tasked with trying to figure out where this person who this person really needs to talk to.
Context_of_Work	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	But if we ever were to or because we are moving into IP based items hackers, TDOS things like that anytime it is deemed that something needs to be handled immediately a phone call is made to me and I'm on call with my vendors, I'm driving in, I'm here to handle anything that needs to be handled and then it's also my way of being able to communicate back and forth with emails. I get hundreds of emails everyday to kind of go through and answer back to people for simple things.
Context_of_Work	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Derecho hit I was the EOC team lead and so I called in my team and we were sat in front of the county's Twitter and we were just looking for people who were tweeting out non-emergencies or emergencies. We weren't necessarily saying oh call us here, call us there. We weren't responding a lot. We were saying hey, I see your message we're going to get it to the right person.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Exactly. So we've used it that was the first time we had used social media and then as we developed the Watch Desk again I was hired into that Watch Desk position in that initial year and that's the stuff that we were aiming towards was being able to be that bridge that constant bridge and communication point so the Watch Desk also sends out pages and alerts to who needs to know within the county whether it is situational awareness like there's a shooting in [name] or situational awareness that there's a large storm coming or we have certain protocols that we have to send pages for so if one of those is met it takes that burden off of the operation supervisor who can worry about maintaining and managing their shift during situations and just lets that person send out those pages and we monitor radios from around the area.
Context_of_Work	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	A partial EOC standup could just be well we had a storm come through so I just need JS for mapping, parks and recreation, the ECC liaison you know get these people in a room so we can coordinate the efforts of getting these trees out of the roadway but we don't need all 18 or 19 ESF's to be there. If we do have something catastrophic we will it doesn't even have to be catastrophic it could be something that effects each department we'll call in a full activation of an EOC.
Context_of_Work	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	Where you may have something that's really cool on the operations side but really lacking on the technology side so that's something that I am really passionate about. Now that I'm on the technology side is not forgetting that operations side and making sure that the technology doesn't outweigh the operations and the operations doesn't outweigh the technology.
Context_of_Work	COMMS	U	Manager	26-35	6-10	Female	COMMS-U-007	It's not just me it's also my supervisor who is he is the Deputy Administrator for Systems so he sees over all the system managers so CAD, radio, telephone. He sees over all of us so he that's his vision as well but he has been so far removed from operations that he needs that operations perspective but he also knows and understands he needs that operations perspective and the people that are being hired as the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								older administrative staff retires or leaves they are hiring those who want to merge those two and want to keep up kind of their skills on both sides so that they make sure that they really are everybody is getting what they really need.
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	I'm the police dispatcher. But I also do the record management. I register sex offenders. I do purchase permits. We have probationaries that come in. So I have various things that I do in addition to the dispatching and taking all the calls. And since I'm here--
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	... we handle sex offenders. We do purchase permits. I mean, we have the citizens that come in. We have probationaries that come in twice a day or sometimes three times a day, to do breath test for alcohol-related incidents. Plus we have to manage our records. So I mean, you're call taking. You're dispatching. You're handling the window traffic. You're running all the officers' paperwork. Now, nobody else usually does this, but I'm submitting warrants, processing all the court work, the subpoenas, the tickets. Like I said, I do all the records management.
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	...You have to be compassionate. You have people calling who may have just lost a loved one, or could have a loved one that it's not doing well and is on their way to the hospital and maybe not expecting to make it, or someone's calling in to say that their child's been raped. I mean you could get a lot of different things that you have to be able to deal with. So you've got to have not so much a thick skin that you're not-- hold on
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	Yeah, I'm the only notary in this city right now [laughter] so I do a lot of notarizing too.
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	... I don't tell them to hang up and call 9-1-1. I just take all the information. I enter it into the computer. It's already on the screen for central, and then I'll just call over there and say, "I just put one in, on such-and-such street. I've got a medical; They need an ambulance," or, "I've got a fire, they need the fire department." Or even, if I get called calls outside the city for traffic, accidents, any of that stuff, I just put it in, and then I call over and say, "Hey, I just put one in for you." Just because it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								just as easy, we all look at the same screen, and it's, to me, it's not right to make people repeat all their information, or it someone is in a panic mode, to say, "Hang up and call the sheriff's department," or, "Call 9-1-1." You just get their information and put it in there. And then it's done.
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	... Yesterday I had a lady come in with an identity theft, she lived in [name]. But once you get to know all the boundaries and the streets, then you know which department needs to be contacted. We handle all of the-- what's called the lean work. So if I run a file or a criminal history, warrants, all that stuff we do [name] and [name]. So I talk to those guys everyday, because I might be entering a car, entering a warrant, putting a conditional bond in, a no-contact order. So usually I'll just text somebody and say, "Hey, I got somebody here at the station, do you want me to send them to your station or do you want to come here?" Because [name] will stop by almost everyday with court work, whether it's a warrant to enter or a conditional bond. So you get to know them as well, because we have-- I won't say daily interactions, but pretty close to daily interactions. If they have an arrest and they need a full work up, we'll do what's called-- we do a file check, a criminal history, a driving history, depending on what they've been arrested for. So we're doing with them as well.
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	Well, generally my customers-- I mean probably 90% of the time-- I shouldn't say 90, but usually it's someone that needs some type of police service. I mean, we do have people that walk in, and for example, found a dog. And at least in this city, it's still a police matter because we don't have an animal control officer right now. So the police officers, we would just take the dog, take it to our kennel, try and contact the owner. Like I've said I got people coming in, turning themselves that need finger prints. I mean, you still get-- that phone call was somebody that is starting a new business, and is applied for a liquor license, or a beer and wine license. So they need to come and get fingerprinted. We fingerprint, we're one of the few agencies-- there are agencies that do it, but they have very restricted hours. So we get a lot of people that come in here

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								for CPL, Concealed Pistol License, fingerprints. The teachers all have to be fingerprinted, the bus drivers, the janitors, the kitchen staff. So we get a lot of people in here everyday that need finger prints for a job-related-- we have a guy come in yesterday, he works for the federal government, I think immigration in [City], he needed fingerprints. And I think we're the only department in the county that still does ink, so we do ink and digital. So we do get a lot of people that come in to get a purchase permit. To get fingerprinted for their job. Nurses have to be fingerprinted, so we'll get a lot nurses that come in to get fingerprinted. People that race horses, they have to get fingerprinted. Some of the nurses will come in and get fingerprinted for five different states, because they'll travel around. And they'll need one for [name], one for [name], one for [name]. So I mean we have that percentage that are just everyday citizens coming-- and a lot of notaries because again, I'm the only notary in the city. I notarize stuff for the city all the time, for city council, or for like boundaries. Somebody came in the other day, it was an easement, something with an easement. So I do stuff with that.
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	Right, and I mean I would say that the majority of it is law enforcement related, whether they're turning themselves in, or they've been a victim of a crime, but we still have the people that come in to get directions. or want to show their child the station. or we have people that come in for tours. The school groups will come in. I mean we still get all that stuff and we'll do presentations. But I guess I could easily say 80% of it is someone that's been either a victim of a crime, or was arrested and charged with a crime and needs to know what happens next, or to get their fingerprints, or stuff like that.
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	...So I have to switch the phones in the morning. I switch the phones and then I take care of the [PB-Teers?] and then all these computers, when we leave at midnight, everything gets shut down. So I turn everything back on and then get ready for the day. And I generally do the court work first thing, but it just depends. This morning I came in and the phone just-- it's been ringing off the hook all morning, so. Usually, on Fridays,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								City Hall is closed so it's not as busy here but today we've been busy.
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	... But we get a lot of unlocks, a lot a lot of private property crashes, a lot of crashes on the streets. But we get a ton of unlocks and I think we're still the only agency in [County] that does unlocks. We carry the tools in our car and that's a service that we provide for free, so we do get a lot of calls for unlock. I think I had two yesterday. You'd be surprised how many people lock their keys in their car.
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	... It's basically the who, what, where, when, why. Who are you? What do you need? Where are you at? What's going on? Is it in progress? Is it already occurred? Because those are things you want to make-- like for priority reasons, if they were just assaulted and the suspect's still there, if it's a domestic violence. Or if it happened two nights ago, you were scared but you're just now calling the police. Do you know where that person went? Or if that person just left, you want to get their clothing description, their vehicle description. Did they have any weapons? Were they drinking? Are they on drugs? I mean, all these things that would play-- generally we try and run the person to see if they have an officer safety caution, to let the officers know if they have a history of violence, or running from the police, or assaulting the police. And again, where did it happen? When did it happen? You want to make sure that it was in our jurisdiction. If it wasn't, we would refer them to the jurisdiction where it happened. Again, get the caller's name, their phone number. And that's in case we need to call them back.
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	Basically, you're just going to make sure that-- anywhere from 8 to 10 minutes-- depending on the call. If it's not a big deal, you're going to keep checking their status. Make sure they're secure and they don't need any backup. Or if they do, you get backup on the way. If they need, like in that instance where [name] needed a file, so I ran the file and he asked me to save it, so you print it off. I generally will put the complaint number and the time on there so they remember what it was. If it's an accident, they might ask you to put-- so that was driver of vehicle number one, which was brown. And then, again, I put the complaint number and the time. So

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								your job would be-- just make sure everything is in order for the officer. If they have an arrest, I automatically will run a file, run a criminal history, run a driving history. Have that whole packet ready for them when they come in so they go to write the report. And then, when we go to submit the warrant, we've got all that paperwork that goes with the warrant. If it's an accident or an arrest, you would be responsible, excuse me, to get a wrecker. Or if they get to a scene that came in as a non-injury and somebody says, "I'm having chest pains," they'll contact us on the radio, we get ambulance and fire on the way to have that person checked out. If we have a combative person that needs to go to the ER we will call the ER and say, "We're coming in with somebody", you know, same thing with the [crosstalk], anybody that's combative, we would let them know for safety reasons, "We've got somebody coming in, you might need more manpower or some way to strap them down or--"
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	Yep. And like I said as much information as you can get, you put into that screen and then all the information you get you relate to the officers.
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Female	COMMS-R-005	As I think you saw, I was taking a phone call and talking on the radio, so I got them in one ear and I'm writing stuff down in the other, just so I don't miss anything. We also have this complaint book which is old school, but if the computer goes down I can still go back-- if somebody comes in and wants an accident report I can still go back and say, "Oh, that was last week at [name] and [name]." And then I can run and get the report, so even if my computer's down I can still pull the report and make a copy so they don't have to come back.
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Well I would say that it's can be boring I think sometimes. I think too that you know it's good work. It's important work. I would say that we take calls and we send calls so we're taking calls from the public and sending those out to the deputies that need them. I would say that I don't know what else I would say that we take calls, we deal with the public, we try to help people with their problems.
Context_of_Work	COMMS	R	Comms	36-45	11-20	Female	COMMS-	Well I would say that you know again sometimes it's boring and I was a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel				R-009	<p>little surprised by that when I started here. Nobody kind of prepared me for that and yeah it's there are times when we just don't have a whole lot of stuff to do and there's a lot of sitting so that's sometimes hard but I'd also say you know we deal with the public and we deal with the public when they're having problems and so that sometimes I'm going to say it's painful. That might not be the right word. I don't know what the right word is there but I think you know people call us when they are in their time of need. They call us when they have a problem and so that's hard I think to be able to respond appropriately and in a way that can calm them down and make them feel better even though you're not there and that's I think is another hard piece of all this but being a dispatcher especially is that you're not there. You're on the phone and so you're kind of once removed from the problem but you're still trying to help with the problem and I think that that's hard too so I would say that it's a hard job some days. Some days it's easy, it's boring, it's you know you've got to just kind of go with the flow but it can also be really painful sometimes and mostly when there's a call that's you know that is really difficult. We get those calls sometimes medical calls or accident calls and you know that it's bad there on the scene and you want to do everything you can to help but part of it is you're not there and you're kind of this middle person so you're kind of limbo almost.</p>
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	<p>...That's the biggest thing really. You've got to be a really good communicator. You have to be good with people. We do have people sometimes coming into our offices so you know you've got that one on one and you have to be able to deal with people. Sometimes they're not happy, sometimes it's just you know have a chat. We have a lot of older folk in our community and sometimes they just like to stop in have a good old chat and then go on their way and so got to be good with that. You have to be able to follow a protocol right because when people call we have to be able to get the right information to give that information to the deputies so they can go out and do their job and actually help those people so communication skills, communication skills, communication skills you've got to have those.</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Well we just come in to the office, you talk to the dispatcher who is going off, they tell you what happened over the course of their shift and maybe anything you need to pay attention to but generally no you just start your day, you're on the radio, filing paperwork or whatever needs to get done. We don't use much else here other than a radio and a filing cabinet so that's I think kind of the way things go until you get a call and then really you're following a protocol.
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	No not really no but sometimes the Sheriff might give you a task. You know if we've got we go do fundraisers or we go help out in different communities or sometimes it's organizing something like that maybe so you might need to make some phone calls and again that's where you need those communication skills right because you're talking with all different kinds of people so sometimes though the Sheriff might have to ask for you but that's about it.
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	We start out by asking who this is and where they're at. Those are the two pieces of information we really have got to get. Who is this and where are you at? Then we need to know what's going on. Is this an accident? Is this a fire? What's the nature of the call because then we have to send out the appropriate people so that's the main information at the minimum that we need to get. Kind of who is this, where are you and what's wrong? Once we get that we really need to dispatch because that's all they need to get going and because we are such a large area it might take one of our deputies a while to get wherever they're going so we want to get that information out to them and then we might go back to the person then and ask we're going to ask things like is anybody hurt?
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Is there anything else we need to know? If it's a situation where somebody's called in with a robbery for example we need to know if the robber is still there or if the person is gone. Was there a weapon involved? And again these are really rare situations for us but they do happen occasionally so that's information we're going to ask about. Sometimes we'll get off that call with the person unless you hear that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they really need you there or it's the type of call that really means you need to stay on the line with them until somebody gets there. And again we'll have dispatch to either the deputies or fire or EMS sometimes all three depending on what's going on and that location.
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Oh our responsibility is about getting the information from the person and communicating that to the right people so they can go and help with that situation. That's our responsibility. Sometimes our responsibility I won't say it's really our job responsibility but I think maybe we feel a sense of responsibility to stay on the phone with people and keep them calm and keep them focused. You know if there's been an accident sometimes the person who is calling is the person who is not hurt and they're seeing their loved one in pain and they're then in pain too so part of it is for you to stay calm as a dispatcher in those situations and stay on the phone with those people so we can kind of be the anchor we're the anchor then for those people.
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	No I think I would say we pass on all the information we get. I think our people want to know as much as they can get. Again it's very rare that we're going to have two things going on at once so it's easy enough to take the time to give someone all the information they need so I don't know that we're making decisions about information as much as we're passing information along.
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Well sometimes but that's very, very rare here. Sometimes maybe but if we do if I'm on a call for example and I get another call you have to see what the nature of that call is. You do make a decision then about where you need to focus your energy first, you take care of that, you dispatch that then you go back to the other call so some of it is about prioritizing and understanding what needs to take priority in those kinds of situations and so it's about figuring out who needs help the most and sending people there.
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Well with our sheriffs we don't really have an issue except where maybe you know the radios don't work and we do have those kinds of coverage issues but generally not a problem when you know I'm communicating

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								something dispatch and something out to my sheriff officers but fire is a different channel and that's not usually a problem. Only sometimes they're not always listening to their radios and we can't control that. Sometimes we don't know that so but we communicate that out, we dispatch that out and then sometimes that's out of our hands and same thing for EMS. We make that call, we dispatch them but we don't always know until somebody communicates back to us that they've gone or not so it's easy enough to communicate. I don't always know that that communication has been successful.
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	No mostly the phone. I've got a headset so I mostly use that. Sometimes I take that off because it just bothers my ear but yeah mostly we're using a headset and the phone and the radio. That's how we're communicating dispatching out so calls come in on the phone, we dispatch out through the radio. I do have a computer here but we don't use it with the cars it's really just in the office here to look stuff up if we need something or you know we're processing paperwork or doing something like that but otherwise that's about it.
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	Oh no I think it's mostly people really. You know people don't always give you the information that you need even when you ask for it so we think we're being really specific and asking about a very particular thing and then people give us all kinds of crazy answers so sometimes a call that you think should take you know thirty seconds takes 2 minutes and then you've got to dispatch out that information and so sometimes I guess now I think about it you asked earlier about you know decisions we're making about information and sometimes that does happen. Sometimes that is true that we get too much information from people and we don't need to pass all of that along to the folks and so we sometimes do leave things out at least in that initial dispatch and then we might call back and give them additional information later but they need that first information to really go in and deal with the call so that's I think sometimes what I would say that it's really it's a people problem more than anything and people giving you the right information when

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you ask it in ways that are useful.
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-009	I don't really think they have really. I think things are pretty much the same. You got a phone, you got a radio that's about it. Maybe we use the computer a little bit more for reports or something but in general it's about the same.
Context_of_Work	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah, but actually I work in the office of emergency services and so I have dual responsibilities. I work with emergency planning and I also work with the county emergency manager, and I run our communications unit which is a split of radio and technology.
Context_of_Work	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah, I wear a lot of hats. Basically, I work in the incident management side of the world primarily. So when there's large scale emergencies or disasters our office moves in to play and we will help the incident management teams and the various agencies in the county respond to those emergencies. To do it as efficient as possible and then to set them up for success on the back-end for recovery. And then on the communications unit side, my organization facilitates communications amongst all those organizations.
Context_of_Work	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] So over the 40 hours of the weekend, it was a complex series of events that went on. So in [City], we had the first incident which started out as a vegetation fire that spread to two apartment complexes, then to a commercial building and then back to vegetation. So it became a large complex fire. We had 15 families that were displaced. It was a four-alarm fire, so a significant number of personnel on scene. In those types of events, we mobilize our mobile command and communications vehicles to facilitate interoperability amongst different agencies. As well as rehabbing radios and all those kinds of things. So that was the first one. They left that one to go to a second, new vegetation fire. While they were there, a third one was started. You know, this appears to be arson. While they were there at that second one, a larger third fire came about. So we had dozens of different fire agencies come in and we moved all of our assets from the first [town] fire to this other complex, which we called the [complex]. So it was three separate fires that we managed as

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								one with all of our resource pools so.
Context_of_Work	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah. Primarily, my daily job is technology project management. So I run different technology projects. For example, we're upgrading our helicopter's digital video dialing system right now. We're doing radio reprogramming across the county right now. So it just runs the gamut. But technology project, primarily. I also do application development and support as well so.
Context_of_Work	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] The big project we have right now is implementing [software]. If you haven't heard of that, basically, it's a crisis management software.
Context_of_Work	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah. So those are on the-- both of those things that you just described are on the CAD side, but this is on the emergency management side. So you have your instant responders that go out, your first responders that go out. And they will use tools like you just described. But on the emergency management side, when it's a larger more complex issue and you're dealing with multiple jurisdictions, how do you share information and process agencies? And so that's a platform that we're implementing. The tool itself comes from the vendor, kind of a blank slate out of the box and you customize it. And so it's the customization of that tool that is our project.
Context_of_Work	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] And it's a good question because, operationally speaking, when an incident first happens, we've found that it's better to a let a command and control type scenario work out from the communications perspective. So if those that are in command get together and have a conversation, then they can push that information back out to their respective employees and partners. If the incident is going to be prolonged it's better for us to all figure out a communications plan, and then segment that up by function as opposed to silos of law, fire and EMS. So there's a time factor to when we decide, "Hey, we're going to enter operate communications," or we're just going to let it ride because everybody knows how that operates on a daily basis.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] We do have a significant number of hazmat potential. Hazmat scenario's a good one right because in that scenario you're going to have a perimeter group that would be managing security on the perimeter, right? You would have an inner perimeter group to manage the hot zone. And that could be across function between your hazmat and fire. You got people that need to go around and do air sampling and those kinds of things. So in certain circumstances, the group could be a mix of law and fire and EMS.
Context_of_Work	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yep. Same thing goes for active shooters. Same thing for mass casualties, those kinds of scenarios where you might form up in teams and be a multi-discipline team.
Context_of_Work	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah, it's really slick. And then the State offers a version called [software] that they're rolling out right now. And then obviously, there's [software]. And the majority of our functions and interactions [software] is for high fidelity mapping, as opposed to kind of a situation where there's like, "Here's a pen, here's a pen". If we needed detailed mapping like, for example, we have a large landslide that took out a road in our county. Cut off a community. We needed high fidelity mapping to say, "Okay, this is where the pipelines are, this is where the utilities are, poles, and all that kind of stuff". To look at it from a detailed perspective how we are going to fix this problem. So it's a right size-- you pick the tool based on the scenario [crosstalk] and who has access to it.
Context_of_Work	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] The whole process is coordinated with state and federal partners. They have their own processes. So as an example, we recently had significant weather events in [state]. We had lots of mud slides and roads that were taken out and private property damage and those kinds of things. So when the inspectors - they're basically inspectors - when the recovery folks come to town, they're going to want to go around and look at all the damage, right? And assess it. And there's a communication flow that has to happen and it's really challenging. It has to go from your very local jurisdiction up to your operational area, and it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								has to get processed and synthesized and say, "Okay, what's the scope of this," right? And it's much more detailed information than you would get like, "Hey this building is on fire." Okay? "Let's all run and put it out." Well now you've got to go back and you've got to have building inspector information. You've got to have-- how much time-keeping that's involved? All these different components of information that make that process a lot more complex. And then you have to account for it, right?
Context_of_Work	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] So if you're going to try and maximize what you get out of recovery, you have to account for every little thing. So that's why this [software] tool is great because I do all of my logging in there, of all-- hey, this is when I signed in, when I signed out. This is when I went to this property, here's what we learned, here's when the inspector went there. All those kinds of things that aggregates all that information for you.
Context_of_Work	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah. It's a little clunky, just to be honest. But yes, they have a mobile application where you can say-- get my GPS location, take a picture, this is what I'm seeing at this location and post it. So yeah.
Context_of_Work	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Right. Right. Yeah. We actually just used the drone. Well, we used the drone at our county fair for situational awareness, large crowd gatherings, to monitor that. What's going on in the middle of the crowd. And then perimeter stuff, so. We had a local police department that pulled a car over. The guy actually got out and ran. Ran through the perimeter of the parking lot of the fairgrounds and those kinds of things drones are really good for because you don't have to break somebody off a security spot. The better off you are if you can just go check it out. "Hey, is he coming in, or is he just running through?" Those kinds of things. And then we had a large fire in [town] a couple weeks ago, and they used a drone there to map out how much was actually involved in the fire, and whether or not structures were involved. That kind of stuff. [company] transmission line, it was in the fire area. So those kinds of things. Checking that stuff out. So they can be really useful.
Context_of_Work	COMMS	S	Other	36-45	11-20	Male	COMMS-	[S3] Yeah. They're perfectly acceptable use for search and rescue.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Public Safety Personnel				S-001	
Context_of_Work	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Yeah. It's pretty neat. So yes, we use them for search and rescue. Their operational time isn't very long.
Context_of_Work	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] But one thing I will say is you can't do everything on a phone. I'm not going to write a report, right, on a phone. So you'll have to have different form factors. You'll have to have something that has a lot of screen real estate and that kind of stuff for certain job functions. That's not going to go away. But if I can provide an ecosystem of applications that makes a lot of the jobs simpler, that's really where I want this to go.
Context_of_Work	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] The job that I do is unique as well since it's so diverse. Most jobs are really, really siloed, and I have a lot of function in a lot of different areas. I've also made it my mission to work on communications across all the different organizations in the county, which I think that's also unique because there just wasn't a lot of support for that when I got here. I wrote a strategic plan on how this was going to work. Why it's worth our time and effort, all that good stuff, to do it. So those are some of the unique things about me and the jobs that I'm currently working.
Context_of_Work	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] And it's overlaid with your APN number, for the house and lot that you live on. And that automatically gets populated system. So when we have an incident they have a tool that they literally draw a geometric shape on the map, and then it will pull out all of the phone numbers from that area and then feed that into the caller system.
Context_of_Work	COMMS	S	Other Public Safety Personnel	36-45	11-20	Male	COMMS-S-001	[S3] Well, so if the big one really does happen within [software] there's a status board, right? So if you're online literally, right, you have the ability to connect. You'll update your status. So that's a pretty operational thing that we've worked out. That way if you don't check in we know that there's probably a problem, right? And now we can start to understand

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								situationally that, "Hey we have three cities on the west-end that haven't checked in. That's probably where a significant amount of damage is."
Context_of_Work	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	Well I monitor the schedules for the four dispatchers that we have on our 911, in our 911 COMMS center. It's both sheriff and EOC, which is [County]. And it's manned by the both of us. We are cross-trained, so either one of us can run whichever console that we're on. It's just a different pay by different entity. Besides the scheduling, I fill in when we're short. I monitor any training updates that they have to do, so I keep track of all trainings, training schedules, any new training that's out there I look to so we can be updated and with the latest and greatest. Make sure everyone has their technology skills up to par.
Context_of_Work	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	So you may be on a traffic stop or responding to a call, and you can just do what you need to do, give out that information, give that person's information. But you have to take into consideration your dispatcher is 90% on the phone. If we're not on the phone, there's two of us, if we're not on the phone, we may be [inaudible] on other calls. So we need you all to monitor your radios.
Context_of_Work	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	We try to get a routine in. Sometimes it'll work. Sometimes it's like okay, we can't do it that way, you just have to do it another way. So coming in, setting up our system, and logging into all of the systems that we have to log into, and just being ready, readily available for anything that comes.
Context_of_Work	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	It takes maybe 10, 15 minutes to log into everything.
Context_of_Work	COMMS	R	Manager	36-45	6-10	Female	COMMS-R-010	Making sure that the deputy that's responding or fire service, EMS, whomever that we have responding, gets there and have the direct avenue to get there, the perfect location, have the correct information on, as far as if it's safe to enter or is it safe to go in, and do you need backup.
Context_of_Work	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	Not, it does. They bring the invoice to me. In a nutshell, I guess if you were to [inaudible] my job into one, it's public safety more than just

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								emergency preparedness. We also have a direct, all four fire departments are volunteer within the [County].
Context_of_Work	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	I know you're also kind of in charge of the dispatch stuff and the communications...
Context_of_Work	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	... Our dispatch center is a little unique in that we have a consolidated dispatch. However, we have a law enforcement, sheriff's office dispatcher, and a [County] dispatcher both cross-trained in each other's jobs. The only difference is one gets their, one's on the payroll of the sheriff, one's on the payroll of the [County]. There is a supervisor for each shift or each, I'm sorry, not each shift, each discipline. We are 24 by 7, 365, two position [inaudible].
Context_of_Work	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	... And when it comes down to the communication end of it versus the emergency management side of it, it kind of ties together because when we do have natural or man-made disasters, all of a sudden we're wearing several different hats at one time and having to change gears to do and make sure that we don't overstep our boundaries, if you will, speaking, what's either law enforcement-sensitive and/or dispatch-sensitive versus what's going on in the real world. So we're almost the speed dial call of a lot of people because when's the roads going to open, when the bridges are going to reopen, that type of thing. So I mean it's, and they come to us for a lot of answers that sometimes may take us a little while to get back to them.
Context_of_Work	COMMS	R	Manager	36-45	11-20	Male	COMMS-R-011	...And we can put it up on these big screens that we have inside [inaudible] and show exactly where, of course keeping confidentiality, where confidentiality needs to go, but being able to show what parts of the [County] are damaged. We took it a step further, in that right now I have my GIS crews working on a project to where we can use it for industry, to where we can, we know what emergency response equipment they have, who's the point of contact, what's the 24-hour number. So they're working on that amongst other things.
Context_of_Work	COMMS	R	Field	18-25	5 or less	Female	COMMS-	I am a [Job title].

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				R-012	
Context_of_Work	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Okay. Well not only do I work my regular jobs, my regular, I can't think right now, my regular duties, I supervise everybody else in their duties. But essentially to make it simple, we answer phones, and then we delegate deputies to go to like emergency situations, non-emergency situations. But on top of that, we also, we dispatch our fire departments to the areas in the [County], and then we also work NCIC, which is where you find your criminal histories, your wanted people, your basic background checks.
Context_of_Work	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	So definitely being able to listen, but at the same time you have to be able to multi-task while you're listening because not only are you talking to somebody on the phone, but you have deputies asking you for information, calling out traffic stops, or you have a fire department talking to you. Or you have to dispatch the fire department while you're on a call.
Context_of_Work	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	[RE: talking with other dispatchers] ...we do talk, I guess depending on the shifts, 'cause every once in a while they'll mix the shifts up. You have to get used to working with different people and people you haven't worked with before for 12 hours straight. Versus working with them maybe 30 minutes, you're working with them 12 hours straight now, so now you have to get used to how they're working. And that's the challenge for me as a supervisor 'cause I have to get used to how they operate, 'cause not everybody operates the same. Like I had [Name] [phonetic] in there. Actually he used to be on my shift. So when he and I worked together, I knew what he wanted to work, which is the radio. That's his favorite thing. But like it wasn't I had to worry about whether he covered his job duties while he's sitting at the radio. Now that I have new people I have to worry, are they doing what they're supposed to be during each situation, so now I go through, and I replay the calls that are dispatched and the calls that are taken to make sure that they are operating on the level they're supposed to versus under, I guess under with at least an okay.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	It definitely starts the same and ends the same. We come in. We relieve the group before us. They're usually tired or ready to go. So yeah, we'll talk, [inaudible] pass on what situations could have, could come back up, what happened, and is not going to come back up. And then as we come in, we make our coffee. We basically get the day started. And for a little while, it's a little, you kind of wait on the ball to roll down [inaudible]. So between like 6:00 in the morning and 8:00, 9:00 in the morning, it's slow. So you're just waiting on the ball to start, getting momentum, and then the phone starts ringing. So we do our daily tasks, like the radio person. They have a number of tasks they have to do, whether it's the work cellphone, the backup tasks, or we have a TTY machine which is the machine you speak with deaf people with. Then you got your, you have the two stations where they do the 9i1 phone tests, and then they, depending on what tasks are left over from the night before, whether it's a fire that's continuing, a fire call out, or if NCIC is finishing up on entering wanted people or running criminal histories for the deputies. So we catch up. That's our catch up time between 6:00 and 9:00. And then we get the day started.
Context_of_Work	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	So you've got somebody taking calls and somebody dispatching out.
Context_of_Work	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	So you would, when you pick up the call, you basically ask if it's an emergency. You identify the agency, and then you ask if it's an emergency. And typically they'll say yes, no, or it's an emergency to me, but it's not to you. So at that point forward, we go ahead and try to get a, we try to get an address first. Then we get a description of what's going on. At the very least if the call drops, we have the address. So even if we don't know what's going on, we know somebody at that address needs police help. And then we get a description of what's going on and based on the description would be what kind of incident it is or what kind of priority it would have. And usually if you have someone screaming on the line or incoherent, that's a raised priority 'cause something's going on that they can't even listen to the phone to find out, to give us

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								information. So basically we determine the priority, and then after that if we can obtain their name, their phone number, if they're involved, if they're not involved, if whoever they're calling for is still on scene, or whoever is a possible suspect is still on scene, what they're wearing.
Context_of_Work	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Well depending on what station you're at, which right now I'm not at the actual station, so I'm just kind of monitoring what everybody else is doing. But I have a trainee. She's in the fire room, so she's working on learning how we would dispatch our fire room or our fire department. So which some days pass, and we don't page the fire department out. And then other days we page out not one, but all of them. So it's imperative that they pay attention to what's going on with the fire departments. So sometimes we'll page them out. That'll be our main task. And just like when you're in the fire room, when your fire departments start going out in service, their focus is going to be the fire department.
Context_of_Work	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	Yes. And then we enter what would be our wanted people, so our individuals that have serious criminal warrants, we make sure the whole, basically the whole state knows that if you find this guy, we're coming to get him.
Context_of_Work	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	It can be; it can be. I would definitely classify that as clerical, but that's part of our job duties. So like your regular clerks would not do that, 'cause it's also sensitive information, 'cause you're pulling, when you enter a wanted person for their warrants, you're also including their personal demographics such as their Social Security number. Criminals, or people that have been arrested actually are assigned a state I.D. number. So if they're arrested in the state of [State], they have their own personal I.D. number that shows, you run that I.D. number, and it shows every time they've been arrested, where they've been arrested, which is their criminal history sheet. Then there's an FBI number which is your, your 50 states, it's a number, if you run that number, it shows all 50 states.
Context_of_Work	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	It's not hard. We definitely make sure that our towers are in working order and all radios are in working order for sure, so like there's never a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								loss of connection between the two. And if there is, we have access to everybody's cellphones, so we're calling them, making sure they're, hey are you catching my radio traffic? Which there are some dead zones. And if they aren't, they'll say hey, our radio's not working, but I am I'm okay. I don't need backup.
Context_of_Work	COMMS	R	Field Responder	18-25	5 or less	Female	COMMS-R-012	They're looking at the cameras. We also have, like my screen, I also, we have the C4 cameras which, [inaudible] [City], which is our, it's basically the port does nothing but offshore. [Inaudible] offshore companies. So we monitor their cameras as well. We pull up any database that they have. So we monitor those, and then we have the Zuercher open and the cameras for this building open and the license plate reader. My email is always open 'cause I get a bunch of those. The recorder which I can use, I tend to use 'cause I play back calls, if I hear a dispatcher raise her voice a little bit or say something that I don't think maybe should have been said that way, I'll replay the call, make sure that that call went the way it was supposed to, not inappropriately to where I don't have to pull somebody aside and have a conversation with them. But we have our map for our deputies, so I can view where every deputy is that has a unit. Which actually, I used that yesterday. No, Sunday. A deputy overslept and didn't show up, and they didn't have, he moved to [inaudible], which is a neighboring [County]. He moved there, but he didn't update his file so nobody knew where this guy lived. So I had to pull up his, basically the GPS on his unit to find out where he lives so we can find him.
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	I am the [Job title].
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	I supervise 16 employees that work communications whether it be from administration to training to scheduling to filling in shift if need be if one of them's sick [chuckling].
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	And it seems a little excessive but when you're sitting there for 12 hours and you just need to get a little bit of heat but the person 2 desks down from you is cold or is hot and wants the fans on them, it makes a big

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								difference because just in their work you are letting them get comfortable at their station as far as, you know, environmentally-wise they can heat up or warm up or cool off and they can—I find that it helps them perform better because if you're sitting there freezing, I mean you're not exactly going to do anything at that moment in time.
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	It can be officers from our agencies. It could be other agencies. Citizens that call in. It's such a wide range of people that they talk to. You know you can be on the phone talking with someone at... wanting a legal advice of what should they do and of course they get referred to contact a lawyer because we're not going to give them legal advice. You know and the next call you pick up is, you know, someone needing a dire emergency going on. So I mean it bounces from one thing to another. It could be someone calling in to see—get connected to tickets because they need to pay whatever the ticket they have or fine or a warrant check. It just... it ranges from everything you can think of.
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	Over here, we work 12-hour shifts on the station at terminal one. So you day starts with that station and it ends with that station for the most part unless someone needs to switch during the day for whatever reason. I don't know that it starts and ends the same. If you're on day shift it starts really, really slow. 6:00 o'clock in the morning not a lot of people are up for the most part. But by the time you get off at 6:00 p.m. it's [Laughing] extremely chaotic in here. And then if you're night shift you're coming in at 6:00 p.m. So you're starting it off on your busy time and you're ending at 6:00 in the morning really slow.
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	They do. They have to check their radio equipment and make sure their computer volumes and everything else is set to what they need and to what it should be.
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	It starts with the people... we of course immediately ask is there an emergency. Because whether you're dialing 7-digit or 911 it could be either/or if it's coming in on. And once they've identified whether it is or isn't then, you know, there's a procedure after that. But a routine call is normally not an emergency per se. It may be an emergency to that caller,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it's just not an emergency to the actual police. But they take that information. They figure out what's going on. Where can we send the deputy to, to speak with them? Take down their contact information in the document, who we're speaking to and what's going briefly in the call.
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	A lot of times we are just listening to some callers because they just need someone to get out what they have to get out. Sometimes you have to start--they want to start from 3 years ago and you have to bring them back down to what's going on now. And from there gather all of the necessary and important information that you need to get those deputies to that call to be able to handle it correctly.
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	But the fire department, you have to do that before each and every call. All of our fire departments are volunteers. So you're calling them out of their house or their vehicle or their job. Some of them actually are able to leave and go. So it's a little different. The deputies you're telling them to go there. And this is where you need to go. It's not exactly an option, huh. Whereas the fire department sometimes you--they don't go en route fast enough or what you feel would be fast enough so you're setting a second tone off trying to figure out where they're at. And you have to remind yourself that they volunteer. They don't get paid. You know they do this out of them wanting to help their community. So. It's different.
Context_of_Work	COMMS	R	Comms Personnel	36-45	11-20	Female	COMMS-R-013	15 years ago. And then inputting it into another system after that. I never understood that part but. We monitor security cameras around our building. We monitor over 70 securities cameras in [port] which we're in [City]. The [County] is 99 miles long. [port] at the 99 mile marker. [Laughing]. So we're monitoring their cameras as well. We have several license plate readers throughout the [County] that scans every plate coming through whether it be stolen vehicles and such. So they're monitoring that. They are monitoring fleet tracking which is another program which tells them where our officers are at, how fast they're going, whether they've got a seatbelt on, whether their lights are running. We have a lot of programs. I'm trying to think.
Context_of_Work	COMMS	R	Comms	36-45	11-20	Female	COMMS-	They're monitoring the Are You Okay program we have in our [County].

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel				R-013	Elder residents or residents that are secluded to their homes or anything like that can sign up for a free program that calls them once a day. It could either be mornings, afternoon, or evening. They pick up the phone, it's a prerecorded message from our sheriff. They press a button and it tells us that they have answered that call and they're okay. If for some reason they don't answer there's 2 contacts below that, the system will call that, automatically call so they can check on their loved on. They can render them okay if they press the button. And if none of those answer our patrol deputies are going to the house and check on them.
Context_of_Work	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	[Laughing]. I'm a 911 dispatcher.
Context_of_Work	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	It's usually quiet here [Laughing]. We only have 2 call takers on at a time, 2 dispatchers on here at a time. And during the day it's more busy because we do have people in and out of the building, dealing with the ELC and other aspects of the sheriff's office but at night it's extremely quiet. It's really not that busy here so like I said it's really quiet. And really quiet. But the building is nice. You know we have our kitchen and our restrooms and facilities that need--it's nice.
Context_of_Work	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Well we come in, make coffee and get settled in. And at 7:30 every day we have our radio checks where we have to check our system and make sure everything is up and running as it should be. After that we just sit and wait for the calls to start rolling in. And that's about it [Laughing].
Context_of_Work	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Oh, your partner, well your relief comes in at about 5:15, 5:20 and you go over shift change, tell them everything that's happened, who all they have working for them, and just kind of make small talk and they make their coffee and you leave and that's it.
Context_of_Work	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	So you just try to, you know, talk to the person, you call it through and just stay with them until help arrives and then after they get help and you disconnect you know you just take a minute to just kind of bring yourself back down and calm yourself down.
Context_of_Work	COMMS	R	Comms	26-35	6-10	Female	COMMS-	My responsibility is to stay on the phone with the caller, get all the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel				R-014	information that I need and have it conveyed to road patrol or whoever is responding and just make sure that they're safe and my guys are safe.
Context_of_Work	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Sometimes we have to look up stuff for--I'll call it in for the guys, we have to look--Google stuff and--
Context_of_Work	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	Well... because there are--like I say there are a lot of instances where we have to look up stuff for our guys because like I say we are the country and some of the addresses don't... aren't easy to find. So [Laughing] we have to try to Google and look up stuff and we've had callers who are in this [County] and they know someone who needs help in another [County] so we have to like Google, you know, information for them so-- and we do that a lot.
Context_of_Work	COMMS	R	Comms Personnel	26-35	6-10	Female	COMMS-R-014	[Laughing] you just pray. Pray and get on the landlines and call and try to get your calls rerouted and let everybody know that needs to know and just... try to get it back up as quickly as you can.
Context_of_Work	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	I'm a [Job title].
Context_of_Work	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	[Job Title].
Context_of_Work	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Laughing]. I would say I'm a 911 operator so I take emergency calls from the public, emergency and non-emergency calls and I talk to police, fire, and EMS via radio and just relay basically everything I'm told to them. And I have to talk to the public a lot. Basically, huh.
Context_of_Work	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	...But if you have like a lot of kids that's a good way [Laughing] so you could be a great dispatcher because if you can hear all of them that's kind of like how they are, like when they're on the road, it's almost like well these are our kids, we got to take care of them. You have to answer them. So it's like even if the phone is on or whatever like you kind of just got to grab stuff from different places.
Context_of_Work	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	...I guess mean or have an attitude, things like that. Basically talking to the public is what we do all day. Then we'll talk to the officers and get

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								them where they need to go. We do NCIC entries like putting in people and stolen property and things like that. We talk to EMS and the fire department every day.
Context_of_Work	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Well we have some downtime but most of the time if we do have downtime we'll go through like our NCIC book and make sure everything's up to date in there. We're in the process of trying to write out new policies and procedures so we kind of do that and then I'll talk to my partner basically.
Context_of_Work	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	Yes. Basically the start of my day we relieve, 'cause it's 24/7 so we relieve another shift. We'll do like a pass it on type of thing where they just let us know what happened the night before. We just log into our system. We do check everything like to make sure our radios work. The radios are still working from the night before, the 911 lines are still working and everything like that. And then at the end of the shift we just prepare to give the coming on shift their shift notes or reports.
Context_of_Work	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	[Laughing]. It is to a certain extent. I do think we do need to test our systems but sometimes it's like, well, what if they go down, like right after I do it, like how am I going to know it's down? But so we do test our systems. We kind of I think we need to restart them 'cause our computers never take a break. I guess like they--they just run 24/7. And the passing on, I definitely think that helps because you get to know like what happened on the shift before. So if somebody calls us right back and like well I just talked to y'all, I'm like, no, you didn't talk to me. But, yeah, we'll know what happened because we can look at the shift notes and they can tell us. They've already told us what happened.
Context_of_Work	COMMS	R	Comms Personnel	26-35	5 or less	Female	COMMS-R-015	My responsibilities are to help the public basically. Help my officer. And just ensure that everything can get back to whatever normal the person has going on where they don't just feel like they just need somebody.
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	I am the [Job title] for [County] Sheriff's Office. And also the--with that title comes 911 director for the [County].
Context_of_Work	COMMS	R	Comms	46-55	21-30	Male	COMMS-	Well I would say that first of all I am the director of operations for all

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel				R-016	emergency communications for the [County] first responders. For police, law enforcement, and fire, we handle all of the operations of their dispatch systems. So we answer the calls, the 911 calls, my division answers the 911 calls, administrative, non-emergency calls, and then we take those calls for service, put them into our computer aided dispatch and then dispatch the appropriate services for any particular event whether it's unlock of a vehicle or it's a mass casualty event, whatever it would be.
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	I guess that's the point that I look at it from because I've been there and I don't want something out there that's going to harm them or harm their responsibilities because to me the most important thing that-- responsibility that we have is protecting the officers, the deputies, the firemen, paramedics that are in the field, protecting them as they're responding to these emergencies. From the very questions that we ask to the technology that we use, that's the most important piece of... information that--or... that's the most important part of our job.
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	They're going to talk to a wide range of people. They're going to talk to anywhere from callers having medical emergencies to fire emergencies, to law enforcement. Things that they're going to interact with: deputies, administrators of the sheriff's office, and so forth. They're going to... we don't do emergency medical dispatch. We transfer medical calls to the private ambulance service. So the emergency medical dispatch instructions and pre-arrival instructions and things are given by the private ambulance service. They will talk to firemen, different municipal police departments. We have I believe it's 7 municipal police departments here in the [County]. We dispatch for all of those. And so the dispatchers will talk to those people.
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	We--I guess the way that we view from law enforcement is that our dispatchers are the lifelines. They are the informational resources of these deputies and police officers and firefighters out there. If they need something on that scene, they look to the dispatcher to find that resource for them. And being in a controlled environment it's much

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								easier for us to start looking things up, the resources for them, rather than it is that incident commander in most cases to look it up, look at an iPhone and start Googling something rather than calling dispatch and saying, hey, I need additional manpower, I need hazardous materials, I need the coroner, I need whatever resource, it's much easier for this dispatcher in a controlled environment to get that.
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	Not really. Their main responsibility is to take the calls and dispatch them out. There are a few other things that we do. We do keep up--our division is responsible for keeping up with NCIC and keeping up with some of those tasks that are communications related but not necessarily--it could be done by another division but we've chosen and I believe the right way to do it here in communications. So but other tasks not really. Most of their tasks are centered around taking calls and dispatching.
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	Getting the important information from the caller and relaying that information to the responders timely and accurately. Getting it from that caller, no matter what the circumstances are and then relaying it timely and accurately. We don't determine how that responder goes, whether it's lights and sirens or not. They determine that based off the information and that's why it's critical with that information that's given timely and accurately so that the responders can make an appropriate decision on... how they respond and... basically that picture that was painted for them, how do they go and finish dealing with that situation to satisfy the needs of the victim or the caller or whatever it is.
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	Yes, they do. They make a decision whether that is pertinent information for the event and whether it needs to be passed along. Some do that better than others just honestly. Some make a better decision on that than others. But I think they do a pretty good job of passing along the important information. We do have mobile data terminals, mobile data computers, in the police cars and some of our fire vehicle that they can actually see the information that the telecommunicator, call taker, dispatcher, has received and whether that's important for them to know

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								or whether it was just important for us to document in that particular file card as additional information. And then they have to--the decisions that they have to make are do they run that person NCIC. Do they get a criminal history on that individual because he has warrants out for him?
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	Where the law enforcement guys, they've got to write a report. They've got to get additional information so they're going to call and have that more casual conversation with the dispatchers than the fire guys will in most cases.
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	People sit up further towards the edge of their seat and they [Laughing] they just answer as many as they can and as quickly as they can, getting the pertinent information. It's not a--it's not something where you can say, hey, call me, get me one of the secretaries from downstairs to come up here. Myself and the lieutenant in communications will try to sometimes go out there and help do what we can. But again it's--by the time we--they call us and say, hey, can you come in here, it's usually, okay, we're slow again [Laughing].
Context_of_Work	COMMS	R	Comms Personnel	46-55	21-30	Male	COMMS-R-016	It can cut that last mile of cable between your 911 center, your communication center, and your end office at your telephone company and you're out of luck. You don't have that. But you still have to serve the people. So you'd better have some good backup plans and you'd better have some good resources that can still think, maybe even outside the box a little bit, and not just say, well, our CAD's down we can't do anything. We can't respond. Our radio system's down. You'd better find another way.
Context_of_Work	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	Communications Officer 3.
Context_of_Work	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	I say that I basically babysit police officers. I say that I help utilize all the information that I can. I find every bit of information I can to help my officers. I basically research. I basically find anything you could possibly need. I'm not separated from our information, you could say, 'cause some offices, they have CIU, whereas they look up the crime

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								information. And then they have some that just dispatch. We do all that up in here. We do everything. So we do fire, police, EMS. If we need to send out facility services on campus, we do that. We do everything. So I basically tell them that I'm like a one-woman circus, up in COMMS.
Context_of_Work	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	Stressful is like today. My computer does not work, so my co-partner, if she's here, which is usually two of us at all time, but if one of us is gone, we have to handle everything from traffic stops, phone calls, we field everything. That can be so stressful. My computer being down, I can't really do anything but answer phones. I handle walkups. So that's also different from other departments. Most, I think we're one of the very few departments that actually have walkups to our window. We're not really supposed to interact with people. We have a bulletproof glass for that purpose.
Context_of_Work	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	I do, so fire and EMS, and all them are in that giant building downtown. And we will still contact them that way, so that's how I would dispatch. I would technically speak with their, I guess department, and they would dispatch on their own. So I do not dispatch fire. But I do dispatch like facility services, local on-campus entities.
Context_of_Work	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	I do. I come in, and I get my Clorox wipes, that counts, and I wipe up everything. Kind of OCD. I take ADHD medication that I've taken since I was 25. I'm now 30. I take that. I eat my breakfast. We do whatever we need 'til about 12:00. We do not get to take breaks, really. We do leave and go stuff. Like I have to go get lunch later. Then say at 12:00 sharp, I usually have my lunch. We get off at 7:00 p.m. And it's the same way with night. At 12:00 a.m. I usually have my lunch. And then say 3:00 is when the shift changes, 'cause they're on eight-hour shifts. So the 3:00 to 11:00 shift will come on. We find out who's on, 'cause that's always a circus. And then we go from there, and then at 7:00 we get off, and we give them the rundown of what happened that day. If it's serious, I've got to let them know. During this time, we're also dealing with national crime information files. We have to do a lot with that as far as if somebody stole your phone, and [inaudible] NCIC. If someone gets a hit on it, I have

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to verify that. That can happen time anytime during our shift. And so if we input someone as like a wanted person, I would really need to relay that to the next shift.
Context_of_Work	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	You could say that when we have, the office aspect, I have very rarely, but I'll have sex offenders come in, and I have to get their information. Today we're scheduling interviews. I get their information if that's needed, and I have to text my supervisor, message my supervisor and let her know that they're here. It varies from day to day to day. We had our phones reprogrammed. And then I knew I was meeting with you probably around 1:30, which that was no big deal to switch time or anything. But that can happen at any time. It's been a busy day. So I guess you could say there's like little tasks in there. I play some games.
Context_of_Work	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	... I have [inaudible]. Normally someone else will back them up. I don't have to tell them. Then they will get me a license, or a 26, and I will run that and check for warrants, make sure they're valid. And a lot of times, that's hit or miss. You have a lot of people driving with a suspended license in [City]. It's different than anything I've ever seen. So if it's valid, then we proceed. They'll either ticket them or whatever, and then they call 10-8, which is they're done.
Context_of_Work	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	Responsibility is getting the most accurate information and location that I can. I cannot send them into a call where there is a domestic situation, say it's a football game, and I have tailgaters out there. And well he's fighting me. Okay, is he still there? Yes. Does he have weapons? I don't know. Do you see him with his hands on anything? No. You have to spoon-feed them questions [inaudible]. Okay, has he been drinking? Yes. Has he been doing any drugs? Not that I know of. He could be. Could be, but you haven't seen him take them? No. Have to really go down the list with certain things. Some things I don't really have to, like alarm calls, I don't.
Context_of_Work	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	I get more stressful. I try to get more information as quick as possible so I can get them off the line. Lately on day shift you usually have back to back to back calls. Some days like Tuesday, I had five, six calls the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								whole day, 12 hours. It was [inaudible]. The day before I had 22 case numbers. And that's back to back to back to back. So that got a little stressful. Sometimes it get stressful with your partner, and they're, you're like hey, you're miscommunicating with me. I do that too. Sometimes I'm miscommunicate a lot. It happens.
Context_of_Work	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	Mostly. State police, say I mentioned national crime information computer, we get that information in. And I don't, they keep changing how to put in certain, like your cell phone was stolen, they might have changed that, what that code is in the thin, and I have to call them. That happens a lot. I think they've redone a lot of stuff, when I'm actually working on stuff to get an actual breakdown of what we need to put in things under. So that comes off on me. That's another task I do, is I find things. If it doesn't work for me, I find something else.
Context_of_Work	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	Most of the time if I can give them a call back, 'cause you have to call them back, and most of the time if not, I have to send out an officer to that last location, 'cause EMS will tell us where it happened at. And if I can't get a contact back, then I have to send them. Like they'll say it's next to the tire cage. Okay, well I'll send somebody, and they'll be like okay, I don't see anything, [inaudible], case number.
Context_of_Work	COMMS	U	Comms Personnel	26-35	6-10	Female	COMMS-U-017	Usually, yes. Not actually all the time. Sometimes it's even off campus. Sometimes I'll have to tell them well here's what I can do. I'm going to forward you over to [City] Police since you're off campus. Since you're off campus, that's who you have to go through, or say it's EBRSO, sheriff's office. Like well if you're not on campus, I can't help you, but I can forward your call. I can get you help to that location. And it's an interesting app. It's call 911 Shield. A lot of colleges I think are using it. I think Virginia Tech is the one that came up with it.
Context_of_Work	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	I'm a communications officer.
Context_of_Work	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	We take phone calls from people around [inaudible] college campus, we take phone calls about--you know, if there are thefts or any kind of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								emergencies, we dispatch officers, if there's a medical emergency, we get in touch with EMS, which EMS would get in touch with Fire and have them sent out. There are a lot of different things that we send officers to do. We'll send them out to motorist assists, if it's somebody who needs a jump or anything like that, or we can also send an officer to do an escort, like if a student wants to get from one location to another on campus.
Context_of_Work	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	It can be very thrilling. We have some calls that, you know, they're very--we need to get an officer out there as soon as we can. It is fun, we do have fun, we are like a family here, so we do have fun, but when serious things happen, we get on the ball and we get them out there.
Context_of_Work	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	Yeah, I mean, we come in in the morning, we get all the programs that have we signed in. We make sure everything is up to speed, and the dispatchers before us let us know what's going--what they had the night before, if anything is going to come up between those calls and going into the day, and that's basically our routine, just, you know, make sure everything is up to date, and we know what's going on.
Context_of_Work	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	Okay, so let's say if we have a subject that is--let's say they're breaking into a building, or they're going inside the stadium. We usually have the cameras pulled up, we'll have those pulled up, we'll try to locate them, we'll get as much information from the complainant as we can, you know, get their race, what they're wearing, if they have any accessories, like if they have a book sack or anything like that, we'll get that information, and we'll send the officer out there. Now, if it's a theft case, we'll send--we'll get all the information from the person, and usually, I mean, the usual theft cases we have here, sometimes it's usually technology, iPhones, it's computers and stuff like that, so we'll get all the information from the person that--you know, if they're on campus, and sometimes, they'll call, and they won't be on campus, so we have to tell them, you know, call back when they get on campus, or to come in here, and then they can make a report that way.
Context_of_Work	COMMS	U	Comms	26-35	5 or less	Female	COMMS-	Okay, my job during a call is like--is to get the officer there, you know, get

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel				U-018	all the information, get the officer where they need to be at, and then have the officer tell me information, and the information he gives me, I put into his call. That way, whenever he's done, he goes to write the report, he has all that in writing.
Context_of_Work	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	Well, it'll go to their case number, so like, once they pull a case number for it, and they go to write their report, all that information is in there, and they know, the time--everything is timestamped and all that.
Context_of_Work	COMMS	U	Comms Personnel	26-35	5 or less	Female	COMMS-U-018	Nuclear Science, so this one, we monitor it, and sometimes, it'll go off, and we have to get in contact with the person that is over it to let them know, and then, you know, we usually get an officer en route to get them to check it out, so we monitor that. Let me think what else we have. Yeah, I mean, this just--it's a lot of things we monitor, but it's definitely doable. It's definitely--and that, I mean, the Nuclear Science rarely goes off, so--
Context_of_Work	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	...Spent the vast majority of time in that field capacity both as a commander and as a provider in our special operations section, which is our all-hazard rescue section. So with that, the special operations section covers technical rescue, hazmat, water rescues, confined space rescue, cave rescue. So any kind of rescue discipline where a patient, or where someone may find themselves as a patient, that is in an austere condition. Not necessarily at someone's bedside, but maybe out in the wilderness, or hanging from a cliff, or industrial rescue. So maybe a window washer stuck on a rope on a side of a building. So, spent the vast majority of that field experience and that field time as a provider for that team, and as a commander for that team. In 2003, I was-- I moved to the public information office, which--
Context_of_Work	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	Within the Public Information Office, it's not just pretty faces on cameras or anything. In our section, and my primary duty is to handle open records requests, so we do that within our section. We also function as a legal liaison between the courts and our medics, because obviously we're in a situation where our medics are subpoenaed a lot for all types of court cases, whether that be family violence, or DWIs, or murders. I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								mean, whatever it is. We have a lot of that, and we try to be the go-between and make it smooth, both for the court system to have access and get our medics and get them scheduled off, and then our medics as well. Be the conduit there to make it more of a seamless-type go-between, so it makes it as painless as we can for them in those things. In the public information realm, we're also very heavy on social media. We have quite extensive use of Twitter, Facebook, some of the other platforms. Those are our major ones. So we do that as well. Part of the of open records requests and some of the other kind of liaison-type duties between other departments, for instance, the [County] Sheriff's Office, we - since we're talking technology - we utilize technology to go into archives where the audio files from the 911 calls are stored. So we pull those, and either provide them to law enforcement for their investigation or public information. We do redactions of documents and audios. Part of PIO also, we're very highly involved in presentations to all types of groups. So we deal with programs, Prezi, presentation programs, Canva, developing graphics. That's another area that we produce in-house videos, like kind of what to do when, and safety tips. There's a lot of technology there that we get involved--
Context_of_Work	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	Right now, it's just for kind of training video, photography, PR purposes. But we hope to have a fully operational drone program at some point in time that would assist in search and rescue, or maybe even an aerial platform that we could observe what's going on real-time at a scene or something. We do a lot of outdoor concert venues out towards the Circuit of The Americas. So it's a vast area. And if we could keep track of our medics and the situation, the crowd movements and stuff like that, using that aerial platform, that would be something that we would be involved in, as well.
Context_of_Work	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	...I stayed, crosstrained for a year and a half, probably almost two years, where I was still working in the field to maintain my qualifications and credentials there. Then just through some personal life things and stuff going on, I decided I'm just going to have one job again and just do

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								comm, and decided to stay there. Worked my way through the ranks in comms, a training officer and captain. I did a couple of years at our academy as an academy instructor. Then came back as a supervisor. Eventually promoted to commander, which used to be-- that was sort of a management role at the commander level. And I did that for probably 9 years, almost 10 years, and then promoted to division chief about 3 years ago, I think-- 2 and a half years ago.
Context_of_Work	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	...My group is responsible for our portion of the computerated dispatch system that we use and software we use to track calls and ambulances, and keep everything balanced with resources. We also manage the radios. So our portion of the radio system, and maintaining and making sure that everybody has what they need from radios, and doing all of the strategic planning. And so I sit on a couple of different committees and boards with the city and with the radio system and with the region, with CAD Call, which is our counselor governments, looking at technology and what are we using now, where do we see. We've done a lot with FirstNet sort of in the planning phases with them to see how this public safety LTE is going to work for us and what we're going to do wih it. That's me in a nutshell. I'm a tech geek.
Context_of_Work	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	And Homeland Security. So I also manage our Homeland Security Division. So it's a relatively small division, but there's a lot of technology there too. So watching all the different federal websites, HSIN and all of that, to stay on top of whatever is coming down the pipe at us. And then all of the-- there's a lot of web-based like WebEOC, the Intermedix group that does WebEOC and patient tracking and all of that. So there's some technology going on there as well, both what we use day-to-day sitting at our desk, but also how do we get information out to people on the phones and to their mobile tablets and things so that we're giving them good intel about how busy we're working right now, and how busy are the hospitals, and how do they make better decisions or help patients make better informed decisions about where they want to go. If a hospital's really busy, then we can offer them the next closest hospital

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that's in the same network. And so we're working on doing some of that again.
Context_of_Work	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	We look up medications, side effects, stuff like that. So, [crosstalk] some of the-- or even pill identification. There's a yellow oval pill with a square mark on that side and a 137 on the other. So, you can have that answer.
Context_of_Work	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	Usually. Depending on how many call. Because if we know it's a collision, and so we'll put into the CAD patient contact and then that person is like there on scene, everybody else starts dropping. But what we have to assume is that while there is 15 calls coming in, that may not be 15 calls for that collision. There may actually be something else going on like a cardiac arrest on call number 11. So I've got to get to 11 to find that cardiac arrest or we can't take as long as we normally would to go through all of our questioning. Probably the biggest evil that we see in 911 are uninitialized cell phones. So the cell phones that don't have service anymore, but the FCC requires that they be able to call 911, which it makes sense for people that can't afford it, to have that ability. I know they hand them out at shelters and places, which is great. But when they fall into the wrong hands, they are really difficult for us because we don't have any way to track them. We get false 911 calls. We'll get kids or sometimes even adults with mental illness and things. We get called over and over and over again with these phones. We've had some of them that have called as many-- we had one that was like 600 times in a year and a half from--
Context_of_Work	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	Self-driving ambulance is an interesting concept. And the reason why is because right now you rely on one individual in the back. And if you're treating, even if you're just treating one patient, not multiple patients, but a single patient, but a multi-system injured or ill patient that requires more than maybe one brain and more than one set of hands in order to better manage the treatment side of that patient's modalities, then you're doing it by yourself. And if you need hands, then normally you would ask for-- okay, send a couple firefighters with me, and their not going to have the advanced level skill sets that we do in anything. But

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that is-- so they're a basic mind set. They're a basic set of hands. They're a tool in the tool box. But not necessarily a functional tool. Whereas if you have a self-driving ambulance--
Context_of_Work	EMS	U	Not specified	Not specified	21-30	Male	EMS-U-001	All this safety component to that. Because when you're by yourself treating in the back, 9 times out of 10, you're probably standing. And because you're by yourself and you're trying to access head to toe. And try to access and re-access, and treat, and provide comfort, and start doing your paperwork, all the things that happen. But with two sets, two people in the back when they can both in essence-- "Okay, you take the head, I'll take the feet, and split the torso down in the center," and maybe be seatbelted in. One person is ascribing, the other person is treating. then when you get to the medical facility, then you have a lot more things already accomplished so that that medical asset, that resource, then maybe has a shorter [crosstalk] downtime and has a quicker return to service time.
Context_of_Work	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	I guess my job title would be [Job title]. So I drive the quint half the time, and then other half the time, I actually ride up as officer on the squad. So it's one or the other.
Context_of_Work	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	Okay. So I come in anywhere from 6:10 to 6:20. We actually do our shift change at 7:00, but we try to be here before 6:30, and that's to relieve the other crew on duty. So I start off, come in to work. First thing I do is always get my gear, put it right on the truck. It's the first thing I do because I want to relieve the person who's trying to get off. From there, stuff goes on. I check my pack, make sure it's good to go, make sure our bottles of my operating PSI,ur minimum is 4,000, but the station would do 4,500 because we have an air filler here so there's no reason not to have your bottle completely full.
Context_of_Work	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	So we do that and then from there, I'll go get dressed usually, put my stuff on. I have a cup of coffee with the guy coming off the shift just to talk about the kind of the things they did, calls they ran. From there, I will-- I'm trying to think. Oh, okay. And then after that, my other guy on my shift, and if I'm driving, it's the backseat guy, he's checking the med

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								boxes. I make sure he's good, everything's good. And then if I'm riding on the squad, it's the same deal. I'll walk over, "Hey," make sure he's there, make sure he's doing what he needs to be doing. From there we cook breakfast. So we go ahead and we cook breakfast. Make sure that the new dude's putting out the flag. It's really important. From there, we eat breakfast and we check our truck pretty much from the top to bottom, make sure everything's where it's supposed to be, make sure everything's operating, the full on water, all your lights work, any issues that you could have the night before. So after we do our truck check, we mop our bay. So should we go [crosstalk] or--
Context_of_Work	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	So we mop the floor, we do our daily chore, and we usually have a project we're doing around the station where we're trying to better the station. So if a call comes out, we just go to the call and then when we come back, and we start where we left off. As far as medical stuff, very important that we check our med boxes every morning and everything has to be in date and where it needs to be, and--
Context_of_Work	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	Oh, so there's three different med boxes. We have the actual med box, airway, and trauma. We have them segregated so that way all your medications, stuff I need to check someone's vitals is in one box and my next box is my airway. So anything airway device, like our i-gels to anything airway like your c-collars, your non-rebreathers, your NPA, OPA, all that stuff is in the airway, and then your trauma is for your splinting devices, your SAM sling, it has your tourniquets in it, your big stuff with a lot of bleeding. And we make sure every one of those boxes is good every morning. So it takes about an hour, including doing your AED and your suction device. So we make sure everything is square when we're ready to go because you never want to be on a call and not have something because people across the street have paid you to make sure that you are squared away. So that takes about an hour, hour and a half. It really depends on who's checking it, as far as-- we also clean it too, because it's super important because you open these boxes and you touch them with your dirty hands, so we usually go through-- anything

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that's been touched, we clean it with Lysol or cleaner. So as far as those go, we check those, those are good to go. Trying to think else what you need.
Context_of_Work	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	So I did our whole protocols for CPR, and taught all three crews. So my station here in [City] Two and [City] Three, taught all three of them.
Context_of_Work	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	So we take EMS super important, because it's 80% of your call. And you need to be very efficient at your job, so we take a lot of pride. And I have an app on my phone that has my protocol. So anything I think is weird on my way to the call, I'm looking it up to make sure I'm following my protocol exactly right. We also quiz each other on protocols.
Context_of_Work	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	So, yeah. So we'll make sure that-- just like if you struggle with something, you'll quiz somebody repeatedly just to get it in their brain. What else? I'm trying to think what else. As far as station life, so we do EMS training. We do fire training. So we always try to do at least an hour, hour and a half of fire training, and then we'll try to do always something EMS oriented. It could be different varying times, but that usually happens before fire does.
Context_of_Work	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	Well, the medic unit is separate from us, but we have the squad and it has all of our stuff in there. We currently carry exactly the same-- so all three stations, we carry the exact same medical unit-- I'm sorry, equipment, in each one. Three boxes. So it's uniformity across the three stations. So it's awesome because if you go somewhere else, they're not going to change where it goes in the box. So if I reach for something, I know it's there.
Context_of_Work	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	And we have two new dudes now on our crew, it's the same thing we do to them. On the call: "Hey buddy, you got the spreaders, right?" "Yes." "Okay." And then so you kind of give them a task. And I feel like if you give somebody a task, it doesn't allow them to stop and go, "What am I doing here?" It definitely task-orientes them into doing-- and over time, I think it's definitely one of those things where people get real amped up sometimes. I totally agree with that. But you got to remember that you're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								here to help people and they need your help. I kind of call it my game mode, like I'm in game time. So [Name] takes a step back-- I'm sorry. I take a step back and I'm here to help somebody, and I'm here to help them in any way I can. So I take myself out of the equation and try to-- I'm just here to help you.
Context_of_Work	EMS	R	Field Responder	26-35	5 or less	Male	EMS-R-002	Exactly, so being proactive and trying to figure out what they've taken, and what makes it better or worse is huge. So I think as far as that goes, one of our lieutenants here is a huge EMS guy, and he's very big on download these apps, download the protocols, have all the tools you need to be successful. You need to use them. So I think that is awesome having an app that I can look at and be like, "This is what they took." Because when the medic unit shows up behind us, if you just kind of give them that look, like "Hmm, I don't know. It's this." Then you didn't do everything you could to help somebody.
Context_of_Work	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	...So whoever is in charge of the shift in-- on the nights that I'm in charge, I have a little briefing that we go over, whether hospital statuses, pertinent information like that. And then everyone goes and does housework or chores. They inventory everything on the units to make sure that everything is there that we're going to need for the shift. And then we have dinner and then after dinner, we do training until 11:00 PM. And then at 11:00, everyone pretty much goes to sleep.
Context_of_Work	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	Our crew, I would say the average length of service on our crew is three years. So we've known each other for a lengthy period of time. Some of us have been here for longer. I've been here for six years. My co-officer has been here for 10 years. So there's a lot of longevity. But there's also new people coming in. So for them, we're trying to, basically, indoctrinate them into how we operate and those kinds of things. The dinner communication is very informal and kind of, "How was your day? How was your week?" The training communication is, we allow the providers that are in training to basically run a call, communicate as they think they should. We don't get involved until the end when we do a de-brief. That's more us providing feedback to them. All in person, but those

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								tend to be one way in each direction during that time. And then as people call or walk into the station, it's a little bit random what we do. People come in for blood pressure checks and we need to provide some kind of a community service to them. Other people call with questions about their smoke detector battery that won't stop beeping. So that's a phone conversation. It just depends what it is.
Context_of_Work	EMS	S	Field Responder	26-35	6-10	Male	EMS-S-016	--big incident here. But by and large, I mean we don't-- we need to communicate with the jurisdictions that neighbor-- that surround us. I don't necessarily need to talk to my friends in [State] I used to work with, on the radio from here. So it's basically making good with your neighbors and having good communications with them.
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	My current role I am more or less a liaison between [County] Division of Fire Rescue Services and the hospitals. I go in and out of hospitals all the time, talk to the nurses, talk to the doctors. Find out any kind of issues that might be up or whatever Fire Rescue can do to help the operations in the hospital. I am also a support role for Fire Rescue while on emergency medical scenes. And also on certain occasions-- I mean I can be put into a fire fighter role as well... I am fully trained as a fire fighter and I am also trained as a paramedic... Right now my main role is as a paramedic and as an emergency medical services supervisor.
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	I get to work roughly around 6 o'clock in the morning. I relieve the person that was working before me and more or less do some kind of pass it on to see what issues they encountered yesterday, and at that point I would do my apparatus check. And once that's all taken care of I normally get to my office and start going through my emails. See what kind of issues that I need to address for the day and I check the operations briefing which is put out by the duty operations chief and see what areas I need to help out the duty operations chief with the overall operations of Fire Rescue. And once that's done, typically a breakfast...
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...Our boss allows us two hours of PT time, so I normally do some kind of physical training. After that I normally go around the county. I drive around in a Dodge Ram pickup truck in which I am available to respond

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								on whatever calls I would like. My boss gives me a lot of leeways to what calls I want to run. But there are certain expectations that if there's a pretty significant call like if it's a stabbing or shooting or cardiac arrest, they kind of expect us to be on those kind of calls. And we can run at them at any time.
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Typically, after PT, going out, making rounds at certain hospitals and fire stations. And we pretty much dictate our own day as to what stations we want to go to, who we want to go interact with. And also, while we're interacting with these crews, we're going over calls that they may have run over the past several weeks. Any issues that they encountered, and also going on to hospitals to see what issues that they're having today. Are they having a busy day, a slow day, are they going to be shutting down the hospital for the day for ambulances, and what can I do to help them out. I said running calls...
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...Answering a lot of phone calls that providers may have issues with and more or less I'm just kind of a support role to see what is needed. And if I can fix something, I certainly do. Typically, by the end of the afternoon, start going back to the office again, eat dinner, and at that point I start winding down for the day. I work a 24-hour shift and I'm off for 48 hours.
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	And depending on what kind of call that goes out and I decide to run, I see what those providers need to make their situation better. If we're doing a cardiac arrest, I tend to talk to the family and start letting them know what's going on. If their family member is passing away, or whatever they need to answer questions and making that incident just a little better... Providers, I typically mean other firefighters who are also EMT trained.
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	[RE: apparatus check] It entails making sure that we have all of our equipment is available and not broken. I do a full checkout of the-- as I said, I drive around in a Dodge Ram pickup truck. Making sure all the lights work. Making sure we have plenty of fuel. Making sure that our mobile data computer is up and running. Making sure the GPS is reset for the day. And checking my medications, that they're all in date. And

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								checking out my-- we also have a self-contained breathing apparatus. I make sure that that's ready to go. I don't typically use that in my role right now, but I do make sure that it's ready to go.
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	That's normally a 15-minute process of checking out the truck, making sure the tires are looking good. My collateral duty is making sure that the apparatus is in good shape. Making sure that it doesn't need any kind of routine maintenance, and things like that.
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	For the most part, throughout the day I do operate by myself. My response area is pretty much-- we have two EMS duty officers a day. So we pretty much cover half the county a piece.
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	So most of my communication is through cell phone... But there's a large sum of my day that I'm operating on the radio as well. Providers may be on the scene of a call having a difficult incident and may need to call me on the radio and then we'll talk back and forth on a secured channel and be able to talk securely and be able to talk about patient information.
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Whether they're dealing with hoarding situation. Whether they're dealing with a difficult patient who doesn't want to go to the hospital but they know they do. It's just a wide range. So pretty much predominantly I operate with a cell phone and a radio. Also, some of the other communication technologies we have is a mobile data computer. It's a tough book that has all of our dispatchers on it and that's how we respond on calls, clear from calls, and go available in quarters, available on the radio.
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Any given time I am not really-- I'm not directly supervising anybody. Meaning day to day, hour to hour. But typically whenever I respond to a call, I'm supervising them at that point. That's typically anything from-- most times about six to seven people in my role right now where I'm maintaining the supervisor role for about that many people. That's typically what our span of control is. Anywhere from five to ten people is what we were typically supervise. But at any given time I could be supervising 30 people depending on the incident. But that's a very rare

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								occasion. It's typical for a short period of time.
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	For EMS, for the most part, and this is well over 90% of our calls, it's a pretty low scale incident. Probably dealing with about six people operating at a call, somebody on a chest pain. So the incident command structure doesn't really-- like the big incident command structure doesn't really fall into that...
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...when you're talking about a significant event when you're talking about multiple buses that have crashed on [Street]. We also had an incident down in [City] in which we had a building explosion. Not only was the fire going on and they had incident command structure, you also had 30 to 40 people that need to be transported to hospital with burns. So that's a whole other incident command structure. So we almost have two incidents going on in that one incident. So it's a very similar incident structure in which we have a number of units in which we need to get X amount of people to the hospital and account for them as well. So very similar incident command structure that the Fire Rescue has.
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Most of my role on those type of incidents would be to communicate with the hospitals and find out how many patients can each a hospital take? And then I would start coordinating which patients go to which hospitals at any given time...
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...That's my main job, is to make sure that the hospitals can sustain, and we share the wealth of these patients to each individual hospital, and dependent upon their specialty, as well. Some hospitals don't take kids. Some hospitals don't take these types of patients. So I had to make sure that I know that, and [quarantine?] with all that.
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Sure. Normally, the people that are taking care of the first triage are the ones on the fire engines and fire trucks. It could be ambulances and medic units. We have four providers on engine companies, three on trucks. So we typically utilize those crews, so that they can get through a lot more people, and triage them and give us a number as to how many people we're dealing with.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	So we'll have an actual incident commander. Let's say it's a mass casualty incident. We'll have an incident commander of that, and then he or she will branch stuff out, like triage. You're the triage unit. You're the treatment unit. You're the transport unit. And then they'll have certain units under their command. It's all about breaking down the span of control so that one person isn't taking care of 30 people. You're only dealing with about five or six...
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...then typically we'll have a communications officer, and that's pretty much what my role falls in. I would call our SYSCOM, which is a [State]-based medical communication system, and then I need to declare a mass casualty incident, and then I need to coordinate with the hospitals and find out what the bed counts are. So, yes. It's a very similar command structure as a fire. You're just using different terminologies.
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	We need to know the channels, yep, and if you don't really operate in those channels too much, you pretty much don't know them, but we do have charts, and being able to tell us which ones they're on. A lot of the firefighters and EMTs tend to listen to police channels, because we do operate on the same calls, but I say, we very rarely can talk to them by radio.
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	...On low-scale calls, not a whole lot of communication that needs to happen. We'll have five or six people on an incident, and they're operating within a house, so we don't need to talk to each other via radio. We can just do face-to-face. On big incidents like house fire assignments, hazardous material events, mass casualty incidents, then we go to a whole separate talk channel. There's not a whole lot of talking on that radio, other than what's on that particular incident. So if we have six, seven, eight units dedicated to one incident and you know there's a lot of talking, we'll go to what's called 7 Charlie, or 7 Golf, and we'll have a talk group that we can operate within. And only people talking on that channel are on that call...
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	So our communications they dispatch every single call whether it's a fire call, an EMS call, hazard materials, you name it. It's all done on [Name].

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								We have well over 100,000 calls a year [County] wide. And every single one is dispatched on [Name]. Well over 90% of the calls get-- respond on [Name]. And that is only an operations channel. We don't dispatch on that channel. They just do request of resources and questions and stuff like that of people that are on an incident.
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	One of the main apps that I use is called CHATS. It's C-H-A-T-S. It's a [State]-based hospital status program. I can look at the app and it shows me all the hospitals in [State] and what diversion level they're on. At least from my role, I can see what hospitals open, what hospitals are closed so that we can-- and also providers on ambulances, can use that resource as well to see, "Okay, I've got a patient that is very sick. But this closest hospital is very busy." It might be better to go five minutes down the road and be less busy of a hospital so they get better treatment. So that's one application that I can utilize.
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	We also have hazardous materials apps so that if we run a hazardous materials incident, we can check to see what UN number it is, what the product we're dealing with is...
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	Having that piece of information might be able to trigger questions as we get to the scene of a call. If we've known this person has called 12 times over the past month, then I can at least ask those questions to the people there, "Hey, I've noticed you called this many times. Sounds as if you called for this reason. Which hospitals have you gone to?" So that we can just better provide them the service they need.
Context_of_Work	EMS	S	Field Responder	36-45	11-20	Male	EMS-S-014	[RE: involvement in purchase decisions] Very, very little. I know I was involved in a meeting with some of the technology groups just to see from my vantage point. I'd very little input with it all. The fire chief has his people that he goes out and does a lot of these meetings. So I have very little role when it comes down to choosing these products, but certainly, I can give my input as to, "Hey, I've got this radio. It works great for me but I wish I had this." Very little for me.
Context_of_Work	EMS	S	Field	26-35	11-20	Male	EMS-	So my first and primary function is that of a firefighter that has been

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				S-015	cross-trained. So fire suppression, putting out fires, responding to 911 emergencies. And then I took it upon myself to further my knowledge and my education to be able to provide advanced life support or ALS treatments to individuals in the same community in which I serve. And that includes pharmaceuticals, medications, drugs and electrical therapy for cardiac patients in order to provide appropriate care and treatment pre-hospital. And then get to them to the most appropriate treatment center.
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So my daily routine, when I'm at work, is that I work a 24, 48-hour schedule. So I work 24 hours on, and then two days off. It works out to be 9 days a month is my schedule. Typically, I report to my duty assignment, whatever station that may be by at least 6:00 AM. Our report time is at 7:00. So that gives me an hour ahead of time to just kind of help with a last minute call or whatever needs to be done. Makes smooth transition.
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...I normally find where I'm riding and get that position ready with my gear. Makes sure it's all ready to go. And then I sit at our breakfast table and generally do breakfast and coffee. And then at 07:00 in the morning, we have lineup which is a traditional term. What that means, that the nine gentlemen or females that are working on my shift, we sit and we have a face-to-face discussion about previous shifts, the day ahead of us, what needs to be done, accomplished goals for the day. And that generally takes about 15 to 30 minutes uninterrupted...
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...we go out and check our apparatus, whether it be the fire truck, the fire engine, or the medic unit to make sure that it's operational and ready for the 24-hour tour of service. Fix, maintain, repair whatever needs to be done. That generally takes about 45 minutes to an hour as well on a normal day...
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...from there generally move into some form of physical fitness or activity to maintain personal readiness... Uninterrupted again on a normal day that's, I would say, about a half hour or 40 minutes on a good day. And it may be individual-based, it may be as a collection as a shift

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								doing that. And from there, change, put on the uniform of the day, whatever is required. And then start our day.
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...from I'd say on an average about 1:30, we start an afternoon drill or an afternoon exercise. They can be anywhere from 15 minutes to 4 o'clock that we participate as a whole station...
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...then we move into, excuse me, personal time, pretty much after 4:00, preparing for dinner, cooking, assisting with station duties, housework, cleaning, vacuuming, those type services. And then throughout this period, as I've stated up until this point, we're responding to 911 emergencies or calls. So we're always ready.
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Generally do dinner, we clean up. And then after that, it's more or less our time to follow-up on school work, if we have personal matters that we need to address. Everybody has their own slight agenda or things that they're working on. Station duties, collateral duties, helping train other individuals. And that pretty much runs up till about 9 o'clock. And then for myself, 9 o'clock is generally my bedtime. And then hopefully for a restful sleep, uninterrupted with calls, till about the same start time between 6:00 and 7:00 the next morning.
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	I am a career individual. I had a very limited volunteer experience. I was hired right of high school at 18, and I've been a career or professional firefighter ever since.
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So it's one of our lieutenants or a captain assigned to that station for the day. And it's kind of a, I would say, informal forward progression where based on those individuals that are there, everybody more or less knows where they're going, and we rotate. So if I was on the medic unit the shift before, then I would move to a fire suppression piece the following shift if all those individuals were there. If that individual was on sick or took vacation and there was only one medic there, then that would default that I would be the only medic. So we try to rotate...
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...Back to the communication, so we have that form. And then we do more of the verbal communication, sitting together. Everybody face-to-

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								face, talking. There's some documentations or policies that are read every morning. We may share a quick YouTube video if need be of an incident before, lessons learned type thing. And then after that, most of it is all just one-to-one or individual verbal communication throughout the day...
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...then if there is a response or a 911 call, then we get more into technology in the sense of calls placed from the 911 user. Calls 911, it goes through our CAD or our Computer Aided Dispatch. They generate the 911 call, the type of people that are needed for that call. And then it's transmitted to the station where an alert goes out. It's dispatched using additional technology or forms of communication through the radio system. And then we respond.
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	And it also depends on who the end user is. So if I'm needed to a family member to get medical history about a loved one, they don't have the radio system that we do. So I can't talk to them on the radio. If I need to talk to case management or a social worker, they don't have that radio. I'm limited as to who is on our network, who to speak to.
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	If I need to utilize a language line to talk to a patient of a different language base, I can't do that through my radio. I can, but there's a lot of extra hurdles that go through that. And in my profession as an ALS provider, time may be of the essence. And I need that time and don't have the time to talk to three to four other people to find someone of that language to then convey and talk on the radio.
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So I'll use Google translator. Or I find that people that I serve, and I don't mean this ill in any way or disrespectful in any way, but most people can understand a text message. So even if they don't completely understand the whole paragraph, per se, I can write a text message and show them the message. And then it also allows them to text back if they can, or it's just another form of communication - excuse me - along with body language.
Context_of_Work	EMS	S	Field	26-35	11-20	Male	EMS-	So there's always a state of readiness. So you do have collateral duties

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				S-015	or jobs or responsibilities to do from the simple of going to pick up meals for both lunch or dinner to eat to maintain your own personal nourishment but as I said, you can always get that 911 call at any time. So maintaining to be professional, maintaining to answer questions, representing the department, the county...
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	So EMS, because a lot of the time 50-- even though I may be not on, I'm 100% EMS in the sense of being a medic, but some days I may be the EMS or the medic on a fire truck, so I have that to do. Or I'm just a medic on the transport unit...
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...It may be a little bit of a delay if you have to leave, and the wording that I would use is mutual aid. So if we have to respond mutual aid to an outside county or, for us, it could be another state is, how are we going to talk to them? Mostly, that would be done by radio communications. We have the ability to do radio plugs or communicate to a free channel, but that's above us in the sense of that's communications or dispatchers to assign us to a mutually acceptable channel that interface. Since we went to the 800 megahertz system, where it's a lot easier to do that. Easier for us, but if not every agency that we respond with has 800 megahertz, that could be a challenge...
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	[RE: AVL / call volume] Has increased. So it doesn't upset me one way or the other, of that. The call types are different, in the sense of, I used to question it why they were sending a particular unit because I felt that I was closer and they didn't, and that's not my job to question that. Ultimately, there was a reason why that unit went. Now that we're getting sent on more calls, it makes more sense to that previous thought of, "Oh, I knew we were closer. Now we just justified that we're closer." And ultimately it's the end user, it's the community or the citizen that's benefiting from it. So regardless if we're running more calls or less calls it's--
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...I think when the 911 call taker receives information from someone that's calling, they obviously are on the phone with them the whole time frame for us to get there. So they're getting key pieces of information

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that I don't know about, or will have to repeat the same questions. So there's not really a good transfer of care, in a sense...
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-015	...So if you call 911 because you're having chest pain, and the 911 dispatcher's asking you all kinds of questions about where do you live, and what's your address? Where are you at in the house? What time did your chest pain start? Just being that dispatcher asking questions, those are all same questions that I'm going to have to ask when I get there. And I don't know them-- and I don't know them ahead of time. So they're already getting them, and they're staring at a computer. I would find it helpful if those questions that they asked, when they got put into the dispatch message, that they would also transfer ... over to my electronic reporting mechanism.
Context_of_Work	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	I would say I respond to emergency calls and provide medical assistance to people with medical needs.
Context_of_Work	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Generally, at the beginning of the day, we're just going over the unit, going over the piece and making sure that we have all of our equipment and restocking the equipment as needed. There's a couple of different computers or tablets on the unit right now, that we're using, that we have to log it, that we have to make sure we're logged in properly and everything. And again, that's when we first arrive for duty or whatever, we get all that checked. Make sure everything's ready to go. Other than that, throughout the day there's not really anything specific. It's just a matter of responding to calls as they come out. And again, just restocking supplies as needed and whatever.
Context_of_Work	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	There's a checklist. Although, for the most part, most people pretty much know. They just kind of look at the unit and make sure they have everything they need. There's a checklist that we can use if we need to go through and make sure everything's there.
Context_of_Work	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...The equipment-type supplies are usually pretty well-stocked in the unit. The stuff you usually have to worry about is just the everyday-use supplies: the oxygen masks, the gauze, and IV catheters. Stuff like that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that you can just grab from the firehouse.
Context_of_Work	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Each person has their own log-in. Although, usually, only one crew member is actually logging in. So usually the officer of the unit or the senior person will log into the tablet up front that we use for the CAD system and to get our dispatchers and get all of our call information. The tablet in the back is for the patient care reporting. And generally, whoever's doing the majority of patient care will sign into that one, which may or may not be the same person [laughter].
Context_of_Work	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	The one up front for the CAD stays on the unit. The other one can be taken out. And it depends on what type of unit you're on. The fire trucks take it out more frequently than the ambulances because they'll take the tablet in with them when they go in somebody's house or something. So if they need to get-- the person decides not to go in, and he can sign a release or something. They can get it. Plus, they can record the information that they're getting when they first arrive, and then when the ambulance gets in, they can transfer it over to their tablet. So they usually keep theirs with them. The ambulances, a lot of times, will keep it on the unit because they'll just fill it out at the hospital or on the way to the hospital. So they don't bother taking theirs in with them when they get on the scene most of the time.
Context_of_Work	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Majority of our information comes in over the tablet. Often, it's connected to the CAD. We get dispatch on there. We change our status on there. We let communication know that we're responding. If needed, we let them know that we're on the scene. Usually, that's connected to the GPS. Usually, it'll pick us up when we arrive on the scene or when we get close to the scene. It'll automatically put us on scene when we get close. But if we need to, we'll do that on that tablet...
Context_of_Work	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...And again, transporting to the hospital, we change our status with the CAD on the front end. We do talk over the radio to our EMS supervisor or communications. Let them know what type of patient we have and the priority. Find out what hospitals are available at the current time to transport to...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...if we need to, we can status manually that we're arrived at the hospital, and at the hospital it's mainly just regular communications with the supervisor or communication. We let them know when we've actually transferred care of the patient to the hospital staff, and then if there's any delays at the hospital we let him know over the radio. And then, when we're ready to go back in service-- well, actually, back in service, we usually use the CAD tablet up front for status on there.
Context_of_Work	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	For the most part, it's a limited set of hospitals for most [shifts?]. It'll be different depending on what unit you're on, but usually you're going to the hospitals that are geographically close to you for the most part. Of course, trauma patients have to go a hospital designated as a trauma facility. So there's a limited number of those, but they're spread out enough that usually there's one that you're going to all the time anyway. And same thing with heart attacks and strokes. There's certain hospitals that you can and can't take those to. But again, most of those are in your hospitals you're going to on a regular basis anyway, for the most part.
Context_of_Work	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Yeah. I mean, the relationships in the firehouse are usually, for the most part, it's sounds almost cliché because it's the same way as [I would?] describe it. It's almost kind of like a family because we're there for 24 hours. So for the most part, people get along with each other. When we're not running calls, if we have downtime, we're all working together to clean up, doing any kind of cleanup or anything that needs to be done or things that have to be done around the firehouse or be in the same room just talking and watching TV or whatever, but.
Context_of_Work	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	the way the city is run, they send [City]PD to a large range of calls that may or may not end up actually requiring the police. But they go on-- they end up on pretty much any call that is out on the street. So if we get called for a person down the street or something like that, [City]PD is going to end up getting dispatched. Any cardiac arrest, they'll get dispatched on. And part of that-- I think they've always done that, but especially now with them changing our policies...
Context_of_Work	EMS	U	Field	36-45	11-20	Male	EMS-	...they're allowing us to actually-- if the person is in cardiac arrest, we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				U-017	don't transport them as often as we used to. Because it used to be we would just start CPR and do what we had to do on the scene, and then take them to the hospital. Now, we've kind of changed our policies a little bit, where mostly ALS care that we can do is the same thing they do at the hospital anyway. So rather than transport them to the hospital and have them declare the patient dead pretty much when we get there, we'll work them for 20 minutes on the scene-- at least 20 minutes on the scene. Do everything we can. If we don't get a rhythm back or anything, then we'll call our medical controller and ask for permission to just terminate there on the scene. And at that point, it becomes a [City]PD issue because then they got to call the-- they'll handle notifying the coroner and anything else to do with their investigation. Usually, it's an apparent natural, so usually, it's not anything related to a crime, but they still have to do their little investigations.
Context_of_Work	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...There are some that I personally will use. Children's Hospital has a pediatrics app that I will use for pediatrics. It pretty much has the-- it lines up pretty much with our pediatric protocols anyway because our pediatric protocols were written by Children's Hospital. So it's pretty much the same information, but it can be a little quicker to find the information than digging through the protocols to find it in the protocols. And there's a drug reference app that I'll use for medications occasionally.
Context_of_Work	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...usually the reports are done pretty much before we go back in service from the call. They're done pretty much at the time of service. The amount of time it takes to write it can vary fairly significantly, depending on the severity of the call and how much we had to do.
Context_of_Work	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...I'd say on average, it can take probably-- it's hard to say because usually we're doing it in-- we're doing bits and pieces here and there. So the total time to do a report from start to finish, if I were to sit down at the end of the call with nothing on my tablet and start from scratch and do it all, probably 20 to 30 minutes, on average. Again, that can be significantly reduced if the engine company has already gotten the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								patient's basic information before we get there and transferred it over to our tablet. That's a big bunch of information I don't have to put in. If we've run the patient before-- if I have [copious?] information like their date of birth and their social security number, I can actually look them up in our database to see if we've run them before, and pull down a lot of their history, and medications, and stuff. So it saves me a lot of time doing that when available. Whether that's available or not, it depends on the patient and whether we've run them before [laughter], so.
Context_of_Work	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	Generally, no. But again, they're patients-- most of the time we go, it's not really an emergency per se and usually, they could have gone to the hospital by other means or whatever, or gone to their own doctor or whatever. But the thing is they allow these patients or patients that do have multiple medical problems, and it's one of those things where you never can tell for sure until you get there. Yeah, until you get there and it's like, "Oh, yeah. We wonder every day, but she does have all this health history so she might actually have something going on," and you never know when that's going to be.
Context_of_Work	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	The other thing is, too, is there's more of a system-wide problem in this area. And the hospitals in [City] actually get backed up from ambulances coming in. So it's not a matter of taking the patient to the hospital, drop them off, do your report, and go back in service. A lot of times you'd go in-- especially. if it's a more minor call. A lot of times you'd go into the hospital and you're sitting there waiting 15, 20 minutes before the triage nurse even gets to triage you because there's a line of ambulances at the door.
Context_of_Work	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	And then after you get the triage, they've got to find a bed if your patient requires a bed. A lot of times they'll just send them out to the waiting room if the patient is able to walk or whatever, or sit in a wheelchair. But if they need a bed, a lot of times you've got to sit and wait for them to get a bed available.
Context_of_Work	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	So they started using these private ambulances to take the, what we consider priority three calls, the ones that are stable, don't require any

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								ALS care on the way to the hospital. They may or may not get an ALS assessment on the scene, depending on what the complaint is, but the ones who basically, where-- basically, the patients that aren't going to need treatment on the way to the hospital. Basically, they just need to get to the hospital. And [inaudible], they're using private ambulances a lot for those. Actually, they're in service for us from 7:00AM to 1:00AM so they're 18 hours. From 1:00AM to 7:00AM, then our [inaudible] handle it all. We just handle it all internally...
Context_of_Work	EMS	U	Field Responder	36-45	11-20	Male	EMS-U-017	...There's other private ambulance services in the city, that operate in the city. They don't have any interaction with us as emergency responders or first responders. They do just mainly interfacility transports, taking the patients from nursing homes to the hospitals and back and forth. So, I guess, even though we aren't using them for 911 services, as long as the-- to the extent that the nursing homes utilize them, it takes a little bit of a load off of us because they're using the private ambulances to do some of these patients. Again, a lot of times though, too, even some of the nursing homes a lot of the times will call us, and it's a patient that could have gone by private ambulance or whatever.
Context_of_Work	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] I ride around in an emergency vehicle responding to persons with emergencies. I go around told by dispatch who receives those calls. And then I administer medical aid
Context_of_Work	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] I report to the station. We have one central location where I work right now. And I usually spend about 15 minutes doing inventory on my ambulance, making sure that we have all the appropriate equipment. Log on, check in with dispatch, and then they send us to our assigned-- what we call a post. And that's where we'll be considered coverage should a 911 call come in within a certain area or proximity to where we're sitting.
Context_of_Work	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] Paramedic with the city and county of [City] through [City] Health.
Context_of_Work	EMS	U	Field	26-35	Not	Not	EMS-	[S3] We spend the day driving around the city in an ambulance, helping

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder		specified	specified	U-004	people that get sick or hurt. Depending on the day, I'll drive one day and then attend as the one in the back helping the patients that are sick or injured, giving the medication, and that type of thing.
Context_of_Work	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] we're all subject to the same communications codes, and the police have what's called a 10-code system that we use as well. The expectation is that all employees on the ambulance have an equivalent level of training for the operations. The medicine differs, of course. There's various degrees of certifications, and expertise, and training in that. But operationally, the EMTs as well as the paramedics need to understand all the radios, the routes, and that type of thing, so we are all on the same page.
Context_of_Work	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] And I worked for another service where they would give a tone out before they dispatched a call so that you didn't really have to pay attention to every single word that's being said on the radio because they're talking almost every minute of every day. So we could be doing something, and then we hear that tone, "Okay, now I have to pay attention because they're about to call an ambulance. Could it be me?" Then once they say it's a different ambulance, okay, I can go back to not being as attentive.
Context_of_Work	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S2] That's okay. So it totally depends on how busy the airport is at the time. I mean, it's the ebb and flow of EMS. Sometimes you can sit out there for 10 hours, and nobody is transported out of the airport. Sometimes they transport seven people in 20 minutes... There can be a long time that you're sitting. And at that point, we're basically free to do whatever we want or need to do. If we are down on reports, then we can catch up on our paperwork. If we're hungry, that's the only time that we have to get food because we're not given lunch breaks or breaks in general. Some people, if they have to, they can run an errand. That's the time. If you're posted near a hospital that you ran another patient on that you want follow up from, you can go try and find follow-up from them.
Context_of_Work	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	You pretty much just try to occupy the time however you can. Some people read. Some people bring tablets and watch movies.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S4] ... Gosh, I went through academy in October. I didn't actually start as a EMT on the streets until January. And so, my previous position was the position that she was talking about, a vehicle support technician. And I was sort of promoted into this realm. During that time that I was in the garage and doing the VOC position until I was actually getting that promotion for those two months, I think that there was a lot of questions that I had sort of popped into my head, and I would say that yes, there was some overwhelming factors that came along with that as well. Gosh, academy had a lot of information that was very important, but it was a lot. Probably I would say maybe six or five different sessions for the first week every day.
Context_of_Work	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] That's a hard question. I guess the short answer is no. There's a huge culture with EMS, and fire, and police, and some of that culture is very, very-- EMS as a whole is a fairly new culture. Fire, for example, is a fairly old culture from the very early days of this country. And some of those traditions and those things are very, very slow to change. Sometimes some certain cities-- [City] moves along pretty well. Certain system, I won't name any names, but they are a little bit more archaic in their practices. They read on the paper some practices that are maybe dated and should be changed. They are eventually with varying degrees. But sometimes as in the case of [City], [City] Fire was fairly resilient-- resistant I should say rather, to certain changes and certain economic problems. And ultimately, that agency, unfortunately, went out of business. They completely disbanded and were absorbed by [City] Fire, and [City] Fire is no more. It's gone. And I could say there's a lot of examples. I wouldn't be able to definitively say any of them are a factor, but things happen. You have to evolve. You have to change
Context_of_Work	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] Or raises and there's only so much money to go around. And EMS by definition is a-- it's not a particularly economic business model. People don't really want an ambulance, and people have varying degrees of ability to pay for it. You can't choose when an accident happens to you, and sometimes people don't pay. They can't.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	EMS	U	Field Responder	26-35	Not specified	Not specified	EMS-U-004	[S3] I couldn't say millions of dollars, but it would be a significant percentage, which when it comes to medical billing, even 3 to 5 percent increase in collectible billing is huge when you think of where your system that runs over 100,000 calls a year. So even if only 5% more of those patients had an ability to pay, it would be a significant financial boost. That said, we're never going to not help people with their ability to pay. We're EMS. It's a service at the end of the day. The money system and money gets worked out in the end somewhere in other-- we're the streakers. We're way at the bottom when it comes to all of the finances and stuff. We just help people and drive them to the hospital.
Context_of_Work	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	So we have ambulances in the county. There are two supervisors, one at the west end of the county, one at the east end. It's 50 miles long in the county, so it's too big to have one person do it, although usually one end is a lot slower than the other. And we also get a lot of transfers out of one hospital in [City]. So I'm located in [City], and I switch back and forth every other month. And then I'm responsible for day-to-day holes in the schedule, for just kind of touching base with the crews, with going on calls that I perceive the crews would want me to go on, and getting transfers out the door. When the hospital can't manage a patient that gets brought to them, they need a different level of care, then they usually go to [City]. That's it.
Context_of_Work	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...Like yesterday, I came up to [City] for a couple hours just to hang out and talk. We had a meeting in the morning, and then to hang out with the crews and talk to them. I moved to another station. I hung out with them and talked, and then there was kind of a little flurry of calls, and then it was kind of chill with a couple of calls in the middle of the night. And then today we did interviews all morning from like 8 o'clock until noon, and now I'm doing this [laughter], and then there was a transfer, so I had somebody else do my job while I was in the interviews. So she got the transfer at the door, and then-- it's just that kind of thing where the day dictates itself...
Context_of_Work	EMS	R	Supervising	46-55	11-20	Male	EMS-	...In [City], you can rely on it being a lot slower. Not always, but generally

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder				R-007	slower. Sort of the same type of calls throughout the year. The seasons don't really change it. I mean, you might get hunters in the hunting season. You might get crashes in the winter time. More on the highway. But it's still about the same amount of calls year round. We're in [City], December, January, February, March, it's just skiers, skiers, skiers, and tourists and stuff like that. So it's a difference mix at one end of the valley...
Context_of_Work	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...So the schedule, so we have a schedule of people. They're on a schedule. They work 48 hours and off 96 hours, and there's-- let's just say to make it safe, there's 12 on each schedule, on each shift. So there's three shifts. So basically, you work 48 on and you have four days off. And during your four days off, somebody else is working two days and then somebody else is working two days. And then you come back and do the whole same thing. That's the general schedule for the field employees that work on the ambulances, and they get put in fire station. You know where you're going...
Context_of_Work	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...The schedule gets built a couple of months ahead of time. Then people ask for time off, or get sick, or get pregnant, or get hurt, or want to travel around the world, or whatever they want to do. So then holes come up in the schedule. So then about two months before the schedule, two months before the actual date happens, [Name] builds the schedule. He's the number two person here. He builds the schedule, and he puts out the openings in the schedule. So he says, "Everybody want this stuff?" And we have them make sure a full-time people and part-time people. Almost all the full-time people are paramedics. There are a few full-time EMTs and almost all the part-time people are EMTs with exception of one part-time paramedic.
Context_of_Work	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...we also have extra things besides just the daily duties that are actually even bigger in the summer which are special events. So there's rodeos. There's concerts. There's bike events. There's white water stuff with kayaking. There's weddings. There's visiting dignitaries. There's just all stuff that just comes with the summer. And then there's busy weekends

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								like 4th of July weekend or holiday weekends, or there's a big concert in town, so suddenly we have 30,000 extra people in town. [the scheduler] likes to look ahead. He knows these events and probably how big they're going to draw. So he might add an ambulance or two, or 12-hour ambulance, or 1 24-hour ambulance, and it's all kind of up to him...
Context_of_Work	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...So we only manage-- the field supervisors basically only manage the immediate holes in the system or the holes that are coming up this week. That's it. If we have time to look ahead of the schedule and say, "Hey, there's some openings. We'll send out pages and see if people will pick up." So that's the scheduling thing. And then you can place people in the schedule. We can take people out of the schedule. We can put the reason why they're in the schedule for extra time or less time, or put people off sick, all that stuff. We can do all that stuff. But as far as the overall global schedule, he does that. We manage the little holes in the schedule.
Context_of_Work	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	And then we also take people to [City], and that's even more expensive. And there's different level of care within the valley, and then there's different levels of care when you take them away to another hospital too. So that's where we get a lot of-- and then there's a very small amount of money that comes from grants and stuff that we get, and I'm certain that they only last for a certain period of time though. And then I'm sure there's other money that we literally-- we have leftover and we invest. We try to make it so that when things go down, property value wise, we still have enough money to function [crosstalk]. So that's how we work.
Context_of_Work	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...Basically it just depends, the daily life things. We have chores everyday that we have to do. Then people might have their own personal things they want to accomplish that day that might require driving some place. And then you run the calls as you're supposed to run the calls. And then you go on transfers through a list of-- we have a list of people, and we just go anywhere. And you go to the bottom and you go. And then some people cook together. Some people cook separately. Some people leave

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								leftovers everyday. It just depends. Some people grocery shop together. Some people rotate cooking like, "I'll cook dinner tonight. You cook dinner tomorrow night." It's like a little family. So I mean, you spend 48 hours with these people, so.
Context_of_Work	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...We have supplies to check and restock. And we have maintenance to report or work on. And we have chores that we have to do every day. And besides that and running calls, that's what you do. So you can be very slow depending on what time of year it is, or just where you are or whatever, or you could run all day long or you can run all day, all night. You never know.
Context_of_Work	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	So we have four or five different apps I would use. And some people use them more than others. So we have a Whiteboard. So basically, it's like a-- it used to literally be a whiteboard, like a grease board that you would write on and wipe off. And I would have everybody on the schedule that day, and where they were, and who-- whatever. All that stuff was on a greasy board. And since I've been here-- so in only six or seven years, it's gone to a-- it's a computer monitor that's like just big Samsung television. It sits on every station on the wall. And it's a computer. So you just update it with a keyboard. And you use the scheduling technology to tell you who's working that day. And then the supervisor, in the morning, updates the board. So who's there? Then you update it throughout the day. So if a crew goes on a transfer, you're going to "x" them out and say, "Now, these people are working," or, "Nobody's working that station while they are there," or, "These people are covering for them," whatever it is. So that's how we do it. Then you can see the whiteboard on the phone and that's a newer thing.
Context_of_Work	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: Active 911 app] So yeah, somehow it's linked to dispatch. I don't know how it works. So they send the call. They dispatch out the call. The crew acknowledges the call. They start on the call. And this tends to have a little bit of a lag behind it, and then you'll see drop in it. It just drops in on your screen, and it goes away. It doesn't disappear until you specifically erase it...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: trip reporting] ...Some agencies have ways to track how fast you're going. If you make dangerous turns at high rates of speed, that kind of stuff. And the ambulance, some of them have cameras in the ambulance. Some of them have-- some paramedics have cameras now. No place that I've ever worked, like the cop cameras...
Context_of_Work	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	Yeah sure. So here, I cover more calls than I'm primarily running. So I'll give [City] examples, plus I run more calls in [City]. So in [City] I work part-time, but I work on the ambulance. It's 10 hours a day. I work with another partner. And we listen to the police channel often...
Context_of_Work	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...But a lot of times, there's other information that they can see if they look for it, that they don't read out to you. They just don't. I don't know if they're busy. I don't know if they're just reading the first four sentences. I don't know if it's buried after like another bunch of notes and they don't have time. I don't know why. So if you're listening to the police channel, a lot of times you'll hear the police get sent on the same call, the same information. And then all of sudden, they add two extra sentences and you're like, "Oh, that's helpful information that I got indirectly by eavesdropping on another--" we're totally allowed to do it. But that gives me information about that.
Context_of_Work	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	Also, you can read all of those notes on your laptop. It drops into your laptop. So you can read all of those notes, if you have time on the way to the call, to open it up and take a look about what's happening. And you can see the stuff that they have told you. And you can see stuff like, "Why didn't they tell me that? Why didn't they tell me that?" They try though. And they'll try to give you information like, "We're sending the police with you, and this is why we're sending the police with you." And so you're like, "Okay, good." So yeah, so that happens all the time...
Context_of_Work	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...So I think seeing-- there's a privacy thing now where, do I want to be on camera on every single call that I'm on? Probably not. Do I want to be on camera on any of the calls I'm on? Probably not. But do I run every call like somebody is filming me? Yes, I do, because they're everywhere...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: new ambulance setup] Especially when you're trying to work on a sick patient, or trying to direct your partner who might be new or hasn't worked on the ambulance very much. You're trying to tell them where something is, and it's not in there. So that's stupid...
Context_of_Work	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: new ambulance setup] ...they think that they've tried to set this up so you never have to stand up. And so basically, they've tried to design it with you can be harnessed in like with a sort of four-point restraint seatbelt, sitting on one chair that's like this big, on a patient where you're sitting right about up their waist. And then they've tried to set up equipment around you so you don't have to stand up and reach for it. Even though there's 40 cabinets in the ambulance, they've tried to think, "Well, this is just things that you use 90% of the time, so we're going to try to shove them all right here next to you." ...
Context_of_Work	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	[RE: new ambulance setup] ...So you're grabbing your stuff and doing it, and doing it. And as long as it's a normal patient on a flat road, where you can get an IV on their arm, the arm here, and you don't need to reach for suction, or you don't need to reach for bandages, or you don't need to reach for something for them to throw up in, or you don't need to reach for some advanced airway thing, then the call is okay. But that's not how 90% of the calls go.
Context_of_Work	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	...so we used to have a technology here that would, you had fog and you would beep it in when you would drive, and it would keep track of your driving, your speed, around the curve thing. I'm sure it had some kind of driver scope inside the ambulance to tell you if you're taking the turn, all that stuff. Everybody hated it and the day it got uploaded every month. And they didn't really use it punitively. But it made noise. So it clicked when you come around a turn. And if you take the turn too fast at all, it would alarm. It was so annoying. And even if you were hitting this at a normal speed, it was telling you you were taking it too fast. Let alone when you were actually going fast, then it would just alarm the whole time. So everybody hated it. We kind of mutinied. And when we merged, we got rid of it...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	EMS	R	Supervising Field Responder	46-55	11-20	Male	EMS-R-007	I think also there's a whole side of technology, but I'm sure they can do a study that said if you get to the scene and you realize a patient is sick, and you need to go emergent back to the hospital, then you spend less time at the scene. You package up the patient. You put the patient down in the ambulance. And you start driving, and you never turn on your sirens. You would get to the hospital just as fast as if you get to the scene and go, "Oh, my God," and get in the back, spend 10 minutes or 12 minutes trying to do something with the patient before driving 60 miles an hour through lights. That, I bet, they would show that the time was the same, and the outcome was the same, and there's less crashes when you're not driving emergent. I just think there's ways to-- some people think that the lights and sirens are there to save people's lives, and it really-- there's 1% of the calls, 2% of the calls, where it can make a difference. So that's where maybe people could chill a little bit and use research to prove something.
Context_of_Work	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	So my job title is [Job title], which means I do everything from call a plumber when the toilet's plugged up, to buy \$200,000 ambulances, to hire and fire people. I do personnel. Again, at a small agency, you wear many, many hats. Yeah.
Context_of_Work	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Well, that's exactly it. You learn how to use something, you get used to using it, that's obsolete, next generation, or that company just went out of business. I just got an email today saying that our scheduling program, which is very complex and I schedule 65 employees, they're discontinuing it. Yeah. So [in the service?]- I mean, it's 12 months, 18 months from now... Now I have to go research all kinds of new schedule programs, what's going to work best for us, how it connects with payroll, how is-- you see what I mean? ... So one little change suddenly creates enormous amount of work.
Context_of_Work	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	It's fine. And we're the sole provider. So in the mountains, there's not a lot of resources when it comes to EMS. If we need help, we usually are the help to the surrounding counties because they're even more rural than we are. So if somebody has a big crash, or there's a big fire, or

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there's something else, they're using us for help. We're limited in our mobility to basically [Highway] corridor and a couple two lane roads north and south. Lot of recreational activity in this area. So hunting season's always interesting because people shoot themselves, or fall off their horses, or roll their jeeps, or all kinds of things way back in the woods where there's not a lot of help. No communication. You can't track anybody back there.
Context_of_Work	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	Yeah, it's pretty interesting. But we have search and rescue people, paramedics, who are cross-trained to do what they do and are checked off to be in the helicopter and do all that kind of stuff. We cross-train with the ski patrol. We have paramedics on the ski mountain during the winter. A lot of river activity in this county. [Name] River runs right through the county in one of the [inaudible] parts of the county, of course. So if somebody dumps their raft and is drowning or something, we have to go an hour drive up to the river and figure out how to fix that situation. So lots of long response. Lot of expenditure of resources for one patient, for [smaller?] patients, for those kinds of things...
Context_of_Work	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	So, in big systems, you have your own dispatch and you have grid control over-- the dispatcher can collect the billing information and all that kind of stuff as they send out the call. Here, nobody is big enough to own their own dispatch. So we [are counting on?] dispatch for everything from the dog catcher, to the town buses, to the fire, EMS, police, all of the police agencies, the division of wildlife, the animal control. I mean, it's everything. And so they do a great job at that, but you don't get the level of detail that you would if you had your own dispatch. I mean, they're not trained medical people. They have a card they read off, like if you need to start CPR, okay, do this, do this, do this, do this. Medical priority dispatch, it's called. Most systems use it. You don't have to be medical to read directions to somebody.
Context_of_Work	EMS	R	Other Public Safety	56-65	31-40	Male	EMS-R-008	...Now, in EMS, you never know how many calls you're going to get or when, or anything else. You may get three calls in [City] . All of your other ambulances are 45 minutes away, so that's not going to do you any

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Personnel					good. So all they know to do is throw out the call on the open airwaves and say, "[City] ambulance, you've got another call." And it's up to us to sort of triage those calls. Supervisor picks up the radio and says, "Hey, ambulance 2. Can you come up here to [City] and help with this call?" as opposed to location based dispatching, which, if you had a map and you could see all your ambulances on a map, you could tell which ones were available and which ones was the closest. Then you would optimally send that one. We don't have the technology installed, currently, to do that. And it would solve problems and it would create some, too, because it creates increased workload on dispatchers, who aren't that familiar with how our system works. I mean, they don't work for us. They don't know all our policies and how people move around and how long it takes to do this, that, or the other thing. And so, that's probably the next big step we'll take. So we're looking into hot-spotting each ambulance...
Context_of_Work	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	So the basic Tough-- we use Panasonic Toughbooks for our patient care reporting system. So that Toughbook can communicate by Bluetooth or over cell with, for example, the cardiac monitor. So you hit a button and it pulls the data from the cardiac monitor into the patient report so you don't have to print it and put it in the copier and then scan it and send it over... That kind of stuff, it's nice when it works.
Context_of_Work	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	[RE: frozen towers] we wait until it warms up and it falls off. But in an emergency, sometimes we have to hire a helicopter. Sometimes we go up in a snow cab or the technician does. I mean, that's dangerous, expensive work. And the radio system is kind of like your iPhone. You shut it down and people are like, "Whoa. What happened [laughter]?"
Context_of_Work	EMS	R	Other Public Safety Personnel	56-65	31-40	Male	EMS-R-008	But, yeah, we got high volume, big accidents a lot of time, and poor communications. That's a big problem for us.
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	We do a little bit of firefighting and we do a whole lot of EMS calls. And I tend to categorize it as high-speed counseling most of the time.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	Coming to work, we usually try to get there about half hour, 45 minutes, before our actual shift starts so we can catch the offgoing crew, so we don't catch a late call. And the guys' got kids that they have to take care of. Whatever. Morning starts out usually rig checks. I work on a fire engine so we go through all the equipment, make sure that everything is there. If the crew before us didn't have anything, that's a really fast check. If the crew before us had some significant EMS calls or a fire, then we'll check that equipment a little bit more specifically...
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...As a backseater, my role is to take care of all the-- make sure that the equipment is there that needs to be there so I do the best that I can do. After that, usually, my particular crew, we will get showered up, figure out what we're going to eat, get to the grocery store, try to eat around-- we shoot for 11:00 to noon, but at my particular station, we usually don't get that. If we get that in that window, that's good. After lunch, time is ours, but almost always, we'll be talking about something. Seems like every day we're constantly talking about something to do with work, of course. That usually lasts till about 2 o'clock or so. Time is ours till around then...
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...After that, try to get outside and work out if we can, try to work out as a crew. If we have specific training that our lieutenant or one of us wants to do, we'll do that together as much as we can. That usually ends up getting done around 3 o'clock or so. We usually eat supper late, so we'll start cooking around 5:00, usually. Hopefully, we eat around 6:00, 6:30.
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...the evening is kind of ours. We always say we want to watch a movie, but we never can. So we're not too often that we spend much time sitting down watching actual movies or something we got to get involved in. And if we have computer-based training for our fire department, or if I have ACLS as a paramedic, CPR, if we have to do that, I tend to do that in the evening more, and that seems to be a trend with my particular shift. Then 10:00, 11 o'clock, go to sleep. And then, of course, we run calls throughout that. So my station is an engine house with a rescue company, and that station has-- I would say it averages 15 to 20 calls a day, so. And then for us, a call lasts about 40 minutes

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								depending on if we ride into the hospital or not, so.
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...I suppose my personal approach with reality is the actual time it takes to-- how much time does it take to get the ladder down because we have a hydraulic lift for our ladder rack. It actually takes 10 seconds for it to get down to where we can take it off. So if you got a family that's yelling at you, "Hurry up! Hurry up!" and you're just holding the button, waiting, it's kind of nerve-racking. So I'm big on that. So when we look at equipment, how can we set it up to make it quicker and go? ...
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...And then just a lot of conversation with everybody, really, and, first of all, how I can help the officer. And then how can I help the newer member fit in with that role and understand that my job is to kind of know what the officer is thinking so that we can make decisions really quick? Even on an EMS call, if the environment gets hostile, just being aware when to stand up and step away, or when to ask your officer for help. When do we need more help? Things of that nature. Do a lot of-- that's probably my biggest role in the backseat is just bringing reality back to situations because we tend to always win in our trainings. We always come out successful and it's just not the real world, so.
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: rig communication via headset] No, no, only when they talk to us. And then the same thing goes for us. We can say whatever, but then the front seat, the engineer, and the officer has a button they can push and then they'll talk to dispatch. But they can only hear what comes out of that microphone correlating to that button they push, so.
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	Sure. So we should all be carrying a portable radio, and we do. And then there's specific codes that we use if we need police emergent. If we just say, "Have him come emergent," we'll get like one officer, maybe two, to come and then we'll tell them whatever the problem is. But if we say, "Code one," then that's like a mayday call to the police. And then we'll get every officer that can drop what they're doing. They'll come available and come to help us.
Context_of_Work	EMS	S	Field	26-35	11-20	Male	EMS-	So I sit behind the driver's side and I'll just start over there and walk

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder				S-005	around. And then the other firefighter, he sits, obviously, behind the officer. He'll get out and walk around, check cabinets and everything. And then we just do a circle, however we want to do it, really. When it comes to our literal EMS kits, we tend to work on it together...
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	So it's not really different, with the exception to-- when we're in the station, there's a button that can be pushed that, when dispatch tones us out-- and I don't know exactly what they do, but when they tone us out, it'll say Station [Name] and then we will hear our tone for us. We don't have to hear every other call in the city. When we are out-- I guess traditionally you'd say when we're out on the air-- if we're doing inspection, or groceries, or whatever, we have to listen to everything. Then we got to hear our own call...
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...Now, if we're in the engine, we use the MDC and then that will pop up. Our notes and everything pops up whether we're in station or not. And then we have to hit the en route button. So if we're in the engine, when I act officer, I like to have all the sounds on. And I'll close the computer so that I'll hear the doo doo doo sound and then I'll know that that call is us. And then we'll hear the tones through the headsets. But when we're out walking around, talking to people or whatever, we got to hear. We got to listen.
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	In the rig, when we have headsets on, we hear everything. But we sit facing backwards, so we don't see the computer. Only the officer sees the computer. When we're out walking around and not in the fire engine, we don't see anything on our radio. It doesn't tell us that it's us. We just have to listen.
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...Now, we don't traditionally talk directly to the police. There's a switch we have to switch to talk to police. We can get onto their channel and turn, but we have to ask dispatch. We do that when we have standbys for SWAT or whatever. We'll switch to their channel and then we'll listen. And we can hear the police request entry, and then, "Okay. We'll go in." And a lot of times, there's a minute or two delay before the fire dispatch will tell us that we can go in, whereas if we're just listening to that police

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								channel...
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...Now, when we communicate with the ambulance, as far as I know-- because they don't use the same communication program, computer program, that we use. So they don't get dispatch notes. They only get what they hear on the air. Right. And so there can be information lost based on that. But dispatch airs all our notes. They talk it out loud and we can read with them. We see exactly what they're going to do. But the ambulance providers don't know that. They only hear the notes.
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...For me, in my perspective, like I said, I'm really based on reality, and been a paramedic for a while. I don't care. All I want to know is, what equipment do I have to wear? Do I need a black coat or EMS coat, or do I need my fire coat? That's really the only thing that matters to me. Now, I need to know if the scene is safe. That would be nice. If there's a hostile party, are we going to-- is it so bad that we're going to wait for police to get there first, even though the call is for a baby not breathing? We have that luxury here. Not everybody has that. Now, some people want to know more. They want to know if it's a adult or a child. Breathing, trauma, they want to know. For me, it doesn't matter because, so often, the information that dispatch is receiving from people is very much exaggerated. "Oh my God. There's blood everywhere." "Well, compared to what you're used to, yes, there is blood everywhere. But it's right here and it's right here. It's not that bad." So that stuff really does never-- I don't have a lot of value in that...
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...But if there was like-- nowadays, especially since this is what we're talking about, if you could text message a picture to 9-1-1, and they could send it to us, that would help as far as we could look and say, "This car accident here and the people can't get out of their vehicle." A lot of times, the engine is dispatched by themselves. We could see that picture and say, "Hey, let's add on a truck," and achieve to that so we can extricate. Let's get that ball rolling sooner. Images would be pretty fantastic, but actual words and perception is just so different. My pain scale might be very different from yours, so.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	...So many of us on calls, if we have a unique situation, sometimes we will take a picture with our own personal phone and send it to our chief's personal phone so he can look at it, because the department doesn't issue the rigs smart phones. Only a flip phone, and then a separate digital camera. So we can't make it all work. So having an updated tablet or an updated cell phone for the unit would be very helpful.
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	So using that flip-- having that flip phone with those sensitive numbers in there, that's really helpful. And I've used our phone plenty of times to call the hospital or whatever. But the ambulance company has smart phones, and a lot of times they do take pictures. And they have all that capability.
Context_of_Work	EMS	S	Field Responder	26-35	11-20	Male	EMS-S-005	[RE: technological advancements] So EMS-wise, I like it quite a bit. For instance, the hospitals that we respond to-- now, the one big hospital up north [Name], that one, they have every doctor on site. So we don't need to do it...
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Here at [City] Fire, we are responsible for all the fire suppression, hazardous materials, response, and EMS services within the city and district of [City] Fire Protection.
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	We work 48-hour shifts. First thing we do, we come on in the morning, and we put our gear on the engine or whatever unit we're on. Go in. We have a pass-off with our crew that is going off that day. And then, we have a meeting on our life-size unit, which is a like a closed-circuit TV. So the battalion chief and all the different stations, including dispatch and here in this building administration. And if there's any training or anything like that, they'll make anybody aware of what's going on. If there's any changes, we talk about it, discuss it...
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	...Then, day usually starts out. Truck checks, which we haven't had a chance to do yet since we've been running calls. First day, we usually get groceries for the tour. We have to exercise every day and do some sort of training each day, as well as our daily clean ups that we do at the station. And the second day, hopefully, we get most of the cleanings

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								done the first day, and we can just focus more on our training. Or if we're studying for an upcoming test, we usually get that done too.
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	And then, our crews are also very active with community risk reduction activities, so public education, events at the schools or the senior living facilities, or just different community events. And then, we're also responsible for the pre-plans of all the buildings in our primary response districts, as well. So during the business day, we are active in the community outside of running emergency calls.
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: doing pre-plans] That is every operations member on a fire apparatus or EMS apparatus. So outside of the emergency calls, there are plenty of activities to do within the community.
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	...So we're at the station in between calls just to finish reports and keep the apparatus and facilities maintained. But outside of that, we're usually out and about doing stuff like this [laughter].
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	It depends on hospitals that are close too. So when we transport a patient to the hospital, we come back into our system very quickly. So we pick up calls all over the city just going to and from different events, calls.
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	The hospitals have snacks and stuff, but for the most part, our fire department is pretty healthy. So not a lot of people just mow down the snacks and the vending machine. So I mean, worse case scenario, sometimes we'll just stop real quick and get some food and keep going about it and eat it in the truck, but we're trying at least to sneak in some food because we've got to maintain our health in order to help other people.
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: dispatch] So they don't just send everybody just because. They actually pay attention what the caller says and use that information to make educated decisions and assign appropriate resources. We can always ask for more, but they send the least amount of resources to effectively mitigate the situation. And then, we can add units to that as necessary.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: dispatch] They will tone us, tell us where we're going. And then, usually as we're taking off from the house, they'll tell us what the code is. So depending on if we need to emergent or non-emergent. And then they'll tell us-- usually there's some notes in there too. If it's an older person that can't get to the door, maybe there's a key somewhere.
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: dispatch] And so, what's nice about this system is if grandma falls out of bed and she's uninjured, she's just too weak to pick herself up, you'll get just an ambulance non-emergent with no need to go lights and sirens. If there's a cardiac arrest and you need more caregivers than are on-scene, they'll send the engine company and the ambulance emergent to the scene to quickly get there and mitigate whatever's going on. So the dispatchers play a vital role in our system and are very useful to the end-user crews. But we do use TriTech CAD, so it's got the CAD which gives us directions if we need them and call notes in there and all kinds of stuff.
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: missing information from dispatch] I don't put a lot of validity into it just because the dispatchers are asking questions to a hysterical individual and they aren't thinking clearly or straight. So they don't really know right, wrong, or indifferent. So we show up a lot of times and it's completely different from what was told to the dispatcher. So I think some people will get tunneled in on what the dispatch information is versus what the patient actually presents as. So I don't put a lot of stock in that information just because I think it pigeonholes you into going down one path without critical thinking. And information is only as good as what you get, so it's not the dispatcher's fault, it's not our fault. It's somewhere in the communication breakdown along the way of somebody's calling 911 for reasons, so they're probably stressed anyways.
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Honestly, I like to call notes idea, because I think I'm a traditionalist or purist in the fact of I don't think we need to be talking on the radio a whole bunch just because, especially in a system that's busy. So send us to where we're going and how you want us to get there, and then just put

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it in the notes, and we can read the notes as we draw down the road. Because there's obviously somebody driving the apparatus and that's their primary responsibility, and then whoever is sitting in the passenger seat, who's usually the paramedic in our system, can read the notes and you're making an informed decision as we're going to the call.
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I mean, I've been on structure fires where either it's stabilized or you're asking for specific resources, and you can't transmit out the radio. So either it's a connection issue or somebody's walking all over you. And so, any needs that you need in the short term are not being met because you can't talk to your supervisor. Which 90% of the time, it'll be consequence-free. But we don't live in best-case scenario worlds. So I think we want 100% and I think we won't accept anything less than 100%. So it makes a lot of people's jobs difficult to try and improve the system. And thankfully, we have a lot of people working hard at it, but at the end of the day, it's a matter of life safety that is on the line, so I don't think you should ever get comfortable with that.
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	I've been standing at the door just ready to go in with a nozzle and my officer was waiting for open air before he could communicate. And I'm just [laughter] screaming, "Let's go, let's go, let's go!" And, "Calm down, calm down, calm down." Yeah, but that's everybody. Yeah. So that's the only thing I can really think of.
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Yeah. So we have the actual mobile unit in the ambulance, as well. And that monitors all the channels, so we can hear all of it all the time in the ambulance... Anytime the truck's on, you set which channels get scanned. But essentially, it's the operations channel, the dispatch channel. And some of them have them set to the PD channel, as well.
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	So we have a lot of software with connectivity between the patient care records we have on our laptops to our monitors, which are the 12-leads and defibrillators and all that. So I think a lot of times there could be ways to improve the connectivity between that because it's so integrated. And you can't finish reports if the connectivity is not there, and you can't upload your monitor to your computer. So WiFi is plan A,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and then there's also USBs that we can use if the WiFi's not working. But it just seems like that's a hang up in our system often and increasing the time of the reporting. And getting back into service until the report's done. So once again, technology issues there. But aside from that, that's about it.
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	In our system, generally speaking, the paramedic will sit in the front right seat. And so, he'll be in charge of the MDT and the radio and all that. And then, generally, the firefighter EMT will drive the ambulance to and from the call. And then, we show up on scene, assess the patient, and if it's a ALS call that requires any paramedic interventions, I'll attend on the patient, take them to the hospital, and the EMT will drive. Or if it's a low acuity call and a medical transport to the hospital for a person with no complaint and they just want to go to the hospital, the EMT will attend in the back and the paramedic will drive. But it is on a swivel so if you're in the driver seat, you can still see the computer if you need it--
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Because the back of the ambulance is loud, so the driver up front will just hear all the static and background noise from the road, driving down the road. But I mean, you can manually turn it on and use it, but it's easier to just yell back there. And if you need to talk to your partner, it's effective communication [laughter] front to back.
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	How about downloading our EKGs? A lot of times, they'll want that included in the report, and it just won't connect. So sometimes they'll use a little zip drive. If there were just a hard wire where we could connect it. Again, old school, just run wire from here to here, but it won't do that. So I mean the simpler the better.
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	We also do mutual aid with neighboring departments, too. And the same sort of issue. I mean, we can actually use a common channel, so we have made advances there, so it is getting easier to communicate with them.
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	So in March, I went out to the [State] wildfires for a week. So they made a resource order on 10 o'clock on whatever night. So they gave us until 5

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								o'clock in the morning to assemble a crew and drive out there. So we drove out there with a [Name] brush truck and a division supervisor, F-150, drove out there. So we were told where to meet and who to contact as our point of contact to check in. And then, they had the system kind of built from there.
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: wildland ream response] Through the dispatch. Through the [City] dispatch center. So the [State] State Forest Service made a request for X amount of resources, and that went to the [City] dispatch, which is the dispatch center for our wildland team. And we were able to assemble a crew that met their needs. And so we went to the [City] dispatch, which was in communication with the [State] State Forest Service.
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: wildland ream response] I was going off shift at 7 o'clock the next morning so once this was all met, the battalion chiefs said, "You're leaving at 5:30. We'll bring coverage in for you at 5:30." So I mean, there's some logistics on the back end that needed to happen, that needed to occur, but it's usually pretty easy on that side.
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	Our wildland team is a specialty team. It's a volunteer specialty team, so they come out. The wildland team has an email text list that says, "Hey, we're getting an order for this. Who's available?" And so, X amount of people respond, and then the coordinator will say based on hours of deployment, this person, this person, this person is going to go. Because you have to be available for 16 days. So there's a lot of parameters to work within to fill the titles on a fire truck and the availability of the workforce.
Context_of_Work	EMS	S	Field Responder	46-55	Not specified	Male	EMS-S-006	[RE: wireless communication] SME S3: ...a lot of times we're underground or something like that. And so it makes it almost impossible. So that's why we have to have the hard line connection. And you're dragging all this behind you... Your air hose and your communication line. Your life supports. SME S2: 300 feet of cable.
Context_of_Work	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	So I am one of the supervisors of the [City] Paramedic Division. So one of the guys that makes the ambulance system go from behind the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								scenes. Currently, I run the dispatch center... I've been up here for three years.
Context_of_Work	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	So, because now I'm in management, it's essentially an office job. So I will report to the office, check the emails which will have stacked up over night. I have a couple of different reports that we have to go through every day, some of which are-- mostly they're system status kind of things, how busy we were, how many ambulances we had, things like that. There's also a technology report where any kind of reported problems with the radios or the CAD systems or any of our other technology stuff that comes to me. And then it varies greatly depending on what project I'm working on. It can be anything from overseeing routine personnel issues to dealing with the radio system...
Context_of_Work	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...We're currently just finished up doing an RFP for a new LMR radio system, so I was involved in that. If anything breaks, I get involved in making sure the right people are coordinating to fix it. And then just the everyday stuff, too. I just listen to the radio, I make sure ambulances are behaving themselves on the radio, dispatchers are behaving themselves on the radio. When mistakes are made, I send a lieutenant out to investigate, and then I take the results of those activities and would go ahead and take whatever action's appropriate there, so.
Context_of_Work	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	Yeah. It can be all over the place. I mean, there is some direct command. So day to day, I'm not typically involved in the direct command of operations. So I wouldn't go out and tell an ambulance what to do or where to go. But if there's a larger incident, a kind of MCI or something like that, then I would come in and take over the communications leader role in ICS speak--
Context_of_Work	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	Box, the one that really irks people is they made it so that you can't download anything to a local mobile device. So you have to be in continuous contact with the internet in order for it to function. And, of course, when you need stuff like that the most, when you're trying to move maps and stuff around, is the big incident at the football game and the cell sites are hopelessly oversaturated and you lose

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								connectivity, and all of a sudden you can't rely on it anymore because you couldn't preload that information onto your device. That's the really big one that gets us there.
Context_of_Work	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: pre-plans] Yeah, so a lot of the ones that repeat are going to have-- like a [Name] game is actually so automated that it doesn't get rewritten every week. We just know what's going to be there. There's one, but we have all of those phone numbers written down already. The command center numbers are already in there...
Context_of_Work	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: pre-plans] ...[Name] is a huge event every year, and unfortunately it's fairly active for us because, well, a lot of the participants are cancer survivors or current cancer patients and they get out there and over-exert themselves and we get involved. So that one, they just pull out last year's plan, make sure the phone numbers are still good, change the names, double-check the crowd size estimates, and kick it back out. So we don't have to-- a lot of it is boilerplate at this point because we've done so many of these things...
Context_of_Work	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: pre-plans] ...every once in a while, something really weird will happen. President [Name] decided he wanted to address a crowd. I don't remember what it was but at a local high school. So the man can draw a crowd [laughter]. Basically, on four or five days' notice, we had 20,000 people showing up to hear the president speak on what was essentially just a high school football field. So it's not really geared for that kind of crowd or anything and you just wing it. Those are the ones that are a little more interesting in terms of getting that information together and then out to everybody, especially because those change up until the last moment when you get-- he, the president, whether it's [Name] or not, they're just notorious for-- I mean, the president, if they change their mind, everybody else changes around them, not them. But other events do it to a lesser extent, where you're adjusting on the fly and you need to get all that information out to everybody.
Context_of_Work	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: private ambulances] Yes, it's very common because a lot of these events will be sort of co-coverage. A [Name] game, for example, we

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								cover the stadium and all the people that are in it, all the spectators. But the teams prefer to have a private company called [Name] Ambulance that provides coverage for the teams, and the trainers, and their employees. So we have to coordinate with them if they're bringing an ambulance in or out...
Context_of_Work	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...At [Event], one of the big sponsors is one of the local hospital systems... one of the big medical systems. So they are a sponsor, and so they set up and run their own system, first-aid tents, which we then coordinate with. And the stuff that isn't going to require transport, like they need to sit in the shade and rest for a few minutes, and drink some water, and then they could get back into the walk, we'll let them handle it. And then we only step in for the more serious stuff that's going to come out.
Context_of_Work	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...I spent the first 25 years of my career in the field, first as a paramedic on an ambulance until about 2006/2007, and then I promoted to lieutenant. I was a field lieutenant. And in the [City] Paramedics, the field lieutenant is the field supervisor. So you're in a truck, you're out in the field, you're going from call to call, checking in with people, seeing how they're doing. Anything that sounds like it's going to be big, more than one ambulance, you're trying to get over there. And if it needs two or three ambulances, then you take control of it, free up the medics to do the medic stuff, and you take over the command and control stuff...
Context_of_Work	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...I used the interoperability stuff a lot because we call for-- "We need three more ambulances," and then say, "You get ambulance 51, you get ambulance 53, and you're getting Northglenn 8, so we're going to need to move this over to green one." Because Northglenn 8 doesn't have native access to [City] channels, so we have to shift everybody over to the interoperability stuff. So we used it a lot like that, but it didn't make any of the decisions in terms of how the system was structured at that point. That came later when I promoted to captain.
Context_of_Work	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: unified radio system] ...so that's a group of-- there's probably about 12 of them, full-time radio engineers. It's all they do. They're very, very

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								good at it. They run the system. They do all their own maintenance. They take care of the repeaters, the transmitters, the [backhaul?], the programming. We do all that in-house. So we do have-- currently our vendor is [Name]. So there's a contractor who's involved as a supplier and as a consultant, but we're lucky enough to be big enough as [City] that we have the capability to pretty much fix almost anything in-house with those guys, which is very nice.
Context_of_Work	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: frontline supervisors] They're the people that actually deal with-- if I'm talking to an ambulance, typically something has gone wrong because it should have been handled down at the lieutenant level. I mean, they're the sort of-- if it gets kicked up to the captain level, that means something has become serious enough that they couldn't just fix it then and there...
Context_of_Work	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: frontline supervisors] ...So in terms of how we communicate with them, they have a number of different ways they can get information. We talk to them. We dispatch them on certain calls which are sort of pre-selected for, "This requires a lieutenant's attention." Certain tactical police standbys, large fires, plane crashes, things like that, automatically get a lieutenant dispatch. And in that case, they're dispatched similar to an ambulance. We call them on the radio, tell them where they're going, and off they go. We can also page them as needed on our paging system. Obviously, they have radios...
Context_of_Work	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...So our guys don't leave a trip report at the hospital. They drop the patient off, leave right away, get back into service. And then as soon as they're done typing, they wirelessly transmit that copy. And they don't have to do anything. They just hit done and then the system does it automatically and it ships it off.
Context_of_Work	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	[RE: dispatch via LMR] ...But they automatically get a page that contains the address and a nature code for the call, which is going to be a very general like a seizure, a cardiac problem, a shooting, whatever. And then that same system also, at the end of the call, when they call out at the hospital where we refer to it locally as Code 24, it gives them their times

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and their mileage. So it will say you were dispatched at this time, you arrived at this time, you're transported at this time, and you got to the hospital at this time. And it pulls all that from the CAD system. So they're giving us that information, the call. We're on scene, and we'll mark them on scene. We're transporting nine to [Name] Hospital with one patient. We'll put that all in and then we dumped it all back down to them. And that is primarily it's supposed to automatically go into the trip report, but sometimes that system pick up. So if it does, they can then manually type in the times and [the figures?] that they need.
Context_of_Work	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	...our average transport time is 9 or 10 minutes. It's very short. Because we're purely the urban core. We don't cover most of the suburbs. We cover a few of the smaller suburbs, but we're primarily the urban core of the [City] metro area. So 100% urban and very quick times. If it's trauma call, our scene time is going to be around eight minutes. Our transport time is going to be around nine minutes. There's just not a lot of time. You have to move quick to get the basics done in there. We're not looking to do a lot of extra stuff in terms of communications in that time period.
Context_of_Work	EMS	U	Field Responder	46-55	21-30	Male	EMS-U-003	I mean, the big thing is every thing we use, I mean, we don't have time to mess with it, or tweak it, or play with it. It has to work the first time, every time, or people will just to stop using it. They will just refuse to use it and go back to the old way of talking on the radio.
Context_of_Work	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	Multi-faceted. We have a lot of administrative issues on our end, so I have to deal with a lot of administrative issues. But at the same time, I also have to be able to know what's going on in the field on the operational side. So that we can make some SOPs or general orders that will effect the field or may help the field, so.
Context_of_Work	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	The job of a paramedic out there, on the [City] Fire Department there are two different-- multi-levels. You can have it be a paramedic in a hospital, a private ambulance, but for the [city] Fire Department you have to be very well prepared. Not only mentally, but physically. Be able to answer calls, physically be able to lift minimum of 25 pounds or more. And you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have to take your responses in stride. What I mean by that is you can for everyday responses, are you going to be-- and we work very hard every day. We get about, I think, 1,000 calls a day or more. And so you have to be able to respond to medical, trauma, sometimes just talking to people in the system and their everyday issues. So not only do you have to be ready to answer the call, for an emergency call, but also be able to handle people and citizens in their everyday problems.
Context_of_Work	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: Paramedics] And then also to be able to debrief. In other words, they do seem a lot of trauma. As a matter of fact, I went out to the field just last week and within an hour, I saw how much trauma our young paramedics witness right now. So you have to be able to take that in and either talk about it and/or just keep going. So in order to be a paramedic in a fire department, you have to have a strong character because not everyone's going to approach you in a nice way.
Context_of_Work	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	So as long as you have those good people behind you, the firemen, your partner, it was good for me. I can't speak for anyone else. But for me, it was great because I would come in. I enjoyed my job. I go and inventory my ambulance. As a matter of fact, I had people who had 15 or 20 years on the job prior to me going to them. And they actually taught me how to deal with the mean streets of [City], how to take care of my ambulance, how to-- you talk to certain people in a certain way. And then you talk to other people in a different way because not everyone's the same...
Context_of_Work	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...so from my experience, as long as I had people backing me up and showing me the way, I had a good time being a paramedic in the ambulance. I loved it. As a matter of fact, I love driving. I love starting the idea. I was a hands-on person. You have to be a hands-on person because you're constantly touching people. You're constantly starting IVs. You're constantly taking care of their wounds, their injuries. So you have to be hands-on. The other thing that I used was, I don't want to say joking with people, but also using humor too. Because sometimes we're responding to people's worst days. And I used to love using humor because most of the time, they would take their mind off of it, so.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	So I would come in early in the morning, and as a matter of fact something that I teach the candidates, first thing I would do is open every door in my ambulance, open up each door. Make sure I have the equipment that I needed, in case I got to run that second, was there because sometimes, since you're working 24 hours, you go on certain runs. And the medics that you were relieving may have forgotten to get the stretcher, or the stair chair, or the quick response band; the QRB is what we call it. So I would open every door, make sure that the equipment that was essential that I needed to respond to any kind of medical call or trauma call was there. Then I would go and-- if the person that I was relieving was not up, I'd go in, wake them up and say, "Hey, you're relieved." I'd go get a cup of coffee, bring it back. And then I'd start doing my detailed inventory of the ambulance.
Context_of_Work	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	people have taught me that you start cleaning the ambulance from top to bottom. So I'd get my bucket and my soap and water, and my disinfectant, and just bring it out there, bring the stretcher out, start cleaning it from top to bottom. Sometimes, you find things from the night before because they were busy that you-- blood, or needles, or whatever, clothing. And you would have to turn it in or discard it appropriately. But that was the start of my day. Then I would communicate with the officer, or my officer, and tell them, "Okay. We're deficient on this. So we need this, we need fuel, we need oxygen, etc." And then, we start our day that way and just wait for a response or for us to get a call. We'd get into the club, meaning that we pay for lunch and dinner and that's always the best part. Sometimes we didn't always make it because we were out constantly running.
Context_of_Work	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	I would also try to get a workout in there. Don't ask me how. But I was young and I always tried to keep myself physically fit or keep myself physically fit so. It wasn't long but I learned after that you couldn't train very hard because you would be done for the rest of the night.
Context_of_Work	EMS	U	Supervising Field	46-55	21-30	Male	EMS-U-010	[RE: comms with LE via radio] That was very difficult. We didn't have communications with them on the radio. We communicated with our fire

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					alarm office and the fire alarm office would communicate with them, somehow [laughter]. And not necessarily they would communicate with them but they would communicate with the operator on the other side of the police dispatcher.
Context_of_Work	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: comms with other jurisdictions] No, I never had a need to do that. I think that was handled at a higher level... Or chief level actually. We did respond to a highrise fire here. I think it was [address] but for the most part, we got direction from our chief...
Context_of_Work	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...Now communication with the firemen, that was easier because we did have a channel that we could go to communicate with them if there was some distance between us. Otherwise, we would be we knew all the companies that were around us, and we constantly had runs with them. And so they knew what to expect from us and I knew what to expect from them. But otherwise, communications via radio was simple because we would just turn the switch over to that channel and communicate with them. And now that everyone has radios, I would assume that it's much easier.
Context_of_Work	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	I could tell you that paramedics are better at the radios because they constantly have to use it on every run. We used to be able to communicate with the hospital through our mobiles, and we have to give reports over a clinical radio to the hospitals. So we were in tuned to using the radio then than a regular fireman because back then, not all of the firemen had their own radio. Only the officers did.
Context_of_Work	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...now we have our standing medical orders on a app. So yeah, I think they're still used to look up medications, to find out about diseases that we're not very familiar with, or that we don't encounter a lot of.
Context_of_Work	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	Well right now, what we have with our current data we have, if we get a patient more than once or more than twice, we're able to pull up, the technology is there right now where it'll search and say, "Hey, by the way, you have responded to this person in the past. Do you want to accept it or not?" Because then that gives us their history, their allergies, their

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								medications.
Context_of_Work	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	...I can tell you that for large-scale events, from the command side of things, I would like to see or have some type of a [inaudible] saying, "Okay, you know what? These ambulances are coming from this direction and these ambulances are coming from this direction. Where can I place them so that they don't running into each other or direct them [crosstalk]?"
Context_of_Work	EMS	U	Supervising Field Responder	46-55	21-30	Male	EMS-U-010	[RE: drones] I have read about how they're being used in active shooting incidents where they're going in before anyone else and giving them basically the lay of the land visually.
Context_of_Work	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	Well, in the field, which I'm [inaudible], but when you're in the field, you work as a paramedic on the ambulance. You're in charge of the ambulance. And you're also the captain of a fire company on that ambulance, so you're responsible for the maintenance, the upkeep, the ordering of supplies, that the ambulance is clean, kept in shape. So everything related to it, you're responsible for the physical ambulance and all the supplies itself, too. That's how you differ a little more than a standard paramedic.
Context_of_Work	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	[RE: EMS job description] Maybe challenging. The thing is, I don't work in the field doing that. So I took that rank, but then I work more with the computers that the reports are created on. So I couldn't say for sure for that job description. I've never actually worked in the field on that because I took that and I'm detailed back here and in charge of basically the computers and the software that do the reporting, the run reporting.
Context_of_Work	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	So our hardware is a Panasonic CF-19 Toughbook that we use to create the report. And then we partner with a software company known as SafetyPAD. And they create the software, and they modify it for the City of [City] in order for us to do the report. And then there's a function that is at the 911 Center, or the OEMC, and that's the main server, or the CAD component, that's maintained by Northrop Grumman. So we get a run. It'll push out to the fire house. It'll actually push out to the tablet itself.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								We accept it, create a new report, and then based on your disposition which would be, "No patient found," "Refusal of care," or, "Transport," then there's a number of fields that are required for the medics to fill out before they can complete a report. There's also a component known as NEMSIS, which is the National EMS Information Systems. And we're required to collect data for them and to also send data to the state under NEMSIS. So there's quite a few components that are involved in data collection.
Context_of_Work	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	[RE: toughbooks for paramedics] They keep that and they do all the reports on there.
Context_of_Work	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	[RE: paramedics] They have another CF-30 Toughbook that is strictly for dispatch. So they do all their status on there. The run will come in on there. And then they'll press buttons like en route, on scene. This computer is dedicated just creating the run report though.
Context_of_Work	EMS	U	Field Responder	36-45	21-30	Male	EMS-U-011	...I think as far as technology goes, we're at where we need to be right now. So yeah, not much else I can think of until they get more advanced with medicine itself. I think we do everything [that an] emergency room can do right now.
Context_of_Work	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	I respond to medical emergencies to our community, our public, in the city of [City].
Context_of_Work	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	In the morning, I come in. I check out my apparatus. I check out my equipment, everything that's entitled before we respond to that first medical run. I want to make sure that all my equipment is checked out, radios, my supplies, all my medical treatments that I'm going to be doing for my patients. I want to make sure that everything's ready to go... then we just wait until the first call that comes in. And then we do house chores in the firehouse. We do chores. We have cleaning. And it's a home away from home at the firehouse.
Context_of_Work	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	So my company, [Name], it's one of the busiest companies in downtown. So I already know in my mind that coming in, we're going to get a call in the first 10 minutes. So right away, I come in a little early, and I check my

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								equipment out. Me and my partner check out the equipment, our first-line stuff right away. And then if we don't get that first run, we'll continue on with the rest of the stuff. But we are literally central downtown [City] and we're a very busy company. So coming in, I got to make sure that I check my stuff out right away...
Context_of_Work	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	if we don't have a call, like I said, we'll do our daily routine. We'll do inventory of the apparatus or the ambulance. We do inventory. We have set schedules. Mondays, we do certain things to inventory. Tuesdays could be oxygen. We'll check out the oxygen, everything that pertains to oxygen, the tubing, the PSI of the oxygen. We make sure the tanks are in order, they're not broken or anything like that. So each day there's something to do. Sundays is our big days, our medication inventory. We go down, make sure that all the medications are not expired or anything is going to expire. So that's our biggest day is Sundays. But every day there's something to do to that ambulance.
Context_of_Work	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	So once we're completed with the run we'll let dispatch know we're done and we are available for the next run. If there's no runs available, then we'll just head back to the firehouse.
Context_of_Work	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Always two of us. We have a paramedic. His title is a fire paramedic who drives the ambulance and me as the paramedic in charge. So my role is to document everything that occurs in the shift even if it's not pertaining to a run. It pertains to inventory of the ambulance, anything that needs to be done to the ambulance, or work to be done, maintenance. Everything that goes on in the 24-hour period, I need to document that in a journal... At the firehouse in a journal... It's all by hand.
Context_of_Work	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	...We do get calls a lot even for people that are sleeping on the bench. People are concerned, which is fine. We don't have a problem going out and making sure that they're okay, the homeless people. We get a lot of calls for that downtown. We get a lot of calls for the homeless, especially in the wintertime, which is fine. I want to make sure they're warm, so it's okay with us.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: congestion] You get used to it. My partner came from the Southside of the fire department where there's not that much traffic to this. And he was like, "Oh my God. I can't believe how much lights and sirens." The biggest thing here is that they still don't pull to the right. They don't. They don't pull to the right. I'd say about seven or eight years ago, we did a campaign here. I think CFD did a campaign, pull it to the right. That was great. We had stickers. We had billboards. And I noticed that worked out great. And we haven't done that in a while. So lately, I've noticed that the community has failed on that because we could be stuck on traffic and everyone's pulling to the left. And we got to zigzag especially in downtown.
Context_of_Work	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: traffic noise] I know our community, especially [City] area, they hate that. And you know what? If it's two in the morning and we're coming into an area where people are sleeping, we're not going to be coming blazing with the siren.
Context_of_Work	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: listening to PD frequency] if I'm already hearing it on the PD side, I'm hearing it at PD-- someone's calling 911. I believe someone fell and they injured themselves. But I can't. But I have to wait until EMS dispatch tells us to go. Which is fine. Something critical like that and I'm hearing it, at least I'm ready. I'm always in a ready position, "Okay, hey, guys there's a fire. There might be a fire coming out. We'll be ready. We're going to go."
Context_of_Work	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	Very important to communicate. When I'm in a high-rise, on the 30th floor of the [building] and I'm treating a patient and the patient doesn't want to go to the hospital, it's a refusal of EMS. Instead of coming all the way down and going on the telemetry radio-- we have a telemetry radio now that's hooked up to our hospital, the [hospital]. We have to call the doctor and get a refusal. So instead of coming all the way down, we have our handheld. So then we have to switch channels.
Context_of_Work	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: problem using dedicated hospital frequency] Not if you're trained and you do it a lot. If it's something new to a paramedic in charge who's becoming a new officer, it's going to be a headache for them for a little while. They have to learn it. They have to learn it, it is. I remember when I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								first started, I was like, "Oh my God." Shuffling, "What channel is this? What channel is this?" It's a little headache but you got to work it, you got to learn it.
Context_of_Work	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	So, what I do, when I get dispatched a call on my MDT, I looked at the time, the location, the incident. I'll look at if it's male, female, conscious and breathing. I look at most important information and that information will be there. The alarm office will have remarks on there depending on the caller. They also put on there, which is great, I'm glad they do that, it's called the [local PD} hashtag number. I know how to retrieve that number through my MDT. Down at the bottom, you're able to type in to send information. I'll type in that [local PD] number out to the alarm office and somehow, some way, it comes back to me with what the first 911 call was. What the call is from the call taker...
Context_of_Work	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	...So, say if I'm calling 911, call taker comes on, "What is your emergency?" They're typing this in already. Me, as a paramedic, through the [local PD] number, I'm looking that information up. So I'll send that code number to the alarm office and that call taker information that they printed will come back to me on my MDT and it tells you everything that person on that 911 has stated. Not everybody knows how to do that.
Context_of_Work	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: preferred mode for getting detailed dispatch info] MDT's good. That's efficient enough for me. There's another way too. If we're at the firehouse, and we're waiting for the call, there's the alarm terminal, another computer, and it alerts us by a bell. And the computer system, a female voice will come on, "[company], we have a call, person down." It tells us the address, and that's pretty much about it. At the terminal, at the area where the computer is at, it's called the-- brain fart. It's a printed ticket. A paper copy comes out. It'll tell us the company, the time, basic information, the address. That's pretty much about it. And I always take that ticket with me.
Context_of_Work	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: dispatch printed ticket] I have it. So when we get to the scene of the address, I have that ticket with me because I don't have nothing else, besides my radio and that ticket. Because we could go to a high-rise, the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								[high rise] on the sky level, and the security there's like, "Hey, what do you guys have?" I pull out my ticket, "This is what we have." "Oh, okay. I'll take you to that person." A lot of times, they don't know we're coming.
Context_of_Work	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	[RE: dispatch printed ticket] They haven't been notified. You have a thousand people in the [high rise]: visitors, tourists, people that live there. And there's security. And someone who actually is living in the [high rise] called for shortness of breath, and security may not know because they're dealing with the tourists and whatnot. So at least I have that printed ticket here. We're going to go to room 4502, they're complaining of shortness of breath. And that ticket tells us also how many stairs there is. It tells us exit points, entry points.
Context_of_Work	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	when it's summertime, it's so busy. Dispatch is trying to send ambulances and send them here, send them there, and we're telling them, "Okay, we're on the scene. We're leaving the scene." We have all these ambulances just telling dispatch. So with me, when we're leaving the hospital on our MDT on the ambulance, I'll hit returning to base on the MDT. And I'll look to see if it registered. So there's two icons. When I hit the button, it'll say, "Okay. [company]'s returning." I'm going to look at the other icon to see if dispatch acknowledged that. If they acknowledged that, then it will say return. If they don't acknowledge that, it won't say return. And I'll look. And I'll look to see. And I'll hit return on the button again. Return. It'll say return on my company, and if I see if it's not acknowledging by [dispatch], then I think the system may be down.
Context_of_Work	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	On our run reports, I always put in if [local PD]'s going to be there. I have to put that in manually. I always put that in my run reports in my computer. I manually type it in... That would be great, an autofill in for the PD, because sometimes PD's calling for us. Well, who's calling for us? [PD unit]. Well, how come it's not auto filled in here? I got to put that in there.
Context_of_Work	EMS	U	Field Responder	36-45	6-10	Male	EMS-U-012	I'm pretty quick with my typing. I'm good. And after I double check everything, I think I could knock a good run report out with my computer in-- I could do it in three minutes. And I could do it in-- if it's a really bad

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								trauma, cardiac arrest, I could do it in 30 minutes, if that. If I want to make sure all my Ts are crossed, Is are dotted, I didn't miss anything, I make sure that all my EKGs attached to the report, within 30 minutes. But then, I mean, I've been doing this for a while. So you've still got those first-- they're going to need a whole hour to get to know the system, which is fine.
Context_of_Work	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	... So what I am responsible for is educating them and teaching them while they are in this academy. The paramedics come in as licensed paramedics so we teach them how to work on the [city] Fire Department and the rules and regulations and procedures. And a lot of times I find that because there's so many different backgrounds, where these paramedics are coming from and time and experience as paramedics, that I have to put them all at the same level and teach them all to come up together. I have some that have a lot of experience and some that have very little experience as paramedics. So it's my job to kind of get everybody on the same page. So it takes a lot of work.
Context_of_Work	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	On the Fire Department, the paramedics work 24-hour shifts. We're on for one full 24-hour shift then we're off for 72 hours. You work in an ambulance with one other person, another paramedic. And you do your runs. You administer emergency care in medical situations, trauma situations, hazardous materials, anything. Anything that requires our care as far as first aid, advanced life support, that's what we do for our whole shift.
Context_of_Work	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	We drive around. You return from the hospital, we say, "Ambulance [Name] is returning. We're leaving Mount Sinai Hospital." and then there was always another one waiting. So you just keep going. You're dispatched and communicating constantly from that vehicle for 24 hours.
Context_of_Work	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	.... I mean, you're eating your meals in that ambulance [laughter]. You're bringing life into the world one minute and then you're watching one leave the next minute. It's really something. So that ambulance is your zone for 24 hours so you make it as comfortable as possible.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	EMS	U	Other Public Safety Personnel	46-55	21-30	Female	EMS-U-009	I think that people might say that as far as like the heart monitor, [LifePad?] 15, it's a lot. That device does an awful lot. Just the recording alone and what you do and send those runs over Bluetooth and do all kinds of stuff with that.
Context_of_Work	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	6:30 in the morning, yep. Checking out the ambulance, making sure all the equipment's there. Making sure the equipment's there for the duty day. Cleaning the rig, whatever.
Context_of_Work	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	After that, house chores in the firehouse, if we have any. And then just wait till the tones go off. If you're a busy house, it's not very long [laughter].
Context_of_Work	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	Well, the tones go off, it gives you destination of where you're going, and then it gives a brief-- like what the call is.
Context_of_Work	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	We do, yeah. A lot of high-rises, yep. A lot of high-rises. We do a lot of water stuff, just because we're right down by the lake and the river. So, a lot of firehouses don't experience that kind of stuff.
Context_of_Work	EMS	U	Field Responder	26-35	6-10	Male	EMS-U-013	Yeah. That's me. I'm the FPM, so I'm the driver.
Context_of_Work	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Yeah. I have a daily routine wherever I'm at. I work at three different services so it depends on the service and the vehicle that I'm riding on but I do have a daily routine for everywhere so here for example I'll come in, put my stuff down, clock in, come out to the truck, check the truck off and I have a methodical way of checking the truck and once I'm done with that sort of everything else is dictated by whatever we're doing at the station or whoever calls. So I have a routine for my first part of my day to make sure that I get all the work done that I need to do but after that it's sort of up in the air.
Context_of_Work	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Call based. Here it's a little different because we don't have as much organized stuff to do during the day but we still clean the station, we still clean you know the bay out, we clean the trucks so there's always something to be done. Since I'm part time here I don't always know exactly what's going on when I get there in the morning.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Okay. Well the communication between people in the station is fine. I mean I've known these people whoever I'm working with here I've known them all for a while so we communicate fine. Communication on the radios is a little sparse. I mean you know really I mean this radio we carry it but it doesn't work once you get out of [Town] really so you have to be on the truck radio. You still may not get to anybody. When you get to the hospital you have to tell them you're at the hospital but our only hospitals our in another county so when you get there they don't reach so you have to know exactly where in the road to call dispatch and tell them you're at the hospital or they won't ever know. You got to call them on the cell phone so I mean you know it's just rural EMS and you just deal with it.
Context_of_Work	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	A lot of the time you'll have to call but still you'll run into places out here where cell phones if you don't have any service either. For example, the place we just went had no cell phone service so you know being able to know where you're going it was an unmarked dirt road off of another dirt road and if you didn't grow up here you know been here for 30 years or you didn't have GPS you wouldn't have found that so cell phones are important but you run out of reception. I mean as soon as we got down the dirt road reception went off.
Context_of_Work	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	So like I said I don't live in the county so it was harder for me to volunteer especially with the long hours that EMS works. I worked in [City] and here so back then I was working you know four or five shifts a week so you don't have time to volunteer. You know if you're gone for 24 hour periods you can't make calls, you can't make meetings and stuff like that.
Context_of_Work	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Typically I said I get here and check off the truck, I'll eat breakfast that's an important part of my day, we'll clean up anything in the station. Today, it's catching squirrels. We're working on catching squirrels out of the attic. It's a work in progress.
Context_of_Work	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	We found a trap, we're going to make it work, we had to get up there and investigate where they might be coming from. Anyway we do our area of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the day or you know if there's any other issues that need to be fixed, stockroom restocked or organized. If the shift before us ran a bad call and the ambulance is dirty need to clean that up, disinfect everything so you'll do that for about the first half of the day if you're not running any calls and then sit down eat lunch, relax a little bit and after that it's pretty much your own time, study, work on anything you need to work on and run the call when you get it.
Context_of_Work	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Twenty four hour shifts.
Context_of_Work	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Out here it's any number of things. We've had I mean I've had people walk up to the station, I've had people call the station say hey, I'm sick. Should I come down there or should you come here? We will get toned out by dispatch, they'll call us and say hey, the police are coming with a blood draw and that'll be a call technically so but they'll come to us so it can be any number of things but most of the time it's a dispatch.
Context_of_Work	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	So for the most part here you hear dispatch calling to see if you're okay. So you send somebody back to the truck to tell them you're okay. You can hear on your portable you know it's garbled but you can hear you just can't respond. So you'll tell them you know yeah we're okay then come back. The problem with that is you know service where you just have you and your partner now you're down one in the house there trying to work on somebody so often times if it's a real bad situation we just won't answer. I mean you know we just won't answer until we can get back to the truck because we're more interested in the patient's wellbeing than we are letting dispatch if they send us somebody else great we got somebody else you know. So that's typically what it's like.
Context_of_Work	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Yeah. You'll see us in the back of the truck taking names and demographic information down right then so that we can use that to show the hospital so that we can get them registered and get them cared for quicker. So we got to have it right there with us. The patient signed, the computer you know so we've got our whole record right there on that computer. Don't have to do three different things like we have to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								do here right now.
Context_of_Work	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	<p>Sure I mean paper reports are the easiest you can get. I mean they were quick. I had paper reports down to a you know a 10 minute deal and it could be a complete report you know now I got to write my paper report but I can't write my narrative yet so I write my paper report with all my demographics then I go on to the computer and write my narrative then I have to go to a separate computer app to pull up my times to write on my report and then after that I got to take a copy of it and put it with whatever drugs I use, submit that, then I've got to put my we used to have to put that into a computer system then after that. So I mean which one do you want us to do so they went to the computer. That was good because it was all in one place. Everybody sign on it and just submit it and it's done. Now we're back to writing on the paper, typing the narrative, looking up the times and putting them on the sheet then you have to put them on the big sheet that goes in the computer. So yeah it gets in the way. I just wish somebody would decide whether we're going to go paper or computer. Computer does take longer because you have to wait for the thing to load, you got to wait for it to fax but it does a lot I can do a lot more fairly easily than before where somebody else would have to look at my report, fax it, put it in for billing and now I can with a push of a couple of buttons I can do all that so it saves that person other job basically. There's no need for them so it's like [county] they've got it now. They've been using the same computer program forever. It's simple, it's all in the computer. I don't do anything. It communicates with our computers on the trucks, tells us the times, it's easy. Just press one button everything syncs. It gets more interesting out here when you have to you don't have any computers on the trucks you just have you know it's just your normal driving. Also on the other side of that you got when your computer doesn't work. I mean your computer shuts down so you're so used to hitting route okay now I know how to get there you know well if you hit route in [County] we get in we hit responding we do everything off our Toughbook. You press responding, route, figure out where you're going, figure out what you're going for, read about it, go.</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Here you don't have any of that so everything is radio best but if that tablet in [County] goes down your radio traffic goes through the roof and you know it's hard then to figure out where you're going, what cross street you're going to, where it's at because you're so used to using it. So that's a detriment I guess.
Context_of_Work	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	Sure I use apps on pediatric doses for medications. I'll use Google. I mean we're not too far gone from doctors that I mean when you tell us a whole list of things that are going wrong that could be anything in the world I mean I'll type them into Google and say well it could be this but I don't know you know so I'll look up something for the patient. I'll use it to get us there so yeah there's lots of things I use.
Context_of_Work	EMS	R	Field Responder	18-25	5 or less	Male	EMS-R-018	... Normally you know in a lot of these places the stuff is held together by what the guys do in the station. They're not going to pay for a new light bar because a tree fell and hit the light bar and broke it so now you're running with a broken light bar but if you fix it in the station nobody's going to say anything you know so you fix that stuff, you get it going.
Context_of_Work	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	Most people would actually know me better as an ambulance driver because that's how the general public sees us. They pretty much call everybody an ambulance driver whether an EMT or paramedic. Paramedic means I respond on the ambulance in the county I'm serviced that I work for and able to go out and treat a patient pretty hospitably, take care of them and do what I can as far as medications and treatments and so I'm able to get them to the ER.
Context_of_Work	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	Nothing is really routine but as close as you get is you know we show up, we start our day at eight but I usually come in about 20 or 30 minutes early, clock in, I'll go get on whichever med unit I'm using that day, kind of go over all of my supplies make sure everything is there that I'm going to need, oxygen, medications all of those things, get my bunk room set up because we do 24 hour shifts so I'm going to be here overnight, just kind of check the stations see if there's anything that needs to be done, talk to the crew that I'm relieving to see kind of what kind of night they had because sometimes them talking about their calls

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								is helpful and then we kind of wait it out and see what happens.
Context_of_Work	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	You know if we're busy we have calls if you mean radio communication. What we do is first thing in the morning at 8 a.m. our dispatch will send over a test tone and just basically tell us good morning, we respond back so we know the radios are working. They do that every morning and then when we get an actual call we'll get a loud tone there in our bunk area or throughout the station and then dispatch will give us information, dispatch information you're responding to 42 year old male for instance at such and such address, this is the problem. And then of course we let them know that we've heard them and either clarify information if we couldn't understand them, if the radio was static whatever and then we respond and then once we get on scene we radio back in, give them our mileage, let them know that we're there and they usually check on us every 5 to 10 minutes something like that which in this area we're very rural so there's large parts of the county where we don't get any radio reception so once we get to where we're going our communication with dispatch sometimes is null and void.
Context_of_Work	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	It's very rural and [County] I think is I want to say the third largest county in the [State] and I don't know exactly the details of the radio system here but you know if we're close by they work pretty good but there are far stretches to the ends of the county where we have absolutely no reception whatsoever and then you know dispatch will try to call us on our cell phones but most of these places you don't have cell phone reception either so sometimes you're just kind of stuck out there and when they can't get in touch with us if they have a deputy that's available they'll send a deputy in route to come out and check on us and make sure we're okay which most of the time we're fine it's just that we can't hear them.
Context_of_Work	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	It does pose an issue. As far as I know no one has been hurt because of lack of communication but there are definitely calls where you need to be in touch with dispatch. That's your really that's our lifeline. If we get on scene and we have a lot of psych calls so if we get on the scene and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there's a psych patient that is planning on hurting themselves, hurting us we're the first people a lot of times that have contact with them and if we can't if they don't know for instance they don't know it's a psych patient, if they do they try to send out the Sheriff's office but if they don't we get on scene and we realize oh, this is pretty bad and we need help if we can't communicate with them they have no way of knowing. And then in that 10 minute timeframe or whatever it is that they go by has to pass before they and they don't communicate with us before they say okay we need to have a deputy check on them and reality ten minutes could be way too late so for us to not have communication is really bad not for just our safety for our patient's safety. If we get on a scene and there's a cardiac arrest or something like that and we need backup if we need an extra set of hands someone my partner and I both need to be in the back of that truck with the patient we're going to need someone else to drive and we tend to back each other up when we have calls like that but if it doesn't dispatch out that way and you don't know until you get on scene and then you can't get out to your dispatcher you're kind of on your own.
Context_of_Work	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	We do. There are times when the radio is just really static so dispatch tries to keep a list of who is on the truck each particular day and has our cell phone numbers and sometimes they'll request that we call in because there's information they want to provide over the radio that they don't want the general public to hear especially in a rural area like this everybody listens to the scanner so they know what's going on before we do sometimes and there may be especially a lot of our elderly patients they may keep a key hidden somewhere for us to get access to the house. Those aren't things that they can say over the radio so we'll try to call them on our cell phone if we have service to do that.
Context_of_Work	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	Here it's pretty laid back. We're all you know a close group and we just try to kind of get through the day and take care of anything that needs to be done here. We watch TV, pass the hours, read up for further training things like that.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	It kind of depends on the day and the situation. We all you know we have these radios and like for instance mine is on the EMS channel right now so as of right now I hear what comes across from dispatch to us and us only or the first responders because that's where they put it out for EMS first responders. If we have a fire for instance and we get dispatched to that fire unless I switch over to either their channel or I put it in scan mode I don't hear their traffic, they don't hear my traffic but you can't keep it on scan all the time because then you also hear SO's so every time they pull over a car we hear that information and if you have a patient you definitely don't want that going on. We can speak to if I need to speak to SO directly I can either go through dispatch or my MS channel or I can switch over to SO's channel and try to get in touch with them that way. I can do the same thing with fire.
Context_of_Work	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	I mean it's easy to do as far as you know you're basically just turning the knob and with this particular radio which they're all really old but it'll show you who you're talking to like this is [Name] and when you switch it it'll say fire or SO. It just depends again where you're at in the county because regardless of what channel you're on you may not hear. SO seems to pick up a little bit better than us.
Context_of_Work	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	Honestly the only other thing that we use is once we get back we kind of do old school. We have paper patient care reports so we write all the patient's information and then when we get back we log into the computer here and actually type a narrative which is a storyline of what we did and what happened on that call. Printer, copier, fax that's about it.
Context_of_Work	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	We have a cardiac monitor in our truck. That's really where it ends as far as patient care goes and that some of them have the capability of sending if we do an EKG or 12 lead of their heart that we can send that directly to the hospital while we're in route.
Context_of_Work	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	I do. I have PD dose, safedose. There's a lot of pharmacology ones that it's just a quick reference sheet to go back because there's so many different medications and dosages and especially with pediatric patients you want to make sure that you're giving the right dose so you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								can always grab that and look it up real quick. Of course I'm one of those people that I definitely use my calculator because I'd rather double check myself when it comes to math weight dose medications and things like that.
Context_of_Work	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	... It took 2 to 3 times as long to do your report which when you have a day where you only have 2 calls it's not that big of a deal because you have plenty of down time to get that report done but when you're running back to back calls and you're on a second call and you haven't even gotten to finish your first report it's very frustrating and they shut down a lot especially when these things depend on internet and we are so you get out here somewhere and then the information the things that you need won't load so then you just kind of got to wait until you head toward [town] and pick something up and go from there.
Context_of_Work	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	I definitely would prefer to have a system where we do our patient PCR's. Here especially there's times where we have a 40 minute transport and then you've got to drive from [Town] back where which is at least 20 to 25 minutes. In reality you could have your whole report done before you even get back to the station because your partner drives and whoever took care of the patient they're in the passenger seat so it would be nice to be able to have that plus you can keep track of we have a lot of patients that call us pretty frequently.
Context_of_Work	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	There are. You know us being human. Dispatch will misinterpret what a patient said and relay incorrect information to us. We may they may relay the right information but we don't hear it right whether it's because we've got the sirens going or we may not be paying attention whatever it may be so human error of course plays a big role picking up and then I think sometimes again that human error just not asking for enough information as well. So part of it is our own fault and what we do and don't do but the better radio system and I think that I think that in general dispatch people that work in EMS all of us as a group could be trained better as far as how to use the things that we do have like the radios.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	EMS	R	Field Responder	36-45	5 or less	Female	EMS-R-019	They do all the time especially older people. You know they sit there and sip tea and they listen and hear things going on and they're not the ones that you usually have to worry about showing up. It's the you know the middle aged or the younger people but especially if there's an accident. Everybody it's like a train wreck everybody wants to see what's going on and you know if they realized some of the things that you do see and the fact that those things can't be erased they wouldn't want to but it's sometimes hard for us to do our job when you've got so many people that show up. Like I said the family is one of the big things because this is a family member. They're upset, they're angry at the situation. They may not be angry at me but I'm the person they're going to take it out on because regardless of how fast I move or how efficiently I'm doing their job all they can see is that their family member is hurt and no matter what I do it's not going to be fast enough or good enough at that moment so those are the ones when psych patients and things like that those are the ones that it's scary not to have a working radio because if I need help I know I'm not going to get it because they don't know so I think if there was a way to take the general public out of being able to hear our traffic and us be able to communicate easily and efficiently with each other without all of the areas that we don't have coverage it would be much better.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	About the analogy, so it's analogous to sports in that in sports you have the main players - like a Tom Brady on the field who's the quarterback and he, for the most part, knows what to do, running backs, wide receivers - and then you have a coach on the side. So I'm the coach on the side. And so I've been a player and to carry the ball, run a route, throw a pass, but now my job role is to be the coach. And so the players on the field know what to do, and for the most part make very wise calls. And so when I get there, I'm more like safety, making sure they're making the right decisions, moving in the right direction. But what's a coach to do everyone once in awhile? He has to say, "Stop. We're not going to go for it this time. Get off the field. We're going to transition. Hey, do this, do that," as an overarching driver, if you will, although the players know what

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to do. What else does a coach do? He makes sure his folks are trained. That they're taking the right reps. That the personality of the team, the chemistry of the team is going well. That it's healthy. If there's unhealth, then it's my job role to find out why and help assist that. And then, when I bring in new players to really interview and make sure that it's going to be the right culture, chemistry, confidence with the team. So that's my job role.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	...So administratively, my job role is to staff every day, and so I have to make sure that the right number of bottoms are in seats. And so we do that at the beginning of our shift, contact all those folks, see what training is scheduled
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	...So we have 13 disciplines that we're responsible for in special operations on top of fire and EMS, and so we do Swift Water, HazMat, rope, we're in caves. So I've got to make sure my team is touching all those enough that they're going to be confident to make wise judgment calls
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	...So juggling that dynamic, helping out with culture and chemistry. When things go awry, I become a counselor and a psychologist all in one. Trying to discover how is the problem, is this a training issue, is this somebody whose parent who passed away? And so they're under a tremendous amount of stress and they just need some time, or this is really a caustic thing where I've had to separate people, put them in different stations
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	..So even right now, I have my ear on the city. And so, it's not necessarily all BCs do that. Because if you take this table and cut it into eight pieces, I have one eighth of it, but my team is a little different in that most of the teams are in their geographical piece of pie, so there's a battalion chief, a coach, with his team. But I have a piece in almost every part. So the whole city is my domain, because hazmat could happen anywhere.
Context_of_Work	FF	U	Supervising Field	46-55	21-30	Male	FF-U-001	Right. So I'm listening at all times because if I have a unit in South [City] go out of service or do something on a call and something were to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					happen, I need to be able to call in resources from the rest of the city to go and help solve that
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Sure. So we get together and have the staff initially. We have to make sure there's a right number-- there's a minimum staffing for the city that we've deemed as a department that keeps the city in their best posture. And so the battalion chiefs all get together at 10:30. They look at how many people are on vacation, sick, or training, and we staff our battalions and we talk on the radio, basically an open-talk channel like a-- when you hit it, everybody else is listening to your conversation or what you're saying and we pick people from a list, as a group, to fill all the spots
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	...When I talk to that person inside, I really need to know who it is, and if something were to go wrong, then I'd be able to ask much better questions. Because if Engine One is in trouble, and I don't recognize that Engine One was the first engine on the attack line and something goes wrong with Engine One I might-- but it just helps me-- well if they're on the attack line, then I know they're probably closest to the fire. That means they're in the most danger and if something were to happen, then I could direct other crews, "Hey, we're missing Engine One personnel, follow the hose line." So I have to keep track of who's doing what.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	Sure. So when we show up to let's say a typical house fire, we have thermal-- you read the building and determine many things at once, and we call them "size-up factors". Time of day. Are cars parked? Do you see children's toys? Then is there any smoke showing? Is there any fire showing? We hope to do a 360 and see all sides. We hope to use the thermal imaging camera to help us determine, "Hey, there's nothing on the front. Oh, I have--" because we label it A. We're very progressive with-- well, no. We keep it simple.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	And also, technology-wise, dispatch, we have a certain number of dispatchers. You can always overwhelm any system. There is no such thing as a bulletproof system. And so we have a certain staffing level. And when we have a fire, we also put a dispatcher on it, meaning they're

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								listening to that channel with the people inside. And they are dedicated to listening to what's going on.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	...Because when I go to a fire scene I get a really good rep in, right? It's experience for me, we solve a problem. Well, the other seven BCs didn't necessarily get to go. So how do I share that to help them get better? It's true that if they get a rep it may not be the best rep, but it's as close to getting a rep as you can get. So we can watch the movie, stop it, have them give a size-up, talk about what happened, what could you do better?
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	...So from there, we've gone back and retrained and said how imperative it is to declare what you're doing, what your role is, and making sure those incident commanders-- if that isn't happening, that we stop and basically reset... Even on it's own, fires eventually go out. That's a [laughter] bad day for us. We want to stop it as quick as possible. Well, it's going going a certain speed and so our job is to get there on scene, hopefully be able to predict where it's headed, get ahead of it to stop it. [crosstalk] There are those times when it's so far ahead that it's just more chaotic, because of the way that people position themselves early.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-001	...Somebody says, "Die, die, die," and they got white powder on them and then we get there and we isolate them and then we sit in a group to take samples, find out if it's a protein, run a biosa see if it's anthrax, etc. etc., put it on another machine. Those all help me learn and discover-- I don't know definitively but, "Look, it's 99% talcum powder."
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	So, I am in charge of a specialized heavy-rescue company that does a myriad of different things including fire suppression. Special operations disciplines to include rope, water, big rig entrapments, hazardous materials. All that kind of stuff. So, I am in charge of a firehouse of eight people. Two companies that are responsible for staying current in training in those disciplines, and then responding to emergencies in the city and the county.
Context_of_Work	FF	U	Field	46-55	21-30	Male	FF-U-002	Our biggest thing is, there's the face-to-face piece. And on an emergency

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					scene, we have to get to safe areas. And then, we have to basically take what we call roll call and make sure-- you know, if my radio's failed, everybody's has failed. Let's make sure we have everybody. And then we regroup, and then we start over.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Doesn't change anything [scenario – building is near a major college]. That adds an extra component that has to be handled to determine do we need to evacuate or protect those where that smoke is going. As the first tactical officer on-scene, that doesn't change anything that I do other than emphasize I need to put the fire out.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-002	Okay. And so, that means all those buildings protection systems don't work. So now it's all up to us, and the fire is way high up, and so that's going to take a lot of extra time and resources to get water to that fire. That's going to complicate things even further. So again, I need people now to swap-- people are going to get tired-- so I need more people to help, to be able to swap out, and I have to have special equipment in place, to be able to get water to those upper floors because--
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	I would describe the job to anyone that we're trained to be there on your worst day. So we try and make people's day better, whatever that is. We do everything from change thermostat settings, to people who can't get out of bed, to fighting a high-rise fire. So it's a very unique job in that regard. But we always have to think about the end user and that's the people that we take care of.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	I rode the back seat before and now I'll be driving. And I can ride up and be in charge also, of the engine. But I'll be driving all the time. But the backstep, we think about test level and then as you move up to the front seat you have to start thinking about the whole picture of how they-- the whole event. You know what I mean? Instead of just pulling hose, I'm calling for that tactic to happen and using the radio a lot more.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	They might be working on that but it's our worst, it's a call that we need the radios. We have crews that operate all over the building. If there's a building on the eighth floor we're going to have four crews operating,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								just say, on the eighth floor, We're going to have another three crews working on the floors above and another three or four crews working the floors below, and then we're going to have a crew outside set up the FDCs, we're going to have a crew in the lobby working the elevator, we're going to have a crew at the fire pump. And they all need to communicate to the command post and it's usually a nightmare.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	And on every size up, when I get off the truck, I ride it back still. When I do the truck I do a 360 around the house. And that's one of the things I'm looking for is a wheelchair ramp, is anything that indicates to me. Because if there's a wheelchair ramp, no matter what in this study says, you can go to the back, you can do whatever, you know what I'm talking about?
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	It doesn't matter. If there's a wheelchair ramp, I'm going there, because we're creatures of-- they're not going to roll to the back door and then plop out of their seat, and roll out of a-- right, there's no ramp there, they know that. They're going to the front door. So that's a key indicator for us, we always search that before we'll search the apartment adjacent on the other side.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	So if in that case, it doesn't mean we're not going in. It just means we got to check the environment, so we would shoot water into the ceiling, and if water comes down, it's cool enough to push further in. If you pop water to the ceiling and it vaporizes because it's so hot up in the upper atmosphere, then you can't keep pushing forward. So what we would do at that point, is we would open up the nozzle, and cool it down until we start hearing water drop. And then we'd push forward and forward.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	We're going to wait until we overcome the heat, and get that water to start dropping. But that's our barometer when we go into a fire is we'll shoot, any time we go in the front door we'll give it a quick shot to listen. And it's especially important in a commercial structure where you have all that plenum space. That air up there has nowhere to vent and so we cut a whole in the roof, so it's eight foot of huge area, that a lot of times the heat will be up there and it won't feel bad when you walk in, but you

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								got a ton of heat above you. So we check our environment, that's what we do.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	Yeah. If I got reports from dispatch that there was smoke showing multiple calls, I would make sure that they fill the box out and I get all the people. And at a place like that, if it's a good working fire, I'll call for a second alarm right away so that we get a crew just for evacuation. We get a crew just for roof ventilation. We've just got to get enough people there to mitigate the scene.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-003	My whole thing is, if I've got a problem and I need more people, I'm going to call for it, and if I don't need all of them, I'll turn them around, They can go back home, but if we don't have enough people we're not going to be effective. It's especially important here because, like today, it's 105, 110. You go through a couple of bottles at work and you're beat.
Context_of_Work	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	...So as my boss was saying earlier, I'm kind of in charge of portable radios, mobile radios, pagers, and our paging system software. I'm not so much involved on the technical side of programming devices, more so I'm kind of a liaison between our fire department and the guys at our wireless shop who do the actual programming...When people have issues with their radios, I'm the person that-- well, our whole group gets the email, what we call a com search request, but I'm kind of the guy who's in charge of making sure it gets taken care of and usually this involves sending them a spare radio and taking the broken one to the radio techs at the wireless shop
Context_of_Work	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	Mm-mm. Almost everybody in our dispatch center, dispatchers, people in the hallway - that's what we call the guys, the staff job Monday through Thursday, [inaudible] Friday - we're all commissioned firemen except for one. They used to have some civilian dispatchers but now it's all firemen-- firefighters [laughter]. [inaudible] Firefighters.
Context_of_Work	FF	U	Field Responder	26-35	11-20	Male	FF-U-004	call taker. Now, since we have fire, EMS, police, if it's some kind of an incident that there's a medical problem going on, we're sending the fire truck, but they're also sending the police because someone got shot,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								then you're going to have three call takers. One from each agency will be listening in. There will usually be one, I think, just talking but everyone's sitting there getting information. If I'm the police call taker and I need to get something, I'll but in just like, "I'm sorry, ma'am. Is there any weapons?" They would ask about it.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	Specialty is, we're working downtown. I guess our specialty here at the station would be high-rise, downtown high-rise, and urban firefighting.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	I would describe it as a public service organization that is all hazards and response. We do not just everything but-- or not just fires but we do everything from car wrecks to hurt toes and toothaches, to fires, to vehicle rescues, to wilderness searches, all kinds of stuff. Basically, if there's a problem, they send the fire department out and we fix it.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	It's real time. It's very nice, a very nice feature. And so if there was extra information coming over that was only coming to me, then I'd be responsible for that in disseminating that to everybody else. So if it's said over the radio, everybody kind of hears it, and it's one less little thing I have to do--
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	Once we get there I do want to know from dispatch-- dispatch does a really good job a lot of times of asking when they're talking to the callers, "Is everybody out?" Or the neighbor says, "Yeah, I think they're on vacation but I don't know. Their cars are in the driveway." Dispatch does a good job of telling us what the caller says about occupants in the house. If I don't know anything, that's part of my job when we first get there. I look at the fire but I also look at bystanders because sometimes they can say, "Someone's in that room right there." Or they say, "No, everybody's out but I have a cat somewhere. If you can find my cat that'd be great."
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	They should. They should. And the only thing that changes that is if there's something way out of the ordinary. Let's say we have 15 people hanging off a balcony when we get there. We may divert some of the first crews to solely rescue and not fire attack. But if it's just a normal

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								fire, not that there really is one, but if it's your standard fire with no huge crazy things going on, everybody should be okay doing their pre-assignments.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	That's all right. Hey, it could happen. It could happen. Something big like that where we may have big exposure problems, I'm going to call for more help right away. I'm going to call for second alarm if one's not already en route. If we have one high-rise building on fire and another high-rise building or large occupancy hazard about to catch on fire, it may take a third alarm. When you have a lot of people you may say, "Hey, you guys, all you four trucks go deal with this building right here." It may get to the point where if we had two buildings, command may decide to split it and ask dispatch for more channels to kind of put them over there so they can talk about their stuff. We can talk about our stuff. That usually doesn't happen until the instant it kind of grows beyond the first unit's control.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	No. What we do for the way our high-rises are structured, we go to the fire control room. In the fire control room, they are required to have five different key rings that are all identical. So the first engine there grabs a key ring. It should have an elevator key on there. Some places have building master keys. Some don't. You may get a key ring with 12 keys on it. You may get a key ring with two. But all of those keys are supposed to provide us access with anything we go upstairs to. We always secure the elevators because we may or may not use them but we definitely don't want people using them. So we will recall all the elevators. We'll look in the elevator shaft and see if there's any smoke or fire. Elevators are a godsend. If you can take them up to the 12th floor and not have to walk [laughter]--
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	--not have to walk up there. But we have to make sure they're under our control. Those are two of the first end company's big responsibilities. So yeah, we all report there, grab our keys and go up. There's been times where the first engine company gets excited and they grab all the keys and they go up. And then nobody has any keys, so.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-005	Most of the time, it's just found by response. And we do lots of alarm activations so that gives us a good chance to walk around and find these areas. But the way our station works it is, for alarm activations, we split up in teams of two and one person's on the primary channel, and one person's always on direct. Because from experience, that's how we are able to communicate with each other. So that's kind of a standing rule we have on our shift.
Context_of_Work	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	For one, it's the best job in the world. We get to have fun all day long. One of the biggest things about it is we actually do get to help people on a daily and sometimes even an hourly basis. Of course, everybody, you see a big red truck going down the street and kids will wave and we wave back at them. I mean, it's hugely a public service job. And--
Context_of_Work	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	Well, let's see. Last shift I think we ran five or six calls on the ladder. I'm normally assigned to the engine where we run a little bit more, but we did have a vehicle rescue where, like I said, we put the radios in our coat pocket. So we have all of our protective gear on and what not. But as far as listening to traffic, usually, if it's a medical call it's-- usually we're just talking to each other. There's no communication with dispatch. For example, at vehicle extrication, there's a lot of other units there with us. Also there's the incident command. I mean, for me, being at the level that I'm at, usually, I just go straight to my officer and we kind of already have a game plan of what we're going to be doing as soon as we get there so we're not talking back and forth on a radio saying, "Hey, I need you to do this. I need you to do that." We just have our little meeting on the drive over there and it's like, "All right. This is what I want," or the officer will say, "This is what I want." We've got the game plan. We'll still be listening to the radio for updates, things like that, but--
Context_of_Work	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	Yes. This is coming in over the radio. When we do get assigned to an emergency like that, dispatch will also be monitoring, and then all of that gets transcribed for our reports or whatever they do up in the upper management. But yeah. So that's how everybody else is getting their info. Dispatch will hear it. They'll start typing everything in into our call

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								text. So if somebody didn't have their headset on or something, it'll actually populate on the MDC, and then that info can be relayed. But usually, we're pretty quick about getting the headsets on. So by the time the first-in unit gets there we're listening to what they have to say and what they're seeing.
Context_of_Work	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	So the one that kind of came to mind was we had to backboard a patient. So we needed to do a C-collar-- there's these little deals called [head beds?], things like that. Well, the probationary firefighter was having an issue with the C-collar and trying to get it set up. There's a couple of little things you have to do before it actually goes onto the patient. So I was like, "Hey, that's kind of backwards. So let's try it this way." And he kind of sat there for a second, just kind of, "Oh, man. I don't know how to make this thing work now, and we're all ready to get this patient moved, but we need to get the collar on there. It's--" "Hey, do this real quick, and it's going to pop down and do this, whatever." He was like, "Oh, cool. Okay." And then we got it on there, no problem.
Context_of_Work	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	Usually, through the department policies, they want you to check your email and everything right after shift change. So shift change out here is at noon. So, usually, what most of us will do, we'll get here, we'll relieve somebody, check out the rig real quick, then we run upstairs. We have to actually log all of our air packs on the website. So you're already on the computer doing your logs. So might as well click over and check out your email real quick and see-- we get our orders via email. So that gives you a heads-up on what's planned for the shift or if we even have anything planned for the shift, who's traveling, who's working overtime, that kind of thing.
Context_of_Work	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	Oh, so the orders, the battalion chief sets the board up. Battalion chiefs actually come in at 10:30 in the morning. So they set up the board and everything for, "Okay. These people and so and so are on vacation. Well, I need to fill those spots with overtimers." So they're going to come in and say, "Okay. Well, battalion one, which is station one, two, three, four, sevens--," yes, and sevens. So they have those, whatever that was, five

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								stations. So they'll look and say, "Okay. Well, this many people are off. We're going to bring in overtimers to fill those spots." Each battalion chief will do it a little differently, but-- so they'll say, "Station one, okay, there's going to be--" today for example, I think we have three overtimers here. And it's going to have all those guys listed and then station two, maybe they're even. Everybody showed up to work today. And they'll do nothing. Then down at the bottom usually if there's something on the calendar, fire inspections, or station visits, any kind of compliment training, things like that will all be listed there. And we have a big, giant, whiteboard upstairs where it's all divided by shift, and we just kind put all of our notes up there.
Context_of_Work	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	Correct. So me, being kind of the low guy on the totem pole, I'm usually here pretty early. As soon as the orders get up, I'll go up, make the board. So that would include who's riding where on each rig. We have three different rigs here. So, for the most part, it's pretty straightforward but when we start having a lot of vacations, especially over the summer, it's kind of a game of, "All right. I don't think anybody's going to yell at me if it's set up this way," and then right below it we'll add the notes on what's going on throughout the shift, whether training, or what have you.
Context_of_Work	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	Okay. First on-scene unit, I would like to-- so we already determined that it is a stove-top fire based on the caller. So what we'd want to know is to make sure that everybody had evacuated that apartment or if they did anything to try to mitigate the fire. It sounds like with smoke coming from the eaves that they didn't try to put out whatever it was. It was actually burning pretty good. We would want to know whether or not the building is sprinklered. So it's 5:30 in the afternoon. So, more than likely, the apartments are going to be-- people are going to be coming home if they aren't already home. So we're definitely going to have to be considering evacuation. Let's see. That's actually more truck-related work but on the engine we'd be-- like I said sprinklers. We'd want to know if it sprinklered, if there's standpipes, what we're going to use as a water source, what kind of hose based on the amount of smoke, or flames, or

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								whatever is there. We're also going to be looking for any kind of extension if it is up on the eaves. I don't think it-- did it say how many stories the building actually is? It just said it was on the fourth?
Context_of_Work	FF	U	Field Responder	26-35	6-10	Male	FF-U-006	Oh, yes. So back onto that track, so we extinguish the fire. Like I said, check for any extension anywhere. So we're going to be doing a lot of overhaul, trying to salvage as much as possible. And then once we're happy that everything is definitely put out, I don't think in this situation an investigator would be brought out. So, more than likely, once the fire is out, the scene is contained, then we'd clean up a little bit, and that'd be it for us.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	All right, so we show up every-- show up at work, we check out our equipment. Respond to calls for help, mostly medical calls, occasional fires, but any kind of hazard or any kind of response that we can go to help somebody is what we do.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	Very often when we respond with police in general. We're pretty much when we respond to a medical incident with EMS, which is the third system in [City], but we operate on the same radio channel so if we have to stage for law enforcement to secure the scene, or we're on a scene where law enforcement is involved in the actual scene, it's very difficult to get information from them. We can scan their channels but we don't really have a good process. And maybe it's not so much the communications. It's almost just is getting it solved to communicate better with law enforcement. But we had a fire recently where someone had a gun inside of the house on fire, and so we all had to back out. And then we weren't really sure what police was [doing?], but we can kind of hear their communications, but they don't use plain English, they use 10 codes that we really can't make sense out of. But just if there was a way for us to communicate with police more easily.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	Yeah. We're all wearing headsets, and so a lot of times-- I hop in the apparatus and I don't get dressed in my stuff as I'm driving or before we leave. And everybody else is getting dressed, so I'm having the headset on and then they're getting dressed in the truck bay. They all hop on and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								so everything that's been being dispatched or information that's come in I relay to them just because I'm the guy that has the opportunity to sit up there and listen to stuff. And a lot of times, during the route they're putting hoods on, putting stuff on their gear so they go off-air. So, yeah, I guess the driver pretty much, at least during the response part of the call, is who needs to be listening for information. Just because I don't have a whole lot to do other than drive and listen.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	Okay. So I'm driving there, and so the dispatch tells us information, we get time of day fire reported. So information we'll need as we're responding: is everybody evacuating, are there any hazards in the building, stuff like that. And that's normally through dispatch that we get enroute. And let's say we're the first unit to arrive on scene--engine company. We have reports of exposures and I don't know if there's any kind of active endangerment of those exposures right now. So we'd get there and let's say we're going out as the first unit on scene. And it's on the fifth floor?
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	Okay. So we have a certain-- if we get there with that amount of resources then we call for a high-rise alarm in [City] which is just a ton more folks come in. And so if dispatch didn't have it, and sometimes they don't, most of the times they do. They don't have the building listed as a high-rise, then they'll have just a regular fire alarm compliment, and then so if it is a high rise we'll just make it a high-rise alarm and send a whole bunch more people at it. And so we get there and we'll give an exterior report, technology-wise. So just what we see from the outside. Let's say we can't see smoke coming from the fifth floor. You may have already said that. The first sent people did say that. So that would actually be an impetus for even more people to come, just a greater alarm than that high-rise initial compliment.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	--it decides, down there, everything that I could imagine that-- as far as phones, notification devices, and then just exhaust fans, stairwell preservation fans, seems like every time I walk into a new high-rise, there's something even cooler, fire-protection-wise, inside of the-- but

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that's pretty much everything we need is right there. We do a size up from the fire control room. We get all our necessary equipment as far as building access stuff, elevator control stuff like that. And then we go to the stairwell. We'd had to designate a stairwell and that's-- we had a fire recently, that was below grade at a high-rise but it turned out just to be just a parking garage. And it wasn't a fire, just somebody burning their tires up, peeling out down-- yeah, I don't know, but it smoked up the entire place.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	Okay. The big thing you're going to do is call for more resources, and you may having to think about folks that are downstairs, and just if it's going to endanger any other exposures or collapse hazards type of deal. But the big thing we're going to do when we get there is if we need more resources, call for additional alarms. We have a ton of folks, even on a third alarm a greater alarm high-rise fire, I mean it's in the neighborhood of probably 80 people, they're showing up to it, so we just get more resources and more people to come with more equipment to put it out. But technology-wise, I guess the building doesn't have all the alarm system and notifying the occupants to get out of it, but just like that social media stuff, that often somebody does, I guess, maybe notify dispatch to notify the occupants to what's going on. And then also communications with law enforcement and just getting them to block off streets so we can get in there. A lot of times, too, we'll get there-- and this is part of our not communicating well with law enforcement-- they'll park to block people out, but then they'll have a fire apparatus needing to get down there and you don't know who's car it is or where they are, so just trying to get people there. But this communicating better with law enforcement thing is our big issue and it's probably just more of a policy issue than it is a technology issue.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	You're going to just need communication from on-syncers to not get adequate flow and there's a unit that's assigned to supplement the flow and a lot of times on our-- so it just kind of looks like I thought there'd a sign at the fire department connection that says, "Pump this pressure."

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								But if they don't have that sign, then on our MDCs it says, "Pump this pressure." And it may not even say it on the MDC it hadn't been updated. So you have to go down to the pump room, and then get the pump, and kind of calculate the incoming pressure and the turn pressure that's labeled on the pump. So then you have to kind of just add those up and that's going to give our pressure. So then if all else fails, there's kind of the height of the building and start off in the minimum pressure. And if you have your minimum pressure, like your 150 PSI, plus however many for however many floors it is, then you still aren't getting adequate pressure, then you have to have a way to communicating it, probably just done with our portable radios down below, "Hey, we don't have enough pressure." From the guy at standpipe who will have a valve right there-- or, I'm sorry, a gauge right there, to see how much is flowing. Just the communicating, it's just with our portable radios.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-007	Yeah, so that's probably the big one. There's going to be tons of radio traffic, and I'm sure someone is going to hit that button and say, "Emergency traffic. Building collapse." Whatever needs to happen. "Evacuate everybody." If there's a way to, communication-wise, if there's a way just to confirm that that message has been received by everybody-- that would be a cool button to have, just like if there's an emergency event, and everybody has their just like, "Okay. We got it. This crew has it." But just the fact that-- and it's all kind of sector'd, and so they have like, this division's supervisor is going to account for all his crews, but a lot of times when we're there at an incident, and there's something that the division supervisor-- we had a guy with a gun not long ago, and so, "Check in with me, Fire Engine One", and then we checked in, and then we were kind of waiting, so if we just had a way to communicate directly, so it was like, "All right, we got it. We're all coming out." And the guy at the command vehicle can see that it's all been taken care of, just on a screen or something, it would be cool, yeah.
Context_of_Work	FF	R	Supervising Field	46-55	21-30	Male	FF-R-008	I'm the [Job title]. So we're responsible for all operations, administration, purchasing, technology, implementation. Basically everything to do with

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					the fire department.
Context_of_Work	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	Okay. That's a good question. The [Job title]'s job is to maintain the tempo of the organization and to move it with-- and consistent with the mission, values, set forth by the organization. Develop policies, provide training, look at what our performance measures are. Are we meeting those performance measures? Adopting a strategy to modify our performance or our actions to meet those performance measures. And then obviously, from a strategic point, then reassess whether or not those performance measures really are meaningful in actually achieving a goal that's worth investing in.
Context_of_Work	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	And then of course, oversight for human capital issues, leadership, discipline, hiring, firing, and all that. Policy development is one.
Context_of_Work	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-008	So there is-- break this up into the type of incidents. So from a wildland incident or a flooding incident, then what we are going to be looking at as mapping data that is accurate typically for us that's driven by the appraisal districts. So they'll put a layer in our MDC for where these buildings are. Have that in a more usable format would have been nice. The topography: potential flood areas, known flood areas, historical data on the types of hazard that might impact a particular area historically. Especially flood lines, right? It would nice to know that, "Hey, if I get four inches of rain in a 30-minute period, what is that going to look like?"
Context_of_Work	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	So I'm a [Job title]. And then I work on the squad, which is our ambulance. So I'll be the-- it's kind of like a [Job title] position for that squad. We switch off every month, so it depends on which month you're working for what your priority is going to be and your duties. So this month, I'm [Job title]. So I mean, we do everything. Traffic injuries, fires, EMS calls. Anything. We'll go help out people cut down a tree if they need help cutting down a tree or cleaning up their lawn. I don't know if you heard about the floods we had.
Context_of_Work	FF	R	Field	26-35	6-10	Male	FF-R-009	So every day for three hours a day, we go pick up trash in this ditch to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					help out this pretty rough neighborhood. They got hit real hard, so we just go pick up trash. So we're here for the citizens, so anything they need--
Context_of_Work	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	If I had to describe the job, I would say it's a family-oriented department that we work for, a real tight-knit group. Pretty much, we're going to go help anybody that needs help, whether it's medical, fire, anything like that. If they need something, just call the fire department, we'll come on help them. I'd say that we're at their disposal for them. So if it was really coming down to, "What do we do?" just be anything for the citizens we work for, pretty much.
Context_of_Work	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	Not with firefighters. I mean, I may text the other stations because our station [Name] is our medical station. So I may text them a list of medical supplies and say, "Hey, this is what we need." And we'll go pick it up. Stuff like that but I mean, that's just kind of if you need it. You'll ask them but it's not super related to the fire department.
Context_of_Work	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	Yeah. For this department, I think what's changed the most is probably the way that our chief is starting to track everything. So he's tracking all the maintenance of the trucks, he's tracking hours that we train, so he'll be able to put that in like a chart or graph, compare it to next year, and see are we getting worse or better at this. So let me give you an example. So forcing doors. We have to force doors. You can force one door in like 30 seconds. He wants to know if we train two hours on this, can you still force a door in 30 seconds? And a year later, if you don't train, do you lose that skill? Do you still have that skill? So we don't have to worry about training on that one 50 hours over the year. We can train on something else like swift water or something that does deteriorate with time like knots. Ropes and knots, it just doesn't click with me.
Context_of_Work	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	Yeah. So I can tie them all, and I can put them to work and use, but if I don't train on knots at least an hour every two weeks, I'll forget one or two things. And you never know when you're going to need it. So I think that's been the biggest thing that's changed is just the way he's been tracking everybody with daily goals and stuff like that. He's also starting

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to track motivation for the workers' performance and satisfaction with their job, so he's going to track all that and let us know. Probably, I think, every three months or so he'll give us a breakdown and see where we stand with everybody else in the department. Not like you're better than them, but just to know what your peers think of you, I guess. If you need to work harder on something. I think that's probably how the technology has changed the most. It's just on the day-to-day tracking system, pretty much.
Context_of_Work	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	So you're already there. So this usually happens-- we have like four rodeos out here. And they're like Hispanic rodeos, where they just bareback ride bulls and just outrageous stuff. They're all on horses. It's like this old country store, people get shot and stabbed, and just crazy things happen over there. So you always know, "Today's Saturday, they'll probably go there. Just because it's a Saturday." So for instance we went there. It's probably three weeks ago I was on the squad and [Event].
Context_of_Work	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	This is just going to be-- right we do truck checks, so we'll check off the whole quint, ladders, lights, sirens, make sure everything's working. All the tools working. And whatever's not working, you can put it in the system if it's-- and actually needs to be repaired, or you can just tell the next shift face to face, "This is that we did." You can say, "Spreaders and cutters are kind of sticking," or something. "Don't use them." But right now he's-- I think it's in July, he said [put us?] an iPad where we can put in these are the tire pressures, oils, every day. Check all of it. And then your tire pressure's supposed to be at 50 and you put it in 45, it's say, "Hey, this is low." And then you keep track of that. And it'll keep track of your oil changes. Every time we do any maintenance on the quint whether it's greasing the ladder or oiling the ladder, stuff like that.
Context_of_Work	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	So normally you have to send it out. Especially for the quint. I don't know if it's a warranty issue or not. But for the quint we'll send it out. We can do our own oil changes, but we usually just take it to another place. I don't know if we have a good deal or if we have to per department policy. Things like changing the lights or stuff we'll do that. Or if it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								something with the pump that we know how to fix, we'll do that. We have guys that go to school, like certain guys went to school for the rescue tools--
Context_of_Work	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	So anything like that, two acres, we could put out with our brush truck pretty quick, especially in the morning like that. Our brush truck could put out two acres within, I don't know, 5 or 10 minutes.
Context_of_Work	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	So on our squad's lieutenant doesn't have it but the firefighter, he takes all the vitals. He does all the hands-on stuff because we're sitting there. We're taking reports up. But he has a camera. It's on his radio belt. So you can double click it and it will record everything, whether it's audio, visual, stuff like that, and sends it to our chief. So he can get that back. I don't know what the range is, but I know if I was wearing it right now he could watch from the other room what our discussion was.
Context_of_Work	FF	R	Field Responder	26-35	6-10	Male	FF-R-009	This is one of the things he's testing. Kind of like how he tests things like that. But yeah, I think he wants to get one at every station, and the firefighter would wear it because he's the one doing the BPs and stuff. But if you think about it, it may be better for the lieutenant to have it because he's not moving as much. You just got to make sure-- because usually the first thing we'll do on scene, if it's not a serious sick call, we'll open up our computer, get all the patient information. So it's just going to be recording the computer. So if there's any way to have it located somewhere where we can record the actual patient, patient care that's being given, that would be good. And it gives us a way to monitor our rookie firefighters too. If they're doing something we think is wrong or they could do better, that's a good thing to look at just to improve them.
Context_of_Work	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...So the citizens call us when they're having a bad day. Something's gone wrong in their life and they need somebody to come in and help make it right. So when we show up, sometimes it's a very straightforward situation with minimal risk, an EMS call where we just have a patient, that we don't have much in the way of outside concerns to deal with other than just providing treatment to the patient in question...So the citizens call us when they're having a bad day.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Something's gone wrong in their life and they need somebody to come in and help make it right. So when we show up, sometimes it's a very straightforward situation with minimal risk, an EMS call where we just have a patient, that we don't have much in the way of outside concerns to deal with other than just providing treatment to the patient in question.
Context_of_Work	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	... But whenever we deploy the task forces, we do deploy our own internal management team, which is called an IST, an incident support team, which basically mirrors the incident command structure of the receiving jurisdiction. And normally, what happens is we've got our people paired up with the receiving organization. And actually, as the program evolved is we actually pair up starting at the FEMA Regional Operation Center. So the USAR program will have a liaison in the ROC, the Regional Operation Center.
Context_of_Work	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...And this actually goes for the whole [City] region because within the [City] region, we have the Council of Governments which is sort of a-- it's a membership organization but almost all of the municipalities within the [City] region are members of the organization. And we coordinate amongst ourselves through COG. And in specific, there's a public safety communications committee within COG, and then under that, there's a fire committee and a police committee. And the fire guys organize the fire stuff. The police guys organize the police stuff. But then we also meet together to make sure that fire and police are organized--
Context_of_Work	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	...So if [County] was having a catastrophic kind of day and we need to send [County] units down to [County], we would go operate on 5 Charlie or whatever they told us to operate on, and we could operate-- one, every unit in [County] would know how to get to that channel, with no confusion, because it's a very simple pattern that everybody can understand. And we would be operating directly on their radio system just as we were a native [County] radio user. So that plan has been implemented throughout the COG region and works very well and helps to coordinate our communications within the fire rescue community.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	So we had a warehouse loaded with 8,000 radios sitting in a warehouse in [City]. So the [County] rep said, "Hey, I know where there's a whole bunch of radios sitting in a warehouse. Let me talk to [County]." The [County] rep came to us and said, "Hey, [City]'s wanting 1,000 radios. You've got 1,000 radios. Do you mind if we take them?" And [County] said, "Sure. Take them. We don't care." As it turned out, our warehouse provided not only radios to [County], but also to [City]. And they ended up pulling a couple thousand radios out of our warehouse and sent them to both incidents.
Context_of_Work	FF	S	Field Responder	Not specified	31-40	Male	FF-S-040	.. ..So for about a week, the sniper tip line was at the conference table right in front of me and my fax machine was the fax machine for the tip line. And I was going through reams of paper and ink cartridges like crazy [laughter] as people from all over the country are faxing everything in to my fax machine.
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	... There are times when I go mutual aid to [County], and there are times when I go to mutual aid to [City]. But those are the only two places that I go. And that is about it. I mean, I don't know how many citizens we carry. I know that it is a lot of space and a lot of time. And if I am on one area of my battalion and the response of the call is on the other area, it takes me a long time to get there, but it is okay because there are at least two command officers that get dispatched. So the neighboring jurisdiction, the neighboring battalion will go ahead and move up and possibly get there before me and hopefully at quick time.
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-041	...But the majority of the outreach events are covered by the stations. So school demo covered by the station. I may show up. I may not show up. Civic association, they have 500 people show up. They just want fire rescue to talk about smoke detectors? Sure, I may show up. We have 1,000 people showing up for a soccer event, and we need a table for fire rescue to talk about anything? I may show up. But largely, my role is to make sure that those things are covered by the individual stations. I very rarely get involved in that.
Context_of_Work	FF	U	Field	26-35	11-20	Male	FF-U-042	.... So you're running with all sorts of different companies, but in terms of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					the actual core, I guess, purpose of the special ops runs, you're running it with the same other rescue squads, you're running it with the same hazmat unit, you're running it with the same fireboat. So it's the same people. So we were very fortunate and even within our battalion, being smaller, that we're working with a smaller group of people, we're working more frequently with each other, we actually were able to do more drilling
Context_of_Work	FF	U	Field Responder	26-35	11-20	Male	FF-U-043	...We have the command unit. If that comes out, that has spare batteries on it, at least another six spare batteries. We have other things like our rehab unit or the canteen unit. They might come out on second-alarm fires. They just had a minimum-- again, we have six bank chargers sitting in the unit so that, they show up and somebody needs a battery, they can help them out and say, "Hey, here you go."
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	You're seeing everything. And I wanted to follow up. You've mentioned that you have a lot of interaction with law enforcement, FBI, Secret Service. You're dealing with them on a daily basis, which is something very different than what we've heard in sort of other areas.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Telephone, first-name basis. So a quick example, so the other day one of our units went to Union Station. They went in and they got a patient. They come back out and there's this device on the steps of the ambulance. And so "holy crap," so they backed up, they call me. I'm like, "All right, evacuate. Get the police, and I'm on the way." And so by the time I had gotten there-- it was Union Station, so Amtrak police has every asset you can imagine, so they had a bomb dog already walk past it. They had cleared it for EOD.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	The police, it's like, "This is my territory." So they're very territorial about who's in charge, whereas being the fire department, the only one, we're usually in charge if there's a fire issue [laughter], so it makes it easy. Anyway, I'm dealing with this sergeant from Amtrak Police, and right behind me, [Name] from the FBI pulls up. He's in a black unmarked cruiser. Guy's got khakis, hat, not-- no suit. You normally think FBI's going to be in a suit, and he's khakis, polo, ball cap, hat, half unshaven. "Who's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that?" I'm like, "That's the FBI." "Who called them?" I'm like, "I did. I call them everywhere I go. I take them everywhere I go. So Amtrak was a little annoyed that FBI had shown up, which is typical law enforcement.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	It's the special operations chief. We formalized it as that-- there's four of us on shift work, and each one of us is on a first-name basis with Agent [Name]. He's developed these relationships and cultivated them.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Q: Fantastic. That's good. I had always wondered. It seems like you guys are responsible for so much stuff that you would need help. So it's nice to hear that you do have that. Do you work with the same aide every day or--? SME: Yep. It's [Name], who I went to rookie school with.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	Yeah. We have some very easy communication back and forth. There's no ambiguity. We're always on the same page.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-044	He claims that we're going to be in court one day and they're going to ask him if they recognize his worksheet, he's going to say no and anyway, it was stupid. Yeah, like that, I'll do that. I'll take notes over here and record and I like it a lot.
Context_of_Work	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	So it's an interesting dynamic because I had-- I had always been in a company in a firehouse as a member of the crew, so to speak. Well, the incident safety officer works alone. So you have an office inside a firehouse, you are on shift work, you eat meals with the firehouse but you're not really part of the company, so there is that-- there's a dynamic when you're there, you're involved, you can go downstairs and have coffee with the crews but then you're also having-- you're in an office, so it's a really weird setting. It took a lot of time to get used to it because you lose that teamwork component of, "Hey, we're here every day, we're here together, I know your strengths and weaknesses, you know mine." You're just kind of there as a guest, I guess, is the easiest way to explain it.
Context_of_Work	FF	U	Other Public	26-35	11-20	Male	FF-U-045	Because the company officer here is-- this sounds really-- and it's probably not the best terminology, but you're almost like a caretaker. I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Safety Personnel					like to say babysitter sometimes [laughter]. So you have people that rely on you and you rely on them, and then when you lose that dynamic, it's just-- it takes getting used to. Yeah. Especially a field that's so built on teamwork, yeah.
Context_of_Work	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	--and things like that, so. Yeah, that would be definitely a transition. So talk to me a little bit about the community that you serve here.
Context_of_Work	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	I think it varies. I think it varies a lot by neighborhood. I feel like when you're downtown and there's more of a transient population, and people aren't from the city or don't live in the city, you're just kind of just an anybody, so to speak. I don't say that to be a bad term, but just-- you're just-- everybody's here to go to work and that's it. But when you-- say if you were to go get coffee at a neighborhood coffeehouse at a place where people live and work, you're more a part of the community. People will engage you, ask, "Hey, what happened yesterday?" or "How's it going today?" something like that. So I used to always try to tell my people as a company officer, you're always on duty, whether you realize it or not. So even if you're not on a call but you go to get pizza or something, you're-- people are going to come up to you. They're going to ask you questions. They're going to expect you to somehow represent the agency, so--
Context_of_Work	FF	U	Other Public Safety Personnel	26-35	11-20	Male	FF-U-045	I definitely think so. Yeah, definitely with that. I can always speak for my position in the safety office, but we have the COG healthy and safety subcommittee. And we meet monthly and discuss whatever issue is going on either nationally in your own jurisdiction, regionally. It's an amazing amount of data sharing. Everybody kind of comes into it at the same level, whether you're deputy chief of risk management in [County], or you're a captain in the safety ops in [City], or in the [County], wherever. Everybody meets at the same table.
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So a rescue squad is different than an engine or a truck in that our duties on a fire ground or an accident scene or another kind of rescue is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a little bit specialized. So on a fire, we specialize in search and rescue of victims. We don't carry water to put the fire out we just do a search and pull out the people. On an auto accident, we are the ones with the hydraulic tools and the specialized tools to get people out of the cars. So we specialize in extrication, and we're all technician level trained, per the NFPA standard, in vehicle and machinery exhortation. In addition to that, if we run a technical rescue, which would be something like a window washer who falls and is hanging from a thread, or somebody who drives their car down an embankment and we have to use ropes to get them out, we're all trained in rope rescue as well. And we have various specialized tools...
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	On the ambulance, as an EMT or an ambulance driver, I focus on patient care more than removing the patient from their environment. So once they get out of the fire or the car that they're trapped in by the rescue squad, then they go into the ambulance care. They get some medical treatment and any kind of emergency life-saving procedures. And then they go to the hospital...
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: driving the heavy rescue vehicle] I'm working on my qualification for that now...It's more classes. It's more in-house training. We have a training standard for all of our qualifications that's actually above the minimum for the county. So even once you've taken the class, you have to go through a rigorous in-house training process on the AMKUS Rescue Systems that we have for our hydraulics tools, on various different types of rescues, and the role that you'll have to perform as the technician or the squad driver.
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	I show up at about 6:30 PM for the 7:00 PM shift. I work a 9:00 to 5:00 job. So I come here around 6:00 or 6:30. I start off by checking out the rescue squad. I run the saws to make sure that they're fueled and that they're all put together well. I clean off any pieces of equipment that need it. I check out the hydraulic tools so that they're operational. I check out the rope equipment, make sure that's good to go...
Context_of_Work	FF	S	Field	18-25	5 or less	Male	FF-S-039	...I check out my wrap intervention kit, is what it's called, a RIT pack. And

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					just to make sure that that's organized the way that I want it so if I need to deploy it I can do so quickly and smoothly. I put my gear on the squad and check out my SCBA cylinder to make sure that's all secure. I check my radio battery, make sure that's good. Make sure that the radio's oriented in its strap the way that I like it, actually [laughter]. Everybody has their own preference about that. So some people wear it under their coat. Some wear it over their coat. Some put it in the pocket. So I wear it under my coat.
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So that's how I wear my radio. I make sure that it's in the strap the way I want it. The batteries are good to go. Then we'll usually wash the rescue squad. Then I'll start doing some in-house chores, taking out trash or whatever.
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: apparatus check] It usually takes between 30 minutes and an hour. So ideally, if I get here at 6:00-- if I can get off work a little early, then I'll try to start that at 6:00 and go until 7:00. And then the shift actually starts at 7:00... But worst case scenario, I show up at 6:30... I want to be ready to go when the buzzer gets [laughter]..
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...I take a little bit more of a management perspective around here sometimes. So I try to make sure that other people are checking out their units. And at 7 o'clock, I've already done the work I need to do. So then I make sure that other people who might have not showed up earlier doing what they need to do. Checking out the ambulances, make sure that they're all ready to go.
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	If we have an observer, I'll orient them. Make sure that they know where they're riding, what they need to do. Any inexperienced people, try to walk them through any processes that they need to do in the first half hour. Then that's about a half hour of housework and management things.
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	Then we usually do dinner around 7:30, either some night crews cook in the station, some other ones say, "Just take the ambulance or the rescue squad downtown and grab some food at the [inaudible]," so that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								depends on if it's Monday or Tuesday, right [laughter]? So that's around 7:30 or 8:00 usually...
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So we could get calls at any stage.
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...The people who ride the rescue squad usually don't stop training right at 11:00. A lot of times we'll go till midnight or 1:00. Once we get in the zone on a drill, we don't want to stop, so we'll just keep going until we're done.
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...other times, there are various deeper cleaning things we have to do. Like right now, there are guys out in the engine bay who are-- they are taking everything out of an office that we have out there where we store equipment, called the property office. They're cleaning it up. They're scrubbing it. They're looking through all the equipment to see what we need, what we don't need. And they're sorting it and organizing it. So that can happen at any time in the shift depending on the priority.
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	It varies because people ride a different amount, and people are in different stages of their training processes. But right now, we have, let's see, one, two, three, four, four-ish people who are in the midst of their squad qualification process, meaning that they can go into fires. They've taken the classes, and they've done the minimum - we call it the fourth man - qualification, so they're probationary firefighters. They can go in with the supervision of a lieutenant, or a captain, or a chief, but they can't be independent. They won't be able to operate as a two person team with somebody less qualified. So we have four people in that process, so any night, we usually have one or two of them in.
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So I'm here a lot. I'm here five or six nights a week. So probably close to 100 hours a week. And there's a small group of people that are here that frequently. We're called the live-ins or the permanent sleepers. We have beds upstairs and a little bit more space, and we live here. And so we spend a lot of time together, and that's a very tight-knit group of people. There are seven live-ins right now. And we're very close. So that's kind of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the group where you don't need to communicate as much. You can kind of know what they're saying even if they're not a good communicator or even if they don't say anything at all, it's still like, "Okay, I know what you mean." ...
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...Then the next tier of relationships, I'd say for me, is the people who ride the rescue squad a lot because I ride the rescue squad a lot. So even if they're not live-ins but they're very active, then it's the same type of thing. If they're only here one or two nights a week but every week and I'm always riding with them those one or two nights a week, you develop that ability to communicate better and to develop those strong relationships...
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	I mean, when we're on a call with police, they're usually in a more of a supporting role, at least for the rescue squad, because if we're on a fire and police show up, it's because they need to block off the road. We don't need to talk with them all that much for that. We'll say, "Hey, can you block off the road?" Not really that bad, or if it's an accident, we're the ones cutting the car, and they're basically either blocking the road, or they may have to check the ID of the person or do a sobriety test or whatever it might be. But our interactions with them are usually pretty straightforward. So, even though we might have bigger communications differences, I'd say we don't even have that many problems with it, because we don't do as much high-stakes interaction with the police.
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	So we don't run with other counties around us just because of where we're located. Once in a while, we might run something with someone from [County], but not even that frequently, especially not anymore...
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...What we do experience that's unique is we run to [City] a lot on the ambulances. So people can special call our dispatch office instead of 911 if they're having an emergency in [City], in Upper Northwest, and we'll send them an ambulance to help them out. And we still have to go onto the [City] communications channels, which are different channels. It's 0-12. And so, when we're on that channel, it's pretty straightforward. They use slightly different terminology. If we're in the county, we'll say,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								"Ambulance 741 bravo to [County]," if we're trying to reach the dispatch center. In [City], you say, "Ambulance 741 bravo to communications." So slight differences there...
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...They also have slightly different dispatch procedures. So if you have a lift assist, for us, that's usually just an ambulance, but for them, if you say, "We're responding for a lift assist," they'll usually send you an engine to help you out. So I don't know if they still do that, but when I was driving the ambulance more, that was something we dealt with. And you had to specifically say, "I don't need any manpower," or, "I need additional resources," something like that...
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	Right. So if they have a big incident, they might send our rescue squad for an accident in [City] if they don't have their own rescue squads available, but that's very rare. I don't know. Maybe that happened once or twice this year.
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: internal radio system] We don't carry those on the call, but we just have it mounted inside of the unit. So if the ambulance is downtown getting dinner in [City] and somebody calls our dispatch center having an emergency in [City], our dispatch center will call that ambulance on our special radios. But we don't use them on any incidents.
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	But there is definitely a push for people to follow their SOPs, their standard operating procedures more. And to communicate less of the stuff that should be assumed. Like, I know if we were in a fire right now, our job is to do a search. That's our primary job. That's our primary job. Our secondary is to is to control utilities. No one needs to tell us to do that. So if we're really adhering to this policy of less radio traffic, no one should have to tell us to do that. When we're done with those things we'll say, "Rescue squad 741 to command, we've completed the primary search and it's negative. The utilities are gas and electric and they're both controlled." That transmission right there took 20 seconds, and that should be the only transmission...
Context_of_Work	FF	S	Field	18-25	5 or less	Male	FF-S-039	...But a lot of times you'll hear, command will ask, "Hey rescue squad,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					can you please do the search." And we're already half way done the search because we already know that we need to do that. "Yes, sir. We're doing it." That's two more communications. Then they'll ask us two minutes later, "Hey, is that search done?" "Still doing it." That's two more communications. Then when we're finished with it we'll say, "We've finished the search and it's negative." And they'll say, "Okay, can you do utilities?" And we'll say, "We're doing that." And so now we're at like seven or eight communications, when we really just needed one or two. So that can be a challenge because someone else has to listen to that and it's distracting to them. But then they also can't get a communication across if they need to.
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	[RE: AVL] ...So a perfect example is we went to a house or a building fire with entrapment two Fridays ago in, I guess it was [City], where we know for a fact that [City]'s rescue squad is due there before us. But we were on the air. And so that one minute advantage got us there. And we were there pretty quickly. And I think the computer was right that we would have beat [City] there. But six months ago, they wouldn't have put us on that call.
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	They've been really good about-- the dispatchers update their computer with any pertinent information that comes in from 911 calls, or also from the radio traffic. So they're always monitoring that. So if we're running a fire this morning, as soon as they find out that someone's trapped, they'll enter that into the computer, and all the units will get that message. Even units that aren't responding. So if a Chief sees that he might say, oh, I should probably go on that. And then he'll start responding. So they get the information out there pretty well...
Context_of_Work	FF	S	Field Responder	18-25	5 or less	Male	FF-S-039	...I know one of my friends, who lives in [County], he has that for their area. So if he's at home, he can hear if somebody goes into cardiac arrest on his street, and he could go out and render first aid to them. And he could also listen to a fire that's happening 10 blocks away, and he'll know if he needs to adjust his personal traffic, whatever, based on the apparatus that's there. Stuff like that.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	I am a captain in the fire service. My responsibilities are twofold. I do communications and special operations [clinician?] and then I am also a captain on a truck company and in charge of our department's hazardous materials team.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So one of the daily routines in the company level is we get on. We have what we call- well, we exchange shifts. So the off-going shift reports with the head any problems, any incidents, or anything that they did. The oncoming shift will typically swap out our equipment. We log on to the computer, check email, any memos, notes, meetings or anything like that. We kind of find our schedule for the day as far as any required training, maintenance, all of that sort of stuff. Then we'll have a roll call where the officers will brief everybody, the crews, as to kind of the game plan for the day. And then we go into the routine...
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...So the routine includes maintenance issues, housecleaning, and whatnot. There'll be training stuff. There will be inspections. So there's stuff that interfaces with the community: inspections, trainings, school visits, site visits, all that sort of stuff. There's stuff that pertains to us here in the station. So training, maintenance, health issues, health tracking, fitness, all of that.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...the second half of my job is more administration, and so I interface with people all over the country. So there's different time zones to work with so that's conference calls or webinars, or I have work-related travel probably once or twice a month all over the country for that. Different committee meetings and whatnot as well.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So FEMA sponsors 28 urban search-and-rescue teams throughout the United States. And we are part of one of those teams. And so those teams get mobilized and state requests for incidents like Hurricane Sandy, Hurricane Matthew, I went to last fall. September 11th. I went to New York for that. They went to the Pentagon. So Northern Oklahoma I think there was a tornado, stuff like that. So that's also part of- that's one of my roles, is being active on that team, the regional team.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So our communications is anything and everything, depending on the nature of the disaster. So in emergency service, it's not unheard of, whether it's communications or anything, to kind of have your main plan, your backup plan, your backup to the backup plan, your backup to the backup to that. So depending on where I'm working, the communications will be different. So in operations here in the fire station, we use smartphone-type devices.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	For law enforcement traditionally across the United States, every individual will have a radio assigned to them. Law enforcement traditionally does a lot more. I mean when they're off duty they're still on duty, taking home the police car, that sort of stuff. Versus on the fire side, we don't take home the fire engine [laughter] and [crosstalk]--
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...so myself and my other officer counterparts and actually a lot of the crew members and stuff, it's go, go, go, working from usually 7:30 in the morning, getting ready to transition on shift till probably 1 or 2 o'clock in the morning as far as just paperwork and maintenance and tracking things and training and learning about our job and stuff. And then from that point on, usually it's personal time. So if there aren't any calls, people will sleep. If there are calls, then you always go on the calls. You're always doing the emergency response. But people will do hobbies or read, or sleep or whatever...
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So in our department, we do the EMS. But we're a little unique from a lot of the rest of the nation in that our paramedics only do ALS, the advanced life support. That's the IVs, and the intubation, and stuff. Most other departments, they will have those paramedics either running on the engine, or if they're on an ambulance, the paramedics will do basic life support and advanced life support. So ours, they don't--
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: paramedics] they don't ride the engines and they only do ALS. And what we found is that that really helps reduce the amount of burnout or frustration, because they're doing the critical life-safety stuff that they've been trained for, not the, oh, I-need-a-Band-Aid-type calls and stuff. And so... everybody is cross-trained to ride either on the truck or the engine

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								or to do the basic EMS-level stuff.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So our department averaged, I think-- I want to say we did about 90,000 calls last year for service. And that was generated from, I think it was 130, 140 thousand 911 calls. So of that 90,000 responses, about 78 to 80 percent of those are EMS-medical related.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...So my off-shift job is actually also with the fire department. So that's all the communications stuff that I do. So I tell people my bread and butter is working here in the station, riding on the truck, doing the hazmat-team stuff. But then on many, many, many of the days that I'm off from that, I'm still working for the department but on a lot of these communications issues, whether regionally, state wide, or nationally.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	Yeah, so at the national level, I'm very involved with a couple different efforts. There's the FEMA Urban Search and Rescue that I talked about. But there's the SAFECOM.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	Yes. Within DHS. And so very involved in that. I chair The Education Outreach committee. I chair a task group working on the development of the communications unit. It's a taskforce so it involves the communications unit leaders, communications technicians, dispatchers, all of that. Everything from the wild land environment for forest firefighting to urban search and rescue to day-to-day operations. All of that. The other big national effort is I'm on the PSAC for FirstNet. So the whole FirstNet and broadband, public safety and stuff.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...At the state level, very involved with a lot of communications training. So most states now have Statewide Interoperability Executive Committees, SIECs; and SWIC, Statewide Interoperability Coordinators. And so I work with both of those groups on a lot of the training, training needs, what have we got, what do we need? But also bringing it full circle by the nature of my day-to-day work as far as, hey, this training and this stuff is making a difference or it's not, and maybe we need to go into a different direction...
Context_of_Work	FF	U	Field	46-55	21-30	Male	FF-U-030	...At the local level, our region is replacing their 800 megahertz trunked

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					radio system [with] a new P25 Phase 2 system. But I chair the operations committee, which is all the end users kind of advising that project as far as, what our needs are, what our problems are, shortfalls, training, all of that... I believe the ballot measure was passed, I want to say like two years ago, so it's an expected or anticipated completion date somewhere in 2019, 2020.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...So on a smartphone device, I've got the ability-- if I meet somebody that's deaf, or maybe somebody that's mute that can't talk back or something like that, between the two of us, we'll have applications for EMS where they can show me pictures of what's wrong or spell it out or something like that.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	In the pharmacy, people may say, "I'm taking these medications." And as you can imagine, there's thousands and thousands of different pills and medications. I may have no idea what that is for, but I can look up within seconds and find out, "Oh, that's a diabetic medicine. So do you have a history of diabetes?" And that can lead into entire lines of questioning that maybe very pertinent to why we're there for their medical condition or whatnot.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: department-issued cell phone] No, this has the voice too. I mean, I got the phone years ago. I was making so many department-related phone calls that I was burning up half of my minutes for whatever on the whole phone. Like this is crazy. So yes, that's voice and data.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	I think we're at like the 90% compliance rate with those times. And we've done a lot and lot of advanced study on those times and why those times are so critical. I know that NIST, different divisions, but have done studies on the fire-growth, fire-burn time, and whatnot, as far as, yeah, that four-minute response number is still pretty important as far as the burning. We've done, in conjunction with our universities here-- we have probably one of the premier medic programs in the nation, and they have found that, ironically, almost identical to some of the NIST stuff on the fire growth, that on the medical side, you have about the same four-minute window for a lot of your cardiac events. So if the heart stops

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								beating, you have about that same four-minute window to start getting oxygenated blood back to the brain before they become very, very sick.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: operations company officers] Q: they don't have time to get the information delivered to them. It's not what they need when they want it. SME: Then they'll just skip it and go to something else that gives them the information they need.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So we will record that a building was inspected, for example, on this date and time by these people and that they may have found these issues. One of the things that the fire department has is a lot of pre-incident-type, survey-type stuff. So for a typical high-rise, for example, we may have what a typical floor plan looks like. Where the emergency shutoffs are. Where the elevator controls are. Where the gas is. For all of those types of things.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	[RE: data management] So schools is another big one and probably more important to the police because of the school shootings and stuff that have happened in our country. They're very interested in where the hallways, what ways do doors open, all of that type of information.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...we just switched to a new medical records platform, and so they're still populating a lot of the databases. But being able to have information on that patient from previous calls and previous history is really cool because filling it all out the first time can be very time-consuming. What medications do you take? What medical history do you have? Have you had any surgeries? All of this stuff. If somebody else sees that patient later and you've already mentioned that or put that into the medical records, if they put in the right name, a little flag pops up that says, "Hey, is this [Name]?" If you click yes. It's like, "Oh. Last time we saw [Name] was this date and time. Here's all the medications she was taking. Here's what we saw her for. Here's her concern. Here's all of that type of stuff." So being able to get that information. We're not there yet just because it's a new enough system. But that would be huge in being able to share that with hospitals and stuff.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	The problem that we found is, as far as just one, there isn't one solution that fits all. So we're walking around like this, with just nothing else. I may be able to use my earpiece in here and it may stay in fine. But if I go into the firefighting mode where I have to put in a hood over myself and I have to put on the SCBA mask with straps, that same mechanism may just not be able to stay in the ear or something like that...
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...Like the military, public safety will often operate in kind of a squad mentality, that you may have a bigger incident with incident command and commanders and stuff that you need to talk to, but you have these little squads everywhere that also need communications amongst themselves. And so we're starting to see some people that are kind of piecemealing it together, but you have the kind of deal where it's almost like two radios within one, where you can hear the command level stuff going on, as far as updates and what's going on, but you would have the ability to, while hearing that, still have a squad-level communications...
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	...then to just make it worse, ideally, the squad-level stuff would be hands-free voice activated so that I've got a chainsaw or tools in my hand, but I can say in my protected environment, "Hey Firefighter [Name], can you help me over here with this?" Not having to key anything. Not having to push anything. And then Firefighter [Name] hears and acknowledges and he comes to help me, in that regard. If I need to talk to command or something like that, then, yeah, push a button or something or key up and, "Hey, this is ladder one. We need blah, blah, blah." or something like that.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-030	So the other thing, fire service and law enforcement operate an incredibly high-noise environments. So fire service is chainsaws, and fans, and apparatus at high idle. Police, same. The sirens and stuff. [It's?] the same for them. Gunshots and whatnot...
Context_of_Work	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	I'm a firefighter, captain rank, and my job is as a first responder to, first of all, provide public safety. But my specific job description is to disseminate training curriculums to our agency, career firefighters, volunteer firefighters and support staff, and firefighting in the EMS.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	My daily routine is very hectic because as the training division we're required to manage training curriculums, provide evaluation processes for probationary firefighters, to disseminate and deliver required training by the [State] Administrative Code, the National Fire Protection Association, as well as manage budgets and funding so we can provide those training with all our personnel.
Context_of_Work	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	So the daily routine for firefighters primarily, initially, is personal readiness. So you check your own gear and then you check the firetrucks, the apparatus, make sure all the equipment's ready to go. There are daily routine, daily duties to do around the station, maintenance around the station as well as business inspections, public interaction, public education. We may have to do presentations to schools, fire drills, home-owners associations, and then obviously, emergency responses or priority at any time of the day and night that we have to drop what we're doing and go on the run. And we provide emergency medical care, basic life support. If that's the case then we'll transport that person to the hospital as well. And in the case of fire response, we'll get on the fire truck and we'll go to the fire response depending on what it is. And again, preparedness is number one, and then we also have to maintain our training while on duty. So there's required training that has to be done monthly, weekly, daily. And we take those training records and they land here, and we manage that accordingly.
Context_of_Work	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	... We're all cross-trained firefighter/EMT. Some are cross-trained fire fighter/paramedic which is a higher level of EMS care. We have ALS, best life support providers that work within our fire stations but they're affiliated with another fire department.
Context_of_Work	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	We're one shift on, two off, one on, four off.
Context_of_Work	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	... There's the [Tribe] towards the city of [City]. They're one of our partners in the consolidation, and we provide-- under part of the fire district that we cover, we have an agreement with the tribal community,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								city are the [Tribe]. It's primarily the [Casino] is the major--
Context_of_Work	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Yeah. EMS responses are the primary responses. They probably take up about 85% of our overall responses. Motor vehicle accidents, special operations like mountain rescue, trail rescues, especially in the summer time, are quite prevalent as well. Structural fires, actually buildings that are on fire are another component of that remaining 15%, and then other types of alarms like automatic fire alarms and out-of-the-box responses, hazardous materials, technical rescues, things like that.
Context_of_Work	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Well, generally speaking, we have a fair amount of wild land interface fires that are generally small in nature. Can be handled by several units. But we do have several apparatus that are wild land fire trucks, and we have easily 60 to 70 personnel that are trained in wild land interface. And they will go on deployments throughout the west coast and the Pacific northwest, so.
Context_of_Work	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	Firefighting, you come back, and you enter the information on the computer or the tablets because there isn't time to do that and fight fire at the same time, so to speak.
Context_of_Work	FF	S	Field Responder	46-55	21-30	Male	FF-S-031	And then you just have to make, again, that situational awareness call. "Well, we've showed up. There's no gun fire. There's no fire. There's no car accident, but we're investigating." And a lot of that has to do with trying to coordinate with law enforcement. They may be at the scene, and they may not be at the scene, and we just don't-- we're not sure of that because the dispatch center can't give an estimated time of arrival.
Context_of_Work	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	So I would say that we're responsible for two items. One is providing emergency medical services. So if there's any time of need where someone has an emergency medically, we respond.
Context_of_Work	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	And two, to suppress any fires that happen. And then I guess a third would be to work to prevent both of those things from happening as well.
Context_of_Work	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	...So as a firefighter, the daily routine is come into the station, chat with the people that were on shift before, the 24-hour shift. We work 24-hour

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>shifts. So in the morning, we would talk with the people that were on the apparatus before us, see how their day went, see if there was anything, any information for them to pass. At that point, we start in with talking about a plan for the day, any training or activities we have. Then we proceed to check our equipment and make sure everything is up to standard, that we have everything in place. We'll end up doing some routine housework just to kind of get the station up to standards and make sure everything is okay on that front. And then we typically will spend the day doing some sort of training activity or familiarization, inspections. That would be the plan. And then emergency responses kind of come in and out throughout the day, so we would divert to those as they arise. And then towards the end of the day, we would have a meal and we stay at the station 24 hours. So if we're slow, we'll get some sleep. If not, we'll get ready for the calls that are going to come in at night.</p>
Context_of_Work	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	<p>...So we have a fire engine and we have an aid car, which is basically a ambulance for the fire service. So the fire engine has, in our case, three personnel assigned. So the equipment check on the fire engine is much more related to are the hoses in the correct spot? Are the nozzles functioning? Are the hydrant materials necessarily in place? And then on the aid car side, it's are the blood pressure cuffs and stethoscopes and medicines that you need to do your calls. So each apparatus has a different set of gear. So there's EMS-related items on the fire engine as well.</p>
Context_of_Work	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	<p>Some of it's assigned full-time. So some people are assigned on apparatus permanently, and then some people are rotated. Typically, the people that have been here longer or have been promoted into a position, so the person in charge, the officer of the fire engine is in that spot all the time. The driver or engineer of the fire engine is in that spot. And then most of the fire fighters will rotate around between either riding on a fire engine or riding on the aid car. That's how we do it at our station at least. Different models. Sometimes other departments rotate</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								all the positions
Context_of_Work	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Yeah, so we work what's called a Modified [City], and the best way to describe it is it's an-- I don't know if it's the best way [laughter] but this is a way to describe it. It's a nine-day cycle that repeats every nine days and we work 24-hour shifts on day one, three, and five of that nine-day shift. So we have 24 hours on, 24 hours off, 24 on, 24 off, 24 on, and then a stretch of four days that are off. So it's nine days and then it repeats. So we work day one, three, and five of nine.
Context_of_Work	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	...So we do a little of everything. When our specific apparatus are out going around the area that we serve, we're typically spending the majority of our time either inspecting buildings: so looking for fire-code violations, trying to make sure building owners are keeping their building as safe as possible. Concurrent with that, we're doing a lot of area familiarization, pre-fire planning, trying to become familiar with the buildings that we may, potentially, be responding to while they're on fire. So some of that's just looking around and trying to memorize it, and some of it is recording information so that we have it accessible for anybody who may be responding. And then we do do some outreach to the community, community events, but our department's large enough that we have a division of our department that is kind of responsible for that public education outreach. So every once in a while, we will be requested from that division to go out and talk with some school kids or do an event, that sort of thing.
Context_of_Work	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Yeah, they do. So the rules say every station is supposed to do eight buildings a year, but it ends up typically being more than that. Usually, you might do eight full start-to-finish either a new construction project that needs a lot. Typically, what you do is as you're in the buildings for inspections or sometimes even on responses, if you notice something that's missing or that's a good piece of information, we will add that to the pre-fire.
Context_of_Work	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	...The fact that we work those 24-hour shifts and then you're on for a period of time. And then if you have some vacation or some Kelly Days,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								which are those work reduction days that kind of spread out, keep our hours to an acceptable amount, you could be on for two weeks at a time. And whether there's an expectation for you to read it off duty or not. And the other thing, I think the cause of some of that challenge that most of the administrative staff is on a 9:00 to 5:00, Monday through Friday work cycle, and we are on those 24-hour. So depending on if you had your work schedule on a weekend or versus if you were in the middle. So sometimes it's easier for people to-- I send this out and I know people are going to read it right away, or sometimes I send it out and this person might not see it for 96 hours, or this person might not see it for two weeks. So there's just some inherent challenge in that.
Context_of_Work	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	Right. Yeah, but ideally, anything that's better than I go on nine calls in a period of throughout the day to different healthcare agencies that have people that need to be transported. I get a jumbled pile of paper from this person. I get a nurse who's, say, very acute and aware of what's going on with this person and can tell me everything. I get a person who has no idea, really, what the medical condition is that this person has. They don't really know, they just happen to have a shift change. I get a person that tells me something about their health that's completely bogus.
Context_of_Work	FF	S	Field Responder	36-45	6-10	Male	FF-S-032	...I think we would actually end up-- our job to try to help people and save people, really ultimately is most effective probably done in the preventative means. And we've seen that in the course of our career as fire safety sort of things have been changing, as building materials have been changing. But we can do more of it with data, so I think ultimately, for me, it's that access to better data and utilizing that to make better decisions and keep everybody safer and all that kind of stuff
Context_of_Work	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	So my basic responsibilities include planning and coordinating required training for all of the firefighters that work for the city. So that includes monthly training requirements, quarterly training requirements, annual training requirements. And so I kind of help to facilitate a schedule and plan and organize that training. In addition to that, I also help to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								coordinate and run recruit academy. So when we hire new firefighters, we put them through a three-month recruit academy. And so I help run those classes. Teach and instruct the material. And teach them the skills needed to become firefighters.
Context_of_Work	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	I'm also in charge of our department driving instructors. So they drive the fire engines, fire trucks. And then, they also help to teach and train all of the other firefighters. So I'm kind of in a supervisory role of those department driving instructors. And I also coordinate the promotional examination process for our promoted drivers. So you can become a firefighter but then you have to promote to an engineer. And so I facilitate the promotional testing process and practical exam process for that. Other than that, I'm on various committees throughout the region planning three-year training plans, putting together training manuals. And I'm on an officer development academy committee which oversees continuing education classes for fire officers to improve their skills.
Context_of_Work	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Very much. Yes. I'm at 40-hour office admin position right now. So I'm not responding on calls unless it's a big emergency incident. Then I can go and I'll be in a support staff kind of a position.
Context_of_Work	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	So the daily routine for a line officer - so that's when you're working shift work - is there are 24-hour shifts here in [City]. and the mornings always start off with roll call. So we make sure that everybody's there, everybody has what they need, they're in their proper uniform. We go right into checking our apparatus to make sure they're ready to respond, the inventories are all up to date and current. And so we go through the daily rig checks. Following that there's typically a different assignment for every day of the week. So on Mondays, we'll check portable equipment. On Tuesdays, we'll check ladders. On Wednesdays, you know. So we have different things. So depending what day it is, then we'll go into that. And then, we try to take care of one training drill every shift. And so that could be either in the morning or the afternoon as time

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								allows. We also have medical EMT classes assigned to us. We have fire training drills assigned to us that we have to get done. So as time allows we do those trainings, and then we also respond on calls. Whenever a call comes in, everything gets dropped. We run out. We go on the call. And then, we try to pick up where we left off if the time allows.
Context_of_Work	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	We also do PR events. We go to preschools, and we show off the fire engine, and we do neighborhood block parties. We show up with the fire engine and we answer questions. And we have tourists come to the station. We answer questions there. We also go out and we do fire inspections. And so then we have to go out to individual businesses, and we have to make sure that they're compliant with fire code, and we have to write violations if they're not in compliance, and then follow-up to make sure that they fix the things that they need to take care of. We also do pre-fire planning. So for example, this apartments across the street. We would go through and we'll make a computer generated footprint of the complex, letting us know where each building is, if there's anything special we need to know about it, where the fire hydrants are in relation to the buildings. So we check all of that too as well, so.
Context_of_Work	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Yes. Yes. Calls take priority. So when a call comes in, everything gets dropped and we go running the call. And everything else fills in the rest of our free time if we have any [laughter].
Context_of_Work	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	And that might be changing a little bit but I wouldn't say it's shifting much. Maybe 70%. But it's usually in the 75% range EMS, and then the other 25% of our calls falls into non-EMS things like car accidents, or fires, or just fire false alarms, or service calls, and things of that nature. [talking about medical emergencies]
Context_of_Work	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	.... So then the officer could be looking at the computer, the firefighter could be looking at the iPad, while the engineer's driving down the road. And you have two people saying, "I think this is the best hydrant. We should take on this. Or I think for traffic, the time of day, we should take this route." So they have two people kind of keeping track of that. But it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								not always one, but it's most often going to be the officer who has the access to them.
Context_of_Work	FF	S	Other Public Safety Personnel	36-45	11-20	Male	FF-S-033	Yes. Yes. So that comes back to what we do on a daily basis. That comes back to our pre-fire planning. So when we go out and we make our footprint of even a high-rise, we'll plan out, "Okay, here's where the hydrant is for the high-rise. Here are the connections to the building. So we have to plug our hoses into those connections." And that will support their sprinkler system. And that will support the sand pipes, that we can connect our hoses to the pipes inside the building. So we need to know where that engine's going to have to position.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	So a firefighter. But as a lieutenant, I'm basically the first level of management. So on the [inaudible] Engine [Name], which means I'm in charge for that for my shift. So I've got a driver and two [inaudible] people.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	... I mean, obviously, if there's a fire, you fight fire. And that's what most people associate it with. But probably 80-some percent of our job is all EMS. So we do first aid work, that's the majority of what our run volume is, is people call in and they hurt themselves, drug overdoses, falls, seizures, and all kinds of medical problems. So that's what the majority of our run volume is, per se. If somebody doesn't know what to do, then they call the fire department. So we go on [orders?]. And on [orders?], we wind up troubleshooting a lot of different things. Aside from the alarms that we go on in our station, and we have to maintain all of our equipment, our stations. So we do housekeeping duties every day, from scrubbing toilets to cooking our own meals to cleaning the apparatus and making sure the equipment's all ready to go.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	We come on shift at 7:30. So aside from very early, we make sure that as the officers, what the staffing is for the day, who's going to ride in what position. We have multiple units here in the station between engine trucks, two aid cars, and a staffing coordinator, as well as we're also the HAZMAT response team for the city. So first thing in the morning, we figure out where everybody's riding, what position. Especially on the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								HAZMAT team, whether they'll be entry or [decon?], or whatever duties they'll have. We go through a kind of roster's layout, what the day will probably look like, whether we have training today, whether we're going to do some inspecting in the morning, in the afternoons, as far as training if we have that, or go over review material, any projects that we're going to do. Then we have lunch noon-ish, we all [clutch?] for dinner at 6:00. And then after that, it's kind of a little bit of a hit and miss usually after dinner. Again, do our own housework cleaning and all that stuff when everything is done. For the most part, me personally, I kind of let the guys and gals do whatever they're going to do. And then I usually try and catch up on paperwork, or work on projects or something like that through the evening. Rarely do we do training after dinner.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	... Especially, and I think maybe more, a medical level. Because that's the majority of what we do, 80% roughly. So we don't often-- we aren't usually going into the high-rises with your average white-collar, blue-collar worker, just because-- and sometimes for a diabetic, or they didn't eat right or things like that, seizures. You kind of have your random stuff, but I would say the majority of it all deal with the homeless and the shelters. Because you have people that either, number one, don't do a very good job of taking care of themselves, which perpetuates their medical problems and/or just aren't capable of taking care of themselves. So with that, that's what most of the time and energy goes. And then two, from the fire side, we do a lot of false alarms. And a handful of them can be from malfunctioning systems in high-rises, but most of them are still maintained by their engineers. Most of the false fire alarms we go on are the low-income housing, where people are drinking and then cooking and fall asleep and burn their food.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	... So within that, we all have our own areas that we inspect. So with that, it's fire safety-oriented. So we'll go out into the occupancies, the buildings, businesses, restaurants, stuff like that, and we basically do fire safety checks. So we'll make sure that the fire protection systems are all up and running, service dates are accurate. And then look for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								general fire hazards, maybe electrical problems and stuff like that. So that's a fair chunk of our outside, aside from the actual incidents that we go on. There are times that we do community events based on the area. Being downtown, we don't have as many because we're not really in much of a residential area. A lot more of those where they started-- they do their-- I can't figure what it's called, but they'll shut off streets and do that sort of thing. So a little bit probably more in your residential areas, we tend to look at more of that public interaction and just kind of showing up as the local fire department.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	...We get a lot of tours. It's not so much that we, where we are, go out. But because we're such a big station, a lot of people come in. So we're constantly doing tours and/or things like this, where people come in from different businesses and/or being HAZMAT, we have a lot of technology that we use for monitoring. So sometimes, we have a lot of people that want us to beta test their equipment and stuff like that. So there's that kind of interaction on a-- and then sometimes, it's getting out, going to shop because we buy our own food, cook our own meals, as well as just kind of taking care of the guys and going to grab a cup of coffee at the local Starbucks or something.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Again, I'd fill out forms. It's not like I'm a cutting-edge, trying to develop CAD programs or anything like that. So it's not like I feel we're behind the times, per se. I'd say we're kind of probably current. I wouldn't say we're cutting-edge. I don't feel like.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Well, within dispatch, when you take a call and I'm interrogating the caller. The first thing I ask is, "This is Fire Medic One, what's the address you're calling from?" We'll get that out of the way, so I know where it's going. I confirm that. So that I make sure that my resources are going to the right spot. And then it's like, "What's the problem today?" And if it's fire-related, then I go down a certain kind of path of asking questions versus EMS. Specific to our EMS, we have a protocol system. So I have a screen that I pull up that look kind of like an Excel. It's a database that has all these tabs.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-034	Because that's where you're going to, I think, save lives, as far as our lives, right? And yes, obviously the public too. But the majority of the time, and it's a mindset in the fire service, everyone who's a firefighter, I mean, it's like we're problem solvers. It's like there's the fire, go. We put it out. But there's times we shouldn't be putting it out, because there's no lives that-- it's a risk-benefit analysis. And there's times that we go and it's a vacant building. There's no life safety in there.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] Mine's a little bit different. I guess as far as mapping goes, I have a general broad range of things that's hard to really nail down in a full aspect. But there's inspections, code enforcement. A lot of learning, researching codes and variations of them,
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Not specified	FF-S-035	[S3] Incendiary reports, yeah, quality assurance of what people put down on electronic documents, things of that nature. And then I still have the ability to scoot back into the line and do my old general abilities, which is what these guys currently do. So I'm kind of playing a new role, but the majority of that is what I first stated, and that is more back up.
Context_of_Work	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] It means that I'm in charge of all the finances. I'm in charge of all the personnel. We have about 300 employees. And we have legal consultants. We have HR. So we're more like a city than a member of the fire department within a city that just deals with fire. We have all the ancillary services that an organization needs. And so, I report to a fire commission of elected officials. And so really, it's almost like a city manager of a city.
Context_of_Work	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S3] I report to the fire chief. In general, I oversee the operations on the street; the men and women that are in the brigade. I do that by supervising 12 battalion chiefs, who again oversee all the rest of the 300 employees the chief was talking about. So yeah, my overall goal is to oversee the basic fire EMS operation on the street.
Context_of_Work	FF	S	Supervising Field Responder	Not specified	Not specified	Male	FF-S-036	[S2] The first thing we'll hear is we keep track of patient contact. So we have on the scene, than when you're actually with the patient. They'll voice that because they don't carry their MDC inside. So they have to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								voice that one, that's only thing you hear. They'll do transport, transport complete, returning and back in quarters all push buttons. They don't talk. So on a structure fire, where we send a lot of units, only the first in battalion chief and the first in engine talk. Everybody else just push buttons until they get on the scene. Then, of course, they'll talk, but we've really gone away from voice.
Context_of_Work	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	No [laughter], quite honestly. I mean, I have-- I get to work at 7:00, and I leave at 4:00. But it's one of those-- it's a job where sometimes I have things on my schedule, but often times it's, "Okay, well, what's my priority for today based on what's happening around me? So it is an emergency services job. So I may come in and have one plan for the day, and we get a fire or some kind of incident, and I get pulled a different direction than what maybe my plan was. So I wouldn't say that it's the same every day [laughter].
Context_of_Work	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	Well, in my role, it's more of the office business. That kind of stuff, with the occasional emergency thrown in. So I do a lot of stuff on my computer. I use a lot of different computer programs to do my job. So--
Context_of_Work	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	Yep. And then firefighters are also entering data when they get back, when they do their reports.
Context_of_Work	FF	S	Supervising Field Responder	36-45	21-30	Female	FF-S-037	maps that the crews use to do their job. So he can kind of-- his maps will tell kind of like, "Okay. Well, here's the nearest hydrant location, and here are some of the things that you might need to know about this building, or--" so he's doing a lot of behind-the-scenes work, so that when they roll up on a scene they'll have more information about what exactly is there. That's relatively newer. So he's just updating the maps right now and doing some of that work, but it is very helpful the work that he's doing. And we will use him in a major incident as well to provide maps, modeling, or whatever it is that we may need him to do. He's a professional GIS guy, so it's kind of cool to have.
Context_of_Work	FF	S	Supervising	46-55	31-40	Male	FF-S-038	I would describe my work as overseeing all the personnel that work in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					the field, so those that are on the fire engines, ladders, [medic-aides?].
Context_of_Work	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	The work that they do is-- I mean, we're all hazards. So, anywhere from fire protection, life safety, medical aid-type responses.
Context_of_Work	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	Descriptors of the work in the field? It's a good question. It's a good way to put it I guess. Well, public servants. I mean, we are the public employees who are here to work for the citizens of the communities we serve. So we're going to react to any request that gets put upon us and we're going to deal with it in the way we see fit with resources, deployment of resource, what we send, those type of things. I'm not thinking of any great adjectives that come to mind at the moment.
Context_of_Work	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	So I'm a Monday through Friday employee. So, that's my schedule. I have an office here at this station. So typically, when I leave the house, if I don't have a meeting that I need to attend in the morning, I will typically get out to one of the outlying stations. We have six stations. So I typically like to hit a station at shift change which our shift change is 8:00 o'clock. So I'll try to get to the station before 8:00, converse with the crew going off duty, and then converse with the crew going on duty. And not so much that I have an agenda, but I like to get out and just sit around and have coffee and interact with the crews, see what's going on, see if there's any issues with the station, with the vehicles, if anybody just wants to talk about anything. So more often than not, it's just sitting around talking about calls and those type of things. That's kind of the start of my day.
Context_of_Work	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	Our battalion chief who directly reports to me, we have three, one per shift - we work three battalions and three shifts here - they work at station [Name] which is a separate facility than this. And I will also occasionally stop in their shift change as well to catch the off-going battalion chief as well as the oncoming battalion chief to see what's going on with them, see if they have any needs, any issues that have cropped up, anything we need to deal with. And then eventually, I'll make

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it back to my office and then that's where I get into my email, see what I got going on, start working through that, and then the day just kind of takes me from there as far as if I have any scheduled meetings or anything of that nature. In the assistant chief-- well, in the administrative group up here, the assistant chief, the deputy chief, and the fire chief we work on a rotation for on-call. So every fifth week one of us is on call 24/7 for the big events that may occur in our district. So what that means is we carry our phone, we carry a pager that if we get something big, we'll get called and notified and then we respond to assist the incident commander at the scene.
Context_of_Work	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	And I will say the battalion chiefs seem to use that more often than the guys going out on the call, because the battalion chiefs are the one that have some time in their rigs. Okay, they're putting their plan together, they're giving orders, and they will get on there and, "Okay, I've got this building on fire. Yeah, I'm going to send a crew around back to give me an assessment on what it looks like, a 360, but let me see if I can see it from the air to give me, the battalion chief, a visual on it." And that works very well for those certain type of calls where they want to have that viewpoint.
Context_of_Work	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	...The battalion chief, he sits in his command vehicle and he's doing his radio and he's looking at the MDC, getting information. But for the field units, that's all that piece is, is getting them to the call. Once they open that door and get out, they're on the radio and that's all behind. But it prepares them. Well, helps get them there and prepare them for what they're coming into.
Context_of_Work	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	... Right now, I will say we have a system in place. It's called IPCR. It's for our medical reports. It's on their iPads or they can come back on a desktop. But in the field they'll take their iPad in and usually their captain or the company officer on the call, he'll be working the iPad as they're doing the evaluation on the patients. And right now it seems to be working okay. We do also have, for every call we're dispatched on, we have an [inference?] piece that we have to do through another computer

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								system. So the crews have to come back and sit in front of a computer at a desk, log in, find your call, and do the information. And that's the reportable information that we are required to report to the state. So there's those two. So for every EMS call we have to do two reports, one in the field and then one when you get back.
Context_of_Work	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	...And with that new technology, we've kind of changed the way we do business on fires or bigger incidents. We keep our battalion chief in the vehicle, our incident commander stays in his vehicle back. Prior, he would get out without with his portable and run around and point fingers. Now they command from their vehicle. They have headsets they put on that's attached to the radio. So they don't miss-- we used to miss some radio traffic that was important because of the old system. And even the new system, I mean, you can miss radio traffic if you're not paying attention or if you're being distracted as an incidence commander. So now we've kind of focused on that that you have to pay attention to the radio because we have a great system.
Context_of_Work	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	They are mostly getting information from the crews. So they're managing the fire scene or whatever the incident scene is. So they're getting reports back. They're seeing visual. They've got a visual on what's going on, but they're also getting information back from the crews of what they can't see. They've got crews inside. Whatever they may need they're going to communicate that to the battalion chief via radio, "Hey, this is Engine 22. I need another crew to help pull ceilings." And so the commander will get that through the radio, figure out who he's got available, and assign them. And as far as the MDC, that lists all the units responding. So the BC, battalion chief, incidence commander, he knows who's coming to his call. And as he assigns, he has a board and he's doing his thing. So it's kind of a tool he'll use as a reference to what he's got going on. And as dispatch gives him information over the radio also, say they need to give him some additional information on whatever. They may have gotten a second call. They type all that information in at dispatch, and that'll populate in his MDC. So he'll see

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that as well.
Context_of_Work	FF	S	Supervising Field Responder	46-55	31-40	Male	FF-S-038	... And I had mentioned the way we work, me being on call every fifth week. Those big events, we get notified, we respond, we're the aid. We're usually are in aid to the commander. So we're going to do whatever that person wants us to do. If he wants us to sit in the passenger seat to help him manage personnel with passports and all that, we'll do that. If he wants us to go run a division on the charlie side we'll go do that.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Serve. Protect. I mean, somebody's worst day. I mean, we had a lady the other day, came up to the firehouse, asked us if we had trucks to help move some mattresses. Unfortunately, we don't do that. We deal with water, Mother Nature. More EMS, probably, than we do fire. And then it's probably, I don't know, 70% EMS, maybe 10% miscellaneous, and then the other 20% fire-related, fire alarms, gas leaks.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. So all your typical firefighting things, from first aids to car accidents. As the engineer, I operate the vehicle. So drive the truck, help keep any of the tools running, do all the maintenance inspections. And then during a call, so like on a first aid, I help with just moving the equipment, helping move the patient. During a fire, I help get the water to the firemen and operate the truck, make sure that the truck doesn't stop running. And then fix or repair any equipment or shuttle equipment to the scene. And that's it.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So every day, we have a daily inspection and inventory. And then, depending on the day of the week or the-- depending on the station captain, you either have an inventory of a particular cabinet or section of the truck. And then some of the smaller apparatus, they'll just do an inventory once a week. So we work on a really large apparatus. So we break it up into six days. And some of the smaller trucks we'll just break up and do on one day.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	It's paper. It's a checkboard. We don't even check in addition to that. We'll run it, make sure it's operational. Like [Name] said, we go through different compartments, clean it, run it.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. Right now, everything's done on paper. We've looked at a couple different ideas of going to a digital system. But without building it ourselves, nothing really exists that does what we need because the physical check are just a database of saying yes, it's there, or it's not there. It's pretty simple to build. And we've actually kind of, here, worked on a real simple process of doing that. But what really needs to be done is to have a log of, it's there, but then a log of how it's working. So is it working? Then, if you did a repair to actually notate or maintain record of the repair. There really isn't a system that's there. And then, the other thing would be is if it's not broken, but there's still something that's... whether it's not quite right or not operating right...
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...in the airline industry, they have something that they call a squawk sheet... So where you would actually put just there's-- maybe it's squeaking, or it looks like a bearing's going out, or a bushing or something. To be able to notate it, but then have that annotation carry through from today to next week to next month. And then that way, at least you knew that there was an area of concern that you could keep an eye on. There isn't anything that-- when you make that notation in the database, once you start it over on the next day, it kicks it out because it doesn't retain that data set. So it's one of the things that we've looked at, but we haven't found anything that exists. And we're focused on what we do, and we don't have the time to build something that's that complex.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So we work 48-hour shifts... So two on, four off. It starts off, in the morning, we'll do a pass-off with the off-coming crew. So this morning, we came off with A shift. And they'll tell us, basically, pertinent information in terms of calls. They'll tell us how many calls they ran, how many our ambulance ran, any training they did, any issues with the truck or equipment, or issues with the station. So that's that. And then at 7:15 in the morning, we'll do what we call pass-off with the rest of the stations.
Context_of_Work	FF	S	Not	Not	Not	Male	FF-S-022	So we have a technology, it's called LifeSize... And what that allows us to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			specified	specified	specified			do is, you have a TV screen, and every station, basically, is on camera. And we'll go through each of the stations. They can tell us what they're doing for the day, any trainings. If they're going to be in service, out of service. And then we also use that for critiques. Where before, we'd meet at one central location, and we'd talk about an incident, whether it's fire, a large incident, EMS, mass casualty. So now what that has allowed us to do is stay in our primary area. So if we get a call, our response time is a lot less...
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...we get our gear on first thing in the morning. We start at 7 AM. So we get our gear on, do our pass off, do our LifeSize changeover. And then we'll check our equipment in terms of our air pack. Put our gear on the truck, put our bunker gear on the truck. And then we start, like [Name] said. We'll do a detailed truck check. That's how it starts out.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	throughout the day we'll a training. We run, like [Name] said, a heavy rescue and a hazmat. So we do quarterly trainings. So depending on the time and where that training is at that time, we'll go out of service. And then we train for that day. And that's just not-- the hazmat and heavy rescue are SET and TRT. But we'll do in-house training, as well. So it doesn't necessarily mean we do multi-company. But every department requires, at least our department requires, that we train in the 24-hour period some type of training. And then we do physical fitness training. That's mandatory. Two hours a day...
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...we do the station clean up. So not only the truck has a certain area, but we have a detailed cleanup. So Saturday, maybe outside grounds. I don't know what today is. Maybe a gym [phase?].
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. So the daily schedule, other than, like [Name] explained, the first hour, is pretty inflexible because we always do our pass-off, and we do our video conference. And then you try to get to your truck check. Barring calls, we try to stick to that very regimentally. But other than that, everything else just happens as it happens. We try to do all of it-- we try to do everything we can as early into the first day as you can because that way you can make sure that the equipment's there and everything's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								working correctly. But if a call happens, then you just start getting to it in the afternoon, or whatever you do, so.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...So you can get these hot and cold zones. You can get the hours that are more busier than others. And then you can even-- in [State], we can break it out into season because we can see that-- during colder months, we get more CO calls. We get more things of that nature. During the summer is when we get the outside broken arms, broken legs... all that adventure rafting and stuff. So it's interesting when you really start to look at the data. The things that we knew in the past just by experience and rumor, now we can actually see a true example of what's going on.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	It's very clunky. So we do the pre-plan drawing in PowerPoint. We then do the data entry into the fire marshal software. Then the fire marshal software spits out a PDF of the information that we have. We take the pre-plan document and cut and paste the PDF into it from the fire marshal software. We then export that into a PDF. And then the PDF of the combined two documents get sent to TriLink, and that gets put into the CAD as a viewable PDF. But not queryable data, because the queryable data lives inside of the fire marshall software. So you can't just say, "Show me where the Knox-Box is."
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...I mean, we send our gear out for a deep cleaning. Our station, we clean after every fire. And that's come around a long ways. It used to be you have your gear, you do your fire, you go back and wear your same gear. You don't wash it. Now we changed it so we have a backup set of gear. So it's changing, it's evolving, but there's not just one program that communicates with everything. It'd be tough. I mean, I think it can be done, but there's a lot of aspects.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	We explored a TIC that was integrated into a helmet. It was about \$1 million a piece when we were looking at, and it proved to be a very cumbersome piece of technology. It was 10 years ago, so the screen was really thick. The camera was really heavy. It added another 10 pounds to somebody's head... it was an extra 10 pounds on your head.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								And if you'd look like an orange sitting on top of a toothpick, that's basically what it was. So it just proved that it just wasn't a good technology...
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	And so when they first did the system, we had a lot of interference because of cellular, because we're moving closer to cellular bandwidth. We had a lot of bleed-over from a cell tower. And they brought out a company that did monitoring around the entire city for about a year and try to find all the cellular bleed-over. And it was actually a digital system that was between two points. And I don't know the exact information. [Name] may be able to tell you. But it basically sounded like it was sending a Morse code between two points. And depending on the weather and other things like that that affect radio signals, we would get the beeping of the Morse code, the dee-dee-dee-dee-dee-dee through our system. Or it would either just be this low-tone static through our system that was just bleeding over because the bandwidth has become so used. Or not the bandwidth, but the radio waves had become so used that it's just saturated. But it's gotten really cool, because when we were in the other radios, we couldn't talk to anybody. Now we have the ability that every one of our radios has FERN on it. Everyone of our radios has-- that's the Fire Radio Network.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Exposure Tracker. We use Exposure Tracker because the CAD and-- the CAD sends us to calls, but the scheduling is what schedules you. And so there's no real direct tie-in between your name and the call that you ran. And so we use a web-based program, which has an app called Exposure Tracker. And it's just on your own. It's your own responsibility. And we track, so we're supposed to go in there and put calls that we run on. So something that you may be exposed to, a hazardous material, you may be exposed to a fire, something like that. So you can actually track your exposures, personally, and then have that information if you develop cancer, or have a problem, or have hearing loss. So there's vision loss, hearing loss, cancer, all these things that you would then want to show your doctor, or human resources, or whoever that these are all the things

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that you've been exposed to over your career.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...Having the Internet so available for hazmat calls and stuff like that is actually really great. Because on our hazmat truck, we do the research side of things. That's what our primary goal is on hazmat [forward?]. And we had a whole bank of books, and that's where we did all of our research. So from the ERG, the emergency response guide that comes from DOT, to the CHRIS manual, which comes from the navy, I think... It comes from one of the armed services. And then we had just chemical dictionaries, things like that. Now you can just type it in and everything gets queried for you...
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: frequency of using different radio channels] It'd have to be a mass casualty incident, or when we do what we call mutual aid. We go into somebody else's area; we can go onto their talk group.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	So depending on the type of call, if it's a long extended call, then we'll view off of the primary channel. Or, depending on how busy our dispatch center is, every fire goes to channel three automatically. Very rarely, we get local.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: radio channels during mutual aid] Yeah. When you respond, they'll tell you to check in on red northwest or whatever.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. So if we went-- and the only thing that they would monitor is that somebody else in that northwest quadrant, or southeast quadrant, or whatever, wasn't already doing something. So if they are doing something, then you may switch to a radio channel that's out of that quadrant, but just that dispatch is monitoring and they know that isn't busy. Or we can go to a non-repeated channel. Something like that. So they'll find a work-around to make it happen if we need to make it happen. But it all comes through dispatch.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Well, obviously, we eat there; we sleep there; we cook; we work out. I mean, you never know what you come across. You can have one call that'll mess up a whole crew. You just never know. You may run 20 calls. You may run 1 call. You may run 0 calls. It just depends. Like you said,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there's not really a time where you're going to say, "Yep. Three o'clock, we're going to be running down on [tong?]." I mean, we do have what we call frequent-fliers, per se, where we know we help certain individuals out, but it's never a set routine. It's different every day.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	I mean, even our crews are different. So if I'm off on vacation, now somebody else is going to fill in for me. We always run four-man engine, and then we get two on our ambulance. So we know every day that that's going to happen. Unless the fact that I get sick and I got to go home, then they'll have a short duration where nobody's in there. But usually that person will hang out. So it's not set, besides the truck checks, and the clean ups, and the workout. As far as, yes, you try to work out between 9 and 11 o'clock. But if that call drops or [inaudible] something like that, everything changes. You can just try to recharge your schedule and move on with your day. In fact, it's busy work until five o'clock. After five o'clock, then we can turn on the TV, unless it's a newsworthy event. But for the most part, it's busy work.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We used to do inspections, and now we do what we call pre-plan. So any new construction, we walk through the building. We look for hazards. In the event that that building starts on fire, we'd say, "All right. In that corner, that's where an ammonia is. And that's a roof access over here. That's our FBC." ... "These are exits. This is how we're going to lay hoses, and this is where we're going to throw our ladders." So it helps us out.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...It's a small [crosstalk]. We just have to do it. We have torches. We cut stuff, and then we have people that walk in and we've got a ring on their finger and it's swelled up, so now we got to cut that off... Now, you can't cut every ring. I mean, some rings cut easier than others, but. So it's constantly changing.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Yeah. There's always some level of education. We have to keep up with everything else. Keep up with the new cars, keep up with the new construction, keep up with new industry moving in, keep up with everything.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Well, we need to understand the danger of what they're doing. And so if there's a leak, and-- but the firehouse is neat. It's fun. It's never the same. You're doing something else every day. Some new company's moving in and you're being exposed to a new idea, a new concept, a new hazard. And now we're learning about the trains because commuter rail's moving into [City]. So we have to learn about how to de-energize it, how to lift it, how to work around something as heavy as a commuter rail train.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	I'd say, I was just on a call a couple of days ago. It was an officer-involved shooting. And we basically have a set system of, basically, command structure, right? And there was no command structure in that. So nobody's knowing what is going on because you have multiple jurisdictions. You got [City], where it happened at. You have [County] sheriff that was serving a warrant. So he was serving a warrant and he got shot. So obviously, he's calling us, calling [County]. So everybody's coming in. So is there really-- they should have a command post and the command post will delegate, "Okay, you're going to be my safety officer." And it just goes down chain of command. Well, it was just free for all.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	And that was one thing I was going to talk about with the radio that's gotten better is, in the past, anybody could get on the radio. We're all safety officers. So if I need to get on the radio and I say, "Hey, this wall's coming down. It's going to collapse," I get on the radio and I let that be know. Well, now we have basically an officer where, pretty much, you say, "Hey, doc. That wall's going to come down." But he doesn't do it or he doesn't see it, you're welcome to get on the radio. But we just don't have-- it's not free for all. But our command staff is where it needs to be because once that domino goes downhill, it goes downhill fast. So you just don't show up and do whatever you want...
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...We all have certain tasks that we do, certain jobs, and they'll change depending on where you are and who else is around you and where they're at. For the most part, we're a truck company, but if we have a fire in our backyard, we may switch over to an engine company. An engine

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								company may be a truck company. You just never know. So that constantly changes. But that's the biggest part, is that command structure.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...I mean, they're calling for one of us - I was on the ambulance - calling for a paramedic. Well, we don't ever just go as one. It's a rule: two in, two out. So we ended up fixing that, but our command staff was not happy, either. They wanted to set up a designated command staff in that post. And then we work and they say, "Okay. We need one medic. We need two medics. We need five medics. We need six beds." And then our command staff calls our dispatch center and they say, "All right. We got six reds, five blacks." And then they start delegating to where you need to be transported to, and who's available and who's not. So it just all happens. And if you don't do that, then nobody knows their right foot from their right hand from the left hand, so. It can be a mess real quick.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Well, I think the thing is, is firemen and policemen and all people that work in these industries, they're really good at just adapting and overcoming. And I think that's what we've always done for years and years. So there's even from the command structure, there's even from communication things. Like I told you about the call that we had that the city showed up with an iPad app that showed all the water. At the end of the day, we always get everything done. So we always cut the car. We get the water shut off. We get the officer that's been shot to the hospital. Things can always be done faster and better...
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...we have one thermal imaging camera. We send one in with every group of firemen that go in. So they have that technology there. But the people in the front that are on the nozzles that are doing the job-- to be able to talk to them and to tell them, "Hey, I see this," or, "I see that," because you're focused on your one job. I think that would bring more value than everybody having \$50,000 worth of stuff attached to them... When maybe not everybody needs that. Everybody needs to be in contact and to be able to communicate everything that's happening. Because I think now, everybody wants to have a TIC because they can't

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								see it. But if you were just being told in a regular voice where, "I didn't have to push a button. I didn't have to do this. I didn't have to do that," you wouldn't feel the need to have to have everybody have a TIC to be able to see...
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	We have stand-alone ERs everywhere. And so the idea is, they want to funnel in-- they want to funnel in somebody to their system. So if they build a stand-alone ER in suburban areas, they can take care of a certain amount of things. But then, if it's really bad, it already puts them into the system and they kick them over to the hospital. And so now we've kind of become the transport between these stand-alone ER's and the big ER. Or if somebody goes to the stand-alone ER, but they're really, really, really sick, they won't even take them. We just go pick them up and then take them over to the hospital.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	I think it's evolving. It's going to be to where you'll have ambulance show up on-scene and they'll help you transfer to the hospital. Hospitals are inundated, big time. So you cut your finger and you need a couple stitches. We'll send a unit. We'll stitch you up. We'll give you some [of your?] medications. And then after that, you get with your pharmacy. I think that's kind of the wave of the future, I really think, now.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[City], they've hired a nurse to ride with a paramedic in a pick-up truck with more equipment than you would have in an ambulance. So they could slide the bed out, and he actually had a small suture set. They had small things that they could do in house. And so they could actually do it there and then not transport him.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: stand-alone ERs] You save that money. You save that ambulance transport... Puts us back in service quicker for the next patient. There's still a lot of kinks that need to be worked out. A lot of it's insurance and what they're paying for, and what they're not paying for. So I don't know how it's going in [City], but we've had it here through a private agency. It's called a CCT unit... Critical Care Transport. So that unit would show up and then, like I said, based on what it is, they [would either?] take care of you right there and send you a bill or transport you. So I really think that's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the wave of the future for multiple reasons, and I think it's a great idea. You're going to have those people where you absolutely have to transport them... But from the hospital's perspective, they don't want you to do that. They would rather see you in their building...
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: cause of communication issues] I think lack of training, maybe. Adrenaline... I mean, I can honestly tell you it doesn't happen here. We may get off of track a little bit, in terms of an individual or two, but for the most part, we get toned. Our chief gets on scene, he takes command over instantly, based on if it's a fire. Not every time. It's his discretionary, based on what he's hearing en route. He may say, "Yeah. My officer's got it under control. I'll let him have it." But it's still in-- you still have somebody in command, right? He basically is there to support you, but not like I just come in on [Name] seat and take it over, unless he tells me or I ask him to. So I think that part, here, is really dialed in...
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: cause of communication issues] ...But in terms of when we get with multi-agencies, that's when it's kind of a measuring contest. We should all work together, but it doesn't always work that way. Like I said, we are on a north area team that we do a trench rescue on. And we've had a couple calls. [Yeah?], it gone smoothly. It got the job done, and outcome probably came out the same. But it's just too many people. Everybody wants to be a chief. Too many chiefs, not enough Indians [laughter]. So [inaudible] [that is?], but how do you fix that? We train on it. But I just think, again, you have your certain guys that you work with, and all of a sudden you're off on vacation, and I'm not working with you. So were not on the same page. And I'm working with some guy from A shift, and he does it totally different than the guy I used to work with.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	But it can start from our communications, too. You call an emergency, based on our dispatcher interprets that. They got flip cards. [Name] was a dispatcher. He knows more about it than I do. But based on how you relate the information to our dispatch, that basically determines who's going and what we're going on. So they may say, "Yeah, it's a small little fire on the corner." So they send one apparatus. Well, the whole

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								building's on fire, right? ...
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	<p>...So I, personally, think we're going to have a drone, eventually, where the drone will go out before the chief. And he'll basically get on scene, and he can do a 360 of the house. Then the chief can say, "Yeah. The whole back of the house is on fire. This is our action plan, based on that." Where now, basically, they show up on scene, and he's waiting to hear what your size-up is. So you go to the back of the house, you say, "Yeah. Half of the house is burned." Well, really the whole house is burned. So your envision and his envision are two [different?] things. You may say, "It's two story at the back and it's three in the front." He's like, "How's it two? It's three in the front." Well, it's a walkout or whatever, you know what I mean? We've had that happen. So again, that's back to that communication thing, where it's your vision and my vision are two different things. I could tell you it's red, and you're like, "That's pink." You know what I mean? Kind of like that. That degree. So I think, eventually, you're going to have where that drone is going to be in front of the chief, and he has a better of a view. And then he can say, "Yeah. We don't need all these apparatuses, based on what I see."</p>
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	Well, [it's?] in hazmat. You have an unknown package. Take the drone over there. Fly it over there, and zoom in, and take a photo. Sends it back. Well, the drone's there. We can see what's going on.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	--so you don't have to put one of us in harm's way. I'd work on the meters and stuff like that, as well, and so. That's one of the things that's come out is we have the meters work over radio frequencies now... So we can actually take a monitor-- we have to physically take it. But we take a monitor, and you can actually leave it inside of a structure. You can leave it around a facility, and then we can actually monitor that remotely... So it's one of the things-- it's cool, but that's on another piece of software that doesn't talk with anything else. But it is cool. It's neat. It's neat where technology's going.
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	[RE: NG 911] So it's neat. I think it's giving a lot of-- there's a lot of ways to get information to a dispatcher to be able to get people en route to a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								call. Some of the texting and some of that, when you're getting away from the phone call, it's difficult to be able to gather the needed information to get the right truck to the right call, which is one of the biggest problems. It's being able to ask the right questions, being able to get the right answers. You're dealing with people that are... really distraught. They're really worked up. And you're trying to have them come up with a good answer, I guess, is the best way-- I don't know. You're trying to get them to think and to say the right things. You're trying not to be leading, because once you start being leading, then you start getting misinformation. So the text thing I think is neat, but it doesn't give you that rapid communication where you can get all the information. But at least it's another means to get people there...
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	SME S3: ...We had a car fire a week ago. Well, we went fast, but we didn't go lights and sirens, because it's not next to a building. It's in the middle of the street. It's a hazard for that person, and a hazard for that car, but it's not a hazard... SME S2: for the surroundings and everything else. And so there's not really a reason to put all the people in danger from point A to point B, because it was a non-issue. The car's already on fire... SME S3: It's already ruined. It's not a big deal. So you show up and you do that...
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	That would be really cool. If I could say, "Okay. Rescue 54 in these four portables are assigned to that truck," and I know that I'm toning them out to [Street] If I could make that truck and all those radios go to TAC four, and I don't have to worry about them changing their radio channels-- which is why our admin doesn't like it. Because if [Name] remembers to change his radio, but I don't remember to change my radio, and then I need to get ahold of [Name], I can't. And then I have to wait for dispatch to tell me to change my radio, or dispatch needs to become my relay...
Context_of_Work	FF	S	Not specified	Not specified	Not specified	Male	FF-S-022	...if I could push the button and say, "Change these five radios to TAC four," and then they're on TAC four, you wouldn't have to worry about it. Or if you could do that for a big group. Because when we do have a fire,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we do utilize a TAC channel because there is a lot of traffic that we don't want to interfere with daily traffic. But we will always, inevitably, have at least one or two apparatus, or one or two officers, that are checking in on the wrong channel, or that are getting a size-up or getting something on a wrong channel. And so then, as a dispatcher, you become the, "Hey, change your radio to channel--" and then jump to the other channel real fast, try to give the relay to keep everybody up to date. And then they give the same size-up because they're still trying to get out, and so it uses up a lot of radio traffic...
Context_of_Work	FF	S	Manager	46-55	21-30	Male	FF-S-023	It's been a lot of work. EMS is a lot of work. So we staff our engines with four staff or medics too. We have a battalion chief and a support officer on, and that's our daily compliment for operations...
Context_of_Work	FF	S	Manager	46-55	21-30	Male	FF-S-023	That's really what support services is all about. Our mission is to keep the fire fighting force fighting-ready. That's what we like to say.
Context_of_Work	FF	S	Manager	46-55	21-30	Male	FF-S-023	...So I have the dispatch center, and we have two full-time dispatchers on at any given time, plus a dispatch supervisor and we use computer-aided dispatch. A Q/A, it's a EMD/EFD system. So it's a question/answer system that they go through. But we also have a station alert system that they activate. Westnet is the brand. And then we have-- what else do they have to do in there as far as a call goes? A lot of recordings go on, a lot of extra radio, like backup radio systems, that kind of thing. So they're pretty technically important. Huge trunks from our phone provider, so there's a lot of telephone coming in and going out from them.
Context_of_Work	FF	S	Manager	46-55	21-30	Male	FF-S-023	Yeah, and then so I think that's everything. Oh no, maintenance. So I also have maintenance as well. Can't forget those goofballs [laughter]. So it's a little maintenance division, I've got a maintenance manager who's also-- does a lot of our building and facilities. He's got a part-time assistant. We have an assistant for that whole group that does a lot of paperwork and data entry and stuff like that. And then we have three vehicle mechanics that do all of the vehicles.
Context_of_Work	FF	S	Manager	46-55	21-30	Male	FF-S-023	[RE: interoperable data link] So that's probably the biggest key, is do they

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have the capacity to get it done, the work capacity? Because we still have to keep the trucks maintained and all of these systems--
Context_of_Work	FF	S	Manager	46-55	21-30	Male	FF-S-023	...the data we're getting, like in-first data, is not very complete. It's very open to error, it's all subjective by the officer. We actually collect a lot of data that we don't touch. For instance, when they say things on the radio that stuff should be able to come to us somehow because they're right there at the moment, and they're saying something. So they're probably saying the right thing. Then they come back and do their report, they remember it the way they remember it, human nature.
Context_of_Work	FF	S	Manager	46-55	21-30	Male	FF-S-023	[RE: in-first data] It's not a big deal. It is what it is. So we know, for instance, they say that they went emergent, then they got slowed down, they kind of sped up, and they got slowed down. It's not really an emergent run because they didn't go as fast as they could the entire time. So we'd have to calculate that a different way but they may classify it one way. We have all that data. It's there, it's somewhere. So if I can reach that it would be awesome.
Context_of_Work	FF	S	Manager	46-55	21-30	Male	FF-S-023	And quite honestly, that's a highly overused medium. We find that most of our emails are for trying to educate or inform through email, don't go out to the masses. It's just junk. In their head, it just goes away. So every morning, we have a life-size briefing for every shift change with the crews. There's a life-size briefing which is the Skype. It's just a television meeting with all the crews. So I join in on that. Listen for any things that might be for my division. So I have my maintenance guys join in on that, so they can inform people what maintenance needs are...
Context_of_Work	FF	S	Manager	46-55	21-30	Male	FF-S-023	...Up until recently, I was on a company so there was a lot of listening to PD, talking with [City]PD, talking with [City] at the time. We couldn't get [City] PD, but trying to get a hold of them...
Context_of_Work	FF	S	Manager	46-55	21-30	Male	FF-S-023	...In this particular case, one of the dispatchers on PD got bad information and thought that one of the buildings might have been occupied. We change our operations if we think there's people at risk. We'll very, very, very, very aggressive if we think people are at risk. As it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								turns out that wasn't the case, nobody was in either building. The PD didn't give that information to fire, but they aired it to a couple of their officers. One of our dispatchers happened to hear that and gave that information out. What they didn't hear was the officer said, "No, I have these occupants here."
Context_of_Work	FF	S	Manager	46-55	21-30	Male	FF-S-023	...at that time-- now this has changed, but at that time what happened is two more fire fighters went into the exposure building that was catching on fire, did a quick search but while they were upstairs it blow up on them. A lot of fire came down to the floor. Our more senior fire fighter says, "We got to go," ran outside. Well, he's fine at that point. Turns back and his partner wasn't with him. So he goes back in. Tries to call for a mayday, but his radio melted through. So he grabs his partner who was getting melted to the floor which is part of this too, so he grabs his partner bodily and it's kind of humorous because [Name], who's the hero here, he's only about yay high. He's a very small troll-looking dude, very, very strong. So he pitches out this guy that's taller than I am out the door. During that when his radio melted through, one of their two radios did an emergency broadcast and set off alarms. Well, [City]PD at the time just silenced those alarms and didn't tell anybody. So that was information that you might have helped [laughter]. Now, we fixed this, but there are other agencies that are of dealing with that I'm positive...
Context_of_Work	FF	S	Manager	46-55	21-30	Male	FF-S-023	...it was just a few weeks ago we had a fire fighter hit the emergency activation button and now I need PD at this location and ran back because his partner in the ambulance was getting beat up... Sort of. I mean there was a fight going on. Well, now those emergency terms come to our center and it went up and they didn't hear what they needed because it beeps it goes, "Beep," and then it shuts and during that beep is when he said I need PD at that location... Our police department didn't hesitate, they went ahead and sent an officer, they started an officer that way and one of our other medics was getting a call at the same time and this was 2 o'clock in the morning, just happened to be scanning, heard that and let the police know what was going on...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	S	Manager	46-55	21-30	Male	FF-S-023	...It would be great to know what the building looks like, or what the streets look like, at the time of the incident. If we had access to cameras on the apparatus, or even our dispatch center, they could say, "Hey, look. What I'm seeing from this location is no smoke or I see a fully-involved structure," changes the tone of a lot of stuff. And 2 o'clock in the morning, if you get woken up, it takes a couple of minutes to get all cylinders firing; some of us takes longer. I don't know which side I am [laughter]. You get down there, and you listen to the information. And if it sounds like a good call, there's a lot of adrenaline. There's a lot of-- your heart's pounding, and it's a big deal...
Context_of_Work	FF	S	Manager	46-55	21-30	Male	FF-S-023	...So if you could get into the truck and have information there readily available, like a picture of the building, and a residential buildings. Now, a lot of our commercial buildings we'll get pictures, but they're historical pictures or pre-[crosstalk] pictures. If I could get accurate on-scene information in front of me before I leave, can change my entire way of thinking. And if I can shift that thinking process earlier to, "Oh. Well, this is a fire, so I'm going to think of X, Y, and Z," versus, "I don't see anything, but I need to look at X, Y, and Z. But I'm going to focus on A." So I think that would help those responders a lot.
Context_of_Work	FF	S	Manager	46-55	21-30	Male	FF-S-023	Police, same thing. If they could see where they were headed, if they could see, maybe, somebody running southbound, they could start their search from the south and come north. That kind of thing. So a visual, I know we have cameras on a lot of places. If we could get access to them, that would be awesome. And get that information out pretty quick.
Context_of_Work	FF	S	Manager	46-55	21-30	Male	FF-S-023	So there's several different facets to that I think. I've been trying to look into the future, my IT administrator is futurist. So we talk a lot. There is technology that's coming, that's going to make us safer. Robots, drones, that kind of stuff actually doing some of the hazardous work. So there's that kind of technology that's coming. And it makes sense, you've got building on fire, it's just like a bomb. We sent robots to go defuse bombs, why not send a robot into a burning building? If it's not something we have to actively go search for somebody. That way if it collapses, what

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								do we lose? ... A million dollar robot, who cares? It doesn't have a family, so there you go.
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So I work underneath the Deputy Chief of Operations. So fill an executive officer role, and then I have supervision of the nine fire department battalion chiefs.
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	Work-wise, quick workout, cleaned up, come into my office, coffee, breakfast, emails, more emails, and then some more emails. Work on projects that are handed, passed down through the Deputy Chief of Operations. Then by 1:00 in the afternoon, I try to spend my afternoon out on the street, working with the battalion chiefs.
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	I'm kind of the go-between between the battalion chiefs and the deputy chief for the executive staff. So, like this morning, I had a half dozen emails that related to emergency medical services issues, CPR cards that didn't get issued, people who didn't get to go to advanced cardiac life support class, people who were having issues with medical equipment. So I would then have a conversation with the emergency medical services commander to try to work through those issues, and try to get those issues resolved. I had a staffing issue about somebody being moved on to a fire apparatus on short notice. So, trying to work with them on how do we make those recommendations, how do we do our job a little bit better, how do we make sure that we communicate amongst our co-workers in a better fashion.
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...And then going through all the fire reports from yesterday, so then I went through the record management system, our fire manager program. I review the structure fire reports. I'm responsible for the removal of duplicate calls, making sure that the battalion chiefs are getting all the reports done. And then I was on the street yesterday, so I had to write a report this morning because I went on a call yesterday, so I was responsible for getting my reports done in a timely manner. And then I came down here.
Context_of_Work	FF	S	Supervising	46-55	21-30	Male	FF-S-017	So in our comm center, so usually where you see duplicate or multiple

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					calls is like yesterday. We had a car accident, significant car accident with injuries, they thought somebody was trapped. So you had multiple call-takers taking the same calls and when they generate, they load it into the system and it would show up in our record management system as four calls but only one got resources. The dispatcher filled one out, added resources to it. The other three show up in our fire manager as unfulfilled calls. But I don't remove them, it shows up in the incomplete report list that I send out to the battalion chiefs, and then they're trying to weed through these calls that have no resources assigned to them.
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	And the reason that matters, too, is because the battalion chiefs tend to come around. The battalion chiefs, as part of their duty, they'll look through to see. Look, there's these incomplete reports. These guys did not go in and finish their report. But like [Name] said, if they're duplicates, they shouldn't. They've already filled one out. So that's why he clears those out.
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So some of the projects I'm working on now is working with the training bureau and the engineer that has oversight of our fleet. And we're purchasing new hose. So, inch and three quarter and two and a half inch hose. Purchasing new nozzles. We're looking at the way we do water supply. So we are looking to changing and adding gate valves on to our hydrants so we can get more water out of our hydrants than just using the five-inch supply line. So working on those projects to do the R and D. And there's crossover between training and operations, so working with them to kind of make-- right?
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So we work on projects like that. Those are kind of more of the significant ones. The operational ones. A little R and D, a little planning for it, so we're building incredibly large hotel out by the airport. And it is very distant from most of our core resources. Not only for us but PD, and streets, and parks, and water, and everybody. And we're trying to work together to figure out, okay, how are we going to provide services? Well, it's so far out, that now it's building relationships with north side fire departments that we've never worked with. But they're actually our

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								closest backup. But it's so distant from the core of the city and we've never had any development out in that area that all of sudden now we've got almost a three million square foot hotel, convention center complex going in. And there's going to be one fire truck, for now, assigned out there when it first opens. We'll add resources as it grows, but figuring out, okay, if we have an incident, how do we cover that, and then building out the relationships with our neighbors to the north, and introduce ourselves, and do some tours, and some joint training, and kind of get that. So those are some of the projects that I have the opportunity to work on.
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So normally I'll go out. There's two reasons I go to the street. One is to work with the battalion chiefs. So I'll either have group meetings. So we'll sit down. We'll do a little training. We'll have conversation about what's gone on at headquarters for the day or any issues that they have in their battalions that we can work through, the four of us. Sometimes I'll have one-on-one meetings. So like this morning I went out and had one-on-one meetings with the battalion one chiefs. I caught them at shift change, so I caught one before the other one came in, had a meeting. Then he changed and left. I sat down with the other one. And then yesterday I went out because all three chiefs were on calls, so that I went in service as the fourth chief. And then it's also my responsibility as that fourth chief to maneuver our resources around.
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	We're working on going to a move-up module or we may even be into that but we're not using the move-up module yet. So right now we're manually-- I sit there and look at what calls are there and I know where my resources are and I just start shifting them around to make calls. And then we had an area where we had all our resources in the southeast part of the town were being used. So I started using Mutual Aid resources to cover into that area because we just had too many calls going. We had a house fire going on and then our extraction rollover, and a chest pain, and all in this southeast part of town, so my responsibility is resource management at that point.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So yesterday, I'll literally find-- usually I find somewhere in the center of the city and park. I'll find a parking lot in the center of the city because then I can respond in any direction. I sit in a parking lot, I pull up my list of calls, I see what resources I have left. I can then pull up my map on my mobile data computer.
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...We used to have free standing fire dispatchers years ago, and they were really good at free-think. I mean they'd be like, "Have you thought about this? What about this? Do you want this resource? Should I be calling this?" That's just not the way our comm center works right now. They're super busy. They crank out a ton of calls and try to process a lot of information for us. And with priority dispatch, I think it's really increased that. I mean, the demand on them is tremendous, I think. Just trying to keep a full workforce for them, I think, is a battle, let alone teaching them how to be advanced in free thinking for the fire department. I just don't think they have that opportunity right now.
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So we went to a interoperability channel. They would get the call, MatCom would process it and call us on an interoperability channel. My BC would take it. We'd write it on the board. Another chief would pick our-- go, "This is the run card. This is who I'm sending." Somebody else was tracking it on the board, and another person was tracking it on a computer screen and pulling up maps just in case we had to-- because we lost our mapping, everything. So just in case we had to route somebody in then we could route them in. So it just happened to be at the end of a meeting when everybody was upstairs. So we just pushed everybody into the room and everybody's like, "Why didn't dispatch do something?" I go, "What did you want them to do?" It's not what they're trained to do. So, yeah, it was fun. It was really fun.
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	Yeah. I think the biggest one-- and I was just very fortunate. I had a 300-acre wild land fire this year. 60-mile an hour sustained winds gusting to 75 miles an hour. It's running this field. It is on the border of a old World War II, Korean war bombing range. So we knew if it got into there, we couldn't fight fire in there, and then after that it was natural gas and oil

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								wells...
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: wildfire incident] ...So what was cool about it was, MatCom has a dispatcher that drives around in a pick-up truck. One of their dispatchers is set up in a pick-up truck. And, at some point, I'm trying to get resources and coordinate my radio communications, and he pulls up next to me and he goes, "Hi. What can I do for you?" And he's standing there with an iPad. And I go, "I need five brush trucks right now." And he goes, "Okay." And you see him push a couple buttons on his iPad and he goes, "Done. Now what do you need?" I go, "I need five type one engines right now." "Okay. Done. You want me to spin you up some weather? I'll spin you up some weather and give you live weather. If we can get the airplane up, I can get overhead video for you."
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: wildfire incident] So having them come in and provide this amazing-- so he coordinated all my radio channels. So I had 27 Mutual Aid agencies on the call. I've never experienced anything like that. And he coordinated all my comms, rigs coming in, rigs going out, having everybody go to certain radio channels for me. And he's like, "Here you go. Here's what you have. Here you go. Here's what you have," which was an-- because otherwise I'd have just been sitting in the cab of my truck, trying to figure this out on my own, and he was able to set me up. He was able to talk to the state and get certain channels freed up for me to use, which was really cool.
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...Yesterday, we ran with [City], so we went over to Red [City]. So now they were trying to monitor Red [City] and we had a working fire going and tons of medicals going on and a dispatch channel going on. So, it's interesting to watch them try to manage our call load, especially when we hit a peak, when we just get busy. I'm just trying to think of what else we do. Those are really our primary channels. We really don't meander off too often off of the dispatch channel and TACs two through six, and then Red [City]. We're hoping to move away from that as soon as this merger is done and we start moving over to their channels.
Context_of_Work	FF	S	Supervising	46-55	21-30	Male	FF-S-017	[RE: working in Arson] Radio-wise, by the time we got there, everything

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					was over, everything was done. Most of ours was face-to-face communication or cell phone comms with each other, the other investigators, or the state investigator. Everything was cell phone or text message. It was rare we do a lot of radio comms...
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: working in Arson] ...the biggest problem was, is even when we found something, unfortunately, it's such a dirty profession, that any decent piece of technology, you couldn't bring into that scene anyways. Because I'm either exposing it to gases or smoke, or I would completely soot it up. So then it was covered with soot, then some engine would come in and spray it down with water, and then you're like, "You know what? Everything just stays out in the car."
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: working in Arson] People were touching your stuff and moving your stuff and dropping your stuff, and at some point, you just went, "I'm going to write on a piece of paper with a pen." And that's it. And I went back to pen and paper. And a good pen that could write when it was 20 below and that was it. Because trying to use technology in that- it made sense, but it just was impossible to do. It was just too hard.
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	So, I mean, like [Name] said, we do manage all the technology that they use. Well, all the computer-based technology they have. They have stuff that we don't manage. So it's pretty frequent. I mean, we have a public safety team within IT that's dedicated to works, or in just their applications and the technology they use. So they're pretty hands-on with that. At least a couple times a week, I think.
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	Sure. So usually what happens is, say we're going to a shooting, a party with a gunshot wound. We won't go in. We stage a way. Fire and ambulance stage a way, block two blocks away. En route, the officer on the engine or ladder truck will come up on dispatch and go, "Dispatch, tell me what PD channel and the officer in charge." And they'll be like, "Okay, go to PD3, Lincoln 27." So we'll switch over to PD3. And, usually, we have an extra radio in there or they'll use their portable to keep the rig radio on whatever TAC channel we're on. And then listen and listen to hear PD say, "Request entry." So they don't tell us it's clear anymore. They

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								just will request entry when it's safe as it's going to be for us to come in.
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	[RE: communication with LE] So they'll request entry. We can communicate on this. So we recently had a SWAT activation for a guy who had some hostages. So we had an in-sync commander who will do unified command post. And then, we'll listen to whatever PD channel they're on. And then, we'll operate on our own fire channels with our fire person. We usually only have the in-sync commander go to the PD channel because they really don't want us talking on their channels if we can help it. But we have access to all their channels. And within the last year, they've added our channels onto their supervisors radio. So they can come up on our channels now to-- up until a year ago, they didn't have that access. They didn't want it. All of the sudden, something happened where they couldn't get a hold of us and they realized they really wanted it and they've got to add it on to their radios.
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	But some of the in-mass communication stuff we're excited about. We hope that that plays out so you're not holding your radio up to your mask and then having it move through an amplifier and through your microphone...
Context_of_Work	FF	S	Supervising Field Responder	46-55	21-30	Male	FF-S-017	...We're going to new microphones that have five port-- five, I guess, speakers because we're having issues with people. We don't like to wear our radio belts. So we all talk like this. While the microphones are on the front, and we all talk at the top of our radio. And now the new ones have a microphone on the top so they has five microphones. Back, front, top. Hopefully, that'll improve some of our communications too, as we switch to those. Because you're supposed to take them and turn them and talk at them. And we don't because we're all wearing these. We all talk into the top of our-- in analog it, would pick up fine. In digital it does not.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	SME S3: General emergency response, we respond to all the normal stuff, fires, EMS, motor vehicle accidents. And we have a little bit of a specialized assignment because we're a rescue company. So we also do technical rescue. SME S2: Heavy extrication.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So specifically, how we're set up, we have engine companies that our main priority is fire attack. And then we have a truck company.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Search and rescue on a fire scene. Ladders, elevated master streams, stuff like that. And then the rescue, we operate on a fire scene as a truck company, but we don't have the elevated ladder on top, but we do have all the technical stuff, ropes, confined space, trench, structural collapse. And we have the vehicle extrication component, also.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So we start our day with our daily pass off from the off-going crew. They tell us anything to note, just what they did on the day before for anything, any issues. And then we go to our life-size system which is a video conferencing system through all the stations and headquarters and dispatch. Everybody gives any more pertinent information and what's going on with the day. And the time chief and the support officer run that. After that, we go out and do our truck checks, get everything ready for the day. My lieutenant spells out what we'll be doing for the set the two days that we're on, and we go from there.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Yeah, after that, typically we'll do a training each day. We have station duties, like cleanups to do, and that's in between, obviously, emergency response.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Well, a little bit of it's run by emergency response. So we have to kind of work around that. I mean, that's our first priority is to run calls. And we try to fit in a workout in each day and then--
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	There's community risk-production events where we do public education and anything like that. You can see how the calendar dictates our main points of the day. I mean, we have this. What else do we have?
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	We have another training this afternoon that's a department-wide training.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Yeah. And that last set, we're doing all the same stuff, different trainings and stuff that we're required to do. We do in-house training also that's kind of what we decide we want to train on versus what is dictated through the training calendar and then training division. Meals and, yeah.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So, again, some of that is we have a HAZMAT rig, and our rescue has quite a bit of equipment. So we do our truck checks on those, also, running all the equipment. But then we also have our daily cleanup schedule for the whole station. We have to get that done at some point also.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	We have an ambulance company with us, as well. So they're in and out. They try to do as much as they can with us, and we try to integrate them into what we're doing training-wise, and working out, and eating, and things like that. They're typically busier than we are, so they're in and out of the station quite a bit more than we are.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	And since they transport the patient, their calls take quite a bit longer. We go back after the initial scene, and they transport, so we try and get everything ready for them so they're not-- they miss a lot of meals, so we try and get it all ready for them.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	And then after 5:00, we're free to-- it's sort of free time, so we can watch TV or a movie, or do personal stuff after that.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So we have two truck check sheets, so to speak. So we have an inventory list that's really just kind of more of an in-house-- we're checking specific pieces of equipment and we're doing it on paper and check marks. And then we have a daily truck check that is more the basic mechanical stuff and making sure the lights and sirens work and the radio and things like that. And those also are on a sheet of paper with check marks, and then they get sent to our maintenance division.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: equipment checks] So we'll scan them and send them to maintenance. I believe our maintenance secretary enters them for that for the ISO and all that.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Our ambulance do it all electronically. But it just seems if you can click a box that was yes or no-- we kind of do the same thing with our pack, our daily SEBA check. We have to log in into a computer and log into this other program and enter in that we checked our SCBA and we log our daily workouts in there, also.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	In the past, we've used them for pre-plans and that kind of stuff. I'm trying to think what else. Ambulance crews have laptops they do reports on. And we don't have those on the engines or trucks or the rescue. I mean, we have MDTs on the apparatus But we don't do reports on those.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	As far as computers-- I mean, we're HAZMAT, also, so we have one on our HAZMAT rig that we can do several of their-- research stuff with for any chemicals or anything we run on. And with that, our meter maintenance, we try to log all our stuff in digitally like that, also. It's an electronic meter so it can plug in there and you can do all the--
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	The majority of our calls are just face-to-face verbal conversations when we're on scene because, for the most part, on medical calls and motor vehicle accidents, we're close enough that we can just talk. I don't have to talk to these guys over the radio. Now if we have a fire scene or a larger scene, the way we work, our truck companies and the rescues we split so we're two and two. So I can talk to other companies or these guys via the portable radios.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So really, if we take a fire scene, command is in a separate vehicle. And usually there's at least two people in that command vehicle. So they're giving overall orders for the scene. So it's a back and forth of-- we echo everything, so, "Rescue 54, I want you to do ventilation." "Copy. Performing ventilation." And then we can talk to other crews, also, which doesn't happen, usually, on our fire scenes. Everything goes through command and then send information back out to the crews.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: using smart phones] So, yeah. You can't do much more than just talk on the station's cell phone. And, I mean, we all have smart phones so if we need-- it's been a lot where we've needed to look something up, and we just use our own phones and stuff like that.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: using smart phones] Specifically for us with the HAZMAT stuff, a lot of that stuff you can download apps now. So it eliminates us using the computers in the truck because we can just do it on our cell phones.
Context_of_Work	FF	S	Field	26-35	11-20	Male	FF-S-018	[RE: using smart phones] And Google, you find MSDS sheets. You can

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					find everything just by a simple search.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: using smart phones] I mean, people have used their cell phone for mapping.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	I'd say more often we see an ambulance mutual aid. Where our's goes there, or we're out of ambulances so they send one. And it's just simple medical pass off, and they transport the patient, so it's pretty basic on that end.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: communication on scene] Yeah, at that point it's just task-level stuff. So their incident commander will assign us a task, and you let them know when you're done, so.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: radio in the rescues] The officer usually is talking into it.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	[RE: radio in the rescues] The officer and the engineer both have a button to talk. In the back, we don't have a button, so either one of them can talk, but he's the main.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	I think our engine one is our busiest station, so they wear their trucks out faster than other stations.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	And the ambulances...they get beat up. They're always running, so they get a lot of miles and hours on them.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	So we do an EMD system, emergency medical dispatch. So they'll code it out, and anything-- so they could code it Alpha through Echo. Alpha's being that just the ambulance responds. And then Echo is the worst, so we both go emergent. Delta, we both go emergent. Charlie, the closest apparatus goes emergent, so that's second. And Bravo and Charlie are, really, response is the same, so it's the closest apparatus emergent and then the other one goes non-emergent.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	I mean, a majority of our calls are medical calls now, and the majority of those we're going together with an ambulance.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Yeah. So generally station five is our support, or we support each other with technical rescues. So we always respond jointly. And again, with

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								that, we're part of the [Name] Tech Rescue Team. So our last one was a trench collapse with a guy in the bottom, out in a different jurisdiction. And so we responded with them out there. And yeah. So we go on scene, and there's a guy in the bottom of a collapsed trench. And for that, we'd shore up the sides, and then we start digging out. And as far as communication, it could have gone better. There was the incident command structure, and he was delegating all the tasks and all that. But, yeah. I don't know if we had a common radio channel. It was mostly face-to-face on that one. How in-depth, do you want me to go about the call?
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Personally, I was helping with the shoring team. So we put trench panels in so no more sloughs in. And then we put wood in between them so that keeps it from coming in and pressurize it. So we got that done, I was helping with that. And then we rotated in and out of digging at the bottom to get the guy out. And I wasn't in medical at all on that one. We had paramedics on scene that came down and gave the guy meds and drugs like that, pain meds and different things. Our engineer, he helped with lead. He is very well-versed in the technical rescue. So he was assigned to help a guy in another department to be lead on the technical part as far as the tactic, views, and all that. He used the commander. For the most part he's just doing all that behind the scenes work. With anything like that you have a lot of personal on-scene.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Yeah, and there wasn't much to say. I mean, we're digging him out and we're-- you're only about 8 feet down, so they're at the side on the edge talking to you. And you're giving buckets of dirt out and stuff like that, so it's not like you're just down there by yourself
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	Boy. Typically I have technical rescue response. I'm either going to be operations which is-- because typically what we do, even on a fire, I might initially be command, but then I'm going to pass that on to our battalion chief which would probably most likely what would happen unless we assign this gentleman to operations or something like that because sometimes it's based on expertise or something like that. So I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								would probably initially be [inaudible] in command and get things going and then assign your operations and then assigning specific tasks. But then eventually I would probably work with command or pass command on. And then, that would be-- on calls like that, it's a lot more face to face. But I would do some stuff over the radio. Officially passing command and assuming command, and things like that, that's all face to face stuff.
Context_of_Work	FF	S	Field Responder	26-35	11-20	Male	FF-S-018	It depends on the call. HAZMAT and technical rescue typically go a little bit slower because we're kind of seeing what's going on and getting a better picture of what's going on. So there's a lot more huddling and figuring out what's going on and what's going to be our plan of attack.
Context_of_Work	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	I guess ... I'm in charge of the department. So I'm, I guess, the team leader for the whole fire department and how we want to train and what equipment we're going to have, and what services we provide, and how we're going to make it happen.
Context_of_Work	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	My job is to train the firefighters how to go on calls, and when they're not available, to take care of the calls.
Context_of_Work	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	We are a volunteer fire department. And the volunteers do the job, and the paid staff supports the volunteers.
Context_of_Work	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	So my typical day looks like just coming in, checking with the crew, seeing what their needs are for the day, what their training objectives are for the day, and making sure that that fits within the mold of our policy and of what they need to get done, making sure-- I do scheduling, so I make sure the schedule for the week is complete and track the changes daily as they go through their-- we talked about the certifications expire at different benchmarks. I have to review those and make sure that we're not going to expire on something...
Context_of_Work	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...My daily task is reviewing the call reports and training documents that have been submitted, and making sure they're accurate and complete, and making sure people are getting proper credit for what they did do, making sure that there isn't anything on there that they didn't do that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they're trying to get credit for, which doesn't happen often...
Context_of_Work	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	My long-range planning is really what I spend a lot of time on because it's hard to determine, again, with our transient volunteers, again, through no fault of their own, what are their needs going to be. How do we need to make them successful in our organization? What classes are going to be available and at what cost? Classes are getting more and more expensive. We were just talking this morning. There is a class-- we're getting our last guy through it, which as we've gotten everybody else through, was 100 bucks just to-- the tuition to get into class. That doesn't include the supplies, and hotel, and everything to get through it. But that class is now 500 bucks.
Context_of_Work	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	...And then, after coming up with a plan, I have to be able to relay that to the fire board, the fire chief, and either defend and make it happen or come up with a different game plan based on what they need. The State of [State] has a pension plan for volunteers, and that takes a fair amount of time administering that on the background. There's minimum requirements from the volunteer to achieve that, but tracking that and making sure that people are getting appropriate credit or not getting credit or whatever, that takes a tremendous amount of time. And then, when the chief's not here, I help take care of whatever administrative issues come up, so.
Context_of_Work	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	My day is usually kind of-- have you heard the term inboxing? ... That's pretty much what I do. Every day, he comes in and figures out what has to be tackled. I mean, I usually have a plan of what I want to do, but it usually gets changed...
Context_of_Work	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Yeah. So, obviously, I have a lot of administrative work because I am the [Job title]. I'm the [Job title]. I'm also our [Job title]. So I do all of that. I help with the county radio system because they do all the radio programming for the county. Just kind of being CEO, all the mail that comes in, the emails-- I mean, just [a lot of?] communication stuff that as the liaison for the department, just keeping things going. I'm also still [Job title]. So I have inspections that I'm doing.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Yeah. So I wear a lot of hats and it doesn't all get done. And one of my frustrations that I've always said is, as a firefighter, we're the jack of all trades but mastery of none. And so back in the day, I like to have projects and see them all the way through. And it seems like I'm getting on the project and I always hit the good-enough phase, then I'm on my next project. We're never actually completing or mastering anything, or finding efficiencies because we're just-- all we're doing is just putting out emergencies and going on to the next thing, so.
Context_of_Work	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Just trying to manage-- I spend a lot of my time as the [Job title] guy just fixing-- helping people log in to seven different apps, or the passwords, their emails, whatever it may be. And I realize is that they're a volunteer, right? This is a volunteer thing we're asking from them. With their job, they have all these. And their second job, they might have all these. So a volunteer might have 15, 20 different apps and some of them are duplicate. We have people who work up at [City] full-time. They use WhenToWork. We use WhenToWork. But certainly, in the app, you can't just change users. You have to totally log in differently. And so it's just--
Context_of_Work	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	[RE: DOT] Yeah, we run to the calls. We provide the emergency services, but they're key for keeping us safe. I mean, getting traffic slowed down, putting out boards so that people know that there's an accident ahead. And they're actually responsible because of the way the [Name] tunnel works. It's very unique to this state. They actually have the responsibility for fire protection in a small section of the state.
Context_of_Work	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	It'll take about three months to roll out everybody, just with time. I mean, if I were to sit down and actually 1,200 radios showed up right there, right now, and I could push through, I could probably get that done in a week.
Context_of_Work	FF	R	Not specified	36-45	Not specified	Male	FF-R-019	Car wrecks. We'll get sometimes a call to the-- it's a car wreck. There's no information. We get there, and we find out, and we're extricating three patients, and the car's upside down. It's near the river. And it took us 40 minutes to get there. And by the time we get there, now, I got a call for help. Well, that's another 40 minutes. So some of that stuff ahead of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								time would be helpful. I know there's a challenge...
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...So technically what I do is, in addition to-- I work parallel to the other captain and we do all the equipment ordering for the operations, so for the fire trucks. And that includes the special operations companies, all the rope rescue, ice rescue. So all that, tech hazmat...
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...In conjunction to that, we also coordinate our wildland program... Even though the City of [City] doesn't have a large wildland interface, the City of [City] Fire Department actually has one of the largest wildland teams in the region. So we have about 150 firefighters that are on our wildland team and they deploy individually and as various groups, or units, or task force, to incidents around the country. And we have apparatus that we can also send tools and equipment as its own resource. So we can send an engine to a fire scene with people on it. And so we coordinate that...
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So the other captain and I do all the research and development. So for whether it's new hose, drones, just anything that has to do with research and development, and looking at new practices, policies, and procedures. So that's kind of what we do. I also specifically do all the multiagency, multijurisdictional coordination. So I do the coordination with the Office of Emergency Management, in addition to the police department, the FBI, the Secret Service, all the various federal agencies as well as the State Department, Homeland Security. And I do all the pre-coordination for any large events, whether they're protests, a presidential visit, a Democratic National Convention, or a Republican National Convention. So anything like that, I'm usually tasked with the fire department's piece of that.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So we're currently moving forward with our drone program. We haven't actually purchased the drone yet, although we are in the process of purchasing several drones. We've done all the research on it. The other captain and I have taken several-- we've gone to different conferences and have talked to various people around the country in the industry, both from a public safety standpoint and the commercial user kind of TV commercials, bridge inspections, and we've collected all of our data

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and kind of-- we're at the point right now where we're actually next week sending out for bid the drones that we actually want to get, so.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So, usually, prior to any type of an event we try to-- obviously, we have numerous meetings, whether it's [Event] parade that we had last year. We'll have meetings prior to. We'll come up with a communications plan...
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Yeah. So that's frequently how we-- we'll just set up and have a communications plan. Police will be operating on whatever channel it is. And then we would have that. And we would spread that information to whoever that unified command incident commander is who's working in that specific incident. And then we would take down and pass-- if we wanted to have subchannels underneath there, we would pass that down to fire commanders or to police commanders who are working underneath, like in a fire branch or in a law enforcement branch, or an EMS branch...
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...I don't know if you know that we're a bit different here with the way we run with our EMS system... Unlike most fire departments, there's been a bit of a-- we have evolved in the city as the [City] Paramedics, which is [City] Health and Hospitals, which is not truly a city agency. It is just the [City] Hospital. It's a private hospital. And the paramedic division has-- it works for them. The [City] Fire Department is obviously a city fire department. We work for the city. They provide the advanced life support and transport. We provide basic life support, unlike most fire departments around the country where the fire department houses both advanced life support and basic life support. And the fire department has its own ambulances and there's paramedic firefighters that could work on the ambulance or there's just firefighters who work on the ambulance that work on a separate...
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...like New York City has an EMS division. And so I work for the FDNY as an EMT on an ambulance. In [City], we don't have that. Now, we do have quite a few firefighters who are training as paramedics, but they don't get to operate because they might have day-off jobs or they came here

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								from different organizations that allowed them to work in that scope. We don't allow you-- we only work as EMT basics. Our fire trucks have four firefighters on them. And so we, because of the-- we have 15 truck companies and 38 engine companies. And so we could usually get there prior to an ambulance. And so we start that basic life support part, that component...
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So, normally I come in and-- God, that's such a good question. What do I do? I mean, usually I come in and answer emails, tons of emails, so.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So we have a-- we have a visit from [Name] coming next week. So yesterday I spent a while in a secret service meeting doing the pre-coordination. So this morning, there are some pieces to that puzzle that need to be handled. So when the secret service, the agents that are here, and the travelling agents that come with her, those pieces from the fire side have been filled in. So what I'll do is-- like right now actually, when Chief [Name] asked me to come in here, that's kind of what I was doing. I was doing some of the coordination pieces for that, whether it's setting up the safe houses, assisting in which hospitals would be used as a primary hospital, where is our relocation sites. We have various things called breakout rooms on the hotel that she might be staying at, that we look at and say, "Okay. Can I get a fire truck to that floor that she's staying on?" And we'll designate. So those are the kind of-- that's what I would-- usually my mornings consist of doing something that is a coordination piece...
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: LE multiagency terrorism information] ...it could be anything. "Hey, a firefighter had his equipment stolen out of his car." Doesn't seem like a really big thing until, from an intelligence aspect, you start saying, "Well, we have an event coming up over here." And if a firefighter's gear went missing and somebody was wearing that, could they just gain access into this event? So we will then take this information which has been disseminated to key individuals, and we will pass that throughout our organization and say, "Hey, look out for this." Or I might coordinate with the [Name] security to say, "Hey, we have a Knox-Box key," which is on

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								every building. "So, hey, one of our Knox-Box keys was stolen. So you need to--"
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So every morning, I check with the Joint Terrorism Task Force, the [State] Information Analysis Center, to see if there's anything credible that's going on and see if there's anything that's going on within the city and county to see if there's any correlation. And if there's information that I need to disseminate, then I take that information and I push it on out to the operations folks.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So I actually don't work in the firehouse. I'm more of a 9:00 to 5:00 guy. It's actually 6:00 to 4:30 guy. So I'm more of an office worker...
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...But then, like this firehouse down here, they have to maintain their technical rescue proficiency. So that requires them, when they come in in the morning, to get all their stuff ready like they normally would. And so they'll do their shift change with the person in front of them and take their gear off and take the person's gear off and put their gear on, go through the entire fire truck, and then they have two more fire trucks here. One is a huge tractor-trailer which is part of the technical rescue team that has tons of wood and saws and all kinds of things to do what we call sheeting and shoring, and for trench collapses and building collapses and stuff like that. And then the other fire truck is a big, what we would call a heavy-rescue truck that actually houses part of our dive team and our swift-water rescue, under-ice rescue. So they, in addition to going through their fire trucks, they have to go through those also. So it takes a bit of time. So they'll go through their dry suits, the wet suits, all the scuba equipment, the masks, making sure everything's set up specifically for how they like to do if they're the primary diver that day. They're going to go through and make sure their stuff is ready to go...
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: dive team search patterns] So usually you're looking for the bubbles of the person coming up...
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	With that said, we're right on the outskirts of the [Name] district, so a lot of business. What we've seen recently, honestly, is we've always had a

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								fairly large population of homeless but it's exponentially increased over the last few years because of the marijuana legalization. So every 16-year-old that's angry at Mommy and Daddy because they don't let them smoke marijuana decides to leave home and come out here. So if you look out right where they're going, right over here is a high-density area for homeless people and drug usage. So it becomes, for us, we've seen that increase dramatically and with the homelessness comes-- and the marijuana, it just takes-- it goes from the marijuana and then they come out here, the next thing you know, it's some type of cocaine, heroin, just whatever. So we're trying to-- and there's not a lot of places to put them, so the mayor's priority is really trying to get people into some type of housing so that they're not out there just-- and programs that really help the people that are out there coming in and just getting addicted to stuff, so. But this firehouse really has just a wide-- if you just head just a little bit that way, it's low-income. If you head a little bit that way, upper-end business... So this area kind of hits it off... This area just totally sees it all.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Our call volume has increased tremendously. We're reaching a place where, as we're looking and staffing and we're trying to track and trend the data that shows, okay, this is how our call volume has increased, and here's a direct correlation to population increase and some of the other various factors like marijuana. And so there's a direct correlation between the population increase and our call volume. It just is. So as the [City] keeps doing better and better and better, which we have, we are growing and growing and growing. I think there's a projected 187% increase in-- yeah, I think we just surpassed Baltimore in size, which is... crazy.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...I'm trained to put water on a fire. I'm trained to cut a hole in a roof. I'm not trained to come in and say, "What do I need to--?" ... Or even, what is data? I don't even know where to begin to look at saying, "Hey, I would like more fire trucks." Great. And usually, as firefighters, we're very passionate people because we want to help. And so when a government

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								comes in, they can understand a passionate argument significantly. They come in and they say, "Man, I totally agree with you, but I don't have \$1.8 million to buy a new fire truck. I have all these other priorities." ...
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Yeah. So that's kind of what the goal is, is to have Tablet Command interface with the drone. So let's say I show up, and I have the drone, and I'm flying the drone. The incident commander will be able to see... This is actually what you're seeing, and I could use-- it was yesterday or the day before, we had a pretty good working fire with a multifamily building that had a fire up in the attic. Well, now I could take the thermal imager, and I could actually show the chief, "Hey, here's where all your fire is. Direct the crews to go over there and cut a hole right there." So that has a lot of application... Yeah. The drones that we'll be using, they'll have the TIC mounted to the drone.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Tablet Command program] Yes. So only one person can really make-- so the incident commander is the only one that could really make any changes, but multiple people could see it. So let's say Division Chief [Name] is the operations divisions chief and he's sitting in his office and he wants to take a look at what's going on at this fire over here. He could turn on his radio, listen to the radio, and he can pull out his tablet and see exactly what's going on, where the crews are, how they're being utilized. What we didn't want was a second and third battalion chief on scene being able to manipulate data. So I'm not quite sure how that piece works, but if I'm the second-in chief, I'm not the incident commander. I'm the safety officer, or I'm assigned to be on the back side of the building. I can see things but I don't have the ability to actually drag and drop companies. That only comes from the incident commander and dispatch... So if the chief's super busy, dispatch can actually take that and they can actually assist the chief in doing--
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...sometimes CAD will come in and say, "Engine one, respond to this call." Well, it's not taking into account that this road is closed, and so engine 11 may actually be closer because right now there's a protest going on, and so this road is closed. And so it just automatically assigned engine

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								one... So, us having firefighters up there who actually understand firefighting... They understand, "Hey, you know what? I got this road closed." And usually, they're not quite as-- I don't want to say fearful of making a decision as maybe a civilian who's hired to be a dispatcher. "CAD told me to do this so that's what I'm going to do." I have firefighters who are like, "No, this is the best reason why I would do this." Or, "Hey, Chief. Do you want me to start you a second company on that? It looks like you're running a little low on truck companies. I'll start you another one." So having those firefighters up there is kind of a-- every time we come to collective bargaining every three years in the city we always fight to keep our dispatchers up there.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Situational 360 program] If I have 18 fire trucks working here and a bunch of police cars because we had a Boston Marathon bombing, something like that, we still have all the other calls for service in the city. People are still having heart attacks. There are still fires. How do you service that, is through mutual aid and prearranged agreements that you have with these other jurisdictions. Well, if you're operating on an island, kind of hard to start communicating those things. So trying to increase that. Increase the common operational picture for all these agencies. And so this is a tool that we're trying to-- this is the first iteration. It just came out two weeks ago.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: Situational 360 program] So yeah, the ultimate goal is to ensure first that everybody within the city is utilizing it the way it should be utilized. Trying to get more agencies on board. And so some of the stuff we're struggling a little bit with is trying to-- if I'm an incident commander and I'm working at this particular house fire and I have roads here, and I say, "Hey, I'd like the police department to come in and block off this road right here to protect our hose lines and make sure nobody goes down there," how do I show on the map that these roads are closed? ...
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	I can see that information right there. We also have the ability to say, at the same location, "Dumb-dumb has gun in house. We've been here 10 times." So we flag that. So as that address comes up we know, "Hey, this

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								building, there's a guy with a gun. We've been there five, six, seven, eight times. We know he has a gun." So we can enter notes. "Hey, this particular building has some type of a construction feature that's hazardous to firefighters." So we will take that information and share it throughout our organization and even from [Name] Health and Hospitals, [Name] Police, and the fire department...
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...So our fire prevention division, which is the code enforcement part, the people that go out and inspect, as they come across certain features of buildings from a code enforcement standpoint, sometimes it's not possible to get people to come into compliance immediately. Some larger buildings or facilities that don't-- even if I take them to court, it doesn't necessarily mean they have the money to fix a problem. But the building is still standing and in existence. Even if I take everybody out of the building, we still have a building.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: hazardous construction features] So they share that information with us. And so there's a lot of-- recently, we had a firefighter fatality two years ago and that firefighter fell through a roof in a warehouse. What we didn't know was that up on top of the roof, a lot of these places were using-- just like a sunroof, they used corrugated Plexiglas that looked like the corrugated tin and they were putting it on top of these roofs to create more sunlight. Well, the firefighter was walking across the roof just like he would on the corrugated metal piece and stepped on the corrugated plastic and went straight through. Yeah. So subsequently after that, we found a tremendous amount of buildings around that had those because we were like, "Holy cow, where are these things coming from?" ...
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...So now with that, in addition to looking for that specific problem, one of the things that we did is on our software in a program that we were using called Firehouse, which now we're using a different program, we created a safety hazard box, which is-- essentially, if I go on a call and there is a safety hazard, I can click that box and write in what that safety hazard is. That safety hazard, when I click that, gets sent to the highest

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								levels of the [City] Fire Department. The chief sees it, the deputy chief sees it. The division heads see it and some key other people. And that safety hazard will be immediately looked into.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: hazardous construction features] And so now, rather than it coming and going through kind of a bureaucratic-y kind of, "Well, maybe we'll get-- who's going to get to it? I don't know," there is, I'm a company officer. It's 2:00 in the morning. I went on a call. I found whatever the hazard is. I immediately click safety hazard. I write in what it is. And then that's going to be immediately, that very-- immediately, the next day, people will be assigned to flag the building, go out and look to see if it's meeting code, put it in the dispatch notes so all the key players who would be involved in communicating it and mitigating it are immediately involved.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	So now instead of the company officer calling dispatch to call the ambulance which is essentially a different company, a different entity, the firefighter can call the ambulance.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	And so, same thing with the police. Rather than saying, "Dispatch, could you find out what police car is coming on this?" I can actually switch over to police district six and say, "Hey, police district six dispatcher. This is Captain [Name]. I'm working at the accident over here at 2nd and [Name]. Who do you have coming on this? What's their ETA?" "You're going to get car 54 on that. Their ETA is about six minutes." "Okay. Thanks." And so rather than putting that middle person in there, you have the ability...
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	[RE: radio training] ...so the training is really-- we had formalized training, but then we do routine training in the firehouse. And it's nothing that we-- it's annual but sometimes we do it more often than that. Usually, it's with newer firefighters. So the older firefighters kind of jump in and will kind of help. Officially, we do annual training, but unofficially it's usually probably more like once a month or once a quarter.
Context_of_Work	FF	U	Field	46-55	11-20	Male	FF-U-020	...everything we do is so visual. So when we show up, we process the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					information visually. That's a seven-story building and there's smoke coming out of the fifth floor on the bravo side. So being able to just know what type of building it is or seeing what it is-- a lot of times, we know because we've worked in those areas...
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...if there was a way to say, "Hey, you're responding to [Street]." And something were to come up that actually shows you [Street] it definitely would be advantageous to say, "Okay. Wow. This is this type of building of this type of construction, it's this time of day which means I have this kind of a hazard. If it's this time of day, it's a totally different hazard." But being able to visually see that would be good.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...We're using a new program as we're-- in EMS for-- it's an iPad-based system for patient contact, where it has everything there, and we can actually share. So when the paramedics get on scene, our iPad will link up with their iPad and they can see, "Yeah, we already wrote down all the medicines they're on. Here's their history," and it links up with them so they have it. And then when they get to the hospital, subsequently, it just shares with them. And it also gives us the ability to see resolution with the patient outcome. So that piece that we've always been missing, "Hey, this five-year-old girl, she had anaphylactic shock and she wasn't breathing. We took her to the hospital," and the firefighters are always saying, "I wonder what ever happened to her?" You'd actually be able to see a patient outcome on that, days later. So it's a pretty interesting little tool that we're using, that we're going to. We're not actually there. Probably within the next four to six months, we'll be-- it's called ESO.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	...we currently use iPads for inspections, which has really significantly increased our ability to-- like any technology tool, we've had some glitches with it, but I think, overall, it's helped us.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	I'm a firefighter out on the street and, all of a sudden, I come into a position in here. Just figuring your schedule out, let alone what you do for your job, takes you a year. Well, then you only have six months left. And you know as well as I do that a lot of times, it's who you know that can make-- I can call up somebody at technical services and say, "Hey, I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								have this problem with this. What do you think?" "Oh, there's this dashboard program that you could use that could really help you track your people and help you create some efficiencies in your time." "There is?" "Yeah." But if you're only spending 18 months, number one, do I really care? And number two, I don't even know where to start to do that kind of stuff...
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-020	Interesting, because you're creating your own position. So there's a lot of-- my position goes-- it'll swing from doing very task-oriented stuff like engine 22 lost a fire hydrant wrench. You need to order a new fire hydrant wrench. "Hey, Captain [Name], we lost a fire hydrant wrench," and the letter that goes along with that, to trying to plan a multijurisdictional, multiagency event or coming up with how we're going to do this new unified command system at Coors Field. And so I bounce back and forth between very base task level kind of-- and I'm not going to say meaningless, but very low level kind of, "Order this tool," to all the way up to this, these things that are bigger than sometimes most of our chiefs even are involved in. So that piece is a bit challenging. So, yeah, but it's fun. I like it.
Context_of_Work	FF	U	Manager	46-55	11-20	Male	FF-U-021	Basically, under the umbrella of administration all of the administrator components of budgetary, HR, all of the department directives and guidelines fall under administration. We also oversee all of the recruitment efforts, all of the PIO efforts of the department, also internal investigations, external investigations, anything to do with on-duty or off-duty behavior. We deal with City of Attorneys Office on litigations and lawsuits come this way. Claims against the city from accidents so on and so forth. We get all the citizens complaints, and then also around arson. Some of the arson investigations everything from fires falls under the administration as well.
Context_of_Work	FF	U	Manager	46-55	11-20	Male	FF-U-021	I generally start around 5:00 in the morning, and I get to work early. There's a lot of stuff to do. So first thing I do is I go log on on the computer and check. I don't know if you had a chance to look at it, but people have a chance when they go to the computer, when they're doing

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								their inferences, they can actually click on something if there's a safety concern...
Context_of_Work	FF	U	Manager	46-55	11-20	Male	FF-U-021	...So the first thing I do every morning is I'll click on safety concerns, and that gives me an idea of what's going on, on the calls of previous days. So to give you an example, of I click on this, there's three of them. So here's, for instance, a ring that was dispatched to a class to an alarm was actually a burglar alarm, that's a concern because they could have put themselves in harm's way for what could have been an armed burglar in there. So things of that nature. So I always try to check that first thing in the morning to see if there's something that's paramount that needs to be dealt with immediately. So that's kind of the first thing I do...
Context_of_Work	FF	U	Manager	46-55	11-20	Male	FF-U-021	...Second thing is, obviously, check out staffing. We're in charge of overtime and things of that nature, too. So see what the numbers are looking like, and making sure we have enough people to staff the rigs in a safely fashion--
Context_of_Work	FF	U	Manager	46-55	11-20	Male	FF-U-021	Everything's in-house. So just every day, I could pull up our staffing in every single district. Who's on an LOD, who's on funeral leave, on admin leave, jury duty, so on and so forth. And then how many people we have on overtime. I can look at the daily calendar to see what's going on as far as EMS schedules, district training, who's doing what throughout the day...
Context_of_Work	FF	U	Manager	46-55	11-20	Male	FF-U-021	...what rigs we have in and out of service. Five-inch hose companies, tower companies, ready reserves, wild end rigs. Everything tells me in one quick snapshot what we have going on for the day and if there's any concerns that I need to pay attention to right away. So that's kind of the very first thing I do, look it up. And then if we have to do any short-hiring, operations will hire them, but we do all the staffing. So we'll look at the staffing and make sure that we're not going to run into any issues where we're going to have too many rigs out of service or not staffed properly where it's going to be a safety concern.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	U	Manager	46-55	11-20	Male	FF-U-021	If there's anything paramount that, again, needs to be taken care of immediately, I meet with the assistant chief of administration, and if there's any IA concerns, people-- if there's any law violations, anyone under investigation, sometimes things we need to handle immediately, so we kind of have a discussion around on what's going on with discipline issues or any investigations.
Context_of_Work	FF	U	Manager	46-55	11-20	Male	FF-U-021	Face-to-face meeting every day. Same thing, I kind of update on city attorney stuff, things we have going on litigation-wise or if any of the concerns he needs to be aware of. He's over at a separate building. That's where arson's staffed out of, so he's kind of my eyes and ears for arson, and we also run the Youth Fire Stop program as well, so that staff's a smoke trailer and does all the education components for the schools, for DPS, and things of that nature. So I kind of get an update from him what's going on. Investigations, any arrests, anything in that aspect I need to know about...
Context_of_Work	FF	U	Manager	46-55	11-20	Male	FF-U-021	...then from there, I'll go to speak with all the rest of the team in administration of what's going on with modified duty because we're in charge of that. So every day, how many bodies do we have broken, who's off, who's not, when do they go back to the doctor's, our paperwork filed properly, am I going to have any problems with risk management? So we try to stay on top of that. And then I'll meet with or get on the phone with risk management because obviously, cancer is something that's, unfortunately, becoming very prevalent now. And we've got quite a few people that have cancer right now. So I kind of give them updates of people having a problem with billing and things in that nature, so we can get that taken care of. And then kind of, just start the day after that, so.
Context_of_Work	FF	U	Manager	46-55	11-20	Male	FF-U-021	...So as far as-- there's a lot of texts. So we get certain text, any time there's an injury, 24 hours a day 7 days a week, I get a text of that. And then my team is responsible for going to the hospital. So we'll actually meet someone there that, whether or not they're by themselves and frees up the assistant chief, whoever took them. So they can go back and service them, stay with them. And either take them home or make

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								arrangements for them to get picked up. If it's a significant injury, numerous of us will respond. But we always have someone from administration there...
Context_of_Work	FF	U	Manager	46-55	11-20	Male	FF-U-021	...At any significant incident, any type of fire, we get paged on 24 hours a day 7 days a week as well. So that's some of the technology we use as far as the pagers. And then obviously, face-to-face communication, phone communication, email communication, texts. And that's really about it as far as that type of communications are concerned. Probably the most utilized, I'd have to say, would be email. Probably, roughly 75 to 125 emails a day, back and forth. It's quick, it's effective. Text, very quick and effective as well. Less and less phone conversation.
Context_of_Work	FF	U	Manager	46-55	11-20	Male	FF-U-021	I've got an iPad that I can link in from home. So I can just log on to my computer from home see if I need to look at any files or folders on my computer things of that nature. So it's good and bad, it's good because it's convenient, but it's bad that you never get away from work.
Context_of_Work	FF	U	Manager	46-55	11-20	Male	FF-U-021	...What we've been doing and what the issues are with a particular type of call. PD, again, it's dependent on the type of call but if it's an active shooter or something significant then we'll have some type of a joint command. Same thing with ALS but those are not as frequent but again, you still have, they respond a lot to accidents. So there's that verbal communication and we will listen to them on the radio to find out if the scene is secure and safe for us to approach. So we'll definitely go to the radio channels and monitor the radio channels. Same thing with ALS, we can go to their channels or let them know that they're not needed or vice versa. They'll pick us up on our channels if we're not needed at the scene.
Context_of_Work	FF	U	Manager	46-55	11-20	Male	FF-U-021	[RE: TICs] Those are, to me, they're paramount for not only fire scenes but for propane leaks, a lot of different things so it really picks up good heat signatures. So it helps if you have something involving a grill car with chemicals, ammonias, anything like that. So those are very helpful. Obviously they make a big difference when searching in hazardous conditions, trying to locate victims and get them out...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	U	Manager	46-55	11-20	Male	FF-U-021	[RE: vehicle schematics] You've got to pay for them, but they initially had books. So it's kind of a sort of hazmat book. It's an emergency response guide book for all the vehicles. And you could flip to Prius and it'll show you where the high voltage is running. So it doesn't change really our operations internally. It just gives you a lot more to think about.
Context_of_Work	FF	U	Manager	46-55	11-20	Male	FF-U-021	You don't know. And also there's a lot of things where you have to immobilize the 12-volt batteries because that's what mobilizes the high voltage. So there's a lot of things that's paramount that you have to cut the low voltage to a hybrid because if you don't, it's still charged with a high voltage. So just things that you need to recognize and this is more through training now that everything is not as it appears. You can't look at a car and just say, "Oh, that's this type of car." Well, they make that type of car in a hybrid as well. So there's a lot more things to think about.
Context_of_Work	FF	U	Manager	46-55	11-20	Male	FF-U-021	Oh boy. A lot. I mean, I was on the special operations team so we use a lot of communications. Because you'll be either in a Level A suit for hazmat or confined space. We use a lot of comm units where for diving it's integrated into one of the-- you'll have basically a rope system and part of that you'd have a comm, so you could communicate in your auto mask...
Context_of_Work	FF	U	Manager	46-55	11-20	Male	FF-U-021	Yeah. Back to the technology, what I found when I was in the firehouse it was more, I think it's training, and what we would try to do is try to communicate differently, holding the microphone because they say you're supposed to hold it on the opposite of your voice amp. Does it make a difference? So we would try different ways. Hold it on the [doorstep?]-
Context_of_Work	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	I manage five fire stations. Each one of those stations has their own officer, but those five officers answer to me.
Context_of_Work	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Lots of email. Deliver the mail. I work on schooling stuff if I'm working on training or whatever, visit the stations, answer calls, eat, sleep at night, train with the crews. There's a wide array of-- and a lot of freedom.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: search and rescue operations] We used to get called in for those, and it was very disorganized. So what happens now is there will be someone lost or someone injured out off of the grid. Away from highways, if you will. And what they do is they will alert the fire, EMS, mountain rescue, and law, whoever's in charge for the day. They tone those four people, we meet on a certain channel, dispatch issues the information, and then the four of us decide who's going to do what. Most of the time, mountain rescue handles everything. Occasionally, they will ask us to help. We're just not outfitted for that, but we will help.
Context_of_Work	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...We don't have all of the equipment. If someone offers it, we have to decide whether or not we're going to take on that liability. That's a pretty rare occurrence, but they handle everything. But we work together. River rescues, any time we go on a river call, we're always going to be first because we're right there and mountain rescue's always notified and they may or may not respond.
Context_of_Work	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Well, there's towers at 11,000 feet, at 10,000 feet, and they're riding snowmobiles in the middle of a blizzard to go make a repair. They had pictures last year of the tower in East [City] that was completely covered in ice because there had been so much freezing and thawing and precipitation. And then they get up there and the pictures were incredible. Just blue ice, just dripping or solid frozen on this thing, so.
Context_of_Work	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: frozen tower] Oh yeah. The radio tech guys have to go up there. And they have to get it up and running and get all of that stuff cleared off. That was a rare occurrence, but still.
Context_of_Work	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	Medicals are probably the second most frequent call for us. Motor vehicle accidents are up there. We run a lot of winter accidents that are really nothing. Any car that slides off is going to get 50 phone calls. It's pretty outrageous. It's job security, I guess.
Context_of_Work	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: false alarms] Yup, most of them are. I think maybe once a year we actually go to one and we get there and then-- we had one in [City] a couple of years ago at a house, and the engine was turning into the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								neighborhood and they saw the glow. And they're like, "Oh, this is the one? Man, we're all alone--" because we only send one engine. They're all alone, and, hey, this is a fire. It was pretty awesome. [crosstalk]... they put out first alarm and so then we send-- we send three engines, a ladder, an ambulance, and a battalion chief to every alarm.
Context_of_Work	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: wildland fires] So we obviously take care of the urban areas of our corridor. We do respond to anything within our district, which includes the Forest Service, like the wilderness area. We generally won't engage in something that's way off the road. So if you were to take [Highway] and go to [City], there are many, many areas where you can see miles off into the forest. So if we get a call up there for a smoke report and if they get to a location and they can see it way off there, we're just going to pass that info on to the Forest Service. They go and handle that. If we have something significant within the urban corridor, then we definitely handle that. All of the agencies in the county will assist with that...
Context_of_Work	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...The other thing about station alerting is right now someone answers the phone, they start taking information, who, what, where, why, what's going on, and then they hit a button, whatever their procedure is, and then it goes to the other consoles. Then the person who's dispatching sees the call, they read the notes, okay. They start building the calling CAD, and then they have to go to this other screen and they have to choose which radio channels need to be awoken, if you will. Then they use a button, they make the noise, and then they send out the dispatch.
Context_of_Work	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	...So with station alerting, the call-taker answers the phones. They get a predetermined amount of information. When they hit that button to send it to the other consoles, it immediately sends the alert to those stations. So they're already awake and walking to the bay. They know where they're going, they know why they're going somewhere, and they're moving almost a minute before earlier than they would have already... And so that's the other thing is we're out the door far quicker than we are now.
Context_of_Work	FF	R	Supervising	36-45	21-30	Male	FF-R-024	[RE: dispatchers] So they do have a big job. So one, two, three, four fire

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					departments, one EMS agency, five law enforcement agencies, and then they have the ability then to also interact with Road and Bridge. All of them, the four of five towns, buses. They don't talk to them routinely, but they're there. So buses can call them if they need something. So they do a lot, going on up there. And then to have four people on at a time, to juggle all that. One big incident in the county will tax two or three dispatchers at once.
Context_of_Work	FF	R	Supervising Field Responder	36-45	21-30	Male	FF-R-024	[RE: EMS] They transport, and we don't transport to the hospital. Every agency is trained up to EMT basic... And then the paramedic system-- they're all paramedics, very highly trained. They're CAS certified. Yeah, and we work pretty well together.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	I would say we respond to 911 calls for fire emergencies. If they have a fire, they can call 911. We'll come and put it out, car crashes, medical aids, unknown problems, kind of a catch-all service behind the police.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	We start at 8 o'clock in the morning, and we have a roll call that usually lasts until 8:30, talking about orders that have come out, or any updates to medical protocols or things like that. And then, from 8:30 to about 9:30 we check out the rigs. And the people that aren't driving that day clean the station. And then, usually they wrap up around 9:30, 9:45 and then they take a 10, 15-minute break. And then, we go out and do inspections, check hydrants, check-- we have cisterns here, so we check and make sure those are full, building inspections. And that usually lasts till about 11:00 or 12:00. And then we come back and make lunch. And then, occasionally we'll have a drill in the afternoon. And once all that stuff is done, you're free to work out or you're, kind of, on your own time just responding to calls after that.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	It depends. A lot of people own a driver's position. So if you own a driver's position, you're probably going to be driving most of the time. I'm an EMT, but the driver on my shift is-- they [laughter] seem to always be hurt or off for some reason, so I'm always driving, yeah. So it kind of goes by seniority in that case, in the absence of a actual driver that owns that spot.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	Yeah, we do that stuff. We go to schools sometimes. Sometimes if the neighborhood's having a block party or something, they'll ask us to show up and we'll go and show the kids a fire engine and stuff like that. When we're out driving around, usually the boss is always pointing stuff out like, "Look at this roof, or that roof." And aside from that, it's the normal banter in the fire engine, which is always fun. So.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	We usually take a rig. And that's-- everything we do is crew-based. So we get asked sometimes if we're shopping or something, why does it take four of you guys to shop? And it's not that it takes four of us to shop. It's that we all have to be together in case we get a call because we're not off-duty while we're doing that. So it's the same thing with the inspections. So we take a rig out there. There are maybe four or five of us, depending on if it's an engine or a truck, doing the inspection. And we're still going to calls, if we get one. And also, it's an opportunity for the entire crew to see the construction of each building that we go to. So a lot of times, if you've been here a few years, you've gone to several buildings over the course of those years. You'll get calls in those buildings and you'll know the layout of the building before you even get there, which is kind of nice.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	And it's not really-- yeah it's not going to change the paramedics' job, really they're going to have to do a patient assessment no matter what.
Context_of_Work	FF	U	Field Responder	36-45	11-20	Male	FF-U-010	So on the way there I'm going to be getting dressed, looking at the TAC channel making sure my radio is set to it. Basically just kind of getting ready to go. Then once we get there if I can see what's going on, that would be helpful to get a visual of what's happening. We're going to get our air packs, get all the tools that we need, and then if we're first alarm, we're probably going to go straight to work. If we're second or third, we may check in with the incident commander before he assigns a task, he or she. If it's eight stories, technically a high-rise in [City], because that is higher than our aerial ladders will reach. So we're going to want to know if evacuation is underway, and if so, what stairwell is that happening in? Do we have any elevators that don't penetrate the fire floor, because if so

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we can use those. What kind of a system the building has in it. Are we going to be dragging hose up this thing or do we have a dry standpipe, combined standpipe, sprinkler system? And then if you're not the first engine there, you want to know what the first engine's doing, because we're going to back them up.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	So we are expected to be here at 8 o'clock in the morning but most guys come in earlier, around 7:00 so they can relieve the people that are here. You can imagine if you've been here 24 hours, you're dying to get out of here. Some of us. So we show up at 8:00 and then our day really doesn't start until 8:30. From 8:00 to 8:30 there's our coffee break. People are just talking day-to-day on things that need to be done, how the rig's responding, if something's missing, or what type of fires or calls that they had and just heads up. And then from 8:30 to 10:30, we're doing house work. People are assigned different tasks. You could be the day watch, which means you're answering phones, dealing with the public. So one person is assigned to that. Others are assigned to cook. Day-to-day, there's 15 people here and you're cooking for 15. So everyone helps out but one person is assigned to cook. And then in the evening, there's a night watch and it's the same. You're answering phones, and hearing a radio, and just dealing day-to-day tasks. And then from 10:30 on, everyone is helping out in the kitchen, running various drills, any meetings or sometimes they have battalion drills, which involves the outline companies and we're just doing drills just to practice. Then at 3 o'clock, you're allowed to work out. And as this is a busy station and you're always running calls in between. And then dinner is usually around 7:30 to 9:30 and then we're allowed to sleep here at night. 9 o'clock, you'd go up and sleep in your bed and then in between calls. And then 8 o'clock the next morning, you're off duty. So we're on from 8:00 to 8:00, 24 hours.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	There's a chart and the officers, their job in the morning is to delegate those tasks. So we all take turns, so there's a watch chart and people are assigned.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Oh, training. Okay. So one aspect that I love about Station [Name] is, you never lose out on your skills here, because you have each type of apparatus. So we're allowed to trade shifts with other people. So one day you could be on the engine, one day you could be on the truck, one day you could be on the squad. So you're always keeping up with your skills. So if you're at a, say a single engine it takes-- that's why they have battalion drills, so you're involving other apparatuses. So you don't forget your-- but here, you're always around these type of rigs.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	They're all props so. And it's just on a-- to keep our skills up. The fire doesn't decide what type of building so sometime it'll be on a peaked roof, sometime it'll be on a flat roof. So these props are just to keep us aware of what's out there.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	So at shift change, it's the busiest time. So you have 15 people going off and 15 people coming on. Guys are noisy. It's your second family. I can't wait to get to work, I don't know. Something's always happening, it's exciting. In here at 7, I mean, it's a busy station. The demographics as a city directs on how busy you're going to be, so if you're in the Marina it's not going to be as busy as here. I think it's here, it's-- as far as there's BART, there's been a series of homeless people. And so 80% of our calls are medical and because of the homeless population, there's a bunch of drugs, alcohol. And so with people with cell phones they're always-- someone's lying on a street, they think there's something wrong but most cases, they're just sleeping.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	No. Well, if there were a catastrophic event, then you might get a call or wildland, some of us are cross-trained in wildland fire. So if you put your name in, available to work for that, then you might get a call to go out. And in fact, we have a strike team that went out two nights ago.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Butte fire? I forget where they're dispatched but yeah, right now we have five rigs and a chief out, fighting that fire.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	On-scene we are-- depending on if they dispatched us, because they get a lot of calls that they don't know if the person-- they call it a police

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								department evaluation. So we'll show up to see if this person's truly hurt or sometimes the people fake it. We'll get dispatched to the police jail and someone will say, "I have chest pain." So we have to check it out on that to see if they're lying.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Green, yellow, red. And by the time you get to red, you're going to get your Viber alert, and then you got to grab your buddy. Two in, two out. So you grab your buddy. You let your officer know, and then you report outside. Change your bottle. Go back in.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-011	Yes. Yeah, I mean, that's part of our morning checkup, that their radios are all charged. And it's the officer's duty to check that they're there. That they didn't go missing.
Context_of_Work	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	Very easy. We are the stopgap for society. So if you feel unsafe, you call cops. If you're having issues with your piping, you call a plumber. If you're having issues with electricity, you call an electrician. And for everything else, you call firefighters.
Context_of_Work	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	So traditionally we'd come in-- if you're a good employee you come in an hour early. If you're a bad one you come in 15 minutes early. And if you're a really bad one you come in 1 minute before your shift change. And you come in here. Sign in on the board.
Context_of_Work	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	So after you come in here and you figure out where you're going to be, we usually have a cup of coffee. We have a morning meeting to kind of give everybody their assignments, "Hey, you're the cook. You're the driver. You're the boss. You're the so-and-so, so-and-so." Everyone gets their assignments and then it's kind of, ready team, break! We go tops and tails. The entire house gets cleaned. And then the rigs-- every single thing on the rig that turns on gets turned on. Every single thing that opens gets opened up. And you just make sure all the tools, all the equipments work. Including the radios. Both the mobile and the portable radios get turned on, operated, batteries switched out if they need to be charged. Essentially, all that stuff. So that takes anywhere from about 8:30 to 9:30, 8:30 to 10:30, depending on how vigilant the person is and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								maybe how old the equipment is or how unfamiliar with the equipment they are. Sometimes you'll see if someone's assigned to a rig they're not normally assigned to, like someone normally on the engine assigned to the ladder truck, and they have to operate that ladder, they may expend into some extra time out back going, "Hey, it's been a little while since I've done this," right? "I normally drive that. Now, I'm driving this. It's a completely different machine." Go operate the machine a couple of rounds and go, "Okay. I know what to do in case there's a fire." So that's what we'll do up until about 9:30.
Context_of_Work	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	Then we'll go and do area orientation. We'll just drive around our area. Sometimes if there's a guy who's on overtime, as a treat to the crew, he'll say, "Hey, let me buy you a coffee." We'll get a coffee, and then we'll drive the area and do what's called pre-fire planning. So additionally to area orientation, and looking at the buildings and what you're assigned.
Context_of_Work	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	So that one person assigned to cook, goes and makes a list, comes up with the recipes, uses old recipes, goes with the old standby, whatever it is. And then you go shopping for the day's food for lunch and dinner. It's only you have to shop that day to catch up ahead of time just because you never know who you're going to work with. You don't know where you're going to be. You could have a vegetarian. You could have a vegan. You could have a celiac-diseased, gluten [inaudible] allergen person, whatever. So you go and you do your shopping. You'll also conduct a drill of some kind, depending on what the needs are. If there's a probationary member, maybe they have something in their book that needs to be signed off. Or if it's something you haven't done in a while, they'll have you going, "Hey, I haven't raised this 50-foot ladder and all. Okay, let's go get the 50. Raise the 50. Hey, I haven't used this saw in a while. Okay, let's go get the saw, and talk about how we'd use the saw." So that gets you right until lunch. We start cooking right about now, a little late, but we have our lunch.
Context_of_Work	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	So that delays whatever was going on. Probie drills, shopping, coffee, area orientation, any other training, cooking prep, cleaning, it's all at the

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								whim of the 911 system. So you have to be on your toes and ready to respond at all times, despite all those other responsibilities you have on a daily basis.
Context_of_Work	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	Yeah. They joke that this job is very much oriented to people who have ADD. Because you're not really doing anything for more than 15 minutes. You're really only doing a little bit of cooking, then a call goes off and someone takes over. You're only doing a little bit of cleaning, then a call goes off for a different unit and someone else takes over.
Context_of_Work	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	And actually, Insurance Service Organization, ISO, which deals with NIST all the time-- ISO dictates how often hydrants get checked. I'm not exactly sure of how frequent it is. But what will happen is an engine company, who's in charge of flowing water fires, will log in what hydrants are due. And they'll just say, "The corner of [Street]. The corner of 11th and [inaudible]," and you're just, "Okay." We go to those ones, and you just check them. And then you come back, and enter it into the computer that we checked that one. It was 50 psi. And it was clean and serviceable and ready to go, boom, boom, boom. Next day, someone comes in, these are the ones that pop up.
Context_of_Work	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	No, no, no, no, no, no. It's more of a, clear the area around it, open it up, flow the water, check it. And then you'll look for the shut off because a lot of times they get hit by cars. So usually those shut offs that are in the street, those little mini-manhole covers that you'll see, person-hole covers, sorry [laughter]-- those mini metal covers that you'll see, will sometimes accidentally get paved over. Not necessarily by a city crew, but some construction crew that screwed something up and they go, "You've got to pave this," and they'll just pour something and will go. On the hydrant it says it's three feet away, and you go, "It's not there," and we'll have to hammer it. Those ones take like 15 minutes because we're just using sledgehammers to try to find--
Context_of_Work	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	No. Well, compared to a hydrant, yeah. There for 15 minutes. Nothing too crazy. Those are just kind of preliminary inspections. Anything that comes up negative on a fire inspection from the company level, it's

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								deferred to our fire prevention bureau. And so the fire prevention bureau, they have to do all the follow up. Yeah, yeah, yeah, they're the professionals. There's such a large requirement that they detail it out. So standby real quick.
Context_of_Work	FF	U	Field Responder	26-35	11-20	Male	FF-U-012	Triannual, that means every four months. The division chief, which is stationed here, right? There's two in the [inaudible] with the city. They go and inspect each station. They split them up over the course of the year. But three times a year, this station will get inspected by it's local battalion chief, the division chief, and the rescue captains in charge of EMS responses. And they'll come and check the cleanliness of the station, the care and maintenance of the tools and the apparatus, all that kind of stuff. Member's uniforms. Their personal protective gear. All that stuff needs to be labeled, marked, clean, serviceable, all that stuff.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	I am actually, well I had to change names, I'm an Incident Support Specialist also the Chiefs' Operator also Chiefs' Aid. So I drive the division chief and assist him or her on the fire ground scene and then do a bunch of administrative stuff too.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	I drive the division chief to get him anywhere he needs to go, we respond to all fires. We're division three so we respond to all fires from Beta Beach south of [Street] and then kind of zig zags a little bit all the way out. I also help administratively making sure that our side of the city is balanced and has firefighters where they need to be because sometimes some stations are fat or have too many people, and some people they have less so we call them fat or light. Anything, I mean anything, we have a strike team out right now I help make that list and get them out the door, sometimes I actually go on that. When they come back, administratively going to help make sure everyone goes where they need to be. A lot of staffing kind of stuff as well as maintaining on the fire ground where our people are. I help make sure accountability that we don't lose anybody we know what companies are, we know what they're doing, what their tasks are and if anything was to happen, kind of where their last known location was.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Female	FF-U-013	So it's usually on radio. So at an instant when we get there which they come in and check in with the chief, I'm usually just listening. I'm the second set of ears and I'm just moving people because he doesn't have to tell me, I can just hear it, right?
Context_of_Work	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Yes. But the other part of the job is I'm incident commander at any event that I'm dispatched to, supervise up to five alarms worth of companies, develop strategies, make sure people are carrying out objectives, keep everybody safe and account for them.
Context_of_Work	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	We are probably, I would say, at least five years behind the times on upgrading to things become electronic. Excuse me. So through my office every day, I have a stack of mail that comes through there that I have to review, and acknowledge, and make sure it's done correctly.
Context_of_Work	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	Yeah. I mean, if I went on the call right now, I would be dealing with two battalion chiefs, three engines, two truck companies, a rescue squad, so I have a lot of people. So 35 radios are showing up that I have the ability to communicate with. And so we organize that by either just talking to the officer in charge of those engines or breaking them up into groups and talking to just one person using the span of control to be able to talk to people correctly.
Context_of_Work	FF	U	Supervising Field Responder	56-65	31-40	Male	FF-U-014	It's a place that I would position myself that has a good visual of what is occurring, and I have control of everybody's-- that's there that's available to get an assignment. So not everybody that goes to a fire is given a job to do. You keep people in the on-deck circle. So I'm in a position of looking at what's going on, strategizing where people go, listening to radio traffic, then I'll turn around to somebody, or an engine, or a truck and say, "You go into that building." And then my operator will document where they're going, and I'll communicate to their boss where they're going, "You're getting this engine company that's going in there." So it's a funnel. It's a pinch-point for managing resources. It's also a place that we account for everybody that's there as much as possible and where I'm directing or managing whatever it is.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	It means that I'm responsible for all the land mobile radio, two-way radio, communications, cellular communications, and mobile data terminal interface and back call for 53 fire stations and all the up runners.
Context_of_Work	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	Kind of like a sheep herder, and you're trying to get everybody to follow the lead of technology. And it's not always easy to get people to understand the technology and how to lead them down the right path. It takes time.
Context_of_Work	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	Daily routine, we have from a technology perspective, maintaining two different radio systems. Then we're trunking P25 new digital radio system, and we also have a conventional VHF system. So as our contingency or backup radio system. So maintaining all of the subscriber, and all of the hand-held radios, mobile radios over the period of a month will get probably 10 to 15 travel tickets, varying from something not working to a dead area geographically that we have to go and investigate. So there's three of us that do this job throughout the county. We are allowed throughout the county to do that. And we respond to the line personnel when they run into an area that they don't have any communications. And what did they do to resolve that? And then we helped them through to understand their different contingencies that they have available to them at the line level.
Context_of_Work	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	Yes. There's definitely a daily routine in the suppression side, running on an engine, being responsible for your car on that engine. And understanding your communications, understanding how it works, and testing it. And making sure that it's functional. And then you have a whole training component that we barely get to train on because there's so many other aspects of their job that are as mission-critical as communications. So there is a routine that we need to follow, and we do in terms of changing the batteries and making sure that the physical equipment's working. But from a training perspective,
Context_of_Work	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	... When we get called up, there's 56 of us, and we get called up. And there's four of us on my team that deals strictly with communication stuff. So we understand kind of what the challenges are going to be

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								when we get deployed, and we start doing our homework or our background investigation. Once we get that call, they'll tell us kind of where we're going, and then we'll start our information gathering at many different levels to say, "What do you have in place today? What's working? What's not working? What's the geographical area that we have to cover?" We already know that from a fire aspect, resources all have a complement of channels that we could utilize initially. And we call that initial attack. It goes extended over three days, then we get special frequencies out of the fire center in Boise, Idaho that give us national frequencies that we can program in that would reduce the interference to other fires around us or other agencies.
Context_of_Work	FF	S	Field Responder	46-55	31-40	Male	FF-S-015	Coming from my current perspective of managing and helping maintain communications for everybody. Identifying how we could do communications through LMR, cellular, and satellite communications. To be able to balance between the different technologies so it automatically roamed between your best connection which would entail you never being out of communications unless you were some place underground that you had no access to the sky. You had no access to any cell sites or radio site. And even there having that understanding that if we had a wireless network wi-fi access point most everywhere, we could utilize that technology to get back to the mothership somehow, someway, it's having that connection. But having the satellite system in play that allows us to roam between the networks, commercial versus the government, and having a means to talk back to the mothership.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	I am the Assistant Deputy Chief in charge of the Homeland Security Division for the [City] Fire Department.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	So I handle about five different areas. I handle all disaster preparedness and planning. I handle all special event planning. Super Bowl, the marathon coming up next week, okay? And all Homeland Security related functions, so that's intelligence, bulletin dissemination, trends, that kind of thing. Some special operations, especially the maritime

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								branch, the marine division, I guess you should say. I do all the grant writing, grant management. I do all special projects as assigned such as trying to develop a drone program. I manage the K9 search team that we have. And I manage the stress unit. It's about 10 to 12 jobs in one.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	I have to be very connected to my phone. So emails, phone calls happen all the time, so I have to be on top of it, otherwise-- I went away on vacation for the last week or two, 200 emails. And I still have to answer my phone, be available 24/7, because I'm a senior command staff person in the fire department. So anytime there's a major event, I have to respond and perform a certain function for emergencies. Oh, I also manage our Fire Department Operation Center. I'm the EOC rep to the-- I'm basically the liaison to any federal or outside agency that works with the fire department.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	No. Generally, I'm in meetings most days. And that means very little time in the office to do actual work. So when I write grants or write proposals or bigger papers or what not, that's all done at home on my own time. So I rarely see the kids during the week because of my division of work.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	My job is largely a lot of email. So I've been on a lot of work groups it's all-- a lot of things are done virtually. Documents are shared, or you write things up, people want answers to things for special event planning. It's really about the email. I build a lot of documents in Word and have to convert them into PDFs. I get a lot of PDFs. I have to try and extrapolate something so I can put into my own document, such as a map for a special event. So I have to have PDF Pro, which I don't have at home because I'm not going to pay for it my own pocket.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	They have very much a daily routine. It's not centered around technology so much, except for an internal website which they're responsible to check every day they work because there's general orders that they have to be accounted for that they've read. There's internal training that is done online that they have to do. So they have to interface with it on that level. But for the most part, the firefighter, to do his job, doesn't need a computer, except for what I just mentioned. If they want to sign up for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								an overtime day, if they want to view online training which they have to check, verify information, check their sick balances. That kind of stuff. Check their schedule. That is done on the internal [crosstalk]--
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	Yeah. It's not emergency stuff. Their job in emergencies-- the core of their job is to get on the fire engine and go to emergencies and they don't need a computer to do that. The officer does, has a computer on the engine or the ladder truck, they need to interact with that but that's it.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	Our primary role 99% of the time, it's going to regular emergencies. And we function very well within that role.
Context_of_Work	FF	U	Supervising Field Responder	46-55	21-30	Male	FF-U-016	Yeah. Technology's great, but it still doesn't do CPR on people. It doesn't put a hose into a building where you can't see anything and it's hot as hell and you got to make your way down a crappy hallway. A person still has to do that job.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	My position would be a little bit different than the field. I don't go to the field as far as taking any runs right now, so I'm on 40 hours. And so my primary job right now is to look at many different aspects of the job behind the scenes, basically...
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: cancer causing ailments in the field] ...Now, I'm looking at those. When you're out in the field, that's all in your periphery. You're kind of not focused on that. But what's allowed me to do - and I've been in this for the last two years now - is I've been able to slow down. I've been able to take a few steps backwards and really look at what it is that is a problem out there. And one of our main things right now is being able to detox. You'll never be able to totally eliminate your exposures. It's just unrealistic. It's nature. It's an occupational hazard. But when we get into detox, how do we get rid of these toxins that are embedded in our adipose tissues? How do we help reduce our exposures? Those are key things. That's where I'm at.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	It's either the sports, or adrenaline, or whatever the case you want to call it. But it's the challenge. It's a challenge. And I guess you would say

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								through a public's eye that it's not normal to actually want to go into fires. But once you get educated and have some of those fears reduced through education, it then becomes understandable of how you can actually do that because there is a process. There is a tactical process. There's a way to do it. So what may seem to be an insane activity to laypeople? or others is kind of normal for us because you kind of learn the parameters of your dangers and what you can and can't do. You learn your limitations. And so knowing all those things and putting them together and being able to size up the situation and look at and minimize your tactics, or what they do is they look at things, and you're able to size up a building and measure, through education, some of your dangers...
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...you make a decision based on what are your-- I'm trying to put it in words. What are your risks versus your benefits? So you minimize and reduce your risks if there's truly no benefit, but if there are people trapped in the building, especially when we get on the radio that there's children in the building, everything just goes up and everything's added up and your risks are laid on the line. I mean, that's kind of what we're here for. So yeah, I mean, that plays a big part of it, big part of it.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	They are going to those iPads, so right now we have little computers, little laptops in there that we use for hitting a button saying we're on-scene, or returning, or doing other things. But you can also get on there and type. So we do have little laptops on there, but they are looking at going to more of an iPad type of technology...
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: cell phone use in FF] It's not going to be used as much. The chiefs do it. They'll use cell phones to communicate probably to our main dispatch center when they can, just because they have the capabilities. They have the time to do it. They're set back from the scene. They're not actually in the trenches, so for us to use a cell phone in fire situations are less likely, but other incidences like maybe if it's a situation where we're able to step back and not get so involved, we may be able to use a cell phone. But when cell phones are used, it's mainly an incident-

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								command type of situation, not actual-- the companies are actually mitigating a situation. We don't really get into cell phone use at this point, so.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...there is a few incidences where we were caught into some pretty scary situations inside looking for potential victims, especially in occupied buildings. So situations where either it's unoccupied or the people calling in saying, "Hey. There's a fire at this address. No one's in the building," there's been a few times where we've been inside and we've been caught up in some scary situations where the people outside knew that there was no one in there, and we never got that information. Those kind of situations are critical because then, we wouldn't have been in those situations, and we wouldn't have been in there to where fires break through the door and starting to fly down the hallway because we're in there looking for somebody. We wouldn't have put ourselves in that situation if we had known that there's no one in the buildings, so I think those are critical pieces of information.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	[RE: usefulness of computer] If our attention is directed to it, sometimes it's just one of those things you've got to develop habits. And you've got to break some of the old habits. So you've got to develop new ways of doing things. Now for me honestly, I never focus on the computer when I was going to work because I'd look to see what the address was. But then there was times where I was more focused on listening to the radio. I was more focused on making sure everybody was ready to go and then looking for the smoke. So I'm concentrated on outside. I'm looking for the smoke. I'm looking for the streets. I'm watching traffic. And then I'm looking for hydrants...
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...So there's a lot of things that come into play when you're setting up tactically to approach these situations that you've got to be concerned about rather than what's the computer telling you? So that's just a form of habit that needs to be developed. I rarely focus my attention on the computer. I was more on the environment and radio.
Context_of_Work	FF	U	Field	46-55	21-30	Male	FF-U-025	[RE: overwhelmed] That can potentially happen, for sure, especially in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					larger size incidences where it's involving a major commercial building. Or one thing that can be overwhelming would be-- they would call them mayday situations. So where a fireman's trapped or injured or there's an incident and a mayday is called. So when a mayday's called, then there's a lot of-- there's a lot of things that go through your mind. What's happening? What's wrong with the situation? Why was there a mayday? And so for a brief moment, the situation gets chaotic and very uncertain. Those are situations that they can pose those stressful uncertainties. And then other ones would be emergency evacuations. So when you're inside and you're fighting the fire, you're doing what you need to do, and then they tell everybody to get out of the building, they start blowing horns outside to let you know you need to get out, there are times where we're not real sure why they're pulling us out...
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...our past experiences where the stairwell doors would shut and lock, so you'd have somebody that go out in your stairwell and the doors would lock and they would start going down and they were overcome by smoke and they can't go any further, and they can't get out of the stairwell, so now it's a problem. So now stairwells don't lock anymore. They'll shut but they won't lock...
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-025	...I did a lot of dive jobs when I was in the squad. So we would go and we would take care of boats in distress, or drowning potentials, and stuff like that. And a lot of that does take place during the boat shows, and the air shows in the summer, and stuff like that. So where we would run into issues with that is crowd and being able to get to where we're going but being able to figure out where the actual location is because there's people all over the place, and if you're down here and you're just a visiting-- or a citizen, you don't really know the city for sure, and you may see somebody go into the water and not really know how to say where you're at.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	I'm in charge of a fire company. I have four men under me. I'm in charge of implementing whatever tactics when used in different responses, be it fire, rescue, or EMS. My main job is my men's safety and making sure

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								everybody comes home.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	I conduct, probably, higher risk reward analysis in terms of what we're going to, do versus what we have. I make sure all our safety procedures are implemented, and our tactics are correct for whatever situation we are dealing with.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	There's always. A lot of ours is just-- the problem is we rely on call-takers who are reliant on the public to pass on information. So especially on our EMS calls, they can vary widely. We'll get gunshot, and you get there and it's nothing, or you get minor accident, and you get there, and there's like three cars. And we get traffic accident. Is it a school bus pinned under a truck, or is it just a fender bender? You have no idea until you get there and see it.
Context_of_Work	FF	U	Field Responder	46-55	11-20	Male	FF-U-027	if I'm going to a fire scene, there's a whole different thing where if they show me camera feed, there's nothing showing on that fire. As opposed to every window's full of fire, and there's jumpers hanging all over, it's going to change my tactics immediately, especially on the way there. I mean, I'm thinking already on the way there of-- one of the things that would be nice, even if they didn't even show the live feed, just a picture of the building just to jog my memory so I can adjust my tactic, orders. There's a huge difference between a one-story ranch or a 100 by 200 courtyard building. That changes our tactics immediately. In some places, you don't remember that building. So it'd be nice to even have an idea of what I'm coming into.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	[RE: job description] A lot of it is exposure to watching [City] Fire. I get that one all the time. Is it like that or not? I think some laymen do know what kind of what we do in a way, but from giving it perspective is this, what does a fireman do? We put out fires and help people in medical emergencies. We respond there. And then you could obviously advance further into an explanation, but that would be it. We fight fires.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	I would say people call us in their desperate time of needs. That's when they call us, either for a medical emergency to, again, a raging fire or to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								handle somebody at a factory with a hazardous material situation. Or surface calls. Show up at a parade or get involved in your community. So there's a bunch of different aspects of what we do, but the thing is that we're all-encompassing and we're the jack of all trades.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	We have to be proficient or at least possess enough knowledge to mitigate any situation because people call the fire department first. They don't call the police or the public works or Jimmy John's or whatever it might be. They call us to solve their problems. Obviously, it's a whole array of problems. You have to be proficient in pretty much every area. Those aspects again are from structural firefighting to wildland firefighting, high-rise fires, fires in boats. It doesn't stop and then flip the coin...
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...a great majority of our runs are EMS related. And now some of us are paramedics, some of us are EMTs. Now we have to know about life-saving skills, what to do with a [neuro?] addict, get people to breathe, CPR, identify a medical component that's giving someone a big problem or an issue, and address it, and fix it for them. It's at the snap of the finger. How much time to go and get your medical book and say, "Ah, this might be happening to you." See the flow chart and how to treat it. And then, again, it can go off into another hauler of hazardous materials, water rescue. I mean, it's endless. Trench rescues. These guys are doing outside your confined space rescue, which is a discipline of rescue. So it's all-encompassing to have knowledge in every little aspect, to make you very proficient but very efficient on it and get the job done. That's the whole main goal, is to get the job done. And that's why they call us. You are the jack of all trades.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...I've had, again, the whole spectrum or they had from violent people. Caution the gunshot that the shooter may be on the scene. The fighting is still in progress. This person has a communicable disease, which is great information here before you can step foot and even open that door knob or take your first step into this residence, whoever they might be.
Context_of_Work	FF	U	Field	46-55	21-30	Male	FF-U-028	Excellent means of communication and then I think that one is still in its

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					infancy, still developing. Because you can also relay a very critical building components from preplans. For example, fire department connections, where are they at and where is the gas shut off. Where's the water shut off? How was this building made? Is it a light-weight construction? Is it a truss roof? It's giving you the information that would help use any sort of commander or the first officer arriving, help base your decisions, what your actions you're going to take. They send a lot of this information, has come about. Without that, it was all either guess work or you had to go and investigate how buildings was made, where the sprinkler connection was, which side of the building we shot the gas off. Hit it just the-- what a great concept and I think, yeah, it's starting to evolve. We can put so much information on these computers for us today.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	...On the fire drum, there's a million things that are going through your head. There's a million things that must be observed to come up with the solution. Any incidents giving you the problem, it's your job, again, to come up with the solution. And it's not something that's just, "Let me go back to the fire truck and think this one out real quick." It doesn't happen that way.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	So I call that saturation overload. And that happens a lot on incidents that are kind of beyond your scope. Obviously, a medical call is within your realm or your scope. It's easily handled. Bigger the incident, you're dealing with the human factor, the mind at the process...
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Cell phones, I think they're-- yeah, again, very useful. We all have one. We all carry one. If you look at the cell phone usage, job-related for use at an incident - at an incident where you have time obviously - where you're not googling or looking up things. It's a great mechanism if you had learn to-- "Oh, I forgot how to tie this knot." Go on YouTube. Various fire departments and well-known fire instructors also put out information in series or in format so you can use it as a drill, or call it up and doing searches on single family dwellings. So then we can use the technology as a form or basis of your training for the day...

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	[RE: cell phone use] ...Hazardous material. Again, if you've got time, you'd sit back, "Hey, you know what, I got my phone here. Let me look up this product. Let me find some of the physical properties, characteristics of the spill or leak or whatever. How is this stuff going to harm us? And what do we do to rectify it?" Your ERGs can be pulled up, emergency response guides for hazardous material. Pull it up. I think arming you with more than enough information to handle an incident, and successfully to do so. But again, it weighs on time. So yeah, the cell phone is a great tool to use if you have time. If you're in haste, you cannot. So their technology would not benefit you. So calling and looking at my phone going into a fire will not happen. You don't need it. You don't have the time.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Everything there's a fine line in every detail. Do we have time or do we not have time? Or when we process data, you don't have the time. When things that are happening real quick and real fast, it's hard to go through the technology to find things. I'm thinking of the other side of that spectrum is that when you have time. Because when you have time, you can look up every resource that you want using technology at hand and what we have available as a fire department. Yeah, flood yourself, get the upper hand. Knowing your enemy, knowing what you're getting yourself into through technology means, but again it's practical then not practical. And I think that's your dividing line. We have time to use technology, or we have no time to use it.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	Going to an apartment building fire, for example, the only technology piece that I would find useful is the thermal-imaging camera and obviously the portable radios that communicate messages back and forth among people. Not overwhelming with messages, but enough to get the gist. It's what is putting the fire out, is using your hose line. It's not the computer. It's not the technology that's doing this stuff. We're still going into time-proven ways of doing things without the presence of technology. From that aspect, as a line officer, I look at that...
Context_of_Work	FF	U	Field	46-55	21-30	Male	FF-U-028	...Later, down the line, you can use the technology to look at some things

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					that again you may have forgotten. Things that are going to enhance your ability at, perhaps, another incident, learning new techniques, new practices that they have done. Try this cultivation of change, of technology. Using that in a positive manner for you and your fire department. But I've seen it from a different perspective, because during emergencies it's really not quite useful. But those are the technologies that you take for granted. The portable radio and the tech camera have benefit.
Context_of_Work	FF	U	Field Responder	46-55	21-30	Male	FF-U-028	... When you come back 20 years from now and ask these questions, I'll be long gone, but ask them to other firemen or fire officers, they might say, "Oh, it's real easy. We got this on the rig and it tells us where the fire is at. We've got pointers and lights." It's going to be amazing what fire service is going to be like in 20 years. The name of the game still hasn't changed or you still got to get water on the fire, but things that help us increase the safety to work in our favor is going to be greatly enhanced through technology.
Context_of_Work	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	Within the fire service, I do specialized rescue. I run a rescue company in the city.
Context_of_Work	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	We have to do everything. I mean, we do confined space, trench rescue. We do rope rescue. We do scuba diving. We do hazmat. I cover a third of the city with fires. And we have a-- and sometimes we are called upon like tasks that people have problems with, they call us. We'd get called to emergency rooms, and help out in emergency rooms sometimes.
Context_of_Work	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	The other thing we don't have in the city that a lot of the suburbs have, and it might be a nightmare, is the control of the lights. Where they can [shade?]. They're going on a run, they come up to a corner, that can turn a light green for them. We don't have that in the city because-- still on the high-rise, you have four engines, four trucks, a squad, a command van, four battalion chiefs. You have everybody going to the same address from different areas, so that would be a nightmare, especially with traffic downtown. And that's where most of the high-rises are, so I could see why they don't have that.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	U	Field Responder	56-65	31-40	Male	FF-U-026	We have a full range of meters, from the radiation meters to four gas meters, two meters that do-- the hazmat rig has meters that identify a product specifically, it just takes a while to set up and that. We have more radios than anybody else. Everybody at my company has a radio and we have three TIC cameras so we split up in three different-- in the high-rise, will go three different places. I mean, we have the-- like I said, we monitor the marine radio on a dive run or a boat run. We have a lot of different kinds of meters, more or less.
Context_of_Work	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	My primary function was new recruit, candidate training. So I oversaw-- from the instructor standpoint, I recruited instructors, brought them in-house here to the fire academy, and then kind of helped develop a three-month program for them because they spend the first three months of their recruiting phase becoming certified EMTs. And then they come here to this building, and then we teach them three months of fire training, so I kind of oversaw that for the last seven recruiting classes.
Context_of_Work	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	... So I will be a city-wide relief battalion chief until I bid for and land on a permanent position. So I will relieve other chiefs that are on a day off, so to speak, or on a furlough to go on vacation. So there's a big group of us at every rank that fill in. And so I'll do that at the chief level for a little while until I find a spot.
Context_of_Work	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	.... If you were hired before then, you can be a firefighter without being an EMT, but we're kind of slowly phasing that out, where you're always going to at least be an EMT. And now we have so many paramedics now that they either-- we have the ability on our department to come on as just a single-role paramedic and then cross over and become a firefighter paramedic. Whereas in the suburban area, it's mostly firefighter paramedics...But about 80% of our calls are EMS-related, so a new recruit or your standard firefighter working in a firehouse out there every day really has to prepare for that. Because it's everything from calls that we shouldn't go on, for nosebleeds and fevers, and just general not feeling well, to some pretty horrific auto accidents where we kind of combine EMS skills and fire skills somewhat with hydraulic tools and

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								stuff. Yeah. So even though the allure for a young firefighter is to go to fires, they're not as frequent as they used to be due to better alarm systems, more sprinkler buildings.
Context_of_Work	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	Typical tasks would be, there's a physical aspect of it using hand tools. I mean, a standard fire would be an engine company would have hose lines and would be slightly ahead of a truck company and they would try to extinguish as much fire as they can. And truck company guys with a lot of hand tools, and pipe poles, and whatnot, come behind them and pull ceiling, pull walls down, things like that. So there's a lot of-- a regular run-of-the-mill fire would be like that. A lot of physical exertion, some mental. For lack of better words, anguished would probably be too strong of a word, but especially in the younger years where you're a little bit timid and you're not--the thing about fires are it's not like TV or in the movies.
Context_of_Work	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	...Because as a young up-and-comer, I worked with officers who didn't even want to carry them because they didn't want to lose them. We had that going on or they never communicated on the radio. Conditions in the building, just to--there's a lot of this job that would take us a long time to explain. But if I was a lieutenant on a truck, it's a little bit harder for that officer to have accountability for his members because they have tasks that take them away from that officer. Whereas, on an engine company with the hose lead outs and everything, generally, people stay together
Context_of_Work	FF	U	Other Public Safety Personnel	46-55	21-30	Male	FF-U-029	I mean, really, I only have so much accessible to me as far as technology goes, at least at my rank. So if I step out of my car and pull up to a fire and step out-- see, that's another thing is, in [City], a chief officer that runs a fire would immediately leave his vehicle and be in the front of where ever that incident was on foot. In other areas, I know just from watching training films and things, that sometimes that guy stays in his car and that's like a miniature command post, so now he has access to more things. But as soon as I pull up, this is all I have. It's all I have. That, and whatever anybody is transmitting to me that they see that I can't. So

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								it's really all I have as far as technology goes. Now, do I have access to my cell phone? I do. So in a pinch, if this malfunctions, the best that I can do-- I can't really contact anybody at the scene that's working, but I can call the firearm office, maybe tell them, "I'm having radio problems. I'm going to secure another radio from somebody else, so I'll get that to you in a minute." I may do something like that. So in a pinch, I could use my cell phone, definitely. Definitely don't go anywhere without it.
Context_of_Work	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	[Job title]
Context_of_Work	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	[Job title].
Context_of_Work	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	My day usually begins about 6 a.m. with checking emails and text messages and call logs.
Context_of_Work	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	We house the ambulances and have the paramedics but we're pretty much joint. If any of their staff are like in [name] and there's a call in [name] they'll go right to the scene and join.
Context_of_Work	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	So our minimum staffing is two so there would be two full time people on duty and like a CPR call that's not enough and then a structure fire you know you need a minimum of 21 to really fight a real structure fire safely and so we rely on the volunteers to back us up.
Context_of_Work	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Being a very active community we do a lot of back country rescue and communications again is one of our biggest issues so we kind of look at different ways that we can improve communications and have backup communications for those responders that are going out into the field because especially during winter with avalanches there's so many additional hazards that the responders face out there added on top of it so what we've been using between the radios, hand radio we've also started using [name] units which are similar to the spot units for

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								tracking of our members and our teams.
Context_of_Work	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Well what happens to me is you know I'm supposed to be in charge of the incident so if I'm tied up setting up the communication links and stuff it takes away from events so we're trying to get more people trained, more people interested and trained up on it is really important and it's not one of those things where you can do it twice a year to be proficient you have to do it a lot.
Context_of_Work	FF	R	Supervising Field Responder	Not specified	Not specified	Male	FF-R-046	Yeah so it's again it's one of those issues that we have to evaluate what kind of threat level we are at in our local communities before we'll actually send a resource that's going to go national and once we get a call requesting a resource I'll evaluate it, I'll see what we have for personnel that are available and we'll send out an active 911 scene who is interested in going and so once we kind of do our if we feel that it's okay to go then we'll send resources out. We typically we have some members that are retired but they want to be more involved in the wild land side of things so we do send single resources out a fair amount.
Context_of_Work	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	... We've had a lot beyond for a week or a month and then just leave town and so once they have their training, driving, training and stuff like that and some of that is slacked because of time a lot of it though is I guess me knowing the people and common sense. I mean we're pretty small, pretty local I know whether a guy is going to go out there and hurt himself or not hurt himself you know to an extent. That's not by the laws of great relations but they you know get the call and then once I release them or feel comfortable with them then they'll go and fight fires.
Context_of_Work	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	I think it would be probably easier if we had a paid position and the chief would be it you know. In my thoughts you know even just an older gentleman that's retired take the chief's position he don't have to go fight fires or nothing but take care of all the paperwork, all the dealings and maybe have a command vehicle to where he could go and IC the fire or the situation, wreck or whatever.
Context_of_Work	FF	R	Supervising	36-45	11-20	Male	FF-R-047	... Wrecks are very slim which I think the Lord for that. We have had I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					mean a few but not as much as like [name] would where you got [name] a major highway running through there. Most of our fires are grass fires or controlled burns that got out of control luckily. We have had a few structure fires but knock on wood not very many of them and we also have storm spotting calls you know. If the weather gets bad they'll call us to go spot for tornadoes or whatever.
Context_of_Work	FF	R	Supervising Field Responder	36-45	11-20	Male	FF-R-047	Or a retired guy that you know still had a lot of life, a lot of heart left in him that like I said could just take care of all the government stuff maybe was good at writing grants doing stuff like that you know run the meetings just keep all the training up you know that we need to do annually or every two years and all that you know and possibly you know like I said kind of IC the fire situations. Medical ain't that big of a deal but fire especially if we have to bring in other departments. I mean you need somebody just sitting there doing nothing observing so that when that other department gets there you can say well I need for you to go on this south side and take care of that fire line or you know it's hard to be the [Job title] and out there fighting fires especially if you're on the back of the truck.
Context_of_Work	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Basically on the safety side of it if we're on scene I make sure all of the guys are and gals are safe like they're decked out in what they need to be decked out in. Before they go I will help with the scene size up and make sure the scene is safe to approach when I'm on scene with our crew. On the training side pardon me I help organize the training when it becomes available and try to get our crew to take training and stay up to the date on training which can be difficult at times.
Context_of_Work	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Currently we have just switched to an app on our phones on our smartphones that's called Who's Responding. With it, it will the app will come across our tone for our department will go out and then it will give us the information for the call, it will be followed by a text through text messaging through that system we can either say we're responding to the scene if we're closer than where we're at to the scene or we can respond to our department or we can stand down and in doing that

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								through the app it goes directly to everybody on the department so everybody knows who is showing up and it also goes to dispatch and they can know okay we have a firefighter or EMR that is in route either to the station or to the scene.
Context_of_Work	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Most of our incidents are wild lands/grass fires stuff like that. You know field fires, brush stuff like that hay bales. Then the next one would probably be car accidents. We do respond with those and then on down to structure.
Context_of_Work	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Yes. Here at the department we are an [Job title], [Job title]. What we are is basically a step below and [Job title]. We do do medical calls and assist with the we assist the patient until the ambulance shows up and then we assist the [Job title] and the [Job title] so yes we are not everybody on the department is medical. It's just kind of if you want to be I personally am an [Job title]. I've been an [Job title] for 9 years. Most of the guys and girls on our department are both fire and medical.
Context_of_Work	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Yes, yes. People not having the radios on you know and say you know say they don't have well I guess there's like say we have a guy on the truck, inside the truck driving, we have a firefighter on the back sometimes communication between them you know say our headsets don't work because here at the department at [Town] we don't have a headset for the guy on the back that communicates with the guy in the front and so the guy on the back can't I mean he's not going to hear the radio, he's not going to be able to talk because you know he's in full gear, he's got engine running, he's got a pump running back here, he's not going to hear that so we don't have those headsets.
Context_of_Work	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Yeah well we had a [Event] just west of town here and I was first on the scene in my personal pickup because it was between my house and the station. I knew we had guys in route I didn't know how long. I had a guy I'm not trying to be graphic here but he was basically it chopped the cab off the semi-truck. We're talking an oil field tanker truck and the truck was on its side and his legs were pinned underneath the dash and he was literally dangling, screaming. I'm there helping there was 2

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								bystanders that had called it in and that's a helpless feeling.
Context_of_Work	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	You got a helpless feeling that you can't help you can't do anything. I mean yeah we can support and kind of you know our EMR's can you know get the guy stabilized. Yes the guy survived I mean we may have flighted him out and he did survive but I mean that's seconds, seconds matter you know and what makes it harder in this area I didn't know him personally but when you're on a scene and it's involving your friends who people that you know and treat like family it makes it harder and everybody knows everybody you know kind of a deal in these small towns so we want our stuff to work.
Context_of_Work	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	I mean ours are getting we're able to still do them but I don't know the price wise on those but I know they're expensive to replace and I know ours are getting old you know I mean because I can't afford to have a guy in a building in a structure and that thing messes up because then we've got to focus all of our attention on our firefighter and that's what it's going to be.
Context_of_Work	FF	R	Other Public Safety Personnel	26-35	6-10	Male	FF-R-048	Well first off you get them here and second off you keep them here. I mean even a paid department you know just the regulations to drive these trucks if we were in [city] they ain't a person on this fire department that would be qualified because the amount of driving, training they require to do that. Now do I make sure my guys are safe before they go? Yes and I have a rule if they don't know how to drive it it's grass it's a house as long as nobody your safety is first. Leave the truck. Wait on somebody else to get here don't drive it. You know that's the thing you know if you don't know don't go in but it's just you know the amount of time it takes.
Context_of_Work	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	As of right now I'm a sergeant with the Metro [name] Fire Department.
Context_of_Work	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	Initially your base job responsibility is fire suppression, preservational life and property and our motto and our code of ethics what we take our oath for is to preservational life and property. To elaborate on that we do

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								a lot of fire preventive safety measures. It's not that we want things to burn down as firefighters we just want to be there when they do to help people but a big part of our job now does lie in fire prevention. That's the first line of defense to save lives and property.
Context_of_Work	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	... You have to be an advocate for people that are less fortunate, people that are renting homes is a good example. You have to educate them on being update on their fire safety and things of that nature and if that means installing smoke alarm for them or giving them directions on where to find a good smoke alarm or just letting them know that you know as a renter your landlord is responsible for this, that and the other and we run into a lot of people that have not so nice landlords and we have to actually become an advocate for those people that live there. We're not really law enforcement but we can be code enforcement and that's where our not patient advocate but being advocates for our citizens our customers.
Context_of_Work	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	We come into work, we do a pass along from our outgoing shift find out if there's anything wrong with the truck, if there's anything that needs to be taken care of that day and then we talk a little bit of junk to each other, pick at each other a little bit, talk about the fire that they got the shift before that we're probably not going to get that shift or whatever and we start with our daily duties which will consist of a truck check to begin with, we check our apparatus, we make sure it's in good working order all the equipment on it is in good working order that includes you know make sure it starts, it's able to pump water, lights, communications and then from there pretty much we have set dates throughout the week to where we take care of what we call our station duties.
Context_of_Work	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	We have yard day, we run it essentially like a household and then on top of those duties different types of the year we handle details such as hydrant maintenance, we handle what we call pre-plan and building familiarizations. We go out and we check local businesses. It's not really an inspection it's more of an investigation for us to see what types of

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								dangers we may encounter in responding to these certain types of businesses. While we're there though that's where we do fall into education role and an advocate role.
Context_of_Work	FF	R	Field Responder	36-45	21-30	Male	FF-R-049	... So you ask people to go out raise money for barbeques, respond to calls in the middle of the night and then you say oh you need to go take some classes too. I mean there are some people in this county that I don't know why they don't do it professionally because they take it very seriously.
Context_of_Work	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] I'd say the same more so flexible with EMS stuff is the major part of what we do right now so EMS is taking over everything.
Context_of_Work	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] You got to be able to adapt with anything literally like one call in the morning could be a baby with SIDS, the next call could be waking up with somebody grandma fell. You got to be able to mentally handle it all.
Context_of_Work	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 2] As far as the daily routine goes I'd have to say the station part of it the regular duties that we do it's all the stuff in between the emergency calls is where you definitely have to be flexible so yes there is routine to it.
Context_of_Work	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Yeah we have a system called Voice net. Voice net is pretty much attached to our radio communication center. As soon as we get a call they will tone out pretty much give you a certain buzz to say there's a fire, there's a medical alarm and it will say exactly who is being dispatched.
Context_of_Work	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] My experience for the most part once your duties for your station duties for the day are done and your day becomes yours so some guys are studying, other guys maybe working out, there may even be some training involved or the station officer may get the whole crew together and talking some things out or we're actually physically doing some type of training, putting our hands on the equipment or talking about that equipment and like I said that day pretty much after 5 p.m. then it becomes your time.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Yes oh yes. Just like you said they eat together, going to the grocery store is a big thing, if you need a rec center, the station I used to go to the rec center a lot work out chill out with the community. It really depends on where you're at. Some people are located in the community, some are located on the outskirts more in the industrial areas.
Context_of_Work	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] Kind of everybody kind of welcomes us over there. Very diverse all races, types of life, you kind of get welcomed with open arms around here being a firefighter.
Context_of_Work	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] That is the life of a firefighter. Getting prepared for the worst that's the best way to put it.
Context_of_Work	FF	U	Field Responder	Not specified	Not specified	Male	FF-U-050	[speaker 3] All involved. Any way you can get your word across is the best way.
Context_of_Work	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	My responsibilities are to make sure that one) the department is ready to respond to various incidents, two) coordinate those on scene, three) make sure that they receive the training necessary to complete that function and oversee some of the day to day tasks that the... personnel who are on duty do. Currently I'm responsible for all that and a lot more. I'm the number two in line of, in the [Job title] right now.
Context_of_Work	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	[Laughing]. It can be quite a few of them. Sometimes it's fulfilling and sometimes it's aggravating. Because of where we are... you... you have to be a jack of all trades. So we do fire, we do EMS, we investigate, we have an investigations division and inspections division that do those tasks. So it can be... when you wear a lot of hats it can be somewhat frustrating trying to get them all done and sometimes the needs in one place od not necessarily satisfy the needs in others in terms of what you have to do it with you're the manpower you have to do it with.
Context_of_Work	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Somewhat. I mean I travel for my regular job which is investigating fires in the private sector. So my schedule is different. Right now I'm trying to make it a little more regular but you know I always try to do that but it doesn't always happen I'm at the mercy of whoever's paying me. But there are things that you regularly deal with. You deal with personnel

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								issues. You deal with making sure that the training is done. You make sure that the training is focused on where you see areas that need improvement. And then you work on making sure that the equipment is where it's supposed to be and when it's supposed to be there and that it's been maintained properly which we have a mechanic that's full time.
Context_of_Work	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	He does that. Other things are taken care of by other people. So yeah, there's a routine. You deal with each piece--your priorities may be different every day but the routine is about the same.
Context_of_Work	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	And you're putting out fires, you know using the air quotes around "fires" but you may not always be putting out fires. We run a lot of medical calls. We do all types of different rescues type of things so. We carry a vast... we carry a variety of equipment to deal with a lot of different situations.
Context_of_Work	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Partly. We have the river out there so we've had to do things related to the river over the years. We've, you know, we did the bread and butter house and grass and vehicle fires and all of that but over the years we've gone and taken people off of radio antennas or towers that have had issues. We've dealt with trench rescue. You know we do a lot of vehicle extrication. But we train for high angle, we train for collapse, we train for all kind of other things. We have members on [Organization] [phonetic] teams.
Context_of_Work	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	It is all radio dispatch and it's all--I mean if I have somebody somewhere I can get them to like email it to me or something using either getting it on my iPhone or whatever 'cause we all have our own technology but in terms of having the technology to bring in the information available. I mean I can call--if I'm outside this building, if I'm dealing with a suspect on an arson or a car that we're investigating or whatever I can get any information I want sent to me over the radio and then they'll copy it to the CAD and we get that later on. But in terms of having something printed in front of you that you can sit there and walk up and say, okay, when she reads me--if she gives me a VIN which is sometimes the only way I can identify a car I've got to go sit and write it down then go take it

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								back or I can read it to her and she can say, yeah, that's what it is.
Context_of_Work	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	They'll have a few over there but in terms of me dialing into the [city] Fire Department, I have to go to my old radio that I'm not always carrying 'cause they're on that kind of system. So. The biggest problem with all of this is money.
Context_of_Work	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Not understanding they're still building the call. You know if you get the text message and you're that worried, go get in the truck and wait for them, you know to tell you to go. But... used to the Active 911 would hit first. We'd get an Active 911, it tells you what it is, where it's at, same thing the text message shows but Active 911 actually builds you a map to where--from where you're at to it. It's helpful. You know all of those technologies, they're--one's extreme, you know one does a whole lot more for you, one does a little less. I can, on Active 911 I can hit a button and then I'm going.
Context_of_Work	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	And we've seen that. Before you would get hired--before our dispatchers were just jailers. You know? Whoever was working in the jail was who dispatched us and what information you got, our biggest problem right now is we probably need a third one in there all the time because if you get a good call going, you have somebody on the phone and somebody trying to talk to three agencies at a time. And to you get to where one takes priority where maybe it shouldn't be at that time. But it's just the nature of it. So if you had one person on the phone, one person can do fire and EMS, one person is going to do law enforcement 'cause when law enforcement gets there they're wanting to start their, you know, if it's a wreck they want to start getting their information run so they can get their report done and getting the wreckers coming.
Context_of_Work	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	But we... you know, our biggest problem is limited number of people. But we have a large area, spread out, without a water system that covers the entire thing. So we have to bring a lot of our water to fires. So that's what we deal with here.
Context_of_Work	FF	R	Supervising	46-55	21-30	Male	FF-R-051	That--we're either running, going to wrecks to either see if somebody

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Field Responder					needs to be cut our or render first aid and assist EMS or we're going to just straight up first aid calls.
Context_of_Work	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	It's... not difficult with the 700 radio. It's a matter of me turning a knob. And I can talk to any one of them that's coming to the scene with--I mean I regularly do it. I should get the call and just turn the knob all the way to response coord and we should all be there. And I'm--since that's on my mind, I'm going to talk to [Name] about prompting them to do it. To tell them to go do it.
Context_of_Work	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	I would say that... my job, like a deputy's job, like an EMS person's job, we're all the same. When everybody else's world get tossed up and down and shook up, you know or Humpty Dumpty falls, they expect us to put Humpty Dumpty back together again. And one of the ways you do that is with the information that you need or getting the people that you need there and know what's going on coming in and the ability to talk to each other is the only way that that happens. You know it's a whole lot better if you have a guy coming in whether it's a deputy going to somebody's hose on a domestic call or if you can have a picture of the front of the house, a picture of the driveway, it's easier to fine. If you can have a layout of the house or a general idea of how the house is laid out or a building or a school or a church or whatever you know where the pitfalls are.
Context_of_Work	FF	R	Supervising Field Responder	46-55	21-30	Male	FF-R-051	Don't have to go back there 2 weeks later and say, hey, you know we're checking people's smoke detectors. Ask them. Put them up before you leave. I don't care if it's 2:00 o'clock In the morning, they're already up. They--so.
Context_of_Work	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	As a captain in the fire service basically you're a frontline supervisor. You still fight fire but you also supervise people at the same time whereas when you move up in the ranks to, you know, assistant chief of deputy chief or something you're more of just strictly supervision and not as much hands on.
Context_of_Work	FF	R	Field	36-45	21-30	Male	FF-R-052	Go to work, you never know what you're going to do while you're at work.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					It depends on what the caller on the other side of the end of the line, what kind of problem or issue they have, depends on what you're going to do, you know, for that time. So it's not like I work in an office and I sit down and I do the same thing day in and day out. It's basically the same... work but it's always going to be in different locations and just different things like that.
Context_of_Work	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	Well when the--outside of running emergency calls one of the main important things that we do each and every day is to check our equipment to make sure it's, you know, in working order, make sure it's clean, presentable, if we have to go out. We don't want to go to your house in a dirty fire truck. It's all about the image. Not all about the image. But the image has a lot to do with it.
Context_of_Work	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	So but, yes, we have certain things that we do, certain days of the week. But like our number one priority is emergency calls. Next to that is to ensure ourselves that the equipment we have is in proper working condition. And then from there it's usually just other tasks and then, you know, never know really what's going to come about during the--during your shift that you'll have to deal with whatever but in the summertime we cut grass in the evenings. We clean our own toilets, restock our own trash bags and take out the--we don't have a maid, you know, that comes in and does it for us. We are, you know, our maid service.
Context_of_Work	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	So those things are routine that we typically do every day, sweep, mop, basic kind of house cleaning type stuff, wash clothes if they're dirty. Wash trucks if they're dirty. Things like that.
Context_of_Work	FF	R	Field Responder	36-45	21-30	Male	FF-R-052	Until just within the last probably month or so, I had only been over here one other time and that was to do an inspection with the fire department where we come in and check for life and safety code type stuff. Since then I've been over here several other times. But I don't... don't really know the dispatchers or the people that work over here outside of them calling me on the radio and telling me where I need to go or whatever. But I'm starting to get to know some of them personally. And you know we spend a little bit of time together. And there's one guy that works

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								here that I think he's also a volunteer with us just recently became a volunteer but he comes over and hangs out in the evenings.
Context_of_Work	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S2: Well, we provide medical first aid, first responders [indiscernible] EMTs or paramedics and we are [Job title] so we fight fire. [Cross talk] Oh we do a lot of public events.
Context_of_Work	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S3: Run safety checks where we will check your fire alarms and do home inspections of your fireplace and stuff.
Context_of_Work	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S4: And we do, once a year for ISO you know what ISO is, International Services Organization?
Context_of_Work	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S4: For ISO we have to check hydrants in our first response area to know where they are. In certain areas of the county we are required to test pressures and flush them, some utility districts won't let us touch them but we still have to identify where they are and so we do that once a year and what else we do, we call it pre-incident planning. We visit all the commercial structures in our first response area and we plan for a fire to happen; we get contact information, we know where the utility shutoffs, are we know where all the exit's are - if we have to go inside, we know how to get out. We do that kind of pre-incident planning thing; we do that once a year as well, plus all other things that he said --.
Context_of_Work	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S4: But it helps us understand how we can be better if we talk about it that kind of thing. After the shift change we are required to do a daily truck check, we have to go through the entire truck, check the lights, check the equipment, make sure the pump can works, the pump fires, all of our breathing apparatus and all of our hand tools and things that are supposed to be there in working condition and be ready for the next incident. After that, of course, we are required to respond to the calls. We do reports on those every time we run a call. We do any of those daily projects we have told you about, whether it is a home safety check or that we do a pre-planned project or other project which we are required to get those done there in a day. And they we are supposed to have two hours of training. Some sort of training every day, we have to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								always stay educated on you know where do we pull the ladder off the truck or pull the hose off the truck or sit in front of a YouTube video and learn from other fire departments, what they have done what worked and what didn't work. We do some sort of training every day about two hours and once we usually get that done, all we do is kind of sit back and wait for the next emergency; we are here 24 hours.
Context_of_Work	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-053	S4: Well, both. If we are here at the station they send a certain tone out through their system and activate some alert system here and they give us a preliminary dispatch, an EMS call for a seizure, okay so we get in the truck, we go respond to and then we do a secondary dispatch that tells us it is a seizure with somebody who has history, somebody with epilepsy or it is a febrile seizure for a child or something of that nature, give us a little bit more on the secondary. But the initial dispatch is to get us to the truck and get us on the road and then kind of build this thing.
Context_of_Work	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: See what people don't get nowadays is we just don't go out here and fight these fires; 90% of your calls - 80% to 90% of your calls are just wrecks and EMS calls.
Context_of_Work	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: Yes, if it was like with injuries, but if it is like we call a 45 which is a non-injury, then the cops just take care of that. But if there is like a spill, hazardous spill, then we obviously go to that.
Context_of_Work	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S3: Well we, one of the first things we do to make sure everything is cleaned up you know, keep the trash cans emptied and you know just keep the place looking nice, and then after that we just sort of on our own until we get a call.
Context_of_Work	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S3: Yeah, wash trucks.
Context_of_Work	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S4: Keep up with your equipment, make sure it is you know obviously up-to-date and then like make sure it is working properly, because you don't want to get here and you are on a call and something goes out and you don't about it.
Context_of_Work	FF	R	Field	Not	Not	Male	FF-R-054	S3: And then sometimes a wreck we will have 10 or 20, sometimes five

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder	specified	specified			or six. It depends on how bad it is, so lot of people come from over east.
Context_of_Work	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: Yeah we fill out reports on this computer and it keeps up with our calls of per year pretty much, the percentage of each person like say [Name] he went on what how many percentage you go on last year?
Context_of_Work	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S3: We got two zones, we got a zone here and we got a zone down there. I live in this zone up here, so if we got something that happens down that zone down there then I am supposed to just come here. Same thing with people down in zone 2, if we got in the zone 1, they are supposed to come here.
Context_of_Work	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: Even the dam, we preplan the dam.
Context_of_Work	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: [indiscernible] two biggest places around here, other than your schools I mean we also have to preplan the schools too.
Context_of_Work	FF	R	Field Responder	Not specified	Not specified	Male	FF-R-054	S2: I mean it is like this ladder back here it is an older version of it. See, on that one it puts tank and gear and all that stuff so it is actually get to start going you got to pull these pumps and stuff but you go here to the scenario all you do is just press a button and it doesnt move; it regenerates, it recycles.
Context_of_Work	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	So I will go to our other station and we will check off trucks
Context_of_Work	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	Or we will fill them up. We will pull all the equipment out, make sure it all work because when you get on scene, sometimes stuff don't work like it is supposed to because we are not a paid department so try to keep track of as much as we can because it is all grants, that is all that pays for us is grants and money out of our pockets and we say, one of us wants to buy a bunch of tools, you know, a couple of hundred hours we will put it in and buy the tools that we need; some people will.
Context_of_Work	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	So, one of the weekends I would be over there, I wouldn't be responding over here, but during the week I can respond here. But we got a couple of guys over right now, they are learning stuff and I am like, ah how do

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								you learn it? Oh- it's over there. You know --
Context_of_Work	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	A lot of big departments, all the black helmets are the fire fighters, the red are the officers and the yellow is probationary and some departments I think New York does just a probationary shield on the front.
Context_of_Work	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	Well, we get one guy that is assigned that particular job of looking for the right price and how many we are going to need and then he brings it back to the table, you know, to the meeting and we will talk about it, how much is it going to cost, what is it going to be benefit for us, is it going to be a good investment and then we will vote on it.
Context_of_Work	FF	R	Field Responder	46-55	5 or less	Male	FF-R-055	So, but we usually assign one guy. He is on it right now, looking at getting a grant to purchase new radios to get digital because we are -- a lot of the departments right now are tired of the scanner people. We get these people on scanners and they blow Facebook up and then there is rumors everywhere and that's destroying everything -- to me.
Context_of_Work	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	I'm second-in-command at the police department. I manage all of the ordering, all of the technology, all of our security's aspects, our training, our fleet management, the overall function of the day-to-day operations of the department.
Context_of_Work	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	It varies some days. Typically, in my position, I come to work and have, typically, a meeting with the chief sometime in the morning. Then I get started on any projects I have going, any obligations I have to do. Sometimes, I'm obligated to cover a shift and work still on the patrol side because somebody's out or something like that. And then, there's kind of different things as they come up throughout the day. So there's never really a set routine, like I'm always going to do this, this, and this. This kind of varies on-- what I'm going to do-- what's going on during the day depends upon what I have to do during the day.
Context_of_Work	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	Typically, they arrive to work, and then they get started. They brief in the morning or in the afternoon, whichever shift they work. They have what we call pass down or shift briefing. Each officer's a little different, but

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they'll get in their cars, and they'll go start patrolling. They'll go start traffic enforcement, things like that. During the school year, in the mornings at 7 o'clock to 8 o'clock, we patrol the school zones heavier. We stay around the school zone areas and stuff like that, make sure people are slowing down. And then throughout the day, this kind varies on call volume, and what's happening throughout the day. Day shift is different from night shift. You have typically more calls during the daytime than you do at nighttime.
Context_of_Work	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	Yeah. Typically, there's two to three that work on a shift. So then they'll communicate back and forth, or they'll listen to the radio and say, "Okay. Well, one's over here making the traffic stop. So I'll go over here in this area and be a [substitute?]."
Context_of_Work	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	Yeah, just maintaining the overall functionality of the department, I guess, is my main task. Right? The chief handles the meetings, and going before city council, and stuff like that. And then my job is kind of the implementation and providing him with ideas of can we look at this as a next step, or can we look at this for the next step, and stuff. And then my job's kind of the implementation process and then the overall, like I said, functionality of the department.
Context_of_Work	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	The Sheriff's Department dispatches for us, and so 911 calls and calls go into them, and then they disseminate it to the officers who are working.
Context_of_Work	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	No, because we're a small area so it's easier to learn. When you get into the county, the officers, like the deputies, they need navigation more than we do. But I can tell you where all of our streets are and stuff like that, so it's not as intricate--
Context_of_Work	LE	R	Supervising Field Responder	26-35	11-20	Male	LE-R-001	All of the cases. All the cases we have to do, we have to send to court. If we get a-- we don't do any redaction unless it's an open records request, and then somebody who's going to have to redact it from that aspect. And then we send it to [Job title], and they send it to our attorneys to figure out if we're going to release it or not.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	When someone calls because they have an emergency, I respond to their house or wherever they are to help solve their problem, I guess. And I also work in non-emergency situations with crime prevention.
Context_of_Work	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	On patrol, just in general I worked at night. So we would do a lot of business checks, pulling in and making a presence, checking the doors to make sure they're locked and secured. We would respond to a lot of disturbances between families and things like that mostly at night. And also traffic enforcement, speed enforcement, driving while intoxicated enforcement is a big thing. Basically looking for anybody that's a danger to everybody else on the road.
Context_of_Work	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	Yes, because we're assigned to the city but it's generally every officer's goal to hit every part of the city in their shift. Every street, every corner, those [inaudible].
Context_of_Work	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	Right. You don't want to drive by the same business and check the same business at 8 o'clock every night. You kind of work for yourself. You make sure that you yourself made all of the stops in the city that you need to and checked all the businesses, and your partner does the same. And in between is when all the calls and the traffic stops and things like that happen.
Context_of_Work	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	Well, my partner, I worked with him long enough where I kind of knew where he liked to hang out and where he liked to go check, and I'm sure that he learned my behaviors too. So you really just-- it's quite random. There's some of us that have a routine. You start here and you end here. But him and I, we kind of just based it off of, "Hey, have you been to [City] tonight?" which is a neighborhood way down south, and, "Oh yeah, I went there a couple hours ago." So you know yourself, "Okay, maybe I should go through there."
Context_of_Work	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	Working night shift, like I said, a lot of disturbances, domestics. A lot of alarm calls where businesses are either closing up shop or something happens in the night. A lot of suspicious people calls. Somebody might be driving and say, "That guy looks weird," or that kind of thing.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	I come from the individuals that like to do a lot of things on their own. I don't like to bother dispatch. They're busy enough, and I know that because I've been in that position. So if I can run driver's licenses and look up call history and do my own research on my own computer, I'm happy with that. But their CAD system that they use up there, to enter in 911 calls and things like that, is not linked at all to our computers. So what they see up there, I can't see. And it was the opposite from where I came from. Where I came from in [County], you can look at your computer and see that there was a call holding. And you might be close to it, and you can pick it, and assign yourself and put yourself on the scene, and all those things. And I think that being-- it helps them in dispatch, especially, when there's only two of them up in that dispatch. And on a Friday night or something, they're busy.
Context_of_Work	LE	R	Field Responder	18-25	5 or less	Female	LE-R-002	Oh, yeah. We have a program here. Since I'm here in the office because I'm pregnant, we have a program here where we have to organize all of the old reports and stuff from the 1980s and everybody used to handwrite everything back then and all that stuff. And it's definitely inconvenient now for us because I can't read some of their handwriting or the things like that, so.
Context_of_Work	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	So I am a police officer for the [City] Police Department here in [State]. However, I'm currently assigned to the recruiting unit. And I've been in the recruiting unit for four years now, so I'm a recruiter.
Context_of_Work	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	I answered calls for service around the city of [City] and [City], [State] before here, being proactive in my free time, running traffic stops, driving around neighborhoods looking for suspicious activity.
Context_of_Work	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Yeah. So when somebody calls 911, it goes to our dispatcher, and the dispatcher puts it out over our laptop computers. And so we have a queue of calls. On a typical day, there's a queue waiting, and they're listed by priority from a hotshot call or something that needs to be addressed right away all the way to a barking dog, which tends to kind of hold for a little while. So if there's a lot of calls holding, you just pick whichever call you want to go in priority. And then if there's no calls

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								holding, you're free to do what you want so.
Context_of_Work	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	Sort of. They're by region. However, if it's like an officer needs assistance, like an officer's in trouble, or if it's something big like shots fired, or a school shooting, or bank robbery, then it's just an all-out everybody respond. Typically, most calls like family violence calls, crashes, stuff like that, that's just region-based. If we're on the dividing line, like on this side is my sector and that side's another sector, I won't know what's going on over there unless I actually flip to their radio.
Context_of_Work	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	...So I travel. [That's always?] a month. We travel to military bases, colleges, and just all sorts of [the setting?] all over the country.
Context_of_Work	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	house, so I pull the call up on the computer, and I kind of read the notes on it to see what's going on, see if there's any-- if the address has a history of past false alarms. If I pull up the call history and it looks like this alarm has gone off 10 times in the past year, well, then that kind of puts me a little more IDs, and it's probably a false alarm. Whereas if it's a brand new house, never had a history of false alarms before, we'll maybe need something a little more legit. So I kind of-- I try to get a sense of what I'm getting into on my way over there. So I look at the call history. I look at where it's at, the neighborhood and the location-- like I said, how I'm going to get there, if I know-- if there's a back side I could take as opposed to having to go through a major thorough fair depending on the time of day or whatever. And then, once I get there and throw it in park, I'd mess with the computer until the call's done.
Context_of_Work	LE	U	Field Responder	36-45	11-20	Male	LE-U-003	On those interagency calls, every now and then, I will get one. Maybe if it's a bank robbery, and there's other agencies in the neighborhood, it can be overwhelming because once you start introducing different agencies other than [City] or even specialized units, because the specialized units in [City] operate on different channels, as well. So you'd have a massive miscommunication because you have these different entities talking on their own separate channels. Supposedly, the dispatcher is supposed to be connecting everybody, but rarely does that happen. So it makes for a big breakdown in communication, which causes confusion and adds

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								stress to the situation.
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	Right now, my job is I work in the technology unit for [City] Police Department. Basically, anything technology-related with law enforcement. We research; test; work on implementation, and troubleshooting, and maintenance, and all that fun stuff.
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	...Take calls. Anytime someone calls 911, we respond. Any downtime, we're running traffic. Basically, if somebody's breaking the law in a vehicle, we pull them over, and give them a ticket, or go from there something else happens. Working nights, there's very little foot traffic. So anyone on the streets at three in the morning, if they give us a reason to stop, we go stop and talk to them, and go from there. Take people to jail. Help people. I was a mental health officer so I would work with that community and get them help in the ways that they needed help. So a little bit of everything. A lot of hats.
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	As of right now, like I said, it's different from patrol. A typical day is just showing up in the office, answering emails. If there's research to be done on different technologies, I'll go in and do my research. We'll do demos with different companies trying to come in and show us their product. We have weekly meetings with maintenance for all the projects that we have with the-- I work on different video stuff, so the videos that are in our cars, we have body cameras coming out, that kind of thing. So emails, meetings, going and demoing different products, research and, yeah, trust me it's fun at times. It doesn't sound very fun, but yeah [laughter].
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	Definitely. A lot of times we're liaisons between our tech people and the officers themselves. If they have a problem, they'll come to us. They won't go straight to the IT Department. They'll say, "Hey, this is what's happening." 50% of the time we can fix it for them. The other 50% we have to get the IT specialists involved. So, yeah, we're definitely the in-between for the patrol officers. What we're doing is for them, to make their lives easier in every single way possible. So their feedback is incredibly important. So, yeah, talking to them on a regular basis is

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								pretty important.
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	Personally, my primary tasks are, like I said, just technology based: researching, and implementing, and making everyone else's lives easier if I can.
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	I mean, you can go on for a while. There are directed patrols. If someone in the neighborhood has a ongoing issue with, oh, speeding in the neighborhood, and we'd see cars regularly speeding, they'll call. And then a directed patrol will be set up to where an officer is assigned, or decides to assign to it, and just watches that neighborhood for an hour or two. And pulls people over for speeding or just sits there and that usually deters speeding in itself. Same thing with graffiti and you can kind of get the idea. If there's a homeless problem behind a business, and they want us to go check that out, we go do that kind of thing. Other than that, most patrol officers are call-driven, waiting for 911 calls to come in. And we're such a busy city, with the resources that we have, it's basically call-driven. We're going call-to-call, and then downtime is either spent running traffic, basically just means pulling people over.
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	Definitely, I would say 90% of the calls we go on that, when we're interacting with a person, that a report has to be written to document why you're there, whether you're making an arrest or not. Whether that's a quick "I stopped this person for this and I gave them a warning" or it's a X-amount-paragraph-long report of what happened.
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	Yeah, that's in the car. Normally, you'll take a call, and you'll go sit in your car, and write up the report, and however long that takes you.
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	I mean, it depends on what you're doing. There are paper copies for family violence. If you take a report for family violence, a lot of times you have to fill out a family violence victim statement form, is basically what it's called. And then, that gets put in with your arrest affidavit, and it gets sent to an attorney, the district attorney's. So there is definitely some paperwork still. Crash reports still have paperwork. It's getting less because it's getting more digital--

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	It's helpful if your buddy's writing a report on a suspect, and they want you to send them over some information, like a supplement. So we go to a call together, and it's a somewhat involved call. He's taking the main report. I'm writing a supplement to that report of my interaction with whomever I talk to. I'll write up myself. And as opposed to saying, "Hey, this is what I did," and just talking to him, and then he has to remember all that, I'll write it up, send it to him, and he can copy and paste it.
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	If dispatch is busy for whatever reason, or if we don't want to tie up the radio, sometimes if we're going to a call that we know a suspect, or if shift mate's going to a call that we know the suspect, I'll run his warrant checks and then I'll send him the warrant checks. Say, "Hey, this what this guy has. He has an active warrant," and he'll just have that right on his computer. So probably the second-most used form of communication. Third would be probably the cell phone. Whether you're calling your supervisor for any reason that you call a supervisor, or just texting your buddy, or calling, or just for advice, or whatever that you don't necessarily want it to be audited. It's right there. So definitely a communication source. Not city-owned, but used.
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	In general, day shift has one shift on. Evening usually has around two. And the night shift usually has one shift on. And each shift has about 10 people. So at any given time, you'll have 10 to 20 people on at a time.
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-004	You can write tickets on your phone. And then, the possibilities are completely endless, so it's just a matter of getting them. And, yeah, I think it would be a huge benefit.
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	I'm assigned a patrol shift. I've currently got eight troops, one vacancy. So technically, I have 9 to 10 bodies. I have direct supervisors in charge of me and when he's not there, then I'm in charge of the shift. So when he is there, I'm on the street with the troops, working with them, solving problems, and working on crime scenes, helping with training. Those types of jobs.
Context_of_Work	LE	U	Field	26-35	6-10	Male	LE-U-005	We'll have a show up thirty minutes prior when the shift first starts, at

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					<p>which point we discuss some of the BOLOs, what we call Be On the Look Outs, for certain events that are happening. See any events that the other troops have worked previously. Sometimes we'll discuss training, sometimes we'll discuss tactics. We've had a call that's been-- that was complicated, dangerous, people make mistakes. We like to debrief those. That's one of my biggest concerns is to make sure we debrief people and learn from our mistakes. So we'll talk about the tactics involved, what we can do better, those types of things. So that's in a 30-minute window, at which point we'll move to starting to check out equipment, which is a task in itself. So it takes about 30 minutes or so. That includes loading up the vehicles, which is a huge fiasco for us because when we start running into technological issues, we've got a lot toys in the car and a lot of those toys don't play nicely with our wireless. So that's a big window when we're off the street tied up for a while. And then we'll hit the street somewhere about 45 minutes to an hour after the start of the day. They'll cruise around. It depends on what I need to get done for the day. I'll either do paperwork or I'll help them out with some hot calls that'll will clear the calls off the board. We'll try to clear everything up. About 30, 45 minutes, by he end of the shift we'll try to cruise back inside and have show down, which is where we offload if we have evidence. If we have extra reports to get done, if someone's got a big case, everyone will kind of jump on it. Some people take some evidence and turn it in to lessen the burden on that individual, and then we just kind of wind down, and then we're done for the day.</p>
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	<p>Yes. For the most part, yes. The city divided into nine sectors. We are assigned to a sector but within a sector, there are four districts. Each officer is assigned to a district. However, depending on how busy they are, they may cross boundaries a little bit. Depending how busy another sector is, the amount may cross into a completely different sector, the system with a hot call or something.</p>
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	<p>Well, proactive allows us to put the people-- to stop the events from happening. So ideally, in a perfect world, we would stop the victims from</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								ever being victims. If we can catch a burglar as he's about to break into a car, if we can catch a burglar in the act of breaking into a car, we still would have a case. We can put them in jail and then the victim would know that at least we caught the bad guy. And then we keep the burglar from being empowered and doing it over and over again. And unfortunately, when you're doing almost completely reactionary type of police work, you never have the time to go out and do those types of things. To catch these people, to stop the crimes from happening before they happen.
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	We could use them-- before I worked here I worked in the unit that did street-level gangs, prostitution, drugs, those types of things, and we would get assigned a specific target, and that target would be somebody who has multiple felony convictions, is currently a burglar, is currently wanted for specific crime, and we would track them via social media. I mean, that was a great tool that we used all the time, because they always hold up guns and they're a convicted felon, obviously they can't have a gun. So that makes it really easy to us to work a case for them. So we use that a lot. And that would be done in an office environment, in that particular case.
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	Most recently, part of this job, I worked robbery as a detective there and I was violent crimes response, so I was more mobile than I was in an office. And to have the ability to do that stuff in the field would be great, because if I was on a search warrant and I wanted more information on the search warrant, obviously I would then go back to a computer.
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-005	So if I've got somebody who was being cooperative with me, but he's not in handcuffs yet. And dispatch comes back and says, "Oh, he's got a felony warrant for stabbing his wife." Well, he just heard of that. Now he's going to run.
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	Okay. So I am an officer with the [City] Police Department. That is my actual title. I'm assigned to the technology unit. Primarily what we do-- our main focus is to handle the acquisition, the training, the implementation of technology for patrol officers. That's our primary

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								mission. Within that, it gets broken down to-- we also do software purchases. We do specialized unit type purchases, whether it's for the air unit and they need a new digital map or-- we also helped start the [City] Regional Intelligence Center so it's just very-- as with everything in the government, you have a focus but you have to be very flexible.
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	Yeah. So I mean, I can answer from my patrol officer perspective. But again, in my role, what I need is, I need to know the last time I got the update or what update of software they're using. What's the hardware associated with it? Things more of a technical nature. Certainly, I do have to take calls. We call it [backroll?]. I go back out to patrol. I work for a week. So for that type of information, I want to know the history of the location. Have we been out there yesterday for a different problem, the same problem? What was that outcome? Was there an assault committed? Did they make threats against officers? If possible, I want to know who I'm going to be dealing with, the last time we dealt with them. Again, what's the history of where I'm going?
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	So we do our best to put that information in our mobile CAD. We certainly have a history of the last time we've been there. There's also bits and pieces in our RMS, in our records management system, which can be a little bit-- it's extra steps to get that information from a patrol environment, from a car. I'd also want to know-- I mean just, again, as a course of business, I'd want to know where my backup is, how long it's going to take for them to get there, for my own safety or maybe it will steer how I respond to a call. That's it right now.
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	I would think both. Certainly, we do get calls on individuals that are known individuals for whatever reason. Maybe it's a warrant service or - I'm just throwing something out there - a parent will call in on their son. So we have the name, we have the date of birth. It would be nice if, instead of me having to again pull over my car so I'm trying to be safe, search all over the databases, if somehow there was a tool to do that for me and return it to me.
Context_of_Work	LE	U	Field	26-35	6-10	Male	LE-U-006	Okay. We use 4G LTE in our cars. We have our own [ATMs?], our own

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					private network on Verizon. That's what our department uses. It goes back to our-- we call it CTech. It's basically our combined dispatch center with fire and EMS, but it goes to our portion of that. We have the ability to query our RMS. We have the ability to look up histories in our CAD calls. We have the ability to run people for wants and warrants. We can also message each other. We have a Toughbook. Panasonic Toughbook is the current model that we're using, but that's always subject to change. It's hard-mounted in the vehicles. An officer can remove it if they need to. So that would be the overview of our CAD portion. But we also have technology to get-- if this is going somewhere else, let me know. But we also have electronic ticketing which is a whole different Windows device. It's a handheld device that we can take up to the violator's window. We actually have another device that's designed to take someone's fingerprints. And then, it queries against our local database. Again, as a beside, we were supposed to hook it up so it queried the TCIC as well, but that never happened
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	We are single officer units, so one per car typically. There's instances whether there's-- we have days where there's a lot of shifts working just by how the schedules fall. There might not be enough cars, so they might double up, but we almost always dispatch two officers. I mean, actually, we do dispatch two officers every call unless an officer for whatever reason says, "I'm code four. I do not need additional backup at all."
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	--that was viewed as a way to teach me how to be a cop without being reliant on technology. So at that time, when our CAD went down due to maintenance or an unplanned outage-- what's a fancy way of saying crashed? It was like I could still do my job and it didn't-- I don't want to say it didn't affect me, but I was comfortable and it was just Tuesday. And eventually, I became a field training officer. I had to have a map skill, an actual physical map that I had been able to find where I needed to go. By the time I became a trainer, the department didn't hand out maps. It was considered-- I'm not going to say no one does it, but it's unusual

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								now to make that trainee not use a computer.
Context_of_Work	LE	U	Field Responder	26-35	6-10	Male	LE-U-006	And I tried to find-- and I think today you'll find that, especially some of the ones that are on patrol that come in and talk to you today or tomorrow, they're going to probably complain, but they're also going to give you a fair assessment. And I feel that, as bad as things are, we know how to make them better. I think sometimes they feel like they're not heard as well, so when a decision's made that they don't like, it makes them even more upset. But I think here in Austin, by and large, once you get past all the complaining, I think they're actually quite happy with what they do have, if that makes sense. Especially those that have come from other departments. We get a lot of transfers, and so we hear from them a completely different story than the officers that have grown up in this department. So I don't know if that helps.
Context_of_Work	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	Well, I work specifically in the public information office. So our primary goal in that office is to get out information to the public and the community as accurately and as efficiently as possible.
Context_of_Work	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	So, my day can be unpredictable because I'm the only officer in the unit. We have a sergeant. We used to have two officers in the unit but they didn't have as many officers on patrol. So they brought in more civilians and slowly phased some of the officers out of the specialized unit positions. They're trying to bring them back. But I guess they didn't get the funding that they needed for more officers but they were able to get the funding for more civilians. So they were filling in the gaps. So that leaves myself and my sergeant. And we respond to any homicides, robberies, squad call outs, or any officer involved shootings. And we handle the daytime hours. We have officers that are considered adjunct public information officers and they work in all different types of assignments throughout the city. And so those after hours they go onto the on-call status. So if any of those incidences occur after hours, they handle it that way my sarge and I don't have to be on call 24/7.
Context_of_Work	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	So that's the way to kind of work around just having two of us in the office. So some days it can get busy. Because we can have a homicide

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								and we can have a bank robbery when my sarge and I are out. But in addition to those types of responses-- oh, we do go to the scenes. What we do is we basically get the information from the investigating detectives or the officers on scene and then we provide media with the briefing. So whatever it is that's going on. Because our goal in this department is to be very transparent and very open. So before we are able to release the information and doesn't jeopardize the integrity of the case, that's what we want to do. Because we do realize that the public and the community, they're a great resource to utilize. So if we can get that information out there and say, "Hey we are seeking assistance in locating this robbery suspect." They help us quite a bit. And that's what we want is to help us solve cases. So we try to get that information out. Which can be kind of stressful sometimes [laughter]. We do our best. So that's what we do in those types of incidences except for officer-involved shootings. The chief will talk on that. So usually, if we have a situation like that, we'll get a timeline for him, get him all the information. He talks to everybody on the scene and then he provides the briefing. We just set everything up.
Context_of_Work	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	And we have stuff just pop up last minute because the media they want it now. Everything is now. Which is different for a governmental agency that's like, "Oh, give us a week." It doesn't work like that in my office. They've got to make the five o'clock news. So we have to help them package the story. And we try to build that relationship and vice versa. Because we both need each other.
Context_of_Work	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	Before I get there I need to know who's out there. So I need to know what type of call that it is. And what we do is we have what's called a Real-Time Crime Center. You guys have probably heard of our HALO cameras that are downtown. So we have a-- it's at the Main, which is where I work, the headquarters downtown. And so upstairs they have a bunch of-- it was actually the police technology that helped implement it. But they basically have computer screens everywhere. They monitor patrol calls. And they have cameras all downtown, in different areas of downtown.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								So they can zoom-in and see what's going on in their busier areas like 6th Street, that kind of stuff. So they also monitor the stuff like any big incidents that happen overnight. In our email address or in our inbox, we will get what's called a SIN which is a significant notification. Basically, tells us if something's going to garner intense media attention. They'll put at the top like if it's an aggravated robbery or a celebrity was arrested or something like that. We'll get a notification.
Context_of_Work	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	So they monitor all that stuff. So when we're getting ready to go out on scene or a call like that pops up where they know it's probably a homicide or robbery, they'll call down to our office and they notify us. And they'll say, "Okay, we're working a bank robbery at this location. Robbery detectives are en route." So we give them a few then we call up to robbery and we see what sergeant is out there. And then we're like, "Okay, what's going on?" Get a little bit of brief information. Just really, is this a bank robbery or not? More so it probably applies to homicide. Because sometimes we're like is this natural causes which the media doesn't care for. And if we just kind of tell them it's natural causes or sometimes suicide, for ethical reasons most of them won't report on it or care much for it. But if it's sometimes suspicious death, we kind of have to wait. So, we'll call to homicide and say, "Are you guys going out there? Is this a suspicious death? Is this something we need to go?" So pretty minimal actually, information. Very basic. Just who's out there and kind of what's happened.
Context_of_Work	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	He'll call us and let us know. Make the notification. And they also send the emails overnight. Those significant notification notices to let us know, maybe what we've missed and what we might be getting called on during the day. So we're kind of prepared. We have case numbers. And we have at least a summary. And then if we need more we can try to reach out to the responding officers. But we're really trying to-- I mean they're working hard. And we really try to keep them out of the loop if possible. Sometimes not possible if you get a call. But it just depends.
Context_of_Work	LE	U	Public	26-35	6-10	Female	LE-U-007	I do, but I'm the only officer. Everybody else is civilian that's in there. So I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Affairs					won't key up on the radio though to talk to people before I get on scene because they have their other radio chatter. I don't want to interfere with whatever it is that they're doing. So I'll get in my car. I'll log into our CAD system, which [Name] probably talked to you about that because he does that kind of stuff. And just show myself en route to the location so everybody can see it. They all know I'm en route. The dispatcher will know I'm en route. So if a supervisor gets on, soon as media starts showing up, most officers don't want to deal with media or cameras. They're like, "Aah. Where's PIO?" It's kind of funny [laughter]. They get more worried about them than like a suspect or something like "Media's here. They have a camera." It's okay. So we'll show up. And they'll say "Is PIO en route?" And they can just look at the screen and they'll be like, "Yes. PIO [Name]. She's en route. And she's going to go in." And then we just kind of corral the media into one space. Most of them are pretty good about staying where they are supposed to. I mean it's public too. You're in a public place. So they can shoot. But we can always ask them, "Hey guys, can you not shoot exactly right there?"
Context_of_Work	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	For my job, I mean the more information the better. Just details of whatever happened on the incident. So I guess the biggest thing for me, is what I do, is when I get on the scene, I will go off the CAD notes, what I've been told via phone by the watch commander, and I'll write a statement. And then what I do is I take my statement, and I tell the detective this is what I am going to say. And then they look at. And they'll say, "Oh, you can't say this. Or you can say this." And then sometimes I'll ask them a couple questions like "Would it be okay to release this or that?" Something big that we run into though is EMS. EMS will tweet out stuff. They tweet out right away. And they're saying, "Transporting one with a gunshot wound." Or they'll say, "Transporting." So for us, we don't confirm that. And the reason we don't confirm a type of injury is because sometimes people think they get shot and they didn't get shot or they didn't realize they were shot and they were shot. And we're not medical doctors. So us as a police department, we can't make that determination. The investigation's still rapidly unfolding. So

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we run into the media saying, "Well, one was transported with a gunshot wound, can you confirm that?" And when you're the PIO standing up there it's a little frustrating. So we kind of try to explain it to them.
Context_of_Work	LE	U	Public Affairs	26-35	6-10	Female	LE-U-007	Yeah. And they're usually not very long. Because the briefings is-- it's the initial investigation. So officers responded this date and time to this. Suspect came in, took an undisclosed amount of cash and left the bank on foot. I mean, we give out very minimal on a briefing. Later on, as we get more information, then we provide it to the media or we'll have the detective do a press conference. And we'll show photos or whatever else that we need to do.
Context_of_Work	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	Yeah. And I think there is still, no matter what department you work at, you're always going to have folks that enjoy other folks more than not. But there is somewhat, more than not, of a camaraderie where, I mean, we're typically meeting up every night for coffee. We're meeting up for dinner, so I mean, it is definitely-- you're not out here all by yourself. Technically, you're riding alone by yourself. But we don't run calls-- very rarely do run calls by ourselves. Officers will respond and go to the same calls--
Context_of_Work	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	...I think [City] and [County] is a unique area because I think there is a lot of police support. But I also think there are plenty of folks that are interested in joining and just jumping on the bandwagon, and they have no facts and/or reasons to do so in our specific demographic in which we-- where we serve. So in general, I think law enforcement, because of the lack of community support, because of the lack of political-- because of the lack of support as it relates to our administrators and our politicians and elected officials because they are more consumed with the pressure from the public, it is making our job very difficult because the average patrol officer does not feel like the administration has their back, which is why I think, quite candidly, you see violent crime on the rise and you see crime nationwide going through the roof. Officers are not patrolling the way that they used to patrol and as a result, you take [City], for example, which is a war zone with over 750

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								homicides last year and 100 shootings this past weekend.
Context_of_Work	LE	S	Field Responder	26-35	11-20	Male	LE-S-033	We have a very good relationship with [County], so my agency communicates directly with them on their radio channel. We supplement them. They supplement us. We all run calls together, so for us, it's very fluid. So from my jurisdiction specifically, no, it is very fluid. I live in [City] and that is not the case in [City]. They operate on two completely different radio channels, although they're working right next door to each other.
Context_of_Work	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	I mean, it's all professional. I mean, when I'm at the station, we're usually talking about something that happened at work. And I mean I--
Context_of_Work	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	So typically, you try to stay in that geographical boundary. You don't have to, but typically, you try to because that's the area that you're going to be responsible for. And then, you can hear all the calls being dispatched. So unless they specifically ask for you, you can make a determination whether or not to go on that call or not if you're in the area. So if I'm driving by NIST and they say, "Hey, there's an accident at the NIST parking."
Context_of_Work	LE	S	Field Responder	36-45	11-20	Male	LE-S-034	"I'm right here. I'll just come over to you and help out."
Context_of_Work	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	So if there's anything that goes up into the neighborhoods and there's business community cameras, so they share a video with us as well. Now we don't view those here, but if something was to happen, we know where those cameras are. We can send the detective out to ask for that video as well.
Context_of_Work	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	But we can support each other. If something goes down, we all know to do it. So I could VPN in, if my guy-- I'm the primary, but if another guy couldn't do it, he's having a problem, I would log in and VPN to see if I could see what the problem is and help assist him, so.
Context_of_Work	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	In the event that they might need-- I mean that we're taking the lead in-- we're the lead agency, but we're utilizing a partnership system, camera system that we have access to that we're utilizing their system, which

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								we were using each and every event. But because we're the lead, we will have one of their representatives on site in the command center with us, so that if we tell you to move a camera in a certain direction, they'll do it immediately.
Context_of_Work	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	Yes, so they're in here as well. They have a station. Whenever we go live from a planned event, they have a station where they send fire and EMS. Both come. Now, on the command bus, they're not on that, but generally where our command-- they have a bus as well. So, generally, where they park, we're close to them. Yeah. We're close to them. So we can convey information whether we go over the radio or we physically walk to them.
Context_of_Work	LE	U	IT Specialist	46-55	11-20	Male	LE-U-035	Yeah. Juggling the problems that we're having is not necessarily with fire because [City] Fire, we have no problems with that. It's the surrounding jurisdictions, they as [County] is a little different. So well actually [County], we can now get that over-- I bet they've upgraded to 800 megahertz I believe. But there a couple of them that are not on the same frequency, so we got to-- so that makes it a little challenging when they're involved in it. If they're not involved, then there's no challenge. There's no problem at all. But you never know when especially anything that happens right here in [City], you automatically, like about 911 type of event, you automatically have [State], onto [City], [City] You have [County]. You have [County]. Those are five just outside of [City] not to mention what we have on the inside, which is Park Police, Secret Service, Housing Police. You have all these different agencies that's running into support of what you're doing as well. So they're right there with you as well, so.
Context_of_Work	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	--or assisting with making meetings and going to meetings with him, and helping him with whatever tasks he needs, and reviewing things that come from the lower or the units that are under us. That's more of the administrative side. Then I was a patrol officer before up until last August. And that just incorporates responding to 911 calls and conducting proactive enforcement such as traffic enforcement, and parking violations, and helping citizens with whatever they need, so.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Yes. So we would come in, go to the locker room, get changed, put your vest on, put the belt on, and then we'd go to roll call, which the beginning of every shift, all the members of your shift are in a room. And then your supervisor is at the front of the room, and he gives you assignments such as Officer X is assigned to area Chinatown, and Officer Y is assigned to Union Station area, and this is the vehicle you have, and this is the equipment you're issued. And so basically, the roll call is essentially time where everyone is together, and they give you out assignments and what roles everyone's taking that shift.
Context_of_Work	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	It's a good atmosphere. In general, when we're at the station, it's a little less stressful because you're with your colleagues, and you can blow off some steam. And there's a lot of joking that goes around a police department just because it can't be all doom and gloom all the time because no one would be happy. So the stations where you can kind of relax a little bit, and do your report, or do whatever you have to do at the station before you go back out on the street. But unless something terrible happened, and people are all in a bad mood or whatever, I mean in general, it's a pretty decent environment... It also depends on who's supervising your shift on how the environment is in the station too, because other supervisors are different than others, and so it's a dynamic too that they kind of play on there.
Context_of_Work	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	Oh, I haven't gone to any community meetings or whatever. So last time I was on the street, I went to a community meeting at the police station. And they have citizens come in, and they actually brought juveniles in from the city, and they had a facilitated conversation between the officers and juveniles like what the juveniles-- questions they wanted to ask us and questions we can answer for them in reference to why I would stop that time, or what do you guys think would help the trust of the police from the juveniles? So that was the only one that I've been to. But I know a lot of the commanders of the districts go to community meetings at least once a month and address concerns they have. And every district also has an email LISTSERV. And so whenever something

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								significant happens, the commanders email out to the community what's going on and the updates on different things, so.
Context_of_Work	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	It varied. Some people didn't want to talk to you. Others were very friendly. And it could vary by block. It's not even neighborhood by neighborhood. It's literally one side of the street's friendly. The other side isn't. And even within one building or even within one family, one person's cooperative, one person isn't. So it's very varying, but also, I think it depends on their past experience with law enforcement. So if they had a bad experience in the past, they're a little more negative, whether they met me before or not. And if they've had a good experience recently with law enforcement, then they're a little more friendlier. So I think it's a lot to do with their past experiences. But then also, it's important not to judge them. Be like, "Oh--" Because you also can't take things personal on this job. They don't hate me personally. As a 26-year-old kid from Chicago area. They don't hate me. They hate the uniform, and what it represents, and stuff like that. So I mean, you can't take things personal.
Context_of_Work	LE	U	Field Responder	26-35	5 or less	Male	LE-U-036	So we have a horse-mounted unit, and they do a lot of community events. And they also come out for large demonstrations. But the heaviest mounted presence is probably park police.
Context_of_Work	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Correct. When we come on, sometimes, they are already looking for dogs or the evening dogs-- I work midnights, so there's at least two evening dogs working before I come in, and they stay on-- they work until 2:00 AM. I come in at 8:00 PM. So if they're running calls and they need help, I go help. If it's not, then I'll either go to our central K9 office and deal with any paperwork, administrative duties I may need, or I'll go to a structured roll call.
Context_of_Work	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Some people that have single-purpose dogs are the firearms detection dogs and the bloodhounds. So that's a second animal. So if you have a narcotics dog and they ask-- so when they ask for a dog, they just say, "Hey, is there a drug dog close?" And then, one of us that has a drug dog, we pretty much self-police, meaning if I don't have a narcotics dog,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								somebody working in the neighboring district does, I'll either hit them up on the computer or call them and say, "Hey, they're looking for a drug dog." And then, they'll come over.
Context_of_Work	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	I mean it's a small unit, so it's very cordial. We all get along. We all know each other fairly well.
Context_of_Work	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	We as K9, a lot of times, will get on the air, the police radio, and ask them to set up a perimeter or do something to help us when we get on scene. That's usually our biggest request. Sometimes, they're already on it and we don't say anything, and sometimes they forget about it and we have to say, "If we're going to be doing a track, we need to help and try to contain this as best we can."
Context_of_Work	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Case in point is a lot of times the fire rescue system will stage to make sure the scene is safe. So we have to go in first, make sure it's safe, and then they can come in. So if you're on a scene of a major incident, a shooting, say, we've got to make sure it's safe for them. It makes total sense. But if they're bleeding heavily, there's only so much we can treat, and so they're staging where they should be. But then, we go, "Okay, fire rescue can come in and help us take care of this person." But that goes from police officer, police dispatcher, police dispatcher, fire dispatcher, fire dispatcher, to fire engine. So that's a long chain to get an ambulance and a fire truck to come in and help us take care of a bleeding person [laughter].
Context_of_Work	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	With the SWAT team, very, very rarely. Like I said, there is a couple dogs that work predominantly with them, and most of those dogs, their handlers are on the SWAT team as well. Sometimes, we kind of get thrown in a perimeter location with them sometimes on a SWAT call, but that's not very often.
Context_of_Work	LE	S	Field Responder	36-45	21-30	Male	LE-S-037	Q: Oh, okay. That's interesting. Okay. So how is the relationship with the state police in general, or is it just that--? SME: It's very good in our county, both with the road troopers and the pilots. And the nice thing is is they have all of our channels. So predominantly, when we're working

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								something with them, they come over to our radio channel and it's seamless.
Context_of_Work	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	I guess, it's a work-- I guess a work environment-- I don't really know how to answer that. But everybody going back and forth to their assignments, whether going to do security in a courtroom. There's maybe an issue in a courtroom then you respond to. People are hanging out waiting for assignments. People are being sent out to do different things, like fugitive guys they're gearing up to go out and lock people up. I mean it's good. It's a good environment, where basically everybody comes together to one location to be sent out to do a job, and help each out, I guess. I don't know if it really answers that question.
Context_of_Work	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	I have good working relationship, and a good, I guess, personal relationship. We all pretty much get along. We all get along because we-- I don't know, we all get along, but everybody comes together for the same goal. So if there's a call for one K9, and if another K9 handler comes out there, they know what they're doing, why they're doing it, and we're there to help support them. If I'm running a call and another handler shows up, they're there to help me, and then afterwards it's-- or outside of work same thing. Everybody has a good, for the most part, personal relationship. Yeah, so everybody pretty much gets along.
Context_of_Work	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	It's a good relationship, it's-- they're there to help us just as much as we're there to help them. They're there to help the community just as much as we're here to help the community. And so it's a good brotherly relationship. We all support each other in the job we're doing. We have different jobs, different assignments, but at the end of the day it's-- we're all here to serve the community, and we all, in my opinion, do a good job at it within the county.
Context_of_Work	LE	S	Field Responder	36-45	11-20	Male	LE-S-038	No, we have a good working relationship. The only issue wise would be the communication because I don't know-- outside of [County], like [City] police, [City], whoever else, I know what channels to find those. So outside of this county, it's hard because I don't know what channel [County] uses, [County], [County], but within the county it's not as hard as

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								long as you know-- it's hard as long as you know what channel they're on. And you can flip through your radio and find it and communicate with them.
Context_of_Work	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	And we also get information. So we have anonymous text tips that come in. So citizens can text tip - it's 5041 - any kind of information or pictures anonymously to us. So if they have a tip about something going on in the neighborhood or they see something, they can take a picture. And then we'll dispatch officers out there. If it's something that's going on immediately or if it's something like a long-term investigation, maybe a drug complaint or something like that, then we'll send it over to the appropriate unit. And they'll come back and do a follow-up investigation and see, is there really something to it or is it not.
Context_of_Work	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	...those folks who are inside our command information center, they're pushing out information. So they're using social media. They're using your Twitters and your Facebooks. They're pushing out traffic information. So if we know there's a street closure because of the traffic accident, we have a separate Twitter account for that. They can push out Twitter information like that. And they're also pushing out to the news media. So there's local traffic folks that push out others an accident here or there. When we get it, we push it out to them as well. So that way they're aware. They can put it through the radio and the TV so folks can avoid those areas in their commute and know to stay away from that. So we're pushing things out that way. We have LISTSERV on the department. So prime things, if there's something in the patrol district. So maybe, say, we're going to have a community bike ride one day. On the LISTSERV, we'll push out that information. If there's a shooting in the neighborhood, the district commander will go on there and say, "We've had a shooting in the [Street] of [Street] Northwest. Anyone who has any information, please contact us at XYZ phone number so that we can get information back." And we're telling the public what's going on. In the same token, they're providing the information they may have to us. So a lot of things.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	<p>...So everything now is kind of connected. It's no different in law enforcement than it is in the rest of the world. You have to stay up with the times. So as social media becomes more popular, we have to adopt that, and embrace that, and move forward because if not, we're behind the times. And a large majority of people-- 20 years ago, you had your major news networks, and CNN pops up, and Fox News. Now, people get their information from a variety of sources. And if you don't embrace that, then people are missing your message. So if you're not pushing out your own message, then yeah, it's kind of lost. You have to be your own best advocate. So when we're doing good things, we have to make sure we broadcast that as well. If there's issues or concerns that we're addressing, we want to make that [inaudible] as transparent as possible. So by being able to push out your own message to social media-- there's a lot of good things that happen in law enforcement that, in the past, unless the newspaper or the local media kind of want to pick up and do one of those feel-good stories, it kind of got lost in translation. Now we can push that out ourselves. "Hey, our officers just rescued these folks from this burning building last week." Maybe the media would have got it. Maybe they wouldn't have. But if something bad had happened, it's always out there. So being able to push out forward things out there-- and then a lot of times the media will grasp on, "Hey, this is a really good story," and then they kind of re-tweet it. They push it out. Maybe they'll make their own story that goes to a larger audience-- or more traditional audience, I guess, is kind of what you say. But young people today, they embrace it. And as those young people get older more and more of the population is using social media, using these electronic platforms and less so much of newspapers and things like that, so.</p>
Context_of_Work	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	<p>... Last night we had a fatal traffic accident. This is the 22nd traffic fatality for this year. What are we doing to reduce traffic fatalities, working with patrol districts because the majority of our traffic enforcement happens in the patrol level. So what are the patrol districts doing towards a city-wide goal of reducing traffic fatalities to zero? So where the special operations division is working on a city-wide plan,</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								they're bringing in all the districts to say, "Okay, what are you doing? These are the locations within your district that have the most instance of traffic accidents. And we've noticed there's been an increase in this corridor of traffic fatalities over the year." So that way the district can develop a focused plan of how they're going to let patrol assets work on that, where we within the bureau, we put that all into one big plan. But then there's target enforcement. Stuff like your hotspot policing, you may call it. Okay, we know there's been five traffic fatalities in this stretch of railway, so even the districts doing their routine daily enforcement, we're going to put some focused overtime enforcement here or maybe one of our upcoming programs, Smooth Operator, Ticket It or Click It, things like that. We're going to do enhanced enforcement in this area, because we've seen there's been five traffic fatalities, and they've all happened on Thursday, Friday, or Saturday between 10:00 pm and 3:00 am.
Context_of_Work	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	...Maybe it's something you work with the ABRA or the Alcohol Beverage Regulatory Commission. Maybe you have a lot of folks doing a lot of drunk driving, so maybe educational programs. We need something like that where maybe we do a sobriety checkpoint and hotspot enforcement. [inaudible] a lot of bars, but maybe they're pushing out educational information for patrons. In the bathroom stalls, you sometimes see different fliers and things like that, or maybe they have things around the bar, reinforcing, don't drink and drive. There's been 10 traffic deaths related to alcohol use this year in the city. Things like that to make people more aware and remind them of their behaviors when they're out there. So kind of working with other agencies, that's something that falls underneath us. So it's another form of communication.
Context_of_Work	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	.... The special events side, there's a biweekly task group that meets. And it's the police, the fire, the DCR, the district stuff, the Department of Regulatory Consumer Affairs, Department of Transportation, Department of Public Works, they sit there and, "I want to come, and I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>want to have a festival here on the street." I have to go in front of these individuals and say, "Hey, we're planning to have a festival here on [Street] from 5:00 am until 5:00 pm on Saturday, December 15." And they go through things you have to do by law to make sure it's safe. Now you have to have-- the roads have to be blocked off. You have to have people clean the roads afterwards. You have to have tow trucks because if you come and have your events-- so they help work people through how to have a successful event to ensure it's safe, compliant with the law, and everything they need to do to have a good event. So things like that. And there's lots of events. Just about every weekend, there's always something going on here in the city. Summertime is a little different, because it's so hot, it's hard to deal with. Especially in the fall, marathons, and 5K's, and food festivals, art festivals. Then you have just your regular baseball games and things like that. So there's always lots of task groups, and groups convening communicate on a more routine basis about what's going on, sharing information back and forth.</p>
Context_of_Work	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	<p>Depends on the event. So anything that's a special event that requires a street closure, it's the same group of individuals that go and attend those, and help them and walk them through it. Things like the baseball stadium, for transportation there's a work group that the individuals from the ballpark, the Department of Transportation, the police department, we all come together. The Department of the Vehicles for Hire, Taxicabs, Ubers, that kind of stuff, we all work together to say, "Okay, baseball season is starting. We did this last year. Here's some areas for improvement. We had issues with Ubers and Lyfts, backing up this roadway. Is there something we can do differently? Maybe we can work with them to geofence this area, keep them away, and have them go to this location, that would be better. It's safer for the folks who are leaving the ballpark to go there. It's less of a hazard for them. It won't interfere with us getting traffic out of the ballpark, and we won't have 30 cars waiting, that could be a potential threat to the ballpark right outside." Working through those issues together. It's a different group, but the key is, communicating what's going on. The people who are</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there, the key stakeholders are there sharing information, trying to work through solutions.
Context_of_Work	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	So believe it or not, we actually work very well with the federal law enforcement agencies here in the city, and it's because we have everything that we do - I don't want to say everything - but a lot of things we do, we do together. So we have a demonstration at the White House. Well, the street is our jurisdiction. The sidewalk and the park are actually US Park Police jurisdiction. And the Secret Service Uniform Division stand on the sidewalk. So it's not like, "Well, let's--" so we know there's a large demonstration. We actually host the bi-weekly meeting with all the law enforcement partners here, FBI, Uniform Division, everyone. They come, so we kind of all talk about, "Hey, this is coming up. This is on our radar." So everyone's kind of aware what everyone else is doing. And we all know each other, so if there's an issue, I can go to the phone. I can call the assistant chief of the park police and say, "Hey, we know this is going on. What are you guys doing?" "Oh, yeah, we got this going on." Or, "There's a large demonstration that's planned for the mall we see here." Just because it's happening on the mall and that's their jurisdiction, people have to get there. So they got to ride on the metro, most likely, or park their car. Well, the metro, they have their own police too. So we got to make sure that we're talking to them. But when they get out of the metro, they got to get from the metro to wherever, and they're going to walk on our jurisdiction. And we have jurisdiction everywhere. So we have jurisdiction in the mall. We have jurisdiction in the metro. So they kind of have their focused areas. But, at the end of the day, we'd be like the state police for the city. So everything kind of-- we're responsible for making sure things are covered. So making sure that we're communicating. So we do a really good job with that, and it all comes back down to personal relationships, talking about what's going on. And the same tools, I mean, email, in-person meetings, phone calls, just picking up and, "Hey, what do you guys seeing on this?" I mean, information sharing is key because, as we talked about, things rapidly evolve. So making sure everyone knows what's going on. And you want

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								to make sure that if you do have some information about, "Hey, we heard there's a threat towards the monument. Did you get that?" Pick up the phone and calling the right people, making sure they're aware.
Context_of_Work	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	We do a lot of interagency collaboration and coordination, and then all the NSSCs, so the State of the Union, the Inaugurations, a lot of these Summits, Nuclear Summit, African Leader Summit. Those are all NSSCs, so Secret Service takes the lead planning role, which means they're responsible for making sure it's planned out. But that's not to be confused with who's in control. We work as a unified community structure here. So it's a federal city. There's lots of people. Everyone wants to know what's going on. Everyone's kind of got an vested interest so there's kind of two ways you can go with that. You can try to fight over who's the lead person, or you can all come together with a team of individuals and make the decisions that go on. And then if it's something that really is park police centric, that's something that they'll do. And be like, "This is what we're doing." Because what they do is going to affect everybody else. So we have to all make sure-- not making decisions in a vacuum. We have the appropriate resources because a lot of times, when it comes to an incident, especially an impromptu incident, maybe a terrorist attack or a train derailment, or whatever, it comes down to resources. Who has the most resources? So the FBI may be in charge and maybe in 15 hours they will be in charge, but initially, they're probably going to have maybe 10 people. Whoever they have here right in this area to respond out. Where we're going to have 3,800 people. So, I mean, whoever kind of controls the resources, but at the same token, you know at some point the FBI's going to be taking it over, so making sure that we're all working together. Making sure that they knew what's going on, and there's resources that they can start pulling in, and the appropriate resources to help out, because, yeah, maybe we can put a rush of resources in there, but you know what? We still have to make sure the city's safe. We can't shut down patrol operations and you have people, okay, calling 911, someone's still got to answer those calls. So we have to make sure that we're not depleting all of our resources out in

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								the districts to handle an incident. And that's why things like special events, planned things, we bring in additional resources because, yeah, we have a lot of people and we can probably handle it, but you have to make sure that you maintain or surpass the patrol operations on a routine basis. Because when you're having people-- an influx in the downtown area, which is where most people come, it's going to have an effect. You're going to have more traffic coming into the city. So all those things play out, and you have to maintain that in the city. So it's really important you're not lowering your level of service response time to handle a special event. You have to make sure it's planned out appropriately.
Context_of_Work	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	Sure. So, yeah, fire and EMS. So whenever we get special events and things like that, they're all involved in the planning. So one of the key things is making sure there's adequate EMS and fire resources. So even when you think that something that's maybe more security centric, you think the inauguration. "Oh, we got to make sure it's secure and all kinds of security measures." You have to make sure the security measures are such that the fire department can get in, that they have the appropriate resources staged within. They have to be intimately aware of what's going on. So, I mean, there's going to be-- there's folks on the fire department, they have security clearances, so they're fully aware of what's going on on the law enforcement sides so they can make sure that they have the adequate resources there to make sure you have folks there. Because if you have things like the Inauguration, you have a secure perimeter. You can't drive in or out.
Context_of_Work	LE	U	Supervising Field Responder	36-45	11-20	Male	LE-U-039	And then on game day we use the ICS structure so for large events we activate, what we call the Joint Operations Command Center here. There's a fire comm that the fire department stands up and we have liaisons in all the locations. So if we're having a marathon, we have our command bus up, we'll have someone from the fire department on there...So being together in unified command we can easily do that. Everyone knows what's going on. Keeping all the partners briefed.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Sharing that information and then that way they can control their assets, we can control ours and then you don't have that cross talk when you don't really need it. If you need the crosstalk you can directly communicate, but a lot of times it causes confusion
Context_of_Work	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	Administrative side, first thing in the door is to review all of the correspondence that's come in overnight. Then it is reviewing the chief's correspondence to see what important documents we load through the cloud to his iPad, so he has them handy. New daily briefs, any pertinent crime trends or anything that's come in overnight, or something that's pertinent to our bureau. Like we have major crash, so any crash fatality reports, anything like that. Then I go through any and all of the correspondence and scrub the correspondence, which means review, typos, anything like that. Got it to where it needs to be. Address any correspondence that's coming from our chief's office. We have what's called an IQ system, where it's from citizens, or questions, or anything that we can direct to our many bureaus. Since we are a Special Operations, we have a lot of public issues to address, marches, parades, demonstrations, harbor patrol. So people want to know where they can park their boats, things like that. So it's a very diverse area. And then it's down to the daily operations, receiving, doing what the chief needs to be done, scheduling his calendars, scheduling appointments, reviewing command manuals for events, things like that. The patrol side, it is respond to my assigned patrol district, and participate in roll call, whether on the roll call of official, scheduling the members to take their beats, give out assignments, get out pertinent daily information. And then, from that point, once we're dismissed from roll call, it's supervising the officers on their beats, not just the officers assigned to my group-- it's called the redeployment, where everybody that is not assigned to a-- specifically to a patrol district, is put out in groups. So I'll be assigned with most of the people from Special Operations and that's our core group. And we assist the regular district personnel. So, I could be assisting on a scene with district personnel or my personnel, or a combination of both. And so it's just a matter of-- I'm extra manpower

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								for them. So, I might be acting in a sergeant capacity, or I might be acting in a role of an officer, just responding to a call, going to a call for service, helping blocked traffic on a traffic crash, something like that.
Context_of_Work	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	It depends on what job function that I have. Myself and one of the officers that I work with are actually on an inaugural committee. So, we were walking the parade route, up and down [Street] on the day of the Inaugural Parade. As a member of Special Operations, you can be called out-- well, Homeland Security Bureau, Special Operations has been pretty much my career for 13 years so far, for that [risk?] patrol. But Homeland Security, you have to go to respond to marches, demonstrations, specific events, things on the National Mall, July 4th celebration, any and all marches that are large-capacity or high-publicity events. Things that happen on the National Mall, even in they're National Park Service, we could have to respond to help with traffic along the theater streets and things like that. Also called to demonstrations or events throughout the city where we could be of use.
Context_of_Work	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	So events there, events at Nationals Park, whenever anybody climbs a crane to hang a sign in protest, we're there [laughter]. In patrol, I'm mainly assigned to the Seventh District, which is on the other side of the Anacostia River. That mainly consists of responding to calls for service traffic, crashes, assaults, domestic violence. Those are the more-- here, it's more businesses. It's more high-publicity. Getting the [State] Monument in the background. Over there, it is your family living. It is neighborhood crimes. It is neighborhood issues. It's the neighborhood folks coming out to support us and help us. And then there's the criminal element that can be found in regular cityscape.
Context_of_Work	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	It's doesn't. It's doesn't. We have very good relationships with the law enforcement agencies. I think there's something like 29 other law enforcement agencies in the city. We are the primary law enforcement agency. When you dial 911, we pick up and nobody else. Also, if there's any type of homicide, we handle it, no matter what. So it's a lot of coordinating effort.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	Actually, we're working with Fire Department and EMS. And I'm not as good—[Name], who's in the other room, he's our tech guy. So he'll be able to tell. But we are trying to get to a comprehensive system where we could share radio communications if we need to. And we are working with our Fire Department and EMS to do so. Some certain are encrypted different ways just based on their security function
Context_of_Work	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	...And it makes it a lot easier nowadays than having to get on the radio and ask a question. These people, you will be on, when you're on details, even when you're on regular patrol, people will ask you a question. I'm like, "I don't know, but let me find out."
Context_of_Work	LE	U	Field Responder	46-55	21-30	Female	LE-U-040	...Because you get random things that you're like, "I don't know." And so you hopefully find somebody and you work it out together because somebody may know because they've experienced it.
Context_of_Work	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	--my job right now is in a lot of planning. So all my free time is planning. So yesterday, I pretty much had meetings all day, all Salmon Days related. So today, though, I'm at my desk pretty much sending emails, and I spend about 50, 60 percent of my time at my desk. So with my position, I do a lot of--
Context_of_Work	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	Yeah. I do a lot of correspondence from my desk. I try to get out. I try to get out and talk to people as much as I can, but some days, I'm just stuck. I have too much going on. But other than that, lunchtime, normal stuff. And then, I usually will have-- on a normal day, I usually have probably three to four different meetings that are related to different things. If I have something late or if I have an HOA presentation where I do crime prevention tips on the course, that usually ends my day because they're 6, 7 o'clock at night. And then I start doing it all over again. So it's really different. I have a lot of hats, a lot and a lot of hats, so my position-- I do a lot of different things. So one day, I could have nothing to do with community resource officer and it could be just Salmon Days or whatever it is. So every day is a little different which is good too. It's kind of exciting, so.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	LE	S	Other Public Safety Personnel	36-45	6-10	Male	LE-S-027	So I'm kind of a mixture. I'm staying in my position now, but the position-- so I'm going to be corporal. So I'm going to be corporal community resource officer. So our corporal CRO. But I'm going to be taking the role of the detective corporal as well. So I'm not going to be a detective as much. I'll do a little bit of detective stuff, but I'll have some of the supervisory responsibilities of that position, which [Name], the one you met, he's my boss, and then it would be me, as a corporal, and there would be three or four or five guys under us in that department, which is the school resource officer, the detectives, the traffic officers, all under our section. So I'll still be primarily-- probably 75% of my time is going to be spent still doing the CRO stuff. So I'll just, like I said, wear just different hats. I do so many different things.
Context_of_Work	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	So I am the administrative sergeant at the [City] Police Department, which means I oversee the Investigations Division and the school and community resource officers. And then I also do special projects for the command staff. I have just recently been a patrol sergeant as well, where I would oversee a patrol staff.
Context_of_Work	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Because my job involves a lot of supervision. I have to be up-- I have to be-- I have to understand investigative strategies, and I have to approve those reports. So I have to review them and ensure that things are done correctly. I also work as a detective when necessary. And historically, I've actually been our cell phone and Internet crimes detective, so I've dealt with a lot of technology in that realm. But technical relates a little to technology and a lot more to the intensity of the review, so.
Context_of_Work	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	So come in the office, I work-- my job requires Monday through Friday because again, I take all-- I run the Investigations Division, so I delve out all the investigations and oversee that. So oftentimes I'll come in in the morning. I check the inbox where cases are submitted to detectives to see if any cases have been submitted. If they have, I will review those cases and then decide whether or not-- decide which detective they'll be assigned to, using our records management system to find out who's got what cases and who has bandwidth for a new case. That morning

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								routine also involves checking emails because there's emails that come out that we review stuff from-- other agencies send out information that may relate to something that we're we're doing. There may be an email on a project that I'm doing. There may just be random emails. A couple of times a month, I'm in charge of ensuring that the program that we use for payroll is checked and approved. And then my day just goes kind of random from there. I have a pretty specific kind of morning routine, but once the morning coffee's down, and the morning routine is down, it matters how many cases I have assigned to me, what projects I might be working on, and then what happens throughout the day. This week we had-- 9 o'clock in the morning, we had a guy burglarize a house and barricade himself in the house. So whatever I had planned for that day kind of ended [laughter] and we refocused on that--
Context_of_Work	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	As a patrol supervisor, or even as a patrol officer - there's not much difference - oftentimes on a Monday, we'll come in and set up. As a patrol supervisor you set up a Monday morning-- what would be your Monday, regardless of whether it actually falls on a Monday. So whatever your first day-- whatever your first shift is, the patrol sergeant sets up a briefing to cover the incidents that have occurred over the past few days that-- our patrol staff works four-on four-off, so you come in and-- so the sergeant reviews the four days that you're off. And then we bring up pertinent informant in a briefing, "Hey, be on the lookout for this vehicle," or, "Look, all these [inaudible] happened in this neighborhood," or whatnot, to try and pass that information down to the officers, the line staff, so that they know what was going on while they were gone.
Context_of_Work	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Yes, so you pass on the briefing from the other squads. At that point in time, there may be training that needs to be done, in a briefing. So right now we're issuing Narcan which is the drug that brings you-- when you hear about people who overdose on opioids, and they use a drug called Narcan to bring those people out of the overdose. So all of our patrol staff is being issued that right now, so we might have a briefing training that says-- so we'll pass this information along. There might be a short

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								training environment, and then everybody kind of goes out and goes on to patrol. And we might meet for coffee, or a couple of individuals might meet for coffee, but then the day is really then, again, whatever kind of comes at you. So now as a patrol supervisor, you may have a project that you're working on. Most of our supervisors have projects. So during a day shift as a patrol supervisor, I spend a lot more time in the office than I do during the night shifts. There tends to be a lot more administrative work during the day that goes on than in the nights where you can kind of go out, make your traffic stops, back the officers up. The patrol sergeant does take calls for service, not every call, but there are calls that the patrol sergeant is also required to respond to. So during the day, you probably get four or five calls you have to go to, and then it's kind of random throughout the day after that, so.
Context_of_Work	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	--over or under the freeway. So your individual patrol officer will be responsible for a portion of the city, for the calls for service, but that may be-- depending on your staffing, that may be really small. That may be really large, so.
Context_of_Work	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	I mean, there's a lot of interaction that goes on. We prefer the patrol staff doesn't spend a lot of time in the office because that's then less time that they're out on the street. But we have our own dispatch center, our own jail, and our own records division. So patrol officers, as well as all the supervisors, interact with all those people. It becomes family-like at times. We're a really small agency but we're a small agency so we all know each other and we all get along. I can go and sit in the chief's office for half hour, just chatting about whatever, as well as I can go and sit in our dispatch center or whatnot. As a patrol sergeant especially, although you don't get to do it every day, especially during the night shifts, you try and spend time down in the jail and down in dispatch. Make sure those people get some contact with the outside world... they work in isolated areas, so we try and ensure that you go and spend a little time and chat with them a little bit, just because it's very difficult to get-- we, as patrol officers, get to go out in the city and drive around all

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								night long, whereas the individuals here who have to work in more secure areas don't get that for the most part...
Context_of_Work	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Yeah. A lot of times they'll write reports back here or they may just come back for lunch, to eat lunch in our lunch room. They may just come back just to get-- they may have a question about something. They may just want to chat with somebody. That type of thing, so.
Context_of_Work	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	And that's a little bit of what we-- I mean, a lot of that has to be pre-planned, or when it's emergent, we just have to ensure that our dispatch center can patch the two together. I mean, obviously if we have a situation where we're searching for somebody and the helicopter comes up, that we don't-- our agency doesn't have a helicopter, but that helicopter can speak on a frequency that will patch in with all the rest of us. So as soon as helicopter gets there, I'm hearing them. And I'm sure that dispatch is helping implement that as well, so if it's pre-planned or if dispatch is involved, it's really easy. Like I said, if we're trying to figure it out standing on the scene, it becomes a little more technical and less easy. So it's usually done here at our dispatch center than everybody go to some random radio frequency, and then trying to communicate that across the group that's all deployed on a scene, so it's much easier to do it at-- we're at the trunk than it is to do it at all the branches. And we can monitor other agencies' frequencies as well as state patrol, and so I can go and I know where I can talk to other agencies on my own radio frequency, if I, for some reason, need to reach out without being patched. I can find that avenue, but it's a little more difficult to do that.
Context_of_Work	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	That monitor the infractions that are written. There are governing policies and laws that state who can actually look at video feed that's not related to the actual infractions themselves. But yeah, I think we have three officers that have ability to log into the system and evaluate the violations of the speed camera.
Context_of_Work	LE	S	Supervising Field Responder	36-45	21-30	Male	LE-S-028	Well, I think it limits the amount of information that we end up getting. I'll kind of tie it into what we get as an anonymous complaint. If I get an anonymous complaint from somebody, and I go out there, and I can't

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								find what they were talking about, I can't recontact them and get that information, right, because it's anonymous. They didn't want to give their name or their phone number, so now I've come to what they were really concerned about, and I can't either figure it out, or it no longer exists, or I may be in the wrong spot. But I can't call back and go, "Hey, what about--" and when you think about Text-to-911, there has to be the ability to reconnect with that individual because people don't like to text a lot of information. My fear with Text-to-911 is that you won't have a true idea of what the emergency is because they're not going to pass all that information along, and we like more information than less. So Text-to-911 has to be able to come with the ability for us to recontact the individual, to ensure that one, we know what it is you're trying to communicate, and two, we can recontact you if necessary.
Context_of_Work	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	My job is I'm overall responsible for providing police services, uniformed police services, anywhere inside the city of [City]. The uniformed officers of the department work for me. Our primary responsibility is rapid response to 911 calls for service, as well as proactive policing for crime trends.
Context_of_Work	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Usually starts pretty early in the morning with getting updated on what happened over night. So, I'll usually get up around 5:00 in the morning, me checking emails, voice mails, all of that for probably two hours and then commute in. While I'm commuting I'm usually in conversation with people over the phone, try to get here usually by about 8 o'clock. My responsibilities, it could be meetings, it could be special events, it could be critical incidents because I manage quite a few different areas. Usually head home probably around 7 o'clock to 8 o'clock in the evening, usually, phone calls, voice mails, checking voicemails things like that.
Context_of_Work	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Yeah. Well, when I'm driving home. Because I have about an hour and a half commute home, and so I'll use that time usually to make phone calls things like that, follow up on things. So like I said, usually at work from about 8:00 in the morning to 8:00 in the evening, and then I'm doing voicemails and stuff on the way home.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Not so much emails because I'm driving, but like voicemails and things like that. Then when I get home, before I go to bed, I'm usually checking emails again. And then start it all over the next.
Context_of_Work	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Unfortunately, I'll have usually at least a couple of face-to-face meeting on some issue every day. A lot of the communication now is either emails or phone calls. We do some texting back and forth but not a lot of that, but the primary-- unfortunately, for me, I'm not keen about using email as a communication source. To me, it's not the most efficient because it's almost like you're having a conversation-- I'm going to say yes and then 10 minutes later you come back. But the phone calls usually-- it's hard to make phone calls some times, so primarily during the day I'm communicating with my command via email.
Context_of_Work	LE	U	Supervising Field Responder	46-55	31-40	Male	LE-U-029	Yeah, what type of resources. Generally speaking, I assign new officers coming in really based on where the crime trends are and what staffing is and things like that, but it tells us what the existing officers are doing in the precinct. Listen, the [City] neighborhood doesn't really care about night life issues, but they do care about car prowls, and so that drives what you have those officers do when they are not on 911 calls for service, what's called proactive time. But listen, let's come up with plans to address the concerns for that neighborhood. Versus in the [City] neighborhood, especially at night, that proactive time is going to be spent not not for car prowls, it's going to be spent working with the security at the different clubs to make sure that we don't have fights, disturbances, and that the noise is kept to a reasonable level and stuff like that. So very, very strong ethnic neighborhoods. And again, we have the neighborhood councils, but we also have community councils that are based on ethnicities. So, East African community, Filipino community. A number of these communities also have advisory councils for the department as well so we can address things that they are concerned about.
Context_of_Work	LE	U	Supervising Field	46-55	31-40	Male	LE-U-029	Yeah, they do. They write a lot of reports. You write hundreds of thousands of reports.

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					
Context_of_Work	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	The operations lieutenant manages all of the non-patrol functions of the precinct and so, for example, the community police team, the anti-crime team. And I also in some aspect, I am the kind of the assistant to the captain of the precinct. The precinct is commanded by a captain, and I'm-- if it were a corporation and he were the president, I would be a vice president.
Context_of_Work	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Probably administrative. The precinct is a patrol function. I provide patrol services to the geographical area that is the East Precinct. The working day is divided into three shifts. We call them watches. And so each watch has a number of patrol squads that are supervised by sergeants. And then there's a lieutenant, who is a watch commander over that particular part of the workday. So the operations lieutenant has everything that goes on in the precinct other than patrol functions. And so my job is largely administrative as opposed to operational. But because the captain has overall responsibility for the precinct, then whatever task he assigns me, I accept. But it usually is outside of the pure patrol function of the precinct.
Context_of_Work	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Sure. The first thing is to boot up the computer, access my emails, find out what issues have come up overnight. On our desktop computers, we also have the ability to log into our CAD system, which is the functional equivalent or the exact equivalent of the mobile data terminals that the officers have in the cars, and so--
Context_of_Work	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Yeah. And so I can monitor what is going on specific to the precinct. You can actually monitor citywide, but that's too big of an area to cover, and I don't have any responsibilities outside of the precinct. And so the daily routine starts off with checking with the emails, pulling up the MDT so that I can monitor what's going on. I also have my portable radio on, so I can monitor radio traffic. And then there's always some projects that we're working on in the precinct, administrative matters, having to do with facilities, personnel. And so very rarely do I know ahead of time what exactly I'm going to be working on on any particular day. I mean,

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								there are all these ongoing projects that I monitor. But really, so much of it depends on what comes across my desk, either through the interdepartmental mail system or the email system. And I just kind of address the issues as they arrive while working on the long-term projects as well.
Context_of_Work	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Yeah, I work Monday to Friday, roughly 9:00 to 5:00. I mean kind of just regular business hours. But oftentimes, there's a reason for me to come in early because something's going on or because the Community Police Team does a lot of community hour each work, and the captain is very engaged with the community. There are oftentimes meetings or other obligations that extend beyond that 9:00 to 5:00 range... I will attend community meetings either with the captain or on behalf of the captain. And it's often a practice in most precincts. But particularly in ours, if my captain is going to be away from the office for a day or a week, then I will serve as what we call the acting captain. So then, I'll take on the precinct in its entirety. Those are very busy times, but it's really very much an administrative task-specific job.
Context_of_Work	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	They're all patrol. Yeah. Well, except for the four officers that are assigned to the Community Police Team. And there's a sergeant and six officers assigned to the Anti-Crime Team, which is it's a uniformed assignment, but they're usually tasked with specific crime-related projects. They're often engaged in doing anti-narcotics type of work. They will do search warrants. They'll do narcotics operations. So they're kind of halfway between a regular patrol squad and a SWAT Team. It's their function.
Context_of_Work	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Most of my time is spent at my desk, yeah.
Context_of_Work	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Well, as an operations lieutenant, not really, because I don't have any operational obligation to it. But for example, say, the watch commander for that particular shift isn't available, isn't working, and if the sergeants--there's some things that need lieutenant's approval to do. And so I make myself available that if they need a lieutenant at a scene and the watch

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								commander is not available. In principle, if someone from the East Precinct needs a lieutenant at the scene and the East Precinct is lieutenant is not available, then a lieutenant from another precinct could respond. But if I'm working and if I can be of assistance, if I can contribute to whatever they're trying to accomplish, then I'll make myself available.
Context_of_Work	LE	U	Field Responder	56-65	31-40	Male	LE-U-030	Yeah. And there's some incidents like if an officer gets assaulted, the sergeant that's in charge of that particular incident has to notify an on-duty watch commander. And again, if the East Precinct lieutenant is not working, the watch commander is not working, then... I'm the next available person.
Context_of_Work	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Right now, I'm assigned to bicycles. So I'm actually not the police officer in the police car. I'm on a bicycle. So I supervise a squad of eight officers, and we go out... All on bicycles. And we go out and we commit public safety...
Context_of_Work	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	...So the way it works in [City] is we're free from radio calls, per se, in other words, we don't have a-- there's certain cars and certain beats, and they have to answer radio calls. We're a little freer to move around the area. We're not tied to radios much, although we will... We listen, and we use it and all that kind of stuff, of course. And so we provide high visibility patrols in high crime areas, try to make the community feel safe, try to interdict crimes and make arrests, and that's kind of it.
Context_of_Work	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	A physical board, yes. So there's other bulletins on there, or there's information like you see on TV for roll calls, that's what I'm looking at. I'm getting rid of the old stuff, checking to see if somebody's been arrested or if they're still at large, and then I go into roll call with that. So to me, that's kind of where I interface a lot of technologies, in preparing for roll call.
Context_of_Work	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Right. Exactly. Yeah. No, that's not always the case from precinct to precinct. It's true at our precinct. The officers will often-- I'll actually go back to my desk and then if there's something I need to do, like I need to

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								look at my email, and if there's some kind of follow-up something that I got from my lieutenant, [[Name]?], I do that then. And then I go back out to the bikes and we head out for the day.
Context_of_Work	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Yeah, yeah. So then, this gets us in pretty deep. There's a lot of paperwork to be done, and so two officers went back to the precinct, because not only did he have probable cause to arrest for something else but he was in a stolen car and he had some drugs on him. So that's probably going to be a shift-killing report for them. One of the other officers is going to have to do a report on the use of force. I have to go back to the precinct and do a report as well. So basically, we're all heading back to the precinct now to use the technologies there to complete our paperwork.
Context_of_Work	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	Right. Well, we're all right there and that's very common that at the end you'd say, "Okay, who's doing what?" We kind of have a protocol for it. Most departments, they have a call, or they [hand?] you a call, you have a primary officer. Usually, the primary officer is the one that's going to-- to be honest with you, has seen the most, is probably going to testify in court, because they can pull the case together. The department doesn't want to send five people to court on overtime. They want to send just one, maybe two. So we find the one who's got the most information. He's the primary.
Context_of_Work	LE	U	Field Responder	56-65	31-40	Female	LE-U-031	So in a patrol car, I can look at everybody's call, I know where everybody is-- oh, wait, this is interesting. So one of the problems that we're having is-- so in a patrol car, the current CAD system that we have is, let's say they dispatch us to a certain address. The CAD will show that, oh, we've been to that address before. And you can click on that underlying thing, and you can look at these other calls... More details. But I don't get that on a bike...
Context_of_Work	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] Information Technology Professional. However, I say that loosely because I really was a CAD administrator and took care of 911 equipment back when we didn't have information technology-trained people in the comm centers. So basically if you really were to say what I

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								do, it's a business analyst, for the most part now.
Context_of_Work	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] My official title is 911 technology coordinator but I am also classified as an IT professional.
Context_of_Work	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] After 39 years I've worn a lot of hats, but if I were to describe to somebody right now today what I do, basically, is I look at the organization as a whole, and I look at the technologies coming in, and I am one of the people that will have ideas and suggestions and maybe even lead or help integrate how that technology can work best for us, so.
Context_of_Work	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Yeah. Yeah. We put out a lot of fires metaphorically, and then the first responders that do it literally. We have a lot of that. And it comes from that high demand, I think. When things do change rapidly and dynamically, they look to people like [Name] and I for that immediate responsiveness and being able to provide the answers or be able to look in the right place for the right answers.
Context_of_Work	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] ... but the number one thing that we have to remember that is the most important is keeping the lights on at that com-center, answering those phone calls, getting those dispatched and keeping the officers safe. Sometimes it can be challenging to try to brain in everything happening around us.
Context_of_Work	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Yeah, I mean you've got your re-occurring meetings and projects like [Name] mentioned that you're continually chugging along with and trying to keep up with and progress with. So I guess that's my routine. We've got certain things that are set in stone every week, every other week, once a month, and you do those things. And then sometimes you don't make those meetings or those commitments because of the other dynamic stuff that happens. But yeah, otherwise, I've never felt like I've been entrenched in a routine of at this hour I get coffee, I come back, I check emails. It's sort of come into the office and see what's going on that day.
Context_of_Work	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Yes. I think it's important to note to on that note that our particular 911 center is the primary public safety answering point for the city. We'll

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								receive all inbound 911 calls, but we're a police-disciplined dispatch center only. If it's fire or EMS related then it will be transferred to the fire alarm center's 911 center which is our back up down the street, and they field and then process all of the fire and medical calls.
Context_of_Work	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S2] Then you're listening to radio traffic and you can't keep up with that radio traffic while you're waiting for a minute.
Context_of_Work	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Just today I scheduled a meeting between police and fire because, again, both centers deal with each other all day long with the transfers, and sometimes maybe we've changed a policy that the fire department doesn't know about, and they're not understanding each other or what a word might mean, a fast backup versus a healthy officer or those little things. So I did get a group started just like you're talking about between police and fire and 911 users. So think of supervisors, duty officers, the people operationally dealing with these things, and we're going to try to meet, for now, once a month and see where it goes.
Context_of_Work	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Yeah, and those standards are interesting too. So we have a call answering standard that says we need to answer all 911 calls within 10 seconds, 90 % of-- no I'm sorry, we need to answer 90% of 911 calls within 10 seconds, 80% of the time, and there's funding from the county tied to that standard. You bring in something like a text message and there's not a lot of data to do analysis on yet, but the typical call time is-- or processing time is 10 to 13 minutes now and so it just blows that out of the water.
Context_of_Work	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] Right. And will we all be compelled for witness testimony because we're now witnessing a crime in progress.
Context_of_Work	LE	U	IT Specialist	Not specified	Not specified	Not specified	LE-U-032	[S3] I guess the other part, too, is the segregation of the classes. The dispatchers, the call takers, the supervisors, chief dispatchers.
Context_of_Work	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	I am the commanding officer of the Communication Division, at the rank of deputy chief.
Context_of_Work	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] And I am assistant commissioner for Life Safety Systems Division under the Information Technology Bureau, where actually both

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								operations and life safety systems fall under the Information Technology Bureau of [City]PD.
Context_of_Work	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] Essentially, operations is our client in a lot of work. So, essentially, all of operations' needs from a technology and mission-critical systems perspective are facilitated through our organization, and that includes everything from computer-aided dispatch, radio communications, all other administrative types of computer needs. Also, interfaces with other outside jurisdictions that we work with and partner with, and including some of the technologies that other agencies provide, like the Information Technology Bureau that provides the call handling system, which is our telephony portion of the 911 system, the logging and recording systems that are implemented. And I didn't bring it with me, but all of the technologies are integrated in the PSAC and PSACs in a manner where it provides the greatest uptime and availability to the 911 call takers and dispatchers that operate in the center. So there's a lot of incident management, change management that we have to facilitate on a day-to-day basis, plus the implementation of new technologies that replace the old technologies. So there's a lot of coordination within the center as it pertains to the systems and the infrastructure, and that's what we facilitate.
Context_of_Work	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] Okay. The call takers start their shifts. They are eight-hour shifts. It's important that they be on time. As soon as they come in they are assigned to either radio dispatching or 911 operator. All PCTs with less than approximately 25 years on are cross-trained. Individuals that were, you could say, grandfathered in, they're not required to be a dispatcher, but the overwhelming majority are cross-trained. So when they come in there's a roll call up on the board upstairs. They just need to look at where they're assigned. And then they'll either take their call taking duties, 911 operator, or they're dispatching. Certain individuals do primarily dispatching. They enjoy it. That's what they want to do. And for the most part they're allowed to do that. Some individuals like to do call taking more often and we'll do our best to accommodate those

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								<p>individuals to what they feel they're better in, strong, but they are cross-trained. So if we need to hold individuals on overtime, a dispatcher may dispatch the first eight hours but then they may help out for four hours in call taking. So everybody's cross-trained. But a typical day, they come in, they take a look at the board, see what their assignment is, sit down and get to work. We have very generous breaks. There's OSHA guidelines. Two hours they have to be up and away from the screen. So no individuals up on the work floor are working at their positions more than two hours at a time, and they get their meal and scheduled breaks in as well. There's overtime that's voluntary and there's overtime that's mandated if we do not get enough volunteers. There's sign-up sheets.</p>
Context_of_Work	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	<p>[S3] ...Dispatchers, though, however, if there's a major event going on such as there's an active 10-13, an officer needs help, we actually want that dispatcher to stay and handle the event if at all possible. If it's an event like a barricaded perpetrator, a barricaded bad guy-- I don't know if-- you've probably used all this language-- and it's going to go on for another eight hours, obviously then they would just catch them up to speed and say, "Listen, we have a barricaded perpetrator in, say, the 77 Precinct." The sergeant's there, ESU, all our specialty units. ESU is like our SWAT team, if you're familiar with all of this. And then they hand it off.</p>
Context_of_Work	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	<p>[S3] Okay. The operators have assignments as per avenues. When you go upstairs you'll see avenue A, B, C, D, E. Then the dispatchers, it's geographical. They'll have [City], [City], [City], [City], [City] dispatching. So they will be assigned-- it's broken down by zone as well. So the boroughs are broken down but then even further you'll have two precincts, for the most part, per zone and there's several where you have three precincts. And they'll have that exact assignment, zone 15. So they'll look at the board then know they're going to zone 15. If they come back from sick leave or something like that then they'll actually walk into the supervisor and the supervisor will return them back to work and give them an assignment. But if they're coming in when they're scheduled they'll see</p>

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								their assignment.
Context_of_Work	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...One dispatcher can handle multiple precincts within a zone. Some precincts are so busy it's just one precinct in that zone. And then there's the specialized, citywide SOD and citywide where we have-- our citywide radio channels that handle protests and other details and counter-terrorism and special operations. And they're specialized and so they only primarily deal with those people in the field. And then there's transit. All our below-ground communication with our transit dispatchers. And that's a unique environment in itself, just handling the underground communication aspects of the police because it's really Transit Authority but it is an outside jurisdiction but we police it. So the Transit Authority runs the trains, operates the trains but [City]PD is in control of policing the below-ground subway stations.
Context_of_Work	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] ...So now there's five people working covering three zones. So even though you're assigned to a zone you're not going to work that one zone all day because it's going to be two zones between three people. So you may work just, say, zone 15 for two hours then you move to zone 16 after your break. So you'd go on break and then you'd come back and it's like a rotation.
Context_of_Work	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] And they're, essentially, monitoring their radio for-- to get messages, to get updates from dispatcher--
Context_of_Work	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...Recently, during the UN General Assembly, we activate special patches between the federal interoperability channel, which is VHF, and our UHF system. And we conduct daily roll-calls twice a day, and make sure that all lines of communication are open between federal and city, and really stay in authority because the MTA police is on there, [State] Police. And so everybody is-- all lines of communication are open. Hold on one second, please.
Context_of_Work	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] ...do to know that the system was reliable was every-- we tested for an entire year every subway station, every platform, along grids, right, within predefined-- we downloaded special PDFs onto our test

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								equipment, developed heat maps that actually showed signal strength to be able to know exactly where our gaps are. And in fact, we have an active project now. We've already fixed all the [City] stations. So based upon test equipment that's uniquely developed just for, plus downloading the actual subway maps and platform maps, we can actually via the actual position of the person walking and doing radio checks, we have constant signal going and we can actually see red, yellow, green along the subway. We know throughout the entire subway system what works and what doesn't. And we can actively now participate in fixing any deficiencies or gaps in communication. And for years those tools weren't available. We have the tools now and, actually, we're fixing many of those particular areas. So some of the other challenges on the cell phone side in the subway is it's not designed-- the contract is not designed for tunnel communication.
Context_of_Work	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] I think having the right engineers, the right-- and the right people, and the right decision makers is key. And also bringing the unions in, explaining to them the process of transition, what we're trying to do. And really getting out-- before we're going live, ensuring that all the notifications are in place. We really had to really white-glove it in a lot of ways, and there was a lot planning and a lot of process involved. So that was big, big challenges.
Context_of_Work	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] ...Help fill in warrant checks, if there are any warrant checks, if the police officers aren't able to do them over their phone. Because you have to realize, especially if it's a solo post, he can't bury his head in the phone while he has a person stopped on a wall or whatever it is. So it may be easy to grab the radio and say, "Can you give me a warrant check on [Name]. Date of birth." A couple of other things that you could say are challenges on 911 calls that bounce from-- say they're standing in [County] and they dial 911, there are calls that will hit our cell tower in [City]. I just threw out a-- and this is not something that's actually unique to [City]. From what I understand it's-- we just receive so many calls. You could say [County].

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
Context_of_Work	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S4] A human level? I don't know. Right now, if someone has a video or a picture, it goes to Real Time Crime, and it's handled in a manner that could be dealt with. So when we go text-to-911, we initially won't have pictures or videos. They'll be stripped off and we'll be sending them for special processing.
Context_of_Work	LE	U	Not specified	46-55	Not specified	Male	LE-U-041	[S3] Comm stat. Yeah. You've heard of comm stat, right? That's what's driven it. And I was precinct commanding officer of two precincts, so you look at where your problems are and they have access to the same NetDispatcher. It could break down. So that's probably--
Context_of_Work	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	Being in the area we are, I do everything. I will handle everything from a homicide to hanging Christmas lights. And it could be all in the same day.
Context_of_Work	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	So my primary focus is narcotics and drug investigation. So that includes running a confidential informants, buying controlled substances, looking at groups of people who are-- there's a group of people, six people, selling meth. You look to see if there's connections and then if you can build a case out of that. Then whatever else they need me to do. Last week I was teaching a class to eight-year-olds about drugs. I'm also a [Job title]. So I go round the state and actually all over the West teaching about the drug impairment and drunk driving, teach all over the State about marijuana and the impacts, teach at the academy and so on... at [College] in the hood.
Context_of_Work	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: daily routing] Yeah. No. I'm structured in a weird way like a rock band... They do their own thing, but they are on the same page. So my wife laughs at me. I'm up at 3:50. I'm at the gym by 4:30. I'm done with that. I go to CrossFit, then I go to-- on three days a week, I will swim for an hour. And then I go home and walk my stupid dog. And then I'll get breakfast, play with my-- I got a 6-month old and a 13-year old, so... --I'll talk trash with them, play with my son, watch Sesame Street in Spanish with the youngest one, whatever I need to do...
Context_of_Work	LE	R	Field	36-45	11-20	Male	LE-R-017	I try and stumble in the office around 9:00. First hour is usually

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
			Responder					weighting through emails. I try to read through them as I go throughout the day. And then after that, it depends on what we've got going. So just for today, we've got a meeting at noon, a team meeting to set up our plans for the week, what we're going to do. That's usually about two hours because of everything we've got going. Then I've got follow-up to do from cases last week. There's going to be a couple four hours to take on the whoever is on the keyboard. Typing is the only class that I learned something in high school that I actively use every day. Thanks to my mommy for making me take it...
Context_of_Work	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...At some point, I will eat at my desk and just try and weigh through my to-do list as much as possible. As some stuff comes in, we're somewhat reactive, in that, if needed, we will react to it. And there's a triage that you just go through your mind of what needs to be done now. And if there's nothing that needs to be done now, what task can I do to get done the quickest, just to help clear stuff off my plate?
Context_of_Work	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	And eventually, I hope to be home by 7:00 tonight.
Context_of_Work	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: ski town narcotics office caseload] It does and it doesn't. Our base of the people that I deal with are somewhat steady because it's always the same people. I mean, I work dope, but I'm the worst narc ever because I've been doing this for 10 years, and everybody knows me. You see, I'm not exactly one that blends into a crowd. So they all know me. So I've got to find creative ways to get into them. The other people on my team, they're not as well known. They haven't been in The Valley as long, so...
Context_of_Work	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: department issued iphones] ...We just got our patrol but everybody at the Sheriff's office has an iPhone. Text messages between co-workers and bosses about things you can need. And sometimes it's as simple as, during the workday, "Hey." I'm interviewing somebody in the jail, "Can you bring me a form?" Cool. Or it can be 10 o'clock at night, "Come find me in the morning," or, "I need to do this in the morning." And some of that bothers me, some of it doesn't. That's why I try not to go

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								through the emails. But some of them are-- there's a lot of junk mail. And being me, I get my [Organization]'s emails sent to my phone. So that way I just-- but on weekends, I'll spend 10 minutes at a time just waiting through it. I haven't gone on. And I've just waited through...
Context_of_Work	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	...So it's 10 o'clock right now on Tuesday. This is my first day of the week. And I've got 68 emails to go through. Of those, will they result in more work or--? I don't know. I mean, I'm just scanning through them. And some of them, I can just delete right away. But of those, I think [inaudible] refresh 76. But there's probably 30 that I need to look at, I need to do something with. So there's a lot of emailing. Phone calls, all day long. There's phone calls.
Context_of_Work	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: apps] So I've got Facebook, Google, Voice, and Messenger. But they're all linked up to not my real Facebook. So they're all hooked up to UC accounts, undercover accounts. So I got Snapchat because dopers put all their shit online. So you can get Snapchat video. I got my Dunkin' Donuts app because I need to know where I can go to get a good cup of coffee [laughter]. Chive, like I said, for boring meetings so I can entertain myself and not be loud. Reddit. We're just starting to get into dark web and some stuff like that. And there's a lot of shenanigans of food on Reddit. So I have the app but don't really know much about it. I've got [State] Road Conditions. Being up here and being-- it can come in handy especially when your only connection to somewhat really outside is [Street]. It's your main one. And it closes down for hours at a time so-- and it's always when you need to go to [City]. Let's see. Pandora, Spotify. I've got one called Scannable. So when I get sent somewhere, we have to keep a copy of receipts. This takes pictures of them, and then you can email it to yourself in a PDF form. WhatsApp, another one, you talk to the fine citizens that I deal with. Google Maps...
Context_of_Work	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: apps] ...Some specific ones, I use for the job. One's called Theodolite, T-H-E-O-D-O-L-I-T-E. And it's a surveying app. But what it does is surveying, but you can take pictures with it. And I also put it up here. So you can take a picture and then it's going to have your GPS

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								coordinates... And then you can take that picture and then put it in your case files. So we have a homicide. And like I said, there are some spots where it's just you and God out there. And this way, you can get a GPS coordinates of it, or an approximate GPS coordinates. Otherwise, we go by the Fore Service map which will narrow it down to a square mile. This will narrow it down to a few feet...
Context_of_Work	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: apps] ...I use one called Chrono Age, and that is to determine somebody's age. I use that in death investigations. You get a date of birth, and then you type it in there and then it'll tell you how old that person was today... Or we would use it for MIP situations or something like that... Minors In Possession, people under 21 with marijuana or alcohol.
Context_of_Work	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: apps] There is a DUI app, where it-- I've got it, but I use it more in a teaching scenario. And I tell people about it. But what it'll do is you go through it and you go through all the steps in a DUI process, and it will prompt you [inaudible]. Okay. Did you see it? Yes or no. And then it'll email you everything so you have a lot of stuff already filled up for your report. I like certain aspects of it, but I don't like using it on the street because I think you're too busy. You get dug into your phone and safety issues. One called Units. And that just helps convert times, distance, weights.
Context_of_Work	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: apps] Once called the US Cop. It's basically the only one I would tell people to actually buy when I teach in the academy. And I'm like, "It's five bucks. Buy it. It's worth it." ... It's got all kinds of stuff on it. It's got drugs, schedules, news feeds, traffic laws, law enforcement contacts... It's got some Spanish stuff. It's got a little bit of everything. So if you have traffic laws, traffic questions, you got something about tire size, speed difference. I mean, this is a big one here, front license plate states, and it'll give you a list of-- I mean, we could have the measured power of Google and just do it that way too, ... And then compact and non-compact states. Compact is states that have gotten together and signed. So if I get a speeding ticket in California, or-- no. Let's say

Code - Subcode	Discipline	Area	Role	Age	Experience	Gender	Transcript ID	Quote
								Florida. Florida. It affects my [State] driver's license. But what I love about being from [State] is it's a non-compact state. So as long as I didn't get a speeding ticket in [State] it didn't affect my [State] stuff.
Context_of_Work	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE: apps] That one. Drugs.com is a good one, especially with the DRE, the DUI, and my narcotics stuff. You've got pill identifiers. You can learn schedules. It's a lot easier to go to the desktop version, but when you're standing in a parking lot in the middle of the night, you have it real nice.
Context_of_Work	LE	R	Field Responder	36-45	11-20	Male	LE-R-017	[RE; report writing] Yeah. Yeah. I have to. And I'm old schooled, and I've OCD and everything. So I need my desk. I need my computer. And I kind of have like a flow of how I need to lay out my papers and-- I take notes, and as I put it in the report, I cross it out but in a different color pen because that way I know I did it. But yeah. Our reporting is desktop-based. You can access certain parts of it in the cars, on the MDT. But you're twisting yourself up into a nod. And then, the word processor in our report system stinks always. Just garbage. And we've taught everybody. And I was one of the original instructors. And I almost think that I was told this by the company. "Just type at Word, copy and paste."
